Posted at 8:16 p.m. PST Tuesday, Nov. 6, 2001

BY DAN GILLMOR

Mercury News

So it's down to a few states that have enough money to fight and refuse to be bullied. They are American consumers' last

hope for an outcome that doesn't leave Microsoft on a clear path toward controlling the choke points of tomorrow's commerce and communications.

No one should be surprised that half of the state attorneys general have given up. A few undoubtedly believe the Justice Department's sellout achieved something. Others were just along for the ride and are feeling Microsoft's—and the federal government's—enormous lobbying pressure. Watch the campaign contributions flow to see what may have happened with at least some of the politicians who were handling this lawsuit.

If U.S. District Judge Colleen Kollar-Kotelly, who's now hearing the case, has any courage, the Tunney Act hearing should be extremely revealing. There are so many questions raised by the malodorous deal cut by the Justice Department that it's hard to know where to begin.

The best place to start is with the bizarre settlement itself. The document reads as though it had been written by Microsoft lawyers. Every time you read an item that suggests actual restraint on Microsoft's behavior, you find weasel language elsewhere that undermines the supposed concession. This thing isn't just full of loopholes. It's meaningless.

For instance:

Why did the lawbreaker get to keep the loot it made from violating the law? Do we give bank robbers the same courtesy?

Why does this settlement implicitly give Microsoft the right to withhold information about its programming interfaces to open-source and free software writers?

Microsoft, in its sole authority, gets to decide what goes into Windows. Since that eviscerates every other provision in the agreement, why bother with this charade at all?

It would also be useful to put some key people under oath, to answer questions about the politics of this case. For instance:

Why did none of the non-political professional staff members who worked on this case support the settlement? Have they been ordered to keep their mouths shut? If so, why?

What was the substance of the summer conversation between Vice President Dick Cheney and Microsoft Chief Executive Steve Ballmer?

Attorney General John Ashcroft's deputy chief of staff—a Microsoft shareholder and former official of the Republican Party, which got massive Microsoft campaign "contributions"—reportedly told Microsoft opponents to back off even after he'd supposedly recused himself from the case. He's denied the report, but let him do so under penalty of perjury. (Oh, wait, who'd prosecute? This Justice Department?)

There's another angle that the media, in particular, need to examine as quickly as possible. Is it possible that Microsoft and the government have made some secret arrangements that will be couched under "anti-terrorism" rhetoric when or if they emerge into the public light? The government's new surveillance powers would be far easier to carry out if Microsoft became a government ally in this area.

Have there been such side deals? I hope not. I would prefer to think that Microsoft

was rewarded by an administration that opposes antitrust enforcement on ideological grounds, as this one surely does.

California deserves special credit for its stance. Bill Lockyer, the state attorney general, has emerged as the most important public official in America when it comes to holding back the Microsoft tide.

This means that Microsoft, with its bottomless pockets and utter ruthlessness, now loathes him more than any other public official.

Subject: i'm outraged

Microsoft has, and continues, to use monopolistic leverage to destroy competitors and rip off consumers. For example XP allows Microsoft to tax the internet by charging web sites for placement. Given that there's no real alternative to most users Microsoft will effectively be able to tax most online sales since the companies will pass on the costs of buying placement in XP to consumers, albeit invisibly. The only viable solution is to split the company and require them to eschew charging for any placement in the OS. This will still leave Microsoft well off financially.

One note. I'm a mac user. I pay about the same for an OS upgrade as does a Windows user. But the mac base is 1/20th that of the Windows base. That seems to indicate that Microsoft is milking the market. If there were any competing source, as there is in the chip arena, i bet those windoze users would be paying a lot less.

Subject: Microsoft Settlement

Hi,
I'm concerned to read press reports that show this settlement as merely trying to prevent Microsoft's future bad behaviour, without punishing its current misdemeanours.

I know that Microsoft is unhappy about a break-up, but fundamentally is that such a bad thing? Microsoft is a monopoly in several IT spaces. If MS was split into three—Operating Systems and Tools, Back Office Servers, User Applications, would that really hinder the companies ability to innovate? I

realise that much software is starting to have both server and client components, ie exchange without outlook doesn't work, so Data Analysis requires some functionality from SQL Server. Looking forward to a better outcome from this for all of us ...

From <http://www.siliconvalley.com/docs/opinion/dgillmor/dg101101.htm> Microsoft using XP to tighten grip on users
BY DAN GILLMOR
Mercury News

At long last, Microsoft has released a consumer-oriented operating system that won't be in danger of regular failures. What a shame, if not a surprising one, that Microsoft has ratcheted up its standard set of anticompetitive tactics with the release of Windows XP. If you buy a new Intel-compatible computer you'll have essentially no choice in the matter. Microsoft effectively controls the software side of the personal-computer industry, and it has decreed that Windows XP is what you'll run. The questions are different this time.

If you aren't buying a new PC soon, should you replace your current operating system with XP? I say no, unless the stability of your current software is so awful that you can't stand it anymore. And if you are getting XP on a new computer, are there ways to mitigate Microsoft's ever-growing control-freakery and have things your own way, not Microsoft's? Not always.

The increase in reliability is a major improvement for home users. I've been running the business-oriented Windows 2000 on my laptop computer. XP is based on the same foundation, and it's like the difference between wood and cardboard. One tends to be sturdy. The other tends not to be.

There are also some intriguing changes in the user-interface, the screen that greets you

when you start the system, and the way it works. I can take or leave most of them, but novices will find that Windows XP is in many ways easier to use than its predecessors. Naturally, Microsoft is not content with the unprecedented advance of selling a reliable consumer product. With its grip on the computer industry, it has also decided to steer its customers down new and sometimes disturbing paths.

If you buy the upgrade software, you'll be required to register the software with Microsoft. If you don't, the operating system will stop working. Later, if you've changed your PC's hardware sufficiently to trigger Microsoft's paranoid fear that someone may be trying to make an unauthorized copy of the operating system, you'll need to call the company and get its permission to keep using your computer. Microsoft is also using its desktop monopoly to herd you into its own corral. Again and again, you'll be steered to Microsoft or Microsoft partner sites and services, thereby reducing your choice unless you want to make extra effort.

Then there's the Passport authentication system. You are required to sign up for it if you want to use the instant-messaging software that comes with the operating system, and most users will do so by default because most users do what they're told.

Passport is the linchpin to Microsoft's next generation of software—its aim to convert packaged products into pay-as-you-go services that run on the Web. You need to think very hard about whether you want to give Microsoft the keys to your financial and online identities. You may trust Microsoft to keep its word not to abuse this position, but the company's fairly abysmal record on security should give you considerable pause. The bottom line on Windows XP is simple. Reliability is coming with many strings attached. Only a monopolist could get away with this, which is exactly the point.

MTC-00001349

From: George McKinlay
To: Microsoft ATR
Date: 11/19/01 8:07pm
Subject: Settlement

From my readings of the settlement it is clear that this settlement will not inhibit Microsoft from continuing or extending its prior anti-competitive practices into new areas. Microsoft should not be permitted to develop applications, or if it does these applications should not be done by the acquisition of companies (such as Bungie) and the subsequent releasing of Windows only versions of their software. Microsoft should not be permitted to purchase companies such as Adobe? instead it should be forced to divest its interests in such companies.

Microsoft should be obligated to stop distributing free/bundled software such as Explorer, MS media player, C# and other strategic software/languages/formats that

have developed independently of Microsoft and which Microsoft now considers important in its strategy to dominate the internet.

If Microsoft is permitted to continue to develop non operating system software then it must be obligated to provide concurrently, fully functional and feature complete software on all commercially viable operating systems with adequate market share (Mac OS X, Linux, Solaris etc) just as ATT was/is obligated to carry competitors business on their infrastructure.

