First, many estimates include the costs associated with controls required by the Environmental Protection Agency rather than OSHA. Since these costs are frequently substantial, their inclusion greatly inflates the costs presented. Second, some estimates were calculated on the basis of replacing entire plants or pieces of equipment that are at the end of their economic lives. In these cases, the replacement costs would be incurred even in the absence of an OSHA regulation. Thus, the cost appropriately attributable to the OSHA regulation is the difference between simple replacement of plant and equipment and replacement that achieves compliance with the regulation. Third, many controls are currently in place or required by other regulations and are double-counted if attributed to the lead standard. Further, some of these controls may simultaneously reduce exposure to other toxic substances. Thus, the costs attributable to the lead regulation are actually some fraction of the total costs of the control. Fourth, OSHA notes that historically industry has overestimated compliance costs consistently in all rulemakings. Thus, the Agency concludes that it is likely that these estimates are similarly biased on the high side. While OSHA has not attempted to adjust the estimates downward by some consistent factor, the Agency cautions that past industry predictions of high costs and consequent economic disruption have proven to be unfounded. (See Ex. 475–1). The costs presented by OSHA in the following analyses are, therefore, presented on the best available evidence and accurately represent the anticipated compliance costs that potentially affected industries may incur.

Capital costs of compliance, however, are not typically incurred in any one year because firms borrow money to finance the investment. In making a determination of feasibility, OHSA concludes that the appropriate comparison is between the costs incurred in any one year and the financial condition of the affected industry in that year. Therefore, the Agency compares total industry shipments, sales, profitability or other measures of economic viability with annualized capital costs. OSHA converted the capital costs to an annual rate based on the standard captial recovery formula $i(1+i)^n/(1+i)^n-1$, retaining DBA's assumptions of a 10 year equipment lifetime and a 12% interest rate (Ex. 26).

B. *Specific Industries.* On the basis of all the evidence accumulated during the rulemaking proceeding, OHSA has determined that by the dates specified in paragraph (e)(1) of the standard, compliance with the PEL by the use of engineering controls, work practices, and, in some limited instances, respiratory protection is feasible.

These conclusions are based on the best available evidence of what each affected industry, taken as a whole, can achieve with presently available production and control technology. These conclusions are necessarily industry-wide generalizations, and since some involve projected compliance activities, they rely in part on policy judgments. OHSA recognizes that compliance problems may exist at individual plants or work areas, but concludes that these problems can be better dealt with through enforcement activities where solutions can be worked out by affected parties.

The following is a detailed discussion of the technological and economic factors in the major industries affected by the standard. In making these industry-by-industry analyses of feasibility, OHSA relies fully on the general principles expressed by Dr. First, Dr. Billings and others that were treated in this section. Throughout the following discussion, phrases such as "meeting the PEL", "achieving compliance", or "meeting 50 $\mu g/m^3$" all refer to the permissible exposure limit, which is 50 $\mu g/m^3$ as an 8-hour time-weighted average. (See 43 FR 52987).

1. Agricultural Pesticides

(a) *Uses*

There are approximately 1.5 billion pounds of pesticides produced yearly, which account for $2.5 billion in sales. Production, as measured by consumption, is growing slowly at a rate of 1.4 percent per year, with insecticide production showing the slowest rate of increase (less than 1 percent per year). Twenty-six percent of total pesticide production can be attributed to the production of insecticides (Ex. 476–50).

Exposure to lead in the insecticide industry may occur during the manufacture or formulation of the insecticide, lead arsenate (also known as acid lead arsenate, ortho arsenic acid, basic ortho arsenate, or basic lead arsenate). Acid lead arsenate has been used extensively to control fruit insects in apple and other orchards. However, synthetic organic chemicals have largely replaced acid lead arsenate (Ex. 476–50). Basic lead arsenate is only used on peach and other fruit trees grown in moist climates, where the less stable acid form causes leaf burn (Ex. 476–50). The Environmental Protection Agency restricts the use of lead arsenate as an insecticide to Florida.

Data indicating what percentage of total insecticide production lead arsenate represents were not available. Based on record evidence submitted by Woolfolk Chemical, Dupont Chemicals,

Dow Chemicals and Los Angeles Chemicals (Ex. 476–45, 49, 52, and 54), OHSA found that only one domestic firm, Landia Chemicals of Lakeland, Florida (Ex. 476–53), formulates lead arsenate. The company formulates a lead arsenate pesticide during approximately 3 months each year and only one employee is exposed to lead during this time (Ex. 476–53).

Representatives of Woolfolk Chemical Co. (Ex. 476, #54) indicated that they, along with Allied and Dow Chemical, stopped producing lead arsenate in 1972 as a result of the hazards associated with arsenic exposure and the difficulties of reducing this exposure (Ex. 476–45).

(b) *Process Description and Exposure Areas*

When lead arsenate is manufactured by batch process, the greatest potential for exposure to lead occurs during the mixing of lead oxide with arsenic acid (Ex. 476–50). The resulting precipitated slurry may either be piped to drying drums and packaged or shipped as a liquid.

Exposures may also occur during the cleanup of liquids spilled from batch mix vats, although spill pans installed below each processing unit capture most spills and then recycle the liquid back into the processing line (Ex. 476–50). Other exposures may occur during drying operations, although water vapor collected from the dryers is usually vented through the stacks (Ex. 476–50). Finally, the handling of lead arsenate for packaging and distribution is also a potential source of exposure (Ex. 476–50).

Based on the record evidence, Landia Chemical Co. appears to be a formulator rather than a manufacturer of lead arsenate. The company has stated that it receives lead arsenate, mixes it with water to form an aqueous solution, and packages the substance for distribution. Exposure to lead appears to occur primarily in the handling or processing of lead arsenate and does not appear to occur during the handling of the raw materials used in the manufacture of lead arsenate.

(c) *Controls Currently Used*

Various control technologies are available to contain dusts generated by the handling or mixing of toxic powders, including: ventilation control, process enclosure, automated weighing and handling equipment, and equipment operator booths to reduce worker exposure (Ex. 476–50). Depending upon the quantity of lead substance to be handled, the following control measures are available for reducing or eliminating exposure to lead during materials handling operations.

Portable bins (e.g. Tote Bin or Invert-a-Bin) may be used to handle dry compounds, thereby minimizing manual handling of the pesticide. Multi-wall, 50-pound paper bags (instead of single walled paper bags) may be used when transporting finely powdered ingredients. The dumping of bags, in general, is not recommended because this presents the greatest potential for dust emissions. To minimize exposures, it is recommended that unloading occur by breaking bags or cutting them open with a stationary knife over a grill equipped with proper ventilation, or by dumping bags into the boot of an elevator. The emptied bags, which still contain some powder, should be disposed of using the same hood used for emptying. Bag opening machines, which permit the operator to unload paper bags without opening them, thereby avoiding contact with the contents, may also be used. These machines may be moved from one process line to another. Drums can be opened under local exhaust ventilation to minimize dust hazards and drum dumping can be performed in enclosed booths. Pneumatic vacuum systems may also be used in unloading or loading lead compounds to vented storage bins. In charging operations, enclosed drum-dumping cabinets have been developed to mechanize this process, thereby reducing manual handling of toxic substances. Specially designed hoods which capture the dust at the source of exposure have been used, in some cases, to minimize employee exposure (Ex. 476–50, p. 84–107).

Dr. Billings suggested a control method for lead pigment formulators that OHSA believes to be applicable to pesticide manufacturers and formulators as well. He suggested the use of containers which are soluble in the particular vehicle or solvent being used (Tr. 116). Mr. Brustein, representing the United Rubber Workers, supported Dr. Billings' testimony and indicated that Goodyear produces a product called Elastifilm which can be used as a soluble container (Tr. 736).

Representatives of the Landia Chemical Company did not indicate which (if any) of the engineering control technologies discussed above were in use in their establishment, nor did they indicate which work practices were being used.

(d) *Exposure Levels*

The Landia Chemical Company did not submit data indicating the exposure levels to lead which result from the formulation of lead arsenate. The company did indicate, however, that complying with the 50 $\mu g/m^3$ standard (Ex. 476–53) was not expected to present any problems for them, and the company therefore declined to submit comments in response to the **Federal Register** notice of September 24, 1980 (Ex. 476–53).

(e) *Additional Controls*

The data presented to the Agency by the Landia Chemical Company indicate that additional engineering controls and work practices are not necessary to achieve compliance with the 50 $\mu g/m^3$ standard.

(f) *Conclusion: Technological Feasibility*

The Agency assumes, based on its knowledge of the control technology available to the pesticides industry (Ex. 476–50), its knowledge of the comparability of material handling in pesticide manufacturing and similar processes, and Landia Chemical's own statement that achieving 50 $\mu g/m^3$ poses no problem, that the company must be using tranditional control methods for materials handling. In addition, the company may be relying, in some part, on the use of good work practices, housekeeping, and worker rotation to aid in maintaining exposures below 50 $\mu g/m^3$. Furthermore, Landia Chemical, the only known processor of lead arsenate, has indicated that only one employee is exposed to lead exposure and this employee is potentially exposed for only 3 months annually (Ex. 476–53). Present engineering controls appear to be adequate to reduce this worker's 8-hour time-weighted exposure to below the PEL.

(g) *Cost of Compliance*

It appears that the technology already in use is sufficient to maintain levels below the 50 $\mu g/m^3$ limit. As a result, expenditures need not be made to retrofit existing equipment with improved ventilation systems or to invest in housekeeping equipment (such as a central vacuum system). Because these expenditures are not necessary, no costs will be incurred as a result of complying with the lead standard.

(h) *Industry Profile*

Production data on lead arsenate are classified in SIC 2879, Agricultural Chemicals, Not Elsewhere Classified. Lead arsenate is further disaggregated into SIC 2879807, however, entries for quantity and value in dollars of production and shipments were withheld by the U.S. Commerce Department to avoid disclosing operations of individual companies (Ex.

476–20). By 1972, major domestic producers of lead arsenate had withdrawn from the market (Ex. 476–45, 49, 52, 53, and 54). Landia Chemical, the only known formulator of lead arsenate in the United States, is a small, privately held firm. The company did not submit financial information indicating that the regulation would be burdensome.

(i) *Conclusion: Economic Feasibility*

The economic impact of the lead standard on the agricultural pesticides market and, specifically, on the production of lead arsenate, will be insignificant. This finding is based on the fact that no compliance costs will be incurred by this industry as a result of the lead standard.

2. Aluminum Smelting

(a) *Uses*

Aluminum is used in the manufacture of chemical vessels, kitchenware, electrical transmission lines and other products. It has architectural applications and is used extensively in the land, sea, and air transportation industries. (Ex. 476–5G)

(b) *Process Description and Exposure Areas*

Although aluminum ores are widely distributed in the earth's crust, only bauxite has proven to be economical as an ore from which the metal can be smelted (Ex. 476–5G). Bauxite is usually mined through the open-pit method, crushed, sometimes washed to remove clay, and dried. It is then refined through the Bayer process into aluminum oxide or "alumina." In this process, dried, finely ground bauxite is charged into a digester where it is treated, under elevated pressure and temperatures, with caustic NaOH solution to form sodium aluminate. (Ex. 476–5K)

After the digestion process is completed, the residue (containing impurities) is forced out of the digester through filter presses and discarded. The liquid, which contains extracted alumina in the form of sodium aluminate, is pumped to precipitator tanks where seed crystals are added to aid in separating aluminum hydroxide from the solution. The aluminum hydroxide that settles out from the liquid is filtered and then calcined in kilns which convert the alumina to a form suitable for smelting (Id.).

Metallic aluminum is produced by an electrolytic process that reduces the alumina into oxygen and aluminum. In this process, pure alumina is dissolved in a batch of molten cryolite (sodium aluminum fluoride) in large electrolytic furnaces called reduction cells or "pots." An electric current is passed through a carbon anode suspended in the bath mixture, causing metallic aluminum to be deposited on the carbon cathode at the bottom of the cell. The heat generated by passage of this electric current keeps the bath molten so that alumina can be added as necessary to make the process a continuous one. At intervals, aluminum is siphoned from the pots and the molten metal is transferred to holding furnaces either for alloying or impurity removal. It is then cast into ingots of various sizes for further fabrication. (Id.)

Exposures to lead arises from trace amounts in the ore. Exposures may occur at materials handling equipment or during pyrometallurgical processing (Ex. 481). Since most of the bauxite processed in this country comes primarily from Jamaica, Brazil, Surinam, Australia, and Ghana and contains only traces of lead (Ex. 476–56), very little exposure occurs during the handling of raw ore. In fact, the principal source of lead exposure during ore handling is not from the ore itself but rather from the acid leach (the process by which the impurities are separated from the ore) which contains traces of lead (0.004 percent lead sulfite) (Ex. 476–57)

The primary exposure problems in the pyrometallurgical process occur when ores containing lead undergo smelting, thereby releasing fugitive emissions, such as lead oxide, or from emissions resulting from impurities which rise to the top of the molten aluminum and must be periodically skimmed off as dross from the melting and holding furnaces. This dross is transferred to a floor area known as a dross pad where it is dumped and raked out to cool. After cooling, the dross is mixed with salts and charged into a rotary melting furnace, where more of the aluminum is recovered.

(c) *Controls Currently Used*

(i) Materials handling controls include: Pneumatic conveyance; elimination, by redesign or use of dead drops or long material drops; belt wipes; conveyor curtains and skirts; ventilation hoods at transfer points; complete enclosure of conveyors; liquid sprays to suppress dust; chemical dust suppressants; vacuuming (preferably wet vacuuming) instead of dry sweeping of spilled or otherwise deposited materials; and clean air pulpits (Ex. 481).

The selection of the appropriate control strategy depends upon the material being handled, the extent of the exposure problem, the process involved, and the extent to which engineering controls are already in place.

(ii) Pyrometallurgical controls include: Exhaust hoods for tapping and skimming ports; exhaust hoods for ladles, pots, and kettles; covers and hoods for launders; maintaining the unit at negative pressure; enclosure of the entire unit or pertinent parts of the unit; ventilation to capture fugitive emissions which cannot be contained otherwise; enclosed control rooms supplied with clean air; and controlled air pulpits (Ex. 481).

(d) *Exposure Levels*

During aluminum smelting, lead is present as lead sulfide in bauxite ores. Bauxite containing .04% lead would produce an air lead concentration of 4 $\mu g/m^3$ when bauxite concentrations are 10 mg/m^3. "Therefore, lead exposure would be well below existing or proposed limits." (Ex. 491)

Sampling data in a NIOSH report on the Martin Marietta Aluminum Company in Lewisport, Kentucky (Ex. 476–58) revealed nondetectable lead exposure levels, in most instances, although one sample showed 7.5 $\mu g/m^3$ of inorganic lead (Id.). These figures indicate that exposure levels are well below the OSHA permissible exposure limit of 50 $\mu g/m^3$ and the 30 $\mu g/m^3$ action level. The results of the NIOSH survey are consistent with the statements made by Kaiser and Alcoa Aluminum indicating that lead exposure is not a significant problem in aluminum smelting (Ex. 476–56, 57).

(e) *Additional Controls*

The exposure data indicate that lead levels in aluminum smelting are well below 30 $\mu g/m^3$. Control technology already in use has been effective in maintaining lead exposure levels below the PEL. Additional engineering controls, work practices, housekeeping and worker rotation are not needed. Compliance with the PEL has been achieved (481)

(f) *Conclusion: Technological Feasibility*

The record shows that bauxite ores processed in the United States contain only trace quantities of lead and that alumina (aluminum oxide), from which aluminum is reduced, contains virtually no lead (Ex. 476–56, 57; Ex. 22). Exposures to lead above the PEL are unlikely to occur, as representatives from both Kaiser and Alcoa Aluminum have acknowledged (Ex. 476–56, 57).

Control technologies already in use will be sufficient to control any exposures to lead which may occur.

(g) *Economic Feasibility*

Because the exposure levels are so low, the industry need not enhance existing ventilation systems, establish additional work practice programs, enhance housekeeping practices or rotate workers as a result of this regulation. Therefore, there will be no costs of compliance nor any economic impact incurred as a result of the lead standard.

3. Ammunition Manufacturing

(a) *Uses*

Lead continues to be the major metal used to produce sport ammunition in the form of shot and small caliber shells. Although lead ammunition is no longer used in wartime applications, it is still used in military training (Ex. 476–123). The Federal Government has enacted legislation requiring steel shot for water fowl shotgun loads in some parts of the country. If this were universally adopted, it would eliminate the manufacture of lead shot, and also the problem of lead exposure from this material (Ex. 476–26).

(b) *Process Description and Exposure Areas*

Ammunition fabrication may be done using either a hot or cold lead process (Ex. 22, p. 231). Lead used in the manufacture of ammunition may be in the form of ingots or may be processed from scrap lead. Lead processing from scrap requires smelting prior to refining and is therefore considered a secondary smelting operation. Companies that just melt lead prior to fabrication are not considered as secondary smelters.

OSHA has proven the technological feasibility of achieving compliance for secondary smelting operations and the Agency's findings have been upheld by the court Slip Op. at 181–97. The implementation dates and interim levels for secondary smelting and refining operations are applicable to ammunition manufacturers whose initial operations are, in fact, secondary smelting operations. In addition to fabrication, ammunition manufacturers also maintain ballistics ranges which are used to test the quality of the ammunition manufactured.

(i) *Fabrication.* Lead exposures occur during the melting, drossing, pouring, casting, extrusion, cut-off and assembly portions of the process of fabricating bullets from hot lead (Ex. 475–35). In the fabrication of lead shot, lead exposure occurs during the melting, drossing, dropping, polishing and loading of lead shot. (Id.)

(*a*) *Hot Lead Processes.* Lead is melted in refining kettles and treated by drossing to remove impurities. Further refining may be necessary to achieve a specific composition prior to casting lead into molds to produce bullets by extrusion or by dropping lead to form shot (Id.). Finishing processes for bullet manufacturing include extrusion, cut-off, assembly, inspection and packaging. (Id.) Finishing processes for the manufacture of lead shot include shot lubrication, screening, polishing, packaging, and loading cartridges with shot. (Id.)

(*b*) *Cold Processes.* In the cold processes, lead is used to form bullets by feeding wire into forming machines which extrude the projectiles (Ex. 476–65). Employees working at the forming machines may be exposed to lead, but such exposures appear to be very low (Ex. 476–65).

(ii) *Testing of Ammunition (Firing Ranges).* Ammunition that has been fabricated must be tested, and manufacturers use ballistics ranges for this purpose. Most firing ranges are equipped for the firing of handguns, shotguns, rifles, and machine guns. They are used by ammunition manufacturers to check ballistics, as practice ranges for firearms enthusiasts and as practicing and qualifying ranges for law enforcement officers.

It should be noted that while many persons may be exposed to lead at a firing range, only the exposures of range employees (of ammunition manufacturers or private ranges) fall within the scope of the standard: the exposures of firearms enthusiasts who use the ranges for practice are outside the scope of this standard because they are not occupationally related.

The dimensions of firing ranges vary in length from 70 to 120 feet, in width from 20 to 80 feet, and in height from 8 to 10 feet, and the range may house any number of firing booths. Ranges are installed in "available" space (Ex. 476–64) or they may be constructed as part of a manufacturing process, as is the case with some ballistics test ranges. (Ex. 475–35)

The bulletproof firing booths are approximately 4 feet wide, 6 feet long, and 9 feet high, and the distance from the firing line to the bullet trap is approximately 75 feet. Ranges are usually equipped with a steel bullet trap in which the spent lead accumulates in a trough at the bottom of the trap. The spent lead is removed from the trough when necessary, and may either be discarded or remelted and cast into small ingots for sale or reincorporation into the manufacturing process.

Lead dust and fumes are generated from the bullet primer when weapons are fired. The primer is approximately 35 percent lead styphnate and lead peroxide. The lead styphnate is used as a detonator. Lead vapors (because of cylinder and barrel misalignments and gaps from wear and manufacturing tolerances) pass through the weapon after firing and are expelled at right angles to the direction of fire. This effect is commonly known as "side blast." The side blast creates turbulence in the breathing zone of the shooter, thus increasing his exposure to lead dust and fumes (Ex. 476–64).

Another source of lead contamination occurs when the bullet is fragmented as it strikes the bullet trap. In this situation, personal exposure to lead is believed to be minimal, since the distance between the shooter and the bullet trap is normally at least 75 feet (Ex. 476–64).

(c) *Controls Currently Used*

(i) *Fabrication.* The refining operation for ammunition manufacture is comparable to refining in secondary smelting operations, and therefore some of the difficulties associated with secondary lead refining may be applicable to ammunition refining.

In fact, it may be difficult to control lead exposures in refining operations depending upon the size of the operation (43 FR 54484). Operations requiring the use of overhead cranes are difficult to control (Tr. 5695). Local exhaust ventilation, either in a stationary or portable form (43 FR 54484), is used primarily at drossing operations (Ex. 26, p. 5–32).

Submissions from Remington Industries and a NIOSH HHE of the Hoyt Plant indicate that local exhaust ventilation is being used by some facilities (Ex. 475–35; Ex. 476–309) in casting and fabrication areas.

Local exhaust ventilation used in the die casting areas, hooding of the drop shot kettles and the enclosure or separation of some processes from others are methods being used to reduce lead exposures. In the lubrication of lead shot, substitute lubricants have been used which appear to reduce lead exposures (Ex. 475–35).

(ii) *Testing of Ammunition (Firing Ranges).* The controls to reduce lead exposure require local or general ventilation to control the air flow so that the concentration of lead in the environment does not continue to increase after the number of shooters has been reduced. (Systems should be capable of preventing airborne lead "build-up.") Floors are also often painted smooth concrete surfaces which can be easily cleaned using wet vacuuming methods. Spent lead is often collected in water traps to further

minimize the lead exposure (Ex. 476–64; Ex. 475–35).

(d) *Exposure Levels*

(i) *Fabrication.* Data submitted indicate that typical exposures in ammunition manufacturing range from 10–170 $\mu g/m^3$ (Ex. 22, p. 231). Remington did not provide specific exposure data but indicated that at one plant of 465 exposed employees, 425 were exposed to less than 50 $\mu g/m^3$ of lead, with 40 employees exposed to levels in excess of 50 $\mu g/m^3$. Remington further qualified that statement by stating that this number of employees was exposed prior to the installation of certain engineering controls (Ex. 475–35). No information was submitted indicating what effect these controls had on reducing the number of workers exposed above 50 $\mu g/m^3$. In another Remington plant, 590 of 600 employees are exposed to levels below 50 $\mu g/m^3$ and 10 are exposed above 50 $\mu g/m^3$. Some of these 10 individuals worked on the firing ranges and were not directly associated with the manufacturing process (Ex. 475–35).

Exposure data (Ex. 476–309) from N.L. Industries Hoyt Plant indicate that respirable dust levels were 10 $\mu g/m^3$ for the buckshot kettle operator, 30 $\mu g/m^3$ for the lead man in the shot building and 30 $\mu g/m^3$ for the shot drop operator.

(ii) *Testing of Ammunition (Firing Ranges).* Surveys such as those taken at La Salle College (Ex. 476–66), New York State Police Facilities (Ex. 476–67), St. Bernard Police Firing Range (Ex. 476–68), and the U.S. Customs House Firing Range (Ex. 476–70), have all found lead levels in excess of the 50 $\mu g/m^3$ PEL. Remington Arms also indicated that compliance with 50 $\mu g/m^3$ on their ballistics range would be difficult (Ex. 475–35).

(e) *Population Exposed*

(i) *Fabrication.* In a previous report to OSHA (Ex. 22, p. 231) it was estimated that 500–900 workers are exposed to lead in the manufacture of ammunition (id.). The percent of these individuals exposed above and below 50 $\mu g/m^3$ is not know.

Remington submitted data that indicated that out of 1,065 employees (number of workers in the entire plant) only 50 were exposed in excess of 50 $\mu g/m^3$ (Ex. 475–35). It is also believed that 95 percent of all ammunition manufacturing is done by three large companies, one of which is Remington (Ex. 22, p. 231). Extrapolating from Remington's data, OSHA estimates that only 150 to 200 employees are exposed to lead in excess of 50 $\mu g/m^3$.

(ii) *Testing of Ammunition (Firing Ranges).* There is no way of estimating how many employees are exposed to lead in public firing ranges or in ranges operated by ammunition manufacturers (Ex. 22, p. 231).

(f) *Additional Controls*

(i) *Fabrication.* Remington discusses four difficult areas of compliance in their plants: the ballistics range (see discussion of firing ranges), shot tower (especially where lead dross is handled), the maintenance of certain exhaust systems (see discussion of maintenance) and production equipment, and primer mixing and charging (see discussion of explosive manufacture). Remington suggests that improved ventilation will be required at drossing operations and that vacuuming has already greatly reduced exposures by reducing dust levels in maintenance operations. In addition, employees should be instructed in the proper manner of handling lead materials to minimize their exposures (Ex. 487).

In finishing processes local exhaust ventilation can be used on extruding machinery, at cut-off machinery, etc., as suggested by Dr. Billings. Isolation, local ventilation and housekeeping may also be used. Workers handling extruded products and those filling and inspecting cartridges should be cautioned to use appropriate work practices to minimize dust exposures and should also be instructed to wash their hands and forearms thoroughly before eating, smoking, etc. (Ex. 487).

(ii) *Testing of Ammunition (Firing Ranges).* NIOSH recommends that to control lead fumes, dust and gaseous combustion products in the firing range, a minimum ventilation rate of 50 feet per minute (fpm) should be maintained at the firing line, with all of the air being exhausted at the bullet trap (Ex. 476–64). The firing range should be maintained at a slight negative pressure in relation to adjacent areas.

Floors should be constructed with a drain and should be made of dense, continuous-poured concrete or steel. The concrete should be finished to a smooth surface to facilitate proper clean-up, using either the wet method or the vacuum cleaner method. A routine range maintenance program is essential. NIOSH recommends that employees performing maintenance or removing lead from the trays wear an approved respirator.

In addition, worker rotation may be necessary, especially in firing range maintenance operations, to meet the 50 $\mu g/m^3$ limit.

Data have been compiled which indicate that levels have been reduced using minimal controls. For example, the Springdale firing range made improvements in the ventilation system by increasing the flow rates, which resulted in dust levels being reduced from 200 $\mu g/m^3$ to approximately 60 $\mu g/m^3$ (Ex. 476–69). Additional efforts, such as increased housekeeping and maintenance, should bring this range into full compliance.

Remington also presented data which discussed the difficulties encountered in bringing their ballistic range into compliance with the 50 $\mu g/m^3$ limit. The company felt that engineering controls, such as improved ventilation and improved water bullet traps, had been successful and that work practices such as vacuuming and wetting down shooting booths have also helped (Ex. 475–35) to reduce lead levels. However, they felt that 1 year was not a long enough period to bring the lead levels into full compliance.

A great deal of data was presented on firing range design and emission controls for firing ranges generally; however, little data were furnished by ammunition manufacturers who have ballistic ranges. While the controls peculiar to firing range use are the same whether the range is privately owned or owned by a manufacturer, the degree to which controls must be implemented depends upon the extent to which the range is used by employees and the level of exposures. Ammunition manufacturers who use their ranges constantly will have to install more sophisticated controls than a range that has one or two occasionally used booths. Therefore, Remington may, in fact, need more time to implement sophisticated engineering controls to reduce levels to 50 $\mu g/m^3$

(g) *Conclusion: Technological Feasibility*

(i) *Fabrication.* The technology to achieve 50 $\mu g/m^3$ is available and is apparently being effectively used by the Hoyt Plant in its shot operations. Remington also indicated that improvement of existing ventilation systems would be necessary to achieve compliance with 50 $\mu g/m^3$, although they admit that reducing exposures in some operations solely through the use of engineering controls might prove difficult; in addition, Remington stated that one of the most difficult operations to control would be the drossing process. Caplan (Ex. 138D) recommended that controls used in primary lead drossing plants should be used in refining operations also. Many of these controls would also be applicable to melting operations. It appears that the available engineering controls, when coupled with good work practices, effective housekeeping, and

worker rotation, will bring lead levels down to 50 $\mu g/m^3$. Exposure data from the Hoyt Plant indicate that the PEL is feasible and has been achieved.

Most of these operations involve the use of machinery to produce finished products. As Dr. Billings stated, "you can put control technology on a machine" (Tr. 146).

The technology to control finishing operations exists and may require isolation, ventilation, careful housekeeping and perhaps worker rotation to achieve compliance with the 50 $\mu g/m^3$ standard for lead.

In addition, the making of ammunition by cold lead processes presents few, if any, exposure hazards. Manufacturers may substitute this process and significantly eliminate lead exposures in projectile formation. OSHA finds that compliance with the standard in one year is feasible.

(ii) *Testing Ammunition (Firing Ranges).* While Remington anticipates difficulty in bringing its firing range into compliance in a year, other ranges have made substantial progress in reducing levels in considerably less time. The Springfield Firing Range was surveyed in September of 1977 and resurveyed in December of 1977. During this 3 month period, ventilation controls were implemented which reduced exposures from 200 $\mu g/m^3$ to approximately 60 $\mu g/m^3$ (Ex. 476–69).

Ventilation controls are not the only acceptable means of achieving compliance with the 50 $\mu g/m^3$ level. Work practices, housekeeping, and worker rotation may be used. OSHA believes that Remingon, like other owners of firing ranges, can achieve compliance with the 50 $\mu g/m^3$ level simply by enhancing existing ventilation controls with appropriate work practices and administrative controls. Respirators may be required for some operations, such as cleaning traps, where engineering controls, work practices, or rotation are not sufficient to reduce levels to the 50 $\mu g/m^3$ limit. However, the Agency believes such situtations will occur infrequently and will be of short duration. Remington does not dispute that given the appropriate time period for compliance, lead levels can be reduced to 50 $\mu g/m^3$ through the use of engineering controls (Ex. 475–35). Based on these factors, OSHA concludes that compliance with the standard in one year is technologically feasible for firing ranges.

(h) *Cost of Compliance*

None of the potentially affected manufacturers of ammunition presented cost data to OSHA. However, Remington Arms submitted a comment that described its progress in reaching the 50 $\mu g/m^3$ standard and asked for 3 to 5 years to reach this goal (Ex. 475–35). The record indicates that small arms projectile manufacturing, as typically done, is a cold process operation (Ex. 476–65). However, the production of lead shot may require hot processes, in which case controls may be necessary. Ventilation systems already in place, may require upgrading, however, the less costly use of housekeeping and worker rotation will significantly aid in achieving compliance and will also reduce arsenic exposures. Therefore, compliance costs will be minimal.

The record does not contain data on the costs of compliance with the standard for indoor firing ranges. However, a NIOSH study of the problem of excessive exposures of this nature indicates that with appropriate planning in the design and construction of indoor firing ranges, the lead hazard could be eliminated. (Ex. 476–64) OSHA contends that such planning will result in cost-effective implementation of control measures. In addition, NIOSH points out that many firing ranges have very poor housekeeping. Remington also indicated that housekeeping improvements have had a great effect on reducing exposures (Ex. 475–35). Good housekeeping is an effective and inexpensive aspect of controlling overexposure to lead dust.

(i) *Industry Profile.* There are 65 establishments employing a total of 7,700 workers in the production of small arms ammunition (SIC 3482). Shipments were valued at $436,200,000 in 1977. In addition, 81 establishments employ 13,000 production workers in the manufacture of ammunition other than that for small arms (SIC 3483). The 1977 value of these shipments are reported at $775.000,000.

In SIC 3482, two establishments with 250 to 499 employees produce shipments valued at $394,700,000. Forty establishments in this SIC employed less than five workers. In SIC 3483, $415,900,000 in shipments was produced by six establishments with 1,000 to 2,499 employees. Twenty-five establishments employed less than five workers (Ex. 476–20). Thus, there is significant market concentration in the production of small arms ammunition and less concentration in the production of other forms of ammunition.

If there are significant exposure problems in smaller companies, and if the costs of compliance with this regulation are large, smaller companies may be at a competitive disadvantage with the large producers. Some smaller companies might not be able to pass on the higher costs of production and would exit from the market, thereby increasing industry concentration. However, it appears that the current trend of increasing concentration will continue even in the absence of the lead regulation, and it is likely that the effect of OSHA on market concentration will be relatively small. Therefore, OSHA concludes the lead regulation is economically feasible for this industry.

4. Artificial Pearl Processing

(a) *Uses*

Artificial pearls serve as substitutes for natural pearls in jewelry manufacture.

(b) *Process Description and Exposure Areas*

United States plants manufacture the pearlescent coating; Japanese and Puerto Rican firms usually dip the pearls. (Ex. 22, p. 289)

Lead-based pigments, such as lead carbonate, are used as a base coat to cover the bead being coated. A pearlescent coating, quanine, is used to cover this base coat, resulting in a bead resembling a pearl.

(c) *Controls Currently Used*

The pearl coating is applied by spraying or dipping the bead into the pigment. Spraying is done in a booth with an exhaust hood system (Id.).

(d) *Exposure Levels*

No data were submitted indicating the extent to which workers may be exposed to lead as a result of the manufacture of pearlescent coating. However, data from comparable operations, such as the glazing of bricks, pottery or glass, in which lead based compounds are applied, indicate that levels in artifical pearl making may range from 0.002 (brick glazing), to 60 $\mu g/m^3$ (hand-dipping of pottery). The degree of exposure will vary depending upon many factors, including the degree of automation. The manufacture of the pigment, lead carbonate, is discussed in the lead pigment section.

(e) *Population Exposed*

The Short Report estimated that 50 people are exposed to lead as a result of this process in the United States (Id.). The number of workers exposed above and below 50 $\mu g/m^3$ is not known.

(f) *Additional Controls*

Ventilation controls appear to be effective in maintaining acceptable lead levels. The Agency believes that existing ventilation, when coupled with improved work practices and effective housekeeping, will be adequate to achieve the 50 $\mu g/m^3$ PEL. Where spontaneous high levels of exposure

occur, worker rotation may also be necessary.

Finally, nonlead based undercoats may be substituted for lead-based coatings in the pearlizer process (Id.).

(g) *Conclusion: Technological Feasibility*

None of the firms manufacturing artifical pearls submitted any exposure data or control technology data to OSHA, although the trade association for this industry was contacted. OSHA has extrapolated exposure levels from levels in comparable operations. The Agency believes exposures to be below 50 $\mu g/m^3$, in general, and that current controls will be sufficient to achieve compliance. No evidence or arguments to the contrary were offered by industry representatives who were contacted by OSHA. They did, however, indicate that compliance with the proposed standard of 100 $\mu g/m^3$ or the 50 $\mu g/m^3$ action level posed no problems for the industry.

OSHA concludes that compliance with the 50 $\mu g/m^3$ standard within 1 year is feasible for this industry.

(h) *Cost of Compliance*

None of the potentially affected firms in this industry offered any cost data to OSHA for use in this analysis of feasibility. Because exposures are presumed to be below the PEL, the industry need not enhance existing ventilation systems, establish additional work practice programs or improve housekeeping programs. Therefore, no significant costs will be attributable to the lead standard. If, however, exposures exceed the PEL, some minimal compliance costs may be incurred.

(i) *Industry Profile*

There were only six to eight firms in the United States working with pearlings or artificial pearls in 1976, each employing, at most, six workers (Ex. 22, p. 289) who were potentially exposed to lead. The greatly reduced demand for pearls over the past 10 years and the availability of less expensive imported pearls from the Orient have contributed to the reduction in the size of this industry (Id.). Sales of pearlescent pigments have dropped from an average of 200 pounds per customer order in 1960 to, at most, 3 pounds per customer order in 1976 (Id.). The economic impact of the OSHA lead regulation on this industry is expected to be negligible.

5. Automobile Manufacture/Soldering

(a) *Uses*

Soldering of welded joints with lead-tin solder may be necessary in auto body assembly. This is the major use of lead in the auto industry, although several other operations may also use lead products, e.g., spraying automotive bodies with lead-based paints or primers. Exposure to lead in these operations is covered under other industry classifications as appropriate.

(b) *Process Description and Exposure Areas*

In the assembly of an automotive body, it may be necessary to apply solder to some welded joints. Excess solder must then be removed to achieve a smooth finish of the joint. Removal of the excess solder is accomplished in solder grinding booths. These booths, which vary from about 100 to 200 feet in length, can accommodate a line of several car bodies, with about 6 feet on either side for the solder grind operators to work. These workers use grinding and finishing tools to remove excess solder and smooth the finish. The first operator in the line will use a relatively coarse abrasive, with successive employees using finer abrasives as the car body passes through the booth (Ex. 475–20). Other related operations in the automotive body shop where there may be some lead exposure are joint preparation, tinning, solder filling, door hanging, stud welding and metal finishing.

(c) *Controls Currently Used*

Industry, in general, has not found the exclusive use of engineering methods practical for controlling airborne lead produced by the use of power tools on solder. To control exposures, the automotive industry has developed exhaust-ventilation booths in which grinders must also wear air-fed helmets known as hoods. The industry has thus combined engineering controls with elaborate personal protective equipment. The Motor Vehicle Manufacturers Association asserted that "the technical state-of-the-art regarding engineering and administrative controls have (sic) been reached." (Ex. 28(36)) Refinements of the process, of course, are still possible. Two companies have reported some success with high velocity/low volume tool ventilation systems. (Ex. 26, p. 5–135)

Spokesmen for the United Auto Workers Union (UAW) suggested that not all feasible engineering controls have been installed. Dr. Mirer, for example, testified that "the essential engineering design feature of the grinding booth is that it is a negative pressure enclosure that seeks to contain the airborne lead, but the design specifications do not include measures to reduce the airborne lead by such measures as a downdraft or a specified capture velocity downwards." (Tr. 5252) Frank Nix, health and safety representative for UAW Local No. 10, stated that, in his plant, particles are thrown out of both ends of the booth and, because the car bodies do not go through a water wash after grinding, subsequent workers on the assembly line are exposed to lead. He also expressed concern about lack of a grinding booth for repair work. (Tr. 5242–47)

(d) *Exposure Levels*

Data submitted as part of variance requests by Chrysler, Ford, and General Motors indicated that lead levels in solder/grind booths were far in excess of the 50 $\mu g/m^3$ standards (Ex. 476–77, 80). Data have not been submitted by other vehicle manufacturers which indicate the levels of exposure in their operations.

Some vehicle manufacturers have been successful in controlling lead exposures during solder grind operations. One manufacturer had lead levels of 231 $\mu g/m^3$ (TWA) prior to installing a solder grind booth. After installation of engineering controls, lead levels were reduced to 17 $\mu g/m^3$ and 40 $\mu g/m^3$ (Ex. 476–16, #TO–3). In another instance, lead levels were 907, 63 and 180 $\mu g/m^3$. After substitution of epoxy resins, lead levels were non-detectable.

(e) *Population Exposed*

The Short Report estimated that between 13,000 and 15,500 employees are potentially exposed to lead in all operations in this industry. (Ex. 22, p. 214) The record does not contain data permitting an estimate to be made of the number of workers exposed to lead from the soldering process or at what levels.

(f) *Additional Controls*

Maintenance of solder grinding booths is of the utmost importance in attempting to achieve exposure levels below 50 $\mu g/m^3$. In addition, work practices must be strictly adhered to and employees must be educated with respect to safe work practices. Vacuuming of surfaces (preferably wet) and maintenance of stringent housekeeping programs will also be necessary for this industry to minimize exposure levels. Worker rotation may be necessary.

(g) *Conclusion: Technological Feasibility*

Dr. Mirer stated that "ultimately, the only solution is engineering the solder out of the car body by redesign of the body or finding a substitute material for filling out the seam." (Tr. 5249) OSHA agrees with this statement. In fact, industry has already reduced the use of solder in automobiles by substituting plastics and epoxies. One line of cars has totally eliminated the use of solder in production. (Ex. 26, p. 5–133)

General Motors and Chrysler (Ex. 476–77) have petitioned for, and received, a permanent variance from the lead and arsenic standards (45 FR 46922, 45 FR 74096). Ford's application is still pending with the Agency. (Ex. 504B) The variances permit the continued use of air-supplied respirators while the automakers engineer the solder out of the auto body. OSHA granted the variances because: (1) Each company has committed itself to eliminate the need for lead solder in the auto body assembly process by redesigning certain exterior solder joints; and (2) during the interim, employee health is being protected by the use of personal protective equipment.

In their applications, three major automobile manufacturers have admitted that it is technologically and economically feasible for them to eliminate the use of lead solder within seven years (See, e.g., Ex. 476–80; Ex. 504B; 504C). No comments have been received from the remaining automobile manufacturers, but there appears to be no reason why they should not similarly be able to eliminate lead solder within seven years. For this reason, OSHA finds that the auto industry has an economically and technologically feasible means of complying with the lead standard.

Accordingly, OSHA has decided to regulate the automobile industry in accordance with the mutually agreed upon variances and has extended the compliance time for this operation to seven years from the effective date. The table in paragraph (e)(1) of the standard has been amended to reflect this decision.

Some firms may choose not to engineer solder out of the auto body design because they can achieve compliance through the application of engineering controls to existing equipment and work practices. The record indicates that in some plants engineering controls are being used to achieve compliance with the 50 $\mu g/m^3$. (Ex. 476–16, #TO–3). In addition, emphasis should be placed on the importance of housekeeping, booth maintenance, work practices, and worker rotation in achieving compliance with the standard.

6. Book Binding

(a) *Summary*

No person could be located who had any knowledge of lead exposure in the book binding process itself. However, it appears that if lead is present, it is in the form of a bonding agent or adhesive.

Contacts were made with the Binding Industries of America, Book Manufacturer's Institute, Library Binding Institute, and the Guild of Book Workers (Ex. 22 p. 259). These organizations indicated that they were not aware of problems with lead exposure resulting from lead use in book binding. If exposures are present they are clearly below the action level.

7. Brick Manufacture

(a) *Uses*

Bricks have many uses in construction and repair work. Tiles are thin brick-like structures used for facings.

(b) *Process Description and Exposure Areas*

Red or yellow bricks or tiles are made from clay. As the clay comes from the pit or storage bins, it is ground in dry pans and carried to a pug mill, where it is tempered with water to give it a stiff, mud-like consistency. From the pug mill it is forced by an auger screw through a steel die to the shape and size desired for the finished ware. The clay issues from the die head as a continuous column. A few feet from the die head, a cutter, generally automatic and consisting of piano wires set at proper distances on a jog (movable frame), cuts the column into the correct lengths. The cut raw ware continues on a belt conveyor, from which it is transferred to a dryer car. From the dryers, the ware is taken to the kiln (usually of the downdraft type) for firing (Ex. 476–5G).

In districts without clay resources, bricks are made from sand, or crushed sandstone mixed with approximately eight percent hydrated lime. Sand and water are added to create a dough which may be shaped in presses. The new bricks are loaded on small trucks and pushed into autoclaves. This operation is called "curing" and corresponds to the firing of the red clay bricks.

Firebricks are the material used in the construction of linings for open-hearth steel furnaces, for iron and other blast furnaces and stoves, for cupolas, calciners, and many other types of chemical engineering apparatus. They are used to line fireboxes and furnaces.

Bricks may be glazed prior to being fired or autoclaved. Glazing compounds are usually applied to facing bricks and tile to provide a smooth coat or finish (Ex. 476–5G). Glazes are usually applied automatically by spraying.

Lead exposure results primarily from the application of lead-based glazes on bricks. There appears however, to be limited industrial use of these glazes (Ex. 476–81, 82, 83). Exposure may also occur at the kiln area when glazed bricks are being fired.

(c) *Controls Currently Used*

The brick manufacturing industry already uses extensive control technology, consisting of mechanical handling and mixing of clays, automated material conveyance systems, automated glazing operations, and ventilation in kiln areas, to control worker exposure to crystalline silica. These controls also reduce lead exposures. (Refractory Institutes submissions to ANPRM for crystalline silica).

(d) *Exposure Levels*

A NIOSH Health Hazard Evaluation at the Colorado Brick Company (Ex. 476–84) found that of 10 lead samples taken at the furnace area, all levels were 0.002 $\mu g/m^3$, far below the 30 $\mu g/m^3$ action level. Data supplied by one manager of a large brick manufacturing facility also indicated that "no exposure exists in the industry." (Ex. 22, p. 203)

(e) *Population Exposed*

No information regarding the number of workers exposed to lead during brick manufacturing was furnished by the industry. Because exposure levels are so low, however, OSHA assumes that only a small percentage of brick workers are exposed in this industry.

(f) *Additional Controls*

No additional controls will be needed to reduce lead levels to below 50 $\mu g/m^3$ in this industry. The data indicate that exposure levels are currently less than 50 $\mu g/m^3$ with existing controls.

(g) *Conclusion: Technological Feasibility*

Based on record information it appears that this industry is already in compliance with the 50 $\mu g/m^3$ limit. Therefore, requiring compliance with the standard within the one year period is technologically feasible.

(h) *Conclusion: Economic Feasibility*

This industry will not have to improve existing ventilation equipment, train employees in proper work practices, enhance existing housekeeping or rotate

workers, and therefore expenditures need not be made by this industry to comply with the lead standard. Therefore, no costs of compliance nor any economic impact will be incurred as a result of this standard.

8. Cable coating

(a) *Uses*

Lead-sheathed cable is used to weigh down underwater cable; eliminate air, water or corrosive substances; as a rodent control; or in tinning processes where the ends of steel wires are coated prior to being joined. Also, lead soaps may be used as lubricants during the installation of locomotive and power equipment control cables. (Ex. 22, p. 299)

Information regarding this industry was provided by several sources, some of whom requested that their identities remain confidential. One source indicated that the domestic use of lead-jacketed cables has declined. Production is now limited to three companies: Perelli at Union, N.J.; Okonite at Ramsey, N.J.; and Phelps Dodge at Yonkers, N.Y. (Ex. 476–88). Reportedly, lead is still being used to jacket cable for some underwater uses (Ex. 476–88) and for use in insulated high voltage cables (Ex. 476–87). In addition, lead is being used in the process of tinning stranded wires (Ex. 476–89), and is also used by the telecommunications industry (Ex. 475–22). Apparently, at least one company, Keyrite, is involved only in the splicing of lead-jacketed cable (Ex. 476–92).

Although lead-sheathed cable is still manufactured by certain companies, the use of led cable is declining and is being replace by aluminum, which is lighter, cheaper, easier to extrude and less toxic to the environment. Lead, as a jacketing material, is also being replaced by rubber, nylon, polyvinyl chloride, paper cloth and plastics (Ex. 22, p. 299).

(b) *Process Description and Exposure Areas*

Prior to pressing, the wire needed for coating is made by drawing a hot-rolled wire rod through one or more dies to decrease its size and enhance its prhysical properties. The wire rod is rolled from a single billet and cleaned in an acid bath to remove scale, rust or any protective coatings.

Single-draft or continuous drawing processes may be used. In single draft, a coil is placed on a reel or frame and the end of the rod pointed so that it will enter the die. The end is grasped by tongs on a drawbench and pulled through to appropriate lengths for winding around a drawing block or reel (Ex. 476–5K). In continuous drawing, wire is fed through several dies and drawn blocks are arranged in series. This permits maximum drawing in one operation before annealing is necessary (Ex. 476–5K).

Lead powders are mixed at coating blenders and conveyed to press areas where coatings are pressed into the wire by pressurized steel dies (Ex. 476–5K). The lead-sheathed cable is then passed through a water bath to cool the materials prior to winding (Ex. 22, p. 300).

Tinning is frequently used as a coating prior to bonding or soldering. This process involves the dipping of the workpiece in a molten tin-lead bath. Often, the molten metal is quenched in cold acidified water or warm soapy water so that bonding or soldering may be performed sooner (Ex. 476–4A).

Operations in the lead coating process (which presents the greatest exposure hazard) are the lead press, coating blender, pulverizing and catching operations, mixer operations, and stripping operations at wire drawing machines (Ex. 22, pp. 299–301). Reports concerning the tinning process stated that mixing of the tin-lead solution created the highest lead exposure (Ex. 476–89). No specific exposure problems were associated with lead cable splicing operations (Ex. 476–92).

(c) *Controls Currently Used*

Several companies already maintain very low exposure levels because of their excellent ventilation systems (Ex. 22, p. 301). Another source agreed with this comment, stating that lead exposures are generally well controlled (Ex. 476–92). Dr. Billings of Johns Hopkins University also indicated that simple, straightforward technology is effective to control lead exposures in cable coating. He noted, "If it is an industrial situation, and the control technology will work, (and) there is no reason why it wouldn't; if you are coating a cable, and you have a machine that is doing it, then you can put control technology on a machine" (Tr. 146).

Exposures within the cable coating industry are generally low (Ex. 22, p. 303) and most companies maintain ventilation systems. Ventilation systems on the processes were described as simple, straightforward hood and duct designs, already existing in the plant. One company involved in lead coating operations uses vacuum charge presses in batch operations processing 700-pound charges. Twelve employees are engaged in these operations, which produce 15 percent of all domestic lead-coated cable (Id.).

A second lead-cable coating processor reported that standard hooding and duct ventilation equipment had been on its machines for years. This company has 9 employees with potential lead exposure and produces approximately 33 percent of the domestically manufactured product (Ex. 476–91).

In general, local exhaust ventilation must be used at lead presses, stripping (wire drawing), compounding, and soldering operations (Ex. 22, p. 301). Handling and mixing of lead powders is the most difficult operation to control. The process should be automated and controls such as those described for similar materials handling operations in pesticides, pigments, and plastics and rubber production should be used. Therefore, even in the most difficult to control operation, mixing, feasible engineering controls are available to reduce exposure. (Ex. 476–89).

(d) *Exposure Levels*

Initially, the Short Report (Ex. 22, p. 300) reported exposure levels of 500 $\mu g/m^3$ in the blending rooms, 140 $\mu g/m^3$ in the duct, 37 $\mu g/m^3$ for the catcher, 20 $\mu g/m^3$ in the coiling department, and 30 $\mu g/m^3$ in the mixer. Most companies reported both areas of high level exposure and areas of low exposure (Id.). More recent data, however, indicate that lead levels in some operations are well below the 30 $\mu g/m^3$ action level. In fact, actual breathing zone samples furnished by one company's insurance carrier indicated that lead levels of 3, 5.5 and 13 $\mu g/m^3$ exist (Ex. 476–91). Several companies indicated that these low exposure levels are maintained because of their excellent ventilation systems (Ex. 22, p. 301).

Despite low air-lead levels, several high blood lead levels were reported. In two instances, however, industry sources attributed the few elevated blood lead levels among cable-coating employees to poor personal hygiene rather than elevated airborne concentrations (Ex. 476–89).

(e) *Population Exposed*

The Short Report estimated that 40 cable companies processed lead sheathing and assumed that 105 employees were employed by each company for a total of 4,200 persons potentially exposed to lead (Ex. 22, p. 301). However, more recent data indicate that only three companies make lead sheathing and one of these companies has estimated that only nine of its employees are exposed to lead (Ex. 476–91). Assuming that 9 is an average number, approximately 27 employees would be exposed to lead in this industry. Information is not available indicating how many

employees are exposed above or below 50 $\mu g/m^3$. Additional number of employees may be exposed in tinning operations and during the application of lead soaps as lubricants in the locomotive and power control cable operations. However, the total number of such affected employees is unknown.

(f) *Additional Controls*

Recent data submitted to OSHA indicate that additional engineering controls will not be necessary (Ex. 476–89, 90, 91). Although, improvement and maintenance of existing controls will be needed (Ex. 22, p. 300). Increased housekeeping may also be necessary (Id.). Emphasis should be placed on personal hygiene practices to reduce some elevated blood lead levels which have been attributed to poor hygiene practices rather than high airborne concentrations (Ex. 476–89).

(g) *Conclusion: Technological Feasibility*

This industry appears to be in compliance with the existing 50 $\mu g/m^3$ standard, or nearly so in most cases (Ex. 476–89, 90, 91). The industry has achieved compliance through the appropriate use of ventilation equipment (Ex. 22, p. 301, Ex. 476–91). Firms not yet in compliance can use other measures such as equipment maintenance, housekeeping and worker rotation to attain the PEL within one year. The industry realizes the importance of worker training and has indicated that poor personal hygiene has resulted in elevated blood levels (Ex. 476–89). Through proper training in appropriate work practices, the firms currently having difficulty with elevated blood lead levels should be able to eliminate this problem.

(h) *Costs of Compliance*

Manufacturers of lead-coated, sheathed or jacketed cable have not presented cost estimates for complaince with this standard. Costs of compliance may be incurred as a result of maintenance and housekeeping activities. These costs will be relatively low when compared to use of more costly engineering controls to achieve compliance.

(i) *Industry Profile*

Of all the domestic producers of cable, only three remain in the lead-sheathed or coated cable industry. The three firms, Perelli Company, Okonite, and Phelps-Dodge, are located in close proximity to each other in New York and northern New Jersey. The record also indicates that Japan produces a significant quantity of lead-sheathed cable; however, there is no evidence of domestic competition with Japanese cable or of Japanese exports of this product to the United States. (Ex. 476–88)

The public record shows that power cable, formerly insulated with paper and coated with lead, is now insulated with polyethylene and covered with plastic, other synthetic, or aluminum jackets (Ex. 22, pp. 299–301). These substitutions have occurred in most cable products. Exceptions are underwater cable and other applications requiring mechanical strength (Ex. 22, pp. 299–301) and, possibly high voltage paper-insulated cables (Ex. 476–87). In addition to some performance problems associated with lead cable, there is a strong economic incentive to substitute other coatings because of the high costs associated with repairing lead cable (Ex. 476–87).

(j) *Conclusion: Economic Feasibility*

In summary, the declining use of lead cable, the curent low exposure levels, and the minimal compliance costs have convinced OSHA that the economic impact of the lead standard will be insignificant in this industry. Moreover, in those few markets where the performance of lead cable cannot be matched by substitutes, the continued demand for these products will permit producers to pass on a significant part of these costs to the purchasers of the cable.

9. Collection and Processing of Lead Scrap:

(a) *Uses*

The lead scrap from radiators, solder, telecommunications parts, cables, sheet lead, batteries, lead bearing dross, etc., are received by waste recyclers which sort, pack and ship the scrap lead to secondary lead smelters. (Tr. 245–246) The recycler may melt the scrap prior to shipment in an effort to handle the scrap more efficiently. (Id.). However, Mr. Ness, of the National Association of Recycling Industries, indicated that waste recyclers usually do not melt scrap. (Ex. 476–103) More than half of the lead scrap recycled in secondary lead smelters consists of used lead-acid batteries (Ex. 476–319, p. 341). This section does not apply to recyclers who process scrap lead as part of a secondary smelting operation. In addition, scrap processing of gold, silver, platinum, copper, zinc, brass and bronze are discussed as secondary smelting processes, in the appropriate sections.

(a) *Battery Breaking*

(i) *Process Description and Exposure Areas.* Battery breaking is accompished by various methods. (1) Quick acting guillotine devices may be used to cut the battery in half, after which the lead-bearing contents are emptied from the case and the case discarded. (2) Batteries may be ground in a mill and the lead-bearing materials separated from the case through flotation. (3) Batteries may be run over by large tractors, after which the lead-bearing materials are separated from the case. (4) The top of the battery may be cut off, using a hand saw, or slow-moving guillotine shears may be used to separate the top of the battery case from the battery. The contents of the battery are then emptied out and the case discarded (Ex. 476–319). Battery breaking has traditionally been one of the most difficult operations in which to control exposure to lead; exposures to acid mist and lead have been high (Ex. 476–319).

In recent years, polypropylene cases have replaced hard rubber cases. Polypropylene batteries can be charged to the blast furnace in larger quantities than the rubber-cased batteries. Typically, however, these batteries must also be broken so that efficient heating and smelting can occur in the blast furnace. (Ex. 476–319)

The primary exposure hazards resulting from the battery breaking operation are lead particulate and acid mist. Further, acid mist, lead sulfate and lead oxide may become airborne during the process of shearing the battery top, emptying the battery case, and transporting lead materials from the battery breaking building. Lead becomes airborne through two basic mechanisms: (1) The mechanical action of shearing, emptying, etc., which causes leaded mists and particulates to become airborne; or (2) the drying of lead oxide on adjacent surfaces which are then redispersed into the air by the agitation of heavy equipment. (Ex. 476–319).

(ii) *Controls Currently Used.* The chief method of exposure control require that all surfaces be wet to suppress dusts; that enclosed exhausted plastic battery shredders be used; that equipment or operations which would tend to provide energy for pulverization be avoided; and that slow-moving hydraulic shears be used to remove battery tops. The shear, the batteries, the floor, the conveyor belts, and all equipment in the building may be kept wet with automatic and manually applied water sprays. This approach is intended to minimize the secondary introduction of contaminants into the air (Ex. 476–319).

With polypropylene battery shredders, lead mists may be controlled through the use of an enclosed negative-pressure exhaust system coupled with a venturi/cyclone contaminant separator. The scrubber consists of a primary venturi scrubber, a secondary venturi scrubber, and a cyclone. The polypropylene shredder costs approximately $150,000 in 1974. It is capable of processing 1,000 batteries per hour, and is designed primarily to increase the production rate rather than as an environmental control for lead exposure. (Id.)

These controls are found in some operations. However, many scrap companies do not apply the technology that the more advanced plants have. Some still do not use ventilation at battery saws, dumping stations, or at guillotine knives. (Ex. 26, pp. 5–31). Side terminal batteries and industrial batteries may also be broken manually, with no controls to protect employees.

(iii) *Exposure Levels.* Exposure levels in battery breaking operations have been estimated to average between 50 and 150 $\mu g/m^3$ of lead (Ex. 476–319, p. 347). Battery breaker levels ranged from 107 to 785 $\mu g/m^3$; control room levels were measured at 31 to 86 $\mu g/m^3$, and levels outside the building were 149 to 359 $\mu g/m^3$. (Id.). The Short Report concluded that exposures in battery breaking operations would pose no significant problem if the plates were kept damp (Ex. 22).

(iv) *Population Exposed.* Mr. Ness, of the National Association of Recycling Industries, indicated that there are approximately 7,000 to 8,000 scrap processors (Ex. 476–103), with approximately one to ten workers per plant (Ex. 476–) No data are available which indicate how many workers may be exposed to lead above or below 50 $\mu g/m^3$.

(v) *Additional Controls.* The control data available were taken from one battery breaking operation. Other battery breakers with similar capacities will be required to use a comparable degree of technology, including automated battery shredding or shearing of some sort (Ex. 476–319). In smaller operations, the wetting of all surfaces with manually applied sprays and the use of local exhaust ventilation equipment may be relied upon to reduce exposures.

Of utmost importance is maintaining working surfaces and areas as free of accumulated lead dust as practical. Scrupulous attention to immaculate housekeeping forms an important strategy for compliance regardless of the size of the operation (Ex. 480).

The control technology necessary to achieve a 50 $\mu g/m^3$ standard in battery scrap processing is available. These technologies include containment, suppression using water, use of local exhaust ventilation, and mechanized handling of materials (Tr. 248). In addition, preventive maintenance, work practices and vacuum systems for housekeeping also can be used to reduce the concentrations of airborne lead (Tr. 248). On a large scale, battery breaking, in general, may be replaced by methods discussed in the secondary smelting section of the final standard (Ex. 476–319).

The data also indicates that lead levels outside of the battery breaking plants are in excess of 50 $\mu g/m^3$ (*Id.*). Where possible, compliance with ambient air standards should also compliment control of lead in the occupational setting by prohibiting the re-entry of lead into the work environment.

Benjamin Wake, an OSHA expert witness, concluded that the 50 ug/m^3 level is achievable in most operations, most of the time, using available control options. This concludion seems appropriate (Tr. 249).

(b) *Processing of Lead Scrap from Radiators, Solder, Telecommunications Parts, Cables, Lead Sheet and Lead Bearing Dross*

(i) *Process Description and Exposure Areas.* Scrap may be merely cut, bundled and shipped to secondary smelters or may be melted, cut, bundled and shipped. Processors of scrap fall into two broad categories: melters and non-melters. (Tr. 245–246).

Non-melters may be scrap processors who handled dross and flue dust. They must ship, transfer, load, unload, weigh and store the scrap. The potential for lead exposure occurs at all handling operations and in mechanized processes at transfer points. (Ex. 22, pg. 143)

The Metal Salvage Company of Salt Lake City, Utah, is another type of non-melting scrap processor. It receives scrap lead sheets, radiators, etc., and sorts, chops or cuts, and bales or bundles the lead scrap to be sold to secondary smelters (Ex. 476–102). It does not melt lead scrap, nor does it process dross or flue dust (Ex. 476–102). Further, no battery breaking is done. Melters may be companies such as Keystone Resources, of Mars, Pennsylvania, which, in the past, remelted lead from telecommunications equipment, cables, and boxes. Part of the process involves the stripping of lead from the wires prior to melting (Ex. 476–101).

(ii) *Controls Currently Used.* The technology available and currently being used by these scrap processors includes water sprays to suppress dusts and local exhaust ventilation (Ex. 476–101). Melting pots are provided with exhaust ventilation (Ex. 476–112).

(iii) *Exposure Levels.* Little exposure data was provided to OSHA (Ex. 476–94, 96, 101, 102). Some companies, however, did indicate that controlling lead exposure presents no problem (Ex. 476–101, 102). These firms represent both melters and non-melters. One company stated that they are very close to compliance with the 50 $\mu g/m^3$ standard. (Ex. 476–112)

(iv) *Population Exposed.* No data was available on the number of workers exposed. The number of workers employed by scrap processors appears to range between 6 and 25 (Ex. 476–93–117). Since available exposure data indicates that many of these companies may be nearly in compliance with the standard, OSHA estimates that the number of exposed employees exposed above 50 $\mu g/m^3$ is probably very small.

(v) *Additional Controls.* Based on the data available, controls other than those existing and already applied in some cases, are probably not necessary (Ex. 476–101, 112). The melting scrap processor, that indicated that it was in compliance used both wet suppression and local exhaust ventilation (Ex. 476–101). The processor that used only exhaust ventilation was very nearly in compliance. (Ex. 476–112) The processor that did no melting did not indicate that any controls were necessary and mentioned no compliance problems. (Ex. 476–101). Thus the application of controls already existing within the industry seems sufficient to achieve compliance. (Ex. 476–102, 112).

(c) *Conclusion: Technological Feasibility.* The National Association of Recycling Industries argued extensively regarding the infeasibility of collectors and processors as well as secondary smelters and refiners in achieving compliance with the 50 $\mu g/m^3$ limit. Basically, the Association contends that collectors and processors should have the same 5 to 10 years compliance period as do secondary smelters and refiners. They also stated that "these small collectors and processors cannot comply within one year much less through the use of respirators alone." (Ex. 447–17, 478). In its post-hearing submission, the Association argued that is it "technologically infeasible for these additional scrap collectors and processors to comply with the OSHA lead standard—without the continued use of respirators in most of their operations." (Ex. 498, p. 37)

It appears to OSHA that the industry, apart from alleging that it cannot comply

with the standard has not provided the Agency any consistent evidence as to why compliance is not feasible. OSHA has repeatedly requested this Association to provide data on exposure, on controls being used, and on controls to be implemented. However, all the Agency has received are assertions that it is not technologically or economically feasible for the industry to comply. On the contrary, OSHA concludes that the controls discussed in the general feasibility section of this document could also be used to reduce exposures in the recycling industry.

NARI contends that most scrap handlers only handle lead scrap occasionally and also that they are small businesses that lack the resources to implement costly controls. As a result of these factors, NARI believes OSHA should designate collectors and processors of scrap as part of the construction industry and thus relieve them of the burdens of complying with the standard (Ex. 498, p. 37).

OSHA notes that while the construction industry is not covered by *this* lead standard, it is covered by a lead standard in Part 1926. The attempt to analogize the recycling industry validity in the NARI arguments for concluding that being a small business or handling various kinds of scrap (some of which contain lead, and some of which do not) warrants exemption from the standard. In fact, the intermittent nature of processing leaded scrap could, itself, serve to maintain levels below 50 $\mu g/m^3$.

Also, based on the data submitted to the record, it appears that in processing scrap, other than batteries, the simplest control technologies are being used, including wet suppression and local exhaust ventilation (Ex. 476–101), with substantial success. Many of the companies that supplied data to OSHA were small businesses (less than 10 employees) who indicated that lead exposure posed no problem (Ex. 476–101, 102). Perhaps, this is because they did not envision, nor anticipate, constructing the grossly exaggerated solutions suggested by NARI, but instead used the simplest of controls (water suppression and portable exhaust ventilation) to reduce lead levels.

Melting operations may require somewhat more effort for exposure control. However, as one commenter contended, melting pots are provided with exhaust ventilation (Ex. 476–112). Containment of fugitive emissions from melting pots is a standard operation with many different industries using general ventilation, local ventilation at emission points, negative pressures, maintenance of seals, etc., to achieve compliance with many standards, in addition to lead. These controls are "tried and true" and used by industry as a whole, as noted by Billings and First. (Ex. 487, 104).

Battery breaking operations may require that some firms use extensive controls to achieve compliance with 50 $\mu g/m^3$ if only the use of engineering controls and work practices are employed. Extra efforts may be necessary to encourage use of automated materials handling operations. However, this industry appears to be adding more automated production equipment to increase productivity and this will also achieve worker protection as a benefit. Once again, materials handling controls, are controls that are used by industry as a whole and are generally applicable to all situations (Ex. 487, 104). However, extensive use of engineering controls will only be necessary when very few controls currently exist. Also, the industry should consider the positive effects housekeeping alone would have on dust suppression. In addition, the less costly alternative of worker rotation could also be used effectively to achieve compliance with the 50 $\mu g/m^3$ limit. Those firms not in compliance should look to the implementation of a variety of control techniques and use such interchangeably to achieve compliance.

For manual battery breaking operations done by sole proprietors or small operations, compliance will not be difficult only if proper consideration is given to controls available. For example, portable ventilation units are available and can be purchased very inexpensively. In addition, the less costly alternatives of worker rotation, wet suppression, etc., may be used. It should be noted, however, that as battery breaking operations become more automated, the larger companies which adopt these processes can sell scrap lead at a lower price, which will affect the markets of the small operators.

This industry can comply with a 50 $\mu g/m^3$ standard and, in some cases as previously discussed, has already complied with the standard. The engineering controls used are readily available with the only problems in implementation, in some cases, stemming from the fact that very little in the way of controls was done in the past. Most change in this industry has come about as a result of process productivity (battery breaking) with little thought being given to safety and health related changes. However, OSHA has allowed this industry, as well as others, to use worker rotation to achieve compliance with the 50 $\mu g/m^3$ PEL and, even in the very smallest of operations, hiring one more individual may prove the least costly alternative for complying with the standard.

(d) *Cost of Compliance*

The record contains sparse and unsupported industry estimates of costs of compliance in some scrap facilities. One recycler of lead scrap reported that the installation of a water spray system (costing $6000) and the use of administrative controls were effective in achieving compliance with the standard (Ex. 476–100). Another recycler had a 20 ton remelting operation in which all pots were equipped with exhaust hoods. These hoods were installed at a cost of $15,000 and the firm was reported to be very close to compliance with the standard. With increased attention to personal hygiene, the firm expected to achieve full compliance (Ex. 476–112).

The majority of scrap recyclers are not remelters, therefore, potential compliance costs for most firms will be low. Remelters may require more significant investments in ventilation equipment. A multifaceted approach to reducing air lead levels can result in cost-effective compliance with the lead standard, while simultaneously controlling exposures to other toxic substances present in scrap.

(e) *Industry Profile*

There are an estimated 7428 establishments in SIC 5093, Scrap and Waste Materials (Ex. 476–109). These establishments are primarily engaged in collecting, cleaning, breaking, sorting, chopping, baling, and distributing all types of scrap for delivery to remelters and secondary smelters (Ex. 476–103). The public record indicates that approximately 4000 to 5000 of these establishments employ a total of 40,000 workers to handle lead scrap (Tr. 246). These scrap processors, however, do not ordinarily melt lead (Ex. 476–103) and, in fact, it is estimated that only 200 of these establishments may perform remelting operations (Tr. 246).

There is evidence to support positive prospects for the scrap industry in the future. There is a continuing national emphasis on the recovery and reuse of natural resources (Ex. 476–106). In addition, current deposits of lead-bearing ores are diminishing (Ex. 476–108).

Firms within the industry are widely distributed across the nation with concentrations in California, New York, Pennsylvania, Illinois, and Texas (Ex. 476–109). Because of the high cost of transportation, it is unlikely that

potential increases in price as a result of compliance would cause major changes in market structure or increased concentration. During ebbs in the business cycle, scrap dealers may be forced to cut prices if their customers, also complying with the lead standard, attempt to shift costs back to them. However, on balance the potential economic impact on this industry should be negligible, since the firms that enage in remelting operations are generally the larger firms that will be able to afford any required additional capital investment. The smaller firms do not ordinarily melt lead and, therefore, will face few new compliance costs.

10. Copper Smelting

(a) *Primary Copper Smelting*

(i) *Uses.* The largest use of copper is in electrical equipment and supplies. Electrical instruments and test equipment, power distribution systems including transformers, switchgears, and electrical lighting and wiring equipment require large quantities of copper. Copper also has widespread uses in the construction industry, in the production of nonelectrical industrial machinery, and in the transportation industry (Ex. 476–122).

There are 15 primary copper smelters in the U.S. Seven of them are located in Arizona. Most of the firms engaged in the smelting of copper ore also engaged in the mining, beneficiation, refining and fabrication of copper products and in the processing of other non-ferrous metals such as arsenic, lead, zinc, gold, cadmium, etc. (Ex. 476–119).

(ii) *Process Description and Exposure Area.* Pyrometallurgical smelting methods are used extensively in the United States to produce copper from sulfide ores. These ores usually contain less than one percent copper when mined and, therefore, must be concentrated before being transported to the smelter. This is accomplished by crushing, grinding, and flotation operations at the mine site. The sulfur content of the concentrate is generally 25 percent and the water content 10 percent. Some concentrates also contain boron, antimony, precious metals and other heavy metals (Ex. 476–118).

The operations for pyrometallurgical copper smelters in the United States include roasting, reverberatory or electric furnace smelting, and conversion to produce blister copper from concentrate. The remaining impurities are usually removed by fire refining and electrolytic refining. About half of the smelters in the United States do not use the roasting step, but instead feed wet or "green" charge directly to the smelting furnace. The roasted product, called calcine, serves as a dried and preheated charge for the smelting furnace. Either multiple-hearth or fluidized-bed roaster furnaces are used for roasting copper concentrate (Ex. 476–118).

After roasting, the copper concentrate is smelted. In this process, hot calcines from the roaster, or raw, unroasted concentrate are fused with limestone and siliceous flux in reverberatory or electric-arc furnaces to produce copper matte. Slag floats on top of the molten bath and is removed continuously. Copper matte remains in the furnace until poured (Ex. 476–119).

The final step in the production of blister copper is converting. Converting is normally performed in a Pierce-Smith shell. An opening in one side of the converter functions as a mouth through which molten matte, siliceous flux, and scrap copper are charged to the converter and gaseous products are vented. Air or oxygen-enriched air is blown through the metal to form a slag, which floats on the surface, and pure Cu_{2s}, which is collected on the bottom of the coverter. After removal of the slag, a renewed air blast oxidizes the sulfur into SO_2 leaving blister copper in the converter (Ex. 476–118).

Blister copper usually contains from 98.5 to 99.5 percent pure copper. Impurities may include gold, silver, antimony, arsenic, bismuth, iron, lead, nickel, selenium, sulfur, tellurium and zinc. To further purify the blister copper, fire refining and electrolytic refining are used. In fire refining, air is blown through the metal to oxidize remaining impurities.

The principal sources of lead exposure are the solid particulate materials in handling circuits and the vaporized metal oxide fumes from pyrometallurgical processes (Ex. 481). Materials handling exposures result from the handling of the ores and the calcine, matte, etc. Pyrometallurgical emissions result from roasters, reverberatory furnaces, converters, and other processes associated with the use of these furnaces.

The principal source of fugitive emissions from roasters is the process of removing hot solid calcine from the roaster. Both lead dust and residual sulfur dioxide may be released. When the process also involves dumping the calcine into cars for transfer to the reverberatory furnace, as is the case with some multiple-hearth roasters, the sudden dissipation of kinetic energy as the calcine strikes the car causes the generation of a puff of lead dust and trapped gases. Emissions may also result from leaks in the roaster (Ex. 476–118).

Reverberatory furnaces produce molten matte from either "green" charge or calcine. Charging and tapping of the furnace are carried out intermittently while melting continues. Although the furnace operates at slightly less than atmospheric pressure, the charging operation is conducted through openings in the furnace from which some lead dust or fume and sulfur dioxide may escape (Ex. 476–118).

Molten matte is removed from the furnace through tap holes which are normally plugged. During tapping, the holes are opened and the matte flows through channels called launders to ladles. Most furnaces have two or three matte tap holes on each side. Because the matte is still close to furnace temperature as it is removed, the remaining sulfur (in the form of sulfides) can continue to oxidize, outside of the furnace, for a time, forming sulfur dioxide. Oxides of volatile metals may be emitted also as materials are transported to the converters (Ex. 476–118). The less dense slag that floats on top of the matte in the reverberatory furnace is also removed periodically through slag tap holes and launders. Some emissions result from this operation but they are generally not as intense as those from the matte (Ex. 476–118).

(iii) *Controls Currently Used.* At the materials handling stage, jaw crushers are used to crush and grind the ore which is then sent to bedding bins. Typical controls include: the mechanical conveyance of ores to the jaw crusher; containment of the dust through the elimination (by redesign or use of dead drops) of long material drops; belt wipes; conveyor curtains and skirts; ventilation hoods at materials handling points; complete enclosure of conveyors; liquid sprays to suppress dusts; vacuuming (wet) of spilled materials; and the use of clean air pulpits for workers operating mechanical conveying systems (Ex. 481).

Pyrometallurgical processes may be controlled by using various ventilation control schemes, depending upon the equipment used in the process and the emission sources.

Reverberatory furnaces are constructed of refractory bricks. Because of the need to allow room for thermal expansion, it is difficult to design a leakproof furnace. Leaks in reverberatory furnaces may be sealed by the spraying of a slurried refractory (Ex. 476–118).

Fugitive emissions associated with copper converting generally result from ineffective capture of fumes and sulfur

dioxide during certain phases of the converter operation. During blowing, the exhaust hood placed over each converter generally fits rather tightly; thus, fugitive emissions are minimal. The fit is not perfect, however, as there must be a gap between the hood and the opening to prevent freezing of the hood to the converter as a consequence of molten copper splashes. A chain-curtain closure is sometimes used at the edge of the hood to minimize this gap while still providing durability and flexibility. A metal skirt is sometimes used to improve the seal and minimize deterioration of the converter. In a properly designed system it is possible to collect nearly all of the emissions during the "roll-in" and blowing phases (Ex. 476–118).

Automatic damper controls are generally used to prevent excess dilution air from being drawn into the system, while at the same time maintaining effective fume collection from most phases of converter operation. If the damper control point is improperly set, or if the charge level in the converter is higher than normal, fugitive emissions can result (Ex. 476–118).

When the converter is rolled out for the pouring of either slag or blister copper, the hood draft is usually shut off by dampers to maintain a higher concentration of sulfur dioxide in gases that are fed to the by-product acid plant (if such a plant is provided). When the dampers are closed the converter emissions are not captured and discharged directly into the atmosphere. This operation can amount to 3 to 6 hours out of every 24-hour period for each converter (Ex. 476–118).

Another minor source of fugitive lead emissions is fire refining. The residual sulfur content of blister copper is only about 2 percent and only small amounts of impurities remain. Therefore, when final blowing is conducted the potential for lead emissions is small. These furnaces are, therefore, not hooded (Ex. 476–118).

(iv) *Exposure Levels.* A great deal of exposure data has been compiled for the copper smelting industry. Industry-wide area sampling averages of airborne lead concentrations indicate: 70 $\mu g/m^3$ at reverberatory furnace charging deck areas; 60 $\mu g/m^3$ around reverberatory furnace floors; 50 $\mu g/m^3$ in converter aisles; and 10 $\mu g/m^3$ in the anode casting areas. Personal breathing zone sampling showed lead levels of: 70 $\mu g/m^3$ on the charging decks; 70 $\mu g/m^3$ on the reverberator furnace floors, 30 $\mu g/m^3$ in the converter aisles; and 10 $\mu g/m^3$ in the anode casting areas (Ex. 481).

While these data suggests that compliance with 50 $\mu g/m^3$ has almost been achieved in primary copper smelters, it should be emphasized that these figures represent averages and do not reflect conditions in any one smelter at any given time (Ex. 481). They are very useful, however, for determining the magnitude of exposures.

However, the specific industry data is consistent with these industry-wide averages. At the Tacoma smelter (Ex. 481) forty-two samples were taken on workers in the roaster area with the low value being non-detectable, the high value being 180 $\mu g/m^3$, and the average 42 $\mu g/m^3$. Twenty-nine samples were taken in the reverberatory furnace area, with the low value being non-detectable, the high value 110 $\mu g/m^3$, and the average 12 $\mu g/m^3$. Thirty-two samples were taken in the converter area (excluding flue dust pullers), with a low value of 10 $\mu g/m^3$, a high value of 290 $\mu g/m^3$, and an average of 82 $\mu g/m^3$. Exposures for flue dust pullers were quite high, four samples ranged from 280 $\mu g/m^3$ to 4060 $\mu g/m^3$, and averaged 2180 $\mu g/m^3$. In an earlier survey at the Tacoma smelter in July 1972 (Exhibit 481–10), nine area samples were taken on the charge deck of the reverberatory furnace with a low value of 10 $\mu g/m^3$, a high of 140 $\mu g/m^3$, and an average of 63 $\mu g/m^3$. The concentrate was 1.3 percent lead, which is relatively high for a copper smelter concentrate.

ASARCO's El Paso plant was surveyed by NIOSH in April 1972 (Ex. 481), at which time area and personal samples were taken in the copper smelter (which also includes a zinc fuming operation). Twenty-two areas samples were taken ranging from less than 10, to 290 $\mu g/m^3$, and averaging 99 $\mu g/m^3$. Samples were taken in cranes, on the converter skimming platform, in the reverberatory furnace area and the zinc-fuming area also. The 10 personal samples ranged from 10 to 190 $\mu g/m^3$ and averaged 61 $\mu g/m^3$. At the time, the smelter building was relatively open. This building has since been enclosed to comply with EPA standards. An OSHA survey of this facility in 1977 (Ex. 481) indicated that lead exposures, however, remained relatively low. Two beltmen in the roaster area had exposures of less than 10 $\mu g/m^3$ and 4 personal samples taken in the anode furnace area showed levels of 24, 26, 28, and 41 $\mu g/m^3$.

A survey conducted at Kennecott Copper Company's McGill, Nevada, facility in August 1972 (Ex. 481–3) consisted of one sample on the reverb furnace charge deck of 20 $\mu g/m^3$. The green feed to the reverberatory furnace contained 0.03 percent lead. Kennecott's Hayden, Arizona, plant was surveyed in March 1973 (Ex. 481–6) and 9 area samples, taken on the reverb charge floor, ranged from less than 10 to 20 $\mu g/m^3$. The concentrate contained 0.06 percent lead.

A survey of Kennecott's Hurley, New Mexico, smelter consisted of 5 area samples from the reverb charge deck which averaged 4 $\mu g/m^3$ (Ex. 481). The range was less than 2 to 10 $\mu g/m^3$. The concentrate contained 0.016 percent lead.

Kennecott has rebuilt its Garfield smelter near Salt Lake City and instead of using reverberatory furnaces, it is now using three modified Noranda continuous smelting furnaces. During a NIOSH Health Hazard Evaluation conducted in December 1979 (Ex. 481–12), 24 personal samples were taken with lead values ranging from less than 5 to 290 $\mu g/m^3$ and averaging 64 $\mu g/m^3$. Thirteen of the samples (54 percent) were below 50 $\mu g/m^3$.

Two area samples taken on the reverb charge deck at the Phelps-Dodge smelter at Ajo, Arizona, in March 1972 (Ex. 481–4), indicated that lead levels were less than 0.001 $\mu g/m^3$. The concentrate contained 0.10 percent lead. The Phelps-Dodge smelter at Douglas, Arizona, was studied a year later (Ex. 481–7) and 11 area samples taken from around the reverberatory furnace charge floor averaged 11 $\mu g/m^3$. The range of values was from less than 10 to 320 $\mu g/m^3$.

Inspiration Consolidated Copper Company's smelter at Inspiration, Arizona, was surveyed by NIOSH in 1973 (Ex. 481–11). All of the 36 area samples taken from around the reverb charge deck indicated lead levels of less than 10 $\mu g/m^3$. The concentrate contained 0.05 percent lead. The reverberatory furnace at Inspiration has recently been replaced with an electric furnace.

Extensive surveys were also conducted at White Pine, Michigan, in 1972 (Ex. 481, 8 and 9). Twenty-seven area samples from the reverb furnace, converter furnace, fire refining, casting, holding furnace, and waste heat boiler areas averaged only 3.6 $\mu g/m^3$ (the high value was 13 $\mu g/m^3$). Personal samples which obtained for the reverb furnace operator, tripper man, flue dust man, conveyor belt operator, laborer, tapper, tapper helper, brick mason, converter puncher, craneman, refining furnace operator, rappler, and research technician job titles averaged 2.8 $\mu g/m^3$. Estimated time-weighted-average exposures ranged from non-detectable to 50 $\mu g/m^3$. This upper value is inconsistent with the personal sampling data, because the concentrate contained

only 0.005 percent lead at the time of the survey. (Ex. 481).

The above data, as Dr. Wagner stated, as OSHA consultant, indicates that "there is considerable variability in airborne lead concentrations among individual smelters and among areas within individual smelters." (Ex. 481).

OSHA estimates that the number of workers potentially exposed includes all 5,000 workers who are directly involved in copper smelting activities. (Ex. 481).

(vi) *Additional Controls.* According to information contained in the public record:

> Some smelters are already substantially in compliance with the OSHA standard of 50 $\mu g/m^3$; others would only have to concentrate their engineering efforts in certain areas or on certain processes. A few smelters would have to make a major effort throughout the entire operation and even consider making major process changes. The variabilty in concentrations is a function of the amount of lead in the raw materials and feed, the type of equipment and process, the adequacy of existing controls, and the maintenance and operation of controls (Ex. 481).

The technology needed to comply with the lead standard in the smelting industry generally was discussed at length in the gold, silver, and platinum section. This technology is currently available and its application to copper smelting requires little innovation in order for existing controls to be adopted to existing equipment. (Ex. 481).

In addition, the types of controls necessary for lead are already in place in many smelters, needing only to be upgraded, modified, and/or maintained (Ex. 481). Quite often, airborne lead concentrations can be reduced by properly fitting the components of the control system or by improving enclosures so that emissions are captured more efficiently. In some instances, otherwise adequately designed systems lack sufficient capture velocity to provide proper ventilation under changing conditions. (Ex. 481).

Maintenance and proper operation of control systems is a major problem throughout the industry (Ex. 481). Housekeeping is also usually poor; certainly part of the airborne lead comes from dust and materials found lying around throughout many smelters (Ex. 481). Many of the witnesses felt that if increased emphasis should be placed on control system design, maintenance and operation, and on good housekeeping, to lower the concentrations of airborne lead (Ex. 481 and 487).

The time required for each smelter to come into compliance will vary with individual situations (Ex. 481). Some smelters are already in compliance, some have only a few areas which need additional control, and some need only to upgrade existing systems, initiate improved maintenance and housekeeping programs, and enforce their better operating procedures (Ex. 481). In general, smelters appear to be able to come substantially into compliance within one year. (See 43 FR 54477–78). A few smelters may have problems achieving compliance in all operations within a year, but can make substantial improvements in air levels and will have many areas in compliance (Ex. 481). Some smelters may have to consider expensive, long-term changes in their processes in order to come fully into compliance (Ex. 481). Where the process cannot be entirely controlled or enclosed, the worker can be provided a clean air control room in which to work or a clean air pulpit in which to stay during periods when only observation is required. Many jobs in the copper industry, such as matte tapping, slag skimming, and charge deck work, are performed intermittently and, if clean air pulpits were provided, the time-weighted-average exposures of these workers would be significantly reduced (Ex. 481).

(vii) *Conclusion: Technological Feasibility.* ASARCO submitted comments during the hearing stating that the technology for controlling lead exposure in copper smelters does not exist (Ex. 475–28). The company's position was premised on the notion that processes invoved in the primary production of copper and zinc are similar to those involved in primary lead production, and that similar technology is necessary to control exposure to lead in zinc and copper operations. The company also argued that primary lead smelters were given extended periods to comply because innovation was necessary (Ex. 475–28) and that allowing copper smelters one year to comply was inconsistent with the number of years allowed for primary lead smelting (10 years) and secondary lead smelting (5 years).

While there may be similarities in processes, the underlying problems associated with control of lead exposure depend on the percentage of lead in the ore. Dr. Wagner testified that this percentage was extremely variable and that copper smelters smelt ore ranging from less than .01 to 1.3 percent (Ex. 481). Smelters smelting ores containing a higher percentage of lead may have more difficulty in controlling lead exposures and may require additional time to come into compliance than those using ores with lead concentrations at the lower end of the range. (Tr. 353–354). However, the comparison to lead smelting is not accurate. Primary and secondary lead smelters process sulfide ores with lead content far greater than 1 percent and, therefore, have much higher lead exposures. The technology necessary to reduce these exposures is not the same in that it requires a much greater degree of control which involves application of engineering controls and major process and equipment modifications. As stated above, upgrading and modifying existing controls is all that is required for most copper smelters in the United States, and one year is an appropriate time limit for these smelters.

Many of these copper smelters must also comply with the OSHA arsenic standard (29 CFR 1910.1018). The control technology necessary to comply with that standard will also control lead concentratons to lower levels (Ex. 481).

However, in a minority of plants smelters may have peculiarities, aged plants are in need of extensive renovation, or lead in ore concentrations are particularly high, compliance with the standard within one year may be difficult. Individual firms' claims of infeasibility in one year can be considered through compliance or variance mechanisms between the company and OSHA (43 FR 52991).

(b) *Secondary Copper Smelting*

(i) *Uses.* The secondary copper industry processes scrap metals for the recovery of copper. Products include refined copper or copper alloys in forms such as ingots, wirebar, anodes, and shot. Copper alloys are combinations of copper with other materials, typically, tin, zinc and lead. For special applications, combinations may include such metals as cobalt, manganese, iron, nickel, cadmium and beryllium as well as nonmetals, such as arsenic and silicon (Ex. 476, 118).

(ii) *Process Description and Exposure Areas.* The principal processes involved in copper recovery are scrap metal pretreatment and smelting. Pretreatment includes the cleaning and concentration processes necessary to prepare the material for the smelting furnace. Smelting involves heating and treating of the scrap to achieve separation and purification of special metals (Ex. 476–118).

The feed material used in the recovery processes can be any metallic scrap containing a useful amount of copper, bronze (copper and tin), or brass (copper and zinc). Traditional forms are punchings; turnings and borings; defective or surplus goods; metallurgical residues such as slags, skimmings and drosses; and obsolete, worn out, or

damaged articles, including automobile radiators, pipe, wire, bushings and bearings (Ex. 476–118).

The type and quality of the feed material determine the processes the smelter will use. Due to the large variety of possible feed materials available, the method of operation varies greatly between plants. Generally, a secondary copper facility deals with less pure raw materials and produces a more refined product, whereas brass and bronze alloys processors take cleaner scrap and perform less purification and refining (Ex. 476–118).

Pretreatment of the feed material can be accomplished using several different procedures, either separately or in concert. Feed scrap is concentrated by manual and mechanical methods such as sorting, stripping, shredding, and magnetic separation. Feed scrap is sometimes briquetted in a hydraulic press. Pyrometallurgical pretreatment may include sweating, burning of insulation (especially from wire scrap), and drying (burning off oil and volatiles) in rotary kilns. Hydrometallurgical methods include flotation and leaching with chemical recovery (Ex. 476–118).

In smelting, low-grade scrap is melted in a cupola furnace, producing "black copper" and slag; these are often separated in a reverberatory furnace from which the melt is transferred to a converter or electric furnace to produce "blister" copper.

Blister copper may be poured to produce shot or castings, but is often further refined electrolytically or by fire refining. The fire-refining process is essentially the same as that described in the primary copper smelting industry and includes: (1) Charging; (2) melting in an oxidizing atmosphere; (3) skimming the slag; (4) blowing with air or oxygen; (5) adding fluxes; (6) "poling" or otherwise providing a reducing atmosphere; (7) reskimming and (8) pouring (Ex. 476–118).

To produce bronze or brass, rather than copper, an alloying operation is required. Clean, selected bronze and brass scrap is charged to a melting furnace with alloys to bring the resulting mixture to the desired final composition. Fluxes are added to remove impurities and to protect the melt against oxidation by air. Air or oxygen may be blown through the melt to adjust the composition by oxidizing excess zinc (Ex. 476–118).

The final step is casting of the alloy or refined metal into a desired form. This form may be shot, wirebar, anodes, cathodes, ingots, or other cast shapes. As in the case of primary smelters, exposure to lead dust can be expected from materials handling, furnace charging, and uncaptured or uncontrolled furnace emissions (Ex 476–118).

(iii) *Controls Currently Used.* The technology to control lead in the secondary copper industry is the same as that required in other smelter operations; it requires mechanized methods of handling scrap and installation of additional or improved systems for collecting emissions (see discussion in copper smelting).

The Southwire Company submitted data indicating that its anticipated scheme for achieving compliance with 50 $\mu g/m^3$ requires the use of available controls, such as hooding of the Maerz charging area and blast furnaces; adding more duct work; hooding the converter charge and blast furnace tops and adding six baghouse additions, two fans, a 60-meter stack and a sample furnace exhaust (Ex. 475–32).

(iv) *Exposure Levels.* The Lead Industries Association indicated that exposures in smelter departments, casting operations, furnace areas, sampling departments, and maintenance operations are consistently in excess of 200 $\mu g/m^3$ (Ex. 475–27). It is not clear whether these levels represent workers' time-weighted averages, however. The Southwire Co. has indicated that exposures in its plants are above the 50 $\mu g/m^3$ limit, but has also indicated that past exposures were higher before engineering controls were installed. Controls are being implemented currently which are intended to reduce levels to below 50 $\mu g/m^3$ (Ex. 475–32). NIOSH, in its report on the secondary nonferrous smelting industry (Ex. 476–133) found that secondary brass and bronze smelters have lead levels as high as 200, 320, and 380 $\mu g/m^3$ at the tapping/pouring hood and 220, 320 and 490 $\mu g/m^3$ at the reverberatory furnace charging hood (Ex. 476–133). However, exposure levels are a function of the percentage of lead in the brass or bronze, and lead concentrations were not available in this report to make comparisons. The controls at these secondary smelters discussed by NIOSH were not anywhere near the "state of art" as are those found at the Southwire Corporation's smelter.

(v) *Population Exposed.* No data has been submitted which indicate how many workers may be exposed to lead as a result of secondary copper operations.

(vi) *Additional Controls.* The engineering controls necessary to comply with lead exposure limits in secondary copper smelters have been described previously and are already commercially available. Southwire, in fact, is using many of these technologies in its plant and anticipates achieving compliance with the standard (Ex. 475–32). Improved housekeeping and worker rotation may also be necessary in some plants.

(vii) *Conclusion: Technological Feasibility.* The Lead Industries Association has indicated that engineering controls are theoretically feasible to achieve compliance with 50 ug/m^3 in this industry, but states that it does not know whether implementing such controls will, in fact, achieve compliance (Ex. 476–32). However, primary lead smelters, where the lead content of the raw material is much higher, have been shown to have the technology necessary to comply. Therefore, if primary lead smelters, with higher concentrations of lead, can comply, secondary copper smelters, using materials containing less lead, should be able to use similar, but much less extensive controls to achieve compliance. Further, one must consider that as not all scrap copper contains lead, the intermittent nature of exposure in many operations makes worker rotation a viable control alternative.

The National Association of Recycling Industries (NARI), in its post-hearing comments, discussed extensively the lead exposure problems of the Southwire Corporation. NARI has portrayed the Southwire facility as one of the most modern, technologically advanced secondary copper smelters and, despite Southwire's expectations that compliance with the PEL will be achieved, NARI has stated that there are no guarantees that implementation of the best engineering controls will meet a 100 $\mu g/m^3$, much less a 50 $\mu g/m^3$ standard (Ex. 498).

NARI, however, ignores two things. It does not consider the use of housekeeping, effective maintenance and worker rotation in complying with a 50 $\mu g/m^3$ standard as, in all cases, only the use of engineering controls is discussed as the method to achieve compliance (Ex. 498, pp. 61, 62). The use of less costly alternatives has not been considered. These work practices and administrative controls would be especially appropriate in this operation because of the varying and intermittent nature of exposure. OSHA has determined that compliance is possible (Slip op. at 159).

(c) *Economic Feasibility: Primary and Secondary Copper Smelting*

(i) *Cost of Compliance.* ASARCO has submitted data on the cost of compliance with the lead standard in primary copper smelters (Ex. 475–28). The following compliance expenditures have been estimated for ASARCO's four

facilities: Hayden, Arizona, $16,628,000; Tacoma, Washington $20,941,000; Amarillo, Texas, $667,000; and El Paso, Texas, $18,504,500. These calculations are based on the cubic feet of air per minute necessary to ventilate specific areas of the plants and on the costs of vacuum systems. Costs of associated devices designed and installed to prevent the emission of pollutants into the general atmosphere also appear to be included in these estimates. For instance, wet scrubbers and wet scrubber gas cleaning systems, costing a total of $1,540,000, have been included in three of the estimates. Thus, ASARCO claims that total expenditures of $56,740,000 would be required and also claims that this amount would not guarantee compliance with the standard.

Three secondary copper smelters—Southwire Copper, AMAX, and ASARCO—have submitted cost estimates to OSHA (Ex. 475–32, Ex. 475–31, and Ex. 475–28). In addition, Lead Industry Associates (LIA) has expressed concern as to continued viability of one unidentified secondary copper producer. LIA contends that the smelter is not currently in compliance and is confronted with technological difficulties that will require "several million dollars" to correct. However, LIA did not submit the specific data that OSHA requires to evaluate this particular situation (Ex. 475–27).

Southwire plans expenditures of $1.1 million in capital costs and $60,000 in annual operating costs to control lead emissions. These figures combine both EPA and OSHA-related expenditures. For example, six baghouse additions and a 60-meter stack are included in the estimate. The submission divides the $1.1 million figure into $902,000 for air quality and $198,000 for blast furnace charge fume control (Ex. 475–32). The Cadre Report prepared for Southwire disaggregates, in detail, the costs of ventilation approaches to fume control to be attributed to OSHA requirements. These costs total $244,084 (not including installation) (Ex. 475–32A). Southwire cautions that these expenditures even with careful planning do not guarantee full compliance with the 50 $\mu g/m^3$ standard.

AMAX submitted costs of compliance for its subsidiary, United States Metals Refinery. Cost estimates are broken out by areas in the plant. However, the types of equipment to be installed are not specified (Ex. 475–31). AMAX predicts that compliance would not be guaranteed by USMR's expenditure of $13,240,000 in capital costs and $5,034,000 in annual costs (Ex. 490). The components of annual costs include maintenance, power, and capital costs annualized at 20 percent.

ASARCO submitted costs of compliance for a secondary copper facility in Houston, Texas. The firm estimated that a vacuum system would cost $53,000 and that ventilation would cost $70,200 for a total cost of $123,200 (Ex. 475–28).

The record shows that estimates of compliance costs for secondary copper smelters vary significantly from $123,200 to over $12 million, and estimates of costs for ASARCO's primary facilities vary from $667,000 to $20,941,000. Such wide variations can be explained by differences among firms in costing methodologies, and perhaps more importantly, by differences in the initial levels of workplace exposures for primary and secondary producers. In other words, those firms attempting to reduce levels from conditions in excess of the previous lead standard of 200 $\mu g/m^3$ may be facing greater absolute expenditures than those firms that have already invested in control technology. However, based on expenditures per unit of abatement, firms with higher lead levels may, in fact, be spending less than firms that have made previous efforts to reduce lead levels.

Three major omissions in the calculation of costs by industry bias these estimates of compliance costs upward. First, industry estimates have not always reflected a cost-effective method for reducing lead levels. For example, the submissions tend to reflect only the mechanical ventilation approach to the control of lead when, in fact, housekeeping, work practices, and administrative controls in combination with ventilation would be both less expensive and more effective in achieving compliance (Ex. 481). Therefore, OSHA contends that the proper approach to reducing exposure levels is through an effective, multi-faceted approach to the problem. In this way, industry can minimize the resources spent on achieving a given level of lead in the workplace. Second, industry estimates do not reflect the value obtained by the firm from the reclamation of copper and other metals that are captured by control systems. This financial gain will to some extent offset the costs of compliance. However, industry has not presented data indicating the magnitude of the offset. Third, primary and secondary copper smelters have simultaneous legal obligations to comply with other regulations, such as the arsenic regulation. To the extent that actions taken to reduce arsenic levels also reduce lead levels, these expenditures are not attributable solely to the lead standard. In addition, costs attributable to EPA regulations are sometimes included in the estimates. Thus, doublecounting has substantially inflated many industry estimates.

Considering the above factors, OSHA concludes that Wagner's estimates of the total costs for *all* potentially affected copper smelters are reasonable counterestimates to the compliance costs as estimated by industry. Wagner has estimated that costs will not exceed $6 million and might be as low as $1.3 million (Ex. 481). However, because Wagner did not have definitive data on the compliance status of all firms in the industry, he placed caveats on this estimate. Wagner stated that he could have underestimated the costs by as much as 200 percent. Assuming an underestimate of this magnitude, the upper bound on capital costs for the primary copper producers would be only $18 million. If the costs of compliance for primary producers are the same as the costs for secondary producers, OSHA calculates an upper bound of $30 million in compliance costs for secondary copper producers. Thus, total capital costs in the copper industry will be at most $48 million. Annualized over the useful life of the equipment, primary copper producers will incur $3.2 million in total annual costs, and secondary producers will incur total annual costs of $5.3 million.

(ii) *Industry Profile.* The primary copper industry consists of establishments engaged in smelting copper from ore and in refining copper by electrolytic or other processes. Total value of shipments amounted to $3.9 billion in 1977, an increase of 41 percent from 1972 (Ex. 476–20). Historical statistics show that, since 1967, the number of companies in the industry declined from 15 firms, operating 32 establishments, to 11 firms, with 31 establishments in 1972, and 9 firms, with 27 establishments in 1977.

More recent Bureau of Mines data list the primary producers ranked in order of output as: (1) Phelps Dodge, (2) Kennecott, (3) ASARCO, (4) Magma Copper, (5) Copper Range, (6) Inspiration Consolidated Copper, and (7) Cities Services. These companies operated smelters and/or refineries. Several domestic producers, through subsidiaries or stock holdings, have interests in foreign copper-producing facilities in Australia, Canada, Peru, Mexico, South Africa, and Namibia (Ex. 476–122).

Prior to the exit of Anaconda from the market in October, 1980, the top three companies produced about 60 percent of the total industry output (Ex. 476–119).

The net profit margins in 1979 for Phelps-Dodge, Kennecott, and ASARCO were 8.7 percent, 5.4 percent, and 15 percent, respectively, with estimated net profit margins in 1982 through 1984 of 11 percent, 7.2 percent, and 15.9 percent (Ex. 476–130, 476–131, 476–132). Kennecott's lower profits were attributed to its relatively high and rising cost structure, which results from "ancient and outdated equipment" (Ex. 476–131).

Although the market shares and profitability of the top three producers indicate that the domestic market is moderately concentrated, the copper market is internationally competitive. Hence, the ability of the primary producers, regardless of individual market share, to raise prices is limited. Although it appears that the domestic market is not currently threatened by foreign copper imports, forward shifting of costs to customers is to some extent constrained. Producers largely eliminated foreign price advantages by basing domestic prices on the New York Commodity Exchange (COMEX) in 1978 (Ex. 476–26). Proximity to markets, a stable political situation, the existence of an advanced infrastructure, and scale of operations should maintain a viable domestic copper industry even in the face of a potentially worsened position vis-a-vis foreign competition (Ex. 476–122).

The ability to pass costs on is also limited by potential substitutes for copper. For instance, in electrical applications, aluminum, cryogenic power transmission techniques, microminiaturization circuitry, and use of satellites may impede the growth in demand for copper. In construction, the trend toward multiple housing units (which reduces the materials needed per unit), and the substitution of plastic pipes may curtail the demand for copper. Uses of copper in transportation vehicles is expected to continue to decline. In 1975, 34 pounds of copper per automobile were used. In 1979, this was reduced to 29 pounds. The use of only 25 pounds of copper per automobile is forecast for 1985 (Ex. 476–33). However, growth in armaments production may increase the demand for copper. On balance, total U.S. demand for copper is forecast to rise by the year 2000 to 5.1 million tons, representing an annual growth rate of 3.6 percent (Ex. 476–122). This demand is expected to strain supply sources as growth in demand for electrical equipment, computers, and underground power distribution systems rises.

Because the demand for copper parallels the demand for durable goods, the market is volatile and quite sensitive to national economic business cycles. The demand for copper also increases sharply with increased military activity because of its use in ammunition and military equipment. Typically, the industry expands to meet military demand and suffers from overcapacity during times of peace (Ex. 476–118).

In 1978, the International Trade Commission recommended that an import quota be imposed through 1982 to protect domestic copper producers. However, the petition was rejected, largely because the action carried an unacceptable risk of accelerating inflation, but also because the copper market was in the process of recovering from its depressed condition (Ex. 476–122).

At least two factors have contributed to increasing costs in the copper industry. First, fuel costs, which account for a major portion of production costs in smelting and refining, rose significantly between 1974 and 1978. The second major factor affecting production costs is the long-term declining yield of copper from ores. From 1950 to 1977, average yield has dropped from 18 pounds of copper per ton of ore to 10 pounds, with some deposits containing only 8 pounds of copper per ton of ore. (The cutoff grade is 4 pounds.) In addition, surface mines, which now account for 82 percent of domestic output, have large ratios of overburden (earth that must be removed during mining operations) to ore (Ex. 476–122).

However, a new process has been developed to recover copper from low ore concentrates (Ex. 476–124). The new hydrometallurgical process is pollution-free. Initial testing demonstrates that it is competitive with conventional smelting techniques. Diffusion of this new process throughout the industry may result in significant changes since costs of producing copper are both currently variable and highly dependent on location and physical composition of ore deposits.

Capital expenditures for new buildings, plant, and equipment in 1977 in the copper industry were withheld by the Commerce Department to avoid disclosing operations of individual companies. However, expenditures rose steadily from 1963 to 1975 from $13.1 million to $164.6 million. In 1976, the industry's investments dropped to $52.4 million, reflecting the depressed state of the market beginning in 1974 (Ex. 476–20).

Copper production is considered to be a capital intensive industry. On average, $7,000 per annual ton of new capacity for facilities is required for a totally integrated facility. Expansion of existing facilities requires about $5,000 per annual ton in capital costs (Ex. 476–122).

The primary copper industry employs about 10,000 production workers at smelters and refineries. The ratio of skilled to unskilled laborers has risen with increasing mechanization and large-scale operations have generated demand for mechanics, technicians, and machine operators. In 1971, employee hours per ton of copper averaged 20.3 hours; whereas in 1977, there were 18.2 employee hours per ton of copper (Ex. 476–122), indicating a slight increase in productivity.

Secondary copper producers are classified in SIC 3341. Total shipments in this SIC were valued at $719.2 million in 1977 (Ex. 476–20). Firms in this industry include Southwire, Cerro Copper, Chemetco, U.S. Metals Refining, Franklin Smelting and Refining, Reading Metals Refining, and Nassau Recycling (Ex. 475–32). These producers are located near their sources of scrap materials.

The low availability of scrap, a raw material for this industry, and the high cost of fuel have inhibited capital investments to increase plant capacity in the secondary production industry. The limited quantity of scrap increases the competition among secondary copper producers for sources of supply. The recent entry of Nassau Recycling into the secondary market increased the competitiveness of buyers in the scrap market by removing telephone scrap from available supplies. (Nassau Recycling is a subsidiary of Western Electric (Ex. 475–32), a major manufacturer of telephone equipment.)

While secondary producers are, at present, more energy efficient than primary producers, the threat of an oil embargo or fuel restrictions is sufficient to increase the reluctance of producers to expand operations. However, test results on a new experimental furnace designed for continuous smelting of copper-bearing scrap show that substantial energy savings and an increase in product quality can be realized (Ex. 476–124). On balance, however, the past volatility of the copper industry gives every incentive to delay expansion decisions.

The primary and secondary producers of scrap operate in the same market, because their products are generally perfect substitutes. Copper prices are set by the primary producers at the level that, in their estimation, will yield a reasonable profit without encouraging import competition or substitution. Copper demand is met first by the processing of scrap that can be done below the cost of primary production. Primary copper supplies the remaining

demand. During shortages, rather than raise prices, primary producers may ration sales. When the demand and hence the price of scrap rises, the supply of copper scrap ultimately increases. This happens as lower quality, more dispersed scrap is gathered and processed at a price that purchasers are willing to pay to fill needs not met by primary producers. Although this market activity is limited by the cost of imported copper, this price is generally significantly higher than the domestic price during shortages (Ex. 475–32). Thus, the domestic market does not appear to face major import competition now or in the future. In addition, the secondary copper industry does not appear to be at a competitive disadvantage with the primary copper producers.

(iii) *Conclusion: Economic Feasibility.* The copper market has demonstrated past volatility and remains sensitive to the demand for durable goods. Thus, the demand for copper will fluctuate with swings in the national economy. However, on balance, the demand for copper is expected to grow at an annual rate of 3.6 percent.

Copper is produced and sold in a world market. The domestic industry has a demonstrated ability to compete successfully in this world market. Foreign price advantages no longer pose a threat to the domestic industry, and the stable political situation in the U.S., the existence of an advanced infrastructure, and the domestic scale of operations are expected to contribute to the continued viability of the domestic producers.

The primary copper industry, which produced shipments valued at almost $4 billion in 1977 (Ex. 476–20), will be required to spend a maximum of $3.2 million in annualized compliance costs. OSHA estimates that annualized compliance costs for the secondary copper industry, which produced shipments valued at $719.2 million in 1977 (Ex. 476–20), will not exceed $5.3 million. Therefore, OSHA concludes that the domestic copper industry will be able to comply with the lead standard within one year, and that compliance will not adversely affect the economic viability of the industry.

11. Cutlery

(a) *Process Description Exposure Areas*

Cutlery is produced by die manufacturing and casting (Ex. 22 p. 279). Decorative handles are soldered on and the products are packaged for sale.

A small amount of lead is used in the cutlery industry when handles are soldered (lead-tin solder), when a quick mold check in the die manufacturing and casting of knives is necessary, and when heat treatment of cutlery is necessary. (Ex. 22, p. 279)

The greatest sources of exposure occur in the soldering and heat treatment operations (Ex. 22, p. 279) Soldering of handles to knives is not usually done with lead; when it is however, the appropriate controls, such as local exhaust ventilation, are used (see soldering section for a complete discussion).

Heat treatment with lead is discussed in the section entitled "Wire Patenting and Annealing." In the heat treatment of cutlery, posts measuring 13 by 18 inches, are filled with lead and layers of sand, charcoal and fine steel and heated to high temperatures. The knives or blades are placed in the pot for about 5 minutes. As the blade is pulled out, the upper layers of sand, charcoal and steel remove all trace of lead. The blade is then quenched in oil. The layers of sand and charcoal help prevent the escape of lead fumes and maintain the temperature in the pot. Due to high prices, lead's use is diminishing in heat treating and is being replaced by salt. Also, heat treatment of cutlery and razor blades is often performed in furnaces rather than with molten lead.

(b) *Controls Currently Used*

Soldering operations in cutlery are comparable to other soldering operations, and may be done at benches or in soldering furnaces. Soldering done in furnaces may also use exhaust ventilation (see Soldering section for further discussion).

Heat treating operations are usually segregated from the rest of the workplace because of smoke from the oil, the intense heat, and fire danger. Lead pots are supplied with exhaust hooding. Almost all companies are believed to have exhaust fans and ventilation over the lead pots. (Ex. 22, p. 279) Ventilation methods will be heavily relied upon to achieve compliance in the heat treating rooms and solder areas. (Ex. 22, p. 279)

(c) *Exposure Levels*

No data were submitted indicating the levels of exposure to be found in soldering or heat treatment operations within the cutlery manufacturing process. Exposure levels can be estimated from comparable processes such as soldering of small components and parts, as well as other heat treating operations.

Soldering operations involving small components generally have minimal levels of lead exposure. Some studies have found levels ranging from 3–9 $\mu g/m^3$ (Ex. 476–401). Very little ventilation, if any, was available at these sites.

In heat treatment, lead is melted and heated to a certain temperature; where lead is also melted in melt pots, the company estimated that 50 $\mu g/m^3$ is usually achieved (Ex. 476–228).

It should be noted that lead baths used for heat treatment are covered with layers of sand and charcoal to maintain heat. These layers also tend to prevent the escape of dust and fumes from the process, whereas lead casting melt pots have no such internal controls.

(d) *Population Exposed*

It is estimated that of 11,000 employees in the cutlery industry, fewer than 65 persons are exposed to lead in the heat treatment process, with an additional 50 persons exposed through housekeeping, maintenance, etc. (Ex. 22, p. 279).

(e) *Additional Controls*

Additional engineering controls are not expected to be necessary to achieve compliance in this industry. Existing ventilation methods will be heavily relied upon to meet compliance in the heat treating rooms and solder areas. (Ex. 22, p. 279) The ventilation systems may require upgrading to produce desired flow rates, etc. Housekeeping will have to be improved to achieve compliance with 50 $\mu g/m^3$, with work practices and worker rotation being relied upon when companies choose not to implement engineering control changes.

(f) *Conclusion: Technological Feasibility*

Despite the fact that OSHA provided direct notice to at least one firm (W.P. Case and Sons of Bradford, Pennsylvania), concerning these special proceedings on the issue of the feasibility of the lead standard, no cutlery manufacturers participated in the public hearings, nor did any submit exposure or feasibility data to the Agency. Based upon the Short Report and analogies to comparable processes (such as soldering and smelting of lead), OSHA believes that attaining the 50 $\mu g/m^3$ PEL in this industry is feasible using the simplest of engineering controls. Employers who do not wish to upgrade existing ventilation systems may rely upon housekeeping, work practices, and worker rotation to achieve compliance with the 50 $\mu g/m^3$ limit within one year.

(g) *Economic Feasibility*

Neither compliance costs nor economic impact data were offered by any cutlery industry representatives. Based on the record evidence, it appears

that, at most, employers may need to upgrade existing ventilation systems. Most probably, however, employers will need to rely only on the less costly, but equally effective alternatives, such as housekeeping, work practices and worker rotation, to achieve compliance. The costs of these controls are relatively small in comparison with engineering controls. The industry has stated that compliance poses no problems, therefore, no economic impact is expected as a result of the implementation of this standard (Ex. 22, p. 280).

12. Diamond Processing

(a) *Uses*

Lead is not used in the cutting, polishing or setting of diamonds (Ex. 22, p. 282). However, lapidary wheels having lead sheeting impregnated with powered diamonds are used to polish metal and rock surfaces (Ex. 22, p. 282). In 1977, it was estimated that about 100 such lapidary wheels were in use in this country. The record indicates, however, that the use of these wheels is rapidly declining because the soft lead wheels are not as durable as brass or cast iron wheels. (Ex. 22, p. 282)

(b) *Process Description and Exposure Areas*

An object, either metal or stone, is held against the lapidary wheel which turns and polishes the surface. Lead exposure results from the abrasion of the lead-diamond impregnated sheet surrounding the wheel.

(c) *Controls Currently Used*

The principal method presently used to control exposure during this operation is ventilation. A tight hood enclosure with minimum wheel-hood clearance is used to provide dust control at a minimum exhaust volume. Fixed operations may use conventional controls and portable units may require movable exhaust ventilation units. Some operations use no controls. Water may also be used to reduce dust, but does not eliminate the need for ventilation (Ex. 476–4B).

(d) *Exposure Levels*

OSHA is unaware of any available monitoring data (Ex. 22, p. 282). It is expected that little to no lead exposure results from this operation (Ex. 22, p. 282), although data were not furnished by any industry source.

(e) *Population Exposed*

It is believed that approximately 200 persons are exposed as a result of this operation (Ex. 22, p. 282). However, data were not available to indicate how many of these individuals are exposed above or below the 50 $\mu g/m^3$ PEL.

(f) *Additional Controls*

Because of the very limited nature of lead exposures in this industry, controls, other than those currently being used, are not necessary to comply with 50 $\mu g/m^3$.

(g) *Conclusion: Technological Feasibility*

The magnitude of lead exposures in this industry appears to be very slight. Thus, it appears that this industry is already in compliance with the 50 $\mu g/m^3$ limit. The controls needed to achieve the PEL are already being used effectively. In addition, the inadequacies of lead wheels have resulted in substitution of more durable wheels made of cast iron or bronze. These wheels will probably replace all lead lapidary wheels, thus eliminating the potential for lead exposure in excess of the 50 $\mu g/m^3$ standard. Based on these factors, OSHA concludes that compliance with the standard within one year is technologically feasible for this industry.

(h) *Economic Feasibility*

Since better substitutes have virtually replaced the lead lapidary wheel in this industry and, where the wheel remains in use, lead exposures are likely to be below the PEL, no costs of compliance and, thus, no significant economic impact will be incurred, and the standard will have no effect on the national economy.

13. Electroplating

(a) *Uses*

Plated lead is used primarily in battery parts and chemical construction when resistance to the corrosive effects of sulfuric acid is needed (Ex. 476–145). Lead plating is done for the electronics industry also (Ex. 476–150). The National Association of Metal Finishers indicated that electroplated lead is probably used in the electronics industry only for solder plating (lead-tin alloy plated on printed circuit boards) (Ex. 476–149). However, data from TRW indicate that copper wire plated with lead is used in electrical resistors (Ex. 476–148).

(b) *Process Description and Exposure Areas*

Electroplating consists of coating one metal with another metal by means of an electric current. The cathode, which holds the work, is negatively charged. The anode, made of the material to be coated, is positively charged. The anode and cathode are positioned in a solution and the plating is completed by anode material traveling through the solution and depositing on the cathode. (Ex. 476–145)

Many different materials can be plated using the electroplating process; lead and its alloys are among these. Lead is plated from a fluoroborate solution. At the temperatures involved, it is believed that no lead fumes or dusts are generated. Dr. Billings testified that lead exposures result primarily from lead emissions being given off from open-surface tanks during the electroplating process (Tr. 146), but that exposure to lead is insignificant (Ex. 22, p. 305).

(c) *Controls Currently Used*

The primary method of control involves the use of local exhaust ventilation. The *Industrial Ventilation Manual* recommends the use of local exhaust ventilation for this process and provides specific air-flow parameters sufficient to contain exposures in open surface tanks (Ex. 476–147). Dr. Billings also recommended total system enclosure (Tr. 146). Data indicating which controls are used in the electroplating processes were not made available by the industry, however, the industry feels that application of these control technologies as well as good housekeeping should maintain levels below the 50 $\mu g/m^3$ limit. In fact, only very low lead levels are found in the industry and industry representatives believe that airborne lead is not a significant problem (Ex. 22, p. 305).

(d) *Exposure Levels*

The only available data, collected at TRW, indicate that, in plating operations, airborne concentrations to lead were undetectable (Ex. 476–145).

(e) *Additional Controls*

The engineering controls and work practices currently being used by the industry will be sufficient to maintain levels below the 50 $\mu g/m^3$ standard. Additional controls, such as housekeeping and worker rotation, may be necessary, in some instances, to insure that compliance with the standard is achieved in all operations.

(g) *Conclusion: Technological Feasibility*

Very low exposure data and the industry's statement that lead levels are insignificant indicate that this industry is already in compliance with the standard and, thus, it is certainly feasible for this industry to achieve compliance within one year.

(h) *Economic Feasibility*

Because exposure levels are apparently well below 50 $\mu g/m^3$, no

costs for compliance are anticipated nor is any economic impact expected. Compliance with the standards is, therefore, economically feasible.

14. Explosives Manufacture

(a) *Uses*

Explosives serve two main purposes. They serve as labor saving devices in dislodging rocks, coal and other minerals (industrial uses) and as destructive devices (military uses).

Explosives may be chemical, physical or nuclear in type. Chemical explosives are the most widely used, and involve use of lead in greater quantities than other types. Chemical explosives use initiating devices to ignite the explosive. Lead azide and lead styphnate are among some of the chemical compounds used for this purpose. These lead compounds are mixed with other materials to form the initiator (blasting cap or detonator). The amount of lead compound used is small.

Some uses of lead have been discontinued. For example, the addition of lead to rocket propellants to increase thrust has been replaced by more effective metals, such as aluminum (Ex. 476–152).

(b) *Process Description and Exposure Areas*

The manufacture of lead explosives involves the handling, mixing, precipitating, and drying of various lead compounds and the storing or packaging of the lead based explosives formed. In the case of lead azide, formation results from the mixing of sodium azide with lead acetate or lead nitrate. Lead styphnate is formed from lead acetate and magnesium styphnate (Ex. 476–TG).

Lead exposure results from the handling and mixing of lead compounds used in the preparation of the explosives themselves. Lead exposure may also result from the repair of lead flooring which is used by this industry when sparking dangers are present. Lead plates used to test blasting caps may also result in lead exposure, but only if the plates are melted, poured and cast by the explosives' manufacturer (Ex. 22, p. 308). Lead exposure does not result from the use of plates as detonating devices. Exposure to lead may also occur in the soldering operations, where lead solder is used to attach wires onto the initiators.

(c) *Controls Currently Used*

The handling and mixing of lead compounds is generally well controlled since dust accumulations generated by mixing explosive chemicals are undesirable (Ex. 22, p. 308). The process is usually automated, and the operator is separated from the mixing operation by a protective barrier (Id.).

A few companies indicated that they have an ongoing repair program for their lead flooring. The defective parts are cut away and new sheets of lead flooring are burned into place (Ex. 476, 151). Most others reported that the floor was replaced every five to ten years. Lead burning operations are used quite extensively to repair or replace lead flooring.

Soldering operations are usually ventilated and automated where possible. (See Soldering-Discussion of Control Technology). Lead floor repairing uses no ventilation controls. Blasting caps are now being detonated in water rather than on lead plates, mostly as a means of controlling noise exposure.

DuPont Chemical commented that the use of mechanical engineering controls such as mechanical ventilation would be an unsafe means of reducing employee exposure to 50 $\mu g/m^3$ of lead during the manufacture of two types of explosive initiators (Ex. 475–35). DuPont argued that the two compounds, lead azide and the complex lead salt of dinitro ortho cresol (lead DNOC), are extremely sensitive to impact and that subjecting them to the friction caused by the moving parts in mechanical ventilation systems could lead to detonation. DuPont also pointed out that insertion of a filter into the system ahead of the moving parts, would permit the accumulation of lead compounds that could detonate either on removal of the filter or on impact of moving particles in the air stream against particles held by the filter. In support of these arguments, DuPont submitted impact sensitivity test data for lead azide and lead DNOC. The data showed that a 0.5 inch diameter, 8.35 gram steel ball must fall from 20 to 26 inches to detonate a 0.013 inch thick layer of lead azide. A similar steel ball must fall 5 to 10 inches to detonate lead DNOC. Based on this data, lead particles of 30 microns in diameter which might enter a ventilation system and impact on a collection filter within the duct would have to impact with a velocity of over 55,000 miles per hour to impart enough energy to detonate a layer of lead azide and a velocity of similar magnitude would be required to detonate a layer of lead DNOC. Thus, the detonation hazard allegedly created by colliding particles in a ventilation duct appears to be highly unlikely.

The detonation hazard associated with filter removal could be minimized by wetting the filter before removal. In fact, wet methods to prevent detonation are employed by DuPont in its sieve room, where the employees entering the room to remove lead azide or DNOC products and reload the sieve is required to wet mop the floor ahead of him. Also consideration could be given to employing wet filtering methods (scrubbers, water curtains, etc.) upstream of the ventilation system's moving parts.

(d) *Exposure Levels*

Exposure data were not available for the manufacturing of lead initiators and the soldering of initiator wires. However, industry representatives indicated that exposure levels were well below the 50 $\mu g/m^3$ level (Ex. 22, p. 308). Representatives of Hercules, Inc., of Wilmington, Delaware, indicated that exposures are low because the lead azide cartridge primer prepared by the company is prepared in gram quantities and the process is kept wet throughout (including during the mixing of other compounds with explosives) (Ex. 476–152).

In lead floor repair, where lead burning may be done, exposure results have indicated lead levels 10 to 20 percent below 200 $\mu g/m^3$ (Ex. 22, p. 308). This would place the industry below the 50 $\mu g/m^3$ PEL. In addition, companies like Atlas Power Co. of Dallas, Texas (Ex. 476–151), have indicated that they only encounter lead exposures twice yearly during the repair of lead floors. Exposure to lead was not considered a problem even in these repair activities because of sophisticated ventilation systems already in place to control nitroglycerine vapors.

In operations using lead plate as a detonating device the lead discs used by Hercules to test low-intensity charges would not be expected to give rise to significant lead exposures since the test explosion deforms, but does not volatilize, the lead (Ex. 476–152). The thickness of the discs are measured before and after the explosion as a quality control check of the uniformity of the explosive charges. For testing ammunition charges, blasting caps, and other high-intensity charges, Hercules uses harder copper discs. Moreover, testing of blasting caps in water, instead of on lead plates, would minimize exposure problems (Ex. 22, p. 308).

(e) *Population Exposed*

Total employment in the explosives industry is estimated to be 30,000, of which 100 employees may be potentially exposed to lead (Ex. 22, p. 309).

It appears that most exposure areas are already in compliance using existing controls. Work practices and housekeeping are invaluable tools for this industry, and in many cases are

emphasized due to the extreme explosion hazards. Also many of these lead-bead explosives are made in extremely small quantities (Hercules) and this also tends to minimize exposure hazards.

(f) *Conclusion: Technological Feasibility*

Compliance with the 50 $\mu g/m^3$ standard has been achieved in the explosives industry through a series of compliance endeavors including the use of ventilation, careful adherence to strict work practices, and good housekeeping practices. The importance of striving for a dust free environment in explosives manufacture, revolves around the fact that poor work practices and sloppy housekeeping might result in an explosion. Because exposures are already below the PEL, compliance is feasible.

(g) *Economic Feasibility*

The explosive industry is made up of five major producers with several small firms. It is estimated that 9 or 10 firms manufacture 90 percent of the explosives produced in the United States (Ex. 22, p. 309).

Since this industry appears to be well below the 50 $\mu g/m^3$ limit, there will be no cost for compliance with the lead standard, and the standard will have no effect on the national economy.

15. Gasoline Additives

(a) *Summary*

OSHA has interpreted the processes in this industry (in which lead wastes are recycled) as falling under the definition of "secondary lead production" (Ex. 476–7H). Table I of section (e)(1) of the standard gives this industry five years to comply with the 50 $\mu g/m^3$ PEL. The Agency made this determination because several of the processes that occur at secondary smelters are functionally similar to the recycling processes used in the manufacture of gasoline additives and present the same exposure control problems. Gasoline additive manufacture involves the initial handling of lead sludge, the removal of moisture from the sludge by drying, the smelting of sludge in reverberatory furnaces, the transfer of lead to hold-up pots, the drossing of the lead, the melting and drossing of pig lead additions, and the alloying of lead including weighing, drossing and sodium addition. Since the feasibility of the standard has been upheld for secondary smelting and refining, the similar processes involved in this industry warrant a conclusion of technological and economic feasibility here. Ethyl Corporation's request for this interpretation, together with the absence of objections from any other manufacturers in the industry reinforces this conclusion.

16. Glass Manufacture

(a) *Primary Glass Manufacture*

(i) *Uses.* Glass is manufactured as flat glass, container glass, pressed and blown glass and fiberglass. In subsequent operations, these basic glass types are further processed to form window glass, wire glass, figured rolled glass, plate glass, slash blocks, health glass and special glasses (stained glass and glassware).

(ii) *Process Description and Exposure Areas.* Glass is manufactured by the high temperature conversion of raw materials into a homogeneous melt capable of fabrication into useful articles (Ex. 476–174). The process can be broken down into three subprocesses: raw material handling and mixing, melting and forming and finishing (Ex. 476–174).

Raw materials are received in packages or in bulk and are unloaded by hand, vibrator gravity, drag shovels, or vacuum systems. Raw materials are then weighed and mixed (Ex. 476–174).

Raw materials are delivered to the furnace where they are transformed into glass (Ex. 476–174). Glass is produced in day pots, day tanks, or continuous operating regenerative or recuperative furnaces (Ex. 476–174). Melters are charged either manually or automatically, usually through screw or reciprocating type feeders (Ex. 476–174).

Molten glass at the yellow-orange temperature is drawn quickly from the furnace and worked in forming machines to press, blow in molds, draw, roll or cast. Annealing is done to remove internal stress (Ex. 476–174).

Lead exposure in glass manufacturing can result from the general use of a lead litharge in some melting operations (Ex. 476–195), from the production of leaded glass, or from the production of colored glasses (Ex. 476–5G). Particular process points where lead exposure may occur include materials handling and mixing, charging areas, melting areas (fugitive emissions) and finishing processes (Ex. 476–174).

(iii) *Controls Currently Used.* Controls for materials handling include automated handling of materials by tote bins (Ex. 476–190). Bins may also be mechanized to discharge lead via pinch valves (Ex. 476–190). Buckets may be mechanically interconnected with mixers and automatically dumped, thereby minimizing employee exposure to dusts (Ex. 476–190). Exposures during manual handling can be controlled through the use of exhaust ventilation (Ex. 476–193). Where bags are dumped into barrels and the barrels are fork lifted to mixers, exhaust enclosures have been used successfully to control dust exposures (Ex. 476–193). General batch house controls can include the use of hoods over the weighing hoppers, the top of the mixer, the end of the belt and the whole of the mixer; the use of a vacuum system to maintain clean surfaces; and the use of batch wagons at feeding and dumping points (Ex. 476–189). Batch house operations that result in the highest exposures, such as ingredient weighing, have also required the use of worker rotation to achieve compliance with the 50 $\mu g/m^3$ standard (Ex. 476–190).

Some companies minimize dust emissions by using an oil-base lead oxide (main constituent of glazing compound) (Ex. 476–193). Others perform the work wet (Ex. 476–195), while still others use pelletized or briquetted lead oxide (Ex. 476–190).

To maximize the effectiveness of dust collection systems, baghouses have been enclosed and exhausted to prevent the dispersal of dust into the workplace.

In melting operations, exposures have been controlled by installing continuous melters with dust collection systems (Ex. 476–193). When continuous melters are not used, exhaust ventilation has been used over day pots or tanks to control exposure (Ex. 476–174).

In finishing operations, such as hand blowing, local exhaust systems have been used (Ex. 476–190). Automated press production areas have also been exhaust ventilated (Ex. 476–190).

(iv) *Exposure Levels.* Exposure data for batch house operations were presented by Lenox Glass, Schott Glass, Fostoria Glass and Nuclear Pacific. Exposures at Lenox, Schott, and Fostoria ranged from 24 to 53 $\mu g/m^3$, however, all companies reported average levels of 30 $\mu g/m^3$ (Ex. 475–25; 476–189, 190 and 193). Nuclear Pacific indicated that exposures in its batch operations were in excess of 50 $\mu g/m^3$ (Ex. 475–41, 476–181). Prior to installing a vacuum system, Fostoria indicated that dust levels ranged from 18 to 73 $\mu g/m^3$ in this operation (Ex. 476–189).

An OSHA inspection of a glass manufacturing facility found levels of 44 $\mu g/m^3$ prior to the implementation of engineering controls. After implementation, levels were below 30 $\mu g/m^3$. Only ventilation was used. Another OSHA inspection of a company making television face plates (WB–1) found that batch attendants were exposed to levels of 740 $\mu g/m^3$, prior to

the implementation of controls, and 30 $\mu g/m^3$ after the implementation of a totally enclosed materials handling system.

Exposures in melting operations were reported to be 6 to 25 $\mu g/m^3$ by Fostoria Glass (Ex. 476–189) and less than 8 $\mu g/m^3$ by Schott Glass (Ex. 476–189). Lenox indicated that the 50 $\mu g/m^3$ PEL was achievable (Ex. 476–193). At Nuclear Pacific, exposures were reported to be in excess of 50 $\mu g/m^3$ (Ex. 475–41, 476–181).

In its glass blowing areas, Fostoria indicated that exposures ranged from 20 to 50 $\mu g/m^3$ for employees involved in the melting process and less than 10 $\mu g/m^3$ in the melting pot areas (Ex. 476–189). Nuclear Pacific reported exposures to be below 50 $\mu g/m^3$ in this area (Ex. 476–181). Lenox indicated that 50 $\mu g/m^3$ is achievable (Ex. 475–25, 475–41, 476–193).

(v) *Population Exposed.* The Short Report estimated that about 1500 glass workers are potentially exposed to lead (Ex. 22, p. 248). Exposure data presented by representative companies indicated that in only one instance were workers exposed to levels in excess of 50 $\mu g/m^3$ (three workers at the Nuclear Pacific Company) (Ex. 475–41, 476–181). No definitive estimate of the number of exposed workers can be made, but it can be reasonably assumed that only a small percentage is exposed to levels in excess of 50 $\mu g/m^3$.

(vi) *Additional Controls.* In most instances, existing engineering controls have proven effective in controlling exposures to lead in glass manufacturing (Ex. 475–25, 475–41, 476–189, 190, 193). Engineering controls and administrative controls (worker rotation) have been used to achieve compliance in even the more difficult areas (Ex. 475–25, 475–41, 476–190–193). Exposure levels are, by and large, below 30 $\mu g/m^3$, although in some operations exposures approach 50 $\mu g/m^3$ (Ex. 476–193). Consequently, controls in addition to those existing and in use by most firms are probably not needed. Improved housekeeping may be helpful in those areas where exposures are near 50 $\mu g/m^3$ (Ex. 476–189).

(b) *Secondary Glass Operations*

Secondary operations include grinding, spinning and polishing of glass to produce final products; the remelting of glass for coloring prior to product formation; and the glazing or painting of finished glass surfaces.

Commercial uses include lamp tubing, iron sealing ware, solder sealing, tungsten sealing electron tubes, radiation shielding, capacitors, and television tubes (Ex. 476–5G).

(i) *Process Description and Exposure Areas.—(a) Grinding and Polishing.* Grinding is done with sand, garnet, carborundum, silicon carbide, boron carbide or diamond (Ex. 476–5G). These materials may be used loose, as is done in plate glass grinding (Ex. 476–5G), or grinding may be done by machine. In general, the same machines used for metal grinding may be used to grind glass (Ex. 476–5G). Polishing is similar to grinding, but the polishing compound is finer (felt pads with rouge (iron oxide)) (Ex. 476–4B). Acid polishing and fire polishing are also done (Ex. 476–5G).

Exposure results from ground up lead glass emitted from the process or from lead fumes emitted during chemical or heat polishing. Mechanical grinding operations are generally performed under water mists to suppress dusts (Ex. 22, p. 271).$\mu g/m^3$

(b) Spinning. Fiberglass is produced by throwing a thread of glass pulled from a heated glass rod over a rapidly revolving drum which draws the glass out into fibers resembling wool or silk (Ex. 476–5G). The potential for lead exposure exists when leaded glass is being spun.

(c) Glazing. Glazing is used to color and to increase the strength, durability and abrasion resistance of glass. A water suspension of the glaze forming ingredients is applied through spraying, dipping or screening (Ex. 476–5G). Exposures occur when lead-based glazes are applied to surfaces.

(d) Staining. The staining process involves ion exchange and migration (Id.). When the potash-lead glass is melted down, the colorant is added. The glass is cooled and then often reheated to produce the correct color (Id.). Lead exposure may result from the melting of lead-based glass.

(e) Painting. Lead paint resembling a crayon is melted at low temperatures and poured over a screen onto the glass and then annealed for several hours in an oven. Exposure results from the use of a lead-based paint.

(f) Soldering. Solder glass is a highly leaded glass that melts easily at low temperatures. It is commonly used to seal the various components of television tubes and comes in paste or powder form. Exposure results from the use of lead solder glass.

(ii) *Controls Currently Used.—(a) Grinding and Polishing.* Water mists are used to suppress dusts generated by this process (Ex. 22, p. 271). Local exhaust ventilation has also been used successfully to contain dusts as well as to capture fumes in chemical or heat polishing operations. A detailed discussion of the appropriate design, ventilation rates, etc. is available in the *Industrial Ventilation Manual* (Ex. 487) and the NIOSH criteria document entitled, "Grinding, Buffing, and Polishing Operations" (Ex. 476–40). Companies have reported no problem with controlling exposures in the operation (Ex. 22, p. 475).

(b) Spinning. Local exhaust ventilation applied to the drawing stage of the operation and the glass pulling operations is often used to control exposures.

(c) Glazing Operations. Data were not furnished which indicated the kinds of controls used in glazing operations. However, glazing of glass can be compared to pottery glazing where automated or manual spraying in booths may be done. (See the section on pottery glazing for more details.)

(d) Staining Operations. Data were also not provided indicating the specific controls needed for staining processes. However exposure results from the melting of potash-lead glass and, thus, the controls needed for any melting operation are applicable here also (see glass manufacture).

(e) Painting Operations. Data were not provided for glass painting. However, local exhaust ventilation may apparently be used in areas where lead crayons are melted and poured over the screens. Proper ventilation can also be used in the annealing process to control lead exposures. Ovens are generally enclosed and exhausted (Ex. 476–355).

(f) Soldering. The same controls needed for any soldering operation (i.e., local exhaust ventilation) must be used here.

(iii) *Exposure Levels.—(a) Grinding/Polishing Operations.* Exposure data were not provided by any industry. However, many industry representatives indicated that lead exposure posed little problem (Ex. 22, p. 271). The plate glass industry had replaced grinding to finish the glass surfaces with a flotation process (Ex. 476–172).

(b) Spinning. There appears to be no data available on lead levels associated with fiberglass production, although there are some data indicating exposure levels for fiberglass particulates (Ex. 476–200). Dr. Konzan, of Owens-Corning, stated that in 13 years with the company he has only known of two occasions in which lead was even mixed with fiberglass (Ex. 476–195).

(c) Other Processes. Exposure data for other processes were not provided.

(iv) *Population Exposed.* There are no data indicating the number of workers who may be exposed to lead in secondary glass operations.

(v) *Additional Controls.* No additional controls are anticipated to be necessary to achieve compliance with the 50 $\mu g/m^3$ level. The use of local exhaust

ventilation, improved housekeeping and worker rotation should be sufficient.

(c) *Conclusion: Technological Feasibility (Primary and Secondary Processes)*

Primary and secondary glass operations can achieve the 50 $\mu g/m^3$ PEL. Primary operations will have to make use of engineering controls, to the extent feasible, and supplement them with worker rotation (as the industry is currently doing) to bring areas of high or intermittent peak exposures into compliance with the standard. In addition, improved housekeeping and maintenance operations will be necessary. Compliance with the lead standard will probably also bring about a significant reduction in employee exposure to silica.

Secondary glass operations appear to require minimal controls such as local exhaust ventilation (movable or stationary). Extensive control technology does not appear to be necessary and only in a few instances will worker rotation be necessary.

Representatives of the glass industry emphasized in their submissions that compliance with the 50 $\mu g/m^3$ standard was not possible through engineering controls alone. Based on the evidence submitted, OSHA agrees that the success experienced by this industry in meeting the 50 $\mu g/m^3$ limit has been based on multi-faceted control strategies that include enhancement of existing controls, automation of many processes, stringent work practice programs, improved housekeeping and maintenance and worker rotation. This approach avoids the more costly strategy of relying solely upon engineering controls to achieve compliance. OSHA believes that the use of such balanced controls strategies, rather than reliance upon a single method of control, is perfectly consistent with the lead standard since the Agency's ultimate goal in regulating worker exposure to lead is to reduce workers' exposures through the combined use of engineering controls, work practices, housekeeping, and some worker rotation. The industry did not dispute the feasibility of achieving compliance using this combination of controls.

(d) *Economic Feasibility*

(i) *Costs of Compliance.* Most of the establishments affected by this regulation are currently required to comply with OSHA's standard for silica, and some must also comply with the arsenic standard. Therefore, to the extent that compliance activities simultaneously control other toxic substances, the costs attributable to lead are overstated.

Only three firms submitted cost data to OSHA and none of them documented the derivation of their estimates. Bausch and Lomb estimated that $500,000 would be required to bring its very old optical glass operation into compliance (Ex. 476-171). Owens-Illinois stated that in excess of $1,800,000 has been spent to achieve the 200 $\mu g/m^3$ standards (Ex. 475–195). Nuclear Pacific stated, without supporting data, that it had invested $44,000 in controls for lead (Ex. 475–181).

On the basis of OSHA's assessment of additional controls necessary and the submissions of glass manufacturers, OSHA estimates that costs will range from $10.4 to $26.6 million. Annualized costs, therefore, will range from $1.9 to $4.8 million.

(ii) *Industry Profile.* There are four separate and distinct Standard Industrial Classification codes for glass products. The industries affected by the standard are primarily classified in 3229, Pressed and Blown Glass, Not Elsewhere Classified. While there are a total of 382 establishments employing 38,600 production workers in this SIC, most of these establishments are not engaged in the manufacture of lead-bearing products (Ex. 476–20). Lead-bearing products include radiation shielding glass, television glass parts, optical glass and lead crystal.

Only two domestic firms, Nuclear Pacific and Schott Glass, produce radiation shielding glass. Because of high transportation costs for this specialty product, it is unlikely that the secure market position of these firms would be threatened by foreign products as a result of regulation under the lead standard. In addition, there do not appear to be substitutes for lead in this application, with the possible exception of cadmium (Ex. 476–181). However, cadmium is much more expensive than lead and is also toxic.

Schott Glass, a relatively new facility built in 1969, has invested in control technology and produces several product lines in addition to radiation shielding glass (Ex. 476–190). Nuclear Pacific's radiation shielding glass operation comprises a small part of its business and employs only three workers. Nuclear Pacific reported that OSHA-related expenditures constitute 20 percent of the firm's total machinery and equipment investment, but did not substantiate this claim (Ex. 476–181).

Five firms (RCA, Owens-Illinois, Schott Glass, Lancaster Glass, and Corning Glass) manufacture leaded glass television parts, such as surface plates, funnels and television tube necks (Ex. 476–170). As with other luxury items, the demand for televisions is generally elastic and fluctuates with the general state of the economy. In addition, foreign imports have been a major influence on this market because television sets produced abroad are often perfect substitutes for domestic sets. In fact, Owens-Illinois Television Products Division contends that, as a result of "unrelenting pressure from foreign competition," the industry now has an overcapacity problem (Ex. 475–195). Although a 1977 agreement between the U.S. and Japan limited imports of Japanese color television sets for three years, foreign competition continues to make inroads into the domestic market (Ex. 476–26).

Nevertheless, the effect of the lead standard on the glass parts firms should be relatively small because the economics of the domestic manufacture of these sets will be largely determined by the volume of foreign imports permitted into the country. If domestic production remains viable, the demand for glass parts will be sustained because there are no direct substitutes for these parts, and they comprise only a minor portion of the value of the final product (Ex. 476–174). If foreign competition brings about a sharp decline in the domestic production of television sets, the glass parts firms could probably expand into other product lines with existing plant and equipment because these firms can also manufacture other glasswares.

Three firms produce optical glass in the U.S. They are Schott Glass, Corning Glass, and Bausch and Lomb (Ex. 476–180). Thus, a high degree of concentration exists in the domestic optical glass market. Bausch and Lomb has indicated that allocating resources to comply with the standard in its plant will present a serious dilemma for three reasons: (1) The plant is very old, (2) its output of glass is small, and (3) only seven people are involved in the glass operations (Ex. 476–171). However, the cost estimated by Bausch and Lomb is unsupported. Moreover, given the age of the plant, the firm would increase production efficiency and control lead exposures simultaneously with the advent of new equipment. In addition, there is no evidence to indicate that international competition is occurring, or would occur, in this market as a result of this regulation. Therefore, because there primary uses are considered medical necessities and because the are no suitable substitutes for the product, the demand for optical glass should remain relatively constant with most of the costs of compliance with the OSHA lead standard passed forward to consumers.

Although there are seven domestic producers of crystal (Lenox, Fostoria, Viking, Fenton Art Glass, Rainbow, Pilgrim, and Seneca), Lenox and Fostoria produce the majority of domestic crystal (Ex. 476–170). Lenox submitted a detailed statement on the problems of complying in its china operations, however, no similar material was presented with respect to the manufacture of crystal (Ex. 475–25). Therefore, OSHA assumes that exposure problems in this area are much less severe. Lenox crystal is produced exclusively by hand (Ex. 476–180) whereas Fostoria also uses automatic processes for some of its product lines (Ex. 476–189).

There has always been strong foreign competition in certain quality ranges of the crystal products market. Foreign products may enjoy the advantage of lower labor costs. However, leaded crystal products are valued by the consumer for their quality and craftsmanship. These are luxury items for which many consumers will defer purchase in times of economic uncertainty, but because of the unique aesthetic quality of these products, will generally not substitute lower cost imports, even if they are functionally equivalent.

Both the domestic wool and textile fibergalss markets are highly concentrated, with no prospects for competition from foreign producers (Ex. 476–191). Given the high demand for insulation materials, rising energy costs and the oligopolistic nature of the industry, any cost increases incurred as a result of the lead standard would likely be passed on to consumers. Since specialty orders requesting the addition of lead in these products appear to be extremely infrequent, no significant economic impact is anticipated for this industry.

The record shows that there is little potential for exposure to lead in the production of fiberglass and other insulating materials. Minimal compliance costs may be incurred by companies that intermittently accept special order jobs that might require the addition of lead to their products (Ex. 476–201).

(iii) *Conclusion: Economic Feasibility.* None of the industries or firms within the industries presented financial data to OSHA for consideration. However, the annualized costs of compliance are expected to comprise, at most, 0.8 percent of the total value of shipments ($505.6 million in 1977) (Ex. 476–20). This information and the apparent stability of the lead glass industries lead the Agency to conclude that no major economic impact will occur.

17. Gold, Silver and Platinum Smelting

(a) *Primary Gold Smelting and Refining*

(i) *Uses.* The oldest and the most important commercial use of gold is in jewelry. It is also used in dental devices such as inlays, crowns, bridges and orthodontic appliances (Ex. 476–204). The most important industrial use of gold is in electronic devices, especially printed circuit boards, connectors, keyboard contactors and miniaturized circuitry. Gold containing brazing alloys are also important to the aerospace industry, especially in jet engine assembly. Gold is used as a reflector of infrared radiation in radiant heating and drying devices and heat-insulating windows for large buildings (Id.).

In the United States, 60 percent (Id.) of the domestically produced gold is obtained by recovering natural gold from gold-bearing ores or placer deposits or as a byproduct of lead and copper smelting (Ex. 481 p. 20). The total domestic output of mined gold comes from approximately 225 mines. Three mines accounted for 63 percent, and 25 mines for about 95 percent, of domestic output in 1977 (Ex. 476–204). Eighty-five percent of the gold ore in the U.S. comes from South Dakota, Nevada, Utah, and Arizona. The leading producer, Homestake Mining Company, provides about one-third of domestic output from deep underground mines in South Dakota. The Kennecott Copper Corporation, a major copper producer that produces gold as a by-product of its extensive copper smelting operations, is the second largest gold producer (Id.). The third largest producer, the Carlin Gold Mining Company, has an open pit mine in north-central Nevada. Due to increased gold prices, other mines are now being refurbished (Id.).

(ii) *Process Description and Exposure Areas.—(a) Smelting.* Except for certain alluvial deposits, the first step in recovering gold from ore to is crush it very finely with water in a ball mill to liberate the gold. At the Homestake Mines in Lead, South Dakota, good milling practices have resulted in the recovery of 96 percent of the gold contained in the ore. The remaining gold is removed by amalgamation and cyanidation (Ex. 476–4B).

For some ores (tellurides), a preliminary roasting step may be required prior to amalgamation (Id.). Ores which are to undergo amalgamation are crushed, concentrated, and sorted before the concentrates are passed over mercury-treated (amalgamated) copper plates, to which the gold particles adhere. The discharge from the plates is then extracted with a cyanide solution. Mercury may also be added during the crushing stage to achieve direct amalgamation. The crushed ore may be treated directly with a cyanide solution, thereby making the entire process described above unnecessary.

During cyanidation, the ore is placed in large vats and treated with a dilute solution of sodium cyanide or an equivalent amount of calcium cyanide plus a little lime. Air is bubbled through the mixture to provide oxygen. Cyanide will dissolve any silver present as well as some of the base metals in the ore, further reducing impurities. The cyanide slurry is then filter pressed. This process allows gold to be extracted, without roasting, after fine grinding (Ex. 476–4B). The gold and other metals dissolved by the cyanide are recovered by treatment with zinc dust or, occasionally, with aluminum, that precipitates the gold out of the solution. Frequently, lead acetate is used to assist in the precipitation (Ex. 481).

(*b*) *Refining.* The impure gold recovered from amalgamation or cyanidation is melted under oxidizing conditions to remove most of the copper and the base metals, leaving gold and silver. A cupel, or an open-hearth furnace with a hearth of special construction, furnishes a refractory base of noncontaminating materials to absorb a portion of the fused litharge (a lead solution which is added to the precious metals to formulate the fine metal blends). The litharge is run through a trough and collected for future use. The process requires a blast of air directed at the metals in the hearth while at red heat. The process is complete when the last film of oxide is removed, and the gold flashes out brightly. This process removes all trace metals, including lead (Ex. 476–5G). However, the gold must be further refined to produce a final product.

The gold product can usually be recovered by electrolysis in a chloride solution. In this process, developed by Wohlwill, the gold in the anode is dissolved and deposited in pure form on the cathode. Any remaining silver is converted to chloride, which tends to coat the anode, however, superimposing alternating current on the system will sharply reduce this problem. The resulting cathode deposit should contain 99.95 percent pure gold after melting (Ex. 476–4B).

Electrolytic recovery of gold from impure gold may also be accomplished through the Miller process in which chlorine is bubbled through the molten metal and converts the base metals into volatile chlorides, which then can be poured off and further refined. The

remaining gold is less pure and may require additional treatment (Id.).

Lead exposure occurs in the initial stages of material handling such as crushing, grinding and conveying of the ores. Preconditioning of ores which requires pyrometallurgical treatment may also result in exposures. Cyanidation processes are another potential area for lead exposure. In refining operations, exposures can occur during furnace charging when litharge is being added, from the furnaces' fugitive emissions, and from handling litharge for reprocessing. During the electrolytic processes, very little lead exposure should occur because most impurities have been removed. In the casting areas, very little lead exposure occurs; although trace amounts of lead may remain in bars of silver, gold, or platinum, the lead is in alloy form and does not present an exposure hazard (Ex. 22, p. 236).

(iii) *Controls Currently Used.* The ores are mechanically conveyed to the grinding areas and grinding is done at a ball mill with water (Ex. 476–4B). The companies are very careful about dust collection so as not to lose the noble metals (Ex. 22, p. 235). Materials are stored in bins with chutes and are conveyed by screw conveyors. Belt wipes, dead drops, conveyor curtains or skirts and local exhaust ventilation at material transfer points can also be used to control dust. Dust suppression is accomplished by keeping the materials moist and, on many lines, liquid sprays or chemical dust suppressants are added to ores being handled. Vacuuming (preferably wet) minimizes the reentry of settled dusts into the air. In some instances, clean air pulpits are used in automated operations in very dusty handling processes (Ex. 481).

Controls in cyanidation processes may consist of enclosed materials conveying systems, exhaust ventilation of cyanidation tanks and the automated or mechanical addition of chemical precipitators.

Controls used during pyrometallurgical processes consist of maintaining negative pressure in the furnaces and providing ventilation to capture fugitive furnace emissions or enclosure of the source of contamination. In addition, materials handling systems, such as ladles, pots, kettles and launders, are provided with exhaust hooding, as are tapping and skimming pots (Ex. 481).

In refining operations, exposure control involves the application of pressure differentials to furnaces, ventilation to capture fugitive emissions from furnaces, total or partial enclosure of units and the use of materials handling systems with ventilation of tapping and skimming pots. In addition, electrolytic precipitatory processes are ventilated.

The casting areas utilize exhaust ventilation.

(iv) *Exposure Levels.* Exposure data in ore handling operations were provided. One gold processor reported that the percentage of lead present in gold ore was so low as to preclude any problems in meeting the standard (Ex. 22, p. 235). William Wagner, an expert witness on smelting, agreed that the 50 $\mu g/m^3$ limit was achievable in material handling operations (Ex. 481). Data on lead levels resulting for pre-treatment of telluride ores were not available. However, companies stated that lead exposure from this operation presented no problems (Ex. 22, p. 235). Exposure data were also unavailable for lead exposures resulting from cyanidation, although Wagner stated that he was unaware of any data indicating that lead levels exceed 50 $\mu g/m^3$ in this operation (Ex. 481, p. 20).

A NIOSH survey of the Homestake Gold Refinery (Ex. 476–210) indicated that lead exposures can range from 50 to 13,800 $\mu g/m^3$ in gold refinery operations. Wagner stated that exposures ranged from nondetectable to a few hundred $\mu g/m^3$ at plants that he had sampled (Ex. 481). The broad range of exposure levels is due to a lack of engineering controls at some facilities (Ex. 481). No exposure data were submitted by industry representatives.

(v) *Population Exposed.* The exact number of workers exposed to lead in this industry is probably less than 100. Short estimated that 100 workers in silver and gold smelting (both primary and secondary) are exposed to lead (Ex. 22, p. 237). Wagner stated that approximately 2000 workers are engaged in the gold, silver and platinum industries, but that only 200 are exposed to lead (Ex. 481). No data are available which indicate the numbers of workers exposed to lead above and below 50 $\mu g/m^3$.

(vi) *Additional Controls.* Wagner testified that "all areas associated with the processing and refining of gold, silver and platinum could be brought into compliance with the OSHA lead standard by the application of generally available controls" (Ex. 481).

The selection of the appropriate control, or combination of controls will depend on the material handled, the extent of the dust problem, the process involved, and the extent to which engineering controls are already in place.

Mr. Wagner stated that:

> Materials handling problems occur when bins and chutes become plugged, at transfer points, and when dry or hot materials must be conveyed. Standard engineering solutions for all of these problems exist, especially since materials handling is a problem common to many industries, not just the smelting and refining industries (Ex. 481).

Basically, all commenters agreed that, depending upon the particular condition of a plant, different plans for achieving compliance with the 50 $\mu g/m^3$ standard might be necessary (Ex. 481; 475–38; 479; 487). Applying exhaust hoods and fans to capture and contain fugitive emissions at tapping holes, troughs and charging areas and use of worker observation booths may be necessary in cases where exposure levels are extremely high. Where exposures are intermediate, the use of local exhaust ventilation in specified areas in conjunction with an enhanced housekeeping and worker rotation program may be sufficient. Where levels are slightly above 50 $\mu g/m^3$, employee rotation alone may suffice.

The best controls available will not be effective, however, unless they are properly designed, fabricated, installed, and conscientiously operated and maintained. Ventilation hoods and ducts permitted to deteriorate beyond use; conveyor skirtings that are remove or improperly adjusted; inspection doors that have been removed, left open or replaced by screens; and new systems that are simply tacked onto existing ones with little or no thought to proper air flow balancing will counteract any effort to achieve the 50 $\mu g/m^3$ limit (Ex. 481). Ducts that are not attached to the associated hood or that are completely detached from the ventilation system are also insufficient (Ex. 479). The necessity for enhanced maintenance cannot be stressed enough in this particular industy.

(vii) *Conclusion: Technological Feasibility.* Compliance for primary gold production and refining appears feasible through the use of the conventional control techniques discussed by William Wagner (Ex. 481), Melvin First (Ex. 270), and Charles Billings (Ex. 487). Materials handling systems, pyrometallurgical controls and controls for chemical processes all involve either containment of the source of exposure or worker isolation (Ex. 270). In all areas except for gold refining, compliance with the PEL appears to have been achieved. In refining, levels of exposure are high but, as Wagner testified, the plant he observed with the highest exposures had virtually no controls. Therefore, using the controls methods discussed herein, OSHA concludes that

compliance with 50 $\mu g/m^3$ is feasible in one year in gold smelting and refining.

(b) *Primary Silver Smelting and Refining*

(i) *Uses.* In 1977, domestic use of silver amounted to 154 million ounces. Major consuming areas were photography, silverware, and electrical equipment (Ex. 476–205). Chemicals are produced from about one-third of the silver.

Refineries normally ship silver in the form of ingots. These go largely to several principal producers or fabricators of semi-manufactured products, such as rolled and extruded bars, rods, wire, sheet, foil and powdered or pelleted silver. These semi-manufactured forms go, in turn, to about 5,000 manufacturers of silver products. New scrap, resulting from the manufacture of finished products, is reprocessed internally or returned to one of a number of refiners for reprocessing (Ex. 476–205).

(ii) *Process Description and Exposure Areas.*—(*a*) *Primary Ore Recovery.* Silver is recovered from ores almost entirely by a flotation process that recovers silver from intermediate products of lead, zinc or copper smelting. Silver is carried down with the lead in smelting and separated from it by the Parkes process. This process requires the addition of zinc to the molten silver-lead mixture. The mixture is allowed to cool, and the virtually insoluble silver-zinc alloy separates from the molten lead and rises to the surface, where it is skimmed. This first crust contains much lead, more than 2,000 ounces of silver per ton, and all of the gold in the original bullion. By use of a retort, the zinc is distilled for reuse. The retort residue is cupelled to recover the gold and silver as dore metal, and the lead as litharge (Ex. 476–205).

(*b*) *Refining.* Silver found in association with gold from gold-placer or lode-gold mining is recovered in the electrolytic refining of gold bullion and was discussed in the primary gold smelting and refining section.

Crude silver bullion, which usually contains small quantities of gold or other metals and old scrap silver, may be treated at a copper refinery. The electrolytic refining process is commonly used, that consists of an electrolyte of silver nitrate and nitric acid. Fine silver crystals are produced and remelted into commercial bullion bars. Commercial silver is guaranteed to be a minimum of 99 fine and may range from 99.4 to 99.9 fine purity, with copper or gold the usual impurity (Ex. 476–205).