Subject: Anti-Trust Case Against Microsoft
Dear Sir or Madam,

I heard that you were soliciting feedback from consumers regarding the MS anti-trust case. I am a mac-user, and have used MS Office products for over 8 years. I am a scientist with a PhD in materials science and engineering, and I use several different computing platforms (mac, PC, unix, etc.) and a multitude of different software applications on a regular basis. I am quite computer literate. For me, cross-platform compatability and cross-application compatability is essential to my work. Microsoft, with its proprietary file formats, and monopoly market share domination of desktop publishing environment make my job very difficult, and hence, by default, I am required to use their software in order to move and share information between computers and different clients. I think that Microsoft should be treated as a monopoly and regulated/controlled/penalized for aggressive and predatory business practices. I cite the following reasons:

1. Because they have a dominant (monopoly) market share position, and because their software formats are proprietary, third party file translators don't work very well. Hence in order to share computer file information with other people or between different platforms, one is essentially forced to use their software.
2. Even within their own software, file translation between platforms (mac -> pc) has bugs and problems. They have made great

improvements over the last 7 years, but there are still problems. (e.g. sharing a mac Word 2001 document with embedded windows metafiles with a PC user with Word2000 doesn't work—the images don't show up on their machine.) The solution for this problem is that the consumer has to purchase a new version of the software. They don't support their software with bug fixes for a very long time. I had problems with the performance of Word6.0.1 for the mac. The solution was to purchase Word 98. I had lots of problems with performance and stability with Word98—the solution was to purchase Word2001. I have discovered problems with Word2001. The solution? Buy Word v. X. Since there are no other market competitors, they can pass off bug fixes and new releases and charge consumers full price without really ever fixing or solving the problem. If the software worked as advertised, that'd be one thing, but to pay full price for buggy software, and then be told that all the problems will be fixed in the next release is not fair to the consumer. Consequently, I think that they should be required to maintain their software with annual or semi-annual bug fixes and updates for a period of at least three years.

3. They have used their dominant market share and proprietary file formats as leverage to eliminate competition from other software competitors. For example, look at the fate of WordPerfect and Corel Office. Word perfect at one time dominated the word processing market, and now it is essentially defunct. On the PC side, this product still exists, but it has been discontinued on the mac side—this especially smells fishy considering Microsoft's recent investment in Corel. One may ask, why not let Apple make a competitor for MS Office—the answer is pretty clear. MS would quickly drop MS Office for the mac, and thus there would be no way for mac users to share files with PC users. Consequently, what small number of mac users that exist would be eliminated from the business world, because they would be forced to switch to PC to get their work done. The lost revenue of these mac users would further diminish the viability of Apple, and the company could ultimately go under. At one time, this was such a significant issue for Apple, that they traded software rights for a promise from MS that they would sustain MS Office development on the mac.

I don't know if anyone will read this, but I hope so, and I hope that it might be useful in this case.

—Bradley R. Johnson

Subject: Proposed settlement with Microsoft.
TRUTH, JUSTICE & THE AMERICAN WAY?

Have you guys ever heard of the doctrine of the Separation of Powers over there in the U.S.?

What is the point of having a judiciary if a sympathetic president can just step in, appoint a political glove puppet to the D.o.J., have a few words in the right ears, and then

make a total mockery of the entire judicial process by effecting a complete about face, notwithstanding the fact that the earlier D.o.J. team secured comprehensive and devastating victories before nine different judges over eight egregious breaches of the anti-trust laws, laws as enacted by your own parliament???

It is VERY telling that, on the one hand John Ashcroft can claim that the proposed settlement "provides prompt, effective, certain relief for consumers and removes the uncertainty in the computer market, a critical factor in today's economy [and that it] imposes a broad range of restrictions that will stop Microsoft's unlawful conduct and will restore competition in the industry", when "the Justice Department's senior non-political staff didn't sign on to the agreement, signalling their opposition", on the other.

Did the Microsoft spin-meisters write those lines for him? No wonder Bill Gates is so keen to, "implement this settlement promptly and fully"; it's about as onerous as having been legally obliged to open one's Christmas presents.

What does this mean about the facts and telling the truth? Were the original D.o.J. team lying? Were the nine judges stupid and got the whole thing wrong? Have the anti-trust laws suddenly changed? Why bother with the pretext of having a judiciary at all? Why not just dispense with them altogether and make the president a despot, as it wouldn't make much practical difference in the present circumstances? The parallels with this case and the means by which the present U.S. government rose to power are a little frightening!

Oh how hard it must be for Microsoft to keep a straight face; they have never had to fight a fair fight in their life, and if this joke of a settlement goes through, they probably never will.

In short, this smacks of cronyism and it belittles all arms of power by showing the divisions between them to be a mere charade staged to placate the public sense of democracy and justice. Truth, justice and the American way? From where I am standing, it sounds a little rich to me!

Thank goodness for the States and for Federation in general!

Thank goodness for the Tunney Act.

Thank goodness for the E.C. investigation.

Thank goodness that not everyone is in the pocket of Microsoft or the present administration in the U.S..

Subject: Microsoft settlement

The proposed settlement appears to be a complete surrender by the Department of Justice, after soundly trouncing Microsoft in court. What's the point of spending years in court only to barely slap Microsoft on the wrist? A breakup would have been a minimally acceptable outcome, but since the courts have rejected that option, you need to come up with a next-best-thing, instead of throwing your hands up in the air and calling it quits.

If the proposed settlement goes through, it will spell doom for the computer industry.

Subject: Disapproval of the Microsoft settlement

Everything I've seen over the years and read about this settlement says Microsoft got away with murder of other corporations. Again. They've also penalized and overcharged customers while absolutely disavowing any legal responsibility for the problems and pains they cause. Microsoft is not concerned with how much their products cost—all they are concerned with is making sure they get as much money as possible. They provide support like a kind of charity, and publicize it as a kind of false advertising. If I were a betting man, I'd say the probability of this settlement leading to any significant change in Microsoft's illegal behaviors is effectively zero. You'd have to give me 100:1 odds and spot me a million dollars just to get me to play the game. However, it's exactly what I expected from Bush since we all understand how he feels Microsoft's pain.

Subject: Less than a slap on the wrist for MS
Sirs,

I was most disappointed in the DOJ's decision to ignore the testimony provided during the hearings which lead to Judge Penfield's decision. Penfield was reprimanded for his comments after the trial, not his decisions. These were upheld by a higher court.

This DOJ settlement will have no effect on Microsoft's behavior. Microsoft has a history of ignoring settlements. They will ignore this one as well, because it has no teeth. MS was found to be violating several anti-trust laws. To let MS off with considerably less than a slap on the wrist, sends the message back to MS that such activities are acceptable corporate behavior.

Several facts were brought to light during he hearings:

Bill Gates lied to the Court and was caught at it.

The demonstrations about the ease of removing Explorer were falsified.

It was proven that Microsoft intentionally modified its operating system to render competing browsers at a disadvantage.

MS incorporated copyrighted concepts from competitors without permission or payment.

Essentially, the DOJ has told MS that the software and operating system playing field is theirs and they can defend it with whatever means they can bring to bear. Without a substantial penalty for their paranoid and invidious behavior, they will not play fairly. This disregard for fair competition has already been demonstrated in many of the features incorporated into the new Windows XP operating system.

Sincerely,
Chris Cassell

From: Doug Knowles
To: Microsoft ATR
Date: 11/19/01 8:53pm
Subject: Microsoft settlement is woefully inadequate

To Whom It May Concern:

I have been a software engineer for over 25 years, and I am writing to protest the inadequate sanctions imposed on Microsoft under the proposed antitrust settlement. The settlement will allow Microsoft to continue its most predatory practices and rob consumers of the opportunity to experience, evaluate, and possibly choose among potentially competitive technologies.

The great failure in the DOJ's case against Microsoft is that it concentrated on harm inflicted on competitors that are still in existence today; what has been forgotten is the longer list of technologies and competitors that Microsoft stifled and killed before consumers ever had a chance to know they existed, let alone choose as an alternative to the narrow choices offered by Microsoft. As an employee of various firms that partnered and/or competed with Microsoft, I have seen Microsoft exercise the clout it holds as a near monopoly in at least three different ways that I believe to be in violation of the spirit (if not the letter) of antitrust law, and certainly to the detriment of the software industry in general as well as its customers:

- Misdirection given to independent software vendors (ISVs) by Microsoft operating system managers to steer them away from a competitive position vis a vis Microsoft applications;
- Threats made against ISVs to withhold technology cooperation on established product lines to prevent those ISVs from pursuing independent product development efforts not to Microsoft's liking;
- Exploitation of smaller competitors (through a combination of partnerships and threats) to make them temporary agents of Microsoft's agenda to their ultimate detriment.

If the DOJ can not back away from this settlement, I hope that the states that have rejected the settlement have more success in re-establishing diversity and competition in the software industry.

Sincerely,
Douglas A. Knowles

From: peter
To: Microsoft ATR
Date: 11/19/01 9:14pm
Subject: Ridiculous settlement

To whom it may concern:

I am baffled by the Microsoft settlement. As a computer professional, it is obvious that

MS has exhibited vicious, anti-competitive behavior. In fact, this is no longer an opinion held by those of us in the field of technology, but a fact of law.

Consequently, it is bizarre that they be let off with a slap on the wrist and no substantial force to compel them to change business practices. They have shown contempt for the consumer, contempt for competitors, and contempt for the legal process against them. Like many in my profession, I have friends who were put out of business by MS. I have clients who have spent more money because of MS's contempt for quality software and basic security.

They don't make good software—they don't have to. They just have to force their competitors out of business with restrictive, unfair and illegal practices or by giving away free software. And you are now telling them that it is OK to operate that way—that the consequences for illegal behavior are less expensive than competing fairly in the first place.

Please reconsider. Microsoft is a monopoly. Please don't let them think that statement depends on what the definition of "is" is.....

Subject: Proposed Final Judgement

Dear Sir or Madam,

I am a student and employee of the Georgia Institute of Technology in Atlanta. As I work extensively with personal computers using Microsoft and competing products, I was dismayed by the limited nature of the proposed Final Judgement regarding Microsoft's use of its monopoly power.

Microsoft has demonstrated repeatedly that it is willing to use its monopoly power to gain an unfair advantage over competitors. This has been proven in a court of law. Although the proposed judgement begins to address past infractions on Microsoft's part, those battles in the marketplace are over, and Microsoft has already won. Microsoft is already moving on, and the judgement does little to prevent future abuses of monopoly power.

Microsoft is aggressively pursuing several new strategies. Among them are the "Passport" authentication system and the ".Net" subscription process. Because these are heavily integrated in the XP operating system, they are poised to benefit from and strengthen Microsoft's monopoly position. Further, The ".Net" strategy is integrated into the Windows license, effectively neutralizing the Judgement's power over it. Passport is forced upon users of many Microsoft web services, (including the popular Hotmail) which in turn are integrated into Microsoft applications, which have already come to dominate the market as a result of Microsoft's monopoly power. The Judgement as proposed would have been very effective five years ago. Unfortunately, this industry changes very rapidly. Much more broad measures are necessary to protect consumers now and in the future.

From: Andrew Steele
To: Microsoft ATR
Date: 11/19/01 9:40pm

Dear Sir or Madam:

It is my concern that Microsoft is becoming a much larger business than what it should be. Not only did it take away the majority of profit and business from Netscape Communications by offering its software free of charge to businesses, it has continued that character to this very day. Just watching one of the head operators of the business give a speech to his workers puts fear into my heart on this issue of when this will stop. Here is my concern: Microsoft holds an overly large percent of the OS business, and holds tight control over its users to make sure that they continue to use their software. With Microsoft XP, this company has produced software that requires users to upgrade after 6 months. Microsoft holds a large share in the browser software business. Internet Explorer is considered one of the top two browsers that are provided on the internet today. Microsoft is now trying to take over the gaming industry with the introduction of the X-box. Microsoft also makes such an extensive variety of products with software as to compete with every existing software company that exists.

In conclusion with viewing each of Microsoft's adventures, one would come to the conclusion that Microsoft should continue an attitude change that would encourage healthy competition consistent with the American ideal. Microsoft should limit the employment of its employees until the business' core employment consists of one department that completes one task. If their are employees that are on staff, their numbers should be insignificant in comparison to the whole.

Microsoft should use its resources to honor customers by making the best products that can be made, instead of demanding from them money for products that may or may not be of the best quality. Microsoft should be ultimately forced to do the best that they can do, instead of using their money to create so many partnerships with companies that people feel a need to either put their software

as compatible with Microsoft or go out of business. Microsoft needs to do the best that they can instead of use their money as influence. Thank you for reading my thoughts.

Subject: Let's get on with it

Microsoft has done an awful lot for this economy. They are being penalized by companies that are jealous by what they have accomplished. Its time for them to throw in the towel and admit that they are envious of Microsoft. SunWest has charged exorbitant price for what you get and yet they are envious of Microsoft. Netscape, didn't they sell for a big profit?

Microsoft is entitled to make a profit for what they give us as is any business. This thing has gone to far and its time to call a halt. I've been more than happy with the quality and price I paid for from Microsoft.

Subject: Settlement give Microsoft too much

The DOJ has conceded far too much to Microsoft. It is extremely troubling that you will permit them to bundle any application into the Windows OS. This has no positive benefits: For example, bundling IE into Windows makes neither IE nor Windows better than if they were not one and the same. Yet there are negative ramifications: bundling plainly stifles competition, and thus innovation: the practical demise of Netscape is on point, and with the release of XP, we're sure to see the same with photo-editors, media players, and more.

Moreover, you've permitted too many loopholes for Microsoft to override non-Microsoft applications that OEM's have installed on PC's.

Microsoft is also using Win XP to extinguish existing de facto standards. Specifically, the DOJ settlement does nothing about those standards which were NOT included with Win XP. In not including such Internet Standards such as Java and MP3

capabilities, Microsoft, with its Windows Monopoly, seeks to crush such standards with its own "equivalents." When the old standards are crushed, MS will thus have locked its total control over internet Music and more.

Finally, splitting MS in two would have benefitted the stockholders too. Surely President Bush, with his MBA, has some understanding of why this is.

Subject: Settlement

5 years ago Microsoft said they would behave. We are back at it again. When the agreement runs out in 5 years, they can go back to their old ways, then we spend more government money to investigate them again.

Next time they will do a better job of getting rid of incriminating evidence. I can not go anywhere in my computer without being reminded that MSN or Explorer is waiting to service my needs. I think the company still should be broken into two companies.

MTC-00001374

From: Ruth Silveira
To: Microsoft ATR
Date: 11/19/01 11:03 pm
Subject: Tunney Act

Follow through with this act and end all of this !!!! Making the biggest and the best should be Microsoft's prerogative. Isn't that what the free trade market is all about?

Microsoft makes a good product and doesn't screw with the consumer. If they want something different they can purchase it. If the government spent as much money taking care of the un-employed, hungry and homeless in our country as they have on this case we would be in good shape.

I see this whole process as a witch hunt with a very biased judge presiding over most of it. Thank you, Ruth Silveira

Subject: MSFT trials

Come on! end this crap! Stop wasting the voters money. The clintons are gone to create their own kind of hell in NY, even though she is still in dc. The DOJ under the goofiest politicized AG for the past 100 years under orders by the clintons in order to drive contributions to slick hilly and Mr. Gore went after MSFT in order to attack the biggest muck in the tech space, help their \$ raising from the tech cos, and hopefully keep the Republicans out of the White House so they would not be prosecuted for all of their crookedness.