(iii) *Controls Currently Used.* Materials handling control technology for silver smelting is comparable to that used in gold, lead and copper smelting, and generally requires the use of storage and mixing bins; belt, screw or mobile conveyors; pneumatic conveyance; and enclosure and hooding of conveying systems, etc. (Ex. 481). The controls for the electrolytic processes and refining are also comparable to gold smelting and include ventilation of pyrometallurgical equipment and electrolytic processes.

The areas of exposure are essentially the same as in the copper and gold smelting industries, and consist of materials handling, pyrometallurgical processes, and chemical processes (Ex. 481). The Bunker Hill Company stated that the greatest potential for exposure occurred during the handling of silver concentrates when they are transferred to holding bins via an overhead conveyor system, and when carts are used to transfer the concentrates from the bin to the refining furnace (Ex. 475–38B). Specific sources of exposure include spillage of concentrate, dust from shoveling, fuming furnaces and skimming molten metals from furnaces (*Id.*).

(iv) *Exposure Levels.* The Short Report estimated that in gold and silver smelting combined the 100 workers were exposed to low to medium concentrations of lead. Low was defined as 70 percent below 50 $\mu g/m^3$, 20 percent above 50 but below 100 $\mu g/m^3$, and 10 percent above 100 $\mu g/m^3$. In the medium category, the percentages were 40, 30, and 30 respectively (Ex. 22, pp. 239, 124). Lead exposure estimates by the Bunker Hill Company indicate that 20 percent of all employees are exposed below 30 $\mu g/m^3$ and 80 percent are above 50 $\mu g/m^3$ (*Id.*) Exposures were significantly higher than 50 $\mu g/m^3$ in certain of the areas the company labeled as high exposure areas (Ex. 475–38B, p. 2). This inconsistency with the Short estimate suggests that Bunker Hill's levels may be higher and, therefore, are not representative of the rest of the industry.

(v) *Population Exposed.* As stated for the gold smelting and refining industry, the number of workers exposed to lead in silver smelting alone is not known, but is probably below 100. William Wagner estimated that about 200 workers are exposed to lead in the silver, gold and platinum smelting industries combined (Ex. 481).

(vi) *Additional Controls.* Wagner concluded that the application of generally available controls can bring the silver industry into compliance in those areas where compliance has not yet been achieved (Ex. 481). These controls were discussed extensively in the section above. In the case of Bunker Hill, additional efforts may be required, such as upgrading existing dust collection systems. For example, Bunker Hill provided data which indicated that the handling of the concentrate presents the most difficult control situation (Ex. 475–38B). Overhead conveyor systems are used, as are carts, to transfer the concentrate to refining furnaces. A detailed description of the existing technology was not provided, thus, it is not clear whether the conveyance system is totally enclosed, whether long material drops are used, whether protective curtains or barriers can be applied, etc. However, as Wagner stated, materials handling is a problem for most industries and existing, already tested, workable controls are available. Bunker Hill must assess the controls it has in place and determine their effectiveness. The extent to which upgrading or additional controls will be required depends upon the characteristics of the ores being handled, the extent of the dust problem, the exposure levels of the workers (eight-hour time-weighted averages) and the design of existing equipment.

In areas where exposure levels are high, improvements to existing ventilation systems may be necessary and, perhaps, the addition of worker observation booths. Where exposures moderately exceed 50 $\mu g/m^3$, proper ventilation, enhanced housekeeping and worker rotation may be sufficient to achieve compliance. Where levels are only slightly above 50 $\mu g/m^3$, worker rotation may suffice (Ex. 481).

(vii) *Conclusion: Technological Feasibility.* Compliance with the 50 $\mu g/m^3$ PEL within one year appears to be feasible for the silver smelting and refining industry, in most cases, simply by upgrading existing control technologies, using effective work practices and using worker rotation. Since silver smelting is, for the most part, a by-product of primary lead and copper smelting, the controls needed to achieve compliance with a 50 $\mu g/m^3$ PEL in these operations will also control lead exposure during silver recovery processes. In the refining of silver, improvements in the areas of material handling should bring the industry into compliance with the standard.

(c) *Platinum Smelting*

(i) *Uses.* Platinum is used as a catalyst in synthetic organic chemistry, in contacts for relays and switch gears, in resistors and capacitors, electro-chemical electrodes, spacts electrodes, grids for power tubes and radar tubes, fuel cells, thermocouples, retardants, and as an ingredient in corrosion resistant substances, hardening agents,

medical or dental uses, jewelry, reflecting ornamental surfaces, and brazing alloys (Ex. 476, 4L). Of the platinum metal refined in the U.S., new metal either as a placer or by-product from gold and copper refining accounts for a very small portion of the production, whereas attainment of the precious metal from recycling accounts for the largest production (Id.).

(ii) *Process Description and Exposure Areas.* There are two principal stages in the isolation of reasonably pure platinum metals from raw materials. One is the extraction of a concentrate of precious metals from a large body of ore. The other is the refining of the precious metals, which involves the separation of the concentrates from each other and, ultimately, their purification (Id.).

In one process most of the platinum metal is separated from the bulk of the copper and nickel during slow cooling of a Bessemer matte. During this cooling, the oxidation of sulfur is regulated and produces small amounts of metallic nickel and copper. The latter serve as collectors of the precious metals from the original ore, and separation of the metallic phase is facilitated because the phase is magnetic. The separated material can be concentrated to an even richer alloy, the electrolytic refining of which yields a rich concentrate in the anodic slimes. Smaller amounts of the precious metals are also recovered during refining of nickel either electrolytically or by the Mond carbonyl process. The separation from placer gold ores is also done electrolytically.

Areas of exposure are similar to those in gold and silver smelting (Ex. 481), exposure can occur at materials handling stages, during pyrometallurgical processes, and possibly during electrolytic precipitation.

(iii) *Controls Currently Used.* The controls necessary to achieve the 50 $\mu g/m^3$ standard in gold, nickel, silver and copper smelting would be the same controls necessary to achieve 50 $\mu g/m^3$ limit for platinum, since platinum is recovered as a by-product of the smelting of gold, lead, silver, copper, and nickel.

(iv) *Exposure Levels.* No data on levels of exposure were presented by any witnesses nor as part of any written submissions. Levels are assumed to be the same as those in gold and silver operations and to depend entirely upon the percent of lead in the ore (Ex. 481).

(v) *Population Exposed.* Approximately two hundred workers are exposed to lead in gold, silver, and platinum smelting combined (Ex. 481). The number potentially exposed in platinum operations alone is not known.

(vi) *Additional Controls.* Controls are not necessary to control lead exposure occurring as a result of platinum recovery, since platinum is recovered exclusively as a by-product of a gold, silver, copper, lead or nickel smelting process.

(vii) *Conclusion: Technological Feasibility.* Since platinum is recovered almost exclusively as a byproduct of the smelting of another ore, the controls needed to achieve 50 $\mu g/m^3$ lead exposure for the recovery of primary ore will also achieve 50 $\mu g/m^3$ in the recovery of platinum.

(d) *Secondary Smelting of Gold, Silver, and Platinum*

(i) *Uses.* The uses of silver, gold and platinum obtained from secondary operations are the same as for metals produced through primary production operations.

(ii) *Process Description and Exposure Areas.*—(*a*) *Sampling of Scrap.* Sampling is done to determine the content of materials so that the correct treatment for extracting the impurities may be selected. There are three major forms in which materials are sampled; (1) Sweep, which are the residues from jewelry and dental laboratories; (2) bullion, which are materials received in pigs or bars; and (3) slimes, which are the dried residues from electro-refining or electrowinning processes (Ex. 475–31).

Materials for sweep sampling are received in 55-gallon drums. The powder is mixed in double cone blenders, repackaged in the drums, the thiefed for sampling. Bullion bars must be melted, prior to processing, for sampling. Kaplan described AMAX as having a bullion room containing with five furnaces, four oil-fired and one electric to melt bars prior to sampling (Ex. 475–31). Sampling of slimes is accomplished by dumping the materials onto the floor and quartering and coning (Id.). The operation has already been enclosed in a separate isolated room, with that room placed under suction to a dust collector, in order to localize the problem (Id.).

(*b*) *Pyrometallurgical, Wet Chemistry, or Electrowinning Processes.* Following sampling, materials are fed either to the Dore furnace for pyrometallurgical treatment, or to the wet chemistry and electrowinning sections of the precious metals process (Id.).

The dore furnace is a special type of reverberatory furnace (Id.). Pyrometallurgical treatment is comparable to treatment performed in primary operations and basically involves the melting of the materials, separation, and skimming or raking. Chemical separation is also done quite often, of pyrometallurgical separation.

Sweeps and related materials containing nonmetallic particles can be treated by adding the appropriate flux to produce a low-melting slag. Litharge (PbO) should be present in the mixture and some of this is reduced to produce metallic lead, which dissolves the fine precious-metal particles. The resulting noble metal-lead alloy, which should contain a reasonable amount of silver, is oxidized in a later step to produce litharge, which is poured off, and the residual dore is treated electrolytically (Ex. 476–5G).

(*c*) *Refining.* A number of special problems arise in the treatment of precious metal wastes of various types, such as "sweeps" and in treating scrap containing copper, nickel, zinc, and possibly some iron, tin, and lead, plus gold and silver. Dilution of the zinc can be fumed off as zinc oxide, and iron, lead, and some of the tin may be slagged off. The precious metals remain with the copper and most of the nickel. This product can be made at the anode in a sulfate solution and most of the copper and nickel removed, the precious metals remaining as an anode slime or mud, which is further recovered through electrolysis (Id.).

In refining precious metal scrap and some concentrates, the gold is converted to its chloride by treatment with aqua regia. After heating to remove nitrogen oxide, gold is precipitated from this solution by reduction with sulfur dioxide or ferrous sulfate. Any platinum metals can be recovered from this solution after the complete precipitation of the gold. (Id.)

Silver also can be removed from dore metal by treatment with hot sulfuric acid. The gold remains undissolved but is lower in purity than that resulting from most other processes. (Id.)

Dore containing moderate amounts of gold can be treated by electrolysis in a nitrate solution. The gold does not dissovle but is retained in canvas anode bags. The silver deposits are very pure. (Id.)

Exposures may occur in sampling operations, in the dore furnace areas, and in chemical processing and electrostatic precipitation processes.

(iii) *Exposure Levels.* Typical exposure levels are not known, but Short's statement that "companies anticipate no difficulties or costs involved with compliance with the proposed standard" (Ex. 22, p. 235) indicates exposure level must be below 100 $\mu g/m^3$ as a general matter. At one site for which exposre levels were obtained, exposure in sweep sampling range from 15 to 5290 $\mu g/m^3$ (Ex. 475–

31). Typically, four workers are involved per shift. No information was given which indicated if these were personal samples or area samples, or if they were peak exposures or 8-hour time-weighted averages. The bullion furnace operations create exposures ranging from 17 to 530 $\mu g/m^3$ (Id.) These numbers also have not been characterized to determine accurately what environmental conditions are at this site. No exposure data were given concerning lead concentrations in the dore furnace areas.

(iv) *Population Exposed.* The Short Report did not separate the number of employees in primary recovery of gold and silver from secondary recovery (Ex. 22, p. 237), but the number is less than the total amount of 100.

(v) *Additional Controls.* Improvement of existing technology may be necessary for some plants; use of work practices, housekeeping, and worker rotation may also be necessary to achieve compliance with 50 $\mu g/m^3$.

Materials handling operations involving the sampling of sweeps pose some problems as a result of trade customs which dictate the methods and size of shipments (Ex. 475–31). While it may be true that this particular operation may require improved ventilation to recover lost precious metals from the ambient air as a result of these customs, an economic incentive for implementing such improvements is created by rising prices for precious metals (Ex. 22). Of course, one should also consider that the recovery of these precious metals is economically advantageous to the company (Ex. 481). However, where ventilation cannot be used to reduce levels to 50 $\mu g/m^3$, worker rotation can be used as a supplement to achieve compliance with the intent of the standard, to control worker exposure.

The electric furnace is amenable greater fume control with a lesser air volume than are oil-fired furnances (Ex. 475–31), thus, Kaplan suggests converting to all electric furnaces. This certainly is the most costly alternative; however, less expensive and technologically less drastic changes such, as the use of local exhaust ventilation, containment, etc., as suggested by Wagner, could also be utilized (Ex. 481).

Current trade practice dictates that only one method of slime sampling is acceptable, and Kaplan testitied that this is the method AMAX uses and that no further mechanization is possible under present circumstances (Ex. 475–31). In this case, stringent adherence to work practices, effective maintenance and housekeeping plans and worker rotation should be sufficient to reduce levels to 50 $\mu g/m^3$.

Improved ventilation of the dore furnaces may also be necessary. In Kaplan's example, improved ventilation was applied to prevent strong air currents from disrupting the air flow of exhaust hoods and to prevent contaminated air from being carried to other portions of the precious metals department. (Id.)

The importance of plant maintenance cannot be overstated. Repairing floors, leaking pipes, etc., can reduce or eliminate exposures in many instances. One example presented by Mr. Kaplan involved lead exposure in a leach room which resulted from lead emissions from the dore furnace area. It appeared that the leach room was located above and generally downwind of the dore furnace room, and the lead concentrations in the leach room were due to contaminated air rising from the dore furnaces. Kaplan felt that repairing the leach room floor, keeping the stairway opening closed, and installing a make-up air system to pressurize the room slightly would resolve this problem. (Id.)

(vi) *Conclusion: Technological Feasibility.* The most difficult areas to control appear to be in the materials handling processes. As Bill Wagner testified, the materials handling problems are common to many industries, and standard engineering controls do exist to reduce exposures in these areas (Ex. 481).

Controls for pyrometallurgical processes are also available and used extensively in primary operations and include hooding of tapping and skimming ports, ladles, pots, kettles, launders, etc. (Ex. 481) and are also applicable to secondary processes.

Even though there may be areas for which engineering controls *alone* may not be able to reduce exposures below 50 $\mu g/m^3$ (i.e., sweep sampling and slime sampling), effective work practices, worker rotation, and housekeeping can be used to control exposures to the 50 $\mu g/m^3$ level. The industry is, therefore, capable of compliance within one year.

(e) *Gold, Silver, and Platinum as By-Products of Lead or Copper Smelting Operations*

(i) *Uses.* The uses of these precious metals are the same as those discussed in the primary smelting of gold, silver, or platinum ores.

(ii) *Process Description and Exposure Areas.* The precious metal may also be recovered from the smelting of base metals such as lead and copper by the cupellation method. Subsequent processing to remove precious metals may involve chemical treatment to precipitate one or more precious metals or an electrolytic method.

The electrolytic method is the preferred means of separating precious metals from base metals in the U.S. One process uses anodes of dore silver, with the cathode being a movable silver belt with a light coating of oil. The belt moves in a trough of redwood coated with acid-resisting paint. The bath is silver nitrate, kept slightly acidic with nitric acid. The belt moves under the cathode, is brushed off automatically at the turn, and delivers silver powder. The anode is hung in a fabric basket in which the gold slime deposits. The slimes are collected, washed with sulfuric acid, and melted to recover gold metal (Ex. 476–4B).

The composition of the anode and cathode determines which precious metals will be precipitated electrolytically.

When precious metals are recovered as a by-product of the primary smelting of a lead or copper ore, the greatest exposure to lead occurs in the initial stages of the base metal processing. The feasibility of the standard in these operations has been established. The final electrolytic processing to remove the precious metals involves very little lead exposure.

(iii) *Controls Currently Used.* The technology necessary to achieve compliance with a 50 $\mu g/m^3$ standard in primary lead smelting and copper smelting will suffice to control lead exposure in the recovery of by-products such as gold, silver and platinum, since the lead in all cases is separated from the precious metals prior to electrolytic treatment.

(iv) *Exposure Levels.* Exposure levels during primary lead refining were discussed in the initial preamble (43 FR 54481–82). Exposure levels during primary copper smelting and refining is discussed in the primary copper smelting section. Data on lead exposure in electrolytic processes were not available.

(v) *Population Exposed.* Data were not provided indicating the populations exposed to lead as a result of the recovery of precious metals as a by-product. However, one can assume that the same population exposed in primary lead and copper smelting would also be potentially exposed in these refining processes.

(vi) *Conclusion: Technological Feasibility.* Since gold, silver, and platinum are recovered electrolytically as by-products of primary lead and copper smelting operations, the controls necessary to achieve compliance in primary operations would suffice to control by-product emissions.

(f) *Economic Feasibility: Precious Metals*

(i) *Cost of Compliance (Gold and Silver).* Industry submitted no cost data relevant to the recovery of precious metals as by-products from zinc and copper smelting. Although both ASARCO and Bunker Hill presented comments that referred to precious metal recovery, they submitted no data on controlling lead exposures in these areas (Ex. 475–28 and Ex. 475–38).

OSHA estimates that the cost of compliance in these areas will be between $500,000 and $1,500,000 (Ex. 481). These estimates were entered into the record and presented during the hearings. At no time did industry submit any data which would counter this estimate.

(ii) *Industry Profile.—(a) Gold.* In 1977, production of domestic gold was 1,100,000 troy ounces. Total value of shipments was $163,197,000 (Ex. 476–206). About 60 percent of gold is obtained from predominantly gold ores, while the balance (40 percent) is a coproduct primarily of copper and partly of other base metal productions. Of this base metal production, seven percent of the total gold mined involved lead ores (Ex. 476–206).

Three major smelting and refining companies produce 65 percent of domestic primary gold. These companies are Homestake Mining Co., Kennecott Copper Corporation, and Carlin Gold Mining Corporation. Three individual mines produce 63 percent of domestic primary gold.

Major uses of gold include jewelry and arts, dental supplies, industrial uses and investment. In 1977, 55 percent of U.S. demand for gold was for jewelry and arts, 15 percent for dental supplies, 25 percent for industrial uses and 5 percent for investment. There are no major individual demanders for gold in the U.S. With respect to the elasticity of these demands for gold, the demand for gold in jewelry and arts and in dental supplies is inelastic. There are very few acceptable substitutes for gold in these industries. However, with respect to industrial demand for gold, this appears to be much more elastic. As evidence, the industrial demand for gold in troy ounces fell by one-half between 1975 and 1977. Taking the place of the industrial demand for gold has been the investment demand for gold. Traditionally, gold has been considered to be a hedge against inflation because of its limited supply and its resistance to tarnish and corrosion. Expectations of inflation lead to this increase in the demand for gold and this component of demand becomes a larger and larger component over time as inflation remains unabated. Thus, minor cost increases in the production of gold are not likely to have a significant impact upon the gold market.

As relatively little gold is produced as a by-product of other metal refining and, as 92 percent of that by-product gold is currently recovered, other metals markets will have little impact upon total gold production. Recent gold price fluctuations simply illustrate the volatile nature of investor expectations and their impact upon the price of gold. These price increases have also shown that the secondary gold supply is extremely responsive to prices.

(*b*) *Silver.* In 1977, five primary and 17 secondary producers in SICs 3339535, 3341531, and 3341571 produced 111,623,000 troy ounces of silver and silver-based alloys. Total value of shipments was $388,300,000 (Ex. 476–20). Nearly one-third of silver is obtained from predominantly silver ores, while the balance is produced as a coproduct of copper, lead, zinc, and other mineral production. Nineteen of 25 mines from which silver was obtained were copper, lead, lead-zinc, and copper-lead-zinc-gold mines (Ex. 476–205).

Four major smelting and refining companies produce the bulk of domestic primary silver. They are ASARCO, the largest, and Bunker Hill, Kennecott, and U.S. Metals Refining Company (a division of AMAX). Three silver processing and fabricating firms consume nearly two-thirds of all domestic unmanufactured silver. They are Eastman-Kodak, Handy and Harman, and Engelhard Minerals and Chemicals (Id.).

Major uses of silver include photography, silverware, and electrical and electronic equipment. In photography, demand for silver is relatively inelastic since there are no suitable substitutes. The relatively low value of silver content in electronics applications in comparison to the high unit value of the end product, leads to an inelastic demand for silver in this use as well (Id.). Thus, price increases are not expected to adversely affect the firms in this industry.

However, since production is dependent on other metals, silver output also responds to economic factors other than the price of silver. Recent silver price fluctuations have been attributed more to speculation than to the gap between supply and demand (Id.). Future increases in market price will probably result in an increase in the supply of secondary silver.

(iii) *Conclusion: Economic Feasibility.—(a) Gold.* Over the past few years, the price of gold has risen dramatically. Mines that were previously closed because it was not economically profitable to work them have been reopened. Because of the relatively low compliance costs that gold producers may incur and the high rates of profitability in the industry, OSHA concludes that the standard will clearly not be financially burdensome in this industry.

(*b*) *Silver.* There has been a pronounced increase in the profitability of producing silver and other precious metals in the past few years. Given the relatively small compliance costs in this industry, OSHA concludes that the standard will not be financially burdensome to the silver producers and will not have an adverse effect on the economy as a whole.

(*c*) *Platinum.* There are no additional costs attributable to platinum smelting beyond those required to achieve compliance in the smelting of the primary ore.

18. Jewelry Manufacture

(a) *Uses*

Jewelry manufacture does not use lead in the actual production of pieces of jewelry, but lead solder is used in the laminating of two metals or in construction of items such as service emblems. The technological discussion relates to the soldering of jewelry.

(b) *Process Description and Exposure Areas*

Manual jewelry soldering is a typical soldering operation. Workers may solder at "bench type" operations where a soldering iron is used to melt solder to individual work pieces.

One large costume jewelry company reported that most costume jewelry soldering is done in furnaces (Ex. 22, p. 287). In one company having 500 employees, a total of one pound or less of lead solder is used per year (Id.).

(c) *Controls Currently Used*

One industry contact felt that 50 percent of the companies have well ventilated facilities at present (Id.). Local exhaust ventilation (see discussion in soldering section) and housekeeping can be relied upon to maintain levels below 50 $\mu g/m^3$ (Id.). Where furnaces are used to melt solder, proper ventilation, consisting of fugitive emission capture hoodings, is used.

(d) *Exposure Levels*

Data were not furnished by jewelry manufacturers. However, in comparable soldering operations (Ex. 476–404), breathing zone samples were less than 3 $\mu g/m^3$. One operation surveyed had mostly nondetectable levels, except for

one which was .018 $\mu g/m^3$ (Ex. 476–400). All levels in manual soldering were less than the 30 $\mu g/m^3$ action level (Id.).

(e) *Population Exposed*

Data indicating the number of workers exposed to lead in jewelry manufacturing were not available.

(f) *Additional Controls*

None are needed other than those already being used.

(g) *Conclusion: Technological Feasibility*

One company stated that if there was any lead exposure, its insurance company would know about it and would have made recommendations for corrections (Ex. 22, p. 287). A trade association representative stated that lead use in jewelry soldering has been studied at length by State and local officials, and that lead exposure was not found to be a problem (Id.).

Based on the data from comparable soldering operations, it would appear that companies in this industry are correct in stating that lead exposure poses no feasibility problem. Levels are less than 30 $\mu g/m^3$, which signifies that compliance with the standard is currently being achieved (Id.).

(h) *Economic Feasibility*

Since existing control technology will be sufficient to keep levels below 50 $\mu g/m^3$, there will be no compliance costs nor economic impact as a result of this standard.

19. Lamp Manufacturing

(a) *Uses*

Lead is used in the manufacture of incandescent lamps, either in the remelting of leaded glass to form specific parts or in the soldering together of parts (Ex. 22, p. 312).

(b) *Process Description and Exposure Areas*

Operations have been described quite differently at various locations. At the Quoizel Plant, glass patterns are set, copper foil is wrapped around the edges of the glass and lead flux is poured around the glass to glass interface (Ex. 476–215). At the General Electric lamp making facility, lead compounds are used primarily in the application of solder, in some lamp types, to seal the wires to the metal bases, and in lead glass, in flares at the base of lime glass bulbs (Ex. 476–214). While the specific manufacture of a product is variable, the exposure to lead results from either the reworking of a lead glass or a soldering process.

(c) *Controls Currently Used*

The basic controls include the use of local exhaust ventilation at points of exposure, such as melting, pouring and soldering areas.

(d) *Exposure Levels*

Exposure monitoring performed at the Quoizel Plant indicates no exposure to lead (Ex. 476–215). General Electric also has indicated that air levels are below 50 $\mu g/m^3$ (Ex. 476–214).

The three major lamp producers suggested that compliance with the 50 $\mu g/m^3$ PEL was achievable (Ex. 22, p. 312). General Electric also indicated that the 50 $\mu g/m^3$ limit had been achieved in soldering processes (Ex. 476–214).

(e) *Additional Controls*

No additional ventilation controls are needed. In fact local exhaust ventilation was not being used by the Quoizel Company and compliance was being achieved (Ex. 476–215). Soldering processes are already well ventilated and automated (Ex. 22, p. 312). It appears that existing technology, when coupled with good housekeeping, will enable these companies to remain in compliance with the 50 $\mu g/m^3$ standard.

(f) *Conclusion: Technological Feasibility*

Indications are that compliance has been achieved in the manufacture of lamps either through the use of engineering controls or by housekeeping and worker rotation. Companies have indicated that the 50 $\mu g/m^3$ PEL is achievable and, where monitoring data were compiled, levels were shown to be below 50 $\mu g/m^3$ and, in fact, they were nondetectable (Ex. 476–215).

(g) *Economic Feasibility*

Since compliance with the standard apparently has been achieved, there are no estimated costs for compliance, nor is any economic impact anticipated.

20. Lead Burning, Brazing, Welding and Surface Preparation

(a) *Uses.*—(i) *Burning, Brazing, and Welding.* Welding is a term applied to various processes that join pieces of metal by heat, pressure, or both (Ex. 476–5G). There are over 80 different types of welding and allied processes in commercial use; those allied processes include brazing and thermal cutting. Welding, brazing, and thermal cutting are widely applied in all industries where metals are used in construction, repair, and manufacture (Ex. 476–39).

Brazing is a process that produces fusion by using a nonferrous filler material having a melting point above 450° C but below that of the base metals. The filler metal is distributed between the closely fitted surfaces of a joint by capillary action. Thermal cutting (commonly referred to as burning) severs or removes metals by using welding heat sources. Thermal cutting processes include gouging, burning, and scarfing.

Recent technological advances have introduced new and more efficient welding and allied processes. The magnitude of these changes is shown by the change in materials used. In 1976, for the first time, stick electrodes constituted less than 60 percent of the electrode market. Ten years earlier, stick electrodes accounted for 75 percent of the filler metal used. The decrease in stick electrode production in 1976 indicated the trend towards automatic and semiautomatic welding methods using a continuous wire instead of rods (Ex. 476–39).

Many of the recently introduced processes are finding only limited application. Electron beam welding has found application in the aerospace and automobile industry; laser welding in automobile manufacture; and plasma arc, an extremely high temperature process, in cutting processes. (Id.)

(ii) *Abrasive Blasting.* This process entails use of an abrasive media such as sand, steel shot, or grit to remove a surface coating prior to painting. The construction industry has been exempt from the lead standard, however, the industry has not been exempt from complying with the provisions in 29 CFR 1926 which regulate abrasive blasting operations. So while some of the exposure data was compiled from abrasive blasting at construction sites, the exposures are comparable to abrasive blasting exposures found elsewhere.

(b) *Process Description and Exposure Areas*

Exposure to lead can occur in a variety of situations where any of these operations are performed and lead sheet or a lead containing product is being used. Specifically lead exposure results when workers must handle and weld, lead sheets and pipes for waterproofing, chemical resistance lining (this use has declined with the increased use of either specialty coatings or plastics, although a recent increase in lead sheeting for lining pollution control ductwork has been reported (Ex. 22, p. 244), non-sparking electrical bonding (i.e., lead floors for explosives manufacturers), when workers perform lead burning or braze leaded materials, or when lead surfaces are cleaned with an abrasive.

(i) *Welding.* Welding processes differ in the way heat is created and applied to the parts being joined. In arc welding, the most frequently used process, heat is created as electricity flows across a gap between the top of the welding electrode and the metal. In gas welding, the heat from burning gas melts the metal. As part of any welding process, filler materials, including welding rods, stick electrodes, or welding wire, are melted and added to the joint to give it greater strength. Lead exposure results from the welding of lead materials (Ex. 476–56).

(ii) *Burning (Cutting).* The fabrication or burning of joints previously formed or shaped is accomplished by utilizing a small torch (oxygen-acetylene), to heat a surface to a red color. Flame size is intentionally kept small, liquefying the smallest possible area. Lead exposure at burning operations results from the melting of the lead and the accompanying emission of fumes from this process (Ex. 22, p. 244).

(iii) *Brazing.* A nonferrous alloy is introduced in the liquid state between the pieces of metal to be formed. Four methods are used to heat the metal, (1) dipping the parts in a bath of molten metal; (2) furnace brazing; (3) torch brazing; or (4) electric brazing (Ex. 476–5G).

Exposures in all cases may occur at stationary places (such as in anode manufacture) or may involve movable sites (such as in the shipbuilding industry), or may simply be part of maintenance activities (such as repairing lead flooring in explosives manufacture) (Ex. 476–5G).

(iv) *Abrasive Blasting.* An abrasive substance is used to clean a surface prior to painting, or to remove dust and scale. This is usually accomplished by using compressed air to propel the abrasive. Exposure results from lead-containing abraded materials.

(c) *Controls Currently Used*

(i) *General Controls.—(a) Welding, Burning, Brazing Operations.* The reduction of fume concentrations within the breathing zone of a welder, brazer, or cutter can be accomplished by using either of two ventilation methods. The fume can be dispersed by diluting fume-laden air with uncontaminated air, or the fume can be captured by a hood collector connected to an exhaust system (Ex. 476–39).

Dilution ventilation can be provided either naturally or mechanically. Natural ventilation relies on wind currents or vertical temperature gradients to move the air. General mechanical ventilation uses fans to exhaust contaminated air and to provide clean make-up air in order to dilute the concentration of contaminants in the workplace air.

The use of local exhaust ventilation has been shown to be a practicable means of controlling the exposure of welders, brazers, and thermal cutters from fumes (which may contain lead) produced in their work. Compared with general ventilation, local exhaust ventilation can control fumes more effectively and is the preferred means of ventilation, provided the exhaust hood can be positioned close enough to the process to capture air contaminants.

In addition to ventilation, another method of lowering total emitted fume is the use of operating procedures that minimize the fume generation rate. The techniques identified in one report (Ex. 476–39) include using lower currents than those recommended by the manufacturer, using larger diameter electrodes, and positioning the electrode for minimum arc length, minimum contact tube-to-work distance, and maximum angle from the work. Slower speeds not only decrease the fume generated per unit of time but also per unit of length, because a lower temperature may be used (Id.).

Enclosure can also be effective in limiting airborne levels of fume. Electron beam welding, brazing, and cutting performed in a partial vacuum exemplify this practice. Dust emissions can be reduced by storing and dispensing powders in closed containers, (e.g., fluxes in submerged arc welding and filler metals in furnace brazing and thermal welding). Substitution of cleaner welding processes such as dip-arc and foil seam welding or the use of redesigned equipment such as the welding torch, can lower fume production. Proper selection of consumable welding electrodes can also lower total fume emission. Because of their widespread use, covered stick electrodes have been tested and reformulated to reduce fume generation. (Id.)

In the welding, brazing, and thermal cutting of metals, control of lead exposures also requires the use of well-designed work practices. Such practices, together with engineering controls, can minimize worker exposures to airborne lead. In open work areas, exposure to lead may be controlled by ventilation, but in confined spaces, the application of safe work practices becomes essential.

However, under some circumstances, respiratory protection may be necessary to adequately protect workers. Concentrations of a lead within a worker's breathing zone may reach an unsafe level because work is being performed in an area too confined to provide adequate ventilation, or because the quantity of emissions is quite high.

(*b*) *Abrasive Blasting.* The NIOSH criteria document entitled "Abrasive Blasting Operations Control Manual", provides a detailed discussion of the controls necessary to protect workers from the hazards of abrasive blasting, including lead hazards. In addition, OSHA's general industry standard for ventilation 29 CFR 1910.94(a) establishes requirements for abrasive blasting operations, some of which include the use of supplied air respirators when using certain abrasives or when blasting under certain conditions. Currently, the operations are controlled by using local exhaust ventilation in confined or enclosed areas in addition to supplied-air respirators.

(ii) *Specific Application of Controls to Work Operations.—(a) Welding/Burning/Brazing.* Lead burning operations are used quite extensively to repair or replace lead flooring. The lead flooring is approximately ⅜ inch thick and thus a relatively small flame is required for the burning of the lead (Ex. 475–37). This results in very few lead fumes being generated and thus low exposure. Lead emissions occur where the torch melts the surface. Local exhaust ventilation at the point of emission is often used to control exposure. Respirators are also used.

Republic Lead is primarily engaged in the manufacture of lead anodes used in the electroplating industry. Each of eight lead burning stations has local exhaust ventilation and the workers wear respirators while burning (Ex. 476–222). After evaluation, NIOSH concluded that Republic's ventilation system should be revamped and recommended the installation of local exhaust for the hook coating and the specialty casting process, stressed the importance of assuring that local exhaust ventilation hoods be maintained close to the point of contaminant generation, suggested that the temperatures of the small lead pots be thermostatically controlled, and recommended improving housekeeping within the plant since it was believed that fugitive dust contributes significantly to air lead levels and employee exposures. Finally, NIOSH noted that in two instances where lead burning hoods were being operated, air movement from an open door created air turbulence sufficient to override the capture velocity of the exhaust system, thus rendering the engineering controls ineffective. (Ex. 476–222).

NIOSH also surveyed Texaco Incorporated's Casper, Wyoming welding facility (Ex. 476–223). NIOSH's measurements and calculations for this plant indicate that the new ventilation

systems had (lead burning hoods) adequate capacity, but modifications would increase air flows through the system. These modifications include (1) decreasing the amount of flexible duct since it has a high resistance, (2) keeping bends, in the flexible ducts to a minimum, and (3) using a more conventional type of hood in the place of the present hoods whose slot lengths of 2 to 4 feet are not ideal. Keeping the hoods close to the point of contaminant generation would assist in assuring a minimum capture velocity of 200 fpm, since the capture velocity at the point of contaminant generation decreases with distance from the hood. Lead exposures resulted from: (1) Lead aerosols generated from the lead burning processes, and (2) re-entrainment of lead-containing dusts into the air caused by foot traffic, air currents, fork lift usage.

In one instance, engineering controls at a lead burning operation consisted of large floor fans designed to blow fumes away from employees, but when the fans were mispositioned they blew fumes into other work areas. (Ex. 476–221)

(*b*) *Abrasive Blasting.* A 1975 NIOSH health hazard of demolition and reconstruction activities performed at seven missile silo sites in the Minot, North Dakota, area discovered that sandblast helmets were being used by workers performing sandblast operations (Ex. 476–220).

(d) *Exposure Levels*

(i) *Welding/Burning/Brazing.* One company reported that airborne lead exposure for workers performing lead floor burning is 10 percent to 25 percent of the previous T.L.V. of 200 $\mu g/m^3$ with no local ventilation (Ex. 476–37), thus exposure levels are at or below 50 $\mu g/m^3$ PEL.

Other air samples, both personal and fixed location, were taken to indicate exposures to, and general ambient levels of, lead. The personal air sample results for lead ranged from 60 $\mu g/m^3$ to 1,180 $\mu g/m^3$ with a mean of 300 $\mu g/m^3$. The fixed location samples ranged from 20 $\mu g/m^3$ to 150 $\mu g/m^3$ with a mean value of 100 $\mu g/m^3$.

Specific personal sampling results reflected the following lead exposures: lead burning of hooks to anodes, 60 $\mu g/m^3$ and 1,180 $\mu g/m^3$; lead burning involving coating of hooks, 150 $\mu g/m^3$; grinding and miscellaneous work, 170 $\mu g/m^3$; and plastisol coating and crating, 60 $\mu g/m^3$. Area samples indicated the following lead concentrations: Adjacent to burning station, 20 $\mu g/m^3$; 3 feet from lead casting pot, 150 $\mu g/m^3$ and adjacent to lunch room table, 90 $\mu g/m^3$.

Lead levels were measured in several areas of the plant. In the thermal spraying area, lead levels were reported to be less than 111 $\mu g/m^3$; in the torch brazing shop, described as a 20x20 foot enclosed room with local exhaust, 330 $\mu g/m^3$ of lead were found; and in an unenclosed but locally exhausted torch brazing area, 550 $\mu g/m^3$ of lead were found. (Ex. 476–222)

(ii) *Abrasive Blasting.* Results of data collected at four different missile sites where abrasive blasting was being done were reported by NIOSH. Ten measurements taken at one site ranged from 0.8 to 5,300 $\mu g/m^3$ with a mean of 1,470 $\mu g/m^3$. At a second site, nine measurements ranged from 8 to 620 $\mu g/m^3$ with a mean of 230 $\mu g/m^3$. For a third site, nine samples ranged from 20 to 19,000 $\mu g/m^3$, with a mean of 4,340 $\mu g/m^3$. At the fourth site, two samples indicated lead levels of 210 and 200 $\mu g/m^3$. Respirators were being used.

(e) *Additional Controls*

The controls needed to comply with a 50 $\mu g/m^3$ standard consist of simple straight forward portable or fixed local exhaust ventilation. However, some operations or locations are not amenable to engineering solutions, and respirators may also be necessary. Less reliance on respirators may, however, be accomplished by employers relying upon worker rotation. In fact, OSHA expects that employers will use existing ventilation equipment, maintain this equipment in optimum order, and rotate workers, in an effort to comply with 50 $\mu g/m^3$ in difficult compliance situations.

Fred Mabry of the United Steelworkers described one situation where engineering controls were effectively utilized in reducing lead exposures during lead burning operations (TR 533–525).

Mr. Mabry testified:

> When lead burning is done in a stationary location adequate ventilation can be used. At other times, there are other devices that perhaps could be available. One of those devices could be a welding suction device which is not that expensive; in this case it cost them less than $1,000 each for two complete units, which consisted of two 4-inch suction hoses with a magnetic pick-up head so that it would stick to the iron wherever they needed it. This was sufficient to remove all the welding fume including the lead from all four welding stations completely.

Charles Billings of Johns Hopkins University, also testified on exposure control technology (TR 140–141).

> But there is no reason why control technology that is presently developed cannot be applied to that. The problem here is an infrastructure problem, an implementation problem. For example, there are small, portable control devices which can be applied to any welding application. They simply have to buy it, instruct the welder how to use it, and make sure that the welder does use that. Now, you argue that involves participation on the part of the welder, and I think it does. But for the case where you are welding, and the material that you are welding, you have to move, your control technology has to move with it, and it isn't the same situation as a fixed location might be.

(g) *Conclusion: Technological Feasibility*

Inexpensive ventilation can be employed in most cases to effectively control fumes generated during welding, burning, and brazing operations. In some limited operations or locations engineering controls alone may not be effective in reducing exposures to below the PEL and supplemental respirators will be required.

21. Lead Casting

(a) *Uses*

Lead casting, as discussed in this section, relates to casting of finished special order or routinely manufactured products. The type of casting used to form pigs, ingots or billets by primary or secondary lead smelters and refineries is not covered here, but instead is discussed as part of primary and secondary lead processes.

The American Die Casting Institute states that only a few of its members continue to cast lead, and this is done only upon special customer request (Ex. 22, p. 291). Castings are most often made of aluminum, zinc and magnesium, since those metals are lighter, cheaper and have better mechanical properties than lead. Lead is used when greater corrosion resistance and weight are needed. In fact, lead has generally been replaced by plastics and lighter metals. One establishment reported that lead is cast only as a customer service and is not a money-making proposition. Also, in this instance, lead is cast in a separate facility to prevent contamination of the aluminum and magnesium casting processes. Lead casting is still used, to some extent, in making weights used balancing automobile wheels, in fishing weights and in industrial size expansion shields (Ex. 22, p. 291).

(b) *Process Description and Exposure Areas*

When lead is cast, it is melted to a barely fluid state and poured. One company described its process as having 17 pots, ranging from 1 to 10 tons with a 3–5 ton average, and a gas furnace melting lead for casting. Metal is either hand ladled or pumped into

molds. The hardened castings may then require further finishing prior to sale. Exposure results from the melting, pouring, casting and finishing of lead castings (Ex. 22, p. 291).

(c) *Controls Currently Used*

Melting pots are equipped with exhaust ventilation. Material conveying systems may also be hooded and ventilation hoods are often placed over the casts. Of course, any grinding, buffing or polishing would require the use of local exhaust ventilation also (Ex. 476–228).

(d) *Exposure Levels*

The company estimates that 50 $\mu g/m^3$ is usually achieved but occasionally exposures do go above 50 $\mu g/m^3$. Data were not submitted which indicate whether these were personal or area exposures (Ex. 476–228).

(e) *Population Exposed*

No data are available on the number of employees exposed above 50 $\mu g/m^3$, although based on data which indicate that lead specialty casting is being replaced by substitutes, the number is expected to be very low (Ex. 22).

(f) *Additional Controls*

Housekeeping and worker rotation may be necessary to ensure that levels remain below 50 $\mu g/m^3$.

(g) *Conclusion: Technological Feasibility*

Conclusion. The data suggest that levels are presently at or very near 50 $\mu g/m^3$ in this industry, although exposures occasionally exceed 50 $\mu g/m^3$. Existing engineering controls appear to be sufficient for maintaining levels at 50 $\mu g/m^3$, in general, with intermittent exposures being controlled by worker rotation. Housekeeping and maintenance may need upgrading since controlling general exposures to the lowest limits will allow occasional excursions to be accommodated with minimal effort.

(h) *Economic Feasibility*

Compliance costs were not furnished by the industry. However, since compliance is generally being achieved through the use of existing ventilation controls and work practices (except for occasional excursions) any additional compliance costs should be minimal and should be for the less costly controls, such as improved housekeeping or worker rotation.

22. Lead Chemical Manufacture

(a) *Uses*

Lead based chemicals may have many uses some of which are plasticizers, stabilizers, catalysts, oxidants, soaps, and colorants. Some common lead chemicals are: red lead, a rust-inhibitor and a component in positive storage battery blends and in ceramics; lead dioxide, used as a powerful oxidizing agent in the dyeing and chemical industry; lead silicates, used as a stabilizer or inhibitor; lead oxide, which has many uses as an ingredient to form other lead compounds and as a litharge in numerous chemical processes; and the lead soaps, which are used extensively in the polyvinyl chloride (PVC) industry as stabilizers, as driers in paints and varnishes, and in lubricating greases. (Ex. 476–4B).

Lead Stearates and lead 2-ethylhexoate are stabilizers for vinyl and other plastics. Lead stearate is used in the metal powder and molding industries. Other lead soaps include the following:

lead caprate
lead undecylenate
lead laurate
lead myristate
lead palmitate
lead dibasic stearate
lead resinate
lead neodecanoate
lead lignocerate
lead cerolate
lead melissate
lead hydrocarpate
lead chaulmoograte
lead linoleate
lead 2-ethylhexoate
lead tallate [7]

(b) *Process Description and Exposure Areas*

(i) *Lead Pigments (includes lead oxides).* The primary metal, lead, is fed to a smaller melting pot at approximately 900 degrees F. Following an air/stream oxidation and separation process, the oxides of lead are produced (Ex. 476–235). See Pigment section.

(ii) *Lead Soaps.* Lead soaps are produced mainly by *chemical* specialty companies in a batch process in a *partially* closed kettle. The powdered lead litharge is added to the kettle under a slight negative pressure so as to draw the lead dust into the pot. This process takes about 15 minutes, and generally is not performed more than once a day. Precautions are taken to reduce lead litharge dust and the empty shipping bag is sealed in plastic for disposal. Companies monitor employee air-lead exposures by urine and blood sampling.

Only employees involved in dumping and mixing the lead litharge could be generally exposed to inorganic lead. These employees wear respirators and protective equipment (Ex. 22, p. 316).

(c) *Controls Currently Used.*

Most exposures result from handling and mixing lead containing materials. (Id.). As discussed in lead pigment manufacture and plastics manufacture, automated or mechanized materials handling systems, hooding and enclosure of mixing operations, and worker control booths have been used successfully in some plants to control exposures. (See these sections for a complete discussion.)

Cyanamid (Ex. 475–30) submitted data on the compliance activities at their plant. This company manufactures litharge (lead oxide) and from the lead oxide produces other lead chemicals. The process here basically involves acquiring the raw lead, melting, oxygenating and separating out oxide. As a result of several OSHA inspections it was determined that lead levels were in excess of the PEL and after negotiation an abatement plan was devised. This plan would include, many changes, some of which are: Local exhausting of the screening station, dryer, and drossing door; enclosing the screw conveyor feeding the pre-oxidizer; replacement of one mill with an enclosed mill which does not require routine mill screen examination; modifying the drumming station by lengthening the feed chute to reduce dust generation and the hopper by flanging the hood to improve dust collection efficiency; enclosing four dust collector dumping stations; balancing ventilation systems; and improving maintenance by applying new seals; reducing leakage from screw conveyor seals and gaskets, etc.

Blood lead levels prior to 1971 were very high at this plant with 5 employees having levels above 100 ug/100g of blood. Recent levels average at 42 ug/100g. Cyanamid attributes this to stringent management of employee practices (work practices), improved respiratory protection, and engineering modifications.

(d) *Exposure Levels*

(i) *Lead Oxides.* Data was not submitted by the companies indicating the levels to which workers are exposed. OSHA is aware that Cyanamid (cite to 475–2 or 475–30) had levels in excess of 50 $\mu g/m^3$; however, compliance with the abatement plan should reduce levels to below 50 $\mu g/m^3$. On follow-up OSHA found that levels in some part of the process were in compliance with 50 $\mu g/m^3$. (Ex. 476–16).

(ii) *Lead Soaps.* Due to precautions now taken, exposures to inorganic lead are low. (Ex. 22)

(e) *Population Exposed*

(i) *Lead Oxides.* Data on the numbers of workers exposed to lead oxide as a result of its manufacture was not available.

(ii) *Lead Soaps.* In one establishment that produces thousands of specialty chemicals, 12 employees out of 240 production employees are potentially exposed to inorganic lead. (Ex. 22, p. 317). A total of 12 companies are reported to make lead soaps with an estimated total of 240 employees nationwide being potentially exposed to lead. (Ex. 22)

(f) *Additional Controls*

Controls already in place or soon anticipated to be in place are expected to achieve compliance with the 50 $\mu g/m^3$ standard. Clearly, in some cases, enhancement of existing controls will be necessary. In the survey done on the N.L. Industries plant, recommendations were made to improve local exhaust ventilation, isolate and enclose dusty operations, and improve housekeeping. (Ex. 476–309). Cyanamid has an abatement plan which includes many ventilation improvements. In addition, housekeeping and worker rotation will be necessary in difficult to control areas.

(g) *Conclusion: Technological Feasibility*

Although exact exposure levels were not available, the Agency knows that lead exposure may be a problem in this industry due in part to the similarity in processes between this industry and the lead pigment industry. Exposure may be high in some cases, due to the failure on the part of the industry to automate, mechanize, etc. This same failure puts the industry at a competitive disadvantage with regard to more modernized foreign competitors. Compliance is achievable even in the most difficult of situations such as that faced by Cyanamid. Controls exist for materials handling problems, and enclosure of mixing operations has been done successfully by many plastics firms. This industry may, however, need an amount of time for compliance comparable to that given the pigments industry, not because the technology is not available, but because the industry has been laggard in some cases in keeping up with control technology.

23. Lead Pigments Manufacture

(a) *Uses*

Pigments are used as the colorants for linoleum, plastics, paints, rubber, pottery, glass, and other products. They also serve as plastics stabilizers. Pigment products include lead chromate-lead molybdate (molybdate orange), red lead, lead sulfates, lead carbonates, lead silicates, lead oxides, and lead chromates. Lead chromate is by far the most commonly used.

(b) *Process Description and Exposure Areas*

The manufacture of pigments involves a number of different processes. Only pulverizing and grinding processes for reducing the particle size are common to all members in the class. Inorganic pigment manufacture is a combination of chemical-physical processes involving both wet and dry reactions and including precipitation, filtering, washing, fusing, calcining, etc. The processes may be carried out as a batch system, as continuous production, or as a combination of the two.

Pig lead is often the basic raw material in inorganic lead pigment; litharge and other lead forms, however, are sometimes used. Because litharge is a powder, it presents the potential for lead exposures at every transfer point. Filtering, drying, grinding, sizing, grading, blending, and bagging are all considered to be areas of potential exposure to lead. Cross contamination between operations also occurs.

DuPont (Ex. 476–269) manufactures, among others, yellow lead chromate, orange lead chromate (molybdate orange), and "Krolor," a silica-encapsulated lead chromate containing pigment. The pigments are made by both batch and continuous processes. In the initial stages of the batch process for the manufacture of yellow lead chromate, an aqueous sodium chromate solution is reacted with a lead nitrate solution. To make the orange pigment, some of the sodium chromate solution would be replaced by a sodium molybdate solution at this stage. From there, the pigment slurry is dewatered in a filter press, then dried, ground, blended, and packaged.

To make Krolor, bags of dried lead chromate pigment are manually dumped into tanks and slurried in water. This water pigment dispersion is then silica coated in a strike tank. All operations after the silica strike are identical to the molybdate orange batch process.

Manual handling operations of the batch process for all of these pigments involve loading wet presscake from the filter press onto dryer trays, transporting and dumping dryer cars, dumping dried material into grinders or blenders, packing pigment out of the blenders into bags, and dumping dry pigment into dispersion vats for processing Krolor. All of these operations require manual handling of dry pigment and result in exposure to lead.

Contamination between colors and even between shade grades is detrimental to product quality. Consequently equipment is dedicated to specific product groups; there are five separate tank/press units for the "Krolor" operation and three tank/press units for molybdate orange. The equipment is spread over four separate buildings.

Sodium chromate (or sodium chromate/molybdate solution) and lead nitrate are continuously reacted to produce a pigment slurry. The slurry is continuously dewatered and washed in centrifuges, then discharged to a belt dryer. The dried pigment is automatically conveyed to a grinder and the packing system where bags are manually filled.

The unit is operated on a campaign basis with cleanouts between color grades. The campaign cycle consists of the manufacture of zinc chromate, followed by a major cleanout; primrose shade lead chromate cleanout; light shade lead chromate, cleanout; medium shade lead chromate, followed by a major cleanout; and molybdate orange, followed by a major cleanout.

The most significant dust exposure sources in the continuous unit include: packing the finished product into bags; attending the dryer and grinder operations, which requires entering their enclosures; and cleaning operations for the centrifuges, belt dryers, and grinders.

Cleaning operations are performed about once every 2 weeks and take 28 to 48 hours to complete. This operation involves high pressure water cleaning of about 10 process tanks, opening of the continuous belt dryer for vacuuming and washout, opening material transfer equipment including five screw conveyors and bucket elevators for vacuum cleanout, and cleaning of storage bins, product collectors and packing equipment. Each of these cleaning operations presents a lead exposure problem for employees performing the cleaning and introduces airborne lead into surrounding work areas.

(c) Controls Currently Used

DuPont described engineering controls to reduce pigment dust exposures which are presently in place or contemplated for installation (Ex. 475–37).

In the early 1970's, enclosures were installed in the continuous unit at the dryer and grinding equipment locations. Special gaskets and seals were added to the material transfer equipment to reduce dusting. In a typical day, an employee will fill over 500 bags. To pack these products, a pressured, air flow packer is used. The packer is susceptible to dust generation if slight seal problems occur or as the filling air pressure is relieved to take the bag off the packer. In 1977, a simple exhaust hood was installed at the packer. DuPont reports that operator exposure (95 percent value) is 266 to 2,921 $\mu g/m^3$, as an 8-hour TWA. An improved exhaust hooding system was installed at the bag packing station with levels being reduced to 127–182 $\mu g/m^3$. This system included:

—Digital check weigh scale enclosed in a hood with 250 feet per minute face velocity;
—Catch pan and partial enclosure under and around the packer filling spout to catch any spills;
—High velocity exhaust from around the filling spout to control leaks during bag filling and puffs of color when the bag is removed;
—Exhausting all hoods to an existing scrubber system used primarily to service the dryer;

In 1974, DuPont installed a new system to control dust during the unloading of tray dryers into drums during batch processing. Facilities included:

—Separate building area for the unloading operation;
—Two tray dryer dumping stations with exhaust hoods pulling 250 feet per minute face velocity with a hoist system to raise or lower cars so dumping only occurs at waist to shoulder height;
—Monorail system for moving and staging dryer cars;
—Conveyor system for removing full pigment drums;
—Hooding and ventilating (H & V) system for the dump hoods and staging areas;
—Portable vacuum floor scrubber;

DuPont reports the dry room operator's (95 percent value) 8-hour time-weighted average exposure is 1,100 $\mu g/m^3$. DuPont has also indicated that they have in progress work to increase the laminar flow fresh air supply which will provide a slight reduction in dust levels.

In 1975, a completely new inorganic finishing area was constructed for dust control. The new facilities included:

—Three separate grinding lines dedicated to different product groups to reduce cleanout; and
—Two large blending lines with wet packers.

Dust control features included:

—Enclosure of grinding equipment in separate rooms;
—Isolation of equipment where possible;
—Exhaust hoods at all pigment dumping locations;
—Specially developed packers that reduce dust generation and which are equipped with exhaust hoods.
—Tote bin filling and unloading equipment; Tote bins are used in place of drums for interim storage between grinding and blending;
—Separate tote bin storage area;
—Automatic bag dumping machine. (This proved to be unsatisfactory and did not live up to the vendor's claims);
—Central vacuum clean-up system;
—Portable vacuum floor scrubber;
—Central exhaust system and dust collector (36,000 CFM);
—Central H & V system;

With completion of this project, DuPont reports that dust levels were significantly reduced. The 95-percent, 8-hour time-weighted average values for employees assigned to this area were stated to be 428–1,122 $\mu g/m^3$.

New dumping hoods were installed in the "Krolor" manufacturing process in late 1979. The new facilities included:

—Two dumping hoods with very small open areas and 250 feet/minute hood face velocity. One hood is used for yellow, and one hood for orange;
—Unit dust collectors mounted directly over the hoods which can recycle captured dust;
—Side slot inside the hood for transferring empty bags directly into a plastic bag for disposal. Before this, empty bags were placed inside a plastic bag which was kept outside the hood;

Since the installation of the new dumping hoods, 13 8-hour time-weighted average personal breathing zone samples reported by DuPont showed employee exposure when making "Krolor" to range from 1 to 119 $\mu g/m^3$ and to average 26 $\mu g/m^3$.

Engineering controls considered by DuPont to reduce exposure levels in the continuous process include replacement of grinding and packing systems, installation of flash or spray dryers and dust collection H & V systems. For the batch process DuPont is considering installing packing area air-sweep rooms, automating drumming and bag dumping operations, and utilizing ultrasonic, dryer car cleaning, and additional hoods and dust collectors.

With the installation of these controls, DuPont estimates that dust levels in lead chromate pigment manufacture could be consistently (95 percent value) controlled to 200 $\mu g/m^3$ (8-hour TWA) and optimistically as low as 100 $\mu g/m^3$, (8-hour TWA). Additionally, DuPont states that regardless of the extent of engineering controls, the need for respirators during the following operations will always be necessary:

—Equipment cleanout for color grade changes,
—Equipment malfunction repairs such as cleaning jammed mill air lock (1,830 $\mu g/m^3$, 8-hour TWA measured 5/13/80), unjamming mill chute (1,975 $\mu g/m^3$, 8-hour TWA measured 5/12/80), cleaning air ducts (3,882 $\mu g/m^3$, 8-hour TWA measured 9/4/80);
—Equipment servicing requiring work in the blender pit (640 $\mu g/m^3$, 8-hour TWA measured 8/21/80);
—Changing dust collector or product collector bags;
—Mechanical work inside grinding equipment enclosures;
—Unloading tray dryer cars. During this operation, the employee can accidentally drop the tray causing dust or the tray may get stuck in the car and have to be forced out;
—Packing pigment bags can break, usually at the seam, during bag filling.

The project to automate drum and bag dumping to reduce dust levels in the batch finishing area is underway and, according to DuPont, the use of additional technological controls that will give significant reductions at reasonable cost will be undertaken. DuPont did not specify when the additional controls would be available nor did they indicate to what extent "significant reductions" might be achieved.

Information on pigment production at the Harshaw Chemical Company was also provided to the record (Ex. 476–244). The number of employees exposed at the Harshaw plant is small, since the process is not labor intensive. At Harshaw only two or three workers are required at one time at each stage of the process, i.e., precipitation, filtering, spray drying, milling, and packaging.

This company has replaced some equipment in their plant and has eliminated some processes, such as press filtering and tray drying, which were the source of high employee exposures. The process has been modified so that pigment precipitate slurry is now pumped from batch tanks through a continuous filter, then the wet precipitate is conveyed to a spray dryer after which the dry pigment is conveyed to a mill, and then to the bagging operation. Exposures at the bagging operations are reported to be the most

difficult to control. Some exposure may also occur at the milling operation. Most Harshaw production line workers are estimated to have 8-hour TWA exposures below 100 $\mu g/m^3$ of lead and some are below 50 $\mu g/m^3$ of lead, according to a Harshaw spokesman. Enclosure and local exhaust ventilation have yielded the best results in lowering exposures.

Changes of production from one color to another at Harshaw were not reported to be a serious source of lead exposure. The company employs separate production lines for dark shades, light shades, etc., of lead chromates and a separate line for molybdate orange. Color changes are made from one shade to a slightly different shade, resulting in the need for less frequent equipment cleaning. Thus it appears that installing separate production lines for different colors and graduating slightly from shade to shade during the runs could reduce equipment breakdown and resulting release of lead into the surrounding work area.

Hercules, Inc., of Wilmington, Delaware, manufactured lead-containing pigments until recently. A company source familiar with Hercules' process when in operation provided the following information on lead chromate pigment manufacture. (Ex. 476–245).

Solubilization of the lead before reaction with a chromate solution was mentioned as a possible source of employee exposure, particularly if pig lead is the raw material used. The lead is melted and poured into a stream of rapidly moving water to "feather" and increase surface area. The feathered lead is partially dissolved in acetic acid, using a series of tanks in which there is a continuous counter current flow of the acid over the lead particles. Lead which does not dissolve in the acetic acid is then dissolved in similar tanks using nitric acid. The employee lead hazard is exposure to the acid mists containing soluble lead acetate or nitrate.

The Hercules spokesman stated that some companies now buy litharge for a raw material and dissolve it in nitric acid, so the process can more readily be enclosed.

Various shades of chrome pigments can be obtained by coprecipitating lead sulfate with lead chromate. A high proportion of lead sulfate gives a light lemon color, while very little lead sulfate gives orange to primrose colors.

The Hercules representative felt that the degree of difficulty and the available technology for controlling lead exposures is about the same for lead chromate pigments and other lead pigments (such as litharge, red lead, lead carbonate, lead sulfate, lead silicate, etc.). All involve handling a dry, fluffy powder with small particle size. Bagging is a problem for all lead pigments. The ultimate control technique in bagging involves automation of the process so that the operator can control it from within an enclosure.

The Hercules pigment facility has been purchased by the Ciba-Geigy Corporation. A company representative for Ciba-Geigy indicated that they were presently in the process of planning and implementing engineering modifications to reduce exposures during the pigment manufacturing process. Though no details were provided by Ciba-Geigy, the company source indicated that they felt they could achieve compliance with a 50 $\mu g/m^3$ exposure limit by March 1, 1984. (Ex. 476–262).

Finally, Kikuchi Color and Chemicals, Paterson, N.J., provided details on their operations. (Ex. 476–264). Kikuchi Color and Chemicals is a subsidiary of a Japanese company of the same name, headquartered in Tokyo. The Paterson, N.J., plant makes a single product, a lead chromate pigment. The color is constant, except for minor adjustments to achieve the desired hue.

Mixing of chemicals to form the lead chromate precipitate is done by a batch process where no significant lead exposures are reported. All other steps are automated and enclosed. These steps include washing, centrifuging, conveying to the oven dryer, conveying to the bagger, and bagging.

The plant is entirely new. It has been in operation for 11 months. The plant employs nine people. Pigment is produced in batch tanks, and pumped to a washer. From the washer, the pigment is pumped as a slurry to the centrifuge. From the centrifuge, a concentrated slurry is pumped to the feed tank for the oven dryer. The dry pigment is conveyed pneumatically to the bagging station. No grinding is required.

The Paterson plant produces a medium chrome yellow pigment. The hue is carefully controlled by sampling the pigment at the washer and analyzing it in the lab. Color adjustment is made as needed by pumping the contents of one batch tank into another batch tank. All blending is done by pumping slurries. No blending is done at the "dry end."

Under the present bagging system, pigment is poured into open top bags, and the bagging operator then sews the top of each bag. The new equipment being sent from Japan in November will allow Kikuchi to convert to valve-type filling. That new equipment will consist of a conveyor line which will carry an empty bag with the top already sewn, to a scale. A filling spout will introduce pigment into the bag through an opening on the side near the top of the bag. Air will be sucked from the bag as pigment enters it. The pigment feeder will be automatically stopped at 50 pounds, and the bagger will remove the filling spout and close the bag manually.

The new ventilation system for the bagging station will be mounted above the bagging station, with the bagging operator external to it. It does not involve any new technology, and according to Kikuchi, similar systems could be easily developed by other companies. The unique features are multiple points for dust pickup and dust control equipment inside the enclosure so that the unit is self-contained.

Even with their present equipment, Kikuchi stated that there is very little dust on the outside of the filled bags and they have had no problem with bags breaking. Thus, warehousing involves little lead exposure.

The New Jersey Department of Labor and Industry inspected the facility and found that the only lead exposure in excess of 50 $\mu g/m^3$ was at the bagger. Eight-hour TWA lead levels included: Bagger operator—66 $\mu g/m^3$; Centrifuge operator—45 $\mu g/m^3$. The two operators sampled spent the entire workday at their respective work stations. Following advice offered by the New Jersey Department of Labor, ventilation was improved at the centrifuge and the bagger. The exhaust system at the centrifuge was modified to vent directly to the outside. The exhaust system at the bagger was upgraded to achieve better capture of the pigment. Kikuchi is hopeful that lead exposure of the bagger operator is now below 50 $\mu g/m^3$ and that lead concentrations at the centrifuge are significantly lower. A vacuum clearner is used at the bagger for spills, and the entire plant is kept as clean as possible and is now being repainted.

In summary, Kikuchi reports that no new technology was required to achieve their present, relatively low air lead levels in the plant and that the key elements to exposure control are good enclosure of processes and good ventilation.

(d) *Exposure Levels*

Exposure levels vary greatly in this industry from highs reported at DuPont's pigment facility in maintenance operations where levels of 1,830, 1,975, 3,882, 640 $\mu g/m^3$ were reported (Ex. 475–37), to a low at Kikuchi Color and Chemicals (Ex. 476–264) at which all levels in the plant were below 50 $\mu g/m^3$. Harshaw (Ex. 476–244) reported levels of most production line workers to be

below 100 $\mu g/m^3$ with some levels being above 50 $\mu g/m^3$.

(e) *Population Exposed*

The number of production employees in lead pigment manufacturing is estimated to be 2,000. DBA's survey of several plants indicated that 90 percent of the workers were exposed to levels of lead above 100 $\mu g/m^3$. (Ex. 26, p. 5–93)

(f) *Additional Controls*

DuPont predicted that the additional, conventional controls, exposure could be controlled at least to 200 $\mu g/m^3$ and possibly to 100 $\mu g/m^3$. (Ex. 475–37). Kikuchi and Ciba-Geigy suggest that there appear to be controls available to achieve compliance with the 50 $\mu g/m^3$ standard (Ex. 476–262, 478–2). However, most pigment plants appear to be rather old structures which were originally built with no consideration given to dust control. Subsequent additions of control equipment have required great capital expenditures because of the antiquity of plant design and the difficulty of retrofitting equipment with controls. This lack of modernization is also reflected in the stiff competition experienced by American firms with more modernized foreign competitors.

Even though the technology exists, continual retrofitting of equipment in this industry poses problems and in some cases firms could be required to make major changes.

(g) *Conclusion: Technological Feasibility*

The Court of Appeals rejected OSHA's original conclusion that compliance could be achieved if employers undertook major renovations and redesign of outmoded plants and equipment. It objected not to the notion that OSHA had the authority to require major rebuilding in an industry (if it were economically feasible), but to the lack of "logic and supporting evidence" (Slip opinion, p. 210). The Court cited the absence of descriptions of the technology that could be used and rejected OSHA's reliance on a "casual" statement by DBA and Dr. First's generalizations as central evidence on feasibility (Id.).

OSHA now confirms its earlier conclusion on the feasibility of the standard in this industry, but supplements the conclusion with specific detailed discussion of a pigment plant which has, in fact, used conventional control technology to already achieve compliance with the standard. The Kikuchi plant has applied the basic control principles discussed by Dr. First, Dr. Billings, and others and stands as a concrete example of what can be achieved by other pigment manufacturing firms. The company reported that no new technology was required in achieving these low air lead levels in the plant and that the elements of exposure control are good enclosure of processes and good ventilation. There is no reason why these controls cannot be employed by other pigment manufacturers to achieve the PEL in the time allowed under the standard. As the Court of Appeals stated:

> At the very least, * * * OSHA can impose a standard which only the most technologically advanced plants in an industry have been able to achieve—even if only in some of their operations some of the time * * *. But under this view OSHA can also force industry to develop and diffuse new technology. (Slip opinion, p. 142)

For this industry, it is not a matter of the diffusion of *new* technology, but simply a matter of permitting firms sufficient time to utilize *conventional* technology already demonstrated to be technologically feasible (Kikuchi) or expected to be in four years (Ciba-Geigy). After careful reevaluation of the 5 year period for compliance with the PEL, OSHA has concluded that 5 years is adequate for firms in this industry to make the necessary changes if economic resources permit.

The interim level has, however, been deleted for this industry. Most plants are old and retrofitting may not be effective in many cases. The industry, *as a whole,* is not close to compliance with either the PEL or the interim level in most operations and will require major renovation in plant and equipment to achieve either 100 or 50 $\mu g/m^3$.

(h) *Costs of Compliance*

One producer of lead chromate pigments, the lead chromate producers' trade association, one producer of lead frit, and one producer of other lead pigments submitted written comments to OSHA on the feasibility of the 50 $\mu g/m^3$ standard. In addition, OSHA has estimated the compliance costs that may be incurred by producers in this industry.

The Dry Color Manufacturers Association (DCMA) contends that the lead standard will necessitate the expenditure of "very significant amounts of money" with no assurance that compliance can in fact be achieved (Ex. 475–23). However, the DCMA did not provide a more specific estimate of the magnitude of the costs for the industry or for any firms within the industry. Furthermore, details on the types of controls that may be necessary have not been provided.

DuPont states that expenditures of more than $5,000,000 from 1971–1979 have not guaranteed compliance with the lead standard. In the early 1970's, more than $140,000 was invested in controls, enclosures, and hoods. A new system for unloading tray dryers was installed at a total cost of $280,000 in 1974. In 1975, $4,300,000 was invested in a completely new inorganic finishing area. DuPont considers this project a failure, because design control dust levels (not specified in the company's submission) were not achieved. In 1979, $20,000 was invested in new dumping hoods in another part of the plant. Levels in most areas are still significantly greater than the previous 200 $\mu g/m^3$ lead standard (Ex. 475–37).

DuPont suggests that additional, new controls including another continuous unit at a cost of $3,740,000, air-sweep rooms, automation of dumping, ultrasonic dryer car cleaning, and additional hoods at a cost of $1,505,000, might reduce levels. DuPont estimates the total capital cost of these controls to be $5,245,000 plus $1,300,000 in increased annual operating costs. Thus, capital expenditures on controls since 1971 would total $9,945,000. DuPont estimates optimistically that levels of 100 $\mu g/m^3$ might be achieved with these controls in place (Ex. 475–37).

The large control costs that have already been expended and that DuPont estimates would still be required include the high costs of building new structures and replacing entire product lines or processes. As demonstrated by the DuPont case, this is certainly a more efficient and cost-effective method of reducing levels than retrofitting old plants and equipment. However, it is probable that an industry with relatively old plants and equipment would incur many of these expenses for modernization even in the absence of the lead standard. Therefore, OSHA regards these figures as overestimates of actual costs of controlling lead exposure, since some replacement of equipment and expansion would be occurring in response to market stimuli other than regulation. In addition, companies are able to deduct expenses incurred in coming into compliance with a regulation as costs of doing business. Therefore, the after-tax financial impact on the firm will be reduced as it deducts costs of coming into compliance.

Harshaw Chemical has reduced lead levels by modifying its processes to limit handling of pigment. The company has separate automated product lines for various colors produced. Harshaw provided neither costs of current controls nor estimates of additional costs of achieving the 50 $\mu g/m^3$ standard (Ex. 476–263). Similarly, Ciba-Geigy,

which acquired two Hercules facilties, is currently planning to install engineering controls in these plants. The company stated that expenditures would be large, but did not provide specific figures (Ex. 476–262). Anticipated controls include continuous equipment, preferably enclosed systems, product packaging modifications and increased local exhaust ventilation (Ex. 478–2).

Kikuchi Chemicals appears to be substantially in compliance now. The company is also planning to install new equipment from the parent company in Japan to reduce lead levels in the bagging area. The company stated that the unit represents a "substantial investment." However, a dollar cost for the unit was not provided (476–264).

The Ferro Corporation manufactures lead frit and has spent about $300,000 to control exposures to lead. A combination of automation, exhaust ventilation, and use of pelletized litharge have contributed to reductions in lead levels (Ex. 476–241). No costs of compliance for additional controls, which may not be necessary, were provided.

Eagle-Picher produces white lead pigments. In its submission, engineering controls such as containment, isolation, ventilation, and bagroom collectors are described as "perhaps available" and expensive (Ex. 475–13). OSHA knows that these methods of control are indeed available and have been successful in controlling dust exposures and does not dispute that controls may be expensive. However, Eagle-Picher's qualitative assessment of burden is difficult to evaluate without a supporting quantitative estimate of the cost of compliance.

Eagle-Picher also does not offer data on the controls currently in place and installed "at great cost over the past five years." This information would be of substantial use in determining the additional costs necessary to continue the reduction in levels that the company currently reports. (Ex. 475–13). Furthermore, the company states that "minor" improvements in levels owing to better ventilation and better housekeeping have yielded commercial benefits by reducing cross-contamination of products and consequently reducing the costs of rectifying contamination problems (Ex. 475–13). To the extent that these cost-savings offset control costs, they should be subtracted from the costs of compliance.

All of the pigment producers mentioned bagging operations as a particularly troublesome and expensive process to control. However, there are substitute forms in which to package and ship pigments, such as slurries and pastes. In addition, dust suppressants could be added to the dry product. This would reduce control problems at bagging operations as well as contamination of other plant areas and exposure potential for downstream users (except spray painters). The adoption of these alternatives would offset to some extent increases in cost of transporting products in wet forms, which are heavier than dry pigment.

DBA estimated the costs of compliance for three pigment producers and derived costs per ton of pigment produced and costs per employee. The estimates were based on retrofit technology in two of the plants and the cost of substantially rebuilding a third plant. Initially, DBA estimated that the upper bound on compliance costs was $109 million. This appears to assume, however, that the firm from which they received data was representative of every other firm and that each firm would rebuild at a cost of $7.1 million. Clearly, there is substantial variation in the degree of current compliance for pigment producers, hence, this upper bound estimate is excessive.

On the basis of the estimated unit cost estimates, DBA then extrapolated the compliance costs to the lead pigment industry as a whole to yield a range of potential compliance costs. The total capital cost of compliance for the pigment industry ranged from $4,451,000 to $43,817,000 using costs per ton as a basis for extrapolation. Using costs per employee, the total capital costs for the entire industry ranged from $15,820,000 to $80,226,000 (Ex. 474–26).

These upper bound estimates overstate the costs of compliance. First, as DBA states, the costs do not reflect the simultaneous reduction of other toxic substances, such as hexavalent chromium. Second, the costs associated with complete rebuilding in an industry already in need of modernization should not be attributed in their entirety to OSHA regulation. Rather, the cost attributable to the lead standard is the difference in expenditures between rebuilding to comply with the standard and rebuilding in the absence of the standard. In addition, economic benefits gained by modernization further offset these compliance costs. Examples of offsetting benefits include increases in product quality, increases in capacity, and increases in labor productivity stemming from reduced absenteeism and lower labor turnover.

OSHA concludes that the costs of compliance in this industry are best represented by an average of the extrapolated costs calculated by DBA. Averaging the costs expected for a large and small firm adjusts the costs to reflect more accurately the variation between large and small producers, and reduces the distortion created by extrapolating on the basis of either extreme. Thus, the estimated capital costs would then range between $21.5 and $41 million. Annualized over the life of the equipment, these costs range between $3.8 and $7.3 million.

(i) *Industry Profile*

There are 71 companies operating 106 establishments and employing 8,000 workers in the manufacture of inorganic pigments (SIC 2816). New capital expenditures for the industry totalled $20,800,000 in 1967 and rose to $124,300,000 in 1977. Average hourly wages of production workers in the industry rose from $3.57 in 1967 to $6.72 in 1977 (Ex. 476–20).

Within the industry, it is estimated that about 15 companies produce pigments or frit that contain lead (Ex. 476–248, Ex. 475–37, and Ex. 478–2). The product lines manufactured by these companies include chrome green (2816311), chrome yellow and orange (2816315), molybdate chrome orange (2816317), red lead (2816341), litharge (2816345), basic carbonate and sulfate white lead (2816213), and leaded zinc oxide (2816225). Quantity of litharge produced has dropped significantly since 1972, while the quantities of lead chromate pigments produced rose very slightly between 1972 and 1977. The value of product shipments of lead chromates doubled in this same period. Total value of shipments of all lead pigments in 1977 exceeded $170,000,000 (Ex. 476–20).

Twelve companies produce lead chromate pigments. They are F.D. Davis, DuPont, Harshaw, Ciba-Geigy, Reichold, National Lead, Chemetron, Bordon Chemical, Kikuchi Chemical, Nichem, Wayne Chemical, and Industrial Color (Ex. 476–250). Lead chromate pigments are considered to possess a versatility superior to all other inorganic pigments. In addition, white lead pigments are dual purpose products that can serve as vinyl stabilizers in the plastics industry. Lead pigments are used in a myriad of formulations destined for numerous end uses including paints, inks, vinyl, rubber, and paper colorants.

There are technical substitutes for the chrome yellows and oranges in most of their uses, but, most of these substitutes are not price competitive and do not offer the combination of properties that make lead chromates so attractive. One exception to this lack of substitutes is the chrome green pigments. Between 1955 and 1965, the rate of production of chrome green pigments was almost

halved as a result of two factors. First, mandatory "lead-free" legislation specifying a low lead content in interior paints has excluded chrome green from this market and restricted its use to exterior and industrial applications. Second, its market dominance has been effectively challenged by phthalocyanine green, even though it is more than five times as expensive as chrome green (Ex. 476–249). To avoid disclosure of company operations, current production figures on chrome green have not been published by the Department of Commerce (Ex. 476–20).

The industry has been characterized by a substantial degree of concentration. In 1972, the top four producers of chrome colors and other inorganic pigments manufactured 47 percent of the industry output and the top eight firms produced 64 percent of the industry output (Ex. 474–26). Current estimates indicate that the top four firms manufacture close to 80 percent of the lead chromate pigment industry output (Ex. 475–37), and that the top eight firms produce close to 95 percent of the industry output of lead chromate pigments (Ex. 475–23).

Foreign imports do not appear to be a significant source of competition at this time in the lead chromate market. (Ex. 476–26). In fact, between 1973 and 1977, imports of chrome yellows and oranges have fallen from 9,000,000 pounds to 5,700,000 pounds, and imports of molybdate orange have fallen from 1,100,000 pounds to 500,000 pounds (Ex. 476–409).

No significant export activity for lead chromate pigments exists for U.S. producers (Ex. 478–2), except for DuPont. Since 1977, DuPont's exports have risen from 2,900,000 to 4,000,000 pounds (Ex. 475–37).

Hercules has expressed concern that domestic producers may leave the market because foreign producers can produce the lead pigments products at lower cost. However, neither the foreign producers nor their competitive advantages were identified. Cost advantages for foreign producers may be maintained because transportation costs for dry pigment are not prohibitive in relation to the value of the product (Ex. 476–245). Moreover, the influence of foreign interests is evidenced by the fact that Hercules is now a subsidiary of a foreign-owned (Swiss) corporation, which has plans to revamp the production process in its newly-acquired facility and to achieve compliance with the 50 $\mu g/m^3$ standard by 1984 (Ex. 476–262). Furthermore, a Japanese firm recently built a new facility in this country because raw material costs are rising faster abroad than in the U.S. and foreign exchange rates favor production in the U.S. The company does not import lead chromates into the American market from Japan (Ex. 476–264).

One submission states that the trend in the demand for lead chromate pigments is declining. In 1979, demand was 70 percent of the pre-1974 demand for lead chromate pigments (Ex. 475–37). However, these figures are significantly influenced by demand fluctuations stemming from the general business cycle. Comparison of the demand for these two years is not an accurate indicator of the health of the market. The DCMA argues that there are no cost-effective substitutes for lead pigments and that substitution would require significant production and process changes. Hence, many customers would not be able to afford a switch to other pigments (Ex. 475–23). While there does not appear to be growth in the industry in excess of 2 percent, according to census data (Ex. 476–26), the market is not contracting.

The DCMA also forecasts "massive dislocation which threatens the competitive stability" of the industry and devastating effects including the "complete discontinuance of manufacture" of lead chromate pigments by many firms (Ex. 475–23). Given the degree of market concentration apparent among producers, the standard may indeed have differential impacts on smaller versus larger producers. However, other factors may mitigate the severity of such an effect. First, the pigment industry in general tends to be regionally oriented (Ex. 474–26). Production and distribution are closely tied to regional markets. Therefore, the geographic location of a small firm may be its largest competitive advantage.

Second, large producers have no monopoly on successful control of lead exposure. In fact, the largest producer with the best access to capital has invested in controls which it considers to be, on balance, a disappointing failure. By contrast, other large producers and at least one smaller producer appear to be having more success reducing lead exposures (Ex. 476–244 and Ex. 476–264). Third, because of the batch nature of the processes in most of the older plants, economies of scale do not appear to be significant (Ex. 474–26).

Pigment products are intermediate or industrial inputs into final products. Thus, general economic conditions will be a significant determinant of the demand for pigments. The demand for pigments is derived from the demand for paint, ink, plastics, rubber, and ceramics, demand for all of which is derived in turn from the demand for final durable goods such as construction equipment, farm equipment, trucks, school buses, and automobiles (Ex. 474–26). The market for pigments can be characterized as a bilateral monopoly with a competitive fringe of small sellers and small buyers existing in conjunction with the large sellers and large buyers (Ex. 474–26). The price of pigments, therefore, is set within a range bounded by the cost of production and the value to the user of the pigment. To the extent that the large and small sellers and buyers perceive one another as alternative sources of the product, some downward pressure exists on the prices of lead pigments (Ex. 474–26).

Large producers may pass costs of compliance with the lead standard to consumers with no effect on output (Ex. 474–26), but some contraction may occur in the output of small producers. If the small producers were identical, perfectly competitive and substitute products were unavailable, then each producer would cut output by an equal quantity. However, DBA suggests that it is more likely that there are marginal firms in the industry that will exit the market, thereby reducing total output of some of the small producers. On the basis of evidence gathered to date, however, there is no reason to believe that small producers are necessarily at a competitive disadvantage with large producers. In fact, small producers may be at a competitive advantage over large producers because of geographic location, and the inability of large producers to comply may ultimately lead to less concentration in the industry.

The market for white lead pigments is much smaller than the market for lead chromates. White lead pigments, primarily basic carbonate and sulfate and leaded zinc oxide, are expected to disappear from the market partly as a result of the 1971 Lead-Base Paint Poisoning Prevention Act (42 U.S.C. 4831) but more importantly due to the superiority of water-based titanium dioxide paints for residential and commercial applications (Ex. 474–26). One producer of white pigments, Eagle-Picher, claims that it will be forced out of business by the lead standard. Eagle-Picher is currently operating a plant that was built 105 years ago (Ex. 475–13).

One domestic firm produces pigment grade dibasic lead phosphate and basic lead silica sulfate. One domestic firm produces basic lead silicate and basic lead sulfate. Five domestic producers manufacture basic lead carbonate (Ex. 476–250). One of the five is now a subsidiary of a foreign firm (Ex. 476–247). Sales of this firm and one of the lead chromate companies to European

firms indicate the increasing cost and diminishing profits of the facilities (Ex. 476–26), which are usually quite old. On the other hand, takeovers by other producers also forecast a good market for the products.

The market for corrosion-inhibiting lead pigments refers primarily to red lead, a lead oxide. A small quantity of litharge, an input into the production of pigments and red lead, is used directly as a paint additive (Ex. 476–409). In 1972, product shipments were 26,300 short tons of red lead valued at $9,900,000 and 157,200 short tons of litharge valued at $45,000,000. In 1977, product shipments of red lead had declined to 9,300 short tons valued at $7,800,000 and litharge fell to 97,200 short tons valued at $67,300,000 (Ex. 476–20). Imports of red lead rose from 1,200,000 pounds in 1973 to 2,500,000 pounds in 1977 while litharge imports rose from 28,000,000 pounds to 36,000,000 pounds (Ex. 476–409). Exports for red lead and litharge combined fell from 4,500,000 pounds to 3,500,000 pounds between 1973 and 1977, with peaks in 1974 and 1975 of 6,800,000 pounds and 5,200,000 pounds, respectively (Ex. 476–409).

These corrosion-inhibiting lead pigments are used in resistant primers with the largest volumes in industrial maintenance and marine finishes. However, there are nunerous suitable substitutes in these applications. Lead pigments comprise only 20,300,000 out of 861,400,000 pounds (or 2 percent) of corrosion inhibitors used in industrial settings. In marine environments, 40,800,000 pounds of corrosion inhibitors were used, but only 3,000,000 pounds (or 7 percent) were lead-based (Ex. 476–409).

Production of lead frit (SIC 2899, Miscellaneous Chemical Products), colorants used in the ceramics industry may be in a temporarily depressed state with output as much as 40 percent lower than normal (Ex. 476–242). Frit is used in products such as glass bottles, glass-lined vessels and pipes, hot water heaters, household crockery, tile, and piezoelectric products (Ex. 476–241).

The number of producers of leaded frit is now known but it is estimated to be small. Some users may produce their own frit by mixing lead oxide and silicates. One producer stated that it has a plant in Mexico that is not yet capable of producing frit of acceptable quality. However, the entire operation would be shifted to Mexico if quality were not a problem (Ex. 476–241).

(j) *Conclusion: Economic Feasibility*

OSHA recognizes that the pigment industry consists of many firms that operate plant and equipment built more than 50 and even 100 years ago. For these firms, retrofit controls would be expensive and, as demonstrated by the experience of DuPont, may be ineffective in achieving compliance. While OSHA cannot require the construction of new plants, it encourages affected firms to consider this means of compliance, especially in light of the many other benefits of modernization in addition to the benefits of a healthier work force.

Given a compliance period of 5 years, pigment producers would face annualized costs ranging approximately between $3.8 and $7.3 million dollars. The costs are reasonable and feasible in an industry that produces total shipments valued at $170 million per year. Compliance costs range between .025 and .048 percent of total value of shipments. OSHA requested data on profitability of potentially affected firms. However, pigment producers did not submit financial data to the Agency for its consideration.

Market changes may occur as a result of compliance with the standard. First, there may be a slight shift in demand in favor of substitute products. Some downstream users may decide to use a different pigment rather than incur their own compliance costs. Others, responding to changes in relative prices, may switch to substitute pigments. However, given the present wide difference between the prices of lead chromates and substitutes currently characterizing the industry, a significant shift is not likely. Furthermore, lead pigments are not closely rivaled in technical properties by substitute pigments. Therefore, the stability of the market even in the face of an increase in price is enhanced. The relatively inelastic demand for lead pigments will also allow producers to pass forward the increases in costs to consumers in the long-run.

The domestic market for lead chromates is not facing competition from foreign producers. However, a recent increase in imports of litharge could signal the onset of foreign competition in this market. The industry did not raise this as an issue. Therefore, OSHA infers that domestic producers will not be placed at a competitive disadvantage relative to foreign producers as a result of the standard.

OSHA anticipates that the standard will generate changes in market structure. However, the impact of compliance with the standard on the relative market position of small firms and large firms is uncertain. Smaller firms with compliance costs which are large in relation to total costs of production may no longer be able to compete with large firms. But the regional orientation of the pigments market may mitigate to some extent the reduction of a small firm's competitive edge. But more importantly, it appears that small lead chromate producers will not necessarily be at a competitive disadvantage because of the standard. On the contrary, if some small firms are relatively close to compliance now, their costs may be proportionately smaller than a large firm's costs. In fact, if larger producers, which currently dominate the lead chromate market leave the market, then several smaller firms might enter the market thereby reducing industry concentration and enchancing competition.

24. Lead Sheet Metal Manufacture

(a) *Summary*

Lead sheet metal is used in roofing, flashing and sheeting for radiation protection (Ex. 22, p. 144). The manufacture of lead sheet metal is a secondary lead smelting operation (Ex. 22). A discussion of this process and the accompanying exposure areas can be found in the feasibility section of the final lead standard. The feasibility of the standard in secondary smelters has already been established. Slip Op., at 181–97.

The use of lead sheets may also result in exposure in that sheets must be cut, welded, brazed, or burned into place. A discussion of these operations and accompanying exposure problems can be found in the section of this document entitled Lead Burning (Brazing/Welding).

25. Leather Manufacture

(a) *Uses*

Leather is a skin permanently combined with a tanning agent so that its principal fibrous protein is rendered resistant to decay while the fibrous structure and desirable physical properties of the skin are retained.

Leather must be cured, soaked, dehaired, delimed, baited, pickled, tanned, and dyed (post-tanning operation).

Lead chemicals are no longer used in the tanning of leather so exposure to lead only occurs when lead chromate dyes are used.

(b) *Process Description and Exposure Areas*

The only data on the application of lead based dyes to leather indicates that dyes are swabbed on (Ex. 22, p. 207).

(c) *Controls Currently Used*

Local exhaust ventilation may be used in some cases, in operations involving

the swabbing of materials onto the finished hides, protective gloves may be used. Further data concerning current use of controls was not available.

(d) *Exposure Levels*

The only data available indicated that solid waste residues could contain as high as 0.3 percent lead (Ex. 22, p. 207). No data was available on ambient levels.

(e) *Population Exposed*

The actual number of exposed employees was not available. Industry contacts indicated that the number exposed is not appreciable (Ex. 22, p. 207).

(f) *Additional Controls*

Since finishes containing lead chromates are swabbed on, no fumes or dust are generated and exposures are low. Moreover, the total elimination of lead-base pigments would have no adverse impact on the industry (Id.).

(g) *Conclusion: Technological Feasibility*

The data indicates that no exposures to lead in excess of the 50 $\mu g/m^3$ level occur in this industry. Where exposures may occur they could be eliminated entirely by eliminating use of lead-based pigments.

(h) *Cost of Compliance*

It appears that potential exposures to lead in the finishing of leather have already been controlled to 50 $\mu g/m^3$. Therefore, there are no costs attributed to this regulatory action and no economic impact is anticipated.

(i) *Industry Profile*

In the past, patent leather workers were on occasion exposed to inorganic lead. However, lead-free urethanes have been substituted for the lead salt driers that caused past exposures. The only current source of exposure to lead in the industry is in the dyeing of leather with lead chromate pigments (Ex. 22, p. 207) however, use of lead chromate based dyes in declining (Ex. 476–278).

Tanneries (SIC 3111–11) employ 14,300 production workers in 315 establishments and contract tanneries employ only 4,500 production workers in 107 establishments. (1977 Census of Manufacturers Industry Services MC77–1–31A). A very small percentage of these workers are in finishing departments and no workers are directly exposed to dry lead-based pigments or to spray mist. Application of finishes occurs in specialized, mechanized operations. (Ex. 476–278)

26. Machining

(a) *Uses*

Machining and milling serve to cut away excess metals from product edges and to finish a surface by the grinding or polishing action of a machine.

(b) *Process Description and Exposure Areas*

The process may be like the one used at Schulmerich Carillons, Inc. where rough cast bronze belts are machined to achieve predetermined pitch (Ex. 476–298) or at Raybestos-Manhattan, Inc. (Ex. 476–299) where sintered metals are machined into gears and clutch plates.

Only machining or milling of lead metals or lead-based alloys poses any lead exposure problem. The points of exposure are at the machines being used.

(c) *Exposure Levels*

Exposure data from Raybestos-Manhattan (Ex. 476–299) indicated that lead exposures were below 35 $\mu g/m^3$. In fact, all sample groups except for one were below 30 $\mu g/m^3$. Exposure data from Schulmerich Carillon Inc. consisting of five samples taken at the machining operations showed no detectable levels of lead. (Ex. 476–298). Samples taken at the Western Gear Corp. were also below the limits of detection (Ex. 476–300).

(d) *Controls Currently Used*

Control technology in each of these establishments consists of local exhaust ventilation over the source exposure points (Ex. 476–299, 300), the use of a water-soluble cutting fluid (Ex. 476–300), and housekeeping (Ex. 476–298, 299, 300). At Raybestos-Manhattan, which had detectable lead levels, it was recommended that the use of compressed air for cleaning be restricted and consideration be given to the use of a vacuum cleaning system in lieu of forced air hoses (Ex. 476–299).

(e) *Additional Controls*

Controls other than those already being used are not needed since compliance is being achieved.

(f) *Conclusion: Technology Feasibility*

Exposure levels are below the 50 $\mu g/m^3$ PEL thus, compliance is being achieved.

(g) *Economic Feasibility*

There will be no cost of compliance nor any economic impact because the industry is well below the 50 $\mu g/m^3$ standard already.

27. Miscellaneous Lead Products

(a) *Uses*

There are many other products that use or contain lead. Only those for which data was submitted to the Agency are discussed here.

Collapsible tubes that are used for glue packaging, often contain lead, as does lead caulking used by plumbers and certain specialty lubricants.

The use of lead in the collapsible tube industry has dropped considerably. One explanation for this is the adoption of aluminum and plastic collapsible tubes. However, this replacement is limited by the compatibility of the product and the container. It is doubtful that lead will be totally replaced by other materials.

(b) *Process Description and Exposure Areas*

(i) *Lead Tubes.* A survey of several companies (Ex. 22, p. 315) indicated that lead tubes are made in much the same way from company to company. Lead is purchased in billets, melted and then poured or rolled into shapes for further processing. When rolled or poured, the end result is a slug (the shape of a coin). It is then impact-extruded into the tube shape. Further processes involve capping one end and possibly lining the tube with a wax or some other type of sealer.

Potential exposure exists during all processes of fabrication. The highest exposure probably exists in the melting area. All sources indicated these processes are ventilated and that lead is brought just to the melting temperature (less than 1,000°F) which decreases the probability of significant lead fumes being created.

(ii) *Petrochemical Industry.* The only data that was available involves the manufacture of specialty lubricants from crude oil. (Ex. 476–305)

Oil is filtered through bauxite to remove impurities, material is conveyed to a multi-stage burner and impurities are burned off.

Lead is the pyrolysis product from the combustion of the impurities from the oil. Air monitoring indicates that all levels are less than 5 $\mu g/m^3$.

(iii) *Lead Caulking Used by Plumbers in Forming Lead and Oakum Joints.* Much of the caulking lead is manufactured as part of secondary lead operations. (Ex. 22, p. 316). This section covers those operations that primarily take large lead ingots and melt them down and cast them into smaller ingots. Melting is accomplished in a large pot (typically, 3,000 pound capacity). Some melting pots are vented, others are not.

(d) *Exposure Levels*

(i) *Lead Tubes.* Although no data is available for any operations making collapsible lead tubes, it is felt that exposure is not excessively high. With ventilation in existence, exposure of employees in the melting areas is estimated to be 50–200 $\mu g/m^3$ (Ex. 22, p. 305).

(ii) *Petrochemical Industry.* Air monitoring indicates that all levels are less than 5 $\mu g/m^3$ (Ex. 476–305).

(iii) *Lead Caulking.* Data was not available indicating exposures in caulking operations.

(e) *Population Exposed*

Using an estimate of 5 percent to 15 percent of total employees as representing those potentially exposed, a range of 250 to 750 potentially exposed employees is derived. Assuming one person per pot and 100 pots, an estimated 100 potentially exposed employees for the small shop manufacturing of lead caulking is obtained. Data on other exposed groups was not available. (Ex. 22, p. 316–317).

(f) *Additional Controls*

Manufacturers and shops fabricating collapsible tubes and lead caulking will probably have to add to or improve their present local ventilation. Improved housekeeping will also be required. Definite compliance methods are difficult to determine without better exposure data and site visits.

(g) *Conclusion: Technological Feasibility*

Very little information was furnished by companies indicating what exposure levels were or what problems exist with achieving the 50 $\mu g/m^3$ PEL. The Short Report was the only source of information which the Agency had to rely on. (Ex. 22, p. 215). Based on the information in this report, it appears that compliance is feasible with improved ventilation and housekeeping. In addition, the companies can rely upon worker rotation to achieve compliance with a 50 $\mu g/m^3$ standard in this industry.

(h) *Economic Feasibility*

The cost of compliance is assumed to be minimal in that inexpensive ventilation controls, housekeeping, and worker rotation will be relied upon to meet the 50 $\mu g/m^3$ PEL.

28. Nickel Smelting

(a) *Uses*

Nickel and nickel alloys are used for the fabrication of equipment to resist corrosion. Nickel is also used chemically to form catalysts. It is also used extensively as a plating medium.

There are only two nickel smelting operations in the United States. One of these, the Hanna Nickel Co. located in Riddle, Oregon operates the only nickel mine in the United States (Ex. 476–212). Trace amounts of lead in ores result in worker exposures.

(b) *Process Description and Exposure Areas*

The first step in processing the ore is to screen and crush it prior to transportation either by tramway or by some other automated method to the smelter (Id.).

Ore is reclaimed from the stockpile by rubber-tired front end loaders and is conveyed to dryers, where the moisture content is reduced. After drying, the ore is conveyed to the screening, crushing, and sampling plant. The ore is properly screened and sent to a storage bin.

From the storage bins, the coarse ore is fed to two natural gas or oil fired rotary calciners, while the fines are fed to two natural gas or diesel fired multiple hearth roasters (Ex. 476–212).

After calcining, the ore discharged from both the calciners and roasters is transported by automatic skips to hot ore bins above four electric melting furnaces in the smelter building (Ex. 476–212).

The ore is charged to the melting furnaces by gravity. Molten ore is poured from the melting furnaces into ladles for the reduction process (Ex. 476–212).

Reduction of nickel and iron is accomplished by the Ugine process, which consists of adding a reducing agent containing metallic silicon to an oxide ore in the presence of molten ferrous metals and using vigorous mixing action for good contact of reductant and ore (Ex. 476–212). After the vigorous mixing cycle, the ferronickel is allowed to settle to the bottom of the ladle. The slag is skimmed off and granulated with high pressure water jets.

As the reducing reactions continue, ferronickel accumulates in the ladle. At regular intervals, a portion of this product is removed, or "thieved," and transported to one of two identical small electric steel furnaces. Here the impurities, predominantly phosphorous, are removed by suitable refining slags, after which the ferronickel is cast into pigs. (Id.).

(c) *Controls Currently Used*

Control of dust emissions from the plant was recognized as a substantial technological problem during the initial design phase prior to 1954 because of the nature of the ore to be handled (Id.). Fabric filters were considered to be the best equipment available, for dust control and were installed on the melting furnaces, crusher house and storage bins ventilations systems. Electrostatic precipitators were installed on the calciner and wet scrubbers were installed on the dryers and furnace. This equipment operated at 98.3 percent efficiency (Id.).

In 1970, new State air quality standards again made it necessary to upgrade the system's efficiency, to 99.8 percent. Large cloth dust filters on the crusher house, ore melting furnaces, and a ferrosilicon furnace, handling a total of 720,000 actual cubic feet of gas per minute, were required. Improvements to existing equipment on the calciners, roasters, dryers, and storage bins were made (Id.). The system was completed in July, 1974, and now meets State air quality standards.

(d) *Exposure Levels*

Exposure data made available from the NIOSH survey of this smelting operation indicate that lead levels are well below the 30 $\mu g/m^3$ action level. In fact, of 81 samples analyzed for lead, the highest exposure was 0.013 $\mu g/m^3$. The company presented no data at the hearings, presumably because compliance with the lead standard poses no problem. There is no reason to suspect that the other nickel smelter has appreciably different environmental conditions.

(e) *Population Exposed*

No workers are believed to be exposed above 30 $\mu g/m^3$.

(f) *Additional Controls*

No additional controls are necessary, since the industry is already in compliance.

(g) *Conclusion: Technological Feasibility*

Levels of exposure are below 30 $\mu g/m^3$ and thus compliance with the 50 $\mu g/m^3$ lead standard is already being achieved.

(h) *Economic Feasibility*

There will be no cost of compliance nor any economic impact as a result of this regulation.

29. Nonferrous Foundries

(a) *Uses*

There are currently 1,620 foundries in the United States which do some casting of brass and bronze. Copper-based alloys are the primary raw materials at approximately 900 of these foundries. Lead is used in this industry in the form

of ingots or scrap metals and may vary in amount from less than 1 percent to 20 percent of the brass or bronze casting (Ex. 26, p. 5–73; Ex. 475–33D; Ex. 479).

(b) *Process Description and Exposure Areas*

The processes found in nonferrous foundries are similar to most foundry operations, and consist of coremaking, molding, melting, pouring, shake-out, and cleaning of castings. Cores are produced by chemical reaction or by baking a resin coated mixture. (Ex. 476–331, 337, 339).

The molding process consists of compacting a prepared sand layer around a pattern; the cores are set in position within the opening left by the patterns; the two mold sections are then joined together. (Ex. 476–331, 337, 339).

Lead exposures in the molding area come either from the reuse of sand in which lead has condensed or from cross-contamination from other operations of the plant (Ex. 479; Ex. 22, p. 172). Usually this area is located near the pouring area, so that spills often contribute to the exposures. (Ex. 22, p. 172).

Solid metal is melted in an electrical induction, reverberatory, or gas or oil-fired crucible furnace (Ex. 476–317; Ex. 22, p. 172). When the metal is ready for pouring, dross is skimmed off the surface of the molten metal, increasing the amount of fumes released. (Ex. 479; Ex. 476–339, 337, 331; Ex. 475–10). Emissions at the melting operation come primarily from the furnace during charging the cupola launder leading to the forehearth; and the tapping of the ladles.

Pouring is performed at the transfer of metal from the furnace to the ladle and from the ladle to the mold. (Ex. 476–331, 339; Ex. 22, p. 172). Lead fumes may be released during each pouring (Ex. 22, p. 172; Ex. 479; Ex. 475–33C).

After a cooling period, the castings are removed and transported to the shake-out and/or the wheelabrator which rids the castings of any remaining sand. (Ex. 479; Ex. 476–331, 339). Castings are then cleaned by grinding, cutting or buffing. (Id.).

There are two important sources of lead in the finishing department: the dust generated from the finishing operation and background dust. Final processing may include plating with gold, brass or silver (Ex. 476–317). Lead exposures may also occur during baghouse operations from the melting of lead the pouring of lead into casts and shakeout and cleaning. (Ex. 22, p. 172).

(c) *Controls Currently Used*

Engineering controls in the foundry industry range from general ventilation to numerous local exhaust systems. The most frequent control in the melting department is a hood over the furnace. (Ex. 476–332). In one foundry, each furnace was equipped with a mechanical exhaust canopy hood to collect fugitive lead emissions (Ex. 479).

Another foundry had totally enclosed the furnace (Ex. 479). Some foundries have provided tightly enclosed exhaust ventilation around their furnaces, local exhaust ventilation on the ladles and side draft exhaust ventilation in the pouring stations (Id.). These additions have sufficiently reduced the lead emissions (Id.). Several of these hoods were portable, allowing better access (Ex. 476–317, 332). The American Foundrymen's Society agreed, noting that canopy hoods are generally ineffective and that using a close capture, high velocity hood performs more effectively (Ex. 476–332). Total enclosure of the furnace was also recommended as a means for reducing exposures (Ex. 479; Ex. 476–323). Enclosure allowed Allis Chalmers to reduce lead exposures from 280 $\mu g/m^3$ to 30 $\mu g/m^3$. (Id.). NIOSH observed a movable side-draft hood on an arc furnace which reduced the furnace operator's lead levels to 20 $\mu g/m^3$; on the melting deck similar background levels were found. (Ex. 476–332). One company isolated the operator from the furnace by enclosing him in a positive-pressured booth, and the charging operation was totally automated and controlled from the booth (Ex. 476–332); these controls substantially reduced lead exposures.

Other methods of control included: proper control of charge materials and furnace operations, charge bucket filling and preheating stations with local exhaust, use of a charge bucket cover during loading and unloading of charge materials into the furnace, control of charge door emissions by local exhaust, and use of a charge bucket only slightly smaller than the opening. The charging and tapping operations can be exhausted by using a hood with an air volume of 19,000 cfm (Ex. 476–319, 332). Other suggestions include keeping the furnace covered, minimizing overheating and wing deoxidizers or alloying agents while the crucible is still in the furnace shell (Ex. 476–319). By replacing a crucible furnace with an electrical induction furnace, George Butler, OSHA's expert witness reported lead levels were reduced from 325 $\mu g/m^3$ to 200 $\mu g/m^3$; coupled with isolation of the melting area with a barrier was recommended (Ex. 479). One foundry reported that installation of an induction furnace resulted in a cleaner metal.

NIOSH recommended several methods for reducing lead emissions at the slagging station. They included: a side-draft hood exhausting 25,000 cfm, a fresh air supply directed past the worker, rollers to ease the use of long slagging poles used on large ladles and "rosat slagger" used to isolate the worker during slagging on large ladles. (Ex. 476–329). DBA suggested that the dross be disposed of in barrels with a mobile ventilation system (Ex. 26, p. 5–80).

The most effective method for controlling lead in the pouring area was the use of a mobile ladle hood which exhausts the ladle at the source and is connected by flexible ducting to a traveling exhaust carriage which moves along a stationary plenum extending the entire length of the pouring area. Air volumes ranged from 2,000–7,000 cfm (Ex. 475–3; Ex. 479; Ex. 476–330, 329, 323, 339, 337, 317). Using this technology, Allis Chalmers reported a drop in lead levels from 600 to 40 $\mu g/m^3$ (Ex. 476–323). NIOSH reported levels of 100–140 $\mu g/m^3$ for the molten and 52–100 $\mu g/m^3$ for the metal pourer (Ex. 476–329).

One company visited by NIOSH had an automatic transfer system for metal from the melting area to holding furnaces through a launder, and then automatic pouring from the holding furnace (Id.). Ladle covers were also suggested as a means of reducing emissions (Id.; Ex. 317). In addition, careful work practices to reduce spills as much as possible (Ex. 22, p. 174) or pouring in a remote area would reduce lead levels. (Ex. 476–319).

Butler and Marion Bronze suggested other methods to control lead levels. Butler suggested changing the type of alloys cast to reduce the lead content (Ex. 479). Marion Bronze has developed a patented process where metal is continuously cast and then finished while cold. The idea is not new, but it has not been applied in nonferrous foundries. (Ex. 475–18). Marion Bronze has achieved compliance with these controls.

One of the most frequently used and least effective methods of reducing lead exposures is the use of roof fans. The fans have a tendency to allow air currents to bring the emissions back into the plant. This can be prevented by increasing the height of the stack (Ex. 476–317).

The molding area is generally ventilated, primarily to control silica (Ex. 479). Rigorous housekeeping in this area is mandatory. (Ex. 22, p. 173). Cast Metals Federation (CMF) found that

cooling fans, so often used in this area, can disrupt the calculated air flows.

The finishing department includes grinders, chippers, buffers, cut-off saws, torch cut-offs, and air ranging and cutting, all of which can be exhausted locally (Ex. 476–339, 331, 332, 317; Ex. 22, p. 174; Ex. 479). Low-volume, high-velocity exhaust systems were used by one company (Ex. 476–337). Down draft tables were found at the chipping, grinding and buffing operations (Ex. 476–332), and enclosures or booths have also been used. (Ex. 475–3; Ex. 22, p. 174; Ex. 479; Ex. 476–339, 332, 317). NIOSH found a company using an air-supplied booth exhausting 16,000 cfm on a torch cut-off operation. Lead levels were less than 1 $\mu g/m^3$. (Ex. 476–332). In an air operation for small castings, NIOSH also noted a backdraft hood on a bench exhausting 8,300 cfm and an air supply of 1,500 cfm. For large castings there was a ventilated booth with supplied air and a materialized turntable for positioning the castings. The air volume exhausted was 8,500 cfm; the air supplied was 3,600 cfm. Booth curtains were used to separate this area from other areas (Ex. 476–337). CMF suggested the use of kiss gating for the casting area which would reduce, if not eliminate, some cut-off operations. Cosmetic grinding might also be eliminated (Ex. 475–33).

Nearly all of the foundries utilized local exhaust ventilation for capturing lead-containing dust in the cleaning rooms when dust is generated from grinding operations. However, the high-speed rotation of the grinding wheel interferes with the effectiveness of capturing the grinding dust (Ex. 479). Grinding dust containing lead can be satisfactorily controlled with an exhausted booth (Id.).

Vacuum cleaning also must be regularly performed. (Id.; Ex. 22, p. 174). Preventive maintenance is a major part of any ventilation system and must be done regularly to maintain effective control of emissions (Ex. 476–332).

Finally, crane operations can use fresh air cabs. One company had lead levels of 300 $\mu g/m^3$ outside the cab and 30 $\mu g/m^3$ inside (Id.).

In the small foundries, rotation of employees occurs out of necessity and therefore, individual exposure is reduced. Another inherent control in the brass and bronze foundry industry is the variability of lead content in the metal. However, this exposure reduction may be offset by a lack of housekeeping, resulting in accumulations of lead from fugitive emissions from past formulations. (Ex. 479) Air filtering respirators are also sometimes used by the workers.

(d) *Exposure Levels*

The job classifications in a foundry include core maker, muller, molder, furnace operator, pourer, shake-out operator, wheelabrator operator, chippers, grinders, and other maintenance personnel (Ex. 476–317). In the very small foundries, one worker may be responsible for several of these jobs. Of these jobs, the furnace operator, pourer, and cleaner are exposed to the highest lead levels. These operations account for approximately 60 percent of the workforce (Ex. 479).

Exposure levels within foundries are quite variable. Levels at Hersey Products were: 50–222 $\mu g/m^3$ at melting operations with a mean value of 118 $\mu g/m^3$; 100–280 $\mu g/m^3$ at pouring operations with a mean value of 190 $\mu g/m^3$; 10–660 $\mu g/m^3$ at cleaning operations with a mean value of 228 $\mu g/m^3$ (Ex. 476–337). At another Hersey Products site, levels for melting were 25 $\mu g/m^3$; less than 7 $\mu g/m^3$ in pouring operations; and 242 $\mu g/m^3$ in cleaning operations. (Ex. 479). Gorsuch Foundry had levels with a mean value of 88 $\mu g/m^3$ at melting operations; 123 $\mu g/m^3$ at pouring operations; 102 at cleaning operations; and 85 at molding operations. (Ex. 476–336). Other plants had considerably lower levels in melting, less than 40 $\mu g/m^3$; in pouring less than 40 $\mu g/m^3$; and higher levels in cleaning 165 $\mu g/m^3$ mean value. (Ex. 476–317).

When all the data submitted for the record is compiled the range of exposure levels found were: molders ranged from 3–250 $\mu g/m^3$; melters and helpers from nondetectable to 2,000 $\mu g/m^3$; pourer's and helpers from nondetectable to 820 $\mu g/m^3$; shake-out from 2–300 $\mu g/m^3$; finishing department from nondetectable to 4,400 $\mu g/m^3$; miller was from 32–180 $\mu g/m^3$, wheelabrator operator was from nondetectable to 160 $\mu g/m^3$. (See, Ex. 476–337, 339, 331, 343, 328, 336, 317; Ex. 22, p. 178; Ex. 26, p. 5–78; Ex. 475–33I)

Although the exposure data varies greatly, it should be noted that many of these establishments were, in fact, in compliance with the 50 $\mu g/m^3$ lead standard in some operations. As Butler testified, 6 of the 12 foundries he surveyed were either in compliance in the melting areas or could easily be brought into compliance; 4 were in compliance in cleaning operations; and 3 foundries were in compliance in finishing operations. (Ex. 479)

OSHA compliance activities indicate that in a foundry making red brass (5% lead) workers time-weighted exposure were 20 $\mu g/m^3$ for the floor man, 10 $\mu g/m^3$ for the squeeze molder, 20 $\mu g/m^3$ for the share-out furnace tender, 10 $\mu g/m^3$ for grinders and share-out, 50 $\mu g/m^3$ for cut-off men, and 116 $\mu g/m^3$ for ferrous furnace tenders. (Ex. 476–317). This plant has a Hawley monorail traveling exhaust hooding system, an induction furnace, down draft ventilation of grinding areas, and good use of general and local exhaust ventilation.

(f) *Additional Controls*

The engineering controls and work practices to achieve compliance with a 50 $\mu g/m^3$ standard are available and have been used by some of the firms in this industry to achieve compliance. Some foundries have used isolation to separate areas of high exposure from areas of low lead exposure. Fossil fueled crucible furnaces have been replaced with electric induction furnaces. Foundries not in compliance with the standard may find it necessary to upgrade existing ventilation systems, upgrade housekeeping practices and rotate workers to meet the 50 $\mu g/m^3$ standard. Many of the facilities are not in compliance simply because of a reluctance on the part of the industry to invest in health and safety controls. Thus while current technology will enable this industry to comply with the standard, the absence of existing controls in some plants and inadequate design of controls in others indicates that compliance activities will take careful planning and time. OSHA has incorporated these considerations into its implementation schedule. The five years provided for compliance allowed the industry a sufficient planning horizon to install efficient, well designed, cost-effective ventilation systems or new processes.

Thus, while current technology will enable this industry to comply with the standard, the absence of existing controls in some plants and inadequate design of controls in others indicates that compliance activities will take careful planning and time. OSHA has incorporated these considerations into its implementation schedule. The five-years provided for compliance allows industry a sufficient planning horizon to install efficient, well designed cost-effective ventilation systems, new equipment, or other engineering control.

(g) *Conclusion: Technology Feasibility*

The Court of Appeals remanded the standard for this industry because the preamble did not explain OSHA's basis for extrapolating the feasibility of the proposed 100 $\mu g/m^3$ PEL and did not describe technological developments that might be utilized (Slip opinion, pp. 205–207). In this analysis, OSHA has presented direct evidence of the technological feasibility of the 50 $\mu g/m^3$ PEL. Exposure data for several foundries

demonstrated that foundries which have utilized state-of-the-art controls have in fact already achieved compliance.

However, in the foundry industry, the use of effective engineering controls and work practices is not uniformly applied. Some firms have achieved compliance throughout, others have achieved amazing success in controlling lead exposures in some processes but lack controls in others areas necessary to achieve compliance, and other have done virtually nothing.

Many firms believe that it is not possible to bring all operations in the foundry in compliance with the permissible exposure level of 50 $\mu g/m^3$ (Ex. 479; Ex. 475–334, 33H, 33F, 33A, 3). Billard Pattern and Brass Foundry stated that even with the latest technology in use, in the most critical areas such as melting, levels remain in the 50–100 $\mu g/m^3$ range. (Id., at 33D). Another company said that at best they could meet the 200 $\mu g/m^3$ standard (Id., at 33D). The industry contends that the lead standard is not feasible and presented the Ford Motor Company as an example of a state-of-the-art foundry which is not in compliance with 50 $\mu g/m^3$. However, this state-of-the-art foundry appears to suffer from the lack of "common sense" in achieving control. As Gary Mosher from the American Foundrymen's Society observed: "Smoke tube testing done in the foundry at the same time as the air sampling indicated that there seemed to be no unifors air flow patterns in the foundry. A significant problem in the foundry is the use of man cooling fans. These fans are doing a fine job disrupting air flow patterns around exhaust hoods." It appears that a common sense approach to design and maintenance of ventilation controls would facilitate the ability of this industry to comply with the standard. Foundries that modify their processes and adopted those used by the Marion Bronze Company could easily come into compliance. This process in which alloys are continuously cast and then cold finished greatly minimizes the lead which becomes airborne. This process is readily adaptable to the industry (Ex. 475–18).

The American Foundrymen's Society (Ex. 503) discussed problems with the data relied upon by Butler in determining feasibility. They maintain that the exposure data was not representative of foundries doing casting of brass and bronze in that either low percentages of lead were involved or casting of non-lead substances was done, but provide no documentation of this claim. OSHA has no reason to believe that the data upon which it relied was not the representative, and in fact it was the best available data. OSHA made every attempt to get the best information, but industry has failed to provide adequate data.

(h) *Costs of Compliance*

The record contains a substantial amount of cost data on reducing exposures to lead in nonferrous foundries. The cost estimates for individual foundries vary widely for at least three reasons. First, some estimates were based upon a nonlinear relationship between compliance costs and exposure levels, whereas other estimates assumed a linear relationship. However, OSHA believes that documentation is available to support a linear relationship between costs of compliance and levels of exposure above 25 $\mu g/m^3$ (Tr. p. 85–86). Further evidence has been provided to corroborate the linearity relationship (Ex. 270, p. 25). Second, different methodologies were used to estimate the cost of these controls. Third, the baseline of current exposure levels varied from foundry to foundry over a wide range. Whereas some foundries were close to or in compliance with 50 $\mu g/m^3$, others were in excess of the previous 200 $\mu g/m^3$ standard.

One foundry reported that it had purchased and installed two induction furnaces with mechanical exhaust ventilation hoods. Each furnace cost between $10,000 and $11,000, and a $40,000 control panel for the furnaces was also installed. No other ventilation was installed. This represents a major undertaking by the foundry. However, the costs of reducing workplace emissions will be partially offset by savings stemming from a cleaner metal product (Ex. 476–314).

Another foundry reported the expenditure of $15,000 for increased ventilation of 6,000 to 7,000 cfm over pouring stations, and $3,000 for an increase of 10,000 cfm to ventilate furnaces (Ex. 476–330). Since the system is not yet operational, no exposure levels were reported by the firm. However, contaminant emissions are expected to be substantially reduced, and all fumes over the pouring stations should be captured by the hoods (Ex. 476–330). Thus, these two foundries indicate that measures can be taken to control exposures to toxic substances in foundries. Furthermore, because foundry workers are exposed to a multitude of hazardous substances, these controls are simultaneously effective in affording protection to workers against other metals, silica and other toxic substances.

A number of foundries submitted provision-by-provision cost estimates through their trade association, the Cast Metals Federation (CMF). Eight firms provided cost data ranging from capital expenditures of $111,190 to $4,000,000 per foundry to reach 50 $\mu g/m^3$ lead (Ex. 475–33). Total costs for these foundries were $14,446,429, and the average cost per foundry was $1,805,804. In addition, one firm estimated the cost of constructing a new, fully-automated foundry with the latest technology at $6,275,000 (Ex. 475–33(I)). The foundry was to be located in a warm climate, thereby eliminating costs associated with heating make-up air.

These cost estimates were not supported by engineering studies and appear to be speculative in nature. For instance, one respondent wrote that the installation of a ventilation system "would probably cost about $60,000" (Ex. 475–33(c)), while another submitted that it was "led to believe that (it would) be required to spend up to $4,000,000 more if this standard is upheld, with no guarantees of success" (Ex. 475–33(E)) in achieving compliance. One foundry estimated a cost of $23,000 for "removing partial moisture from brass chips" without an explanation of the reason for this process and its relationship to the revised lead standard (Ex. 475–33(A)).

The variation among the cost estimates also indicates that not all of the costs presented are reasonable. For example, one foundry with 24 employees estimates the cost of a shower/change/locker room at $70,000 (Ex. 475–33(A)); one with 12 employees estimates a cost of $5,000 for a change room and showers (Ex. 475–33(C)), another with 600 employees estimates the cost of change rooms and showers to be $30,000 (Ex. 475–33(E)); and still another with about 100 employees claims that change rooms, showers, a lunchroom, and lavatory modifications will cost $750,000 (Ex. 475–33(H)). With respect to costs of housekeeping, most foundries estimated that costs would be in the vicinity of $20,000 per year. However, one firm estimated much larger annual housekeeping costs of $180,000 (Ex. 475–33(T)) with no apparent explanation for this deviation.

All of the foundries forecast large decreases in productivity as a result of "nonproductive" hours spent by employees in compliance activities, such as housekeeping and showering. However, the firms did not explain the derivation of the productivity loss estimates, nor did they attempt to calculate offsetting gains in productivity that may be realized through

modernization and a cleaner work environment. Furthermore, classification of work practices as "nonproductive" fails to depict accurately the purpose and effects of safety and health in the workplace. While work practices may not necessarily be perceived as contributing to the conventional product output of the firm, utilization of these resources does contribute to the health of employees and, therefore, may reduce worker turnover and absenteeism.

At least one foundry claims that it will incur large costs of training new employees because a certain percentage of its workforce would switch to other jobs as a result of "loss of personal freedom" at work (Ex. 475–33(F)). The firm claims that the calculation of the 8-hour TWA would require rescheduling shifts such that many employees would seek other employment. On the contrary, OSHA believes that providing cleaner and safer foundries would be likely to reduce worker turnover. Workers who were previously dissatisfied with the workplace, as exemplified by high rates of turnover and absenteeism, would be more likely to remain in current positions and attend with greater reliability. This would be of substantial benefit to the firm, because retraining costs associated with new workers would be reduced. In addition, overstaffing in the face of high absenteeism, to ensure an adequate workforce on any particular day, could be reduced.

In contrast to the relatively high compliance costs provided by some members of the CMF, other data indicate that compliance costs may be considerably lower. These data are estimates of the cost of complying with the 200 $\mu g/m^3$ lead standard. Bolt, Beranek, and Newman (BBN), a consulting firm that conducted a program of on-site consultations in the foundry industry as part of an OSHA National Emphasis Program, made estimates of the specific costs of controlling metal fumes in participating foundries. The reports also included separate cost estimates for controls recommended to reduce exposures to free silica, noise, binders, and safety hazards. A total of 282 firms sought BBN's consultative services. For all these foundries, including steel foundries, gray iron foundries, malleable iron foundries and nonferrous foundries, total control costs for all hazards were estimated to be $6,200,000. In other words, on average, each foundry needed to spend about $22,000. However, BBN pointed out that costs for individual foundries varied widely (Ex. 476–317).

OSHA reviewed the BBN reports pertaining to nonferrous foundries, especially those establishments in which brass and bronze were cast. The compliance costs and the estimated time necessary for implementation of control measures ranged from a minimum of $75 and one month to $95,000 and one year. Three establishments were advised that immediate actions, that bore *no* costs, such as moving a hood or a worker's position, could be taken to achieve compliance (Ex. 476–317).

BBN estimated the total costs for coming into compliance with the 200 $\mu g/m^3$ lead standard and all simultaneous exposures to metal fumes at $364,100 for the nonferrous foundries participating in the consultation program. The average cost per foundry was only $6,300. Excluding those foundries that were in compliance and that therefore incurred no costs, the average cost per firm rose slightly to $8,500. The average length of time required for implementation of controls was 4.5 months.

For their estimates, BBN used an integrated cost-effective method of solving exposure problems, that is, a combination of engineering controls, work practices, and administrative controls. This multifaceted approach to reducing levels is necessary to provide an effective, least-cost solution to the exposure problem. Because the industry estimates do not take this approach, they are probably overstated.

The study by Jacko and Overmyer similarly emphasized the multifaceted approach to lowering lead levels by utilizing housekeeping, work practices, proper layout of plant and equipment, and ventilation. Since it is important to reduce the amount of air exhausted, which is the most costly component of compliance, these other methods represent important ways of reducing costs for firms. In addition, the estimated costs of ventilation control per cfm typically include the costs of complying with EPA air pollution regulations. To the extent that this is the case, the costs attributable to OSHA should be systematically reduced (Ex. 475–3A(2)).

The Census of Manufacturers estimates that there are 489 brass, bronze, and copper foundries and 365 nonferrous foundries, not elsewhere classified (Ex. 476–26). However, according to the American Foundrymen's Society (AFS), there are 364 copper-base alloy foundries, 59 steel foundries, and 29 other nonferrous foundries in which exposure to lead may occur (Ex. 475–3A). The AFS also noted 246 gray iron foundries and 304 aluminum foundries in its estimate of the number of nonferrous foundries potentially using lead.

The two trade associations (CMF and AFS) concur that exposure to lead occurs in approximately 1,000 foundries (Ex. 475–3A and Ex. 475–33). The Census data identify 476 brass and bronze foundries but do not identify other foundries in which brass and bronze may be cast as secondary products or other alloys containing lead may be cast. Thus, OSHA accepts 1,000 firms as the best available estimate of the number of potentially affected firms.

Using this estimate of the number of affected foundries and the BBN cost estimate of $8,500 per foundry to reach 200 $\mu g/m^3$, OSHA estimates that at least $8,500,000 would be expended to achieve compliance with the 200 $\mu g/m^3$ standard. Assuming that the BBN estimates are understated by a factor of ten, that is, that there is a ten-fold difference between achieving 50 $\mu g/m^3$ and 200 $\mu g/m^3$, total cost in the foundry industry of achieving 50 $\mu g/m^3$ may reach $85,000,000. Butler's cost estimate of $107,000,000 to reach 50 $\mu g/m^3$ is based solely on controlling lead levels with ventilation (Ex. 479), which is likely to be more expensive than a multi-faceted approach. The best estimate of DBA for achieving the 100 $\mu g/m^3$ standard was $161,000,000. However, this figure was based on 1,620 foundries rather than 1,000 foundries producing bronze and brass castings. OSHA believes that the BBN data constitute the best available evidence, because they were collected more recently than the DBA data and because BBN visited a much larger sample of firms. Thus, OSHA concludes that the foundry industry may expend $85,000,000 to $107,000,000 complying with the lead regulation. On an annualized basis, these health-related expenditures range from $15.2 million to $19.2 million.

(i) *Industry Profile.* Exposure to lead in nonferrous foundries occurs primarily in the manufacture of brass and bronze castings (Ex. 478–1). According to the Department of Commerce, there are 476 companies operating 489 establishments in this industry, SIC 3362. About 10,200 production workers were employed in this industry in 1977 (Ex. 476–26). However other foundries may produce copper-base alloy castings as a secondary product, thereby increasing the number of workers potentially exposed to lead. For instance, the CMF estimates that there are about 1,000 foundries in the U.S. producing brass and bronze castings (Ex. 475–33), and the AFS estimates that 1,004 foundries in the U.S. produce nonferrous castings, including 364 which produce copper-

base alloy castings as their primary product, and 246 gray iron, 2 malleable iron, 59 steel, 304 aluminum and 29 other nonferrous foundries with copper-base alloy casting as a secondary product. Total employment may be as high as 80,000 workers, according to the AFS (Ex. 475–3A). The value of shipments for the nonferrous foundries was $813.7 million in 1977; the value of shipments for the brass, bronze, and copper foundries was $553.3 million (Ex. 476–26).

Using employment as a measure of size, most of the foundries in SIC 3362 are small with 41 percent employing less than 10 employees, and forty-six percent of the establishments employing between 10 and 50 employees. Only three establishments employed between 250 to 499 employees, the largest firm size category. In other foundries producing bronze and brass castings, the number of employees per foundry is not known. However, since 10,200 workers are employed in the bronze and brass foundry industry, and since the AFS estimates that there are 80,000 workers in the nonferrous industry at issue (Ex. 475–3A), this leaves 69,800 workers in the remaining establishments.

The CMF and some of its members predicted severe financial hardship, plant closures, increased unemployment, and productivity losses of 10 percent to 20 percent after compliance with the lead standard (Ex. 475–33). The AFS addressed the issue of technological feasibility but did not submit data on the economic feasibility of compliance nor claim that this regulation would present a hardship for affected foundries (Ex. 475–3A).

One manufacturer of bronze bearings presented data in support of the feasibility of the lead standard. The Marion Bronze Company, with the assistance of Battelle Columbus Laboratories, developed a new method of casting bronze. The research and development effort was stimulated by the incentive to lower production costs associated with rising energy costs (Ex. 475–18). A grant was awarded by the Department of Energy to supplement the work prepared to date, which has been patented by the U.S. Patent Office. The funding is designated for the completion of the research necessary to market the new technology (Ex. 475–18B).

Because substantial cost reductions can be gained by manufacturers switching to the process, it is likely to be rapidly accepted. The National Bureau of Standards (NBS) regards the process as commercially feasible. The NBS indicated that reductions in costs are based on lower capital investments required to produce a wide range of bearing sizes, significant reductions in energy usage, and significant increases in productivity compared to current processes in use (Ex. 475–18C). In addition, the new continuous casting method is a cold process and does not require melting metal (Ex. 475–18). This new process which offers significant economic benefit to producers would also virtually eliminate lead exposures in the production of some bronze castings.

The conventional processes used in foundries involve pattern making (generally customer specific), mold making, metal pouring, and finishing. Foundries usually specialize in either job contract or volume business in producing standardized products. The demand for foundry products is determined by a highly diversified group of customers purchasing a wide selection of standard and specialty castings. The dominant factor in determining the price of final products is the price of brass and bronze ingots (Ex. 476–26).

There are less than 30 firms in the brass and bronze ingot manufacturing industry, which is separate from but essential to the foundry industry. Copper-based ingots of specific alloy compositions are produced and sold primarily to nonferrous foundries, which in turn melt the ingots and cast brass and bronze products. All but one of the ingot manufacturers are small, closely held corporations. Industry commented that the capital-intensive nature of the industry, the strong competitive pressures, and the demanding government regulations result in small profit margins for ingot producers relative to other manufacturers (Ex. 475–10). The industry also contends that lack of access to capital has forestalled modernization. The industry is composed of older facilities located in urban areas (Ex. 475–10).

The submission of the Joint Government Liaison Committee of the Assocation of Brass and Bronze Ingot Manufacturers and the Brass and Bronze Ingot Institute further describes the role of the industry as essential (Ex. 475–10). They describe no domestic competitors nor foreign penetration of the brass and bronze ingot market in supplying foundries with these alloys. Most foundries will not produce their own ingots because extensive and expensive laboratory facilities are required to produce alloys of specific compositions (Ex. 474–26). Thus, it appears that any compliance costs incurred in protecting workers in the ingot manufacturing industry could be passed on to nonferrous foundries. Furthermore, since the industry is described as consisting of small, highly competitive firms operating under similar conditions and producing a homogeneous product, compliance costs should not impose a disproportionate burden on any specific firm within the industry.

In the foundry industry, however, market conditions are somewhat different. Job shop foundries are supplying a service to customers who order specialty castings. Here, the quality of the castings produced appears to be an important method of product differentiation. Thus, the reputation of the foundry may be a critical factor under consideration by the buyer. Thus, small foundries with a reputation for high quality may retain their competitive advantages even in the face of rising costs. Castings that are mass produced, on the other hand, may meet much less stringent demands on quality (Ex. 476–26). Small firms in the market may be unable to compete with larger firms because of disproportionate cost increases.

Establishments in the industry are distributed throughout the nation with a large proportion of producers in the Middle Atlantic, East North Central, and New England census regions. For standardized products, competition is less regionalized than for job-contract work. Within given geographical markets, competition for specialty orders is fairly intense (Ex. 475–10).

While the foundry industry is vulnerable to business recessions, especially in construction and consumer durables, the industry's flexibility and diversity of product lines tend to buffer the severity of such impacts. As the economy recovers, the foundry industry should share in the growth. There may be a trend to shift from brass and bronze to ferrous castings; however, the magnitude and strength of this shift is not measurable owing to a lack of data.

The structure of the industry as a whole closely resembles a monopolistically competitive market. The low concentration ratios for 1972 from the Census of Manufacturers provide evidence of the competitive nature of the industry, although this measure probably overestimates the competitive nature of regional markets. Economic and technological barriers to entry appear to be very low on the basis of available evidence (Ex. 474–26), and the size distribution of firms does not indicate that there are significant economies of scale in production (Ex. 474–26). Thus, low unit production costs can be obtained at low levels of output.

About 25 percent of the foundries classified as brass and bronze foundries are unincorporated, single plant firms.

Since these companies produce at low volumes, they have not in the past benefited from bulk discount buying of raw materials. Therefore, when the price of brass ingots rose sharply in 1972 and 1974, many of these firms were unable to compete with larger producers (Ex. 474–26).

DBA indicated that costs of production rise as a result of compliance with the lead regulation, firms would initially pass on to consumers most of the increase. Moreover, in the long run, the prices would rise to fully pass on the costs of compliance, although there might be some increase in market concentration (Ex. 474–26).

Some of the present markets for brass and bronze castings may change to reflect increasingly elastic demand if plastic castings are accepted as suitable substitutes. Aluminum and ferrous castings may also compete successfully if the relative prices of bronze and brass castings rise.

One company commented that foreign competition was much stronger than in the past and was adversely affecting its ability to export castings (Ex. 475–33I). However, foreign producers do not appear to be competing with foundries in domestic markets. On the other hand, in an effort to escape regulatory requirements, and to lower costs of labor, some foundries may consider the option of moving abroad (Ex. 476–26). For instance, if some domestic foundries relocate to Mexico, the impact on the southwest regional market for brass and bronze castings might be disrupted (Ex. 476–26). The extent of this dislocation is not measurable with the available data.

(j) *Conclusion: Economic Feasibility*

The foundry industry has been given 5 years to comply with the standard. In light of this extended compliance period and the cost evidence, OSHA concludes that the economic impact of the lead standard will not prove disruptive to the domestic foundry industry. OSHA calculates that compliance costs will comprise between 1.4 percent and 3.4 percent of total shipments, valued between $553.3 million (brass and bronze foundries) and $813.7 million (nonferrous foundries) in 1977 (Ex. 476–20). Although marginal firms may exist the market or drop lead-related product lines from their operations, causing some increase in market concentration, entry barriers are low. Therefore, new firms may enter the market if others shut down. Thus, in the long run, increases in concentration may not occur.

30. Pipe Galvanizing

(a) *Uses*

Large quantities of steel wire, pipe, hot and cold rolled strip and sheet are coated with molten zinc in a process called galvanizing. Galvanized steel is used where corrosion resistance is required, for example, in the underbody of automobiles, for air conditioning ducts, culverts and storage tanks. Often the galvanized sheet is given a paint coating to make it fit more attractively in its surroundings. Some farm silos are made of continuously painted galvanized sheet. Curtain walls in building exteriors, interior partitions, and parts of kitchen cabinets or major appliances such as refrigerators may also be manufactured from painted galvanized sheet.

(b) *Process Description and Exposure Areas*

Metal to be galvanized may require annealing to remove the effects of cold working. For galvanizing wire a continuous annealing process consisting of a lead-bath is usually employed. A pan filled with molten lead is installed in front of the cleaning and galvanizing apparatus. The lead also serves to burn off the wire-drawing lubricant. Since the rate of cooling in continuous process annealing has little effect upon the physical properties of the wire, the wires are cooled in air, or, if the space is limited, low-carbon wires will be cooled by conducting them from the annealing furnace into a vat of water. Following annealing, the materials are cleaned of scale by being drawn through a bath of hot acid at predetermined concentrations and later through hot water. The cleaned wire must be dried before galvanizing. A flux is used to prevent any oxidation or rust from forming during the drying process. The dried wires are drawn at once into the molten zinc, or spelter. This molten metal is contained in a spelter pan, which is usually made of boiler plate and is supported by a brick setting of suitable construction for firing with the most satisfactory fuel available. Pans designed for galvanizing coarse sizes of wire may reach a length of 30 feet. The depth of the pan must be sufficient to prevent the wires from coming into contact with the dross which settles and collects upon the bottom. This dross which is an alloy of iron and zinc and solid at the temperature of molten spelter, forms a pastelike mixture that is very harmful to the coating. As molten zinc oxidizes rapidly, the pan is provided with some form of covering, which rests upon the molten spelter and protects it from the air, except at the ends where the wires enter and leave the bath. Here, the surface of the metal must be kept free from oxide by frequent skimming. The mixture of zinc and zinc oxide thus obtained is known as zinc skimmings.

The wire, just after it emerges from the zinc bath, is passed through either one of two devices known as wipes or headers.

Galvanizing of cold rolled sheets and strips is performed in a similar manner, however, annealing is performed in a box furnace which eliminates the need for the lead bath preceding the zinc-bath. Pipe and hot rolled steel do not require annealing so the lead bath is likewise not necessary.

Electrogalvanizing, as the name implies, is a process which applies a coating of zinc to steel by means of an electric current. Electrogalvanizing uses a long, shallow plating vat, usually from 100 to 200 feet long. This vat is filled with a solution such as zinc sulphate which must be continuously agitated to maintain a uniform density. From the vat the steel goes to a wiping unit and is then permitted to dry in air.

Lead exposure results from processes preceding the hot galvanizing, such as annealing, which is often done in a lead bath (Ex. 476–483). Lead is sometimes added to the zinc bath because a lead layer acts to hold down other impurities which may be present in the zinc bath (Ex. 22, p. 209).

(c) *Controls Currently Used*

Suggested control technology consists of two hoods, one over the dip tank and one to exhaust the blowbox (steam ejector for removing coating metal from the inside of the pipe) (Ex. 476–344).

(d) *Exposure Levels*

Specific exposure data was unavailable, although the consensus among those expressing an opinion was that lead exposure poses no problems in this industry (Ex. 22, p. 209). AISI furnished blood lead data to the record, but furnished no exposure data (Ex. 500).

(e) *Population Exposed*

No data was available.

(f) *Additional Controls*

AISI stated that engineering controls were infeasible and that fluidized bed systems (which cannot be used in all cases) have replaced the galvanizing process. (Ex. 500, p. 9). While this may be a reliable way to eliminate lead exposures, other traditional methods such as those recommended by Short appear suitable (Ex. 22, p. 209). The submission from industry (Ex. 476–343)

also indicates that relatively standard control technologies are being used. The less costly housekeeping and worker rotation controls are also available to the industry.

(g) *Conclusion: Technological Feasibility*

The data which was available indicate the exposure to lead from galvanizing is low and poses very few compliance problems (Ex. 22, p. 209). Controls appear relatively simple and consist primarily of hooding. Additional preventive measures such as enhanced maintenance and housekeeping may also be used to insure that levels are kept below 50 $\mu g/m^3$. Compliance with the standard thus is feasible.

(h) *Economic Feasibility*

Data was not submitted by any industry source which indicated that there would be any costs of compliance associated with the use of traditional controls for complying with this standard. Exposure levels are low and the costs incurred, if any, will probably be for maintenance and housekeeping improvements, both of which require minimal expenditures. AISI did submit data in their post hearing comments which indicated that replacement of existing controls with a fluidized bath in galvanizing operations would be $650,000 (Ex. 500, p. 9). They further indicated delivery of the system would occur 1 year after the purchase order.

In view of the apparent low exposures in this industry and the relative simplicity of the controls required, compliance with the standard should not cause significant economic impact on this industry.

31. Plastics and Rubber Manufacture

(a) *Uses*

Polymerization processes result in many different kinds of bulk plastics and resins which are later molded to form plastic products or processed to form paints, solvents, varnishes, etc. Rubber has many uses, but is primarily used in the formation of tire and rubber hosing. Linoleum is no longer made in the United States (Ex. 476–286) and therefore its manufacture is not discussed.

(b) *Process Description and Exposure Areas*

The processes for the production of plastics and resins are numerous. Eighteen general processes are used to produce various plastics. Only the compounding of lead based ingredients poses an exposure problem in rubber and plastics manufacture (Ex. 22, p. 224).

Lead exposure may result from the compounding of a polymer. The term "compounding of a polymer" refers to those chemical and, especially, physical methods used to modify the polymer's properties in accordance with specific performance, appearance, or economic requirements. Most commonly, the compounding of a plastic involves the incorporation of certain additives, the compounding ingredients, into the polymer to produce a homogeneous dispersion or mixture. In this way, improvements may be made in processing characteristics (e.g., by the use of plasticizers), in resistance to degradation (e.g., by stabilizers), in strength (e.g., by modifiers or reinforcing fillers), in appearance (e.g., by antistatic agents), and in cost (e.g., by fillers or extenders). Curing agents are also important compounding ingredients, especially in the case of thermosetting resins and elastomers. The nature and proportions of the compounding ingredients; i.e., the formula or recipe to be used depends primarily on the nature of the polymer and its intended use (Ex. 476–286).

Important classes of compounding ingredients are: Antioxidants; antiozonants; antistatic agents; biocides; blowing agents; carbon; catalysts; curing agents; driers and metallic soaps; dyes; inorganic fibers; fillers; flame retardants; pigments; plasticizers; release agents; stabilizers; and ultraviolet radiation absorbers. (Id.)

Polymers are modified using a multitude of products, but most compounding methods generally consist of three steps. The premixing or preblending step involves breaking of agglomerates and gross dispersion of compounding ingredients. The compounding ingredients are heated and intensively mixed or blended in order to give the polymer particles a homogeneous dispersion on a molecular level. The last stage in compounding involves shaping the compounding material into a usable form (Id.).

General methods of compounding polymers may be divided into those of compounding thermoplastics and those for compounding thermosetting resins because the effect of heat differs greatly depending on whether the polymer is in the former or the latter group. The compounding of elastomers is a specialized technology. (Id.)

(i) *The Compounding of Thermoplastic Polymers* Premixing operations may be carried out in large batches with the aid of mixers and blenders. In mixing dry materials (e.g., in dry coloring), a less intensive type mixer, like ribbon blenders, conical mixers or sigma-blade blenders, may be used. If the material is dough or taffy-like, a more intensive mixer like the Muller-type mixer or vertical-action mixer will be required (as in the mixing of color concentrates with uncolored resin). The premixed materials are usually screened to eliminate remaining aggregates before the next operation. (Id.)

Fusion is accomplished by the external application of heat, shearing action, or both. A number of different types of equipment are available for this purpose. Extruders are widely used because they provide heating by shear and permit continous operation. The Banbury internal mixer is particularly useful for compounding plastics that are difficult to process and for compounding and reclaiming elastomers. It is usually employed in conjunction with a two-roll mill or an extruder (Id.).

The last stage in compounding a thermoplastic involves shaping of the compounded material into a usable form. For example, the Banbury mixer will produce thick, shapeless masses of several hundred pounds that must then be cut into small pieces. The compounded material is therefore placed on a two-roll mill and a sheetlike material is produced. The sheet can be reduced in size by cutting and further subdividing into granules or rounds (Id.).

The final product from an extruder can be obtained in tape, tube or strand form, or, after cooling, may be granulated. Pellets can be obtained directly by die-face cutting where the extruded polymer is cut underwater upon emerging from the extruder while still hot (Id.).

(II) *The Compounding of Thermosetting Resins.* Thermosetting resins are usually in the form of a syrup or of a finely divided powder prior to compounding. They are mixed with a variety of other solids, e.g., fillers like wood floor, asbestos, clay or mica. In addition to the usual compound ingredients, thermosetting resins are also compounded with suitable curing agents before they are fully set. Equipment used for compounding includes ball mills, sigma-blade blenders and vertical mixers. Ball milling is particularly useful for the production of powders with exact shades of color (Id.).

The sensitivity of resins to heatsetting requires that heating only be carried out at low temperatures and for short periods of time. Likewise, pH conditions must be carefully controlled. Fusion (fluxing) for brief periods can be performed on two-roll mills or a Banbury mixer. (Id.) The compounded material produced from the two-roll mills or Banbury mixer may then be

reground into a powder or granulated after extrusion. (Id.).

(iii) *The Compounding of Elastomers.* High quality natural rubber is too hard and tough to process. Therefore, the first step in its use is a preliminary breakdown or mastication. This is accomplished by the shearing action of a two-roll rubber mill or an internal mixer such as a Gordon plasticator. This breakdown causes the rubber to become smoother, more plastic and more thermoplastic in subsequent steps. Most synthetic elastomers also require some breakdown of a similar type. The amount of breakdown required varies with the type and grade of elastomer. In most cases, the breakdown of synthetic elastomers differs from and is less extensive than that of natural rubber. All rubber compounds contain some added chemicals and most contain softeners and pigments. All of these materials must be thoroughly blended with the rubber to give an essentially homogeneous mixture.

When using an internal mixer of the Banbury type, the rubber is added first and then worked; the compounding ingredients are added later. Many elastomers, such as those for tire treads, are mixed in several steps.

The first step in the process is premixing. Mixing results in elevated temperatures as a result of the mechanized agitation. In many cases, especially when mixing is in a high-speed mixer, the temperature rise in the batch is quite rapid. To prevent scorching or premature vulcanization, part or all of the curing agents may be kept out of the batch until the final mix. The batch is dumped onto a sheeting mill as soon as it reaches a definite temperature instead of being mixed for a definite period of time. The batch comes out of the Banbury mixer in chunks of various sizes which are dropped onto a two-roll mill under the mixer. On this mill, the batch is further blended, sheeted and cooled. It is cut off the mill in sheets, cooled in water, dusted or dispersed with separators to prevent sticking and stored for further processing.

There are many ways to shape rubber products. One widely used method, for either an intermediate or end product, is extrusion through a tuber or extruder. Calendering, another method, produces a smooth, uniform sheet of unvulcanized rubber by pressing between rollers. Such sheets may be cured as sheeting, cut into threads, or plied with fabric. In a friction calender, the rubber stock is pressed and smeared into the interstices of woven fabric to make raincoats, boots, etc. Another method spreads or coats properly compounded latex or cements onto fabrics. The machines required for spreading and coating are simpler and cheaper than those used for calendering but the coated fabrics must be dried. When cords are used instead of fabrics, they are usually dipped into latex and then dried.

Lead is used at the beginning of the process, in the compounding of the rubber and plastic itself, and later in the fabrication of rubber and plastic goods (Ex. 489). Lead oxide is used to accelerate the rubber vulcanizing process (Ex. 489).

Lead is used in the compounding of chlorosulfonated and isoprene-isobutene rubbers and is the common heat and light stabilizer for vinyl plastics where they often do double duty as lubricants or colorants (Ex. 489).

Lead exposures occur as a result of handling, weighing, applying and using lead bearing anti-oxidants, colorants, color concentrates, plasticizens, fillers, stabilizers, inks, paints, and internal and external lubricants (Ex. 22, p. 224). The potential for lead exposure exists in the following circumstances: (1) Whenever dry lead-bearing powder components are introduced into the system and until they become combined with liquids or reacted constituents; (2) when heating or curing operations raise temperatures sufficiently to increase vapor release; (3) during grinding, buffing, and machine operations which create airborne dust; or (4) in spray operations for coloring, painting or other purposes which disperse lead-bearing particulates into the atmosphere (Id). Specifically, the operations which are major sources of toxic dust generation are raw material handling and storage, additive weighing and batch recipe make-up, entry of additives into mixing and blending operations until the additives are fused into resin, and all hoppers and material transfer systems.

(c) *Controls Currently Used*

Numerous control technologies are available and used by the industry to control lead exposures: Total enclosure of the system; control by computer vacuumized propolymerization; local exhaust and general ventilation; mechanical stepping switches to control operations; enclosed control rooms under positive pressure; air local entry systems in charging operations; batch mix tanks with a flexible hose exhaust permanently situated at the top inside of the point; blend tanks equipped with an exhaust hood for the manway; screw conveyors under negative pressure; and small mobile blowers (Ex. 476–286).

The following controls are in use in a congoleum industry's plant (Id.). In the pigment preparation area, one employee working in a chemical kitchen area makes up all the additive solutions for addition to solution tanks of the reactors and coagulation area. The kitchen area is well ventilated and good housekeeping is emphasized. Attempts are made to receive dry materials in flake or large particle form, rather than as a fine powder. Also, material container sizes are selected to correspond with the weight requirements of the various batches, thus minimizing the need for the operator to measure shortweights (removal of part of the contents in the bag to obtain the desired weight) of dry materials, which is usually a very dusty operation. The solution tanks are open to the room and are not provided with local exhaust (Id.).

Exposure of workers to solid catalysts during normal plant operations is eliminated by the Catalyst Vacuum Loader. The solid catalyst for the solid resin facilities is unloaded from drums into a charge system via a vacuum conveying system to eliminate contact with personnel and reduce dust. The sensors and control elements interface with a computer and are automatically controlled (Id.).

While dumping dry additives, bags are positioned directly in front of the charge booth. One at a time, they are placed over a grate, slit open, turned over and dumped into the mixer. Empty bags are purged of residual particulate matter by vigorous shaking directly in front of the exhaust slot. Depending on the contents, the bag is either dropped into a polythylene-lined container, or flattened and baled inside or outside the booth. Any spillage is swept into the booth (Id.).

Partial or short weight amounts of additives are handled specially; the bags are slit into two equal sections, one is dumped and the other is carried to the scale and weighed. If short weight operations are frequent then an exhausted scale facility is probably necessary. Major spills from leaky pallet loads are vacuumed up immediately (Id.).

Good housekeeping is also essential to proper control, as is evidenced by the low measured concentrations of airborne dust. In some plants (Ex. 489) every 2 weeks, the entire plant (including rafters) is thoroughly vacuumed. This means that settled dust will never accumulate sufficiently to become a significant secondary source of contamination.

(d) *Exposure Levels*

The Kentile Floor Co. (Ex. 476–271) is a manufacturer of vinyl coating and vinyl floor covering. Dust samples were

collected in the compounding area where compounders load a compound, charging the hopper with dry chemicals. The chemicals are then transferred to the pre-mixer and finally to the Banbury mixer. Lead levels in the process area were nondetectable.

In the compounding department materials are transported by vacuum to compounders who weigh and mix pigments etc., and ultimately charge the Banbury mixer. Levels in the charging areas ranged from 43–70 $\mu g/m^3$ (three samples were taken). The survey concluded that even though the two samples exceeded OSHA limits, this did not constitute a major area of exposure. The significantly higher lead concentrations measured on one filter would indicate that a re-evaluation of the compound-charging area is necessary to determine whether this sample's filters were inadvertently contaminated or whether employee work practices here are significantly different than those of other workers. In fact, the survey recommends that compounders be instructed to empty bags of chemicals more gently in order to prevent dust generation. Representatives of Monsanto (Ex. 476–289) and Dow (Ex. 476–287) indicated that lead was not a problem in their operations.

Armstrong Cork (Ex. 476–297) also manufactures several types of floor tiles where lead is used in the pre-mix stages. Levels of exposure were approximately 0.01 $\mu g/m^3$. In 1975 this plant was re-evaluated and lead levels were nondetectable. Ventilation controls had been implemented to control asbestos exposure; these also served to reduce lead levels.

Dover Molded Products (Ex. 476–280) is a job shop producing small plastic items by injection molding. Colorants are added to the plastics by mixing white plastic with a dry colorant in 55 gallon drums. Of 9 samples taken, lead levels were nondetectable except for one which measured 0.02 $\mu g/m^3$. Even though lead levels were low, exposure to cadmium and chromates exceeded the PEL's. The survey recommended that colorants be substituted in these operations; discussions with company and supplier representatives indicate that it is technically and economically feasible to replace these colorants with nontoxic substitutes.

Lead exposure in the rubber industry occurs during vulcanization when lead oxide is added as an accelerator and during the manufacture of braided hose. The Rubber Manufacturers Association (Ex. 476–290) estimates that the amount of lead used in tire manufacture is relatively small and exposures are well controlled and pose no problem. Lead may also be used as a balance paint (a paint with a litharge to give it weight) which is painted on the side of a tire to give them balance. Monitored exposures were less than 6 $\mu g/m^3$.

The manufacture of braided hose can also result in lead exposures when the hose is vulcanized by encasing it in molten lead, and heating the encased lead in an autoclave to yield a smooth surface (Ex. 476–290). The lead is then stripped off, melted and reused.

At the Gates Rubber Co. (Ex. 476–293) 20 environmental samples were taken. Exposures ranged from 10–190 $\mu g/m^3$. The average of the samples was 87 $\mu g/m^3$. The Gates Rubber Co. (Ex. 476–288) submitted data which indicate that all employees have 8-hour time-weighted averages below the PEL and that most are below the action level. The company does have problems with intermittent exposures in dross handling (these exceed 1,000 $\mu g/m^3$) and maintenance, although the company is planning to install a new system for dross barrel handling which should reduce exposure.

B.F. Goodrich submitted sampling data from their braided rubber hose operation and found levels in 1971 with a median exposure of 34 $\mu g/m^3$ and 1980 levels with a median exposure of 5 $\mu g/m^3$. The lower exposure figures in 1980 may have resulted from an improved air filtering system which was installed primarily to comply with EPA lead regulations.

(e) *Additional Controls*

The control technology to comply with the PEL exists and in many cases has been installed by various plants. In some plants general ventilation may be inadequate to remove very small particulates and these systems may have to be upgraded. Also, some employers still use dry sweeping and compressed air blowing to remove dust; this must be replaced with vacuuming or wet sweeping. The transportation or storage of toxic materials in open containers (i.e., half bags, plastic cups) must also be replaced by contained methods.

Work practices are critical to successful dust control and many plants may have to use added efforts to change poor practices into good ones. Opening additive containers outside of the hoods provided for dust containment, sloppy handling of additive powders, poor opening procedures for bags, and generally improper use of local exhaust systems must be stopped and replaced with good work practices.

In plants with either nonexistent or poorly designed local ventilation systems, efforts must be made to insure that airflows are proper, exhaust slots are properly sized and placed, the appropriate duct transport velocities are achieved and hoods are of the proper depths. Ventilation systems should also be checked to ensure that they are not rendered useless by excessive cross drafts either from pedestal fans or open windows. Mixers, blenders, hoppers, feed chutes and conveyor belts should also be provided with local ventilation. Not enough emphasis can be placed on the importance of maintaining dust collecting systems.

Another control which may be required in some cases is the use of less dusty forms of the lead compounds. For example, Halstab offers lead stearate under the trade name, Hal-Lub-N, (described as light-tan flakes about 1 inch in diameter to keep down dusting in compounding operations) (Ex. 476–4I). Kenrich Petrochemicals, Inc. offers litharge pre-dispersed in a rubber base under the trade name, Kenlastic. Litharge is also offered pre-dispersed in process oil in the form of a paste under the trade name, Kenmix. (Ex. 489). The use of pre-dispersions may offer other benefits. Kenrich points out that the use of pre-dispersions is standard practice for some applications where it is necessary to insure even mixing of high concentrations of litharge.

The use of a returnable container and sealed materials-handling systems to prevent escape of the product into plant atmospheres may also be necessary. Plastic bags which are soluble can be added unopened to the mixer, such as a product "Elastifilm," made by Goodyear (Ex. 489).

In some cases complete elimination of existing equipment may be necessary. Both ribbon blenders and Banbury's are internal mixers, and thus may be readily equipped with ventilation. The use of open two-roll mills for the initial mixing of rubber batches has largely been eliminated in the industry. It may not be feasible to install ventilation which would reduce airborne lead to acceptable levels on such equipment. The URW believes that the complete elimination of open mill mixing of hazardous materials for production batches is both feasible and necessary. (Ex. 476–291).

Once the rubber or plastic batch is compounded and mixed, exposure to lead from the batch itself is not usually a problem. Grinding or machining operations may generate rubber or plastic dust, but these operations are not unique to the rubber and plastics industry. Workers are also exposed to lead in the mixing and application of paint and ink, casting of lead tools and fittings, machining, of bushings, battery

repair, soldering, etc. Again, these processes are not unique to the industry.

Metallic lead is used in the curing of rubber hose. While the process itself is not found in any other industry, the principles of control are the same as those for any process in which slab metallic lead is extruded, scrapped and melted to be reclaimed. Sampling data from URW Local Union No. 241 (Ex. 475–14) indicates that engineering control are feasible.

There has been widespread substitution of other materials for lead in the rubber industry. Further substitution of less toxic materials may be feasible in both rubber and plastics (Ex. 476–285) as well as in pigments for resilient flooring. Lead exposure in compounding can be controlled through the use of non-dusting forms of lead or through the use of engineering controls.

The URW (Id.) submitted exposure data for the Inland Division of GMC, using wipe samples for lead. Dust was settled on handrails and eye wash fountains, as a result of dry sweeping; some high dust levels were detected. This clearly demonstrates that the use of housekeeping will prevent secondary re-entry of dust into the workplace.

(f) *Conclusion: Technology Feasibility*

It appears that the technology exists in the compounding of plastics and rubber to achieve 50 $\mu g/m^3$. The exposure data which has been compiled indicates that levels are generally well below 50 $\mu g/m^3$ in some operations and exposures only intermittently exceed the PEL in others. The plastics industry is an extremely automated industry and controls used to increase productivity and product quality have also resulted in reductions in lead levels. Pre-measured colorants, stabilizers, etc., only insure that entire batches of plastics are not spoiled by sloppy, weighing. The URW submissions (Ex. 475–14) clearly demonstrate that compliance has been achieved in many operations by the use of controls such as automated and mechanized material handling and mixing operations, enclosed processes, and worker operating booths. The advent of pre-mixed and containerized additives has further eliminated the need for workers to handle toxic additives.

(g) *Costs of Compliance*

(i) *Plastics.* Of the four manufacturers of lead stabilizers, only American Cyanamid submitted data to OSHA. They indicated that a study performed for them by a consulting firm estimated a cost of $746,600 to install engineering controls to lower levels to 200 $\mu g/m^3$ and to modernize the plant. The company further indicated that the cost of implementing a 1979 settlement agreement between them and OSHA was estimated to be $75,000 for feasible engineering controls (Ex. 475–30). However, assuming that each of the four companies producing lead stabilizers will each need to spend $750,000, the total capital costs for this industry would be $3,000,000. American Cyanamid stated that levels would not be reduced below 200 $\mu g/m^3$ and contended that "space age" technology would be necessary to achieve a 50 $\mu g/m^3$ standard (Ex. 475–30). OCAW argued, however, that using design concepts based on existing technology, American Cyanamid has a good chance of meeting the current lead standard (Ex. 475–34).

No manufacturers of plastic products submitted any cost or other data to OSHA on the issue of feasibility. However, Monsanto Corporation indicated that it does not have any lead exposure problems (Ex. 476–289). Similarly, Dow Chemical, which infrequently uses lead in its plastics operations, does not have an exposure problem (Ex. 476–281). Congoleum Corporation, which produces resilient vinyl flooring, uses lead predominantly in a wet form, thereby virtually eliminating an exposure hazard (Ex. 476–286) Armstrong, which is also a producer of resilient vinyl flooring, has substituted other materials for lead in its pigment and stenciling operations (Ex. 476–285).

(ii) *Rubber.* In 1976, B. F. Goodrich contended that engineering controls would cost a total of $255,000 to control 600 exposures to lead (Ex. 474–3(133)). This is an average cost of $425 per exposure. No supporting data were provided to explain what controls the estimate reflects or how the estimate was calculated.

In connection with the October 1980 hearings, B. F. Goodrich provided data indicating that its lead encased hose plant is substantially in compliance with the lead standard, most likely as a result of installing an improved air filtering system to reduce emissions into the ambient air (Ex. 476–284). In a similar operation, Gates Rubber reported that while all employees were below the 50 $\mu g/m^3$ standard, brief high excursions occur in three operations. It was added that control of these operations by means of engineering controls would be prohibitively expensive, however, no cost estimate was offered (Ex. 476–288). OSHA assumes worker rotation will be used to achieve compliance, thus creating no significant costs.

No compliance costs were submitted for other users of lead compounds in the rubber industry. This is most likely because the potentially affected companies have already come into compliance by means of process changes or substitution. For example, B. F. Goodrich no longer uses lead as an accelerator in the manufacture of tires (Ex. 476–284), and in compounding, exposure can be controlled by substitution of less toxic substances or by use of nondusting forms of lead products which are supplied by a wide range of producers (Ex. 489). Significant commercial benefits in the form of increased product quality are also promoted as advantages of these control measures (Ex. 489).

(h) *Industry Profile*

(i) *Plastics.* From 1972 to 1977, total value of shipments in the plastic materials industry (SIC 2821) increased 141 percent to $10,818,000,000 and total value of shipments in the manufacture of miscellaneous plastic products (SIC 3079) rose 121 percent to $23,688,000,000. There were an estimated 397 establishments employing 36,700 production workers in SIC 2821, and 10,212 establishments employing 358,000 production workers in SIC 3079. New capital expenditures have grown from $654,000,000 to $1,154,200,000 in SIC 3079 and from $253,200,000 to $895,200,000 in SIC 2821 between 1972 and 1977. (Ex. 476–20). The plastics industry is expected to outperform the economy and grow at a rate of 4 percent to 5 percent in 1980 (Ex. 476–26).

However, only four companies—American Cyanamid, Associated Lead, Hammond Lead, and to a limited extent, Eagle-Picher—produce lead-based stabilizers (Ex. 475–30). These stabilizers are commonly used in the production of polyvinyl chloride (PVC) plastic insulation for application in commercial and residential electrical wiring. The final product contains 4 percent to 6 percent lead stabilizer which prevents degradation. There is no substitute available, that can impart the same heat stability and electrical properties (Ex. 475–30). Therefore, because no substitute products are available, any increases in costs due to the lead standard can be passed on to the consumers.

Approximately 21,000,000 pounds of lead stabilizers were produced in 1976 and the projected growth rate for the industry is 3 percent per year. The industry is characterized as mature with a flat sales growth curve. Over 100 downstream consumers of lead stabilizers produce finished products containing stabilizers. The wire and cable industry alone annually uses

about $200 million of lead stabilized PVC for insulation (Ex. 475–30).

Lead compounds are also added to plastics as colorants. The market for colorants varies with cyclic changes in color preferences or tastes and is generally characterized by a steady mass market for a few simple "wide-tolerance" colors (Ex. 476–295). The incorporation of colorants should be done in a manner that speeds production, upgrades product quality, and reduces cost. Dry coloring, which is the most hazardous operation for workers, offers the marketing advantage of almost unlimited color range and flexibility in production color changes. However, it generates dust which may contaminate other products, does not disperse as completely as other forms of colorants, and involves careful weighing, timing of batch mixing, and drying of the resin (Ex. 476–295). Other methods of adding colorants, such as using wet or paste colorants or pelletized products, avoid these disadvantages while virtually eliminating the potential exposure of workers to lead. Thus, OSHA concludes that methods for complying are readily available and that these measures will probably yield commercial benefits for producers in addition to bringing them into compliance with the lead standard.

(ii) *Rubber.* There are an estimated 56 companies operating 63 establishments that employ 7,100 production workers in the manufacture of synthetic rubber (SIC 2822). In addition, there are 127 companies employing 88,300 production workers in 200 tire manufacturing plants (SIC 3011) and 102 companies employing 23,400 production workers in 146 establishments manufacturing rubber and plastic hose and belting (SIC 3041).

One-third of the establishments in SIC 2822 (synthetic rubber manufacture) employ fewer than ten employees per plant, nine employ more than 500 employees per plant and one firm employs between 1,000 and 2,500 employees. Data on the latter are withheld to avoid disclosing operations of the company, however, the ten largest companies by employment (or one-sixth of the firms) produce $1,355,100,000 out of a total value of shipments of $1,863,300,000 (or 72.7 percent) and invested $36,200,000 in new capital expenditures in 1977. Similarly, 65 of 200 establishments in SIC 3011 (tire manufacturing) employ fewer than 10 employees and 46 establishments employ more than 1,000 employees. One-quarter of all firms produced $7,500,700,000 in value of shipments out of a total of $8,971,000,000 (or 83.6 percent). The distribution of firms by employment in SIC 3041 is much more even, however, the top five firms produced $675,100,000 in value of shipments out of total industry shipments of $1,765,700,000 (or 38.2 percent). Thus, some degree of concentration is apparent in the three industries (Ex. 476–20).

Exposures above the standard (although not necessarily as TWA's) occur only in the production of lead-encased hose. There are only 12 to 15 domestic companies out of more than 100 involved in such operations (Ex. 476–290). No evidence of a suitable substitute for lead-encased hose was apparent. Therefore, OSHA concludes that the demand for this product is inelastic and that the increased cost of production as a result of potential compliance costs, if any, can be passed on to consumers.

(i) *Conclusion: Economic Feasibility.*—(i) *Plastics.* In their submission, American Cyanamid did not provide any financial or profit data for their firm's operations upon which OSHA could evaluate the economic feasibility of these costs (Ex. 475–30). OSHA estimates that if each of the four companies producing lead stabilizers will each need to spend $750,000, the total capital costs for this industry would be $3,000,000. This represents an annualized cost of about $540,000 or about 0.3 percent of the $200 million in annual sales of lead stabilized PVC for insulation alone. OSHA therefore concludes that the standard is clearly economically feasible for this industry.

No other manufacturers of products submitted data concerning the issue of economic feasibility. However, Monsanto Corporation, Dow Chemical, Congoleum Corporation, and Armstrong have no exposure problems or have already eliminated such problems. Moreover, the control of lead exposures, in particular in its use as a colorant through the use of wet or paste colorants and pelletized products, will probably yield commercial and financial benefits to producers which will offset, at least partially, the cost of complying with the lead standard. Since the total value of shipments in the plastic materials and miscellaneous plastic products industries is over $34 billion, OSHA has concluded that the minimal increases in costs that may be necessary to comply with the lead standard are clearly economically feasible.

(ii) *Rubber.* Exposures above the standard occur in only 12 to 15 domestic companies. If each of these companies needs to spend $255,000 to install engineering controls, as B.F. Goodrich estimated, this would total, at most, $3,825,000 in capital costs or about $687,000 in annualized costs. This amounts to $45,800 for each of the 12 to 15 companies involved. The total shipments for the manufacture of rubber and plastics hose and belting is $1,765,700,000. Dividing by the number of companies in this industry (102) yields an average of $17,310,000 in shipments. The annualized cost of $45,800 represents less than 0.3 percent of the average shipments for these companies. OSHA therefore concludes that the standard is economically feasible.

32. Plumbing

(a) *Uses*

Lead is utilized in about 15 percent of the plumbing business. Lead is still used in extra heavy pipes, some drain wash and vent systems, and in roof flashing to waterproof the area where a pipe penetrates the roof. It is also used in 4-inch pipes for closet benz and ¾-inch pipe for water surfaces. Previously, lead has been used as a noncorrosive lining for shower floors, but this use is being displaced by plastics, copper and coated steel. (Ex. 22, p. 284).

The most common use of lead is for lead and oakum (jute-like fiber) joints used to repair oil lead-oakum joints. The use of lead-oakum is a time-consuming and old-fashioned method of plumbing repair, and is most prevalent in the Eastern Seaboard area. The old lead-oakum joints are being replaced by metallic clamp joints with compression gaskets. The newer materials are often easier to work with and much lighter than lead and, therefore, more desirable. (Id). Lead is also used in the soldering of copper pipe joints.

(b) *Process Description and Exposure Areas*

When used in joints, lead is melted in a small pot and typically dipped out with a 24-inch ladle. The plumber's work areas are 18–25 inches from their noses. They wear gloves, but not respirators, and the lead is barely molten, with few fumes present (Ex. 22, p. 384).

(c) *Controls Currently Used*

Plumbers may work in well ventilated open areas or in confined areas. The controls most often used in confined areas would be local exhaust ventilation or dilution, although the data submitted showed no use of ventilation. (Ex. 22, p. 384).

(d) *Exposure Levels*

The American Society of Plumbing Engineers, the Plumbing, Heating and Casting Information Bureau, and the Plumbing Manufacturers Institute

indicated that lead in plumbing is being phased out and they know of no exposure data. (Ex. 476–346, 349 and 350). The Plumbing and Mechanical Officials indicate that lead is still in the Codes of Chicago and New York (lead-oakum). (Ex. 476–353). The only exposure data available came from a report from the Heating and Plumbing Contractors of California which indicated that levels were well below the OSHA Standard, ranging from 4–10 $\mu g/m^3$. A NIOSH survey on the Denver Dry Good Company showed similar results with lead levels from 0.01—0.03 $\mu g/m^3$ (Ex. 476–351). This is a once-a-year operation with no ventilation. The levels are sufficiently low that they will rarely exceed the 30 $\mu g/m^3$ action level.

(e) *Additional Controls*

None are necessary, since compliance with the standard is already achieved.

(f) *Conclusion: Technological Feasibility*

Exposure data indicates that lead levels are below the 50 $\mu g/m^3$ standard and that this industry is in compliance with the lead standard. However, it should be noted that plumbing work which is part of construction operations is beyond the scope of the standard.

(g) *Economic Feasibility*

No cost of compliance and no economic impact are anticipated, because levels are below the 50 $\mu g/m^3$ level.

33. Pottery and Ceramics

(a) *Uses*

Pottery and ceramics manufacture includes production of ordinary building bricks and tile, sewer pipe and electrical conduit, drain tile, refractory bricks of all kinds, electrical and chemical porcelain and stoneware, whiteware such as dinnerware, china, floor and wall tile, porcelain enamels and abrasives. (Ex. 476–359).

(b) *Process Description and Exposure Areas*

The process begins with the proper amounts of clays being weighed and blended to form a slip. The slip flows to filter presses where it is pressed into cakes (aging may be done). The slip is then converted through more mixing into a casting slip or sent for jiggering or jolling. (Ex. 476–5 G).

Casting of the slip is usually done in plaster of paris molds. Castings are dried in hot air dryers prior to firing. Glaze coastings may also be applied to dry ware prior to firing.

In jiggering or jolling the clay is fed from the storage bins to a pug mill and mixed with water to form a mud. The mud is then forced by augers through a die to form a wad. The wad is fed to the jigger which consists of a rotating unit carrying a mold which will form one face and a tool which will form the other. The ware is then dried, and glazed (if necessary) prior to firing.

Exposure to lead results from the use of frits applied as a glaze (Ex. 22, p. 211; Ex. 476–357, 373). These are nonsoluble lead silicates, lead borates or bi-silicates. (Ex. 22, p. 211). Some companies also make the raw material which comprise the glazing compounds (Ex. 476–369). A discussion of the control problems in the manufacture of glazing materials is discussed in pigment manufacture. Fine china manufacturers may also use white lead (Ex. 476–363).

The preparation of frits for glazing requires that lead-based materials be mixed with other materials and ground in a ball mill. (Ex. 476–373, 363). Water is usually added (Ex. 22, p. 211, Ex. 476–373) and the glaze applied to the piece by spraying or dipping, (Exs. 22, p. 211; 476–371); 476–372; 476–373), either manually or by machine. The piece is then placed on a "setter" which is introduced into a kiln for firing (Ex. 22, p. 211).

The other processes and job titles in which lead exposures occur include the manufacture of the glaze (the slip house leader, journeyman, forklift operator); the application of the glaze to the ware (the dipper, duster, glaze cleaner, glaze sprayer, inspector, spray machine loader, unloader, operator, setter-carrier, reclaim operator, and service operator); and, the handling and firing of the glazed piece (kiln placer, setter, reworker and kiln utility). Other exposed employees include the production supervisors and technicians. (Ex. 476–373).

(c) *Controls Currently Used*

The materials handling controls used to handle glazes or glazing compound components are the same as those used by many other industrial segments. Materials may be mechanically dumped or pneumatically conveyed. Materials may be stored in bins and gravity fed or containers may be dumped in ventilated areas. Premeasured, containerized glaze components may be added to the mixers in disposable containers to reduce the potential for dust exposure. System enclosure and local exhaust ventilation at point of emission are controls which have been used successfully. Also, mixing the glazing compounds with water at the ball mill reduces the dust exposure but does not eliminate the potential for lead exposure since the mist formed may contain lead.

The glaze is usually applied to the ware either by spraying or dipping the ware. Spraying or dipping may be done manually but spray booths and mechanized dips are usually used. Local exhaust ventilation is used in both manual and mechanized operations to reduce exposure levels. Spray booths may be automated with workers controlling operations from outside the booth or may require the worker to hand spray the ware from within.

Glazes which are applied as powders to heated surfaces require extensive automation and ventilation controls to achieve exposure limits of 50 $\mu g/m^3$ (Ex. 476–369).

Once the ware has been glazed, it must be dried. Drying is done either by allowing the ware to sit in well-ventilated areas, or gas-fired or infrared dryers may be used. Local exhaust ventilation is usually employed to capture emissions from the drying ware.

(d) *Exposure Levels*

Data submitted by Employers Insurance of Wausau indicated that lead levels in the tile and ceramics industry ranged from 10–140 $\mu g/m^3$. The highest measured levels, 140 $\mu g/m^3$, were found in the batch making process. Workers in glaze making areas were exposed to levels of 210 $\mu g/m^3$ and the machine operator had an exposure of 130 $\mu g/m^3$. Weighing and mixing workers were exposed to levels of 70 $\mu g/m^3$ with hand dipping glaze workers being exposed to 60 $\mu g/m^3$ of lead. A description of the engineering controls used, if any, was not provided, also it is not clear whether these were time-weighted averages, area exposures, or peak exposures.

Exposure data collected at the Allan-Bradley Co. indicated that lead levels in their mixing and pressing departments were 0.4–0.3 $\mu g/m^3$ (Ex. 476–367). This company employed 374 persons; 246 production workers of whom 36 were monitored for lead exposure.

A survey done by NIOSH on the Lance Corporation found lead levels ranging between 10–70 $\mu g/m^3$ in the dipping operation. (Ex. 476–370). Data was not available for mixing operations. Lead levels resulting from the firing of glazed ware were nondetectable in the kiln area.

During an OSHA inspection, levels of 19–31 $\mu g/m^3$ were reported for a company using a Binks spray booth in the glaze application department (Ex. 476–377).

Other companies submitted data indicating percentages of employees above or below 50 $\mu g/m^3$, however, the exact levels above 50 $\mu g/m^3$ were not provided. For example, Piezoelectric (Ex. 475–40) which mixes and applies

glazes containing litharge and red lead estimates that 80 percent of their employees are exposed to 50 $\mu g/m^3$ or less and that 20 percent are exposed in excess of 50 $\mu g/m^3$. The company also indicated that exposure above 50 $\mu g/m^3$ occurred from "time to time" and did not indicate that levels were generally above 50 $\mu g/m^3$.

Lenox China estimated that out of 130 lead exposed workers, 50 percent are exposed to less than 50 $\mu g/m^3$. The other 50 percent are estimated to be exposed in excess of 50 $\mu g/m^3$ (Ex. 476–373).

(e) *Population Exposed*

Short estimates that the total population of potentially exposed employees in this industry ranges from 1,000 to 10,000 people. (Ex. 22, p. 211). Data presented from companies indicate that levels are closer to 1,000. (Ex. 475–25; 475–29; 476–371; 476–372; 476–373). This lower figure is consistent with the statement from the Fine Earthenware Food Utensils and Vitrcore China Food Utensils who have estimated that potentially exposed employees range from 1.5 percent to 8 percent of production workers in these industries (Ex. 22).

(f) *Additional Controls*

Some companies appear to be in compliance, some are nearly in compliance and some will be required to make changes in current controls to achieve compliance with the 50 $\mu g/m^3$ standard. The controls are available and many companies have used engineering controls to effectively reduce lead exposure levels. Others may have to apply these successfully used controls to achieve compliance with the 50 $\mu g/m^3$ standard. For example, problems in batch processing areas have been solved by installing new conveying systems including tanks, pneumatic conveying systems and local exhaust ventilation at emission sources (Ex. 476–369).

Some companies that manufacture the raw chemical ingredients used to prepare the glazes have installed reclamation systems in which the plant is blown down every two weeks and materials are collected and remelted to be used again in the process. These reclamation systems may also be effectively used by companies mixing and applying the glazes (Ex. 476–356).

In one plant, through various control strategies, several areas are kept below 50 $\mu g/m^3$. These areas were not identified but the controls which had been installed included total enclosure of certain equipment, installation of wet scrubbers with special ductwork, employee rotation and upgrading the housekeeping (Ex. 476–373).

In areas of exposure above 50 $\mu g/m^3$ the employer stated that additional scrubbers and dust collection systems can be installed, with increases in the air velocity of existing systems (Ex. 476–373).

Billings testified that exposure to lead in the spraying operation could be reduced by dipping the ware rather than spraying. However, Merwin of the USPA said that dipping is much slower and that generally, spraying is done automatically in an enclosed booth (Ex. 476–363; 476–366), although some companies must dip odd shaped ware. Airless spraying may also be used to reduce lead exposures. Although, as Mr. Merwin testified, to his knowledge there is no airless spraying done in this country. Currently, however, there is a company in the United States (U.S.P.A.) selling airless units (Ex. 476–363).

If methods such as dipping or airless spraying cannot be done, more effective spray booths such as the Binks spray booth may be used. This booth is 37 inches in height, 42 inches in width, and 46 inches in depth. It spins the ware and has a deflection screen. Face velocities ranged from 200 to 350 fpm and behind the booth there is an exhaust chamber which collects the excess glaze. This booth is very efficient and does keep levels below 50 $\mu g/m^3$ (Ex. 476–377).

Where employers are reluctant to replace existing spray booths with more efficient models, upgrading of existing ventilation controls may be necessary.

In finishing operations requiring buffing and grinding of ware, local exhaust ventilation may need upgrading. For example, in a NIOSH survey of one finishing operation, ventilation hoods had face velocities of 0–10 fpm for soldering, 200–600 fpm for the buffing, 0–960 fpm for polishing operations, 50–200 fpm for spray booths, and 60–150 fpm for the toolroom. NIOSH recommended upgrade and repair of existing systems and noted that maintenance appeared to be lacking in most cases (Ex. 476–370).

In may cases, effective maintenance, improved housekeeping, and worker rotation may be necessary to achieve compliance with the 50 $\mu g/m^3$ lead standard.

Lenox indicated that they have been unable to reduce air levels to 50 $\mu g/m^3$ through engineering controls. At present they have plans to add controls in the glaze department including modifying the hand dip dryer and installing down draft tables, purchasing a high lift truck for overhead cleaning, purchasing a high efficiency vacuum and filter system, installing a scrubber, installing a spindle wash system, modifying spray booths and tunnels, modifying dust collectors, installing infrared dryer systems, applying sealant to the floors and walls and purchasing a truck and board cleaner. Lenox is also installing a dust collection system at the ball mill loading area in the slip department and at the die making area in the mall department. These controls will be completed in 1981. Work practices currently being implemented include both daily clean up in the glaze department and quarterly cleaning (which includes all elevated equipment, piping, electrical conduits, light fixtures). This employer is continuing to share information with other manufacturers to improve work practices and expects the improvements will take another 2 to 5 years to complete. Thus they summarize their submittal by recommending a 5-year implementation schedule (Ex. 475–25).

(g) *Conclusion: Technological Feasibility*

As previously stated, some companies and some processes are in compliance with the 50 $\mu g/m^3$ standard. Others like Lenox will be required to make improvements to existing controls to achieve 50 $\mu g/m^3$. The company anticipates that these controls will achieve the PEL but notes that they are not certain that this will be the case. The company also stated that 5 years will be necessary to implement all controls—work practices and engineering (Ex. 475–25).

OSHA finds several puzzling problems with these industry compliance assessments. First, as Dr. Billings testified, careful planning and design of ventilation equipment require that companies plan controls with the premise that a margin of error is designed into the equipment. More precisely, if you are to comply with the 50 $\mu g/m^3$ PEL, controls should be designed to achieve a level equal to 10 percent of the desired PEL (5 $\mu g/m^3$) or at least some margin of error should be used (Tr. 106). Also, since OSHA was not furnished with a description of specific controls for this particular company, it is difficult to determine if the need for extensive use of ventilation equipment is a result of the inadequacy of existing controls or the complete lack of any controls. Also, the Agency wonders if some of these controls, especially those having to do with scrubbers and capture equipment, require extensive upgrade as a result of the high levels of silica found in the plant and only secondarily to reduce lead levels. As a result of these questions, the Agency is unable to determine with any certainty the extent

to which these controls will actually be necessary to achieve compliance with the lead standard and the extent to which other airborne contaminants will also be reduced. Also, the Agency is unable to determine, what, if any, controls were existing before this extensive remake was begun.

The company also indicated that 2–5 years would be necessary to implement work practices and 5 years would be necessary to implement engineering controls. Clearly, however, it does not take two years to train employees in the proper handling of toxic materials and to maintain surfaces free from dust accumulations. The most effective work practice programs have been developed by employers simply observing employee work habits. Not every employee has to be followed through his daily routine; excessively high blood lead levels often signal the employer that employee practices may be the source of the problem (See Cable Coating discussion). Regarding the issue of whether a 5-year implementation period is necessary to achieve compliance with 50 $\mu g/m^3$, it appears that this company may need this amount of time. The time indicated by this company only considers the implementation of engineering controls to achieve compliance. OSHA, however, has given all industries the option of using a variety of control strategies as opposed to specifying only the use of engineering controls. By employing this strategy, OSHA is allowing employers the maximum amount of flexibility in complying with the standard and in fashioning solutions consistent with their particular workplace situations. Therefore, OSHA finds that compliance with a 50 $\mu g/m^3$ PEL is feasible within one year for the pottery industry.

While some employers may experience difficulty achieving compliance in some operations, it is not because the technology does not exist. Also, this industry appears to rely too heavily upon engineering controls to achieve compliance and has ignored the less costly approaches of work practices, housekeeping and worker rotation.

(h) *Cost of Compliance*

Several producers in different SIC's within the pottery industry have provided cost data to OSHA for this standard. In SIC 3261, Vitreous Plumbing Fixtures, Koehler estimates that it has already spent $2.5 million to eliminate its exposure problems. Controls included an entire new structure, tanks, pneumatic conveying system, and ventilation (Ex. 476–369). The specific controls are not described in detail, nor was a derivation of the cost estimate provided. However, the costs attributable to the lead standard are properly represented by the difference between the costs for a new plant and equipment including control equipment, and the costs that the firm would have undertaken in the absence of the standard. In this case, Koehler may have changed systems primarily for commercial reasons, such as to increase productivity or capacity, rather than as a response to a regulatory action. Koehler indicated that the changes made were beneficial to production but did not indicate why this was true (Ex. 476–369).

In SIC 3262, Vitreous China Food Utensils, two producers provided cost data to OSHA. Lenox has already invested in some control technology. By 1981, Lenox will have spent $230,000 on engineering controls and $200,000 on work practices (Ex. 475–25). Lenox also indicates that it is converting to "low solubility fritted glazes", and requests that a 5-year implementation period be adopted for the schedule of compliance in pottery manufacture (Id.).

On behalf of the producers of products in SIC 3263, Fine Earthenware Food Utensils, the American Ceramic Tableware Council submitted comments indicating that the standard will require extensive and costly engineering controls and new work practices (Ex. 475–29). Neither the specific controls required nor the actual cost estimates were provided. However, the submission states that the Department of Commerce, which is currently devising strategies to increase the competitiveness of domestic earthenware producers, may recommend expenditures for new, technologically superior plant and equipment (Ex. 475–29). Expenditures of this kind, incorporating modern control technology, would be preferable to more costly and often less efficient retrofit technology. Such outlays may provide long-run savings with respect to production compliance costs by removing workers from exposure sources. A quantification of these savings, however, must be postponed until data on compliance costs become available.

Finally in SIC 3264, Porcelain Electrical Supplies, Vernitron Corporation submitted cost information for its Piezoelectric Division. Vernitron indicates that numerous engineering and work practice controls have already been implemented and asserted that the cost of achieving compliance with the 50 $\mu g/m^3$ standard, would be between $300,000 and $500,000 (Ex. 475–40).

DBA submitted the only industry-wide estimates of the costs of compliance in the pottery industry. They considered both the installation of local exhaust ventilation at stations where workers may mix and spray frit and the additional costs for maintenance and housekeeping. DBA's estimates of the total capital costs ranged from $1,000,000 to $10,400,000 and annual costs from $770,000 to $7,700,000 on the basis of a population at risk of 1,000 to 10,000 exposed workers. Their estimates of annualized capital costs ranged between $177,000 and $1,869,000. OSHA believes that these estimates are reasonable and thus the industry's total annual costs are not expected to exceed $9,569,000 and may be as low as $947,000.

(i) *Industry Profile.* There are 54 companies operating 70 establishments in SIC 3261, Vitreous Plumbing Fixtures. The firms employ 7,800 production workers whose average hourly wages were $6.23 in 1977. The four largest companies, measured by number of employees, produce about 25 percent of the total value of shipments, while the top 30 firms produce $390,900,000 out of $411,400,000 (or 95 percent) of shipments (Ex. 476–20).

Both Koehler and Eljer Plumbingware said that lead is no longer used in coating sanitary pottery, but potential exposures to lead may occur through application of glazes on product lines (such as sinks and bathtubs) in which porcelain enamels are sprayed onto cast iron base metals (Exs. 476–356, 369). While stainless steel sinks and plastic bathtubs and other plumbingware products made from relatively inexpensive materials have captured an increasingly large share of the market, Koehler, Eljer, American Standard, and a few other firms still make cast iron products (Ex. 476–350). Since these firms appear to be substantially in compliance and have not submitted contrary evidence to OSHA, compliance costs, if any, are assumed to be minimal and will not result in significant economic impact. If some consumers maintain preferences for the cast iron base plumbing fixtures, then the relatively inelastic demand for this "specialty product" would allow producers to pass on the costs of compliance with the standard to the customers.

Porcelain enamel is also applied to many durable goods, such as stoves, refrigerators, washers, and dryers (Ex. 476–360). There are no substitutes for porcelain enamels in these uses. However, the lead colorant is a very small proportion of the final price of the product. Thus, costs of compliance are

not expected to significantly increase the price of major appliances, and this minimal cost would likely be passed on to consumers.

Since 1963, the number of firms in SIC 3262, Vitreous China Food Utensils, has risen slightly from 26 to 27, with a maximum of 35 firms in the market in 1967. Employment has been relatively steady with about 6,000 production workers in the industry in 1977. Capital expenditures have risen steadily from $700,000 in 1963 to $5,400,000 in 1977. Average wages have increased from $2.22 per hour in 1963 to $4.82 per hour in 1977. Three establishments employ more than 50 percent of the production workers and produce over 50 percent of the total value of shipments in the industry, which were $170,700,000 in 1977 (Ex. 476–20).

There are only three producers in the American fine china industry today. These companies are Lenox, Gorham Division of Textron, and Pickard (Ex. 476–362). Manufacturers of fine china are the only users of white lead in the pottery industry (Ex. 476–363). Lenox alleges that competitive pressure from foreign producers has caused eight domestic firms to close down (Ex. 475–25). It contends that foreign imports now dominate 75 percent of the fine china market (Id.).

In SIC 3263, Fine Earthenware Food Utensils, the number of establishments has been relatively constant over the years (20 firms in 1963; 22 firms in 1977). However, the number of production workers has fallen from 6,600 in 1963 to 3,500 in 1977. Capital expenditures have increased from $800,000 in 1963 to $1,700,000 in 1977, while average hourly wages have risen in that period from $2.14 to $4.23. Four establishments produce $52,400,000 (or 64 percent) of the total value of shipments of $81,300,000 and employ 2,000 of 3,500 workers (Ex. 476–20).

The American Ceramic Tableware Council has submitted comments (Ex. 475–29) on behalf of several of the producers of earthenware (Anchor Hocking, Hall China, Homer Laughlin, Pfaltzgraff, Royal China, Sabin, and Scio Pottery), who use lead in their glazes (Ex. 476–362). Lenox also produces dinnerware in this market (Ex. 475–25). However, there are many small firms with limited access to capital and who use labor intensive processes in the industry (Ex. 475–27).

SIC 3269, Pottery Products, Not Elsewhere Classified, consists of 727 establishments employing 9,200 production workers. The industry has grown since 1967 when 434 establishments employed 6,700 production workers. Average hourly wages in the industry have risen from $2.05 in 1967 to $3.88 in 1977. More than half of the establishments are small (four employees or less) and 677 (or 93 percent) out of the 727 establishments employ fewer than 50 employees. Most of these small plants are centered in and around Ohio (Ex. 475–29). The top four companies, measured by number of employees, employ at most 500 workers each and produce $41,700,000 (or 18 percent) of a total value of shipments of $229,900,000 (Ex. 476–20).

Lenox and the American Ceramic Council report that the domestic earthenware industry is struggling to maintain a 20 percent share of the domestic market in the face of severe foreign competition (Ex. 475–25 and Ex. 475–29). The industry submissions cite 75 percent and 80 percent penetration of the market by foreign producers, chiefly from Japan. However, the Department of Commerce shows imports of china dropping by 7 percent and earthenware imports by 9 percent in 1979. Total market share in 1979 by foreign producers is estimated at 44 percent and 59 percent for china and earthenware, respectively (Ex. 476–26).

Industry cites lower labor costs (Ex. 475–25), more relaxed regulatory constraints (Ex. 475–29), and unfavorable tariffs (Ex. 475–25) as major reasons for domestic competitive disadvantages. The claims are made, for instance, that British regulations classify low solubility fritted glazes as nontoxic, and that wage differentials between the United States and Japan create a situation in which the Japanese worker is paid 55 percent of the average American worker's wages for comparable work (Ex. 475–25). However, it is not clear that the wage comparison reflects real wages. Furthermore, the conclusion assumes that the Japanese and other foreign producers are not enjoying cost advantages based on a more advanced technology. Finally, since the Japanese pursue stringent environmental regulations, they probably have no competitive advantage in this respect.

Lenox China, which is a wholly-owned subsidiary of Lenox, Inc., and which was the only company responding individually, did not submit financial data to OSHA on the grounds that the information is confidential (Ex. 475–25). However, OSHA is not convinced that Lenox will be forced to absorb compliance costs. Luxury items, such as fine china, are often purchased on the basis of brand reputation. Thus, increases in price may not significantly affect demand.

There are 77 companies operating 86 establishments in SIC 3264, Porcelain Electrical Supplies. The industry employs 9,100 workers whose average hourly wages were $5.55 in 1977. The six largest firms, measured by employment, produced $172,700,000 (or 47 percent) of a total value of shipments of $367,500,000 and invested $11,600,000 (or 56 percent) of the industry total of $20,900,000 in new capital expenditures (Ex. 476–20).

Vernitron Corporation, which manufactures piezoelectric ceramic parts, is aware of eleven other plants distributed nationwide that compete with it in the electrical porcelain market. Total sales in this market are estimated at $20 million with no one company holding a dominant position (Ex. 475–40). The company comments that imports are increasing steadily although it has not provided documentation or estimates of the market share controlled by imports. This company shows a negative rate of return on equity from 1975 through 1977 (an average of minus 11 percent) and a 1979 profit of 10 percent. In view of its poor performance, the company may close its facility rather than invest in additional control measures (Ex. 475–40). However, no other companies in the industry came forward with similar data. Thus, OSHA has no reason to conclude that Vernitron's financial situation is typical of the industry.

(j) *Conclusion: Economic Feasibility*

The five markets within the pottery industry that are potentially affected by the lead standard produced shipments valued at $1,260,800,000 in 1977 (Ex. 476–20). OSHA estimates, based on the calculations of DBA, that compliance costs in these industries may be as low as $947,000 annually, but are not expected to exceed $9,569,000 annually. Hence, the costs of compliance range between 0.075 and 0.76 percent of total value of shipments.

The minmial size of the estimated costs compared to shipments leads OSHA to conclude that compliance with the lead standard will not cause economic disruption in the pottery industry. The industry appears to be under increasing pressure from foreign imports, a trend that is not likely to end in the near future. This pressure may reduce future profits for American firms, but the small, additional profit reduction that these firms may incur as a result of the lead standard should not severely affect the profitability of most firms in this industry. Although it is possible that some small firms may have some difficulty competing, OSHA does not expect, and the evidence does not show, that the viability of the industry as a whole will be threatened by compliance

with this standard. OSHA therefore concludes that the standard is economically feasible for the industry. Moreover, this OSHA action may stimulate modernization in this industry, which should result in both increased protection for workers from lead exposures and an improved competitive position vis-a-vis foreign producers.

35. Shipbuilding

(a) *Uses*

The shipbuilding industry includes repair as well as construction of ships. The sizes of the shipyards and the types of vessels being repaired or built vary widely. Also, shipbuilding may involve many construction activities found in other industries. Some shipyards have their own foundries, furniture shops, restaurants, alloying departments, blacksmith shops, carpenter shops, machine shops, etc. However, the major activities of the shipbuilding industry are: (1) The building of steel frames and hulls, and (2) the outfitting of the ship with its propulsion and support equipment (Ex. 26). Both activities are very closely related and are often present in the same shipyard. This industry also includes the conversion or alteration of ships.

Although the number of establishments included in SIC code 3731 exceeds 450, the actual number of private American shipyards totals approximately 138. Ten additional shipyards are operated by the U.S. Navy. It is estimated that only three shipyards are capable of constructing nuclear powered vessels.

(b) *Process Description and Exposure Areas*

(i) *Construction.* A ship's hull is almost invariably made of sheel sheet plate of varying thickness that is often coated with a primer paint to reduce corrosion and make the work cleaner. The steel plate is treated initially by automatic shotblasting machines that shotblast both sides of the plate at once. (Small components (e.g., castings) may be shotblasted manually.) The plate is then painted, mostly by automatic spraying in booths by multi-head spray-guns. Hand-spraying and brush painting must be repeated to prevent corrosion because subsequent burning and welding removes paint. Final painting of the hull is done by airless spray painting.

The steel plate is then ready to be cut and bent to shape. It is cut by oxyacetylene, oxypropane or oxybutane flame. Larger or duplicate pieces are cut on automatic machines. Cutting by hand-burner is done mainly during hull erection since surplus material must be removed and small holes made for access or fittings. Some cutting is done by guillotine. Small parts may be formed using a punch press.

The shaping of steel pieces is accomplished by hot or cold processes which bend, roll or press. The shaped pieces of steel plate are then welded together to form units and subassemblies, a technique which has largely superseded drilling and hot riveting.

The majority of welding is performed manually, using consumable stick electric-arc electrodes, although increasing use is being made of automatic and semi-automatic electric-arc processes. These are often CO_2-shielded, and may use flux-cored or plain wire continuous electrodes. Gas welding is often used for pipe assembly.

Subassemblies are usually prepared in fabrication sheds and virtually all work is done under cover. The trend toward subassembly manufacturing techniques reportedly will continue in many shipyards. The number of launching berths has been reduced to increase the ground area available for prefabrication sheds. Thereafter, these large pieces, which will form the hull when fitted together, are moved by crane to the slipway or dock where the hull is being erected, usually in the open. They are welded together mainly by portable automatic welding machines.

Where high-quality welding is required, weld metal may be cut back to remove flaws either with compressed air chisels or by electric-arc air-gouging, where the melted weld metal is blown away with a high-pressure air jet. Further welding fills the groove and completes the joint. At this point, X-ray or ultrasonic equipment may be used for quality control. Finally, the weld bead may be trimmed flat by mechanical chisel or grinder (Ex. 476–385, p. 1303).

In recent years, more and more stainless steels have been used in shipbuilding, particularly in ships designed for nuclear propulsion or in cryogenic liquid container ships. Additionally, lead has become a prevalent material in nuclear powered vessels and submarines. A certain amount of the superstructure may be formed from aluminum alloys using argon-arc welding.

Once the hull of the ship has been erected it is launched from the slip or dock and floated to a fitting-out berth. In the fitting-out berth, pipes are fitted and insulated, electrical wiring and controls are installed, living accommodations are constructed, the super-structure is completed, and the deck equipment and rigging are installed. Fitting-out involves the skills of numerous workers such as engineers, plumbers, electricians, insulators, carpenters, joiners, boiler makers, technicians, etc.

The last step in shipbuilding is the trial of the newly completed ship at sea. The ship undergoes various tests to determine whether or not mechanical or physical defects exist. Rectification of faults may involve the removal of components, stripping of insulation, welding and the cleaning of oil tanks and lines prior to repair.

(ii) *Repair.* Major shipyards usually combine repair, overhaul, and conversion with shipbuilding capabilities. It is difficult to distinguish among these types of activities in shipbuilding yards and ship repair yards, since many engage in both types of work. However, the four activities commonly performed in ship repair yards include: unscheduled or emergency repair and casualty work, scheduled maintenance and inspection of ships, major overhauls and conversions and non-ship industrial work.

Planned maintenance or preventive maintenance is atypical. Ships generally come to be repaired due to a breakdown in machinery or equipment which cannot be repaired on board, when the ship's hull must be cleaned and painted to achieve greater fuel efficiency or when repairs are necessitated by casualties. Over the years, planned maintenance, especially that requiring drydocking, has been scheduled to coincide with required inspection activities and with the periodic application of antifouling coatings.

Conversion of ships to increase their size, change their purpose, etc., is also an activity of the repair yard. Conversion activity presently includes jamborizing—placing a new midship section between the bow and stern to allow more cargo to be carried. Other conversions involve a change in propulsion systems to a type that burns less fuel, or even a complete change of the commodity carrying characteristics of a ship. Both conversion and major overhaul work typically involve lengthy repair activities. A complex overhaul of a naval ship may take a year or more. In these major overhauls, virtually every part of the ship is removed, inspected, repaired and/or replaced.

(iii) *Operations in Construction and Repair Which May Result in Lead Exposure.* Shipyard operations in which lead exposures may arise include welding, sandblasting, painting and other lead working activities, such as tinning, torch bonding, lead caulking, casting hull shielding panels, grinding of leaded surfaces, sawing and packing

lead ballast, burning on leaded or tinned structures, burning on lead-contaminated steel, carbon-arc gouging of canning plates overlaying lead, steel gritblasting on or near leaded structures, mineral gritblasting of steel prior to point application, and sorting scrap lead for salvage. A discussion of these operations is presented below.

(a) *Abrasive Blasting.* Gritblasting with open gun-type blast systems is widely employed in ship reworking and rapaid to remove paint from lead-painted surfaces. Gritblasting is necessary to remove old, deteriorating paint and to create small indentations or etchings on the ship's surface to facilitate the bonding of new paint.

(b) *Lead Bonding/Tinning.* The first step in a lead bonding operation is "tinning" prior to the installation of a lead panel. Tinning is the operation by which a thin coat of lead-tin alloy is applied to a clean and heated steel surface. The surface is heated by an oxygen-hydrogen torch to provide a thin lead film on the steel. Tinning is essential because, without the application of such an alloy, the metallurgical bond between steel and lead would be inadequate to assure the structural integrity of a lead panel under shock.

This process requires a team, with one or two operators using oxygen-hydrogen torches in the joint while another operator ladles lead into the joint. The ladle operator transports molten lead from a small portable lead pot to the joint or seam that is being bonded.

Manual torch bonding is used in lieu of manual ladling for local repairs. In such situations, accessibility to the joint is reported to be limited in the majority of cases. Manual torch bonding is the process of depositing lead into a joint by melting prefabricated lead bars with an oxygen-hydrogen torch. The purpose is to effect fusion of the lead to the base metal. In both construction and repair, this process occurs chiefly on the hull.

Manual ladle bonding is the process of depositing molten lead in the joint or seam between steel and lead panels from a hand ladle. The bonders use oxygen-hydrogen torches to fuse the molten lead to the lead base metal and to bond the lead to tinned steel surfaces. When it is applied, the molten lead must be between 700°F and 850°F.

Although the temperature of the molten lead is such that its vapor pressure is insignificant, the ladle operator is exposed to light lead suboxide dust from drossing both the portable pot and the joint that is being bonded. The Shipbuilders Council (SBC) maintains that in bonding operations, although the portable pot may be ventilated, the ventilation serves no useful purpose once the lid of the portable pot is opened. To fill the ladle, the ladle operator must expose the molten lead. SBC noted that the use of excessive ventilation on the portable lead pot would cool the lead surface and cause excessive dross to form, requiring the operator to dross more frequently, thus, exposing the operator to greater amounts of lead dust then would otherwise be the case.

(c) *Welding/Burning.* Although welding is not a work function performed with lead, welding on lead structures can cause lead exposures. Exposure may occur when a welder strikes an arc in close proximity to lead-contaminated surfaces. The heat generated is sufficient to vaporize the lead, which then becomes airborne. Exposures to lead can occur also during burning on leaded or tinned structures. This may occur when a burner cuts off a strip of steel contaminated with lead splatter or tinning paste for fitting up to a hull. Exposure to lead occurs when the heat of the burning torch is applied to the steel and causes lead, lead dust or tinning to fume off and become airborne. The Shipbuilders Council believes that, when this occurs, the operation has created high-velocity airborne particles that are not readily captured by local exhaust ventilation because space constraints and configurations often prohibit the use, or eliminate the effectiveness, of units capable of capturing such emissions.

(d) *Milling, Chipping, and Grinding.* The fabrication and subsequent fit-up of lead panels involve milling, chipping, grinding and planing. Exposures during these operations result from mechanical working of the lead surface. Grinding on leaded structures can also generate airborne concentrations of lead. The grinder is responsible for cleaning and flushing off welds and for removal of any defects which inspection may identify. Airborne lead results from grinding on structures contaminated with lead tinning and in areas adjacent to lead shielding.

(e) *Foundry Operations.* The melting, pouring, and casting of lead is done to form lead hulls and reactor shielding.

(f) *Caulking.* Lead caulking is another operation occasionally performed on nuclear ships. This is a procedure in which lead wool rope is installed in a joint or seam and compressed to a solid mass using a flat-ended tool driven by a pneumatic hammer. Bonders may be exposed to airborne lead when the lead oxides on the surface of the lead wool become airborne as a result of repeated mechanical compression.

(c) *Current Controls*

(i) *Abrasive Blasting.* Gritblasting of lead paint generates respirable airborne lead particles. The Council indicates that blast operators are currently equipped with air-fed respirators and protective clothing. Further, whenever possible, work areas are restricted and blasting is performed during the least busy shifts.

In one category of work involving lead exposure, mineral gritblasting on unleaded surfaces, the SBC suggested the possibility of substituting steel grit for lead containing mineral grit. Mineral gritblasting removes rust, hull scale and paint and provides an anchor pattern suitable for the application of new paint. Steel grit provides a comparable anchor pattern.

Gritblasting, whether mineral or steel grit is used, creates a high volume of abrasive that rebounds at very high velocity. The SBC maintains that even if steel grit were substituted for mineral grit, the operator of the blasting mechanism would still have to wear personal protective equipment, such as full-face airline respirators, coveralls, etc. Thus, the SBC argued that substitution would not afford the worker any additional protection and would be highly costly, since the current market price of mineral grit is approximately $40 per ton, while the current market price of steel grit is approximately $378 per ton. It takes 2.5 times the weight of steel grit to achieve the same coverage achieved by mineral grit.

(ii) *Tinning/Bonding Operations.* Local exhaust ventilation hoods are necessary at tinning operations because the bonding must be performed at the job site. This is true whether the tinning is performed onboard the ship or off. When work is performed off hull, it is performed on sections of bulkheads of varying configurations. Thus, the angles at which lead bonders must approach their work vary. Even though shipyards have developed portable hoods designed to suit a variety of structural configurations, the SBC indicates that the system still requires continual placement and replacement of the hoods by employees. The Council argues that since the torches used in this process produce combustion products with an initial velocity of over 20,000 feet/minute, creating high turbulence, the capture velocity of local exhaust ventilation will be exceeded, thus, portable ventilation systems would be unable, in this instance, to achieve the 50 $\mu g/m^3$ PEL.

The SBC indicates that while most of the applications of manual torch bonding can be serviced with local

exhaust ventilation, manual torch bonding is often performed in confined spaces, in which local exhaust ventilation is ineffective, or in spaces that are too constricted to allow access by portable ventilation equipment. As described by the SBC, the breathing zone of the operator, who is often sitting or kneeling, can be within six to ten inches of the heated surface being worked. In such circumstances, the Council notes that local exhaust ventilation may be above the worker's head and, therefore, ineffectual in protecting the worker from fumes. In such cases, respirators are usually used.

(iii) *Lead Welding/Burning.* For burning operations, oxygen-acetylene torches are used to cut through coated metal. The flame velocity blows molten metal and fume on both sides of the surface. The SBC maintains that there is no hood that can provide adequate protection from the exposures this process creates. In other lead burning operations, portable exhaust ventilation is most often used.

The SBC believes that the only known means of reducing a welder's exposure to lead by engineering controls is through the use of local exhaust ventilation, but that this approach is not possible when operations are performed in areas in which accessibility is limited. In these instances, respirators are used.

(iv) *Milling, Chipping, and Grinding.* The SBC maintains that reducing exposure to lead by use of local exhaust ventilation is of questionable value in this process because grinding on lead-contaminated steel surfaces generates high velocity particulates that can not be readily captured by local exhaust ventilation. The SBC also states that configurations exist which would often prohibit access of the large-diameter local exhaust ventilation ductwork that is necessary for the capture of high velocity particulates. Therefore, OSHA assumes that ventilation is rarely employed.

(v) *Foundries.* The SBC reports that approximately two percent of lead workers in the shipbuilding industry perform foundry work. Lead hull and reactor shielding are made by pouring molten lead from a lead furnace into adjustable molds. The operation is performed under a canopy hood that, the SBC believes, significantly reduces employee exposures. Employee exposures also result from drossing the lead furnace, preheating molds, preheating the chute, tinning and drossing molds. Even with what is described as state-of-the-art ventilation, however, SBC reports that some exposures above the 50 $\mu g/m^3$ PEL continue to occur. This is especially true when specific applications require the operator to move under the hood and his breathing zone is placed between the source of emission and the point of exhaust.

The SBC states that local exhaust ventilation has been found to be effective in reducing exposures below the 50 $\mu g/m^3$ PEL in some open spaces, but that caulking must often be performed in enclosed spaces that preclude the use of local ventilation and result in exposures exceeding 50 $\mu g/m^3$.

(d) *Exposure Levels*

(i) *Abrasive Blasting/Painting.* The SBC maintains that exposure levels in excess of 50 $\mu g/m^3$ and, sometimes, in excess of 100 $\mu g/m^3$ (on an 8-hour time-weighted average), are encountered by employees in the areas where blasting of lead paint takes place. (Specifically, levels were indicated as being between 62 and 3,984 $\mu g/m^3$.)

Sandblasting is used to remove all coating materials, including those containing lead, before painting the hull of a vessel. DBA estimated that the exposure levels of sandblasters exceed the PEL (Ex. 26, p. 5–117). Painters, in contrast, are assumed to fall into the low energy category. When painting is not done in a ventilated spray booth, however, most painters now wear respirators (Ex. 26, p. 5–117). Lead-based paint is being replaced and some shipyards no longer use lead-based paint (Ex. 22, p. 321).

(ii) *Bonding/Tinning.* According to the SBC, ship construction and repair yards experience mean air-lead levels in tinning of 100 $\mu g/m^3$ to 150 $\mu g/m^3$ TWA, with excursions in excess of 150 $\mu g/m^3$ caused by the oblique angle at which the flame impinges on a flat surface.

Exposure data presented by SBC indicated that lead levels in tinning operations conducted in open areas were 120 to 1949 $\mu g/m^3$ (uses 4" to 8" ducting) and 41 to 374 $\mu g/m^3$ (uses 8" ducting). In enclosed areas, levels were 38 to 160 $\mu g/m^3$ (4") and 29 to 436 $\mu g/m^3$ (8"). These levels represent area samples rather than eight-hour TWA's. Since the fpm's per ducting were not provided, OSHA does not know what the effectiveness of the system was. Manual ladle and manual torch bonding exposures were 55–2254, 47–2072, 7–332, 11–1702, 8–526, 18–410 $\mu g/m^3$. There are obvious problems with these data, because no information was provided concerning the number of workers, the nature of the samples taken, etc.

(iii) *Welding/Burning.* Exposure during welding can originate in the base metal being welded, the coatings used on the electrodes, and the coatings on the base metal. The studies reviewed by DBA indicate that welders may be exposed to concentrations of lead well in excess of 100 $\mu g/m^3$. One 1968 study, however, reported mean lead concentrations of 40 $\mu g/m^3$ in shipyard welding. DBA estimates that the exposures of 81 percent of welders would fall above 100 $\mu g/m^3$. Especially high exposures result from work in confined spaces and on galvanized metals coated with zinc silicates (Ex. 26, pp. 5–113, 5–114). The SBC reported levels of 0 to 1,599 $\mu g/m^3$ (Ex. 505).

Lead burning occurs only in the construction of nuclear ships, when lead is welded to the hull in order to shield the ship's reactor. DBA estimated that 40 percent of these workers have exposures above 100 $\mu g/m^3$ (Ex. 26, p. 5–111). The SBC reported levels of 45 to 540 $\mu g/m^3$ in carbon arc gouging and levels of 5 to 410 $\mu g/m^3$ in burning.

(iv) *Grinding/Finishing.* Measurements for grinding, without ventilation, indicated levels of 6 to 1651 $\mu g/m^3$. Saving lead ballast found levels of 55 to 365 $\mu g/m^3$. Passing and packing of ballast, measured without ventilation, indicated levels of 0 to 558 $\mu g/m^3$.

(v) *Foundry Operations.* Measurements taken during the casting of hull shielding panels indicated levels of 16 to 224 $\mu g/m^3$. Quality control inspections found levels of 6 to 367 $\mu g/m^3$. Measurements of scrap lead sorting indicated levels of 5 to 140 $\mu g/m^3$.

(vi) *Lead Caulking.* Caulking operator's levels were reported to be 0 to 161 $\mu g/m^3$.

(e) *Population Exposed*

The number of workers exposed to lead during burning is estimated to be 1,374; during sandblasting, 264; during welding, 16,120 and during painting, 4,495. However, employees often work at a variety of assignments, and thus their work may expose them to lead only 1 or 2 days per week (Ex. 26, pp. 5–110 and 5–111).

(f) *Additional Controls*

The engineering and work practice controls applicable to the operations of welding, burning, brazing, abrasive blasting, painting and tinning have been effectively used by other industries to obtain compliance with the 50 $\mu g/m^3$ lead standard. The need for upgrading of ventilation systems, improved housekeeping and the rotation of workers varies according to the industry and its state-of-the-art with respect to the use of these controls.

Substituting less hazardous materials, equipment or processes may be the least expensive, as well as the most positive, method of controlling occupational hazards resulting from spray painting. In

order to minimize the hazards in spray finishing, coating materials should be formulated with relatively safe ingredients, and with minimum amounts of solvents.

In many instances, organic pigments can be used in place of the lead pigments currently used in industrial finishes. However, the organic pigments are less durable, have reduced corrosion resistance, and have a tendency to fade. Therefore, they are not always adequate substitutes.

Shipbuilding is not a process that uses a production line or work stations to which engineering controls can be attached. As ship construction proceeds, the work environment changes. In such operations, compliance calls for local exhaust ventilation, using portable, flexible equipment and absolute filters. Large shipyards have installed such controls. Some confined spaces, however, may not have room for portable ventilation ducts (Ex. 26 p. 5–119).

Complying with the standard may be more difficult for some small companies, especially during work on hulls painted with lead-based paints. If the proper welding practice of removing an area 3" wider than the weld is strictly followed, however, exposure above the PEL is less likely to occur (Ex. 26, p. 5–119). Also, replacement of lead-based paint by non-lead-based substitutes will reduce exposures in welding and repairing (Ex. 22, p. 323). Otherwise, operations involving exposures to lead-based paint (blasting, welding, burning, painting, chipping and needle gun) were described by the SBC as not lending themselves to engineering controls.

For ship exteriors, the SBC argues that because of the large cloud of respirable lead particles generated by abrasive blasting, there is no ventilation-extraction system that can be employed to reduce respirable lead particles to a concentration below the PEL, and further, since employees engaged in blasting of ship exteriors must constantly shift positions, any type of engineering control would have to be portable, capable of ventilating large air volumes and capable of reaching inaccesible areas, including the underside of the hull.

The SBC believes that no feasible alternatives to gritblasting are available. It stated that while needle gun vibrators are sometimes used to remove paint from small or highly inaccessible ship surface areas, this mechanism is too slow for general blasting of a ship's hull or interior. (Ship repair yards are required to blast ship hulls within a short period of time since prompt repainting is necessary to avoid rusting of exposed surfaces.)

The SBC argued that, for several reasons, self-contained robot-like abrasive blasters would not be feasible for general blasting of ship hulls. First, a hydraulic crane is required to maneuver the robot blaster around the ship and, according to the SBC, many small ship yards do not have, and could not afford, such cranes. Further, SBC maintains that robotblasters are incapable of effectively removing paint from curved surfaces, such as the undersides of hulls; that robot blasting is slower than hand blasting and would unduly delay the completion of repair jobs; and that robot blasters would only limit exposure of the worker who otherwise would do the blasting function, but would not limit exposure of other workers in the area in which the blasting is being conducted.

For blasting ship interiors, SBC states that the only potential engineering controls for lead exposure are portable ventilation systems (with flexible ductwork and filters). However, the SBC characterizes these systems as extremely cumbersome, requiring substantial time and labor (by multiple trades) to disconnect, rewire, transmit and rearrange, and in any case, inadequate to reduce exposure levels below 50 $\mu g/m^3$ in confined spaces.

Gritblasting generates lead particulate matter that collects on platforms used by workers blasting the hull, under the hull, in the bay of the dry dock and on the floor of ship interiors. Several personnel are required to collect and dispose of this material through vacuuming and shoveling. The SBC maintains that this cleanup process agitates the lead particulate residue, resulting in exposures in excess of those permitted under the standard, and that engineering controls are as infeasible for this operation as for the initial blasting operation itself.

In ship repairing, welders and burners may be required to work near lead-painted surfaces and on surfaces from which lead-based paint has been removed. Burners and welders may work in a variety of situations, including enclosed or confined spaces, and they also may operate in close proximity to other types of workers, such as machinists, pipe fitters and shipfitters. The SBC states that airborne lead concentrations greatly in excess of the PEL occur in such operations and that engineering control of lead exposures in welding is infeasible because of the numerous spaces in which portable ventilation cannot be placed or is ineffective. On the exterior of ships, the problem, as described by SBC, is that portable ventilation is suitable on elevations accessible only through use of stage work or hydraulic lifts and there is no place, in these cases, to hang portable equipment. In ships interiors, SBC indicates that numerous welding operations occur in spaces so confined that they are not accessible to ventilation equipment or so shaped that ventilation cannot be placed in positions that will effectively protect the worker.

As noted earlier, it is often necessary to remove lead paint from small or inaccessible areas of a ship's surface to prepare for welding, burning or similar repair functions. Chipping or needle-gunning operations are performed. The SBC states that airborne lead concentrations, substantially in excess of the PEL, occur during those operations, and that because chipping and needle-gunning are almost always conducted in confined areas of the ship interior and difficult to reach exterior surfaces, engineering controls are infeasible.

For the actual painting operation, SBC reports that, due to the excess amounts of paint projected into the air by spray painting, local exhaust and/or general mechanical ventilation are, in themselves, inadequate to reduce lead exposure levels below the PEL.

In addition to the engineering problems encountered by shipyards due to lead-based paints, shipyards that do construction, conversion, overhaul or repair of nuclear vessels for the United States Navy are confronted with additional circumstances in which, according to SBC, control of airborne lead to the PEL is infeasible.

The use of lead in nuclear ship construction and repair is required by the United States Navy for the purpose of shielding the reactor compartment and for ballast. As perceived by the SBC, the essential problem with the use of engineering controls in nuclear shipbuilding stems from the fact that a majority of the lead worker population is engaged in work that must be done on location, involving mobile operations in a variety of structural configurations.

The installation of lead panels is the largest source of exposure to lead in nuclear shipbuilding. Lead panels must be bonded to steel structural components. Because lead and steel resist the bond, very close work is required. Lead bonders and quality control inspectors can be expected to have daily exposures to lead during nuclear ship construction.

For welding operations the Council maintains that, even in areas where ventilation is adequate for most purposes, welders will come upon unexpected situations resulting in high lead exposures due to the fact that

shipbuilding and ship repair are not standardized operations. As an example, the SBC reports that a welder may be welding on canning plates above exposed lead or tinning and the exposure to lead will be determined by the amount of exposed tinning paste on the surface of the steel, which will vary with the thickness of the lead panel, the location of the canning plate and the technique of the person who applied the tinning paste.

Welders may also be exposed to lead concentrations in the process of carbon-arc gouging of canning plates which cover lead. Carbon-arc gouging is the process by which defective welds are removed and steel structures are cut. In carbon-arc gouging, an arc is formed between the carbon rod and a grounded steel structure. The metal surface becomes molten and is removed from the gouge path by the controlled release of compressed air. Exposure to lead occurs due to gouging on steel plates that cover lead bins or during operations that are performed on lead contaminated surfaces. The SBC reports that both repair and construction yards have had limited success in using local exhaust ventilation since the lead exposure of any worker engaged in carbon-arc gouging is dependent upon that individual's work practices. High air-lead levels are said to occur when the arc burns completely through the steel and impinges upon the lead surface beneath. When this occurs, the SBC reports air-lead levels of up to approximately 540 $\mu g/m^3$ TWA, because of the high velocity at which molten metal is ejected. Thus, according to the Council, control of lead exposure depends upon the welder's care in adjusting the arc height so that the steel is not penetrated.

The SBC reports that Navy specifications require lead ballast installation on Naval ships. (1,000,000 pounds of ballast are installed per vessel.) Carpenters may be exposed to lead oxides in sawing lead ballast, as well as in passing, packing and in overhaul work requiring the removal of ballast. Ballast is sawed in shops. Sixty-pound planks, or "pigs," are sawed into shapes for fitting into the hull as specified by design drawings. Lead oxide abrades off the surface of the pig during handling, and lead dust is generated by the sawing. The SBC indicates that this is one of the few shipyard operations that resembles stationary factory work. Thus, SBC believes that fixed ventilation systems may, in fact, control these exposures to below the 50 $\mu g/m^3$ PEL.

The SBC does not believe, however, that this is true with respect to passing and packing lead ballast. Lead packers, who are commonly the same carpenters responsible for sawing lead pigs, are responsible for installing the lead in ballast bins. The pigs are hammered, cut and shimmed to fit. Airborne lead may be generated when lead oxide is dislodged from the surface of the lead while it is being handled and during hammering. SBC argues that lead passing is a mobile activity and lead packing takes place in confined quarters and, therefore, local exhaust systems are infeasible.

A lead boot is required by Navy specifications to be installed inside the primary shield tank in the installation of nuclear instrumentation. The lead boot is designed to protect measurement instruments placed in the radioactive area. Since the precision of this instrumentation must be maintained, the lead boot must be bored to close tolerances. Work on a lead boot occurs during the construction of each ship, and boring of the boot takes about six weeks out of the multi-year schedule for construction of a ship. Thus, machinists having responsibility for boring the boot will go for long periods with only background exposures to lead, even in the busiest nuclear yards.

The lead boot is machined with a boring bar that simulates the proper configuration required in the boot. The outside machinist who performs this operation is exposed to airborne dust. SBC believes that heavy dust vacuums can collect most of the lead chips that are generated in this operation but that, even though control of exposure is dependent upon the housekeeping procedures, employee exposure to levels below 50 $\mu g/m^3$ can generally be achieved.

The SBC reports that approximately two percent of lead exposed shipyard workers do foundry work. Lead hull and reactor shielding are made by pouring molten lead from a lead furance into present adjustable molds. The operation is performed under a canopy hood that the SBC believes significantly reduces employee exposures. Employee exposure results from drossing the lead furnace, preheating molds, preheating the chute, tinning and drossing molds. Even with state-of-the-art ventilation, however, the SBC reports that some exposures above the 50 $\mu g/m^3$ PEL continue to occur where specific applications require the operator to move under the hood and place his breathing zone between the source of emission and the point of exhaust. OSHA regards these foundry operations, however, as essentially the same as all foundary operations, and will treat them accordingly.

The SBC indicates that control to the PEL has been achieved in the pouring of molten lead into missile tube ballast cans since the pouring of the missile tube resembles a fixed factory operation that is stationary and can be exhausted by one hood.

SBC believes that no engineering controls exist that can keep lead exposures to the worker consistently under even 100 $\mu g/m^3$ in tinning operations. The bonding torch must be maintained at a temperature of 4,820° F in order to create a heated structure adequate to take the bond. The alternative to such torches, oxygen-acetylene torches, cannot be used because they create carbon deposits in the structural bond unacceptable for nuclear shielding. The SBC attributes this to the nature of the work which generates large volumes of lead fumes that are difficult to capture because the high heat generated by the oxygen-hydrogen flame virtually boils off the lead.

(g) *Conclusion: Technological Feasibility*

The Court of Appeals, in finding that OSHA had not demonstrated the feasibility of the 50 $\mu g/m^3$ PEL for this industry, concluded that the original record supported the conclusion that attaining exposure levels of 100 $\mu g/m^3$ is generally feasible (Slip opinion, pp. 212–213). The first hearing record indicated that attaining exposures of 100 $\mu g/m^3$ is generally feasible in the shipbuilding industry. The SBC, as well as General Dynamics and Ingall Shipbuilding, a division of Litton Industries, described the proposed standard as "technologically possible" (Ex. 230, p. 2; Ex. 28(30), p. 3; Ex. 3(58), p. 2). Whether further reductions to 50 $\mu g/m^3$ can be achieved requires an analysis of methods of controlling each particular operation generally and under the conditions peculiar to shipyards. OSHA believes that its analysis of technological feasibility in the general sections on welding, burning, brazing, spray painting, foundries, abrasive blasting, etc. are applicable as a general matter to these operations when performed in a shipyard. In each of these, OSHA has found the 50 $\mu g/m^3$ PEL feasible in one year.

However, in shipyards, these operations may be performed under conditons where controls, otherwise effective, might not be adequate. Where this is the case, engineering controls and work practices must be used to reduce exposure to the extent feasible and must

be supplemented with respirators. No data have been presented to assess the extent of respirator usage required, but it may be prevalent in most operations. Clearly, in abrasive blasting operations respirators are already required by existing regulations when certain abrasives are being used. Spray painters are also required by the Longshoremen and Harborworkers Act to wear respirators (Ex. 505, p. 3). And as the Shipbuilders Council stated, "respirators for this reason would be worn regardless of the lead standard."

Although, the Shipbuilders Council discussed extensively the problems associated with using engineering controls and work practices in the shipbuilding and repair industry, they did not consider the alternative approach to compliance of worker rotation. Worker rotation, in some instances, could be used by the industry to replace the current, extensive reliance on respirators.

It should be noted that no industry-wide implementation schedule has been provided for shipbuilding. For example, shipyard foundry operations are controlled by the general section discussing foundries; lead burning by the lead burning section; and spray painting by the spray painting discussion.

(h) *Costs of Compliance*

DBA estimated that the average costs of compliance with the lead standard would be approximately $5.69 per worker in capital expenditures and $1000 per worker in annual operating expenditures (Ex. 474–26). These costs were derived by estimating the numbers of workers and levels of exposure of these workers, and by developing a compliance scenario for all feasible engineering controls and work practices. DBA estimated that a total of 22,253 workers in shipyards are potentially exposed to lead in welding, burning, painting, sandblasting, and lead worker (in nuclear shipbuilding yards) occupations. Thus, the total compliance cost to this industry would be about $127,000 in capital expenditures and $22,253,000 in annual operating costs.

On the basis of estimated exposure levels, DBA prepared compliance cost estimates for monitoring, personal protective equipment and clothing, housekeeping, engineering controls, maintenance, work practices, medical surveillance, training, and recordkeeping. The capital costs of compliance per worker for workers exposed in excess of 100 $\mu g/m^3$ was $90; for workers exposed between 50 $\mu g/m^3$ and 100 $\mu g/m^3$ the cost was $16.33; and for workers exposed to less than 50 $\mu g/m^3$ the cost was $.50 (Ex. 474–26). The annual operating expenditures per worker were estimated to be $2000, $1358 and $883 for workers above 100 $\mu g/m^3$, between 50 $\mu g/m^3$ and 100 $\mu g/m^3$, and under 50 $\mu g/m^3$, respectively (Ex. 474–26).

The SBC did not offer counterestimates to the DBA figures. The SBC did charge that DBA had neglected to count the costs of "reduced worker efficiency, disruption of repair operations, production upsets, and work schedule delays" that the engineering and work practice controls might cause (Ex. 475–26). However, to the contrary, the DBA estimates did incorporate the additional costs of lost production associated with housekeeping, maintaining and setting up portable engineering controls, time lost for medical exams and training, and time lost for hygiene practices. Furthermore, DBA did calculate the cost of hiring the additional labor required to prevent production delays and losses (Ex. 474–26). These costs have been included in the estimates of the total costs per worker provided above.

Therefore, OSHA believes that the DBA estimates constitute the best available evidence on costs of compliance. Neither the SBC nor any other participants in the rulemaking effectively refuted them or supplied other estimates of the actual costs in this industry.

(i) *Industry Profile*

There are approximately 537 establishments in the shipbuilding and repairing industry (SIC 3731) employing 175,365 workers. Of the 208 firms operating these establishments, about 80 are shipbuilding firms and about 128 are ship repairing firms (Ex. 475–26(b)). Only 3 shipyards are equipped to build nuclear-powered ships (Ex. 474–26). Classified by employment size, 19 percent of all establishments employ 4 or fewer workers. The distribution of establishments with 5 to 9, 10 to 19, 20 to 49, 50 to 99, and 100 to 249 employees ranges from 11 percent to 16 percent for each size category. Only 4 percent of the establishments employ 1000 or more employees (Ex. 476–25). Within the industry, a greater proportion of small establishments are in ship repairing than shipbuilding (Ex. 475–26(c)).

The industry appears to be characterized by a high degree of concentration. There are 9 conglomerate-owned, 16 independent, and 100 general yards. But a few large firms control most of the major shipyards. Tenneco owns Newport News Shipbuilding and Drydock, Congoleum owns Bath Iron Works, Sun Oil owns Sun Shipbuilding, Fruehauf owns Maryland Shipbuilding and Drydock, and Bethlehem Steel owns the Bethlehem Shipyard. Todd Shipyards is the major independent yard. Two of these large shipyards control 13 repair yards that provide 60 percent of all repairs. Assuming each yard has a fairly equal market share, this evens out to approximately 5 percent per yard. Forty three yards control 75 percent of all private repairs (Ex. 475–26(b)). Due to the highly competitive nature of ship repairing among the yards, this distribution is expected to be maintained (Ex. 475–26(c)).

Ship repairing is more profitable than shipbuilding (Ex. 475–26(c)). Approximately 75 percent of the revenue from ship repairing is generated by the federal government (Ex. 475–26(b)). The total number of repairs done in domestic shipyards is a function of world trade (the major determinant), the age of the fleet, and the rate of technological change. Proximity to ship traffic is a basic element in establishing a successful repair yard. Consequently, U.S. yards are located predominantly on the west, east and Gulf coasts and on the Great Lakes (Ex. 475–26(c)).

There are several criteria that customers consider in addition to placement of repair yards along shipping routes. Four major factors are cost of the repair, the yard's reputation for quality, turnaround time, knowledge of the ship, and other special skills.

The U.S. has a reputation for quick turnaround with fewer days both in a drydock and in completing the repair. Thus, while the U.S. is not as price competitive as foreign shipyards, the service offered is characterized by more rapid turnaround time (Ex. 475–26(c)). The U.S. is, however, becoming more price competitive with foreign shipyards. In the face of worldwide overcapacity, the gap in foreign versus domestic drydock charges is narrowing and labor costs, which are critical in an industry as labor-intensive as shipbuilding and repairing, are becoming less of a cost disadvantage to U.S. yards as wages rise abroad. Fluctuations in exchange rates have also been advantageous to the U.S. shipyards in terms of major competitive foreign countries, especially West Germany, the Netherlands, and Japan. Thus, whereas costs in West Germany in 1976 were 98 percent of the lowest U.S. cost, they were 117 percent of the lowest U.S. cost in 1978. In Japan in 1976, average repair costs were 20 percent less than in the U.S.; by contrast, in 1978, Japanese costs were only 4 percent less than U.S. costs (Ex. 475–26(c)).

The ship repairing industry faces a stable future and will prosper well into the 1980s as a result of several factors. First, more stringent environmental safety requirements for tankers in U.S. coastal waters will generate an increased market for inspections, minor repair, and retrofit overhauls of ships. Second, there are perceived needs for modifying, especially "jumboizing" existing vessels to meet shipping demands more quickly and less expensively than by constructing new ships. Third, U.S. repair services are becoming more competitive in the world market. U.S. ship repair yards already have a reputation for superior work and high productivity and are continuing to improve efficiency by investing in more modern equipment. Fourth, shipyards are diversifying into non-ship-related industrial work that utilizes shipwork skills, such as sheet metal working, welding, and blasting. Fifth, repair and overhaul of Naval vessels is expected to increase. Sixth, increased shipping activity with the expansion of world trade and transportation of Alaskan oil will generate a need for more ship repairs (Ex. 475–26(b)). The anticipated increase in world trade is especially important since the demand for ship repairs is a derived demand, that is, it cycles with the demand for both domestic and international trade (Ex. 475–26(c)).

Revenue in repair yards is expected to grow at an annual rate of nine percent for the next decade. Funding for Naval repairs, which occur almost exclusively in Naval shipyards, is expected to increase by about 6.2 percent per year. Commercial ship repair is forecast to grow at 5.5 percent annually. The largest increase of 14.3 percent per year is expected in foreign repairs. Overall, revenue for commercial repairs are projected to stabilize at a 6.5 percent rate of return per repair over the next decade (Ex. 475–26(c)).

The market outlook for shipbuilding is not as stable as the ship repairing forcast. While most shipbuilders have integrated ship repairing operations into their facilities, new construction orders and employment in shipyards will probably decline in the immediate future, reflecting the worldwide slump in shipping (Ex. 475–26(a)). However, during 1978 and the first and second quarters of 1979, an unexpectedly large number of new orders brightened the outlook for the shipbuilding industry (Ex. 476–26). Total orders in 1979 were the largest since 1973, with contracts reflecting a healthy demand for deep-draft commercial vessels (Ex. 475–26(b)). A prime source of commercial ship orders for U.S. yards stems from the severe shortage of dry bulk charter vessels. The American-flag fleet includes only 19 bulk ships, and 13 of its ships are over 30 years old. The demand for product tankers has also shown a revival that should continue through the 1980s (Ex. 476–26). Furthermore, Naval expenditures authorized by Congress for new ships are expected to continue at least at the same level (Ex. 475–26(b)), thus bolstering the demand in the shipbuilding industry.

The shipbuilding and repairing industry considers shipbuilding less profitable than repairing. Ship repairs command excellent prices because the work is typically urgent and repair yards can usually control overhead more successfully than construction yards (Ex. 476–26). However, to ease the financial situation for shipbuilders, federal construction differential subsidies are granted for ships built, owned, operated, and manned by Americans. The amount of the subsidy is calculated on the basis of the construction cost difference between U.S. and foreign shipyards (Ex. 475–26(b)).

In the long-run, that is, beyond 1985, the market for shipbuilding looks very good. The future boom in fishing, resulting from the implementation of the 200 mile limit, will require larger and more efficient vessels. Also, the prospects for mining undersea mineral nodules may contribute to a rising demand for new ships (Ex. 475–26(b)). Since the industry is cyclical and dependent on worldwide conditions in many markets, recovery can be expected as water-borne trade expands again (Ex. 476–26).

In addition to the anticipated upturn in the shipbuilding industry, there appear to be long-run trends away from the use of lead in ships. The shipbuilding industry is currently in the process of adopting substitutes for lead-based paints in ships. Existing ships that still contain lead painted surfaces will continue to be a source of potential exposure during ship repairs. However, ultimately, this source of exposure will be eliminated. Some technological improvements that increase the mechanization and automation of shipbuilding and repairing processes may also lead to reduced exposures where lead use is retained. In addition, underwater painting and underwater welding processes are being developed (Ex. 475–26(a)).

There does not appear to be a perfect substitute for lead in nuclear shielding of reactors. One possible substitute is a cement shield. However, cement shields require much more space than lead shields (Ex. 475–26(a)). Only three yards have a current capability to build nuclear ships. For these yards, it is expected that the cost of controlling lead exposure would be such a small percentage of the total cost of building a ship that the percentage increase in price of the ship would be negligible. Furthermore, the production of nuclear ships is exclusively funded by the military, and military demand for nuclear ships is relatively insensitive, even to large increases in price. Any increased costs of production would be passed on ultimately to the taxpayers by the few yards involved in nuclear shipbuilding.

(j) *Conclusion: Economic Feasibility*

OSHA concludes that the economic impact of the lead standard on the market for ship repairing and shipbuilding will not be disruptive to the industry. Since the estimated total annualized costs amount to only about 0.68 percent of the value of the industry's sales (Ex. 476–20), ship repair yards will be able to pass costs on to customers because the commercial and military demand for repairs is relatively inelastic. Small independent yards may have more limited access to capital than yards that are owned by large parent corporations. However, competitive advantages of location and individual reputation for quality work will help to offset potentially adverse impacts on small versus large owners of ship repair yards.

Similarly, the shipbuilding industry will be able to pass costs of compliance on to commercial and military customers. The cost of controlling lead exposures represents a very small percentage of the cost of building a ship. Thus, any price increases are expected to be negligible. Furthermore, the future profitability of the industry will rise as the demand for new ships increases in the 1980s. Concurrent substitution away from lead use in most new ships will significantly reduce compliance costs, and consequently the economic impact of the lead standard.

36. Solder Manufacture

(a) *Uses.* Solder is sold in the form of ingots, rods, bars, anodes, solid wire, cored wire, foil, sheet and paste (Ex. 22, p. 294). In addition to its many other uses, solder is essential for the manufacture of electronic devices. No substitutes for solder are known (Ex. 65B, p. 40–42).

(b) *Process Description and Exposure Areas*

Refined lead is used to make lead-tin and other solders. The ratio of lead to

tin, bismuth, antimony and other metals varies depending upon the type of solder desired. In the making of solder, metals are melted down at low temperature and blended in established ratios. Handling of lead is minimal, but employees do handle raw lead ingots before they are melted (Ex. 488).

Material handling includes manual material transfer or transfer by forklift. The material may be in the form of pigs, skidded materials, semi-finished products or final products exposed and/or in packages. Material handling often includes weighing, breaking up of ingots into smaller parts for accurate alloy charges, loading the solder pot with metal, transferring semi-finished or finished items from one operation to another, etc. (Ex. 488).

Alloying includes the melting of charges, mixing of molten metal, removing samples for analysis and the removal of dross from the charge.

The allowing of solder is usually performed by melting the elements at 100°F. above their melting point and stirring them to achieve homogeneity. Depending upon the composition of the solder, the temperature and the partial vapor pressure of lead, one can calculate the evolution of lead in air. In general, metallic lead fumes are unlikely to occur when the temperatures are kept below 1,000°F., as in the case with solder manufacture where the temperature is kept low to prevent excessive dross formation that reduces the yield of the charge (Ex. 488). Lead fumes are normally expected at temperatures between 1,500° and 2,700°F. (Ex. 488).[1/6] Thus, the exposure in this area is not from metallic lead fumes, but rather from the reaction of products with air (mostly lead oxide) which is called dross. This constitutes the greater potential for airborne lead since dross is a dry, powdery substance (unless special additives are used).

Finished solder is cast into blocks, ingots, rods or bars, sheets and foil, and extruded into solder wire and sheets (Ex. 22, p. 294).

Casting involves such operations as dross removal, pouring, topping of slugs and removal from the molds. Extrusion may be done directly from the melt in a continuous form or with the use of precast billets. Basically, this requires hydraulic pressing through dies to achieve final shapes. The extrusion often includes such operations as cutting, loading and unloading the presses, and transfer of the extruded material to the next operation (Ex. 488).

Hook attachment to anodes may be stainless steel or tinned copper alloys. (Tinning is often performed as an auxiliary operation to anode manufacturing. It involves the fluxing and dipping in molten alloy of the hooks in question.) The hooks are either attached mechanically (using a drill and tap operation) or by lead burning, which is a form of soldering (Id.).

Wire drawing is performed by running materials through lubricated reducing dies and includes threading the wire into the dies, reattaching the wire when it breaks, cleaning the dies, maintaining the solution, and a feed and unload operation. The lubricant (also called a drawing solution) contains fine particles of solder which may cling to the wire as it leaves at high speeds. These particles may then become airborne during spooling and handling (Id.).

Spooling of solder wire is often done manually, although semi-automatic and fully automatic equipment exists. This includes such operations as manual spooling, cutting and weighing, and reconnecting brakes.

Rolling and cladding are processes whereby solder is metallurgically or mechanically bonded to other metals, such as copper. This includes such operations as cleaning (dangerous only if it involves mechanical abrasion), feeding, measuring, and transfer of the finished product.

Stamping and wire forming (to make preforms) include such operations as setting up the dies and equipment, the physical operation of the equipment (lubrication used to prevent equipment damage eliminates particles from being generated into the air), and collecting, measuring, and cleaning the end product.

Powder blowing is an operation which, by its nature, creates airborne lead contamination. Although powder is often blown into a special environment of liquids rather than air, it requires special control. Powder blowing of molten solder is acknowledged to be the most hazardous operation, resulting in the greatest potential for lead exposure in solder manufacturing. Powder is normally blown from a molten reservoir by feeding a steady stream of liquid solder through an air nozzle. By the time the metallic droplets solidify, they settle into the bottom of the equipment where they are sized.

Powder classification or sizing is the operation where powders are separated into various sizes (referred to as mesh sizes). This is achieved either through gravity by horizontal air blowing or mechanically by a series of different sieves. Here again, there is danger of airborne lead and adequate controls are required.

Powder blending requires that powders be mixed with the fluxes to create the end product, which is either a paste or a cream.

Packaging and shipping is an operation which includes the handling, weighing, inspecting, and packaging of all final products. The exposure depends on the form of the product being handled (i.e., whether it is in powder or compressed forms).

Housekeeping includes the cleanup of all floors and surfaces to remove particulate matter containing lead. Wet sweeping and vacuum cleaning are two mechanized methods possible.

The potential for lead exposure exists for almost all operations, but the greatest potential is experienced in alloying, casting, powder blowing, housekeeping, and machine operations such as cutting and drilling.

(c) *Controls Currently Used*

Materials handling presently is done manually or with a forklift. Alloying operations have tight enclosures which use air exhausts. Casting operations use ventilation. Powder blowing operations are performed in tight enclosures with negative pressure. Ventilation is used in machine operations. (Ex. 488)

(d) *Exposure Levels*

Originally, in the Short Report, most industry sources indicated that lead levels were probably low and that problems in meeting the standard were not anticipated (Ex. 22, p. 394). OSHA inspections at two solder plants reported levels above 200 $\mu g/m^3$ in spooling operations, furnace areas, and kettle areas (Ex. 65B, p. 42). One company reported that even with excellent ventilation, lead levels in the casting area reached 200 $\mu g/m^3$. (Ex. 22, p. 294.) Levels of 220 $\mu g/m^3$ to 300 $\mu g/m^3$ were reported in the spooling and wire drawing operations (Id.). Results of OSHA inspection # CN–2 found lead levels of 140 $\mu g/m^3$, on an 8 hour TWA. The only control at this facility was ventilation consisting of two 42" ceiling fans located above the melting pot and one 30" wall fan (Ex. 476–16). In more recent exposure estimates, one large company reported that most of its direct labor force is exposed below 30 $\mu g/m^3$. In addition, in the older, smaller to medium sized plants, 20–25 percent of all employees (or 124–155 workers) are exposed above 50 $\mu g/m^3$ while in the large plants 8–12 percent (or 100–125 workers) are exposed above 50 $\mu g/m^3$ (Ex. 488)

(e) *Population Exposed*

The data presented by Howard Manko, an OSHA expert witness, indicate that approximately 250 workers

in the entire industry may be exposed in excess of 50 $\mu g/m^3$. (Ex. 488)

(f) *Additional Controls*

Data indicating additional controls needed to comply with the 50 $\mu g/m^3$ standard were not submitted by the industry. Therefore a comparison of solder manufacture to comparable processes and a discussion of the applicable controls are provided in this section.

Materials handling may be done mechanically by conveyor system or pneumatically, depending upon the size of the materials being moved. Materials to be cut to smaller size or broken into pieces should be processed under exhaust hoods or should be broken and cut using automated mechanical devices. This whole area of exposure could be eliminated by buying scrap from collectors and processors already reduced to size. Weighing can be done in automated hooded weighing areas. (Ex. 270, 48, 488)

Additional ventilation may be necessary in some areas for compliance with the PEL. In a few areas that are difficult to ventilate, such as spooling, other protective measures may also be necessary. Slowing the spool rate is one possible method for controlling lead levels in the spool and wire drawing area, although this method would decrease the production rate. (Ex. 488)

Alloying operations can use exhaust ventilation in the melting areas and mixing areas. Dross can be mechanically conveyed to discharge areas with hooding of the conveyance ducts being provided. Casting areas can have local exhaust ventilation over casts. All machine operations can be successfully exhaust ventilated at the source of exposure and cutting fluids can be used to suppress dusts.

Spooling operations can be done automatically to avoid worker contact. Powder blowing may be done in fully enclosed systems of negative pressure with workers in clear air pulpits to minimize exposure. Powder classing and signing should be done mechanically with the entire sieving area ventilated and local exhaust ventilation being supplied to each sieve. Powder blending can be done mechanically and wet. Handling and shipping operations can also be mechanized, depending upon the substance being handled. (Id.)

Housekeeping should be emphasized with frequent wet sweeping or vacuuming. Floors and wall surfaces should be finished to eliminate cracks, crevices or porousness, which will tend to hold dusts. (Ex. 488)

In areas of high pressure, worker rotation should be utilized. Also, emphasis should be placed on the importance of proper work practices. Workers should be instructed to avoid stirring up dusts by improper dumping of materials, etc.

Mr. Manko suggested that manufacturers could also reclaim lead for reprocessing, which would greatly reduce the airborne contaminants and be cost effective by recycling wastes.

(g) *Conclusion: Technological Feasibility*

Most employers protect employees from lead exposure by ventilation. Hoods, exhaust fans, vents, air ducts, and baghouses are usually used. (Ex. 22, p. 294.)

Conclusions offered on the feasibility of achieving compliance with the 50 $\mu g/m^3$ PEL are based exclusively on the use of engineering controls. The consequence of work practices and effective housekeeping for complying with a 50 $\mu g/m^3$ standard was not considered. Solder manufacturing is an extremely dusty operation and re-entry of lead into the air from moving equipment could be effectively eliminated if proper housekeeping was practiced. In addition, rather than putting respirators on workers in high exposure areas, workers could be rotated, thereby minimizing their exposure.

Considering the available controls discussed here, the significant contribution which housekeeping can make in reducing levels, and the fact that at least one company has stated that most of its direct labor force is exposed to levels below 30 $\mu g/m^3$, compliance for the industry as a whole appears feasible. OSHA concludes that compliance with the standard as a whole is feasible for the industry within one year.

(h) *Cost of Compliance*

The total cost of compliance for the solder industry would include the capital expenditures and the operating costs that would be incurred to reduce lead levels. One industry source reported capital expenditures for EPA and OSHA improvements of $325,000 for two plants over a five year period (Ex. 488). This would suggest annual capital expenditures for the entire industry of $4.1 million. Annualized capital costs, therefore, are estimated to be $740,000. The corresponding operating costs for these two plants, as provided by this source, were $95,000 a year. Extrapolating from this cost figure to the entire industry yields an estimate of $5.9 million a year. Thus, total annual costs are estimated to be $6.6 million. However, four qualifications must be attached to these extrapolated figures. First, the costs provided by the industry source include costs for both EPA and OSHA improvements. Hence, using these estimates to evaluate the costs associated with the OSHA lead standard only is inaccurate. Second, the industry representative did not indicate whether these expenditures were necessary to achieve compliance with other OSHA standards. If these expenditures do include compliance costs for all OSHA standards then again these figures would be grossly inflated measures of costs of compliance with the lead standard. Third, these two plants need not be representative of the industry; in this case these figures would not be an appropriate basis from which to extrapolate to the entire industry. Fourth, these expenditures may have yielded other benefits to the employer in addition to those attributed to the EPA and OSHA requirements. These jointly produced benefits would then offset some of the costs of compliance with the OSHA standard.

(i) *Industry Profile*

Solder manufacturers are classified in either SIC 3356, in which the product is made from virgin metal, or SIC 3341, in which it is produced from secondary metal. Between 1975 and 1979, total value of shipments of solder averaged $306.5 million per year. The end uses of solder are divided among building and construction (9,777 metric tons or 18 percent), metal cans and shipping containers (14,485 metric tons or 26 percent), electronic components and accessories (10,344 metric tons or 19 percent), other electrical machinery and equipment (2,711 metric tons or 5 percent) and motor vehicles and equipment (16,961 metric tons or 31.3 percent).

In all uses, with the possible exception of other electrical machinery and equipment, declines in the use of solder are expected. Competition with light-weight plastics in the container industry has stalled the anticipated growth of the solder market. Newly designed automobiles, which will be smaller and lighter in weight, may reduce use of solder in this application.

Furthermore, substitutes for solder in the automotive industry have been developed. DuPont first invented and began licensing the technology for adhesives known as toughened acrylics five years ago. This glue, which is capable of eating through oil and grease, eliminates the need for arduous surface cleaning of parts to be joined and is superior to solder in resisting environmental degradation caused by heat and moisture. The Japanese auto

industry already makes considerable use of adhesive chemistry to lighten the weight of cars (Ex. 476–26). Increasing miniaturization in the electronics industry will cause some contraction in demand for solder. Finally, declines in usage in construction are expected.

Production of solder from 1975 to 1979 closely tracked the general business cycle in the U.S. In 1976, the economy was in the initial stage of a recovery from the 1974–1975 recession. The demand for automobiles, machinery, and equipment was reviving. In addition, the building and construction industry was responding to a strengthened demand during this period. The production of solder paralleled this expansion. Output of solder increased from 73,987 short tons in 1975 to 105,504 short tons in 1978. Between 1977 and 1978, solder production expanded by approximately 27 percent. This rapid growth could be attributed to the upturn of the economy and perhaps to lags in the demand for durable goods during an expansion. The production surge could also be a consequence of the substantial increase in the average price of imports of solder. By the end of 1977, average solder prices for foreign producers had increased by $0.56 per pound; by contrast, average production costs for U.S. producers increased by only $0.07 per pound. One possible implication that could be drawn from these figures is that a change in relative prices between U.S. and foreign producers caused some shift in demand in favor of the U.S. industry.

The percent of lead in solder during 1975–1979 actually fell from 77.5 percent to 76.3 percent. The change in the percent of lead in solder was even more dramatic between 1977 and 1978. In 1977, the percent of lead in solder was 77.1 percent and, in 1978, it was 71.4 percent. Much of the increase in solder production appears to have been concentrated in non-lead solder.

The solder manufacturing industry can be characterized as a mature industry that has undergone few technological changes in the past 30 years. An estimated 20 percent of production equipment is less than 15 years old, while at least 60 percent of production equipment exceeds 30 years in age. Very few modern installations exist in the domestic market. This characteristic of the industry contributes significantly to the rising average cost of production.

There are an estimated 125 plants that are domestically producing solder. Twenty-seven firms, operating 30 plants and having total assets in excess of $1 million each, control 80 percent of the known solder production. Twelve companies, operating 13 plants and having total assets of at least $1 million each, and the remaining firms with fewer than $500,000 each, produce the remaining 20 percent of the solder. These smaller companies, whose raw material is predominantly scrap, generally market a limited product line of lower quality solder.

The small shops are dispersed across the U.S. This localization of operations results in some cost advantage to these producers. This advantage stems from both the proximity to scrap suppliers and the high costs of transporting solder. The latter is an especially important component of price, since solder is a heavy product.

Most of the large producers are located on the east coast. The maturity of the industry may inhibit these large producers from relocating to new areas. Hence, the small producers will probably continue to enjoy a substantial cost advantage over their larger competitors.

The cost of compliance with the standard may represent a higher proportion of total production cost for small producers than for large producers. However, in light of the immobility of large producers and the location advantages of many of the smaller plants, the competitive advantage of the small producers is not expected to be severely curtailed. This conclusion is supported by the fact that evidence of an increase in concentration in the industry, or a decline in the comparative advantage of small producers relative to large producers, has not been provided in the record.

However, foreign producers, who currently enjoy lower labor costs, may continue to increase their penetration of the domestic market, irrespective of an OSHA standard. In fact, some domestic firms have already begun some overseas operations in response to these cost advantages. Major foreign competitors are the United Kingdom and Canada, which account for 90 percent of the volume of imported solder. Other competitors include Spain, Denmark and Mexico. These latter countries present an attractive climate for business expansion and may prove to be dominant in the supply of solder for use in the electronics industry. In addition to this potential change in market concentration, foreign competition in higher grade solders, containing 37 percent to 40 percent lead, may increase since such operations typically have higher profit margins.

(j) *Conclusion: Economic Feasibility*

Annual compliance costs are not expected to exceed $6.6 million. (Shipments totalled $306.5 million averaged between 1974 and 1979.) Thus, OSHA estimates that annual compliance costs in the solder manufacturing industry will not exceed 2 percent of the total value of shipments produced in the industry.

Furthermore, the standard will not adversely affect the comparative advantage currently enjoyed by the smaller producers of solder. Hence, an increase in concentration in the industry is not expected. Foreign competitors may be encouraged to further infiltrate the domestic market. However, rising costs of energy and, consequently, of transportation will be constraining factors on foreign sales in the U.S. Evidence of this import constraint is provided by the rapid rise in the average price of imported solder between 1976 and 1977.

37. Soldering

(a) *Uses.* The application of solder, a lead-tin alloy, can be done mechanically or by hand. Operations performed by hand are usually "bench type" operations where employees are stationed individually and use soldering irons to melt solder to form a connection. Exposure occurs at the point of melting the solder (Ex. 79). Soldering in radiator shops seems to create lead exposure problems. During the repair of radiators, they are disassembled using oxygen acetylene torches. After the radiators are cleaned, they are reassembled using soldering wire. Lead fumes become airborne during the soldering and workers are also exposed to lead by handling the soldering wire and the lead contaminated radiators.

(b) *Controls Currently Used*

Local exhaust ventilation has been used to capture fumes in some cases but most stations have no ventilation. Each employee must clean his station and remove lead dross each day. Wetting down of dross is not done.

Soldering of small components or parts does not appear to cause a problem. Ventilation controls at most radiator repair shops were either non-existent or very poor. Ventilation at the Empire Radiator Company consisted of one large exhaust fan in the upper wall which moved air across the work areas at 50 linear feet per minute (Ex. 476–399). At George's Radiator Shop ventilation consisted of three roof-mounted exhaust fans with make-up air added by leaving doors open (Ex. 476–406).

(c) *Exposure Levels*

Numerous health hazard surveys have been done on hand soldering operations.

At the Monoghan Co. (Ex. 476–401), sampling was done at the hand soldering stations in the electronic assembly areas. Exposure levels were approximately 0.009 $\mu g/m^3$ of lead.

Western Electric did a study of its soldering operations and found that breathing zone samples indicated that exposures were less than 3 $\mu g/m^3$ of lead, typical of hand soldering operations. The average number of work years for employees of these operations was 16, and blood lead levels, when compared to those of a group of non-solder exposed office workers were also low. The author concluded that soldering does not present a health hazard associated with soldering does not exist (Ex. 3 (9)).

Similar surveys were done on the Hospital Medical Corporation (Ex. 476–400) and the Westinghouse Electric Corp. (Ex. 476–404). Most lead levels were non-detectable, except for one sample of 18 $\mu g/m^3$.

In some processes, automatic soldering irons may be used. Exposure levels were below the 30 $\mu g/m^3$ limit in this operation also (Ex. 476–405).

A survey at the Rock Mountain Radiator Shop found lead levels as low as 0.4 $\mu g/m^3$ and as high as 210 $\mu g/m^3$ for radiator mechanics (Ex. 476–402). At Empire Radiation Co. lead levels averaged 60 $\mu g/m^3$ (Ex. 476–399). At George's Radiator similar levels of lead were found for the repairmen. Levels ranged from 20 to 100 $\mu g/m^3$. Most levels were above 50 $\mu g/m^3$ (Ex. 476–406). Aero Radiator's levels were in excess of 50 $\mu g/m^3$ (Ex. 476–395).

(d) *Additional Controls*

NIOSH made recommendations to several companies to add local exhaust ventilation and increase general ventilation at soldering areas. Recommended controls include movable local exhaust ventilation installed at each repairman's station to capture lead fumes and acid mists. Companies were also advised to improve housekeeping. This would aid in removing dust from old solder areas, thereby reducing the amount of lead introduced as a secondary source of emission. Wet mopping and the use of water sprays to suppress lead dusts were also recommended.

(e) *Conclusion: Technological Feasibility*

Soldering operations, except for soldering of radiators, are in compliance with the 50 $\mu g/m^3$ standard. The control technology consists of simple exhaust ventilation and housekeeping. In radiator soldering, the data indicate that compliance with the 50 $\mu g/m^3$ standard has not been achieved. Soldering in these operations is done with virtually no use of ventilation equipment, even though portable units are readily available and inexpensive. Housekeeping also is virtually nonexistent in these small firms. NIOSH has recommended that implementation of ventilation, housekeeping also is virtually nonexistent in these small firms. NIOSH has recommended that implementation of ventilation, housekeeping, equipment, and wet suppression will enable radiator soldering operations to achieve compliance with a 50 $\mu g/m^3$ PEL.

(e) *Economic Feasibility*

The cost of compliance will be negligible and may consist of costs for portable ventilation systems; however, the less costly alternatives of housekeeping and worker rotation may suffice to reduce levels to the 50 $\mu g/m^3$ PEL in radiator soldering. The economic impact of the lead regulation on this industry is assumed to be negligible.

38. Spray Painting

(a) *Uses*

Spray painting is performed in two general situations: (1) Manufacturing processes where products are conveyed to a station and spray painted, and then conveyed forward for further processing, or (2) construction or repair painting requiring that the paint application workers and systems move to the location needing the coating (Ex. 228). Painting is usually done by spraying because of the excellent finish that can be obtained and the speed at which the coating materials can be applied (Ex. 476–412, p. 14).

(b) *Process Description and Exposure Areas*

There are four basic work environments in which employees may be exposed to lead. Manual spray booths require that the operator remain outside the enclosure and use various types of pressurized guns to apply the paint. Automatic spray painting booths require that the pressurized spray gun be automatically operated. Manual spray painting rooms are usually much larger than booths and may be either totally enclosed or open on one side. The objects to be painted are usually large and must be positioned in manual spray rooms, or automatically conveyed in. Open spraying consists of those paint applications undertaken outside locally ventilated spray booths or rooms. (Id.)

In any of these methods, the spray may be generated by compressed air, by hydraulic pressure, or by electrostatic forces (Id.). Compressed air spraying is the most widely used because of its versatility, low cost, and because it creates a high quality finish. In this method, compressed air provides the energy to atomize the finish. The atomization is produced by an air nozzle. Two types of nozzles are used: external mix and internal mix nozzles. In the external mix nozzle, the coating and the compressed air exit from separate orifices and are mixed outside the nozzle. The air jet atomizes and shapes the spray fan. Internal mix nozzles combine the compressed air and finishing materials in a chamber inside the nozzle. The atomized mixture is shaped by the geometry of the chamber opening. (Id.)

Airless spray equipment atomizes paint by forcing it through a very small orifice at a very high pressure. The airless spray gun simply consists of a device to hold the orifice and a value for shutting off the flow. The size and shape of the nozzle determine the volume of material sprayed and the geometry of the spray pattern. The hydraulic pressure necessary for atomization is provided by a high pressure pump that is operated by compressed air or an electric motor. (Id.)

In electrostatic spraying, an electrical charge is applied to the atomized coating particles, either by the creation of an ionized zone within the spray cone area, or by imparting a charge to the fluid stream prior to its release from the spray gun head. The charged, atomized paint particles are attracted to the conductive object being finished by the electrostatic field between the paint and the object. Atomization can be achieved by the use of air-atomizing or airless-type equipment, or solely by the use of electrostatic means. In this last method, the coating material is introduced into the center of a rapidly spinning disk or bell, which is highly charged. As the coating reaches the edge of the disk or bell, the repulsive forces of the like charges cause the coating to atomize. (Id.)

(c) *Controls Currently Used*

The use of airless atomization, heated paint, and electrostatic attraction in place of conventional, compressed air spray equipment can significantly reduce the amount of stray mist or fog produced. Compressed air spraying atomizes liquid paint by directing a high velocity air jet at the paint stream as it exits from a nozzle. The flow of air conveys the finely atomized droplets to the object being painted. This stream of air is deflected when it strikes the object. Paint particles of sufficient mass are not deflected and deposit

themselves on the object. Additional paint mist is lost when the spray pattern does not completely contact the object. Total paint losses of 50 percent are not uncommon. (Id.)

On the other hand, in airless spraying, the paint is atomized by forcing it through a small orifice under very high pressure. This method produces less fog than compressed air spraying because not as many fine droplets are produced, and thus the "bounce-back" phenomenon is largely reduced because the paint droplets are conveyed to the object being painted by their own momentum rather than by a stream of air. Other advantages of airless or high pressure spraying include higher capacity, compatibility with high-solids coating, more adequate coverage of awkward shapes, and negligible stray mist. Some disadvantages include relatively high cost, limited pattern and flow adjustment, and difficulties in overlapping. (Id.)

In electrostatic spraying, the paint can be atomized with compressed air, by hydraulic pressure as in airless spraying, or solely by electrostatic forces. The chief advantage of electrostatic spraying is the improved working environment and the paint economy that is achieved. Electrostatic systems usually permit use of substantially less exhaust and make-up air than conventional compressed air spraying for the same painted surface area. This technique also provides significant wrap around, coats sharp edges, and can be highly automated. However, null points in the electrostatic field (caused by recesses or object interiors) may not be coated. (Id)

Isolation can be achieved by the use of a physical barrier, or by the separation of the worker from the hazard by time or space.

Automation of the paint application process is another means of isolating the worker from the hazard. There are two fundamentally different methods of automating spray finishing operations. The first method involves mounting the spray guns in fixed positions or on a reciprocating assembly. The product items are painted as they pass by the assembly on a conveyor. The parts may be rotated as they are painted. This type of automation is designed and built for the requirements of a limited product line, where the size and shape of the objects finished are easily definable. Manual paint sprayers are often required for touch-up. The second method of automation involves the use of programmed robots. These machines can accommodate production runs of various sizes and shapes. Since they can duplicate virtually all of the movements of a manual spray painter, the use of robots allows for the removal of workers from potentially hazardous areas or unhealthful working conditions. (Id.)

Ventilation systems can be either local or general in nature. A general ventilation system supplies and exhausts large volumes of air in an attempt to dilute air contaminants. General ventilation can successfully control the buildup of explosive vapors in enclosed spaces. (Id.)

The practice of placing a fan in a manhole, doorway, or window is not satisfactory to reduce paint mist because the air is circulated only at the opening; the fan does not move or dilute the air in other portions of the enclosed area. Munger recommends that clean air be drawn into the enclosed space from an opening at the top by exhausting air from the lowest portion. (Id.)

Reichenbach describes a similar procedure for ventilating the spray painting of ship holds and tanks and other confined spaces and recommends that painters in enclosed areas should wear supplied-air respirators. The fan capacity required for dilution ventilation can be calculated from the lower explosive limits for the solvents employed and the paint application rate, using the formulas in *Industrial Ventilation: A Manual of Recommended Practice.* (Id.)

Excessive quantities of air need to be handled to protect the breathing zone of a spray finisher solely by the use of general ventilation. Hence, indoor spray finishing operations are usually controlled by ventilated spray booths. They function by directing relatively uncontaminated air past the worker towards the process, and into a collection point or exhaust hood. The source of the uncontaminated air may be a tempered fresh air supply or simply general workroom air. (Id.)

For practical purposes, spray booths can be classified into two basic designs based on the direction of air flow. Booths with a horizontal air flow are termed "sidedraft booths." These booths take advantage of the momentum of the spray mist and can successfully be used when painting small- to medium-sized articles. With larger articles, it may not be possible to maintain adequate air flow on all sides of the object being painted, and rotating the workpiece may not be practical. In these situations, a downdraft spray booth permits greater protection, while allowing more freedom of movement for the painter. Both sidedraft and downdraft booths will vary in size, in the degree of enclosure, in the method of air makeup, in air velocity, and in overspray control. (Id.)

Spray booths range in size from small bench-type models that are designed for spraying small objects to huge chambers that are capable of holding a large airplane. The basic consideration in determining the size of a spray paint booth is the size of the object being painted; adequate space around the top and sides of the object are needed to permit the painter easy access to these areas. The booth should be deep enough to allow the operator to work inside. If the object is transported by a conveyor, the booth must be sufficiently long to permit coating within the time the object remains inside the confines of the booth at the maximum line speed. (Id.)

Both sidedraft and downdraft booths are available in open or enclosed versions. Overspray is easier to control in a closed booth; random room air currents may upset the flow pattern designed for an open booth. In addition, an open booth is more costly to operate than an enclosed booth, because a larger volume of air is necessary in order to achieve a given air velocity at the operator's location. (Id.)

The air exhausted from the spray booth must be replaced in order to achieve optimum plant environmental control. Whether this air is supplied directly to the spray booth or to the general workroom is largely a function of how dusty the plant air is. Spray booths may be equipped with filter doors or fresh air inlet plenums to prevent plant dust from settling on freshly painted surfaces. Air should enter the booth at low velocity (200 fpm or less), and in the same direction as it is being exhausted to avoid unnecessary turbulence. Fresh air inlet plenums should be equipped with baffles or other positive means of air distribution. (Id.)

The air cleaning section of the spray booth not only removes paint mist from the exhaust air, but acts as a means of air distribution within the booth. An arrangement of metal baffles is the simplest form of air cleaner. Specific design criteria for baffle-type booths are listed in *Industrial Ventilation: A Manual of Recommended Practice.* The baffle-type booth provides a constant flow of air. Mist removal and clean-up difficulties limit its use to low production applications. Dry filter booths combine low cost with high efficiency paint mist removal, but have the disadvantage of a variable air flow. The air flow is at a maximum when the filters are clean, but continuously decreases to a point where the filters require replacement. Like baffle-type booths, the dry filter booth is best suited for low production operations. Water wash booths incorporate various

combinations of water curtains and sprays to scrub the paint mist from the exhaust air. They have the advantage of constant air flow, inherent fire protection, and high mist removal efficiency, but at a greater cost than dry-type booths. Maintenance is necessary to retain the high rate of mist removal. Cost of maintenance may equal or exceed that of the dry-type booths. (Id.)

Inadequate training and supervision in the techniques of spray finishing can result in a poor work environment as well as a faulty finish and a waste of paint. Because spray booths function by directing clean air past the worker towards the process, the operator must not position himself between the object being painted and the point of exhaust. (Id.)

When four sides of an object are sprayed in a sidedraft booth, all four sides can be painted without the operator being covered with his own overspray by incorporating a turnable. The painter's breathing zone can be removed from the area of active mist generation if an extension or pole gun is used. Airless spray equipment is useful for such cases because of its inherent low mist generation and its superior coverage of deep recesses. In a tall object in a downdraft booth, stepladders, platforms, or manlifts can be employed to avoid exposure to the spray backwash. (Id.)

(d) *Specific Applications*

(i) *Automotive Manufacture.* Automobile manufacturers utilize a booth which is designed with downdraft supplied at 1600–2000 cfm per linear foot of booth. An equal exhaust volume is provided. The supply air provided overhead is tempered, filtered and directed downward over the product, which moves through the booth at a rate of approximately 70 jobs per hour and is exhausted through a grating in the floor and scrubbed in the back section of the booth. Velocities of approximately 200–300 feet per minute exist on the skin of the product being painted. This type of ventilation system represents the current "state of the art" technology. Individual plants may have slight variations in the design; however, the basic control system has remained essentially the same in motor vehicle assembly plants over the past 30–40 years. (Ex. 476–411). Air-supplied respirators are also used.

(ii) *Automotive Refinishing.* The automobile refinishing industry is considered separately from the automobile producing industry because of the nature of the refinishing production process. Many of these shops can be characterized as small, poorly ventilated, and having few or no controls. Only modern, larger automobile paint shops use auto refinishing booths.

The surface that is to be painted is normally cleaned, sealed, and sanded before paint application. These operations are usually performed by hand. Coatings are normally applied by hand-held air atomizing equipment. The coating material is generally cured by air drying.

Alkyd enamels are used for total body repainting because, unlike the case with lacquer finishes, no hand rubbing is needed to gain a high gloss surface film. The rapid cure of lacquer finishes permits blending of spot repairs into undamaged areas, which makes this type of finish more popular in body repair shops. The air drying alkyds are more typically applied in spray booths because of their suceptibility to contamination by airborne dust. (Ex. 476–412)

(iii) *Wood Furniture.* Before coating, the wood surface is prepared and pretreated in several steps, such as sealing, glazing, sanding, and polishing. These techniques are used for both natural wood and unfinished exterior or interior grades of plywood. Some materials may require solvent wiping and sanding. Coating materials are generally applied in several layers, which require intervening steps like sanding, rubbing, daubing, and polishing. These procedures are performed by hand and, therefore, the workers are exposed not only to the liquid coating material itself, but to the wood dust that may also contain the coating material. Coating materials are predominately applied by hand. Sometimes electrostatic spray techniques are used; they require the use of a conductive primer (applied by dipping), or controlled moisture content. (Id.)

(iv) *Metal Furniture.* The metal surface to be coated is cleaned and pretreated. Most plants use automated three-stage or five-stage pretreatment processes, incorporating hot water rinses, phosphoric acid baths, and chromic acid rinses. (Id.)

Alkyd baking enamels are most used. Various acrylics (both thermosetting and emulsion), high-solid polyesters, and powders are also used in lesser quantities. Electrostatic spray guns are used in both automatic and hand-held operations. Both liquid paint and powder coating lines are highly automated, but hand-held conventional and airless spray guns are still used in reinforcement operations. It is common for defective coating to be manually reworked. (Id.)

(v) *Major Appliances.* Before coating, the metal surfaces are prepared in order to remove rust, oil and other unwanted material. Treatment generally involves eight automated stage, consisting of alkali cleaning, double water rinsing, and a zinc-phosphate bath, followed by water, chromic acid, and deionized water rinsing.

Primers are generally applied by electrocoating in a water bath that contains 8 to 10 percent paint material. As alternatives to this method, dip and flow coating techniques can be utilized. Some primers are still applied by manual or automatic spraying. (Id.)

Top coating is usually accomplished by electrostatic spraying. Both automatic and hand-held electrostatic guns are used. The automatic equipment is typically an electrostatic bell or disk. Manual spray equipment is used primarily for reinforcement on less accessible surfaces and touch-up operations. (Id.)

(vi) *Transportation (Non-automotive).* Because of the size and shapes of these products, both primers and topcoats are generally applied by hand spray equipment. Railroad cars are painted primarily for protection against corrosion; aesthetic considerations are secondary. Application techniques (primarily airless) are therefore geared to providing a high film build in a minimum amount of time. Truck finishes are also applied by hand-held spray guns and cured by baking or air drying. Alkyd-type finishes predominate in this industry. (Id.)

In the aircraft industry two component epoxy and urethanes predominate because of their ability to produce a baked quality finish without baking. Airless spray equipment is generally not accepted because of aesthetics. (Id.)

(vii) *Machinery and Equipment.* Coating application is generally by airless or electrostatic-airless spray technology; however, dipping and flow coating are also used. Despite some automation, most top coating is done by hand-spray equipment. As a curing method, air-dry and force-dry techniques are used. (Id.)

(viii) *Spray Painting in Other Industries.* Spray painting is done in many other industries, primarily those in which repair and refurbishing are performed. The shipbuilding industry is discussed under that industry category. Wherever spray painting is done the controls and method of application discussed in the general section apply. (Id.)

(e) *Exposure Levels*

(i) *General Methods For Determining Exposure Resulting From Paints.* Paint mist refers to the nonvolatile component of the coating aerosol. Its concentration in the breathing zone of spray painters can be determined gravimetrically as an index of overspray control. NIOSH reports concentrations for continuous painting operations as 8-hour time-weighted averages; results from intermittent painting operations are reported for the duration of the specific painting operations. (Id.)

The level of airborne paint mist is a more reliable indicator of the degree of control in manual spray finishing than the concentration of solvent vapors. Solvent concentrations were well below the recommended maximum even when paint mist levels exceeded the maximum concentration permitted for nuisance dusts. In no case was the reverse true. If the paint composition is known, the concentration of paint mist can also be used as a guide in estimating the potential exposure to specific nonvolatile paint components. For example, if the concentration of paint mist is 5 $\mu g/m^3$, and lead represents 1 percent by weight of the paint solids, then the airborne concentration of lead could be estimated at 50 $\mu g/m^3$. (Id.)

Continuous operations include both manual and automatic application processes where the painter remains in one location as the workpiece passes by on a conveyor. The concentration of total paint mist for the majority of continuous spray finishing operations did not exceed 5 $\mu g/m^3$, provided that spray booth ventilation rates met minimum OSHA requirements (specified in 29 CFR 1910.94) and good spray painting practices were observed. The continuous painting operations that exceeded this concentration involved either the spraying of internal cavities (case study 6) or faulty ventilation and work practices (case study 3). With the corrections suggested in these case studies, paint mist levels could be controlled to below 5 $\mu g/m^3$, and would achieve compliance with the lead standard (Id.).

Intermittent operations are non-conveyorized processes where a relatively large workpiece is positioned in a booth; after finishing operations are completed by a mobile painter, the workpiece is removed and replaced by the next unit. The concentrations of paint mist reported for intermittent painting operations range from 2.0 to 43.3 $\mu g/m^3$. Differences were due to the relative success in maintaining proper air flow orientation as the painter changes position and the degree of sophistication of the paint application equipment. The paint mist concentration for the majority of these operations could be controlled to below 10 $\mu g/m^3$ if ventilation and/or application techniques were improved. An exception would be the finishing of relatively enclosed spaces, such as vehicle interiors. (Id.)

Specific data have been compiled which indicate the levels of lead which may be in some paint mists. The amount of lead, by weight, in the dried film of paints using these pigments may reach 15 percent. In no case where the lead content approached this figure was the 50 $\mu g/m^3$ limit for lead met. Operations using alkyd resin enamels employing lead only as soaps for paint drying did not exceed the 50 $\mu g/m^3$ standard when minimum ventilation requirements were met. (Id.)

Based on the maximum paint mist concentration of 5 $\mu g/m^3$ found in well-controlled finishing operations, up to 1 percent lead could be tolerated in the dried film and the OSHA standard for airborne lead would still be met. This is not a practical concentration for the pigments typically used. However, where a variety of colors are painted, the "average" paint for the workshift may be well below this figure and the subsequent average exposure for the shift may be below 50 $\mu g/m^3$. (Id.)

The lead pigments provide durability to paint finishes and thus find greatest use on transportation and heavy equipment. Of the operations in these categories, the heavy equipment finishing operation comes closest to meeting the 50 $\mu g/m^3$ standard, with an 8-hour time-weighted average concentration of about 100 $\mu g/m^3$ during painting of equipment exteriors. (Id.)

(ii) *Specific Exposure Data.* Some data specific to lead exposures have been compiled as a result of OSHA compliance activities. Case No. PIT–3 involves spray painting in the automobile industry (Ex. 476–16). Automobiles are moved by conveyor system, electrically charged with the opposite charge of the paints being used, and then sprayed on the cars as they leave the booth. Exposures were 32.8 $\mu g/m^3$. The company indicated that in its previous sampling, levels were generally around 30 $\mu g/m^3$. All workers are exposed below 50 $\mu g/m^3$ of lead, although the company requires that MSA comfort II respirators are worn. OSHA Case No. TD–5 involved spray painting of plastic parts for automobiles. Levels measured were 157 $\mu g/m^3$, 293 $\mu g/m^3$ and 132 $\mu g/m^3$ before the company upgraded the spray paint facility. After upgrading, the levels ranged from 0 to .087 $\mu g/m^3$. Respirators also were being used. Most of the upgrading consisted of increasing the ventilation, improving or replacing filters, installation of new fans, and performing needed maintenance. Two spray booths were replaced by ones which utilize a water-wash entrapment technique to collect contaminants.

OSHA case number WB–2 involves painting of large industrial mufflers. Painting was done in an enormous spray booth. Levels of exposure were measured at 14 $\mu g/m^3$ and 24 $\mu g/m^3$. Compliance was achieved solely through the use of exhaust ventilation of the booth. However, although the company was in compliance, company policy requires that respirators be worn at all times. The company also stated that its implementation of this ventilation system in the spray booth resulted in an improved spray finish on its products.

(f) *Additional Controls*

Spray booths that meet OSHA design requirements are capable of controlling total paint mist and organic solvent vapors to within recommended maximums. Spray booths are partially effective in the control of toxic metals and other dangerous materials, insofar as they contain the hazard within the booth.

Several factors not addressed by the OSHA standard have a significant bearing on the effectiveness of a booth in protecting the health of the painter.

The distribution of air within the spray booth is at least as significant as the average air velocity. Supply and exhaust air chambers are often built without regard to accepted criteria for plenum design (Ex. 476–412). Particular problems occur where fresh air is supplied at a velocity that is too great, introduced in a direction other than the direction of exhaust, or introduced between the painter and the point of exhaust.

In order for protection to be maintained, the spray painter must not position himself between the object being painted and the point of exhaust. Where all sides of an object require painting, the operator can maintain proper position if the object is rotated, or if a downdraft booth is employed. (Ex. 476–12)

The air velocities recommended in the standard are useful guides in determining air volume requirements, but may be either too restrictive or inadequate, depending on the toxicity of the paint material, and the method and rate of paint application. Higher air flow rates should be considered for highly toxic materials in order to minimize

exposure, although even at these higher rates control may not be complete.

In spray booths equipped with dry filters, airflow must be monitored because it decreases with the build-up of overspray on the filters. Manometers are frequently used to monitor the pressure loss across the filter media. Filters are changed when resistance reaches a predetermined level. Too often these manometers are broken, low on fluid, mounted where they cannot be seen, or no change point has been determined. A more positive means to ensure that the filters are changed is the use of a pressure switch and interlock that prohibits activation of the spray gun when the filter is fully loaded.

The working environment of the spray finisher can be improved by the use of paint application methods that minimize the energy expended in the atomization process. Electrostatic discs and bells atomize paint primarily by electrostatic forces and produce very little stray paint mist. An electrostatic bell system was evaluated in case study 6 (Id.). With minimal air movement in the automated spray room (for the purpose of diluting the evaporating solvents), the mean concentration of paint mist was only 0.1 $\mu g/m^3$.

When either air-atomized or airless electrostatic methods are used with heated paint, they can produce low levels of overspray, even when relatively large and complex shapes are painted. Paint mist concentrations of 2.0 $\mu g/m^3$ were measured when these methods were used to finish the exteriors of heavy equipment. Airless techniques appear to be particularly useful in painting recesses or internal cavities. Not only do they provide a cleaner work environment, but they apply paint faster and cover inside corners better. In a similar operation using conventional spray guns, paint mist concentrations were over 10 times as high. This higher level of paint mist was found despite the fact that the total number of units requiring internal painting was significantly less.

There is some reluctance to use high technology application equipment, especially where appearance is a critical factor. This is due either to the greater versatility of conventional air-atomized spray equipment or to some inherent cost limitations with the more sophisticated techniques. However, in many operations, ventilation is impractical, and efficient application techniques are the only logical choice.

Respiratory protection may be required in those spray finishing operations that employ significant quantities of highly toxic materials, such as lead, chromium, or reactive compounds (isocyanates and epoxy curing agents). It is also necessary for protection against paint mist and organic solvents in painting enclosed spaces and other areas where ventilation is compromised. The lead standard contains respirator selection guidelines.

(g) *Conclusion: Technological Feasibility*

OSHA has determined that substitution of non-lead based paints is one feasible alternative for the industry. Lead and other toxic metal pigments should be eliminated where possible.

Spray booths can be used which maximize the enclosure of the painting operation. The choice of a downdraft or sidedraft booth depends largely on the configuration of the object that is to be painted. Air flow must be in a direction which will carry contaminated air away from the breathing zone of the painter. If necessary, work platforms, product rotators, or other means must be provided in order that the proper orientation of air flow can be maintained.

Application equipment is available which minimizes the energy expended in the atomization process, thus reducing the amount of stray mist that is generated. The recommendations of the paint formulator concerning the method of application and the atomization parameters should be strictly followed.

Several commenters discussed the problems associated with applying lead paint to surfaces. Billings noted problems encountered with "bounce back" and suggested that application be automated or be done by brush or roller in these instances where possible. However, it appears that in some cases, depending on the number of spray painters, the size of the object, and numerous other environmental factors, the PEL in spray painting can be achieved through the use of currently acceptable control technologies and without reliance on a respirator, as OSHA's compliance activities demonstrate (Ex. 476–16). Even in industries such as the automobile industry which were previously felt to be at the state-of-the-art, new techniques are being used which are achieving compliance with 50 $\mu g/m^3$. In most of these situations, even when compliance is being achieved, employers are requiring workers to wear respirators as an added safety measure, but not air-supplied respirators. Certain operations, such as painting deep recesses or confined spaces cannot be effectively controlled by ventilation. Airless application methods can be used for these operations. However, OSHA recognizes that in some of these cases, due to the conditions of application, engineering controls alone will not be adequate to achieve the PEL and respirators may be necessary in addition to currently available controls. However, the industry generally appears to have the control technology necessary to achieve compliance with 50 $\mu g/m^3$. In addition, employers may rotate workers, thereby reducing levels to an even lower extent.

39. Steel Manufacture

(a) *Primary Steel Production*

(i) *Process Description and Exposure Areas.* The basic oxygen steelmaking process uses as its principal raw material molten pig iron from a blast furnace. The other source of metal is scrap. Scrap is processed similar to the methods used in scrap processing and collection; hydraulic scrap cutters may be used. Only the processing of lead scrap poses a problem. Lime, rather than limestone, is the fluxing agent. As the name implies, heat is provided by the use of oxygen.

The basic oxygen furnace (BOF) is a steel shell lined with refractory materials which is supported on horizontal trunnions so that it can be tilted. Usually these furnaces are installed in pairs so that while one is making steel the other can be filled with raw materials.

The first step for making a heat of steel in a BOF is to tilt the furnace and charge it by larry car with steel scrap. Immediately following the scrap charge, an overhead crane presents a ladle of molten iron from a blast furnace or from a holding device called a mixer.

As soon as the furnace is charged, and set uprighted the oxygen lance is lowered and the oxygen is turned on. In a very short time the heat increases and lime, fluorspar (and sometimes scale) are added via a retractable chute to the metallic charge. From that point on, the blowing procedure is uninterrupted. Oxygen combines with carbon and other unwanted elements eliminating those impurities from the molten charge and converting it to steel. The lime and fluorspar help to carry off the impurities as a flowing layer of slag on top of the metal which is now entirely molten.

When the batch of steel is complete, the oxygen is shut off, the clamps on the lance are released, and the lance is retracted through the hood. The furnace is then tilted in the direction opposite to that in which it is charged, and molten steel flows through a tap hole that is located near the top of the furnace. A ladle receives the molten steel. The slag, which floats on top of the steel, stays

above the taphole by the progressive tilt of the furnace.

Electric arc furnaces are used for producing alloy, stainless, tool and other specialty steels. More recently operators have also learned to make larger heats of carbon steels in these furnaces. Therefore, the electric steel making process is becoming a high-tonnage producer.

Electric arc furnaces are shallow steel cylinders lined with refractory brick. They are charged in one operation from buckets or other containers brought in by overhead cranes. The roof of an electric furnace is pierced so that three carbon or graphite electrodes can be lowered into the furnace. These electrodes provide the current arcs from one electrode to the metallic charge and then from the charge to the next electrode, causing intense heat.

In each process the end product is molten steel in a ladle. In this form the steel is useless. It must be solidified into forms that are suitable for further shaping by the steel industry's rolling mills and other finishing facilities. Molten steel direct from furnaces is rarely cast into finished products.

The traditional method of handling raw steel from a furnace it to "teem" it from the ladle into ingot molds of various sizes and shapes. Alloys are added to the ladle of steel often by chutes extended from above the teeming floor. However, injection may be by gun.

The ladle into which the molten steel from the furnace has been tapped is usually mounted on a railcar which is moved to a position where an overhead crane can lift it. The overhead crane lifts the ladle of molten steel to a position where it can be poured into ingot molds, (or into a strand or continuous casting machine) for solidification.

The size and shape of an ingot is determined by the size of the roughing mill designed to handle it. Roughing mills produce semifinished forms of steel such as blooms, which are roughly square in cross section; slabs, which are rectangular in cross section; and billets which are smaller than blooms in cross section and usually much longer.

A more modern technique than the traditional ingot procedure is the use of a strand casting machine to receive molten steel and produce such semifinished solid products as slabs or billets. In so doing, they bypass ingot teeming, stripping, soaking and rolling.

There are several kinds of strand casting machines, but the principles of their operation are similar. Molten steel from a furnace is carried in a ladle to the top of the strand caster. A stopper in the bottom of the furnace ladle is lifted so that molten metal drops into the tundish (which provides an even pool of molten metal to be fed into the casting machine), which also acts as a reservoir allowing an empty ladle to be removed and a full ladle to be positioned and to start pouring without interrupting the flow of metal to the casting machine. In some strand casters the descending column of steel is cut to desired lengths while still in a vertical position. This is done by traveling cutting torches.

Molten metal is often received from conventional steelmaking furnaces and refined to remove impurities quickly before the steel solidifies. Among the vessels and other facilities used in this operation are those for vacuum stream degassing, vacuum/ladle degassing, argon-oxygen decarburization and vacuum/oxygen decarburization. Electron beam processing generally begins with carefully selected and prepared cold raw materials. However, there is nothing to prevent the electron beam facilities from being charged with molten steel from a primary smelter. These remelting processes are used mostly in the production of sophisticated alloys and specialty steels.

Sources of lead exposure in steel making include leaded heats (i.e., additions of lead either to the blast furnace as an additive to the molten iron or to the ingot molds at the time that the steel from the furnace is poured into the molds). Lead is usually added to ingot molds as lead shot in order to provide the finished steel with useful properties for machining operations (477–5G). More specifically lead exposures occur at the pouring stand of the "Pit" section where leaded steel is produced. (476–442). From the BOF, a steel ladle is transported via a crane to a stand where ingot molds are present. During each "teeming" (adding molten steel to ingots molds) 50 pounds of lead shot are added to each ingot when it is one-third to two-thirds full. Lead is added to the steel stream with a "lead" gun comprised of a rubber hose and long steel pipe with a nozzle. Workers must operate the guns, throw toppings on each ingot to keep the molds from losing their heat, and must take a steel sample.

(ii) *Controls Currently Used.* Materials handling is often done mechanically or pneumatically. Scrap is processed by using hydraulic cutters to reduce its size prior to charging furnaces (Ex. 500, p. 5). Local exhaust ventilation of furnace areas, ladles carrying molten melts, and casting areas is also used.

Companies may (Ex. 476) use a pneumatically operated "lead gun" to inject lead shot into the molten metal stream from the teeming ladle. A traveling ventilation system is attached to the teeming ladle. A hood serves the ingot mold being filled, and is connected to a 20-foot flexible duct which exhausts through a plenum to a baghouse. The traveling exhaust system is disconnected and reconnected during teeming so that it can be moved along with the teeming ladle. The duct (which ventilates the exhaust hood) is moved manually at its point of connection into the plenum.

At the molding operations, the ventilation consists of built-in local exhaust systems. Adjacent to each ingot mold there are lateral exhaust hoods. Hoods are opened in a sequence to reduce total ventilation air quantity. Lead captured is conveyed to fabric filters, shaken into polyethylene lined bags.

An OSHA inspection identified as case #PIT–2 reported that 3–4 hours per day, while the molten steel is being poured (Ex. 476–460), once or twice per shift. Also, this company invented a sliding ventilation system with telescoping duct work. The system was also connected to a baghouse which emptied the contaminant collected into a drum for disposal. The system is used exclusively for leaded steel pours. In this particular operation the crane operator was not in an enclosed cab and his exposures were in excess of 200 $\mu g/m^3$; the company is installing a positive pressure, filtered air cab on the crane to achieve compliance with 50 $\mu g/m^3$. This company also rotated workers' shifts (i.e. one crew works one month with lead and spends two months removed from lead).

(iii) *Exposure Levels.* Exposure data collected at teeming operations indicate that at the CFI Steel (Ex. 476–457) plant lead breathing zone samples ranged from 1 $\mu g/m^3$–79 $\mu g/m^3$ with 22 percent of the samples exceeding the 50 $\mu g/m^3$ standard. Other comparable data has been recorded which ranges from 10 $\mu g/m^3$–190 $\mu g/m^3$ with the mean value near 50 $\mu g/m^3$ (Ex. 476–456).

Data collected during teeming indicates that levels range from 20 $\mu g/m^3$ to 2600 $\mu g/m^3$ with the majority of data exceeding 200 $\mu g/m^3$ (Id.). OSHA inspection number PIT–2 found levels at one teeming operation of 200 $\mu g/m^3$ for the ladle preparer, 60 $\mu g/m^3$ and 70 $\mu g/m^3$ for helpers, 40 and 50 $\mu g/m^3$ for pitmen, 60 $\mu g/m^3$ for pourer's and 30 $\mu g/m^3$ for the pourer's helper and 230 $\mu g/m^3$ for the craneman (Ex. 476–460). Controls which were in place were designed to achieve compliance with a 200 $\mu g/m^3$ standard.

(iv) *Additional Controls.* The controls exist to achieve compliance in steel manufacture, more specifically in alloying, but some employers may need to upgrade existing equipment. In fact,

OSHA's recommendation in case #PIT–2 was that compliance in this operation with 50 $\mu g/m^3$ could be achieved by widening the flanges on the hood of the telescoping duct work and increasing the total ventilation system air volume flow rate.

Materials handling operations should include more local exhausting of emissions sources. Recommended controls also consist of improving the ventilation at the teeming operations. The local exhaust hoods used are only as wide as the molds. Flanges and side baffles should be used to increase the capture area. Crane operators can be placed inside enclosed cabs.

Good employee work practices can help minimize exposure. High lead concentrations are a result of workers heaving toppings into the molds instead of gently pushing to avoid splattering (Ex. 476–455). NIOSH HHE–CFI). Workers can be taught to position themselves in pouring operations, etc. in such a fashion as to minimize their lead exposure. In addition, employers may find it necessary to rotate workers on a more frequent basis than monthly to comply with 50 $\mu g/m^3$ standard.

(v) *Conclusion: Technological Feasibility.* The steel industry is presently undergoing a modernization program. To be consistent with the modernization program, OSHA recognizes the need to have control of lead exposures accomplished in conjunction with these modernization efforts. The extended compliance period of three years is consistent with these efforts and is provided despite the fact that existing controls can technologically control lead. Rather, OSHA believes lead control should not occur in a vacuum when a more cost-effective, long-term solution to a host of environmental problems can be accomplished within the framework of modernization. OSHA has concluded that compliance deadlines for the lead standard should parallel the timetable established for modernization by the Steel Tripartite Advisory Committee. The Committee envisions that modernization will be completed in 3 years; then, if retooling is not completed another two years will be provided. Accordingly, OSHA has provided a 3 year compliance deadline and may reconsider extending that period based on existing conditions at that time (Slip opinion, p. 162).

OSHA has also set an interim level of one year in which to achieve compliance with the 100 $\mu g/m^3$ level. This action is taken to assure that employers who do not plan to remodel their teeming facilities do not allow lead levels to remain unnecessarily high. Those employers who do plan to modernize their teeming facilities will be eligible to bypass the interim level. 29 CFR 1910.1025(e)(4). In the interim, these employers should maintain the effectiveness of existing systems, provide enhanced housekeeping, and rotate workers to maintain lead levels as close to the 50 $\mu g/m^3$ standard as possible.

(b) *Secondary Steel Manufacture*

(i) *Process Description and Exposure Area.* Scrap steel is received and cut using acetylene cutting to reduce the size of the scrap so that it will be suitable to feed into the furnace. Exposure to lead may occur where the scrap contains lead.

Electric induction furnaces are primarily used to remelt scrap. As the steel scrap melts, a pool of liquid metal is formed on the furnace bottom, but when the entire bath is molten, the stirring action of the inducing current moves all of the liquid steel with no dead spots.

There is little need for a slag during induction melting since the surface of the liquid metal exposed to air is small in relation to its volume.

After melting is complete, the operator makes necessary additions of alloys or deoxidizers to bring the steel to a specified chemical composition. When the analysis and temperature of a heat are completed the furnace is tilted and the molten metal runs out over the lip into a ladle or directly into a mold.

(ii) *Controls Currently Used.* Materials handling is done mechanically or pneumatically, with scrap either being processed on the site or purchased ready to use. Scrap processing in the steel industry is comparable to general scrap processing and requires sorting, chopping, and burning (cutting). Local exhaust ventilation at the ladles, molds, and other sources of emissions is also used. Generally, the ventilation controls are similar to those found in the primary steel processes.

(iii) *Exposure Levels.* Exposure data submitted by USWA (Ex. 483) indicates that lead levels in scrap processing are low. Out of 13 samples taken none were above 36 $\mu g/m^3$ and most were between 7–15 $\mu g/m^3$.

(iv) *Population Exposed.* The number of workers exposed in secondary steel operations is unknown. However, since the data indicate that lead levels in scrap processing may be low, OSHA estimates that only a small percentage of workers are exposed in excess of 50 $\mu g/m^3$.

(v) *Additional Controls.* None are required. Maintenance of existing controls and housekeeping should keep lead levels below 50 $\mu g/m^3$.

(vi) *Conclusion: Technological Feasibility.* In secondary steel manufacture it appears that 50 $\mu g/m^3$ can be met and in some operations is currently being met with existing technology. In those instances where levels are in excess of the PEL, upgraded ventilation systems coupled with worker rotation can be used to achieve compliance with 50 $\mu g/m^3$. In addition, improved housekeeping and maintenance of existing controls will permit compliance with 50 $\mu g/m^3$ in one year even in the more difficult situations.

(c) *Forming Steel Products*

(i) *Process Description and Exposure Area.*—(a) *Processes.* Forging may be defined as using compressive force in such a manner that the lines of metal-flow in a product put the greatest strength where it is needed. There are two major types of hot forgings—open-die and closed-die. In open-die forgings, large presses are used which squeeze the steel between two flat surfaces. Closed-die forging uses matching tool steel dies into which the shape of the desired finished product has been "carved." The steel is placed between the two dies which are hammered together. The hot metal inside the closed dies flows to fill both halves upon impact from a steam hammer. Forging presses may be driven hydraulically, although some exert pressure through mechanical devices.

Other operations which fall under the general category of forging include extrusion, upsetting and roll forging. All of these knead the original steel into a denser structure and bring it so close to its original finished shape that it requires minimal cutting with machine tools. Thus, very little metal is lost as scrap.

Steel may be rolled hot or cold. The cold rolling process hardens sheet steel so that it must be heated in an annealing furnace to make it more formable. The batch (or box) annealing furnace requires that coils of cold rolled sheets be stacked on a special base with huge covers that are cylindrical. Then a huge box-like annealing furnace is lowered over the covered stacks of cold reduced sheets and the temperature is increased to a specific level for the desired end product. The length of time that the sheets are heated at a given temperature, and the length of time allowed for them to cool is of extreme importance in meeting customer specifications. The heating and recooling of the cold, reduced sheets may take 5 or 6 days.

Alternatively, continuous annealing facilities may be used, depending upon the end product desired. Continuous annealing lines are imposing structures often longer than a city block and several stories high. The coils of cold rolled sheet are uncoiled and led up and down through towers in the annealer, and subjected to heat. The steel is "softened" in preparation for further processing.

If the desired end product is cold rolled sheet and the product will not be coated, the annealed cold rolled sheet will often be sent to a temper mill. The temper mill provides flatness and surface quality for many end products such as sheets for automoble bodies, or home appearance.

It is not at all uncommon to prepare steel slabs scheduled for rolling into high quality sheet and then strip these sheets by grinding or burning off surface imperfections on them with torches in a process called scarfing.

A Sendzimir mill rolls extremely thin-gage steel sheets. Most tin plate is produced by the electrolytic method.

There are three continuous tin plating processes in general use in the United States today; halogen, alkaline and acid. All three start with a product called black plate which is actually a form of cold rolled sheet that has been annealed, usually in a continuous annealing line.

Other products formed from steel are hot rolled or cold drawn bars, structural steel shapes, steel plates, clad plates, pipes, tubing, and wire. A discussion of pipe galvanizers and wire patenting is provided in separate sections.

Lead exposure only results when the steel being worked contains lead.

(ii) *Controls Currently Used.*

The initial operation in the forming of steel is the heating of metal ingots in soaking pits. These pits are charged and emptied by overhead cranes and are heated by gas. Potential contaminants from this operation include carbon monoxide from incomplete combustion of the gas, and dust from the slag that falls from the ingots and is removed from the bottom of the pits in the cinder tunnel. The soaking pitmen and bottom-makers are the most likely employees to be exposed to toxic dust when they clean and repair the pits. The crane operators who work above the soaking pits are in air conditioned crane cabs, so their exposure is expected to be low.

The hot ingots are moved by crane from the soaking pits to a transfer table which moves them to the rolling or roughing mill. The transfer table is operated from an air conditioned enclosure or "pulpit" and employees are exposed to very little dust or other contaminants. (Ex. 476–453).

The roughing mill is operated from an air conditioned pulpit and the ingot is passed back and forth between the rollers until it has been reduced to a billet or slab of desired dimensions. It is then sent to a scarfing operation, also controlled from an air conditioned pulpit, where the outer coating of impurities is removed with a combination of high pressure water and flame. The ends of the bloom, billet, or slab are then sheared off and the semi-finished shape is removed from the area. This shearing step is also controlled from an air conditioned enclosure.

While the first few passes of the ingot through the rollers creates some metal fumes and dust particles, these are generally of a large diameter and nonrespirable and the major source of toxic contamination is the scarfing. During a NIOSH investigation, a dense smoke was observed rising from the scarfer, especially during the scarfing of ingots identified as being from high sulfur heats. There is one overhead crane operator who works in this area in an open cab and his exposures can be quite high except that he does not spend his full work shift in the crane. There are also workers on the floor in the vicinity of the rolling mill and these employees are potentially exposed to many contaminants.

Other employees routinely stationed in this department are the scarfer repairmen who spend much of their time in a workroom partitioned off from the general mill area. They are exposed to the fumes and dust from the mill and also to metal dust created in grinding and cleaning operations they perform in their workroom.

(iii) *Exposure Levels.* Exposure levels averaged 10–20 $\mu g/m^3$ of lead except for one sample from a mill laborer which was 190 $\mu g/m^3$ (Ex. 476–452). Two years later lead levels were 17 $\mu g/m^3$ (Ex. 476–453). One sample in the study was as high as 35.4 $\mu g/m^3$. (Id.)

Exposure data collected at scarfing operations shows a great deal of variation; sometimes these jobs are below 50, sometimes they are not (CFI).

Lead exposure reductions in flame scarfing operations have been accomplished by staggering the workers. Conditioning may be done by grinding. In fact CFI suggests that flame scarfing is being replaced by grinding machines due in part to the fact that the cost of gas used in scarfing is prohibitive in certain locations. (Ex. 476, CFI)

(iv) *Additional Controls.* The controls needed for compliance when forming steel products consists of the use of existing technologies such as ventilation, isolation and enclosure. AISI (Ex. 500, p. 6) estimates that some companies which have not used these controls may have to isolate processes and install crane pulpits, although, AISI states that even with these engineering and administrative controls levels would not consistently be below 50 $\mu g/m^3$. AISI also maintains that ventilation of mill stands is not possible, because ventilation above the stands would be destroyed by cobbles (twisting masses of steel). Down draft ventilation in these instances could be used, although with some effort and keen awareness of engineering design, a local exhaust system for this operation could be devised. Grinding operations can be controlled by the use of local exhaust ventilation although AISI maintains that the use of air-supplied respirators is necessary to comply with 50 $\mu g/m^3$. Scarfing operations could be substituted with grinding, thereby reducing levels. However, while this may be an alternative, more traditional methods have been used in other burning operations to achieve compliance with 50 $\mu g/m^3$ (See Lead Burning section).

(v) *Conclusion: Technological Feasibility.* Although AISI maintains that it is not feasible to use existing technologies to achieve compliance with 50 $\mu g/m^3$ in steel product formation, the data suggests that compliance is achievable and existing technology need only be applied to the industry. Unlike the primary production of steel, this portion of the industry is not modernizing due to financial constraints. Easily installed, available technology can reduce lead to the PEL. Therefore, compliance with the standard is required within a one-year period. The exposure data indicates that some mills are complying. Scarfing operations (Ex. 476–455) in some cases are merely being controlled by staggering workers and the alternative of grinding is being reduced in some instances by the high costs of fuel needed to operate scarfing torches. Firms not in compliance in this industry need only try, and through the use of control strategies consisting of engineering controls, work practices, and worker rotation the 50 $\mu g/m^3$ standard can be met.

(d) *Steel Fabrication*

Sheets of steel are cut using an oxygen-acetylene cutting torch, then welded together to produce a finished product.

Lead exposure could result if the sheets being cut are lead steel. The NIOSH HHE (Ex. 476–456) done on the Grand Junction Steel Co. indicates that lead levels were nondetectable, however, excesses of iron oxide, etc.,

were found. Recommended controls include the use of local exhaust ventilation and/or electrostatic precipitators to minimize welding fumes. The same controls would reduce lead exposures if lead were present.

(e) *Economic Feasibility*

(i) *Cost of Compliance.* There are several potential sources of lead exposure in the steel industry. These include the production of leaded steel and terne metal (a lead-tin alloy), and the processes of annealing, patenting, grinding and scarfing steel products (USWA, Ex. 477–5).

The American Iron and Steel Institute states that compliance with the lead standard is "prohibitively costly" and estimates costs in the range of $500,000 to $1,000,000 per teeming facility for upgraded evacuation systems, and $3,500,000 per teeming facility when no evacuation systems are currently in place (Ex. 475–39(A)). No engineering or financial details were provided with these estimates. Similarly, an unsupported estimate of $5,800,000 for a completely redesigned hood in a teeming operation was provided by AISI (Ex. 500). With respect to operations in rolling mills, AISI received estimates from one member company of $10,000 for isolation controls, $20,000 for two crane pulpits, and $200,000 for four crane cabs to control exposures in soaking pits. Ventilation of mill stands was estimated to be "so expensive that it is not economically feasible." Downdraft ventilation, which was the only type of ventilation deemed effective, would necessitate reconstruction of complete facilities (Ex. 475–500).

Estimates for substitution of two salt baths, which have been substituted for lead baths in wire patenting processes, were $85,000 to $115,000 where existing controls were in place. Replacement of existing controls with a fluidized bed system was estimated to cost $750,000. The Stelmor process, which reduces but does not eliminate the need for patenting operations in the production of wire or rod (Ex. 475–500), requires capital investment of about $100,000,000 for new plant construction (Ex. 476–482). However, about 25 steel works in the steel industry have already switched to the Stelmor process (Ex. 474–22), and some steel plants have substituted salt baths for lead baths in annealing and patenting operations (Ex. 476–486). Bethlehem Steel has instituted a process change in wire patenting operations that enables it to achieve compliance, but neither the details or the process nor the costs were specified (Ex. 476–481). According to the International Wire Association, the use of lead in wire patenting is being phased out by replacement with other processes (Ex. 476–484).

Cost data for the substitution of grinding for scarfing operations, which reduces exposure to lead (Ex. 475–500), were estimated at $1,530,000 with a 2-year period required for design, building, and installation (Ex. 476–425). AISI stated an additional cost of $2,750,000 for a baghouse (Ex. 500) to prevent release of pollutants into the ambient air, however, this cost is not attributable to OSHA. Furthermore, there may be cost incentives spurring the move from scarfing to grinding in certain locations where the price of special gases needed for scarfing is rising. This increase in price limits the attractiveness of scarfing when compared with grinding (Ex. 476–425).

AISI did not describe the baseline of current controls in the industry nor did it attempt to show examples of current attempts at compliance in the industry. Both Copperweld and Jones and Laughlin stated that OSHA requirements were "burdensome," but they also indicated that process controls, such as stationary and traveling local exhaust ventilation systems, were in place and effective in reducing air lead levels (Ex. 476–449 and Ex. 476–431). In addition, AISI did not consider the effectiveness of housekeeping and work practices, which are relatively inexpensive methods of control, in estimating costs of compliance. Thus, OSHA believes that their costs are biased upward for each plant and, if extrapolated, would substantially overstate costs for the industry as a whole.

OSHA estimates, based on the data of DBA (Ex. 474–65B), capital costs for the wire patenting firms would range between $1.25 million and $2.5 million. In addition, firms may also need to spend $3 to $5 million in annual operating costs. For long terne metal producers the annualized capital costs are estimated to range between $63,000 and $125,000. Estimated annual operating costs range between $157,000 and $265,000 for these producers.

(ii) *Industry Profile.* Within the steel industry there are an estimated 58 companies in SIC 33122 producing steel ingot and semifinished shapes, 85 companies in SIC 33124 producing hot rolled bars, bar shapes, and plate, and 24 companies in SIC 33125 producing steel wire as part of steel mill operations. Alloy steels, including leaded steels, valued at $1,067,343,000 comprised about 25 percent of total steel ingot shipments valued at $4,028,900,000 in 1977. Steel wire, some of which is produced by lead patenting or annealing), manufactured in steel mills was valued at $606,300,000 in 1977. The quantity and value of long ternes (SIC 3312317) and short ternes (SIC 3312329) were not disaggregated from other tin mill products in the published data (Ex. 476–438), but represents a relatively small portion of steel mill production (Ex. 476–475). All processes that potentially involve exposure to lead in steel production are included in the industrial classifications above.

Several of the major steel producers, including Bethlehem Steel, U.S. Steel, Inland Steel, Copperweld, Republic Steel, and Jones and Laughlin, produce leaded steel alloys (Ex. 476–434, Ex. 476–431, Ex. 476–449). In addition, some specialty steel producers may also add lead to steel ingots for end use in free machining castings (Ex. 474–22, p. 263).

Very few companies produce terne metal products (Ex. 476–475). Long ternes (sheet steel that has been coated with a tin-lead alloy) can be produced in continuous and single-sheet coating processes. The latter is less efficient than the continuous process which eliminates some intermittent operations associated with sheet pots and produces a higher quality product since the coating is more uniform. All long terne production processes at U.S. Steel facilities are continuous, but other companies may still use single-sheet coating, which has the advantage of being more adaptable to small, varied orders, especially with respect to the size of sheets needed. Gasoline tanks for tractors, trucks, and automobiles are the major end use of long ternes (Ex. 476–475). Terne plate, occasionally known as short terne, is produced in very small quantities today. It is no longer used at all for roofing material, firedoor plates, or other former uses (476–475).

An estimated 100 plants produce wire by using lead patenting operations (Ex. 474–22). Not all patented wire is produced by steel companies, however, and those steel companies that do produce wire usually have separate facilities or distinct plants for this purpose. At least two of these producers have used substitution or other controls to comply with the lead standard. CF&I has switched to a sodium bath (Ex. 476–435), and Bethlehem Steel has controlled lead exposures by improving local exhaust ventilation and adding a surface active agent to the molten lead (Ex. 476–454).

Another producer, who produces lead patented wire only when orders are received from customers, considers the operation "marginal." Exposures, which occur intermittently, are not controlled by any ventilation at all. However,

housekeeping, including vaccuming of dust created in scale from the dragout operation, is performed (Ex. 476–431).

For this analysis, OSHA recognizes that data specific to the producers of leaded products within the steel industry would be preferable to data for the steel industry in general. However, neither the published data nor the submission of AISI are disaggreated in this manner. Therefore, the following discussion of economic conditions in the steel industry is assumed to be applicable to those firms within the steel industry that are affected by the lead standard.

The steel industry has been characterized as a laggard industry that has failed to keep up with changes in technology. The industry faces strong foreign competition and recent reduced demand for steel stemming from the decline in production of automobiles and other consumer durables, such as home appliances. Domestic industry shipments are expected to decline 5 percent in 1980 (Ex. 476–26).

In 1979, significantly increased demand for steel in the nonresidential construction market and for machinery, industrial equipment, and railroad equipment resulted in the third best volume year on record with 100 million tons in domestic shipments. However, metal production decined nearly 2 percent as steel mills reduced their inventories by more than 1 million tons. Steel imports also declined 24 percent in 1979, as a result of increased prices for foreign steel, which rose from $314 per ton to $400 per ton. Trigger prices, which are based on the production coats of the most efficient foreign producers (the Japanese) were instituted in 1978 to discourage sales of imported steel at less than fair value (Ex. 476–26). Thus, a Steel Tripartite Advisory Committee, sponsored by the Departments of Labor and Commerce, was formed in 1979 to address the problems of modernization and capital formation, labor and community adjustment assistance, technological research and development, international trade, and environmental protection (Ex. 476–26). The committee found that the current situation of individual steel companies in terms of efficiency, profitability, and competitiveness varies significantly. Differences in technology, location, sources of raw materials, and management have affected the current conditions of firms. The slow growth in consumption of steel products, the worldwide excess steelmaking capacity and the increasing market share of foreign producers in the domestic market have combined to give the industry as a whole insufficient financial capability and incentive to modernize operations. For example, the advent of continuous casting processes were adopted in 50 percent of Japanese steel mills by the late 1970's, but only 15 percent of American steel producers used the more efficient technique (Ex. 476–39F). Moreover, while some U.S. Steel producers are phasing out 40- to 50-year-old mills, major Japanese companies are shutting down 20-year-old facilities, which would be regarded as modern by U.S. standards (Ex. 476–430). Thus, the domestic industry is left with an aged capital stock, declining productivity, obsolescence and falling industry employment (Ex. 475–39F).

In 1979, U.S. Steel alone, which produces leaded steels, closed 15 plants with a loss of 12,500 jobs (Ex. 476–430). However, one of U.S. Steel's problems was its continued production of steel products in many plants that had long since failed to generate adequate returns on investment. The long overdue restructuring has helped steel product lines remain profitable, suggesting that further consolidation moves will occur (Ex. 476–440).

On the other hand, some major producers have not felt the impact of current market conditions as severely. For instance, Inland Steel's capacity is sufficient to enable it to participate fully in steel production when the market recovers, and its major diversification out of steel has kept the company profitable over the past years (Ex. 476–442). Bethlehem Steel, which retired 10 percent of its steel capacity after difficulties in 1974 and 1975, has excellent prospects for record profits in the mid-1980's owing to recent and projected extensive modernizations (Ex. 476–443). Republic Steel, in spite of recent decisions to delay major capital outlays, is in sound financial condition and can keep its plans to modernize among its first priorities (Ex. 476–441). Armco has performed impressively in view of recessionary tendencies in the economy and declining steel demand. Record high profits were reported in 1980, owing partly to successful diversification but also to Armco's up-to-date operation of steel facilities. Electric furnaces comprise 45 percent of Armco's production (Ex. 476–441). Jones and Laughlin, a subsidiary of LTV Corporation, is undergoing operating problems. However, these may be moderated by the expenditure of hundreds of millions of dollars for needed modernizations (Value Line, Ex. 476–441).

In order to survive profitably, the domestic steel industry must modernize. The Tripartite Commission has set the stage for steel modernization in the 1980's, with particular emphasis on modernizing the economic base and adopting the best possible technology (Ex. 475–39F). Since it is probable that the most advanced technology is also the cleanest technology, OSHA regards modernization as generally beneficial to the safety and health of workers. In addition, since retrofit technology is typically expensive and more likely to be ineffective than redesigned equipment, the 1980's would appear to be the rational time to invest in safe and healthful equipment and processes.

(iii) *Conclusion.* The decade of the 1980's is set for the revitalization of the domestic steel industry. AISI reports that the industry needs to spend $4.4 billion per year to modernize and replace productive capability (475–39). Modernization of the industry inherently involve the installation of cleaner and more productive technology. To the extent that modernization is accompanied by a safer and more healthful work place, OSHA its implementation. OSHA also emphasizes that effective and efficient allocation of resources occurs when controls are designed into new processes rather than applied in retrofit fashion. Thus, the Agency urges steel producers to anticipate potential sources of hazardous exposure to lead and other substances and to engineer such hazards out of existence during the planning phase of rebuilding.

Moreover, AISI indicates that steel operations involving the use of lead are generally intermittent, "occurring for short periods in a day, weekly or even monthly" (Ex. 475–39A, pp. 7, 8). Consequently, although the industry did not submit data relating to the overall importance of lead steel, it is likely that leaded steel operations constitute only a minor part of the total output for many individual firms. Therefore, some of the firms which would be required to make large capital outlays for compliance may decide to concentrate exclusively on non-leaded steel products. This tendency toward specialization would significantly limit the overall compliance costs to the industry.

Therefore, in accordance with the goals of the revitalization plan, OSHA concludes that within 3 years, it should be economically feasible for the steel producers to comply with the lead standard. (Depending on conditions in the industry, OSHA will consider granting a two-year extension). OSHA encourages firms to comply with the regulation as soon as possible and requires interim protection of exposed

workers by means of worker rotation, respirators, or other effective measures.

The steel-related operations of wire patenting and terne metal production, which are not included within the scope of the revitalization plan, will be required to comply with the lead standard within one year. OSHA is allowing the firms included within the revitalization plans 3 years to comply because one of OSHA's concerns is promoting economic efficiency in complying with its regulations. Those firms will be able to implement more effective and efficient controls if they are allowed to be implemented in conjunction with the new investments which will be made over the next few years. It would be inefficient and ineffective for OSHA to require firms to retrofit production equipment that is going to be replaced and modified in the near future. In the case of firms involved in wire patenting and terne metal production, these considerations do not apply. In these operations, compliance can be achieved through simple modifications of existing equipment redesign or extensive retrofitting is not required.

To determine the economic feasibility for wire patenting firms to comply with this standard, estimates of the capital and operating costs of compliance are needed. These were provided by DBA and presented in the cost of compliance section above. Using those estimates and assuming a 12 percent rate of interest and a life expectancy of ten years for the required capital equipment, OSHA estimates that the annualized capital costs to this industry will now range between $1.25 million and $2.5 million. The new capital expenditures for this industry in 1977 were $79.4 million (Ex. 476–20). Thus, as these annualized capital costs represent, at most, only 3.1 percent of the total new capital expenditures in this industry, the rate of return to these firms' investments will not be appreciably lowered by compliance with this standard. DBA further supplies estimates of the annual operating costs of complying with this standard which ranges between $3 million and $5 million. Total 1977 shipments in this industry were $2,258.6 million. Thus, the annual operating costs represent, only 0.4% of the total shipments. Therefore, on the basis of the available data, OSHA concludes that this standard would impose very small costs upon the wire patenting industry. That conclusion, in turn, implies that this standard will have a minimal impact upon the price of lead coated wire, the prices of goods and services produced by industries using lead coated wire, the output and employment of firms producing lead coated wire, and the profitability of wire patenting operations, and, hence, the economic viability and health of small businesses, would not be altered by the costs of complying with this standard.

In order to determine the economic feasibility of the standard for long terne metal producing firms, estimates of the capital and operating costs of compliance were derived from data provided by DBA. Using those estimates and assuming a 12 percent rate of interest and a life expectancy of 10 years for the capital equipment required to comply with the standard, capital costs to this industry are estimated to range between $63,000 and $125,000. The estimated annual operating costs of complying with this standard range between $157,000 and $265,000. The available data indicate that only 3 companies manufacture long terne metal plate and that technological and economic efficiency dictates the use of large scale production technology. Thus, these costs should be a minor component of the total cost of long terne metal output. Another point to consider is that this product has no substitute (within the feasible price range) for automobile gas tanks and in gasoline truck tanks. Thus, this industry's costs of complying with the standard are likely to be passed on to the industrial purchaser of long terne metal plate. The effect which this passed-on cost will have upon the prices of the final goods using long terne metal plate (automobiles and gasoline tanker trucks) will be very small because the cost of the long terne metal products is only a minor component of the price of the final goods. Thus, the costs of complying with this standard will not measurably affect the prices of goods produced by industries using long terne metal plate, the output and employment of firms producing long terne metal plate, and the profitability of long terne metal plate operations.

40. Stevedoring

(a) *Uses.*

Stevedoring companies are those which arrange for the manpower to load or unload cargo from seagoing vessels. Only those stevedoring activities which require the handling of lead ore are discussed below.