Being in league with and prompted by Ellison, who arrogantly wanted to be the richest man in the world, only adds to the injustice. Tell the state A's G to get lost with their political ambitions also. The CA AG is another Ellison tool.

The deal is cut, it seems reasonable, and seems to address the problem. IF NOT GO AFTER ELLISON—he is a monopoly in the DB sector and it was even worse during the period covered by the MSFT suit.

The DOJ is not supposed to be the business bludgeon of a private citizen and a crooked politician. That was supposed to be banned 50 years ago. And I'm a Democrat. Imagine what I would think if I were not one.

Subject: My comments

Dear Sir or Madam:

As a software developer as well as a computer user, I am concerned that the recent agreement settles nothing for which the lawsuit was initiated.

Over the years, I have seen various attempts by Microsoft to secure its position:

It had been shown by Andrew Schulman in Doctor Dobb's Journal, that they put special programming into Windows 3.0 and 3.1 to dissuade users of Digital Research's DR-DOS with their product. They were also in an agreement to use the Stac storage compression technology, then decided to dissolve the agreement, but left the programming in their MS-DOS 6.2.

Microsoft was late in building office suite software for their own operating system. In the early days of Windows 3.0, their office software performed terribly. When Windows 3.1 arrived, not only did their software perform much faster, the competitors' software broke.

There was much discussion of undisclosed APIs (Application Programming Interfaces) used by the office products. Recently, they disabled Apple's QuickTime plug-in (and others) for Internet Explorer.

I understand that someone will monitor Microsoft's accounting practices. I'm not

certain this was ever a problem. It is their business practices which need adjustment.

If Microsoft are allowed to proceed with only a minimum of change, they will continue to restrain free enterprise. I'm not saying that everyone can be protected from Microsoft, but much more needs to be done. Why does Microsoft need to agree to punishments anyway? Does the U.S. government fear Microsoft? Besides this, why was there such a marked change in the course of this trial once the Bush administration came into office?

Thank you,
Curt Risor

Subject: Feedback

The course of this trial since the advent of the current administration is a travesty of justice.

There's a major discrepancy in the judicial process's ability to keep up with the fluidity and capriciousness of business, industry, technology, society. Can we somehow make this leviathan motile? Can the judicial process integrate modern technology to enlarge the "court of popular opinion" for one and perhaps incorporate a "Digital Judiciary," a way that can better integrate new information into ongoing efforts for another?

The Court mishandled an episode that's essentially eons past. Meanwhile, in realtime, the defendant has continued with the same behavior it was found guilty of, and now fully intends to consolidate as much control over the digital domain as they can maintain with their instant tap into the purse of each user.

Don't think I haven't noticed the irony of using the defendant's product to generate my response.

How do you kill a giant Money-Sucking parasite that makes it hosts vulnerable to infections?

Exterminate sounds so dramatic.

Subject: Microsoft Antitrust Settlement

The information that has been made available through the press and commentary by individuals knowledgeable in the world of personal computers indicate that the result of the subject settlement will be a disservice to the consumer.

If Microsoft were to expend as much money and effort in producing and supporting their products as they do in executing legal maneuvers, they would not have to browbeat their vendors and customers to gain acceptance of their software. They have a consistent history of amending their license terms such that a consumer cannot depend upon getting the support called for in the documentation that accompanies their product.

As an example, I purchased the upgrade from Windows 95 to Windows 98SE and the

documentation said that I would get 90 days of live telephone product support from the date of my first call. I installed the software and required assistance after 30 days had gone by (I had been trying to use on-line help and their support site). I called the support line and was told that this was the first of my TWO live support calls that I was allowed. I asked about the 90 days provision and was told that it was no longer their support policy.

This is as basic a consumer fraud issue as a car manufacturer reducing a buyer's new car warranty. Yeah, I know they put it in the fine print that if I don't want to accept their license terms I can return the software within 30 days for a refund. What do we do for personal operating systems then? We've already committed to hardware that requires windows. Let's get in the real world and realize that they can only get away with this because of the monopoly they've built in the operating system arena.

Their software is poorly written as evidenced by the unbelievable number of patches they have to produce for each rendition of their software. Allowing them to continue, and indeed strengthen, their demonstrated monopolistic behavior can only cause increased consumer dissatisfaction with no recourse, they hold all the cards. I don't know of another software company that's been able to survive producing applications with failures and security problems to the extent Microsoft does.

Allowing them to integrate more utility and functional software into the operating system will enable them to extend this monopoly to nearly the entire range of utility and functional software currently available from multiple vendors. Obviously there may be some exceptions to this, primarily in very specialized applications such as CAD/CAM, accounting systems, etc.

The greatest impact will be in the consumer and general business office software. We are the "silent majority" that get lost in the political sea changes after so much of our money is spent in pursuit of the issue. I will be extremely disappointed if SEVERE constraints are not placed upon both what Microsoft can integrate into the operating system and the extent to which they are allowed to change support provisions after an Item is purchased.

Subject: Yet another citizen

Dear Department of Justice,

I am yet another citizen, writing to ask you to reconsider your slap on the wrist to Microsoft. As their recent actions in blocking non-Microsoft web browsers from msn.com shows, they continue to habitually, and without awareness or remorse, use inappropriate practices to their own advantage.

As their lack of response to the 1995 consent decree shows, future oversight is likely to be insufficient to convince them to change their ways. Without substantial enough legal action that directly addresses

their monopoly power in the very near term (e.g. splitting the company up, required release of Internet Explorer and Windows source code), it seems very likely that they will continue to abuse that power.

Finally, as many others have pointed out, there are many loopholes in the language of the agreement that would make their continued abuse of their monopoly position legal (e.g., the current language lets them define what counts as the operating system).

I urge you to:

1) Find substantial fixes to their anti-competitiveness that are unarguably clear and easily-enforced in the near term, in addition to the competition-restoring requirements on future action in the current settlement (which I predict they will ignore, requiring future court action).

2) Go back and fix the loopholes in whatever remains of the language in the existing settlement.

Sincerely,

John Abbe

Subject: sell out

You sold out to Microsoft. Bill Gates got an early Christmas present. There is no penalty in the so called "penalties" the Justice Department settled for. Windows XP only shows how Microsoft is carrying on as if there had never been a case. Nobody can say justice was done. Have you checked Microsoft's policy that won't allow Dell or Gateway or anyone else to sell OEM versions of Office to any company with more than 500 computers? What is the justification for that?

What about Passport? What about Windows XP's driving people to Microsoft customers to buy photo and print processing? What about their demand that if someone put an icon on the desktop that THREE Microsoft icons have to be there for affiliated services?

You wasted all that money we paid in taxes to pursue Microsoft. They were proven to be a monopoly that did damage to innovation and competition, and a healthy economy. And you are doing NOTHING to stop it. You don't serve the people, you serve the super rich. As many of us have always suspected you would. Cave in, that is. Thanks for nothing.

To: Microsoft ATR

Date: 11/20/01 12:17am

Subject: comment

The major failure of the proposed settlement is its failure to address the unfair

advantage of the Microsoft applications divisions. The applications divisions have intimate access to the OS during development and can exploit this during application development. Even further, they can tell the OS developers what they would like and they can get a custom patch to suit their needs. Both of these have occurred in the past with Windows 95, and 98. Microsoft products contained updates to the os, which were necessary for the product, but were not available with competitors products. Any fair settlement should preclude the applications divisions from getting any information and treatment in regards to the OS which is not available to other software developers at large, including their competitors.