(b) *Process Description and Exposure Areas*

West Gulf Maritime Association (Ex. 475–17) has indicated that a number of its member companies have been engaged in handling bulk concentrate ores of lead sulfide. Operations for its member companies consist of loading or unloading these concentrate ores to or from ships or barges with gantry cranes or mobile cranes utilizing clam buckets and industrial front-end loaders. Import ores are either dicharged directly to trucks or railcars or stockpiled in dock-side warehouses for later land transit. Export ores are received at dock-side warehouses and stockpiled in the warehouses for later loading aboard ship or barge. The number of longshoremen or warehousemen involved in the handling of concentrate ores varies according to the kind of cargo, the size of the cargo, material handling equipment, vessel compartment size/configuration, etc. Lead exposure results from the handling of lead ores. Approximately, 50,000–100,000 tons of lead ore are handled each year (Ex. 475–17) in approximately 10–20 shipments (Ex. 475–28).

(c) *Controls Currently Used*

West Gulf Maritime Association (Ex. 475–17) presented data depicting the controls used in a typical operation. Discharging is performed with a clam bucket from a vessel direct to railcars and involves 1 signalman, 1–2 machine operators, 8–10 sweepers and 1 gang foreman. The signalman gives hoisting and bucket position signals to the crane operator. Machine operators operate a front end loader in hold of the vessel to position ore for pick-up by the clam bucket. Sweepers salvage and hand shovel ore from between vessel ribs (structural members) into the clam bucket for final discharge. These sweepers are usually needed only for final cleanup near the end of the job.

Discharging can be accomplished by clam bucket from a vessel to the dock. Stockpiling in a dock-side warehouse involves the same operations as above, but can also involve another machine operator for a front-end loader to move ore from the dock apron to the warehouse. From the warehouse, the ore will eventually be moved by a front-end loader to the railcar.

Loading ore with a clam bucket from warehouse stockpile into a vessel involves 2 machine operators, 1 crane operator, 1 signalman, and 2 foremen. The machine operators use front-end loaders to stockpile the ore dumped by truck at the dock-side warehouse, and to move ore from the dock-side warehouse to the dock apron. The crane operator, directed by the signalman, operates a clam bucket to move the ore from the dock apron to within the vessel. The 2 foremen supervise the warehouse and vessel gangs.

(d) *Exposure Levels.*

West Gulf reported that initial air monitoring performed during the handling of lead sulfide concentrate and zinc concentrate with lead sulfide ore, revealed employee exposures to air lead levels ranging from 26–149 $\mu g/m^3$ (Ex. 476–7R). The highest concentrations were found for workers in the warehousing operations, for machine operators, and for sweepers. One West Gulf port, where lead and zinc concentrate ores are handled, employed an average of 1,020 longshoremen and warehousemen, during 1978 and 1979, with a nucleus work force of 119. (Ex. 475–17.) Another West Gulf port averaged 920 employees with a nucleus of 76. (Id.) However, because lead concentrates ores are handled intermittently, West Gulf estimated that only several employees in each port would have lead exposures slightly above 30 days per year. In no case were any employees exposed to lead in excess of 45 days per year. (Id.) Other sources confirmed that, usually, employees would be exposed to lead concentrates in ore for only a few days per year (Ex. 475–26, 27). However, as previously mentioned, exposure for these 30–45 days could be in excess of 50 $\mu g/m^3$.

(e) *Additional Controls.*

Stevedoring operations are mechanized and engineering and work practice controls, if properly used, should be effective in keeping lead levels to the 50 $\mu g/m^3$ limit except in certain operations where workers must physically remove the ore especially in confined spaces (shoveling, trimming, etc.). Work practices are also important tools in achieving compliance with 50 $\mu g/m^3$ lead standard. Mr. Richardson from West Gulf also noted that, during his recent visit to an unloading operation, the high moisture content of the lead concentrate resulted in no visible dusting, except during trimming with payloaders in the hold, and during spillage cleanup. In addition, he offered the following recommendations to further reduce dust exposures:

—Greater care should be exercised in crane operation. Overfilling of bucket or feed hopper should be avoided.
—The ridge on the crane bucket should be machined down so that material does not adhere.
—Refinements should continue on a workable fogging system that does not overwet the material. A fixed fogging position on the nozzle should be maintained permanently, with an on-off valve installed upstream of the nozzle.
—Spillage should be occasionally wetted as precaution against blowing dust.
—The belt sock on the railcar feed chute should be used consistently to reduce visible dust.
—Better education and supervision of stevedores may reduce the number of observed incidents of poor work practices, such as shoveling dry spillage from the vessel to the dock below where others were working.

If it is possible, payloader work should be completed in the hold before trimmers begin their shovel work. This precaution will reduce dust exposures to trimmers. (Ex. 475–28 (App. C)) Trimming operations may require the use of a respirator to achieve compliance with the 50 $\mu g/m^3$ limit.

The data submitted to OSHA indicates that improved work practices, especially material handling procedures, and limited use of respirators for some jobs will enable this industry to comply with the standard.

(f) *Conclusion: Technological Feasibility*

OSHA believes, based on the data furnished by ASARCO (Ex. 475–28) and the West Gulf Maritime Association, (Ex. 475–17) that lead levels can be controlled to 50 $\mu g/m^3$ in stevedore operations by implementing simple and relatively cost free work practices, such as avoiding excessive spillage from the cranes, cleaning up spills as soon as possible, and not allowing concurrent work to be done in the holds by the cranes/payloaders/trimmers. In addition, the use of an appropriate respirator may also be necessary to achieve compliance with the 50 $\mu g/m^3$ PEL in some of these operations where engineering or work practice controls may not be feasible or at some dockside facilities which stevedoring companies do not own.

ASARCO and St. Joe did not dispute the feasibility of work practices, presently utilized engineering controls and respirators to reduce lead levels to 50 $\mu g/m^3$ in these operations. These firms requested an exemption from the standard for these operations, indicating that stevedore companies were unwilling to utilize such controls and, to avoid compliance with the standard, may refuse to load or unload lead ores. This possibility, should it arise, is unfortunate but cannot deter OSHA from exercising its responsibility, as mandated by the Act, to develop and implement safety and health regulations to adequately protect workers. In so doing, the Agency must consider the feasibility of complying with its regulations. OSHA has determined, based on record evidence, that stevedoring operations can feasibly comply with the lead standard, and, in fact, has determined that compliance can be achieved largely through the less costly implementation of work practices in addition to engineering controls presently in use. In a few limited circumstances, e.g., clean-up operations following off-loading, these controls will have to be supplemented by respirators.

OSHA has no control over stevedoring companies' decisions to handle or not handle lead ores, but there are other, more appropriate means of resolving the problem of stevedoring companies' refusal to handle certain cargoes. But denying workers protection from health and safety hazards is not a legitimate basis for granting an exemption.

41. Telecommunications

(a) *Uses*

Telecommunications has been defined as "that industry that repairs those cables above our heads, and pulls them out from under the street, and pulls them in the street." (Tr. 172) For this remand, it is limited to that segment of the telecommunications industry which repairs, replaces, or installs lead sheathed cables above and below the ground.

(b) *Process Description and Exposure Areas*

Telecommunications involves the laying of new lead sheathed cable (Ex. 476–462), although one company reported that very little laying of lead sheathed cable is being done (Ex. 476–465); the withdrawal of old cable (wrecking); and the repair of cables by forming new splice cases or sleeves (Ex. 476–462). The last process involves opening lead sheathed cable splices by torch and sealing lead sheathed cable splice closures (sleeves) by pot wiping or torch (Ex. 475, GTE). Lead exposure results only from encounters with lead cable, the use of which is declining. This work may be done above ground (stringing cable between telephone poles) or in underground facilities (manholes).

(c) *Controls Currently Used*

Most companies use a portable blower system to control the employee's exposure and do achieve the PEL most of the time by these methods. (Ex. 475–22; 476–462) Bell Telephone currently controls exposures by using a spray containing water and a wetting agent, minimizing physical manipulation of the cable and rotating job assignments (assignments are ½ day) (Ex. 476–463;

475–22). Other companies have advocated the use of lead particle entrapment creams applied prior to carding (Ex. 475–22 & 22(a)) and also the use of a wetting spray during wrecking operations (Id.).

(d) *Exposure Levels*

The General Telephone and Electronic Corporation stated that "the nature of the telecommunications industry reduces to virtually zero any potential health hazard from lead exposure. A 'potentially' exposed employee only works with lead sheathed cable on an intermittent basis at best; it may be once a week, once a month, once a year or never." (Ex. 476–465; 475–22) A NIOSH Health Hazard Evaluation was performed at the New York Telephone Company to determine whether wiping sleeves in manholes resulted in excess lead exposures. (Ex. 476–464) The average time for completing a sleeve-wiping operation was approximately 60–150 minutes. Breathing zone samples were taken for the outside helper and at several spots inside the manhole (due to the size of the space, it was not possible to hang a personal sampler on the repairman). Nine of eleven samples taken indicated nondetectable lead levels. Two samples indicated lead levels of 14.8 and 45.2 $\mu g/m^3$. One sample was taken from above the sleeve, the other from behind the worker. When computed on a time-weighted average basis, lead exposures in cable splicing are probably below the action level.

In a typical day's work, a crew will remove and replace cable at different sites: there is no lead exposure between sites; while they are preparing manholes for work; or while the old lead sheathed cable is being replaced by non-lead sheathed cable. The company also stated that work with lead sheathed cable is an infrequent occurrence.

Cable removal operations, where lead oxide is produced, create the greatest potential for lead exposure. Exposure levels have been estimated to be between 100–200 $\mu g/m^3$ for the time periods in which the work is done. (Ex. 476–7B; 478–5) These levels should then be below the PEL of 50 $\mu g/m^3$ when measured as a time-weighted average. In addition, when cable pulling occurs under water, little, if any, exposure is expected.

(e) *Populations Exposed*

Approximately 42,000 Bell System employees are potentially exposed. However, based on the exposure data, it appears that very few are exposed above 50 $\mu g/m^3$ on an 8-hour time-weighted average basis. (Ex. 476–7B)

(f) *Additional Controls*

Telecommunication companies are already using controls such as suppressing creams, wetting agents, dilution ventilation, and good work practices, that are effective in keeping exposures below 50 $\mu g/m^3$. The random nature of lead exposures and the limited amount of time required to perform lead related tasks should keep employee exposures below the 50 $\mu g/m^3$ PEL. In addition, many repair crews consist of at least two men; alternating these employees' contacts with lead would further reduce individual exposures. Employee exposures will rarely be in excess of the PEL, however, when exposures exceed the PEL, employee rotation will be more than adequate to achieve compliance.

(g) *Conclusion: Technological Feasibility*

The industry maintained that its problems with complying with the lead standard were comparable to the difficulties associated with the construction industry, and that OSHA should exempt them from the standard's coverage (Ex. 475–22 and 22(a)).

OSHA does not agree that the similarities warrant an exemption (Ex. 476–7C). While workers may be required to move from site to site, the sites themselves are stationary and the company does know the location of each work place and has been able to determine representative exposure levels. Furthermore, the work force is highly specialized and not transient in nature, as it is the construction industry. Thus, the same employees continue to have potential lead exposures. The fact that telecommunications repairmen move from site to site and that sites infrequently have leaded cable, tends to aid employer compliance by naturally eliminating continuous worker exposure to lead.

Industry has contended that compliance with the standard would also require installing "a shower in every manhole" (Tr. 203, 206) and that this requirement rendered the standard infeasible. This fear is unfounded: the standard requires hygiene facilities to be constructed only when employee exposures exceed the PEL. Since worker rotation will assure that no employee's exposure to lead exceeds the PEL, no requirement to furnish hygiene facilities will ever arise.

(h) *Economic Feasibility*

There are no significant costs of compliance or economic impact because lead levels, on a time-weighted basis, can easily be maintained below 50 $\mu g/m^3$.

42. Terne Metal

(a) *Uses*

The iron and steel industry uses numerous non-ferrous metals to coat its products. Primary among these are—other than tin, zinc and chromium—aluminum, copper, nickel and lead. An alloy of lead and tin is used to make a coating for steel sheets; the end product is called terne plate. One of the most useful applications for terne plate is in the manufacture of sheets for roofing, where it has an exceptionally long life. Its uses also include fabricated metal parts, automobile gas tanks, and radio chassis.

(b) *Process Description and Exposure Areas*

There are two methods generally used for applying terne metal to single sheets in the manufacture of long ternes.

The flux process employs a flux of molten zinc chloride, a water solution of zinc chloride, or a solution of zinc chloride in hydrochloric acid to remove any oxides of iron that may be present and also to effect a rapid drying of the sheets. The terne pot temperatures range from 620° to 680°F. The process is carried out in a "rigging" or machine which carries the sheet through the several process steps prior to passing sheets through the molten terne metal, where the coating is applied. The sheets are then moved upward through a coating machine which contains an oil (palm oil, fish oils, mineral oils, or combinations thereof) that floats on top of the metal.

The equipment and processes involved are a coil holder followed by a payoff reel which feeds the strip into a pinch-roll unit. This, in turn, is followed by a squaring shear and a welder if the process is continuous. Cleaning may also be done.

The highest lead exposures occur after the terne alloy bath, when excess lead is brushed off of the coated steel strips or sheets. (Ex. 22, p. 268.)

(c) *Controls Currently Used*

Hoods are located over baths to provide local exhaust ventilation. Some plants have ventilated control booths for the protection of workers. Flaking at the coiler requires extensive housekeeping. (Id.)

(d) *Exposure Levels*

Exposure data were not presented to OSHA, but the Short Report estimated that exposures have been kept below 200 $\mu g/m^3$ (Id.). It is not clear that this estimate represents a time-weighted

exposure. An OSHA inspection of a terne operation found levels of 210 μg/m³ prior to implementing engineering controls which included enclosing the terne pot operations and improving ventilation. After implementation of these controls, levels were reported as 48 μg/m³ and 41 μg/m³ for workers in these areas (Ex. 476–16, #TO–1).

(e) *Population Exposed*

The Short Report estimated that 100 individuals are exposed. (Ex. 22, p. 268.)

(f) *Additional Controls*

Ventilation systems may require upgrading. Ventilated booths for workers may be required. Improved housekeeping will be required. High exposure areas may require worker rotation.

(g) *Conclusion: Technological Feasibility*

Since this operation is automated, with mechanical devices moving and dipping sheets or strips, the oil which floats on top of the lead bath should help to keep lead from becoming airborne. In addition, ventilation is provided which, if properly used, will also control exposures. In fact, OSHA inspection data shows that simple engineering controls can be effectively used to achieve the PEL. (Ex. 476–16, #TO–1.) Occasionally, exposures may exceed 50 μg/m³ where only engineering controls exist and it is in these cases that worker rotation can be used to achieve compliance with 50 μg/m³. AISI also suggests the process change of using a fluidized bath, which eliminates lead exposure.

OSHA has concluded that compliance can be achieved in one year. It should be noted that the extended compliance period the Agency has provided for primary steel manufacturing is not applicable to terne metal production. Terne metal production does not require an extended compliance period for several reasons: (1) Terne metal is a steel fabrication process, rather than a steel production process; (2) steel fabrication is not included within the remodernization program established for steel producers (Ex. 475–39F); and (3) exposure levels are moderate and basic engineering controls are available to reduce these exposures.

(h) *Economic Feasibility*

See discussion in Steel Manufacturing.

43. Textiles

(a) *Uses*

Lead based dyes or finishes may be used in coloring or finishing textiles.

(b) *Process Description and Exposure Areas*

Colors with potential lead exposure include inorganic yellow pigments, comprised of lead chromates with varying amounts of lead sulfate. Chrome orange is a basic lead chromate, but it is not used in the textiles industry (Ex. 476–467). Also, chrome green is not used. Textile finishes may be lead based.

(c) *Exposure Levels*

Representatives from the American Textile Manufacturers Association, Compton and Knowles, and Monsanto stated that they knew of no problems from use of lead-based dyes in textiles (Ex. 476–471, 472, 473). The small amounts of lead which occur in trace metal effluents resulting from chromate-lead based dyes have been measured at 52 ppm.

The exposure problems the Short Report assumed to be associated with lead in textile finishing (insect protection, water proofing, fungus inhibitors) do not, in fact, exist. A NIOSH Health Hazard Evaluation performed at the A&S Tribal Industries (Ex. 476–470) found no detectable levels of lead as a result of handling camouflage netting that had been finished with an insect repellant.

(d) *Conclusion: Technological Feasibility*

Because exposure to lead appears to be negligible in this industry, it has been assumed that compliance has already been achieved or poses no problem.

(e) *Economic Feasibility*

There will be no significant compliance costs nor economic impact in the textile industry as a result of the lead standards. This is due to the fact that there are no appreciable employee lead exposures in this industry.

44. Tin Rolling and Plating

(a) *Summary*

Rolling refers to the rolling of lead-tin alloys (Metal Handbook). The plating of tin-lead alloys with copper alloys is comparable to other plating operations discussed above (see terne metal). Lead exposure in these operations results from the formation of the tin-lead alloy and not from the alloy being coated with a copper alloy. Alloying of steel is discussed in the steel section. Alloying of lead sheets has been classified as secondary lead smelting and has been discussed in the feasibility section of the final lead standard.

45. Wire Making

(a) *Uses*

Once a rod is drawn through a die it is called wire even though it may be re-drawn. It has been estimated that there are more than 100,000 applications for wire; its uses are as diverse as suspension bridge cables, musical instruments and dry cleaners' coat hangers. (Ex. 476–483).

(b) *Process Description and Exposure Areas*

(i) *Wire Making.* The simplest form of wire drawing involves coils of lime-coated wire rods which are drawn through a lubricant and then through dies which are smaller in diameter than the rods. The enormous force required to draw a rod through a die is provided by a device known as a draw block which rotates on its axis building up a continuous coil of wire. In a continuous wire drawing frame, wire (properly prepared and lubricated) is pulled through a series of dies. Between each of these dies are sheave wheels around which the wire is looped. These sheave wheels control the tension of the wire between die blocks. (Id).

(ii) *Quality Control.* The drawing of wire hardens the steel, therefore, prior to drawing, the rods must be treated to withstand the rigors of this operation. In addition, when wire of very small diameter is desired, annealing or patenting may be required after initial drawing and before final drawing. Heat treating is required to produce the precise quality, and may be done by annealing or patenting. Patenting is a heat treatment applied to rods and wire and is a term peculiar to the steel industry. The object of patenting is to obtain a structure which combines high tensile strength with high ductility. Annealing, on the other hand, refers to slow cooling of a metal from an elevated temperature and is used to soften, add toughness, remove stresses, and increase the ductility of metals. (Ex. 476–5K).

(a) *Annealing*

Controlled atmosphere annealing is the current method of annealing used by the wire industy. Both batch-type and continuous-type furnaces are employed. (Ex. 476–483).

Salt-bath annealing is used occasionally for common sizes of wire. The wire in coils is immersed for 30 minutes to one hour in gas-fired pots containing molten salt which is held at some predetermined temperature. The advantages of this process over other methods are that small amounts of wire may be quickly annealed at closely

controlled temperatures without scaling the surface of the wire. This process has a somewhat limited application in wire processing. (Id).

Continous lead annealing consists of drawing the wire through a bath of molten lead heated to the proper temperature. The molten lead is contained in a shallow rectangular steel pan, about 10 to 15 inches deep, 3 to 4 feet wide, and 15 to 25 feet long. (Sometimes two pans are used, the first known as the cold pan and the second as the hot pan, and the wire is drawn through each in succession.) In practice several strands of wire are drawn through the bath by a take-up block placed at a convenient distance from the end. To keep the wire immersed in the molten lead, devices known as sinkers are used. (Id).

The principal use of lead annealing is in connection with galvanizing plants, where it is used to anneal process wire. In these plants, layouts are provided that permit the wire to be annealed, cooled, cleaned, washed, dried and galvanized or tinned, in one continous operation. Only lead bath annealing results in workers being exposed to lead. Fluidized bed and sodium nitrate baths are possible substitute process equipment for lead-bath heat treatment. Use of either of these processes would eliminate lead exposure in annealing processes. (Id).

(b) *Patenting Heat Treatment*

Metal patenting consists of heating the material to point well above the upper critical temperature, then cooling through the critical temperature at a comparatively rapid rate to a predetermined temperature to yield the desired microstructure and mechanical properties. There are several kinds of patenting and patenting may be done to wire or rod.

(*i*) *Air Patenting.* The rod is heated by passing it through alloy-steel tubes arranged in an open muffle or in an open flame without tubes and cooled by pulling it from the furnace into the open air—"O.P." (old process or air) patenting.

(*ii*) *Lead Patenting.* The wire may be cooled by passing it into a lead bath held at a relatively low temperature; this process is known as the metallic hardening process. In another process, the wire is heated in a bath of very hot lead and cooled in another bath of lead at a lower temperatue; this is the double lead process. In this last process the temperatures of both baths can be readily controlled and accurately measured, making it possible to obtain any desired structue even in rods of high carbon content, a quality not available using "O.P." patenting. This last method also forms less scale than in the other two methods. In the wire industry, both the metallic-hardening process and the double-lead process are generally referred to as "lead patenting."

(*iii*) *Stelmor Patenting.* The Stelmor process, takes rods, on a single strand basis, heats them to their critical temperature and rapidly water cools them to a predetermined temperature. The patented rods are formed into rod rings. The prqcess compliments the higher rolling speeds of today's mills and enables heavier weight coils to be produced.

(*iv*) *Other Methods of Patenting.* Another method of patenting involves the use of electric direct-reistance heating and quenching in a molten alloy metal bath. A recent development, particularly applicable to patenting very high carbon and hypereutectoid steels, involves a double cascade quenching of the rod or wire from the austenitizing temperature.

Sources of exposures in patenting operations result from fumes escaping from inadequately ventilated baths and from dust flaking from process coils (Ex. 22, p. 260).

(c) *Controls Currently Used*

Ventilation and housekeeping controls are commonly used to control lead exposure. Vacuum cleaners are used to clean up areas where scale from dragout occurs (Ex. 476–484). Currently, U.S. Steel and Republic Steel are using the Stelmor process. This process eliminates lead from patenting. (Ex. 476–482). This process also tends to increase productivity (Ex. 476, 482).

(d) *Exposure Levels*

Exposure data indicate that lead exposure in patenting operations averages 100–200 $\mu g/m^3$ (Ex. 22 p. 260).

(e) *Additional Controls*

Improved ventilation and housekeeping will be necessary to control lead levels to 50 $\mu g/m^3$. However, like the pipe galvanizing process, the basic control is hooding of lead baths. Also, since the process is mechanized, workers may be protected by rotation or by providing clean air pulpits from which they can control equipment when necessary.

(f) *Conclusion: Technological Feasibility*

OSHA believes that lead exposure can be reduced to 50 $\mu g/m^3$ in this industry through minimal efforts consisting of improving and maintaining existing ventilation equipment, good housekeeping practices, and worker rotation within a 1 year period.

(g) *Economic Feasibility*

See discussion of Steel Manufacturing.

46. Zinc Smelting

(a) *Uses*

Zinc metal is used for galvanizing, brass and bronze products, and metal casting. In addition to metallic applications, significant quantities of zinc are consumed in pigments or other chemicals (Ex. 476–491).

(b) *Process Description and Exposure Areas*

The processing of zinc from its ore begins with the milling of the ore to prepare a concentrate that can be treated to recover zinc and its associated byproduct and coproduct metals (Id.).

The minerlogy of zinc-containing ores determines the technology and economics of the milling practice. Heavy-media separation pretreatment prior to zinc flotation has been designed into newer mills. About one-half of the mill feed can be floated at relatively coarse size with the reject fraction assaying as low as 0.04 percent zinc (Ex. 476, 491).

Flotation is the basic mineral reduction process. The general scheme for the flotation of mixed sulfide ore is: (1) Flotation of the lead copper minerals and depression of the zinc and iron minerals; (2) separation, also by flotation, of the lead-copper concentrate into separate lead and copper concentrates; (3) activation and flotation of the sphalerite from the iron and gangue minerals; and (4) flotation of the pyrite if recovery is desired (Id.).

Reduction of the zinc ores and concentrates is accomplished by electrolytic deposition from a sulfate solution or by distillation retorts or furnaces. In either method, the zinc concentrate is roasted to eliminate most of the sulfur to produce roasted concentrate or calcine (Id.).

At electrolytic zinc plants, the roasted zinc concentrate is leached with dilute sulfuric acid to form a zinc sulfate solution. The solution is then purified and piped to electrolytic cells, where the zinc is electrolytically deposited on aluminum cathodes (Ex. 476, 491). The cathodes are lifted from the tanks at intervals and stripped of the zinc, which is then melted in a furnace and cast into slabs (Ex. 476, 491).

There are three types of distillation retort plants—batch horizontal retorts, continuous vertical retorts heated by fuel, and continuous vertical retorts.

A blast furnace process for producing zinc, also known as the Imperial Smelting Process, was developed by Imperial Smelting Corporation, Ltd., of Avonmouth, England. This process is similar to the normal blast furnace practice of burning coke in intimate association with the ore to be reduced but, as in the retort process, the zinc is released as a vapor and must be condensed (Id.).

The Kivcet-CS process, developed in the U.S.S.R. and available for commercial distribution, combines the functions of sintering, blast furnacing, and slag fuming in one autogenous smelting unit. It offers the possibility of recovering, along with lead, either zinc metal or zinc oxide. The process is characterized by high metal recoveries, low environmental contamination, and low labor and capital costs compared with those of a conventional smelter (Ex. 476, 491).

Potential lead exposure occurs during the handling and storing of concentrates and charging of concentrates to the roaster. Typical operations involve the receipt of concentrates by railcar or dump truck, storage in the open or in storage buildings, moving of concentrates by front-end loader to open conveyors, drying in a rotary dryer, holding in storage bins, and charging by conveyor to the roaster. Exposures in this area are due largely to dust emissions from mechanical screens and conveying equipment, overflow from front-end loaders, and reentrainment by wind (Ex. 481).

(c) *Controls Currently Used*

Undisputed evidence suggests that the technology necessary to control lead is available. Mr. Wagner's analysis of available control technology is consistent with the practices which Bunker Hill, ASARCO, St. Joe, etc. currently employ (Ex. 481). In some cases, such as the American Chemet Co., enhanced housekeeping practices are all that would be necessary to achieve compliance with the standard (Ex. 476–501). Bunker Hill, in its statement (Ex. 475–38), agreed that improved ventilation would reduce exposures at its anode casting and welding operations. In addition, it believes that automation of the handling of zinc concentrate would reduce lead exposure levels. St. Joe's also outlined control technologies consistent with the recommendations made by Mr. Wagner and others. (Ex. 475–36)

(d) *Exposure Levels*

The level of exposure to lead is dependent on the lead content of the concentrates: Lead concentrations ore range from 0.3 percent (Ex. 481–35) to 1.5 percent (Ex. 481–19). For example, airborne lead exposures among concentrate handlers at Bunker Hill's zinc smelter averaged between 50 and 800 $\mu g/m^3$, while levels at National Zinc (Ex. 481–25) and Jersey-Miniere Zinc (Ex. 481–25) did not exceed 30 $\mu g/m^3$.

Other potential lead exposures occur in the roasting department: these exposures vary with the type of roaster. The highest exposures were found at Bunker Hill where open, multiple hearth roasters are used (Ex. 481–19). Lead levels there averaged between 481 $\mu g/m^3$ and 2057 $\mu g/m^3$. These can be compared to levels at New Jersey Zinc in the 150–200 $\mu g/m^3$ range where closed, multiple hearth roasters are employed (Ex. 481–20). At National Zinc, where a fluidized bed roaster is used, no lead levels in excess of 30 $\mu g/m^3$ were measured in the roasting department (Ex. 481–25).

In the electrolytic process, calcine and dilute sulfuric acid are introduced into a series of tanks for the leaching operation. Since the concentrates become wet and stay wet throughout the remaining processes, little potential lead exposure occurs (Ex. 481). In the recast process at Bunker Hill, lead exposure levels for the workers casting the anodes averaged 200 $\mu g/m^3$ (Ex. 481–19) and at National Zinc (Ex. 481–25) about the same average is seen with one exposure measured as high as 1200 $\mu g/m^3$. The cathode strippers in both plants have lead exposure levels that average slightly in excess of 50 $\mu g/m^3$ (Ex. 481–19 & 25).

In the pyrometallurgical process, the sintering machine represents the last significant lead exposure area. Lead levels have been seen as high as 200 $\mu g/m^3$ for the fume equipment operator at New Jersey Zinc (Ex. 481–20) and in excess of 50 $\mu g/m^3$ for the other workers in this department. Most of the lead and cadmium is fumed off at this operation, thus little potential for significant lead exposure exists in remaining processes (Ex. 481).

Zinc fuming furnaces are operated by Bunker Hill, ASARCO at El Paso, Texas, and by St. Joe at Monaca, Pa. The Bunker Hill fuming furnace is physically located within the primary lead smelter (not far from the lead blast furnace), and levels of lead in this area have been measured in the range of 269 to 11,152 $\mu g/m^3$. In fact, approximately, 65 percent of employees are exposed below 30 $\mu g/m^3$ (Ex. 476–386) and 35 percent of all employees are exposed above 50 $\mu g/m^3$ (Ex. 476–386). William Wagner, an expert witness on smelting, testified that "a significant portion of worker exposure to lead in this area is due to contamination from primary lead smelter activities and that it would be difficult, if not impossible, to bring this area into compliance with the 50 $\mu g/m^3$ standard until the remainder of the lead smelter is in compliance." OSHA agrees that Bunker Hill's lead levels are exceptionally high due to cross-contamination. Other zinc fuming processes showed that most lead levels were below 50 $\mu g/m^3$ (Ex. 481).

In a NIOSH Health Hazard Evaluation survey at the American Chemet Co., of 8 samples taken at the zinc smelter (Ex. 476, American Chemet) 6 were below 50 $\mu g/m^3$. NIOSH recommended that housekeeping be used to reduce levels significantly. An OSHA inspection of the National Zinc Co. found that 360 workers were exposed below 30 $\mu g/m^3$ and only 17 above 50 $\mu g/m^3$ (Ex. 476–503). Based on these findings OSHA believes exposure to lead is probably not a significant problem in most zinc smelting operations (Ex. 481).

(e) *Population Exposed*

There are an estimated 2,000 production workers potentially exposed to lead in the zinc smelting and refining industry, 70 percent of whom are exposed to less than 30 $\mu g/m^3$. Fifteen percent are exposed to between 30 $\mu g/m^3$ and 50 $\mu g/m^3$, and 15 percent are exposed to over 50 $\mu g/m^3$ (Ex. 481, p. 16).

(f) *Additional Controls*

To bring zinc smelters into compliance requires that some firms to retrofit existing ventilation equipment with equipment to increase capture potential. Other firms may need to automate more processes or to rotate workers, while some need only enhance their housekeeping practices to achieve compliance with 50 $\mu g/m^3$.

(g) *Conclusion: Technological Feasibility*

The record evidence indicates that most operations within most zinc smelters are in compliance, and that in those which are not fully in compliance, many of their processes are below 50 $\mu g/m^3$ and some even below 30 $\mu g/m^3$. Thus, compliance for the industry, as a whole, appears feasible within one year, except one difficult compliance situation exists. Bunker Hill, because the zinc smelter is located inside the primary lead smelter, may not be able to control lead levels in the zinc smelter until the primary lead smelter is controlled. Since the lead smelter has 10 years under the standard to be in compliance, it is necessary for OSHA to recognize that Bunker Hill's zinc operation may not be able to reach 50 $\mu g/m^3$ in one year

without respirators. But consistent with the Court's opinion, Bunker Hill would still be obligated to reduce exposure to the lowest feasible level even if ultimate compliance will take a longer time.

(h) *Cost of Compliance*

Three primary producers of zinc—ASARCO, Bunker Hill, and St. Joe Minerals—provided OSHA with written submissions on the feasibility of meeting the lead standard in their operations. Other primary producers and the secondary producers did not respond to OSHA's request for information.

Bunker Hill did not submit a cost-effective, multifaceted approach to reducing levels through a combination of engineering controls, work practices, housekeeping, and administrative controls (Ex. 475–38). Indeed, Bunker Hill did not provide actual cost estimates but it contends that compliance costs for ventilation and process automation will be required to comply with the standard. These measures, although constituting an important aspect of control technique, are typically the most expensive approaches to reducing worker exposure levels. In fact, the company was recently cited for violation of housekeeping provisions of the lead standard, which are effective in making immediate reductions in dust levels and relatively inexpensive to implement (Tr. p. 559–560). Furthermore, control of primary lead emissions, which contaminate zinc operations in the smelter, will significantly reduce the lead levels of exposure, and therefore, the amount of additional control required, and the cost of compliance attributable to zinc operations.

ASARCO provided estimates of compliance costs in its Corpus Christi, Texas, primary zinc facility and its Sand Springs, Oklahoma, secondary zinc facility. In addition, costs for the zinc department of ASARCO's El Paso, Texas, primary copper facility were provided. (Zinc dust from this operation is transported to Corpus Christi for recovery.)

ASARCO claims that the total cost of compliance will be $13,308,000 for its zinc operations. These costs include ventilation and vacuum systems and are divided between primary production ($13,002,000) and secondary production ($306,000) (Ex. 475–28). The Corpus Christi plant estimates do not consider potential changes in work practice controls, which are necessary to eliminate some of their worst exposures resulting from power sweeping (Tr. 531). ASARCO also overlooks potentially less costly solutions by omitting standby pulpits with pressurized filtered air for intermittent operations, such as sampling (Tr. 532). ASARCO did not consider the use of pressurized cabs, which are readily available for mobile equipment (Tr. 532), nor did they consider apparently simple solutions such as placing workers farther away from dusty areas by providing longer hammer handles for belt watchers, who break up concentrates by manual hammering (Tr. 532). Finally, a participant from the United Steelworkers of America suggested that a device known as a vacuum truck, which costs at most $50,000, might be able to reduce exposure levels as effectively and much less expensively than the sulfide car dumper that ASARCO costed out at $1,898,000 (Tr. p. 536).

OSHA also suggests that other methods of control could be used, such as chemical dust suppressants, traveling ventilation systems, secondary and tertiary hoods (which are currently used in Japan), and process changes, such as slag granulation in lieu of transporting molten slag (Tr. 789–791). These methods are available, effective, and economically attractive when compared with the alternatives provided by ASARCO.

St. Joe Minerals submitted a compliance cost estimate of $13 million in capital costs and $400,000 in annual operating costs (both in 1978 dollars). This estimate reflects use of "conventional control techniques" (Ex. 475–36A). St. Joe stated that this estimate originated from its prior experience in meeting safety, health, and environmental regulations, and that derivation of the figure was available in its submission to the 1977 rulemaking proceedings (Tr. p. 770). However, OSHA is wary of relying on these estimates, since they are not clearly explained and do not appear to be based on cost-effective solutions to reducing exposure.

First, there were no data presented in support of the cost estimates in the original submission. Second, these estimates were calculated on the basis of 1975 replacement costs for control systems that had been installed from 1948 through 1975. However, the economic life of the equipment was not presented. Because some of this equipment would certainly be due for relacement in the absence of the standard, the costs for newly designed controls would not fully attributable to OSHA. At most, only the difference between the controls designed to meet the 200 $\mu g/m^3$ standard and the new controls which would permit compliance with the 50 $\mu g/m^3$ standard would be attributable to OSHA. Third, the types of equipment and their functional relation to reducing in-plant lead levels are not explained. In fact, the identification of control systems is listed in abbreviated form in St. Joe's submission. Fourth, the estimate relies solely on ventilatory reductions to achieve compliance rather than a cost-effective, multifaceted approach to lower lead levels. Finally, the total costs were only $7,380,000 (Ex. 474–3(103)). The derivation of $13,000,000 from this previous estimate remains unclear. It is especially difficult to evaluate in view of the fact that the smelter will be operating at 25 percent of its capacity. However, it seems unlikely that compliance costs would nearly double with a drop in capacity of 75 percent.

OSHA estimates that the costs of compliance with the lead standard will be in the range of $3.5 to $10.5 million for the zinc industry (Ex. 481 and Tr. 345). This estimate factors in the use of a broad array of control technologies and work practices. Some of these work practices are very inexpensive or carry no costs at all (Tr. 349). Approaches such as enclosing people rather than enclosing equipment are also reflected in these estimates (Tr. 347). For instance, control rooms, especially with air-lock entry anteroom systems and boot-washing facilities could be used at St. Joe's zinc smelter (Tr. 561). The record shows that some zinc smelters are currently in compliance or near compliance with the lead standard in most of their operations. Hence, not all smelters will incur significant costs. OSHA also recognizes but does not have data to measure the value of reclamation of other metals, which will offset compliance costs for some firms in the industry (Tr. 348). Furthermore, expenditures for compliance are considered business expenses, thereby reducing the after tax burden of these firms (Tr. 349). In addition, zinc smelters are already under an obligation to control exposures to arsenic. OSHA estimated that the industry would spend $9.3 million in capital costs and $940,000 in annual costs to comply with the arsenic standard (Ex. 476–488). To the extent that resources have been allocated for this purpose, and that they will have reduced lead levels simultaneously, the costs should not be double-counted by adding them a second time. In light of these considerations, OSHA concludes that its high estimate of $10,500,000 is a reasonable assessment of the upper bound of the potential costs for the zinc industry. Annualized over the useful life of equipment, the industry is not

expected to incur costs in any one year in excess of $1.9 million.

(i) *Industry Profile*

In 1967, there were 10 companies operating 18 establishments and employing 6,400 production workers in the primary zinc industry (SIC 3333). By 1977, ge there were 8 companies operating 8 facilities and employing 3,500 production workers. Value added per production worker rose from $8.85 to $16.03 per hour while average hourly earnings of production workers rose from $3.17 to $7.17 per hour (Ex. 476–20). Investments in new capital fell from $25.8 million to a low of $5.9 million in 1969, but have risen then to $39.8 million in 1977 (Ex. 476–20). Total shipments were valued at $430.7 million in 1977 (Ex. 476–20).

Since 1969, there has been a continuous decline in the production of domestic zinc coinciding with the closure of 9 smelters (Ex. 476–490). Thus, although United States demand for zinc metal over the decade has remained relatively stable, smelting capacity has declined by almost 50 percent. Smelters closed for a variety of reasons, including obsolescence, failure to meet environmental standards, and an inability to obtain sufficient concentrate feed (Ex. 476–490).

ASARCO commented that several operations closed as a result of a downturn in demand lagging the recessionary period of 1974 to 1975 and the long-run trend in substitution away from zinc in the automotive industry (Ex. 475–28). However, the industry has made steady progress in developing and promoting the use of thin-wall zinc diecastings, which are lighter in weight. Thus, zinc has begun to recapture some of the market and currently is used in 150 automotive diecastings compared with 100 in 1978. In addition, the rising costs of substitute materials, such as plastic and aluminum, have increased the competitiveness of zinc in some markets (Ex. 476–26).

Historically, the demand for zinc correlates closely with economic activity (Ex. 476–490). The major use of zinc metal is in the construction industry, which is the major market for zinc coated or galvanized products, such as structural steel, roofing, siding, guttering and duct material in air conditioning, ventilating and heating systems. Transportation accounts for the second major use of zinc metal. The largest use within this sector is diecastings for automobile components. Zinc is also used as a nonmetallic oxide in the rubber industry, production of photocopying chemicals, and paints. Zinc is most vulnerable to substitution in these nonmetallic uses (Ex. 476–490).

There are currently five domestic producers of primary zinc AMAX, ASARCO, Bunker Hill, Jersey-Miniere, and National Zinc. (Ex. 476–489). In addition, St. Joe Minerals has reactivated at 25 percent of capacity its zinc smelting operation. This decision was made because of the discovery of a high-grade zinc deposit in New York (Tr. p. 762–763). Depletion of this deposit is expected to occur within 15 years (Tr. p. 764).

The tenor of zinc ores in the United states tends to be lower than that of foreign ores. Therefore, to ensure a continuing domestic supply and to foster development of domestic low-grade ores, incentives exist to develop and implement efficient mining and extraction processes (Ex. 476–490). However, major United States companies also have substantial interests in foreign zinc mining activities (Ex. 476–49B).

Also, foreign investment by a Belgian firm in the United States zinc industry supplied capital for a joint venture to build an electrolytic, highly automated facility in Tennessee and to develop four mines. In addition, several Japanese companies and a United States oil firm entered into a 3-year partnership to explore for zinc deposits in Tennessee (Ex. 476–49B).

Pilot research in the field of zinc recovery has shown that some ores that were previously used to a limited extent or not at all as sources of zinc can become commercial sources of the metal. Specifically, the Kivet CS shaft furnace allows simultaneous smelting of lead and zinc and is ready for industrial scale application in the Soviet Union. Advantages of the process include reduced volumes of waste gas, high metal recovery, improved environmental control of emissions and lower labor and capital costs compared with conventional smelters (Ex. 476–49B).

The construction of electrolytic plants and the development of hydrometallurgical processes, which will eliminate roasting, can also produce unintended benefits, such as reduced environmental pollution. The newest plant in the United States, a $97 million joint venture of New Jersey Zinc and Union Miniere, uses a highly automated electrolytic process. Some of the plants that closed between 1969 and the present were utilizing obsolete technology and could not meet environmental standards (Ex. 476–490).

Foreign producers with more modern technology and lower labor costs enjoy competitive advantages over domestic producers. Foreign penetration into the domestic market is approaching 50 percent (Ex. 476–493), and may reach 63 percent by 1981 (Ex. 476–38(b)). However, even absent the OSHA lead regulation, this trend is expected to continue and in fact may be accelerated. Given the current depressed condition of zinc prices in spite of an international cartel active in supporting zinc prices since 1965 (Ex. 476–493), primary producers probably will continue to defer decisions concerning reinvestment in new plant and equipment and more modern technology. Perhaps the costs of such investments will induce a rise in the number of joint ventures to cover the risks of investing in the zinc industry until the development of new markets secures the future of zinc as an industrially important metal.

(j) *Conclusion: Economic Feasibility*

OSHA estimates that the annualized compliance costs in this industry will not exceed $1.9 million, which is only 0.4 percent of the industry's total value of shipments. Therefore the convergence of many factors more significant than the OSHA lead regulation will determine the future of the zinc industry. Current market conditions have resulted in depressed prices in the industry, and the strength of foreign competition is increasing as domestic producers retire obsolete, inefficient plants and deplete domestic ores. Developments of new zinc markets and modernization of technology in the industry may contribute to a brighter outlook for producers. However, if world producers ignore demand, excess supply could force prices down, resulting in lower profits. This might impel additional capacity reductions, which would reduce available supplies in the late 1980s.

OSHA recognizes that the zinc industry is operating in a depressed world market. However, the estimated annualized compliance costs ($1.9 million) are only 0.4 percent of the industry's total value of shipments based on the most recent available data (Ex. 476–20). In addition, most zinc smelters are currently in or close to compliance in most operations.

However, two smelters may pose potential compliance problems. Bunker Hill's unique situation has been addressed in a previous section (see Technological Feasibility). St. Joe contends that it cannot afford to comply with the lead standard because of adverse conditions in the zinc market. However, St. Joe has reopened its zinc smelter at 25 percent capacity because of the discovery of an ore deposit, which will be depleted in about 15 years. The decision to reopen this smelter was

made after promulgation of the lead standard. Therefore, OSHA assumes that St. Joe concluded that the venture would be profitable within the context of a 50 $\mu g/m^3$ lead standard.

Authority

This document was prepared under the direction of Eula Bingham, Assistant Secretary of Labor for Occupational Safety and Health, 200 Constitution Ave., NW., Washington, D.C. 20210.

Accordingly, pursuant to sections 6(b) and 8(c) of the Occupational Safety and Health Act of 1970 (84 Stat. 1593, 1599, 29 U.S.C. 655, 657), Secretary of Labor's Order No. 8–76 (41 FR 25059), and 29 CFR Part 1911, Part 1910 of Title 29, Code of Federal Regulations is hereby amended, for the reasons set forth in the preamble, by revising Table I of section 1910.1025(e)(1).

Signed at Washington, D.C., this 13th day of January 1981.

Eula Bingham,

Assistant Secretary of Labor.

Part 1910 of Title 29 of the Code of Federal Regulations is hereby amended by revising Table I of § 1910.1025(e)(1) to read as follows:

§ 1910.1025 Lead.

* * * * *

(e) *Methods of Compliance*—(1) *Engineering and work practice controls.*

* * *

Table I.—*Implementation Schedule*

Industry [1]	Compliance dates [2]		
	200 $\mu g/m^3$	100 $\mu g/m^3$	50 $\mu g/m^3$
Primary lead production	([3])	3	10
Secondary lead production	([3])	3	5
Lead acid battery manufacturing	([3])	2	5
Nonferrous foundries	([3])	1	5
Lead pigment manufacturing	([3])	N/A	5
Primary steel production	([3])	1	3
Automobile manufacturing/soldering	([3])	N/A	7
All other industries	([3])	N/A	1

[1] Includes ancillary activities located on the same worksite.
[2] Expressed as the number of years from the effective date by which compliance with the given airborne exposure level, as an 8-hour TWA, must be achieved.
[3] On effective date. This continues an obligation from Table Z-2 of 29 CFR 1910.1000 which had been in effect since 1971 but which was deleted upon the effectiveness of this section.

(Secs. 6, 8, 84 Stat. 1599 (29 U.S.C. 655, 657); Secretary of Labor's Order 8–76 (41 FR 25059); 29 CFR Part 1911)

Part III

Department of Commerce

Office of the Secretary

National Voluntary Laboratory Accreditation Program (NVLAP); Quarterly Report

DEPARTMENT OF COMMERCE

National Voluntary Laboratory Accreditation Program (NVLAP); Quarterly Report

This quarterly report covers the period from October 1 to December 31, 1980, and has been prepared in accordance with section 7a.17(a), 7b.17(a), and 7c.17(a) of the National Voluntary Laboratory Accreditation Program (NVLAP) procedures (15 CFR Parts 7a, 7b, 7c). Notice of accreditation actions under NVLAP for the month of December are included in this quarterly report.

Accreditation Actions

A total of 90 laboratories were accredited or reaccredited during the last quarter of 1980.

DOC reported October accreditation actions for 71 laboratories on November 14, 1980 (45 75542–75547) and November accreditation actions for two of those laboratories on December 12, 1980 (45 FR 81804–81805). Nineteen laboratories were granted accreditation during the month of December. The terms of these accreditations are valid for one year from the date that each accreditation was granted, unless otherwise revoked due to violation of the criteria or other conditions of accreditation, or terminated at the request of the laboratories. An alphabetical listing of all accredited laboratories and the test methods for which each is accredited as of December 31, 1980 is shown in Appendix 1. The test methods available under each LAP and the laboratories accredited for each test method are listed in Appendix 2.

NVLAP accreditations shall in no way relieve the laboratories from the necessity of observing and being in compliance with any exisitng Federal, State, and local statutes, ordinances, and regulations that may be applicable to the operations of the laboratories, including consumer protection and antitrust laws.

Applications Suspended or Withdrawn

Further processing of the application submitted by Terralab Engineers, salt Lake City, Utah, has been suspended until all required fees are paid and all data from required proficiency tests are submitted. Testing Laboratories, Inc., Alamagordo, New Mexico, withdrew its application before the assessment process was initiated.

Insulation LAP

The LAP for thermal insulation materials has 56 test methods for which accreditation may be sought. A total of 37 laboratories have been accredited to perform one or more of these test methods.

In a letter of December 2, 1980, the U.S. Department of Energy requested DOC to include additional test methods for urea-formaldehyde foam insulation, under the insulation LAP. Action on this request has been suspended pending the outcome of a Consumer Product Safety Commission decision on whether to ban the use of urea-formaldehyde foam.

The charter for the National Laboratory Accreditation Criteria Committee for Thermal Insulation Materials (NLACC–1) expired on October 29, 1980.

Concrete LAP

The LAP for freshly mixed field concrete has two groups of test methods (with one method optional) for which accreditation may be sought. A total of 41 laboratories have been accredited under the concrete LAP.

The National Laboratory Accreditation Criteria Committee for Freshly Mixed Field Concrete (NLACC–2) met for the last time on November 25, 1980 to advise DOC on certain technical issues which arose during the laboratory assessment process. The NLACC–2 charter expired on December 31, 1980.

Carpet LAP

The LAP for carpet has 12 test methods for which accreditation may be sought. A total of 23 carpet testing laboratories have been accredited for one or more of these test methods.

New Policy

On December 10, 1980 (45 FR 81249–81250) the Department of Commerce (DOC) announced a new policy for accepting applications. Laboratories seeking NVLAP accreditation may now make application at any time during the year for initial entry into NVLAP, for additional laboratory accreditation programs (LAPS), and for additional test methods within existing LAPS. Applications will be reviewed and laboratory assessments will be initiated on a continual basis. Appendix 3 provides information on how to request an application.

Potential LAPs

On November 10, 1980 (45 FRF 74684–74686), DOC announced a preliminary finding of need to accredit laboratories that provide acoustical testing services. Public comments are due January 9, 1981, the same day on which a public hearing on the need for such a LAP will be held in the Department of Commerce, in Washington, D.C.

A determination of whether or not to make a final finding of need based on the comments submitted and on further analysis of the August 6, 1980 preliminary finding of need to accredit laboratories that provide electromagnetic calibration services (45 FR 52326–52329) is expected during the first quarter of 1981.

On December 10, 1980 (45 FR 80163–80164), DOC announced the declination of further action on two formal requests to find that there is a need to accredit wastewater testing laboratories under NVLAP based upon objections to the development of such a LAP by the U.S. Environmental Protection Agency.

Two formal requests for new LAPs were received during the last quarter of 1980. In a letter dated October 20, 1980, Stadium System, Inc. requested that DOC establish a LAP for athletic equipment. An analysis of this request (made under Part 7a of the NVLAP procedures) is under way. In a letter dated December 4, 1980, the U.S. Department of Housing and Urban Development requested that DOC establish a LAP for solid fuel room heaters. Analysis of this Part 7b request was not completed as of the end of 1980.

Dated: January 13, 1981.

Robert B. Ellert,

Acting Assistant Secretary for Productivity, Technology and Innovation.

BILLING CODE 3510-13-M

APPENDIX 1

LISTING OF LABORATORIES ACCREDITED BY THE UNITED STATES DEPARTMENT OF COMMERCE UNDER PROVISIONS OF THE NATIONAL VOLUNTARY LABORATORY ACCREDITATION PROGRAM AND THE TEST METHODS FOR WHICH EACH LABORATORY IS ACCREDITED TO TEST THERMAL INSULATION MATERIALS*

AGUIRRE ENGINEERS, INC.
Attn: Mr. Vukoslav E. Aguirre
14 Inverness Drive East, Unit 8H
Englewood, CO 80112
Phone: (303) 771-4446

NVLAP Code	Test Method Designation	Short Title (property) Subtitle (if applicable)
02/M01	ASTM C31	Making and Curing Concrete Test Specimens in the Field
02/M03	ASTM C172	Sampling Fresh Concrete
02/P01	ASTM C143	Slump of Portland Cement Concrete
02/W01	ASTM C138	Unit Weight, Yield, and Air Content (Gravimetric) of Concrete
02/A01	ASTM C231	Air Content of Freshly Mixed Concrete by the Pressure Method
02/S01	ASTM C39	Compressive Strength of Cylindrical Concrete Specimens
02/A02	ASTM C173	Air Content of Freshly Mixed Concrete by the Volumetric Method

NOTE: Accreditation is granted on 10/20/80 and expires on 10/19/81.

* It should be noted that testing laboratories accredited by the Secretary under these procedures are in no manner immune from the necessity of being in compliance with all legal obligations and responsibilities imposed by existing Federal, State, and local laws, ordinances, and regulations, including those related to consumer protection and antitrust prohibitions.

01/D20	ASTM D2126	Response to thermal and humid; Aging (proc. D); Rigid cellular plastics
01/D21	ASTM D2126	Response to thermal and humid; Aging (proc. E); Rigid cellular plastics
01/D22	ASTM D2126	Response to thermal and humid; Aging (proc. F); Rigid cellular plastics
01/D23	ASTM D2842	Water absorption; Rigid cellular plastics
01/D24	ASTM C739 (para. 7.5 in 77 version)	Moisture absorption; Cellulosic fiber (loose-fill)
01/D25	HH-I-515 (para. 4.8.3 in D version, Amendment 1)	Moisture absorption; Cellulosic fiber (loose-fill)
01/D26	HH-I-515 (para. 4.8.1 in D version, Amendment 1)	Settled density; Cellulosic fiber (loose-fill)
01/F01	ASTM D777 (as modified by HH-B-100B)	Flammability; Paper and paperboard
01/F02	ASTM E84	Surface burning characteristics; Building materials
01/F05	ASTM E136	Behavior of Materials in a Vertical Tube Furnace
01/F07	HH-I-515 (para. 4.8.7 in D version, Amendment 1)	Critical radiant flux; Radiant Panel (cellulosic fiber, loose-fill)
01/F08	HH-I-515 (para. 4.8.8 in D version, Amendment 1)	Smoldering combustion; Cellulosic fiber (loose-fill)
01/S01	ASTM C165	Compressive properties; Thermal insulation (proc. A)
01/S02	ASTM C203	Breaking load/flexural strength; Preformed block insulation
01/S03	ASTM C209 (para. 9 in 72 version)	Transverse strength; Board (cellulosic fiber)
01/S04	ASTM C209 (para. 10 in 72 version)	Deflection at specified load; Board (cellulosic fiber)

NVLAP Code	Test Method Designation	Short Title (property) Subtitle (if applicable)
01/S05	ASTM C209 (para. 11 in 72 version)	Tensile strength; Parallel to surface; Board (cellulosic fiber)
01/S06	ASTM C209 (para. 12 in 72 version)	Tensile strength; Perpendicular to surface
01/S07	ASTM C273	Shear test; Sandwich construction
01/S08	ASTM C446	Breaking load/modulus of rupture; Preformed pipe insulation
01/S09	ASTM D781	Puncture test; Paperboard and fiberboard
01/S10	ASTM D828	Tensile breaking strength; Paper and paperboard
01/S11	ASTM D1621	Compressive properties; Rigid cellular plastics (proc. A-Crosshead)
01/T01	ASTM C177	Thermal transmission properties; Low-temperature guarded hot plate
01/T04	ASTM C236	Thermal conductance; Guarded hot box
01/T05	ASTM C335	Thermal conductivity; Pipe insulation
01/T06	ASTM C518	Thermal transmission properties; Heat flow meter
01/T09	ASTM C653	Thermal resistance (Rec. ; Practice); Blanket (mineral fiber)
01/T10	ASTM C687	Thermal resistance (Rec. Practice); Loose-fill (fibrous)
01/V02	ASTM D591	Starch in paper; Qualitative test
01/V03	ASTM D2020	Mildew (fungus) resistance; Paper and paperboard
01/V04	ASTM E96	Water vapor transmission; Thin sheets (proc. A)
01/V05	HH-I-515 (para. 4.8.6 in D version, Amendment 1)	Fungus; Cellulosic fiber (loose-fill)
01/V06	HH-I-515 (para. 4.8.9 in D version, Amendment 1)	Starch; Cellulosic fiber (loose-fill)

NOTE: Accreditation is granted on 10/12/80 and expires on 10/11/81.

01/D24	ASTM C739 (para. 7.5 in 77 version)	Moisture absorption; Cellulosic fiber (loose-fill)
01/D25	HH-I-515 (para. 4.8.3 in D version, Amendment 1)	Moisture absorption; Cellulosic fiber (loose-fill)
01/D26	HH-I-515 (para. 4.8.1 in D version, Amendment 1)	Settled density; Cellulosic fiber (loose-fill)

NVLAP Code	Test Method Designation	Short Title (property) Subtitle (if applicable)
01/F02	ASTM E84	Surface burning characteristics; Building materials
01/F06	ASTM C739 (para. 10.4 in 77 version)	Flame resistance permanency; Cellulosic fiber (loose-fill)
01/F07	HH-I-515 (para. 4.8.7 in D version, Amendment 1)	Critical radiant flux; Radiant Panel (cellulosic fiber, loose-fill)
01/F08	HH-I-515 (para. 4.8.8 in D version, Amendment 1)	Smoldering combustion; Cellulosic fiber (loose-fill)
01/S02	ASTM C203	Breaking load/flexural strength; Preformed block insulation
01/S03	ASTM C209 (para. 9 in 72 version)	Transverse strength; Board (cellulosic fiber)
01/S04	ASTM C209 (para. 10 in 72 version)	Deflection at specified load; Board (cellulosic fiber)
01/S05	ASTM C209 (para. 11 in 72 version)	Tensile strength; Parallel to surface; Board (cellulosic fiber)
01/S06	ASTM C209 (para. 12 in 72 version)	Tensile strength; Perpendicular to surface
01/S08	ASTM C446	Breaking load/modulus of rupture; Preformed pipe insulation
01/S11	ASTM D1621	Compressive properties; Rigid cellular plastics (proc. A-Crosshead)
01/T06	ASTM C518	Thermal transmission properties; Heat flow meter
01/T09	ASTM C653	Thermal resistance (Rec. Practice); Blanket (mineral fiber)
01/T10	ASTM C687	Thermal resistance (Rec. Practice); Loose-fill (fibrous)
01/V02	ASTM D591	Starch in paper; Qualitative test
01/V03	ASTM D2020	Mildew (fungus) resistance; Paper and paperboard
01/V05	HH-I-515 (para. 4.8.6 in D version, Amendment 1)	Fungus; Cellulosic fiber (loose-fill)
01/V06	HH-I-515 (para. 4.8.9 in D version, Amendment 1)	Starch; Cellulosic fiber (loose-fill)
03/F01	ASTM E84	Surface Flammability (Carpet)
03/F02	UL 992	Surface Flammability
03/F03	DoC FF1-70	Methenamine Pill Test
03/F04	ASTM E648	Radiant Panel (Carpet)

NOTE: Accreditation is granted on 10/12/80 and expires on 10/19/81.

APPENDIX 2

LIST OF TEST METHODS AND THE LABORATORIES ACCREDITED TO PERFORM EACH TEST METHOD

INSULATION LAP -- CORROSIVENESS TEST METHODS

01/C01 ASTM C739 Corrosiveness; cellulosic fiber (loose-fill)(para. 7.7 in 77 version)
- OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY
- UNDERWRITERS LABORATORIES, INC., NORTHBROOK, ILLINOIS

01/C02 HH-I-515 Corrosiveness; cellulosic fiber (loose-fill)(para. 4.8.5 in D version, Amendment 1)
- CERTAINTEED CORPORATION, RESEARCH & DEVELOPMENT LABORATORY
- CERTIFIED TESTING LABORATORIES, INC.
- COMMERCIAL TESTING COMPANY, INC.
- DYNATECH R/D COMPANY
- FACTORY MUTUAL RESEARCH CORP.
- HAUSER LABORATORIES
- INTEST LABORATORIES, INC.
- OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY
- SOUTHWEST RESEARCH INSTITUTE, DEPARTMENT OF FIRE TECHNOLOGY
- TECHNICAL MICRONICS CONTROL, INC.
- THERMTRON RESEARCH LABORATORY
- UNDERWRITERS LABORATORIES, INC., NORTHBROOK, ILLINOIS
- U.S. TESTING COMPANY, INC., HOBOKEN, NEW JERSEY
- U.S. TESTING COMPANY, INC., CALIFORNIA BRANCH LABORATORY
- U.S. TESTING COMPANY, INC., TULSA BRANCH LABORATORY

INSULATION LAP - DIMENSIONS, STABILITY, AND DENSITY PROPERTIES TEST METHODS

01/D01 ASTM C136 Sieve or screen analysis
- CERTAINTEED CORPORATION, RESEARCH & DEVELOPMENT LABORATORY
- UNDERWRITERS LABORATORIES, INC., NORTHBROOK, ILLINOIS

01/D02 ASTM C167 Thickness and density; blanket and batt
- CERTAINTEED CORPORATION, RESEARCH & DEVELOPMENT LABORATORY
- JOHNS-MANVILLE SALES CORP., R & D CENTER
- NAHB RESEARCH FOUNDATION, INC.
- OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY
- OWENS-CORNING FIBERGLAS CORP., BARRINGTON, NEW JERSEY PLANT LABORATORY
- OWENS-CORNING FIBERGLAS CORP., DELMAR, NEW YORK PLANT LABORATORY
- OWENS-CORNING FIBERGLAS CORP., FAIRBURN, GEORGIA PLANT LABORATORY
- OWENS-CORNING FIBERGLAS CORP., KANSAS CITY, KANSAS PLANT LABORATORY
- OWENS-CORNING FIBERGLAS CORP., NEWARK, OHIO PLANT LABORATORY
- OWENS-CORNING FIBERGLAS CORP., SANTA CLARA, CALIFORNIA PLANT LABORATORY
- OWENS-CORNING FIBERGLAS CORP., WAXAHACHIE, TEXAS PLANT LABORATORY
- UNDERWRITERS LABORATORIES, INC., NORTHBROOK, ILLINOIS

01/D03 ASTM C209 Thickness; board (cellulosic fiber) (para. 6 in 72 version)
- JIM WALTER RESEARCH CORPORATION
- JOHNS-MANVILLE SALES CORP., R & D CENTER
- OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY
- UNDERWRITERS LABORATORIES, INC., NORTHBROOK, ILLINOIS

01/D04 ASTM C209 Water absorption, 2 hour; board (cellulosic fiber)(para. 13 in 72 version)
JIM WALTER RESEARCH CORPORATION
JOHNS-MANVILLE SALES CORP., R & D CENTER
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY
UNDERWRITERS LABORATORIES, INC., NORTHBROOK, ILLINOIS

01/D05 ASTM C209 Water absorption, 24 hour; board (cellulosic fiber)(para. 13 in 72 version by D1037; para. 100-106 in 72 version)
JIM WALTER RESEARCH CORPORATION
JOHNS-MANVILLE SALES CORP., R & D CENTER
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY
UNDERWRITERS LABORATORIES, INC., NORTHBROOK, ILLINOIS

01/D06 ASTM C209 Linear expansion; board (cellulosic fiber)(para. 13 in 72 version by D1037; para. 107-110 in 72 version)
JIM WALTER RESEARCH CORPORATION
JOHNS-MANVILLE SALES CORP., R & D CENTER
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY
UNDERWRITERS LABORATORIES, INC., NORTHBROOK, ILLINOIS

01/D07 ASTM C272 Water absorption; core materials
DOW CHEMICAL U.S.A., GRANVILLE R & D CENTER
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY

01/D08 ASTM C302 Density; preformed pipe insulation
CERTAINTEED CORPORATION, RESEARCH & DEVELOPMENT LABORATORY
JOHNS-MANVILLE SALES CORP., R & D CENTER
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY
UNDERWRITERS LABORATORIES, INC., NORTHBROOK, ILLINOIS

01/D09 ASTM C303 Density; preformed block insulation
CERTAINTEED CORPORATION, RESEARCH & DEVELOPMENT LABORATORY
JIM WALTER RESEARCH CORPORATION
JOHNS-MANVILLE SALES CORP., R & D CENTER
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY
OWENS-CORNING FIBERGLAS CORP., BARRINGTON, NEW JERSEY PLANT LABORATORY
OWENS-CORNING FIBERGLAS CORP., KANSAS CITY, KANSAS PLANT LABORATORY
OWENS-CORNING FIBERGLAS CORP., NEWARK, OHIO PLANT LABORATORY
OWENS-CORNING FIBERGLAS CORP., SANTA CLARA, CALIFORNIA PLANT LABORATORY
OWENS-CORNING FIBERGLAS CORP., WAXAHACHIE, TEXAS PLANT LABORATORY
UNDERWRITERS LABORATORIES, INC., NORTHBROOK, ILLINOIS

01/D10 ASTM C355 Water vapor transmission; thick materials; desiccant method
DONALD S. GILMORE LABORATORIES, THE UPJOHN COMPANY
DOW CHEMICAL U.S.A., GRANVILLE R & D CENTER
JOHNS-MANVILLE SALES CORP., TECHNICAL CENTER LABORATORY
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY
TWIN CITY TESTING & ENGINEERING LABORATORY, INC.
U.S. TESTING COMPANY, INC., HOBOKEN, NEW JERSEY
U.S. TESTING COMPANY, INC., TULSA BRANCH LABORATORY

01/D11 ASTM C356 Linear shrinkage; soaking heat; preformed high temperature insulation
JOHNS-MANVILLE SALES CORP., R & D CENTER
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY

01/D12 ASTM C411 Hot-surface performance; high temperature insulation
HAUSER LABORATORIES
JOHNS-MANVILLE SALES CORP., R & D CENTER
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY

01/D13 ASTM C519 Density; loose-fill (fibrous)
CERTAINTEED CORPORATION, RESEARCH & DEVELOPMENT LABORATORY
JOHNS-MANVILLE SALES CORP., R & D CENTER
NAHB RESEARCH FOUNDATION, INC.
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY
UNDERWRITERS LABORATORIES, INC., NORTHBROOK, ILLINOIS
UNDERWRITERS LABORATORIES, INC., SANTA CLARA, CALIFORNIA

01/D14 ASTM C520 Density; granular loose-fill
JOHNS-MANVILLE SALES CORP., R & D CENTER
UNDERWRITERS LABORATORIES, INC., NORTHBROOK, ILLINOIS

01/D15 ASTM D756 Weight and shape changes; accelerated service (proc. A); plastics
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORTORY

01/D16 ASTM D756 Weight and shape changes; accelerated service (proc. B); plastics
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY

01/D17 ASTM D756 Weight and shape changes; accelerated service (proc. E); plastics
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY

01/D18 ASTM D1622 Apparent density; rigid cellular plastics
DONALD S. GILMORE LABORATORIES, THE UPJOHN COMPANY
DOW CHEMICAL U.S.A., GRANVILLE R & D CENTER
JIM WALTER RESEARCH CORPORATION
OLIN CORPORATION, PHYSICAL TESTING LABORATORY
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY
TWIN CITY TESTING & ENGINEERING LABORATORY, INC.
UNDERWRITERS LABORATORIES, INC., NORTHBROOK, ILLINOIS
U.S. TESTING COMPANY, INC., CALIFORNIA BRANCH LABORATORY
U.S. TESTING COMPANY, INC., TULSA BRANCH LABORATORY

01/D19 ASTM D2126 Response to thermal and humid; aging (proc. B); rigid cellular plastics
DONALD S. GILMORE LABORATORIES, THE UPJOHN COMPANY
DOW CHEMICAL U.S.A., GRANVILLE R & D CENTER
JIM WALTER RESEARCH CORPORATION
OLIN CORPORATION, PHYSICAL TESTING LABORATORY
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY

01/D20 ASTM D2126 Response to thermal and humid; aging (proc. D); rigid cellular plastics
DONALD S. GILMORE LABORATORIES, THE UPJOHN COMPANY
DOW CHEMICAL U.S.A., GRANVILLE R & D CENTER
JIM WALTER RESEARCH CORPORATION
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY

01/D21 ASTM D2126 Response to thermal and humid; aging (proc. E); rigid cellular plastics
DOW CHEMICAL U.S.A., GRANVILLE R & D CENTER
JIM WALTER RESEARCH CORPORATION
OLIN CORPORATION, PHYSICAL TESTING LABORATORY
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY
U.S. TESTING COMPANY, INC., CALIFORNIA BRANCH LABORATORY

01/D22 ASTM D2126 Response to thermal and humid; aging (proc. F); rigid cellular plastics
DOW CHEMICAL U.S.A., GRANVILLE R & D CENTER
JIM WALTER RESEARCH CORPORATION
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY

01/D23 ASTM D2842 Water absorption; rigid cellular plastics
DONALD S. GILMORE LABORATORIES, THE UPJOHN COMPANY
DOW CHEMICAL U.S.A., GRANVILLE R & D CENTER
JIM WALTER RESEARCH CORPORATION
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY

01/D24 ASTM C739 Moisture absorption; cellulosic fiber (loose-fill) (para. 7.5 in 77 version)
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY
UNDERWRITERS LABORATORIES, INC., NORTHBROOK, ILLINOIS

01/D25 HH-I-515 Moisture absorption; cellulosic fiber (loose-fill) (para. 4.8.3 in D version, Amendment 1)
CERTAINTEED CORPORATION, RESEARCH & DEVELOPMENT LABORATORY
CERTIFIED TESTING LABORATORIES, INC.
COMMERCIAL TESTING COMPANY, INC.
DYNATECH R/D COMPANY
FACTORY MUTUAL RESEARCH CORP.
HAUSER LABORATORIES
INTEST LABORATORIES, INC.
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY
SOUTHWEST RESEARCH INSTITUTE, DEPARTMENT OF FIRE TECHNOLOGY
UNDERWRITERS LABORATORIES, INC., NORTHBROOK, ILLINOIS
U.S. TESTING COMPANY, INC., HOBOKEN, NEW JERSEY
U.S. TESTING COMPANY, INC., CALIFORNIA BRANCH LABORATORY
U.S. TESTING COMPANY, INC., TULSA BRANCH LABORATORY

01/D26 HH-I-515 Settled density; cellulosic fiber (loose-fill) (para. 4.8.1 in D version, Amendment 1)
CERTAINTEED CORPORATION, RESEARCH & DEVELOPMENT LABORATORY
CERTIFIED TESTING LABORATORIES, INC.
COMMERCIAL TESTING COMPANY
DYNATECH R/D COMPANY
FACTORY MUTUAL RESEARCH CORP.
HAUSER LABORATORIES
INTEST LABORATORIES, INC.
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY
TECHNICAL MICRONICS CONTROL, INC.
THERMTRON RESEARCH LABORATORY
UNDERWRITERS LABORATORIES, INC., NORTHBROOK, ILLINOIS
UNDERWRITERS LABORATORIES, INC., SANTA CLARA, CALIFORNIA LABORATORY
U.S. TESTING COMPANY, INC., HOBOKEN, NEW JERSEY
U.S. TESTING COMPANY, INC., CALIFORNIA BRANCH LABORATORY
U.S. TESTING COMPANY, INC., TULSA, BRANCH LABORATORY

INSULATION LAP - FIRE PROPERTIES TEST METHODS

01/F01 ASTM D777(as modified by HH-B-100B)Flammability; paper and paperboard
CERTAINTEED CORPORATION, RESEARCH & DEVELOPMENT LABORATORY
JOHNS-MANVILLE SALES CORP., R & D CENTER
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY

01/F02 ASTM E84 Surface burning characteristics; building materials
COMMERCIAL TESTING COMPANY, INC.
FACTORY MUTUAL RESEARCH CORP.
HARDWOOD PLYWOOD MANUFACTURERS ASSOCIATION
JOHNS-MANVILLE SALES CORP., R & D CENTER

OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY
UNDERWRITERS LABORATORIES, INC., NORTHBROOK, ILLINOIS
UNDERWRITERS LABORATORIES, INC., SANTA CLARA, CALIFORNIA
U.S. TESTING COMPANY, INC., HOBOKEN, NEW JERSEY
U.S. TESTING COMPANY, INC., CALIFORNIA BRANCH LABORATORY

01/F05 ASTM E136 Behavior of Materials in a Vertical Tube Furnace
CERTAINTEED CORPORATION, RESEARCH & DEVELOPMENT LABORATORY
HAUSER LABORATORIES
JOHNS-MANVILLE SALES CORP., R & D CENTER
OWENS-CORNING FIBERGLAS CORP., TECHNICAL CENTER LABORATORY
U.S. TESTING COMPANY, INC., HOBOKEN, NEW JERSEY
U.S. TESTING COMPANY, INC., CALIFORNIA BRANCH LABORATORY

01/F06 ASTM C739 Flame resistance permanency; cellulosic fiber (loose-fill) (para. 10.4 in 77 version)
SOUTHWEST RESEARCH INSTITUTE, DEPARTMENT OF FIRE TECHNOLOGY
UNDERWRITERS LABORATORIES, INC., NORTHBROOK, ILLINOIS

01/F07 HH-I-515 Critical radiant flux; radiant panel (cellulosic fiber, loose-fill)(para. 4.8.7 in D version, Amendment 1)
CERTAINTEED CORPORATION, RESEARCH & DEVELOPMENT LABORATORY
CERTIFIED TESTING LABORATORIES, INC.
COMMERCIAL TESTING COMPANY, INC.
FACTORY MUTUAL RESEARCH CORP.

Part IV

Department of Agriculture

Food and Nutrition Service

Summer Food Service Program for Children

DEPARTMENT OF AGRICULTURE

Food and Nutrition Service

7 CFR Part 225

Summer Food Service Program for Children

AGENCY: Food and Nutrition Service, USDA.

ACTION: Final rule.

SUMMARY: This final rule completely reorganizes the regulations as they existed in 1980 for the Summer Food Service Program (Program) to make them easier to understand and use. The rule also makes several substantive changes to the prior regulations. It now requires State agencies to establish for each food service site serving vended meals an approved level of meal service. Program sponsors will no longer receive reimbursement for meals served in excess of the approved levels. This change is intended to reduce waste in the Program by reducing the number of excess meals claimed for reimbursement under the Program. The final rule spells out new corrective action requirements for State agencies dealing with meal service violations at the site level. These requirements will assist State agencies in reducing Program mismanagement, waste and abuse. The requirements for State agency monitoring of sponsor and site operations have been changed to reduce the burden of conducting reviews early in the summer while emphasizing the need for follow-up reviews of program operations. This change from the 1980 regulations is intended to give State agencies greater flexibility in utilizing their monitoring resources. The final rule will allow Food and Nutrition Service regional offices (FNSRO's) greater discretion in the scheduling of conducting management evaluations of State agencies.

EFFECTIVE DATE: January 1, 1981.

FOR FURTHER INFORMATION CONTACT: Jordan Benderly, Director, Child Care and Summer Programs Division, Food and Nutrition Service, U.S. Department of Agriculture, Washington, D.C. 20250, or by telephone at (202) 447–8211.

The Final Impact Statement describing the options considered in developing this final rule and the impact of implementing each option is available on request from either Mr. Benderly or Ms. Beverly Walstrom at the above address or telephone number. Copies of all written comments on the proposed rule will be available for review during normal business hours at room 644, 500 12th Street, SW., Washington, D.C. 20250.

SUPPLEMENTARY INFORMATION: This final regulation has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044 and has been classified "not significant."

The Summer Food Service Program is authorized by section 13 of the National School Lunch Act. Comprehensive Progam regulations were last published on January 2, 1979 (44 FR 8). On October 30, 1979 (44 FR 62279), and February 1, 1980 (45 FR 7227), amendments were published implementing the provisions of Public Law 96–38, which set a deadline for the submission of the final claim for reimbursement for fiscal year 1979. On January 8, 1980 (45 FR 1844), amendments to the regulations were published which implemented the changes in Program eligibility mandated by Public Law 96–108, and made several other minor changes. Section 13 of the National School Lunch Act was amended on December 15, 1980, with the enactment of Public Law 96–499, which extends the Program's authorization through Fiscal Year 1984 and limits daily meal service of food service sites. On December 15, 1980, Public Law 96–528 was enacted, prohibiting FNS from administering the Program in States in which FNS did not administer the Program in FY 1980.

Proposed regulations for the Program were published on November 7, 1980 (45 FR 74384). The proposal incorporated a comprehensive reorganization of the regulations and several changes based on Program experience and recommendations received from various sources. The preamble to the proposed rule encouraged readers to submit comments. A comment period of 30 days was allowed for interested parties to submit criticisms, favorable opinions, and information to affect the final regulations. (Justification for the shortened comment period is provided at 45 FR 74384 in the November 7, 1980, proposal.) A total of 86 comments were received from private citizens, sponsors, State agencies, Food and Nutrition Service (FNS) Regional Offices, advocacy groups, and others. All comments were studied, and were summarized and catalogued according to the section of the regulations to which they refer so that they could be considered systemically during the development of the final rule.

Comments on regulatory issues are presented by issue in the preamble. In most instances, comments which recommended changes contrary to the Program's authorizing statute or which were not accompanied with some justification or discernible rationale are not addressed in this preamble. This preamble sets forth the basis and purpose behind significant deviations from the November 7, 1980, proposed regulations. Interested parties can generally assume the reasons given in the preamble to the proposed rule are still valid for those provisions which are not changed in the final rule. A thorough understanding of the grounds for the final rule may require reference to the proposed rule.

Statutory Changes

The concluding section of the preamble to the proposed rule discussed anticipated legislative amendments and the Department's proposals for their implementation. This section was included in the preamble to facilitate implementation of the legislative changes if enacted, and to solicit public input, with the cautionary advice that some or all of the amendments might be enacted. As it turned out, Congress did not pass any of the amendments discussed in the last section of the preamble. The Department will retain the comments received on that section of the preamble for use in the event that the next Congress considers and passes similar legislation.

The 96th Congress did pass the Omnibus Reconciliation Act of 1981, which was enacted as Public Law 96–499 on December 5, 1980. Public Law 96–499 extends authorization for the Program until September 30, 1984, and limits daily meal services at sites other than camps and those which primarily serve migrant children. On December 15, an appropriations act for FY 1981 was also enacted, as Public Law 96–528, prohibiting FNS from administering the Program during FY 1981 in those States which undertook to administer the Program in FY 1980, thereby leaving administration of the program in those States to State agencies.

The provisions implementing these changes appear in the final rule, rather than in a proposed rule which would be subject to public coment, for three reasons. First, the mandatory deadline of January 1, 1981 for the publication of final regulations for the Program would be greatly exceeded if a proposal were to be published and a comment period allowed. Secondly, the provisions of the statutory amendment are nondiscretionary and public comment could not, therefore, affect their implementation. Finally, Congress passed these amendments in order to reduce Federal expenditures and to improve Program management during this Fiscal Year. The Department believes that these objectives can best be served by immediate implementation

of the changes in the final rule. Therefore, the solicitation of public comments is unnecessary. Inclusion of these provisions in the final rule is in accordance with the conditions specified in Executive Order 12044 for exclusions from the requirements for public comment in the rulemaking process. It has been determined by Bob Greenstein, Administrator, FNS, that the emergency nature of these changes warrant publication without opportunity for public comment at this time. Good cause exists both for dispensing with the solicitation of public comments and for making this rule effective earlier than 30 days after publication.

The changes from the proposed rule incorporated in the final rule are described below.

1. Definitions

a. *Areas where poor economic conditions exist.* The Department has received comments that indicate some confusion about the definition of "areas where poor economic conditions exist" as it relates to enrollment programs. Sponsors of enrollment programs may demonstrate that they serve areas where poor economic conditions exist in either of two ways. (1) They may establish, as for any other site which is not a camp, that 33⅓ percent of the children in the local area from which the site draws its attendance qualify for free or reduced price school meals, as allowed under 7 CFR 225.2(d) (1), or (2) they may document that at least 33⅓ percent of the children enrolled in the site qualify for free or reduced price school meals, as allowed under 7 CFR 225.2(d)(2). However, if the sponsors wish to establish their sites' eligibility under the second method it is necessary to collect family size and income information for enrolled children at these sites. Sponsors of enrolled or unenrolled sites other than camps are only required to submit documentation every other year that their sites serve areas where poor economic conditions exist. Sponsors of camps must, however, collect family size and income information each session at each camp. Camps cannot qualify for eligibility under subparagraph (1) above, as serving areas where poor economic conditions exist. (See also 7 CFR 225.9(a)(2).)

b. *Camps.* The proposed rule modified the definition of "camps" by requiring that nonresidential camps operate for at least six hours each day.

One commenter pointed out that six hours is not enough time to provide the minimum number of meal services for which nonresidential camps may be approved (a breakfast, lunch, and supper each day). Two other commenters argued that the six hour requirement is unnecessary. In response to these comments, the definition in the final rule has been changed to require simply that nonresidential camps offer a continuous schedule of organized cultural or recreational activities between meal services. The Department has determined that the deletion of the reference to a minimum number of hours of operation each day will not detract from the original purpose of changing the definition, which was to ensure that sites which qualify as nonresidential camps actually provide the other services associated with the term "day camp." (See 7 CFR 225.2(e).)

c. *Income accruing to the Program.* One commenter pointed out that a minor discrepancy exists between the definitions of the term "income accruing to the Program" included in the proposed rule and the regulations for the Child Care Food Program (7 CFR Part 226). The definition included in the proposed rule refers to monies "received by a sponsor for use in the Program," and the definition used in Part 226 refers to monies "used in an institution's" child care food program. Although the discrepancy may seem significant, it was unintentional, and therefore the definition is changed in this final rule to make them consistent. If it becomes necessary to pay food service bills with non-Program funds, sponsors may wish to borrow the needed funds from their other accounts, paying back such loans to the extent possible with Program reimbursement.

Money lent rather than permanently transferred to the food service program should not be reported as income accruing to the Program. (See § 225.2(n).)

2. Turn-back of administrative responsibility

FNS Regional Offices have had to assume administrative responsibility for the Program in as many as 21 States. Recognizing the increasing number of States in which the Federal government directly administers the Program, Congress has prohibited the Department from assuming administration during FY 1981 in any States which administered the Program in FY 1980. This prohibition was made a part of Public Law 96–528 which was enacted on December 15, 1980.

In order to comply with Public Law 96–528, the final rule prohibits FNS Regional Offices from assuming administrative responsibility for the Program during FY 1981 in any State where a State agency administered the Program in FY 1980. (See 7 CFR 225.3(b).)

3. Special developmental projects

The proposed rule deleted provisions for special developmental project funding under the Program. Although a majority of commenters opposed the deletion (seven out of thirteen), the Department has determined that, in the interest of effective use of Federal funds and critical administrative staff time, the Department should exercise its discretion in the best interest of the success of the Program by discontinuing funding for special developmental projects.

As the preamble to the proposed rule pointed out, the special developmental projects have proven costly and have generally yielded no useable results. One commenter argued that rather than eliminate the funding, the Department could improve the effectiveness of the projects simply by exercising more discretion in approving them. The Department maintains, however, that the potential effectiveness of the projects is severely limited by the short duration of the Program. The Program's administrative demands during the summer are such that adequate oversight of the projects frequently cannot be provided. More careful review of project proposals would not resolve these problems. Special developmental projects have greater potential to produce useful results in the programs that operate year round.

4. Priority for allocation of sites

In the proposed rule, an inadvertent error was made in identifying the priority for approval where two or more applicant sponsors propose to serve the same area or the same enrolled children. The proposed rule specified that public and nonprofit private schools which successfully operated the Program in the past would be the highest priority applicants in such situations. The final rule properly identifies the highest priority applicants as "applicants which are public or nonprofit schools, and other applicants which have demonstrated successful Program performance in a prior year." (See 7 CFR 225.8(g)(1).)

5. Approved levels of meal service

The proposed rule contained a provision requiring State agencies to establish an approved level of meal service for each site serving meals obtained from a food service management company. The approved level would constitute the maximum number of meals which the site potentially could serve at a meal service and claim for reimbursement. The proposed rule provided, in very general

terms, the bases for establishing the approved levels and for adjusting them should a site's attendance drop below or have potential to rise above its initially established approved level.

More than 50 comments were received on this proposal, and the comments were evenly divided between those supporting and those opposing the provision. While a slight majority of commenting sponsors and advocacy groups supported the proposal, a slight majority of the State agencies which commented opposed the change. The Department has decided to retain the requirement in the final rule, with minor modifications. The Department believes that establishing approved levels for vended sites will provide the mechanism needed to reduce the number of excess meals delivered to the sites. Sponsors can use approved levels to better plan their programs. Food service management companies can rely on approved levels as a system to help prevent sponsors from over-ordering, and thus not receiving enough reimbursement to cover their costs when excess meals are delivered and disallowed.

Seven commenters (three State agencies, two advocacy groups, and two sponsors) expressed reservations about the provision, with the argument that establishing and adjusting approved levels for vended sites would place too great a burden on State agencies. This concern has also been raised by some FNS Regional Offices. The Department believes, however, that the additional workload will prove manageable, especially once State agencies have established their procedures for implementing the requirement. Also, it should be noted that significant reductions in the minimum preapproval and monitoring visits to some extent counter-balance the additional workload that the requirement for approved levels will entail.

The concept of setting maximum approved levels of meal service for sites is not new to the Program. Some administering agencies have made use of approved level systems in the last few years and have found that with an approved level system they have been able to reduce Program waste by reducing the number of excess meals that are delivered to the sites. These administering agencies have developed systems which are fully consistent with the requirements of the proposed (and final) rule and which mitigate the workload which the approved level requirement would appear to entail.

The regulatory provisions for approved levels are stated in general terms in order to allow State agencies as much flexibility as possible in developing their systems, while maintaining a basic requirement that State agencies implement a site approved level system aimed at reducing the delivery of excess meals to sites. The following discussion explores some of the mechanisms which State agencies may wish to consider in developing their systems for establishing and adjusting approved levels.

In approving a sponsor's application for vended sites, the State agency should use any available and reliable information about the sites' attendance in prior years to establish an approved level. To ensure that there are enough meals to serve the children at the site, the State agency may wish to give the site an approved level somewhat higher than the exact level of attendance indicated in the records from the prior years. Such a margin will avoid the problem of having to adjust the approved level upwards when attendance at the site exceeds by only a small number the attendance levels recorded for the site in prior years. Of course, if the State has reason to believe that attendance at the site will actually decrease, it should not build such a margin into the approved level.

The proposed rule stipulated that if no reliable record of a site's probable attendance is available, the State agency would establish the approved level based upon its own best estimate of attendance for each site. In order to provide more flexibility to State agencies, the final rule modifies this provision. The final rule allows the State agency to use other procedures besides making an estimate of a site's likely attendance in those situations where an accurate record of attendance is not available and making an estimate of likely attendance would prove difficult.

For example, an acceptable procedure for sites for which no reliable record is available would be to establish a uniform, standard level of meal service that could be provided at all those sites (such as 100 meals per site), subject to adjustment based on review findings or any other information which may become available to the State agency. The standard level which a State agency chooses to employ will depend on the character and the size of the programs and sites which operate in the State. For example, a standard approved level of 50 may be appropriate in some States, while a standard level of 100 may be more appropriate in others. States may use a standard approved level for some sites and make an estimate of attendance for others. In any case, States should consider making an estimate of attendance rather than using a standard approved level for each site which has had problems with excess meals in prior years. States which choose to use a standard approved level must provide a mechanism for establishing approved levels higher than the standard level for sites of sponsors which provide evidence that they will serve more children than the standard approved level would permit. Of course, if the site information sheet submitted by the sponsor or any other information indicates estimated attendance will be significantly lower than the State's standard approved level, the State agency may consider using the lower figure in establishing the site's approved level.

When State agencies review a site and discover that attendance is significantly below the site's approved level, the State agency should consider reducing the approved level. A downward adjustment will be particularly important if it appears that the sponsor has not adjusted meal orders for the site with the objective of providing only one meal per child. The State agency may consider various options for making downward adjustments. It may want to adjust the approved level to a number equalling a reasonable percentage of the site's attendance on the day of the review to leave sufficient margin to accommodate any normal fluctuation in site attendance. For example, such a percentage might be 115 or 120 percent of the site's attendance on the day of a review. The State agency may want to make a more stringent adjustment in some cases.

When the State agency makes adjustments in the approved level, it should do so with the intention of accurately reflecting the site's probable attendance without setting the level so low that frequent readjustments will be necessary. The possible mechanisms for implementing the approved levels requirement described above do not constitute the only possibilities. State agencies are encouraged to establish systems for approved levels which best suit the programs in their States and which will make the most effective use of their staff resources in reducing waste in the Program.

Among the comments on the proposal were a few recommending that, instead of requiring approved levels for sites, a sponsor-wide approved level should be required. One commenter argued that a sponsor-wide approved level would provide sponsors with more flexibility to ensure that enough meals could be

ordered for each site to provide one meal for each attending child. This recommendation was rejected because it would not be effective in reducing the number of excess meals delivered to sites.

Several other commenters expressed concern that approved levels would prevent sites from receiving as many meals as they need to serve each attending child. Clearly this is not the intent of this change in the Program. The Department believes that State agencies will ensure that sponsors have rapid recourse whenever they find that a site's approved level is too low.

Three commenters argued that establishing an approved level of meal service would actually increase waste in the Program by encouraging sponsors to order the full approved number of meals each day without adjusting their meal orders in response to trends in site attendance. To address this concern, the final rule emphasizes the sponsor's responsiblility for rapid adjustments in meal orders downwards when site attendance is below the approved level. In no case should the approved level be used as a standing meal order. State agencies must continue to review sites and sponsors to ascertain whether the sponsors have in fact adjusted meal orders with the objective of providing only one meal per child.

A few other commenters recommended that State agencies also be required to set approved levels for sites of sponsors which prepare their own meals. This recommendation was rejected because of the additional workload it would impose on State agencies. Also, the Department believes that excess meals are not as serious a problem for self-preparation programs as for vended programs. Sponsors which prepare their own meals tend to adjust more quickly the number of meals prepared to the number of children in attendance. However, State agencies may choose, as under prior regulations, to establish approved levels of meal service for the sites of any sponsor which prepares its own meals. (See 7 CFR 225.8(j)).

6. Sponsor applications

The proposed rule required that, within two weeks of receiving notification of their approval, each sponsor submit (1) a copy of its letter advising the appropriate health department of its intention to operate a food service at its sites, and (2) if the sponsor expects to receive more than $75,000 in Program payments, a copy of its letter of engagement with an auditor. Two comments received have raised a valid concern that providing two weeks following approval for the submission of these letters may prove detrimental to the Program in situations where the sponsor plans to begin its food service program less than two weeks following approval. In such a case, the letters might not be submitted until after the sponsor's program has actually started operating. The Department has decided that it must ensure that sponsors have taken the necessary steps to involve the appropriate health department and to arrange for an audit before opening their summer food service programs. Therefore, the final rule stipulates that these letters must be submitted within two weeks of approval *and* prior to commencement of operations under the Program. State agencies may, of course, choose to require that the sponsor submit along with its application a copy of the letters the sponsors will send. (See 7 CFR 225.9 (d) and (e).)

7. Late applications

The proposed rule introduced a change in the Program requiring that the State agency not approve an application submitted after the deadline date any sooner than seven days following its submission. In response to strong disapproval of this change registered in eleven out of fourteen comments received on the subject, this change has not been included in the final rule. The Department concurs with the argument of several of the commenters that this constraint on the application approval process would unnecessarily reduce the flexibility of State agencies in dealing with late sponsor applications. The Department also agrees with commenters that such a mandatory delay in approving late applications might have the effect of denying meals to children who otherwise might be served.

8. Funding assessment

The proposed rule retained the requirement from prior regulations that FNS Regional Offices collect data on each State's administrative funding needs by August 1 of each year. The funding assessments serve as the basis for adjustments in the State's final Letter of Credit. Commenters from Regional Offices recommended that the deadline date for funding assessments be changed because State agencies often do not receive enough information from Claims for Reimbursement from sponsors prior to August 1 to conduct accurate funding assessments. In recognition of the validity of this argument, the Department has reviewed the entire process for making funding assessments and has determined that it can be changed in two ways. First, the final regulations extend to August 20 the deadline for Regional Offices to report on funding assessments. Additionally, final regulations restructure this reporting process from a complete State by State tally to exception reporting. Thus, Regions need only report, by August 20, any necessary adjustments to the information submitted in a State's Management and Administration Plan (MAP) which would impact on a State's Letter of Credit. If no new information is submitted by August 20, only the information submitted in the MAP will be considered. These changes reflect consideration of concerns expressed by commenters about the August 1 deadline and further reduces the reporting burden by instituting an exception reporting process. (See 7 CFR 225.13(d).)

9. Audit requirements

Regulations in prior years have required that sponsors which expected to earn $50,000 or more in Program reimbursement arrange for an audit of their programs every year. The proposed rule changing this level to $75,000 was supported by fifteen out of nineteen commenters. Several State agencies pointed out that this change has the effect of increasing the number of audits which State agencies must pay for out of their State administrative funds (SAF). Five State agencies indicated that their SAF would not be sufficient to cover the additional audit costs. The Department realizes that this change will put a strain on some States' administrative funds. However, 7 CFR 225.13(a)(4) allows States to appeal the requirement if they can demonstrate financial hardship. States which find that the change in the audit requirement entails unaffordable additional costs may want to initiate such appeals.

10. Tolerance system

One of the proposed changes which received numerous comments was the provision giving State agencies the option to allow a five percent tolerance on meal service violations observed during a site review. The proposal would permit State agencies to allow sponsors to claim reimbursement for meals in violation of the meal service requirements, as long as the number in violation did not exceed five percent of the total number of meals at the service.

While a majority of the commenters indicated support for the proposal, many of the commenters indicated that the five percent level would be far too low. Seventeen of the commenters recommended a ten percent tolerance. A few others stated that fifteen percent would be a more realistic level. The Department believes that many of the

eleven commenters which endorsed the proposed five percent level (most of whom are Program sponsors) did not fully realize that the change would result in a stricter and more formalized disallowance policy in some States than has been in effect in the past. Unfortunately, the comments did not reveal any consensus on what the appropriate tolerance level should be.

The Department has determined, however, that it should not provide authorization in regulations for a higher tolerance on meal service violations. A higher tolerance could cause serious Program management and accountability problems and encourage criticism of the Program.

After taking these issues into consideration, the Department has decided not to include provisions for tolerance levels in the final rule. Instead of providing tolerance through a flat percentage, the final rule provides a different mechanism to help ensure that sponsors which operate efficiently are not penalized for unavoidable losses, and that Program integrity is strengthened at the same time.

Under the final rule, all meals in violation would continue to be disallowed from the meals times rates calculation (i.e., as meals served to children) in the Claim for Reimbursement. The State agency would, however, be allowed to permit sponsors to include the cost of disallowed meals as operating costs, except that in no case shall the cost of meals in excess of a site's approved level of meal service established in accordance with 7 CFR 225.8(j) be considered allowable or be reported as an operating cost.

Sponsors receive, as reimbursement for their operating costs, the lesser of (1) the amount derived by multiplying the number of allowable meals served to children times the reimbursement rates, or (2) their allowable operating costs. If sponsors are not permitted either to include disallowed meals in the meals times rates computation or to include the cost of the disallowed meals as operating costs, then even a single disallowed meal will result in reimbursement being reduced below costs that a sponsor has actually incurred, and the sponsor will experience a financial loss. This loss would have to be borne by the sponsor out of other funding sources, or the sponsor would be left with a debt that it could not pay off. The Department recognizes that to a small extent disallowances may be unavoidable, even for sponsors which carefully manage their programs, and that State agencies may not want to impose such losses on sponsors which run good programs. If such losses are imposed, the most scrupulous sponsors may be discouraged from participating in the Program, with the result that waste in the Program may increase due to less careful sponsors taking their place.

This rulemaking addresses this issue by permitting disallowed meals to be considered as allowable operating costs. At the same time, by disallowing these meals from the meals times rates computation, and maintaining the requirement that allowable operating costs will be reimbursed only up to the meals times rates level, reimbursement for high levels of disallowed meals will be prevented.

The requirement of prior regulations that not even a single disallowed meal be included in operating costs may have discouraged some high quality sponsors from participating, and may also have influenced some sponsors who participate to report costs and meal counts incorrectly. For example, when a sponsor prepared or purchased 100 meals (incurring the cost of 100 meals), only the cost of the meals that were served to children in accordance with Program requirements could be claimed as an allowable cost. If only 90 of the 100 meals were served to children and met all of the requirements, only the cost of 90 meals was allowable. The cost of the other 10 meals was not allowable and, unless reported improperly on the claim, would have represented a loss to the sponsor.

Under the tolerance provision in this final rule, the sponsor can still only claim 90 meals as meals served to children, which can be used in the meals times rates calculation in order to determine the maximum potential reimbursement. However, unlike prior regulations, the final rule allows this sponsor to claim the cost of all 100 meals in its report of operating costs as long as none of the meals were in excess of the site's approved level of meal service. In reimbursement for operating costs, the sponsor will continue to receive the lesser of (1) allowable meals times the reimbursement rates, or (2) allowable operating costs. To the extent that the sponsor has kept its per meal costs below the reimbursement rates, the sponsor may be allowed to recover the cost of disallowed meals.

The provision included in the final rule will encourage accurate reporting and more efficient program management. While efficiency will be encouraged, the provision should not cause sponsors to keep their costs low by reducing the quality or quantity of the food served to children, as State agencies will continue to conduct reviews, examine meals, and disallow meals which do not meet the meal pattern requirements. If the State agency determines that the sponsor is reducing costs by reducing meal quality or is not taking the necessary steps to control its program, the State agency may choose to require the sponsor to reduce the costs reported on its Claim according to the number of meals disallowed.

Efforts to secure the most qualified sponsors will be facilitated by this provision. State agencies will be able to assure potential sponsors that they will not necessarily suffer financial losses for all disallowances.

The costs of meals in excess of a site's approved level of meal service are given separate treatment (i.e., they must be excluded in all cases from the Claim for Reimbursement) because such violations are easily avoidable. Ordering meals in excess of a site's approved level would constitute a willful violation, and the cost of such meals cannot be considered a necessary cost of operating the Program.

This provision is like the proposed 5 percent tolerance level system in that it can help sponsors to recover some of the costs of meals which otherwise would not be reimbursed. However, unlike the tolerance level system, this provision will provide additional incentive to sponsors to control and accurately report their costs and is, therefore, consistent with the goal of encouraging good Program management. (See 7 CFR 225.12(c)(8).)

11. Corrective action

The proposed rule contained several changes emphasizing corrective action regarding sponsors and sites which are found not to meet Program requirements. The proposal also modified the requirements for State agency reviews of sponsors and sites, emphasizing the need for State agency follow up when corrective action is necessary.

The final rule incorporates a provision meant to trigger special State agency attention to corrective action and follow-up when site violations reach a high level. In addition to requiring that sponsors take actions to ensure that any violations observed by the State agency during a site review do not recur, the final rule requires the State agency to prescribe a specific corrective action plan if it finds what it considers to be a high level of meal service violations at the site being reviewed. To ensure that the corrective action plan has been implemented, the State agency is required either to conduct a follow-up visit or in some other manner verify that the corrective action has been taken.

The Department believes that this requirement for a corrective action plan is probably not unlike systems already utilized by many State agencies, and will therefore not entail additional work. The provision will help to highlight the importance of follow-up efforts and will provide State agencies with specific regulatory support for mandating corrective action. (See 7 CFR 225.14(e)(4).)

12. Appeal procedures

In the proposed rulemaking, the Department outlined four major modifications to the appeal process: appellants must submit written documentation refuting the State agency's decision within seven days of submitting a request for review; State agencies must provide appellants with five days advance written notification of the time and place of hearings; a representative of the State agency must be allowed to attend hearings; and the time limit for review officers to render their decisions was raised from three to five work days. The Department received eight comments on these proposals, including two from administrative review officers. In general, the commenters approved of this section of the proposed regulations, although some criticisms and suggestions were made. In response to these comments the Department is modifying the proposed rulemaking in several ways.

First, the Department is including the revocation of a food service management company's registration as an appealable action. The Department never intended that vendors should be without administrative redress in such situations.

Therefore, this modification merely corrects the original oversight.

Secondly, the Department is specifiying that all appeals must clearly identify the precise State agency action being appealed and must include a photocopy of the State agency's notice of action. This stipulation is intended to enable review officers to determine immediately the reason for the appeal, thereby avoiding lost time spent by the review officer researching the nature of the appeal and permitting decisions to be rendered as expeditiously as possible.

The final regulation stipulates that the State agency, as well as the appellant, must be provided with five days advance written notice of the time and place of the hearing.

The proposed regulations also would have raised the time limit for rendering decisions from three work days to five. Some commenters, however, believe the time limit should be even longer, up to a maximum of thirty days. The Department originally proposed the two-day increase because the three-day limit was not always sufficient to allow review officers to reach decisions, particularly when appeals were complex or caseloads were large. A modest increase in the time limit is desirable, therefore, but because the SFSP operates for such a short period of time, it is imperative that all decisions be rendered as expeditiously as possible. For this reason, the Department does not believe that the time limit should be expanded beyond five working days.

Finally, in response to some queries and comments, the Department wishes at this point to clarify the intention of the provision requiring the State agency to maintain a complete record of each appeal. Such a record should provide an outside party with the opportunity to determine whether the State agency has followed the regulations in such matters as notification and time frames. The record should also make it clear why the review officer rendered the decision. It is not necessary, however, that verbatim transcripts of hearings or, for that matter, any other particular kind of documentation be included in every record. The Department has no wish to encumber review officers with an extensive list of materials which must be part of the record. Instead, the Department intends that review officers have flexibility in this area provided that the record is sufficiently complete to document the State agency's compliance with these regulations and the basis for the decision. This issue is clarified in the final rule. (See 7 CFR 225.16 (b) and (c).)

13. Daily meal services

Section 206 of Pub. L. 96–499 stipulates that sites other than camps and those which primarily serve migrant children shall only be approved to provide up to two meal services under the Program each day. If such sites provide one meal service each day, it may be either breakfast, lunch, or a supplement. If such sites provide two meal services each day, one of the meal services must be lunch, and the other may be breakfast or a supplement. These sites shall not be approved to serve both breakfast and a supplement each day. The statute permits camps and sites which primarily serve migrant children to serve up to four meals each day. Congress made this change in the Program in order to reduce Federal expenditures, Program mismanagement, and abuse associated with multiple daily meal services. The final rule incorporates this change.

As before, the regulations provide that residential camps may serve up to four meals per day. The same language is used allowing sites primarily serving migrant children to serve up to four meals. Consistent with regulations for prior years, the proposed rule stipulated that nonresidential camps, however could be approved only to serve four meals, or three meals consisting of breakfast, lunch, and supper, each day. Several commenters argued that nonresidential camps should be permitted, like residential camps, to serve any number of meals up to four each day, on the grounds that the minimum meal service stipulation is an unnecessary encumbrance. The Department has decided to accept their recommendation. State agencies can achieve the original objective of the proposed provision, which was to ensure that nonresidential camps offer the other services associated with the term "day camp," by careful scrutiny of the sponsor applications with regard to the schedule of activities which the camp will provide for enrolled children. (See 7 CFR 225.19(f), (g), and (h).)

14. Meal pattern requirements

The final rule retains the presentation of the meal component and portion requirements for the various meal types in chart, rather than narrative, form. However, the order of listing the individual components of each meal type has been adjusted in order to conform to the format presented in guidance materials developed by the Department.

A provision has been added to the final regulations that clarifies the use of enriched macaroni products with fortified protein in the Program. These products may be used to meet either part of the meat/meat alternate requirement or the bread/bread alternate requirement in a meal. However, these products cannot be counted toward meeting both component requirements in the same meal. (See 7 CFR 225.21(c)(3).)

15. Unitization of meals

Under prior regulations, all meals purchased from food service management companies were required to be unitized, with or without milk. This final rule modifies this provision by requiring that these meals be unitized, with or without milk or juice. This change responds to complaints that when juice has been included in the unitized meal, it has sometimes spilled and damaged other components in the unit. The change will help to prevent wasting of food. (See 7 CFR 225.17(a).)

16. Affirmative action to increase participation by minority food service management companies

The Department received no comments relating to the proposal to collect information during the registration process on minority food service management companies desiring to participate in the 1981 Program. Because the Department believes that increased emphasis on minority business participation is both necessary and important, this provision has been included in the final regulations. (See 7 CFR 225.17(c)(2)). If the 1981 data reveals a disproportionately low level of minority business participation in the Program, the Department intends to re-evaluate the means it has used in the past to increase the level of participation of minority owned firms in the Program.

17. Other changes

Finally, in the proposed rulemaking, the Department outlined several changes in the requirements for monitoring, meal patterns, audits and management evaluations. These changes were designed to allow for greater flexibility and more efficient and effective utilization of personnel and administrative expenditures, and public comment was overwhelmingly favorable. The Department, therefore, is incorporating the following proposals into these final regulations for the reasons discussed in the preamble to the proposed rulemaking:

a. State agencies shall make preapproval visits to all sponsors which did not participate during the previous year or which are determined to need such a visit.

b. The requirement that State agencies make preapproval visits to all new non-school sites located in cities with total elementary and secondary public school enrollment exceeding 75,000 is deleted.

c. The requirement that State agencies make preapproval visits to all new sites with proposed average daily attendances of more than 300 children is limited to non-school sites.

d. State agencies are relieved of the burden of conducting reviews during the first four weeks of operation of sponsors with 10 or more sites which had no significant problems during the previous year's Program. Such sponsors must still be reviewed, but the reviews may be conducted at any time during the period of Program operations.

e. Department has deleted the requirement that States expecting to earn $250,000 or more in State administrative funds conduct reviews of 75 percent of the non-school sites and 25 percent of the school sites operated by sponsors with 10 or more sites in cities with public school enrollments exceeding 75,000 during the first four weeks of operations.

f. The number of program reviews which State agencies are required to conduct of sponsors with fewer than 10 sites is reduced from an average of 80 percent to 70 percent of the sites of such sponsors.

g. The number of items which State agencies must include on the monitoring forms used by sponsors is expanded to include the number of meals prepared or delivered, the number of meals served to children, and any deficiencies noted.

h. Regional Offices are allowed to conduct management evaluations of State agencies either prior to or during the first six weeks of Program operations.

i. Regional Offices shall conduct a follow-up evaluation if the original management evaluation reveals serious problems in a State's administration of the program.

j. Regional Offices have authority to require a State agency to submit on 20 days notice a corrective action plan addressing serious problems revealed during management evaluations.

k. The National School Lunch Program's (NSLP) equivalencies for various foods (published at 45 FR 32502), including the number of eggs and the amount of cooked dry beans or peas needed to provide the protein equivalent of the meat/meat alternate component are adopted.

l. Meals served with lesser quantities than are established under these regulations are required to meet the quantity requirements for age groups in the Child Care Food Program. Moreover, lesser quantities may be served only to children under the age of six and must have prior approval of the State agency.

Accordingly, 7 CFR Part 225 is revised and reissued as follows:

PART 225—SUMMER FOOD SERVICE PROGRAM

Subpart A—General

Sec.

225.1 General purpose and scope.
225.2 Definitions.
225.3 Administration.

Subpart B—Assistance to States

225.4 Payments to State agencies and use of Program funds.
225.5 Commodity assistance.

Subpart C—State Agency Provisions

225.6 Program management and administration plan.
225.7 State agency personnel.
225.8 Procedures for approval of applications.
225.9 Program applications.
225.10 Program expansion, monitoring and assistance.
225.11 Records and reports.
225.12 Program payments.
225.13 Audits and management evaluations.
225.14 Corrective action procedures.
225.15 Claims against sponsors.
225.16 Appeal procedures.
225.17 Procedures for food service management companies.
225.18 Procurement standards.

Subpart D—Provisions for Sponsors

225.19 Requirements for sponsor participation.
225.20 Operational responsibilities of sponsors.
225.21 Meal service requirements.
225.22 Free meal policy.

Subpart E—Miscellaneous Provisions

225.23 Other provisions.
225.24 Program information.

Authority: Secs. 5, 7, 10, Pub. L. 95-627, 95 Stat. 3603 (42 U.S.C. 1771); sec. 2, Pub. L. 95-166, 91 Stat. 1325 (42 U.S.C. 1761); sec. 7, Pub. L. 91-248, 84 Stat. 211 (42 U.S.C. 1759a).

Subpart A—General

§ 225.1 General purpose and scope.

This part announces the policies and prescribes the regulations under which the Secretary will carry out a Summer Food Service Program to assist States through grants-in-aid to initiate, maintain, and expand non-profit food service programs for children during the summer months and at other approved times. The primary purpose of the Program is to provide food service to children as a substitute for the National School Lunch and School Breakfast Programs, during periods when area schools are closed for vacation, except that the Summer Food Service Program is directed toward children from needy areas.

§ 225.2 Definitions.

(a) "Act" means the National School Lunch Act, as amended.

(b) "Administrative costs" means costs incurred by a sponsor related to planning, organizing, and managing a food service under the program, and excluding interest costs and operating costs.

(c) "Advance payments" means financial assistance made available to a sponsor for its operating costs and/or administrative costs prior to the end of the month in which such costs will be incurred.

(d) "Areas in which poor economic conditions exists" means (1) the local areas from which a site draws its attendance in which at least 33⅓ percent of the children are eligible for free or reduced price school meals under the National School Lunch Program and the School Breakfast Program, as

determined (i) by information provided from departments of welfare, education, zoning commissions, census tracts, and organizations determined by the State agency to be migrant organizations, (ii) by the number of free and reduced price lunches or breakfasts served to children attending public and nonprofit private schools located in the areas of Program sites, or (iii) from other appropriate sources, or (2) an enrollment program in which at least 33⅓ percent of the children at the site are eligible for free or reduced price school meals as determined by statements of eligibility based on the sizes and incomes of the families of the children enrolled.

(e) "Camps" means residential summer camps and nonresidential day camps which offer a regularly scheduled food service as part of an organized program for enrolled children. Nonresidential camps shall offer a continuous schedule of organized cultural or recreational program for enrolled children between meal services.

(f) "Children" means (1) persons 18 years of age and under, and (2) persons over 18 years of age who are determined by a State educational agency or a local public educational agency of a State to be mentally or physically handicapped and who participate in a public or nonprofit private school program established for the mentally or physically handicapped.

(g) "Costs of obtaining food" means costs related to obtaining food for consumption by children. Such costs may include, in addition to the purchase price of agricultural commodities and other food, the cost of processing, distributing, transporting, storing, or handling any food purchased for, or donated to, the Program.

(h) "Continuous school calendar" means a situation in which all or part of the student body of a school are (1) on a vacation for periods of 15 continuous school days or more during the period October through April and (2) in attendance at regularly scheduled classes during most of the period May through September.

(i) "Department" means the U.S. Department of Agriculture.

(j) "Fiscal year" means the period beginning October 1 of any calendar year and ending September 30 of the following calendar year.

(k) "FNS" means the Food and Nutrition Service of the Department.

(l) "FNSRO" means the appropriate FNS Regional Office.

(m) "Food service management company" means any commercial enterprise or non-profit organization which contracts with a sponsor to manage any aspect of the food service program. Food service management companies may be (1) public agencies or entities; (2) private, nonprofit organizations; or (3) private, for-profit companies.

(n) "Income accruing to the program" means all funds used by a sponsor in its food service program, including but not limited to all monies, other than program payments, received from Federal, State and local governments, from food sales to adults, and from any other source, including cash donations or grants. Income accruing to the Program will be deducted from combined operating and administrative costs.

(o) "Meals" means food which is served to children at a food service site and which meets the nutritional requirements set out in this part.

(p) "Milk" means whole milk, lowfat milk, skim milk, and buttermilk. All milk must be fluid and pasteurized and must meet State and local standards for the appropriate type of milk. Milk served may be flavored or unflavored. In Alaska, Hawaii, American Samoa, Guam, Puerto Rico, the Trust Territory of the Pacific Islands, the Northern Mariana Islands, and the Virgin Islands of the United States, if a sufficient supply of such types of fluid milk cannot be obtained, reconstituted or recombined milk may be used. All milk should contain Vitamins A and D at the levels specified by the Food and Drug Administration and at levels consistent with State and local standards for such milk.

(q) "Needy children" means children from families whose incomes are equal to or below the Secretary's Guidelines for Determining Eligibility for Reduced Price School Meals.

(r) "OIG" means the Office of the Inspector General of the Department.

(s) "Operating costs" means the cost of operating a food service under the Program, including (1) cost of obtaining food, (2) labor directly involved in the preparation and service of food, (3) cost of nonfood supplies, (4) rental and use allowances for equipment and space and (5) costs for transporting children in rural areas to feeding sites in rural areas, but excluding (i) the cost of the purchase of land, acquisition or construction of buildings, (ii) alteration of existing buildings, (iii) interest costs, (iv) the value of in-kind donations, and (v) administrative costs.

(t) "Private nonprofit" means tax exempt under the Internal Revenue Code of 1954, as amended.

(u) "Program" means the Summer Food Service Program for Children authorized by Section 13 of the Act.

(v) "Program funds" means Federal financial assistance made available to State agencies for the purpose of making Program payments.

(w) "Program payments" means financial assistance in the form of start-up payments, advance payments or reimbursement paid to sponsors for operating and administrative costs.

(x) "Rural" means (1) any area in a county which is not a part of a Standard Metropolitan Statistical Area or (2) any "pocket" within a Standard Metropolitan Statistical Area which, at the option of the State agency and with FNSRO concurrence, is determined to be geographically isolated from urban areas.

(y) "Secretary" means the Secretary of Agriculture.

(z) "Self-preparation" means the sponsor prepares the meals which will be served at its site(s), and does not contract with a food service management company for the preparation of all or a portion of the meals.

(aa) "School Food Authority" means the governing body which is responsible for the administration of one or more schools and which has the legal authority to operate a lunch program in those schools.

(bb) "Session" means a specified period of time during which an enrolled group of children attend camp.

(cc) "Site" means a physical location at which a sponsor provides a food service for children and at which children consume meals in a supervised setting.

(dd) "Special account" means an account between a sponsor and a food service management company with a State or Federally insured bank in which checks from the State agency for operating costs are deposited by the sponsor and released only in accordance with the terms of the special account agreement.

(ee) "Sponsor" means a public or private nonprofit institution which develops a special summer or other school vacation program providing food service similar to that available to children during the school year under the National School Lunch and School Breakfast Programs and which is approved to participate in the Program. Institutions eligible to be sponsors include (1) camps and (2) nonresidential institutions which provide a year-round service to the community, or provide a food service to the children of migrant workers, or provide a food service for a significant number of needy children which would not otherwise have reasonable access to the Program.

(Sponsors are referred to in the Act as "service institutions.")

(ff) "Start-up payments" means financial assistance made available to a sponsor for administrative costs to enable it to effectively plan a summer food service, and to establish effective management procedures for such a service. These payments shall be deducted from subsequent administrative costs payments.

(gg) "State" means any of the 50 States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands of the United States, Guam, American Samoa, the Trust Territory of the Pacific Islands, and the Northern Mariana Islands.

(hh) "State agency" means the State educational agency or an alternate State agency that has been designated by the Governor or other appropriate executive or legislative authority of the State and which has been approved by the Department to administer the Program within the State, or in States where FNS administers the Program, FNSRO.

§ 225.3 Administration.

(a) FNS shall act on behalf of the Department in the administration of the Program.

(b) Within the States, responsibility for the administration of the Program shall be in the State agency, except that FNSRO shall administer the Program in any State where the State agency is not permitted by law or is otherwise unable to disburse Federal funds paid to it under the Program to any sponsor in the State. Notwithstanding the provisions of this paragraph, no FNSRO shall assume administration of the Program in any State during the period October 1, 1980, through September 30, 1981, unless the Program in that State was administered by FNSRO during the period October 1, 1979, through September 30, 1980. Each agency shall notify the Department by each November 1 of the fiscal year involved as to whether or not it intends to administer the Program.

(c) Each State agency desiring to take part in the Program shall enter into a written agreement with FNS for the administration of the Program in the State in accordance with the provisions of this part. The agreement shall cover the operation of the Program during the period specified therein and may be extended by written consent of both parties. The agreement shall contain an assurance that the State agency will comply with the Department's nondiscrimination regulations (7 CFR Part 15), issued under Title VI of the Civil Rights Act of 1964, and any Instructions issued by FNS pursuant to those regulations.

(d) When the Secretary determines that the State is not operating the Program in accordance with the provisions of this part, he shall, through FNSRO, assume the responsibility for administration of the Program in the State as provided for in § 225.23(b). Notwithstanding the provisions of this paragraph, no FNSRO shall assume administration of the Program in any State during the period of October 1, 1980, through September 30, 1981, unless the Program in that State was administered by FNSRO during the period October 1, 1979, through September 30, 1980.

(e) In States in which FNSRO administers the Program, it shall assume all of the responsibilities of a State agency and shall earn State administrative and Program funds as set forth in this part.

Subpart B—Assistance to States

§ 225.4 Payments to State agencies and use of Program funds.

(a) *Letter of Credit for Program payments.* (1) Not later than April 15 of each fiscal year, FNS shall make available to each participating State in a Letter of Credit an amount equal to 65 percent of the preceding fiscal year's Program payments for operating costs plus 65 percent of the preceding fiscal year's Program payments for administrative costs in the State. This amount may be adjusted to reflect changes in reimbursement rates made pursuant to § 225.12(c)(12). However, the State shall not withdraw funds from this Letter of Credit until its Program management and administration plan is approved by FNS.

(2) Not later than May 15, FNS shall make available, if necessary, additional funds in a Letter of Credit to ensure that at least 65 percent of the Program operating and administrative funds estimated to be needed for the summer in the State's approved management and administration plan has been provided to each State.

(3) Not later than July 1, FNS shall make available, if necessary, in a Letter of Credit an amount sufficient to ensure that as least 65 percent of the Program operating and administrative funds determined during the evaluation required in § 225.13(c) to be needed for the summer has been provided to the State. Funds made available in these Letters of Credit shall be used by the State agency to make Program payments to sponsors. FNS may make appropriate changes in the amounts included in these Letters of Credit based on any information available upon which determinations of actual program size may be made.

(b) *Continuous school calendar.* The Letter of Credit shall include sufficient funds to enable the State agency to make advance payments to sponsors serving areas in which schools operate under a continuous school calendar. These funds shall be made available no later than the first day of the month prior to the month during which the food service will be conducted.

(c) *Remaining funds.* FNS shall make available any remaining Program funds due within 45 days of the receipt of valid Claims for Reimbursement from sponsors by the State agency. However, no payment shall be made for claims submitted for any fiscal year if they are submitted after December 31 of the following fiscal year, except as allowed under § 225.12(c)(7).

(d) *Return of funds.* Each State agency shall release to FNS any Program funds which it determines are unobligated as of September 30 of each fiscal year. Release of funds by the State agency shall be made as soon as practicable, but in no event later than 30 calendar days following demand by FNS, and shall be accomplished by an adjustment in the State agency's Letter of Credit.

(e) *State administrative funds.* For each fiscal year, FNS shall pay to each State agency for administrative expenses incurred in the Program an amount equal to (1) 20 percent of the first $50,000 in Program funds properly payable to the State in the preceding fiscal year; (2) 10 percent of the next $100,000 in Program funds properly payable to the State in the preceding fiscal year; (3) 5 percent of the next $250,000 in Program funds properly payable to the State in the preceding fiscal year; and (4) 2½ percent of any remaining Program funds properly payable to the State in the preceding fiscal year: *Provided, however,* That FNS may make appropriate adjustments in the level of State administrative funds to reflect changes in Program size from the preceding fiscal year as evidenced by information submitted in the State Program management and administration plan and any other information available to FNS.

(f) *Use of State administrative funds.* State administrative funds paid to any State shall be used by State agencies to employ personnel, including travel and related expenses, and to supervise and give technical assistance to sponsors in their initiation, expansion, and conduct of any food service for which Program funds are made available. State agencies may also use administrative funds for such other administrative expenses as are set forth in their

approved Program management and administration plan.

(g) *State administrative funds Letter of Credit.* (1) At the beginning of each fiscal year, FNS shall make available to each participating State agency by Letter of Credit an initial allocation of State administrative funds for use in that fiscal year. This allocation shall not exceed one-third of the administrative funds provided to the State in the preceding fiscal year. For State agencies which did not receive any Program funds during the preceding fiscal year, the amount to be made available shall be determined by FNS.

(2) Additional State administrative funds shall be made available upon the receipt and approval by FNS of the State's Program management and administration plan. The amount of such funds, plus the initial allocation, shall not exceed 80 percent of the State administrative funds determined by the formula set forth in paragraph (e) of this section and based on the estimates set forth in the approved Program management and administration plan.

(3) The remaining State administrative funds shall be paid to each State agency as soon as practicable after the conduct of the funding assessment described in § 225.13(c) and (d) (but not later than September 1) and shall be in an amount equal to that determined to be needed during the funding evaluation, less the amounts paid under paragraphs (g)(1) and (2) of this section.

(h) *Funding assurance.* At the time FNS approves the State's management and administration plan, the State shall be assured of receiving State administrative funding equal to the lesser of the following amounts: 80 percent of the amount obtained by applying the formula set forth in paragraph (e) of this section to the total amount of Program payments made within the State during the prior fiscal year, or, 80 percent of the amount obtained by applying the formula to the amount of Program funds estimated to be needed in the management and administration plan.

The State agency shall be assured that it will receive no less than this level unless FNS determines that the State agency has failed or is failing to meet its responsibilities under in this part.

(i) *Limitation.* In no event may the total payment for State administrative costs in any fiscal year exceed the total amount of expenditures incurred by the State agency in administering the Program.

(j) *Adjustment of Letter of Credit.* Prior to May 15 of each fiscal year, FNS shall make any adjustments necessary in each State's Letter of Credit to reflect actual expenditures in the preceding fiscal year's Program.

(k) *Health inspection funds.* By April 15 of each fiscal year, FNS shall make available by Letter of Credit to each State agency an amount equal to one percent of Program funds expended in the preceding fiscal year in the State. Following approval of the State's management and administration plan, FNS shall make available in a Letter of Credit any additional funds necessary to ensure that 1 percent of Program funds estimated to be needed for Program payments in the State's management and administration plan is available to the State. These funds shall be used solely to enable State or Local health departments or other governmental agencies charged with health inspection functions to carry out health inspections and meal quality tests, provided that if these agencies cannot perform such inspections or tests, the State agency may use the funds to contract with an independent agency to conduct the inspection or meal quality tests. An adjustment may be made in the amount provided for in this paragraph based on the evaluation required in § 225.13(c) and (d), if such an adjustment is warranted. Funds so provided but not expended or obligated shall be returned to the Department by September 30 of the same fiscal year.

§ 225.5 Commodity assistance.

(a) Sponsors eligible to receive commodities under the Program include only those which prepare the meals to be served at their sites and those which have entered into an agreement with a school or school district for the preparation of meals. The State agency shall make available to these sponsors information on available commodities.

(b) Not later than June 1 of each year State agencies shall prepare a list of the names of sponsors which are eligible to receive commodities. The list shall indicate the average daily number of eligible meals to be served by each of these sponsors. If the State agency does not handle the distribution of commodities donated by the Department, this list shall be forwarded to the agency of the State responsible for the distribution of commodities. The State agency shall be responsible for promptly revising the information included on the list to reflect additions or terminations of sponsors and for adjusting the average daily participation data as it determines necessary.

Subpart C—State Agency Provisions

§ 225.6 Program management and administration plan.

(a) Not later than February 15 of each year, each State Agency shall submit to FNSRO a Program management and administration plan for that fiscal year.

(b) Each plan shall be acted on or approved by March 15, or if it is submitted late, within 30 calendar days of receipt of the plan. If the plan initially submitted is not approved, the State agency and FNS shall work together to ensure that changes to the plan, in the form of amendments, are submitted so that the plan can be approved within 60 calendar days following the initial submission of the plan. Upon approval of the plan, the State agency shall be notified of the level of State administrative funding which it is assured of receiving under § 225.4(h).

(c) Prior to submission, the State shall ensure that interested parties have opportunity to make comments and recommendations and that timely comments and recommendations have been given full consideration in the development of the Plan.

(d) The Plan shall have the original signature of the Chief Official (Commissioner or Superintendent) of the State agency.

(e) The State agency shall give the Governor, or his delegated agent, the opportunity to comment on the management and administration plan. A period of 45 calendar days from the date of receipt of the Plan shall be afforded to make such comments.

(f) Approval of the Plan by FNS shall be a prerequisite to the withdrawal of Program funds by the State from the Letter of Credit and to the donation by the Department of any commodities for use in the State's Program.

(g) The Plan shall include, at a minimum, the following information:

(1) The State's plan for the use of State administration funds, Program funds, and funds from within the State to reach needy areas, and a description of the means of identifying needy areas. It shall provide the procedures and timeframes for achieving the maximum participation of needy children, particularly needy children in rural areas, in Indian tribal territories, and in areas with a concentration of migrant farmworkers, by disseminating information on the availability of the Program to potential sponsors. The Plan shall provide the State's procedures for locating sponsors eligible under § 225.19(a) (1) through (5);

(2) The estimated number and types of sponsors and sites expected to participate and the estimated average

daily attendance. A description of the estimation methods used shall be included;

(3) The estimated amount of Program funds, by month, needed for operating costs payments to sponsors. The plan shall describe the State's method for calculating the amount and the procedures and timeframes for disbursing these payments to sponsors;

(4) The estimated amount of Program funds, by month, needed for administrative costs payments to sponsors. The plan shall describe the State's method for calculating the amount and the method and timeframes for disbursing these payments to sponsors;

(5) The State agency budget, by month, for the use of State administrative funds, including but not limited to staffing, salaries, travel, and per diem;

(6) The State's procedures, deadlines, timeframes, and criteria to be used in the approval process for sponsor applications, including sponsors seeking eligibility under § 225.19(a)(6);

(7) The State's procedures and timeframes for providing technical assistance and training to sponsors, including the number of such training sessions and any other types of technical assistance the State agency intends to provide;

(8) The State's procedures and timeframes for (i) monitoring sponsors and sites, including the number of pre-approval visits and Program reviews conducted in the prior fiscal year and the number of Program reviews planned for the current fiscal year, (ii) followup and corrective action to remedy Program deficiencies and violations detected during such monitoring, and (iii) additional monitoring of sponsors described in § 225.19(a)(6) and sites administered by such sponsors;

(9) The State's procedures and timeframes for (i) registering, (ii) training, and (iii) monitoring of food service management companies, (iv) ensuring that food service management companies do not enter into contracts for more than they can provide effectively and efficiently, and (v) followup and corrective action to remedy food service management company Program deficiencies and violations;

(10) The State's Plan to provide for health inspections and meal quality tests, and the State's plan for the use of funds provided under § 225.4(k);

(11) The State's plan for maximizing the use of school food service facilities and on-site meal preparation;

(12) The actions to be taken to ensure compliance with the requirements of the Department's regulations respecting nondiscrimination (7 CFR Part 15);

(13) The State's procedures and timeframes for auditing sponsors not subject to the auditing requirements prescribed by the Secretary in accordance with § 225.13(a)(1). The Plan shall also include the total number of audits performed during the prior fiscal year;

(14) The State's procedures for granting a fair hearing and prompt determination to any sponsor wishing to appeal a State's decision affecting its application for participation, its site participation, or its Program payments, and the State's procedures for granting a hearing and prompt determination to any food service management company wishing to appeal a State's denial of registration in the State. The State shall also identify the title and/or position of the hearing official responsible for hearing appeals by sponsors and food service management companies of any State decision concerning any aspect of their participation in the Program. The Plan shall provide evidence of that official's independence from the original decision-making process;

(15) The amount of non-Federal funds made available to the Program through direct State appropriations;

(16) An explanation of significant deviations in last year's actual Program operations from that proposed in the Plan for last year. This explanation shall include the State's corrective action plan for resolving any problems or deficiencies which occurred during the prior fiscal year and for reducing waste and mismanagement in the Program.

§ 225.7 State agency personnel.

(a) The State agency shall provide sufficient qualified consultative, technical, and managerial personnel to administer the Program, monitor performance, and measure progress in achieving Program goals. The State agency shall assign Program responsibilities to personnel to ensure that all applicable requirements under this part are met.

(b) All administrative personnel shall be employed and available for Program duties at least 30 days prior to the State agency's sponsor application deadline date. All field staff personnel shall be employed and available at least 15 days prior to the first day of Program operations. However, the State agency may submit to FNSRO a written request for an exception to these hiring dates. The requests shall include information in sufficient detail for FNSRO to determine that the exception is necessary and will not adversely affect Program administration and operation. The requests must be submitted prior to the first of the hiring dates.

§ 225.8 Procedures for approval of applications.

(a) Each State agency shall establish and inform all of the previous year's sponsors and all potential sponsors of the deadline date for submitting a written application for participation in the Program. The State agency shall approve the application of an otherwise eligible applicant sponsor submitted after the deadline date established by the State agency only when the failure to do so would deny the Program to an area in which poor economic conditions exist or a significant number of needy children would not otherwise have reasonable access to the Program. The State agency shall inform potential sponsors inquiring after the sponsor application deadline date of the possibility of approval if the sponsor qualifies under these terms.

(b) Within 30 days of receiving a complete and correct application, the State agency shall notify the applicant of its approval or disapproval. If an incomplete application is received, the State agency shall so notify the applicant within 15 days and shall provide technical assistance for the purpose of completing the application. Any disapproved applicant shall be notified of its right to appeal under § 225.16.

(c) The State agency shall determine the eligibility of applicant sponsors applying for participation in the Program in accordance with the applicant sponsor eligibility criteria outlined in § 225.19.

(d) The State agency shall review each applicant's administrative budget as a part of the application approval process, in order to assess the applicant's ability to operate in compliance with these regulations within its projected level of reimbursement. In approving the applicant's administrative budget, the State agency shall take into consideration the number of sites and children to be served, as well as any other relevant factors. A sponsor's administrative budget shall be subject to review for adjustments by the State agency if the sponsor's level of site participation or the number of meals served to children changes significantly.

(e) State agencies may approve the application of an otherwise eligible applicant which does not provide a year-round service to the community which it proposes to serve under the Program only if it meets one or more of the following criteria: (1) it is a residential camp, or (2) it proposes to

provide a food service for the children of migrant workers, or (3) a failure to do so would deny the Program to an area in which poor economic conditions exist, or (4) a significant number of needy children will not otherwise have reasonable access to the Program. Such an applicant may be approved to operate more than 50 sites only if it will provide a food service for the children of migrant workers and the State agency determines that the applicant has adequate capabilities and facilities and has provided services to migrant communities in prior years. When approving the applications of such applicants, the State agency shall take particular care to ensure that such applicants are timely in their Program planning and thoroughly prepared to assume and carry out all Program responsibilities.

(f) Applicants which qualify as camps shall be approved for reimbursement only for meals served free to enrolled children who meet the eligibility requirements for free and reduced price school meals.

(g) The State agency shall use the following order of priority in approving applicants eligible under § 225.19(a) (1) through (5) to operate sites which propose to serve the same area or the same enrolled children:

(1) Applicant sponsors which are public or nonprofit private schools, and other applicants which have demonstrated successful Program performance in a prior year;

(2) Applicant sponsors which propose to prepare meals at their own facilities or which operate only one site;

(3) Applicant sponsors which propose to utilize local school food service facilities for the preparation of meals;

(4) Other applicant sponsors which have demonstrated ability for successful Program operations; and

(5) Applicant sponsors which plan to integrate the Program with Federal, State, or local employment or training programs.

(h) The State agency shall not approve the application of any applicant which seeks eligibility under § 225.19(a)(6) unless the applicant fully documents that it has a consistent record of reliable and honest management and administration of community food service programs. For the purpose of determining eligibility under § 225.19(a)(6), "community food service program" means a program that provides meals on a regular schedule, and which has the stated objective of providing nutritionally balanced meals to participants. The State agency shall approve these applicants only if sponsors identified in § 225.19(a) (1) through (5) are not available to administer the Program in the same geographic area or a significant number of needy children will not otherwise have reasonable access to the Program. Upon receiving an application from a potential sponsor seeking eligibility under § 225.19(a)(6), the State agency shall make every reasonable effort to locate a sponsor eligible under § 225.19(a) (1) through (5) to serve sites in that same area. The State agency may also assist applicants seeking eligibility under § 225.19(a)(6) in making changes in their proposed programs that would make the applicants eligible under one of the other categories in § 225.19(a) (1) through (5).

(i) When evaluating a proposed food service site, the State agency shall ensure that:

(1) If not a camp, the proposed site serves an area in which poor economic conditions exist, as defined by § 225.2(d);

(2) The number of meals, by type, proposed to be served to children at the site does not exceed the number of children residing in the area to be served, or, if applicable, the number enrolled;

(3) The area which the site proposes to serve is not or will not be served in whole or in part by another site, unless it can be demonstrated to the satisfaction of the State agency that each site will serve children not served by any other site in the same area for the same meal and that the total number of meals, by type, served to children at all sites does not exceed the number of children residing in the area; and

(4) The site is approved to serve no more than the number of children for which its facilities are adequate.

(j) When approving an application, the State agency shall establish for each meal service an approved level for the maximum number of meals which may be served under the Program for each site which will serve meals prepared by a food service management company. These approved levels shall be established in accordance with the following provisions.

(1) The initial maximum approved level shall be based upon historical record of attendance at the site if such a record has been established in prior years and the State agency determines that it is accurate. The State agency shall develop a procedure for establishing initial maximum approved levels for sites when no accurate record from prior years is available.

(2) The maximum approved level shall be adjusted, if warranted, based upon information collected during site reviews. If attendance at the site on the day of the review is significantly below the site's approved level, the State agency should consider making a downward adjustment in the approved level with the objective of providing only one meal per child each day.

(3) The sponsor may seek an upward adjustment in the approved level for its sites by requesting a site review or by providing the State agency with evidence that attendance exceeds the sites' approved levels.

(4) Whenever the State agency establishes or adjusts approved levels of meal service for a site, it shall document the action in its files, and it shall provide the sponsor with immediate written confirmation of the approved level.

(5) Upon approval of its application or any adjustment of maximum approved levels, the sponsor shall inform the food service management company with which the sponsor contracts of the approved level for each meal service at each site for which the food service management company will provide meals. This notification of any adjustments in approved levels shall take place within the time frames set forth in the contract for adjusting meal orders. Whenever the sponsor notifies the food service management company of the approved levels or any adjustments to these levels for any of its sites, the sponsor shall clearly inform the food service management company that an approved level of meal service represents the maximum number of meals which may be served at a site and is not a standing level for meal orders at that site. The sponsor shall adjust meal orders with the objective of serving only one meal per child, as required under § 225.20(d), when the number of children attending is below the site's approved level.

(k) Each State agency shall inform potential sponsors of the procedure for applying for advance operating and administrative costs payments as provided for in § 225.12(b), and where applicable, each State agency shall inform sponsors of the procedure for applying for start-up payments provided for in § 225.12(a).

(l) The State agency shall not approve any applicant sponsor to operate more than 200 sites or to serve an average daily attendance of more than 50,000 children unless it can demonstrate to the satisfaction of the State agency that it has the capability of managing a program of that size.

(m) The State agency shall not approve the application of any applicant sponsor identifiable through its organization or principals as a sponsor which participated during the prior three

fiscal years and was seriously deficient in its Program operations during any one of those years, except as allowed under § 225.14(c). In the event that an applicant sponsor's application is denied, the State agency shall inform such applicant sponsor of the procedure to request a review of the denial. The official making the determination of denial must notify the applicant sponsor in writing stating all of the grounds on which the State agency based the denial. Serious deficiencies which are grounds for nonapproval are described in § 225.14(c).

(n) Pending the outcome of a review of a denial the State agency shall proceed to approve other applicants in accordance with its responsibilities under paragraph (g) of this section, without regard to the application under review.

(o) The State agency shall not approve the application of any applicant sponsor which submits fraudulent information or documentation when applying for Program participation or knowingly withholds information which may lead to the disapproval of its application. Complete information regarding such disapproval of an applicant shall be submitted by the State agency through FNSRO to OIG.

§ 225.9 Program applications.

(a) The applicant shall submit a written application to the State agency for participation in the Program as a sponsor. The State agency may use the application form developed by FNS or it may develop an application form for use in the Program. Application shall be made on a timely basis in accordance with the State agency deadline date established under § 225.8(a). At a minimum, the application shall include the items listed below:

(1) A site information sheet, as developed by the State agency, for each site where a food service operation is proposed. The site information sheet shall demonstrate or describe the following:

(i) An organized and supervised system for serving meals to attending children;

(ii) The estimated number and types of meals to be served and the times of service;

(iii) Arrangements, within standards prescribed by the State or local health authorities, for delivery and holding of meals until time of service, and arrangements for storing and refrigerating any leftover meals until the next day;

(iv) Arrangements for food service during periods of inclement weather;

(v) Access to a means of communication for making adjustments as needed in the number of meals delivered in accordance with the number of children attending daily at each site;

(vi) The geographic area to be served by the site;

(vii) The percentage of children to be served by the site who meet the eligibility requirements for free or reduced price school meals; and

(viii) Whether the site is rural, as defined by § 225.2(x), or non-rural, and whether the site's food service will be self-preparation or vended.

(2) Along with its site information sheet for a site that is not a camp, documentation supporting the eligibility of each site as serving an area in which poor economic conditions exist. For those sites at which applicants will serve children of migrant workers, the documentation requirement may be met by providing the State agency with data from an organization determined by the State agency to be a migrant organization, which supports eligibility for those children as a group. When a sponsor proposed to serve a site which it served in the previous year, documentation from the previous year may be used to support the eligibility of the site. For such sites applicants shall only be required to obtain new documentation every other year. Prior to filing their Claims for Reimbursement for each session or at such time as specified by the State agency, camps shall submit to the State agency family-size and income information which documents the number of children enrolled in each session who meet the eligibility requirements for free or reduced price school meals.

(3) Information in sufficient detail to enable the State agency to determine whether the applicant meets the criteria for participation in the Program as set forth in § 225.19, and the extent of Program payments needed, including a request for advance payments and start-up payments, if applicable, an administrative and operating budget, and a staffing and monitoring plan.

(4) A complete administrative budget for State agency review and approval. The budget shall contain the projected administrative expenses which a sponsor expects to incur during the operation of the Program, and shall include information in sufficient detail to enable the State agency to assess the sponsor's ability to operate under the Program within its estimated reimbursement. A sponsor's approved administrative budget shall be subject to subsequent review by the State agency for adjustments in projected administrative costs.

(5) A plan for and a synopsis of its invitation to bid for food service, if a bid is required under § 225.17.

(6) A free meal policy statement, as required in § 225.22.

(7) For sponsors applying after the deadline date established by the State agency under § 225.8(a), an explanation to the State of why they are applying late. The State shall maintain a record documenting all late submissions.

(8) Applicants which sponsored the Program during any of the prior three fiscal years shall not be required to submit the documentation described in this paragraph. Applicants under § 225.19(a)(6) of this part which have not sponsored the Program during the prior three fiscal years shall submit sufficient documentation with the application to demonstrate that they have been consistently reliable and honest in the management and administration of community food service programs. The following types of documentation shall be submitted by these applicants for any other community food service programs administered during the prior three years, and may be submitted for any program administered prior to that time:

(i) A description of all food service programs which the applicant has managed or administered, including lists of names of corporate officers, addresses of food service sites, and sources of funding;

(ii) Independent audit reports stemming from any audits which may have been conducted of the applicant's food service programs;

(iii) An assurance that the applicant has not been terminated or determined to have been seriously deficient in its operation of community food service programs; and

(iv) Any other relevant information which is available to the applicant concerning its record in management and administration of food service programs.

(b) Sponsors approved for participation in the Program shall enter into written agreements with the State agency. The agreements shall provide that the sponsor shall:

(1) Operate a nonprofit food service during any period from May through September for children on school vacation or at some other time or times during the year for children on school vacation under a continuous school calendar system;

(2) Serve meals which meet the requirements and provisions set forth in § 225.21 during a period designated as the meal service period by the sponsor,

and serve the same meals to all children;

(3) Serve meals without cost to all children, except that camps may charge for meals served to children who are not served meals under the Program;

(4) Issue a policy statement in accordance with § 225.22;

(5) Meet the training requirement for its administrative and site personnel, as required under § 225.20(i);

(6) Provide for an audit as outlined in § 225.13(a)(2) if it expects to receive over $75,000 in Program payments;

(7) Claim reimbursement only for the type or types of meals specified in the agreement and served without charge to children at approved sites during the approved meal service period, except that camps shall claim reimbursement only for the type or types of meals specified in the agreement and served without charge to children who are eligible for free or reduced price school meals. The agreement shall specify the approved levels of meal service for the sponsor's sites for which approved levels have been established as required under § 225.8(j). No permanent changes may be made in the time of any meal service period unless the changes are approved by the State agency;

(8) Submit Claims for Reimbursement in accordance with procedures established by the State agency, and those stated in § 225.12;

(9) In the storage, preparation and service of food, maintain proper sanitation and health standards in conformance with all applicable State and local laws and regulations;

(10) Accept and use, in quantities that may be efficiently utilized in the Program, such foods as may be offered as a donation by the Department;

(11) Have access to facilities necessary for storing, preparing, and serving food;

(12) Maintain a financial management system as prescribed by the State agency;

(13) Maintain on file documentation of site visits and reviews in accordance with § 225.20(g) and (h);

(14) Upon request, make all accounts and records pertaining to the Program available to State, Federal, or other authorized officials for audit or administrative review, at a reasonable time and place. These records shall be retained for a period of 3 years after the end of the fiscal year to which they pertain, unless audit or investigation findings have not been resolved, in which case the records shall be retained until all issues raised by the audit or investigation have been resolved;

(15) Maintain children on site while meals are consumed; and

(16) Retain final financial and administrative repsonsibility for its program.

(c) Each State agency shall require applicant sponsors submitting Program applications, site information sheets, Program agreements or Claims for Reimbursement, and sponsors requesting advance payments, to certify that the information submitted on these forms is true and correct and that the sponsor is aware that deliberate misrepresentation or withholding of information may result in prosecution under applicable State and Federal statutes.

(d) Within two weeks of receiving notification of their approval, but in any case prior to commencement of operations under the Program, sponsors shall submit to the State agency a copy of their letter advising the appropriate health department of their intention to provide a food service during a specific period at specific sites.

(e) In accordance with § 225.13 (a) and (b) within two weeks of receiving notification of its approval, but in any case prior to commencement of operations under the Program, sponsor whose total Program payments are expected to exceed $75,000 shall submit to the State agency a copy of its letter of agreement with the accounting firm or individual which is to conduct the audit of its program.

(f) In addition, the State agency may require any sponsor which contracts with a food service management company to enter into an agreement with the State agency to provide that the sponsor shall establish a special account with a State or Federally insured bank for operating costs payable to the sponsor by the State. The special account agreement shall specify that any disbursement of monies from the account must be authorized by both the sponsor and the food service management company. The special account agreement may contain other terms agreed to by both sponsor and food service management company, which are not inconsistent with the terms of the contract between the sponsor and the food service management company. A copy of the special account agreement shall be submitted to the State agency and another copy maintained on file by the sponsor. Any charges made by the bank for the account described in this section shall be considered an allowable sponsor administrative cost.

§ 225.10 Program expansion, monitoring and assistance.

(a) *Program availability.* By February 1 of each fiscal year, each State agency shall announce the purpose, eligibility criteria, an availability of the Program throughout the State, through appropriate means of communication. As part of this effort, each State agency shall compile a listing of potential sponsors which have not previously participated in the Program and shall contact them. State agencies shall identify rural areas, Indian tribal territories, and areas with a concentration of migrant farmworkers which qualify for the Program and shall actively seek eligible applicant sponsors to serve such areas. States shall identify priority outreach areas in accordance with FNS guidance and target outreach efforts in these areas. Outreach efforts shall be directed toward potential sponsors which would be eligible under § 225.19(a) (1) through (5). State agencies shall make every reasonable effort to locate high priority sponsors for sites in areas where poor economic conditions exist. The State agency shall encourage potential sponsors to use their own facilities or the facilities of public or nonprofit private schools for the preparation, delivery, and service of meals under the Program.

(b) *Training.* Each State agency shall plan for and carry out Program training for sponsors, food service management company representatives, auditors, and health inspectors which will participate in the Program in that State. Prior to Program operations, each State agency shall ensure that the sponsor's supervisory personnel responsible for the food service receive training in all necessary areas of Program administration and operations. This training shall be structured and scheduled to reflect the fact that individual sponsors or groups of sponsors required different levels and areas of Program training. State agencies are encouraged to utilize sponsors which have previously participated in the Program in such training and to train site personnel regarding their responsibilities. Training should be made available at convenient locations. Prior to the beginning of Program operations, each State agency shall make available training in all necessary areas of Program administration for representatives from all food service management companies and each health department which will participate in the Program in the current year.

(c) *Program materials.* Each State agency shall develop and make available all necessary Program materials in sufficient time to enable applicant sponsors to adequately

prepare for their participation in the Program.

(d) *Food specifications and meal quality standards.* With the assistance of the Department, each State agency shall develop and make available to all sponsors minimum food specifications and model meal quality standards which shall become part of the contracts between sponsors and food service management companies.

(e) *Program monitoring and assistance.* The State agency shall conduct monitoring and provide Program assistance according to the following provisions:

(1) *Pre-approval visits.* The State agency shall conduct pre-approval visits of sponsors and sites as specified below, to further assess the applicant sponsor's or site's potential for successful Program operations and to verify information provided in the application. The State agency shall visit prior to approval:

(i) All applicant sponsors which did not participate in the Program in the prior year;

(ii) All other applicant sponsors which, as a result of operational problems noted in the prior year, the State agency has determined need a pre-approval visit;

(iii) All proposed nonschool sites with an expected average daily attendance of 300 children or more and which did not participate in the Program in the prior year.

(2) *Sponsor and site reviews.* The State agency shall review sponsors and sites, to ensure compliance with Program regulations and with the Department's nondiscrimination regulations (Part 15 of this title) and any other applicable instructions issued by the Department. In determining which sponsors or sites to review under this paragraph, the State agency shall, at a minimum consider whether or not the sponsor or site has been used or reviewed in prior years, the performance of the sponsor or site in prior years, the performance of other sites operated by the same sponsor in prior years and the current year, and the performance of the applicable sponsor in prior years and the current year. Reviews shall be conducted as follows:

(i) For the following types of sponsors, State agencies shall conduct both a review of sponsor operations and reviews of an average of 15 percent of their sites during the first four weeks of the sponsor's operations:

(A) Sponsors which have 10 or more sites and which did not operate the Program in the prior year, and

(B) Other sponsors of 10 or more sites which are determined by the State agency to need early reviews.

(ii) The State agency shall review the following types of sponsors and sites not reviewed under subparagraph (2)(i) of this paragraph at least once during the period of program operations:

(A) All remaining sponsors of 10 or more sites and an average of at least 15 percent of their sites, and

(B) 70 percent of all sponsors of fewer than 10 sites and an average of 10 percent of their sites.

(iii) The State agency shall conduct follow-up reviews of sponsors and sites as necessary.

(3) *Monitoring system.* Each State agency shall develop and implement a monitoring system to ensure that sponsors, including site personnel, and the appropriate food service management company, if applicable, immediately receive a copy of any review reports which indicate Program violations and which would result in a Program disallowance.

(4) *Records.* Documentation of Program assistance and results of such assistance shall be maintained on file by the State agency.

(5) *Food preparation facility visit.* As a part of the review of any sponsor which contracts with a food service management company for the preparation of meals, the State agency shall inspect the facilities of the food service management company. Each State agency shall establish an order of priority for visiting facilities at which food is prepared to be served in the Program. The State agency shall respond promptly to complaints concerning facilities with potential problems. Funds provided for in § 225.4(k) may be used for this purpose.

(6) *Forms for reviews by sponsors.* Each State agency shall develop and provide monitor review forms to all approved sponsors. These forms shall be completed by sponsor monitors. The monitor review form shall include, but not be limited to, time of reviewer's arrival and departure, site supervisor's signature, certification statement to be signed by monitor, the number of meals prepared or delivered, the number of meals served to children, the deficiencies noted, and corrective actions taken by sponsor and date of such actions.

(7) *Statistical monitoring.* State agencies may use statistical monitoring procedures in lieu of the site monitoring requirements prescribed in paragraph (e)(2) of this section to accomplish the monitoring and technical assistance aspects of the Program. State agencies which use statistical monitoring procedures may use the findings in evaluating claims for reimbursement. As appropriate, FNS will develop guidance outlining statistical monitoring procedures. States should use the statistical monitoring procedures provided by FNS, or develop alternate procedures and obtain FNS approval prior to implementation. Statistical monitoring may be used for some or all of a State's sponsors. Use of statistical monitoring does not eliminate the requirements for reviewing sponsors in paragraph (e)(2) of this section.

(8) *Corrective actions.* Corrective actions which the State agency may take when Program violations are observed during the conduct of a review are discussed in § 225.14. The State agency shall conduct follow-up reviews as appropriate when corrective actions are required.

(f) *Food quality and preparation facility inspections.* The State agency shall make a positive effort to ensure that inspections of food preparation facilities and food service sites, including meal quality tests, are conducted. The procedures for carrying out the inspections and tests shall be consistent with procedures used by local health authorities. For inspections of facilities of food service management companies not conducted by State agency personnel, copies of the results of the inspections shall be provided to the State agency. The company and the sponsor shall also immediately receive a copy of the results of these inspections when corrective action is required.

(g) *Financial management.* Each State agency shall establish a financial management system in accordance with Office of Management and Budget Circular A–102 and FNS guidance to identify allowable Program costs and establish standards for sponsor recordkeeping and reporting. The system shall also be consistent with Federal Management Circular 74–4. The State agency shall provide guidance on these financial management standards to each sponsor.

(h) *Nondiscrimination.* (1) Each State agency shall comply with the requirements of title VI of the Civil Rights Act of 1964, and the Department's regulations concerning nondiscrimination issued thereunder (7 CFR Part 15), including requirements of racial and ethnic participation data collection, public notification of the nondiscrimination policy, and reviews to assure compliance with such policy, to the end that no person shall, on the grounds of race, color or national origin, be excluded from participation in, be denied the benefits of, or be otherwise subjected to discrimination under the Program. (2) Complaints of discrimination filed by applicants or participants shall be referred to FNS or

the Secretary of Agriculture, Washington, D.C. 20250.

§ 225.11 Records and reports.

(a) Each State agency shall maintain complete and accurate current accounting records of its Program operations which will adequately identify funds authorizations, obligations, unobligated balances, assets, liabilities, income, claims against sponsors and efforts to recover overpayments, and expenditures for administrative and operating costs. These records shall be retained for a period of three years after the date of the submission of the final Program Operations and Financial Status Report (SF–269), except that, if audit findings have not been resolved, the affected records shall be retained beyond the three year period until such time as any issues raised by the audit findings have been resolved. The State agency shall also retain a complete record of each review or appeal conducted, as required under § 225.16, for a period of three years following the date of the final determination on the review or appeal. Records may be kept in their original form or on microfilm.

(b) By December 15 of each year the State agency shall provide FNS with information on the scope of Program operations within the State.

(c) Each State agency shall report information to FNS on the use of funds and on Program operations on a form provided by, and as instructed by, FNS.

(d) Not later than March 1 of each fiscal year, the State agency shall submit to FNS a final Operations and Financial Status Report for the prior fiscal year, on a form (SF–269) provided by FNS. Any requested increase in reimbursement levels for a fiscal year resulting from corrective action taken after submission of the final Program Operations and Financial Status Reports shall be submitted to FNS for approval. The request shall be accompanied by a written explanation of the basis for the adjustment and the actions taken to minimize the need for such adjustments in the future. If FNS approves of such an increase, it will make payment, subject to the availability of funds. Any reduction in reimbursement for that fiscal year resulting from corrective action taken after submission of the final fiscal year Program Operations and Financial Status Reports shall be handled in accordance with the provisions of § 225.15(d), except that amounts recovered may not be used to make Program payments.

(e) By October 15, each State agency shall submit to FNS, on a form provided by FNS, information concerning each food service management company which applied to the State agency for registration for that calendar year's Program. FNS shall allow any food service management company to review the information concerning that company which was submitted to FNS in accordance with this paragraph.

§ 225.12 Program payments.

(a) *Start-up payments.* At their discretion, State agencies may make start-up payments to sponsors which have executed Program agreements. Start-up payments shall not be made more than two months before the sponsor is scheduled to begin food service operations and shall not exceed 20 percent of the sponsor's approved administrative budget. The amount of the start-up payment shall be deducted from the first advance payment for administrative costs or, if the sponsor does not receive advance payments, from the first administrative reimbursement.

(b) *Advance payments.* At the sponsor's request, State agencies shall make advance payments to assist sponsors in meeting operating costs and administrative expenses. For sponsors operating under a continuous school calendar, all advance payments shall be forwarded on the first day of each month of operation. Advance payments shall be made by the dates specified in paragraph (b) (1) and (2) of this section for all other sponsors whose requests are received at least 30 days prior to those dates. Requests received less than 30 days prior to those dates shall be acted upon within 30 days of receipt. When making advance payments, State agencies shall observe the following criteria:

(1) *Operating costs.*

(i) State agencies shall make advance payments for operating costs by June 1, July 15, and August 15. To be eligible for the second advance payment, the sponsor must have conducted training sessions for its own personnel and site personnel covering Program duties and responsibilities. A sponsor shall not receive advance operating cost payments for any month in which it will participate in the Program for less than ten days.

(ii) To determine the amount of the advance payment to any sponsor, the State agency shall employ whichever of the following methods will result in the larger payment: (A) The total operating costs paid to the sponsor for the same calendar month in the preceding year, or (B) for sponsors contracting with a food service management company, 50 percent of the amount determined by the State agency to be needed that month for meals, and, for sponsors preparing their own meals, 65 percent of the amount determined by the State agency to be needed that month for meals.

(2) *Administrative costs.*

(i) State agencies shall make advance payments for administrative costs by June 1 and July 15 of the year in which the program will be operated. To be eligible for the second advance payment, the sponsor must certify that it is operating the number of sites for which the administrative budget was approved and that its projected administrative costs do not differ significantly from the approved budget. A sponsor shall not receive advance administrative costs payments for any month in which it will operate under the Program for less than 10 days. However, if a sponsor operates for less than 10 days in June but for at least 10 days in August, the second advance administrative costs payment shall be made by August 15.

(ii) Each payment shall equal one third of the total amount which the State agency determines the sponsor will need to administer its program. For sponsors which will operate for ten or more days only in one month and, therefore, will qualify for only one advance administrative costs payment, the payment shall be no less than one half and no more than two thirds of the total amount which the State agency determines the sponsor will need to administer its program.

(3) *Advance payment estimates.* When determining the amount of advance payments payable to the sponsor, the State agency shall make the best possible estimate based on the sponsor's request and any other available data. Under no circumstances may the amount of the advance payment for operating or administrative costs exceed the amount estimated by the State agency to be needed by the sponsor to meet operating or administrative costs, respectively.

(4) *Limit.* The sum of the advance operating and administrative costs payments to a sponsor for any one month shall not exceed $40,000 unless the State agency determines that a larger payment is necessary for the effective operation of the Program and the sponsor demonstrates sufficient administrative and managerial capability to justify a larger payment.

(5) *Deductions from advance payments.* The State agency shall deduct from either advance operating payments or advance administrative payments the amount of any previous payment which is under dispute or which is part of a demand for recovery under § 225.15.

(6) *Withholding of advance payments.* If the State agency has reason to believe that a sponsor will not be able to submit a valid Claim for Reimbursement covering the month for which advance payments have already been made, the subsequent month's advance payment shall be withheld until a valid claim is received.

(7) *Repayment of excess advance payments.* Upon demand of the State agency, sponsors shall repay any advance Program payments in excess of the amount cited on a valid Claim for Reimbursement.

(c) *Reimbursements.* Sponsors shall not be eligible for reimbursements for operating and administrative costs unless they have executed an agreement with the State agency. All reimbursements shall be in accordance with the terms of this agreement. Reimbursements shall not be paid for meals served at a site before the sponsor has received written notification that the site has been approved for participation in the Program. The State agency may make full or partial reimbursement upon receipt of a Claim for Reimbursement, but shall first make any necessary adjustments in the amount to be paid. The following requirements shall be observed in submitting and paying claims:

(1) No reimbursement may be issued until the sponsor certifies that it operated all sites for which it is approved and that there has been no significant change in its projected administrative costs since its preceding claim or, for a sponsor receiving an advance payment for only one month, that there has been no significant change in its projected administrative costs since its initial advance administrative costs payment.

(2) Claims for reimbursement shall be submitted by the 10th day of the month following the month for which the claim is made. The State agency may require that claims be submitted more frequently than once each month.

(3) Sponsors which, in the first month of operation, operate less than 10 days shall submit a combined claim for that month and the month immediately following.

(4) Sponsors which, in the final month of operations, operate less than 10 days shall submit a combined claim for the final month and the month immediately preceding within 10 days of the last day of operation.

(5) The State agency shall forward reimbursements within 45 days of receiving valid claims. If a claim is incomplete or invalid, the State agency shall return the claim to the sponsor within 30 days with an explanation of the reason for disapproval. If the sponsor submits a revised claim, final action shall be completed within 45 days of receipt.

(6) The State agency is not required to act upon any Claim for Reimbursement which is not received within 30 days of the sponsor's last day of food service operations, unless the State agency determines that the late submission is due to circumstances beyond the sponsor's control, in which case payment shall be made if the claim is valid.

(7) Claims for Reimbursement for any fiscal year shall not be considered if they are submitted later than the following December 31, with the exception of Claims submitted on or before December 31 and subsequently amended as a result of audits or investigations.

(8) Claims for Reimbursement shall include data sufficient to justify the amount claimed and to enable the State agency to provide the information required in Program reports. Sponsors shall also certify that records supporting the claim are available. The cost of meals served to adults performing necessary food service labor may be included in the claim. The State agency may choose to allow sponsors to include the cost of meals disallowed as meals served to the children, in accordance with § 225.14(e) (1) and (2) in its report of operating costs on its Claim for Reimbursement. In no case shall the cost of meals in excess of a site's approved level of meal service established under § 225.8(j) be considered allowable.

(9) The State agency shall promptly take corrective action with respect to any Claim for Reimbursement for which such action is determined necessary based upon the results of Program reviews or any other information available. The corrective action must be completed in time to be reflected in the final Program Operations and Financial Status report for each fiscal year if reimbursement for the claim is to be made available for that fiscal year through the Letter of Credit system described under § 225.4(j).

(10) Payments to a sponsor for operating costs shall equal the lesser of the following totals:

(i) The actual operating costs incurred by the sponsor, or

(ii) The sum of the amounts derived by multiplying the number of meals, by type, actually served under the sponsor's program to eligible children by 85.75 cents for each lunch or supper, 47.75 cents for each breakfast and 22.50 cents for each supplement. These are base rates of reimbursement, not current rates, and must be adjusted in accordance with paragraph (c)(12) of this section.

(11) Payments to a sponsor for administrative costs shall equal the lowest of the following totals:

(i) The amount estimated in the sponsor's approved administrative budget (taking into account any amendments);

(ii) The actual administrative costs incurred by the sponsor; or

(iii) The sum of the amounts derived by multiplying the number of meals, by type, actually served under the sponsor's program to eligible children by 6.75 cents for each lunch or supper, 3.50 cents for each breakfast and 1.75 cents for supplements, except that sponsors shall be eligible to receive an additional 1.50 cents for each lunch or supper, 1.00 cents for each breakfast, and .50 cents for each supplement served to participating children at rural or self-preparation sites. All rates in this subparagraph are base rate of reimbursement, not current rates, and must be adjusted in accordance with subparagraph (12) of this paragraph.

(12) Each January 1, FNS shall publish a notice in the Federal Register announcing any adjustment to the reimbursement rates described in paragraphs (c)(10)(ii) and (11)(iii) of this section. Adjustments shall be based upon changes in the series for food away from home of the Consumer Price Index for all Urban Consumers since the establishment of the rates.

(13) Sponsors of camps shall be reimbursed only for meals served to children in camps whose eligibility for free or reduced-price meals is documented. Any nonresidential camp reduced to fewer than four meals per day under the terms of § 225.14(d) shall receive reimbursement only for those meals served to children eligible for free or reduced-price school meals.

(14) If a State agency has reason to believe that a sponsor or food service management company has engaged in unlawful acts in connection with Program operations, evidence found in audits, reviews, or investigations shall be a basis for nonpayment of the applicable sponsor's Claims for Reimbursement.

(d) The sponsor may claim reimbursement for any meals which are examined for meal quality by the State agency, auditors, or local health authorities and found to meet the meal pattern requirements.

(e) The sponsor shall not claim reimbursement for meals served at any site in excess of the site's approved level of meal service, if one has been established under § 225.8(j). In

reviewing a sponsor's claim, the State agency may limit payments to the sponsor according to the approved level for meal service which may be claimed for reimbursement at the sponsor's sites, as provided for in § 225.8(j).

§ 225.13 Audits and management evaluations.

(a) *Audits.* (1) Upon approval of applicant sponsors whose total Claims for Reimbursement are expected to exceed $75,000, the State agency shall provide those sponsors with an audit guide to be used in the conduct of the audit required by § 225.20(k) and any other guidance necessary to enable them to comply with the audit requirements of this part. The audit guide developed by the State agency shall, at a minimum, contain the standards set forth in the audit guide issued by the Department for the program.

(2) In addition to the plan submitted under § 225.6(g)(13), the State agency shall ensure that all sponsors within the State whose total Claims for Reimbursement are expected to be more than $75,000 provide for an annual audit of their program. Any sponsor required to provide for an audit of its program shall engage an accounting firm or individual which is independent of the sponsor to conduct the audit.

(3) The State agency shall also provide for biennial audits of sponsors whose total Claims for Reimbursement are expected to be less than $75,000 with the following exceptions: (i) sponsors under $10,000, (ii) sponsors receiving other Federal funds, and subject to an organization-wide audit in accordance with OMB Circular A–102, and (iii) sponsors for which the State agency determines an audit is unnecessary based on program performance. States must justify and document all exemptions made to the biennial audit requirement. The cost of such audits shall be considered an allowable State administrative expense, and in no case may the cost of such audits be passed through to sponsors. States which can demonstrate that compliance with the requirement will impose financial hardship may initiate an appeal through FNSRO to FNS.

(4) Any audit of an organization which is conducted in accordance with the Program audit guide and includes the Program covered by this part may be included to meet a portion of the audit requirement contained in this section.

(5) Audits shall be conducted by: State agency internal auditors; State Auditors General; State Comptroller's Offices; other comparable State or local government audit groups; Certified Public Accountants; or public accountants licensed on or before December 31, 1970, and currently certified or licensed by the regulatory authority of the State or other political subdivision of the United States.

(6) Within the first two weeks of the sponsor's operation of the Program, the auditor engaged by any sponsor required to have an annual audit shall submit to the sponsor and to the State agency a copy of a letter evaluating and making recommendations for the improvement of the sponsor's accounting and recordkeeping systems.

(7) Each State agency shall coordinate its monitoring review findings under § 225.10 and the audit reports provided for under § 225.20(k). Each State agency shall ensure that monitoring is conducted to result in a representative review of the sponsor's operations under the Program.

(8) While OIG shall rely to the fullest extent feasible upon State-sponsored audits, it shall, when considered necessary, (i) make audits on a State-wide basis, (ii) perform on-site test audits, and (iii) review audit reports and related working papers of audits performed by or for State agencies.

(9) State agencies shall provide FNS and OIG with full opportunity to conduct management evaluations (including visits to sponsors) and audits of all operations of the State agency. Each State agency shall make available its records, including records of the receipts and expenditures of funds, upon a reasonable request by FNS or OIG. OIG shall also have the right to make audits of the records and operations of any sponsor.

(10) Use of Program audit guides available from OIG is encouraged. When this guide is utilized, OIG will coordinate its audits with State sponsored audits to form a network of intergovernmental audit systems.

(b) For each sponsor whose total Program payments under any Program agreement are expected to exceed $75,000, the final Claim for Reimbursement under the agreement shall not be eligible for payment until the audit has been completed and the results have been reviewed by the State agency. The cost of the audit may be considered an administrative cost. All such audits shall be subject to review by the Department.

(c) *Management evaluations.* For management purposes, FNSRO shall conduct an annual evaluation of Program operations within each State agency to determine Program needs and identify potential problem areas. Based on information obtained during this assessment, FNSRO may provide training or technical assistance to the State agency. FNSRO shall conduct management evaluations either prior to the initiation of Program operations, or during the first six weeks of Program operations, whichever time FNSRO considers best to evaluate the State. If the management evaluation discloses serious problems, a follow-up evaluation shall be made.

(d) In addition to the management evaluation, FNSRO shall collect data on the need for Program and State administrative funding within any State agency if the funding needs estimated in a State's management evaluation and administration plan are no longer accurate. Based on this data, FNS may make adjustments in the level of State administrative funding paid or payable to the State agency under § 225.4(g) to reflect changes in the size of the State's Program as compared to that estimated in its management and administration plan. The data shall be based on approved Program participation levels and collected during the period of Program operations, but no later than August 20. Immediately following this data collection, payment of State administrative funds shall be made to the State agency. The payment may reflect adjustments in the level of State administrative funding, based on the information collected. FNS shall not decrease the amount of a State's administrative funds unless the State failed to make reasonable efforts to administer the Program as proposed in its management and administration plan or the State incurred unnecessary expenses.

(e) The State agency shall fully respond to any recommendations made by FNSRO pursuant to the management evaluation. The response shall be in the form of a corrective action plan, as required under § 225.6(g)(16).

(f) FNSRO may require the State agency to submit on 20 days notice a corrective action plan regarding serious problems observed during any phase of the management evaluation.

(g) In conducting management evaluations or audits for any fiscal year, the State agency, FNS or OIG may disregard overpayment which does not exceed $100 or, in the case of State agency administered programs, does not exceed the amount established by State law, regulations or procedures as a minimum for which claims will be made for State losses generally. No overpayment shall be disregarded, however, when there are unpaid claims for the same fiscal year from which the overpayment can be deducted or when there is substantial evidence of violation of criminal law or civil fraud statutes.

§ 225.14 Corrective action procedures.

(a) *Purpose.* The provisions in this section shall be used by the State agency to improve Program performance.

(b) *Investigations.* Each State agency shall promptly investigate complaints received or irregularities noted in connection with the operation of the Program, and shall take appropriate action to correct any irregularities. State agency shall maintain on file all evidence relating to such investigations and actions. The State agency shall inform the appropriate FNSRO of any suspected fraud or criminal abuse in the Program which would result in a loss or misuse of Federal funds. The Department may make investigations at the request of the State agency, or where the Department determines investigations are appropriate.

(c) *Denial of applications and termination of sponsors.* The State agency shall not enter into an agreement with any applicant sponsor identifiable through its corporate organization, officers, employees, or otherwise, as an institution which participated in any Federal child nutrition program at any time during the previous three fiscal years, including the fiscal year of its application to the Program, and which was seriously deficient in its operation of any such program. The State agency shall terminate the Program agreement with any sponsor which it determines to be seriously deficient. Following such termination, the sponsor shall not be eligible to participate in the Program during the remainder of the fiscal year of its termination and the subsequent two fiscal years. The State agency may, before the expiration of the three fiscal years, approve the application of a sponsor which has been disapproved or terminated in accordance with this paragraph if the State agency, with FNS concurrence, determines that the sponsor has taken appropriate corrective actions to prevent recurrence of the deficiencies. However, the State agency shall afford a sponsor every reasonable opportunity to correct problems before terminating the sponsor for being seriously deficient. Serious deficiencies which are grounds for disapproval of applications and for termination include, but are not limited to, any of the following:

(1) Noncompliance with the applicable bid procedures and contract requirements of federal child nutrition program regulations;

(2) The submission of false information to the State agency;

(3) Failure to return to the State agency any start-up or advance payments which exceeded the amount earned for serving meals in accordance with this part, or failure to submit all Claims for Reimbursement in any prior year, provided that failure to return any advance payments for months for which Claims for Reimbursement are under dispute from any prior year shall not be grounds for disapproval in accordance with this paragraph.

(4) Program violations at a significant proportion of the sites which include, but are not limited to, the following:

(i) Noncompliance with the between meal time requirements;

(ii) Failure to maintain adequate records;

(iii) Failure to adjust meal orders to conform to variations in the number of participating children;

(iv) The simultaneous service of more than one meal to any child;

(v) The claiming of Program payments for meals not served to participating children;

(vi) Service of a significant number of meals which did not include required quantities of all meal components;

(vii) Excessive instances of off-site meal consumption;

(viii) Continued use of food service management companies that are in violation of health codes.

(d) *Meal service restriction.* The State agency shall restrict to one meal service per day (1) any food service site which is determined to be in violation of the time restrictions for meal service included in § 225.21(a) when corrective action is not taken within a reasonable time as determined by the State agency, and (2) all sites under a sponsor if more than 20 percent of the sponsor's sites are determined to be in violation of the time restrictions included in § 225.21(a). If this action results in children not receiving any meals under the Program, the State agency shall make every reasonable effort to locate another source of meal service for the children.

(e) *Meal Disallowances.*

(1) Meal disallowances for improper planning. If the State agency determines that a sponsor has failed to plan and prepare or order meals with the objective of providing only one meal per child at each meal service at a site, the State agency shall disallow as meals served to children the number of meals prepared or ordered in excess of the number of children served.

(2) Meal disallowances for violations of meal service requirements. If the State agency observes meal service violations during the conduct of a site review, the State agency shall disallow as meals served to children all of the meals observed to be in violation.

(3) The State agency shall also disallow any meals which are in excess of a site's approved level established under § 225.8(j).

(4) Whenever the State agency observes violations during the course of a site review, it shall require the sponsor to take corrective action. If the State agency finds a high level of meal service violations, the State agency shall require a specific immediate corrective action plan to be followed by the sponsor and shall either conduct a follow-up visit or in some other manner verify that the specified corrective action has been taken. Paragraph (f) of this section indicates actions the State agency shall undertake if corrective action has not been taken.

(f) *Termination of sites.*

(1) The State agency shall terminate the participation of a sponsor's site if the sponsor fails to take action to correct the Program violations noted in a State agency review report within the timeframes established by the State agency and specified in the review report.

(2) The State agency shall immediately terminate the participation of a sponsor's site if during a review it determines that the health or safety of the participating children is imminently threatened.

(3) Within 48 hours of terminating a site, the State agency shall, if applicable, notify the food service management company providing meals to the site of the termination.

(4) Upon terminating a sponsor's site, the State agency shall inform the sponsor of its right to appeal under § 225.16.

§ 225.15 Claims against sponsors.

(a) The State agency shall disallow any portion of a Claim for Reimbursement and recover any payment to a sponsor not properly payable under this part, except as provided for in § 225.13(g). However, the State agency shall notify the sponsor of the reasons for the disallowance or demand for repayment, and allow the sponsor full opportunity to submit evidence on appeal as provided for in § 225.16.

(b) Minimum State agency collection procedures for unearned payments shall include: (1) written demand to the sponsor for the return of improper payments; (2) if after 30 days the sponsor fails to remit full payment or agree to a satisfactory repayment schedule, a second written demand for the return of improper payments, sent by certified mail, return receipt requested; (3) if, after 60 days following the original written demand, the sponsor fails to

remit full payment or agree to a satifactory repayment schedule, a third written demand for the return of improper payments, sent by certified mail, return receipt requested; and (4) if after 90 calendar days following the original written demand, the sponsor fails to remit full payment or agree to a satisfactory repayment schedule, the State agency shall refer the claim against the sponsor to appropriate State or Federal authorities for pursuit of legal remedies.

(c) If FNS does not concur with the State agency's action in paying a sponsor or in failing to collect overpayment, FNS shall notify the State agency of its intention to assert a claim against the State agency. In all such cases, the State agency shall have full opportunity to submit evidence concerning the action taken. The State agency shall be liable to FNS for failure to collect an overpayment unless FNS determines that the State agency has conformed with this part in issuing the payment and has exerted reasonable efforts in accordance with paragraph (b) of this section to recover the improper payment.

(d) The amounts recovered by the State agency from sponsors may be utilized (1) to make Program payments to sponsors for the period for which the funds were initially available, and (2) to repay the State for any of its own funds used to make payments on Claims for Reimbursement. Any amounts recovered which are not so utilized shall be returned to FNS in accordance with the requirements of this part.

§ 225.16 Appeal procedures.

(a) Each State agency shall establish a procedure to be followed by an applicant requesting a review of a denial of an application for participation, a denial of a request by a sponsor for an advance payment, a denial of a claim by a sponsor for reimbursement, a claim against a sponsor for remittance of a payment, the termination of the sponsor or a site, a denial of a sponsor's application for a site, a denial of a food service management company's application for registration, or revocation of that registration.

(b) At a minimum, the procedures for those reviews shall provide that:

(1) The sponsor or food service management company be advised in writing of the grounds upon which the State agency based the action. The notice of action, which shall be sent by certified mail, return receipt requested, shall also include a full description of the sponsor's or food service management company's rights and responsibilities under this section;

(2) The sponsor or food service management company be advised in writing that the request for review must be made within a specified time and must meet the requirement of paragraph (b)(4) of this section. The State agency shall establish this period of time at not less than one week nor more than two weeks from the date of receipt of the notice of action;

(3) The appellant be afforded the opportunity to review any information upon which the action was based;

(4) The appellant may refute the charges contained in the notice of action either in person or by filing written documentation with the review official. To be considered, written documentation must be submitted by the appellant within seven days of submitting the request for review, must clearly identify the State agency action being appealed, and must include a photocopy of the notice of action issued by the State agency;

(5) A hearing shall be held by the review official in addition to, or in lieu of, a review of written information submitted by the appellant only if the appellant so specifies in the letter of request for review. The appellant may retain legal counsel, or may be represented by another person. Failure of the appellant's representative to appear at a scheduled hearing shall constitute the appellant's waiver of the right to a personal appearance before the review official, unless the review official agrees to reschedule the hearing. A representative of the State agency shall be allowed to attend the hearing to respond to the appellant's testimony and written information and to answer questions from the review official;

(6) If the appellant has requested a hearing, the appellant and the State agency shall be provided with at least 5 days advance written notice, sent by certified mail, return receipt requested, of the time and place of the hearing;

(7) The hearing shall be held within 14 days of the date of the receipt of the request for review, but, where applicable, not before the appellant's written documentation is received in accordance with paragraph (b)(4) of this section;

(8) The review official shall be independent of the original decision-making process;

(9) The review official shall make a determination based on information provided by the State agency and the appellant, and on Program regulations;

(10) Within 5 working days after the appellant's hearing, or within 5 working days after receipt of written documentation if no hearing is held, the reviewing official must make a determination based on a full review of the administrative record and inform the appellant of the determination of the review by certified mail, return receipt requested;

(11) The State agency's action shall remain in effect during the appeal process. However, participating sponsors and sites may continue to operate under the Program during an appeal of termination, and if the appeal results in overturning the State agency's decision, reimbursement shall be paid for meals served during the appeal process. However, such continued operation under the Program shall not be allowed if the State agency's action is based on imminent dangers to the health or welfare of children. If the sponsor or site has been terminated for this reason, the State agency shall so specify in its notice of action; and

(12) The determination by the State review official is the final administrative determination to be afforded to the appellant.

(c) A record regarding each review shall be kept by the State agency, as required under § 225.11(a). The record shall document the State agency's compliance with these regulations and shall include the basis for the decision.

§ 225.17 Procedures for food service management companies.

(a) Any sponsor may contract with a food service management company for the preparation of unitized meals with or without milk or juice. In all cases, the sponsor shall adhere to the procurement standards indicated in § 225.18. All meals prepared by a food service management company shall be unitized, with or without milk or juice, unless the sponsor submits to the State agency a request for exceptions to the unitizing requirement for certain components of a meal. These requests shall be submitted to the State agency in writing prior to advertising for bids. The State agency shall notify the sponsor in writing of its determination in a timely manner.

(b) Any sponsor which contracts with a food service management company shall be responsible for ensuring that the food service operation is in conformity with its agreement with the State agency and all the applicable provisions of this part. No sponsor may contract out for the management responsibilities of the Program such as monitoring, enforcing corrective action, or preparing Program applications.

(c) A sponsor may contract only with a food service management company which is registered with the State in which the sponsor will operate the

Program, except that a school acting as a food service management company and a food service management company which has an exclusive contract with a school for year-round service (and no contracts with other sponsors) shall not be required to register with the State. The procedures for registration of all other food service management companies are as follows:

(1) By February 1, each State agency shall notify each food service management company which participated in the Program in either of the prior two years in the State that it must register with the State agency if it wishes to participate in the current fiscal year. This notification shall include at a minimum: (i) a statement that registration with the State agency is a prerequisite to participation in the Program during the fiscal year; (ii) a list of the items which must be submitted in the application for registration as set forth in paragraph (c)(2) of this Section; (iii) a complete description of the criteria developed by the State agency for determining registrant eligibility; and (iv) any other information necessary to apply for registration. In addition, each State agency shall by the same date issue a public announcement of the registration requirement, including all the information necessary to apply for registration.

(2) With the exceptions described in the first sentence of this paragraph, each food service management company shall register with the State by March 15 of each fiscal year. At a minimum, registration shall require: (i) submission of name and mailing address and any other names under which such food service management company presently or in the past two years has marketed its services; (ii) a certification that the food service management company meets applicable State and local health, safety, and sanitation standards; (iii) disclosure of present company owners, directors, and officers, and their relationship in the past two years to any sponsor or food service management company which participated in the Program; (iv) records of contract terminations, disallowances, and health, safety, and sanitation code violations related to prior Program participation during the past two years; (v) records of any other contract terminations and health, safety, and sanitation code violations during the past two years; (vi) the address or addresses of the company's food preparation and distribution facilities which will be used in the Program and the local officials responsible for the operation of the facilities; (vii) the number of meals which can be prepared in each preparation facility in a twenty-four hour period for use in the Program; (viii) a certification that the food service management company will operate in accordance with current Program regulations; (ix) a statement that the food service management company understands that it will not be paid for meals which are delivered to non-approved sites, or for meals which are delivered to approved sites outside of the agreed upon delivery time, or meals that do not meet the meal requirements and food specifications contained in the contract between the sponsor and the food service management company; and (x) submission of a Certified Public Accountant's audit report if an audit was performed during the prior year and, (xi) a statement as to whether the organization is a minority business enterprise. A minority business enterprise is a business,

(A) in which the management and daily operations of the business are controlled by a member or members of a minority group; and

(B) at least 51 percent of which is owned by a member or members of a minority group; (*1*) if the business is a corporation, at least 51 percent of all classes of voting stock of the corporation must be owned by members of a minority group; (*2*) if the business is a partnership, at least 51 percent of the partnership must be owned by a member or members of a minority group. Minority groups are Black, Hispanics, American Indians, Alaskan Natives, Orientals and Aleuts.

(3) A State agency shall consider a food service management company's application for registration submitted after March 15 of the current year, if the State agency determines that the lack of registration could result in a significant number of needy children not having reasonable access to the Program.

(4) Prior to registration, the State agency shall provide for inspections of all food service management companies' food preparation facilities listed on the applications for registration, except those located outside the State. The State agency shall promptly notify FNSRO of the name and location of any out-of-State facility, and FNSRO shall ensure that the facility is inspected prior to registration. The purpose of the inspection is to evaluate each facility's suitability for preparation of meals for use in the Program. The State agency may waive this inspection requirement if a facility was registered last summer and operated in accordance with Program requirements.

(5) No food service management company shall be registered by the State agency if the State agency determines that the company lacks the administrative and financial capability to perform under the Program or if it is identifiable through its organization or principals as a food service management company which participated in the Program during any previous year and was seriously deficient in its Program operation. Serious deficiencies which are grounds for non-registration include, but are not limited to, any of the following:

(i) Noncompliance with the applicable bid procedures, contract requirements or Program regulations;

(ii) Submission of false information to the State agency;

(iii) Failure to conform meal deliveries to meal orders;

(iv) Delivery of a significant number of meals which do not meet contract requirements;

(v) Failure to maintain adequate records;

(vi) Significant health code violations which were not corrected upon reinspection;

(vii) Failure to deliver meals; or

(viii) The conviction of any officer, owner, partner, or manager of the company for a crime in connection with a prior Program operation.

(6) Each State agency shall require food service management companies submitting applications for registration to certify that the information submitted is true and correct and that the food service management company is aware that misrepresentation may result in prosecution under applicable State and Federal statutes.

(7) The State agency shall notify in writing each food service management company which applied for registration of its determination on the application within 30 calendar days after receipt of the complete application. The State agency shall inform any food service management company whose application for registration has been denied of the procedures to request a review of the denial as provided for in § 225.16. The official making the determination of denial must notify the food service management company in writing, stating all the grounds on which the State agency based the denial.

(8) Each State agency shall submit information to FNS regarding registration of food service management companies, as required under § 225.11(e).

(d) In the absence of any applicable State or local laws governing bid procedures and with the exceptions identified in this paragraph, each sponsor which contracts with a food service management company shall

comply with the competitive bid procedures described in this paragraph. Sponsors which are schools which have an exclusive contract with food service management companies for year-round service and sponsors whose total contracts with food service management companies will not exceed $10,000, shall not be required to comply with these procedures. These exceptions do not relieve the sponsor of the responsibility to ensure that normally accepted bidding procedures are followed in contracting with any food service management company. Each sponsor whose proposed contract is subject to competitive bidding procedure shall ensure, at a minimum, that:

(1) All proposed contracts shall be publicly announced at least once, not less than 14 calendar days prior to the opening of bids, and the announcement shall include the time and place of the bid opening;

(2) The bids shall be publicly opened; and

(3) The State agency is notified at least 14 calendar days prior to the opening of the bids, of the time and place of the bid opening.

(4) When advertising for bids, the sponsor shall adhere to the following requirements, at a minimum:

(i) The invitation to bid shall not specify a minimum price;

(ii) The invitation to bid shall contain a cycle menu approved by the State agency upon which the bid shall be based;

(iii) The invitation to bid shall contain food specifications and meal quality standards approved by the State agency upon which the bid shall be based;

(iv) The invitation to bid shall not specify special meal requirements to meet ethnic or religious needs unless such special requirements are necessary to meet the needs of the children to be served;

(v) Neither the invitation to bid nor the contract shall provide for loans or any other monetary benefit or term or condition to be made to sponsors by food service management companies;

(vi) Nonfood items shall be excluded from the invitation to bid, except where such items are essential to the conduct of the food service;

(5) A copy of the food service management company registration determination issued by the State agency shall be submitted by the food service management company with each bid;

(6) Sponsors shall submit to the State agency copies of all bids received and their reason for selecting the food service management company chosen;

(7) All bids in an amount which exceeds the lowest bid shall be submitted to the State agency for approval before acceptance. All bids totaling $100,000 or more shall be submitted to the State agency for approval before acceptance. State agencies shall respond to a request for approval of such bids within 5 working days of receipt.

(e) Each State agency shall develop a standard form of contract for use by sponsors in contracting with food service management companies. (Sponsors which are public institutions and sponsors exempt from the competitive bid procedures described in paragraph (d) of this section may use their existing or usual form of contract, if such form of contract has been submitted to and approved by the State agency.) The standard contract developed by the State agency shall expressly and without exception provide that:

(1) The sponsor shall provide to the food service management company a list of State agency approved food service sites, along with the approved level for the number of meals which may be claimed for reimbursement for each site (established under § 225.8(j)), and shall notify the food service management company of all sites which have been approved, cancelled, or terminated subsequent to the submission of the initial approved site list and of any changes in the approved level of meal service for a site. Such notification shall be provided within the time limits mutually agreed upon the contract;

(2) The food service management company shall maintain such records (supported by invoices, receipts, or other evidence) as the sponsor will need to meet its responsibilities under this part, and shall report to the sponsor promptly at the end of each month, at a minimum;

(3) The food service management company shall have State or local health certification for the facility in which it proposes to prepare meals for use in the Program, and it shall ensure that health and sanitation requirements are met at all times. In addition, the food service management company shall provide for meals which it prepares to be periodically inspected by the local health department or an independent agency to determine bacteria levels in the meals being served. These levels shall conform to the standards which are applied by the local health authority with respect to the level of bacteria which may be present in meals served by other food service establishments in the locality. Results of the inspections shall be submitted to the sponsor and to the State agency;

(4) The meals served under the contract shall conform to the cycle menus and meal quality standards and food specifications approved by the State agency and upon which the bid was based;

(5) The books and records of the food service management company pertaining to the sponsor's food service operation shall be available for inspection and audit by representatives of the State agency, the Department, and the U.S. General Accounting Office at any reasonable time and place for a period of 3 years from the date of receipt of final payment under the contract;

(6) The sponsor and the food service management company shall operate in accordance with current Program regulations;

(7) The food service management company shall be paid by the sponsor for all meals delivered in accordance with the contract and this part. However, neither the Department nor the State agency assumes any liability for payment of differences between the number of meals delivered by the food service management company and the number of meals served by the sponsor that are eligible for reimbursement;

(8) Meals shall be delivered in accordance with a delivery schedule prescribed in the contract;

(9) Increases and decreases in the number of meals ordered shall be made by the sponsor, as needed, within a prior notice period mutally agreed upon;

(10) All meals served under the Program shall meet the requirements of § 225.21;

(11) In cases of nonperformance or noncompliance on the part of the food service management company, the company shall pay the sponsor for any excess costs the sponsor incurs by obtaining meals from another source; and

(12) If the State agency requires the sponsor to establish a special account for the deposit of operating costs payments made by the State agency to the sponsor in accordance with the conditions given in § 225.9(f), the contract shall so specify.

(f) A food service management company entering into a contract with a sponsor under the Program shall not subcontract for the total meal, with or without milk, or for the assembly of the meal.

(g) Each State agency shall have a representative present at all procurement bid openings of sponsors which expect to receive more than $100,000 in Program payments.

(h) The State agency may require any sponsor which contracts with a food service management company to

establish a special account in a State or Federally insured bank for the deposit of Program payments for operating costs. The special account shall be such that any disbursement of monies from the account must be authorized by both the sponsor and the food service management company, and shall be in accordance with the other specifications included in § 225.9(f).

(i) Copies of all contracts between sponsors and food service management companies, along with a certification of independent price determination, shall be submitted to the State agency prior to the beginning of Program operations.

(j) Each food service management company which submits a bid over $100,000 shall obtain a bid bond in an amount not less than five (5) percent nor more than ten (10) percent, as determined by the sponsor, of the value of the contract for which the bid is made. A copy of the bid bond shall accompany each bid.

(k) Each food service management company which enters into a food service contract for over $100,000 with a sponsor shall obtain a performance bond in an amount not less than ten (10) percent nor more than twenty-five (25) percent of the value of the contract as determined by the State agency. Any food service management company which enters into more than one contract with any one sponsor shall obtain a performance bond covering all contracts if the aggregate amount of the contracts exceeds $100,000. Sponsors shall require the food service management company to furnish a copy of the bond within ten days of the awarding of the contract.

(l) Food service management companies shall obtain bid bonds and performance bonds only from surety companies listed in the current Department of the Treasury Circular 570.

(m) Failure by a sponsor to comply with the provisions of this section shall be sufficient grounds for the State agency to terminate participation by the sponsor in accordance with § 225.23(b). If a food service management company fails to take the actions recommended to correct violations noted by the State agency or health inspectors in the conducting of a review or inspection, the State agency shall notify the sponsor and the food service management company that reimbursement shall not be paid for meals prepared by the food service management company after a date specified in the notification. When the State agency takes such action, it shall inform the sponsor of its right to appeal under § 225.16.

§ 225.18 Procurement standards.

(a) State agencies and sponsors which are Federally recognized Indian tribal governments or entities of State or local governments (such as some school districts, elementary and secondary schools, and public park authorities) shall comply with the standards prescribed in Attachment O of Office of Management and Budget Circular A–102 in the procurement of food, supplies, goods, and other services with Program payments.

(b) All sponsors other than those identified in paragraph (a) of this section shall comply with the standards prescribed in Attachment O of Office of Management and Budget Circular A–110 in the procurement of food, supplies, goods, and other services with Program payments.

(c) The State agency shall make available to sponsors information on Office of Management and Budget Circulars A–102 and A–110, as appropriate.

(d) Sponsors may use their own procurement procedures which reflect applicable State and local laws and regulations, provided that procurements made with Program funds conform with provisions of this section, as well as with procurement requirements which may be established by the State agency, with the approval of FNS, to prevent fraud, waste, and Program abuse.

(e) The State agency shall ensure that all sponsors are aware of the following practices specifed in OMB Circular A–102, with respect to minority business enterprises:

(1) Including qualified minority business enterprises on solicitation lists,

(2) Soliciting minority business enterprises whenever they are potential sources,

(3) When economically feasible, dividing total requirements into smaller tasks or quantities so as to permit maximum participation by minority business enterprises,

(4) Establishing delivery schedules which will assist minority business enterprises to meet deadlines, and

(5) Using the services and assistance of the Small Business Administration, the Office of Minority Business Enterprise of the Department of Commerce and the Community Services Administration as required.

Subpart D—Provisions for Sponsors

§ 225.19 Requirements for sponsor participation.

(a) *Sponsor eligibility.* Applicants eligible to sponsor the Program include:

(1) Public sponsors;

(2) Private nonprofit sponsors, including residential summer camps, which prepare their own meals or obtain meals from a public facility, such as a school district, public hospital, or State university;

(3) Private nonprofit schools, including colleges and universities;

(4) Private nonprofit migrant farmworker organizations, including those that purchase meals from a food service management company, which develop programs for children of migrant families;

(5) Private nonprofit sponsors which serve not more than a total of 500 children daily at not more than three sites and which purchase meals from a food service management company; and

(6) In areas where no sponsors described in paragraph (a) (1) through (5) of this section are available to operate the Program, or where a significant number of needy children will not otherwise have access to the Program, private nonprofit service institutions which purchase meals from a food service management company, and which are determined to have a consistent record of reliable and honest management and administration of community food service programs.

(b) *Requirements.* No applicant sponsor shall be eligible to participate in the Program unless it:

(1) Demonstrates financial and administrative capability for Program operations and accepts final financial and administrative responsibility for total Program operations at all sites at which it proposes to conduct a food service;

(2) Has not been seriously deficient in operating the Program in the prior three years;

(3) Will conduct a regularly scheduled food service for children from areas in which poor economic conditions exist or qualifies as a camp;

(4) Has adequate supervisory and operational personnel for overall monitoring and management of each site including adequate personnel to conduct the visits and reviews required in § 225.20 (g) and (h);

(5) Provides an ongoing year-round service to the community which it proposes to serve under the Program, except as provided for in § 225.8(e);

(6) Certifies that all sites have been visited and have the capability and the facilities for the meal service planned for the number of children anticipated to be served;

(7) If not a camp, provides documentation that its food service will serve children from an area in which poor economic conditions exist, as defined in § 225.2(d). If a camp, certifies

that it will collect family size and income information to support its Claim for Reimbursement; and

(8) If a summer school, is open to serve children in addition to those enrolled in the accredited school program or is a school serving children outside of the summer school hours.

(c) *Applications.* Applicants shall make written application to the State agency for participation in the Program as sponsors. Such application shall be made on a timely basis in accordance with the requirements of § 225.9.

(d) *Agreements.* Each sponsor shall enter into a written agreement with the State agency upon approval of its application, as required in § 225.9(b).

(e) *Meal services.* The meals which may be served under the Program are breakfast, lunch, supper, and supplemental food. No sponsor shall be approved to provide more than two services of supplemental food per day. A sponsor shall only be reimbursed for meals served in accordance with paragraphs (f) and (g) of this section.

(f) *Camps.* Sponsors of camps shall only be reimbursed for meals served in camps to children from families which qualify for free and reduced price meals under the guidelines established for the National School Lunch Program (7 CFR Part 210). The sponsor shall maintain a copy of the family income documentation of each child receiving meals under the Program. Meal service at camps shall be subject to the following provisions:

(1) A camp may serve up to four meals each day.

(2) Residential camps are not subject to the time restrictions for meal service given in § 225.21(a)(1).

(3) A camp shall be approved to serve these meals only if it has the administrative capability and, where applicable, adequate food preparation and holding facilities, and if the service period of the different meals does not coincide or overlap.

(4) A camp may be approved to serve supplemental food and also participate in the Special Milk Program (7 CFR Part 215). Any camp which participates in both Programs shall keep separate records for each Program, and shall not claim or receive reimbursement under both Programs for the same milk.

(g) *Sites other than camps and those serving migrant children.* Food service sites other than camps shall serve children in areas where poor economic conditions exist, as defined in § 225.2(d). A sponsor which operates in accordance with this part shall receive reimbursement for all meals served to children at these sites in accordance with this part. Food service sites other than camps and those which primarily serve migrant children may serve either (1) one meal each day, a breakfast, a lunch, or a supplement, or (2) two meals each day, if one is a lunch and the other is a breakfast or a supplement. These sites shall not be approved both to serve supplemental food and also participate in the Special Milk Program (7 CFR Part 215).

(h) *Sites which serve children of migrant families.* Food service sites which primarily serve children from migrant families may be approved to serve up to four meals each day. These sites shall serve children in areas where poor economic conditions exist as defined in § 225.2(d). A sponsor which operates in accordance with this part shall receive reimbursement for all meals served to children at these sites. A site which primarily serves children from migrant families shall only be approved to serve more than one meal each day if it has the administrative capability and, where applicable, adequate food preparation and holding facilities, and if the service period of the different meals does not coincide or overlap. These sites shall not be approved both to serve supplemental food and also participate in the Special Milk Program (7 CFR Part 215).

§ 225.20 Operational responsibilities of sponsors.

(a) Sponsors shall operate the food service in accordance with the provisions of this part and any instructions and handbooks issued by FNS under this part or issued by the State agency which are not inconsistent with the provisions of this part.

(b) Each sponsor shall, to the maximum extent feasible, utilize either its own food service facilities, or obtain meals from a school food service facility. If the sponsor obtains meals from a school food service facility the applicable requirements of this part shall be embodied in a written agreement between the sponsor and the school.

(c) Upon approval of its application or any adjustment in the approved levels of meal service for its sites, established under § 225.8(j), the sponsor shall inform the food service management company with which the sponsor contracts of the approved level for each meal service at each site for which the food service management company will provide meals.

(d) Sponsors shall plan for and prepare or order meals on the basis of participation trends with the objective of providing only one meal per child at each meal service. The sponsor shall make the adjustments necessary to achieve this objective using the results from its monitoring of sites. For sites for which approved levels of meal service have been established in accordance with § 225.8(j), this means that the sponsor shall adjust the number of meals ordered or prepared with the objective of providing only one meal per child whenever the number of children attending the site is below the approved level. In no case shall the sponsor order or prepare meals for any site in excess of the site's approved level. Records of participation and of preparation or ordering of meals shall be maintained to demonstrate positive action toward this objective. In recognition of the fluctuation in participation levels which makes it difficult to precisely estimate the number of meals needed and to reduce the resultant waste, any excess meals within the approved level for the site that are prepared or ordered may be served to children and claimed for reimbursement unless the State agency determines that the sponsor has failed to plan and prepare or order meals with the objective of providing only one meal per child at each meal service. Second meals shall be served only after all participating children at the site's meal service have been served a meal. In no case shall the sponsor order or prepare meals for any site in excess of its approved level, established in accordance with § 225.8(j).

(e) Sponsors shall submit Claims for Reimbursement only for meals served to children in accordance with this part. Claims shall be submitted by the 10th day of the month following the month for which the claim is made. However, the State agency may require that claims be submitted more frequently.

(f) Sponsors shall maintain accurate records which justify all costs and meals claimed. The sponsor's records shall be available at all times for inspection and audit by representatives of the Secretary, the Comptroller General of the United States, and the State agency for a period of three years following the date of submission of the final Claim for Reimbursement for the fiscal year.

(g) Sponsors shall visit each of their sites at least once during the first week of operation under the Program and shall promptly take such actions as are necessary to correct any deficiencies.

(h) Sponsors shall review food service operations at each site at least once during the first four weeks of Program operations, and thereafter shall maintain a reasonable level of site monitoring. Sponsors shall complete a monitoring form developed by the State agency during the conduct of these reviews.

(i) Each sponsor shall hold training sessions for its administrative and site personnel with regard to Program duties and allow no site to operate until site personnel have attended at least one of these training sessions. Training of site personnel, at a minimum, shall include: the purpose of the Program, site eligibility, recordkeeping, site operations, meal pattern requirements, and duties of a monitor. Each sponsor shall ensure that its administrative personnel attend State agency training provided to sponsors, and sponsors shall provide training throughout the summer to ensure that administrative and site personnel are thoroughly knowledgeable in all requisite areas of Program administration and operation and are provided with sufficient information to enable them to carry out their Program responsibilities. Each site shall have present at each meal service at least one person who has received this training.

(j) Sponsors shall not claim reimbursement under parts 210, 215, 220, or 226 of this Chapter, or any other Federally-funded program for meals served under the Program.

(k) Each sponsor whose total Program payments under any Program agreement are expected to exceed $75,000 shall have an audit conducted of its Program claims and the supporting documentation for those claims. The audit shall be conducted in accordance with the provisions of § 225.13 (a) and (b). A report on the audit shall be submitted to the State agency.

§ 225.21 Meal service requirements.

(a) *Time restrictions for meal service.*

(1) Three hours shall elapse between the beginning of one meal service, including supplements, and the beginning of another, except that 4 hours shall elapse between the service of a lunch and supper when no supplement is served between lunch and supper. The service of supper shall begin no later than 7 p.m., unless the State agency has granted a waiver of this requirement due to extenuating circumstances. These waivers shall be granted only when the State agency and the sponsor ensure that special arrangements shall be made to monitor these sites. In no case may the service of supper extend beyond 8 p.m. The time restrictions in this subparagraph shall not apply to residential camps.

(2) The duration of the meal service shall be limited to two hours for lunch or supper and one hour for all other meals.

(3) Meals served outside of the period of approved meal service shall not be eligible for Program payments.

(4) Any permanent or planned changes in meal service periods must be approved by the State agency.

(5) Meals for each meal service which are not prepared at the food service site shall be delivered within one hour of the beginning of the appropriate meal service unless the site has adequate facilities for holding hot or cold meals within the temperatures required by State or local health regulations.

(6) The sponsor shall serve only the type(s) of meals for which it is approved under its agreement with the State agency.

(b) *Meal patterns.* The meal requirements for the Program are designed to provide nutritious and well-balanced meals to each child. Sponsors shall ensure that meals served meet all of the requirements. Except as otherwise provided in this section, the following tables present the minimum requirements for meals served to children in the Program.

BREAKFAST [1]

(1) The minimum amount of food components to be served as breakfast are as follows:

Food components	Minimum amount
Vegetables and Fruits	
Vegetable(s) and/or fruit(s)	½ cup.[2]
or	
Full-strengh vegetable or fruit juice	½ cup (4 fl. oz.).
or	
An equivalent quantity of any combination of vegetable(s), fruit(s), and juice.	
Bread and Bread Alternates [3]	
Bread	1 slice.
or	
Cornbread, biscuits, rolls, muffins, etc.[4].	1 serving.
or	
Cold dry cereal [5]	¾ cup or 1 oz.
or	
Cooked cereal or cereal grains	½ cup.
or	
Cooked pasta or noodle products	½ cup.
or	
An equivalent quantity of any combination of bread/bread alternate.	
Milk [6]	
Milk, fluid	1 cup (½ pint, 8 fl. oz.).
Meat and Meat Alternates (Optional)	
Lean meat or poultry or fish	1 oz.
or	
Cheese	1 oz.
or	
Eggs	1 large egg.
or	
Cooked dry beans or peas	½ cup.
or	
Peanut butter	2 Tbsp.
or	
An equivalent quantity of any combination of meat/meat alternate.	

[1] Children age 12 and up may be served adult-size portions based on the greater food needs of older boys and girls, but shall be served not less than the minimum quantities specified in this section.

[2] For the purposes of the requirement outlined in this subsection, a cup means a standard measuring cup.

[3] Bread, pasta or noodle products, cereals, and cereal grains (such as rice, bulgur, or corn grits) shall be whole-grain or enriched; cornbread, biscuits, rolls, muffins, etc., shall be made with whole-grain or enriched meal or flour; cereal shall be whole-grain, enriched or fortified.

[4] Serving sizes and equivalents to be published in guidance materials by FNS.

[5] Either volume (cup) or weight (oz.), whichever is less.

[6] Milk shall be served as a beverage or on cereal, or used in part for each purpose.

Lunch or Supper [1]

(2) The minimum amounts of food components to be served as lunch or supper are as follows:

Food components	Minimum amount
Meat and Meat Alternates	
Lean meat or poultry or fish	2 oz.
or	
Cheese	2 oz.
or	
Eggs	2 large eggs.
or	
Cooked dry beans or peas	1 cup [2]
or	
Peanut butter	4 tbsp.
or	
An equivalent quantity of any combination of meat/meat alternate.	
Vegetables and Fruits	
Vegetable(s) and/or fruit(s) [3]	¾ cup total.
Bread and Bread Alternates [4]	
Bread	1 slice.
or	
Cornbread, biscuits, rolls, muffins, etc.[5].	1 serving
or	
Cooked pasta or noodle products	½ cup.
Cooked cereal grains	cup.
or	
An equivalent quantity of any combination of bread/bread alternate.	
Milk	
Milk, fluid, served as a beverage	1 cup (½ pint, 8 fl. oz.).

[1] Children age 12 and up may be served adult-size portions based on the greater food needs of older boys and girls, but shall be served not less than the minimum quantities specified in this section.

[2] For purposes of the requirements outlined in this subsection, a cup means a standard measuring cup.

[3] Serve 2 or more kinds of vegetable(s) and/or fruit(s) or a combination of both. Full-strength vegetable or fruit juice may be counted to meet not more than one-half of this requirement.

[4] Bread, pasta or noodle products, and cereal grains (such as rice, bulgur, or corn grits) shall be whole-grain or enriched; cornbread, biscuits, rolls, muffins, etc., shall be made with whole-grain or enriched meal or flour; cereal shall be whole-grain or enriched or fortified.

[5] Serving sizes and equivalents to be published in guidance materials by FNS.

Supplemental Food [1]

(3) The minimum amounts of food components to be served as supplemental food are as follows. Select two of the following four components. (Juice may not be served when milk is served as the only other component.)

Food components	Minimum amount
Meat and Meat Alternates	
Lean meat or poultry or fish	1 oz.
or	
Cheese	1 oz.
or	
Eggs	1 large egg.
or	
Cooked dry beans or peas	½ cup [2]
or	
Peanut butter	2 tbsp.
or	
An equivalent quantity of any combination of meat/meat alternate.	
Vegetables and Fruits	
Vegetable(s) and/or fruit(s)	¾ cup.

Food components	Minimum amount
or	
Full-strengh vegetable or fruit juice	¾ cup (6 fl. oz.)
or	
An equivalent quantity of any combination of vegetable(s), fruit(s), and juice.	
Bread and Bread Alternates [3]	
Bread	1 slice.
or	
Cornbread, biscuits, rolls, muffins, etc[4].	1 serving.
or	
Cold dry cereal[5]	¾ cup or 1 oz.
or	
Cooked cereal	½ cup.
or	
Cooked pasta or noodle products	½ cup.
or	
Cooked cereal grains	½ cup.
or	
An equivalent quantity of any combination of bread/bread alternate.	
Milk[6]	
Milk, fluid	1 cup[5] (½ pint, 8 fl. oz.).

[1] Children age 12 and up may be served adult-size portions based on the greater food needs of older boys and girls, but shall be served not less than the minimum quantities specified in this section.
[2] For purposes of the requirements outlined in this subsection, a cup means a standard measuring cup.
[3] Bread, pasta or noodle products, and cereal grains (such as rice, bulgur, or corn grits) shall be whole-grain or enriched; cornbread, biscuits, rolls, muffins, etc., shall be made with whole-grain or enriched meal or flour; cereal shall be whole-grain or enriched or fortified.
[4] Serving sizes and equivalents to be published in guidance materials by FNS.
[5] Either volume (cup) or weight (oz.), whichever is less.
[6] Milk should be served as a beverage or on cereal, or used in part for each purpose.

(c) *Meat or meat alternate.* Meat or meat alternates served under the Program are subject to the following requirements and recommendations.

(1) The required quantity of meat or meat alternate shall be the quantity of the edible portion as served. These foods must be served in a main dish, or in a main dish and one other menu item.

(2) Cooked dry beans or peas may be used as a meat alternate or as a vegetable, but they may not be used to meet both component requirements in a meal.

(3) Textured vegetable protein products, cheese alternate products, and enriched macaroni with fortified protein may be used to meet part, but not all, of the meat/meat alternate requirement. The Department will provide guidance on the part of the meat/meat alternate requirement which these foods may be used to meet. If enriched macaroni with fortified protein is served as a meat alternate, it shall not be counted toward the bread requirement.

(4) If the sponsor believes that the recommended portion size of any meat or meat alternate is too large to be appealing to children, the sponsor may reduce the portion size of that meat or meat alternate and supplement it with another meat or meat alternate to meet the full requirement.

(d) *Varying amounts.* The State agency may authorize the sponsor to serve food in smaller quantities than are indicated in paragraph (b) of this section to children under six years of age if the State agency determines that the sponsor has the capability to ensure that variations in portion size are in accordance with the age levels of the children served. In such cases, the sponsor shall follow the age-appropriate meal pattern requirements contained in the Child Care Food Program regulations (7 CFR Part 226).

(e) *Infant meal patterns.* Sponsors approved to serve children under one year of age shall be required to comply with the applicable meal requirements contained in the Child Care Food Program regulations (7 CFR Part 226).

(f) *Additional foods.* To improve the nutrition of participating children, additional foods may be served with each meal.

(g) *Temporary unavailability of milk.* If emergency conditions prevent a sponsor normally having a supply of milk from temporarily obtaining milk deliveries, the State agency may approve the service of breakfasts, lunches or suppers without milk during the emergency period.

(h) *Continuing unavailability of milk.* The inability of a sponsor to obtain a supply of milk on a continuing basis shall not bar it from participation in the Program. In such cases, the State agency may approve service of meals without milk, provided that an equivalent amount of canned, whole dry or nonfat dry milk is used in the preparation of the components of the meal set forth in the tables included in this section. In addition, the State agency may approve the use of nonfat dry milk in meals served to children participating in activities which make the service of fluid milk impracticable, and in locations which are unable to obtain fluid milk. Such authorization shall stipulate that nonfat dry milk be reconstituted at normal dilution and under sanitary conditions consistent with State and local health regulations.

(i) *Statewide substitutions.* In American Samoa, Puerto Rico, Guam, the Virgin Islands, the Trust Territory of the Pacific Islands, and the Northern Mariana Islands, the following variations from the meal requirements are authorized: a serving of a starchy vegetable, such as ufi, tanniers, yams, plantains, or sweet potatoes may be substituted for the bread requirements.

(j) *Individual substitutions.* Substitutions may be made by sponsors in food listed in paragraph (b) of this section if individual participating children are unable, because of medical or other special dietary needs, to consume such foods. Such substitutions shall be made only when supported by a statement from a recognized medical authority which includes recommended alternate foods. Such statement shall be kept on file by the sponsor.

(k) *Special variations.* FNS may approve variations in the food components of the meals on an experimental or a continuing basis for any sponsor where there is evidence that such variations are nutritionally sound and are necessary to meet ethnic, religious, economic, or physical needs.

(l) *Donated commodities.* Institutions shall efficiently use in the Program any foods donated by the Department and accepted by the institution.

(m) *Plentiful foods.* Institutions shall, in so far as practicable, purchase and efficiently use in the Program foods designated as plentiful by the Department.

(n) *Sanitation.* Institutions shall ensure that in storing, preparing, and serving food, proper sanitation and health standards are met which conform with all applicable State and local laws and regulations. Institutions shall ensure that adequate facilities are available to store food or hold meals.

§ 225.22 Free meal policy.

(a) *Basic policy.* As part of the application, applicants shall submit a statement of their policy for serving free meals at all sites under their jurisdiction. No application may be approved unless its accompanying policy statement is approved. The policy statement shall consist of an assurance to the State agency that all children are served the same meals at no separate charge and that there is no discrimination in the course of the food service.

(b) *Camps.* In addition, the policy statement for a camp which charges separately for meals shall include the following:

(1) A statement that the camp's eligibility standards conform to the State's family size and income standards for free and reduced-price school meals;

(2) A description of the method for accepting applications;

(3) A description of the method for collecting payments from children who pay the full price of the meal while protecting the anonymity of children receiving a free meal.

(4) An assurance that the camp will establish a hearing procedure for families wishing to appeal a denial of an application for free meals which provides for the following:

(i) That a simple, publicly announced method will be used for a family to make an oral or written request for a hearing;

(ii) That the family will have the opportunity to be assisted or represented by an attorney or other person;

(iii) That the family will have an opportunity to examine the documents and records supporting the decision being appended both before and during the hearing;

(iv) That the hearing will be reasonably prompt and convenient for the family;

(v) That adequate notice will be given to the family of the time and place of the hearing;

(vi) That the family will have an opportunity to present oral or documentary evidence and arguments supporting its position;

(vii) That the family will have an opportunity to question or refute any testimony or other evidence and to confront and cross-examine any adverse witnesses;

(viii) That the hearing shall be conducted and the decision made by a hearing official who did not participate in the action being appealed;

(ix) That the decision shall be based on the oral and documentary evidence presented at the hearing and made a part of the record;

(x) That the family and any designated representative shall be notified in writing of the decision;

(xi) That a written record shall be prepared for each hearing which includes the action being appealed, any documentary evidence and a summary of oral testimony presented at the hearing, the decision and the reasons for the decision, and a copy of the notice sent to the family; and

(xii) That the written record shall be maintained for a period of three years following the conclusion of the hearing, during which it shall be available for examination by the family or its representatives at any reasonable time and place.

(5) An assurance that, if a family requests a hearing, the child shall continue to receive free meals until a decision is rendered.

(6) An assurance that there will be no overt identification of free meal recipients and no discrimination against any child on the basis of race, color, or national origin.

(c) *Public Announcements.* Each sponsor shall annually announce in the media serving the area from which it draws its attendance, the availability of free meals. Camps shall annually announce to all participants the availability of free meals for eligible children. All announcements must also state that meals are available without regard to race, color, or national origin.

Subpart E—Miscellaneous Provisions

§ 225.23 Other provisions.

(a) *Grant closeout procedures.* Grant closeout procedures for the Program shall be in accordance with Attachment K of the Office of Management and Budget Circular A–110 (41 FR 32016, July 30, 1976), or Attachment L of the Office of Management and Budget Circular A–102 (42 FR 45828, September 12, 1977), whichever is applicable.

(b) *Termination for cause.* (1) FNS may terminate a State agency's participation in the Program in whole, or in part, whenever it is determined that the State agency has failed to comply with the conditions of the Program. FNS shall promptly notify the State agency in writing of the termination and reason for the termination, together with the effective date and shall allow the State 30 calendar days to respond. In instances where the State does respond, FNS shall inform the State of its final determination no later than 30 calendar days after the State responds. (2) A State agency shall terminate a sponsor's participation in the Program by written notice whenever it is determined by the State agency that the sponsor has failed to comply with the conditions of the Program. (3) When participation in the Program has been terminated for cause, any funds paid to the State agency or a sponsor or any recoveries by FNS from the State agency or by the State agency from a sponsor shall be in accordance with the legal rights and liabilities of the parties.

(c) *Termination for convenience.* FNS and the State agency may agree to terminate the State agency's participation in the Program in whole, or in part, when both parties agree that the continuation of the Program would not produce beneficial results commensurate with the further expenditure of funds. The two parties shall agree upon the termination conditions, including the effective date and, in the case of partial termination, the portion to be terminated. The State agency shall not incur new obligations for the terminated portion after the effective date, and shall cancel as many outstanding obligations as possible. The Department shall allow full credit to the State agency for the Federal share of the noncancellable obligations properly incurred by the State agency prior to termination. A State agency may terminate a sponsor's participation in the manner provided for in this paragraph.

(d) *Maintenance of effort.* Expenditures of funds from State and local sources for the maintenance of food programs for children shall not be diminished as a result of funds received under the Act and a certification to this effect shall become part of the agreement provided for in § 225.3(c).

(e) *Program benefits.* The value of benefits and assistance available under the Program shall not be considered as income or resources of recipients and their families for any purpose under Federal, State or local laws, including, but not limited to, laws relating to taxation, welfare, and public assistance programs.

(f) *State requirements.* Nothing contained in this part shall prevent a State agency from imposing additional operating requirements which are not inconsistent with the provisions of this part, provided that such additional requirements shall not deny the Program to an area in which poor economic conditions exist, and shall not result in a significant number of needy children not having access to the Program. Prior to imposing any additional requirements, the State agency must receive approval from FNSRO.

(g) *Fraud penalty.* Whoever embezzles, willfully misapplies, steals, or obtains by fraud any funds, assets, or property that are the subject of a grant or other form of assistance under this part, whether received directly or indirectly from the Department or whoever receives, conceals, or retains such funds, assets, or property to his use or gain, knowing such funds, assets, or property have been embezzled, willfully misapplied, stolen, or obtained by fraud shall, if such funds, assets, or property are of the value of $100 or more, be fined not more than $100,000 or imprisoned not more than five years, or both, or, if such funds, assets, or property are of a value of less than $100, shall be fined not more than $1,000 or imprisoned for not more than one year, or both.

§ 225.24 Program information.

(a) persons desiring information concerning the Program may write to the appropriate State agency or Regional Office of FNS as indicated below:

(1) In the States of Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont: New England Regional Office, FNS, U.S. Department of Agriculture, 33 North Avenue, Burlington, MA 01803.

(2) In the States of Delaware, District of Columbia, Maryland, New Jersey, New York, Pennsylvania, Puerto Rico, Virginia, Virgin Islands, and West

Virginia: Mid-Atlantic Regional Office, FNS, U.S. Department of Agriculture, One Vahlsing Center, Robbinsville, NJ 08691.

(3) In the States of Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee: Southeast Regional Office, FNS, U.S. Department of Agriculture, 1100 Spring Street NW, Atlanta, GA 30367.

(4) In the States of Illinois, Indiana, Michigan, Minnesota, Ohio and Wisconsin: Midwest Regional Office, FNS, U.S. Department of Agriculture, 536 South Clark Street, Chicago, IL 60605.

(5) In the States of Arkansas, Louisiana, New Mexico, Oklahoma and Texas: Southwest Regional Office, FNS, U.S. Department of Agriculture, 1100 Commerce Street, Room 5–C–30, Dallas, TX 75202.

(6) In the States of Colorado, Iowa, Kansas, Missouri, Montana, Nebraska, North Dakota, South Dakota, Utah and Wyoming: Mountain Plains Regional Office, FNS, U.S. Department of Agriculture, 2420 West 26th Avenue, Room 430, Denver, CO 80211.

(7) In the States of Alaska, American Samoa, Arizona, California, Guam, Hawaii, Idaho, Nevada, Oregon, Trust Territory of the Pacific Islands, the Northern Mariana Islands, and Washington: Western Regional Office, FNS, U.S. Department of Agriculture, 550 Kearny Street, Room 400, San Francisco, CA 94108.

[Catalog of Federal Domestic Assistance Program No. 10.559, Summer Food Service Program for Children.]

[The Summer Food Service Program for Children is subject to Part III of Attachment A of OMB Circular No. A–95 (revised). Part III requires that Governors or their designated Plan review agency be given the opportunity to review the State plans required by Program regulations.]

Note.—The reporting and recordkeeping requirements contained in this rule are being submitted for approval to the Office of Management and Budget in accordance with the Federal Reports Act of 1942. This regulation will become effective January 1, 1981. The reporting and recordkeeping requirements may be subject to revision prior to implementation if the requirements, as presently formulated, are not approved without change by the Office of Management and Budget.

Dated: January 14, 1981.

Sydney J. Butler,

Acting Assistant Secretary for Food and Consumer Services.

[FR Doc. 81–1814 Filed 1–19–81; 8:45 am]

BILLING CODE 3410–30–M

Wednesday
January 21, 1981

Part V

Department of Health and Human Services

Health Care Financing Administration

Medicare Program; Medigap—Certification of Medicare Supplemental Health Insurance Policies

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Care Financing Administration

42 CFR Part 403

Medicare program; Medigap—Certification of Medicare Supplemental Health Insurance Policies

AGENCY: Health Care Financing Administration (HCFA), HHS.

ACTION: Proposed Rule.

SUMMARY: This proposal would establish a program of certification, by the Secretary, of Medicare supplemental health insurance policies (so-called Medigap policies) voluntarily submitted by insurers for review. It would implement, in part, section 507 of the Social Security Disability Amendments of 1980. HCFA will administer the certification program.

The voluntary certification program would go into effect July 1, 1982, and would apply only to policies issued in those States that do not have in effect a program for regulating Medigap policies equal to or more stringent than the one to be described in these regulations. A Supplemental Health Insurance Panel, consisting of the Secretary or a designee and four State Commissioners or Superintendents of Insurance appointed by the President, will determine the adequacy of a State's program in relation to the standards contained in the regulations.

These regulations would: (1) set standards for policies voluntarily submitted to HCFA for certification, (2) establish procedures for the certification program, and (3) promulgate the statutory requirements that the Supplemental Health Insurance Panel would use to approve State regulatory programs.

DATE: To assure consideration, comments should be received by: March 23, 1981.

ADDRESS: Address comments in writing to: Administrator, Health Care Financing Administration, Department of Health and Human Services, P.O. Box 17073, Baltimore, Maryland 21235. If you prefer, you may deliver your comments to Room 309–G Hubert H. Humphrey Building, 200 Independence Ave., S.W., Washington, D.C., or to Room 789, East High Rise Building, 6401 Security Boulevard, Baltimore, Maryland.

Please refer to BPP–91–P. Agencies and organizations are requested to submit comments in duplicate. Comments will be available for public inspection, beginning approximately two weeks after publication, in Room 309–G of the Department's office at 200 Independence Ave., S.W., Washington, D.C. 20201 on Monday through Friday of each week from 8:30 to 5:00 p.m. (202–245–7890).

FOR FURTHER INFORMATION CONTACT: Thomas Hoyer, 301–594–9690.

SUPPLEMENTARY INFORMATION: Because of the large number of comments we receive, we cannot acknowledge or respond to them individually. However, in preparing the final rule, we will consider all comments and will respond to them in the preamble to that rule.

Medicare Program

Medicare is a Federal health insurance program, provided for under title XVIII of the Social Security Act, for people 65 and older and some people under 65 who are disabled. The Medicare program consists of two parts, a Hospital Insurance Program (Part A) and s Supplementary Medical Insurance Program (Part B).

Part A, Hospital Insurance, covers hospital, skilled nursing facility (SNF) and home health care, as well as certain therapy services. It is oriented towards acute care, and its coverage provisions are based on the concept of a benefit period or "spell of illness", a period that begins when an individual receives inpatient hospital or SNF services and ends when that individual has been out of the hospital or SNF for 60 consecutive days. In each benefit period, individuals are entitled to up to 90 days of inpatient hospital care, up to 100 days of post-hospital SNF care, and up to 100 post hospital home health visits. If the full 90 days of hospital benefits are exhausted during a spell of illness, a beneficiary may draw on 60 additional lifetime reserve days.

Part B, the Supplementary Medical Insurance Program, provides coverage for physicians' services, medical and other health services (a wide range of services including diagnostic tests and X-rays, outpatient hospital services, durable medical equipment, ambulance service, prosthetic devices, physical therapy, etc.), and up to 100 home health visits per year.

Both parts of Medicare contain cost sharing provisions, that is, deductible and coinsurance. The law requires that, under Part A, the inpatient hospital deductibles and hospital and SNF coinsurance amounts be adjusted annually to reflect the rising costs of health care (Section 1813(b)(2) of the Act). Under Part A, there is currently an annual hospital deductible of $180, a daily co-payment of $45 for the 61st through the 90th day of care, and $90 a day for each lifetime reserve day. In a SNF, there is a $22.50 co-payment for care from the 21st through the 100th day.

Under Part B, medical insurance generally pays 80 percent of "reasonable charges", and the beneficiary pays 20 percent coinsurance. (Under Title XVIII, the "reasonable charge" is the amount of the actual charge of a physician or supplier that can be recognized for payment under Medicare.) Since actual charges generally exceed the "reasonable charges", beneficiaries are also responsible for the difference, unless the physician or supplier accepts "assignment" of a beneficiary's claim. In addition, the beneficiary must pay an annual $60 deductible.

There are a number of items and services that are not covered under either of Medicare's two insurance programs. These items and services include: custodial nursing home care, custodial home care, most prescription drugs, dental care, eyeglasses and eye examinations, immunizations, most foot care, and homemaker services. Beneficiaries must pay the full cost of these services out-of-pocket or obtain additional insurance protection to pay the costs.

Medicare Supplemental Health Insurance Policies—Nature and Problems

The Medicare program was never designed to cover the total cost of providing medical care for its beneficiaries. It has been estimated that Medicare paid for about 44 percent of all health care costs for its beneficiaries in 1978. The remaining 56 percent included the cost of noncovered services and cost-sharing provisions of the Medicare program. Since the enactment of the Medicare program, various insurance organizations, both profit and nonprofit, have developed and marketed health insurance policies aimed at paying health care expenses not covered by the Medicare program. In 1978, about 15 million of the 23 million Medicare beneficiaries spent $4 billion for approximately 19 million policies to supplement Medicare. These policies are commonly referred to as "Medigap" policies and principally include Medicare supplement policies, indemnity policies and specified disease policies.

Medicare supplement policies are designed to fill specific gaps in the Medicare benefit structure. These policies typically offer coverage of some or all of Medicare's deductible and coinsurance amounts and sometimes include coverage of services not covered under Medicare. There are many varieties of supplement policies with premiums and benefit structures

designed to meet the needs of people with a variety of incomes. A characteristic of most of these policies, however, is that they base their payments on Medicare's coverage and reimbursement structures. They seldom pay more than the 20 percent coinsurance amount of the "reasonable charge" recognized by Medicare. They rarely pay any of the difference between the "reasonable charge" and the actual amount that a physician or supplier of services might charge. Furthermore, they frequently do not cover a broader range of services than are covered under Medicare. The premiums for these policies are usually adjusted annually to compensate for increases in Medicare's deductible and coinsurance amounts.

Indemnity policies usually have fixed premiums and pay a predetermined amount of money when certain conditions are present or certain health care services are furnished. An indemnity policy, for example, might pay a fixed amount for each day of hospital or nursing home care, for each medical or surgical procedure required, or for a given diagnosis. The amount of benefits is usually predetermined and is not tied to the beneficiary's actual health care expenses. Indemnity benefits are usually payable without regard to other coverage.

Specified disease policies, popularly known as "dread disease policies", will pay certain specified amounts once a positive diagnosis (e.g., cancer) has been medically confirmed. As with indemnity policies, the benefits paid under specified disease policies are often fixed and are not usually tied to the beneficiary's actual expenses.

In May, 1972, the Senate Judiciary Committee, Subcommittee on Anti-Trust and Monopoly, held hearings related to the sale of Medigap policies. Since then more than a dozen other investigations and studies by congressional committees, the Federal Trade Commission, the news media, and various other individuals and agencies have revealed and onfirmed certain problems with Medigap insurance. Some of the problems relate to the nature of the policies, and some of them relate to the manner in which they are sold:

1. There is such a wide variety of Medigap policies that it is difficult, if not impossible, for a beneficiary to compare them and effectively assess their relative benefits and costs.

2. The policies themselves are often written in complicated language that obscures the extent of their coverage or the nature of their exclusions. For example, many policies contain clauses which limit or exclude payment for services received in connection with medical conditions which were known to exist at the time the policy was sold. These pre-existing condition clauses can negate coverge described in other portions of the policy.

3. Medicare beneficiaries often misunderstand the coverage available under Medicare. This, when coupled with misunderstanding of coverage of the supplemental policies, may lead individuals to purchase coverage that duplicates Medicare coverage or coverage that exists under another supplemental policy, while at the same time leaving significant gaps in coverage.

4. It is also virtually impossible for Medicare beneficiaries to determine the value of the policy's benefits in relationship to the premiums paid. This relationship, known as the loss ratio, is a way of determining how much of the aggregate premium income from a policy an insurance organization spends on aggregate benefits. Many group policies return 80 to 90 cents, or more, on the premium dollar, while some individual policies return less than 25 cents. In general, Medigap policies as a class often return less money in benefits than most other health insurance policies. ("Medigap: State Responses to Problems with Health Insurance for the Elderly", T. Van Ellet; Intergovernmental Health Policy Project, The George Washington University, Washington, D.C.; October 30, 1979 (hereafter, "Medigap" by Van Ellet), p. 16.)

5. Financial incentives, including very large sales commissions, have led some insurance agents to persuade policyholders to terminate a good policy in order to subscribe to a new one. The practice is costly to the beneficiaries and often leaves them without protection for a period of time because the new policy usually has a waiting period for pre-existing conditions. In other cases, a beneficiary is persuaded to purchase additional insurance policies to increase coverage when, in fact, the additional policy duplicates rather than supplements existing protection.

6. Elderly beneficiaries tend to rely on insurance agents for information about the Medicare program and the coverage available under the Medigap policies they are offered, and they are particularly vulnerable to misrepresentation and other abuses. Evidence of fraud, forgery, and intimidation has also been uncovered.

Regulation of Medigap Policies

The McCarran-Ferguson Act of 1945 (15 U.S.C. 1011 et seq.) permitted individual States to regulate the insurance business, and the States have been traditionally responsible for regulating Medigap policies. States have general laws which affect the entire field of insurance, and a number of States have enacted, or have final approval pending of, laws and regulations specific to Medicare supplemental insurance. Despite the current level of activity among the States, however, studies have shown that the scope of regulation varies from State to State and that enforcement of existing regulations is also uneven. (See "Medigap" by Van Ellet.)

There have been several significant initiatives in recent years to address the problems associated with Medigap policies. The National Association of Insurance Commissioners (NAIC), an association of the chief insurance regulatory officials of the 50 States, the District of Columbia, Guam, Puerto Rico, and the Virgin Islands, has played a major role in the effort. The NAIC, in collaboration with HCFA, developed a "Guide to Health Insurance for People with Medicare". Over 6 million copies of the pamphlet have thus far been distributed through social security offices, insurance companies, State insurance departments, and senior citizen interest groups. More important, however, the NAIC also amended its model standards for individual accident and sickness insurance policies so they can be used by States specifically to regulate Medigap policies. The amended model, adopted by the NAIC on June 6, 1979, contains minimum standards that Medigap policies would be required to meet (Model Regulation to Implement the Individual Accident and Sickness Insurance Minimum Standards Act, as it applies to Medicare Supplemental policies: "NAIC Model Standards"). Standards address such issues as minimum coverage requirements, limits on exclusions of coverage because of pre-existing conditions, disclosure requirements, and refund requirements.

As a result of the abuses associated with Medigap policies, Congress enacted section 507 of Pub. L. 96–265 (the Social Security Disability Amendments of 1980). That section of the law established a voluntary certification program for Medicare supplemental health insurance policies (section 1882 of the Social Security Act (42 U.S.C. 1395ss)). The intent of the legislation is to establish a program that enables Medicare beneficiaries to identify Medigap policies for purchase that are represented accurately both by sales agents and promotional literature, do not duplicate Medicare or other health insurance coverage, and provide fairly priced minimum protection against

health care expenses that are not paid for by Medicare.

In the debate that preceded enactment of Pub. L. 96–265, and in the law itself, Congress recognized the progress already made by the States in the area of Medigap regulation. Further, it recognized and accepted the traditional role of the States in regulating insurance. Its intention in developing Medigap legislation was to provide the States and insurance companies with an incentive to speed up their activities to improve the regulation and quality of Medigap policies. At the same time, Congress established an alternative mechanism of certification that could be implemented at the national level for policies issued in States that choose not to establish minimum regulatory programs by July 1, 1982.

While the law relies on improve State and Federal regulation of Medigap policies as a major means of identifying and curbing abuses in the sale of Medigap policies, it also places strong reliance on consumer education as a force in improving the general quality of Medigap policy offerings. The presumption is that beneficiaries, assisted by information provided by HHS, the States, insurance companies and other sources, will become better informed, more aggressive purchasers of Medigap insurance and that insurance organizations will therefore improve the quality of the policies they offer for sale in order to retain their competitive position in the market.

The basic provisions of the Medigap legislation addressed in these regulations are as follows:

1. The statute mandates that the Secretary of HHS establish a program of review and certification of Medigap policies that meet or exceed requirements specified in the statute and regulations. The Secretary's program is voluntary in that it provides for review of only those policies that are voluntarily submitted by insurers (section 1882(a) of the Act). It goes into effect July 1, 1982. (The Secretary has determined that HCFA will administer the voluntary program.)

2. Medigap policies must meet the NAIC Model Standards in order to be certified in the Secretary's program. (A summary of the NAIC Model Standards applicable to Medigap policies is presented below.) However, Congress structured the voluntary program so that it would apply the NAIC Model Standards to group policies as well as individual policies and also established minimum loss ratio requirements for each category of policy (section 1882(c) of the Act).

The NAIC has standards applicable to a variety of policies, including Medicare supplement policies, indemnity policies, and specified disease policies. However, it is important to note that the NAIC Model Standards that Congress incorporated by reference into P.L. 96–265 specifically address only "Medicare supplement policies". Consequently, the focus of the voluntary certification program is on those policies and does not address the certification of, or minimum standards for, "specified disease policies" or "indemnity policies".

3. The Secretary's voluntary certification program will apply only in those States that have not implemented, under State law, a regulatory program that applies standards equal to or more stringent than the NAIC Model Standards and the loss ratio requirements as specified in the statute (section 1882 (b) and (i) of the Act). Regarding the NAIC standards and loss ratio requirements, Congress clearly did not intend to encourage States to limit their regulatory programs to the minimum level specified in the law. On the contrary, the intent of Congress was to encourage States to implement regulatory programs that they determine are appropriate to their needs and to assure States that those programs meeting or exceeding specified minimum standards would be approved by a panel, as specified below. (See Conference Committee Report on Social Security Disability Amendments of 1980, H.R. 3236, Report No. 96–944, pp. 76–77.)

4. The statute also provides for a Supplemental Health Insurance Panel that will determine whether or not State regulatory programs for Medigap policies meet the requirements of the law. The Panel will consist of the Secretary or a designee, who will serve as chairperson, and four State Commissioners or Superintendents of Insurance, to be appointed by the President (section 1882(b) of the Act).

5. The Secretary will authorize the use of an emblem by an insurer to indicate that a policy has been certified as meeting the standards of the voluntary certification program (section 1882(a) of the Act).

The statute contains provisions other than those addressed in these regulations. These include Federal criminal penalties designed to assist States and the Federal government in dealing with abuses identified in the various studies and investigations of Medigap policies (section 1882(d) of the Act). These penalties basically apply to cases in which false statements or misrepresentations are made about a policy's certification or about the extent and nature of the policy's coverage for the purpose of obtaining certification. They also apply to cases of misrepresentation by an insurance agent as an employee or agent of the Federal government (e.g., of the Medicare program) and to cases in which an individual sells a policy that is known to be duplicative of Medicare coverage or other health insurance the individual has. There is also a penalty governing the use of the mails for the delivery of advertisement of Medicare supplemental health insurance policies that have not been approved for sale in a State.

Section 1882(f) of the Act requires the Secretary to undertake a comprehensive study of the comparative effectiveness of various State regulatory approaches in (a) limiting marketing and agent abuse, (b) assuring the dissemination of information to Medicare beneficiaries (and to other consumers) that is necessary for informed purchase of Medigap policies, (c) promoting policies that provide reasonable economic benefits for the insured, (d) reducing the purchase of unnecessary duplicative coverage, (e) improving price competition, and (f) establishing effective State regulatory programs.

At the same time, the Secretary's study must address the need for standards for, or certification of, health insurance policies other than Medicare supplemental health insurance policies sold to Medicare beneficiaries. In order to carry out this study, HCFA needs to collect information concerning policy provisions, premium cost, premium volume and number of policyholders per policy on a State by State basis, loss ratio per policy, consumer knowledge of Medicare and other private health insurance coverage, and consumer purchasing behavior. This study would be used to collect baseline data for the later evaluation of the impact of the Federal voluntary certification program. Suggestions on how to obtain this information would be appreciated. Ideas on how to identify all health insurance products and the companies that sell them to Medicare beneficiaries, and ideas on comparing insurance policies, e.g., a scoring system, and establishing some method for comparing loss ratios would also be welcome.

The Secretary is also required to submit to Congress, no later than July 1, 1982, and at least every two years thereafter, a report evaluating the effectiveness of the certification procedures and the criminal penalties established under the law (section 1882(f) (2) of the Act). The report must include an analysis of the impact that

the certification program and the penalties have on the types, market share, value, and cost of policies certified by the Secretary. The report will also address whether the certification program and the criminal penalties should be continued or changed. We invite suggestions and comments regarding the potential sources of information for the report, the types of information that would be most appropriate, and the organizations or individuals that should be consulted.

Finally, section 1882(e) requires that the Secretary furnish all Medicare beneficiaries information that will enable them to make informed purchases of Medigap policies. Prior to the enactment of this provision, HCFA's Office of Beneficiary Service began distributing informational materials and conducting training classes for, and distributing training materials to, individuals who have contact with Medicare beneficiaries on the State and local levels. Those individuals will be in a position to inform beneficiaries of the problems inherent in the selection of Medigap insurance and of the certification program.

Provisions of the Regulations

State Regulation of Health Insurance Policies

Congress specifically stated that nothing in the statute should be construed so as to affect the right of any State to regulate Medicare supplemental health insurance policies that are marketed within its borders (section 1882(j) of the Act). This same provision would be contained in the regulations. In practice, for example, a policy certified in one State, either by that State or under the voluntary program, could be barred from sale in a second State, if the policy fails to meet the more stringent requirements of the second State.

Medicare Supplemental Health Insurance Policy

These regulations would define a Medicare supplemental health insurance policy, in accordance with section 1882(g) (1) of the Act, as a health insurance policy or other health benefit plan that a private entity offers to a Medicare beneficiary to supplement Medicare. Under the definition, the policy would provide payment for expenses that are not reimbursed under the Medicare program because of deductibles, coinsurance, noncoverage, or other limitations.

The term "Medicare supplemental health insurance policy" (Medigap policy) would include individual as well as group policies. In accordance with section 1882(c) of the Act, policies issued as a result of solicitation of individuals through the mail or by mass media advertising (including both print and broadcasting advertising) would be considered individual policies. The term "policy" would include a certificate issued under a policy (section 1882(g)(1) of the Act). However, in accordance with section 1882(g) of the Act, group health insurance policies of employers and labor organizations would not come under the provisions of these regulations. These policies were exempted for a number of reasons: they are usually sold without regard to age; they are not often sold specifically to supplement Medicare; and abuses commonly associated with Medigap policies have not generally been found to occur with respect to them. In fact, many of these policies have proven to be the best Medicare supplement available to retired workers.

Congress also intended that group health insurance policies of trade, professional, and occupational associations be exempted (Conference Committee Report on H.R. 3236, Report No. 96-944, p. 77). A policy would be exempt, however, only if the association—

1. Is composed of individuals all of whom are actively engaged in the same profession, trade, or occupation;

2. Has been maintained in good faith for a purpose other than the obtaining of insurance; and

3. Has been in existence at least two years before the date of its initial offering of a Medigap policy to its members.

General Requirements

In order to be certified under the voluntary or a State program, a policy must meet standards specified in section 1882(c) of the Act. It would have to meet the NAIC standards and the loss ratio standards, as provided for below. These standards would have to be met or exceeded either in a single policy or, in the case of policies of nonprofit hospital and medical service associations, in two or more policies issued in conjunction with one another.

NAIC Model Standards

Medigap policies must meet the NAIC model standards in order to be certified in either the voluntary program or an approved State program. (See section 1882(c)(1) of the Act.) These proposed regulations, however, would differ from the NAIC standards in specified instances:

1. The NAIC standards address only individual policies. However, the statute clearly addresses both individual and group policies, thereby establishing that Congress intended both individual and group policies to meet requirements prescribed by the NAIC standards (including the standards relating to minimum benefit provisions, pre-existing condition limitations, full disclosure, and cancellation clauses).

2. The NAIC standards define a Medigap policy as one offered to an individual eligible for Medicare by reason of age. The statute, however, defines a Medicare supplemental health insurance policy as one offered to an individual entitled to Medicare, without regard to age (section 1882(g) of the Act). Therefore, in these regulations, a certified Medigap policy for any Medicare beneficiary would be required to comply with the standards prescribed by the statute.

3. The NAIC standards provide optional loss ratio guidelines for individual policies only. These regulations would mandate the loss ratio standards for individual and group policies contained in the statute (section 1882(c) of the Act), as discussed below.

Loss Ratios

The proposed regulations would require that Medicare supplemental policies meet the loss ratio standards mandated in section 1882(c) of the Act. Policies would be expected to return to policyholders in the form of aggregate benefits provided under the policy at least 75 percent of the aggregate amount of premiums in the case of group policies and 60 percent in the case of individual policies. These regulations would specify the formula for determining loss ratios and the components and assumptions used in applying that formula. In addition, under the voluntary certification program insurers would be required to submit supporting information to HCFA that identifies the data incorporated into that formula. We believe that such specificity is necessary in the regulations to assure that policies meet the loss ratio standards of the law and that loss ratio calculations are done "in accordance with accepted actuarial principles and practices", as mandated in section 1882(c)(2) of the Act. Accordingly, insurers would be required to submit the following, together with the policy and the loss ratio computation:

1. The scale of premiums for the loss ratio calculation period.

2. A description of all assumptions made in the development of the loss ratio.

3. The formula used to calculate gross premiums.

4. The expected level of earned premiums in the loss ratio calculation period.

5. The expected level of incurred claims in the loss ratio calculation period.

We would also require that a qualified actuary sign an actuarial certification, a declaration that the expected loss ratio for a given policy is based on actuarial assumptions that are appropriate and reasonable, taking into account actual policy experience, if any, and reasonable expectations. For purposes of these regulations, a "qualified actuary" would mean a member in good standing of the American Academy of Actuaries, or a person who has otherwise demonstrated his or her actuarial competence to the satisfaction of the Commissioner or Superintendent of Insurance of the domiciliary State of the insurer.

Note.—These regulations address only the specifications of the loss ratio calculation and supporting information that would be required when the insurer submits a policy to HCFA in order to obtain initial certification. For a certified policy to maintain its certification, the insurer must submit material, including an updated loss ratio, at least on an annual basis to HCFA. The law clearly envisions that the Secretary's evaluation of that material would extend to the actual experience of the policy in previous years. Therefore, for purposes of those subsequent submittals, HCFA would require both a loss ratio that addresses anticipated experience and data on actual claims and premiums for that policy. We intend to publish proposed regulations, at a later date, regarding the specific data that HCFA would require.

In dealing with the issue of loss ratio specifications, HCFA has recognized that it is necessary to establish the formula for loss ratio calculations and to define carefully its direct and indirect components. The definitions have been included because of HCFA's recognition that "accepted actuarial principles and practices" permit a wide range of discretion to the actuary in selecting among the techniques and data at his or her disposal.

The loss ratio formula has been stated specifically in the regulations as a simple ratio of benefits to premiums. In the ratio, "benefits" would be computed by adding the present value, on the initial calculation date, of expected incurred benefits in the loss ratio calculation period to the present value, on the initial calculation date, of the total policy reserve at the last day of the loss ratio calculation period. The total policy reserve on the initial calculation date would then be subtracted. "Premiums" would be composed of the present value, on the initial calculation date, of expected earned premiums for the loss ratio calculation period. For purposes of the formula, "present values" could be an aggregate, computed by the insurer for a period not to exceed 12 consecutive months, of expected earned premiums and incurred benefits.

In developing definitions of the various direct and indirect loss ratio components, HCFA recognizes, as indicated above, that "accepted actuarial principles and practices" encompass a range of choices that are made by the actuary on the basis of his or her professional judgment as to appropriate data and techniques available. To avoid widely varying professional interpretations, HCFA has provided definitions for the components. These definitions specify the actuarial concepts that HCFA, on the basis of its consultations with actuaries internally and in the insurance industry, believes are appropriate for developing loss ratios for purposes of these regulations.

In addition to the formula and definitions discussed above, it will also be necessary for HCFA to specify other requirements relating to types of computations, assumptions, and data to be considered in developing loss ratios for purposes of these regulations. HCFA believes that these specifications will be necessary to assist actuaries in the development of loss ratios that are consistent will the intent of the law and regulations. These further issues are discussed in the next section of this preamble, which invites comments specifically on a number of the issues now under development.

We believe that the approach to loss ratio requirements taken in these regulations will assure that the requirements of the law are met, will provide for consistent application of the loss ratio threshold standards to all policies submitted for review, and enable comparison among policies on the basis of loss ratios. Once the system is fully articulated and in place, HCFA believes that different actuaries, considering the same Medigap policy and taking into account the principles and concepts described in these regulations, would be able independently to achieve comparable loss ratios.

Solicitation of Comments Specific to Loss Ratios

As we have noted above, some of the specifications for loss ratio determinations are not yet complete. HCFA is studying the practices of various States and is consulting insurance and actuarial groups and other professionals in the field to develop these specifications. We intend to take into consideration the data acquired in that study and through those consultations, and also the comments to this proposed rule, when we prepare the final rule. In addition, we will provide for a further comment period for the loss ratio specifications in the final regulations. We invite comments on all aspects of the loss ratio proposal; however, we are especially interested in comments on the following:

1. In determining premiums and benefits, the insurer must provide for various factors, as appropriate. Two of those are: (a) the expected future change in the distribution by age and sex of the insured group; and (b) the expected wearing off of the impact, in the early period(s) after a policy is issued, of the process the company used to select the insured and of clauses that temporarily exclude pre-existing conditions from coverage. These factors will influence claims. For example, the company that screens and selects the insured (excluding, for example, those with certain health conditions) will have fewer claims to pay in the early years of a policy than the company that guarantees acceptance to all applicants. (The insured in the former instance will most likely be healthier, at lower risk.) We believe that the insuring organization, in calculating the benefits of a policy, should provide for the impact of these factors on claims beyond the loss ratio calculation period.

2. Assumptions regarding a variety of factors, such as lapse of policies, interest, mortality, and morbidity, are integral components of a loss ratio formula. We will address them in final regulations, but we invite comments and suggestions now for our consideration.

3. These proposed regulations would require the insurer to submit supporting data for loss ratios (e.g., scale of gross premiums, a description of assumptions, formula used to calculate gross premiums, and expected level of earned premiums and incurred claims). We invite comments on that supporting data and recommendations regarding other or additional data that would be appropriate.

The Supplemental Health Insurance Panel

Establishment of the Supplemental Health Insurance Panel is authorized by section 1882(b) of the Act. The Panel will consist of the Secretary or a designee, who serves as chairperson, and four State Commissioners or Superintendents of Insurance appointed by the President. HCFA published a notice in the **Federal Register** on August 5, 1980 (45 FR 51923) inviting interested

parties to recommend, by September 4, 1980, State Commissioners and Superintendents of Insurance to serve on the Panel. The President is required by section 1882(b)(2) of the Act to make appointments to the Panel no later than December 31, 1980.

The principal function of the Panel is to assess State regulatory programs for Medigap policies and to determine if those programs meet minimum requirements. If the Panel approves a program as meeting the requirements of the law, that State has an "approved program". The decisions of the Panel are binding on HCFA; that is, HCFA can implement the voluntary program only in those States that do not have approved programs. The Secretary shall report to Congress, no later than January 1, 1982, the Panel's initial determinations as to which States cannot be expected to have implemented an approved program by July 1, 1982. (See section 1882(i)(2)(B) of the Act and Conference Committee Report on H.R. 3236, Report No. 96-944, p. 76.) Finally, the Panel could maintain oversight to assure that States satisfactorily implement their regulatory programs once the Panel has approved them.

The Panel is an independent component within HHS and will be responsible for establishing and implementing its own operating procedures. While those procedures are beyond the scope of these regulations, we are taking this opportunity to identify some of the questions and issues that will be before the Panel, and we invite comments and suggestions.

1. What criteria should the Panel use to determine whether or not a State has established and implemented a satisfactory program for the regulation of Medigap policies?

2. Determinations of the Panel are binding on States and on HCFA. Should the Panel establish procedures so that States might seek review of its determinations before they become effective? If so, what should they be?

3. How should the Panel communicate its determinations to affected parties, principally the State Commissioners and Superintendents of Insurance and the insurance industry? Should notices in the Federal Register be used for this purpose? What other means could be used?

Emblem

Section 1882(a) of the Act provides for an emblem, a graphic symbol the Secretary uses to indicate that a policy has been certified as meeting the requirements of the voluntary certification program. We would authorize the insurer to imprint the emblem on certified policies. (However, where a State prohibits the display of such symbols, insurers could not use the emblem.) We are currently in the process of designing the emblem.

We will also empower States with approved programs for regulating Medigap policies to authorize insurers to use the emblem on policies issued in their States.

As a safeguard to beneficiaries, we would require that an insurer could use the emblem only if the insurer agrees to inform the policyholder in writing within 60 days after his or her policy loses its certification.

States With Approved Regulatory Programs

HCFA would not review or certify policies issued in a State with an approved program for the regulation of Medigap policies. Those policies are presmued to meet the standards of the law and would be deemed certified. For a State to have an "approved program", the Panel must determine that the State has established, under State law, a regulatory program that applies standards equal to or more stringent than the NAIC standards and loss ratio requirements, specified in section 1882(c) of the Act, to each Medicare supplemental health insurance policy issued in that State. (See section 1882(b) of the Act.) For purposes of these regulations, "policy issued in that State" would mean—

1. A group policy, if the holder of the master policy resides in that State; and

2. An individual policy, if a holder of that policy resides in that State. (See section 1882(g)(2)(c) of the Act.)

The Voluntary Certification Program

The Secretary has determined that HCFA will administer the voluntary certification program. Under these regulations, the procedures of that program would be as follows:

1. We would review policies that insurers voluntarily submit. However, we would review and certify only those policies issued in a State that does not have approved regulatory program for all Medicare supplemental health insurance policies issued in that State.

2. The insurer would be required to submit the following material to HCFA for review:

a. A copy of the policy and an outline of the policy's coverage, in the form prescribed by the NAIC model standards.

b. A statement that the information submitted for certification is accurate and complete and does not misrepresent any material fact. We would require that the president of the insurance company, or a designee, sign this statement. We believe that this requirement is necessary to assure that the material is accurate and that it has been submitted by an authorized representative of the insuring organization.

c. An actuarial certification, as specified in the regulations.

d. A statement that the policy meets the requirements of the State in which the policy is issued and of the States in which the policy will be marketed as a certified policy.

e. A list of the States in which the insurer is authorized to market the policy.

f. A statement that the insurer agrees to inform the policyholder in writing if HCFA decertifies that policy.

3. We would certify policies that meet or exceed the NAIC standards and loss ratio requirements specified in regulations.

4. We would certify a policy only if the insurer agrees to notify the policyholder in writing within 60 days of decertification, if the policy was identified as a "certified policy" at the time of sale and later decertified.

5. We would continue to recognize the State's role in regulating insurance policies marketed within its borders. Therefore, we would not certify a policy for sale in a State unless it meets both the requirements of these regulations and requirements of the State in which it is issued and of the States in which the policy will be marketed as a certified policy.

6. A policy that continues to meet the standards would retain its certification if the insurer files with HCFA, no later than June 30 of each year, updated versions of the documents listed in item 2 above. Submittal by this date is required by the statute (Section 1882 (a)).

Insurers would be encouraged to file the above material as early as possible, between January 1 and June 30, to facilitate annual review. The first annual submission of material for a newly certified policy would be due no later than June 30 of the calendar year following HCFA's certification of that policy.

Although the statute mandates that the insurer file material annually, no later than Jyne 30, the insurer could be required in some cases to submit the material before that date. To obtain certification of a policy, the insurer must calculate a loss ratio for an identified period, called the "loss ratio calculation period". For the policy to retain its certification beyond the last date of that period, the insurer would have to submit a complete packet of material, including an updated loss ratio determination.

Accordingly, the regulations would require that the insurer submit the necessary documents no later than June 30 or the last date of the loss ratio calculation period, whichever occurs earlier.

7. We would decertify a policy if the policy fails to meet the standards specified in regulations or if the insurer fails to file material, as specified above.

8. We would authorize insurers to imprint the Secretary's emblem on certified policies. We would also monitor insurers to assure that they notify policyholders when a policy bearing the emblem loses its certification.

9. We would inform each State of all policies certified or decertified under the voluntary program.

Appeal of HCFA Determinations

These regulations would provide opportunity for an administrative review, if HCFA determines not to certify, or to decertify, a policy under the voluntary program.

1. *Notice to the insurer.* If HCFA determines not to certify, or to decertify, a policy, HCFA would send a notice informing the insurer of the following:

a. The reasons for the determination.

b. That the insurer has 30 days from the date of the notice to appeal, in writing, HCFA's determination and to submit additional information to HCFA for review.

c. That if the insurer appeals, HCFA will conduct an administrative review, as provided for below.

d. That in a case involving decertification, the decertification will go into effect in 30 days from the date of the notice, unless the insurer appeals. Should the insurer appeal, the policy would retain its certification, pending the results of the administrative review.

2. *Administrative review.*

a. A HCFA official, not involved in the original determination, would conduct an independent review of the material, including any additional information the insurer provides.

b. The administrative review would be initiated within 90 days of the date of the initial notice to the insurer of the decision to decertify, or not to certify, a policy.

c. Within 15 days of completion of the review, HCFA would inform the insurer of the results of that review, with an explanation of the final determination. In a decertification case a final decision to decertify would go into effect 15 days after the date of the notice to the insurer of the final determination.

We believe that these procedures afford a reasonable opportunity for the insurers to contest an adverse determination on certification, without undue administrative burden either on HCFA or the insurer.

Transfer of Policies From a State Program to the Voluntary Program

These regulations would provide for the orderly transfer of Medigap policies deemed certified under an approved State program to the voluntary program, if the Panel determines that the State no longer has an approved program. If the Panel determines that a State ceases to have an approved regulatory program for Medigap policies, all policies issued in that State immediately lose their deemed certification and automatically come under the aegis of the voluntary program. Policies that have certification status from the State on the day that the determination of the Panel is effective would be presumed to meet the requirements of, and would be certified under, the HCFA progam until the earlier of the following:

1. Six months after the effective date of the Panel's determination.

2. The expiration date of the certification received under the State program.

If the insurer wishes to have a policy retain its certification beyond the date specified above, the insurer would be required to submit the policy to HCFA for review and certification. The insurer is encouraged to submit the policy as soon as possible to enable HCFA to review the material and make a determination while the policy still retains its certification.

These regulations would not address the transition that would occur when policies certified under the HCFA program become subject to an approved State regulatory program. When the Panel determines the State has an approved program, all Medigap policies issued in that State come under the authority of that State's program. We anticipate that the State would provide for the orderly tranfer of policies from HCFA's certification progrm to its own regulatory program to avoid unnecessary difficulties for beneficiaries as well as insurers. We recommend that States begin to develop procedures for the transfer of policies from the HCFA program to their own programs.

Effective Dates

Final regulations would be effective 60 days after publication, except for the following:

1. The effective date of certification of a policy would be July 1, 1982 or later. That is also the first date that a certified policy could bear the emblem (section 1882(i) of the Act). The effective date for the use of the emblem is based on Congressional concern that insurers not be given an unfair competitive advantage in its use, specifically insurers with policies in force that already meet or exceed the standards specified in the statute. Congress intended to give insurers adequate lead time to review their policies and to make changes, as appropriate, in order to be certified under the voluntary program or to meet the requirements of an approved State program. In addition, States that wish to establish approved programs would have time to review and amend State laws and regulations. Finally, this also affords reasonable time for the Panel to assess State programs, so that HCFA would know those States in which the voluntary program would be operative.

2. HCFA cannot begin to certify policies until the Panel's determinations, as to which States have established programs that meet the requirements of the statute, become effective. Section 1882(i) of the Act specifies that the Panel's initial determinations must be submitted to Congress no later than January 1, 1982 and that they become effective 60 days later. In counting those 60 days, "days on which either House is not in session because of an adjournment sine die or an adjournment of more than three days to a day certain are excluded in the computation." (See section 1882(i)(2)(B) of the Act.)

In order to facilitate the start of the voluntary program and to enable companies to display the emblem on approved policies on July 1, 1982, HCFA would begin reviewing policies issued in States found not to have satisfactory programs as soon as the initial determinations of the Panel are sent to Congress. HCFA's certification of those policies, however, would not become effective before July 1, 1982. Moreover, if the Panel should reverse an earlier negative determination, by approving the State's regulatory program, any policy that HCFA reviewed, and that is issued in that State, would immediately come under the State program.

The Department is required to submit section 403.245 of the regulations to the Office of Management and Budget (OMB) for review and approval. This section deals with the submission of information by an insuring organization in order to obtain and maintain certification under the voluntary program. The Department will submit this section to OMB.

Economic Impact

The Department has analyzed the economic impact of these proposals and does not believe that they are "major" within the meaning of Executive Order

12044. For example, these proposals would not create a cost impact of $100 million or more within the next five years.

Direct administrative costs to beneficiaries, the insurance industry, States, and Federal government are unlikely to exceed several million dollars annually, compared to current costs approaching $4 billion annually for Medigap policies and approximately $122 million for State insurance regulation (covering all insurance, not just Medigap). The insurance companies would not be required to submit data to HCFA which they would not ordinarily have prepared either for internal use or State review; or both. However, some States do not now review policy content in detail; and these proposals may have consequential impact in insurance commissions in those States. Also, although we have sought to minimize administrative burdens, further improvements may be possible. We request comments on any aspect of administrative requirements in these proposals for which burden could be reduced further.

The proposed rule would create improved information for consumers. Nothing in the proposal imposes entry restrictions, licensing restrictions, or other forms of "command and control" government regulation. In addition, certification is voluntary. Accordingly, we do not believe that these proposals have direct regulatory impact on the insurance industry. Clearly, however, they will result in a market response over time as newly informed consumers purchase better policies and the insurance industry adjusts its policies to meet consumer expectations. We have no quantitative basis for projecting these responses at this time, but expect them to involve an increased proportion of the $4 billion spent to Medigap policies to be returned to consumers in the form of benefits, with offsetting reductions in administrative cost such as selling expenses. There should be no adverse impact, except insofar as companies unable or unwilling to adjust to a more competitive market lose market share. The study required by law in 1982 will address this issue, but we welcome comments at this time.

NAIC Model Standards

For the reader's information, we present here a summary of the basic requirements of the NAIC model standards, as applicable to Medigap policies. Complete copies of the text may be obtained from The National Association of Insurance Commissioners, 350 Bishops Way, Brookfield, Wisconsin 53004; Attention: Dana Horenberger, Publications Coordinator.

1. *General Provisions:*

a. "Medicare Supplement Coverage" means a policy of accident and sickness insurance (1) that is designed primarily to supplement Medicare, or is advertised, marketed or otherwise purported to be a supplement to Medicare, and (2) that meets the requirements of these standards.

b. The terms "Medicare Supplement", "Medigap", and words of similar import must not be used to characterize a policy, unless the policy is issued in compliance with these standards.

c. A policy issued as a "Medicare Supplement Coverage" must not include limitations or exclusions that are more restrictive than those of Medicare for any type of care covered under the policy.

Note.—The drafters of the NAIC Model Standards intended that nonprofit hospital and medical service associations be subject to these standards. In States where such hospital and medical service associations are prohibited from issuing single subscriber contracts that include all of the benefits required by these standards, the issuing entity must meet the following requirements: Subscriber contracts (1) must include as much of those benefits as are permitted, and (2) must be issued in conjunction with another contract that includes at least the remainder of the minimum benefits required. In that event, the combination of contracts will be considered to meet these standards.

2. *General Coverage provisions:* These are minimum standards and do not preclude policies from including additional benefits.

a. "Medicare benefit period" means the unit of time used in the Medicare program to measure use of services and availability of benefits under Part A, Medicare hospital insurance.

b. "Medicare eligible expenses" means health care expenses of the kinds covered by Medicare, to the extent that these expenses are recognized as reasonable by Medicare. Payment of benefits by insurers for Medicare eligible expenses may be conditioned upon the same or less restrictive payment conditions, including determinations of medical necessity, as are applicable to Medicare claims.

c. Except as provided for in paragraphs d and e of this section, policies must not contain waivers to exclude, limit, or reduce coverage or benefits for specifically named or described pre-existing diseases or physical conditions.

d. Pre-existing condition limitations must not exclude coverage, for more than 6 months after the effective date of coverage under the policy, of a condition for which medical advice was given by, or treatment was recommended by or received from, a physician within 6 months before the effective date of the coverage.

e. Coverage must not be subject to any exclusions, limitations, or reductions that are inconsistent with the exclusions, limitations or reductions permissible under Medicare. A policy may, however, stipulate that coverage is not provided for any expenses to the extent of any benefit available to the insured person under Medicare.

f. Coverage must not indemnify against expenses resulting from sickness on a different basis from losses resulting from accidents.

g. Coverage must provide that benefits designed to cover cost-sharing amounts under Medicare will be changed automatically to coincide with any changes in the applicable Medicare deductible amount and copayment percentage factors. Premiums may be changed to correspond with such changes.

3. *Minimum Benefit Provisions:* Medicare supplemental coverage must provide at least the following:

a. Coverage of Part A Medicare eligible expenses for hospitalization to the extent not covered by Medicare from the 81st day through the 90th day in any Medicare benefit period.

b. Coverage of Part A Medicare eligible expenses incurred as daily hospital charges during use of Medicare's lifetime inpatient reserve days.

c. Upon exhaustion of all Medicare hospital inpatient coverage, including the lifetime reserve days, coverage of 90 percent of all Medicare Part A eligible expenses for hospitalization not covered by Medicare, subject to a lifetime maximum benefit of an additional 365 days.

d. Coverage of 20 percent of Medicare eligible expenses under Part B regardless of hospital confinement, subject to a maximum calendar year out-of-pocket deductible of $200 of such expenses and to a maximum benefit of at least $5,000 per calendar year.

4. *Disclosure Provisions:*

a. All policies, except single premium nonrenewable policies and those resulting from direct response solicitation, must have a refund notice prominently printed on, or attached to, the first page of the policy. That notice must state that the policyholder has the right to return the policy within ten days of its delivery and to have the premium refunded if, after examination of the policy, the policyholder is not satisfied for any reason. With respect to policies issued as a result of a direct response

solicitation (that is, issued as result of solicitation through the news media or the mail), the policy must have a notice prominently printed on, or attached to, the first page of the policy stating in substance that the policyholder has the right to return the policy within 30 days of its delivery and to have the premium refunded if, after examination of the policy, the policyholder is not satisfied for any reason.

b. All insurers must provide an appropriate outline of coverage for a Medicare supplement policy. The insurers must deliver the outline to the applicant at the time application is made; and, except for a direct response policy, the insurer must obtain verification of receipt of that outline. The items included in the outline must appear in the sequence prescribed below. (The coverage outline that follows is taken verbatim from the NAIC Model Standards.)

(Company Name) Medicare Supplement Coverage Outline of Coverage

(1) Read Your Policy Carefully—This outline of coverage provides a very brief description of the important features of your policy. This is not the insurance contract and only the actual policy provisions will control. The policy itself sets forth in detail the rights and obligations of both you and your insurance company. It is, therefore, important that you Read Your Policy Carefully!

(2) Medicare Supplement Coverage—Policies of this category are designed to supplement Medicare by covering some hospital, medical, and surgical services which are partially covered by Medicare. Coverage is provided for hospital inpatient charges and some physician charges, subject to other limitations which may be set forth in the policy. The policy does not provide benefits for Custodial Care such as helping in walking, getting in and out of bed, eating, dressing, bathing and taking medicine (delete if such coverage is provided).

(3) (a) (for agents:) Neither (insert company's name) nor its agents are connected with Medicare.

(b) (for direct response:) (insert company's name) is not connected with Medicare.

(4) (A brief summary of the major benefit gaps in Medicare Parts A and B with a parallel description of supplemental benefits, including dollar amounts, provided by the Medicare Supplement Coverage in the following order:)

Service	Benefit	Medicare pays	This policy pays	you pay
Hospitalization:				
Semiprivate room and board general nursing and miscellaneous hospital services and supplies.	First 60 days	All but $(180)	$	$
	61st to 90th day	All but $(45) a day		
Includes meals, special care units, drugs, lab tests, diagnostic X-rays, medical supplies, operating and recovery room, anesthesia and rehabilitation services.	91st to 150 day	All but $(90) a day		
	Beyond 150 days	Nothing		
Posthospital skilled nursing care: In a facility approved by Medicare, you must have been in a hospital for at least 3 days and enter the facility within 14 days after hospital discharge.	First 20 days	100% of costs		
	Additional 80 days	All but $(22.50) a day		
	Beyond 100 days	Nothing		
Medical expense	Physican's services, inpatient and outpatient medical services and supplies at a hospital, physical and speech therapy and ambulance.	80% of reasonable charge [after $(60) deductible.		

(5) (A statement that the policy does or does not cover the following):

(a) Private duty nursing.

(b) Skilled nursing home care costs (beyond what is covered by Medicare).

(c) Custodial nursing home care costs.

(d) Intermediate nursing home care costs.

(e) Home health care (above number of visits covered by Medicare).

(f) Physician charges (above Medicare's reasonable charge).

(g) Drugs (other than prescription drugs furnished during a hospital or skilled nursing facility stay).

(h) Care received outside of U.S.A.

(i) Dental care or dentures, checkups, routine immunizations, cosmetic surgery, routine foot care, examinations for the cost of eyeglasses or hearing aids.

(6) (A description of any policy provisions which exclude, eliminate, resist, reduce, limit, delay, or in any other manner operate to qualify payment of the benefits described in (4) above, including conspicuous statements:)

(a) (That the chart summarizing Medicare benefits only briefly describes such benefits.)

(b) (That the Health Care Financing Administration or its Medicare publications should be consulted for further details and limitations.)

(7) (A description of policy provisions respecting renewability or continuation of coverage, including any reservation of right to change premium.)

(8) (The amount of premium for this policy.)

42 CFR Chapter IV, Subchapter A, is amended by adding a new Part 403 and Subpart B to read as follows:

PART 403—SPECIAL PROGRAMS AND PROJECTS

* * * * *

Subpart B—Certification of Medicare Supplemental Health Insurance Policies

Sec.

403.200 Basis and scope.

General Provisions

403.208 State regulation of insurance policies.

403.212 Medicare supplemental health insurance policy.

403.215 General standards for certified Medicare supplemental health insurance policies.

403.218 NAIC model standards.

403.221 Loss ratio standards.

403.224 Calculation of expected loss ratios: General provisions.

403.225 Calculation of expected loss ratios: Date and time frame provisions.

403.227 Actuarial certification.

403.230 Supplemental health insurance panel.

403.234 Emblem.

State Regulatory Programs

403.240 State with an approved regulatory program.

403.242 Certification of policies.

Voluntary Certification Programs

403.245 Requirements for obtaining certification.

403.248 Review and certification of policies.

403.251 Submittal of material to retain certification.

403.255 Decertification of policies.

403.258 Termination of a State program: Transfer of policies.

403.260 Administrative review of HCFA determinations.

Authority: Sections 1102, 1871, and 1882 of the Social Security Act (42 U.S.C. 1302, 1395hh, and 1395ss).

§ 403.200 Basis and scope.

This subpart implements, in part, section 1882 of the Social Security Act, which provides for voluntary certification, by the Secretary of Health and Human Services, of Medicare supplemental health insurance policies. The intent of the legislation is to establish a program that enables Medicare beneficiaries to identify Medicare supplemental health insurance policies that do not duplicate Medicare coverage and that provide adequate, fairly priced protection against health care expenses that are not covered by Medicare. This subpart sets forth the standards and procedures HCFA will use to implement the certification program.

General Provisions

§ 403.208 State regulation of insurance policies.

The provisions of this subpart do not affect the right of a State to regulate policies marketed in that State.

§ 403.212 Medicare supplemental health insurance policy.

(a) Except as specified in paragraph (c) of this section, "Medicare supplemental health insurance policy" (policy) means a health insurance policy or other health benefit plan—

(1) That a private entity offers to a Medicare beneficiary; and

(2) That provides payment for expenses incurred for services and items that are not reimbursed under the Medicare program because of deductibles, coinsurance, or other limitations under Medicare.

(b) Medicare supplemental health insurance policy includes the following:

(1) An individual policy. For purposes of this section, "individual policy" includes any policy issued as a result of solicitation of individuals—

(i) Through the mail; or

(ii) By mass media advertising.

(2) A group policy.

(3) A certificate issued under a policy.

(c) Medicare supplemental health insurance policy does not include any of the following health insurance policies or health benefit plans:

(1) A policy or plan of one or more employers for employees, former employees, or any combination thereof.

(2) A policy or plan of one or more labor organizations for members, former members, or any combination thereof.

(3) A policy or plan of the trustees of a fund established by one or more labor organizations, one or more employers, or any combination, for any one or combination of the following:

(i) Employees.

(ii) Former employees.

(iii) Members.

(iv) Former members.

(4) A policy or plan of a professional trade or occupational association, if the association—

(i) Is composed of individuals all of whom are actively engaged in the same profession, trade, or occupation;

(ii) Has been maintained in good faith for a purpose other than obtaining insurance; and

(iii) Has been in existence for at least two years before the date of its initial offering of a Medicare supplemental health insurance policy to its members.

§ 403.215 General standards for certified medicare supplemental health insurance policies.

(a) A policy that meets the requirements of this subpart will be either—

(1) Deemed certified in a State with an approved regulatory program, as provided for in § 403.242; or

(2) Certified under the voluntary certification program, as provided for in § 403.248.

(b) To be certified under paragraph (a) of this section, a policy must meet—

(1) The NAIC model standards of § 403.218;

(2) The loss ratio standards of § 403.221; and

(3) For purposes of paragraph (a)(2), any State requirements applicable to a policy—

(i) Issued in that State; or

(ii) Marketed in that State as a certified policy.

(c) The standards specified in §§ 403.218 and 403.221—

(1) May be met in two or more policies issued in conjuction with one another in the case of—

(i) A nonprofit hospital association; and

(ii) A medical service association; and

(2) Must be met in a single policy in all other cases.

§ 403.218 NAIC model standards.

(a) "NAIC model standards" means the National Association of Insurance Commissioners (NAIC) Model Regulation to Implement the Individual Accident and Sickness Insurance Minimum Standards Act, as amended and adopted by NAIC on June 6, 1979, as it applies to Medicare supplemental policies.

(b) The policy must meet or exceed the NAIC model standards, except that—

(1) The policy must meet the NAIC model standards, regardless of the Medicare beneficiary's age; and

(2) The policy must meet the loss ratio standards specified in § 403.221.

§ 403.221 Loss ratio standards.

(a) The policy must be expected to return to the policyholders, in the form of aggregate benefits provided under the policy—

(1) A least 75 percent of the aggregate amount of premiums in the case of group policies; and

(2) At least 60 percent of the aggregate amount of premiums in the case of individual policies.

(b) The insuring organization must calculate loss ratios according to the provisions of §§ 403.224 and 403.225.

§ 403.224 Calculation of expected loss ratios: General provisions.

(a) *Basic formula.*

(1) The expected loss ratio is calculated by determining the ratio of benefits to premiums.

(2) To calculate the amount of "benefits"—

(i) Add the present values on the initial calculation date of—

(A) Expected incurred benefits in the loss ratio calculation period, to—

(B) The total policy reserve at the last day of the loss ratio calculation period; and

(ii) Subtract the total policy reserve on the initial calculation date from the sum of these values.

(3) To calculate the amount of "premiums", calculate the present value on the initial calculation date of expected earned premiums for the loss ratio calculation period.

(b) *Provisions for calculating "benefits".*

(1) "Total policy reserve" means the sum of—

(i) Additional reserve; and

(ii) The reserve for future contingent benefits.

(2) "Additional reserve" means the amount calculated on a net level reserve basis, using appropriate values to account for lapse, mortality, morbidity, and interest, that on the valuation date represents—

(i) The present value of expected incurred benefits over the loss ratio calculation period; less—

(ii) The present value of expected net premiums over the loss ratio calculation period.

(3) "Net premium" means the level portion of the gross premium used in calculating the additional reserve. On the day the policy is issued, the present value of the series of those portions equals the present value of the expected

incurred claims over the period that the gross premiums are computed to provide coverage.

(4) "Reserve for future contingent benefits" means the amounts, not elsewhere included, that provide for the extension of benefits after insurance coverage terminates. These benefits—

(i) Are predicated on a health condition existing on the date coverage ends;

(ii) Accrue after the date coverage ends; and

(iii) Are payable after the valuation date.

(c) *Provisions for calculating "premiums".*

(1) "Earned premium" for a given period means—

(i) Written premiums for the period; plus—

(ii) The total premium reserve at the beginning of the period; less—

(iii) The total premium reserve at the end of the period.

(2) "Written premiums in a given period" means—

(i) Premiums collected in that period; plus—

(ii) Premiums due and uncollected at the end of that period; less—

(iii) Premiums due and uncollected at the beginning of that period.

(3) "Total premium reserve" means the sum of—

(i) The unearned premium reserve;

(ii) The advance premium reserve; and

(iii) The reserve for rate credits.

(4) "Unearned premium reserve" means the portion of gross premiums due that provide for days of insurance coverage after the valuation date.

(5) "Advance premium reserve" means premiums received by the insuring organization that are due after the valuation date.

(6) "Reserve for rate credits" means rate credits on a group policy that—

(i) Accrue by the valuation date of the policy; and

(ii) Are paid or credited after the valuation date.

§ 403.225 Calculation of expected loss ratios: Date and time frame provisions.

(a) "Application date" means the day the insuring organization sends the policy to HCFA for review.

(b) "Initial calculation date" means the first date of the period that the insuring organization uses to calculate the policy's expected loss ratio.

(1) The initial calculation date may be before, the same as, or after the application date; except—

(2) The initial calculation date must not be earlier than January 1 of the calendar year of the application date.

(c) "Loss ratio calculation period" means the period beginning with the initial calculation date and ending with the last day of the period for which the insuring organization calculates the policy's scale of premiums.

(d) To calculate "present values", the insuring organization may use approximations that aggregate, for a period not to exceed 12 months—

(1) Expected earned premiums, and

(2) Expected incurred benefits.

§ 403.227 Actuarial certification.

(a) For purposes of certification requests submitted under § 403.245(b), "actuarial certification" means a signed declaration in which a qualified actuary states that the assumptions used in calculating the expected loss ratio are appropriate and reasonable, taking into account actual policy experience, if any, and reasonable expectations.

(b) "Qualified actuary" means—

(1) A member in good standing of the American Academy of Actuaries; or

(2) A person who has otherwise demonstrated his or her actuarial competence to the satisfaction of the Commissioner or Superintendent of Insurance of the domiciliary State of the insuring organization.

§ 403.230 Supplemental health insurance panel.

(a) *Membership.* The Supplemental Health Insurance Panel (Panel) consists of—

(1) The Secretary or a designee, who serves as chairperson, and

(3) Four State Commissioners of Superintendents or Insurance appointed by the President.

(b) *Functions.*

(1) The Panel determines whether or not a State regulatory program for Medicare supplemental health insurance policies meets and continues to meet minimum requirements, as specified under § 403.240.

(2) The Secretary, as chairperson of the Panel, informs the State Commissioners and Superintendents of Insurance of all determinations made under paragraph (b)(1) of this section.

§ 403.234 Emblem.

(a) The emblem is a graphic symbol, approved by HHS, that indicates that a policy meets the certification requirements of this subpart.

(b) Unless prohibited by the State in which the policy is marketed, the insuring organization may display the emblem on policies certified under the voluntary certification program.

(c) If a policy is issued in a State with an approved regulatory program, the State in which the policy is marketed may authorize the insuring organization to display the emblem on that policy.

(d) In the case of a policy displaying the emblem, the insuring organization must notify each holder of the policy within 60 days in writing, if—

(1) HCFA decertifies the policy, as specified in §§ 403.255, 403.258(b)(3), and 403.260(b)(5) and (c)(4); or

(2) The State with an approved regulatory program determines that the policy ceases to meet State requirements.

State Regulatory Programs

§ 403.240 State with an approved regulatory program.

(a) A State has an approved regulatory program if the Panel determines that the State has in effect under State law a regulatory program that provides for the application of standards, with respect to each Medicare supplemental health insurance policy issued in that State, that are equal to or more stringent than those specified in § 403.215.

(b) "Policy issued in that State" means—

(1) A group policy, if the holder of the master policy resides in that State; and

(2) An individual policy, if a holder of that policy resides in that State.

§ 403.242 Certification of policies.

If a State has an approved regulatory program, a policy issued in that State is deemed certified.

Voluntary Certification Program

§ 403.245 Requirements for obtaining certification.

(a) A policy must meet the standards specified in § 403.215 to be certified by HCFA.

(b) An insuring organization requesting certification of a policy must submit the following to HCFA for review:

(1) A copy of the policy.

(2) A copy of the outline of coverage, in the form prescribed by the NAIC model standards.

(3) A statement that the policy meets the requirements specified in paragraph (a) of this section.

(4) A copy of the calculations for the expected loss ratio.

(5) Supporting data used in calculating the expected loss ratio. That data must include—

(i) The scale of premiums for the loss ratio calculation period;

(ii) A description of all assumptions;

(iii) The formula used to calculate gross premiums;

(iv) The expected level of earned premiums in the loss ratio calculation period; and

(v) The expected level of incurred claims in the loss ratio calculation period.

(6) An actuarial certification, as specified in § 403.227, of the loss ratio computations.

(7) A list of States in which the insuring organization is authorized to market the policy.

(8) A statement that the insuring organization will notify the policyholders in writing within 60 days of decertification, if the policy is identified as a certified policy at the time of sale and later decertified.

(9) A signed statement in which the president of the insuring organization, or a designee, attests that the information submitted to HCFA for review is accurate and complete and does not misrepresent any material fact.

§ 403.248 Review and certification of policies.

(a) HCFA will review policies that the insuring organization voluntarily submits, except that HCFA will not review a policy issued in a State with an approved regulatory program under § 403.240.

(b) If the requirements specified in § 403.245 are met, HCFA will—

(1) Certify the policy; and

(2) Authorize the insuring organization to imprint the emblem on the policy, as provided for in § 403.234.

(c) HCFA will inform all State Commissioners and Superintendents of Insurance of Policies that it certifies.

§ 403.251 Submittal of material to retain certification.

(a) HCFA certification for policies that continue to meet the standards will remain in effect, if the insuring organization files the material specified in § 403.245(b) no later than the date specified in paragraph (b) or (c) of this section.

(b) Except as specified in paragraph (c) of this section, the insuring organization must file the material with HCFA no later than June 30 of each year. The first time the insuring organization must file the material is no later than June 30 of the calendar year that follows the year in which HCFA—

(1) Certifies a new policy; or

(2) Certifies a policy that has been decertified, as provided in § 403.255.

(c) If the loss ratio calculation period, used to calculate the expected loss ratio for the last actuarial certification submitted to HCFA, ends before the June 30 date of paragraph (b) of this section, the insuring organization must file the material with HCFA no later than the last day of that rate calculation period.

§ 403.255 Decertification of policies.

(a) HCFA will decertify a policy, if—

(1) The policy fails to meet the requirements specified in § 403.245(a); or

(2) The insuring organization fails to meet the requirements for submittal of material specified in § 403.251.

(b) If HCFA decertifies a policy, HCFA will inform the insuring organization and all State Commissioners and Superintendents of Insurance of its determination.

(c) HCFA will monitor the insuring organization to assure that the insuring organization notifies each policyholder in writing when his or her policy is decertified.

§ 403.258 Termination of a State program: Transfer of policies.

(a) When the Panel determines that a State no longer has an approved regulatory program, policies issued in that State are transferred to the jurisdiction of the voluntary certification program.

(b) If the policy was certified under a State regulatory program, but is transferred to the voluntary program, the following provisions apply:

(1) HCFA will waive the requirements specified in § 403.245(b) for submittal of certain information by the insuring organization to obtain initial certification.

(2) HCFA will certify the policy. That certification will be in effect—

(i) Until the expiration date of the certification the policy received under the State program; but

(ii) Not for more than 6 months.

(3) If the insuring organization wishes certification to continue beyond the date specified in paragraph (b) (2) of this section, the insuring organization must submit the material specified lin § 403.245(b) before that date.

(i) If HCFA certifies the policy on or before the date specified in paragraph (b) (2), the new certification will become effective on the date the determination is made.

(ii) If HCFA does not certify the policy on or before the date specified in paragraph (b) (2) of this section, that policy is decertified.

§ 403.260 Administrative review of HCFA determinations.

(a) This section provides for administrative review of a HCFA determination—

(1) Not to certify a policy; or

(2) To decertify a policy.

(b) HCFA will send a notice to the insuring organization containing the following information:

(1) That HCFA has made a determination—

(i) Not to certify a policy; or

(ii) To decertify a policy.

(2) The reasons for the determination.

(3) That the insuring organization has 30 days from the date of the notice to—

(i) Request, in writing, an administrative review of the HCFA determination; and

(ii) Submit additional information to HCFA for review.

(4) That, if the insuring organization requests an administrative review, HCFA will conduct the review, as provided for in paragraph (c) of this section.

(5) That, in a case involving decertification, the decertification will go into effect 30 days from the date of the notice, unless the insuring organization requests an administrative review. If the insuring organization requests an administrative review, the policy retains its certification until HCFA makes a final determination.

(c) If the insuring organization requests an administrative review, HCFA will conduct the review as follows:

(1) A HCFA official, not involved in the initial HCFA determination, will initiate an administrative review within 90 days of the date of the notice provided for in paragraph (c) of this section.

(2) The official will consider—

(i) The original material submitted to HCFA for review, as specified in §§ 403.245(b) or 403.251; and

(ii) Any additional information, that the insuring organization submits to HCFA.

(3) Within 15 days after the administrative review is completed, HCFA will inform the insuring organization in writing of the final decision, with an explanation of the final decision.

(4) If the final decision is to decertify a policy, the decertification will go into effect 15 days after the date of HCFA's notice to inform the insuring organization of the final decision.

Department of Agriculture

Food and Nutrition Service

Food Stamp Program: State Plans of Operation and Operating Guidelines

DEPARTMENT OF AGRICULTURE

7 CFR Parts 272 and 274

[Amdt. No. 156]

State Plans of Operation and Operating Guidelines

AGENCY: Food and Nutrition Service, USDA.

ACTION: Final rule.

SUMMARY: On November 9, 1979 (44 FR 65318) a proposed rule was published concerning changes to regulations dealing with State Plans of Operation (7 CFR 272.2) and State Operating Guidelines (7 CFR 272.3) under the Food Stamp Act of 1977, as amended.

The State Plans of Operation and Operating Guidelines sections set forth procedures and requirements for State agencies to follow to administer the Food Stamp Program.

The proposed rule also included revisions to Part 274 to add a reconciliation report which provides States with a form to identify unauthorized issuances of benefits; to Part 276, dealing with Federal sanctions and State liabilities; and to Part 277, dealing with administrative funding. The proposed revisions to Parts 276 & 277 have been removed from this rulemaking and are being published as two separate final rulemakings. The proposal relating to Part 274 will be incorporated into the final rulemaking of the May 27, 1980 proposed rule (45 FR 35335) establishing a new system for reporting issuance and participation data.

DATE: Effective as of February 20, 1981.

FOR FURTHER INFORMATION CONTACT: Susan D. McAndrew, Chief, Program Standards Branch, Program Development Division, Family Nutrition programs, FNS, USDA, Washington, D.C. 20250. (202) – 447–6535. The Final Impact Statement describing the options considered in developing this final rule and the impact of implementing each option is also available on request from Susan D. McAndrew.

SUPPLEMENTARY INFORMATION:

Introduction

This final action has been reviewed under USDA procedures established in Memorandum 1955 to implement Executive Order 12044 and has been classified as not significant. These are final regulations to revise the requirements for State Plans of Operation and for Operating Guidelines, and for public comment on certain aspects of them.

The basis and purpose for all significant changes from the proposed rules which have been adopted in these final rules are set forth herein, as are the reasons why significant recommended changes were not adopted. For a full understanding of the basis and purpose of all of the final rules, reference should be made to the November 9, 1979 proposed rulemaking (44 FR 65318).

Of the 52 comment letters received on the November 9 proposal, 43 included comments on the State Plans portion of the regulations and 29 on the Operating Guidelines. A total of 20 State agencies commented. In addition, 14 public interest groups, 7 Federal agencies and 1 Local agency submitted comments.

State Plans of Operation

Introduction

As proposed, the State Plans of Operation section was divided as follows:

272.2 (a) General Purpose and Content.

(b) Federal/State Agreement.

(c) Program and Budget Summary statement.

(d) Planning Documents.

(e) Submittal Requirements.

(f) Public Comment.

(g) Revisions.

These divisions are revised in the final rule by deleting (f) in its entirety (since public comment is now covered under the portion of the regulations dealing with Operating Guidelines) and relettering (g) as (f). Major changes were made to the areas of the Federal/State Agreement, the Program and Budget Summary Statement and public comment. An implementation paragraph was added to the final rule.

272.2(a) General Purpose and Content

Comments received on § 272.2(a) from public interest groups expressed support for consolidating planning documents, and recommended that the Operating Guidelines be a formal part of each State's Plan.

Requiring that all Operating Guidelines be made part of each Plan would result in an extremely lengthy and detailed document. Instead of being—as originally intended—a general statement of administrative agreements, the Plan would become cumbersome compendiums of technical manuals, instructions, and the like, concerned largely with day-to-day matters of procedure. The size and complexity of the Plan could cause delays in its review and approval by State agency officials and tardy submission to the Department. For these reasons, the Department has decided not to make all Operating Guidelines part of the State Plan.

Comments from program administrators were more technical. Two commentors suggested that the Plan be a pre-printed checklist like the one used by the Department of Health and Human Services, but another thought the Plan should be similar to that used in the Food Distribution Program. Others suggested that the Plan should not include anything but the Federal/State Agreement. Still others recommended that the Disaster and Outreach Plans be submitted individually, and that there be a separate submission of the budget information.

After considering these comments, the Department has adopted several changes, as described in relevant sections below. The most major changes are (1) to divide the Program and Budget Summary Statement into two separate documents to be known as the Budget Projection Statement and the Program Activity Statement, and (2) to clarify that the time period for the information to be submitted should be the Federal fiscal year in all cases except with regard to the Budget Projection and Program Activity Statements, which are designed to conform to State accounting periods. The Department has decided not to delete or separate from the Plan any of its basic components, which are the Federal/State Agreement, the Budget Projection Statement, the Program Activity Statement, and a number of attachments including the Outreach Plan, Disaster Plan, and Nutrition Education Plan. In the past, the practice of submitting segmented planning documents separately led to some confusion and duplication. While the submittal dates for the Plan's different components still vary, the Department has made an effort to coordinate them to the greatest extent possible while taking into account the administrative capabilities of State agencies. It would be impossible, however, to consolidate all timeframes for submittal because of the differing expectations with regard to these various components. Timeframes for state agency planning, FNS review and approval, implementation and implementation monitoring will vary from component to component depending on the nature of the document. The new preprinted Federal/State Agreement will satisfy the statutory requirements in a simpler manner while the other components will provide necessary management information in a more systematic fashion.

272.2(b) Federal/State Agreement

A number of comments were received on this provision, largely from program administrators. The Federal/State Agreement, as proposed, is the means for FNS and States to formally agree to administer the program in accordance with certain terms and conditions. Some state agencies commented that the Agreement has no statutory basis and should be deleted. They suggested that, if the Agreement is retained, the terms should be limited to simply require adherence to the provisions of the Act. While the Federal/State Agreement is not a specific requirement in the Act, it is the mechanism by which the State agency agrees to conduct a Food Stamp Program in accordance with the points specified in Section 11(e) of the Act as part of its State Plan of Operation.

Pub. L. 96–249, 94 Stat. 357, May 26, 1980 ("the 1980 Amendments" to the Food Stamp Act) revised Sections 11(g) and 16(b) of the Act to clarify that the States are required to follow *all* regulatory provisions, not just those specified in Section 11(e), the State Plan requirements. House Report No. 96–788, 96th Cong., 2nd Sess., states that "... some States ... claim incorrectly and rather absurdly that they are and Congress intended them to be ... free to violate any regulation not otherwise specifically listed in section 11(e) and suffer no fiscal consequences whatever other than the possibility of being enjoined by the Attorney General..." (p. 140). As Pub. L. 96–249 and the House Committee report indicate, the Federal/State Agreement, as originally proposed, does not subject the State to any unauthorized sanctions. For these reasons, the Federal/State Agreement has been retained.

Other commentors recommended adding a provision to the Federal/State agreement requiring States to follow FNS instructions, directives and policies. This suggestion was not adopted. Federal instructions do not contain new substantive material and do not go through notice and comment rulemakings. Therefore, requiring State agencies to abide by Federal regulations adequately covers compliance with substantive policy matters. However, in response to the comment, the Department amended the regulations to require States to adhere to their own FNS-approved manuals and similar operating guidelines which are reiteration of the regulations for the State's method of administering the Program. As these guidelines are binding on the local offices and generated by the State agency itself, the Department considered them appropriate for inclusion.

Other changes to this section were to add a statement that the Agreement could be modified with the mutual consent of both parties and to permit the State to propose alternative language to the pre-printed Agreement, again subject to mutual consent. These two revisions will make the Agreement more open to modifications that would meet the particular concerns of an individual State. The more flexible the Agreement is, the more useful and responsive it becomes to both parties involved.

Comments were received suggesting that the clause on consultation with Indian tribal organizations on reservations be modified to accommodate States without reservations. This suggestion was adopted by making this clause applicable only where appropriate.

272.2(c) Program and Budget Summary Statement

There were 26 comments on this provision, all but three from State or local agencies and FNS Regional offices. Two State agencies suggested separating the form into two documents, one containing a detailed functional breakdown of the proposed budget, and one summarizing program activity for the past year. Six more State agencies and two Regional offices recommended reporting cost and staff in one section without referring to activity.

The Department has incorporated a number of these suggested modifications into the final regulations along with other minor refinements. As has been noted, the principal change has been to separate the Program and Budget Summary Statement into two documents—a Budget Projection Statement and the Program Acitivity Statement. A single combined document would have been more complicated and a greater burden for States, while the information submitted would have been less useful and in some cases less reliable. This is because the two types of data requested—prospective budget estimates and retrospective activity level summaries—are for needed different timeframes, and in many States are not readily available at the same time of year, given their reporting systems and fiscal year budgeting cycles. By separating the two documents, each can be more appropriately tailored to its subject matter and can be compiled at a more convenient time for the State agencies. The documents can be simpler, the burden on States will be less, and the information obtained will be more useful.

The Budget Projection Statement and the Program Activity Statement, when analyzed jointly and in conjunction with data from the Financial Status Report, FNS–269, and other sources, will assist the Department in assessing the sources of and need for State agencies' expenditures to operate the program. The results of this analysis may be used to identify issues for further examination in the Department's management evaluation reviews of the State agencies or in consultations during the State Plan approval process. The Department is concerned by increases in program administration costs and recognizes its responsibility to assure that the program is run as efficiently and effectively as possible.

The Budget Projection and Program Activity Statements will each consist of a pre-printed form to be filled out by the State agency. In addition, a narrative must be attached to the Budget Projection Statement. The forms will be similar in scope and length to the combined form proposed originally, but with several revisions. Although Federal Register policy precludes printing here the forms themselves, their contents can be summarized as follows.

The final version of the Budget Projection Statement requires the State agency to provide estimates of its total program operating costs allocated among ten categories: certification, issuance, performance reporting, fair hearings, outreach, training, ADP development, ADP operations, fraud control, and all other direct and indirect Program costs. These categories reflect a reduction from and simplification of the sixteen items included in the original proposal. A change has also been made in the time period to be reported. In the comments, several States suggested that the budget projections should be based on the State's fiscal year whether or not it coincided with the Federal fiscal year (October–September). Thirty-seven States follow a July–June fiscal year, nine States are on a biennial fiscal schedule, and only two follow the Federal fiscal year schedule. The remainder have variable fiscal schedules. The Department has decided, therefore, to adopt an approach that will accommodate the States' accounting periods and will also provide the Department with more timely and accurate budget projections. The Budget Projection Statement is to be submitted quarterly with budget projections for four quarters beginning with the quarter already in progress and including the three quarters that follow. For example, the Budget Projection Statement due on May 15 is to include budget projections

for April to June and for the next three quarters. This approach, similar to that required by Department of Health and Human Services on their OA 41 report, will provide rolling updates of expenditure projections, making them more responsive to changing conditions. The Department believes that the burden of this additional reporting requirement is minimized by the fact that the report of actual expenditures (SF–269), which generally will be a primary input to the budget projection process, is already required on a quarterly basis. The requirement for submitting the Budget Projection Statement is timed to take this into account, with the SF–269 being submitted 30 days after the report quarter and the Budget Projection Statement due 15 days later (45 days after the end of each quarter). Furthermore, it is anticipated that State agencies will not have to request budget revisions as frequently as in the past since quarterly budget estimates should be more accurate than annual projections that were submitted well in advance of the period they were intended to cover.

State agencies are expected to base their budget projections on a careful analysis of the factors that determine their costs. Although the Department is not prescribing the methods, assumptions, data, or format that State agencies use, the analysis is expected to be systematic and supported by reasonable evidence. Such an analysis normally will take into account (but not necessarily be limited to):

- The number and salary level of employees,
- Other factors affecting personnel costs, including

(1) Anticipated increases in pay rates or benefits,

(2) The distribution of pay periods across quarters, and

(3) Reallocations of staff among units or functions, insofar as these might result in cost increases or decreases.

- Costs for purchasing, leasing, and maintaining equipment and space, especially as concerns

(1) Any upcoming one-time-only purchases of new capital assets such as ADP equipment,

(2) Renegotiation of leases,

(3) Changes in depreciation rates or procedures,

(4) Relocations of offices,

(5) Maintenance and renovation work, and

(6) Inflation.

- Issuance system costs, including

(1) Renegotiation of issuing agent fees, and

(2) Plans to change issuance systems.

- Changes in caseload and factors contributing to increases or decreases in the numbers of recipients and recertifications, including the anticipated impact of economic conditions (and in particular unemployment) and seasonality,
- Cost implications of corrective action plans,
- Anticipated changes in program regulations and operating guidelines and instructions,
- Training needs,
- Travel Costs, and
- Adjustments in insurance premiums.

A narrative justification should be attached to each Budget Projection Statement, documenting and explaining the assumptions used to arrive at the figures reported. The narrative should cover as many of the items listed above, and any other items deemed relevant, as have a significant impact on costs. The State agency is not required to address every contributing factor in every submission of a Budget Projection Statement. Rather, the narrative should concentrate on items that account for increases or decreases in costs from the preceding submissions. Lengthy explanations are not necessary, but pertinent figures used in the analysis (for example, the inflation rate for salary rates and benefits) should be included. It is expected that the majority of the narratives submitted will not exceed 2 to 3 pages in length.

The Program Activity Statement, to be submitted once a year, requires State agencies to provide data on several indicators of the level of program activity that occurred during the preceding twelve months. The specific indicators requested are the numbers of eligibility determinations, issuance transactions, performance reporting system (PRS) reviews, fair hearings, and fraud control activities. Although some of this information is available from other sources, there has until now been no comprehensive summary of key activity indicators compiled for a single timeframe. The Program Activity Statement, serving this need, is designed to assist the Department and the States in analyzing current budgets and in planning future operations and objectives. State agencies should submit Program Activity Statements annually, no later than 45 days after the end of the State's fiscal year, with data covering the entire State fiscal year just ended.

In the proposed regulations, information on staff size was to be reported along with the program activity indicators. This requirement has been deleted from the final regulations in order to further minimize the reporting burden. The Department is exploring other means of obtaining this information through combined reporting with the Department of Health and Human services. Because of the overlap between food stamp and public assistance staff time within the State agency, this combined effort could provide a better overall picture of the dynamics of personnel allocations, patterns, and practices.

The Budget Projection Statement and the Program Activity Statement will be signed by the responsible Program official—usually the State Program director or the chief financial officer. A misreference has been corrected in the regulations that referred to a column on the proposed Form FNS–366 that had actually been deleted from it. Other items that needed clarification will be explained in detailed instructions that will be included with the form. One State agency requested that contracted issuance costs be provided separately. This has been done along with distinguishing mail issuance from other (non-contracted) over-the-counter issuance costs. The extensive explanatory material about the form has been deleted as the Department believes this level of detail is not needed in the regulations. Instructions will be included with the form itself.

A change is also being made in the SF–269, Financial Status Report. The headings on this form are being revised to be compatible with the modified items on the Budget Projection Statement.

Comments were also received on the Organizational Outline which was to have been on the reverse side of the Program and Budget Summary Statement. Several modifications have been made. In response to comments calling for less detailed information to be required, the proposed requirement for a description of the position of outreach coordinator in the State organizational structure has been dropped. The annual outreach plan should provide sufficient information for FNS to monitor State outreach activity. In addition, the Outline is now an attachment to the Program Activity Statement, so that States may substitute existing organizational charts rather than providing the information on the form itself. While some commentors believed that the Outline was too complex, others, including both State agencies and public interest groups supported it. The Outline is retained because the Department believes it is needed to provide the Agency with specific information about how State agency staff are organized. This

information will facilitate contact with the State agency, be helpful in preparation of Management Evaluation reviews and will enable FNS to respond to questions about how individual States administer the Program at the State-level. The instructions for what is to be included in the Organizational Outline have been expanded and clarified to simplify completion of this item as well as to ensure consistency from State to State.

Because of the timing of the final publications of these rules, the initial Budget Projection Statement will be due on May 15, 1981 with budget projections for the four quarters beginning in April, 1981 and ending in March, 1982. The initial submittal of the Program Activity Statement will be due 45 days after the end of the State's 1981 fiscal year. For example, State agencies that operate on a July-June fiscal year will submit their first Program Activity Statement on August 15, 1981. It is apparent from some of the comments received that some States will not be able to provide all of the data required on the Program Activity Statement initially. Therefore, only that information already collected by the State's data gathering systems is required on the initial reports, with the remainder being required in the FY 1982 submission.

Another revision to this section of the regulations is an additional requirement for attachment to the Program Activity Statement of any agreements between the State and the United States Postal Service on coupon issuance, between the State and the Social Security Administration for supplemental security income joint processing and for routine user status, and between the State and the State's Employment Security agency for work registration. The Work Registration and Job Search final regulations package to be published soon will more explicitly describe the Department of Labor's and Employment Security agency's role in developing a State Plan for Work Registration. The initial submission of these supporting documents is due with the Federal/State Agreement (120 days after publication of the final regulations). Subsequent submissions shall be attached to the Program Activity Statement.

272.2(d) Planning Documents

Comments received on this provision primarily concerned suggestions that certain documents should not be included as attachments, such as the Corrective Action Plan or the Outreach Plan. The reasons given were the varying due dates or the degree of complexity in negotiating these Plans which could delay submission of one Plan while others were ready for approval. The final rules do not require the Corrective Action Plan to be submitted in conjunction with other planning documents. The Corrective Action Plan is now an open-ended plan that is modified as needed, rather than submitted at regular yearly intervals. Final regulations regarding Corrective Action Plans were issued on March 11, 1980. The due dates for the Outreach Plan and other planning documents have been structured to coincide to the maximum extent possible.

A number of comments were received on the Nutrition Education Plan with the most frequented suggestions being to mandate a Nutrition Education Plan. The Department has decided not to mandate the Nutrition Education Plan since State activities in this area are optional. Federal responsibilities for nutrition education are outlined in Sections 11(e)(15) and (f) of the Act, and this Plan is designed to reflect any State efforts which result in a request for additional funding. The primary objective is to encourage States to supplement any existing nutrition education efforts.

Other comments suggested that a reference be added to encourage States to coordinate the Nutrition Education Plan with USDA's Expanded Food and Nutrition Education Program (EFNEP), rather than the proposed language which stated that the Plan's efforts not conflict with the EFNEP's. The final regulations were revised to require assurance that the efforts are not duplicative. This change was made in recognition of the expanded role of EFNEP under the 1977 Act. Because of EFNEP's involvement in nutrition education efforts, it is assumed that States agencies will be consulting with EFNEP when preparing their plans in order to best coordinate their programs.

272.2(e) Submittal Dates

Public interest groups commenting on this area expressed support of an annual Outreach Plan as opposed to the semi-annual Plan which was in effect under the 1964 Act. Other commentors suggested that the submittal dates be better coordinated. The Outreach Plan is due annually on August 15 to cover the Federal fiscal year. For most States, those with a July–June fiscal year, this will coincide with the date the Program Activity Statement is due. The August 15 deadline was necessary so that all States could be operating under approved Outreach Plans by the beginning of the Federal fiscal year. Therefore, further coordination was impracticable. The initial Nutrition Education Plan can be submitted at any time; however, the initial Plan should cover a period of months more or less than one year as appropriate, adjusted to permit cycling subsequent submissions annually on August 15th.

Commentors suggested that the time limit for submitting the Agreement be extended to allow more time for the internal reviews conducted prior to the Governor's review and signature. This suggestion was adopted, and the time period has been extened to 120 days. This change also responds to comments on whether the Governor's Review period is included. All steps in the process including the Governor's review are to be completed within the 120 day period.

Language is added to clarify that FNS will take action on Plans which it has received and for which it has sought additional information, within 30 days of receipt of that information from the State. This responds to comments received on this point, and remedies a concern of States that FNS did not place any time limits on itself beyond the first 30 days following initial submission.

272.2(f) Public Comment

The largest number of comments, 35, was received on this provision. Of these, 12 were from public interest groups, 12 from States agencies, and 6 from FNS Regional Offices. Two major concerns were raised by the public interest groups.

These were: (1) that the proposed rules limited the areas of the program subject to public comment and (2) that methods other than a State Administrative Procedures Act (APA) ought to be required to maximize public access to decisionmaking. State agencies were generally concerned about the additional burden of public comments and whether such procedures would unduly hamper their ability to manage resources and respond to problems efficiently.

The Department is committed to a Food Stamp Program which is efficiently managed and accessible to the public. Public participation regarding State's administration of the program can help identify unmet needs and provide useful information to State administrators evaluating choices in their use of State resources. Therefore, the Department reviewed the proposal on public comment on both Plans of Operation (§ 272.2(f)) and Operating Guidelines (§ 272.3.(d)) in light of the comments received to assure it achieved both goals of meaningful public access and efficient program administration.

Significant changes were made to be responsive to comments. Areas of

change include program aspects subject to public comment, the timing and scheduling of public comment, and the methods to obtain public comment.

The proposed rules specified that the Outreach and Nutrition Education Plans, those parts of the operating guidelines where a State exercised a choice or requested a waiver and the training procedures be subject to public comment.

Several commenters wanted more items of the Plan of Operation to be subject to public comment while others were concerned with the time public comment would add to a State's implementation schedule for new program changes. The Department's goal was to focus comment on program areas most meaningful to the public and to do so in a manner which enhanced rather than interfered with timely program compliance.

The Department decided to delete the requirements for public comment on the Outreach and Nutrition Education Plans and not to add Corrective Action Plans (CAP) to the comment requirements. Given the complexity of these items and the requirement for FNS approval prior to their implementation, regular public comment periods could cause significant delays in submission and implementation. If delayed, lack of approved Plans could adversely affect the quality of service delivered. Soliciting and reviewing of comments would add a significant burden, given staff and budget constraints. Also, given the technical nature of the Plans, States would be required to develop explanatory material which would further tax time and staff limitations. Plans are used primarily as management tools for the State agency and to provide FNS with means to ensure compliance with the Act and the regulations in these areas. States may solicit comment on these Plans and, in fact, many States may be already receiving comment through their State Administrative Procedures Acts (APA's). In addition, all Plans are open to public inspection under § 272.1(d). Therefore, § 272.2(f) is deleted from this final rulemaking, and all public comment requirements are discussed under § 272.3(d).

The Department also concurred with comments which brought to light the administrative difficulties of soliciting comments prior to any change in operating guidelines. Therefore, the Department deleted the public comment requirements proposed in § 272.3(d) on Operating Guidelines.

The Department is instead requiring that States provide the public with an opportunity to comment on overall program operations at least once every four years, with special emphasis on the options available to States, such as utility standards and fair hearing procedures. This will provide the public with a broader opportunity to comment on program operations than was originally proposed. At the same time, because comment is solicited every four years, the State agency has a more manageable system with which to operate. Waivers which have a major and direct impact on participants are still subject to comment prior to submission to FNS although changes have been made to allow more flexibility. Because some waivers may need prompt implementation due to an emergency situation, the State agency may request an exemption to the public comment requirements.

The requirement that comments on overall program operations be solicited at least every four years would begin no later than the State's 1982 fiscal year. This scheduling is designed to provide enough operating experience to allow for meaningful evaluation of how the Program is running in the State yet relieve the burden on States.

Comments on waivers which have a major direct impact on participants will be solicited prior to submission to FNS. However, the comment period may be dropped if an emergency situation exists. If the State requests an exception, the request must be submitted promptly and include supporting justification for granting the exemption.

One last public comment provision appears in proposed rules issued by the Department on December 5, 1980 to provide a State option for periodic reporting and retrospective accounting.

The second major concern of public interest groups was that State APA procedures were inadequate as a method for meaningful public participation. Therefore, they suggested that either media publication or public hearings be mandated in addition to APA procedures in those States subject to these provisions. The Department has decided not to adopt this suggestion. One reason is that this suggestion would significantly add to Program expenses. In addition, it would be viewed as inequitable by States with APA's who would have to pursue two methods of soliciting public comment (which could require separate efforts to review and analyze material), while those States without APA's would only be dealing with one set of comments. Finally, despite the allegations in the comments, the Department does not have sufficient evidence to conclude that APA's are any more or less effective than other means of obtaining public participation suggested in the regulations. FNS does have a commitment, however, to making public comment a significant part of developing waivers and of improving overall State operations and will monitor the effectiveness of all such methods intended to achieve this goal.

Other comments were received recommending notification of certain organizations. It was clarified that States using the media to solicit comments must notify all groups on its Outreach list when waivers will be available for comment and when the overall comment periods are scheduled. In addition, a summary of the comments received and an explanation of what was decided shall be prepared. The comment summary must be available free of charge upon written request. The media announcements must include an address where further information about commenting and explanatory material can be obtained.

272.2(g) Revisions

This section details the steps States are to follow when submitting revisions to an already approved budget. Very few comments were received on this provision. The only changes to this section were to reflect changes in a new Federal financial management directive and to reletter it as paragraph (f). The comments on adjustments to the Letter of Credit and the time limits for budget revision requests were not adopted as the Department believes these factors are best handled on an individual basis when the State submits its requests.

Operating Guidelines

Introduction

As proposed, the Operating Guidelines section was divided as follows:

272.3 (a) Coverage of Operating Guidelines.
(b) Submittal and approval.
(c) Waivers.
(d) Public comment.

These main divisions remain in the final rule.

272.3 Operating Guidelines

In general, fewer changes were made to this section, especially as the comments did not indicate the need for as much revision as in the State Plans of Operation section. Some changes were made to make this provision conform to revisions in § 272.2. A discussion on § 272.3(d), relating to "Public comment," is included under § 272.2(f) above.

272.3(a) Operating Guidelines

Operating Guidelines are defined as any manuals, instructions, directives, and the like which the State agency

issues to administer the Program. Several public interest groups suggested that a requirement be added that State agencies provide copies of the Operating Guidelines to the public upon request. § 272.1(d) already delineates the procedures for obtaining material. Therefore, the Department believes this change is not necessary in light of other regulatory provisions.

A concern of State agencies was the provision on consulting with Indian Tribal Organizations on reservations. States without reservations requested that a permanent exemption be made for them. Language has been added to state that submission of this material is only required where appropriate. Some technical changes have been made including a revision to the Performance Reporting System material on submission of quality control sampling plans. In addition, in response to a comment from the California State agency, State regulations that are used in lieu of instructions or the like are considered as Operating Guidelines. This modification has been added to avoid requiring States using this method to also prepare instructional material.

Public Law 96–249 added an income and resource exclusion for payments from Federal, State and local energy assistance programs. In order to provide both certification workers and FNS with a readily available source of information on the various programs, States are required to list the State and local funds to be excluded as energy assistance as part of the Operating Guidelines and to indicate how they identify particular payments as exempt energy assistance benefits. For example, the State would explain the formula used to separate the increase in public assistance grants for energy assistance from other increases or special grants.

This could be done either as a revision to the State manual or through other instructions, such as program directives, to eligibility staff.

272.3(b) Submittal and Approval

Language has been added to this provision to correspond to changes in § 272.2(e) regarding FNS approval. In addition, in response to comments, a revision was made clarifying that if the State agency used FNS-developed material, then only that material or portion which has been developed by the State has to be submitted for FNS approval.

272.3(c) Waivers

In response to comments, a revision was made to allow States to request permanent waivers upon submission of adequate and compelling justification. This is to avoid unnecessary annual requests for waivers in States where the reasons for the initial request have not changed.

Another area of concern was the public comment procedure for waivers. As proposed, waivers which have major direct impact on participants are subject to the public comment provisions. As discussed earlier, the public comment requirements for waivers were made more flexible. This was the only other major change to this section.

Note.—Food Stamp forms have been revised or added in accordance with the requirements of this amendment. The reporting and/or record keeping requirements anticipated in this amendment have been forwarded to the Office of Management and Budget (OMB) for approval in accordance with the Federal Reports Act of 1942. The provisions in this rulemaking concerning submission of forms will be effective contingent upon OMB approval.

Therefore, Part 272 is amended as follows:

1. In Part 272, § 272.1 is amended and § 272.2 and § 272.3 are added as follows:

New subparagraph (28) is added to paragraph 272.1(g).

§ 272.1 General terms and conditions.

* * * * *

(g) Implementation.

* * * * *

(28) Amendment 156. State agencies shall implement the program changes required by amendment 156 within 120 days after publication of these regulations, meeting the submittal deadlines outlined in § 272.2 and § 272.3.

§ 272.2 Plan of operation.

(a) *General Purpose and Content.* (1) *Purpose.* State agencies shall periodically plan and budget program operations and establish objectives. When planning and budgeting for program operations for the next year, State agencies shall consider major corrective action objectives, existing program strengths and deficiencies, and other factors anticipated to impact on the operation of the State's Food Stamp Program and on projected expenditures.

(2) *Content.* The basic components of the State Plan of Operation are the Federal/State Agreement, the Budget Projection Statement, and the Program Activity Statement. In addition, certain attachments to the Plan are specified in this Section and in § 272.3. The requirements for the basic components and attachments are specified in § 272.2(c) and § 272.2(d) respectively. The Federal/State Agreement is the legal agreement between the State and the Department of Agriculture. This Agreement is the means by which the State elects to operate the Food Stamp Program and to administer the program in accordance with the Food Stamp Act of 1977, as amended, regulations issued pursuant to the Act, the FNS-approved State Plan of Operation, and any State-developed manuals approved by FNS. The Budget Projection Statement and Program Activity Statement provide information on the number of actions and amounts budgeted for various functional areas such as certification and issuance. The Plan's attachments include the Outreach Plan, Disaster Plan (currently reserved), and the optional Nutrition Education Plan. The Corrective Action Plan is considered part of the State Plan of Operation, but is submitted separately as prescribed under § 275.22.

(b) *Federal/State Agreement.* (1) The wording of the pre-printed Federal/State Agreement is as follows:

The State of ———— and the food and Nutrition Service (FNS), U.S. Department of Agriculture (USDA), hereby agree to act in accordance with the provisions of the Food Stamp Act of 1977, as amended, implementing regulations, the FNS-approved State Plan of Operation and FNS-approved manuals. The State and FNS (USDA) further agree to fully comply with any changes in Federal law and regulations. This agreement may be modified with the mutual consent of both parties.

Provisions

The State agrees to: 1. Administer the program in accordance with the provisions contained in the Food Stamp Act of 1977, as amended, and in the manner prescribed by regulations issued pursuant to the Act; and to implement the FNS-approved State Plan of Operation and to adhere to FNS-approved State manuals, State instructions, or State directives.

2. Comply with Title VI of the Civil Rights Act of 1964 (Pub. L. 88–352), Section 11(c) of the Food Stamp Act of 1977, as amended, the Age Discrimination Act of 1975 (Pub. L. 94–135) and the Rehabilitation Act of 1973 (Pub. L. 93–112, Sec. 504) and all requirements imposed by the regulations issued pursuant to these Acts by the Department of Agriculture to the effect that, no person in the United States shall, on the grounds of sex, race, color, age, political belief, religion, handicap, or national origin, be excluded from participation in, be denied the benefits of, or be otherwise subject to discrimination under the Food Stamp Program.

3. (For States with Indian Reservations only). Implement the Program in a manner that is responsive to the special needs of American Indians on reservations and consult in good faith with tribal organizations about that portion of the State's Plan of Operation pertaining to the implementation of the Program for members of the tribe on reservations.

FNS agrees to:

1. Pay administrative costs in accordance with the Food Stamp Act, implementing regulations, FNS-approved State manuals and an approved Cost Allocation Plan.

2. Carry-out any other responsibilities delegated by the Secretary in the Food Stamp Act of 1977, as amended.

Date _____
Signature _____
(Governor or Authorized Designee)
Date _____
Signature _____
(Regional Administrator, FNS)

(2) The State agency may propose alternative language to any or all the provisions listed in paragraph (1) of this section. The alternative language is subject to approval by both parties before signature.