Subject: Microsoft

As a certified Microsoft developer with a software product of my own on the market, I am angered by the actions of Microsoft and it's continued leveraging of it's Windows monopoly to propagate it's anti-competitive marketing tactics. The lack of initiative and motivation on the behalf of the Justice department to reign in a convicted monopolist is appalling. I make my living developing software. Were my product to be assimilated into Microsoft's operating system as a "benefit" to customers, I would, very simply, be out of business. Microsoft should be able to develop any software they want. But they should NOT be permitted to distribute this software as part of their operating system.

In my opinion, Microsoft software should be a separate business entity from their operating system. Their continued arrogance, bullying, anti-competitive business tactics, and illegal monopolistic conduct as determined by some of the highest courts of our country, should not be permitted to continue. Given Microsoft's continued behavior, the only way to effect a true remedy is break the company in two, per Judge Jackson's earlier decision. He may have not shown the best of judgement in talking to the media, but he certainly had the most realistic perspective on the true nature of Microsoft.

Your's truly,
Danny Bowman

To: Microsoft ATR
Date: 11/20/01 2:59 am
Subject: monopolistic downward spiral

hello, I am emailing in concern of the whole Microsoft antitrust case. I have long been a supporter of Microsoft, and thought it better than Linux and/or Unix, as it was the most compatible. although, while examining the facts, in a broad sense, Microsoft is seeing that it's customers are starting to take a new and different view to it's large corporation, and it's not entirely better. in the wake of the fact that Microsoft could be split up, or hit with other serious consequences, it set out to tighten it's grip on it's users (just my opinion, but what do I know? I'm just going off of what I see). this grip has been tightened in ways you might not realize, it is getting the world so hopelessly dependent on windows, that to shut down the company would cause severe economic consequences. Stocks, businesses, and the government would be hit by such a serious action, that, it just might affect our nation's stability. Microsoft is still exercising it's monopolistic powers in some cases, such as that of the case between Microsoft and Sun, where Microsoft thought it would be better to discontinue shipping the real version of java, and put in their own little java version. sun developed java, it's not like Linux which has many different competing developers, java is sun's creation, yet Microsoft is creating their own version? this is pushing sun (a major competitor with Microsoft)...off the table... as explained in many online articles. I now believe Microsoft is phasing the rest of the world out, and creating situations where consumers NEED Microsoft's products for things to work, such as their web page, MSN.com; they have locked any browser except IE to be able to view it. coincidence? XP is shipping with software packages that make up some companies' only product(s), they are decreasing the need on 3rd party software, in essence creating the 'Microsoft gathering' to increase the dependence on the windows operating system. if more people depend on this operating system, the less likely it is to be affected by any, shall we say, government legislation. like the new ruling does not affect Microsoft's profits within the range of 10 cents! because everything is being made for windows, it IS the most compatible, but MS has been making that more and more untrue with every version of windows that they release that doesn't support one more app. I

would say 50% is selectively and intentionally not supported, as you see in sun's case and Netscape's case. now to the privacy issue. an operating system that ships with desktop security measures defeats the purpose of being an operating system. a company that tries to 'secure' its products from its customers will lose business. I'm not talking about pirating windows itself, so much as, copying cd's, gathering useless user information and other things of the sort. what good is a product if you can't use it for the original reason you bought the software? Microsoft is also definitely setting up a HUGE database of users, and no doubt will soon be doing business with doubleclick.net, selling anonymous user profiles for money, and yes,

Microsoft would have all of this because everyone will have to have registered. And the dependence on the software will be so high, they will always have a product to sell. Personally addressed advertising will be extended to desktops, without user's notice or permission, as the government passed that INCREDIBLY STUPID FUCKING LAW.....allowing companies to share customer information freely without their permission, and the only way to get them to stop doing that was to specifically say 'don't send it'. I guess the don't send option is what made it pass, as that law totally and completely is unconstitutional and set against the founding principles for freedom, privacy and individuality that our society is so closely based upon. personally, I think it was written by people who don't really think that the internet is a big problem, nor a security issue, but that law extends WAY beyond the internet.

so does anyone see it yet? Microsoft is increasing our 'need' of windows, and the government is punishing them, which is really kicking all of the consumers in the ass. people need to pick, it is obviously not in the interests of the public to have to share information about them that is not necessary for normal business operation. so do you root for the government and all the other computer manufacturers and software programmers that Microsoft is very apparently belittling, but hiding behind the excuse that, MS makes it's own software, and therefore has a right to distribute whatever it likes with windows? Well Microsoft has transformed, once you have no healthy competition, and you have lots of business, you become a SERVICE not a business. some people are also praising Microsoft. For what exactly? Putting out 4 different versions of their operating system per year, and only changing minor things? this recent change is welcome, yet they focus on an aspect of the operating system that is not critical to the goal of the product. which is multimedia, woo hoo(yea right). If I want a rich multimedia experience, it's NOT going to be coming from Microsoft that's for sure! so Microsoft is slowly phasing other software out by trying to cover all it's bases: gaming (x box, and computer games), firewalls, imaging software, java, Linux, (and not to mention the 50 gazillion software titles it is not compatible with), and most definitely the ultimate TV system. by including these products, users feel no need to go out and

buy software, or certain hardware for that matter, causing a downturn in the economy. Nobody would be buying anything, because they already have it. maybe one day Microsoft would make their own computers, fully equipped and compatible with nothing but Microsoft's products of course!

what if the government were to shut down Microsoft? Microsoft would undergo heavy lawsuits because users that purchased windows xp, cant register their product, and therefore wont work. so the government would have to keep some aspect of Microsoft alive, insuring that the economy doesn't undergo drastic swings because current technology doesn't work right. MS certainly has made their place in the world with windows XP, NOW THEY CAN'T BE SHUT DOWN. thank you for reading my email and letting me get my point out there. thanks,

Campbell

 Subject: DOJ settlement

I'm afraid that the settlement doesn't go far enough. The original focus was to break up the company. Ultimately the settlement amounted to no more than a slap on the wrist. For instance, no sooner did the settlement finalize, than MS was accused of keeping all but its own browsers from accessing its MSN network. Granted, it was remedied but it is an example of how MS flaunts its "power" in the face of the DOJ.

Time will tell.

 Subject: Microsoft Windows software

There need to be strict actions against Microsoft. They obviously have a monopoly and it is not because it's a great operating system. Windows is a lousy operating system, but what else is there to use? Every PC I buy comes with Windows preloaded, where do I get a different OS? Have you ever tried to delete Windows Internet Explorer or Outlook from the computer? You can't do it! They have to be installed or the Windows operating system won't work! Where are my choices as a consumer? How can there be any competition when there is only one product available? If computers are going to be sold with software on them, then there should be different operating systems for the buyer to try included on the computer. If consumers did have access to different software then Microsoft wouldn't be such a big company because their software is terrible and they know it!

Thank you,
 Barbara Renz

 Subject: Proposed settlement

As a personal and business user of both Macintosh and Windows operating systems, I urge you to insist that the Windows operating system be treated as such, i.e. an operating system only, and that Microsoft not be allowed to bundle its own software accessory features into the operating system—as users we should be allowed to select whatever accessory software programs we want to and we should not be subjected to having to figure out how to remove Microsoft's embedded programs like Windows Media or Internet Explorer nor be expected to use these programs as our first choice. An operating system is just what it says—a software program to perform the "basic" operations of the computer—consumers should always have the option of choosing what alternative accessory software they want to provide more user specific functions such as accessing the internet, downloading music files, playing streaming video, etc.

 Subject: Microsoft Anti-trust

Thank you for setting up this feedback link to the DOJ. I appreciate the ability to respond to the topic of Microsoft's anti-trust activity. I believe we should vigorously pursue legal remediation for the following reasons:

1. Microsoft consistently demonstrates an aggressive predatory practice towards smaller, more nimble but less cash rich companies. result:

A. as a result of this practice, innovation is diminished as Microsoft slaps together proprietary means of controlling the general public's use of technology.