(c) *Budget Projection Statement and Program Activity Statement.* (1) The State agency shall submit to FNS for approval a Budget Projection Statement and Program Activity Statement in accordance with the submittal dates in § 272.2(e).

(i) The Budget Projection Statement solicits projections of the total costs for ten areas of program operations (certification, issuance, performance reporting, fair hearings, outreach, training, ADP development, ADP operations, fraud control, and other). The Budget Projection Statement is to be submitted quarterly and shall contain projections for each of four successive quarters beginning with the quarter during which the current Statement is due. The State agency shall submit with each Budget Projection Statement a narrative justification documenting and explaining the assumptions used to arrive at the projections. The narratives shall cover such subjects as: the number and salary level of employees; other factors affecting personnel costs, including anticipated increases in pay rates or benefits, the distribution of pay periods across quarters and reallocations of staff among units or functions, insofar as these might result in cost increases or decreases; costs for purchasing, leasing, and maintaining equipment and space, especially as concerns any upcoming, one-time-only purchases of new capital assets such as ADP equipment, renegotiation of leases, changes in depreciation rates or procedures, relocations of offices, maintenance and renovation work, and inflation; issuance system costs, including renegotiation of issuing agent fees and plans to change issuance systems; changes in caseload and factors contributing to increases or decreases in the numbers of recipients and recertifications, including the anticipated impact of economic conditions (and in particular unemployment) and seasonality; cost implications of corrective action plans; anticipated changes in program regulations and operating guidelines and instructions; training needs; travel costs; and adjustments in insurance premiums.

The narrative should cover as many of the items listed above, and any other items deemed relevant by the State agency, as have a significant impact on costs. The State agency is not required to discuss every item in the list in every submission of a Budget Projection Statement. The narrative should concentrate on items that account for increases or decreases in costs from the preceding submissions.

(ii) The Program Activity Statement, to be submitted annually, solicits a summary of program activity for the State agency's operations during the preceding fiscal year. The specific items required are: the number of certification approvals and denials for public assistance and non-assistance households; the number of issuance transactions under different systems; the number of performance reporting reviews; the number of fair hearing decisions; and information on fraud control activities.

(2) An organizational outline shall be submitted at least annually as an attachment to the Program Activity Statement. The outline shall contain the following information:

(i) The position of the head of the State agency responsible for administering the Food Stamp Program in relation to the overall State organizational structure, i.e., the Program Director in relation to the Commissioner of Welfare;

(ii) A description of the organizational structure through which the State agency will administer and operate the Food Stamp Program, including whether the Program is State, county, locally, or regionally-administered; whether the workers have single Food Stamp Program or multi-program functions; and the title and position of the individual or panel designated as the hearing authority and whether officials conduct both fair and fraud hearings.

(iii) A description of the funding arrangement by which State, county, and local jurisdictions will contribute to the State agency portion of administrative costs;

(iv) The position within the State organizational structure of the Performance Reporting System (PRS) coordinator, including whether the PRS coordinator is full or part-time, and is responsible for direct supervision over Quality Control or Management Evaluation or if these functions are handled separately, and whether quality control reviewers have single Food Stamp Program or multi-program review responsibilities;

(v) The position of the training coordinator and whether this is a full or part-time position; and

(vi) The organizational entity responsible for corrective action.

(3) *Additional Attachments.* The following shall be attachments or addenda to the Program Activity Statement submitted annually:

(i) The special plan required by § 277.15 when requesting Federal funding at the present 75 percent level for investigation and prosecution activities; and

(ii) For informational purposes (not subject to approval as part of the plan submission procedures), the agreements between the State agency and the United States Postal Service for coupon issuance, between the State agency and the Social Security Administration for supplemental security income/food stamp joint application processing and for routine user status, and between the State agency and the State Employment Security agency for work registration and job search.

(d) *Planning Documents.* (1) The following planning documents shall be submitted:

(i) Outreach Plan as required by § 272.6;

(ii) Disaster Plan as required by § 280.6 (currently reserved), or certification that a previously submitted Disaster Plan has been reviewed and remains current;

(iii) Nutrition Education Plan if the State agency elects to request Federal Food Stamp Program administrative matching funds to conduct nutrition education programs as discussed in paragraph (d)(2) of this section.

(2) *Nutrition Education Plan.* If submitted, the Nutrition Education Plan shall contain:

(i) The number and positions of staff that will be conducting nutrition education;

(ii) Description of activities in the nutrition education program; and

(iii) Assurance that nutrition education programs for which USDA provides Food Stamp Program administrative matching funds are conducted exclusively for the benefit of Food Stamp Program applicants and participants and do not duplicate USDA's Expanded Food and Nutrition Education Program's efforts in the State.

(e) *Submittal Requirements.* States shall submit to the appropriate FNS Regional Office for approval each of the components of the Plan of Operation for approval within the timeframes established by this paragraph. Approval or denial of the document may be withheld pending review by FNS. However, if FNS fails to either approve,

deny, or request additional information within 30 days, the document is approved. If additional information is requested, the State agency shall provide this as soon as possible, and FNS shall approve or deny the Plan within 30 days after receiving the information.

(1) The Federal/State agreement shall be signed by the Governor of the State or authorized designee and shall be submitted to FNS within 120 days after publication of these regulations in final form and shall remain in effect until terminated.

(2) The Budget Projection Statement and Program Activity Statement shall be signed by the head of the State agency or its chief financial officer and submitted as follows:

(i) The Budget Projection Statement, shall be submitted 45 days after the end of each quarter (January–March, April–June, July–September, and October–December). The first report is due May 15, 1981 for the four quarters beginning April 1981;

(ii) The Program Activity Statement shall be submitted annually, not later than 45 days after the end of the State agency's fiscal year. The first report is due 45 days after the end of the State's 1981 fiscal year. The first report is not required to contain information that is not currently captured by the State agency's information system. State agencies shall amend their data gathering systems so that all items can be completed on the second report, due for the 1982 fiscal year.

(3) The initial submission of the organizational outline described in § 272.2(c)(2) and the additional attachments outlined in § 272.2(c)(3) shall be due 120 days after publication of this final rule and thereafter as an attachment to the Program Activity Statement due 45 days after the end of the State's fiscal year.

(4) The Outreach Plan shall be signed by the head of the State agency and submitted to FNS for approval each year no later than August 15.

(5) Disaster Plan (reserved).

(6) The Nutrition Education Plan shall be signed by the head of the State agency and submitted prior to funding of nutrition education activities when the State agency elects to request Federal administrative matching funds to conduct Nutrition Education Programs. The plan shall then be submitted annually no later than August 15. The initial submission may be for a period of less than or more than a year in order to meet the August 15 deadline.

(7) Where applicable, State agencies shall consult (on an ongoing basis) with the tribal organization of an Indian reservation about those portions of the State Plan of Operation pertaining to the special needs of the members of the tribe.

(f) *Revisions.* Revisions to any of the planning documents or the Program and Budget Summary Statement shall be prepared and submitted for approval to the appropriate FNS Regional Office in the same manner as the original document. However, revisions to the budget portion of the Budget Projection Statement and Program Activity Statement shall be submitted as follows:

(1) *Program funds.* (i) For program funds, State agencies shall request prior approvals promptly from FNS for budget revisions whenever:

(A) The revision indicates the need for additional Federal funding;

(B) The program budget exceeds $100,000, and the cumulative amount of transfers among program functions exceeds or is expected to exceed five percent of the program budget. The same criteria apply to the cumulative amount of transfers among functions and activities when budgeted separately for program funds provided to a subagency, except that FNS shall permit no transfer which would cause any Federal appropriation, or part thereof, to be used for purposes other than those intended;

(C) The revisions involve the transfer of amounts budgeted for indirect costs to absorb increases in direct costs; or

(D) The revisions pertain to the addition of items requiring prior approval by FNS in accordance with the provisions of the applicable cost principles specified in Part 277 Appendix A of the regulations.

(ii) No other changes to the Program fund budget require approval from FNS. Examples of changes which do not require Federal approval are: the use of State agency funds to accomplish program objectives over and above the State agency minimum share included in the approved Program budget; and the transfer of amounts budgeted for direct costs to absorb authorized increases in indirect costs.

(iii) The requirements of paragraph (f)(1)(i)(B) of this section may be waived by FNS provided that:

(A) No different limitation or approval requirement may be imposed; and,

(B) FNS shall not permit a transfer which would cause any Federal appropriation, or part, thereof, to be used for purpose other than those intended.

(2) *Authorized Funds Exceeding State Agency Needs.* When it becomes apparent that the funds authorized by the Letter of Credit will exceed the needs of the State agency, FNS will make appropriate adjustments in the Letter of Credit in accordance with Part 277.

(3) *Method of Requesting Approvals.* When requesting approval for budget revisions, State agencies shall use the same format as the Budget Projection Statement used in the previous submission. However, State agencies may request by letter the approvals required by paragraph (f)(1)(i)(D).

(4) *Notification of Approval or Disapproval.* Within 30 days from the date of receipt of the request for budget revisions, FNS shall review the request and notify the State agency whether or not the budget revisions have been approved. If the revision is still under consideration at the end of 30 days, FNS shall inform the State agency in writing as to when the decision will be made.

§ 272.3 Operating guidelines and forms.

(a) *Coverage of Operating Guidelines.* State agencies shall prepare and provide to staff responsible for administering the Program written operating procedures. In those States which have State regulations that outline these Operating Procedures, these are equivalent to Operating Guidelines. Other examples of Operating Guidelines are manuals, instructions, directives or transmittal memos. The following categories shall be included in the Operating Guidelines:

(1) Certification of households, including but not limited to:

(i) application processing;

(ii) nonfinancial eligibility standards;

(iii) financial criteria and the eligibility determination;

(iv) actions resulting from eligibility determinations;

(v) determining eligibility of special situation households as specified in § 273.11;

(vi) additional certification functions such as processing changes during certification periods and reporting requirements for households;

(vii) lost benefits/claims against households;

(viii) fair/fraud hearings;

(ix) a list of Federal and State energy assistance programs that qualify for the resource and income exclusions discussed in § 273.8(e)(11)(viii) and § 273.9(c)(10)(v) and how these payments are identified as being eligible for the exemption.

(2) Issuance, accountability, and reconciliation;

(3) The Performance Reporting System, including instructions or directives for conducting quality control and management evaluation reviews and the quality control sample plan;

(4) A description of the training program, including a listing of the

organizational component which conducts training, to whom and how often training is provided;

(5) Procedures for obtaining public comment;

(6) The fair/fraud hearing procedures if not included in the Certification Handbook.

(7) The consultation process (where applicable) with the tribal organization of an Indian reservation about the State Plan of Operation and Operating Guidelines in terms of the special needs of members of the tribe and the method to be used for incorporating the comments from the tribal organization into the State Plan of Operations and Operating Guidelines.

(b) *Submittal and Approval.* (1) State agencies may use the forms, manuals, handbooks, instructions, and other operating guidelines provided by FNS or develop and submit to FNS for approval alternate procedures and forms.

(2) If the State agency adopts any FNS-developed material, it shall only submit State-developed material for approval.

(3) FNS shall provide each State agency with approval, denial or appropriate comments on State-developed operating guidelines within 30 days of the receipt of such guidelines. FNS may acknowledge receipt of the guidelines and withhold approval or denial of the guidelines pending further review. However, if FNS fails to either approve, deny, request additional information, or acknowledge receipt of the guideline within 30 days, the guideline is approved. If FNS requests additional information, the State agency shall provide the requested information as soon as possible and FNS shall approve or deny the guidelines within 30 days of receipt of the additional information.

(4) Amendments to any of the operating guidelines shall be submitted to FNS for approval prior to implementation by the State agency. The timeframes in (3) above also apply to submission of amendments.

(c) *Waivers.* (1) The Administrator of the Food and Nutrition Service or Deputy Administrator for Family Nutrition Programs may authorize waivers to deviate from specific regulatory provisions. Requests for waivers may be approved only in the following situations:

(i) the specific regulatory provision cannot be implemented due to extraordinary temporary situations such as a sudden increase in the caseload due to the loss of SSI cash-out status;

(ii) FNS determines that the waiver would result in a more effective and efficient administration of the program; or

(iii) unique geographic or climatic conditions within a State preclude effective implementation of the specific regulatory provision and require an alternate procedure; for example, the use of fee agents in Alaska to perform many of the duties involved in the certification of households including conducting the interviews.

(2) FNS shall not approve request for waivers when:

(i) the waiver would be inconsistent with the provisions of the Act;

(ii) the specific regulatory provision to be waived is a national eligibility criterion;

(iii) the waiver would result in a denial, reduction or delay of benefits;

(iv) the waiver would deny a participant or potential participant any due process protection afforded by either the Act or regulations; or

(v) the waiver would result in a procedure that would not be in compliance with the processing standards specified in § 273.2(g) and (i) and § 273.12(c).

(3) FNS shall approve waivers for a period not to exceed one year unless the waiver is for an on-going situation. If the waiver is requested for longer than a year, appropriate justification shall be required and FNS will determine if a longer period is warranted and if so, the duration of the waiver. Extensions may be granted provided that States submit appropriate justification as part of the State Plan of Operation.

(4) When submitting requests for waivers, State agencies shall provide compelling justification for the waiver in terms of how the waiver will improve the efficiency and effectiveness of the administration of the Program. At a minimum, requests for waivers shall include but not necessarily be limited to:

(i) reasons why the waiver is needed;

(ii) the portion of caseload or potential caseload which would be affected and the characteristics of the affected caseload such as geographic, urban, or rural concentration;

(iii) anticipated impact on service to participants or potential participants who would be affected;

(iv) anticipated time period for which the waiver is needed; and

(v) thorough explanation of the proposed alternative provision to be used in lieu of the waived regulatory provision.

(5) The provisions of this paragraph do not apply to exceptions to service standards approved by the State agency or FNS in accordance with § 272.5 or approved by FNS in accordance with § 275.5.

(6) Waivers shall be subject to the public comment requirements in paragraph (d) of this section.

(d) *Public Comment.* States shall solicit public input and comment on overall Program operations at least once every four years, beginning no later than the State's 1982 fiscal year, and shall emphasize those areas in which the State has some discretion. Certain waivers shall also be subject to public comment.

(1) Prior to the beginning of the comment period, State agencies shall publicize in the media that a waiver or overall Program operations are open to public comment. State press releases and other methods of publicity shall contain addresses for obtaining further information and shall specify the method used for soliciting public comment. The State shall use one or more of the following methods:

(i) State Administrative Procedures Act (APA) if the Act includes procedures for obtaining public comment on food stamp matters and provides at least 30 days for comment;

(ii) Publication (in addition to the notice of the available components) of a summary of the waiver or general Program operations. Also instructions on how to obtain more information shall be included. This publication shall be in sufficient media sources to ensure general coverage in all project areas. In addition, all Outreach contacts in the State's current plan shall be notified separately. Public comment shall be solicited for a minimum of 30 days.

(iii) State wide public hearing(s) at location(s) that are accessible to a significant number of interested persons.

(2) State agencies shall review, analyze, consider and prepare a summary of the comments received. The summary shall briefly outline the sources and contents of the comments and explain what was decided upon. Copies of the comments (either letters or transcripts of oral comments) and a comment summary shall be available for public inspection at the State office during its regular business hours. Copies of the comment summary shall be made available free of charge upon written request. The comment letters or transcripts and the summary shall be retained for at least one year for both public and FNS review.

(3)(i) Waivers which have a major, direct impact on participants shall be subject to public comment prior to their submission to FNS. If the State agency determines that comment period cannot be held because prompt implementation of the waiver is necessary due to an emergency situation or a need for rapid action to protect program integrity and

prevent significant program loss, it shall submit justification for an exemption to FNS with its waiver request.

(ii) Comments on waivers shall be solicited prior to submission of the request to FNS, and a summary of the comments received shall be submitted with the other information.

(4) Special emphasis shall be placed on the following areas when soliciting comments at least once every four years on overall Program operations: (i) ongoing State options such as development of utility standards, hearing and issuance systems, verification, and, if adopted, the periodic reporting and retrospective accounting system; and (ii) all current, pending and anticipated waivers. A waiver or State option need not be included in a particular comment cycle on overall program operations if it has been subject to the public comment procedures prescribed under paragraph (d)(i) of this section within the two years immediately preceding the comment cycle.

(5) State agencies are encouraged to maintain any currently used methods and may also use other methods for obtaining public comment, in addition to the minimum requirements specified above; for example, States with APA's may also hold public hearings, or welfare or food stamp advisory councils may review the material.

(91 Stat. 958 (7 U.S.C. 2011–202)

(Catalog of Federal Domestic Assistance Program No. 10.551, Food Stamp)

Dated: January 14, 1981.

Carol Tucker Foreman,

Assistant Secretary.

Part VII

Department of Education

National Direct Student Loan Program, College Work-Study Program, Supplemental Educational Opportunity Grant Program, Guaranteed Student Loan Program, Parent Loans for Undergraduate Students Program, and Pell Grant Program; Final Rule

DEPARTMENT OF EDUCATION

34 CFR Parts 674, 675, 676, 682, 683, and 690

National Direct Student Loan Program, College Work-Study Program, Supplemental Educational Opportunity Grant Program, Guaranteed Student Loan Program, Parent Loans for Undergraduate Students Progam, and Pell Grant Program

AGENCY: Department of Education.

ACTION: Final regulations with comments invited.

SUMMARY: The Secretary is issuing the regulations for the Pell Grant (formerly the Basic Educational Opportunity Grant Program), National Direct Student Loan, College Work-Study, Supplemental Educational Opportunity Grant, Guaranteed Student Loan and Parent Loans for Undergraduate Students Programs. These regulations are being issued to implement the statutory provisions contained in the Education Amendments of 1980, Pub. L. 96–374 concerning a student's cost of attendance at a postsecondary institution or school. The Secretary is also changing the provision in each program regulation that declares a student ineligible for that program if he or she has had a Guaranteed Student Loan, National Direct Student Loan or National Defense Student Loan discharged in bankruptcy. The provision will indicate that such a student is not ineligible for assistance.

DATES: All comments, suggestions, or objections must be received on or before March 23, 1981.

EFFECTIVE DATE: These regulations are expected to take effect 45 days after they are transmitted to the Congress. Regulations are usually transmitted to the Congress several days before they are published in the **Federal Register.** If you want to know the effective date of these regulations, call or write the Department of Education contact person.

ADDRESSES: Comments should be addressed to William L. Moran or Andrea Foley, U.S. Department of Education, Office of Student Financial Assistance, (Room 4318, ROB–3), 400 Maryland Avenue, SW., Washington, D.C. 20202.

FOR FURTHER INFORMATION CONTACT: William L. Moran or Andrea Foley, Office of Student Financial Assistance, Room 4318, ROB–3, 400 Maryland Avenue, SW., Washington, D.C. 20202. Telephone (202) 472–4300.

SUPPLEMENTARY INFORMATION:

I. On October 3, 1980, the Education Amendments of 1980 were enacted into law reauthorizing the title IV student financial assistance programs through the 1985–86 award year, as well as establishing the Parent Loans for Undergraduate Students Program.

One of the new provisions of the Education Amendments of 1980 involves the calculation of a student's cost of attendance at a postsecondary institution. This change will have a substantial impact on the Pell Grant Program and a lesser impact on the other title IV student programs. These programs include the National Direct Student Loan (NDSL), College Work-Study (CW–S), Supplemental Educational Opportunity Grant (SEOG), Guaranteed Student Loan (GSL), and Parent Loans for Undergraduate Students (PLUS) programs.

Under previous legislation, the cost of attendance for the Basic (Pell) Grant Program, as defined by the Commissioner of Education in regulations, was limited to three nondiscretionary components: (1) Actual tuition and fees charged to a full-time student for an academic year, (2) Actual institutional charges for room and board or a $1,100 allowance for all off-campus students, and (3) A $400 allowance for books, supplies and miscellaneous expenses. The new law alters the cost components to be used for this program by deleting the "actual cost" restriction and mandating a series of expanded discretionary allowances.

These regulations establish general rules for determining a student's cost components while maintaining the critical element of institutional discretion intended by Congress.

All cost of attendance components are determined on the basis of an academic year. However that determination must be adjusted to take into account a student's enrollment status and the period of the award and/or loan for purposes of all title IV programs except the Pell Grant Program. Because of the manner in which the Pell Grant Program is administered, all costs for that program are determined on the basis of a full-time student for a full academic year.

Reflecting the Education Amendments of 1980, these regulations include a provision which allows the financial aid administrator to adjust an individual student's need determination only for the NDSL, CW–S and SEOG Programs.

A. The following is a discussion of the major cost of attendance provisions in these regulations:

1. *Tuition and fees:* In accordance with the Education Amendments of 1980 which discuss the "tuition and fees normally assessed a full-time student," institutions may determine the tuition and fee component of a student's total cost of attendance in either of two ways. The institution may use the actual amount charged to a student for an academic year or it may use an average amount charged to full-time students for an academic year. The latter method eliminates the need for an institution to determine the exact amount charged to each student. However, this provision does not prohibit an institution which elects to calculate an average tuition and fee charge from using actual amounts for individual students whose charges vary greatly from the average.

If an institution chooses to use average charges, the institution must establish a separate average charge for undergraduate, graduate and professional students for the GSL, NDSL and CWS programs which include such students.

Also, if an institution establishes its tuition and fee charges on a residency requirement basis (for example, In and Out-of-State) and it elects to calculate an average tuition and fee charge, it must determine a separate average charge for each residency-based classification. This provision is intended to provide the most equitable treatment for students at institutions whose residency-based tuition and fee charges vary widely.

In addition, an institution may, but is not required to, determine a separate average charge for any other classification upon which it bases tuition and fees, such as separate programs or discrete schools within an institution.

2. *Room and board:* Reflecting the Education Amendments of 1980, these regulations categorize room and board allowances by four types of students.

a. For a student who has no dependents and lives with his or her parent(s), the allowance is set at the $1,100 minimum contained in the new law.

b. For a student who has no dependents and lives in institutionally owned or operated housing whether or not the student contracts with the institution for board, an institution has the option of either determining a standard allowance based on the average amount charged to most students for an academic year, as with tuition and fees, or using a student's actual room and board charges.

c. For a student who has no dependents and does not live with his or her parent(s) or in institutionally owned or operated housing, the institution determines a standard room and board allowance for an academic year. This

category includes students who contract with the institution for board but do not live in institutionally owned or operated housing.

d. For students with dependents, the institution determines an allowance for room and board for an academic year based on the expenses incurred by the student and his or her dependents.

3. *Miscellaneous allowances:* Reflecting the Education Amendments of 1980, the following series of three institutionally determined allowances are provided in these regulations. This is a significant change from the $400 allowance for books, supplies and miscellaneous expenses previously used in determining the Basic (Pell) Grant cost of attendance.

a. A reasonable allowance for books and supplies for an academic year.

b. A reasonable allowance for transportation for an academic year. This allowance may include the cost of travel between the student's residence and the institution and that of travel required for the completion of a course of study.

c. An allowance for miscellaneous personal expenses.

4. *Allowances for special circumstances:* The Education Amendments of 1980 establish several components for use in determining the cost of attendance when certain circumstances exist.

a. If a student is enrolled in a formal program of study outside the United States which is normally included in his or her academic program, a reasonable allowance determined by the institution is included for expenses related to study abroad (for example, travel costs to and from the foreign place of study).

b. For those students with dependent children, a reasonable allowance determined by the institution is included for expenses related to child care.

c. A reasonable allowance determined by the institution on an individual basis is included for expenses related to a student's handicap. However, as mandated by the new law, any expenses provided for by any other assisting agency or program must be excluded from this allowance. These regulations also provide that documentation of any such assistance be made a part of the student's financial aid records. On July 22, 1979, a memorandum was issued jointly by the Commissioner of Education and the Commissioner of Rehabilitation Services which established guidelines for use by State Vocational Rehabilitation Agencies and State Associations of Student Financial Aid Administrators in developing an agreement within each State for the improved coordination of financial assistance for handicapped students. In the light of the Education Amendments of 1980 and these regulations, that memorandum is being revised to emphasize that the State-level agreements should contain policies which reflect coordination of financial aid administrators and Vocational Rehabilitation agencies at the time a handicapped student's budget is being developed, before the making of title IV awards.

The definition of "handicapped" used in connection with the cost of attendance is taken from the definition set out in section 602(1) of the Education of the Handicapped Act.

5. *Correspondence study programs:* As under current regulations, the cost of attendance component for a student enrolled in a correspondence study program includes actual tuition and fees for an academic year. It further includes a room and board allowance for the period of required residential training which is to be determined in the same manner as for students who are not enrolled in a correspondence study program. In addition to those components, this section provides for two other allowances mandated in the new law for students in such programs: if required for completion of the course, a reasonable allowance determined by the institution for books and supplies for an academic year, and a reasonable allowance determined by the institution for travel between the student's residence and the institution while fulfilling a required period of residential training.

6. *Attendance costs in unusal circumstances:* Concerning title IV attendance costs for students whose program length exceeds an academic year at institutions using clock hours, these regulations provide that tuition and fee charges be prorated for the length of the academic year, as under the current Pell Grant program regulations, and added to all other general attendance costs.

B. The following three sections are to be used only in determining the cost of attendance for the Pell Grant Program in unusual circumstances:

1. A new section is included in these regulations concerning attendance costs for students whose program length is less than an academic year at institutions using clock hours. Under this provision, the tuition and fee charges are projected to the length of an academic year. This is done by multiplying the tuition and fee charge for the program by the following fraction:

Clock hours in the academic year ÷ clock hours in the program

The purpose of this section is to provide consistency in the determination of tuition and fee charges for the Pell Grant Program. Currently, students enrolled in programs whose length is less than an academic year are the only group whose tuition and fees cost component is based on less than an academic year's charges which creates an inequitable cost of attendance determination for those students.

2. For students who are incarcerated and for whom at least one-half room and board expenses are provided, the cost components include tuition and fees, an allowance for books and supplies and if applicable, an allowance for transportation and handicap expenses (all determined in the same manner as for non-incarcerated students).

The cost components for students who are incarcerated and for whom less than one-half room and board expenses are provided parallel general attendance costs.

c. As under current regulations, students enrolled at the U.S. Armed Forces academies are considered to have no cost of attendance.

II. The Department of Education currently has in effect regulations which provide that a Guaranteed Student Loan, National Direct Student Loan or National Defense Student Loan which is discharged in bankruptcy is considered in default for purposes of student eligibility for additional assistance (Pell Grant, 34 CFR 690.75(g)(3); NDSL, 34 CFR 674.2 and 674.9(h); CWS, 34 CFR 675.9(h); SEOG, 34 CFR 676.9(h); and GSL, 677.201(c)(3)). A person who is in default on such a loan is not eligible for additional student assistance at the same school which the student was attending with the proceeds of the discharged loan.

However, under the new Bankruptcy Code student loans are nondischargeable within the initial five years of actual repayment, except in cases of undue hardship (11 U.S.C. 523(a)(8)). Therefore, the need for an additional regulatory prohibition has decreased, and its retention may give the appearance of being punitive and contrary to the spirit if not the letter of the Bankruptcy Code.

Consequently, these regulations eliminate the eligibility restriction of title IV assistance for those students who have previously discharged their title IV loan indebtedness in bankruptcy.

This change applies to the Pell Grant Program, the National Direct Student Loan Program, the College Work-Study, the Supplemental Educational

Opportunity Grant Program, and the Guaranteed Student Loan Program.

Waiver of Notice of Proposed Rulemaking

The regulatory changes reflect the provision of the Education Amendments of 1980 which mandates the cost of attendance components to be used for all title IV student financial assistance programs. The Secretary wishes to give the program community as much advance notice as possible of these provisions so that student financial assistance awards may be packaged timely in preparation of the 1981–82 award year.

Accordingly, the Secretary finds that publication of a proposed rule in this instance would be unnecessary, impracticable and contrary to the public interest within the meaning of 5 U.S.C. 533(b), and is publishing these rules as final regulations.

Invitation To Comment

The public is particularly invited to comment on the following:

(1) The advisability of setting a specific dollar limitation on the cost of attendance allowance for miscellaneous personal expenses and on what dollar amount is a reasonable maximum, as well as the types of expenses which may be included in this allowance.

(2) The types of expenses to be included in the cost of attendance allowance for expenses related to dependent child care and the advisability of limiting the allowance to those expenses.

(3) Ways of reducing any regulatory burdens imposed by these regulations.

Interested persons are invited to submit comments and recommendations regarding these regulations. Written comments and recommendations may be sent to the address given at the beginning of this preamble. All comments must be received on or before the 60th day after publication of this document.

All comments submitted in response to these regulations will be available for public inspection, during and after the comment period, in Room 4318, Regional Office Building 3, 7th and D Streets, S.W., Washington, D.C., between the hours of 8:30 a.m. and 4:00 p.m. Monday through Friday of each week except Federal holidays.

Regulatory Flexibility Act Analysis

The Regulatory Flexibility Act (Pub. L. 96–354, enacted September 19, 1980) requires each Federal agency to prepare an initial regulatory flexibility analysis and a final regulatory flexibility analysis for each regulation that—

(1) Is published as a notice of proposed rulemaking after January 1, 1981, and

(2) Has a significant economic impact on a substantial number of small entities (small businesses, small organizations, or small governmental jurisdictions).

Because the Department has not yet established its own definitions of "small organization" and "small governmental jurisdiction", as contemplated by the Act, it is not possible to prepare a full initial regulatory flexibility analysis at this time. Further, since the regulations in this document are required by statute to be published in final no later than May 31, 1981, it is impracticable to delay publication while the necessary definitions are being developed. As noted elsewhere in this preamble, it was impracticable to take public comments before publishing these regulations as final. For the same reasons, it was impracticable to delay the regulations while an initial regulatory flexibility analysis was prepared. In these circumstances, the Regulatory Flexibility Act permits a waiver or delay of the initial regulatory flexibility analysis. If it is determined that these regulations are subject to that Act, the Secretary will prepare the necessary analyses at a later date.

As an interim measure, this document, to the maxium extent possible, includes information of the kind comtemplated by the Regulatory Flexibility Act, including the reasons for the regulations, the objectives and legal basis for the regulations, and any significant issues and alternatives for consideration by the public. To assist the Department in determining whether the Regulatory Flexibility Act applies to these regulations, and in complying with Act's requirements, public comment is especially invited on the following matters:

(1) The number and kind of small entities (small businesses, small organizations, or small governmental jurisdictions) affected by the regulations;

(2) The reporting, recordkeeping, and compliance burdens imposed by the regulations on small entities;

(3) The type of professional skills necessary for preparation of any reports or records required by the regulations;

(4) Any Federal rules that may duplicate, overlap, or conflict with the regulations;

(5) Any significant alternatives that would accomplish the purposes of the applicable statute but would minimize any significant economic impact of the regulations on small entities. The Secretary is particularly interested in suggestions on alternatives such as the following:

- The establishment of differing reporting or compliance requirements or timetables that take into account the resources available to small entities.
- The clarification, consolidation, or simplification of compliance and reporting requirements for small entities.
- The use of performance rather than design standards.
- An exemption for small entities from coverage of part of all of the regulations.

Assessment of Educational Impact

The Department particularly requests comments on whether the regulations in this document would require transmission of information that is already being gathered by or is available from any other agency or authority of the United States.

Citation of Legal Authority

A citation of statutory or other legal authority is placed in parentheses on the line following each substantive provision of these proposed regulations.

Dated: January 13, 1981.

Shirley M. Hufstedler,

Secretary of Education.

(Catalogue of Federal Domestic Assistance Numbers: Pell Grant Program 84.063, National Direct Student Loan Program, 84.038, College Work-Study Program, 84.033, Supplemental Educational Opportunity Grant Program, 84.007, Guaranteed Student Loan Program, 84.032, Parent Loans for Undergraduate Students Program, 84.032)

PART 674—NATIONAL DIRECT STUDENT LOAN PROGRAM

34 CFR Part 674 National Direct Student Loan Program is amended as follows:

§ 674.2 [Amended]

1. Section 674.2 is amended as follows:

In § 674.2, the definition for *default or in default* is revised in (c) by deleting "Except as provided in § 674.9" and capitalizing the next word so that (c) reads as follows: "The Secretary considers a loan discharged in bankruptcy not to be in default."

§ 674.9 [Amended]

2. Section 674.9 is amended as follows:

In § 674.9(g) the sentence is revised to read as follows:

* * * * *

*(g) *Bankruptcy.* The Secretary does not consider a loan made under the National Defense Student Loan, National Direct Student Loan, Guaranteed Student Loan, or Parent Loans for Undergraduate Students Program that is discharged in

bankruptcy to be in default for purposes of this section.

3. Section 674.11 is revised to read as follows:

§ 674.11 Allowable Costs of Attendance

(a) *General.* (1) Except as provided in paragraphs (d) and (e) of this section, a student's cost of attendance means—

(i) The tuition and fees charged to a full-time student for an academic year by the institution he or she is attending as determined under paragraph (b) of this section;

(ii) An allowance for room and board expenses for an academic year, as determined under paragraph (c) of this section;

(iii) A reasonable allowance determined by the institution for books and supplies for an academic year;

(iv) A reasonable allowance determined by the institution for transportation for an academic year. This allowance may include—

(A) The cost of travel between the student's residence and the institution; and

(B) The cost of travel required for completion of a course of study;

(v) A reasonable allowance determined by the institution for miscellaneous personal expenses for an academic year;

(vi) A reasonable allowance determined by the institution for an academic year for expenses related to study abroad for students enrolled in an academic program which normally includes a formal program of study outside the United States;

(vii) A reasonable allowance determined by the institution for expenses for an academic year related to child care for a student's dependent children; and

(viii) A reasonable allowance determined by the institution for a handicapped student's expenses for an academic year related to his or her handicap, if these expenses are not provided for by any other assisting agency or program. This allowance may include expenses related to special services, transportation, equipment and supplies.

(2) If another agency or program provides assistance for any expenses related to a student's handicap, thereby reducing the student's costs, the institution shall document such assistance as part of the student's financial aid record.

(3) For purposes of this section, a handicapped student is a student who meets the definition contained in section 602(1) of the Education of the Handicapped Act. Accordingly, a handicapped student is a student who is mentally retarded, hard of hearing, deaf, speech impaired, visually handicapped, seriously emotionally disturbed, or orthopedically impaired, or is otherwise health impaired or has specific learning disabilities which require special education and related services.

(4) The institution shall take into account when determining a student's cost of attendance—

(i) The period for which financial assistance is awarded; and

(ii) Whether the student is enrolled on a full-time or less than full-time basis.

(20 U.S.C. 1089)

(b) *Tuition and fees.* (1) An institution shall determine the tuition and fees charged a full-time student by calculating—

(i) The actual amount charged the full-time student for tuition and fees for an academic year; or

(ii) The average amount it charges full-time students for tuition and fees for an academic year. If the institution selects this option, it must determine an average cost for each of the following categories of students:

(A) Undergraduate students;

(B) Graduate students; and

(C) Professional students.

(2) If an institution establishes its tuition and fee charges on a residency requirement basis (e.g. In-State and Out-of-State) and elects to calculated an average tuition and fee charge, it shall establish a separate average charge for each different residency based classification.

(3) An institution may determine a separate average charge for any other distinct classification upon which it bases tuition and fee charges.

(4) An institution shall determine the tuition and fees charged a less than full-time student by—

(i) Calculating the actual amount it charges the student for tuition and fees for an academic year; or

(ii) Reducing the amount it calculated under paragraphs (b) (1), (2), or (3) of this section to reflect the less than full-time enrollment of that student.

(20 U.S.C. 1089)

(c) *Room and board.* (1) The institution shall calculate a student's room and board allowance as follows—

(i) For a student who has no dependents and lives with his or her parent(s), an allowance of $1,100;

(ii) For a student who has no dependents and lives in institutionally owned or operated housing—

(A) The actual amount charged the student for room and board for an academic year; or

(B) A standard allowance based on the average amount it charges most of its student residents for room and board for an academic year;

(iii) For a student who has no dependents and does not live with his or her parent(s) or in institutionally owned or operated housing, a standard allowance determined by the institution for room and board for an academic year; or

(iv) For a student who has dependents, an allowance determined by the institution for room and board for an academic year based upon expenses incurred by the student and his or her dependent(s).

(2) For purposes of this section, a spouse is considered a dependent.

(20 U.S.C. 1089)

(d) *Attendance costs for students in correspondence study programs.* The cost of attendance for a student enrolled in a correspondence study program means—

(1) Actual tuition and fees charged to the student for an academic year;

(2) A reasonable allowance determined by the institution for books and supplies for an academic year, if required for the completion of the program; and

(3) If incurred in fulfilling a required period of residential training, expenses for—

(i) Room and board; and

(ii) Travel between the student's residence and the institution.

(20 U.S.C. 1089)

(e) *Attendance costs for students whose program length exceeds the academic year at institutions using clock hours.* The cost of attendance for a student enrolled in an institution measuring progress in clock hours who is charged tuition and fees for a program whose length exceeds the length of the academic year at the institution, is determined by adding—

(1) Tuition and fees × clock hours in the academic year ÷ clock hours in the program plus

(2) Room and board and other applicable allowances determined under paragraphs (a) and (c) of this section.

(f) *Adjustments.* The institution may, in individual cases, adjust a student's cost of attendance if the cost of attendance calculated under paragraphs (a) through (e) of this section is not a reasonable approximation of the student's actual costs.

(20 U.S.C. 1089(e))

(g) *Required documentation.* An institution must be able to justify and document the cost of attendance figures established under this section.

(20 U.S.C. 1089)

PART 675—COLLEGE WORK-STUDY AND JOB LOCATION AND DEVELOPMENT PROGRAM

34 CFR Part 675 College Work Study Program is amended as follows:

* * * * *

§ 675.9 [Amended]

1. Section 675.9 is amended as follows:

In § 675.9(g) the sentence is revised to read as follows:

"(g) *Bankruptcy.* The Secretary does not consider a loan made under the National Defense Student Loan, National Direct Student Loan, Guaranteed Student Loan, or Parent Loans for Undergraduate Students Program that is discharged in bankruptcy to be in default for purposes of this section.

2. Section 675.11 is revised to read as follows:

§ 675.11 Allowable costs of attendance.

(a) *General.* (1) Except as provided in paragraphs (d) and (e) of this section, a student's cost of attendance means—

(i) The tuition and fees charged to a full-time student for an academic year by the institution he or she is attending as determined under paragraph (b) of this section;

(ii) An allowance for room and board expenses for an academic year, as determined under paragraph (c) of this section;

(iii) A reasonable allowance determined by the institution for books and supplies for an academic year;

(iv) A reasonable allowance determined by the institution for transportation for an academic year. This allowance may include—

(A) The cost of travel between the student's residence and the institution; and

(B) The cost of travel required for completion of a course of study;

(v) A reasonable allowance determined by the institution for miscellaneous personal expenses for an academic year;

(vi) A reasonable allowance determined by the institution for an academic year for expenses related to study abroad for students enrolled in an academic program which normally includes a formal program of study outside the United States;

(vii) A reasonable allowance determined by the institution for expenses for an academic year related to child care for a student's dependent children; and

(viii) A reasonable allowance determined by the institution for a handicapped student's expenses for an academic year related to his or her handicap, if these expenses are not provided for by any other assisting agency or program. This allowance may include expenses related to special services, transportation, equipment and supplies.

(2) If another agency or program provides assistance for any expenses related to a student's handicap, thereby reducing the student's costs, the institution shall document such assistance as part of the student's financial aid record.

(3) For purposes of this section, a handicapped student is a student who meets the definition contained in section 602(1) of the Education of the Handicapped Act. Accordingly, a handicapped student is a student who is mentally retarded, hard of hearing, deaf, speech impaired, visually handicapped, seriously emotionally disturbed, or orthopedically impaired, or is otherwise health impaired or has specific learning disabilities which require special education and related services.

(4) The institution shall take into account when determining a student's cost of attendance—

(i) The period for which financial assistance is awarded; and

(ii) Whether the student is enrolled on a full-time or less than full-time basis.

(20 U.S.C. 1089)

(b) *Tuition and fees.* (1) An institution shall determine the tuition and fees charged a full-time student by calculating—

(i) The actual amount charged the full-time student for tuition and fees for an academic year; or

(ii) The average amount it charges full-time students for tuition and fees for an academic year. If the institution selects this option, it must determine an average cost for each of the following categories of students:

(A) Undergraduate students;

(B) Graduate student; and

(C) Professional students.

(2) If an institution establishes its tuition and fee charges on a residency requirement basis (e.g. In-State and Out-of-State) and elects to calculate an average tuition and fee charge, it shall establish a separate average charge for each different residency based classification.

(3) An institution may determine a separate average charge for any other distinct classification upon which it bases tuition and fee charges.

(4)An institution shall determine the tuition and fees charged a less than full-time student by—

(i) Calculating the actual amount it charges the student for tuition and fees for an academic year; or

(ii) Reducing the amount it calculated under paragraphs (b)(1), (2), or (3) of this section to reflect the less than full-time enrollment of that student.

(20 U.S.C. 1089)

(c) *Room and board.* (1) The institution shall calculate a student's room and board allowance as follows—

(i) For a student who has no dependents and lives with his or her parent(s), an allowance of $1,100;

(ii) For a student who has no dependents and lives in institutionally owned or operated housing—

(A) The actual amount charged the student for room and board for an academic year; or

(B) A standard allowance based on the average amount it charges most of its student residents for room and board for an academic year;

(iii) For a student who has no dependents and does not live with his or her parent(s) or in institutionally owned or operated housing, a standard allowance determined by the institution for room and board for an academic year; or

(iv) For a student who has dependents, an allowance determined by the institution for room and board for an academic year based upon expenses incurred by the student and his or her dependent(s).

(2) For purposes of this section, a spouse is considered a dependent.

(20 U.S.C. 1089)

(d) *Attendance costs for students in correspondence study programs.* The cost of attendance for a student enrolled in a correspondence study program means—

(1) Actual tuition and fees charged to the student for an academic year;

(2) A reasonable allowance determined by the institution for books and supplies for an academic year, if required for the completion of the program; and

(3) If incurred in fulfilling a required period of residential training, expenses for—

(i) Room and board; and

(ii) Travel between the student's residence and the institution.

(20 U.S.C. 1089)

(e) *Attendance costs for students whose program length exceeds the academic year at institutions using clock hours.* The cost of attendance for a student enrolled in an institution measuring progress in clock hours who is charged tuition and fees for a program whose length exceeds the length of the academic year at the institution, is determined by adding—

(1) Tuition and fees × clock hours in the academic year ÷ clock hours in the program plus

(2) Room and board and other applicable allowances determined under paragraphs (a) and (c) of this section.

(f) *Adjustments.* The institution may, in individual cases, adjust a student's cost of attendance if the cost of attendance calculated under paragraphs (a) through (e) of this section is not a reasonable approximation of the student's actual costs.

(20 U.S.C. 1089(e))

(g) *Required documentation.* An institution must be able to justify and document the cost of attendance figures established under this section.

(20 U.S.C. 1089)

PART 676—SUPPLEMENTAL EDUCATIONAL OPPORTUNITY GRANT PROGRAM

34 CFR Part 676 Supplemental Educational Opportunity Grant Program is amended as follows:

§ 676.9 [Amended]

1. Section 676.9 is amended as follows:

In § 676.9(g) the sentence is revised to read as follows:

* * * * *

*(g) *Bankruptcy.* The Secretary does not consider a loan made under the National Defense Student Loan, National Direct Student Loan, Guaranteed Student Loan, or Parent Loans for Undergraduate Student Program that is discharged in bankruptcy to be in default for purposes of this section.

2. Section 676.11 is revised to read as follows:

§ 676.11 Allowable cost of attendance.

(a) *General.* (1) Except as provided in paragraphs (d) and (e) of this section, a student's cost of attendance means—

(i) The tuition and fees charged to a full-time student for an academic year by the institution he or she is attending as determined under paragraph (b) of this section;

(ii) An allowance for room and board expenses for an academic year, as determined under paragraph (c) of this section;

(iii) A reasonable allowance determined by the institution for books and supplies for an academic year;

(iv) A reasonable allowance determined by the institution for transportation for an academic year. This allowance may include—

(A) The cost of travel between the student's residence and the institution; and

(B) The cost of travel required for completion of a course of study;

(v) A reasonable allowance determined by the institution for miscellaneous personal expenses for an academic year;

(vi) A reasonable allowance determined by the institution for an academic year for expenses related to study abroad for students enrolled in an academic program which normally includes a formal program of study outside the United States;

(vii) A reasonable allowance determined by the institution for expenses for an academic year related to child care for a student's dependent children; and

(viii) A reasonable allowance determined by the institution for a handicapped student's expenses for an academic year related to his or her handicap, if these expenses are not provided for by any other assisting agency or program. This allowance may include expenses related to special services, transportation, equipment and supplies.

(2) If another agency or program provides assistance for any expenses related to a student's handicap, thereby reducing the student's costs, the institution shall document such assistance as part of the student's financial aid record.

(3) For purposes of this section, a handicapped student is a student who meets the definition contained in section 602(1) of the Education of the Handicapped Act. Accordingly, a handicapped student is a student who is mentally retarded, hard of hearing, deaf, speech impaired, visually handicapped, seriously emotionally disturbed, or orthopedically impaired, or is otherwise health impaired or has specific learning disabilities which require special education and related services.

(4) The institution shall take into account when determining a student's cost of attendance—

(i) The period for which financial assistance is awarded; and

(ii) Whether the student is enrolled on a full-time or less than full-time basis.

(20 U.S.C. 1089)

(b) *Tuition and fees.* (1) An institution shall determine the tuition and fees charged a full-time student by calculating—

(i) The actual amount charged the full-time student for tuition and fees for an academic year; or

(ii) The average amount it charges full-time students for tuition and fees for an academic year.

(2) If an institution establishes its tuition and fee charges on a residency requirement basis (e.g. In-State and Out-of-State) and elects to calculate an average tuition and fee charge, it shall establish a separate average charge for each different residency based classification.

(3) An institution may determine a separate average charge for any other distinct classification upon which it bases tuition and fee charges.

(4) An institution shall determine the tuition and fees charged a less than full-time student by—

(i) Calculating the actual amount it charges the student for tuition and fees for an academic year; or

(ii) Reducing the amount it calculated under paragraphs (b) (1), (2), or (3) of this section to reflect the less than full-time enrollment of that student.

(20 U.S.C. 1089)

(c) *Room and board.* (1) The institution shall calculate a student's room and board allowance as follows—

(i) For a student who has no dependents and lives with his or her parent(s), an allowance of $1,100;

(ii) For a student who has no dependents and lives in institutionally owned or operated housing—

(A) The actual amount charged the student for room and board for an academic year; or

(B) A standard allowance based on the average amount it charges most of its student residents for room and board for an academic year;

(iii) For a student who has no dependents and does not live with his or her parent(s) or in institutionally owned or operated housing, a standard allowance determined by the institution for room and board for an academic year; or

(iv) For a student who has dependents, an allowance determined by the institution for room and board for an academic year based upon expenses incurred by the student and his or her dependent(s).

(2) For purposes of this section, a spouse is considered a dependent.

(20 U.S.C. 1089)

(d) *Attendance costs for students in correspondence study programs.* The cost of attendance for a student enrolled in a correspondence study program means—

(1) Actual tuition and fees charged to the student for an academic year;

(2) A reasonable allowance determined by the institution for books and supplies for an academic year, if required for the completion of the program; and

(3) If incurred in fulfilling a required period of residential training, expenses for—

(i) Room and board; and

(ii) Travel between the student's residence and the institution.

(20 U.S.C. 1089)

(e) *Attendance costs for students whose program length exceeds the academic year at institutions using clock hours.* The cost of attendance for a student enrolled in an institution measuring progress in clock hours who is charged tuition and fees for a program whose length exceeds the length of the academic year at the institution, is determined by adding—

(1) Tuition and fees × clock hours in the academic year ÷ clock hours in the program plus

(2) Room and board and other applicable allowances determined under paragraphs (a) and (c) of this section.

(f) *Adjustments.* The institution may, in individual cases, adjust a student's cost of attendance if the cost of attendance calculated under paragraphs (a) through (e) of this section is not a reasonable approximation of the student's actual costs.

(20 U.S.C. 1089(e))

(g) *Required documentation.* An institution must be able to justify and document the cost of attendance figures established under this section.

(20 U.S.C. 1089)

PART 682—GUARANTEED STUDENT LOAN PROGRAM

34 CFR Part 682 Guaranteed Student Loan Program is amended as follows:

1. In § 682.200, the definition of the term "Estimated cost of attendance" is revised and inserted in correct alphabetical order as follows:

§ 682.200 General definitions.

* * * * *

Allowable Costs of Attendance

(a) *General.* (1) Except as provided in paragraphs (d) and (e), a student's cost of attendance means—

(i) The tuition and fees charged to a full-time student for an academic year by the institution he or she is attending as determined under paragraph (b);

(ii) An allowance for room and board expenses for an academic year, as determined under paragraph (c);

(iii) A reasonable allowance determined by the institution for books and supplies for an academic year;

(iv) A reasonable allowance determined by the institution for transportation for an academic year. This allowance may include—

(A) The cost of travel between the student's residence and the institution; and

(B) The cost of travel required for completion of a course of study;

(v) A reasonable allowance determined by the institution for miscellaneous personal expenses for an academic year;

(vi) A reasonable allowance determined by the institution for an academic year for expenses related to study abroad for students enrolled in an academic program which normally includes a formal program of study outside the United States;

(vii) A reasonable allowance determined by the institution for expenses for an academic year related to child care for a student's dependent children; and

(viii) A reasonable allowance determined by the institution for a handicapped student's expenses for an academic year related to his or her handicap, if these expenses are not provided for by any other assisting agency or program. This allowance may include expenses related to special services, transportation, equipment and supplies.

(2) If another agency or program provides assistance for any expenses related to a student's handicap, thereby reducing the student's costs, the institution shall document such assistance as part of the student's financial aid record.

(3) For purposes of this section, a handicapped student is a student who meets the definition contained in section 602(1) of the Education of the Handicapped Act. Accordingly, a handicapped student is a student who is mentally retarded, hard of hearing, deaf, speech impaired, visually handicapped, seriously emotionally disturbed, or orthopedically impaired, or is otherwise health impaired or has specific learning disabilities which require special education and related services.

(4) The institution shall take into account when determining a student's cost of attendance—

(i) The period for which the loan is intended; and

(ii) Whether the student is enrolled on a full-time or less than full-time basis.

(20 U.S.C. 1089)

(b) *Tuition and fees.* (1) An institution shall determine the tuition and fees charged a full-time student by calculating—

(i) The actual amount charged the full-time student for tuition and fees for an academic year; or

(ii) The average amount it charges full-time students for tuition and fees for an academic year. If the institution selects this option, it must determine an average cost for each of the following categories of students:

(A) Undergraduate students;

(B) Graduate students; and

(C) Professional students.

(2) If an institution establishes its tuition and fee charges on a residency requirement basis (e.g. In-State and Out-of-State) and elects to calculate an average tuition and fee charge, it shall establish a separate average charge for each different residency based classification.

(3) An institution may determine a separate average charge for any other distinct classification upon which it bases tuition and fee charges.

(4) An institution shall determine the tuition and fees charged a less than full-time student by—

(i) Calculating the actual amount it charges the student for tuition and fees for an academic year; or

(ii) Reducing the amount it calculated under paragraphs (b) (1), (2), or (3) of this section to reflect the less than full-time enrollment of that student.

(20 U.S.C. 1089)

(c) *Room and board.* (1) The institution shall calculate a student's room and board allowance as follows—

(i) For a student who has no dependents and lives with his or her parent(s), an allowance of $1,100;

(ii) For a student who has no dependents and lives in institutionally owned or operated housing—

(A) The actual amount charged the student for room and board for an academic year; or

(B) A standard allowance based on the average amount it charges most of its student residents for room and board for an academic year;

(iii) For a student who has no dependents and does not live with his or her parent(s) or in institutionally owned or operated housing, a standard allowance determined by the institution for room and board for an academic year; or

(iv) For a student who has dependents, an allowance determined by the institution for room and board for an academic year based upon expenses incurred by the student and his or her dependent(s).

(2) For purposes of this section, a spouse is considered a dependent.

(d) *Attendance costs for students in correspondence study programs.* The cost of attendance for a student enrolled in a correspondence study program means—

(1) Actual tuition and fees charged to the student for an academic year;

(2) A reasonable allowance determined by the institution for books and supplies for an academic year, if required for the completion of the program; and

(3) If incurred in fulfilling a required period of residential training, expenses for—

(i) Room and board; and

(ii) Travel between the student's residence and the institution.

(20 U.S.C. 1089)

(e) *Attendance costs for students whose program length exceeds the academic year at institutions using clock hours.* The cost of attendance for a student enrolled in an institution measuring progress in clock hours who is charged tuition and fees for a program whose length exceeds the length of the academic year at the institution, is determined by adding—

(1) Tuition and fees × clock hours in the academic year ÷ clock hours in the program plus

(2) Room and board and other applicable allowances determined under paragraphs (a) and (c).

(f) *Required documentation.* An institution must be able to justify and document the cost of attendance figures established under this section.

(20 U.S.C. 1089)

2. In § 682.201, paragraph (c)(3) is revised to read as follows:

§ 682.201 Eligible student.

* * * * *

(c) * * *

(3) The Commissioner does not consider a loan made under the National Defense Student Loan, National Direct Student Loan, Guaranteed Student Loan, or Parent Loans for Undergraduate Students Program that is discharged in bankruptcy to be in default for purposes of this section.

* * * * *

PART 683—PARENT LOANS FOR UNDERGRADUATE STUDENT PROGRAM

34 CFR Part 683 Parent Loans for Undergraduate Students Program is amended as follows:

1. In § 683.10, the definition of the term "Estimated cost of attendance" is revised and inserted in correct alphabetical order as follows:

§ 683.10 General definitions.

* * * * *

Allowable Cost of Attendance

(a) *General.* (1) Except as provided in paragraphs (d) and (e), a student's cost of attendance means—

(i) The tuition and fees charged to a full-time student for an academic year by the institution he or she is attending as determined under paragraph (b);

(ii) An allowance for room and board expenses for an academic year, as determined under paragraph (c);

(iii) A reasonable allowance determined by the institution for books and supplies for an academic year;

(iv) A reasonable allowance determined by the institution for transportation for an academic year. This allowance may include—

(A) The cost of travel between the student's residence and the institution; and

(B) The cost of travel required for completion of a course of study;

(v) A reasonable allowance determined by the institution for miscellaneous personal expenses for an academic year;

(vi) A reasonable allowance determined by the institution for an academic year for expenses related to study abroad for students enrolled in an academic program which normally includes a formal program of study outside the United States;

(vii) A reasonable allowance determined by the institution for expenses for an academic year related to child care for a student's dependent children; and

(viii) A reasonable allowance determined by the institution for a handicapped student's expenses for an academic year related to his or her handicap, if these expenses are not provided for by any other assisting agency or program. This allowance may include expenses related to special services, transportation, equipment and supplies.

(2) If another agency or program provides assistance for any expenses related to a student's handicap, thereby reducing the student's costs, the institution shall document such assistance as part of the student's financial aid record.

(3) For purposes of this section, a handicapped student is a student who meets the definition contained in section 602(1) of the Education of the Handicapped Act. Accordingly, a handicapped student is a student who is mentally retarded, hard of hearing, deaf, speech impaired, visually handicapped, seriously emotionally disturbed, or orthopedically impaired, or is otherwise health impaired or has specific learning disabilities which require special education and related services.

(4) The institution shall take into account when determining a student's cost of attendance—

(i) The period for which the loan is intended; and

(ii) Whether the student is enrolled on a full-time or less than full-time basis.

(20 U.S.C. 1089)

(b) *Tuition and fees.* (1) An institution shall determine the tuition and fees charged a full-time student by calculating—

(i) The actual amount charged the full-time student for tuition and fees for an academic year; or

(ii) The average amount it charges full-time students for tuition and fees for an academic year.

(2) If an institution establishes its tuition and fee charges on a residency requirement basis (e.g., In-State and Out-of-State) and elects to calculate an average tuition and fee charge, it shall establish a separate average charge for each different residency based classification.

(3) An institution may determine a separate average charge for any other distinct classification upon which it bases tuition and fee charges.

(4) An institution shall determine the tuition and fees charged a less than full-time student by—

(i) Calculating the actual amount it charges the student for tuition and fees for an academic year; or

(ii) Reducing the amount it calculated under paragraphs (b)(1), (2) or (3) of this section to reflect the less than full-time enrollment of that student.

(20 U.S.C. 1089)

(c) *Room and board.* (1) The institution shall calculate a student's room and board allowance as follows—

(i) For a student who has no dependents and lives with his or her parent(s), an allowance of $1,100;

(ii) For a student who has no dependents and lives in institutionally owned or operated housing—

(A) The acutal amount charged the student for room and board for an academic year; or

(B) A standard allowance based on the average amount it charges most of its student residents for room and board for an academic year;

(iii) For a student who has no dependents and does not live with his or her parent(s) or in institutionally owned or operated housing, a standard allowance determined by the institution for room and board for an academic year; or

(iv) For a student who has dependents, an allowance determined by the institution for room and board for an academic year based upon expenses incurred by the student and his or her dependent(s).

(2) For purposes of this section, a spouse is considered a dependent.

(20 U.S.C. 1089)

(d) *Attendance costs for students in correspondence study programs.* The cost of attendance for a student enrolled in a correspondence study program means—

(1) Actual tuition and fees charged to the student for an academic year;

(2) A reasonable allowance determined by the institution for books and supplies for an academic year, if required for the completion of the program; and

(3) If incurred in fulfilling a required period of residential training, expenses for—

(i) Room and board; and

(ii) Travel between the student's residence and the institution.

(20 U.S.C. 1089)

(e) *Attendance costs for students whose program length exceeds the academic year at institutions using clock hours.* The cost of attendance for a student enrolled in an institution measuring progress in clock hours who is charged tuition and fees for a program whose length exceeds the length of the academic year at the institution, is determined by adding—

(1) Tuition and fees × clock hours in the academic year ÷ clock hours in the program plus

(2) Room and board and other applicable allowances determined under paragraphs (a) and (c).

(f) *Required documentation.* An institution must be able to justify and document the cost of attendance figures established under this section.

(20 U.S.C. 1089)

PART 690—PELL GRANT PROGRAM

34 CFR Part 690 Pell Grant Program is amended as follows:

Subpart E—Cost of Attendance

Sec.

690.51 Allowable costs of attendance—general.
690.52 Tuition and fees.
690.53 Room and board.
690.54 Attendance costs for students in correspondence study programs.
690.55 Attendance costs for students whose program length exceeds the academic year at institutions using clock hours.
690.56 Attendance costs for students whose program length is less than the academic year at institutions using clock hours.
690.57 Attendance costs for incarcerated students.
690.58 Attendance cost for students at U.S. Armed Forces Academies.

1. Subpart E is revised to read as follows:

Subpart E—Cost of Attendance

§ 690.51 Allowable costs of attendance—general.

(a) Except as provided in §§ 690.54–690.58, a student's cost of attendance means—

(1) The tuition and fees charged to a full-time student for an academic year by the institution he or she is attending as determined under § 690.52;

(2) An allowance for room and board expenses for an academic year, as determined under § 690.53;

(3) A reasonable allowance determined by the institution for books and supplies for an academic year;

(4) A reasonable allowance determined by the institution for transportation for an academic year. This allowance may include—

(i) The cost of travel between the student's residence and the institution; and

(ii) The cost of travel required for completion of a course of study;

(5) A reasonable allowance determined by the institution for miscellaneous personal expenses for an academic year;

(6) A reasonable allowance determined by the institution for an academic year for expenses related to study abroad for students enrolled in an academic program which normally includes a formal program of study outside the United States;

(7) A reasonable allowance determined by the institution for expenses for an academic year related to child care for a student's dependent children; and

(8) A reasonable allowance determined by the institution for a handicapped student's expenses for an academic year related to his or her handicap, if these expenses are not provided for by any other assisting agency or program. This allowance may include expenses related to special services, transportation, equipment and supplies.

(b) If another agency or program provides assistance for any expenses related to a student's handicap, thereby reducing the student's costs, the institution shall document such assistance as part of the student's financial aid record.

(c) For purposes of this section, a handicapped student is a student who meets the definition contained in section 602(1) of the Education of the Handicapped Act. Accordingly, a handicapped student is a student who is mentally retarded, hard of hearing, deaf, speech impaired, visually handicapped, seriously emotionally disturbed, or orthopedically impaired, or is otherwise health impaired or has specific learning disabilities which require special education and related services.

(d) An institution must be able to justify and document the cost of attendance figures established under this subpart.

(20 U.S.C. 1089)

§ 690.52 Tuition and fees.

(a) An institution shall determine the tuition and fees charged a full-time student by calculating—

(1) The actual amount charged the full-time undergraduate student for tuition and fees for an academic year; or

(2) The average amount it charges full-time undergraduate students for tuition and fees for an academic year.

(b) If an institution establishes its tuition and fee charges on a residency requirement basis (e.g. In-State and Out-of-State) and elects to calculate an average tuition and fee charge, it shall establish a separate average charge for each different residency based classification.

(c) An institution may determine a separate average charge for any other distinct classification upon which it bases tuition and fee charges.

(20 U.S.C. 1089)

§ 690.53 Room and board.

(a) The institution shall calculate a student's room and board allowance as follows—

(1) For a student who has no dependents and lives with his or her parent(s), an allowance of $1,100;

(2) For a student who has no dependents and lives in institutionally owned or operated housing—

(i) The actual amount charged the student for room and board for an academic year, or

(ii) A standard allowance based on the average amount it charges most of its student residents for room and board for an academic year;

(3) For a student who has no dependents and does not live with his or her parent(s) or in institutionally owned or operated housing, a standard allowance determined by the institution for room and board for an academic year; or

(4) For a student who has dependents, an allowance determined by the institution for room and board for an academic year based upon expenses incurred by the student and his or her dependent(s).

(b) For purposes of this section, a spouse is considered a dependent.

(20 U.S.C. 1089)

§ 690.54 Attendance costs for students in correspondence study programs.

The cost of attendance for a student enrolled in a correspondence study program means—

(a) Actual tuition and fees charged to the student for an academic year;

(b) A reasonable allowance determined by the institution for books and supplies for an academic year, if required for the completion of the program; and

(c) If incurred in fulfilling a required period of residential training, expenses for—

(1) Room and board; and

(2) Travel between the student's residence and the institution.

(20 U.S.C. 1089)

§ 690.55 Attendance costs for students whose program length exceeds the academic year at institutions using clock hours.

The cost of attendance for a student enrolled in an institution measuring progress in clock hours who is charged tuition and fees for a program whose length exceeds the length of the academic year at the institution, is determined by adding—

$$\text{(a) Tuition and fees} \times \frac{\text{clock hours in the academic year}}{\text{clock hours in the program}}$$

and

(b) Room and board and other applicable allowances determined under §§ 690.51 and 690.53.

(20 U.S.C. 1089)

§ 690.56 Attendance costs for students whose program length is less than the academic year at institutions using clock hours.

The cost of attendance for a student enrolled in an institution measuring progress in clock hours who is charged tuition and fees for a program whose length is less than the length of the academic year at the institution is determined by adding—

(a) Tuition and fees × clock hours in the academic year ÷ clock hours in the program

and

(b) Room and board and other applicable allowances determined under §§ 690.51 and 690.53.

(20 U.S.C. 1070a and 1089)

§ 690.57 Attendance costs for incarcerated students.

(a) The cost of attendance for a student who is incarcerated and for whom at least one-half of his or her room and board expenses is provided includes—

(1) Tuition and fees as determined under § 690.52; and

(2) All applicable allowances as determined under § 690.51(a) (3), (4), and (8).

(b) The cost of attendance for a student who is incarcerated and for whom less than one-half of his or her room and board expenses is provided is the same as that allowed for a student who is not incarcerated.

(20 U.S.C. 1070a and 1089)

§ 690.58 Attendance cost for students at U.S. Armed Forces academies.

A student enrolled at the U.S. Military Academy at West Point, the U.S. Naval Academy, the U.S.C. Air Force Academy or the U.S. Coast Guard Academy is considered to have no cost of attendance.

(20 U.S.C. 1070a and 1089)

2. In Subpart G. § 690.75, paragraph (g)(3) is revised to read as follows:

§ 690.75 Determination of eligibility for payment.

* * * * *

(g) * * *

(3) The Secretary does not consider a loan made under the National Defense Student Loan, National Direct Student Loan, Guaranteed Student Loan, or Parent Loans for Undergraduate Students Program which is discharged in bankruptcy to be in default for purposes of this section.

Part VIII

Department of Transportation

Urban Mass Transportation Administration

Maintenance Requirements; Advance Notice of Proposed Rulemaking

DEPARTMENT OF TRANSPORTATION

Urban Mass Transportation Administration

49 CFR Part 638

[Docket No. 80–N]

Maintenance Requirements

AGENCY: Urban Mass Transportation Administration, DOT.

ACTION: Advance notice of proposed rulemaking.

SUMMARY: The Urban Mass Transportation Administration (UMTA) is proposing a policy that will insure that each mass transit operator maintains facilities and equipment purchased with UMTA funds consistent with practices necessary to provide adequately for safety, comfort and preservation and expansion of transit service. UMTA is seeking public comment to assist in the development of maintenance guidelines and procedures.

DATE: Comments must be received by May 22, 1981.

ADDRESS: Comments must be submitted to UMTA Docket No. 80–N, 400 7th Street, SW., Washington, D.C. 20590. All comments and suggestions received will be available for examination in room 9320 at the above address between 8:30 a.m. and 5:00 p.m., Monday through Friday. Receipt of comments will be acknowledged by UMTA if a self-addressed, stamped postcard is included with the comment.

FOR FURTHER INFORMATION CONTACT: Charlotte Adams, Office of Program Analysis, (202) 472–6997.

SUPPLEMENTARY INFORMATION: All comments received before the expiration of the comment period will be considered in the development of guidelines and procedures. Comments received after the expiration of the comment period will be considered to the extent feasible.

The Administrator has determined that the proposed action is significant under the criteria in the DOT Order for Improving Government Regulations (44 FR 11042, February 26, 1979) since it concerns a matter on which there may be substantial controversy and since it initiates a substantial change in policy.

A draft Regulatory Evaluation has been prepared and has been placed in the public docket, and is available at the address above.

Discussion

The Urban Mass Transportation Administration is proposing a policy that will insure that each mass transit operator maintains facilities and equipment purchased with UMTA funds consistent with practices necessary to provide adequately for safety, comfort, and preservation and expansion of transit sevice. This policy will be applicable to all funds administered for the maintenance and expanison of mass transportation systems by UMTA discretionary Grant funds (Section 3 (49 U.S.C. 1602)); Formula Grant funds (Section 5 (49 U.S.C. 1604)); Section 16(b)(2) funds (49 U.S.C. 1612(b)(2)); Interstate Transfer funds (23 U.S.C. 103) and Urban System funds (23 U.S.C. 142).

Federal investments in the capital and operating cost of transit equipment and facilities are substantial, totalling several billion dollars annually. The use of public transit depends largely upon its ability to provide efficient and reliable service. Efficiency and reliability are functions of the type and level of maintenance performed. Systematic maintenance practices by transit operators have proven effective in reducing service interruptions and in ensuring the useful life and operating expectancy of vehicles and equipment.

Although maintenance procedures impose time and cost burdens on transit operations, UMTA believes such an investment in preventive maintenance practices reduces the likelihood of costly replacement of facilities or equipment before they have reached the end of their useful life or costly repairs that could have been prevented if maintenance practices had been employed. UMTA recognizes the importance of the interrelationship of maintenance, transit reliability and the expense of maintaining vehicle and equipment. Proper maintenance demands a commitment by transit operators to secure the necessary financial and manpower resources often not sought because of immediate operating needs, and limited budgets. UMTA recognizes the difficulties faced by transit operators in establishing maintenance as a local priority and wishes to provide assistance to transit operators in this important area. Because we do not have the benefit, as yet, of systematic analyses of the relationship between maintenance practices and vehicles performance, no simple standard procedure will guarantee improvement in maintenance practices. The Federal government does, however, have a strong interest in ensuring that federal funds available for mass transportation assistance are used prudently and with maximum effectiveness. Therefore UMTA will begin to emphasize the importance of maintenance through this ANPRM, and its intent to identify and evaluate opportunities for improvement in maintenance practices and to initiate needed actions.

Section 116 of the Surface Transportation Assistance Act of 1978, Pub. L. 95–599, 92 Stat. 2698, requires State cerification and Federal oversight for maintenance of Interstate highways. Although there is no similar statutory requirement for Federal oversight of maintenance of transit facilities and equipment, both Section 3(A)(1)(D) and Section 5(d)(1) of the Urban Mass Transportation Act, as amended, provide the Secretary with the authority to subject grants and loans "to such terms, conditions, requirements and provisions as the Secretary determines necessary or appropriate." In addition, Section 5(d)(2) provides the Secretary with the authority to "issue such regulations as he deems necessary to administer this subsection * * * including requirements for improving the efficiency of transit services." These sections provide UMTA with the authority to require adequate maintenance for rail rolling stock, buses, and related transit equipment and facilities. As further support of bus maintenance in particular, the House Committee on Public Works and Transportation indicated in the legislative history to the 1978 Act, House Report No. 1485, dated August 11, 1978, that fourth tier formula funds may "be used to purchase bus equipment needed to maintain the usefulness of the buses pruchase." In addition, OMB Circular A–102, Attanchment N, Prescribes uniform property management standards for grantees of Federal agencies requiring in Section (d)(5) that "adequate maintenance procedures shall be implemented to keep the property in good condition."

The pressure for transit capacity, and the Federal Government's interest in ensuring that federal funds available for mass transportation assistance be used prudently and in a productive manner all necessitate increased attention to transit maintenance practices. UMTA wishes, however, to proceed thoughtfully in the development of alternative strategies for improved maintenance practices. Public comments are requested to assist in the development of future maintenance guidelines and procedures.

Vehicle reliability, therefore total system reliability, varies greatly because of the disparity in operator maintenance practices throughout the country and the many inherent variables in local situations. Manufacturers,

however, do provide either maintenance manuals or standards for the warranty period and/or useful life of vehicles, equipment, and facilities.

Assumptions

Because a systematic evaluation of the tradeoffs between reliability, vehicle availability and maintenance costs as a basis of proof of benefit to operators in terms of reduction in overall operating costs has not been established, it is necessary that assumptions be made regarding maintenance practices at all levels. These assumptions are:

1. There is a perceived cost savings resulting from adequate maintenance practices since service life, reliability and availability of equipment and facilities are increased.

2. Proper maintenance practices postpone and perhaps reduce the need for costly capital investments in new equipment.

3. The actual tradeoffs between reliability and maintenance costs vary from property to property. There is no standard definition of "adequate" maintenance as variables such as climate and road conditions necessitate the need for flexible maintenance practices.

4. A Federal policy which would require transit operators to institute routine maintenance practices would:

a. Provide the motivation for increased attention and allocation of local dollars for maintenance activities;

b. Increase performance and useful life of equipment and facilities;

c. Minimize replacement costs;

d. Result in cost savings for both Federal and local interests;

e. Require enforcement.

In the interest of making all transit operators and the general public aware of the issues to be considered by UMTA in developing a long term policy on maintenance, we specifically request comments on the following alternative requirements, the discussion of compliance, and the discussion of sanctions:

Alternative Maintenance Requirements

The alternatives outlined below are not mutually exclusive. Many could be combined depending upon the direction that evolves. It should be noted that the alternatives encompass various "innovative regulatory techniques" such as use of performance standards; use of voluntary standards; and tailoring of the standards to suit the particular characteristics of the grantee (size of the transit property, geographic location, and weather conditions). These techniques should be considered in commenting on the alternatives. The advantages and disadvantages listed for each alternative represent only our initial analysis. We invite commentors to provide additional advantages and disadvantages.

1. Reinforce UMTA's current authority by specifically requiring maintenance as a condition for UMTA assistance.

Advantages

a. Easy to implement.

b. Allows flexibility in implementation.

c. Accomodates local variables regarding maintenance needs and capabilities.

Disadvantages

a. Provides no uniform or consistent application of the policy because of the wide variety of interpretations of "adequate maintenance."

b. Provides no method of evaluation or monitoring.

c. Compliance is not defined, leading to possible confusion as to when sanctions might be applied.

2. Require grantees to develop and implement a maintenance plan for all vehicles, equipment, and fixed facilities. This plan would be based upon published manufacturers' equipment standards, or these standards and practices combined with an operator's judgment and experience which would result in maintenance practices designed for a specific operation. This plan would cover the warranty period and the stated service life of the equipment and facilities. UMTA would review and approve the plan and ensure compliance through on-site inspections or other means. UMTA also would require that maintenance records be kept.

Advantages

a. Through systematic reviews of the plans, UMTA could ensure some level of uniformity and consistency in maintenance practices among similar properties by comparing various maintenance plans with performance.

b. Provide flexibility in maintenance practices by allowing operators to develop individual maintenance plans.

Disadvantages

a. UMTA would need additional staff and perhaps different expertise to review maintenance plans or conduct inspections.

b. Development of such plans or recordkeeping may be perceived as costly and a paperwork burden.

c. Would not ensure any uniformity or consistency in application of maintenance practices.

3. Require grantees to develop and implement a maintenance plan for all vehicles, equipment, and fixed facilities. This plan would cover the warranty period and the stated service life of the equipment and facilities. UMTA would evaluate the adequacy of the plan by comparing it to the published minimum maintenance standards established by UMTA, on-site inspections, etc. UMTA also would require that maintenance records be kept.

Advantages

a. UMTA would have a standard or criterion against which to evaluate maintenance plans for each property and grantees would have guidelines for the development of such plans.

b. UMTA would be able to ensure consistency and uniformity among maintenance plans developed and maintenance practices.

c. Would provide UMTA with more direct involvement in operators' maintenance practices.

d. Would ensure protection of Federal investment.

Disadvantages

a. Would require additional expertise and staff resources to develop standards and monitor compliance.

b. May be perceived as unwarranted and improper Federal intervention in industry practices.

c. Could encourage adherence to a lower level of maintenance activity.

d. Does not account for variables in local conditions.

e. Could result in Federal Government assuming responsibility for equipment failures.

4. Require grantees to develop and implement a maintenance plan for all vehicles, equipment and fixed facilities. UMTA would require that the plan be made available for review upon request only.

Advantages

a. Provide flexibility in maintenance practices by allowing operators to develop individual maintenance plans.

b. Would not require additional UMTA staff or expertise to ensure compliance.

Disadvantages

a. UMTA would have no standard or criterion against which to evaluate the maintenance plans.

b. Would not ensure national consistency and uniformity in development of plans or application of maintenance practices.

c. Would not necessarily ensure protection of Federal investment.

d. Would not necessarily result in improved maintenance practices.

5. As part of the bid specification, require manufacturers to provide maintenance schedules to grantees for all facilities and equipment for their entire useful life, as do bus manufacturers, and require that these schedules be implemented.

Advantages

a. Minimum amount of involvement by UMTA.

b. Places responsibility for maintenance on grantee and manufacturers.

c. Easy to implement.

d. If a cost is attached to various maintenance activities, it could be used as part of life cycle costing procurement.

Disadvantages

a. Because the manufacturers' primary goal is to produce, the impact and usefulness of manufacturers' maintenance recommendations may be questionable.

b. UMTA would have no way of assessing the usefulness of such schedules except over time by comparing them with performance.

c. May impose a burden on manufacturers who do not recommend maintenance practices to develop such.

d. Manufacturers who do not or choose not to issue maintenance schedules may lose business.

6. Set aside a percentage of Section 5 funds to be used for maintenance activities and/or maintenance training and require that grantees use a percentage of each fiscal year's Section 5 apportionment for these activities.

Advantages

a. Would be easy to track.

b. Would provide visibility for such an emphasis.

c. Such funds also could be used to develop training or information-sharing workshops or courses for transit operators.

Disadvantages

a. Might not result in a satisfactory level of maintenance.

b. Would be difficult, if not impossible, to develop a basis for earmarking Section 5 funds or ensuring equitable distribution of funds among grantees.

c. Would not reflect grantees needs therefore might not have the desired effect.

d. UMTA would have no way of assessing the appropriateness of impact of the training provided or maintenance practices.

e. Earmarking funds by grantee or area may result in a reduction in amount expended on that activity. Could become a ceiling, rather than a floor.

f. Would open the way for earmarking funds for other "priority" activities, a policy discouraged in the past.

7. Establish a formal policy stating that UMTA will not replace vehicles or equipment prior to the end of the manufacturer's specified useful life unless extraordinary conditions warrant replacement before such time.

Advantages

a. Avoids UMTA involvement in specific maintenance requirements.

b. Provides grantees maximum flexibility to maintain vehicles and equipment as they deem appropriate.

c. May provide incentive to manufacturers to produce better quality products or provide improved guidance on maintenance practices.

Disavantages

a. May result in manufacturers recommending a reduced useful life.

b. May result in products of lesser quality or reduced attention by manufacturers to recommended maintenance practices.

c. May not be possible for manufacturer to determine "useful life" for all facilities and equipment.

d. Would put UMTA in position of refusing to replace failed equipment, thereby causing disruption of transit service.

e. Does not account for local variations in climate, terrain, service use, which affect useful life.

8. Initiate maintenance studies in the areas of maintenance planning, manuals, recordkeeping and actual maintenance practices.

Advantages

a. Would provide the cost data to support various levels of bus maintenance practices and resultant performance levels.

b. Would provide additional basis for developing guidance.

Disadvantages

a. May be difficult to obtain appropriate data with which to analyze cost effectiveness of various levels of maintenance.

Compliance

UMTA could impose one or more methods for ensuring grantee compliance with a maintenance requirement.

1. Do the minimum, essentially alternative No. 1.

2. Annual grantee certification to UMTA stating that grantee is in compliance with the chosen maintenance requirement.

3. Review of grantee maintenance records.

4. On-site inspections of grantee maintenance practices. These methods have associated impacts which should be considered in assessing the practicality of their implementation. For instance, on-site inspections and review of grantee maintenance records by UMTA may require additional UMTA staff and such involvement may be perceived as unwarranted Federal involvement in daily transit operations; depending upon the level required, recordkeeping may be considered a costly, time-consuming, paperwork burden.

Sanctions

UMTA could impose a variety of sanctions fro non-complicance with the chosen maintenance requirement depending upon the content of that requirement. Types and time limits for sanctions could vary depending upon the specifics of individual cases in question. Sanctions could include:

1. Submission of a corrective action plan if maintenance practices are found deficient.

2. A requirement that funds be used for the express purpose of correcting deficiencies within a specified time period.

3. Denial or suspension of operating assistance or capital assistance for replacement facilities or equipment or fleet expansion.

The applicability of each sanction to a specific operator's problem should be considered carefully in order to ensure its usefulness and practicality in achieving the desired goal of the chosen maintenance requirement. Withholding Section 5 operating assistance would have the desired immediate impact but also would deny the very funds needed to correct the maintenance deficiency cited. Witholding capital assistance would have a less immediate and perhaps less harmful impact but is an equally undesirable sanction. Regardless of the sanction chosen, UMTA would ensure a clear understanding of the intent of the policy and a clearly defined procedure for due process through which this policy would be implemented.

Dated: January 15, 1981.

Part IX

Department of Agriculture

Food and Nutrition Service

Commodity Supplemental Food Program

DEPARTMENT OF AGRICULTURE

7 CFR Part 247

Commodity Supplemental Food Program

AGENCY: Food and Nutrition Service, USDA.

ACTION: Final rule.

SUMMARY: These final regulations set forth several changes in the requirements for the Commodity Supplemental Food Program (CSFP). The major changes include: revision of § 247.4 on Donation of Supplemental Foods to conform with Part 250 language on claims and losses; new requirements for the State Plan, local agency selections, and certification procedures; permitting medical equipment for nutrition assessments to be an allowable administrative cost; and standards for administrative appeal of State agency decisions. These changes, revisions and additions are intended to improve program effectiveness and will improve service to needy individuals applying for and receiving commodity supplemental foods.

EFFECTIVE DATE: Except for the provisions of § 247.10(b), which prescribe the State agency administrative funding formula, the regulations are effective February 20, 1981. State and local agencies must implement all provisions, except the provision of § 247.10(b) no later than June 1, 1981. (The provisions of § 247.7(g), limiting certification periods for eligible postpartum and breastfeeding women and infants and children to a six months duration, shall be implemented for all new certifications starting no later than the first day of the first month beginning 120 days after publication. Participants who are already certified for longer than six months at that time need not have their current certification periods shortened). The provisions of § 247.10(b) relating to the State agency administrative funding formula shall be effective beginning in fiscal year 1982.

FOR FURTHER INFORMATION CONTACT: Barbara Sandoval, Director, Supplemental Food Programs Division, U.S. Department of Agriculture, Washington, D.C. 20250 (202) 447–8206. The final impact statement describing the options considered in developing this final rule and the impact of implementing each option is available on request from the above named individual.

SUPPLEMENTAL INFORMATION: On March 7, 1980, a set of interim regulations for the Commodity Supplemental Food Program were published in the **Federal Register** (45 FR 15062). The provisions of the regulations concerning administrative funds were made effective April 1, 1980. The other provisions of the regulations were made effective June 5, 1980, to allow an adequate period to meet the new requirements. The major changes: (1) modified the health services definition to require that local agencies maintain the same level of health services as were provided prior to March 3, 1978, while any remaining local agencies were encouraged to develop health service linkages and, at a minimum, advise participants of the importance of health care and where to obtain such services; (2) revised the administrative funding formula to base the administrative grant on 15 percent of total funds appropriated for commodities in order to provide States with a more stable allocation; (3) allowed State agencies to charge transportation costs to local agencies; and (4) clarified the certification procedure.

In response to the March 7, 1980, interim rules the Department received 24 comment letters from Regional offices, State agencies, local agencies, the general public and interested groups. The comments received and the actions taken by the Department are discussed below.

§ 247.1 General Purpose and Scope

No comments were received on this section and the interim rule has been published as final regulations.

§ 247.2 Definitions

Seven commenters opposed the new definition of a local agency which required local agencies who had arrangements with health service institutions prior to March 3, 1978, to maintain them at the same level effective prior to that date, while the few other local agencies were encouraged to develop health service linkages and required to advise participants of the importance of health care and where to obtain such services. The commenters stated that all agencies should have to provide health services. The Department strongly supports the maintenance of existing health service linkages for the benefit of participants. As explained in the March 7, 1980 rulemaking, a requirement that every local agency itself be able to make health services available is not possible, however, without causing severe disruption (and even possible termination) of the program in a few areas. The definition in the interim rulemaking required that all agencies providing health services maintain these services, while mandating that others must, at a minimum, educate particpants on the importance of health care and direct them to health care providers. This approach provides a link with health care to the maximum extent feasible, and is therefore maintained in the final rule.

§ 247.3 Administration

No comments were received on this section and the provisions are unchanged from those in the previous regulations.

§ 247.4 Donation of Supplemental Foods

A revision has been made to this section to clarify the State agency's liability to FNS for supplemental foods that are lost or destroyed. In addition, relative to this section, several comments were received concerning the food package although it was not a part of the interim regulations. Fourteen commenters requested that the food package be included in the regulations. The Department feels that including the food package in the regulations would not be feasible because the purchase of commodities are subject to market fluctuation. On occasion, the Department may not be able to get every food item if the purchase price is prohibitive or available quantities are low. In this case, FNS notifies the State agency to substitute equivalent items. This issue will, however, be addressed further under a separate instruction.

§ 247.5 State Plan

Four new requirements have been added to this section to increase the efficiency and effectiveness of Program operations. Approximately twelve commenters recommended that the State plan should include plans for program expansion; a section on outreach; a detailed description of the manner in which foods are distributed to each local agency and from the local agency to participants; provisions for public hearings; and procedures to local agencies for reporting, processing and resolving complaints about supplemental foods. The Department will require States to incude in their State plan:

(a) Any plans for requesting Program expansion or major redistribution of caseloads within the State and any plans for conducting outreach in order to reach maximum caseload. (This does not mean, of course, that any local agency must expand, but only that it must include any plans it may have to request an expansion.) The Department feels that including this information in

the State plan will provide an indication of each State's plans for Program operation for the year. This information will be in keeping with the Department's intent to tighten monitoring of caseload assignments and participation to assure the most efficient utilization of available Program funds.

(b) A detailed description of the manner in which foods are distributed to each local agency and to participants by the local agency. Since the ultimate purpose of CSFP is to provide supplemental foods to the participants, the Department feels an efficient food distribution system is essential. It is desirable to include in the Plan a description of the systems to be used to distribute supplemental foods within the State, to the local agencies, and from local agencies to participants. A flow chart showing movement of the foods from entry into the State until issuance to participants would be a desirable addition to the State Plan. A description of the flow chart will help provide a useful, overall picture of Program administration in the State.

(c) A list of plans to involve local agencies, participants and other interested parties in the development of the State plan for the next fiscal year. The Department agrees with commenters that local agency and public participation in developing State plans is essential to the success of the Program and would allow for the sharing of Program development responsibility.

(d) A description of procedures required of local agencies for reporting, processing and resolving complaints about supplemental foods.

§ 247.6 Selection of Local Agency

Seven commenters responded to this section. One commenter specifically suggested that the entire section be revised because it did not have any provisions for a deadline for decisions by the State agency regarding action on an application. This section has been revised to expand the rights of local agency applicants. States will be required to evaluate local agency applications within 30 days after receipt of the application and provide written approval or denial of the application. In addition, if an application is denied the State agency will advise the agency of the reason for the denial in writing and the right to appeal. A requirement has also been added that the State agency must maintain a record of the name and address of all agencies who submit an application for program operation when there are no funds available to serve the area. These applicants also must be notified by the State agency when funds become available.

§ 247.7 Certification

Four commenters opposed the provision of the interim regulations that allowed local agencies to utilize nutritional need as an eligibility requirement, but did not require them to do so. These four commenters thought it should be required. Three commenters supported the interim regulations, stating that many community based organizations would be unable to provide nutritional examinations. The Department believes that in addition to receiving the supplemental foods, ongoing health care is vital in further ensuring good health for Program participants. Furthermore, since some local agencies have always used nutritional need as an eligibility requirement, the regulations will allow, but not require, State agencies to require a nutritional need determination for potential participants. All local agencies will be required to advise each participant of the importance of participating in ongoing routine health care and of where health service facilities providing such health care for low-income persons are located.

One commenter recommended that there be an area or county residency requirement. The Department agrees that a residency requirement is desirable. The State agency may determine a service area for any local agency and may require that an applicant be residing within the service area at the time of application. However, the State agency may not impose any durational or fixed residency requirements, i.e., participants who frequently move may participate so long as they reside within the service area at the time that they apply. For example, migrants entering a CSFP service area will be considered as meeting the residency requirement. The Department believes that States should be allowed flexibility in setting service areas to ensure uniformity with service areas for other Federal, State and local public health or welfare programs.

Three commenters requested that the regulations specify what should be done when maximum caseload has been reached. They suggested that a waiting list be established to determine the number of potential participants not being served and to be used to notify applicants if slots become available. Procedures to use in certifying applicants when agencies reach maximum participation level have been added to the final regulations. Local agencies will be required to establish a priority system based on categorical eligibility. Pregnant and breastfeeding women and infants will be served first, then children ages 1–3 second, children ages 4–5 third and postpartum women last. Local agencies who perform nutritional risk screening may modify the priority system to include nutritional risk criteria with FNS approval. The Department believes that a priority system is desirable to ensure that when vacancies occur after a local agency has reached its maximum participation level, those persons in greatest need are served first.

Two commenters asked that we stipulate qualifications for persons who determine applicant eligibility. It was recommended that such persons be limited to health professionals or persons designated by a health professional. It was further suggested that we clarify the meaning of "such other personnel the local agency may designate" to issue prescriptions for food. The Department feels that State and local agency flexibility should be maintained in this area, and that a restrictive federal regulatory requirement is not necessary. Therefore, personnel who issue prescriptions for supplemental foods will remain at the discretion of the State or local agency.

The notification portion of this section has been revised to improve program management. Local agencies will be required to inform applicants during the certification procedure of the right to a fair hearing. Persons found ineligible for the Program during the certification visit will be advised in writing of their ineligibility and of the right to a fair hearing, and the reasons for ineligibility will be documented and retained at the local agency. A person found ineligible for the Program at any time during the certification period will be advised in writing 15 days before termination of eligibility of the reasons for ineligibility and of the right to a fair hearing. Each participant will be notified at least 15 days before the expiration of the certification period that eligibility for the Program is about to expire. Each participant will be given an explanation of how the food delivery system in the local agency operates. Finally, each participant will be advised of the types of health services available, where they are located, how they may be obtained and why they may be useful. The Department believes that the State or local agency has the obligation to ensure that all applicants are given adequate information concerning their program rights and responsibilities.

Six commenters opposed the allowance of yearly certifications. They believed that 12 month certification

periods would de-emphasize health care, and that certification periods should not exceed 6 months in order to conduct frequent nutrition education contacts and to better monitor participants' dietary and health habits so appropriate changes can be made on a timely basis. The Department agrees with commenters that 6 month certification periods will ensure that efficient and effective services are provided to all participants as well as ensure that participants gain maximum benefits from the Program. Therefore, this section will be modified to require that certification periods do not exceed 6 months in length. Most local agencies already assign certification periods of no more than 6 months.

Regarding dual participation and disqualification, one commenter felt that the participant should have the choice of which Program she will remain in. The Department feels that this decision should remain at the State or local agency's discretion. Therefore, this section will remain as it is.

Two commenters felt infants and children should be exempt from disqualification because they are not responsible for parents' fraud. The Department feels that although there is merit in keeping infants and children in the Program, there is no way to ensure that Program abusers are providing the supplemental foods to the child. In addition, as areas reach maximum caseload and have eligible individuals waiting to participate, if dependents of Program abusers are not disqualified, they will continue to occupy caseload slots while eligible infants and children are kept on waiting lists. The Department feels it is inequitable to allow this. Therefore, the provision for disqualification of participants regardless of age will be retained.

§ 247.8 Nutrition Education

Four commenters felt the term "nutrition information" was more appropriate than nutrition education since administrative funds are too limited to provide nutrition education. They felt that information on basic food groups and shopping tips as well as recipes could easily be made available through leaflets, pamphlets, etc., at food distribution sites. However, the Department believes one of the main objectives of the CSFP is to provide nutrition education to improve the nutrition and dietary habits of the target population. These objectives can be met through emphasizing the relationship of proper nutrition to the total concept of good health, with special emphasis on the nutritional needs of the participants and by assisting participants in obtaining a positive change in food habits so that improved nutritional status can be assured. In addition, Pub. L. 95–113 specifically authorizes administrative funds for nutrition education for program participants. Therefore, the term "nutrition education" remains in the final rules.

In addition, a provision in this section has been changed to allow food demonstrations for nutrition education purposes where food recipients are not all program participants, parents or caretakers of participants, provided the majority of people receiving food as part of the food demonstration are program participants.

§ 247.9 Financial Management Systems

There were no comments received on this section and the provisions are unchanged from those in the previous regulations.

§ 247.10 Administrative Funding

Twelve commenters expressed their views on the new funding formula which bases the administrative funds grant on 15 percent of the total monies appropriated for the Program. Two commenters supported the new formula and ten were opposed to it. Some of the objections were: it does not allow for expansion; FNS should not set a limit on the percentage of administrative funds to be used by the State agency; the formula does not consider economies of scale; and States are provided insufficient funds to carry out all program requirements. Based on the comments and the Department's experience with the formula, the Department has made two modifications in the formula. First in order to more accurately reflect current participation levels and administrative funding needs, the formula will be based on the State agency's average participation for the most recent three months for which data are available, rather than on the past twelve months. By using 12 months' data, those States where growth has taken place can get insufficient funds, while those States where programs have declined can receive excess funds. The final rules retain the provision of the interim rules that allows FNS to adjust the participation figures used in the computations if the Department believes the participation data for the last three months does not accurately reflect a State's operations for the coming fiscal year, such as when a State agency plans to start or terminate a program during the coming year.

The second change in the final rules is an increase in the maximum amount of the annual administrative grant that States are allowed to retain at the Sta level. The interim rules retained the provision originally issued in an earlie interim rule on March 3, 1978, that allowed State agencies to retain up to percent of the first $50,000 of the State' total administrative grant, plus 10 percent of the next $100,000 and 5 percent of the next $100,000 after that. This produced a maximum grant at the State level of $22,500. The Department believes that the maximum amount which State agencies should be allowe to retain needs to be increased to take account of inflation since 1978. Therefore, the final rules allow State agencies to retain $30,000 rather than $22,500. The new formula permits State agencies to retain 15 percent of the firs $50,000 in the overall State grant, 10 percent of the next $100,000 and 5 percent of the next $250,000 after that.

This new formula is not inequitable t local agencies. Their administrative grant levels have been rising with inflation each year, since overall administrative grants are tied to the co of the commodities distributed in the program.

The Department would like to note that the March 7, 1980, interim rules earlier provided some relief to State agencies by allowing them to retain a larger proportion of the State grant, witl FNS approval, when the State provides warehousing services and by allowing State agencies to charge local agencies for reasonable transportation costs.

Other than these changes, the administrative funding formula remains the same as the March 7, 1980, interim rules. This formula has the advantage o ensuring that all available administrative funds are actually distributed to States, and that State and local agencies know the amount of administrative funds they will receive a the beginning of the fiscal year, so that they can plan in advance.

Since administrative grants for fiscal year 1981 were allocated at the start of the current fiscal year and State and local agencies have planned accordingly, the new provisions of this final rule relating to State administrative grants will become effective on October 1, 1981, at the beginning of the 1982 fiscal year.

§ 247.11 Administrative Costs

Part of this section has been revised to allow medical equipment to be purchased with administrative funds. The Department feels that medical equipment used for nutritional assessments should be an allowable administrative cost. The medical equipment would include centrifuges, measuring boards, skin fold calipers,

spectrophotometers, hemoglobinometers, hematofluorometers, scales and expendable medical supplies used in nutritional assessments. FNS specifications for allowable limits for the costs of these items are available. These specifications were developed with the aid of the Center for Disease Control.

§§ 247.12–247.19

No comments were received on these sections which include Program income, Records and reports, Procurement and property management standards, Audits, Investigations, Claims, Closeout procedures, and Nondiscrimination.

§ 247.20 Fair Hearing Procedures for Participants

It has been brought to the Department's attention that some State agencies have a standard hearing procedure that is used in cases of appeal for all programs administered by the State agency. In such cases, the Department feels it would be appropriate for those agencies to use their standard hearing procedure in instances of appeal of State or local agency actions with FNS approval. The final regulations so provide.

§ 247.21 Management Evaluation and Reviews

No comments were received on this section. However, the Department feels that States should have the capability of reconciling prescription redemptions to the issuance and certification records. This is an item which States may want to check during monitoring visits.

§ 247.22 Administrative Appeal of State Agency Decisions

Two commenters felt that local agencies should be able to appeal State agency actions affecting them adversely. The Department agreed with commenters and has added a new section to the regulations to provide a hearing procedure whereby a local agency adversely affected by a State agency action may appeal the action. The right to appeal shall be granted when the local agency's application to participate is denied, when participation is terminated, when a contract is not renewed by the State agency or when any other adverse action is taken which affects local agency participation. The adverse action shall be postponed until a hearing decision is reached. In conjunction with promoting equal and fair rights, the Department firmly believes local agencies should be afforded the right to appeal a decision with which they disagree.

§ 247.23 Miscellaneous Provisions

No comments were received on this section and the provisions are unchanged from those in the previous regulations.

Implementation

Because of changes made in such areas as notification requirements, appeal rights, use of a priority system, and the requirement for limiting certification periods (for participants other than pregnant women) to six months, the final rules allow State agencies 120 days to implement their provisions. The provisions affecting the State administrative funding formula take effect on October 1, 1981.

This final action has been reviewed under USDA procedures established in the Secretary's memorandum 1955 to implement Executive Order 12044, and has been classified as "not significant."

7 CFR Part 247 is revised to read as follows:

PART 247—COMMODITY SUPPLEMENTAL FOOD PROGRAM

Sec.

247.1 General purpose and scope.
247.2 Definitions.
247.3 Administration.
247.4 Donation of supplemental foods.
247.5 State agency plan of program operation and administration.
247.6 Selection of local agencies.
247.7 Certification.
247.8 Nutrition education.
247.9 Financial management systems.
247.10 Administrative funding.
247.11 Administrative costs.
247.12 Program income.
247.13 Records and reports.
247.14 Procurement and property management standards.
247.15 Audits.
247.16 Investigations.
247.17 Claims.

247.19 Nondiscrimination.
247.20 Fair hearing procedure.
247.21 Management evaluation and review.
247.22 Administrative appeal of State agency decisions.
247.23 Miscellaneous provisions.

Authority: Food and Agriculture Act of 1977, Public Law 95–113, Section 5, 91 Stat. 980 et seq.

§ 247.1 General purpose and scope.

This part specifies the policies and prescribes the regulations for the Commodity Supplemental Food Program (CSFP) under which women, infants and children in low-income groups, vulnerable to malnutrition, may obtain supplemental nutritious foods donated by the U.S. Department of Agriculture. The purpose of the Program is to provide supplemental foods and nutrition education to eligible persons through State or local agencies.

§ 247.2 Definitions.

For the purpose of this part and of all contracts, guidelines, instructions, forms, and other related documents, the term:

"Administrative costs" means those direct and indirect costs, identified under FMC 74–4, which State and local agencies determine to be necessary to support Program operations. Such costs are further addressed in § 247.11.

"A–90" means Office of Management and Budget Circular A–90 which provides guidance for the coordinated development and operation of information systems.

"A–95" means Office of Management and Budget Circular A–95 which sets forth procedures for evaluation, review and coordination of Federal and federally assisted programs and projects.

"A–102" means Office of Management and Budget Circular A–102 which sets forth uniform administrative requirements for grants-in-aid to State and local governments and federally recognized Indian tribal governments.

"A–110" means Office of Management and Budget Circular A–110 which sets forth uniform administrative requirements for grants to, and other agreements with, institutions of higher education, hospitals, and other quasi-public and private non-profit organizations.

"Breastfeeding women" means women up to one year postpartum who are breastfeeding their infants.

"Categorical ineligibility" means persons who do not meet the definition of pregnant women, breastfeeding women, postpartum women, or infants or children.

"Certification" means the use of criteria and procedures to assess and document each applicant's eligibility for the Program.

"Children" means persons who are at least one year of age but have not reached their sixth birthday.

"Department" means the U.S. Department of Agriculture.

"Distributing agency" means an agency which has entered into an agreement with a State agency and with the Department for the distribution of commodities under 7 CFR Part 250, Subchapter B—Food Distribution Regulations.

"Dual participation" means simultaneous participation by an individual in the CSFP in more than one local agency or clinic, or simultaneous participation in the CSFP and in the Special Supplemental Food Program for

Women, Infants and Children (WIC) 7 CFR Part 246.

"Fiscal year" means the Federal fiscal year covering the period of 12 calendar months beginning October 1 of any calendar year and ending September 30 of the following year.

"FMC 74–4" means Federal Management Circular 74–4, which sets forth principles for determining costs applicable to grants and contracts with State and local governments.

"FNS" means the Food and Nutrition Service of the U.S. Department of Agriculture.

"Infants" means persons under one year of age.

"Local agency" means a public or private nonprofit agency which enters into an agreement with the State agency to administer the Program at the local level. A local agency determines the eligibility of applicants, distributes supplemental foods and provides nutrition education to low-income persons, either directly or through another agency with which it has entered into a written agreement in accordance with § 247.6. In addition, existing local agencies are required to maintain the health-ties at the same level that were effective prior to March 3, 1978.

All other local agencies are encouraged to develop health services linkages and, at a minimum, are required to advise participants of the importance of health care and where low-income persons can obtain such services. The term local agency includes an IHS service unit, an Indian tribe, band or group recognized by the Department of the Interior, or an intertribal council or group that is an authorized representative of Indian tribes, bands or groups recognized by the Department of the Interior.

"Nonprofit agency" means a private agency which is exempt from income tax under the Internal Revenue Code of 1954, as amended.

"Participants" means pregnant women, breastfeeding women, postpartum women, infants and children who are receiving supplemental foods under the Program.

"Participation" means the number of persons who have received supplemental foods through the Program in the reporting period.

"Postpartum women" means women up to 12 months after termination of pregnancy.

"Pregnant women" means women determined to have one or more embryos or fetuses in utero.

"Program" means the Commodity Supplemental Food Program (CSFP) of the Food and Nutrition Service of the U.S. Department of Agriculture.

"Secretary" means the Secretary of the U.S. Department of Agriculture.

"SFPD" means the Supplemental Food Programs Division of the Food and Nutrition Service of the U.S. Department of Agriculture.

"State" means any of the 50 States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, the Trust Territory of the Pacific Islands and the Northern Mariana Islands.

"State agency" means the agency of a State designated by the State to administer the Program; or an Indian tribe, band or group recognized by the Department of the Interior; or an Intertribal council or group recognized by the Department of the Interior and which has an ongoing relationship with Indian tribes, bands or groups for other purposes and has contracted with them to administer the Program; or the appropriate area office of the Indian Health Service of the Department of Health and Human Services.

"State Agency Plan of Program Operation and Administration (State Plan)" means the document which, as required by § 247.5 describes the manner in which the State agency intends to implement and operate all aspects of Program administration within its jurisdiction.

"Supplemental foods" means foods donated by the Department for use by eligible persons in low-income groups who are vulnerable to malnutrition.

"WIC Program" means the Special Supplemental Food Program for Women, Infants and Children (7 CFR Part 246).

§ 247.3 Administration.

(a) *Delegation of Authority to FNS.* Within the Department, FNS shall act on behalf of the Department in the administration of the Program. Within FNS, SFPD and the Regional Offices are responsible for Program administration. FNS will provide assistance to State and local agencies and evaluate all levels of Program operations to assure that the goals of the Program are achieved in the most effective and efficient manner possible.

(b) *Delegation of authority to State agency.* The State agency is responsible for all operations under the Program within its jurisdiction and shall administer the Program in accordance with the requirements of this part, FMC 74–4, A–90, A–95, A–102, A–110, and 7 CFR Part 250 Subchapter B where applicable. The State agency shall provide guidance to local agencies on all aspects of Program operations. If distribution of supplemental foods or other Program operations at the State level are performed by an agency of the State other than the State agency, the State agency shall enter into a written agreement with the other agency. The agreement shall outline the responsbilities of each agency under the Program and shall be included in the State Plan. In addition, when a State agency enters into an agreement with a distributing agency, the distributing agency still must enter into a separate agreement with the Department as required by 7 CFR Part 250 Subchapter B, Food Distribution.

(c) *Agreement and State Plan.* Each State agency desiring to administer the Program shall annually submit a State Plan and enter into a written agreement with the Department for the administration of the Program in the jurisdiction of the State agency in accordance with the provisions of this part.

(d) *Delegation of authority to local agency.* The local agency shall provide Program benefits to participants in the most effective and efficient manner, and shall comply with this part and the Satte Plan.

§ 247.4 Donation of supplemental foods.

The Department shall donate supplemental foods for use in the Program in accordance with the terms and conditions of this part and with the terms and conditions applicable to distributing agencies under 7 CFR Part 250 Subchapter B, Food Distribution Regulations, as long as these provisions are not inconsistent with this part. The State agency is strictly liable to FNS for losses of supplemental foods donated by the Department and shall safeguard items from theft, spoilage, other damage or destruction or other loss. If supplemental foods donated by the Department are lost through any cause, prior to issuance to the participant, the State agency shall provide replacement in kind or submit payment to FNS in accordance with Section 250.6(m) under 7 CFR Part 250 Subchapter B, Food Distribution regulations.

§ 247.5 State agency plan of program operation and administration.

(a) *Requirements.* By August 15 each year the State agency shall submit to FNS for approval a State Plan for the following fiscal year. FNS shall provide written approval or denial of a completed State Plan or amendment within 30 days of receipt. Within 15 days after FNS receives an incomplete submission, FNS shall notify the State agency that additional information is needed to complete the Plan. Any disapproval shall be accompanied by a

statement of the reasons for the disapproval. Approval of the Plan by FNS is a prerequisite to the payment of funds to the State agency for Program administration and the delivery of commodities. The Plan and all amendments shall be signed by the Chief Officer of the State agency or equivalent. Portions of the State Plan which do not change from year to year need not be resubmitted. However, the State agency shall provide the title of the section(s) that remain unchanged as well as the year of the last Plan in which the section was submitted. The State Plan shall provide the following:

(1) The names and addresses of each local agency (i) which have an agreement with the State agency for Program administration; and (ii) the name and address of each certification, food distribution and storage site under the jurisdiction of the local agency.

(2) The specific income criteria and nutritional risk criteria (if used) to be used in certifying persons as being in need of supplemental foods and the period of time covered by certifications in each local agency.

(3) A description of any plans for requesting program expansion or major redistribution of caseloads within the State during the fiscal year.

(4) A description of any plans for conducting outreach to reach maximum caseload.

(5) The plan for nutrition education services for the fiscal year. The nutrition education portion of the State Plan shall include an evaluation component which includes a systematic procedure for participants' input.

(6) A detailed description of the manner in which foods are distributed to each local agency and to participants by the local agency.

(7) A description of the manner in which the State agency plans to monitor each local agency.

(8) A description of plans to involve local agencies, participants and other interested parties in the development of the State Plan for the next fiscal year.

(9) A description of how the financial management system will provide an accurate, current and complete disclosure of the financial status of the State's Program including an accurate accounting of all administrative funds received and expended.

A plan for the detection of dual participation within the jurisdiction of the State agency. In States where the CSFP and either an Indian State agency for CSFP or a WIC Program State agency operate in the same area, a copy of the written agreement between the State agencies for the detection and prevention of dual participation must be submitted.

(11) Procedures developed in accordance with Section 250.6(u) and provided to local agencies for reporting, processing and resolving complaints about supplemental foods.

(12) A description of the audit procedures, including: (i) A description of the scope and frequency of audits of the State agency and local agencies and a delineation of the procedures used that assure audit examinations of the CSF Program at reasonable frequency. Audit agency guidelines for selecting a sample of grant programs for audits should be addressed; (ii) A description of the audit organization in sufficient detail to demonstrate the independence of the audit organization; and (iii) The number of local agencies in which the CSF Program was included in the audit in the last four full quarters, and the number of local agency audits planned for the coming fiscal year which include examinations of the CSF Program.

(13) A description of the procedures used to comply with the nondiscrimination requirements of Title VI of the Civil Rights Act of 1964, the FNS Civil Rights Instruction 113–2 and with 7 CFR Part 15, including racial and ethnic participation data collection, public notification procedures and the annual civil rights compliance review process.

(14) A description of the fair hearing procedures for participants.

(b) *Submission of local agency information.* Local agencies under the State agency's jurisdiction may be required to submit information, similar to the preceding requirements, to the State agency for its use in assuring compliance with this section.

(c) *Submission to Governor.* Annually, by June 30, all State agencies, except Indian State agencies, shall submit the State Plan to the Governor, or a delegated authority, for comment as required by Circular A–95 (38 FR 32874) issued by the Office of Management and Budget, September 13, 1973. A period of 45 days from the date the Governor receives the State Plan shall be afforded for comment. The Governor's comments shall be submitted to FNS with the State Plan. If the Governor makes no comment, a statement to that effect shall be attached to the State Plan. Amendments to the State Plan need not be submitted to the Governor unless there is a significant change. Indian State agencies are encouraged to consult areawide Federal planning offices in the development of their State Plan.

(d) *Amendments.* At any time the State agency may amend the State Plan. The State agency shall submit the amendments to FNS for approval.

(e) *Retention of copy.* A copy of the approved State Plan shall be kept on file at the State agency for public inspection.

§ 247.6 Selection of local agencies.

(a) *Application of local agencies.* The State agency shall require each agency which desires approval as a local agency to submit a written application which contains sufficient information to enable the State agency to make a determination as to the eligibility of that agency. If the State agency and the local agency are the same, this requirement does not apply. The State agency shall notify the agency of the approval or disapproval of its application within 30 days of receipt of the agency's application. If the application is denied the State agency shall advise the agency of the reasons for the denial in writing and the right to appeal as set forth in Section 247.22 of this part. When an agency submits an application and there are no funds to serve the area, the applicant agency shall be notified within 30 days of receipt of the application that there are currently no funds available for Program initiation or expansion. The State agency shall return the application and maintain a record of the name and address of the applicant agency. The potential agency whose application was returned shall be notified by the State agency when funds become available. The State agency may approve the application of a local agency in an area already served by the Program or a WIC program only if a new local agency is necessary to serve the full extent of need in that area or population. If the State agency approves the operation of a new local agency in an area already served by an existing Program or a WIC Program, documentation which indicates the need for both local agencies in that area shall be maintained on file at the State agency for FNS review and evaluation.

(b) *Agreements between State and local agencies.* (1) State agencies shall enter into agreements with local agencies which are approved to participate in the Program. If the State agency and the local agency are the same, this requirement does not apply. Copies of the agreement shall be kept on file at both the State and local agency for purposes of review and audit. Such agreements shall be in writing and shall contain the following: (i) An assurance that local agencies will comply with all the fiscal and operational requirements prescribed by the State agency as required by this part; (ii) An assurance that local agencies will provide nutrition education as required by this part; (iii)

For those local agencies in existence prior to March 3, 1978, an assurance that they will continue arrangements with health service providers for the provision of services to Program participants at least at the level that existed on March 2, 1978, and for other local agencies, an assurance that they will advise participants of the importance of health care and where low-income persons can obtain such care; (iv) An assurance that issuance of supplemental food is in accordance with this part and FNS food package instructions; (v) A statement that local agencies are responsible to the State agency for any loss resulting from improper or negligent issuance by them of prescriptions for supplemental foods; (vi) A statement that local agencies are responsible to the State agency for any Program losses caused by other agencies which have entered into agreements with the local agency; (vii) The names and address of each certification, food distribution and storage site under the jurisdiction of the local agency; and (viii) An assurance that the local agencies will maintain accurate and complete records with respect to their activities under the Program and retain such records for a period of 3 years following the date of submission of the final expenditure report for the period to which the report pertains.

(c) *Agreements between local agencies and other agencies.* A local agency which cannot fulfill one or more of these requirements shall enter into written agreement with another agency(s) in order to comply with these requirements. The written agreement shall state the Program responsibilities of the other agency, shall be approved by the State agency, and shall be on file at both the State agency and local agency. State agency approval of agreements with applicant agencies shall be accomplished during the application process.

§ 247.7 Certification.

(a) *Eligibility requirements.* To be certified as eligible to receive supplemental foods under the Program, each applicant shall meet the following requirements:

(1) Categorical eligibility as an infant, child, or pregnant, postpartum or breastfeeding woman;

(2) Eligibility for local benefits under existing Federal, State or local food, health or welfare programs for low-income persons;

(3) At the State agency's discretion, be determined by a physician, a staff member of the local agency or his or her designee to be at nutritional risk; and

(4) Meet a residency requirement if one is established by the State agency. The State agency may determine a service area for any local agency, and may require that an applicant be residing within the service area at the time of application to be eligible for the Program. However, the State agency may not impose any durational or fixed residency requirements. For example, migrant and seasonal farmworkers entering a CSFP service area shall be considered as meeting the residency requirement.

(b) *Processing standards.* (1) When there are no funds available to provide program benefits, the local agency shall maintain waiting lists of individuals who visit the local agency to apply for the Program. To enable the local agency to contact the individuals when caseload space becomes available, these waiting lists shall include the name of the applicant, the date placed on the waiting list, an address or phone number of the applicant and the applicant's status, i.e., pregnant, breastfeeding, child's age. Individuals shall be notified of their placement on a waiting list within 20 days after they visit the local agency during clinic office hours to request Program benefits.

(2) The following priorities based on categorical eligibility shall be applied when vacancies occur to ensure that persons in greatest need are served first. (i) Pregnant and breastfeeding women and infants will be served first; (ii) Children ages 1–3 second; (iii) Children ages 4–5 third; and (iv) Postpartum women last. Local agencies may elect to use income as a subcategory within the priority system. Local agencies who perform nutritional screening may adapt the priority system to meet their needs with FNS approval. When maximum caseload has not been reached, the local agency shall either certify the applicant or notify the applicant of ineligibility for the Program within 20 days of the applicant's first visit to the local agency to apply for participation in the Program. A person who is determined to be eligible shall receive supplemental foods within 10 days of notification of eligibility.

(c) *Issuance of supplemental foods.* Participants shall be issued prescriptions for supplemental foods by personnel of the local agency or by such other personnel as the local agency may designate. The local agency may choose to issue either a one month supply of supplemental foods each month or a two month supply of supplemental foods every other month. However, local agencies which choose to issue a two month supply every other month shall inform participants that they may still receive one month's supply if they so request.

(d) *Certification forms.* All certification data for each applicant shall be recorded on a certification form. At a minimum the information on the form shall include the following:

(1) The person's name and address.

(2) The date of initial visit to apply for participation and the date of the certification or denial.

(3) The criteria used to determine the person's eligibility or ineligibility and the signature and title of the persons making the eligibility determination.

(4) The following statement shall be located directly above the applicant's signature line and shall be read by or to the applicant, or the applicant's parent or caretaker, before the application is signed:

"This certification form is being completed in connection with the receipt of Federal assistance. Program officials may verify information on this form. I am aware that deliberate misrepresentation may subject me to prosecution under applicable State and Federal statutes. I have been advised of my rights and obligations under the Program. I certify that the information I have provided for my eligibility determination is correct to the best of my knowledge."

(e) *Applicant's rights.* The following sentences shall be read by, or read to, the applicant or the applicant's parent or caretaker at the time of certification. When a significant proportion of the population served by a local agency is composed of non-English or limited English speaking persons who speak the same language, the sentences shall be stated to such persons in a language they understand:

(1) Standards for participation in the Program are the same for everyone regardless of race, color, or national origin.

(2) You may appeal any decision made by the local agency regarding your denial or termination from the Program.

(3) If your application is approved, the local agency will make nutrition education available to you and you are encouraged to participate.

(f) *Notification requirements.* The following responsibilities shall be performed by the State or local agency:

(1) Each applicant shall be informed during the certification procedure of the right to a fair hearing and of the illegality of participation in the Commodity Supplemental Food Program in more than one local agency, or simultaneous participation in the Commodity Supplemental Food Program and in the WIC Program.

(2) A person found ineligible for the Program during a certification visit shall

be advised in writing of the ineligibility and of the right to a fair hearing in accordance with the provisions in § 247.20. The reasons for ineligibility shall be properly documented and shall be retained on file at the local agency.

(3) A person found ineligible for the Program at any time during the certification period shall be advised in writing 15 days before termination of eligibility of the reasons for ineligibility and of the right to a fair hearing.

(4) Each participant shall be notified at least 15 days before the expiration of each certification period that eligibility for the Program is about to expire.

(5) Each participant shall receive an explanation of how the food delivery system in the local agency operates.

(6) Each participant shall be advised of the importance of participating in ongoing routine health care, the types of health services available, where they are located and how they may be obtained.

(g) *Certification periods.* Eligible pregnant women shall be certified for the duration of their pregnancy and for 6 weeks postpartum. Eligible postpartum or breastfeeding women and eligible infants and children shall be certified at the time of their entrance into the Program and at intervals prescribed by the State agency, provided such intervals do not exceed 6 months in length. Program benefits may be continued until the end of the month in which categorical ineligibility begins, for example, until the end of the month in which a child reaches the sixth birthday.

(h) *Restrictions.* The following restrictions shall be observed by State agencies:

(1) Participants shall not be required to make any payments in money, materials or services for, or in connection with, the receipt of supplemental foods. Also, they shall not be solicited in connection with the receipt of supplemental foods for voluntary cash contributions for any purpose.

(2) Distribution of supplemental foods shall not be used as a means for furthering the political interest of any person or party.

(i) *Transfer of certification.* Each State agency shall ensure issuance of a verification of certification form to every participant who intends to relocate during the certification period. The State agency shall require the local agencies under its jurisdiction to accept verification of certification forms from participants who have been participating in the Program or the WIC Program in another local agency within or outside of the jurisdiction of the State agency. The verification of certification is valid until the certification period expires, and shall be accepted as proof of eligibility for Program benefits. However, if the receiving local agency has waiting lists for participation, the transferring participant shall be placed on the list ahead of all waiting applicants. The verification of certification shall include the name of the participant, the date the certification was performed, the date the certification period expires, the signature and printed or typed name of the local agency official in the originating jurisdiction, the name and address of the certifying local agency and an identification number or some other means of accountability. The verification of certification form shall be uniform throughout the jurisdiction of the State agency.

(j) *Dual participation.* The State agency shall be responsible for the following:

(1) In conjunction with the local agency, the detection and prevention of dual participation within each local agency and between local agencies. As part of the certification process, applicants shall be informed of the illegality of simultaneous participation in the WIC Program and this Program or of simultaneous participation in more than one CSFP.

(2) In areas where a local agency serves the same area as an Indian State agency or WIC Program, the CSFP State agency for the Program or the WIC State agency shall agree to a plan for the detection and prevention of dual participation. The agreement must be in writing and must be made prior to operation within the same area.

(3) Participants found committing dual participation shall be terminated from one of the Programs immediately and shall be notified of termination from the other program as specified in § 247.7.

(4) At certification the local agency shall check the identification of each participant. For a child participant, an immunization record, birth certificate, or other records that local agency personnel consider adequate identification shall be acceptable. Also, when issuing supplemental foods, the local agency shall check the identification of each participant or the indentity of the adult responsible for picking up the food for a child participant.

(k) *Disqualification.* (1) The State agency may disqualify applicants and participants from Program participation for a period not to exceed 3 months if it is established by the State or local agency that the applicant, participant, parent, or caretaker fraudulently applied for and/or obtained Program benefits. However, if the person who determined the participant's eligibility determines that a serious health risk will result from disqualification from the Program and the participant is currently eligible, the disqualification shall be waived. In addition, participants may request a fair hearing, as specified in § 247.20, to contest a disqualification.

(2) For Program purposes, fraud includes, but is not limited to, the following actions if they are taken knowingly, willfully and deceitfully:

(i) Making false statements orally or in writing in order to obtain benefits to which the individual would not otherwise be eligible;

(ii) Concealing information in order to obtain benefits to which the individual is not eligible;

(iii) Altering Program documents for the purpose of receiving increased benefits to which the individual is not eligible or for the purpose of transferring benefits to an unauthorized individual;

(iv) Using supplemental foods in an unauthorized manner, such as trading or selling the foods; or

(v) Committing dual participation.

§ 247.8 Nutrition education.

(a) *General.* Nutrition education shall be thoroughly integrated into Program operations. Nutrition education shall be designed to be easily understood by individual participants and shall bear a practical relationship to their nutritional needs and household situations.

(b) *Goals.* Nutrition education shall be based on the following two broad goals:

(1) To emphasize the relationship of proper nutrition to the total concept of good health, with special emphasis on the nutritional needs of pregnant, postpartum, and breastfeeding women, infants and children under 6 years of age; and

(2) To assistant participants in obtaining a positive change in food habits, resulting in improved nutritional status and in the prevention of nutrition related problems through maximum use of the supplemental and other nutritious foods. This use is to be within the context of ethnic, cultural and geographic preferences. Consideration should also be given to tailoring nutrition education to meet any limitations experienced by groups of participants, such as lack of running water, lack of electricity, and limited cooking or refrigeration facilities.

(c) *State agency responsibilities.* The State agency shall ensure that the local agency fully performs its responsibilities as set forth in paragraph (d) of this section. The State agency shall also ensure that an evaluation procedure is maintained to determine the effectiveness of the nutrition education.

Such evaluation procedure shall include a systematic procedure for participant input and may be conducted directly by State and local agencies or by contract for such services, so long as the evaluation is directed by a nutritionist or other professional determined by the State agency to be qualified to perform the evaluation procedure.

(d) *Local agency responsibilities.* (1) The local agency shall make nutrition education available to all adult participants and to parents or guardians of infant and child participants. Where appropriate, nutrition education for child participants is encouraged.

(2) The local agency shall direct Program funds for nutrition education to the benefit of participants and local agency staff members involved in nutrition education, in accordance with this part.

(3) The local agency shall conduct or arrange for nutrition education in a manner consistent with the nutrition education portion of the State Plan.

(4) The local agency shall include the following subject matter in the instruction given to participants:

(i) An explanation of the importance of the consumption of the supplemental foods by the participant for whom they are prescribed rather than by other family members;

(ii) Reference to any special nutritional needs of participants and ways to provide adequate diets;

(iii) An explanation of the Program as a supplemental rather than a total food program;

(iv) Information on the use of the supplemental foods and on the nutritional value of these foods;

(v) Information on the benefits of breastfeeding; and

(vi) An explanation of the importance of health care.

(e) *Food demonstrations.* Any food demonstrations using supplemental foods shall be conducted by the State or local agency solely in conjunction with nutrition education and primarily for participants under the Program. Supplemental foods may not be used for outreach, refreshments for participants, or any other such purpose. Supplemental foods may not be provided to any other community agency or facility for any purpose whatsoever, unless such agency has entered into a signed written agreement with the State or local agency to provide nutrition education services under the Program.

§ 247.9 Financial management systems.

(a) *Disclosure of expenditures.* The State agency shall maintain a financial management system which provides accurate, current and complete disclosure of the financial status of the Program. This shall include an accounting for all property and other assets and all Program funds received and expended each fiscal year.

(b) *Reports.* The State agency shall maintain its financial and donated food accounts in a manner sufficient to permit the preparation of the reports required in § 247.13.

(c) *Record of expenditures.* The State agency shall maintain records which adequately identify the source and use of funds expended for Program activities. These records shall contain, but are not limited to, information pertaining to authorization, receipt of funds, obligations, unobligated balances, assets, liabilities, outlays and income.

(d) *Payment of costs.* The State agency shall implement procedures which ensure prompt and accurate payment of allowable costs, and ensure the allowability and allocation of costs in accordance with the cost principles and standard provisions of this part, and FMC 74–4.

(e) *Identification of obligated funds.* The State agency shall implement procedures which accurately identify obligated Program funds at the time obligations are made.

(f) *Resolutions of audit findings.* The State agency shall implement procedures which ensure timely and appropriate resolution of claims and other matters resulting from audit findings and recommendations.

(g) *Letters of Credit.* All administrative funds made available under this section shall be provided to participating State agencies by means of issuance of Letters of Credit unless other funding arrangements are made with FNS. If at the end of the fiscal year, funds authorized by a Letter of Credit issued to any State agency exceed obligations, FNS shall reduce the amount of the Letter of Credit by the unobligated portion.

(h) *Payments.* Letters of Credit shall be issued to the appropriate Regional Disbursing Office in favor of the State agency. The State agency shall obtain funds needed through presentation by designated officials of a payment voucher on the Letter of Credit in accordance with procedures prescribed by FNS and consistent with the U.S. Treasury Department Circular 1075.

(i) *Transfer of cash.* The State agency shall have controls to minimize the time elapsing between receipt of Federal funds from the U.S. Department of Treasury and the disbursement of these funds for Program costs. In the Letter of Credit system, the State agency shall make drawdowns from the U.S. Department of Treasury's Regional Disbursing Office as close as possible to the time of the actual disbursement of funds. Advances made by the State agency to local agencies shall also conform to these same standards.

(j) *Local agency financial management.* The State agency shall ensure that all local agencies develop and implement a financial management system consistent with the requirements prescribed by the State agency pursuant to the requirements of this section.

§ 247.10 Administrative funding.

(a) *General.* This section prescribes the policies and procedures for payment by FNS of funds for administrative costs to participating State agencies and disbursements by State agencies to local agencies. The funds shall be paid to State agencies as specified in Section 247.9, Financial Management Systems. As a prerequisite to the receipt of such funds each fiscal year, the State agency shall have executed a written agreement with the Department and shall have received FNS approval of its State Plan.

(b) *State agency funding.* Funds for total State administrative costs for each year shall be allocated by FNS based on 15 percent of the annual appropriation available for the purchase of commodities. Each State agency shall receive its proportionate share of the administrative funds based on its percentage of the total average participation reported (up to the authorized caseload level) for the latest 3 months for which data is available prior to the beginning of a fiscal year. FNS shall determine the specific amount due each State agency by: (1) Dividing each State's average participation by the total average participation; and (2) multiplying the result by the administrative funds appropriated to derive an annual grant level which will be distributed to each State on a quarterly basis. FNS shall reserve the right to adjust participation figures used in the computation process upward or downward to ensure adequate funds are allocated when the Department believes that the participation level reported will not reflect future plans for operation, such as when a State agency plans to start or terminate the Program during the year, or when a State agency's participation has increased or decreased significantly in recent months. Participation of new State agencies during the course of the fiscal year will depend on the availability of funds. FNS shall use caseload assignments to ensure that funds appropriated are not exceeded. FNS reserves the right to periodically recover and redistribute unspent administrative funds. To ensure that State agencies can properly budget

for program operations, FNS guarantees that 75 percent of each State agency's total annual grant level will be protected from further recoveries during the current fiscal year. The State agency may retain a percentage of the grant for State level use, based on the following formula: 15 percent of the first $50,000; plus 10 percent of the next $100,000; plus 5 percent of the next $250,000. The State agency may retain a maximum amount of $30,000 annually for its administrative expenditures. However, if the State agency provides warehousing services, FNS approval may be requested at the beginning of the applicable fiscal year for funds greater than those allowed under the formula; provided, the State agency can document the need and ensure that the increase will not impose undue hardship on local agencies. The remaining funds and any unused funds at the State level shall be distributed to the local agencies.

(c) *Local agency funding.* The State agency, in providing administrative funds to local agencies, shall apportion such funds among the local agencies on the basis of their respective needs so as to ensure that those local agencies evidencing higher administrative costs, while demonstrating prudent management and fiscal controls, receive a greater portion of the administrative funds.

§ 247.11 Administrative costs.

(a) *General.* Funds provided to State and local agencies may be used to cover administrative costs identified under FMC 74–4 which State agencies determine to be necessary to carry out the Program within their jurisdiction.

(b) *Allowable costs.* The following costs are specifically identified as illustrative of costs allowable under the Program:

(1) The cost of certification procedures including:

(i) Laboratory fees incurred for tests conducted to determine the eligibility of persons to participate in the Program;

(ii) Expendable medical supplies necessary to determine the eligibility of persons to participate in the Program; and

(iii) Centrifuges, measuring boards, skin fold calipers, spectrophotometers, hematofluorometers, hemoglobinometers, and scales used for determining the eligibility of persons, provided that expenditure limits will be set by FNS for each piece of equipment and expenditures which exceed the limits shall receive prior approval by the FNS Regional Office.

(2) The cost of nutrition education services provided to participants and parents and guardians of participants, and used for training local agency staff members;

(3) The cost of transporting food and of administering the food distribution system;

(4) The cost of interpreters and translators for Program materials;

(5) The cost of outreach services;

(6) The cost of audits and fair hearings;

(7) General administration of the State and local agencies including, but not limited to, personnel, warehousing, and insurance;

(8) The cost of monitoring and reviewing Program operations; and

(9) The cost of transportation for participants to and from the local agency when the local agency has determined and documented the need for such assistance.

(c) *Restrictions on Allowable Costs.* The following costs are allowable only with the prior approval of FNS.

(1) Automatic Data Processing equipment and system purchases whether by outright purchase, rental-purchase agreement or other method of purchase;

(2) Capital expenditures over $2,500.00 such as the cost of facilities, equipment, other capital assets and any repairs that materially increase the value or useful life of capital assets, provided that any subsequent sale of real or personal properties, purchased in whole or in part with Program funds, shall be used to reimburse FNS in an amount computed by applying to the sale proceeds the percentage of FNS participation in the original acquisition costs;

(3) Occupancy of space under rental-purchase or a lease with option to purchase agreements;

(4) Equipment rental costs where the agreement provides for rental-purchase or a lease with option to purchase; and

(5) Management studies performed by agencies or departments other than the State or local agency or those performed by outside consultants under contract with the State or local agency.

(d) *Unallowable costs.* Expenditures by a State agency or local agencies which result in costs that may not be applicable to the Program objectives are "unallowable costs." A State agency's system for financial management shall identify such unallowable costs. In addition to unallowable costs identified in FMC 74–4 the following are specifically unallowable costs for reimbursement by FNS:

(1) Costs incurred for rearrangement and alteration of facilities not required specifically for the program;

(2) Actual losses which could have been covered by permissible insurance (through an approved self-insurance program or otherwise).

§ 247.12 Program income.

Program income means gross income the State agency or local agencies earn from grant supported activities, with the exception of income from the sale of property as specified in Section 247.11(c)(2). Program income earned during the agreement period shall be retained by the State agency in accordance with the provisions of A–102, Attachment E and used to further Program objectives; except that interest earned on Program funds at the State or local levels shall be used in accordance with the provisions of A–102, Attachment E. A State agency's financial management system shall provide guidelines to assure that: income earned is recorded as individual transactions within the accounting records in conformance with generally accepted accounting principles for recording expenditures and revenues; and specifically earmarked Program income is used for the purpose(s) intended.

§ 247.13 Records and reports.

(a) *Recordkeeping requirements.* Each State agency shall, in accordance with Section 250.6(r), maintain accurate and complete records with respect to the receipt, disposal, and inventory of supplemental foods, including the determination made as to liability for any improper distribution or use of, or loss of, or damage to, such foods and the result obtained from the pursuit of claims arising in favor of the State agency. Accurate and complete records shall also be maintained with respect to the receipt and disbursement of administrative funds. State agencies shall require all local agencies to maintain accurate and complete records with respect to the receipt, disposal and inventory of supplemental foods and with respect to receipt and disbursement of administrative funds. All records required by this section shall be retained for a period of 3 years following the date of submission of the annual expenditure report for the period to which the reports pertain. All records, except medical case records of participants (unless they are the only source of certification data), shall be available during normal business hours for representatives of the Department and the General Accounting Office of the United States to inspect, audit, and copy. Any reports resulting from such examinations shall not divulge names of individuals.

(b) *Financial reports.* All financial data shall be submitted quarterly on the

S.F. 269(WIC/CSFP) and/or the S.F. 272 for State agencies on the check payment system.

(c) *Participation and Food Distribution reports.* Participation and Food Distribution reports FNS–153 and FNS–155 shall be submitted as required by FNS, at a frequency prescribed by FNS. Annually, a physical inventory of all foods at each storage and distribution site is required to be submitted to FNS at a date specified by FNS.

(d) *Civil rights.* Each local agency participating under the Program shall submit a report of racial and ethnic participation data FNS–191, at a frequency prescribed by FNS.

(e) *Audit acceptability of reports.* To be acceptable for audit purposes, all financial and Program performance reports shall be traceable to source documentation.

(f) *Certification of reports.* Financial and Program reports shall be certified as to their completeness and accuracy by the person given that responsibility by the State agency.

(g) *Use of reports.* FNS shall use State agency reports to measure progress in achieving objectives set forth in the State Plan. If it is determined, through review of State agency reports, Program or financial analysis, or an audit, that a State agency is not operating according to its State Plan, FNS may request additional information and take other appropriate actions.

§ 247.14 Procurement and property management standards.

(a) *requirements.* State and local agencies shall comply with the requirements of Circular A–102, Attachment 0 for procurement of equipment and other services with Program funds. These requirements are adopted by FNS to ensure that such materials and services are obtained for the Program in an effective manner and in compliance with the provisions of applicable law and executive orders.

(b) *Contractual responsibilities.* The standards contained in Circulars A–90, A–102 and A–110, where applicable, do not relieve the State or local agency of the responsibilities arising under its contracts. The State agency is the responsible authority, without recourse to FNS, regarding the settlement and satisfaction of all contractual and administrative issues arising out of procurements entered into in connection with the Program. This includes, but is not limited to: disputes, claims, protests of awards, source evaluation, or other matters of a contractual nature. Matters concerning violaltion of law are to be referred to such local, State or Federal authority as may have proper jurisdiction.

(c) *State regulations.* The State or local agency may use its own procurement regulations which reflect applicable State and local regulations, provided that procurements made with Program funds adhere to the standards set forth in Circulars A–90, A–102 and Circular A–110, where applicable.

(d) *Property acquired with Program funds.* State and local agencies shall observe the standards prescribed in A–102, Attachment N, and A–110, Attachment N, where applicable, in their utilization and disposition of property acquired in whole or in part with Program funds.

§ 247.15 Audits.

(a) *Federal access to information.* The Secretary, the Comptroller General of the United States, or any of their duly authorized representatives, or State auditors shall have access to any books, documents, papers, and records of the State and local agencies and their contractors, for the purpose of making surveys, audits, examinations, excerpts, and transcripts.

(b) *State agency response.* The State agency may take exception to particular audit findings and recommendations. The State agency shall submit a response or statement to FNS as to the action taken or planned regarding the findings. A proposed corrective action plan developed and submitted by the State agency shall include specific time frames for its implementation and for completion of the correction of deficiencies and problems leading to the deficiencies.

(c) *Corrective action.* FNS shall determine whether Program deficiencies have been adequately corrected. If additional corrective action is necessary, FNS shall schedule a folloup review, allowing a reasonable time for such corrective action to be taken.

(d) *State sponsored audits.* (1) Each State agency shall provide for an independent audit of the financial operations of the State agency and local agencies. Audits may be conducted by State and local government audit staffs, State licensed public accountants who were licensed on or before December 31, 1970, or by Certified Public Accountants and audit firms under contract to the State or local agencies. Audits shall conform to: "The Standards of Audit of Governmental Organizations, Program Activities and Functions," issued by the Comptroller General of the United States (Reprint 1974, for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402); the "Guidelines for Financial and Compliance Audits of Federally Assisted Programs," issued by the U.S. General Accounting Office, October 1978 (for sale by the U.S. General Accounting Office, Distribution Section, Room 1518, 441 G Street, N.W., Washington, D.C. 20013); any compliance supplements approved by OMB; and generally accepted auditing standards established by the American Institute of Certified Public Accountants. An audit shall be used to determine whether:

(i) Financial operations are properly conducted;

(ii) The financial reports are fairly presented;

(iii) The State or local agency has complied with applicable laws, regulations, and administrative requirements pertaining to financial management; and

(iv) Proper inventory controls (physical and paper) are being maintained.

(2) The State agency shall conduct audits in accordance with the provisions of A–102, Attachment P. Audits of the State agency and the local agencies under the State agency's jurisdiction shall be performed in a representative sample of grant program audit examinations during each audit cycle which occurs, not less frequency than once every two years. In some audit cycles, a grant program or programs other than this Program may be audited. However, audits of the Program shall be performed at intervals frequent enough to ensure consistency with good Program management. Also, at any time, the Department, FNS or the State agency may at its discretion audit a Program if an audit appears to be warranted. If FNS in the course of Program reviews of State agency operations finds that the efficiency and effectiveness of the State agency's financial management system is in question, FNS may request the State agency to include the Program in the sample for the next audit examination.

(3) Each State agency shall make all State or local agency sponsored audit reports of Program operations under its jurisdiction available for the Department's review upon request. The cost of these audits shall be considered a part of administrative costs and funded from either State or local agency administrative funds.

§ 247.16 Investigations.

(a) *Authority.* The Department may make an investigation of any allegation of noncompliance with this part. The investigation may include, where appropriate, a review of pertinent

practices and policies of any State or local agency, the circumstances under which the possible noncompliance with this part occurred, and other factors relevant to a determination as to whether the State or local agency has failed to comply with the requirements of this part.

(b) *Confidentiality.* No State or local agency, participant, or other person shall intimidate, threaten, coerce, or discriminate against any individual for the purpose of interfering with any right or privilege under this part because the individual has made a complaint or formal allegation, or testified, assisted, or participated in any manner in an investigation, proceeding, or hearing under this part. The identity of every complainant shall be kept confidential except to the extent necessary to carry out the purpose of this part, including the conduct of any investigation, hearing, or judicial proceeding.

§ 247.17 Claims.

If FNS determines through a review of the State agency's reports, program or financial analysis, monitoring, audit, or otherwise, that any Program funds provided to a State agency for administrative purposes were, through State agency or local agency negligence or fraud, misused or otherwise diverted from Program purposes, a claim shall be made by FNS against the State agency, and the State agency shall pay promptly to FNS a sum equal to the amount of the administrative funds so misused or diverted. Further, if FNS determines that any part of the money received by a State agency was lost as a result of thefts, embezzlements, or unexplained causes, the State agency shall, on demand by FNS, pay to FNS a sum equal to the amount of the money so lost. Claims for losses or misuse of supplemental foods shall be handled in accordance with Section 250.6(m) 7 CFR Part 250—Subchapter B—Food Distribution. The State agency shall have full opportunity to submit evidence, explanations or information concerning alleged instances of noncompliance or diversion before a final determination is made in such cases.

§ 247.18 Closeout procedures.

(a) *Fiscal year closeout reports.* State agencies shall submit preliminary and final closeout reports for each fiscal year or part thereof. All obligations shall be liquidated before final closure of a fiscal year grant. Obligations shall be reported for the fiscal year in which they occur State agencies shall:

(1) Submit to FNS, within 30 days after the end of the fiscal year, preliminary financial reports which show cumulative actual expenditures and obligations for the fiscal year, or part thereof, for which Program funds were made available; and

(2) Submit to FNS, within 90 days after the end of the fiscal year, final fiscal year closeout reports.

(b) *Revised closeout reports.* Revised closeout reports may be submitted at any time. However, FNS shall not be responsible for reimbursing unpaid obligations later than one year after the close of the fiscal year in which they were incurred.

(c) *Grant closeout procedures.* When grants to State agencies are terminated, the following closeout procedures for the Program shall be performed in accordance with OMB Circular A–102.

(1) *Termination for cause.* FNS may terminate a State agency's participation under the Program, in whole or in part, whenever FNS determines that the State agency has failed to comply with the conditions prescribed in this part. FNS shall promptly notify the State agency in writing of the termination and the reasons for the termination, including the effective date. A State agency shall terminate a local agency's participation under the Program by written notice whenever it is determined by FNS or the State agency that the local agency has failed to comply with the requirements of the Program. When a State agency's participation under the Program is terminated for cause, any payments made to the State agency, or any recoveries by FNS from the State agency, shall be in conformance with the legal rights and liabilities of the parties.

(2) *Termination for convenience.* FNS or the State agency may terminate the State agency's participation under the Program, in whole or in part, when both parties agree that continuation under the Program would not produce beneficial results commensurate with the further expenditure of funds. The State agency or the local agency may terminate the local agency's participation, in whole or in part, under the same conditions. The two parties shall agree upon the termination conditions, including the effective date thereof and, in the case of partial termination, the portion to be terminated. The State agency shall not incur new obligations for the terminated portion after the effective date, and shall cancel as many outstanding obligations as possible. FNS shall allow full credit to the State agency for the Federal share of the noncancellable obligations, properly incurred by the State agency prior to termination.

§ 247.19 Nondiscrimination.

(a) *Requirement.* The State agency shall comply with the requirements of Title VI of the Civil Rights Act of 1964, the FNS Civil Rights Instruction 113–2 and the Department's regulations concerning nondiscrimination (7 CFR Part 15), including requirements of racial and ethnic participation data collection, public notification of the nondiscrimination policy, and annual reviews of each local agency to assure compliance with such policy, to the end that no person shall, on the grounds of race, color or national origin, be excluded from participation in, be denied the benefits of, or be otherwise subjected to discrimination under the Program.

(b) *Non-English materials and staff.* Where a significant proportion of the population of the area served by a local agency is composed of non-English or limited English speaking persons who speak the same language, the State agency shall take action to ensure that Program information, except certification forms, is provided to such persons in the appropriate language orally and in writing. The State agency shall ensure that there are bilingual staff members or interpreters available to serve these persons.

(c) *Complaints.* Complaints of discrimination filed by applicants or participants shall be referred to the Director, Supplemental Food Programs Division, Food and Nutrition Service, U.S.D.A., Washington, D.C. 20250.

§ 247.20 Fair hearing procedures.

(a) *Availability of hearings.* The State agency shall provide a hearing procedure through which any individual may appeal a State or local agency action which results in the denial or termination of benefits to the individual. The State agency shall conform to Program hearing procedures as outlined in this section at all times unless the State has an alternate hearing procedure whereby participants can appeal State or local agency actions. This alternate procedure may be used with FNS approval.

(b) *Notification of appeal rights.* At the time of application each applicant shall be informed of the right to a fair hearing.

At the time of denial or termination of benefits, each individual shall be informed in writing of the right to a fair hearing, of the method by which a hearing may be requested, and that any positions or arguments on behalf of the individual may be presented personally or by a representative such as a relative, friend, legal counsel or other spokesperson. Such notification is not

required at the expiration of a certification period.

(c) *Request for hearing.* A request for a hearing is defined as any clear expression by the individual or the individual's parent, guardian or other representative, that an opportunity to present its case to a higher authority is desired. The State or local agency shall not limit or interfere with the individual's freedom to request a hearing.

(d) *Time limit for request.* The State or local agency shall provide individuals a reasonable period of time to request fair hearings. Such time limit shall not be less than 60 days from the date the agency mails or gives the applicant or participant the notice of adverse action to deny or terminate benefits, as required in § 247.7(f)(2).

(e) *Denial or dismissal of request.* A request for a hearing shall not be denied or dismissed unless:

(1) The request is not received within the time limit set by the State agency in accordance with paragraph (d) of this section.

(2) The request is withdrawn in writing by the applicant or a writing by the applicant or a representative.

(3) The applicant or representative fails, without good cause, to appear at the scheduled hearing.

(f) *Continuation of benefits.* Participants who appeal the termination of benefits within the 15 day advance adverse notice period provided by § 247.7(f)(2) shall continue to receive Program benefits until the hearing official reaches a decision. Applicants who are denied benefits at initial certification or at subsequent certifications may appeal the denial but shall not receive benefits while awaiting the hearing.

(g) *Rules of procedure.* The State and local agency shall process each request for a hearing under uniform rules of procedure. The uniform rules of procedure shall be available for public inspection and copying. At a minimum, the uniform rules of procedure shall include: the time limits for requesting and conducting a hearing; all advance notice requirements; the rules of conduct at the hearing; and the rights and responsibilities of the applicant. The procedures shall not be unduly complex or legalistic and the applicant's background shall be taken into consideration.

(h) *Hearing official.* Hearings shall be conducted by an impartial official who does not have any personal stake or involvement in the decision and who was not directly involved in the initial determination of the action being contested. The hearing official shall:

(1) Administer oaths or affirmations if required by the State;

(2) Ensure that all relevant issues are considered;

(3) Request, receive and make part of the hearing record all evidence determined necessary to decide the issues being raised;

(4) Regulate the conduct and course of the hearing consistent with due process to ensure an orderly hearing;

(5) Render a hearing decision which will resolve the dispute.

(i) *Conduct of the hearing.* The hearing shall be accessible to the applicant. The State or local agency shall provide the applicant with a minimum of 10 days advance written notice of time and place of the hearing and shall enclose the rules of procedure. The State and local agency shall also provide the applicant or representative an opportunity to:

(1) Examine, prior to and during hearing, the documents and records presented to support the decision under appeal;

(2) Be assisted or represented by an attorney or other persons;

(3) Bring witnesses;

(4) Advance arguments without undue interference;

(5) Question or refute any testimony or evidence, including an opportunity to confront and cross-examine adverse witnesses; and

(6) Submit evidence to establish all pertinent facts and circumstances in the case.

(j) *Hearing decisions.* (1) Decisions of the hearing official shall comply with Federal law or regulations and shall be based on facts in the hearing record. The verbatim transcript or recording of testimony and exhibits, or an official report containing the substance of what transpired at the hearing, together with all papers and requests filed in the proceeding shall constitute the exclusive record for a final decision by the hearing official. This record shall be retained in accordance with § 247.13. This record shall also be available, for copying and inspection, to the appellant or representative at any reasonable time.

(2) A decision by the hearing official shall be binding on the local agency and shall summarize the facts of the case, specify the reasons for the decision, and identify the supporting evidence and the pertinent regulations. The decision shall become a part of the record.

(3) Within 45 days of the request for the hearing, the applicant or representative shall be notified in writing of the decision and the reasons for the decision in accordance with paragraph (j)(2) of this section. Also, if the decision is in the favor of the applicant and benefits were denied, benefits shall begin within this 45-day time period. If the decision is in favor of the agency, as soon as administratively feasible any continued benefits shall be terminated as decided by the hearing official.

(4) All State and local agency hearing records and decisions shall be available for public inspection and copying, subject to the disclosure safeguards provided in § 247.22(d), and provided the names and addresses of participants and other members of the public are kept confidential.

(k) *Judicial review.* If a State level decision upholds the agency action, the State agency shall explain any available State review of the decision and any State rehearing process. If neither are available or have been exhausted, the State agency shall explain the right to pursue judicial review of the decision.

§ 247.21 Management evaluation and reviews.

(a) *General.* FNS and each State agency shall establish a management evaluation system in order to assess the accomplishment of Program objectives as provided under these regulations, the State Plan, and the written agreement with the Department. FNS will provide assistance to States in discharging this responsibility, and will establish standards and procedures to determine how well the objectives of this part are being accomplished.

(b) *Responsibilities of FNS.* FNS shall establish evaluation procedures to determine whether State agencies carry out the purposes and provisions of this part, the State Plan, and the written agreement with the Department. As a part of the evaluation procedure, FNS shall review audits performed by the State agency to ensure that the Program at both the State and local levels has been included in audit examinations at a reasonable frequency. These evaluations shall include a review of each State agency, including on-site reviews of selected local agencies. These evaluations will measure the State agency's progress toward meeting the objective outlined in its State Plan and compliance with these regulations.

(c) *Responsibilities of State agencies.* The State agency is responsible for meeting the following requirements:

(1) The State agency shall establish evaluation and review procedures and document the results of such procedures. The procedures shall include, but not be limited to:

(i) Annual monitoring of the operation of all local agencies to evaluate certification procedures, management, nutrition education, civil rights

compliance, food storage, inventory accountability, and financial management systems. However, more frequent reviews may be performed as the State agency deems necessary. The State agency shall provide a continuing evaluation of each local agency through on-site reviews of the local agency, reviews of local agency reports including inventory reports, reviews of storage facilities and safeguards for supplemental foods.

(ii) Instituting the necessary followup procedures to correct identified problem areas.

(2) On its own initiative or when required by FNS, the State agency shall provide special reports on Program activities, and take positive action to correct deficiencies in Program operations.

(3) The State agency shall require that local agencies establish Program review procedures to be used in reviewing their own operations and those of subsidiaries or contractors.

§ 247.22 Administrative Appeal of State Agency Decisions

(a) *Requirements.* The State agency shall provide a hearing procedure whereby a local agency adversely affected by a State action may appeal the action. The right to appeal shall be granted when the local agency's application to participate is denied, when participation is terminated, when a contract is not renewed by the State agency or when any other adverse action which affects participation is taken. The adverse action shall be postponed until a hearing decision is reached.

(b) *Procedure.* The State agency hearing procedure shall at a minimum provide the local agency:

(1) Adequate advance notice of the time and place of the hearing to provide all parties involved sufficient time to prepare for the hearing;

(2) The opportunity to present its case;

(3) The opportunity to confront and cross-examine adverse witnesses;

(4) The opportunity to be represented by counsel, if desired;

(5) The opportunity to review the case record prior to the hearing;

(6) An impartial decision maker, whose decision as to the validity of the State or local agency's action shall rest solely on the evidence presented at the hearing and the statutory and regulatory provisions governing the Program. The basis for the decision shall be stated in writing, although it need not amount to a full opinion or contain formal finding of fact and conclusions of law; and

(7) Written notification of the decision concerning the appeal, within 60 days from the date of the request for a hearing.

§ 247.23 Miscellaneous provisions.

(a) *No aid reduction.* The value of benefits or assistance available under the Program shall not be considered as income to or resources of participants or their families for any purpose under Federal, State or local laws, including, but not limited to, laws relating to taxation, welfare and public assistance programs.

(b) *Statistical information.* FNS reserves the right to use information obtained under the Program in a summary, statistical or other form which does not identify particular individuals. FNS may require the State or local agencies to supply data and other information collected under the Program in a form that does not identify particular individuals, to enable the Secretary or the State agencies to evaluate the effect of food intervention upon low-income individuals determined to be eligible for Program benefits.

(c) *Confidentiality.* Each State agency shall restrict the use or disclosure of information obtained from Program applicants or participants to persons directly connected with the administration or enforcement of the Program.

(d) *Public information.* Any person who wishes information, assistance, records or other public material shall request such information from the State agency, or from the FNS Regional Office serving the appropriate State as listed below:

(1) Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont: U.S. Department of Agriculture, FNS, New England Region, 33 North Avenue, Burlington, Massachusetts 01803.

(2) Delaware, District of Columbia, Maryland, New Jersey, New York, Pennsylvania, Puerto Rico, Virginia, Virgin Islands, West Virginia: U.S. Department of Agriculture, FNS, Mid-Atlantic Region, One Vahlsing Center, Robbinsville, New Jersey 08691.

(3) Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee: U.S. Department of Agriculture, FNS, Southeast Region, 1100 Spring Street, NW, Atlanta, Georgia 30309.

(4) Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin: U.S. Department of Agriculture, FNS, Midwest Region, 536 South Clark Street, Chicago, Illinois 60605.

(5) Arkansas, Louisiana, New Mexico, Oklahoma, Texas: U.S. Department of Agriculture, FNS, Southwest Region, 1100 Commerce Street, Room 5–C–30, Dallas, Texas 75242.

(6) Colorado, Iowa, Kansas, Missouri, Montana, Nebraska, North Dakota, South Dakota, Utah, Wyoming: U.S. Department of Agriculture, FNS, Mountain Plains Region, 2420 West 26th Avenue, Room 430–D, Denver, Colorado 80211.

(7) Alaska, American Samoa, Arizona, California, Guam, Hawaii, Idaho, Nevada, Oregon, Trust Territory of the Pacific Islands, Washington: U.S. Department of Agriculture, FNS, Western Region, 550 Kearney Street, Room 400, San Francisco, California 94108.

Note.—The reporting and/or recordkeeping requirements contained herein have been cleared by the Office of Management and Budget in accordance with the Federal Reports Act of 1942.

(Catalog of Federal Domestic Assistance, Program No. 10.565, National Archive Reference Service.)

Dated: January 15, 1981.

Carol Tucker Foreman,

Assistant Secretary for Food and Consumer Services.

BILLING CODE 3410–30–M

federal register

Wednesday
January 21, 1981

Part X

Department of Health and Human Services

Public Health Service

Requirements for a Health Maintenance Organization; Final Regulations

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Public Health Service

42 CFR Part 110

Requirements for a Health Maintenance Organization

AGENCY: Public Health Service, HHS.

ACTION: Final regulations.

SUMMARY: These regulations amend the requirements for the operation of federally qualified health maintenance organizations (HMOs) regarding the disclosure of information by HMOs to members, potential members, and employers. These amendments are made to coordinate the requirements of the Employee Retirement Income Security Act of 1974 (ERISA) and Title XIII of the Public Health Service Act (the Act) so as to avoid any duplicative or otherwise unnecessary requirements that might result from the interaction of these laws.

EFFECTIVE DATE: These regulations are effective on February 20, 1981.

FOR FURTHER INFORMATION CONTACT: Howard R. Veit, Director, Office of Health Maintenance Organizations, Park Building—3rd Floor, 12420 Parklawn Drive, Rockville, Maryland 20857, 301/443–4106.

SUPPLEMENTARY INFORMATION: On June 22, 1979, a Notice of Proposed Rulemaking was published in the **Federal Register** (44 FR 36864–5) proposing to amend the Department's existing rules regarding the organization and operation of federally qualified HMOs. That document proposed to add new provisions to 42 CFR 110.108(c) which would require federally qualified HMOs to disclose clearly (1) certain information similar to that required by the Department of Labor's (DOL) ERISA regulations, 29 CFR Parts 2520, 2560, and (2) information about the financial condition of the HMO. Specifically, proposed § 110.108(c)(1) required a written description of an HMO's benefits, coverage, procedures for obtaining benefits, circumstances under which benefits may be denied, rates, grievance procedures, service area, location, hours of service, and general description of participating providers.

The NPRM also proposed to amend § 110.108 by adding a new paragraph (s) that would require HMOs to provide each employer (or designee or plan administrator) offering the option of enrolling in an HMO the information which is necessary to satisfy its reporting and disclosure obligations under ERISA as they apply to those HMOs.

The Notice invited interested persons to submit written comments, suggestions, or objections on or before August 21, 1979. Nine organizations submitted timely comments, and five comments were received shortly after the end of the comment period. All comments were considered in developing these final regulations. Those comments received which (1) related to matters outside the jurisdiction of the Department or (2) requested clarification of matters that the Secretary has determined can be explained in this preamble to the final regulations were not incorporated in the final regulations. The following is a summary of the comments received:

Seven commenters requested that qualified HMOs not be considered either as an employee benefit plan or as a benefit under the employer's plan for ERISA purposes. Because this matter falls within the jurisdiction of DOL, which administers ERISA, the Secretary sent copies of the letters containing comments received on this NPRM to that Department. The Secretary notes that DOL has responded to this issue elsewhere in this edition of the **Federal Register.**

Two commenters objected to the requirement that HMOs disclose rates. One objected to the required disclosure of grievance procedures. The Secretary notes that these requirements have been in effect since October 18, 1974, and HMOs have not reported any difficulty in complying with them; therefore, they have not been changed in the final regulation.

One commenter questioned what was meant by "a general description of providers" in the proposed regulation at § 110.108(c)(1). The Department has revised the regulation to specify that the type of information which must be disclosed about the providers associated with the HMO is as follows: If the HMO provides health services through an individual practice association(s): The number of member physicians by specialty, and a listing of the hospitals where HMO members will receive basic and supplemental health services; if the HMO provides health services other than through an individual practice association, the HMO must provide for each ambulatory care facility, the facility's address, days and hours of operation, the number of physicians by specialty, and a listing of the hospitals where HMO members will receive basic and supplemental health services.

In response to five commenters requesting clarification as to what an HMO must disclose with respect to its financial condition under § 110.108(c), the Secretary has revised § 110.108(c) to specify that the HMO must provide at least the following most recently audited information about its financial condition: current assets, other assets, total assets; current liabilities, long term liabilities, and net worth.