B. America's ability to engage in progress in the new information age is stifled as Microsoft seeks to control the markets rather than have technology move forward.

2. Any company attempting to corner the technology market this early in a new era is a threat to the well being of America's competitive philosophies. Imagine standardizing on a particular type of car at the beginning of the 20th century, or one type of boat at the dawn of the age of discovery.

3. Microsoft blurs the lines of international standards for web access and functionality. result:

An internet that doesn't always work the way it should with competing versions of JAVA and html that do not work the same way on each platform or each browser as Microsoft makes Explorer work only with certain flavors.

Internet companies with huge productivity losses as they have to design web sites with competing versions of standards in mind.

Microsoft is more than capable of competing fairly, it is time that we impose very harsh restrictions on their anti competitive practices.

Their last series of court cases clearly showed their willingness to lie in the courtroom(-telling the Federal government in a sham test that Explorer could not be seperated from Windows), demonstrated their reliance upon lawyers and delaying tactics rather than innovation, and showed the American public how smaller companies that could have made a difference in the future have been smashed by Microsoft legal hopscotch and the release of inferior products onto the market. Thanks for the opportunity to respond.

Warm regards,
 Rob Short

 Subject: Microsoft vs Freedom
 November 20, 2001
 Salutations sojourner,

I do not know if I have the means requisite to adequately communicate my benumbed dismay over the egregious lack of Justice in the courts decision regarding MicroSoft. There is nearly the taint of perfidy in the air surrounding the removal of Mr. Jackson coupled with the clownish censure of him by some sycophants of MicroSoft.

The evidence presented in the trail was clear enough for a blind fool to perceive, that Microsoft is guilty. Their machinations and evasive dissimulation's underscored their guilt most aptly. In fact they are culpable of a most grievous evil against that hallowed pillar of America, Freedom. Through the wickedness of their hearts and the rapacious greed which drives them, MicroSoft has declared all shall bend the knee in servitude to their system.

I am not a slave. I will not pledge allegiance to an Evil company. I am a free man who would have all Americans and the businesses which provide services to them have the freedom to choose the computer operating system they desire, not that which Mr. Gates and Mr. Ballmer declare they must use.

It is my prayer that in this late hour of the darkening gloom some persons of courage would lift up the Light of Truth and render a judgment against MicroSoft of such a profound severity they would become incapable of ever perverting the course of the digital realm again.

Please, I beseech you, stand as Moses stood before the corrupt Pharaoh and deliver us from the tyranny of his dominion in to the land of Freedom, yet once more.

Sincerely,
 Michael J. Mcnall

 Subject: Microsoft ruling

To be honest I was very surprised by the settlement. I do feel it is far from complete. The main reason was the lack of respect they show by continuing their strong arm tactics while the trial was going on.

The spent 130 million to buy controlling interest in Corel, shutdown Corel Linux—changed the charter of the co so they won't start it up again. Sold it for a 65 million loss.

Microsofts defense of this was two fold. First to blame you—stating the judicial pressure forced them to sell Corel (although that does not explains the changes they forced Corel to make) so they would not control the industry.

Secondly as they lost money how could that have been illegal. Microsoft has consitantly demonstrated a desire to impeded inovation in this industry unless they have purchased the right to it. They have demonstrated a sever lack of respect for the laws of this nation. They have an insane ego—demonstrated by calling a product of theirs "me". I am a computer repair technician and consitantly see alternatives to microsoft outperform microsoft products, however no one can break the strangle hold they have on things.

 Date: 11/20/01 8:29am
 Subject: Microsoft Settlement

To whom it may concern:

As a person who's been involved in computing for over 20 years, I'm quite disappointed with how little progress has been made in the area of usability. I've been a longtime Mac enthusiast, largely because Apple Computer has maintained innovation as a core value. But as hard as a few select hardware and software developers have tried, in the face of the difficulty so many people have in using computers as a so-called productivity tool, I ask myself, "Is that all there is?"

I am very disappointed with the direction the settlement is going against Microsoft. It's a deft twist of logic that Microsoft's defense is to protect their right to innovate, when countless elements of their products are ideas that have been either outright copied from others or "dumbed-down" implementations of a similar concept.

I do have respect for the market economy. I do feel that in order to survive, any product must have the right balance of satisfying a need of a customer, and should adequately reward the developer for their efforts required in making such product available. Once innovation stagnates, however, I don't see the value to the economy as a whole in merely churning profits, particularly in the computer industry, which is still in its nascent phase. Products such as wristwatches and bicycles have long since reached a point where their chief functionality has been satisfied, and innovation is less crucial. Moreover, I don't know of many people who are particularly intimidated by either of those products — something I cannot say of the desktop computer.

It reminds me of the automobile industry some 25 years ago, which seemed rather stale until the rising quality and better cost on imports began to outflank domestic auto giants. The complacency encouraged expensive, inferior products, and once something better did arrive, the industry shift was needlessly abrupt.

I believe that Microsoft's practises have chilled competition. Today, once the Internet browser leader, Netscape, is practically a parody of itself. Java, the "write once, run anywhere" language, is slowly being asphyxiated by Microsoft's ever-changing "standards" and protests. When importing text files from Microsoft products, invariably certain characters are transposed with others—flying in the face of the ASCII character standard, which, once adopted some 35 years ago, became the foundation of modern computing. Divide and conquer.

As a Canadian citizen, I have no voting power in the United States to express my

opinion on these matters. Nonetheless, computers are the centre of my working career, and I do know that their potential as a business, educational and informational tool has not yet been attained. I do feel that Microsoft's practises have become a barrier to that end, and would like to see that they be appropriately discouraged from continuing to operate as they do.

Sincerely,
Richard Cote

Subject: Microsoft Settlement Not in Public Interest

Thank you for taking the time to read this email. As a professional computer user, and avid reader of the industry rags since 1984, with extensive experience with both Wintel and Mac computers, I feel compelled to let my thoughts be known regarding the Microsoft settlement. I had noticed since 1991 that Microsoft was strong-arming OEM's and competitors. I remember then wondering why the government was letting this happen. Microsoft had a choke-hold on technology and I was beginning to resent their hold because I noticed that the capabilities of my Mac were always introduced by Apple first and then copied (and not as well, I might add) by Microsoft. It made me mad that people that only used Windows would get technologies years after I had received them from Apple yet they thought Microsoft invented them. I knew this would slow the rate of innovation in the industry; affecting me, the consumer from being able to use technology that was being stifled by Microsoft.

I heard someone say that racketeering charges should be brought against Microsoft. I agree with that. But, as for the current settlement, please do all you can to have the original remedy reinstated; breakup Microsoft. They need their OS company broken into two or three pieces so that their goal of forcing their activation scheme, .NET, PassPort, Hailstorm, is not forced on customers that want windows but don't want to sell out their freedom.

One of most embarrassing days of being an American was when Bill Gates was asked by the Republican leadership why he wasn't donating more money to them. Here was a congressman, who is supposed to uphold the law, putting out his hand to a convicted monopolist and asking for it to be greased! Unbelievable.

Microsoft tried to kill the anti-trust division; they didn't succeed but they found another way to win, by making a back room deal with Charles James, who is a disgrace. Please fight this settlement with all you have for people like me that know the truth and know that Microsoft must, must, must be stopped and punished. Thank you.

From: Don Tillman
To: Microsoft
ATR,dtillman@wright.edu@inetgw
Date: 11/20/01 8:58am
Subject: Suggestions.. probably not the first;
Greetings!

My name is Don Tillman. I am the Computer Engineer with Wright State University's Department of Psychology. I have been working with computers for 17 years, 12 years professionally. Over the years I have been watching Microsoft and the industry in a microscopic and macroscopic fashion. From all of my reading about Microsoft (books, magazines and journals) and from my experiences as a technician of hardware and software (Mac, Windows(PC), and Unix) I have come to some conclusions.

*It is clear that Microsoft is a monopoly.
*They are a monopoly in our department because of their Office software.

*They are a monopoly with other software developers since Microsoft owns about 90% of the market share (operating systems): Software developers hardly want to consider developing for the Macintosh (Apple Computer) or Linux(Unix) since they seem to only have such a small market share. This is a BIG problem. This only helps the monopoly that Microsoft has.

*It is clear that Microsoft has been helping it's own application developers with it's own undisclosed documentation about it's API's and they have abused that information to beat the competition by developing faster and more efficiently with those API's.

It is clear that WE NEED a STRONG remedy for the situation.

Your current remedy is not strong enough. Here is what I propose. . .

(1) Microsoft open all of it's file format for all of it's application software for 10 years. This would include Microsoft Office et. al. This would allow developers to write competing Office software that is file compatible with Microsoft's. This is crucial since competition cannot exist without being compatible with the biggest office suite in existence.

(2) A true breakup of Microsoft. It is clear that they are abusing their power and the only way to stop that (considering that they have not been cooperative on reasonable terms) is by making the giant smaller. Period.

Here are the groups:
Applications (Office etc.)
Operating Systems
Software development tools
Games and gaming hardware
Educational Software

This will force Microsoft to behave by forcing to live by the rules that it has imposed on other companies in terms of competition and access to relevant API's.

Microsoft has had years to work with you and other companies politely and kindly. They have done nothing but stonewall the process and manipulate the media and deliberately piss off Judge Jackson so that they could trash his ruling. It is VERY OBVIOUS that Microsoft seems to think that they have to answer to no one. I SAY THAT THEY ARE WRONG! A slap on Microsoft's

wrist is the wrong message. They need to be emasculated!

Sincerely,
Don Tillman

From: James O'Brien
To: Microsoft ATR
Date: 11/20/01 8:40am
Subject: Public Interest

The DOJ settlement with Microsoft is in the public's best interest. The competitive playing field is open and level. There are many very substantial companies which have the intellectual and financial resources needed to successfully compete with Microsoft, including Oracle, SunMicrosystems, IBM, Compaq, Hewlett Packard, Computer Associates, Intel, Dell, etc. These companies are free to offer competitive products to the public, should any or all of them choose to do so. They certainly do not need Federal or State governments to help them compete.

The average consumer has benefited greatly from Microsoft's innovation, excellent products, and very affordable prices. DOJ's settlement with Microsoft is appropriate and in the best interest of technology consumers. Continued opposition to the settlement by certain States is irrational.

Subject: Microsoft settlement terrible for public

Dear Justice Department:
I will get right to the point: your settlement with Microsoft is shamefully inadequate. Even BusinessWeek, no enemy of the interests of corporate America, firmly

criticized the settlement as doing too little, both in what it did cover and what it did not.

I will not give technical suggestions on how the settlement can be improved. I am sure you have been receiving a lot of feedback in this area. I will only raise the very important issue of deterrence and punishment. When a criminal is convicted, there is usually some punishment. If not, there is the threat of future punishment to deter repeat offenses. In your settlement, I see neither. If I understand correctly, the only punishment if Microsoft violates the five-year accord is that the terms will be extended for another two years. You mean, the punishment for breaking an agreement and rendering it ineffectual (yet again), is that they will be asked to follow the agreement for a little longer? This agreement would be appropriate only if there had been no court cases, or if Microsoft had prevailed in court. However, we, the public, through the efforts of you, the Justice Department, have won repeated rulings that Microsoft broke the law.

Given that Microsoft's willingness to commit criminal acts has been proven, strong deterrence is needed. You should insist that if Microsoft violates the current agreement in the future, it will be broken up. Nothing less than the fear of breakup will deter Microsoft from acting however it will. The fate of the last consent agreement demonstrates as such.

Please remember that you represent us, the public, who are all consumers of computer software. It is your duty to serve our interests.

Sincerely,
Michael Lin

Subject: Microsoft vs DOJ

Sir,

Funny how things go, when our Governor Bush won the election, the first thing I thought was, "Well, Microsoft just got off the hook." I really had hoped that the DOJ would hold Microsoft to the same standard that others are held, but it really does appear that they bought their president. After being found guilty of violating the Anti-trust laws, you let them off with a "Please don't be a bad boy."

They didn't follow any of the agreements that they had prior to this, what makes you think that they will follow any slap on the wrist agreement now? You must apply a stringent penalty to them. If they had competed, rather than start with the rather lopsided advantage that they did, they would have had to do thing differently. Lets face it, Microsoft doesn't compete. They apply try to apply what the Soviet military called the eleventh principle of war, anahilation. Or haven't you noticed that while releasing updates to their OS they have steadily increased their price of the OS, while providing "free" their web browser. Of course it's free. You pay for it when you purchase the OS.

That is why it is more expensive.

To whom it may concern,

I am a professor who teaches in a landscape architecture program and does independent consulting. I use both Wintel and Apple computers. I am disappointed in the recently announced Justice Department antitrust settlement with Microsoft. The settlement seems to me focused on protecting

of the right of computer sellers to advertise rather than to stop Microsoft from controlling the software market through their dominance in the operating system market. This settlement does little to nothing that will place Microsoft on an even playing field with other software developers. Microsoft's most recent operating system release has an even more inhibiting effect on users (including myself) who might purchase third party software and on developers who might write such software.

I understand that many are pleased to just have the whole thing settled. However, the settlement misses the point and lets the offender go free.

Subject: Microsoft
To: Attorney General
From: Philippe Roy, 7770 Oak Grove Cir.,
Lake-Worth, FL, 33467

Object: Seeking a non-monopolistic Software and OS market.

As we can see clearly with shipment of XP, Microsoft has not changed and will not change unless you do something about this. In XP, they are currently seeking the death of MP3. Given that they can't provide a better technology, they use there monopolistic market to leverage their own technology. It is exactly that kind of behavior that makes our technological lives totally miserable. Once a smaller company produces a winning product or solution, they create something hardly comparable and blocks the original solution from their OS. This is unacceptable. Bullying shouldn't be rewarded.

I strongly hope that you will pursue the avenue of breaking up Microsoft in 2 distinct and separated companies. This is the only solution that doesn't rely on having them understanding their wrong-doing.

Good luck and, should you succeed, we will be forever be grateful about your contribution to a successful technological non-monopolistic society.

MTC-00001420

From: Howard Robinson
To: Microsoft ATR
Date: 11/20/01 9:49am
Subject: Microsoft antitrust case

I do not think the government really sees the real problem with Microsoft. The only way to move forward is sperating the operating system from applications. Why?

When the upgrade from Windows 95 to 98 came out, guess what. The best selling video board, best selling sound board, the Jaz 1GB backup unit would not work any more. Why? Because MS changed their software so the drivers would no longer work since these companies would not kiss up to MS. We all had to work around the problems until the drivers were reworked. MS knew this all along. What did that cost little users like me? Too much! Out of the 5 major word processors in the last 15 years, MS actions has killed three of them. All of which are better than any copy of MS Word. The fifth one did themselves in without help from MS. We are now left MS Word. It is a very poor, buggy program that can't do what the other three could do. (And I still use two of them all the time and use Word only when others require it. And then I convert Word to XY to operate.)