Two commenters felt the disclosure of eligibility requirements for members was burdensome. The Secretary does not agree with this view. While an employer ordinarily determines the eligibility of its employees, and their dependents for health benefits, in order for the subscriber to make an informed choice, it is necessary for an HMO to disclose any restrictions the HMO (as opposed to the employer) has on eligibility (e.g., maximum age for unmarried dependents). On the other hand, one commenter felt that the entire contract for benefits should be disclosed. The Secretary believes that to require this would be burdensome to the HMO (given that the contract would be available upon request to the plan administrator—see the explanatory statement accompanying the DOL regulation in this edition of the **Federal Register**) and of minimal value in explaining the coverage to be provided by the HMO. Therefore, the proposed regulation has not been changed in this regard.

Two commenters suggested that State licensed HMOs, as well as federally qualified HMOs, should be required to follow the disclosure provisions of this section of the regulations. The Secretary cannot accept this suggestion because the jurisdiction of the Department under Title XIII of the Act and these regulations extends only to federally qualified HMOs.

The Assistant Secretary for Health of the Department of Health and Human Services, with the approval of the Secretary of Health and Human Services, amends 42 CFR 110.108 as set forth below.

(Sec. 215, 58 Stat. 980 (42 U.S.C. 218); sec. 1301–1318, as amended, 92 Stat. 2131–2141 (42 U.S.C. 300e–300e–17))

Dated: January 5, 1981.

Julius B. Richmond,

Assistant Secretary for Health.

Approved: January 14, 1981.

Patricia Roberts Harris,

Secretary.

Subpart A—Requirements for a Health Maintenance Organization

§ 110.108 [Amended]

1. In § 110.108, paragraph (c) is revised to read as follows:

* * * * *

(c)(1) *Full and fair disclosure.* Each HMO shall prepare a written description of the items listed below. This description shall be written so that it can be easily understood by the average person who might enroll in the HMO. The description of benefits and coverage (items in paragraph (c)(1) (i) and (ii) of this section, respectively, below) may be in general terms if reference is made to a detailed statement of benefits and coverage which is available without cost to any person to whom the opportunity for enrollment in the HMO is offered or who has enrolled in the HMO. Upon request made directly to the HMO or the plan administrator (as that term is defined under the Employee Retirement Income Security Act of 1974, "ERISA") of a health benefits plan which includes the HMO option, the HMO shall provide the description to any person who is a participant or beneficiary of the plan and who is eligible to elect the HMO option. The items to be included in the written description are the HMO's:

(i) Benefits (including limitations and exclusions);

(ii) Coverage (including a statement of conditions on eligibility for benefits);

(iii) Procedures to be followed in obtaining benefits and a description of circumstances under which benefits may be denied;

(iv) Rates;

(v) Grievance procedures;

(vi) Service area;

(vii) Participating providers:

(A) If the HMO provides health services through an individual practice association(s), the HMO shall provide the number of member physicians by specialty, and a listing of the hospitals where HMO members will receive basic and supplemental health services; and

(B) If the HMO provides health services other than through an individual practice association, the HMO shall provide for each ambulatory care facility, the facility's address, days and hours of operation, and the number of physicians by specialty, and a listing of the hospitals where HMO members will receive basic and supplemental health services; and

(viii) Financial condition to include at least the following most recently audited information: Current assets, other assets, total assets; current liabilities, long term liabilities; and net worth.

(2) *Broadly representative enrollment.* After providing the written description referred to in paragraph (c)(1) of this section, each HMO shall offer enrollment to persons who are broadly representative of the various age, social, and income groups within its service area. In the case of an HMO which has a medically underserved population located in its service area, not more than 75 percent of the HMO members may be enrolled from the medically underserved population unless the area in which that population resides is also a rural area.

* * * * *

§ 110.108 [Amended]

2. In § 110.108, a new paragraph (s) is added as follows:

* * * * *

(s) *Reporting and Disclosure under ERISA.* Each HMO shall provide each employer or designee (as those terms are defined in § 110.801 of this part) or plan administrator (as that term is defined under the Employee Retirement Income Security Act of 1974, "ERISA") including the HMO option in its employees' health benefits plan, upon request, the information which is necessary to satisfy its reporting and disclosure obligations under ERISA insofar as that HMO is involved.

Part XI

Department of State

Office of the Secretary

Hostage Relief

DEPARTMENT OF STATE

Office of the Secretary

[SD-167]

22 CFR Parts 1, 2, 3, and 4

Hostage Relief

AGENCY: Department of State.

ACTION: Proposed rule.

SUMMARY: The Department of State, upon authorization by the President, proposes to issue regulations providing for assistance to American hostages and members of their families and households. The authority for this assistance is the Hostage Relief Act of 1980 (Public Law 96-449, 94 Stat. 1967). This Act requires that the Secretary of State determine who are hostages, and members of the family and households of hostages, for various purposes of Title I and II of the Act.

Part 1 of the proposed regulations describes the process for such determinations. Part 2 deals with the extension of certain provisions of the Soldiers' and Sailors' Civil Relief Act (50 U.S.C. App. 501, et seq.) to American Hostages in Iran and elsewhere. Part 3 deals with medical benefits, and Part 4 with educational assistance.

While the Act also contains in Title II various tax relief provisions, the Treasury Department considers these provisions self-executing and therefore no additional regulatory material is necessary at this time with regard to the tax provisions.

DATE: Comments must be received on or before March 23, 1981.

ADDRESS: Send written comments to: the Assistant Secretary for Administration, Department of State, Washington, D.C. 20520 (202) 632-1728.

FOR FURTHER INFORMATION CONTACT: Walter F. Weiss (202) 632-1492.

SUPPLEMENTARY INFORMATION: Under the Hostage Relief Act, the Secretary of State identifies in the **Federal Register**, from time to time, any hostile action which results in captive status under sections 101(4) and 205(c)(1) of the Act. The Secretary of State also determines, under sections 101(1)(B), 205(c)(2) and 205(f) of the Act, whether citizens or resident aliens of the U.S. who are in captive status are eligible for benefits under the Act.

Benefits under the Act are available to Government civil service and uniformed service personnel, and to others determined to have been rendering service to the United States similar to Government personnel. Benefits are also available to members of the family and households of hostages. Determinations will be made on a case-by-case basis as provided in the regulations.

Any person may apply for such a determination to be made on their own behalf or on behalf of a person believed to be in captive status as defined by the Act, or to be otherwise entitled to benefits under this Act. Information on how to apply is set forth in § 1.2 of the proposed regulation.

The present Soldiers' and Sailors' Civil Relief Act was enacted in 1940 (Title 50 United States Code, Appendix, sections 501 et seq.). The purpose of the Act is to protect certain rights of persons during their term of military service, when they are not in a position to effectively deal with their rights. Generally, the method of the Civil Relief Act is to authorize a court to postpone certain proceedings and transactions, or to avoid the application of certain penalties or damage claims, until a person returns from military service, or when the court determines that a person is in a position to reasonably respond to protect their rights and interests, and where deemed necessary, to provide for adequate representation of such persons during their absence.

The majority of the benefit provisions of the Soldiers' and Sailors' Civil Relief Act have been extended under this Act to hostages. Certain of those provisions have been excluded under Sec. 105 of the Hostage Relief Act as inapplicable, or in some cases in order to allow further consideration.

There is nothing in the Soldiers' and Sailors' Relief Act which relieves a person from the payment of debts or other obligations which may have been incurred. It is only when a person's ability to meet obligations has been impaired becaused of military service, or circumstances covered by the Hostage Relief Act, that relief may be afforded. The extent to which relief is afforded generally is left to the discretion of the appropriate court in the United States.

The intention in drafting the regulations in Parts 3 and 4 is to provide the maximum benefits provided by the Hostage Relief Act and at the same time to avoid duplication of benefits available under other programs. For example, a person eligible for educational benefits under chapters 35 and 31 of Title 38 of the United States Code (Veteran's Administration programs) would have to utilize those programs, and would be able to apply to the Hostage Relief program only for benefits different in amount or duration, if authorized under the latter law.

The medical benefits provided for in Part 3 are medical and health care at U.S. Government expense, and payment of other expenses related to such care, for any illness or injury determined to be caused or materially aggravated by the hostage situation. Applications for benefits are to be submitted to the Office of Medical Services of the Department of State which will determine eligibility and extent of benefits.

The education benefits provided for in Part 4 for hostages or certain family members are modeled after those available under programs administered by the Veteran's Administration. Since the Hostage Relief Act permits more extended benefits in special circumstances, the regulations provide a process for determining when such extended assistance will be authorized.

Accordingly, it is hereby proposed, under the authority of the Hostage Relief Act of 1980 (Public Law 96-449) and section 4 of the Act of May 26, 1949 (22 United States Code, Sec. 2658) to add the following new Subchapter P, Parts 1 through 4, to title 22 of the Code of Federal Regulations.

Ben H. Read,

Under Secretary of State for Management.

January 16, 1981.

SUBCHAPTER P—HOSTAGE RELIEF

Parts

1 General.

Sec.
2 Application of Soldiers' and Sailors' Civil Relief Act.
3 Medical benefits.
4 Educational benefits.

PART 1—GENERAL

Sec.
1.1 Declaration of hostile action.
1.2 Application for determination of eligibility.
1.3 Definitions.
1.4 Notification of eligible persons.
1.5 Relationships among agencies.
1.6 Effective date.

Authority: Hostage Relief Act of 1980 (Pub. L. 96–449) and Sec. 4 of Act of 1949 (22 U.S.C. 2658).

§ 1.1 Declaration of hostile action.

(a) The Secretary of State from time to time shall declare when and where individuals in the civil or uniformed services of the United States, or a citizen or resident alien of the United States rendering personal services to the United States abroad similar to the service of a civil officer or employee of the United States, have been placed in captive status because of hostile action abroad directed against the United States and occurring or continuing between November 4, 1979, and such date as may be delcared by the President under section 101(2)(A) of the Hostage Relief Act of 1980 (Public Law 96–449, hereafter "the Act") or January 1, 1983, whichever is later. Each such declaration shall be published in the Federal Register.

(b) The Secretary of State upon his or her own initiative, or upon application under § 1.2, shall determine which individuals in captive status as so declared shall be considered hostages eligible for benefits under the Act. The Secretary shall also determine who is eligible under the Act for benefits as a member of a family or household of a hostage. The determination of the Secretary shall be final, but any interested person may request reconsideration on the basis of information not considered at the time of original determination. The criteria for determination are set forth in sections 101 and 205 of the Act, and in these regulations.

§ 1.2 Application for determination of eligibility.

(a) Any person who believes that they or other persons known to them are either hostages as defined in the Act, or members of the family or household of hostages as defined in § 1.3(1), or a child eligible for benefits under Part 4, may apply for benefits under this subchapter for themselves, or on behalf of others entitled thereto.

(b) The application shall be in writing, should contain all identifying and other pertinent data available to the person applying about the person or persons claimed to be eligible, and should be addressed to the Assistant Secretary of State for Administration, Department of State, Washington, D.C. 20520. Applications may be filed at any time after publication of a declaration under § 1.1(a) in the Federal Register, and during the period of its validity, or within 60 days after release from captivity. Later filing may be considered when in the opinion of the Secretary of State there is good cause for the late filing.

§ 1.3 Definitions.

When used in this subchapter, unless otherwise specified, the terms—

(a) "Family Member" means (1) a spouse, (2) an unmarried dependent child including a step-child or adopted child, (3) a person designated in official records or determined by the agency head or designee thereof to be a dependent, or (4) other persons such as parents, parents-in-law, persons who stand in the place of a spouse or parents, or other members of a household when fully justified by the circumstances of the hostage situation, as determined by the Secretary of State.

(b) "Agency head" means the head of an agency as defined in the Act (or successor agency) employing an individual determined to be an American hostage. The Secretary of State is the agency head with respect to any hostage not employed by an agency.

(c) "Principal" means the hostage whose captivity forms the basis for benefits under this subchapter for a family member.

§ 1.4 Notification of eligible persons.

The Assistant Secretary of State for Administration shall be responsible for notifying each individual determined to be eligible for benefits under the Act or, if that person is not available, a representative or Family Member of the hostage.

§ 1.5 Relationships among agencies.

(a) The Assistant Secretary of State for Administration shall promptly inform the head of any agency whenever and employee (including a member of the Armed Forces) in that agency, or Family Member of such employee, is determined to be eligible for benefits under this subchapter.

(b) In accordance with inter-agency agreements between the Department of State and relevant agencies—

(1) The Veterans Administration will periodically bill the Department of State for expenses it pays for each eligible person under Part 4 of this subchapter plus the administrative costs of carrying out its reponsibilities under this part.

(2) The Department of State will, on a periodic basis, determine the cost fo services and benefits it provides to all eligible persons under this subchapter and bill each agency for the costs attributable to Principals (and Family Members) in or acting on behalf of the agency plus a proportionate share of related administrative expenses.

§ 1.6 Effective date.

This subchapter is effective as of November 4, 1979. Reimbursement may be made for expenses approved under this subchapter for services rendered on or after such date.

PART 2—APPLICATION OF SOLDIERS' AND SAILORS' CIVIL RELIEF ACT

Sec.
2.1 Eligibility for benefits.
2.2 Applicable benefits.
2.3 Description of benefits.
2.4 Administration of benefits.

Authority: Hostage Relief Act of 1980 (Pub. L. 96–449) and Sec. 4 of Act of 1949 (22 U.S.C. 2658).

§ 2.1 Eligibility for benefits.

A person designated as a hostage under Part 1 of this subchapter, other than a member of the Armed Forces covered by the provisions of the Soldiers' and Sailors' Civil Relief Act of 1940, shall be eligible for benefits under this Part.

§ 2.2 Applicable benefits.

(a) Eligible persons are entitled to the benefits provided by the Soliders' and Sailors' Civil Relief Act of 1940 (50 U.S.C. App. 501, et seq.), including the benefits provided by section 701 (50 U.S.C. App. 591) notwithstanding paragraph (c) thereof, but excluding the benefits provided by sections 104, 105, 106, 400 through 408, 501 through 512, and 514 (50 U.S.C. App. 514, 515, 516, 540 through 548, 561 through 572, and 574).

(b) In applying such Act for purposes of this section—

(1) The term "person in the military service" is deemed to include any such American hostage;

(2) The term "period of military service" is deemed to include the period during which such American hostage is in a captive status;

(3) References therein to the Secretary of the Army, the Secretary of the Navy, the Adjustant General of the Army, the Chief of Naval Personnel, and the Commandant, United States Marine Corps, or other officials of government are deemed to be references to the Secretary of State; and

(4) The term "dependents" shall, to the extent permissible by law, be construed to include "Family Members" as defined in section 101 of the Hostage Relief Act.

§ 2.3 Description of benefits.

The following material is included to assist persons affected, by providing a brief description of some of the provisions of the Civil Relief Act. Note that not all of the sections applicable to hostage have been included here. References to sections herein are references to the Civil Relief Act of 1940, as amended, followed by references in parenthese to the same section in the United States Code.

(a) *Guarantors, endorsers.* Section 103 (50 U.S.C. App. 513) provides that whenever a hostage is granted relief from the enforcement of an obligation, a court, in its discretion, may grant the same relief to guarantors and endorsers of the obligaiton. Amendments extend relief to accoummodation makers and others primarily or secondarily liable on an obligation, and to sureties on a criminal bail bond. They provide, on certain conditions, that the benefits of the section with reference to persons primarily or secondarily liable on an obligation may be waived in writing.

(b) *Written Agreements.* Section 107 (50 U.S.C. App. 517) provides that nothing contained in the Act shall prevent hostages from making certain arrangements with respect to their contracts and obligations, but requires that such arrangements be in writing.

(c) *Protection in Court.* Section 200 (50 U.S.C. App. 520) provides that if a hostage is made defendant in a court action and is unable to appear in court, the court shall appoint an attorney to represent the hostage and protect the hostage's interests. Further, if a judgment is rendered against the hostage, an opportunity to reopen the case and present a defense, if meritorious, may be permitted within 90 days after release.

(d) *Court Postponement.* Section 201 (50 U.S.C. App. 521) authorizes a court to postpone any court proceedings if a hostage is a party thereto and is unable to participate by reason of being a captive.

(e) *Relief Against Penalties.* Section 202 (50 U.S.C. App. 522) provides for relief against fines or penalties when a court proceeding involving a hostage is postponed, or when the fine or penalties are incurred for failure to perform any obligation. In the latter case, relief depends upon whether the hostage's ability to pay or perform is materially affected by being held captive.

(f) *Postponement of Action.* Section 203 (50 U.S.C. App. 523) authorizes a court to postpone or vacate the execution of any judgment, attachment or garnishment.

(g) *Period of Postponement.* Section 204 (50 U.S.C. App. 524) authorizes a court to postpone proceedings for the period of capitivity, and for 3 months thereafter, or any part thereof.

(h) *Extended Time Limits.* Section 205 (50 U.S.C. App. 525) excludes the period of captivity fom computing time under existing or future statutes of limitation. Amendments extend relief to include actions before administrative agencies, and provide that the period of captivity shall not be included in the period for redemption of real property sold to enforce any obligation, tax, or assessment. Section 207 excludes application of section 205 to any period of limitation prescribed by or under the internal revenue laws of the United States.

(i) *Interest Rates.* Section 206 (50 U.S.C. App. 526) provides that interest on the obligations of hostages shall not exceed a specified per centurm per annum, unless the court determines that ability to pay greater interest is not affected by being held captive.

(j) *Misuse of Benefits.* Section 600 (50 U.S.C. App. 580) provides against transfers made with intent to delay the just enforcement of a civil right by taking advantage of the Act.

(k) *Further Relief.* Section 700 (50 U.S.C. App. 590) provides that a person, during a period of captivity or 6 months thereafter, may apply to a court for relief with respect to obligations incurred prior to captivity, or any tax or assessment whether falling due prior to or during the period of captivity. The court may, on certain conditions, stay the enforcement of such obligations.

(l) *Stay of Eviction.* Section 300 (50 U.S.C. App. 530) provides that a hostage's dependents shall not be evicted from their dwelling if the rental is $150 or less per month, except upon leave of a court. If it is proved that inability to pay rent is a result of being in captivity, the court is authorized to stay eviction proceedings for not longer than 3 months. An amendment extends relief to owners of the premises with respect to payments on mortgage and taxes.

(m) *Contract and Mortgage Obligations.* As provided by sections 301 and 302 of the Act (50 U.S.C. App. 531 and 532), as amended, contracts for the purchase of real and personal property, which originated prior to the period of captivity, may not be rescinded, terminated, or foreclosed, or the property repossessed, except as provided in section 107 (50 U.S.C. App. 517), unless by an order of a court. The mentioned sections give the court wide discretionary powers to make such disposition of the particular case as may be equitable in order to conserve the interests of both the hostage and the creditor. The cited sections further provide that the court may stay the proceedings for the period of captivity and 3 months thereafter, if in its opinion the ability of the hostage to perform the obligation is materially affected by reason of captivity. Section 303 (50 U.S.C. App. 533) provides that the court may appoint appraisers and, based upon their report, order such sum as may be just, if any, paid to hostages or their dependents, as a condition to foreclosing a mortgage, resuming possession of property, and rescinding or terminating a contract.

(n) *Termination of a Lease.* Section 304 (50 U.S.C. App. 534) provides, in general, that a lease covering premises occupied for dwelling, business, or agricultural purpose, executed by persons who subsequently become hostages, may be terminated by a notice in writing given to the lessor, subject to such action as may be taken by a court on application of the lessor. Termination of a lease providing for monthly payment of rent shall not be effective until 30 days after the first date on which the next rental payment is due, and, in the case of other leases, on the last day of the month following the month when the notice is served.

(o) *Assignment of Life Insurance Policy.* Section 305 (50 U.S.C. App. 535) provides that the assignee of a life insurance policy assigned as security, other than the insurer in connection with a policy loan, except upon certain conditions, shall not exercise any right with respect to the assignment during the period of captivity of the insured and one year thereafter, unless upon order of a court.

(p) *Storage Lien.* Section 305 (50 U.S.C. App. 535) provides that a lien for storage of personal property may not be foreclosed except upon court order. The court may stay proceedings or make other just disposition.

(q) *Extension of Benefits to Dependents,* Section 306 (50 U.S.C. App. 536) extends the benefits to section 300 through 305 to dependents of a hostage.

(r) *Real and Personal Property Taxes.* Section 500 (50 U.S.C. App. 560) forbids sale of property, except upon court leave, to enforce collection of taxes or assessments (other than taxes on income) on personal property or real property owned and occupied by the hostage or dependents thereof at the commencement of captivity and still

occupied by the hostage's dependents or employees. The court may stay proceedings for a period not more than 6 months after termination of captivity. When by law such property may be sold to enforce collection, the hostage will have the right to redeem it within 6 months after termination of captivity. Unpaid taxes or assessments bear interest at 6 percent.

(s) *Income Taxes.* Section 513 provides for deferment of payment of income taxes. However, section 204 of the Hostage Relief Act of 1980 provides for deferment and certain other relief, and should be referred to in order to determine statutory tax benefits in addition to those in section 513 of the Civil Relief Act.

(t) *Certification of Hostage.* Section 601 provides that a certificate signed by the agency head shall be prima facie evidence that the person named has been a hostage during the period specified in the certification.

(u) *Interlocutory Orders.* Section 602 (50 U.S.C. App. 582) provides that a court may revoke an interlocutory order it has issued pursuant to any provision of the Soldiers' and Sailors' Civil Relief Act of 1940.

(v) *Power of Attorney.* Section 701 (50 U.S.C. App. 591) provides that certain powers of attorney executed by a hostage which expire by their terms after the person was captured shall be automatically extended for the period of captivity. Exceptions are made with respect to powers of attorney which by their terms clearly indicate they are to expire on the date specified irrespective of hostage status. (Section 701 applies to American hostages notwithstanding paragraph (c) thereof which states that it applies only to powers of attorney issued during the "Vietnam era".)

§ 2.4 Administration of benefits.

(a) The Assistant Secretary of State for Administration will issue certifications or other documents when required for purposes of the Civil Relief Act.

(b) The Assistant Secretary of State shall whenever possible promptly inform the chief legal officer of each State in which hostages maintain residence of all persons determined to be hostages eligible for assistance under this subpart.

PART 3—MEDICAL BENEFITS

Sec.

3.1 Eligibility for benefits.
3.2 Applicable benefits.
3.3 Administration of benefits.
3.4 Disputes.

Authority: Hostage Relief Act of 1980 (Pub. L. 96–449) and Sec. 4 of the Act of 1949 (22 U.S.C. 2658).

§ 3.1 Eligibility for benefits.

A person designated as a hostage or Family Member of a hostage under Part 1 of this subchapter shall be eligible for benefits under this Part.

§ 3.2 Applicable benefits.

A person eligible for benefits under this Part shall be eligible for authorized medical and health care at U.S. Government expense, and for payment of other authorized expenses related to such care or for obtaining such care for any illness or injury which is determined by the Secretary of State to be caused or materially aggravated by the hostage situation, to the extent that such care may not—

(a) Be provided or paid for under any other Government health or medical program, including, but not limited to, the programs administered by the Secretary of Defense, the Secretary of Labor and the Administrator of Veterans Affairs; or

(b) Be entitled to reimbursement by any private or Government health insurance or comparable plan.

§ 3.3 Administration of benefits.

(a) An eligible person, who desires medical or health care under this Part or any person acting on behalf thereof, shall submit an application to the Office of Medical Services, Department of State, Washington, D.C. 20520 (hereafter in this Part referred to as the "Office"). The applicant shall supply all relevant information, including insurance information, requested by the Director of the Office. An eligible person may also submit claims to the Office for payment for emergency care when there is not time to obtain prior authorization as prescribed by this paragraph, and for payment for care received prior to or ongoing on the effective date of these regulations.

(b) The Office shall evaluate all requests for care and claims for reimbursement and determine, on behalf of the Secretary of State, whether the care in question is authorized under section 3.2 of this Part. The Office will authorize care, or payment for care when it determines the criteria of such section are met. Authorization shall include a determination as to the necessity and reasonableness of medical or health care.

(c) The Office will refer applicants eligible for benefits under other Government health programs to the Government agency administering those programs. Any portion of authorized care not provided or paid for under another Government program will be reimbursed under this Part.

(d) Eligible persons may obtain authorized care from any licensed facility or health care provider of their choice approved by the Office. To the extent possible, the Office will attempt to arrange for authorized care to be provided in a Government facility at no cost to the patient.

(e) Authorized care provided by a private facility or helth care provider will be paid or reimbursed under this Part to the extent that the Office determines that costs do not exceed reasonable and customary charges for similar care in the locality.

(f) All bills for authorized medical or health care covered by insurance shall be submitted to the patient's insurance carrier for payment prior to submission to the Office for payment of the balance authorized by this Part. The Office will request the health care providers to bill the insurance carrier and the Department of State for authorized care, rather than the patient.

(g) Eligible persons will be reimbursed by the Office for authorized travel to obtain an evaluation of their claim under paragraph (b) and for other authorized travel to obtain medical or health care authorized by this Part.

§ 3.4 Disputes.

Any dispute between the Office and eligible persons concerning (a) whether medical or health care is required in a given case, (b) whether required care is incident to the hostage taking, or (c) whether the cost for any authorized care is reasonable and customary, shall be referred to the Medical Director, Department of State and the Foreign Service for a determination. If the person bringing the claim is not satisfied with the decision of the Medical Director, the dispute shall be referred to a medical board composed of three physicians, one appointed by the Medical Director, one by the eligible person and the third by the first two members. A majority decision by the board shall be binding on all parties.

PART 4—EDUCATIONAL BENEFITS

Sec.

4.1 Eligibility for benefits.
4.2 Applicable family benefits.
4.3 Applicable benefits for hostages.
4.4 Administration of benefits.
4.5 Maximum limitation on benefits.

Authority: Hostage Relief Act of 1980 (Pub. L. 96–449) and Sec. 4 of Act of 1949 (22 U.S.C. 2658).

§ 4.1 Eligibility for benefits.

(a) A spouse or unmarried dependent child aged 18 or above of a hostage as

determined under Part 1 of this subchapter shall be eligible for benefits under § 4.2 of this Part. (certain limitations apply however to persons eligible for direct assistance through other programs of the Veterans Administration under chapter 35 of title 38, United States Code).

(b) A Principal (see definition in § 1.3) designated as a hostage under Part 1 of this subchapter, who intends to change jobs or careers because of the hostage experience and who desires additional training for this purpose, shall be eligible for benefits under § 4.3 of this Part unless such person is eligible for comparable benefits under title 38 of the United States Code as determined by the Administrator of the Veterans Administration.

§ 4.2 Applicable family benefits.

(a) An eligible spouse or child shall be paid (by advancement or reimbursement) for expenses incurred for subsistence, tuition, fees, supplies, books, and equipment, and other educational expenses, while attending an educational or training institution approved in accordance with procedures established by the Veteranss Administration, which shall be comparable to procedures established pursuant to chapters 35 and 36 of title 38 U.S.C.

(b) Except as provided in paragraph (c) or (d herein), payments shall be available under this subsection for an eligible spouse or child for education or training which occurs—

(1) 90 days after the Principal is placed in a captive status, and

(i) Through the end of any semester or quarter which begins before the date on which the Principal ceases to be in a captive status, or

(ii) If the educational or training institution is not operated on a semester or quarter system, the earlier of the end of any cours which began before such date or the end of the twelve-week period following that date.

(c) In special circumstances and within the limitation of § 4.5, the Secretary of State may, under the criteria and procedures set forth in § 4.4, approve payments for education or training under this subsection which occurs after the date determined under paragraph (b) above.

(d) In the event a Principal dies and the death is determined by the Secretary of State to be incident to that individual being a hostage, payments shall be available under this subsection for education or training of a spouse or child of the Principal which occurs after the date of death, up to the maximum that may be authorized under § 4.5.

§ 4.3 Applicable benefits for hostages.

(a) When authorized by the Secretary of State a Principal, following released from captivity, shall be paid (by advancement or reimbursement) for expenses incurred for subsistence, tuition, fees, supplies, books and equipment, and other educational expenses, while attending an educational or training institution approved in accordance with procedures established by the Veterans Administration comparable to procedures established pursuant to chapters 35 and 36 of title 38 U.S.C. Payments shall be available under this subsection for education or training which occurs on or before—

(1) The end of any semester or quarter (as appropriate) which begins before the date which is 10 years after the day on which the Principal ceases to be in a captive status, or

(2) If the educational or training institution is not operated on a semester or quarter system, the earlier of the end of any course which began before such date or the end of the twelve-week period following that date.

(b) A person eligible for benefits under this subsection shall not be required to separate from Government service in order to undertake the training or education, but while in Government service, may only receive such training or education during off-duty hours or during periods of approved leave.

§ 4.4 Administration of benefits.

(a) Any person desiring benefits under this Part shall apply in writing to the Assistant Secretary of State for Administration, Department of State, Washington, D.C. 20520. The application shall specify the benefits desired and the basis of eligiblity for those benefits. The Secretary of State shall make determinations of eligibility for benefits under this Part, and shall forward approved applications to the Veterans Administration and advise the applicant of the name and address of the office in the Veterans Administration that will counsel the eligible persons on how to obtain the benefits that have been approved. Persons whose applications are disapproved shall be advised of the reasons for the disapproval.

(b) The Veterans Administration shall provide the same level and kind of assistance, including payments (by advancement or reimbursement) for authorized expenses up to the same maximium amounts, to spouses and children of hostages, and to Principals following their release from captivity as it does to eligible spouses and children of veterans and to eligible veterans, respectively, under chapters 35 and 36 of title 38, United States Code. The Veterans Administration shall, following consultation with the Secretary of State and under procedures it has established to administer section 1724 of title 38, United States Code, discontinue assistance for any individual whose conduct or progress is unsatisfactory under standards consistent with those established pursuant to such section 1724.

(c) An Advisory Board shall be established to advise on eligibility for benefits under paragraphs (c) and (d) of § 4.2 and under § 4.3. The Board shall be composed of the Assistant Secretary of State for Administration as Chairperson, the Director of the Office of Medical Services of the Department of State, the Executive Director of the regional bureau of the Department of State in whose region the relevant hostile action occurred, the Director of Personnel or other designee of the applicable employing agency, and a representative of the Veterans Administration designated by the Administrator.

(d) If an application is received from a spouse or child for extended training under § 4.2(c), the Secretary of the ——— shall determine with the advice of the Advisory Board whether the Principal, following release from captivity, is incapacitated by the hostage experience to the extent that (1) he or she has not returned to full-time active duty and is unlikely to be able to resume tha normal duties of his or her position or career, or (2) in the event of a separation from Government service, a comparable position or career, for at least six months from the date the Principal is released from captivity. If the Secretary makes such a determination, he or she may approve, within the limits of § 4.5, an application under § 4.2(c) for up to one year of education or training. If the Principal remains incapacitated, the Secretary may approve additional training or education up to the maximum authorized under § 4.5.

§ 4.5 Maximum limitation on benefits.

(a) In no event may assistance be provided under this Part for any individual for a period in excess of 45 months, or the equivalent thereof in part-time education or training.

(b) The eligibility of a spouse for benefits under paragraph (c) or (d) of § 4.2 shall expire on a date which is 10 years after the date of the release of the hostage, or the death of the hostage, respective. The eligibility of a dependent child for benefits under such paragraphs (c) and (d) shall expire on the twenty-sixth birthday of such child or on such later date as determined by the Administrator of the Veterans Administration, as would be applicable if section 1712 of title 38, United States Code, were applicable.

Office of Management and Budget

Budget Rescissions and Deferrals

OFFICE OF MANAGEMENT AND BUDGET

Budget Rescission and Deferrals

To the Congress of the United States:

In accordance with the Impoundment Control Act of 1974, I herewith propose 33 new rescissions of budget authority previously provided by the Congress, totalling $1,142.4 million. In addition, I am reporting 15 new deferrals totalling $1,429.9 million and revisions to three previously-reported deferrals totalling $4.4 million.

The rescission proposals affect programs of the Department of Commerce, Education, Energy, Health and Human Services, and Housing and Urban Development as well as the Community Services Administration, the Federal Mine Safety and Health Services Administration, the Federal Mine Safety and Health Review Commission, the Federal payment to the Postal Service Fund, and the Tennessee Valley Authority. The deferrals affect programs of the Departments of Commerce, Defense, Energy, Interior, Justice, Labor, and State, as well as the intelligence community staff, the National Consumer Cooperative Bank, the Pennsylvania Avenue Development Corporation, and the Small Business Administration.

The details of each rescission proposal and deferral are contained in the attached reports.

Jimmy Carter

The White House,

January 15, 1981.

a/ This amount represents budget authority except for $10,694 thousand involving the deferral of outlays only (D81-19A).

Rescission Proposal No: R81-1

PROPOSED RESCISSION OF BUDGET AUTHORITY
Report Pursuant to Section 1012 of P.L. 93-344

Agency Department of Commerce	New budget authority (P.L. 96-536) $ 774,367,000
Bureau National Oceanic and Atmospheric Administration	Other budgetary resources 11,850,061
Appropriation title & symbol	Total budgetary resources 786,217,061
Operations, Research, and Facilities 13X1450	Amount proposed for rescission $ 30,493,000
OMB identification code: 13-1450-5-1-306	Legal authority (in addition to sec. 1012): [X] Antideficiency Act
Grant program [ ] Yes [X] No	[ ] Other
Type of account or fund: [ ] Annual	Type of budget authority: [X] Appropriation
[ ] Multiple-year (expiration date)	[ ] Contract authority
[X] No-year	[ ] Other

Justification: In accordance with the President's policy of fiscal restraint, a rescission is proposed to reduce or eliminate spending for various low priority programs in the National Oceanic and Atmospheric Administration (NOAA). These programs proposed for rescission were added to the NOAA budget above the amounts requested by the President. The programs and amounts involved are as follows:

Salmon tagging with Japan - Studies to determine the continent of origin of selected species of salmon. The study is not considered essential to the fishery data analysis program. ($800,000)

Conversion of Pacific Region Headquarters, NWS to an administrative office - The proposed action involves the consolidation of managerial and administrative functions. The proposed consolidation would have no impact on the provisions of weather services to the public and will save the Federal Government both personnel and funding. ($348,000)

Oceanographic instrumentation - Statements made in the Conference Report on the Department's 1981 appropriation bill indicated that these funds were to be used to lay up the NOAA underwater habitat, Hydrolab. However, funds to operate the Hydrolab in 1981 were restored by Conference action. Consequently, funds provided for lay up are unnecessary. ($100,000)

Pascagoula fisheries laboratory renovation and expansion - These funds would improve the laboratory facilities and provide additional space. Improvements made to the facility through reprogramming in 1980 are felt to be adequate. ($650,000)

a/

Flood program - These funds would provide for installation, testing, and evaluation of a prototype flash flood warning system of Appalachian counties, which includes the Big Sandy River Basin. Proceeding with installation of equipment in the Big Sandy River Basin is inconsistent with existing National Weather Service plans. The effects of the ongoing program should be evaluated before expanding the effort. Adequate funds are available currently for this. ($325,000)

Purchase of local warning radars - The proposed action includes deletion of funds to purchase radars for Tupelo, Arizona; and Savannah, Georgia. The purchase of these radars is unnecessary since each of these areas is adequately covered by other network radars. ($1,845,000)

NOAA Undersea Research Program - The proposed action reduces funds for three new regional undersea research programs. The effect of reducing these regional programs in 1981 would not be significant. ($500,000)

Anadromous grants - The reduction of $2,000,000 will maintain the program at its 1980 level in 1981. A significant impact on anadromous fish resources is not expected through deletion of these funds. ($2,000,000)

Campeche Oil Spill - The proposed action would reduce the level of funding for the assessment of the social, environmental, and economic damadge resulting from the IXTOC-I oil spill. The impact of the reduced level of funding is minimal due to the length of elapsed time since the spill occurred. ($500,000)

Striped bass - The proposed action would reduce the scope of the studies regarding the causes of the decline in striped bass stocks. The effect of this reduction would result in the termination of these studies as FY 1980 funds are used up. ($750,000)

Vessel Buy-Back Program - This program will assist in aleviating some of the intense fishing pressure on salmon resources in the northwest by reducing the number of available vessels/licences. Implementation of the buy-back programs at a reduced level will not have an adverse effect on the overall program due to the likely time required to initiate the program. Additionally, states are expected to provide a 50% matching share, reducing the need for Federal funds. ($10,000,000)

Additonal programs are recommended for rescission from the funding transferred from the Promote and Develop Fishery Products and Research Pertaining to American Fisheries appropriation. This proposed action would delete funds above the President's request for the following programs: Marine resources monitoring, assessment and prediction $3,175,000; Commercial fisheries grants to states $2,500,000; Regional Fishery Management Councils of $500,000; Restore and enhance fisheries in the Columbia River $1,100,000; additional base fisheries programs $2,400,000; and Sea Grant increase for marine education $3,000,000. Since these funds are part of the uncommitted balance in the Promote and Develop appropriation, the rescission of the funding would not affect the funding of continuing fishery programs. Additional funds in these areas are not required to carry out effective programs in 1981.

Estimated Effects: The rescission of these funds would reduce Federal spending for fiscal years 1981 and 1982, without hampering the carrying out of NOAA's overall mission.

National Oceanic and Atmospheric Administration

Operations, Research, and Facilities

Of the funds provided for "National Oceanic and Atmospheric Administration, Operations, research, and facilities" by P.L. 96-536, $30,493,000 are rescinded

Rescission Proposal No: R81-2

PROPOSED RESCISSION OF BUDGET AUTHORITY
Report Pursuant to Section 1012 of P.L. 93-344

Agency Department of Commerce	New budget authority (P.L. 95-567) $ 25,705,000
Bureau National Telecommunications and Information Administration	Other budgetary resources 11,510
Appropriation title & symbol: Public Telecommunications Facilities, Planning and Construction 13X0551	Total budgetary resources 25,716,510
	Amount proposed for rescission $ 4,000,000
OMB identification code: 13-0551-5-1-503	Legal authority (in addition to sec. 1012): ☐ Antideficiency Act
Grant program ☐ Yes ☐ No	☐ Other
Type of account or fund: ☐ Annual ☐ Multiple-year (expiration date) ☒ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification: The public telecommunications facilities program provides grants for planning and construction of noncommercial telecommunications facilities to help extend and improve the delivery of public telecommunications services. In support of the President's policy of fiscal restraint, a rescission of $4 million is proposed to return the Public Telecommunications facilities program to the level requested by the President in the 1981 Budget.

Estimated Effects: Although the specific demand by States for these funds in 1981 is not known, it is anticipated that this rescission will have no significant impact on the NTIA's ability to meet the "start-up and extension" requirements of the Telecommunications Financing Act of 1978.

Outlay Effects: (in millions of dollars)

PROPOSED RESCISSION OF BUDGET AUTHORITY
Report Pursuant to Section 1012 of P.L. 93-344

Agency Department of Education	New budget authority (P.L. 96-536) $ 740,000,000
Bureau Office of Elementary & Secondary Education	Other budgetary resources -0-
Appropriation title & symbol: School Assistance in Federally Affected Areas 9110102	Total budgetary resources 740,000,000
	Amount proposed for rescission $ 148,000,000
OMB identification code: 91-0102- -1-501	Legal authority (in addition to sec. 1012): ☐ Antideficiency Act
Grant program ☒ Yes ☐ No	☐ Other
Type of account or fund: ☒ Annual ☐ Multiple-year (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification:

The Impact Aid Maintenance and Operations program provides assistance to local educational agencies that have been adversely affected by the loss of revenues due to nontaxable lands defined as Federal property within their boundaries. Section 2 of Title I of the Act of September 30, 1950, as amended, provides assistance to school districts that have suffered a partial loss of tax base due to certain U.S. acquisitions of real property. Section 3 of the Act provides payments to assist school districts to finance the cost of educating children who reside and/or whose parents work on Federal property or are in the uniformed services.

Since school districts receiving aid under this program have been overcompensated for the effects of the Federal burden, a rescission is proposed that will limit payments to school districts under sections 2 and 3 to 75 percent of the amounts paid in 1980.

Estimated Effects:

The proposed rescission will provide payments for all eligible applicants (estimated at 4059 for 1981) for all eligible children (estimated to be 2,234,000 in 1980). By making payments at 75 percent of the amount appropriated for 1980, a savings of $148 million from the Continuing Resolution level of $740 million for the Maintenance and Operations program will be realized.

School Assistance in Federally Affected Areas

Of the funds provided for "School Assistance in Federally Affected Areas" for fiscal year 1981 in Public Law 96-536, $148,000,000 are rescinded: Provided that the payments under sections 2 and 3 shall not exceed 75 per centum of the amounts paid to local education agencies under those sections for fiscal year 1980: Provided further, That the last two sentences of section 5(c) of the Act of September 30, 1950, shall not apply to the allocations and payments provided for in this Act.

PROPOSED RESCISSION OF BUDGET AUTHORITY

Report Pursuant to Section 1012 of P.L. 93-344

Agency: Department of Education	New budget authority (P.L. 96-536): $ 3,838,098,000
Bureau: Office of Elementary and Secondary Education	Other budgetary resources:
Appropriation title & symbol: Elementary and Secondary Education 9110100	Total budgetary resources: 3,838,098,000
	Amount proposed for rescission: $ 52,150,000
OMB identification code: 91-0100-5-1-501	Legal authority (in addition to sec. 1012): ☐ Antideficiency Act ☐ Other
Grant program: ☒ Yes ☐ No	
Type of account or fund: ☒ Annual ☒ Multiple-year September 30, 1982 (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification:

Improving Local Education Practice (Title IV-C) provides grants to State educational agencies to support local educational agencies' efforts at developing and implementing innovative solutions to a variety of educational problems.

Strengthening State Educational Agency Management (Title V-B) provides grants to State educational agencies to apply effective management practices to a variety of educational issues and to improve State leadership and services for elementary and secondary education programs, including the coordination of Federal programs, in each of the States.

Rescissions of $41,400,000 of the funds appropriated for Improving Local Educational Practice and $5,000,000 of the funds appropriated for Strengthening State Educational Agency Management are proposed because neither is, in a time of fiscal restraint, a high priority program. The projects supported by Title V-B are not necessarily targeted to national needs or national priority populations; Title V-B grants represent additional Federal funds devoted to administration.

Territorial Assistance provides general aid to education in the Virgin Islands and assists teacher training in Guam, American Samoa, the Northern Mariana Islands and the Trust Territory of the Pacific Islands.

A rescission of the $5,000,000 appropriated is proposed because sufficient funds are available from statutory set-asides in programs such as ESEA Title I, Title IV-C and Education for the Handicapped and from a variety of discretionary programs to meet the general needs addressed by these programs. Also under the consolidated grant program established by P.L. 95-134, the Insular Areas have enhanced opportunities to target currently available Federal funds on their most urgent needs.

Ellender Fellowships provides a grant to the Close-Up Foundation to fund fellowships for economically disadvantaged secondary school youth and their teachers. These students and teachers spend one week in Washington attending seminars on current issues and meeting with leaders from the three branches of government.

A rescission of $750,000 is proposed because local organizations have demonstrated their capacity to support the Foundation's activities independent of federal funding.

Estimated Effects:

Title IV-C and Title V-B. Rescinding $41,400,000 from Title IV-C will reduce the number of local education agency projects by 1,600 leaving a total of 2,600. The proposed rescission of $5,000,000 from Title V-B will cut the number of State education activities supported by 61. A total of 444 will remain.

Territorial assistance and Ellender Fellowships. Rescinding $750,000 of the funds appropriated for Ellender Fellowships would eliminate approximately 1500 fellowships. Rescinding the funds appropriated for Territorial Assistance would eliminate $5,000,000 of what is essentially general aid.

Outlay Effect: (in millions of dollars)

DEPARTMENT OF EDUCATION

Office of Elementary and Secondary Education

Elementary and Secondary Education

Of the funds appropriated for "Elementary and Secondary Education" in Public Law 96-536 for fiscal year 1981, $41,400,000 of the amount appropriated for title IV, part C and $5,000,000 of the amount appropriated for title V, part B of the Elementary and Secondary Education Act; and $5,000,000 appropriated for sections 1524 and 1525 of the Education Amendments of 1978; and $750,000 of the amount appropriated for Public Law 92-506 are rescinded. Provided, That notwithstanding the provision of Sections 404(a)(9) and 523(c), none of the funds appropriated for title IV, part C of the Elementary and Secondary Education Act may be expended for the purpose of title V, part B of the Elementary and Secondary Education Act.

Rescission Proposal No: R81-5

PROPOSED RESCISSION OF BUDGET AUTHORITY

Report Pursuant to Section 1012 of P.L. 93-344

Agency Department of Education	New budget authority (P.L. 96-536) $ 28,617,000
Bureau Office of Vocational and Adult Education	Other budgetary resources -0-
Appropriation title & symbol Vocational and Adult Education 1910400	Total budgetary resources 28,617,000
	Amount proposed for rescission $ 11,862,000
OMB identification code: 91-0400-5-1-501	Legal authority (in addition to sec. 1012): [X] Antideficiency Act [ ] Other
Grant program [X] Yes [ ] No	
Type of account or fund: [X] Annual [ ] Multiple-year _____ (expiration date) [ ] No-year	Type of budget authority: [X] Appropriation [ ] Contract authority [ ] Other

Justification:

The Career Education Incentive program provides primarily formula based matching funds to State education agencies for developing career awareness and career education within existing education programs and curricula. There is a seven and one-half percent funds set-aside for aid to outlying areas and discretionary activities including information-dissemination, model projects and evaluations. The rescission request will reduce the program from $15 million to $10 million and is requested because it is expected that States will utilize more of their own resources in continuing career education programs.

The Community Schools program authorizes grants, both discretionary and State formula, to support the use of public schools as centers operated jointly by a local education agency and a community service for the coordinated delivery of educational and social services to the community. The 1981 Continuing Resolution provides $10 million to make formula grants to State education agencies to pay the Federal share of the cost of planning, establishing, expanding and operating community education programs.

A rescission is proposed in order to fund the discretionary grants portion of the program at the level of $3,138,000. Funding the discretionary programs rather than the formula program targets scarce budgetary resources to areas that have, or are prepared to start, community schools programs.

Estimated Effects:

The effect of the Federal decrease of $5 million in the Career Education Incentive program will be to reduce formula grants to States and outlying areas from $14,025,000 from which 17 States would receive the statutory minimum grant of $125,000 to $9,350,000, from which 30 States would receive the minimum grant of $125,000. Funding for discretionary activities would be reduced from $975,000 to $650,000. The number of discretionary activities would not decrease but the average cost would.

The proposed Community Schools rescission will change the $10 million formula grant program to State education agencies in all the States, the District of Columbia, Puerto Rico and the Outlying Areas to a discretionary grant program. These discretionary grants will be made to local education agencies (approximately 25), to nonprofit agencies (approximately 6), State education agencies (approximately 25), and institutions of higher education (approximately 6).

Grant program: ☐ Yes ☒ No	
Type of account or fund: ☐ Annual ☐ Multiple-year _____ (expiration date) ☒ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification: This program insures and subsidizes student and parent borrowing for postsecondary educational costs from commercial and other lenders. Since enactment of the Middle Income Student Assistance Act loan volumes and program costs have increased annually to the point where associated Federal costs would now consume a major percentage of the education budget.

This rescission is being sought in order to better target Federal subsidies and to emphasize the traditional role of the family in meeting postsecondary educational costs. The rescission is accompanied by appropriation language which changes the benefits for new loans thereby reducing program costs. These changes would: (a) limit student loan amounts to "remaining need": (educational costs minus other aid and expected family contribution); (b) eliminate the in-school interest subsidy on student loans (allowing lenders to add the accruing interest to the student's loan obligation); (c) extend eligibility for parent loans to parents of dependent graduate students and spouses of independent students; (d) eliminate the Federal special allowance payment to lenders on parent loans; (e) allow lenders to set the parent loan interest rate (up to the Treasury Bill rate for 91 day notes plus 3.5 percent); and, (f) allow an up to 20 year repayment period on parent loans. These changes are also contained in the 1982 budget.

* Represents an estimate of funds expected to be required for this program under an indefinite appropriation provided by P.L. 96-536.

The proposed program changes are estimated to reduce full program costs by $157 million and continuing resolution costs by $79 million in 1981. Enactment of the rescission appropriation language provides $58 million for activities not authorized under the continuing resolution. Savings to the Federal Government accrue over the life of the loans made under these changes and much of the reduction in cost occurs in later years. The requested rescission assumes that these program changes will be effective only for the last quarter of fiscal year 1981. Earlier enactment would result in greater savings.

The chart below shows the fiscal impact of the rescission request:

Guaranteed Student Loan Subsidies
(dollars in thousands)

	Continuing Resolution	Full Program Costs	With Proposed Program Changes	Change from Continuing Resolution Levels
Federal Insurance claims	107,783	107,783	107,783	--
Federal reinsurance claims	232,509	232,509	234,509	+2,000
Interest benefits	654,751	654,751	546,751	-108,000
Special Allowance	1,460,228	1,460,228	1,437,228	-23,000
Death and Disability	14,850	14,850	16,850	+2,000
Bankruptcy	14,132	14,132	13,132	-1,000
Primary guarantee agency allowance	--	30,321	27,321	+27,321
Supplemental guarantee agency allowance	--	27,951	24,951	+24,951
Institutional allowance	36,542	36,542	33,542	-3,000
Allowances to agency reserves	2,500	2,500	2,500	--
Total Obligations	2,523,295	2,581,567	2,444,567	-78,728
Collections and other adjustments			-210,816	
Appropriation needed			2,233,751	

Estimated Effect: This rescission proposal will better target Federal subsidies and emphasize the traditional role of the family in meeting postsecondary educational costs. If this proposal were not made, loan volume in 1981 would be an estimated $7,185 million. This rescission would reduce estimated 1981 loan volume by $2,085 million to $5,100 million. Even with the rescission, 1981 loan volume is estimated to be $350 million over the $4,750 million loan volume of fiscal year 1980.

DEPARTMENT OF EDUCATION

Office of Postsecondary Education

Student Loan Insurance Fund

Notwithstanding any other provision of law, $2,233,751,000 shall be available during 1981 for program activities under this head: Provided that, notwithstanding provisions of the Higher Education Act, new loans to students under the Guaranteed Student Loan program shall be limited to estimated educational costs minus other financial assistance for the loan period and expected family contribution (as determined using a need analysis method approved by the Secretary of Education); the parents of dependent graduate students and the spouses of independent students shall be eligible to borrow funds under the same terms as the parents of dependent undergraduate students and the interest on loans to parents or spouses shall be set by the lender and shall not exceed the average of the bond equivalent rates of the ninety-one day Treasury bills auctioned during the last fiscal quarter completed prior to the making of a loan plus 3.5 percentum, and the repayment period on these loans may be extended by the lender up to a total of 20 years; no Federal interest benefits shall be paid on behalf of borrowers of new loans made under the Guaranteed Student Loan program; no Federal special allowance shall be paid to lenders on loans to parents or spouses under this program.

Rescission Proposal No: R81-7

PROPOSED RESCISSION OF BUDGET AUTHORITY

Report Pursuant to Section 1012 of P.L. 93-344

Agency: Department of Education	New budget authority (P.L. 96-536): $ 410,863,315
Bureau: Office of Postsecondary Education	Other budgetary resources: 16,941,872
Appropriation title & symbol: Higher and Continuing Education 9110201	Total budgetary resources: 427,805,187
	Amount proposed for rescission: $ 30,989,000
OMB identification code: 91-0201-5-1-502	Legal authority (in addition to sec. 1012): ☐ Antideficiency Act
Grant program: ☒ Yes ☐ No	☐ Other
Type of account or fund: ☒ Annual ☐ Multiple-year (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification:

	Amount Proposed for Rescission
Educational Outreach Title I, Part B of the Higher Education Act, is a new authority designed to increase access to postsecondary education for adults and non-traditional learners. This new authority includes a ten percent set aside for Federal discretionary grants. The remainder of the funds are distributed to the States on a formula basis for Comprehensive Statewide Planning, Information Services, and Continuing Education. Funds are also provided to the States for administration of the programs. All funds, except the State administration funds, are proposed for rescission because postsecondary planning, information services and continuing education are viewed as areas of State and institutional responsibility. State administration funds will be used to close out the old University Community Service and Continuing Education program.	$12,800,000
Veterans Cost of Instruction program provides grants to postsecondary institutions to encourage recruitment of, and special service to, eligible veterans. The number of veterans enrolled in postsecondary education has been declining in recent years. The institutions should now be able to provide services to the smaller number of veterans through their traditional counseling, tutoring and other service programs on campus.	$12,039,000
Public Service and Mining Fellowships programs support grants to institutions of higher education to provide fellowship assistance for students obtaining advanced training for a career in public service and for students of exceptional ability who are undertaking advanced training in domestic mining and mineral fuel conservation. Funds are proposed for rescission because there already is a substantial number of qualified persons to fill public service jobs and the attractive financial rewards associated with jobs in mining-related fields have served as a significant incentive in encouraging students to enter this field of study.	$3,150,000
Law School Clinical Experience programs support demonstrations of training programs in clinical legal experience. Funds are proposed for rescission because the Federal objective of demonstrating the value of clinical experience in the education and training of law students has been met.	$3,000,000
Total proposed for rescission	$30,989,000

Estimated Effects: The rescission of $12,800,000 in funds appropriated for the Educational Outreach programs will eliminate approximately 25 Federal discretionary grants for continuing education as well as formula grants to the 57 States and territories for comprehensive planning, information services, and continuing education.

The rescission of $12,039,000 appropriated for Veterans Cost of Instruction will eliminate grants to approximately 1,025 institutions of higher education that provide services to an estimated 326,000 enrolled veterans.

The rescission of $3,150,000 appropriated for Public Service and Mining Fellowships will eliminate approximately 238 Public Service fellowships and 137 Mining fellowships.

The rescission of $3,000,000 appropriated for Law School Clinical Experience will eliminate approximately 60 demonstration project awards, some of which would go to schools where the concept of clinical legal education has already been demonstrated with Federal funds in 1978, 1979, and/or 1980.

PROPOSED RESCISSION OF BUDGET AUTHORITY
Report Pursuant to Section 1012 of P.L. 93-344

Agency Department of Energy	New budget authority (P.L. 96-367 / 96-369) 96-536) $2,298,754,000
Bureau Energy Programs	Other budgetary resources 131,525,000
Appropriation title & symbol 89x0224 Energy Supply Research and Development-Operating Expenses	Total budgetary resources 2,430,279,000
	Amount proposed for rescission $25,026,000
OMB identification code: 89-0224-3-1-271	Legal authority (in addition to sec. 1012): ☐ Antideficiency Act
Grant program ☐ Yes ☒ No	☐ Other
Type of account or fund: ☐ Annual ☐ Multiple-year (expiration date) ☒ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification

The high temperature gas reactor (HTGR) program is a developed technology. A consortium of utilities has been interested in continuing development of this technology. However, since 1978, the consortium has been unable to obtain a commitment for major cost-sharing for a large plant. Latest indications are that it will take Federal support of $350 million over seven years before the utilities would be ready to decide to order the HTGR. This risk of Federal dollars is too great when compared to an essentially zero risk on the part of the private sector. Therefore, a rescission is proposed to withdraw Federal support from this program in 1981.

Estimated Effects

This rescission will terminate the high temperature reactor program immediately.

PROPOSED RESCISSION OF BUDGET AUTHORITY
Report Pursuant to Section 1012 of P.L. 93-344

Agency Department of Energy	New budget authority (P.L. 96-367) $383,287,000
Bureau Energy Programs	Other budgetary resources 22,282,000
Appropriation title & symbol Energy Supply, Research and Development Plant and Capital Equipment 89X0225.40	Total budgetary resources 405,569,000
	Amount proposed for rescission $3,650,000
OMB identification code: 89-0225-3-1-271	Legal authority (in addition to sec. 1012): ☐ Antideficiency Act
Grant program ☐ Yes ☒ No	☐ Other
Type of account or fund: ☐ Annual ☐ Multiple-year (expiration date) ☒ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification

Funds totalling $2.5 million provided for the construction of a facility to produce ethanol from biomass are proposed for rescission. In light of the loan guarantee program for ethanol-producing facilities, the construction of this facility with Government funds is no longer necessary.

In addition, supporting capital equipment funds totalling $1,150,000 for the High Temperature Gas Reactor (HTGR) are proposed for rescission in conjunction with the proposal to terminate activities in the operating account.

Estimated Effect

In light of the availability of loan guarantee awards for construction of ethanol facilities in excess of $1 billion, the effect of rescinding funds for the alcohol fuel facility will be minimal.

The HTGR rescission will stop purchases of capital equipment consistent with the immediate termination of the program.

Grant program [ ] Yes [X] No	[ ] Other
Type of account or fund: [ ] Annual [ ] Multiple-year (expiration date) [X] No-year	Type of budget authority: [X] Appropriation [ ] Contract authority [ ] Other

Justification

Coal Gasification. Funds are proposed for rescission that were intended to finance an unsolicited proposal submitted by the Texas Gas Transmission Corporation and the Commonwealth of Kentucky for a phase zero design study relative to the Hygas demonstration project. The department is currently pursuing an aggressive program to demonstrate the production of high-Btu pipeline gas from coal with two competing designs (CONOCO and ICGG).

Atmospheric Fluidized Bed. Funds are proposed for rescission that were intended to finance operation of the Rivesville 30Mw atmospheric fluidized bed (AFB) boiler, since it has served its purpose in identifying problem areas in fluidized bed technology. Based on the successful performance of this first 30 Mw unit and a subsequent demonstration plant, it is expected that several utilities will be ready to commit to installation of AFB boilers. TVA efforts reflect more modern designs and thus obviate the need for further data from the Rivesville facility.

Coal oil mixtures. Funds are proposed for rescission in the area of Coal Oil Mixtures. The successful application of Coal Oil Mixture Technology has already been demonstrated in past and current DOE and industry projects. Applications for additional demonstrations should be made under the alternate fuels programs and the Synthetic Fuels Corporation.

Estimated Effects

Coal Gasification. Since the Department already is vigorously pursuing a high-Btu demonstration program via the pipeline gas competition and the completion of a Hygas design, the effects of the proposed rescission would be minimal to overall program objectives.

Atmospheric Fluidized Bed (AFB). The proposed rescission will have a minimal effect on the overall AFB combustion program. It is proposed that funds required under contractual terms for eventual dismantling of the facility ($1.2M) be redirected from within the AFB program.

Coal Oil Mixtures. The effect of the proposed rescission is that additional Coal Oil Mixture demonstration projects would not be initiated during FY 1981. The additional data to be gained through DOE efforts, that of providing specific conversion and operating data to the general public for encouraging and supporting ERA mandated near-term technology, would have minimal value. This is because only marginal areas of technical risk remain for Coal Oil Mixtures.

	Amount proposed for rescission $ 47,800,000
OMB identification code: 89-0215-5-1-999	Legal authority (in addition to sec. 1012): ☐ Antideficiency Act
Grant program ☐ Yes ☒ No	☐ Other
Type of account or fund: ☐ Annual ☐ Multiple-year (expiration date) ☒ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification:

Funding is proposed for rescission in the Transportation Energy Conservation Program ($12 million) and the Industrial Energy Conservation Program ($35.8 million).

One rescission in the Transportation Energy Conservation Program is proposed to eliminate contract funding for development of a third automotive gas turbine engine ($7 million). Two separate engine development efforts are already underway, and it is unlikely that a third contractor team could ultimately become competitive due to the time lag from which a third team would be starting. The proposed rescission would have no impact on the development of the two on-going project teams. A second rescission in the Transportation Energy Conservation Program is proposed to eliminate funding of a second Stirling engine contractor ($5 million). The Department of Energy has been supporting an automotive Stirling contractor for several years and their on-going engine program is well established. Funds in the FY 1981 budget were to have initiated a second Stirling engine contractor focusing on component development. However, Stirling engine component development is currently being pursued by DOE's Energy Conversion and Utilitization Technologies Program. Therefore, an additional Stirling contractor appears unnecessary.

The rescission in the Industrial Energy Conservation Program is proposed for formcoke and coke pelletizing projects ($17.8 million) and projects ($18 million) in the waste energy reduction, process efficiency, cogeneration, and implementation and deployment programs. The proposed rescission of the formcoke and coke pelletizing projects will have no major impact on energy conservation since these projects involve questionable energy savings. The other projects in the areas of waste energy reduction, process efficiency, cogeneration, and implementation and deployment would have accomplished lesser energy savings per Federal dollar invested than those projects which will be undertaken in FY 1981 with the remaining $53.9 million in the Industrial Conservation program.

These proposed rescissions in FY 1981 are consistent with the FY 1982 budget request, which includes no funds for these projects.

Estimated Effects:

These rescissions will achieve a savings of $47.8 million by eliminating projects in the Transportation Energy and Industrial Energy Conservation Programs.

Grant program ☒ Yes ☐ No	☐ Other _____
Type of account or fund: ☒ Annual ☐ Multiple-year _____ (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other _____

Justification:

The programs covered by this rescission proposal are the home health services grant program, the Maternal and Child Health (MCH) training program, and the MCH research program.

The Administration is proposing to accelerate the phase-out of the $4 million home health agency start-up grant program. This phase-out was first proposed in the President's 1981 budget. There are already over 3,000 home health agencies operating in the U.S. today so that continued support of the small, marginal program is no longer justified. Moreover, Medicare and Medicaid home health reimbursement--$947 million in 1980--is much more important to the maintenance of home health agencies than this small grant program.

The MCH training and research programs rescission of $4.057 million represents the first phase of a transfer of these responsibilities to the Health Resources Administration and the National Center for Health Services Research respectively where they can be more effectively performed.

1/ An additional $1.9 million for MCH training and research and $4 million for PHS Act Title X family planning are planned to be proposed for rescission if additional 1981 funding is provided for these programs after the present continuing resolution expires on June 5, 1981.

Estimated effects:

The phase-out of the $4 million home health agency grant program will eliminate support for 45 service grants and 21 training grants. These grants were designed strictly for start-up costs with the bulk of Federal support for operating costs scheduled to come from Medicare and Medicaid so that the small amount lost per project--$60,000--should be easily recouped from other sources.

The partial rescission of the MCH training and research programs--$4 million out of the $25.5 million available for these programs under the continuing resolution--will reduce training slots from 6,956 to 6,250 and research grants from 50 to 33.

Grant program ☒ Yes ☐ No	☐ Other
Type of account or fund: ☒ Annual ☐ Multiple-year (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification

The proposed rescission affects health incentive 314(d) grants provided to State health authorities for public health services. These grants constitute a relatively small share of the total State and local expenditures for public health. Their use is flexible enough to include support services such as public health laboratories in addition to the provision of direct preventive health services. The increased availability of other funding mechanisms has diminished the role of health incentive grants to States as a means of supporting public health activities.

The health incentive grant funds are not essential to accomplishment of public health goals. Taken together with other rescissions being proposed by the President, this action will contribute substantially to reducing Federal outlays and helping to minimize Federal borrowing and its impact on the rate of inflation.

Estimated Effects:

The effect of this rescission is to eliminate a Federal share in the cost of public health programs for which State and local health agencies have the primary authority.

The proposed rescission would eliminate funding for health incentive grants used primarily for non-institutional personal health services. In FY 1979, grant recipients used only 40.5 percent of the total funds available which represents 1.5 percent of their total public health expenditures. Other funding mechanisms such as Maternal and Child Health, Family Planning and High Blood Pressure Control provide grant assistance to State and local health authorities.

This proposal also affects programs in tuberculosis control, laboratory support for epidemiologic investigation of outbreaks, radiological health and local health departments. Technical assistance will continue to be provided in these areas.

Rescission Proposal No: R81-14

PROPOSED RESCISSION OF BUDGET AUTHORITY
Report Pursuant to Section 1012 of P.L. 93-344

Agency Department of Health and Human Services	New budget authority (P.L. 96-536) $ 724,755,000
Bureau National Institutes of Health	Other budgetary resources 100,000
Appropriation title & symbol: National Cancer Institute 7510849	Total budgetary resources 724,855,000
	Amount proposed for rescission $ 13,565,000
OMB identification code: 75-0849-5-1-550	Legal authority (in addition to sec. 1012): ☐ Antideficiency Act ☐ Other
Grant program ☒ Yes ☐ No	
Type of account or fund: ☒ Annual ☐ Multiple-year _____ (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification: Of the funds provided by the Congress in excess of the President's request, a rescission of $13,565,000 is proposed. This proposal is intended to help control funding for health research, while allowing growth in selected mechanisms of support for the activities of this agency. The rescission will not affect continuation of the Administration's policy of support for 5,000 new and competing research project grants annually.

Estimated Effects:

Task Forces and Clinical Trials.--Reductions include decreases in Cancer Task Forces, and Clinical Cooperative Groups totalling $1,388,000. The Cancer Task Forces, which fund the organ site program, will be reduced by four awards. The revised funding level for both Clinical Cooperative research and the Task Forces would be $50,759,000. The Clinical Cooperative Group Program will be reduced by nineteen awards. Cancer Task Forces support a planned and integrated research effort oriented toward cancer at a specific site. These site-specific projects are established if cancer in a particular organ site poses a substantial problem in terms of incidence and mortality. Clinical Cooperative Groups support clinical trials and evaluations of the efficacy of the various forms of cancer therapy, and constitute a major national resource for safe controlled research involving patients.

Cancer Centers.--Support for Cancer Centers will be reduced by $1,595,000 or 2% to a revised level of $70,035,000. At this level, all existing 58 centers will continue to receive support. These centers serve as focal points for basic and clinical research activities, and for education, training and community outreach.

Training.--National Research Service Awards will be reduced by $2,559,000. This will result in a reduction of 25 individual awards and 13 institutional awards, resulting in 114 fewer trainees or their annual equivalent being supported. The rescission amount represents a 9% reduction in research training support. The revised level for training support would be $26.6 million.

Research and Development Contracts.--Contracts will be reduced by $3,522,000 or 12 contracts. This reduction includes a decrease in support available for chemo-prevention activities, involving studies of retinoids, analogues of vitamin A, which appear to have the ability to prevent the development of certain forms of invasive cancer. Also affected are certain epidemiological studies to identify specific carcinogens responsible for certain cancers. It will be necessary to curtail research efforts to characterize and evaluate new biological response modifiers as they are identified. The revised funding level would be $205.1 million.

Intramural Research.--The intramural research program which gives research scientists the opportunity for basic and applied research and clinical investigation to solve major health problems, will be reduced by $1,000,000 through reduced purchases of equipment and biological and chemical resources for research. The revised level for intramural activities would be $162.9 million.

Cancer Control.--The Cancer Control Program will be reduced by $2,000,000 precluding new project starts and reducing some ongoing projects. The revised funding level for the program would be $54.3 million. This program is concerned with the entire health care continuum, and includes prevention, screening, diagnosis, pretreatment evaluation, treatment, rehabilitation and continuing care activities.

Construction.--Funds for construction will be reduced by $1,500,000 which will entail some delay in completion of modernization and upgrading of existing facilities. With the rescission the revised funding level would be $3.5 million.

Rescission Proposal No: R81-15

PROPOSED RESCISSION OF BUDGET AUTHORITY

Report Pursuant to Section 1012 of P.L. 93-344

Agency Department of Health and Human Services	New budget authority (P.L. 96-536) $ 406,281,000
Bureau National Institutes of Health	Other budgetary resources 100,000
Appropriation title & symbol: National Heart, Lung, & Blood Institute 7510872	Total budgetary resources 406,281,000
	Amount proposed for rescission $ 10,324,000
OMB identification code: 75-0872-5-1-550	Legal authority (in addition to sec. 1012): ☐ Antideficiency Act
Grant program ☒ Yes ☐ No	☐ Other
Type of account or fund: ☒ Annual ☐ Multiple-year (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification: Of the funds provided by the Congress in excess of the President's request, a rescission of $10,324,000 is proposed. This proposal is intended to help control funding for health research, while allowing growth in selected mechanisms of support for the activities of this agency. The rescission will not affect continuation of the Administration's policy of support for 5,000 new and competing research project grants annually.

ESTIMATED EFFECTS: The proposed rescission is $10,324,000 and would affect the following:

Research Centers: Research centers would be individually negotiated downward to achieve an overall centers' reduction of 5 percent, or a savings of $3,272,000. The revised funding level would be $62.2 million.

Research Career Awards: This program would be scaled down from supporting an estimated 335 investigators to supporting an estimated 321, a savings of $800,000. The revised program level would be $13 million.

Research Evaluation - Research evaluation grants would be reduced by $100,000.

Training: Training programs would be reduced to support a projected 1,612 trainees, a reduction of 35. The reduction would total $716,000 with the revised level being $34.2 million.

R&D Contracts: Existing research and development contracts would be renegotiated to achieve a 7 percent reduction. The Multicenter Investigation of Limitation of Infarct Size (MILIS), a clinical trial now in its recruitment and intervention phase, would be incrementally funded for six months, rather than the normal twelve month award period. The reduction in contracts would total $2,836,000, with the revised program level being $66.7 million.

Intramural Research - A reduction of $2,300,000 or 5 percent, would result in reducing the purchase of scientific equipment. The revised funding level would be $43.6 million.

Direct Operations - A reduction of $300,000 is proposed. The revised funding level would be $27.6 million.

Grant program: ☒ Yes ☐ No	
Type of account or fund: ☒ Annual ☐ Multiple-year (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification: Of the funds provided by the Congress in excess of the President's request, a rescission of $3,232,000 is proposed. This proposal is intended to help control funding for health research, while allowing growth in selected mechanisms of support for the activities of this agency. The rescission will not affect continuation of the Administration's policy of support for 5,000 new and competing research project grants annually.

Estimated Effects:

Research Centers. A reduction of $430,000 is proposed which would result in the funding of one less clinical nutrition research center. The revised funding level for the research centers program would be $20.5 million.

Research Careers. The rescission would reduce by $1,441,000 the research careers program with a resulting decrease of 35 career researcher awards. The revised funding level for this program would be $9.3 million.

Training. Research training support would be decreased by $1,361,000 with 56 fewer individual training awards being supported. Total revised funding for training activities would be $9.2 million.

Rescission Proposal No: R81-18

PROPOSED RESCISSION OF BUDGET AUTHORITY

Report Pursuant to Section 1012 of P.L. 93-344

Agency: Department of Health and Human Services	New budget authority (P.L. 96-536): $ 195,564,000
Bureau: National Institutes of Health	Other budgetary resources: 69,000
Appropriation title & symbol: National Institute of Neurological and Communicative Disorders and Stroke 7510886	Total budgetary resources: 195,633,000
	Amount proposed for rescission: $ 2,031,000
OMB identification code: 75-0886-5-1-550	Legal authority (in addition to sec. 1012): ☐ Antideficiency Act ☐ Other
Grant program: ☒ Yes ☐ No	
Type of account or fund: ☒ Annual ☐ Multiple-year _____ (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification: Of the funds provided by the Congress in excess of the President's request, a rescission of $2,031,000 is proposed. This proposal is intended to help control funding for health research, while allowing growth in selected mechanisms of support for the activities of this agency. The rescission will not affect continuation of the Administration's policy of support for 5,000 new and competing research project grants annually.

Estimated Effects:

Intramural Research. The reduction of $944,000 will delay the full implementation of the Positron Emission Tomography (PETT) initiative including purchase of peripheral equipment. Development of the planned communicative disorders clinical branch will be delayed or postponed. Further development of brain tumor research would be delayed, including development of tumor models and the evaluation of long-term effects of brain tumors and rehabilitation of patients. The revised funding level would be $34.3 million.

Direct Operations. The reduction of $200,000 will defer completion of the microfilming of case records for the collaborative perinatal study. Support of workshops and conferences on hearing, speech, and language disorders would be delayed or postponed. The revised funding level would be $12.9 million.

Program Management. The reduction of $125,000 would delay the final phase of computer programming and data entry for the Institute's newly developed program information system. This system would provide data for budget and program planning, and for inquiries regarding support of the Institute's research programs. The revised funding level would be $2.2 millio

Research and Development Contracts. The reduction of $762,000 would eliminate a stud of the endocrinological parameters (hormone production) in experimental anticonvulsant drugs. A new stroke clinical research program would not be initiated. This contract would determine the availability and efficacy of advanced care and treatment of stroke patients through controlled clinical trials and relevant clinical research. A clinical trial on the pharmacologic prevention of post-traumatic epilepsy would be reduced to one-third of the requirements or not funded at all. The revised funding level for research and development contracts would be $15.8 million.

PROPOSED RESCISSION OF BUDGET AUTHORITY

Report Pursuant to Section 1012 of P.L. 93-344

Agency: Department of Health and Human Services	New budget authority (P.L. 96-536) $ 161,887,000
Bureau: National Institutes of Health	Other budgetary resources 10,000
Appropriation title & symbol	Total budgetary resources 161,897,000
National Institute of Child Health and Human Development - 7510844	Amount proposed for rescission $ 3,285,000
OMB identification code: 75-0844-5-1-550	Legal authority (in addition to sec. 1012): ☐ Antideficiency Act
Grant program ☒ Yes ☐ No	☐ Other _____
Type of account or fund: ☒ Annual ☐ Multiple-year _____ (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other _____

Justification: Of the funds provided by the Congress in excess of the President's request, a rescission of $3,285,000 is proposed. This proposal is intended to help control funding for health research, while allowing growth in selected mechanisms of support for the activities of this agency. The rescission will not affect continuation of the Administration's policy of support for 5,000 new and competing research project grants annually.

Estimated Effects:

Research Centers. A reduction of $750,000 is proposed which would decrease the level of support for several centers. Total revised budget for the centers program would be $24.7 million. Even with the funding reduction, the Institute would not reduce the number of center grants planned of 46. This would be an increase of 5 grants from 1980.

Other Research. A reduction of $259,000 will result in a decrease of seven research career development awards in FY 1981. The revised funding level would be $2.7 million.

Research and Development Contracts. There will be a reduction of 20 contracts and $1,752,000. The reductions would occur in population research studies concerning new contraceptives, contraceptive safety, and behaviorial examinations of the high adolescent pregnancy rates. Also studies in maternal and infant nutrition, management of diabetic pregnancies and mental retardation and developmental disabilities would be affected. The revised funding level for contract studies would be $21.6 million.

Intramural Research. A reduction of $524,000 will result in deferring or elimination of purchases for equipment and other services, resulting in a revised program level of $23.3 million.

This proposal is intended to help control funding for health research, while allowing growth in selected mechanisms of support for the activities of this agency. The rescission will not affect continuation of the Administration's policy of support for 5,000 new and competing research project grants annually.

Estimated Effects:

R&D Contracts. A reduction of $1,500,000 in contract studies is proposed. This would result in delaying the Visual Activity Impairment Study. Total revised funding for contract activities would be $4.3 million.

Direct Operations. Reductions of $205,000 are proposed which would be used to initiate efforts to coordinate the dissemination of clinical research findings in the community. Total revised funding for the direct operations activity would be $3.2 million.

Intramural. A decrease of $648,000 is proposed. The purchase of some equipment for the Ambulatory Care Research Facility will be delayed. Total revised funding for intramural research support would be $11.4 million.

Report Pursuant to Section 1012 of P.L. 93-344

Agency Department of Health and Human Services	New budget authority (P.L. 96-536) $ 70,946,000
Bureau National Institutes of Health	Other budgetary resources 5,613,000
Appropriation title & symbol: National Institute of Environmental Health Sciences - 7510862	Total budgetary resources 76,559,000
	Amount proposed for rescission $ 3,258,000
CMB identification code: 75-0862-5-1-550	Legal authority (in addition to sec. 1012): ☐ Antideficiency Act
Grant program ☒ Yes ☐ No	☐ Other
Type of account or fund: ☒ Annual ☐ Multiple-year (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification: Of the funds provided by the Congress in excess of the President's request, a rescission of $3,258,000 is proposed. This proposal is intended to help control funding for health research, while allowing growth in selected mechanisms of support for the activities of this agency. The rescission will not affect continuation of the Administration's policy of support for 5,000 new and competing research project grants annually.

Estimated Effects:

Research Centers: A reduction of $548,000 is proposed for the support of Environmental Health Sciences Centers and Marine and Freshwater Biomedical Research Centers. The revised funding level for the centers program would be $9.9 million. There would be no reduction in the number of centers supported (15) with decreases being negotiated downward among ongoing Centers to achieve the savings.

Research Evaluation. A reduction of $100,000 is proposed for research evaluation grants.

Research & Development Contracts. A decrease of $1,424,000 will effect the number of new contract-supported testing procedures awarded for the National Toxicology Program (NTP). The revised funding level for NTP would be $6.9 million.

Intramural. A decrease of $1,186,000, the entire amount added by Congress over the President's budget request for this activity, is proposed. The reduction would result in the delay or elimination of purchases for laboratory supplies, materials and large scientific equipment. The revised funding level for intramural research would be $13.9 million.

Grant program: ☒ Yes ☐ No	
Type of account or fund: ☒ Annual ☐ Multiple-year _____ (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification: Of the funds provided by the Congress in excess of the President's request, a rescission of $588,000 is proposed. This proposal is intended to help control funding for health research, while allowing growth in selected mechanisms of support for the activities of this agency. The rescission will not affect continuation of the Administration's policy of support for 5,000 new and competing research project grants annually.

Estimated Effects:

Research Projects. A reduction of $284,000 is proposed in the Geriatric Medicine and Dentistry Academic Awards program. The revised funding for research projects, other than the investigator initiated grants, is $1.3 million.

Intramural/Direct Operations/Program Management. A total of $304,000 is proposed for rescission. This would result in the elimination of at least one scientific conference or workshop ($25,000) and reduce the rate at which women are added to the research cohort in the Baltimore Longitudinal Study ($279,000). The revised funding level in these three activities would be $19.7 million.

Agency: Department of Health and Human Services	New budget authority (P.L. 96-536): $170,779,000
Bureau: National Institutes of Health	Other budgetary resources: 7,390,000
Appropriation title & symbol: Research Resources - 7510848	Total budgetary resources: 178,169,000
	Amount proposed for rescission: $ 10,561,000
CMB identification code: 75-0848-5-1-550	Legal authority (in addition to sec. 1012): ☐ Antideficiency Act
Grant program: ☒ Yes ☐ No	☐ Other _____
Type of account or fund: ☒ Annual ☐ Multiple-year _____ (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other _____

Justification: Of the funds provided by the Congress in excess of the President's request, a rescission of $10,561,000 is proposed. This proposal is intended to help control funding for health research, while allowing growth in selected mechanisms of support for the activities of this agency. The rescission will not affect continuation of the Administration's policy of support for 5,000 new and competing research project grants annually.

Estimated Effects:

Research Centers. A reduction of $4,225,000 is proposed for support of research centers. Included in this decrease is $1,740,000 for general clinical research centers resulting in 4 fewer centers receiving awards. Biotechnology research centers would be decreased by $2,044,000, with a reduction of seven awards. Animal resource grants would be decreased by $441,000 eliminating three awards. Total revised funding for the centers program activity would be $99.9 million.

Biotechnology Research Grants. A reduction of $1,811,000 is proposed resulting in a decrease of three grants.

Minority Biomedical Support. A reduction of $2,035,000 is proposed which would result in the award of ten fewer grants. Total revised funding would be $16.8 million.

Biomedical Research Support. A reduction of $1,694,000 is proposed. Since the funds are distributed to all eligible institutions on a formula basis, the decrease would result in slight reductions among all recipients. Total revised funding level is $47.1 million.

R&D Contracts. Contract supported activities would decrease by $796,000 with seven fewer awards. The revised funding level for the contract program would be $2.9 million.

Of the funds provided for "Office of the Director" for fiscal year 1981 in P.L. 96-536, $360,000 are rescinded.

Rescission Proposal No: R81-26

PROPOSED RESCISSION OF BUDGET AUTHORITY
Report Pursuant to Section 1012 of P.L. 93-344

Agency Department of Health and Human Services	New budget authority (P.L. 96-536) $766,957,000
Bureau Alcohol, Drug Abuse and Mental Health Admin.	Other budgetary resources —
Appropriation title & symbol Alcohol, Drug Abuse, and Mental Health 7511361	Total budgetary resources 766,957,000
	Amount proposed for rescission $ 67,140,000
OMB identification code: 75-1361-5-1-550	Legal authority (in addition to sec. 1012): ☐ Antideficiency Act
Grant program ☒ Yes ☐ No	☐ Other
Type of account or fund: ☒ Annual ☐ Multiple-year (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

JUSTIFICATION:

The figure of $67,140,000 includes $21,262,000 for the Drug Abuse Formula Grants to States Program and $45,878,000 for he Alcoholism Formula Grants to States Program. This rescission reflects the Administration policy that the States support a larger share of their alcoholism and drug abuse programs.

Estimated Effects:

In both areas, the States have recently been successful in providing more support for overall management, training, prevention, and some services programs. It is expected that the States will continue to maintain support for all projects formerly funded under the formula programs which are of high State priority.

Outlay Effects: (in millions of dollars)

1981 Outlay Estimate 1/		Outlay Savings			
Without Rescission	With Rescission	1981	1982	1983	1984
1,046.5	1,038.9	7.6	62.0	—	—

1/ Outlay estimates are for the entire year and include the effect of a follow-on rescission proposal of $9.4 million planned if the funding level provided by P.L.96-536 is extended for the remainder of FY 1981.

R81-26

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Alcohol, Drug Abuse and Mental Health

Of the funds provided for "Alcohol, Drug Abuse and Mental Health" for fiscal year 1981 in P.L. 96-536, making further continuing appropriations for the fiscal year 1981, $67,140,000 are rescinded.

Rescission Proposal No: R 81-27

PROPOSED RESCISSION OF BUDGET AUTHORITY
Report Pursuant to Section 1012 of P.L. 93-344

Agency Department of Health and Human Services	New budget authority (P.L. 96-536) $ 491,634,000
Bureau Health Resources Administration	Other budgetary resources 2,741,000
Appropriation title & symbol Health Resources 7510712	Total budgetary resources 494,375,000
	Amount proposed for rescission $ 78,683,000 1/
OMB identification code: 75-0712-5-1-550	Legal authority (in addition to sec. 1012): ☐ Antideficiency Act
Grant program ☒ Yes ☐ No	☐ Other _____
Type of account or fund: ☒ Annual ☐ Multiple-year _____ (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other _____

Justification:

The programs funded by this appropriation seek to maintain and expand the supply of health professionals in the United States.

During the 1960's and 1970's, the supply of health professionals has increased dramatically, primarily as a result of Federal subsidies to expanded numbers of health professions students and training programs. The current supply of health professionals is adequate and an oversupply for most specialties is now predicted prior to 1990. In recognition of these trends, a rescission of $78.7 million is proposed for 1981 for funds provided under the continuing resolution. This rescission proposal also reflects the policy of placing Federal emphasis on service-connected loan and scholarship programs such as: National Health Service Corps Scholarships and Health Professions Loan Repayment, and relying on Department of Education programs for general student assistance.

Estimated Effects:

Health Professions Education--Start Up (-$1,790,000)

A rescission of $1.8 million is proposed for the Start-up program. The purpose of Start-up grants is to provide support to new schools of medicine, osteopathy, dentistry, public health, veterinary medicine, optometry, pharmacy or podiatry so that they may accelerate the beginning date of instruction or substantially increase enrollments. Because of a current and growing oversupply of physicians and other health professionals, increasing the capacity of health professions institutions is no longer a desirable objective.

The remaining $.9 million has been approved for reprogramming to the financial distress program to provide additional support to Meharry Medical College. The rescission would result in the elimination of support for 4 projects which would have received continuation grants in 1981.

Allied Health--Special Projects Grants and Contracts (-$4,200,000)

A rescission of $4.2 million is proposed. This program provides grants and contracts to assist eligible entities in meeting costs of projects to establish regional or State systems for improved coordination, training and credentialling of allied health personnel.

The revised funding level of $1.0 million would support 13 continuation awards, 1 contract and 12 cooperative agreements (MEDHIC) at a reduced rate. This represents a reduction of 9 continuation projects and 47 new awards from the number which could be supported by the amount currently available in 1981.

Allied Health--Advanced Traineeships (-$1,500,000)

A rescission of $1.5 million is proposed in training grants for allied health professionals. This program provides grants to public or nonprofit institutions, organizations, or agencies for the support of both long and short-term advanced traineeship programs at the post professional level. Support for 42 projects and 175 long-term and 1,513 short-term training slots would be eliminated as a result of the rescission.

Health Professions Education--Nurse Traineeships (-$13,000,000)

A rescission of $13 million is proposed for Nurse Traineeships. The purpose of this program is to provide support to eligible public or non-profit institutions who then make traineeship awards to individual professional nurses who are pursuing advanced educational preparation. The rescission would eliminate support for 125 grants.

Student Assistance-Health Professions Student Loans (-$12,500,000)

A rescission of $12.5 million is proposed for the Health Professions Student Loans Program. The remaining $4 million is proposed for reprogramming to the Health Professions Loan Repayment program. The purpose of this program is to provide long-term, seven percent interest loans up to $2,500 per year, plus tuition, to health professions students (MOD/VOPP). These loan funds are given to schools who then make awards to students. The total reduction of $16.5 million from the Health Professions Student Loan program would eliminate support to 311 schools which would have provided loans to 11,000 additional students.

Special Educational Programs--Health Professions Educational Improvement and Development Projects (-$4,500,000)

A rescission of $4.5 million is proposed. This program provides funds for the planning, development, demonstration, and evaluation of targeted health manpower activities such as those emphasizing humanistic medicine, environmental and occupational health, health manpower development, special problems of aging, human nutrition, and development of regional systems of continuing education and preventive medicine. Support for 35 projects in these areas would be eliminated.

Special Educational Programs--Emergency Medical Training (-$3,000,000)

A rescission of $3.0 million is proposed for this program. The program provides grants and contracts for the training of physicians and other health professionals in life-saving techniques under emergency situations.

The rescission assumes State, local and private resources will finance the training of emergency medical personnel. The training is of short duration and is provided essentially to meet local needs. Support for 22 projects, 2 contracts and training for 6,468 emergency medical services personnel would be eliminated as a result of the proposed rescission.

Health Professions Education Nursing Capitation Grants (-$24,000,000) and Advanced Nurse Training (-$8,243,000)

A rescission of $32.2 million is proposed for institutional support for nursing schools.

Nursing supply problems that may exist in certain geographic and specialty areas are not directly related to the existing capacity of nursing schools, which is adequate to meet overall needs. Consequently, these funds are not necessary for addressing national priorities with respect to nursing. This reduction would result in 1,130 schools not receiving support through formula funding (406 Baccalaureate, 582 Associate Degree and 142 Diploma) and would eliminate 21 current Advanced Nurse Training awards.

General Dentistry Residencies and Training (-$4,050,000)

A rescission of $4.1 million is proposed for general dentistry residencies and training. This program provides grants to plan, develop, and implement programs to provide dental residents with advanced skills in the general practice of dentistry. The rescission would eliminate funding in 1981 for 14 continuation and 28 new projects assisting 240 students. Both this and the following rescission proposal specifically reflect the Administration's assessment that the current supply of dental health professionals is adequate.

Dental Extenders (-$1,900,000)

A rescission of $1.9 million is proposed for the Expanded Function Dental Auxiliary (EFDA) program. This program provides additional training to dental hygenists and dental assistants to qualify them to perform newly-delegated functions formerly performed by dentists. The amount proposed for rescission would have supported 7 continuation and 17 new projects assisting approximately 1,121 students and faculty.

Outlay Effects: (in millions of dollars)

1981 Outlay Estimate 2/		Outlay Savings			
Without Rescission	With Rescission	1981	1982	1983	1984
641.8	634.4	7.4	36.0	21.1	8.4

1/ An additional amount is planned to be proposed for rescission if additional 1981 funding is provided for Health Resources after the present continuing resolution expires on June 5, 1981 as follows:

Interdisciplinary training	--	$ 4,000,000
Advanced nurse training	--	3,000,000
Nursing scholarships	--	9,000,000
Health professions capitation	--	71,878,000
Total		$87,878,000

2/ Assumes extension of the level of funding provided by P.L. 96-536 For the entire fiscal year.

R81-27

DEPARTMENT OF HEALTH AND HUMAN SERVICES
Health Resources Administration
Health Resources

Of the funds provided for Health Resources for fiscal year 1981 in P.L. 96-536, $78,683,000 are rescinded: Provided, that the funds appropriated under this head in P.L. 96-536 for carrying out Title VII of the Public Health Service Act shall be available notwithstanding the limitations of section 786(c).

Rescission Proposal No: R81-28

PROPOSED RESCISSION OF BUDGET AUTHORITY

Report Pursuant to Section 1012 of P.L. 93-344

Agency Health and Human Services	New budget authority (through (P.L. 96-536) $ 185,250,000
Bureau Human Development Services	Other budgetary resources ____
Appropriation title & symbol	Total budgetary resources 185,250,000
Human Development Services (Administration on Aging - Social Services & Centers) 7511636	Amount proposed for rescission $ 10,000,000
OMB identification code: 75-1636-5-1-999	Legal authority (in addition to sec. 1012): ☐ Antideficiency Act
Grant program ☒ Yes ☐ No	☐ Other ____
Type of account or fund: ☒ Annual ☐ Multiple-year ____ (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other ____

Justification: The Human Development appropriation includes programs for the Aging which have as their primary purpose the improvement of the quality of services to the elderly population. Within the aging programs, a rescission of $10 million is proposed in FY 1981 for social services and senior centers consistent with the President's 1981 budget request.

Estimated Effects: The amount appropriated under the continuing resolution (P.L. 96-536) includes $10,000,000 in excess of the President's 1981 budget request. Under the Older Americans Act Amendments of 1978, States were required to complete a transfer of social service activities previously funded under the Act's nutrition title to the social services title. Additional funds were provided in fiscal year 1980 so effect this transfer. Because there is no current programmatic need for additional funds in 1981, no adverse programmatic effects are anticipated from this action.

Outlay Effects: (in millions of dollars)

Grant program ☒ Yes ☐ No	☐ Other ____
Type of account or fund: ☐ Annual ☒ Multiple-year 9/30/84 (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other ____

Justification

This program is currently being operated as a demonstration program out of funds appropriated for fiscal years 1979 and 1980. Funds appropriated for 1981 are not required to carry out the evaluation of this program now being conducted.

Estimated Effects

The 1981 appropriation now proposed for rescission would have provided meal services and some supportive services to an estimated 700 elderly residents of public housing and housing for the elderly or handicapped. However, such services may also be available through other Federal social service programs as well as social service agencies of State and local governments. The proposed rescission will have no effect on the evaluation of this program now being conducted by the Office of Policy Development and Research of the Department of Housing and Urban Development.

Grant program ☒ Yes ☐ No	
Type of account or fund: ☒ Annual ☐ Multiple-year (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification: The National Youth Sports Program duplicates activities and programs sponsored by other Federal agencies and State and local governments. Further, the program does not contribute to CSA's primary objective of assisting low income families to achieve economic self-sufficiency. Therefore, the program is not recommended for continuation in 1981.

Estimated Effects: This rescission proposal would result in cancellation of this program in 1981.

Outlay Effects: (in millions of dollars)

COMMUNITY SERVICES ADMINISTRATION

Community Services Program

Of the funds provided for the "National Youth Sports Program" for fiscal year 1981 in P.L. 96-536, making further continuing appropriations for the fiscal year 1981, $6,000,000 are rescinded.

Rescission Proposal No: R81-31

PROPOSED RESCISSION OF BUDGET AUTHORITY
Report Pursuant to Section 1012 of P.L. 93-344

Agency Federal Mine Safety and Health Review Commission	New budget authority (P.L. 96-536) $ 3,140,000
Bureau	Other budgetary resources ---
Appropriation title & symbol	Total budgetary resources 3,140,000
Salaries and Expenses 9512800	Amount proposed for rescission $ 163,000
OMB identification code: 95-2800-5-1-554	Legal authority (in addition to sec. 1012): ☒ Antideficiency Act ☐ Other
Grant program ☐ Yes ☒ No	
Type of account or fund: ☒ Annual ☐ Multiple-year (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification:

This appropriation provides for adjudication of contested Labor Department enforcement actions under the Federal Mine Safety and Health Amendments Act of 1977.

The Commission's workload depends on the number of citations issued by the Mine Safety and Health Administration (MSHA). Since the number of MSHA citations is expected to decline in 1981, a reduction in the Commission's workload is expected. Therefore, the Commission requires a lower employment level to accomplish this workload within its acceptable time limits. This rescission is proposed as a reserve for savings in accordance with the Antideficiency Act (31 USC 665).

Estimated Effects:

Should these funds not be rescinded, they will lapse at the end of fiscal 1981, and this reduction would not adversely affect program requirements.

Outlay Effects:

No outlay savings will result from this proposal since the funds will lapse if they are not rescinded.

R81-31

FEDERAL MINE SAFETY AND HEALTH REVIEW COMMISSION

Salaries and Expenses

Of the amount provided for "Federal Mine Safety and Health Review Commission, Salaries and Expenses" for fiscal year 1981 in P.L. 96-536 making further continuing appropriations for fiscal year 1981, $163,000 are rescinded.

Rescission Proposal No: R81-32

PROPOSED RESCISSION OF BUDGET AUTHORITY
Report Pursuant to Section 1012 of P.L. 93-344

Agency United States Postal Service	New budget authority (P.L. 96-536) $ 1,593,217,000
Bureau	Other budgetary resources
Appropriation title & symbol	Total budgetary resources 1,593,217,000
Payment to Postal Service Fund 18X1001	Amount proposed for rescission $ 250,000,000
OMB identification code: 18-1001-5-1-372	Legal authority (in addition to sec. 1012): ☐ Antideficiency Act
Grant program ☐ Yes ☒ No	☐ Other
Type of account or fund: ☐ Annual ☐ Multiple-year (expiration date) ☒ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification: This rescission represents a $250,000,000 reduction in the public service subsidy. The reduction was recommended by the President in the March,1980 Budget Revisions.

Estimated Effects: Prior to the President's $250,000,000 reduction recommendation, the Postmaster General, in testimony before the Committee on the Post Office, (March 26, 1980) stated that it would be possible for the Postal Service to withstand a $250,000,000 reduction in the Postal Service subsidy. In effecting this cut, the Postal Service would realize increased productivity and operational efficiencies. In accordance with the Postal Reorganization Act of 1970 (P.L. 93-328) no funds are being withheld pending congressional action on this rescission proposal.

Outlay Effects: Since the appropriation is made to the fund the rescission would result in a corresponding decrease in the total fund amount by the Department of the Treasury.

(in millions of dollars)

Rescission Proposal No: R81-33

PROPOSED RESCISSION OF BUDGET AUTHORITY
Report Pursuant to Section 1012 of P.L. 93-344

Agency Tennessee Valley Authority	New budget authority (P.L. 96-367) $287,563,000
Bureau	Other budgetary resources 87,394,000
Appropriation title & symbol	Total budgetary resources 374,957,000
Payment to the Tennessee Valley Authority Fund 64 x 4110	Amount proposed for rescission $177,000,000
OMB identification code: 64-4110-5-3-999	Legal authority (in addition to sec. 1012): ☒ Antideficiency Act
Grant program ☐ Yes ☒ No	☐ Other
Type of account or fund: ☐ Annual ☐ Multiple-year (expiration date) ☒ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification: An estimate of $177,000,000 of the total appropriations for fiscal years 1980-1981 of $210,000,000 provided for the Coal Gasification Demonstration Project is proposed for rescission. The amount is proposed for rescission primarily because of its limited technological benefit and high cost as follows:

- The project, from a technology standpoint, is unnecessary, i.e., current plans are to utilize a proven technology which is already in use in 25 sites throughout the world;
- The plant and estimated operational costs, including environmental requirements, are quit high (estimates are now up to $4 billion for construction alone) and appear to be uneconomic from the viewpoint of product marketability;
- Operation of the plant is predicated on construction of a pipeline to connect with an existing gas system. This cost has not been factored into the project nor has TVA sponsored any planning for this aspect of the project;
- The project overlaps Department of Energy responsibilities and projects which are not only underway but also utilize a more advanced and probably more economic technology that that proposed by TVA.

Estimated Effects: The effect of this rescission would be to terminate this project. Preliminary work on the project would be halted. The effect on the delivery date for a coal gasification demonstration project would not be adversely affected because of the Department of Energy's activities in this area that include the Memphis project and the Great Plains Coal Gasification Project, both projects utilizing a more advanced and probably more economic technology.

D81-3A

SUPPLEMENTARY REPORT

Report Pursuant to Section 1014(c) of Public Law 93-344

This report updates Deferral No. D81-3 transmitted to the Congress on October 1, 1980 and printed as House Document No. 96-373.

This revision to a deferral of Department of Commerce Knoxville Exposition funds increases the amount previously reported as deferred from $2,867,000 to $3,050,775. This increase of $183,775 is attributable to an adjustment in unobligated balances brought forward on October 1, 1980. The adjustment was necessary because the actual amount of unobligated balances brought forward was $1,044,000 higher than had been originally estimated. The remaining $860,225 has been made available for obligation.

Deferral No: D81-3A

DEFERRAL OF BUDGET AUTHORITY
Report Pursuant to Section 1013 of P.L. 93-344

Agency: Department of Commerce	New budget authority (P.L. ____): $ ____
Bureau: General Administration	Other budgetary resources: 19,658,000*
Appropriation title & symbol: Participation in United States Expositions 1/ 130/41805	Total budgetary resources: 19,658,000*
	Amount to be deferred: Part of year: $ -0-
	Entire year: $ 3,050,775*
OMB identification code: 13-1805-0-1-376	Legal authority (in addition to sec. 1013): ☒ Antideficiency Act ☐ Other ____
Grant program: ☐ Yes ☒ No	
Type of account or fund: ☐ Annual ☒ Multiple-year September 30, 1984 (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other ____

Justification: * The Supplemental Appropriations and Rescission Act, 1980 (P.L. 96-304) provided $20,800,000 in funds for necessary expenses for designing, constructing, and operating a Federal Pavilion at the Knoxville International Energy Exposition. The funds were designated to remain available through fiscal year 1984. Of the $19,658,000 remaining available, $17,749,225 is intended for obligation in FY 1981, and $3,050,775 is deferred for use in fiscal years 1982-1984.

This deferral action is consistent with the congressional intent to provide multi-year funding for the total cost of this program and is taken under the provisions of the Antideficiency Act (31 U.S.C. 665).

Estimated Effect: This deferral has no programmatic or budgetary effects because the funds would not be used if made available.

Outlay Effect: This deferral has no effect on outlays.

1/ This account was the subject of a similar deferral in FY 1980 (D80-73).

* Revised from previous report.

Deferral No: D81-27

DEFERRAL OF BUDGET AUTHORITY

Report Pursuant to Section 1013 of P.L. 93-344

Agency Department of Defense-Military	New budget authority (P.L. 96-527) $7,483,600,000
Bureau	Other budgetary resources 2,000,000
Appropriation title & symbol Shipbuilding and Conversion, Navy 1/ 171/51611	Total budgetary resources 7,485,600,000
	Amount to be deferred: Part of year $ — Entire year 1,125,000,000
OMB identification code: 17-1611-0-1-051	Legal authority (in addition to sec. 1013): ☒ Antideficiency Act ☐ Other
Grant program ☐ Yes ☒ No	
Type of account or fund: ☐ Annual ☒ Multiple-year September 30, 1985 (expiration date) ☐ No-year	Type of budget authority: ☐ Appropriation ☐ Contract authority ☐ Other

Justification: These funds are planned to be deferred through September 30, 1981. Due to the long period of time required to build ships, the Congress makes appropriations available for five-year periods.

Since these funds are, by law, made available beyond the current year, they are not fully apportioned in the current year. The unapportioned amount is withheld and released as the program develops and additional funds are required. The amounts deferred are to be released contingent upon the development of program needs that arise in current and future years.

Prudent financial management requires the deferral of those funds that could not be used effectively during the current year even if made available for obligation.

The above multiple-year funds are currently being deferred under provisions of the Antideficiency Act (31 U.S.C. 665) which authorizes the establishment of reserves for contingencies.

Estimated Effects: Deferral of $1,125,000,000 will have no programmatic or budgetary effect since the funds could not be obligated at this time if made available.

Outlay Effects: This deferral action has no effect on outlays.

1/ This account was the subject of two deferrals during 1930, D80-41 and D80-50.18A.

Deferral No: D81-28

DEFERRAL OF BUDGET AUTHORITY

Report Pursuant to Section 1013 of P.L. 93-344

Agency Department of Defense - Military	New budget authority (P.L. ——) $ —
Bureau	Other budgetary resources 8,065,725
Appropriation title & symbol Family Housing, Defense 970/40701*	Total budgetary resources 8,065,725
	Amount to be deferred: Part of year $ — Entire year 1,992,000
OMB identification code: 97-0701-0-1-051	Legal authority (in addition to sec. 1013): ☒ Antideficiency Act ☐ Other
Grant program ☐ Yes ☒ No	
Type of account or fund: ☐ Annual ☒ Multiple-year September 30, 1984 (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification

These funds were appropriated in 1980 for debt payment in the family housing program. Proceeds from the sales of surplus family housing facilities have resulted in unprogrammed balances in the Family Housing account. The 1982 Budget proposes the reappropriation of these currently excess funds in 1982 in the amount of $1,992,000. These funds are deferred pending completion of congressional action on the 1982 Budget request.

Estimated Effect

Deferral of these funds will have no programmatic or budgetary effect on the debt payment program since sufficient funds are available to pay the principal and interest on outstanding loans.

Outlay Effect

This deferral action has no effect on outlays.

* This account was the subject of a similar deferral in fiscal year 1980 (D80-42) and in fiscal year 1981 (D81-8).

SUPPLEMENTARY REPORT

Report Pursuant to Section 1014(c) of Public Law 93-344

This report updates Deferral No. D81-9 transmitted to the Congress on October 1, 1980, and printed as House Document No. 96-373.

This revision to a deferral of Department of Defense wildlife conversation funds increases the amount originally reported as deferred from $666,615 to $813,618. This increase of $147,003 is attributable to an adjustment in unobligated balances brought forward on October 1, 1980. The adjustment was necessary because the actual amount of unobligated balances brought forward was $147,003 higher than previously estimated.

Deferral No: D81-9A

DEFERRAL OF BUDGET AUTHORITY
Report Pursuant to Section 1013 of P.L. 93-344

Agency Department of Defense - Civil	New budget authority (16 U.S.C. 670 f (a)) $ 912,000*
Bureau	Other budgetary resources 813,618*
Appropriation title & symbol	Total budgetary resources 1,725,618*
See coverage section below	Amount to be deferred: Part of year $ ____ Entire year 813,618*

Grant program [ ] Yes [X] No	[ ] Other ____
Type of account or fund: [ ] Annual [ ] Multiple-year ____ (*expiration date*) [X] No-year	Type of budget authority: [X] Appropriation [ ] Contract authority [ ] Other ____

Coverage * 1/

Appropriation Title	Symbol	OMB Identification Code	Amount Deferred
Wildlife Conservation, Army	21x5095,	21-1500-0-1-303	$608,053
Wildlife Conservation, Navy	17x5095,	17-1501-0-1-303	122,713
Wildlife Conservation, Air Force	57x5095,	57-1502-0-1-303	82,852
			$813,618

Justification*

These are permanent appropriations. The budgetary resources consist of anticipated receipts and unobligated balances generated from hunting and fishing fees collected on military reservations, pursuant to 16 U.S.C. 670. They may be used only in accordance with the purpose of the law--to carry out a program of natural resource conservation.

Since apportionments have been made for all known program requirements, prudent financial management requires the deferral of the balance of the funds, which could not be used effectively during the current year even if made available for obligation. These funds are being deferred under the provisions of the Antideficiency Act (31 U.S.C. 665). Full apportionment is not requested by the Services because (1) installations may be accumulating funds over a period of time to fund a major project, and (2) there is a seasonal relationship between the collection of fees and their subsequent expenditure. Most of the fees are collected during the winter and spring months, while most of the program work is performed during the summer and fall months. This necessitates that funds collected in a prior year be deferred in order to be available to finance the program during the summer and fall months. Additional amounts will be apportioned if program requirements are identified.

D81-9A

Estimated Effect

This deferral has no programmatic or budgetary effect because the funds could not be obligated if made available.

Outlay Effect

This deferral action has no effect on outlays.

* Revised from previous report.
1/ These accounts were the subject of a similar deferral during fiscal year 1980 (D80-10A).

Deferral No: D81-29

DEFERRAL OF BUDGET AUTHORITY

Report Pursuant to Section 1013 of P.L. 93-344

Agency: Department of Energy Bureau	New budget authority (P.L. 96-367 & P.L. 96-369): $2,937,323,000 Other budgetary resources: 705,792,260 Total budgetary resources: 3,643,115,260
Appropriation title & symbol: Atomic Energy Defense Activities, Operating Expenses 89X0220	Amount to be deferred: Part of year: $ — Entire year: 5,000,000
OMB identification code: 89-0220-0-1-053 Grant program: ☐ Yes ☒ No	Legal authority (in addition to sec. 1013): ☒ Antideficiency Act ☐ Other
Type of account or fund: ☐ Annual ☐ Multiple-year (expiration date) ☒ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification

An Administration decision to place an emphasis on a long term approach towards the resolution of existing technical issues pertaining to the disposal of defense nuclear wastes, and to accomplish these objectives within available budgetary resources.

Estimated Effect

A deferral of $4,000,000 will occur in Defense Nuclear Waste/Long Term Waste Management Technology activities, and a deferral of $1,000,000 will occur in Defense Nuclear Waste/Terminal Storage activities, for a total of $5,000,000. This will result in a deferral of long-term waste management technology program activities including processes for the immobilization of transuranic wastes, and technology development in support of low level wastes. Some technical support for the Waste Isolation Pilot Plant (WIPP) terminal storage activities in New Mexico would be deferred.

Estimated Outlay Effects

This deferral will shift an estimated $5.0 million in outlays from fiscal year 1981 to fiscal year 1982.

Deferral No: D81-30

DEFERRAL OF BUDGET AUTHORITY

Report Pursuant to Section 1013 of P.L. 93-344

Agency: Department of Energy Bureau	New budget authority (P.L. 96-367 & P.L. 96-369): $665,305,000 Other budgetary resources: 109,783,000 Total budgetary resources: 775,088,000
Appropriation title & symbol: Atomic Energy Defense Activities, Plant and Capital Equipment 89X0221	Amount to be deferred: Part of year: $ — Entire year: 12,000,000
OMB identification code: 89-0221-0-1-053 Grant program: ☐ Yes ☒ No	Legal authority (in addition to sec. 1013): ☒ Antideficiency Act ☐ Other
Type of account or fund: ☐ Annual ☐ Multiple-year (expiration date) ☒ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification

An Administration decision not to proceed with the Waste Isolation Pilot Plant (WIPP) construction project in New Mexico and to reserve the New Mexico site as a potential site for a future waste repository.

Estimated Effect

Defers $12M of FY 1981 plant and capital equipment funding for the WIPP project into FY 1982. Unobligated FY 1980 funds for the WIPP project will be available for site protection and characterization in FY 1981. The requested FY 1981 deferral will be available in FY 1982 for these same purposes.

Estimated Outlay Effects

This deferral will shift an estimated $12.0 million in outlays from fiscal year 1981 to fiscal year 1982.

Deferral No: D81-31

DEFERRAL OF BUDGET AUTHORITY
Report Pursuant to Section 1013 of P.L. 93-344

Agency: Department of Energy	New budget authority (P.L. 96-367;369;536): $ 2,268,754,000
Bureau: Energy Programs	Other budgetary resources: 476,502,000
Appropriation title & symbol: Energy Supply Research and Development Activities, Operating Expenses 89X0224	Total budgetary resources: 2,475,256,000
	Amount to be deferred: Part of year: $ -0-
	Entire year: 23,860,000
OMB identification code: 89-0224-0-1-271	Legal authority (in addition to sec. 1013): ☐ Antideficiency Act
Grant program: ☐ Yes ☒ No	☐ Other
Type of account or fund: ☐ Annual ☐ Multiple-year (expiration date) ☒ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification:

$16.1 million is deferred in the Nuclear Fission program, reflecting a Presidential decision to place an emphasis on a long term approach towards the resolution of existing technical issues pertaining to disposal of commercial nuclear wastes, and to accomplish these objectives within available budgetary resources. A deferral of $15,000,000 would occur in Commercial Nuclear Waste Terminal Isolation Research and Development activities, and a deferral of $1,100,000 would occur in Commercial Nuclear Waste/Waste Treatment Technology activities.

Also, in order to help limit Federal spending in accordance with the President's policy of fiscal restraint, $1.8 million in funds for the Energy Storage program and $6.0 million in funds for the Solar Energy program are deferred for the remainder of this fiscal year.

Estimated Effects:

The deferral in the Nuclear Fission program primarily reduces the recent rate of growth in R&D pertaining to commercial waste disposal, and also stretches out some disposal site investigation activities, to a modest extent.

Because of the magnitude of the funds involved, the Energy Storage and Solar Energy deferral actions are not expected to have any significant effect on program objectives.

Outlay Effects:

This deferral action will have the effect of shifting $23.9 million in FY 1981 outlays into FY 1982.

Deferral No: D81-32

DEFERRAL OF BUDGET AUTHORITY
Report Pursuant to Section 1013 of P.L. 93-344

Agency: Department of Energy	New budget authority (P.L. 96-367): $383,287,000
Bureau: Energy Programs	Other budgetary resources: 44,672,000
Appropriation title & symbol: Energy Supply, Research and Development Activities, Plant and Capital Equipment 89X0225	Total budgetary resources: 427,959,000
	Amount to be deferred: Part of year: $ -0-
	Entire year: 3,690,000
OMB identification code: 89-0225-0-1-271	Legal authority (in addition to sec. 1013): ☐ Antideficiency Act
Grant program: ☐ Yes ☒ No	☐ Other
Type of account or fund: ☐ Annual ☐ Multiple-year (expiration date) ☒ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification:

A decision to reduce the level of support for the Commercial Nuclear Waste Terminal Repository activities funded through the Energy Supply Research and Development Activities Operating Expenses account decreases requirements for supporting capital equipment that is funded through this account. Therefore, $1.9 million is deferred in the Nuclear Fission program.

Also, in order to help limit Federal spending in accordance with the President's policy of fiscal restraint, additional funds totaling $1.8 million are deferred for the remainder of this fiscal year out of this account. This amount includes $1.7 million for solar energy capital equipment purchases and $0.1 million for construction of the Solar Energy Research Institute.

Estimated Effects:

In the Nuclear Fission program, this reduction in requirements for supporting capital equipment will not adversely impact other plant and capital equipment activities.

Because of the magnitude of the funds involved, the solar deferral action is not expected to have any significant effect on program objectives.

Outlay Effects:

This deferral action will have the effect of shifting $3.7 million in FY 1981 outlays into FY 1982.

Deferral No: D81-33

DEFERRAL OF BUDGET AUTHORITY

Report Pursuant to Section 1013 of P.L. 93-344

Agency: Department of Energy	New budget authority (P.L. 96-514 ___): $423,300,000
Bureau: Energy Programs	Other budgetary resources: 162,645,823
Appropriation title & symbol: Fossil Energy Construction 89X0214	Total budgetary resources: 585,945,823
	Amount to be deferred: Part of year: $ ___ Entire year: 42,000,000
OMB identification code: 89-0214-5-1-271	Legal authority (in addition to sec. 1013): ☐ Antideficiency Act ☐ Other ___
Grant program: ☐ Yes ☒ No	
Type of account or fund: ☐ Annual ☐ Multiple-year ___ (expiration date) ☒ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other ___

Justification

Funds are proposed for deferral on the grounds that proceeding with the second High-Btu demonstration project (77-1-b) will eliminate project competition between CONOCO and ICGG on the first High-Btu demonstration and reduce Government's ability to obtain satisfactory cost sharing and other business arrangements with the industrial partners.

Estimated Effects

It is planned to release these funds at the time the project proposals are reviewed and a project selected. If this occurs in FY 1981 there will be little impact on the work by the contractors. Should additional funds be required prior to this selection to maintain design terms, the required amounts would be proposed for release.

Outlay Effects

This deferral will shift $42.0 million in outlays from fiscal year 1981 to fiscal year 1982.

Deferral No: D81-34

DEFERRAL OF BUDGET AUTHORITY

Report Pursuant to Section 1013 of P.L. 93-344

Agency: Department of Energy	New budget authority (P.L. 96-514 ___): $862,107,000
Bureau: Energy Programs	Other budgetary resources: 83,405,000
Appropriation title & symbol: Energy Conservation 89X0215	Total budgetary resources: 945,512,000
	Amount to be deferred: Part of year: $ ___ Entire year: 10,450,000
OMB identification code: 89-0215-0-1-999	Legal authority (in addition to sec. 1013): ☐ Antideficiency Act ☐ Other ___
Grant program: ☒ Yes ☐ No	
Type of account or fund: ☐ Annual ☐ Multiple-year ___ (expiration date) ☒ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other ___

Justification:

In order to help limit Federal spending in accordance with the President's policy of fiscal restraint, funds totalling $10.4 million for various energy conservation programs are deferred for the remainder of this fiscal year. FY 1981 obligations will be delayed until early FY 1982 for the Buildings and Community Systems Program ($1.6 million), Transportation Energy Conservation ($1.5 million), Multi-Sector ($0.3 million), and Energy Impact Assistance ($7.0 million).

Estimated Effects:

This deferral is slightly more than a 1% delay in program activity. It will have no significant impact on major program objectives of conserving energy.

Outlay Effects:

This deferral will have the effect of shifting $10.4 million in outlays from FY 1981 into FY 1982.

Deferral No: D81-35

DEFERRAL OF BUDGET AUTHORITY

Report Pursuant to Section 1013 of P.L. 93-344

Agency: Department of the Interior	New budget authority (P.L. ____): $107,001,000
Bureau: U.S. Geological Survey	Other budgetary resources: 26,887,207
Appropriation title & symbol: Exploration of National Petroleum Reserve in Alaska 14X0805	Total budgetary resources: 133,888,207
	Amount to be deferred: Part of year: $7,960,000
	Entire year: 2,750,000
OMB identification code: 14-0805-0-1-271	Legal authority (in addition to sec. 1013): ☐ Antideficiency Act
Grant program: ☐ Yes ☒ No	☐ Other ____
Type of account or fund: ☐ Annual ☐ Multiple-year ____ (expiration date) ☒ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other ____

Justification: Public Law 96-985, making appropriations for the Department of the Interior and related agencies, 1981, provided $105.5 million for petroleum exploration activities of the Geological Survey in the National Petroleum Reserve in Alaska (NPRA). Of the $105.5 million appropriated, $10.7 million was provided to prepare for a FY 1982 drilling program. Of this amount, $7,960,000 is deferred until April 30, 1981 and $2,750,000 is deferred for the remainder of this fiscal year. The deferred funds are needed to cover the costs of terminating the exploration program as the two wells begun in FY 1980, and the four wells to be drilled in FY 1981, are finished.

After the FY 1981 exploration season is complete, 28 exploratory wells will have been drilled and over 13,000 line miles of seismic surveys will have been collected and interpreted under the exploration program. The entire Reserve is now covered with a reconnaissance seismic grid and all of the 16 indicated petroleum plays have been penetrated by at least one test well. The drilling and seismic data collected by this program are available for public distribution.

Congress clearly expressed its intent to expedite leasing in NPRA by including in the FY 1981 Interior and related agencies appropriations bill language authorizing private exploration and drilling in NPRA. It is estimated that the first lease sale can perhaps be held as early as December 1981. In addition, several private industry firms have applied for a total of six permits to collect seismic data on the Reserve in FY 1981. Some permits have been issued and the remaining permits should be issued shortly. The Department is actively soliciting additional applications for geophysical exploration and has issued a call for nominations.

In light of industry's demonstrated interest and the accelerated leasing schedule, the Administration anticipates that early exploration and development will take place in NPR-A by private industry. Private exploration activities will start in January 1981 with the issuing of geophysical permits. This will provide for an overlap in FY 1981 between the government funded exploration program and the private exploration program. This shifting of responsibility for oil and gas exploration and development to private industry is good public policy, fiscally prudent in that it could result in savings to the public of up to $125 million in fiscal 1982 alone.

Estimated Effects: This deferral action will permit the orderly termination of the government drilling program in FY 1981 with funds currently appropriated. It will preclude drilling any additional wells in FY 1982. Total obligations will not be affected. Terminating the program in FY 1981, rather than terminating after a FY 1982 drilling program, will avoid 1982 expenditures of up to approximately $125.0 million.

Outlay Effect: This deferral action will have the effect of shifting $2,750,000 in outlays from FY 1981 into 1982.

D81-16A

SUPPLEMENTARY REPORT

Report pursuant to Section 1014(c) of Public Law 93-344.

This report revises Deferral No. D81-16 transmitted to the Congress on October 1, 1980, and printed as House Document No. 96-373.

The amount deferred for the Federal Prison System's Buildings and Facilities account is $9,800,000, an increase of $4,055,000 over the amount previously deferred. This increase is attributable to (a) changes in obligational plans for the Phoenix Federal Correctional Institution which is now being cancelled, and (b) unobligated balances actually carried forward from 1980 which were $543,814, higher than previously estimated.

Deferral No: D81-16A

DEFERRAL OF BUDGET AUTHORITY

Report Pursuant to Section 1013 of P.L. 93-344

Agency Department of Justice	New budget authority (P.L. 96-526) $ 2,842,000
Bureau Federal Prison System	Other budgetary resources 40,237,419
Appropriation title & symbol	Total budgetary resources 43,079,419
Buildings and Facilities 15X1003 1/	Amount to be deferred: Part of year $19,800,000
	Entire year
OMB identification code: 15-1003-0-1-753	Legal authority (in addition to sec. 1013): ☐ Antideficiency Act
Grant program ☐ Yes ☒ No	☐ Other
Type of account or fund: ☐ Annual ☐ Multiple-year (expiration date) ☒ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification: This appropriation finances planning, acquisition of sites, and construction of new penal and correctional facilities as well as construction, remodeling and equipping of buildings and facilities at existing penal and correctional institutions. Projects are undertaken to reduce overcrowding, close old and antiquated penitentiaries and provide a safe and humane environment for staff and inmates. These funds were appropriated in the Departments of State, Justice and Commerce, the Judiciary and Related Agencies Appropriation Act of 1980 and previous years.

A decision has been made to cancel construction of the Phoenix Federal Correctional institution. Funds intended for this purpose ($18.5 million) as well as funds remaining from previous cancellations ($1.3 million) are deferred pending congressional approval and enactment of a transfer of these funds to help offset supplemental program requirements and increased pay costs in various other Department of Justice accounts.

Estimated Effects: The effect of this deferral is to preserve these funds pending congressional action on the transfer proposal.

Outlay Effect: This deferral action has no effect on outlays.

1/ This account was also the subject of a deferral in FY 1980 (D80-178).

Deferral No: D81-36

DEFERRAL OF BUDGET AUTHORITY

Report Pursuant to Section 1013 of P.L. 93-344

Agency Department of Labor	New budget authority (P.L. 96-536) $6,987,244,000
Bureau Employment and Training Administration	Other budgetary resources 196,360,244
Appropriation title & symbol	Total budgetary resources 7,183,604,244
Employment and Training Assistance 161/20174 1/	Amount to be deferred: Part of year $
	Entire year $76,699,000
OMB identification code: 16-0174-0-1-504	Legal authority (in addition to sec. 1013): ☐ Antideficiency Act
Grant program ☒ Yes ☐ No	☐ Other
Type of account or fund: ☐ Annual ☒ Multiple-year 9/30/82 (expiration date) ☐ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Note: If the financing levels provided by the Continuing Resolution (PL 96-536) were to be continued beyond June 5, 1981, an additional $26,903,000 would be deferred.

Justification

As part of the effort to minimize budget deficits in fiscal years 1981 and 1982, it has been decided to phase out the Young Adult Conservation Corps program by the end of 1982, starting now, and to reduce the 1981 Summer Youth Employment Program to a participant level closer to that actually achieved in 1979 and 1980. The Young Adult Conservation Corps program is being phased out because it is extremely costly per year of service and because it does not primarily serve disadvantaged youth most in need. The phase-out will be accomplished by not enrolling any new participants. The summer program funding is being reduced because the 1979 and 1980 programs appear to have substantially met the seasonal need of disadvantaged youth for summer part-time jobs.

Estimated effects

In the Young Adult Conservation Corps program, 1981 enrollment would average 15,400, compared to the 19,700 financed by the continuing resolution. Enrollment at the end of 1981 would be 11,200 instead of 19,900. In the summer program, the estimated range of part-time work opportunities would be 800,000 to 900,000, compared to the 850,000-950,000 range financed by the continuing resolution. The actual number of 1979 enrollees was 805,000; 1980 enrollment is estimated at 839,000.

Outlay effects (in thousands of dollars)

Current outlay estimate for 1981:

Without deferrral	7,488,370
With deferral	7,400,000
1981 outlay savings	88,370 2/

1/ This account was the subject of a deferral in FY 1980 (D80-57).

2/ This amount relates to the outlay savings expected for all of FY 1981 if the Congress maintains the funding level provided in P.L.96-536 for the entire fiscal year.

Deferral No: ___.____ ___

DEFERRAL OF BUDGET AUTHORITY
Report Pursuant to Section 1013 of P.L. 93-344

Agency Department of State	New budget authority (P.L. 96-536) $15,000,000
Bureau	Other budgetary resources 8,807,456
Appropriation title & symbol	Total budgetary resources 23,807,456
United States Emergency Refugee and Migration Assistance Fund, Executive 1/ 11X0040	Amount to be deferred: Part of year $15,000,000
	Entire year ____
OMB identification code: 11-0040-0-1-151	Legal authority (in addition to sec. 1013): [X] Antideficiency Act
Grant program [ ] Yes [ ] No	[ ] Other ____
Type of account or fund: [ ] Annual	Type of budget authority: [X] Appropriation
[ ] Multiple-year ____ (expiration date)	[ ] Contract authority
[X] No-year	[ ] Other ____

Justification: Seciton 501(a) of the Foreign Relations Authorization Act, 1976, (Public Law 94-141) and Section 414 (b)(1) of the Refugee Act of 1980 (Public Law 96-212) amended section 2(c) of the Refugee and Migration Assistance Act of 1962 (22 U.S.C. 2601) by authorizing a fund not to exceed $50 million to enable the President to provide emergency assistance for unexpected urgent refugee and migration needs.

By Executive Order No. 11922 of June 16, 1976, the President allocated all funds appropriated to him for the Emergency Fund to the Secretary of State but reserved to himself the determination of assistance to be furnished and the designation of regugees to be assisted by the Fund.

Funds totalling $15 million were made available pursuant to the Continuing Resolution (P.L. 96-536) These funds have been deferred consonant with the President's authority set out in Executive Order No. 11922 and to achieve the most economical use of appropriations. It is anticipated that reapportionments may be made case-by-case as the President determines assistance to be furnished and designates refugees to be assisted by the Fund.

This deferral action is taken in accordance with the Antideficiency Act (31 U.S.C. 665).

Estimated Effect: There are no programmatic or budgetary effects resulting from this deferral.

Outlay Effect: No effect on outlays results from this deferral action.

1/ This account was the subject of a similar deferral during FY 1980. (D80-18A).

Deferral No: D81-38

DEFERRAL OF BUDGET AUTHORITY

Report Pursuant to Section 1013 of P.L. 93-344

Agency Intelligence Community Staff	New budget authority (P.L. 96-527) $17,824,000
Bureau	Other budgetary resources ---
Appropriation title & symbol	Total budgetary resources 17,824,000
Intelligence Community Staff 9510400	Amount to be deferred: Part of year $2,000,000
	Entire year
OMB identification code: 95-0400-0-1-054	Legal authority (in addition to sec. 1013): [X] Antideficiency Act
Grant program [ ] Yes [X] No	[ ] Other
Type of account or fund: [X] Annual	Type of budget authority: [X] Appropriation
[ ] Multiple-year (expiration date)	[ ] Contract authority
[ ] No-year	[ ] Other

Justification:

These funds were appropriated to the Intelligence Community Staff with specific congressional guidance that they may not be obligated for the purpose for which they were requested, but may be used as a source for reprogramming for other needs. The funds are deferred in line with congressional intent until alternative uses for these funds are identified.

Estimated Effects:

Since it is anticipated that these funds will be reprogrammed for other uses, this deferral action will have no programmatic effect.

Outlay Effects:

This deferral action has no effect on outlays.

Deferral No: D81-39

DEFERRAL OF BUDGET AUTHORITY

Report Pursuant to Section 1013 of P.L. 93-344

Agency National Consumer Cooperative Bank	New budget authority (P.L. 96-526) $26,190,000
Bureau	Other budgetary resources 10,500,000
Appropriation title & symbol	Total budgetary resources 36,690,000
Self-help Development Fund 280/10201 281/20201	Amount to be deferred: Part of year $
	Entire year 13,133,000
OMB identification code: 28-0201-0-1-376	Legal authority (in addition to sec. 1013): [X] Antideficiency Act
Grant program [ ] Yes [X] No	[ ] Other
Type of account or fund: [ ] Annual	Type of budget authority: [X] Appropriation
[X] Multiple-year 9/30/81 1/ and 9/30/82 (expiration date)	[ ] Contract authority
[ ] No-year	[ ] Other

Justification: These funds were provided by the Department of Housing and Urban Development - Independent Agencies Appropriation Act, 1980 (P.L. 96-526) for capitalization of the Self-Help Development Fund. Because the Fund is beginning operations later than expected, a reduced level of lending is expected during 1981. The deferral of $13.1 million to fiscal year 1981 reflects this later-than-expected start.

This deferral action is taken in accordance with the Antideficiency Act (31 U.S. C. 665).

Estimated Effect: This deferral has no programmatic or budgetary effect because the funds would not be obligated if made available.

Outlay Effect: This deferral action has no effect on outlays.

1/ None of these funds is deferred.

Deferral No: D81-40

DEFERRAL OF BUDGET AUTHORITY

Report Pursuant to Section 1013 of P.L. 93-344

Agency: Pennsylvania Avenue Development Corporation	New budget authority (P.L. 95-514): $15,000,000
Bureau:	Other budgetary resources: 43,895,523
Appropriation title & symbol: Land Acquisition and Development Fund 42X4084	Total budgetary resources: 58,895,523
	Amount to be deferred: Part of year: $30,895,523
	Entire year:
OMB identification code: 42-4084-0-3-451	Legal authority (in addition to sec. 1013): ☐ Antideficiency Act
Grant program: ☐ Yes ☒ No	☐ Other
Type of account or fund: ☐ Annual ☐ Multiple-year (expiration date) ☒ No-year	Type of budget authority: ☐ Appropriation ☐ Contract authority ☒ Other Borrowing

Justification: The land acquisition and development project for the eastern sector of the Pennsylvania Avenue Development plan (east of the FBI headquarters building) is being reevaluated. The study is designed to determine if it is feasible to construct residential housing within the Pennsylvania Avenue Development area in downtown Washington, D.C. The change in property values and demand for space that has occurred since the development of the 1974 plan makes this study desirable.

Estimated Effects: The Corporation presently is refraining from all actions that would unduly restrict options during the preliminary stages of the study. This deferral action will postpone new design and construction activity for the eastern sector of the Pennsylvania Avenue Development Project.

Outlay Effects: This deferral has the effect of shifting $20.0 million in FY 1981 outlays into FY 1982 and $10.8 million in outlays from FY 1982 into 1983.

[FR Doc. 81-2299 Filed 1-19-81; 10:17 am]

BILLING CODE 3110-01-C

Deferral No: D81-41

DEFERRAL OF BUDGET AUTHORITY

Report Pursuant to Section 1013 of P.L. 93-344

Agency: Small Business Administration	New budget authority (P.L. 96-536): $609,000,000
Bureau:	Other budgetary resources: 532,228,898
Appropriation title & symbol: Business Loan and Investment Fund 73X4154	Total budgetary resources: 1,141,228,898
	Amount to be deferred: Part of year: ---
	Entire year: 57,500,000
OMB identification code: 73-4154-0-3-376	Legal authority (in addition to sec. 1013): ☐ Antideficiency Act
Grant program: ☐ Yes ☒ No	☐ Other
Type of account or fund: ☐ Annual ☐ Multiple-year (expiration date) ☒ No-year	Type of budget authority: ☒ Appropriation ☐ Contract authority ☐ Other

Justification: The resolution providing further continuing appropriations for fiscal year 1981 (P.L. 96-536) provided $609 million 1981 as a capital appropriation for the Business and Investment Fund. This amount would fund the direct loan program at a level that is $57.5 million higher than the level proposed by the President. Since these additional funds are not needed to provide an adequate program level in FY 1981, they are deferred for the remainder of this fiscal year and will be used for program requirements in FY 1982.

Estimated Effects: The effect of this deferral will be to reduce SBA's 1981 direct business loan activity by approximately 14 percent. The effects of this reduction should be mitigated, however, since guaranteed loan levels will increase by 14 percent.

Outlay Effect (in millions of dollars):

1981 Outlay Estimate		Outlay Savings			
Without deferral	With deferral	1981	1982	1983	1984
600.0	559.7	-40.3	-17.2	---	---

Part XIII

Department of Defense

Office of The Secretary

Report for 1952 Annual Performance of Functions of Bureaus

DEPARTMENT OF DEFENSE

Privacy Act Issuances; Annual Recompilation of System Notices

AGENCY: Department of Defense (DoD).

SUMMARY: Section 5 U.S.C. 552a(e)(4) of the Privacy Act of 1974 (Pub. L. 93–579) requires each Federal Agency to annually publish notice of the existence and character of certain records they maintain. The DoD notices were published last year in the **Federal Register** at FR Doc. 79–37052 (44 FR 73702), December 17, 1979 and were incorporated by the Office of the Federal Register into "Privacy Act Issuances—1979 Compilation." The purpose of this document is to update the notices published on December 17, 1979 and to publish in full those record systems that have been added or amended since then. The following Components have either opted to completely republish or are required to completely republish as they amended all of their records systems during the year:

U.S. Navy
U.S. Marine Corps
Defense Investigative Service
Defense Mapping Agency
Defense Intelligence Agency
National Security Agency
Defense Nuclear Agency

All other Components are publishing complete systems notices only for all new and amended systems and lists reflecting the identities of systems deleted since the December 17, 1979 publication as well as lists of the identities of all unchanged systems.

DATES: This document fulfills the annual notice requirement of the Privacy Act of 1974; (5 U.S.C. 552a(e)(4)).

FOR FURTHER INFORMATION CONTACT: Lt. Col. William C. Goforth, USAF; Staff Executive, Defense Privacy Board, Room 818, Pomponio Plaza Building, 1735 N. Lynn Street, Arlington, VA 22209 telephone (202) 694–3027.

SUPPLEMENTARY INFORMATION: The Department of Defense published its annual recompilation of system notices at FR Doc. 79–37052 (44 FR 73702) December 17, 1979. Notices concerning systems of records within the Department which deleted, added or amended system notices appearing in that document have been published in the **Federal Register** at:

FR Doc. 79–36400 (44 FR 67703) November 27, 1979
FR Doc. 79–36964 (44 FR 68946) November 30, 1979

AVAILABILITY OF 1979 COMPILATION: "Privacy Act Issuances—1979 Compilation" is available from Regional Depository Libraries at 50 locations around the country and can be examined at these libraries free of charge. The 1979 Compilation is also available at the General Services Administration Federal Information Centers, which are located at 30 central points around the country and may be examined at the central headquarters of the Department of Defense Components. It is also available for purchase from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Upon request, the Office of the Federal Register will furnish a photocopy of the full text of a particular records system published in the 1979 Compilation for a nomal fee.

M. S. Healy,

OSD Federal Register Liaison Officer, Washington, Headquarters Services, Department of Defense.

UNITED STATES ARMY

REQUESTING RECORDS

Records are retrieved by name or by some other personal identifier. It is therefore especially important for expeditious service when requesting a record that particular attention be provided to the Notification and/or Access Procedures of the particular record system involved so as to furnish the required personal identifiers, or any other pertinent personal information as may be required, to locate and retrieve the record.

BLANKET ROUTINE USES

Certain blanket 'routine uses' of the records have been established, that are applicable to every record system maintained within the Department of Defense, unless specifically stated otherwise within a particular record system. These additional blanket routine uses of the records are published below, only once in the interest of simplicity, economy and to avoid redundancy, before the individual record system notices begin rather than repeating them in every individual record system.

ROUTINE USE - LAW ENFORCEMENT

In the event that a system of records maintained by this component to carry out its functions indicates a violation or potential violation of law, whether civil, criminal or regulatory in nature, and whether arising by general statute, or by regulation, rule or order issued pursuant thereto, the relevant records in the system of records may be referred, as a routine use, to the appropriate agency, whether federal, state, local or foreign, charged with the responsibility of investigating or prosecuting such violation or charged with enforcing or implementing the statute, rule, regulation or order issued pursuant thereto.

ROUTINE USE - DISCLOSURE WHEN REQUESTING INFORMATION

A record from a system of records maintained by this component may be disclosed as a routine use to a federal, state or local agency maintaining civil, criminal or other relevant enforcement information or other pertinent information, such as current licenses, if necessary to obtain information relevant to a component decision concerning the hiring or retention of an employee, the issuance of a security clearance, the letting of a contract, or the issuance of a license, grant or other benefit.

ROUTINE USE - DISCLOSURE OF REQUESTED INFORMATION

A record from a system of records maintained by this component may be disclosed to a federal agency, in response to its request, in connection with the hiring or retention of an employee, the issuance of a security clearance, the reporting of an investigation of an employee, the letting of a contract, or the issuance of a license, grant, or other benefit by the requesting agency, to the extent that the information is relevant and necessary to the requesting agency's decision on the matter.

ROUTINE USE - CONGRESSIONAL INQUIRIES

Disclosure from a system of records maintained by this component may be made to a congressional office from the record of an individual in response to an inquiry from the congressional office made at the request of that individual.

ROUTINE USE WITHIN THE DEPARTMENT OF DEFENSE

A record from a system of records maintained by this component may be disclosed as a routine use to other components of the Department of Defense if necessary and relevant for the performance of a lawful function such as, but not limited to, personnel actions, personnel security actions and criminal investigations of the Component requesting the record.

ROUTINE USE - PRIVATE RELIEF LEGISLATION

Relevant information contained in all systems of records of the Department of Defense published on or before August 22, 1975, will be disclosed to the Office of Management and Budget in connection with the review of private relief legislation as set forth in OMB Circular A-19 at any stage of the legislative coordination and clearance process as set forth in that Circular.

ROUTINE USE - DISCLOSURES REQUIRED BY INTERNATIONAL AGREEMENTS

A record from a system of records maintained by this Component may be disclosed to foreign law enforcement, security, investigatory, or administrative authorities in order to comply with requirements imposed by, or to claim rights conferred in international agreements and arrangements including those regulating the stationing and status in foreign countries of Department of Defense military and civilian personnel.

ROUTINE USE - DISCLOSURE TO STATE AND LOCAL TAXING AUTHORITIES

Any information normally contained in IRS Form W-2 which is maintained in a record from a system of records maintained by this Component may be disclosed to State and local taxing authorities with which the Secretary of the Treasury has entered into agreements pursuant to Title 5, U.S.Code, Sections 5516, 5517, 5520, and only to those State and local taxing authorities for which an employee or military member is or was subject to tax regardless of whether tax is or was withheld. This routine use is in accordance with Treasury Fiscal Requirements Manual Bulletin Nr. 76-07.

ROUTINE USE - DISCLOSURE TO THE OFFICE OF PERSONNEL MANAGEMENT

A record from a system of records subject to the Privacy Act and maintained by this component may be disclosed to the Office of Personnel Management concerning information on pay and leave, benefits, retirement deductions, and any other information necessary for the Office of Personnel Management to carry out its legally authorized Government-wide personnel management functions and studies.

ROUTINE USE - DISCLOSURE OF INFORMATION TO NARS (GSA)

A record from a system of records maintained by this component may be disclosed as a routine use to the National Archives and Records Service of the General Services Administration in records management inspections conducted under authority of 44 U.S.C. 2904 and 2906.

ROUTINE USE - DISCLOSURE TO DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

All systems of records relating to compensation, employment or retirement, or extracts therefrom, maintained by this Component may be disclosed as a routine use to the Department of Health, Education, and Welfare for the purpose of comparing such record with records of programs administered by and in the possession of the Department of Health, Education, and Welfare in order to verify information where such verification is required by law or regulation or to identify violations or potential violations of law, whether criminal, civil, or regulatory, and whether arising by general statute or particular program statute, or by regulation, rule, or order issued pursuant thereto.

AAFES1609.02

System name:

1609.02 AAFES Customer Service

System location:

Headquarters, Army and Air Force Exchange Service (AAFES), Dallas, TX; Headquarters, AAFES-Pacific; Headquarters, AAFES-Europe, and all continental United States and oversea Exchange regions, area exchanges, post and base exchanges, and satellites within the AAFES system. Addresses are listed in the Directory of the Department of the Army, appearing in the Annual Compilation of System Notices, published in the Federal Register.

Categories of individuals covered by the system:

All AAFES customers who elect to purchase merchandise on a time payment, layaway, or special order basis, or who need purchase adjustments or refunds.

Categories of records in the system:

File contains copies of active layaway tickets, requests for refunds, special order forms, requests for special order procurement, special order logs, cash receipts vouchers, and repair vouchers.

Authority for maintenance of the system:

Title 10 U.S.C., Sections 3012 and 8012.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

To record customer transactions/payments for layaways and special orders; to determine payment status before finalizing these transactions; to identify layaway account delinquencies and prepare customer reminder notices; to prepare and mail refunds to customers on cancelled layaways or special orders; and to process purchase refunds and repair orders.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file boxes/cabinets.

Retrievability:

By last name of customer, document control number, and/or due date.

Safeguards:

Records are maintained in areas accessible to authorized personnel only. Layaway, special order, cash receipts, and refund vouchers are prenumbered and logged as used or retired.

Retention and disposal:

Cancelled or completed layaway tickets: Held in file for 6 months after cancellation or delivery of merchandise, then destroyed.
Purchase orders: Retained for 2 years, then destroyed.
Refund vouchers: Retained for 6 years, then destroyed.
Returned merchandise slips: Retained for 6 years, then destroyed.
Cash receipts vouchers: Retained for 3 years, then destroyed.

System manager(s) and address:

Director, Merchandising Division Headquarters, Army and Air Force Exchange Service, Dallas, TX 75222.

Notification procedure:

Information may be obtained from:
Commander
Headquarters, Army and Air Force Exchange Service
ATTN: MR-O
Dallas, TX 75222
Telephone: Area Code 214/330-2653.

Record access procedures:

Requests from individuals should be addressed to: Commander, Headquarters, Army and Air Force Exchange Service, ATTN: MR-O, Dallas, TX 75222, and should contain customer's full name, current address and telephone number, Army and Air Force Exchange Service activity at which transaction was initiated, date of transaction, and control number of document involved.

Neither instructions nor provisions for personal visits are provided at this time.

Contesting record procedures:

The agency's rules for access to records and for contesting contents and appealing initial determinations may be obtained from the SYSMANAGER.

Record source categories:

Information is furnished by the customer.

Systems exempted from certain provisions of the act:

None.

A0102.02aDAAG

System name:

102.02 Office Business Visitor Files

System location:

Segments may be maintained at Headquarters, Department of the Army, staff and field operating agencies, commands, installation and supporting activities.

Categories of individuals covered by the system:

Any visitor who represents a person, firm, corporation, academic institution or other enterprise involved in business transactions with the Army.

Categories of records in the system:

Files contain forms which reflect the individual's name, name and address of firm represented, person/office visited, purpose of visit, and the status of individual as regards past or present affiliation with the Department of Defense.

Authority for maintenance of the system:

Title 10 U.S.C., Section 3012.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

To provide information to those officials of the Army responsible for monitoring/controlling visitor's status and determining purpose of visit so as to preclude conflict of interest.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders.

Retrievability:

By name of visitor.

Safeguards:

Records are maintained in file cabinets with access limited to Division and Branch Chiefs having primary interest.

Retention and disposal:

Retained for 1 year after which records are destroyed.

System manager(s) and address:

The Adjutant General, Headquarters, Department of the Army, Washington, DC 20314.

Notification procedure:

Information may be obtained from the commander/supervisor maintaining the information.

Record access procedures:

Requests should be addressed to appropriate commander or supervisor. Official mailing addresses are in the Directory of United States Army Addresses following the annual compilation of Army system notices published in the Federal Register.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations may be obtained from the SYSMANAGER.

Record source categories:

Information is obtained from the individual.

Systems exempted from certain provisions of the act:

None.

A0102.04aDAPE

System name:

102.04 Supervisor/Manager Employee Records

System location:

Department of the Army: Offices of supervisors/managers of the functional elements of an Army activity, installation, or agency.

National Guard Bureau: Office of the State Adjutant General, ATTN: Technician Personnel Office, of each State, Puerto Rico, Virgin Islands, and the District of Columbia.

Categories of individuals covered by the system:

Any civilian employee/NG technician (both appropriated and nonappropriated fund) who is employed within the specific organizational element.

Categories of records in the system:

Files contain copies of documents pertaining to the administration of individual civilian/NG technician employees which are duplicated in, or are generated in support of actions recorded in, the Official Personnel Folder, or related personnel files maintained in the civilian/NG technician personnel office. The records in this file contain information about an individual relating to birth date; social security number; veteran's preference; tenure; past and present salaries grades, and position titles; letters of commendation, reprimand, charges, and decision on charges; personnel action; including but not limited to, appointment, reassignment, demotion, detail, promotion, transfer, and separation; training; performance ratings, data documenting the reasons for personnel actions or decisions made about an individual; and awards.

Authority for maintenance of the system:

Title 5 U.S.C., Sections 301, 1302, 2951, 4118, 4308, and 4506; EO 1056, September 13, 1954; and Title 32 U.S.C., Section 709.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Information in these records is used for reference or to support supervisory/managerial actions required in the conduct of official civilian personnel management business; by the Office of Personnel Management in the conduct of its responsibilities; to Justice Department, Department of Labor, or other Federal agencies or judiciary bodies in the conduct of official business.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in folders, Kardex files.

Retrievability:

Alphabetically, by surname.

Safeguards:

Filed in either locked files or in secured locations. Access limited to management/supervisory officials of the assigned employees, clerical personnel maintaining the files, and to persons to whom the subject individual has given written permission.

Retention and disposal:

When an employee leaves the activity through transfer or other separation, the Supervisior/Manager Employee Records File will immediately be forwarded to the civilian/technician personnel office maintaining the Official Personnel Folder (OPF). There it will be screened to insure that it contains no documents that should be permanently filed in the OPF other than exact duplicates of papers already so filed. The Supervisor/Manager Employee Folder and its contents will then be destroyed. National Guard technicians' records are destroyed 60 days after separation date.

System manager(s) and address:

The Deputy Chief of Staff for Pesonnel, Department of the Army, The Pentagon, Washington, DC 20310.

Notification procedure:

Information may be obtained from the individual's supervisor/manager.

Record access procedures:

Requests, verbal or written, should be addressed to the individual's supervisor or manager.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations may be obtained from Headquarters, Department of the Army (DAPE-HRE), Washington, DC 20310.

Record source categories:

From the supervisor/manager by documenting facts or statements of judgments; copies of records maintained in the civilian/technician personnel office or information obtained from same records.

Systems exempted from certain provisions of the act:

None.

A0102.13DAPC

System name:

102.13 Office Military Personnel Files

System location:

Decentralized segments of this file exist wherever unit and staff office administration of military personnel is authorized, whether active Army, Army Reserves, or National Guard; e.g., company, battery, troop detachment, branch, division, subordinate/major command, Headquarters, Department of the Army/National Guard Bureau.

Categories of individuals covered by the system:

Military personnel and, in some instances, their dependents, who are supervised and/or administered within the respective organizational element enumerated in System Location above.

Categories of records in the system:

Records include documents/papers pertaining to the individual relating to day-to-day administration/supervision. Files may include matters pertaining to appointment, promotion, reduction, reassignment, transfer, special duty, reclassification, orders, sponsors, indebtedness, leave, enlistment waivers, statement of service, bonus, evaluations, insurance, applications for outside employment, line of duty determinations, academic transcripts and individual training reports and instructor evaluations, retirement papers, voting, survivor benefits options, applications to boards and follow-on actions, and related administrative matters.

Authority for maintenance of the system:

Title 5 U.S.C., Section 301; Title 10 U.S.C., Section 3012.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

To provide commanders a general reference file of information supporting day-to-day operations and administration as pertains to the assigned/attached service member.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders, index cards, microfiche.

Retrievability:

Alphabetical, by name.

Safeguards:

Records are retained in file containers, locked desks, cabinets, or rooms accessible only to authorized personnel.

Retention and disposal:

Records are destroyed 1 year after transfer/separation of the member.

System manager(s) and address:

Head of Army/National Guard office or organizational element where member is assigned.

Notification procedure:

Information may be obtained from the commander of unit to which individual is assigned.

Record access procedures:

Requests should be addressed to the SYSMANAGER. Written requests should include individual's full name, social security number, and rank/grade. For personal visits, individual must provide military identification card.

Contesting record procedures:

The Army's rules for access to records and contesting contents and appealing initial determinations are contained in Army Regulation 340-21 (32 CFR Part 505).

Record source categories:

Copies of records/documents contained in the Military Personnel Records Jacket, Official Military Personnel File, and correspondence originated by member or from sources relating to subjects in which member may be involved.

Systems exempted from certain provisions of the act:

None.

A0225.11bDAAG

System name:

225.11 The USA Individual Ready, Standby and Retired Reserve Personnel Information System.

System location:

Automated Equipment Division, Systems Support Directorate, United States (US) Army Reserve Components Personnel and Administration Center (USARCPAC), ATTN: AGUZ-SSD, 9700 Page Boulevard, St Louis, MO 63132.

Categories of individuals covered by the system:

All members of the US Army Reserve who are not assigned to a Reserve unit and not serving on extended active duty in an enlisted reserve status.

Categories of records in the system:

Record contains personal and military status and qualifications data.

Authority for maintenance of the system:

Title 10 U.S.C., Section 275.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

US Army Reserve Components Personnel Center, Department of the Army staff and command agencies, and Department of Defense and components thereof: The data records are primarily used to select qualified members for assignment to active Army units and mobilized reserve component units in the event of mobilization during a national emergency. Record is also used to support day-to-day personnel management and administration. Specifically, these uses include: selecting qualified personnel for potential assignment to reserve units based on military occupational specialty, grade, and geographical location; selecting and ordering individuals to military active duty training; identifying personnel for promotion consideration; identifying individuals not qualified for retention in the reserve; issuing annual statements of retirement credits; printing statements of total retirement credits; and publishing orders directing personnel actions and training.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Computer magnetic tapes and disks.

Retrievability:

Filed numerically, social security number (SSN) ascending.

Safeguards:

Computer located in building which has entrance controlled by Federal Protective Officers. An ID badge is required to enter building and a different floor badge is required to enter the floor. The tape and disk library is a fireproof vault with a safe combination door

plus a steel bar key-locked door. The functional and systems directors approve production requests for both one-time and recurring information.

Retention and disposal:

Records are maintained for six years after completion of statutory or contractual reserve commitment.

System manager(s) and address:

Commander, US Army Reserve Components Personnel and Administration Center, 9700 Page Boulevard, St Louis, MO 63132.

Notification procedure:

Information may be obtained from:
Commander, USARCPAC
9700 Page Boulevard, St Louis, MO 63132
Telephone: Area Code 314/263-7763

Record access procedures:

Requests from individuals should be addressed to: Commander, US Army Reserve Components Personnel and Administration Center, 9700 Page Boulevard, St Louis, MO 63132

Written requests from individuals should contain full name, SSN and address.

For personal visits the individual should provide some acceptable identification such as a driver's license.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations may be obtained from the SYSMANAGER.

Record source categories:

Official Military Personnel File and Military Personnel Records Jacket.

Systems exempted from certain provisions of the act:

None

A0225.11fDAPC

System name:

225.11 Enlisted Year Group Management File/RETAIN

System location:

Department of the Army (DA), United States Army Military Personnel Center (DAPC-EP), Hoffman Building I, 2461 Eisenhower Avenue, Alexandria, VA 22331.

Categories of individuals covered by the system:

Active duty members of the US Army in enlisted grades of E1 through E9 and former military personnel who are applicants for enlistment.

Categories of records in the system:

AUTOMATED: File contains control number, reclassification/ enlistment action, type of enlistment, social security number (SSN), pay grade, race, sex, basic active service date, estimated termination of service, reenlistment date, civilian education, career management field, primary military occupational specialty (PMOS), PMOS evaluation score, new career management file (CMF), new PMOS, date of award of new PMOS, source of new PMOS, personnel charged to school code, status of application, assignment code, date of last status change, current location, year group; name, Security Investigation Status (SIS), terms reenlisted, basic pay entry date, promotional status (MOS), special skill identifier, additional skill identifier.

MANUAL: File contains name, control number, reclassification/ enlistment action, type of enlistment, SSN, pay grade, race, sex, basic active service date, estimated termination of service, Armed Forces Qualification Test Score, civilian education, promotion list status, reenlistment bonus status, security clearance, marital status, reenlistment date, physical profile status with code, career counselor with location, pay entry basic date, current/last overseas area, date eligible to return from overseas, date departed United States, waiver required, citizenship status, aptitude area scores, school/assignments requested, assignment confirmation, orders information.

Authority for maintenance of the system:

Title 5 U.S.C., Section 301.
Title 10 U.S.C.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

DA: Records are used for personnel management, year group management, and manpower management.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Records are stored on computer magnetic tapes and disk and as paper records in file folders.

Retrievability:

Normal access is by name, SSN, control number or other individual characteristics.

Safeguards:

Physical security devices, guards, computer hardware and software safeguard features and personnel clearances for individuals working with the system.

Retention and disposal:

Computer tapes are cut off annually, and are retained up to 5 years; hard copy files are cut off annually and retained up to 2 years.

System manager(s) and address:

Commander, United States Army Military Personnel Center, 200 Stovall Street, Alexandria, VA 22332.

Notification procedure:

Information may be obtained from: Headquarters, Department of the Army, US Army Military Personnel Center (DAPC-EP), Hoffman Bldg. I, 2461 Eisenhower Avenue, Alexandria, VA 22331.

Record access procedures:

Written requests for information should contain the full name of the requester, SSN, current or former military status and appropriate return address.

Personal visits may be made to the United States Army Military Personnel Center; individuals should be able to provide their military service identification and DD Form 2A for active duty personnel, or other commonly acceptable means of identification used in normal transaction of business.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations may be obtained from SYSMANAGER, ATTN: DAPC-MSO.

Record source categories:

Information is obtained from the applicant, DA personnel records, computer reports, and from other DA organizations and stations.

Systems exempted from certain provisions of the act:

None

A0239.01DAAG

System name:

202.08 Request for Information Files

System location:

These records exist at Headquarters, Department of the Army, staff and field operating agencies, major commands, installations and activities receiving requests to access records pursuant to the Freedom of Information Act or to declassify documents pursuant to Executive Order 12065. They also exist in offices of Initial Denial Authorities (enumerated in Army Regulation 340-17) when an individual's request is denied; upon appeal of that denial, record is maintained in the Secretary of the Army's Office of General Counsel. Official mailing addresses are in the DOD Directory following the Annual Compilation of system notices appearing at 44 FR 74011 on December 17, 1979.

Categories of individuals covered by the system:

Any individual who requests an Army record under the Freedom of Information Act or requests mandatory review of a classified document pursuant to Executive Order 12065.

Categories of records in the system:

File contains individual's request: related processing papers; correspondence between the office of receipt, records custodians, Army staff offices and other government agencies: retained copies of classified or other exempt materials; and other selective documents.

Authority for maintenance of the system:

Title 5 U.S.C., Section 552: Freedom of Information Act as amended by Pub. L. 93-502; Executive Order 12065.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

To control administrative processing of requests for information either pursuant to the Freedom of Information Act or to Executive Order 12065, including appeals from denials.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders

Retrievability:

Files alphabetically by last name of requestor.

Safeguards:

Records are maintained in areas accessible only to authorized personnel that are properly trained.

Retention and disposal:

Records reflecting granted requests are destroyed after 2 years. When requests have been denied, records are retained for 5 years except that if appeals result, records are retained until 4 years after final denial by the Army or 3 years after final adjudication by the courts, whichever is later.

System manager(s) and address:

The Adjutant General, Headquarters, Department of the Army, Washington DC 20310

Notification procedure:

Requests should be addressed to the custodian of the record sought; if unknown, write to: HQDA (DAAG-AMR-S), Room GA-082, Forrestal Building, Washington DC 20310, telephone: 202/693-1847.

Record access procedures:

Written requests should be addressed to the office that processed the initial inquiry or access request. Individual may obtain assistance from the System Manager.

Personal visits may be made to the office maintaining the records upon presentation of acceptable identification such as driver's license, and furnishing verbal information that can be verified.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations are contained in Army Regulation 340-21(32 CFR Part 505).

Record source categories:

From the individual requestor, Department of Army organizations, other Department of Defense components, and other Federal, state, and local government agencies.

Systems exempted from certain provisions of the act:

The majority of records in this system are not exempt. Copies of documents residing in the office of an Initial Denial Authority having a law enforcement mission which fall within (j)(2) are exempt from the following provisions of Title 5 U.S.C., section 552a: (c)(3), (d), (e)(1), (e)(2), (e)(3), (e)(4)(G), (e)(4)(H), (e)(5), (e)(8), (f), and (g). Copies of documents maintained by other Initial Denial Authorities not having a law enforcement mission which fall within 5 U.S.C., section 552a (k)(1) through (k)(7) are exempt from the following provisions of Title 5 U.S.C., section 552a: (c) (3), (d), (e)(1), (e)(4)(G), (e)(4)(H), and (f).

A0240.01DAAG

System name:

201.08 Privacy Case Files

System location:

These records exist at Headquarters, Department of the Army, staff and field operating agencies, major commands, installations and activities receiving Privacy Act requests. They also exist in offices of Access and Amendment Refusal Authorities (enumerated in Army Regulation 340-21) when an individual's request to access and/or amend his/her record is denied; upon appeal of that denial, record is maintained by the DA Privacy Review Board. Official mailing addresses are in the DOD Directory following the Annual Compilation of system notices appearing at 44 FR 74011 on December 17, 1979.

Categories of individuals covered by the system:

Individuals who request information concerning themselves which is in the custody of the Department of the Army, including requests to amend such records pursuant to Title 5, U.S.C. section 552a(d) (Privacy Act of 1974).

Categories of records in the system:

Documents which notify requestors of the existence of records on them, providing or refusing access to or amendment of records, acting on appeals or refusals to provide access to or amend records, and providing or developing information for use in litigation. Included are requests; approval and refusal actions; appeals and actions on appeals, including DA Privacy Review Board minutes and actions; coordination actions; copies of the requested and amended/unamended records; statements of disagreement; and related documents.

Authority for maintenance of the system:

Title 10 U.S.C., Section 3012; Title 5 U.S.C., Section 552a.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Files are used to process and coordinate individual requests for access, and amendment of personal records; to process and record appeals on denials of requests for access or amendment to personal records by the individual against agency rulings; and to ensure timely response to requestors.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file holders.

Retrievability:

By name of requestor on whom the records pertain.

Safeguards:

Records are accessed by custodian of the record system and by persons responsible for servicing the record system in performance of their official duties who are properly screened and cleared. Records are stored in locked cabinets or rooms.

Retention and disposal:

Offices of Access and Amendment Refusal Authorities: Approved requests, unappealed refusals and refusals fully overruled by appellate authorities: Destroy after 4 years; refusals upheld in whole or in part by appellate authorities: destroyed after 10 years, provided legal proceedings are completed.

Offices of appellate authorities: Appeals adjudicated fully in favor of requestor: destroyed after 4 years. Appeals refused in full or in part: destroyed after 10 years provided legal proceedings are completed.

Other offices: Destroyed after 4 years.

System manager(s) and address:

The Adjutant General, Headquarters, Department of the Army, ATTN: DAAG-AMR-R, Washington, DC 20310.

Notification procedure:

Requests should be addressed to the custodian of the record sought; if unknown, write to: HQDA (DAAG-AMR-R), 1000 Independence Avenue, SW, Washington, DC 20310, telephone: 202/693-0973.

Record access procedures:

Written requests should be addressed to the office that processed the initial inquiry, access request, or amendment request. Individual may obtain assistance from the System Manager.

Personal visits may be made to the office maintaining the records upon presentation of acceptable identification such as driver's license, employee identification card, and furnishing verbal information that can be verified from individual's case file.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations are contained in Army Regulation 340-21(32 CFR Part 505).

Record source categories:

From the individual requestor, Department of Army organizations, other Department of Defense components, and other Federal, state, and local government agencies.

Systems exempted from certain provisions of the act:

The majority of records in this system are not exempt. Copies of documents residing in the office of an Access and Amendment Refusal Authority having a law enforcement mission which fall within (j)(2) are exempt from the following provisions of Title 5 U.S.C., section 552a: (c)(3), (d), (e)(1), (e)(2), (e)(3), (e)(4)(G), (e)(4)(H), (e)(5), (e)(8), (f) and (g). Copies of documents maintained by the DA Privacy Review Board and by those Access and Amendment Refusal Authorities not having a law enforcement mission which fall within 5 U.S.C., section 552a (k)(1) through (k)(7) are exempt from the following provisions of Title 5 U.S.C., section 552a: (c)(3), (d), (e)(1), (e)(4)(G), (e)(4)(H), and (f).

A0506.05DAAG

System name:

506.05 Diplomatic Immunity Roster

System location:

Washington National Records Center, General Services Administration, Suitland, MD 20409.

Categories of individuals covered by the system:

Any member who was assigned to any of the following units which were stationed in Thailand: 7th Radio Relay Field Station; 6924 Security Squadron; Navy Detachment, Radio Relay Field Station; 4802 Joint Liaison Detachment; 17th DAR Squadron; Postal Courier Region, AI16, Det 1, 1985th Communications Squadron;

6201 Aerospace Support Squadron; Department of Defense (DOD) Special Representative, Thailand; General Electric, Kokha.

Categories of records in the system:

File contains individual's name, social security number (SSN) and organization.

Authority for maintenance of the system:

Title 10 U.S.C., Section 3012.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Records are used only to answer inquiries.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

IBM card stock and rosters in file folders.

Retrievability:

Filed alphabetically by last name of individual.

Safeguards:

Building employs security guards. Records are maintained in storage areas accessible only to authorized personnel.

Retention and disposal:

Normal disposition procedures were preempted by imposition of a DOD moratorium. At the present time, these records will be retained indefinitely.

System manager(s) and address:

The Adjutant General, Headquarters, Department of the Army, Washington, DC 20314.

Notification procedure:

Information may be obtained from HQDA (DAAG-AMR-S), Room GA-080, Forrestal Building, Washington, DC 20314, telephone: Area Code 202/693-1845.

Record access procedures:

Requests should be submitted to The Adjutant General, HQDA (DAAG-AMR-S), Washington, DC 20314. Requesters should furnish their full name and any information that would readily identify the record sought. Personal visits are not permitted.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations are contained in Army Regulation 340-21 (32 CFR Part 505).

Record source categories:

Messages and other written communications from the individual units requesting members' addition or deletion from the roster.

Systems exempted from certain provisions of the act:

None

A0509.19cDAAG

System name:

509.19 Vehicle Registration File

System location:

Washington National Records Center, General Services Administration, Suitland, MD 20409.

Categories of individuals covered by the system:

Any US Government Personnel who resided in Thailand and who was required to register vehicles under USMACTHAI Regulation 1-13.

Categories of records in the system:

The file contains information related to importing, local purchase, and vehicle registration with the Royal Thai Government.

Authority for maintenance of the system:

Title 10 U.S.C., Section 3012.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Records are used only to answer inquiries.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Vehicle Registration File is a card file. Privately Owned Vehicle(s) (POV) records are in file folders. Files of the various categories of POV are on computer printouts.

Retrievability:

All records are filed alphabetically. In addition, the files on the categories of POV are also retrieved by license plate number.

Safeguards:

Building employs security guards. Records are maintained in storage areas accessible only to authorized personnel.

Retention and disposal:

Normal disposition procedures were preempted by imposition of a Department of Defense moratorium. At the present time, these records will be retained indefinitely.

Correspondence among the (1) United States Army Military Personnel Center (MILPERCEN), (2) service member, (3) Army Staff offices, (4) Army commands, (5) other Federal agencies, and (6) general public to commander or service member.

Authority for maintenance of the system:

Title 5 U.S.C., Section 301; Title 10 U.S.C.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Army command or US Army Reserve command of assignment/ station/ location of the Army or Army Reserve service member: To provide day-to-day administration, training, qualification, reenlistment, discharge, and related matters pertaining to individual's military service; to publish officer registers/rosters as authorized by Title 10 U.S.C., Section 122.

Inquiries are received for information, documents, papers, and records which are provided to the requester to enable the agency to adjudicate claims, perform investigative actions, support criminal cases, state determinations, research, security clearance, citizenship, location and other related uses consistent with the functional and statutory responsibility of the agency.

Agencies using files are: Central Intelligence Agency; Department of Agriculture; Department of Commerce; Department of Health, Education and Welfare; Department of Housing and Urban Development; Department of Interior; Department of Labor; Department of State; Department of Transportation; Department of Treasury; American Battle Monuments Commission; Atomic Energy Commission; Civil Aeronautics Board; Federal Communications Commission; Federal Aviation Administration; VA; US Postal Service; Office of Personnel Management; Selective Service System; DOD agencies, elements and military departments; Social Security Administration; Defense agencies of the North Atlantic Treaty Organization, and military commands thereof (i.e., Supreme Headquarters Allied Powers Europe (SHAPE) and its subordinate commands of Allied Forces, Northern (AFNORTH), Central (AFCENT), Central Army Group (CENTAG), Southern (AFSOUTH), and Allied Land Forces Southeast Europe (LANDSOUTHEAST); State, county and city welfare organizations when information is required to conduct business of the agency concerned; penal institutions when the individual is a patient or an inmate; and State, county and city probation/parole and pardon officers for use in presentencing or parole investigations; correspondence with next-of-kin in accordance with Army Regulation 630-10; and other elements of the Federal Government in accordance with their respective authority and responsibility.

Patriotic societies incorporated under the provisions of Title 36 U.S.C. in consonance with their respective corporate mission when their use of records or information is in furtherance of the welfare, morale, or mission of the service members of the Army.

Record of the identity, diagnosis, prognosis, or treatment of any client/patient, irrespective of whether or when he/she ceases to be a client/patient, maintained in connection with the performance of any alcohol or drug abuse prevention and treatment function conducted, regulated, or directly or indirectly assisted by any department or agency of the United States, shall, except as provided therein, be confidential and be disclosed only for the purposes and under the circumstances expressly authorized in Title 21 U.S.C., Section 1175 and Title 42 U.S.C., Section 4582. These statutes take precedence over the Privacy Act of 1974 in regard to accessibility of such records except to the individual to whom the record pertains. Blanket 'routine uses' identified in 44 FR 73728 do not apply to these records.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in record jacket folder.

Retrievability:

Records accessed by name.

Safeguards:

Records maintained in areas accessible only to authorized personnel; transferred from station to station in personal possession of individual concerned or by US mail.

Retention and disposal:

Permanent

System manager(s) and address:

Commander, United States Army Military Personnel Center, 200 Stovall Street, Alexandria, VA 22332.

Notification procedure:

Information may be obtained from the commander of the organization to which the service member is assigned; for retired and non-unit reserve personnel, information may be obtained from the United States Army Reserve Components Personnel and Administration Center, 9700 Page Avenue St Louis, MO 63132; for separated and deceased personnel, notify the National Personnel Records Center, General Services Administration, 9700 Page Avenue St Louis, MO 63132.

Record access procedures:

Written requests for information should include the full name, service identification number, branch of service of an officer, and current address. Visits should be made to the Consolidated Military Personnel Activity (COMPACT) or the Military Personnel Office (MILPO) of the organization/station of the service member concerned or the United States Army Reserve Components Personnel and Administration Center.

For personal visits, the requester should provide acceptable identification, i.e., military identification card or other identification normally acceptable in the transaction of business.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations may be obtained from Headquarters, Department of the Army (DAPC-MSO), 200 Stovall Street, Alexandria, VA 22332.

Record source categories:

Letters, statements, forms, records and related papers originating with the service member; generated by Army Staff offices, Army commands, other Federal agencies in accordance with their respective functional or statutory requirements; and by the general public or the commander of service member when such papers relate to the service status of the individual.

Systems exempted from certain provisions of the act:

None

System name:

708.01 Army National Guard Automated Personnel Reporting System

System location:

Primary System: National Guard Computer Center, National Guard Bureau, Columbia Building, 5611 Columbia Pike, Falls Church, VA 22041.

Decentralized Segments: Offices of the Adjutants General of all States, Puerto Rico, the Virgin Islands, and the District of Columbia and units of the Army National Guard (ANG) not on active duty.

Categories of individuals covered by the system:

Each individual who is a member of the ANG in a commissioned officer, warrant officer or enlisted status.

Categories of records in the system:

File contains items of data relating to individual's service which have been extracted from his/her military records or computed from the information contained therein. The records from which the data are extracted are: military personnel records jacket; financial records data folder; health records; statement of service; qualification record; group life insurance election; application for appointment; enlistment records; medical examination; active duty report; record of retirement points; notification of eligibility for retired pay at age 60; voluntary reduction; academic report; officer evaluation report; transcript of military record; oath of enlistment extension; temporary disability record; change of name; statement for enlistment; acknowledgement of service requirements; report of proceedings of physical fitness board; report of proceedings of physical review board; birth certificate; citizenship statement and status; record of security clearance; educational constructive credit; educational transcript; flight record; Federal recognition orders; special orders; recommendation for promotion; notification of non-selection for promotion; miscellaneous correspondence documents and other military orders relating to military service including information pertaining to dependents, interservice actions, intraservice actions, assignments, details, military qualifications, determinations, reliefs, component, branch of service, military awards, pay entitlements, releases, transfers, and other military service data.

Authority for maintenance of the system:

Title 10 U.S.C., Section 275; Title 32 U.S.C.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Department of Defense and Department of the Army (DA) (to include United States Army Forces Command (FORSCOM) and United States Army Reserve Components Personnel and Administration Center (RCPAC)): To provide feeder information necessary to enable computation of the monthly pay for each member of the ANG who is paid by the Joint Military Pay System for Reserve Components of the Army; to provide suspense information to assure completion of individual personnel actions required by Federal stat-

ute at the expiration of specified periods of time. These actions are: removal from an active status upon completion of maximum periods of service or attainment of maximum ages; to provide lists of female personnel to facilitate selection of individuals for specialized assignments in connection with ANG activities; to provide lists of military chaplains and chaplains' assistants to facilitate the selection of individuals for specialized duties or training.

Record of the identity, diagnosis, prognosis, or treatment of any client/patient, irrespective of whether or when he/she ceases to be a client/patient, maintained in connection with the performance of any alcohol or drug abuse prevention and treatment function conducted, regulated, or directly or indirectly assisted by any department or agency of the United States, shall, except as provided therein, be confidential and be disclosed only for the purposes and under the circumstances expressly authorized in Title 21 U.S.C., Section 1175 and Title 42 U.S.C., Section 4582. These statutes take precedence over the Privacy Act of 1974 in regard to accessibility of such records except to the individual to whom the record pertains. Blanket 'routine uses' identified in 44 FR 73728 do not apply to these records.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Magnetic computer tape.

Retrievability:

By name, social security number or automatic data processing parameter.

Safeguards:

Access to data storage area and distribution of printouts are controlled. Approval of functional manager must be obtained before data may be retrieved or distributed.

Retention and disposal:

Data retained in file until updated or service of individual is terminated. In case of enlisted personnel the data are destroyed 1 month after individual is separated from the ANG. In the case of commissioned officers and warrant officers, the data are retained indefinitely in separate file.

System manager(s) and address:

Chief, National Guard Bureau, The Pentagon, Washington, DC 20310.

Notification procedure:

Information may be obtained from: Chief, Army Personnel Division, National Guard Bureau, The Pentagon, Washington DC 20310.

Record access procedures:

Written requests for information should contain full name of individual, service identification number, current military status and appropriate return address.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations may be obtained from the SYS-MANAGER.

Record source categories:

Enlistment, appointment, or commission related forms pertaining to the individual having a current or former military status; academic, training, or qualification records acquired prior to or during military service; correspondence, forms, records, documents and other related papers originating in or collected by Department of the Army Staff agencies and commands; other Federal departmental agencies, administrations, Federal separate agencies, commissions, boards, service, or authority; State and local governmental entities; civilian education and training institutions; and members of the public when such information directly concerns the military service member.

System name:

708.01 Military Personnel Records Jacket (MPRJ) (NGB)

System location:

Each National Guard Armory in all states, Puerto Rico, the Virgin Islands, and the District of Columbia.

Categories of individuals covered by the system:

Enlisted personnel, warrant officers, and commissioned officers who are members of the Army National Guard (ANG) not on active duty.

Categories of records in the system:

Files contain qualification record; emergency data record; enlistment record and related service agreement/extension/active duty orders; military occupational specialty (MOS) evaluation data report; group life insurance election; record of induction; security questionnaire; transfer/discharge report; license application; language proficiency questionnaire; police record check; current declaration of parent/guardian; statement of personal history; identification card application; Veterans Administration (VA) compensation forms and related papers; security clearance; certificate/determination; airborne jump record; dependent medical care statement and related forms; training and experience records; Department of Defense (DOD) summary sheet for review of conscientious objector; oath of extension of enlistment; survivor benefit plan election certificate; efficiency report; application/nomination for assignment; achievement certificates; summarized record of proceeding, record of proceeding and appellate or other supplementary actions, Article 15 (Title 10 U.S.C., Section 815); weight control record; personnel screening and evaluation record; individual statement relating to removal from temporary disability retired list; change of name statements; enlistment statement application/approval/ disapproval/classification/removal for discharge/identification as conscientious objector; requests for appointment; affidavits relating retention beyond expiration of term of service; prior service enlistment documents; certificate barring reenlistment; waivers for enlistment; physical evaluation board letters/election/summaries/status of conditions; authority to change name/birth date; statement of military service; record brief; letters of failure to complete Army school; certificate of completion of Army school; MOS classification board proceedings; award of MOS; waiver of right to deferment; agreement for noncombatant duty; citation of award; correspondence relating to badges, medals, and unit awards; correspondence/authorizations/orders regarding foreign decorations; correspondence regarding Medal of Honor and certification to VA; letters of appreciation/ commendation; recommendations/approvals/ declinations/board proceedings/announcements relating to promotion/reduction; correspondence/letters/administrative reprimands/ censures/ admonitions relating to apprehensions/confinement/discipline; letters of sympathy relating to a deceased member; dependent travel and movement of household goods and acknowledgment of restriction; document and orders relating to National Guard status; adverse suitability information; personal indebtedness correspondence and related papers; statement of involuntary retirement; orders/revocations/amendments/ extracts relating to active duty/awards/change data/court martial/discharge/enlistment-reenlistment/MOS award/ proficiency pay/promotion/reduction/release/retirement/temporary duty; individual flight records/physical examination records/aviator flight record/instrument certification papers/application for identification cards, other training/proficiency/evaluation forms, records, and papers; other correspondence/letters/ documents/papers relating to duty status/leave/pass/organizational entitlements. Correspondence between the (1) United States Army Military Personnel Center (MILPERCEN), (2) service member, (3) Army staff offices, (4) Army commands, (5) other Federal agencies, and (6) general public to commander or service member.

Authority for maintenance of the system:

Title 5 U.S.C., Section 301; Title 10 U.S.C., Sections 275 and 3012; and Title 32 U.S.C.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Army command, United States Army Reserve Command or ANG Command of assignment/station/location of the Army, Army Reserve or ANG service member: To provide day-to-day administration, training, qualification, reenlistment, discharge, and related matters pertaining to individual's military service; to publish officer registers/rosters as authorized by Title 10 U.S.C., Section 122.

Inquiries are received for information, documents, papers, and records which are provided to the requester to enable the agency to adjudicate claims, perform investigative actions, support criminal cases, state determinations, research, security clearance, citizenship, location and other related uses consistent with the functional and statutory responsibility of the agency. Agencies using files are: Central Intelligence Agency; Department of Agriculture; Department of Commerce; Department of Health, Education and Welfare; Department of Housing and Urban Development; Department of Interior; Department of Labor; Department of State; Department of Transportation; Department of Treasury; American Battle Monuments Commission; Atomic Energy Commission; Civil Aeronautics Board; Federal Communications Commission: Federal Aviation Administration; VA; US Postal Service; Office of Personnel Management; Selective Service System; DOD agencies, elements and military departments; Social Security Administration; Other elements of the Federal Government in accordance with their respective authority and responsibility.

Record of the identity, diagnosis, prognosis, or treatment of any client/patient, irrespective of whether or when he/she ceases to be a client/patient, maintained in connection with the performance of any alcohol or drug abuse prevention and treatment function conducted, regulated, or directly or indirectly assisted by any department or agency of the United States, shall, except as provided therein, be confidential and be disclosed only for the purposes and under the circumstances expressly authorized in Title 21 U.S.C., Section 1175 and Title 42 U.S.C., Section 4582. These statutes take precedence over the Privacy Act of 1974 in regard to accessibility of such records except to the individual to whom the record pertains. Blanket 'routine uses' identified in 44 FR 73728 do not apply to these records.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in record jacket folder.

Retrievability:

Records accessed by name.

Safeguards:

Records maintained in areas accessible only to authorized personnel; transferred from station to station in personal possession of individual concerned or by US mail.

Retention and disposal:

Data retained in file until updated or service of individual is terminated. Following separation, record reverts to State status, not subject to the Privacy Act, and is retained indefinitely in appropriate State depository.

System manager(s) and address:

Chief, National Guard Bureau, The Pentagon, Washington, DC 20310.

Notification procedure:

Information may be obtained from the Commander of the unit to which the ANG member is assigned; for retired and separated personnel information may be obtained from the Office of the Adjutant General of each State, Puerto Rico, the Virgin Islands, or the District of Columbia as appropriate.

Record access procedures:

Written requests for information should include the full name, service identification number, current military status, and current return address. For personal visits the requester should provide acceptable identification, i.e., military identification card or other identification normally acceptable in the transaction of business.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations may be obtained from Chief, National Guard Bureau, The Pentagon, Washington, DC 20310.

Record source categories:

Letters, statements, forms, records, and related papers originating with the service member; generated by Army staff offices, Army commands, other Federal agencies in accordance with their respective functional or statutory requirements; and by the general public or the commander of service member when such papers relate to the service status of the individual.

Systems exempted from certain provisions of the act:

A0708.02aDAPC

System name:

708.02 Official Military Personnel File

System location:

Primary System: Personnel Information Systems Directorate, United States Army Military Personnel Center (MILPERCEN).

Decentralized Segments: United States Army Enlisted Records and Evaluation Center; United States Army Reserve Components Personnel and Administration Center (RCPAC); and National Personnel Records Center (NPRC), General Services Administration (GSA).

Categories of individuals covered by the system:

Each individual on active duty in the United States Army in enlisted, appointed or commissioned status; or in a United States Army or Army of the United States (AUS) retired status; each individual not on active duty who has a reserve status in an enlisted, appointed or commissioned status, or in a retired reserve status; and each individual who was an enlisted, appointed, or commissioned member of the United States Army and who was completely separated by discharge, death, or other termination of his/her military status.

Categories of records in the system:

File contains individual records including enlistment contract; Veterans Administration (VA) laws; physical evaluation board proceedings; military occupational specialty data report; statement of service; qualification record; group life insurance election; emergency data form; application for appointment; qualification/evaluation report; oath of office; medical examination; security questionnaire; application for retired pay; application for correction of military records; application for active duty; transfer or discharge report; active duty report; voluntary reduction; line of duty and misconduct determinations; discharge or separation reviews; police record checks; consent/declaration of parent/guardian; Army Reserve Officers Training Corps (ROTC) supplemental agreement; award recommendations; academic reports; casualty reports; United States field medical card; retirement points, deferment; preinduction processing and commissioning data; transcripts of military records; summary sheets review of conscientious objector; election of options; oath of enlistment extensions; survivor benefit plans; efficiency reports; records of proceeding, Title 10 U.S.C., Section 815 appellate actions; determination of moral eligibility; waiver of disqualifications; temporary disability record; change of name; statements for enlistment; acknowledgements of service requirements; retired benefits; application for review of physical evaluation board and disability board; appointments; designations; evaluations; extensions; birth certificates; photographs; citizenship statements and status; educational constructive credit; educational transcripts; flight status board reviews; assignment agreements/limitations/waivers/election/and travel; efficiency appeals; promotion/reduction recommendations/approvals/ declinations/announcements/notifications/reconsiderations/worksheets/ elections/letters of notification to deferred officers/and promotion passover notifications; absence without leave and desertion records; Federal Bureau of Investigation reports; Social Security Administration (SSA) correspondence; miscellaneous correspondence, documents, and military orders relating to military service including information pertaining to dependents, interservice action, inservice details, determinations, reliefs, componeit; awards, pay entitlements, releases, transfers, and other military service data.

Authority for maintenance of the system:

Title 5 U.S.C., Section 301.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Department of the Army (DA): To maintain, use, collect, and disseminate information with respect to an individual holding a military status or former military status, including regular reserve, retired, former member separated, or deceased. Information pertains to individual's former, current, and subsequent to active duty status relating to birth; citizenship; parentage; home of record; education; training; dependents; travel; language proficiency; former and current association; brotherhood, memberships and related affiliations with organizations and like collective elements which service member divulges as having meaning, substance, or significance to his/her military service status; assignment history; and other related military experiences, qualification, training, preferences, restriction, and status actions.

Department of State: To issue passport/visa; to document persona-non-grata status, attache assignments, and related administration of personnel assigned and performing duty with the State Department.

Department of Treasury: To issue bonds; to collect and record incoming taxes.

Department of Defense (DOD): To authorize and consummate interdepartmental actions relating to interservice requirements pertaining to the Army, Navy, Air Force, and Coast Guard when the Coast Guard is operational under DOD.

Department of Justice: To file fingerprints; to perform intelligence function.

Department of Agriculture: To coordinate interdepartmental functions related to education conducted by the Department of Agriculture's advanced education element.

Department of Labor: To accomplish actions required under Federal Employees Compensation Act.

Department of Health, Education and Welfare: To provide services authorized by medical, health, and related functions authorzied by Title 10 U.S.C., Sections 1074 thru 1079.

Atomic Energy Commission: To accomplish requirements incident to Nuclear Accident/Incident Control Officer functions.

American Red Cross: To accomplish coordination and complete service functions including blood donor programs and emergency investigative support and notifications.

Civil Aeronautics Board: Flight qualifications, certification and license actions relating to inservice pilots.

Federal Aviation Agency: To accomplish aviation and air service actions involving inservice aviators.

GSA: For records storage and archival services and for printing of directories and related material which includes personal data.

US Postal Service: To accomplish postal service authorization involving postal officers and mail clerk authorizations.

VA: To provide information relating to benefits, pensions, inservice loans, insurance, and appropriate hospital support.

Bureau of Immigration and Naturalization: To comply with statutes relating to inservice alien registration, and annual residence/location.

Office of the President of the United States of America: To exchange required information relating to White House Fellows, regular Army promotions, aides, and related support functions staffed by Army members.

Federal Maritime Commission: To obtain licenses for military members accredited as captain, mate, and harbor master for duty as Transportation Corps warrant officer.

Each of the several States, and United States possessions: To support state bonus applications; to fulfill income tax requirements appropriate to the service member's home of record; to record name changes in state bureaus of vital statistics; and for National Guard affairs.

Civilian educational and training institutions: To accomplish student registration, tuition support, Graduate Record Examination (GRE) tests requirement, and related school requirements incident to inservice education programs in compliance with Title 10 U.S.C., Chapters 102 and 103.

SSA: To obtain or verify social security number (SSN); to transmit Federal Insurance Compensation Act deductions made from inservice members' wages.

Department of Transportation: To coordinate and exchange necessary information pertaining to interservice relationships between United States Coast Guard (USCG) and United States Army when service members perform duty with the USCG elements or training activities.

Civil authorities: For compliance with Title 10 U.S.C., Section 814.

Department of the Air Force: To administer personnel support for individual Army members assigned for duty with the Air Force.

Department of the Navy: To administer personnel support for individual Army members assigned for duty with the Navy or Marine Corps.

United States International Communication Agency: To receive military and medical record information in conjunction with investigations of applicants for sensitive positions under the provisions of Executive Order 10450.

Record of the identity, diagnosis, prognosis, or treatment of any client/patient, irrespective of whether or when he/she ceases to be a client/patient, maintained in connection with the performance of any alcohol or drug abuse prevention and treatment function conducted, regulated, or directly or indirectly assisted by any department or agency of the United States, shall, except as provided therein, be confidential and be disclosed only for the purposes and under the circumstances expressly authorized in Title 21 U.S.C., Section 1175 and Title 42 U.S.C., Section 4582. These statutes take precedence over the Privacy Act of 1974, in regard to accessibility of such records except to the individual to whom the record pertains. Blanket 'routine uses' identified in 44 FR 72728 do not apply to these records.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Microfiche in plastic carriers stored randomly in electro-mechanical storage/retrieval devices. Temporary files consist of paper records in file folder/jacket; selected data automated for management facility in a perishable manner on tapes, disks, cards, and other computer media.

Retrievability:

Filed alphabetically by last name; automated data retrievable by name, SSN, or automatic data processing (ADP) parameter; reserve component, retired, and deceased persons' records accessed by SSN terminal digit sequence.

Safeguards:

Records maintained in areas accessible only to authorized personnel; automated media protected by authorized password system for access terminals, controlled access to operation rooms, and controlled output distribution.

Retention and disposal:

Microfiche and paper records are permanent. They are retained in active file until termination of service, held in inactive file in accordance with retention and retirement schedule and subsequently retired to NPRC.

System manager(s) and address:

Commander, United States Army Military Personnel Center, 200 Stovall Street, Alexandria, VA 22332.

Notification procedure:

Information may be obtained from:

Following address should be used for inquiries on records of commissioned or warrant officers (including members of Reserve Components) serving on active duty:

Commander
United States Army Military Personnel Center
ATTN: Personnel Information Systems Directorate
Hoffman Building II
200 Stovall Street
Alexandria, VA 22332
Telephone: Area Code 202/325-9606

Following address should be used for inquiries on records of enlisted members (including members of Reserve Components) serving on active duty:

Commander
United States Army Enlisted Records and Evaluation Center
Ft. Benjamin Harrison, IN 46249
Telephone: Area Code 317/542-3361

Following address should be used for inquiries on records of Commissioned officers or warrant officers in a reserve status not on active duty; or Army enlisted reservists not on active duty; or members of the National Guard who performed active duty, or commissioned officers, warrant officers, or enlisted members in a retired status:

Commander
United States Army Reserve Components
Personnel and Administration Center
9700 Page Avenue
St. Louis, MO 63132
Telephone: Area Code 314/268-7770

Following address should be used for inquiries on records of commissioned officers and warrant officers who were completely separated from the service after 30 June 1917 or enlisted members who were completely separated after 31 October 1912:

Commander
National Personnel Records Center
General Services Administration
9700 Page Avenue
St. Louis, MO 63132
Telephone: Area Code 314/268-7262.

Record access procedures:

Written requests for information should contain full name of individual, service identification number, current or former military status, and appropriate return address.

Personal visits may be made to the appropriate location based on the individual's status; individual should be able to provide commonly acceptable identification, such as driver's license, employment identification card, and give some verbal information relative to his/her current or former military status.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations may be obtained from Headquarters, Department of the Army (DAPC-MSO), 200 Stovall Street, Alexandria, VA 22332.

Record source categories:

Enlistment, appointment, or commission related forms pertaining to the individual having a current or former military status; academic, training or qualification records acquired prior to or during military service; correspondence, forms, records, documents and other related papers originating in or collected by DA staff agencies and commands; other Federal departmental agencies, administrations, Federal separate agencies, commissions, boards, service, or authority; state and local governmental entities; civilian education and training institutions; and members of the public when such information obtained directly concerns the military service member.

Information may be obtained from the SYSMANAGER.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations are contained in AR 340-21 (32 CFR Part 505).

Record source categories:

Individual interviewed, Military Personnel Records, Employee Record Cards, TDY Orders and TDY Vouchers.

Systems exempted from certain provisions of the act:

None

A0710.10DAAG

System name:

710.10 Reserve Personnel Information Reporting System

System location:

Decentralized Segments: Commander, First United States Army, Ft George G. Meade, MD 20755; Commander, Fifth United States Army, Ft Sam Houston, TX 78234; Commander, Sixth United States Army, Presidio of San Francisco, CA 94129; Commander, United States Army Western Command. (WESTCOM), Ft. Shafter, HI96858; Ft. Richardson, AK 99505; Chief, United States Army Reserve (USAR) Affairs, Europe, APO New York 09245. Commander, 172d Infantry Brigade Alaska, Each Army Headquarters (HQ) maintains the records pertaining to its geographical area.

Centralized User: Systems Support Directorate, United States Army Reserve Components Personnel and Administration Center (RCPAC), 9700 Page Boulevard, St. Louis, MO 63132.

Categories of individuals covered by the system:

All individuals currently assigned to a USAR unit.

Categories of records in the system:

File contains identification data, including name, social security number (SSN); current assignment data, including unit identification code grade, and occupational specialty; retirement data, including number of retirement points and years of satisfactory military service; and other selected data which serve in the administration and reporting of the individual, including security clearance, date entered military service, date of last promotion, date military obligation expires, sex, race and civilian occupation.

Authority for maintenance of the system:

Title 10 U.S.C., Section 275.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

File is maintained at each Army Command HQ for the administration of USAR unit personnel. Administration includes control of promotions, transfers, and other day-to-day actions in addition to maintaining unit readiness which includes identifying training needs and assuring that needs are filled on a continuing basis.

A copy of each Army file is sent to RCPAC on a monthly basis for reporting purposes. Statistical reports are prepared at RCPAC for use by various Department of the Army (DA) and Department of Defense Staff agencies. The main users of this report are: Office of Chief, Army Reserve; HQ, United States Army Forces Command; HQ, Continental United States (CONUS) Armies, Office of the Chief of Chaplains, and Office of the Deputy Chief of Staff for Personnel (DCSPER). Uses include: strength accounting, budgeting, readiness in case of mobilization of reserve units, and forecasting of future needs based upon expected attrition. In addition, the Command Involvement Program (CIP) computer system inspects the personal data contained in each record and reports percentage of accuracy and completeness to the unit commander and his/her superiors.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

File is stored on computer magnetic tapes and in air- conditioned libraries.

Retrievability:

File is sequenced by SSN within unit identification code. To retrieve an individual's record, an authorized requester must enter

SSN, five characters of last name, unit identification code, military personnel class (indicates individual is an officer, warrant officer or enlisted), and a particular code identifying the transaction as a record request.

Safeguards:

Tape files are stored on tape racks in reel number sequence in a restricted library within the computer room complex which is a restricted area. In addition, the building housing the computer room is restricted to authorized personnel.

Retention and disposal:

A record is retained for the duration of the reservist's unit assignment.

CONUS: The current tape file and the two previous tape files are retained at any given time.

OVERSEAS: Record files are retained for historical data reporting as follows: 4 years for reports for months of March, June, and December; 6 years for the report month of September; and 2 years for all other report months.

System manager(s) and address:

Deputy Chief of Staff for Personnel, The Pentagon, Washington, DC 20310.

Notification procedure:

To ascertain if the tape file contains data on a particular individual, the individual should write or visit the Headquarters of the Continental United States Army area in which his/her unit is located.

Record access procedures:

To request access to the information contained on this tape file, the individual should write or visit the Headquarters of the Continental United States Army in which his/her unit is located.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations may be obtained from the SYSMANAGER, ATTN: DAPE-PBP.

Record source categories:

Data are extracted from the following sources:

Correspondence from Reservist; National ZIP Code Directory; DA Form 1383, Statement of Retirement Points; Release From Active Duty Orders; DA Form 873, Certificate of Clearance and/or Security Determination; DA Form 1379, USAR Unit Record of Reserve Training; Promotion Orders; Assignment Orders; Language Proficiency Questionnaire; DA Form 268, Report for Suspension of Favorable Personnel Actions; DA Form 67-7, US Army Officer Efficiency Report; DA Form 1506, Statement of Service; National Guard Bureau Form 23, Retirement Credits Record; Department of Defense (DD) Form 4, Enlistment Contract Armed Forces of the US; DD Form 47, Record of Induction; DA Form 61, Application for Appointment; DA Form 2, 2-1, Qualification Record; DA Form 3725, Army Reserve Status and Address Verification Questionnaire; Dictionary of Occupational Titles; DA Form 3726, 3726-1, Ready Reserve Service Agreement; DD Form 214, Armed Forces of the US Report of Transfer or Discharge; Standard Form 88, Report of Medical Examination.

Systems exempted from certain provisions of the act:

None.

A0718.01DAPC

System name:

718.01 Military Award Case File

System location:

Primary System: United States Army Military Personnel Center (MILPERCEN), 200 Stovall Street, Alexandria, VA 22332.

Decentralized Segments: Each Army command delegated authority for approval of an award.

Categories of individuals covered by the system:

Military personnel on active duty, members of reserve components, United States (US) civilians serving with US Army in a combat zone, and deceased former members of the US Army.

Categories of records in the system:

Files contain recommendation for award; endorsements; transmittals; letters; memoranda; award board approvals/disapprovals; citation texts pertaining to the specific individual and award; Department of the Army (DA) letter orders/general orders; related papers supporting the recommendation; correspondence among (1) MILPERCEN, (2) service member, (3) Army Staff offices, (4) Army commands, (5) and individuals having knowledge/information relative to the service member concerned or the act or achievement stated in the recommendation.

Authority for maintenance of the system:

Title 10 U.S.C., Chapters 57 and 357; Title 5 U.S.C., Section 301.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Each Army command having authority for action for a specific award: To accomplish review; to authorize the award; to maintain the award case file of approved and disapproved recommendations.

MILPERCEN: To act as the Army element for Headquarters, Department of the Army (HQDA); to accomplish the review and to authorize the award of those awards/decorations which are not delegated or within the scope of authority of a subordinate element of the Army; to maintain the award case file of approved and disapproved recommendations.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folder.

Retrievability:

Records accessed by name.

Safeguards:

Records maintained in areas accessible only to authorized individuals.

Retention and disposal:

Approved wartime or combat activities military award case files are retained permanently; approved case files for all other periods are destroyed after one year.

Disapproved military award case files are destroyed after six years.

System manager(s) and address:

Commander, United States Army Military Personnel Center, 200 Stovall Street, Alexandria, VA 22332.

Notification procedure:

Information may be obtained from United States Army Military Personnel Center, 200 Stovall Street, Alexandria, VA 22332.

Record access procedures:

Written requests for information should include the full name, service identification number, grade and branch of service, name of award, and current address. Visits should be made to the organization/station of the service member or to the United States Army Military Personnel Center.

For personal visits, the visitor should be able to provide acceptable identification, i.e., military identification normally acceptable in the transaction of business.

Contesting record procedures:

The Army's rules for contesting contents and appealing initial determination may be obtained from HQDA (DAPC-MSS), 200 Stovall Street, Alexandria, VA 22332.

Record source categories:

Recommendation for award (DA Form 638) with supporting records, forms, statements, letters, and related papers originated by persons other than the awardee and other individuals having information useful in making an award determination.

Systems exempted from certain provisions of the act:

None

A0720.04aDAPE

System name:

720.04 Individual Correctional Treatment Files

System location:

Records are located at installation detention/Army confinement and correctional facilities, to include the US Army Retraining Brigade, Ft Riley, Kansas. Major commands, whose addresses are in the appendix to Army systems of records, will provide location assistance.

Categories of individuals covered by the system:

Any military member confined at an Army confinement or correctional facility as a result of, or pending, trial by courts-martial.

Categories of records in the system:

Documents and items of information relating to the administration of individual military prisoners in US Army confinement or correctional facilities; court-martial/confinement/release orders; records of disciplinary actions of a judicial or nonjudicial nature; military police reports; prisoner identification records; medical examination reports; requests/receipts for health and comfort supplies; clothing and equipment issue records; mail records and forms authorizing correspondence; individual prisoner utilization records; interview requests/coun-

seling records; fingerprint cards; parolee agreements; inspection records on prisoners in segregation; documents reflecting custodianship of prisoner's personal funds and property; correspondence/orders concerning individual's past, present, or future duty assignments; documents concerning progress and training of confinees; and personal history data to include name, sex, social security number, date of birth, race, marital status, educational level, military rank levels and qualifications, skills test scores, and data relating to separation from service.

Authority for maintenance of the system:

Title 10 U.S.C., Sections 951 - 953.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

By Confinement/Correctional Facility Commander: To determine: initial custody classifications, when custody elevation is appropriate, work assignments, educational needs; to gauge prisoner's adjustment to confinement; to identify areas of particular concern to individual prisoners, and to determine individual's potential for future duty performance. Records may provide statistical data for research projects and managerial studies/reports concerning effectiveness of confinement/correctional programs.

Portions disclosed to Departments of Justice, Defense, and Army Staff agencies and commands; state and local criminal justice agencies established by law. Disclosure to law enforcement and investigatory agencies is for investigation and possible criminal prosecution, civil court actions or regulatory order. Disclosure to confinement/correctional system agencies is for use in the administration of correctional programs to include custody classification; employment, training and educational assignments; treatment programs; clemency, restoration to duty and parole actions; verifications of military offenders' criminal records, employment records and social histories.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders, punch cards, magnetic tapes and disks.

Retrievability:

Alphabetically by prisoner's surname.

Safeguards:

Confinement facilities are secured. Records are maintained in areas accessible only to authorized personnel who are properly screened, cleared and trained. Automated segments are further protected by controlled system procedures and code numbers.

Retention and disposal:

Manual records on individual prisoners are destroyed 4 years after release of prisoner from confinement. Automated records used to provide statistical or managerial purposes are retained indefinitely; however, individually identifiable data are purged within 4 years of prisoner's release. (NOTE: Transfer of a prisoner from one confinement/correctional facility to another is not construed as release from confinement; upon transfer to another such facility, individual's record accompanies him.)

System manager(s) and address:

The Deputy Chief of Staff for Personnel, Headquarters, Department of the Army, Washington, DC 20310.

Notification procedure:

Information may be obtained by writing to the commander of the confinement/correctional facility, or to the System Manager.

Record access procedures:

Individuals desiring access to their records may write to the Commander of the confinement/correctional facility where a prisoner, furnishing full name, SSN, present home address and approximate dates of confinement. Request must bear signature of the individual whose record it is.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations are contained in Army Regulation 340-21 (32 CFR Part 505).

Record source categories:

Subjects, witnesses, victims, Military Police and US Army Criminal Investigation Command personnel and special agents, informants, various Department of Defense, Federal, state and local investigative and law enforcement agencies, departments or agencies of foreign governments; and any other individuals or organizations which may supply pertinent information.

Systems exempted from certain provisions of the act:

Portions of this system which fall within 5 U.S.C. 552a(j)(2) are exempt from the following provisions of Title 5 U.S.C., Section 552a: (c)(3), (c)(4), (d), (e)(2), (e)(3), (e)(4)(G), (e)(4)(H), (e)(5), (e)(8), (f), and (g).

A0722.02DACH

System name:

722.02 Baptism, Marriage, and Funeral Files

System location:

Primary System: Office, Chief of Chaplains, Department of the Army, ATTN: DACH-AMW, Washington, DC 20310. Records from 1917 - 1952 are in the National Archives; records from 1953 - 1977 are in the Washington National Records Center (WNRC), Washington, DC 20409, and the Office, Chief of Chaplains.

Categories of individuals covered by the system:

Any service member, dependent of service member, authorized civilian personnel, and retired service member for whom an Army chaplain has performed a baptism, marriage, or funeral at an Army installation.

Categories of records in the system:

Files contain individual records of baptism, marriage, and funeral as submitted by the officiating Army chaplain. Records of baptism, marriage, and funeral for the period 1917 - 1955 are reported by the officiating chaplain on a Chaplains Monthly Report. Information may also be provided by religious denominational headquarters offices.

Authority for maintenance of the system:

Title 10 U.S.C., Section 3547.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

For personal use of service members, their dependents, and authorized civilain personnel.

Army Mutual Aid Association: To provide proof of marriage for insurance purposes.

Baptism records provide age proof when birth records are unavailable.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Chaplains Monthly Reports for period 1917 - 1952 are on file in paper record form at WNRC. Records of baptism, marriage, and funeral for period 1952 - 1975 are retained in the Office, Chief of Chaplains and are reproduced from roll microfilm. Paper records are on file in Office, Chief of Chaplains for period January 1976 - October 1977 pending microfilming.

Retrievability:

Filed aphabetically by last name. Records of marriage are filed alphabetically by last name of groom. Records of funeral are filed alphabetically by last name of deceased person.

Safeguards:

Building employs security guards at all times.

Retention and disposal:

Records dated 1953 - 1977 are retained for 50 years. System of maintenance of these records was discontined 1 October 1977.

System manager(s) and address:

The Office, Chief of Chaplains, Headquarters, Department of the Army, The Pentagon, Washington, DC 20310.

Notification procedure:

Information may be obtained from:
Headquarters, Department of the Army (DACH-AMW)
Room 1E-417
The Pentagon
Washington, DC 20310
Telephone: Area Code 202/695-1107.

Record access procedures:

Requests from individuals should be addressed to: Headquarters, Department of the Army (DACH-AMW), Room 1E-417, The Pentagon, Washington, DC 20310.

Written requests for information should specify type of record requested.

Baptism: Full name of person baptized; approximate date; names of parents (maiden name of mother); name of chaplain, if known; and place of baptism.

Marriage: Full name of groom and maiden name of bride; approximate date; name of installation at which marriage was performed; and name of chaplain, if known.

Funeral: Name of deceased person, year of death, and name of next-of-kin.

Requester may visit Office, Chief of Chaplains, Room 1E-417, The Pentagon, Washington, DC 20310 with proof of identity for his/her own record or that of his/her dependent, and sign a receipt for same.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations by the individual concerned may be obtained from the SYSMANAGER.

Record source categories:

Records created by Army chaplains and authorized civilian clergy-persons who perform pastoral duties for service personnel and their dependents, and authorized civilian personnel, and submit the same to the Office, Chief of Chaplains.

Systems exempted from certain provisions of the act:

None.

A0807.01DAAG

System name:

807.01 MCT USAR Technician System

System location:

Primary System: Systems Support Directorate, United States Army Reserve Components Personnel and Administration Center (RCPAC) (Field Operating Agency of The Adjutant General's Office, Department of the Army (DA)), 9700 Page Boulevard, St Louis, MO 63132.

Decentralized Segments: Deputy Chief of Staff for Personnel (DCSPER) and DA Staff Agencies and commands.

Categories of individuals covered by the system:

Any person who is currently employed as a United States Army Reserve (USAR) Technician.

Categories of records in the system:

File contains personnel identification data to include name and social security number (SSN) and work status data concerning job category, grade, assigned work station and location. If personnel are members of the USAR, data on reserve assignment and reserve grade are also carried.

Authority for maintenance of the system:

Title 10 U.S.C., Section 275.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

RCPAC: Receive raw input data from USAR Commands, maintain the centralized data processing system and produces and distributes reports to the users. Is the computer processing agency; does not utilize or dispense data to other than officially designated agencies.

USAR Commands: To obtain current management data to administer to technicians assigned within their command.

DCSPER: To monitor and provide policy guidance and budget planning for the program.

Other DA Staff agencies and commands: To provide data for inclusion in training and mobilization plans.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Stored as computer tape and paper printout.

Retrievability:

Sequenced numerically by SSN.

Safeguards:

Security guards limit access to the RCPAC. Magnetic tape files are maintained in a library by reel numbers; access to a specific file must be determined by responsible scheduling personnel. In addition, basic file characteristics must be programmed into access programs before individual data records can be referenced.

Access to hard copy listings is limited to employed personnel with a job related need-to-know requirement at the DCSPER, USAR Commands, and other DA Staff agencies and commands.

Retention and disposal:

The automatic data processing system at the RCPAC requires records to be maintained on an evolutionary schedule; a record is created upon hiring and is eliminated when employment is terminated. Tape files are retained for 60 days; tape files are retained in a tape library through 3 processing cycles, a creation cycle, for use as the current file in the next creation cycle and then as the emergency back-up file.

Printed reports/listings are maintained at the DCSPER, USAR Commands, and other DA Staff agencies and commands until superseded by the next edition.

System manager(s) and address:

Deputy Chief of Staff for Personnel (DAPE-MPO), Headquarters Department of the Army, The Pentagon, Washington, DC 20310.

Notification procedure:

Information may be obtained from:
Deputy Chief of Staff for Personnel (DAPE-MPO),
Room 2B-718,
The Pentagon
Washington, DC 20310;
Telephone: Area Code 202/695-3837.

Record access procedures:

Requests from individuals should be addressed to: Headquarters, Department of the Army, Deputy Chief of Staff for Personnel, ATTN: DAPE-MPO, Washington, DC 20310.

Requests should contain the full name and SSN of the individual; current address and telephone number; and a clear, concise request statement.

Personal visits are limited to the USAR Command having jurisdiction over the unit by whom the technician is employed. Acceptable identifying documents, such as driver's license, Reserve identification card, or other document that can be verified against record, are required.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations may be obtained from the SYSMANAGER, ATTN: DAPE-MPO.

Record source categories:

Data coded on DA Forms 3615-R, Strength and Utilization of USAR Technicians, are transmitted by DA Form 200 from the employing USAR command to RCPAC via the United States Postal Service. Processed data are returned to authorized agencies by reports.

Systems exempted from certain provisions of the act:

None

A0812.03DAPE

System name:

812.03 Grievance Records

System location:

Records are located in the servicing civilian personnel offices for each Army activity or installation.

Categories of individuals covered by the system:

Current or former employees of the Department of the Army who have submitted grievances in accordance with part 771 of the regulations of the Office of Personnel Management (5 CFR 771) or through a negotiated grievance procedure.

Categories of records in the system:

Records relating to grievances filed by Army employees under part 771 of regulations issued by the Office of Personnel Management. The case file contains all documents related to the grievance, including statements of witnesses, reports of interviews and hearings, examiner's findings and recommendations, a copy of the original and final decisions, and related correspondence and exhibits. The system includes files and records of internal grievance and arbitration systems established through negotiations with recognized labor organizations.

Authority for maintenance of the system:

5 U.S.C., 1302, 3301, 3302, E.O. 10577, 3 CFR 1954-1958 Comp., p. 218, E.O. 10987, 3 CFR 1959-1963 Comp., p. 519, agency employees, for personal relief in a matter of concern or dissatisfaction which is subject to the control of agency management.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

These records and information in these records may be used:

To disclose pertinent information to the appropriate Federal, state, or local agency responsible for investigating, prosecuting, enforcing, or implementing a statute, rule, regulation, or order, where the agency becomes aware of an indication of a violation or potential violation of civil or criminal law or regulation.

To disclose information to any source from which additional information is requested in the course of processing a grievance, to the extent necessary to identify the individual, inform the source of the purpose(s) of the request, and identify the type of information requested.

To disclose information to a Federal agency, in response to its' request, in connection with the hiring or retention of an employee, the issuing of a security clearance, the conducting of a security or suitability investigation of an individual, the classifying of jobs, the letting of a contract, or the issuance of a license, grant, or other

benefit by the requesting agency, to the extent that the information is relevant and necessary to the requesting agency's decision on the matter.

To provide information to a congressional office from the record of an individual in response to an inquiry from that congressional office made at the request of that individual.

To disclose information to another Federal agency or to a court when the Government is party to a judicial proceeding before the court.

By the National Archives and Records Service (General Services Administration) in records management inspections conducted under the authority of 44 U.S.C. 2904 and 2906.

By the Department of the Army or by the Office of Personnel Management in the production of summary descriptive statistics and analytical studies in support of the function for which the records are collected and maintained, or for related work force studies. While published statistics and studies do not contain individual identifiers, in some instances the selection of elements of data included in the study may be structured in such a way as to make the data individually identifiable by inference.

To disclose information to officials of the Merit Systems Protection Board, including the Office of the Special Counsel; the Federal Labor Relations Authority and its General Counsel, or the Equal Employment Opportunity Commission when requested in performance of their authorized duties.

To disclose, in response to a request for discovery or for appearance of a witness, information that is relevant to the subject matter involved in apending judicial or administrative proceeding.

To provide information to officials of labor organizations reorganized under the Civil Service Reform Act when relevant and necessary to their duties of exclusive representation concerning personnel policies, practices, and matters affecting work conditions.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Maintained in file folders.

Retrievability:

By the names of the individuals on whom the records are maintained. (Records may also be filed by bargaining unit.)

Safeguards:

Records are maintained in lockable metal filing cabinets to which only authorized personnel have access.

Retention and disposal:

These records are destroyed 7 years after closing of the case. Disposal is by shredding or burning.

System manager(s) and address:

Director of Civilian Personnel, Office of the Deputy Chief of Staff for Personnel, Room 2C-681, The Pentagon, Washington, DC 20310.

Notification procedure:

It is required that individuals submitting grievances be provided a copy of the record under the grievance process. They may, however, contact the Army personnel or designated office where the action was processed regarding the existence of such records on them. They must furnish the following information for their records to be located and identified: name, date of birth, approximate date of closing the case and kind of action taken, organization and activity where employed at time grievance was initiated.

Record access procedures:

It is required that individuals submitting grievances be provided a copy of the record under the grievance process. However, after the action has been closed, an individual may request access to the official copy of the grievance filed by contacting the personnel or designated office where the action was processed.

Individuals must provide the following information for their records to be located and identified: name, date of birth, approximate date of closing of the case and kind of action taken, organization and activity where employed at time grievance was initiated.

Individuals requesting access must also follow the Privacy Act regulations of the Office of Personnel Management regarding access to records and verification of identity (5 CFR 297.203 or 297.201).

Contesting record procedures:

Review of requests from individuals seeking amendment of their records which have been the subject of a judicial or quasi-judicial action will be limited in scope. Review of amendment requests of these records will be restricted to determining if the record accurately documents the action of the Army's ruling on the case, and will not include a review of the merits of the action, determination, or finding.

Individuals wishing to request amendment to their records to correct factual errors should contact their servicing civilian personnel office. Individuals must furnish the following information for their records to be located and identified: name, date of birth, approximate date of closing of the case and kind of action taken, organization and activity where employed at time grievance was initiated.

Individuals requesting amendment must also follow the Privacy Act regulations of the Office of Personnel Management regarding amendment to the records and verfication of identity (5 CFR 297.208 and 297.201).

Record source categories:

Information in this system of records is provided: by the individual on whom the record is maintained, by testimony of witnesses, by officials of the Department of the Army, from related correspondence, from organizations, or persons.

Systems exempted from certain provisions of the act:

None.

A0902.07aDASG

System name:

902.07 Medical Regulating Files

System location:

Primary System: Armed Services Medical Regulating Office (ASMRO), Office of the Surgeon General, Department of the Army (DA), Washington, DC, 20310.

Decentralized Segments: United States (US) Government medical treatment facilities, evacuation units and medical regulating offices.

Categories of individuals covered by the system:

Any patient requiring transfer to another medical treatment facility who is reported to ASMRO by US Government medical treatment facilities for designation of the receiving medical facility.

Categories of records in the system:

File contains information reported by the transferring medical treatment facility and includes, but is not limited to, patient identity, service affiliation and grade or status, sex, medical diagnoses, medical condition, special procedures or requirements needed, medical specialties required, administrative considerations, personal considerations, the patient's home town and/or duty station and other information having an effect on the transfer.

Authority for maintenance of the system:

Title 5 U.S.C., Section 301.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

ASMRO: To properly determine the appropriate medical treatment facility to which the reported patient will be transferred; to notify the reporting US Government medical treatment facility of the transfer destination; to notify the receiving medical treatment facility of the transfer; to notify evacuation units, medical regulating offices and other government offices for official reasons; to evaluate the effectiveness of reported information; to establish further the specific needs of the reported patient; for statistical purposes; and when required by law and official purposes.

US Government medical treatment facilities, evacuation units and medical regulating offices for official purposes concerned with, but not limited to, the transfer of the patient.

Record of the identity, diagnosis, prognosis, or treatment of any client/patient, irrespective of whether or when he ceases to be a client/patient, maintained in connection with the performance of any alcohol or drug abuse prevention and treatment function conducted, regulated, or directly or indirectly assisted by any department or agency of the United States, shall, except as provided therein, be confidential and be disclosed only for the purposes and under the circumstances expressly authorized in Title 21 U.S.C., Section 1175 and Title 42 U.S.C., Section 4582. These statutes take precedence over the Privacy Act of 1974, in regard to accessibility of such records except to the individual to whom the record pertains. Blanket 'routine uses' identified in 44 FR 73728 do not apply to these records.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders and on index cards.

Retrievability:

File alphabetically and by ASMRO control number.

Safeguards:

Buildings employ security guards. Records are maintained in areas accessible only to authorized personnel who are properly screened and trained.

Retention and disposal:

Destroyed 1 year following the end of the calendar year in which the patient was reported to ASMRO.

System manager(s) and address:

Director, ASMRO, Office of the Surgeon General, DA, Room 1E641, The Pentagon, Washington DC 20310; Commanders of US Government medical treatment facilities, evacuation units and medical regulating offices.

Notification procedure:

Information may be obtained from SYSMANAGER or from the patient administrator of US Government medical treatment facilities reporting patient to ASMRO.

Written requests should include full name of patient, rank or status and parent service, approximate date of transfer, medical treatment facility from which transferred and current address of the individual making request.

For personal visits, requester must provide acceptable identification such as military identification card, social security card or driver's license.

Record access procedures:

Requests from individuals should be addressed to Director, ASMRO, Office of The Surgeon General, DA, Room 1E641, The Pentagon, Washington DC 20310, telephone: Area Code 202/695-9118, or to Patient Administrator at US Government medical treatment facilities reporting patients to ASMRO. The official mailing addresses are in the Department of Defense directory in the appendix to Army system notices.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations are contained in Army Regulation 340-21 (32 CFR Part 505).

Record source categories:

Information provided by transferring and receiving medical treatment facilities, medical regulating offices, evacuation offices, and other US Government offices, agencies and commands having information bearing on a patient transfer.

Systems exempted from certain provisions of the act:

None

A0905.05DAAG

System name:

905.05 Active Claims for Medical Care Provided under CHAMPUS File

System location:

Washington National Records Center, General Services Administration, Suitland, MD 20409.

Categories of individuals covered by the system:

All eligible CHAMPUS beneficiaries, i.e., retired members of the Uniformed Services who are not entitled to hospital insurance benefits under social security, spouses and children of retired or deceased service members, and spouses and children of active duty members residing both with and apart from duty member.

Categories of records in the system:

File contains documents relating to medical care obtained by CHAMPUS beneficiaries from civilian sources at US government expense. Included are forms completed by military and civilian medical treatment facilities and practitioners, billings received from civilian sources, forms completed by the patient or sponsor, and related documents.

Authority for maintenance of the system:

Dependents Medical Act, Title 10, U.S.C., Sections 1079-1087, as amended by the Military Benefits Amendments of 1966 (Public Law 89-614).

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Records are used only to answer inquiries.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders.

Retrievability:

Filed alphabetically by CHAMPUS case number and year.

Safeguards:

Building employs security guards. Records are maintained in storage areas accessible only to authorized personnel.

Retention and disposal:

Normal disposition procedures were preempted by imposition of a Department of Defense moratorium. At the present time, these records will be retained indefinitely.

System manager(s) and address:

The Adjutant General, Headquarters, Department of the Army, Washington, DC 20314.

Notification procedure:

Information may be obtained from HQDA (DAAG-AMR-S), Room GA-080, Forrestal Building, Washington, DC 20314; telephone: Area Code 202/693-1845.

Record access procedures:

Requests should be submitted to The Adjutant General, HQDA (DAAG-AMR-S), Washington, DC 20314. Requesters should furnish their full name and any information that would readily identify the record sought. Personal visits are not permitted.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations are contained in Army Regulation 340-21 (32 CFR Part 505).

Record source categories:

Applications by beneficiaries of CHAMPUS and information from medical facilities or physicians that have provided prior medical care.

Systems exempted from certain provisions of the act:

None

A0906.04aDASG

System name:

906.04 Medical Evaluation Files

System location:

Primary System: Army Medical Department (AMEDD) medical facilities convening a medical board.

Decentralized Segments: United States Army Physical Evaluation Boards and United States Army Physical Disability Agency (USAPDA).

Categories of individuals covered by the system:

Army members whose medical fitness for continued service has been questioned either by the member or his/her commander.

Categories of records in the system:

File contains documents reflecting determination by a board of medical fitness for continued Army active service. Includes medical board proceedings and related documents.

Authority for maintenance of the system:

Title 5 U.S.C., Section 301; Title 10 U.S.C., Section 1071; and Title 10 U.S.C., Section 1201, Chapter 61.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Medical Board: To determine medical fitness for continued Army active service.

Physical Evaluation Board (PEB): To review medical board findings when required and to determine if the individual should be discharged, temporarily or permanently retired for disability, or retained for active service.

USAPDA: Record of cases considered, adjudications, reviews determinations, and dispositions. To respond to inquiries received from a member, other Government agency, or other authorized recipient of requested information. Information in computer form consists of profile data, resume of board action and results, maintained primarily for statistical reports. No decisions about members are made from automated data.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders.

USAPDA: Paper records in file folders and magnetic diskettes. Magnetic diskettes contain personal information on members, certain codes of specific type of injuries for research study purposes, and Veterans Administration Schedule for Rating Disability Diagnostic Codes only. Paper files are the PEB proceedings describing the medical problem, and findings, recommendations, and adjudicative decision.

Retrievability:

Filed chronologically by name.

USAPDA: Paper files, filed chronologically by name and fiscal year on 5' x 8' file cards. Retrieval from magnetic diskettes files can be accomplished by PRG program or a DFU load program.

Safeguards:

Rooms are secured by locked doors when not in use. Records are maintained in areas accessible only to authorized personnel who are properly screened and trained.

USAPDA: In addition to the preceding, operation of data processing equipment and magnetic tapes are limited strictly to authorized personnel. Computer has key lock and key is controlled. Magnetic diskettes are stored and controlled to ensure that they do not result in unauthorized disclosure of personal information.

Retention and disposal:

Medical Boards: Retained for 5 years and destroyed.

PEBs: Retained for 2 years or until discontinued, whichever occurs first.

USAPDA: Retained for 5 years and destroyed.

System manager(s) and address:

The Surgeon General, Headquarters, Department of the Army, The Pentagon, Washington, DC 20310.

Notification procedure:

Information may be obtained by written request to:

HQDA (DASG-AOM)
Room 2D453
The Pentagon
Washington, DC 20310

Record access procedures:

Requests should be addressed to: Office of The Surgeon General, Headquarters, Department of the Army, (DASG-AOM), Room 2D453, The Pentagon, Washington, DC 20310.

All requests should be written, since files are not stored in Headquarters, Department of the Army. If telephone conversation is desired, at the expense of the inquirer, area code and telephone number should be furnished.

Personal visits by the individual requesting access may be arranged only with the official assigned to respond to a written request.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determination may be obtained from the official responding to a written request.

Record source categories:

Interview with the individual; medical records on the individual; and reports of medical boards and PEBs.

Systems exempted from certain provisions of the act:

None

A0917.01aDASG

System name:

917.01 Health Care and Medical Treatment Record System

System location:

Army Medical Department facilities/activities at addresses listed in the Directory of United States Army Addresses following the annual compilation of Army system notices published in the Federal Register.

Categories of individuals covered by the system:

Military members of the Armed Forces (both active and inactive); dependents; civilian employees of the Department of Defense; members of the United States Coast Guard, Public Health Service, and Coast and Geodetic Survey; cadets and midshipmen of the military academies; employees of the American National Red Cross; and other categories of individuals who receive medical treatment at Army Medical Department facilities/activities.

Categories of records in the system:

Medical records (of a permanent nature) used to document health; psychological and mental hygiene consultation and evaluation; medical/dental care and treatment for any health or medical condition provided an eligible individual on an inpatient and/or outpatient status to include but not limited to: health; clinical (inpatient); outpatient; dental; consultation; and procurement and separation x-ray record files. Subsidiary medical records (of a temporary nature) are also maintained to support records relating to treatment/observation of individuals. Such records include but are not limited to: social work case files and patient treatment x-ray and index files.

Authority for maintenance of the system:

Title 5 U.S.C., Section 301; Title 10 U.S.C., Sections 1071-1085; Title 44 U.S.C., Section 3101; and Title 50 U.S.C., Supplement IV, Appendix 454, as amended.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Department of the Army: To provide health care and medical treatment of individuals identified in the Individual-Category of this system of records. Information may also be used for research studies; compilation of statistical data and management reports; implementing preventive medicine, dentistry, and communicable disease control programs; adjudicating claims and determining benefits; evaluating care rendered; determining professional certification and hospital accreditation; and determining suitability of persons for service or assignment.

Department of Defense: To provide medical care to those categories of individuals covered by this record system; and to conduct analyses and research studies.

Veterans Administration: To adjudicate veterans' claims and provide medical care to Army members.

National Research Council, National Academy of Sciences, National Institute of Health, and similar institutions for authorized health research in the interest of the Federal Government and the public. When not essential for longitudinal studies, patient identification data shall be eliminated from records used for research studies. Facilities/activities releasing such records shall maintain a list of all such reasearch organizations and an accounting disclosure of records released thereto.

Local and state government and agencies for compliance with local laws and regulations governing control of communicable diseases, preventive medicine and safety, child abuse, and other public health and welfare programs.

Records of identity, diagnosis, prognosis, or treatment of any client/patient, irrespective of whether or when he/she ceases to be a client/patient, maintained in connection with the performance of any alcohol or drug abuse prevention and treatment function conducted, regulated, or directly or indirectly assisted by any department or agency of the United States, shall, except as provided therein, be confidential and be disclosed only for the purposes and under the circumstances expressly authorized in Title 21 U.S.C., Section 1175 and Title 42 U.S.C., Section 4582. These statutes take precedence over the Privacy Act of 1974 in regard to accessibility of such records except to the individual to whom the record pertains. Blanket 'routine uses' identified in 44 FR 73728 do not apply to these records.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders; visible card files; microfiche; cassettes; punched cards; computer printouts and magnetic tapes and disks; and x-ray film preservers.

Retrievability:

By last name or social security number (SSN) of patient or sponsor.

Safeguards:

Records are maintained in buildings which employ security guards and are accessed only by authorized personnel having an official need-to-know. Automated segments are protectd by controlled system passwords governing access to data.

Retention and disposal:

Medical records of a permanent nature (as defined in Record-Category) are retained as follows:

Military Health/Dental and Procurement/Separation X-ray Records: Permanent; Clinical (inpatient), Outpatient, Dental, and Consultation Record Files - Military members: Destroyed after 50 years (Records pertaining to United States Military Academy (USMA) cadets are withdrawn and retired to the Surgeon, USMA, West Point, NY 10996.); Civilians and Foreign Nationals: Destroyed after 25 years; American Red Cross personnel: Withdrawn and forwaded to the American National Red Cross.

All medical records (except the Military Health/Dental Records which are active while individual is on active duty then retired with individual's Military Personnel Records Jacket and the Procurement/Separation X-ray Records which are forwarded to the National Personnel Records Center (NPRC) on an accumulation basis) are retained in an active file while treatment is provided and subsequently held for a period of one to five years following treatment before being retired to the NPRC.

Subsidiary medical records, of a temporary nature (as defined in Record-Category), are normally not retained long beyond termination of treatment; however, supporting documents determined to

have significant documentation value to patient care and treatment are incorporated into the appropriate permanent record file.

System manager(s) and address:

The Surgeon General, Headquarters, Department of the Army, The Pentagon, Washington, DC 20310.

Notification procedure:

Information may be obtained from the medical facility where treatment was proveded (for military and civilian records); Medical Officer, American National Red Cross, 18th and D Streets, NW, Washington, DC 20006 (for American National Red Cross employees).

Record access procedures:

Written requests should contain requester's full name, SSN, and current address/telephone number. Requests for information concerning inpatient treatment, furnish the name of the hospital and year of treatment.

Personal visits may be made to the medical facility where treatment was provided or to the American National Red Cross (whichever is appropriate). Individuals must provide personal identification such as a valid driver's license or military/civilian identification card.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations are contained in Army Regulation 340-21 (32 CFR Part 505).

Record source categories:

Personal interviews and history statements from the individuals; abstracts or copies of pertinent medical records; examination records of intelligence, personality, achievement, and aptitude; reports from attending and previous physicians and other medical personnel regarding the results of physical, dental, and mental examinations, treatment, evaluation, consultation, laboratory, x-ray and special studies and research conducted to provide health care and medical treatment, and similar or related documents.

Systems exempted from certain provisions of the act:

None

A0917.09aDASG

System name:

917.09 Alcohol and Drug Abuse Rehabilitation Files

System location:

Alcohol and Drug Abuse Prevention and Control Program (ADAPCP) rehabilitation/counseling facilities (e.g., halfway houses, rap centers) at installation level.

Categories of individuals covered by the system:

Any individual who is diagnosed as an alcohol drug abuser by a physician and subsequently enrolled in the ADAPCP.

Categories of records in the system:

File contains client intake and follow-up records, initial interview forms, psychosocial histories, counselor observations and impressions of client's behavior and rehabilitation progress, copies of medical consultation and laboratory procedures performed, results of biochemical urinalysis for drug abuse, and similar or related documents.

Authority for maintenance of the system:

Title V, Public Law 92-129; Section 413, Public Law 92-255.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Blanket 'routine uses' identified in 44 FR 73728 do not apply to this system of records.

Records of identity, diagnosis, prognosis, or treatment of any client/patient, irrespective of whether or when he/she ceases to be a client/patient, maintained in connection with the performance of any alcohol or drug abuse prevention and treatment function conducted, regulated, or directly or indirectly assisted by any department or agency of the United States, shall, except as provided therein be confidential and be disclosed only for the purposes and under the circumstances expressely authorized in Title 21 U.S.C., Section 1175, as amended by 88 Stat. 137, and Title 42 U.S.C., Section 4582, as amended by 88 Stat. 131. These statutes take precedence over the Privacy Act of 1974, in regard to accessibility of such records except to the individual to whom the record pertains.

Within the Armed Forces or within those components of the Veterans Administration furnishing health care to veterans or between such components and the Armed Forces.

To medical personnel outside the Armed Forces to the extent necessary to meet a bona fide medical emergency.

To Government personnel for the purpose of obtaining benefits to which the patient is entitled.

To qualified personnel for the purpose of conducting scientific research, management or financial audits, or program evaluation, but such personnel may not identify, directly or indirectly, any individual patient in any report of such research, audit or evaluation, or otherwise disclose identities in any manner.

To a court of competent jurisdiction upon authorization by an appropriate order after showing good cause therefor. In assessing good cause, the court shall weigh the public interest and the need for disclosure against the injury to the patient, to the physician-patient relationship, and to the treatment services. Upon the granting of such order, the court, in determining the extent to which any disclosure of all or any part of any record is necessary, shall impose appropriate safeguards against unauthorized disclosure.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records maintained in file folders.

Retrievability:

Filed alphabetically by last name and maintained in ADAPCP facilities for 1 year following termination of treatment. Selected forms are transferred to the service member's health record.

Safeguards:

Files and records are maintained in central storage areas in locked file cabinets. Access is limited only to authorized individuals.

Retention and disposal:

Records maintained in ADAPCP facilities are destroyed 1 year after termination of the case.

System manager(s) and address:

The Surgeon General, Department of the Army, The Pentagon, Washington, DC 20310; Commanders of medical department activities.

Notification procedure:

Information may be obtained from Commander of medical center or medical department activity at installation where treatment for alcohol/drug abuse was obtained.

Record access procedures:

Requests from individuals should be addressed to: Commander, medical center or medical department activity at installation where treatment was received; or Headquarters, Department of the Army (DASG-HCA), Room 2C468, The Pentagon, Washington, DC 20310.

Written requests for information should contain the full name of the individual, social security number, year of birth, current address, and telephone number. Visits are limited to Alcohol and Drug Abuse Prevention and Control Program facilities, medical center or medical department activity; and Alcohol and Drug Policy Office (DASG-HCA), The Pentagon, Washington, DC 20310.

For personal visits, the individual should be able to give sufficient identification and provide some verbal information that can be verified from his/her file.

Contesting record procedures:

The Army's policy for gaining access to records and for contesting contents and appealing initial determinations may be obtained from the SYSMANAGER.

Record source categories:

Interviews, personal history statements, abstracts or copies of pertinent medical records, abstracts from personnel records, results of tests, physician's notes, observations of client's behavior, related notes, papers, and forms from counselor and/or clinical director.

Systems exempted from certain provisions of the act:

None

A0929.02aDASG

System name:

929.02 Privately Owned Animal Record Files

System location:

Veterinarian service at medical facilities on Army installations and activities. Official mailing addresses are in the Directory of United States Army addresses following the annual compilation of Army system notices published in the Federal Register.

Categories of individuals covered by the system:

Persons whose privately owned animals receive veterinary care.

Categories of records in the system:

Record contains name, home address, and telephone number of animal's owner; treatment of animal; and related information.

Authority for maintenance of the system:

Title 10 U.S.C., Sections 133, 1071 thru 1087, 5031 and 8012.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

To record registration, vaccination, and/or treatment of animals; to compile statistical data; and to identify animals registered with the Veterinary Animal Disease Prevention and Control Facility in connection with the Veterinary Prevention Medicine and Zoonotic Disease Control Program.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records.

Retrievability:

Alphabetically by the animal owner's last name.

Safeguards:

Records are maintained in buildings which are locked when unattended, and are accessed only by authorized personnel having an official need-to-know.

Retention and disposal:

Destroyed within 6 months of death of the animal, expiration of rabies vaccination, or transfer of owner.

System manager(s) and address:

The Surgeon General, Headquarters, Department of the Army, The Pentagon, Washington, DC 20310.

Notification procedure:

Information may be obtained from the veterinary facility where the animal was treated or euthanized.

Record access procedures:

Written requests should contain the animal owner's full name, home address, and telephone number; and the animal's rabies vaccination number. Personal visits may be made to the veterinary facility where animal was treated. Owner must provide personal identification such as a valid military identification card or driver's license.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations are contained in Army Regulation 340-21 (32 CFR Part 505).

Record source categories:

Animal owner, veterinarian reports, and similar or related documents.

Systems exempted from certain provisions of the act:

None

A1001.08aDAAG

System name:

1001.08 Office Personnel Training Files

System location:

Maintained by officials designated to administer agency training programs at Headquarters, Department of the Army staff, field operating agencies, major commands, installations, and activities. Official mailing addresses are in the Directory of United States Army Addresses following the annual compilation of Army system notices published in the Federal Register.

Categories of individuals covered by the system:

Military and civilan personnel employed by the Army who have been selected or scheduled for, or have recently completed training related to functional responsibilities of the office to which assigned or are in furtherance of individual's career development.

Categories of records in the system:

Records pertain to the scheduling and follow-up of military and civilian training courses. Documents include (a) annual projection of individual training necessary to maximize personal career development goals and mission accomplishment; (b) tuition, personnel and travel costs; (c) course name and training facility at which offered; and (d) personal data including name, rank/grade, social security number (SSN), security clearance, resume of educational background to include academic achievements, on-the-job and formal classroom training, and related management reports.

Authority for maintenance of the system:

Title 10 U.S.C., Section 3012.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

To provide management and individuals with reports of training completion, courses scheduled to be taken, and related required actions.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders; computer magnetic tapes and disks.

Retrievability:

By name and/or SSN.

Safeguards:

All records are maintained in secured buildings, in either file cabinets or areas accessible only to authorized persons having a need-to-know. Computer rooms are accessible only by authorized personnel through controlled access. Computer software precludes unauthorized access to the file by use of a system password and system lockout procedures.

Retention and disposal:

Records are destroyed after 1 year or when no longer required.

System manager(s) and address:

Commander of organization/activity maintaining the record.

Notification procedure:

Information may be obtained from the SYSMANAGER

Record access procedures:

Requests should be addressed to appropriate commander/training officer/supervisor. Written requests should include full name of individual and SSN. For personal visits, individual must provide acceptable identification, such as driver's license, military or civilian identification card.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations are contained in Army Regulation 340-21 (32 CFR Part 505).

Record source categories:

Individual applying for training, his/her supervisor, agency training officer, or from office personnel files.

Systems exempted from certain provisions of the act:

None.

A1012.04hDAMO

System name:

1012.04 NDU Student Data Files

System location:

National Defense University (NDU), Ft. Leslie J. McNair, Washington, DC 20319.

Categories of individuals covered by the system:

Resident/non-resident students enrolled at courses of instruction at NDU including the Industrial College of the Armed Forces (ICAF) and the National War College (NWC).

Categories of records in the system:

Records contain name, date of birth, social security number (SSN), student number, grade/rank, branch of service or civilian agency, years of Federal service, biographical data, course/section assignment, prior eduction, and academic and other related management data.

Authority for maintenance of the system:

Title 10 U.S.C., Section 3012.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

NDU officials: To confirm attendance eligibility; to monitor student progress; to produce record of grades and achievements; to prepare assignment rosters; to provide management and statistical summaries and reports; and to compile class yearbooks.

Student transcripts may be disclosed to other educational institutions.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders; computer magnetic tapes, disks, and printouts.

Retrievability:

By SSN or student identification number.

Safeguards:

Records are maintained in buildings which employ security guards and are accessed only by authorized personnel having an official need-to-know. Automated records employ software passwords; magnetic tapes are protected by user identification and manual controls.

Computer room is controlled by card key system requiring positive identification and authorization.

Retention and disposal:

Individual and class academic records are destroyed after 40 years. Records pertaining to extension courses are held indefinitely before being retired to the National Personnel Records Center, St. Louis, MO. Individual training records are destroyed annually; management reports are destroyed when no longer needed.

System manager(s) and address:

President, National Defense University, Ft. Leslie J. McNair, Washington, DC 20319.

Notification procedure:

Students may apply to the National Defense University, Ft. Leslie J. McNair, Washington, DC 20319; telephone: Area Code 202/693-8475.

Record access procedures:

Written requests should contain requester's full name, current address, social security number, and date of enrollment and/or completion/graduation.

Personal visits may be made to the National Defense University at Ft. Leslie J. McNair. Individuals must provide personal identification such as a valid driver's license or military or civilian identification card.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations are contained in Army Regulation 340-21 (32 CFR Part 505).

Record source categories:

Applications for enrollment and biographical resumes from applicants, faculty evaluations and reports, and transcripts from educational institutions.

Systems exempted from certain provisions of the act:

None.

A1012.04hTRADOC

System name:

1012.04 Grade Calculator System

System location:

Director of Automation (ATZLSW-DOA), United States Army Command and General Staff College (USACGSC), Ft Leavenworth, KS 66027.

Categories of individuals covered by the system:

Any officer, United States or Allied, enrolled in the USACGSC resident program.

Categories of records in the system:

System contains personal data on resident students (i.e., name, rank, social security number (SSN); administrative data (i.e., counselor, class section); and academic data (i.e., courses, course grades).

Authority for maintenance of the system:

Title 10 U.S.C., Section 3012.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Records are used to schedule resident students for courses in the USACGSC curriculum; to process grades and other academic related information; to record and translate tests, subcourse and course grades; and, at year end, to prepare school transcripts. Records are used also to prepare rosters and labels for use by the USACGSC departments and other Ft Leavenworth activities. Records serve to track resident student progress throughout the academic year by preparation of various reports and by interactive terminal query.

The automated grading examination system (GRADEX) constitutes a subsystem of this file in that it provides the capability to grade and perform item analysis on various tests given to resident students on MARK SENSE forms.

The student information system constitutes a second subsystem of the file providing the ability to identify students who possess certain skills. This assists in the assignment of students to projects and as assistant instructors. Information collected is printed on reports and is also retrievable by interactive terminal query.

The models and simulation system and the geography of Asia system constitutes a third subsystem of the file providing the capability to administer tests interactively using computer terminals.

The automated student housing assignment system constitutes a fourth subsystem of the file providing the ability to assign students to quarters prior to their arrival.

The user name password system constitutes a fifth subsystem of the file providing the ability to assign computer passwords to students for their use throughout the academic year.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Computer disks.

Retrievability:

By SSN, student exam code or computer user name.

Safeguards:

Computer programs are kept in locked cabinets and, after normal duty hours, the building is secured by guards. Computer access is controlled by passwords which are periodically changed. Access to the computer programs is further restricted by additional passwords which are also changed periodically. Data files are maintained in a secure environment restricted to authorized employees.

Retention and disposal:

Records are destroyed at the completion of an academic year except that educational transcripts become part of an individual's Official Military Personnel File.

System manager(s) and address:

Directory of Automation, United States Army Command and General Staff College, Ft Leavenworth, KS 66027.

Notification procedure:

Information may be obtained from: Commandant, United States Army Command and General Staff College, ATTN: Directory of Automation, Bell Hall, Ft Leavenworth, KS 66027; telephone: Area Code 913/684-2498.

Record access procedures:

Requests should be addressed to: Commandant, United States Army Command and General Staff College, ATTN: ATZLSW-DOA, Ft Leavenworth, KS 66027.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations are contained in Army Regulation 340-21 (32 CFR Part 505).

Record source categories:

Personal data and enrollment information are obtained from the students at the time they complete enrollment and from Department of the Army orders. Grades, class section number, and academic information are obtained from the USACGSC academic departments. Data for the GRADEX system are obtained from the MARK SENSE cards completed by the students and information extracted from the Grade Calculator System.

Systems exempted from certain provisions of the act:

None.

A1306.01DAPE

System name:

1306.01 Behavioral and Social Sciences Research Project Files

System location:

Army Research Institute (ARI) for the Behavioral and Social Sciences, ATTN: PERI-ZA, Room 6E22, 5001 Eisenhower Avenue, Alexandria, VA 22333.

Decentralized locations: ARI Field Units located at: Ft Sill, OK 73503; Ft Benjamin Harrison, IN 46216; HQ USAREUR, c/o ODCSPER, APO NY 09403; Ft Benning, GA 31905; Ft Bliss, TX 79916; Ft Hood, TX 76544; Ft Knox, KY 40121; Ft Leavenworth, KS 66027; Presidio of Monterey, CA 93940; Ft Rucker, AL 36360; and/or Scientific Coordination Offices located at: US Army R&S Group (Europe), APO NY 09510; Ft Monroe, VA 23651; and Ft McPherson, GA 30330.

Categories of individuals covered by the system:

All officer, warrant officer, and enlisted military personnel, including Army Reserves and National Guard.

Categories of records in the system:

Records include questionnaire type data relating to service member's preservice education, work experience and social environment/culture, learning ability, physical performance, combat readiness, discipline, motivation, attitude about Army life, and measures of individual and organizational adjustments. May also include test results from Armed Services Vocational Aptitude Battery and Skill Qualification Tests.

Authority for maintenance of the system:

Title 10 U.S.C., Section 4503.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Information in this system is used by the Army Research Institute for the Behavioral and Social Sciences to research human factors inherent in the recruitment, selection, classification, assignment, evaluation, and training of military personnel. Information derived from individually identifiable records is used also to enhance readiness effectiveness of the Army in that it provides a basis for developing personnel management methods, training devices, and testing of weapons methods and systems aimed at improved group performance. No decisions affecting an indivudal's rights or benefits are made using these research records.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders, punch cards, and magnetic tape.

Retrievability:

By name and/or social security number.

Safeguards:

Buildings employ security guards. Access to records is limited to authorized personnel having an official need-to-know. Automated segments are protected by controlled system procedures and code numbers governing access.

Retention and disposal:

Records are retained at the appropriate research office identified under 'System location' until completion of final report, after which they are destroyed.

System manager(s) and address:

Deputy Chief of Staff for Personnel, Headquarters, Department of the Army, Washington, DC 20310.

Notification procedure:

Individuals wishing to inquire if this system contains information about them should contact the SYSMANAGER indicated above.

Record access procedures:

Written requests from individuals should be addressed to Commander, Army Research Institute for Behavioral and Social Sciences if testing has been concluded; otherwise to appropriate field unit or Scientific Coordination Office. Individuals must furnish the following information: full name, social security number, current address, and subject area and year of testing.

Contesting record procedures:

The Army's rules for access to records and for contesting contents and appealing initial determinations are contained in Army Regulation 340-21 (32 CFR Part 505).

Record source categories:

From the individual, his/her peers, or, in the case of ratings and evaluations, from supervisors.

Systems exempted from certain provisions of the act:

None.

BILLING CODE 3710-08-M

DEFENSE MAPPING AGENCY

REQUESTING RECORDS

Records are retrieved by name or by some other personal identifier. It is therefore especially important for expeditious service when requesting a record that particular attention be provided to the Notification and/or Access Procedures of the particular record system involved so as to furnish the required personal identifiers, or any other pertinent personal information as may be required, to locate and retrieve the record.

BLANKET ROUTINE USES

Certain blanket 'routine uses' of the records have been established, that are applicable to every record system maintained within the Department of Defense, unless specifically stated otherwise within a particular record system. These additional blanket routine uses of the records are published below, only once in the interest of simplicity, economy and to avoid redundancy, before the individual record system notices begin rather than repeating them in every individual record system.

ROUTINE USE - LAW ENFORCEMENT

In the event that a system of records maintained by this component to carry out its functions indicates a violation or potential violation of law, whether civil, criminal or regulatory in nature, and whether arising by general statute, or by regulation, rule or order issued pursuant thereto, the relevant records in the system of records may be referred, as a routine use, to the appropriate agency, whether federal, state, local or foreign, charged with the responsibility of investigating or prosecuting such violation or charged with enforcing or implementing the statute, rule, regulation or order issued pursuant thereto.

ROUTINE USE - DISCLOSURE WHEN REQUESTING INFORMATION

A record from a system of records maintained by this component may be disclosed as a routine use to a federal, state or local agency maintaining civil, criminal or other relevant enforcement information or other pertinent information, such as current licenses, if necessary to obtain information relevant to a component decision concerning the hiring or retention of an employee, the issuance of a security clearance, the letting of a contract, or the issuance of a license, grant or other benefit.

ROUTINE USE - DISCLOSURE OF REQUESTED INFORMATION

A record from a system of records maintained by this component may be disclosed to a federal agency, in response to its request, in connection with the hiring or retention of an employee, the issuance of a security clearance, the reporting of an investigation of an employee, the letting of a contract, or the issuance of a license, grant, or other benefit by the requesting agency, to the extent that the information is relevant and necessary to the requesting agency's decision on the matter.

ROUTINE USE - CONGRESSIONAL INQUIRIES

Disclosure from a system of records maintained by this component may be made to a congressional office from the record of an individual in response to an inquiry from the congressional office made at the request of that individual.

ROUTINE USE WITHIN THE DEPARTMENT OF DEFENSE

A record from a system of records maintained by this component may be disclosed as a routine use to other components of the Department of Defense if necessary and relevant for the performance of a lawful function such as, but not limited to, personnel actions, personnel security actions and criminal investigations of the Component requesting the record.

ROUTINE USE - PRIVATE RELIEF LEGISLATION

Relevant information contained in all systems of records of the Department of Defense published on or before August 22, 1975, will be disclosed to the Office of Management and Budget in connection with the review of private relief legislation as set forth in OMB Circular A-19 at any stage of the legislative coordination and clearance process as set forth in that Circular.

ROUTINE USE - DISCLOSURES REQUIRED BY INTERNATIONAL AGREEMENTS

A record from a system of records maintained by this Component may be disclosed to foreign law enforcement, security, investigatory, or administrative authorities in order to comply with requirements imposed by, or to claim rights conferred in international agreements and arrangements including those regulating the stationing and status in foreign countries of Department of Defense military and civilian personnel.

ROUTINE USE - DISCLOSURE TO STATE AND LOCAL TAXING AUTHORITIES

Any information normally contained in IRS Form W-2 which is maintained in a record from a system of records maintained by this Component may be disclosed to State and local taxing authorities with which the Secretary of the Treasury has entered into agreements pursuant to Title 5, U.S.Code, Sections 5516, 5517, 5520, and only to those State and local taxing authorities for which an employee or military member is or was subject to tax regardless of whether tax is or was withheld. This routine use is in accordance with Treasury Fiscal Requirements Manual Bulletin Nr. 76-07.

ROUTINE USE - DISCLOSURE TO THE OFFICE OF PERSONNEL MANAGEMENT

A record from a system of records subject to the Privacy Act and maintained by this component may be disclosed to the Office of Personnel Management concerning information on pay and leave, benefits, retirement deductions, and any other information necessary for the Office of Personnel Management to carry out its legally authorized Government-wide personnel management functions and studies.

ROUTINE USE - DISCLOSURE OF INFORMATION TO NARS (GSA)

A record from a system of records maintained by this component may be disclosed as a routine use to the National Archives and Records Service of the General Services Administration in records management inspections conducted under authority of 44 U.S.C. 2904 and 2906.

ROUTINE USE - DISCLOSURE TO DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

All systems of records relating to compensation, employment or retirement, or extracts therefrom, maintained by this Component may be disclosed as a routine use to the Department of Health, Education, and Welfare for the purpose of comparing such record with records of programs administered by and in the possession of the Department of Health, Education, and Welfare in order to verify information where such verification is required by law or regulation or to identify violations or potential violations of law, whether criminal, civil, or regulatory, and whether arising by general statute or particular program statute, or by regulation, rule, or order issued pursuant thereto.

B0102-01 HQHTASID

System name:

102-01 Office General Personnel Files

System location:

DMA Headquarters (HQ), DMA Hydrographic/Topographic Center (HT), DMA Aerospace Center(A), Defense Mapping School(S), Inter American Geodetic Survey(I), Office of Distribution Services (D). Staff Offices, Departments, Division and Branch Offices, all Components. See DMA Directory for complete address listing.

Categories of individuals covered by the system:

Employees of DMA Civilian and Military

Categories of records in the system:

Consist of copies of and papers relating to time and attendance reports, leave reports, overtime work, work attendance, holidays, athletic events, employee unions, medical services, training, duty assignments, emergency information and similar data on related subjects. List of individuals authorized to receive these services will also be included.

Authority for maintenance of the system:

Executive Order 10561, 9/15/54; Designating Official Personnel Folders in Government Agencies as Records of the Office of Personnel Management (OPM) and Prescribing Regulations Relating to the Establishment, Maintenance and Transfer thereof.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Supervisory personnel in their day-to-day personnel actions for; promotion, adverse actions, training and other related actions. File subject to civil service review.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper record in file folders and/or Kardex book.

Retrievability:

Filed alphabetically by last name of employee

Safeguards:

Buildings or facilities employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared, and trained.

Retention and disposal:

Temporary records. Destroy after 1 year or on discontinuance, whichever is first.

System manager(s) and address:

Defense Mapping Agency, ATTN: Personnel Office, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4066

Notification procedure:

Information may be obtained from DMA Directory

Record access procedures:

Requests from individuals should be addressed to appropriate organization of address list.

Written requests for information should contain the full name of the individual current address and telephone number, social security number. Visits are limited to normal working hours.

For personal visits the individual should be able to provide some acceptable identification, that is, drivers license, employing office's identification card, and give some verbal information that could be verified.

Contesting record procedures:

The Agencys rules for contesting contents and appealing initial determination may be obtained from: System Manager.

Record source categories:

Copies of papers relative to time and attendance reports, overtime work, work attendance, leave reports, holidays, athletic events, employee unions, medical services, training and related subjects.

Systems exempted from certain provisions of the act:

NONE

B0102-03 HQHTASI

System name:

102-03 Office Personnel Locator Files

System location:

DMA Headquarters (HQ), DMA Hydrographic/Topographic Center (HT), DMA Aerospace Center(A), Defense Mapping School(S), Inter American Geodetic Survey(I). Staff Offices, Departments, Division and Branch Offices, all Components. See DMA Directory for complete address listing.

Categories of individuals covered by the system:

Personnel currently employed or assigned at DMA

Categories of records in the system:

Documents reflecting the name, address, telephone number, and similar data for each person.

Authority for maintenance of the system:

E.O. 10561 9/15/57; Designating Official Personnel Folders in Government Agencies as Records of the Office of Personnel Management (OPM) and Prescribing Regulations Relating to the Establishment, Maintenance and Transfer thereof.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Supervisory Personnel - Used to record personal information and Military Career Progression and maintained on file to notify appropriate agencies and officials in case of emergencies.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper record in file folders and/or Kardex book.

Retrievability:

Filed alphabetically by last name of employee

Safeguards:

Buildings or facilities employs security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared and trained.

Retention and disposal:

Temporary records. Destroy on separation or transfer of the individual or preparation of a new list.

System manager(s) and address:

Defense Mapping Agency, ATTN: Personnel Office, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4066

Record of official annual accumulation and use of employee's leave.

Authority for maintenance of the system:

21 USC 1175

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Director of Civilian Personnel to record employee requests for documentation.

Employee - reference for accumulation of leave.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Magnetic tapes and printouts.

Retrievability:

Files are by payroll block number, organization, and name.

Safeguards:

Buildings and facilities employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared, and trained.

Retention and disposal:

Final Leave Record - Temporary Record. Destroy 10 years after separation of individual.

Other Leave Record: Destroy after 4 years or 90 days after receipt of audit completion letter.

System manager(s) and address:

Defense Mapping Agency, ATTN: Personnel Office, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4066.

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to System Manager. Written requests for information should contain the full name of the individual, current address and telephone number, and social security number. Visits are limited to normal working hours.

For personal visits, the individual should be able to provide some acceptable identification; that is, driver's license, employing office's identification card, and give some verbal information that could be verified.

Contesting record procedures:

The Department's rules for contesting contents and appealing initial determinations may be obtained from System Manager.

Record source categories:

Time and attendance cards initialed by employee. Accumulation and use of leave.

Systems exempted from certain provisions of the act:

NONE

B0303-21 HTA

System name:

303-21 Decedent Claim Files

System location:

Personnel Office - DMA Hydrographic/Topographic Center (HT) and Aerospace Center (A). See DMA Directory for complete address listing.

Categories of individuals covered by the system:

All civilian employees of DMA Hydrographic/Topographic Center or DMA Aerospace Center.

Categories of records in the system:

Death separation - FE Form 6, SF 1153, SF 2800, and other allied papers and correspondence.

Authority for maintenance of the system:

21 USC 1175

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Purpose of this file is to document the death of a career employee. Users are: Personnel Office to maintain/ascertain that documents are in file for employees who have been separated due to death.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folder.

Retrievability:

Alphabetically by employee last name.

Safeguards:

Buildings and facilities employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared, and trained.

Retention and disposal:

Temporary record. Destroyed after 10 years.

System manager(s) and address:

Defense Mapping Agency, ATTN: Personnel Office, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4066

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to System Manager. Written requests for information should contain the full name of the individual, current address and telephone number, and social security number. Visits are limited to normal working hours.

For personal visits, the individual should be able to provide some acceptable identification; that is, driver's license, employing office's identification card, and give some verbal information that could be verified.

Contesting record procedures:

The Department's rules for contesting contents and appealing initial determinations may be obtained from System Manager.

Record source categories:

Copies of vouchers with supporting documents, letters/claims from decedents.

Systems exempted from certain provisions of the act:

NONE

B0401-02 HQHTA

System name:

401-02 Statements of Employment and Financial Interest and Ethics Act Files

System location:

Office of the General Counsel, HQ DMA, Office of the Counsel, DMAHTC and DMAAC. See DMA Directory for complete address listing.

Categories of individuals covered by the system:

DD 1555 -Defense Mapping Agency civilian personnel classified at GS-13 or above, and military officers serving in the grade of 0-5 or above, whose duties require the exercise of judgment in making Government decisions in regard to monitoring grants or subsidies; contracting and procurement; auditing; or other activities having a significant economic impact on the interests of any non-Federal enterprise.

Special Government Employees of the Defense Mapping Agency serving as advisors or consultants.

SF 278 - DMA civilian personnel classified at GS-16 or above of the General Schedule prescribed by 5 U.S.C. Section 5332 and military officers serving in grades of 07 or above and the DMA designated Agency Ethics Official.

Categories of records in the system:

Files include SF 278's - Executive Personnel Financial Disclosure Report and DD 1555's - Confidential Statement of Employment and Financial Interests containing information as to outside employment, financial interests and creditors. Such forms are filed by individuals upon employment and renewed annually. Copies of the individual's current position description. Signed statements of the individual concerned stating that none of the interests listed constitute a conflict of interest with respect to the duties of his present position. Correspondence indicating review and the resolution of any conflicts disclosed.

Authority for maintenance of the system:

Part IV, Executive Order 11222, 'Prescribing Standards of Ethical Conduct for Government Officers and Employees' (as amended). Ethics in Government Act of 1978 (PL 95-521), 5 C.F.R. Section 734.603.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Individual's Supervisor (superior officer or official responsible for signing military evaluation reports or civilian performance ratings)--to determine the existence of, and, if possible, to resolve, any real or apparent conflict between the personal financial interests of the individual concerned and the performance of his services for the Government.

Agency Legal Counsel--to (l) review the individual's statement and the supervisor's evaluation thereof for legal sufficiency, (2) to assist in the resolution of any conflicts disclosed in such statements, and (3) to maintain and safeguard the confidentiality of all such statements.

Directors of Defense Mapping Agency Components and Heads of Defense Mapping Agency Headquarters Major Staff Elements--for review, comment and appropriate action with respect to resolution of any real or apparent conflicts disclosed by the statement of an individual.

The Director, Defense Mapping Agency or the Staff Director of Personnel (as designee)--to review and take action on any conflicts not previously resolved.

Department of Justice--for possible use in investigation/prosecution of fraud or other violation of conflict of interest laws.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders.

Retrievability:

Filed alphabetically by last name of employee.

Safeguards:

Buildings in which files maintained are not open to general public and are guarded on 24-hour basis. Records are maintained in combination safes and are accessible after completion of review only to Agency Counsel. Each submission and subsequent annual renewals are kept in individual, sealed manila envelopes to prevent unauthorized disclosures.

Retention and disposal:

These are temporary records. DD Form 1555 of each employee is maintained until his death, retirement or separation from the Defense Mapping Agency and for six (6) years thereafter at which time it is destroyed. SF 278 is retained six years from date of submission.

System manager(s) and address:

General Counsel, DMA Headquarters, Building 56, US Naval Observatory, Washington, D.C. 20305.

Notification procedure:

Information may be obtained from:

General Counsel, DMA Headquarters, Building 56, US Naval Observatory, Washington, DC. 20305, telephone 202 254-4431.

Counsel Defense Mapping Agency Hydrographic/Topographic Center, Washington, D.C. 20315, telephone 202 227-2268.

Counsel Defense Mapping Agency Aerospace Center, St. Louis Air Force Station, Missouri 63118, telephone 314 268-4501.

Record access procedures:

Requests from individuals should be addressed to: General Counsel, DMA Headquarters Building 56, U.S. Naval Observatory, Washington, D.C. 20305.

Written requests for information should contain the full name and current address and telephone number of the individual. Visits will be arranged through the General Counsel, Headquarters DMA.

For personal visits, the individual should be able to provide some acceptable identification, such as a drivers license or an employer's identification card, and be prepared to provide some verbal information that can be verified with his file.

Contesting record procedures:

The Defense Mapping Agency's rules for access to records and for contesting contents and appealing initial determinations by the individual concerned may be obtained from the SYSMANAGER.

Record source categories:

Statements and related documents are obtained from the individual concerned.

Systems exempted from certain provisions of the act:

NONE

B0401-03 HQHTA

System name:

401-03 Legal Assistance Case Files

System location:

Office of General Counsel, DMA Headquarters (HQ), and Office of General Counsel DMA Hydrographic/Topographic Center (HT), and Aerospace Center (A). See DMA Directory for complete address listing.

Categories of individuals covered by the system:

Military personnel assigned to DMA who request legal assistance

Categories of records in the system:

Files contain legal opinions of the counsel regarding personal matters of an individual. Also copies of document prepared on behalf of the individual.

Authority for maintenance of the system:

44 U.S.C. 3101; - Records Management by Federal Agencies

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Office of General Counsel - for consoltation with individual involved, and for reference and precedent value.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper record in file folders and/or Kardex

Retrievability:

Filed alphabetically by last name of employee

Safeguards:

Buildings or facilities employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared, and trained.

Retention and disposal:

This record is a temporary record. Records are destroyed one year after completion of the case. Selected opinions and correspondence withdrawn for use as precedent may be held until no longer required for reference.

System manager(s) and address:

Defense Mapping Agency, ATTN: General Counsel, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4431

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to system manager.

Requests from individuals should be addressed to the appropriate organization as indicated in address list. Written requests for information should contain the full name of the individual, current address and telephone number and social security number. Visits are limited to normal working hours. For personal visits the individual should be able to provide some acceptable identification, that is, drivers license, employing office's identification card, and give some verbal information that could be verified.

Contesting record procedures:

The Agencys rules for contesting contents and appealing initial determination may be obtained from System Manager.

Record source categories:

Request from military individual for legal opinion on a personal matter, opinions of council and documents prepared by counsil.

B0502-03 HQHTA

System name:

502-03 Master Billet/Access Record

System location:

Primary System - Special Security/Activities Division, Department of Computer Services, DMA Hydrographic/Topographic Center. Decentralized segments - HQ DMA, DMA Aerospace Center. See DMA Directory for complete address listing.

Categories of individuals covered by the system:

All DMA employees and contractor personnel who have been granted a security clearance or indoctrinated for access to Sensitive Compartmented Information (SCI) and all personnel being considered for DMA employment. In addition, employees of other government agencies are included for the period during which their security clearance or SCI access status is permanently certified to DMA.

Categories of records in the system:

File may contain for an individual the following: name, rank/grade, military component or civilian status, social security number, SCI billet number and title, security clearance, SCI accesses authorized and held, date Background Investigation completed, date indoctrinated or debriefed, date and state of birth, DMA badge number and expiration date, and whether an authorized courier of SCI material.

Authority for maintenance of the system:

E.O. 12065, National Security Information, 28 June 1978.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Records are used by DMA security personnel to identify and verify personnel granted security clearances or authorized access to SCI. Purpose of verification and identification is to control access to secure areas for use of classified information; for periodic reindoctrination (rebriefing) of employees for SCI access; for periodic security education and training; and for control and reissue of identification badges.

Information is also used to certify personnel SCI access status to other government agencies and to the Defense Intelligence Agency for updating the Security Management Information System.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Policies and practices for storing, retrieving, accessing, retaining and disposing of records in the system.

Storage:

Records are stored in computer memory core for retrieval through visual display terminals and line printers.

Retrievability:

Files are retrieved by name and at least one other personal identifier, such as a date of birth, place of birth, social security number or military service number. Files may also be retrieved by billet number and/or DMA security badge number.

Safeguards:

Secured in alarmed vault in guarded building. Vault accessible only to properly cleared, authorized personnel. Transmission of system data between DMA Components is by Secure (encrypted) circuit.

Retention and disposal:

Active records only are maintained. Records of personnel debriefed for SCI access are dumped on a debrief tape which is printed as an alphabetical listing cumulatively each month for one year, then the tape is erased. Old printed listing is destroyed when replaced by new printed listing (weekly).

System manager(s) and address:

System name:

503-04 Parking Permit Control Files

System location:

Security Offices of Components - See DMA Directory for complete address

Categories of individuals covered by the system:

Individuals who have been issued parking Permits or cited for violations.

Categories of records in the system:

Documents relating to the allotment of parking spaces, recording of violations by holders of parking permits.

Authority for maintenance of the system:

50 U.S.C. 797; Internal Security - Security Regulations and Orders; Penalty for Violation. and Delegations, Promulgation by President.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Security Offies - Issue of spaces and recording of violators.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records kept in file folders and desk type pull-out shelves.

Retrievability:

Filed by name alphabetically

Safeguards:

Buildings and Facilities employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared, and trained.

Retention and disposal:

Temporary-Record. Destroy on Transfer or separation of parking permit holder, or when permit is superseded or revoked.

System manager(s) and address:

Defense Mapping Agency, ATTN: Administration Office, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4401

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to System Manager.

Written requests for information should contain the full name of the individual, current address, and telephone number, and social security number.

For personal visits the individual should be able to provide some acceptable identification, that is, driver's license, employing office's identification card, and give some verbal information that could be verified on employment.

Contesting record procedures:

The Agencies' rules for contesting contents and appealing initial determinations may be obtained from System Manager.

Record source categories:

Individuals requests for permits, copies of tickets issued.

Systems exempted from certain provisions of the act:

NONE

B0503-05 HQHTASI

System name:

503-05 Vehicle Registration and Driver Record File

System location:

DMA Headquarters (HQ), DMA Hydrographic/Topographic Center (HT), DMA Aerospace Center (A), Defense Mapping School (S), and Inter American Geodetic Survey (I). - See DMA Directory for complete address.

Categories of individuals covered by the system:

Any person privileged to operate a motor vehicle on a military instal- lation and who has been involved in a chargeable traffic accident or whose commission of a moving traffic violation has been verified.

Categories of records in the system:

File contains a record of issuance of decal and of all traffic offenses/ incidents and actions.

Authority for maintenance of the system: 50 U.S.C. 797; Internal Security - Security Regulations and Orders; Penalty for Violation.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Security Office, to record all traffic offenses/incidents and action taken. State and Local Law Enforcement Agency for vehicle identifications.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

8'x5' paper cards in card file cabinet

Retrievability:

Filed alphabetically by last name of employee

Safeguards:

Buildings or facilities employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared, and trained.

Retention and disposal: Destroy one year after revocation or expiration.

System manager(s) and address:

Defense Mapping Agency, ATTN: Security Office, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4411

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to system manager.

Requests from individuals should be addressed to the appropriate organization as indicated in address list. Written requests for information should contain the full name of the individual, current address and telephone number and social security number. Visits are limited to normal working hours.

For personal visits, the individual should be able to provide some acceptable identification and also some information that would verify his need to know.

Contesting record procedures:

The Agencys rules for contesting contents and appealing initial determination may be obtained from System Manager.

Record source categories:

Report of traffic violation from Security police.

Systems exempted from certain provisions of the act:

NONE

B0503-09 HQHTASI

System name:

503-09 Key Accountability Files

System location:

Security Office, DMA Headquarters (HQ), DMA Hydrographic/Topographic Center (HT), DMA Aerospace Center (A), Defense Mapping School (S), and Inter American Geodetic Survey (I). - See DMA Directory for complete address.

Categories of individuals covered by the system:

Individuals with keys to a secure area.

Categories of records in the system:

Documentation relating to the issue, return and accountability for keys to secure areas.

Authority for maintenance of the system:

E.O. 12065, National Security Information, June 28, 1978. Information and Material. 3/10/72

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Security Police - Periodic Inspections, reissuance of keys after locks have been changed.

Personnel - Reference checks on individuals with keys to secure areas.

Supervisors - Reference checks and daily use for information purposes.

OSD and DIA - Investigation of loss or destruction of secure area.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper Records in file folders

Retrievability:

Filed Alphabetically by name

Safeguards:

Buildings, facilities employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared and trained.

Retention and disposal:

Temporary Record - Transfer to holding area, hold three (3) years then destroy.

System manager(s) and address:

Defense Mapping Agency, ATTN: Security Office, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4411

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should contain the full name of the individual, current address and telephone number, social security number.

For personal visits the individual should be able to provide some acceptable identification, that is, drivers' license, employing office's identification card, and give some verbal information that could be verified.

Contesting record procedures:

The Agencies' rules for contesting contents and appealing initial determination s may be obtained from System Manager.

Record source categories:

Individual's key requests, personnel forms and investigatory findings.

Systems exempted from certain provisions of the act:

NONE

System name:

504-01 Personnel Special Security Files

System location:

Special Security/Activities Division - DMA Headquarters (HQ), DMA Hydrographic/Topographic Center (HT), DMA Aerospace Center (A) - See DMA Directory for complete address

Categories of individuals covered by the system: ES

DMA Military or civilian employees who have been assigned to positions that require access to Sensitive Compartmented Information (SCI).

Categories of records in the system:

Files consist of Special Security Office (SSO) security indoctrination and termination oaths; clearance and access certification messages; SSO security violation investigative reports if applicable.

Authority for maintenance of the system:

E.O. 12065, National Security Information, June 28, 1978. 3/10/72

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

To provide central file repository for all SSO security forms pertaining to the individual.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders

Retrievability:

Filed alphabetically by last name of file subject.

Safeguards:

Buildings, facilities employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared and trained.

Retention and disposal:

Retained in active file during period subject is assigned to or employed by DMA, retained in inactive file for one year following reassignment or termination of employment, then destroyed.

System manager(s) and address:

See Defense Mapping Agency, ATTN: Special Security Office, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4603

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to system manager.

Written requests for information should contain the full name of the individual current address and telephone number, social security number.

For personal visits the individual should be able to provide some acceptable identification, that is, drivers license, employing office's identification card and give some verbal information that could be verified.

Contesting record procedures:

The Agency's rules for contesting contents and appealing initial determination may be obtained from System Manager.

Record source categories:

Information obtained from such sources as review of birth records; education records; credit and former employment records; interviews of named and developed references; check of local police and FBI files & check of subversive files.

Systems exempted from certain provisions of the act:

Parts of this system may be exempt under 5 U.S.C. 522a (j) or (k), as applicable. For additional information, contact the Systems Manager.

B0504-01-2 HQHTASI

System name:

504-01 Personnel Security Files

System location:

Primary System - Security Office, DMA Headquarters (HQ), DMA Hydrographic/Topographic Center (HT), DMA Aerospace Center (A), Defense Mapping School (S), Inter American Geodetic Survey (I). See DMA Directory for complete address.

Decentralized Segments - Cross reference index cards (i.e., Badge Requests Cards, Identification Cards, Guard Desk Roladex Identification Cards) with extracts of information contained in primary files are maintained on file in Security Office of each DMA element.

Categories of individuals covered by the system:

Those military, civilian, and industrial personnel who are assigned to, employed by DMA; whose official duties, responsibilities and/or contracts require that they have access to classified defense information which has been entrusted to or is under the Defense Mapping Agency.

Categories of records in the system:

File Contains individual's certificate of clearance indicating level of access individual is cleared for, date clearance was issued, type of investigation conducted, date investigation was completed and identification of agency that conducted the investigation. Additionally, contained in the file are; copy of Statement of Personal History (DD Form 398), individual's certification that he/she has read and understands both the Department of Defense and Agency security directives and instructions regarding the protection of classified defense information; individual certification that he/she understands responsibilities for protection of North Atlantic Treaty Organization (NATO), material to a lesser extent some files will contain individuals certification that he/she has been briefed for access to NATO Top Secret (COSMIC); NATO Top Secret Restricted Data (ATOMAL); Single Integrated Operational Plan (SIOP); Extremely Sensitive Information (ESI); Atomic Energy Commission, Restricted Data (RD); and Atomic Energy Commission, Critical Nuclear Weapons Design Information (CNWDI).

Authority for maintenance of the system:

EO 12065, National Security Information, June 28, 1978. Classification and Declassification of National Security Information and Material - 3/10/72

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

DMA SO - This information is maintained as a means to insure that each and every individual assigned to, employed by or contracting with the HQ DMA has been cleared for the level of access to classified information that is necessary for accomplishment of his official duties. These records further insure that each individual is made aware of his responsibilities regarding the protection and safe guarding of any classified information entrusted to him.

Other Governmental Agencies - Information regarding any individual's clearance and level of access. This enables DMA personnel to conduct official business requiring security clearance, with other governmental agencies.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders

Retrievability:

Alphabetically by name of individual

Safeguards:

Buildings are located on guarded government installation with security guards and alarms. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared and trained.

Retention and disposal:

Records are maintained in an active status only for the period of time that the individual is actually assigned to, employed by or contracting with DMA. When the individual terminates his association with DMA, the records are maintained in an inactive status for the period of one year and then destroyed.

System manager(s) and address:

SDefense Mapping Agency, ATTN: Security Office, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4411

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to System Manager.

Written requests for information should contain the full name of the individual, current address and telephone number, social security number.

For personal visits the individual should be able to provide some acceptable identification, that is, driver's license, employing office's identification card, and give some verbal information that could be verified.

Contesting record procedures:

The agencies' rules for contesting contents and appealing initial determinations may be obtained from System Manager.

Record source categories:

Individual's certificate of clearance originates in HQ DMA Special Security Office (SSO) based on notification of personnel investigation by either the Office of Personnel Management or the Defense Investigative Agency. Certification of clearance for military personnel will be certified by the individuals' parent service. Much of the routine information in these records such as name, date and place of birth, etc., is obtained during the individual's initial processing which is usually accomplished on his first duty day. Other information such as type of investigation, date of investigation, etc., is obtained from such investigating agencies as the OPM, Defense Investigative Service (DIS), etc. The records are updated as new information is received regarding the individual's clearance and access.

Systems exempted from certain provisions of the act:

NONE

B0504-01-3 HQHTA

System name:

504-01 Personnel Security Investigative Files

System location:

Primary System - Security Offices, DMA Headquarters (HQ), DMA Hydrographic/Topographic Center (HT), DMA Aerospace Center (A) - See DMA Directory for complete address.

Categories of individuals covered by the system:

Those military and civilian personnel who are assigned to or employed by the Defense Mapping Agency and whose duties require access to classified defense information and who have therefore been investigated under the provisions of Department of Defense regulations.

Categories of records in the system:

Files consist of two parts, one part subject two exemption of 552a(K)(5) from review one part available for review. Part (l) Exempted consists of National Agency Checks with Written Inquiries (NACI); Background Investigations (BI) Special Background Investigations (SBI); Bring-up Investigations (BU). Part (2) Available for review consists of National Agency Checks (NAC).

Authority for maintenance of the system:

EO 12065, National Security Information, June 28, 1978.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Defense Mapping Agency - to determine eligibility for access to classified defense information and to conduct continuing Security Program

Defense Intelligence Agency - to determine eligibility for access to Sensitive Compartmented Information, applicable to Special Security Office access.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders.

Retrievability:

Filed alphabetically by last name of file subject.

Safeguards:

Buildings, facilities employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared and trained.

Retention and disposal:

Retained in active file during period subject is assigned to or employed by DMA, retained in inactive file for one year following termination of subject's assignment or employment, then destroyed.

System manager(s) and address:

Defense Mapping Agency, ATTN: Security Office, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4411

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to System Manager. Written requests for information should contain the full name of the individual current address and telephone number, and the Case (Control) number that appears with the office symbol, on all correspondence received from this office.

For personal visits, the individual should be able to provide some acceptable identification, that is, drivers license, employing office's identification card, and give some verbal information that could be verified.

Contesting record procedures:

The Agencies' rules for contesting contents and appealing initial determinations may be obtained from System Manager.

Record source categories:

Investigations are originated based on applicant's application for employment Source of information are inquiries of birth, education, local police, federal police agency files, credit, neighborhood, personal references, etc.

Systems exempted from certain provisions of the act:

Parts of this system may be exempt under 5 U.S.C. 522a (j) or (k), as applicable. For additional information, contact the Systems Manager.

B0601-01 HQHTASI

System name:

601-01 Civilian Personnel Program Reporting Files (Master File Printout)

System location:

Personnel Offices. See DMA Directory for Complete Address Listing

Categories of individuals covered by the system:

Any individual employed by the Agency.

Categories of records in the system:

File contains Name, Social Security Number, Date of Birth, Sex, Service Computation Date, Location, Job Title, Grade, Series, Step, Salary, Life Insurance, Health Benefits, Organization Code, Nature and Date of Last Action Tak en, Veteran's Preference, Retirement Deductions, Type of Appointment, Master Tapes, etc.

Authority for maintenance of the system:

Executive Order 10561. Designating Official Personnel Folders in Government Agencies as Records of the CSC and Prescribing Regulations Relating to the Establishment, Maintenance and Transfer Thereof; 9/15/54

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

To provide consolidated source of pertinent information on employees for internal requests for information and internal reports. Provides records of information transmitted to OPM Central Personnel Data File. Available to the Office of Personnel Management (OPM).

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Computer Printout paper

Retrievability:

By organization, grade level, alpha by name

Safeguards:

Buildings/facilities employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared and trained.

Retention and disposal:

Temporary. Destroy after six months.

System manager(s) and address:

B0601-01-3 A

System name:

601-01 Personnel Assistance Files

System location:

DMAAC Civilian Personnel Office. See DMA Directory for complete address listing.

Categories of individuals covered by the system:

Aerospace Center personnel discussions with the Personnel Office.

Categories of records in the system:

File contains memorandums for record concerning Planned Assistance Visits.

Authority for maintenance of the system:

21 USC 1175

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

The purpose of the file is to record employee's visits to Personnel Office and discussions with Personnel Office personnel concerning their questions, advice, or complaints.

User is the Personnel Office staff.

User utilizes the information to keep records of employees' visits and have a record of discussions concerning employee questions, advice, or complaints.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Papers and memorandums.

Retrievability:

Filed categorized by Directorates, Staff Agencies, and Departments, and then filed alphabetically by employee last name after that.

Safeguards:

Facility employs security guards. Records are locked in file cabinets by division secretary's desk when not in use. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared, and trained.

Retention and disposal:

Temporary record. Destroyed after 5 years.

System manager(s) and address:

DMAAC Director of Civilian Personnel. See DMA Directory for complete address listing.

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to System Manager

Written requests for information should contain the full name of the individual, current address and telephone number, and social security number. Visits are limited to normal working hours.

For personal visits, the individual should be able to provide some acceptable identification; that is, driver's license, employing office's identification card, and give some verbal information that could be verified.

Contesting record procedures:

The Agency's rules for contesting contents and appealing initial determination may be obtained from the System Manager.

Record source categories:

Backup material on employee visits to Personnel Office.

Systems exempted from certain provisions of the act:

NONE

B0601-03 HQHTASI

System name:

601-03 Personnel Data System - Civilian (PDS-C)

System location:

Civilian Personnel Offices - See DMA Directory for complete address listing.

Categories of individuals covered by the system:

Current and former DMA civilian employees.

Categories of records in the system:

Civilian employment information including authorization for position, personnel data, suspense information; position control information; projected information and historical information; civilian education and training data; performance appraisal, ratings, evaluation of potential; civilian historical files covering job experinece, training and transactions; civilian awards information, merit promotion plan work files; career programs files for such functional areas as procurement, logistics, civilian personnel, etc., civilian separation and retirement data for reports and to determine eligibility; adverse and disciplinary data for statistical analysis and employee assistance; stand-along file, as for complaints, enrollee programs; extract files from which to produce statistical reports in hard copy, or for immediate access display on remote computer terminals; miscellaneous files.

Authority for maintenance of the system:

5U.S. Code 301 and 44 U.S. Code 3101.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

To provide automated system support to DMA officials at all levels from that part of the Office of Personnel Management (OPM) required personnel management and records keeping system that pertains to evaluation, authorization and position control, pay, position management, staffing skills inventory, career management, training, retirement, employee services, rights and benefits, merit promotions, demotions, reductions in force, complaints resolution, labor management relations, and the suspensing and processing of personnel actions; to provide for transmission of such records between employing activities within the Defense Mapping Agency; to provide reports to the OPM; to provide reports of military reserve status to other armed services for contingency planning; to obtain statistical data on the work force to fulfill internal and external report requirements and to provide DMA offices with information needed to plan for and evaluate manpower, budget and civilian personnel programs, to provide minority group designator codes to the OPM's automated data file, to provide the Office of the Assistant Secretary of Defense, Manpower Reserve Affairs and Logistics, with data to assess the effectiveness of the program for employment of women in executive level positions; to provide data to DMA officials to facilitate the assessment of the DMA Affirmative Action Plan for minorities and women; to obtain listings of employees by function or area for locator and inventory purposes; disclosed to officials of labor organizations recognized under Executive Order 11491, as amended, when relevant and necessary to their duties of exclusive representation concerning personnel policies and practices and matters affecting working conditions.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Maintained in visible file binders/cabinets, card files, computer magnetic tapes, disks or drums, computer paper printouts, microfiche.

Retrievability:

Filed by name, Social Security Account Number (SSAN), other identification number or system identifier. The primary individual record identifier in APDS-C is SSAN. There is the added capability of selecting an individual's record or certain preformatted information by SSAN on an immediate basis using a teletype or cathode ray tube display device.

Safeguards:

Records are accessed by custodian(s) of the record system. Records are accessed by person(s) responsible for servicing the record system in performance of their official duties. Records are accessed by authorized personnel who are properly screened and cleared for need-to-know. Records are stored in security file containers/cabinets. Records are stored in safes. Records are stored in vaults. Records are stored in locked cabinets or rooms. Records are protected by guards. Records are controlled by computer system software.

Retention and disposal:

Analog output products are retained in office files until superseded, obsolete, no longer needed for reference, or inactivated. They are then destroyed by tearing into pieces, shredding, pulping, macerating, or burning. Data stored digitally within system is retained only for the period required to satisty recurring processing requirements and/or historical requirements. The Notification of Personnel Action,

Standard Form 50, is disposed of as directed by the OPM, work files and records such as the employee career brief, position survey work sheet, retention register work sheet, alphabetic and social security account number locator files, and personnel and position control register are destroyed after use by tearing into pieces, shredding, macerating, or burning work sheets pertaining to qualification and retention registers are disposed of as directed by the OPM; transitory files such as pending files, and recovery files are destroyed after use by degaussing files and records retrieved through general retrieval systems are destroyed after use by tearing into pieces, shredding, pulping, macerating, or burning. The separated employee file retains employee information at time of separation for five years after which the employee's record is destroyed by degaussing.

System manager(s) and address:

Defense Mapping Agency, ATTN: Personnel Office, Building 56, Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4066

Authority for maintenance of the system:

5 U.S.C. Section 7901; Health Service Programs

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Uses are for awarding employees with certificates and pins.

Personnel Office, Supervisors, blood collectors

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

cards

Retrievability:

Filed alphabetically by last name of employee

Safeguards:

Buildings or facilities employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared, and trained

Retention and disposal:

Destroy when employee is separated from Agency

System manager(s) and address:

Defense Mapping Agency, ATTN: Personnel Office, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4066

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to system manager. Requests from individuals should be addressed to the appropriate organization as indicated in address list. Written requests for information should contain the full name of the individual, current address and telephone number and social security number. Visits are limited to normal working hours. For personal visits the individual should be able to provide some acceptable identification, that is, drivers license, employing office's identification card, and give some verbal information that could be verified.

Contesting record procedures:

The Agencys' rules for contesting contents and appealing initial determination may be obtained from System Manager.

Record source categories:

Information received from collecting Agency

Systems exempted from certain provisions of the act:

NONE

B0901-07 HQHTAI

System name:

901-07 Alcoholism and Drug Abuse Files

System location:

Civilian Personnel Offices - See DMA Directory for complete address listing.

Categories of individuals covered by the system:

All civilian employees who have contacted program counselor requesting assistance.

Categories of records in the system:

File contains counseling interview notes, medical documents, therapy/treatment referral notes.

Authority for maintenance of the system:

21 USC 1175

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

To help employees with alcohol or drug problems

Medical Officer - diagnose problem

Counselor - to give advise and management

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders

Retrievability:

Filed chronologically by number; names deleted, but are known by counselor.

Safeguards:

Buildings or facilities employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared, and trained

Retention and disposal:

Temporary - destroy when no longer needed or upon separation of employee

System manager(s) and address:

Defense Mapping Agency, ATTN: Personnel Office, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4066

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to system manager. Requests from individuals should be addressed to the appropriate organization as indicated in address list. Written requests for information should contain the full name of the individual, current address and telephone number and social security number. Visits are limited to normal working hours. Contesting record procedures:

The Agency's rules for contesting contents and appealing initial determination may be obtained from System Manager.

Record source categories:

Employee interviews and medical reports
Employee or relatives

Systems exempted from certain provisions of the act:

NONE

B1001-09 S

System name:

1001-09 School Reporting Files

System location:

Defense Mapping School(S). Staff Offices, Departments, Division and Branch Offices, all Components. See DMA Directory for complete address listing.

Categories of individuals covered by the system:

Military personnel and civilian personnel attending courses of instruction at DMS.

Categories of records in the system:

Enrollment records, release of students, graduates, failure of students, class rosters.

Authority for maintenance of the system:

E.O. 11348

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Used for military assignments, monitor career progression and changes of courses of instruction in the event it is recommended and required.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders and/or Kardex book.

Retrievability:

Filed alphabetically by last name of employee

Safeguards:

Buildings or facilities employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared, and trained.

Retention and disposal:

CUTOFF at end of calendar year, held additional year, retired to Records Holding Area, held an additional year and destroyed.

System manager(s) and address:

DMA Defense Mapping School, ATTN: Office of Administration and Records, Fort Belvoir, Virginia 22060, TELEPHONE: Area Code 703/664-1983

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to system manager. Written requests for information should contain the full name of the individual, current address and telephone number, social security number, dates of attendance and name of course.

For personal visits, the individual should be able to provide some acceptable identification, that is, military identification card, driver's license, proof of social security identification and give some verbal information that could be verified with individual's record.

Contesting record procedures:

The Agencys rules for contesting contents and appealing initial determination may be obtained from System Manager.

Record source categories:

Scheduled courses of instruction, class leaders, class instructors, academic division chiefs.

Systems exempted from certain provisions of the act:

NONE

B1001-11 S

System name:

1001-11 Faculty Development Program Files

System location:

Defense Mapping School(S). Staff Offices, Departments, Division and Branch offices, all Components. See DMA Directory for complete address listing.

Categories of individuals covered by the system:

Assigned military personnel and civilian employees at DMS.

Categories of records in the system:

Files consist of record of qualifications, experience, effectiveness, and comparable information, evaluation forms, biographical data and similar documents.

Authority for maintenance of the system:

E.O. 11348 4/22/67; Providing for the further Training of Government Employees

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Used by management for retention of potential instructors, assigned instructors and staff, selection of guest speakers, determining need for additional training.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders and/or Kardex book.

Retrievability:

Filed alphabetically by last name of employee

Safeguards:

Buildings or facilities employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared, and trained.

Retention and disposal:

CUTOFF end of year, held additional year current files area, transferred Records Holding Area, held additional two years, then destroyed.

System manager(s) and address:

DMA Defense Mapping School, ATTN: Office of Administration and Records, Fort Belvoir, Virginia 22060, TELEPHONE: Area Code 703/664-1983

Notification procedure:

Record access procedures:

Requests from individuals should be addressed to system manager. Written requests for information should contain the full name of the individual, current address and telephone number, social security number, dates of assignment or employment and name of supervisor.

For personal visits, the individual should be able to provide some acceptable identification, that is, military identification card, driver's license, proof of social security identification, and give some verbal information that could be verified with individual's record.

Contesting record procedures:

The Agencys rules for contesting contents and appealing initial determination may be obtained from System Manager.

Record source categories:

Records initiated during course of instruction, by instructors, academic division and branch chiefs.

Systems exempted from certain provisions of the act:

NONE

B1002-02 S

System name:

1002-02 School Faculty Board Review Files

System location:

Defense Mapping School(S). Staff Offices, Departments, Division and Branch Offices, all Components. See DMA Directory for complete address listing.

Categories of individuals covered by the system:

Military and civilian personnel attending courses of instruction at DMS.

Categories of records in the system:

Files consist of class standing, ratings, classification and proficiency of students. Minutes of faculty board meetings and related documents.

Authority for maintenance of the system:

E.O. 11348 4/22/67; Providing for the Further Training of Government Employees.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Used to provide information on individual students, class standings, rating and proficiency. Available to Promotion Panels in the Office of Personnel Management.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders and/or Kardex book.

Retrievability:

Filed alphabetically by last name of employee

Safeguards:

Buildings or facilities employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared, and trained.

Retention and disposal:

CUTOFF at end of year, held one year and then destroyed.

System manager(s) and address:

DMA Defense Mapping School, ATTN: Office of Administration and Records, Fort Belvoir, Virginia 22060, TELEPHONE: Area Code 703/664-1983

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to system manager. Written requests for information should contain the full name of the individual, current address and telephone number, social security number, dates of attendance and name of course of instruction.

For personal visits, the individual should be able to provide some acceptable identification, that is, military identification card, driver's license, proof of social security identification, and give some verbal information that could be verified with individual's record.

Contesting record procedures:

The Agencys rules for contesting contents and appealing initial determination may be obtained from System Manager.

Record source categories:

Faculty review board, instructors, chiefs of divisions and branches of courses of instruction and individual student.

Systems exempted from certain provisions of the act:

NONE

B1002-06 S

System name:

1002-06 Individual Academic Record Files

System location:

Defense Mapping School(S). Staff Offices, Departments, Division and Branch Offices, all Components. See DMA Directory for complete address listing.

Categories of individuals covered by the system:

Military and civilian personnel attending courses of instruction at DMS.

Categories of records in the system:

Files consist of documents indicating course of attendance, length of each course, extent of completion of course, results thereof, aptitudes and personal qualities and documents relating to extension courses.

Authority for maintenance of the system:

E.O. 11348 4/22/67;Providing for the Further Training of Government Employees. 4/22/67; Providing for the Further Training of Government Employees.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Used for determining qualifications to base a determination on students potentiality and to revise students cirriculum.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders and/or Kardex book.

Retrievability:

Filed alphabetically by last name of employee.

Safeguards:

Buildings or facilities employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared and trained.

Retention and disposal:

Reference files CUTOFF end of course, held one year, then destroyed. Feeder information submitted to United States Army Engineer School Fort Belvoir, Virginia 22060 who has operational control of DMS and who retains SYSNAME for a longer retention period and disposition.

System manager(s) and address:

DMA Defense Mapping School, ATTN: Office of Administration and Records, Fort Belvoir, Virginia 22060, TELEPHONE: Area Code 703/664-1983

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to system manager. Written requests for information should contain the full name of the individual, current address and telephone number, social security number, dates of attendance and name of course of instruction.

For personal visits, the individual should be able to provide some acceptable identification, that is, military identification card, driver's license, proof of social security identification, and give some verbal infor- mation that could be verified with individual's record.

Contesting record procedures:

The Agencys rules for contesting contents and appealing initial determination may be obtained from Systems Manager. the SYS-MANAGER.

Record source categories:

Individuals, class leaders, class instructors, academic divisions and branch chiefs.

Systems exempted from certain provisions of the act:

NONE

B1002-07 S

System name:

1002-07 Collateral Individual Training Record Files

System location:

Defense Mapping School(S). Staff Offices, Departments, Division and Branch Offices, all Components. See DMA Directory for complete address listing.

Categories of individuals covered by the system:

Military and civilian personnel attending course of instruction at DMS.

Categories of records in the system:

Files consist of training records of individuals and posted to basic individual academic training record files or long term records, absentee reports, delinquency reports, registration forms, examination papers and similar or related documents.

Authority for maintenance of the system:

E.O. 11348 4/22/67;Providing for the Further Training of Government Employees.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Used to record attendance at classes, progress of students, information for counselling individuals when required and recommending specific remedial action.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders and/or Kardex book.

Retrievability:

Filed alphabetically by last name of employee

Safeguards:

Buildings or facilities employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared, and trained.

Retention and disposal:

Destroyed on graduation or elimination of individual or on completion of course of instruction, whichever applies

System manager(s) and address:

DMA Defense Mapping School, ATTN: Office of Administration and Records, Fort Belvoir, Virginia 22060, TELEPHONE: Area Code 703/664-1983

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to system manager.

Requests from individuals should be addressed to the appropriate organization as indicated in address list. Written requests for information should contain the full name of the individual, current address and telephone number and social security number. Visits are limited to normal working hours.

For personal visits, the individual should be able to provide some acceptable identification, that is, military identification, driver's license, proof of social security identification and give some verbal information that could be verified with individual's record.

Individual students, class leaders, class instructors, academic divisions and branch chiefs.

Systems exempted from certain provisions of the act:

NONE

B1202-17 HTA

System name:

1202-17 Contracting Officer Designation Files

System location:

Contracting Offices - DMA Hydrographic/Topographic Center (HT) and DMA Aerospace Center (A) - See DMA Directory for complete mailing address

Categories of individuals covered by the system:

Employee designated Contracting Officer and Contracting Officer Representative at DMA

Categories of records in the system:

Documents reflecting the designation and recission of Contracting Officers and Contracting Officers representative which includes the specific procurement authorities delegated

Authority for maintenance of the system:

44 USC 3101 - Records Management by Federal Agencies

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Documents showing individual designated as contracting officers or Contracting Officers Representatives (COR).

Data includes limitations or restrictions on authority

Data includes background information on 'COR' for use in other contracts

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper record in file folders and/or Kardex book

Retrievability:

Filed alphabetically by last name of employee

Safeguards:

Buildings or facilities employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared, and trained

Retention and disposal:

Temporary Record. Cut off upon recession or termination and placed in an inactive file area for one year. Transferred to Records Holding Area and held for five years and then destroyed

System manager(s) and address:

Defense Mapping Agency, ATTN: Logistics Office, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4475

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to system manager.

Written requests for information should contain the full name of the individuals current address and telephone number, and the Case (Control) number that appears with the office symbol, on all correspondence received from this office

For personal visits, the individual should be able to provide some acceptable identification, that is, drivers license, employing office's identification card, and give some verbal information that could be verified

Contesting record procedures:

The Agency's rules for contesting contents and appealing initial determination may be obtained from System Manager.

Record source categories:

Certificate of Appointment and background information on education, DD Form 1539, and specific information on procurement authorities delegated

Systems exempted from certain provisions of the act:

NONE

B1205-05 HTA

System name:

1205-05 Property Officer Designation Files

System location:

Property Officers of DMAHTC and DMAAC - See DMA Directory for complete address

Categories of individuals covered by the system:

Employees designated Property Officers who have property accounts for their organizations, and have been issued an account number.

Categories of records in the system:

Forms and/or memorandums designating property officers. Included are letters of appointment and revocation.

Authority for maintenance of the system:

40 U.S.C. 486; Management and Disposal of Government Property

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Memorandums or forms showing who or which individual is authorized custodian for equipment for the various organizations within the Agency. Name of individual grade and organization are shown on this document.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper records in file folders

Retrievability:

By individual's account number and organization.

Safeguards:

Buildings, facility employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared and trained.

Retention and disposal:

Temporary Record - Destroyed in the active office two years after termination of appointment.

System manager(s) and address:

Defense Mapping Agency, ATTN: Logistics Office, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4475

Notification procedure:

Information may be obtained from above.

Record access procedures:

The Agency's rules for contesting contents and appealing initial determination may be obtained from System Manager.

Record source categories:

Report of lost damaged or destroyed property

Systems exempted from certain provisions of the act:

NONE

B1206-02 HTA

System name:

1206-02 Self Service Store Authorization Card Files

System location:

Logistics Offices - DMA Hydrographic/Topographic Center (HT), DMA Aerospace Center (A) - See DMA Directory for complete address

Categories of individuals covered by the system:

DMA personnel authorized self-service store cards.

Categories of records in the system:

Cards identifying individuals as authorized self-service store representatives, requests for issuance of cards, correspondence concerning lost and found cards and related documents.

Authority for maintenance of the system:

40 U.S.C. 486; Management and Disposal of Federal Property.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Indicates individuals authorized to sign/receipt for supplies in a designated activity.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Card file and file cabinets

Retrievability:

By account number and organization, alphabetical by last name

Safeguards:

Buildings and Facility employ security guards. Reports are maintained in areas accessible only to authorized personnel that are properly screened, cleared and trained.

Retention and disposal:

Temporary Record. Held in active file until expiration of card or change of individual; held two years and destroyed.

System manager(s) and address:

Defense Mapping Agency, ATTN: Logistics Office, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4475

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to System Manager. Written requests for information should contain the full name of the individual, current address and telephone number, social security number.

For personal visits the individual should be able to provide some acceptable identification, that is, drivers' license, employing office's identification card, and give some verbal information that could be used to verify employment.

Contesting record procedures:

The Agencies' rules for contesting contents and appealing initial determinations may be obtained from System Manager.

Record source categories:

Memorandums, cards, forms designating an individual authorization to sign for supplies received from the self-service store.

Systems exempted from certain provisions of the act:

NONE

B1208-06 HTA

System name:

1208-06 Motor Vehicle Operator's Permits and Qualifications Files

System location:

Primary System - Motor Pool, DMA Hydrographic/Topographic Center (HT) and DMA Aerospace Center (A) - See DMA Directory for complete address

Decentralized Segments - Official Personnel Folder; Personnel Records (Civilian) Center - St. Louis, MO.

Categories of individuals covered by the system:

All DMA employees qualified and issued a motor vehicle operators permit.

Categories of records in the system:

Contains information on employee qualification record and cards and logs in regards to permits issued to individuals authorized to operate Government equipment.

Authority for maintenance of the system:

40 U.S.C. 491; Management and Disposal of Federal Property-Motor Vehicle Pools and Transportation Systems.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Motor Pool used as a record of scores on tests, such as: eye examinations, reaction examinations; and as a quick reference on an individual having a license to operate a Government Vehicle.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Rotary Card file and Log Book

Retrievability:

ROTARY Card File - By last name of individual

Log Book - By number of permit

Safeguards:

Building, Facility employs security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared and trained.

Retention and disposal:

Temporary Record - Permit is a three year record - Destroyed in the Motor Pool

Permanent Record - Qualification Record - kept in active office until separation or transfer of individual concerned, then transferred to Personnel Office for incorporation into the Official Personnel Folder.

System manager(s) and address:

Defense Mapping Agency, ATTN: Logistics Office, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4475

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to System Manager.

Written requests for information should contain the full name of the individual current address and telephone number, social security number.

For personal visits the individual should be able to provide some acceptable identification, that is, drivers' license, employing office's identification card, and give some verbal information that could be verified.

Contesting record procedures:

The Agencies' rules for contesting contents and appealing initial determination may be obtained from System Manager.

Record source categories:

Qualification records consisting of scores on tests.

Systems exempted from certain provisions of the act:

NONE

B1211-03 HQHTAI

System name:

1211-03 Passport Files

System location:

Primary System - DMA Headquarters (HQ), DMA Hydrographic/Topographic Center (HT), DMA Aerospace Center (A), Inter American Geodetic Survey (I) See DMA Directory for complete address

Decentralized Segment - State Department (Passports)

Categories of individuals covered by the system:

Individuals traveling overseas on official government orders.

Categories of records in the system:

Documents relating passports and visas for DMA personnel, including their dependents. Included are requests and receipts for passports, transmittal letters, control cards, and related documents.

Authority for maintenance of the system:

44 U.S.C. 3101; Records Management by Federal Agencies.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Used by personnel travel in processing for travel orders.

Used by individuals of DMA and their dependents for travel purposes.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

File folders - paper records in locked cabinets.

Retrievability:

By name of individual - Alphabetically

Safeguards:

Buildings, facility employ security guards. Records are maintained in areas accessible only to authorized personnel that are properly screened, cleared and trained.

Retention and disposal:

Temporary Record - Held in active office until separation or transfer of individual.

Transferred to State Department upon transfer or separation of individual.

System manager(s) and address:

Defense Mapping Agency, ATTN: Administration Office, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4401

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to System Manager.

Written requests for information should contain the full name of the individual, current address and telephone number, social security number.

For personal visits the individual should be able to provide some acceptable identification, that is, drivers' license, employing office's identification card, and give some verbal information that could verify employment.

Contesting record procedures:

The Agencies' rules for contesting contents and appealing initial determination should be obtained from System Manager.

Record source categories:

Requests and receipt for passports and visas.

Systems exempted from certain provisions of the act:

NONE

B1211-07 HQHTASDI

System name:

1211-07 Individual Government Transportation Files

System location:

Primary System - Travel Office - DMA Headquarters (HQ), DMA Hydrographic/Topographic Center (HT), DMA Aerospace Center (A) - See DMA Directory for complete address listing.

Decentralized Segments - Records Management, Records Holding Areas

Categories of individuals covered by the system:

DMA employees authorized government travel.

Categories of records in the system:

Travel orders and other pertinent correspondence and related documents, and copies of issued and canceled transportation requests, transportation certificates, MAC transportation authorizations.

Authority for maintenance of the system:

44 U.S.C. 3101; Records Management by Federal Agencies, 45 U.S.C. 5707 - Travel and Substance Expense Regulation.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

Used to officially designate Transportation Officer, Assistants and Agents. Used to record authorization for travel, issue orders, make travel arrangements and prepare vouchers for reimbursement.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

Paper Records in file folders

Retrievability:

Alphabetical by name on individual folders or by TR number in case of group travel.

Safeguards:

Buildings, facility employ security guards. Records are maintained in locked cabinets and areas accessible only to authorized personnel that are properly screened, cleared and trained.

Retention and disposal:

Temporary Record. Travel Office holds for one year, transfers to Records Holding Area, held for three (3) years and then destroyed.

System manager(s) and address:

Defense Mapping Agency, ATTN: Administration Office, Building 56, U.S. Naval Observatory, Washington, D.C. 20305, TELEPHONE: Area Code 202/254-4425

Notification procedure:

Information may be obtained from above.

Record access procedures:

Requests from individuals should be addressed to System Manager.

Written requests for information should contain the full name of the individual, current address, and telephone number, social security number.

Personal visits - the individual should be able to provide some acceptable identification, that is, drivers' license, employing office's identification card, and give some verbal information that could verify employment.

Contesting record procedures:

The Agencies' rules for contesting contents and appealing initial determinations may be obtained from System Manager.

Record source categories:

Folders contain various amounts of information on issued and cancelled transportation requests, transportation certificates, travel orders and related data on overseas employees, DMA employees and invitational orders.

Systems exempted from certain provisions of the act:

NONE

OFFICE OF THE SECRETARY OF DEFENSE

REQUESTING RECORDS

Records are retrieved by name or by some other personal identifier. It is therefore especially important for expeditious service when requesting a record that particular attention be provided to the Notification and/or Access Procedures of the particular record system involved so as to furnish the required personal identifiers, or any other pertinent personal information as may be required, to locate and retrieve the record.

BLANKET ROUTINE USES

Certain blanket 'routine uses' of the records have been established, that are applicable to every record system maintained within the Department of Defense, unless specifically stated otherwise within a particular record system. These additional blanket routine uses of the records are published below, only once in the interest of simplicity, economy and to avoid redundancy, before the individual record system notices begin rather than repeating them in every individual record system.

ROUTINE USE - LAW ENFORCEMENT

In the event that a system of records maintained by this component to carry out its functions indicates a violation or potential violation of law, whether civil, criminal or regulatory in nature, and whether arising by general statute, or by regulation, rule or order issued pursuant thereto, the relevant records in the system of records may be referred, as a routine use, to the appropriate agency, whether federal, state, local or foreign, charged with the responsibility of investigating or prosecuting such violation or charged with enforcing or implementing the statute, rule, regulation or order issued pursuant thereto.

ROUTINE USE - DISCLOSURE WHEN REQUESTING INFORMATION

A record from a system of records maintained by this component may be disclosed as a routine use to a federal, state or local agency maintaining civil, criminal or other relevant enforcement information or other pertinent information, such as current licenses, if necessary to obtain information relevant to a component decision concerning the hiring or retention of an employee, the issuance of a security clearance, the letting of a contract, or the issuance of a license, grant or other benefit.

ROUTINE USE - DISCLOSURE OF REQUESTED INFORMATION

A record from a system of records maintained by this component may be disclosed to a federal agency, in response to its request, in connection with the hiring or retention of an employee, the issuance of a security clearance, the reporting of an investigation of an employee, the letting of a contract, or the issuance of a license, grant, or other benefit by the requesting agency, to the extent that the information is relevant and necessary to the requesting agency's decision on the matter.

ROUTINE USE - CONGRESSIONAL INQUIRIES

Disclosure from a system of records maintained by this component may be made to a congressional office from the record of an individual in response to an inquiry from the congressional office made at the request of that individual.

ROUTINE USE WITHIN THE DEPARTMENT OF DEFENSE

A record from a system of records maintained by this component may be disclosed as a routine use to other components of the Department of Defense if necessary and relevant for the performance of a lawful function such as, but not limited to, personnel actions, personnel security actions and criminal investigations of the Component requesting the record.

ROUTINE USE - PRIVATE RELIEF LEGISLATION

Relevant information contained in all systems of records of the Department of Defense published on or before August 22, 1975, will be disclosed to the Office of Management and Budget in connection with the review of private relief legislation as set forth in OMB Circular A-19 at any stage of the legislative coordination and clearance process as set forth in that Circular.

ROUTINE USE - DISCLOSURES REQUIRED BY INTERNATIONAL AGREEMENTS

A record from a system of records maintained by this Component may be disclosed to foreign law enforcement, security, investigatory, or administrative authorities in order to comply with requirements imposed by, or to claim rights conferred in international agreements and arrangements including those regulating the stationing and status in foreign countries of Department of Defense military and civilian personnel.

ROUTINE USE - DISCLOSURE TO STATE AND LOCAL TAXING AUTHORITIES

Any information normally contained in IRS Form W-2 which is maintained in a record from a system of records maintained by this Component may be disclosed to State and local taxing authorities with which the Secretary of the Treasury has entered into agreements pursuant to Title 5, U.S.Code, Sections 5516, 5517, 5520, and only to those State and local taxing authorities for which an employee or military member is or was subject to tax regardless of whether tax is or was withheld. This routine use is in accordance with Treasury Fiscal Requirements Manual Bulletin Nr. 76-07.

ROUTINE USE - DISCLOSURE TO THE OFFICE OF PERSONNEL MANAGEMENT

A record from a system of records subject to the Privacy Act and maintained by this component may be disclosed to the Office of Personnel Management concerning information on pay and leave, benefits, retirement deductions, and any other information necessary for the Office of Personnel Management to carry out its legally authorized Government-wide personnel management functions and studies.

ROUTINE USE - DISCLOSURE OF INFORMATION TO NARS (GSA)

A record from a system of records maintained by this component may be disclosed as a routine use to the National Archives and Records Service of the General Services Administration in records management inspections conducted under authority of 44 U.S.C. 2904 and 2906.

ROUTINE USE - DISCLOSURE TO DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

All systems of records relating to compensation, employment or retirement, or extracts therefrom, maintained by this Component may be disclosed as a routine use to the Department of Health, Education, and Welfare for the purpose of comparing such record with records of programs administered by and in the possession of the Department of Health, Education, and Welfare in order to verify information where such verification is required by law or regulation or to identify violations or potential violations of law, whether criminal, civil, or regulatory, and whether arising by general statute or particular program statute, or by regulation, rule, or order issued pursuant thereto.

DCOMP MSO2

System name:

Personnel Leave Schedule.

System location:

Primary System-ODASD(Management Systems).
Decentralized Segments-Four MS Directorates.

Categories of individuals covered by the system:

All personnel in ODASD(MS).

Categories of records in the system:

Files contain names and dates of anticipated future leave.

Authority for maintenance of the system:

Title 10, United States Code, Section 136.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

INTERNAL USERS, USES, AND PURPOSES

Information is used by the DASD, his Principal Assistant and Directors, for leave administration within the management responsibilities of the DASD(MS).

EXTERNAL USERS, USES, AND PURPOSES

See Office of the Secretary of Defense (OSD) Blanket Routine Uses at the head of this Component's published system notices.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

The records are maintained in the Office of the Directors or by the secretary of the Director. Copies are often provided to all personnel concerned.

Retrievability:

Records are retrieved by name.

Safeguards:

Records are kept in desk of Director or his secretary except in one Division and one Directorate which posts on wall in secretary's office.

Retention and disposal:

Files are discarded when no longer useful.

System manager(s) and address:

The DASD(Management Systems), Room 3E831, Pentagon, Washington, D.C. 20301.

Notification procedure:

Information may be obtained from:
DASD(MS)
Room 3E831
Pentagon
Washington, D.C. 20301
Telephone: 202-695-3424

Record access procedures:

Requests from personnel should be addressed to his immediate supervisor.

Contesting record procedures:

The Agency's rules for access to records and for contesting contents and appealing initial determinations by the individual concerned are contained in 32 CFR 286b and OSD Administrative Instruction No. 81.

Record source categories:

Roster of employees and employee response to request for vacation dates.

Systems exempted from certain provisions of the act:

None.

DCOMP MS11

System name:

List of Female Employees of OSD/OJCS.

System location:

Primary System-Federal Women's Program Coordinator, Room 4B922, Pentagon, maintained in automated form - Army Data Center. Decentralized Segment-Director of Personnel and Security, Washington Headquarters Services (WHS), Department of Defense, Room 3B347, Pentagon, Washington, D. C. 20301.

Categories of individuals covered by the system:

All civilian female employees of OSD/OJCS.

Categories of records in the system:

File is extract of Civilian Personnel Data File and contains organization identification, employee name, Social Security Number (SSN), Series, Grade, Time Basis, Position Title.

Authority for maintenance of the system:

Executive Order 11246/11375, 'Equal Employment Opportunity,' as amended by EO 11478, 'Equal Employment Opportunities in the Federal Government.'

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

The Agency's rules for access to record and for contesting contents and appealing initial determinations by the individual concerned are contained in 32 CFR 286b and OSD Administrative Instruction NO. 81.

Record source categories:

Information contained in general administrative files is obtained from various sources including correspondence, investigations performed by other agencies and general administrative records of the Department of Defense.

Systems exempted from certain provisions of the act:

Parts of this records system may be exempt under Title 5 of the U.S. Code, sections 552a(k)(2), (k)(3) and (k)(5) as applicable. The Office of the Secretary of Defense rules are set forth at 32 CFR Part 286a (OSD Administrative Instruction 81).

DGC 04

System name:

Industrial Personnel Security Clearance Case Files.

System location:

Primary System and Decentralized Segments-Active case files, Directorate for Industrial Security Clearance Review (DISCR), Office of the Assistant General Counsel for Fiscal Matters, OAGC(FM), Office of the General Counsel (OGC), Department of Defense (DoD), Pentagon, Washington, D.C. 20301.

Inactive case files, U.S. Army Investigative Records Repository, Fort Meade, Maryland 20755.

Categories of individuals covered by the system:

Government contractor employees whose industrial security clearance cases were referred to the OAGC(FM), DISCR, for adjudication under Executive Order 10865, as amended by Executive Order 10909, as implemented by DoD Directive 5220.6; these cases pertain only to the individuals who cannot be granted clearance by the Defense Industrial Security Clearance Office (DISCO), Defense Logistics Agency (DLA), Columbus, Ohio.

Categories of records in the system:

Alphabetical card index files for identification and location of case files within the DISCR.

Individual case files include general correspondence relating to case, investigative reports prepared by various investigative agencies conducting security clearance investigations, DISCO referral recommendation, determinations of the Screening Board, Examiners and the Appeal Board, DISCR, with implementing documents, including but not limited to, Statement of Reasons (SOR) issued to individual, his answer to the SOR, transcripts of hearings and exhibits.

DISCR case correspondence files maintained by case number, including case correspondence initiated by DISCR, with individuals, employers, attorneys, congressmen and investigative agencies.

Additionally, correspondence files include copies of Screening Board determinations and Appeal Board determinations from July 1967 to date in order to furnish an index and register of administrative determinations under the Freedom of Information Act (FOIA), Pub. L. 93-502, Section 552.a(2)(C) of Title 5, United States Code.

All final decisions in cases arising under DoD Directive 5220.6, since 1967, are published and indexed for public perusal. Names of applicants, witnesses, sources of information, etc., and identifying information, relative to those persons are deleted from these records to protect the privacy of persons involved.

DISCR Reader Files including DISCR-initiated correspondence, Screening Board determinations and Appeal Board determinations.

Decentralized Reader File segments of copies of Examiner's determinations and Appeal Board determinations to Department Counsel's Office and Screening Board, DISCR.

Chronological correspondence file of letters from assigned trial counsel to individuals, attorneys or counsel, and other Federal offices for hearing arrangements.

Authority for maintenance of the system:

Executive Order 10865, 'Safeguarding Classified Information Within Industry,' dated February 20, 1960, as amended by Executive Order 10909, dated January 17, 1961; and DoD Directive 5220.6, 'Industrial Personnel Security Clearance Program' dated December 20, 1976.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

The purpose and use of this record system are to determine whether it is clearly consistent with the national interest to grant or continue an individual's access to classified information.

INTERNAL USERS, USES, AND PURPOSES

DISCO, DLA, initiates investigation at request of employer and may grant but not deny clearance.

OAGC(FM), DISCR, determines individual's eligibility for security clearance and notifies the individual, and DISCO, DLA, of final decision.

U.S. Army, JAG, U.S. Army, Claims Services, Ft. Meade, Maryland 20755 in cases where claims for reimbursement are requested by an applicant.

EXTERNAL USERS, USES, AND PURPOSES

Department of Justice in cases where individual seeks Federal court review of adverse administration determinations under the Industrial Security Clearance Program.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

Storage:

File folders, vertical file cards.

Retrievability:

Active files alphabetically by name or by case number.

Inactive files by individual's name, date and place of birth, and Social Security Number (SSN).

Safeguards:

Records are stored in security combination lock file containers accessible only to DISCR authorized personnel.

Retention and disposal:

Destroyed 25 years after file is no longer active.

Primary alphabetical card index files are retained permanently in Central Office, DISCR, Alphabetical Index Cards for case control purposes in suboffices, i.e., Screening Board, Department Counsel's Office and Appeal Board are retained during active processing of cases and then destroyed.

All Reader Files are destroyed within 60 days of issue.

System manager(s) and address:

The Assistant General Counsel for Fiscal Matters, AGC(FM), Directorate for Industrial Security Clearance Review (DISCR), Pentagon, Washington, D.C. 20301.

Notification procedure:

Information may be obtained from: OAGC(FM), DISCR, Room 3D282, Pentagon, Washington, D.C. 20301. Telephone: 202-697-8350.

Record access procedures:

Requests from individuals should be addressed to OAGC(FM), DISCR, Room 3D282, Pentagon, Washington, D.C. 20301.

Written requests should include the individual's full name, date and place of birth, Social Security Number (SSN), and notarized signature.

The records requested and available, subject to statutory exemptions, may be made available to the record subject for review at the following locations:

Directorate for Industrial Security Clearance Review (DISCR), Office of the General Counsel, DoD, Room 3D282, Pentagon, Washington, D.C. 20301.

Administrative Director, Eastern Hearing Office, DISCR, Office of the General Counsel, DoD, 26 Federal Plaza, Room 36-112, New York, New York 10007.

Administrative Director, Western Hearing Office, DISCR, Office of the General Counsel, DoD, 9920 S. LaCienega Blvd., Suite 1026, Inglewood, California 90301.

Fees for copies must be borne by the record subject or his authorized representative requesting the review of the records.

Contesting record procedures:

The Agency's rules for access to records and for contesting contents and appealing initial determinations by the individual concerned are contained in 32 CFR 286b and OSD Administrative Instruction No. 81.

Record source categories:

Defense Investigative Service (DIS): Office of the Secretary of Defense (OSD); Defense Industrial Security Clearance Office (DISCO), Defense Logistics Agency (DLA); U.S. Army Investigative Records Repository; record subjects; attorneys or representatives.

Systems exempted from certain provisions of the act:

Parts of this record system may be exempt under 5 U.S.C. 552a(k)(5).

DGC 05

System name:

Administrative Files on Active Psychiatric Consultants to Department of Defense (DOD).

System location:

Directorate for Industrial Security Clearance Review (DISCR), Office of the Assistant General Counsel for Fiscal Matters, OAGC(FM), Office of the General Counsel, DoD.

Categories of individuals covered by the system:

Psychiatric consultants who have entered into agreement with the Department of Defense to conduct psychiatric examination of individuals applying for industrial security clearance for access to classified information required in the performance of their work for classified Government contractors.

Categories of records in the system:

Records filed alphabetically by last name of psychiatrist, consisting of correspondence concerning agreement to conduct psychiatric examinations requested by the Government; and initiation and confirmation of security clearance issued to psychiatrists.

Current list of active DoD psychiatric consultants.

Alphabetical card index file for identification and address of active psychiatric consultants.

Authority for maintenance of the system:

DoD Directive 5220.6, 'Industrial Personnel Security Clearance Program,' December 20, 1976; Executive Order 10865, February 20, 1960; and Executive Order 10909, January 17, 1961.

Routine uses of records maintained in the system, including categories of users and the purposes of such uses:

The purpose of this system is to maintain a record of active psychiatric consultants available to conduct psychiatric examinations of individual applicants for industrial personnel security clearance in convenient geographical areas.

INTERNAL USERS, USES, AND PURPOSES