Why does MS operating systems crash? Because they can't or will not write a good memory manager. (Good ones like QEMM & OS2). MS does not use the memory protection levels in the Intel chips because by not using them it is easy to block other companies application programs and drivers. O, but controlling MS with slow down the great progress MS has made for us in software! If you believe that, I has some swamp land for sale for you. All during the 80's we had freeware/shareware add ons to the operating system that its still ahead of anything MS can do. (And I still use for serious computing.) Now every good fix/add-on that comes out, MS quickly makes a change in the operating system so it will not work anymore. But, it does not matter if the government solves this problem. The real world and market place will find other solutions to MS and their poor controlling software. Most of us serious computer users are finding ways around these problems and in ten years MS will not be needed anymore. The problem is it cost us lots of money and time to solve/fix the problem generated by MS continued sabotage of others software. Why should it all operate the one way MS wants it? Its a computer that can be programmed anyway we want to do things. In the end we will control it. We just don't have billions of dollars to do it like MS.

Subject: Microsoft settlement

I respectfully submit these comments and observations. I am a technologist who has been in this industry since 1985. I currently work for a brand building corporation that uses both Windows and Macintosh systems. In a prior career I worked for Ameritech (now SBC) for 30 years, five of which were in the IT organization.

It appears that Microsoft has again accomplished its objectives and will continue now on its campaign of total dominance of anything it chooses. I fail to understand why our US Justice representatives, would once again offer a simple slap on the wrist to a company that has ignored a similar punishment in the past. Clearly, this approach has not and will not work. Microsoft has so many ways to interpret this proposed agreement that it is a total waste of paper. Were they not convicted of being an illegal monopoly? Did they not destroy competition in as many ruthless and illegal ways as they desired? Will this agreement, increase competition? Is this agreement good for our future? I believe, along with many others, that the answer to all these questions is a resounding NO.

I strongly encourage you to persist in your efforts to vigorously bring this case to justice. A justice that will encourage competition and send a clear message to Microsoft and any others who operate outside the law. Microsoft's aggressive and illegal behavior should be curbed once and for all. It is harmful to our future IT economy to allow this evil doer to continue in its illegal pursuits.

Respectfully submitted,

Subject: Disappointed in Microsoft Settlement

It really is a shame to see big business act the way Microsoft behaves. If all the AG's and Justice would take a hard look at the nose thumbing that Microsoft performed with XP, you would see blatant disregard for any laws. Why did the settlement come after WinXP was released? Microsoft rushed the release because once the cat was out of the bag, no one was going to put it bag in. Look at all the added software that XP has

included. This exactly the same argument as the browser tying issue.

I want everyone to take a look around themselves and examine the impact that Microsoft has on every element of society. Is this good? If you answered yes, then it will only get worse. (i.e. Xbox, Passport, MSN browser lockout, Windows Media Player music files on CD, list goes on). If you think that it is unhealthy for one company to dictate how we live and use their power to cripple consumer decisions, then the settlement as we know it must be adjusted for harsher terms.

Date: 11/20/01 10:19am
Subject: Regarding the settlement

Thank you for providing the ability for the public to comment on the proposed settlement to the Microsoft case. As as been established for years, Microsoft has indulged over and over again in anti-competitive, predatory monopolistic behavior. The list of companies they have killed, and the technologies they have crushed grow longer every day.

If there were one isolated issue, or a short term business practice involved, I would agree that a soft penalty as is proposed would be appropriate, but Microsoft's history and on-going business practices show a blatant disregard for the letter and spirit of the law.

Through their illegal behavior, Microsoft has established themselves as a monopoly and they have grown wealthy at the expense of true competition and the budgets of millions of technology users. Across the board, we have seen technology prices drop, from hardware to software, except in the case of those tools developed by Microsoft. Competing products, such as word processors, spreadsheets, and even operating systems, have no real chance of competing where the basic rules are written and closely guarded by one company.

To use an analogy, it is as if Ford owned the exclusive right to produce oil. We all have to use it in one form or another, but Ford would be free to sell it for any price they chose, and to restrict its access and use in any way they see fit.

This is very similar to the current climate in the computer industry. I strongly urge you to reconsider your stance, and to apply much stronger penalties in this case. Allowing Microsoft to continue on as usual, as they will under this proposed agreement, will continue to stifle competition and innovation in the industry. After all, Microsoft has not developed ANY new technologies themselves, with the exception of the Access

database, a product so poorly written, it is given away free.

Thank you for your time.

A bit about me: I have been involved with the personal computer industry for over 20 years. I remember when MS first started. I have used every operating system on the desktop from CP/M, DOS, Windows 1.0, Atari, Amiga, Commodore, OS/2, NT, Unix, Mac OS 9, and now Mac OS X. I am not a kid with wild eyes and an axe to grind, I'm just a small business trying to earn a living, but Microsoft's predatory practices continue to cost me a significant amount of money.

Hello,

The following is from www.news.com: "Microsoft, which recently reached an antitrust settlement with the U.S. Justice Department, is on the point of settling a raft of private antitrust cases, according to a report Tuesday.

The Wall Street Journal reported in its online edition that the software giant has tentatively agreed to give software and computers to more than 14,000 of the poorest U.S. schools over a five-year period, which would help resolve the majority of its pending private class-action lawsuits."

I would suggest that you mandate that Microsoft purchase Macintosh computers and software to settle this case. Forcing another 14,000+ schools to use Windows and Microsoft software isn't a very harsh punishment—Money is like water to Microsoft and you are essentially allowing Microsoft to purchase market share.

In fact, Microsoft (along with Dell) has targeted schools as a growth area—one long dominated by Apple Computer. This so called settlement allows them to buy market share, which they will later tout to the detriment of Apple Computer.

Believe me, if this proposal is agreeable to Microsoft, there has to be an upside or they wouldn't even consider it.

Does this proposal provide a school with a choice of computer platform? If a school wants Macintosh Computers, is that OK under the terms of this settlement?

I don't see how this kind of settlement prevents Microsoft from using its monopolistic power to do further damage to competitors.

Definitely worth looking into.

Subject: Thanks for standing firm!

Dear Attorneys General,

I just wanted to commend you all on standing firm against the enormous pressure to settle the Microsoft anti-trust case. I only wish the DOJ and other AGs had as much fortitude. Microsoft found ways around previously imposed sanctions and I fear that any type of penalty, short of structural, will simply fail to sufficiently reign them in.

I've been president of a multimedia company since 1987 and I have watched Microsoft imitate and extinguish numerous innovations over the years. They see an innovation in the marketplace and quickly move to kill it, by copying it into their monopolistic Windows operating system. They then use their monopoly to erect sufficient roadblocks to competition so that their version will win out.

Here are just a few examples that come immediately to mind...

Windows itself was an imitation of Macintosh

Excel was an imitation of Lotus 123

Word was an imitation of WordPerfect

Windows Media Player and AVI were imitations of QuickTime

ActiveX was an imitation of Java

JavaScript was an imitation of JavaScript

MSN was an imitation of AOL

MS Instant messaging was an imitation of AOL's instant messaging

Internet Explorer was an imitation of Netscape Navigator

MS Money was an imitation of Quicken

Even MS-DOS wasn't "innovated" by Microsoft, it was imitated from CPM

I honestly can't think of ANY product that Microsoft invented or innovated by themselves without copying it from some other company first.

In my opinion, the only way to really level the playing field, is to separate the operating system from Microsoft's other product divisions, structurally. Prevent the new system company from colluding with the new applications company and prevent the system company from incorporating stand-alone third-party products into the operating system in the future.

Short of that, it will quickly return to business as usual at Microsoft and innovation & competition will continue to be stifled.

Thanks for standing firm,

Subject: Microsoft.

Should Microsoft receive harsher penalties?

I am very disappointed with the Feds settlement. Fortunately nine states' AG's agree with me. I have sent the following to the states' AG's dissatisfied with the terms of the USDOJ settlement agreement. This settlement is to the benefit of Microsoft and not to the markets and consumers.

It seems to me that Microsoft has indulged in not only anti-trust violations but

racketeering as well. Monetary reparations will do nothing to stop their abuses that have stifled the computer industry for years and years.

As you can see, my position well exceeds current prosecution parameters. Even if you don't agree with my extreme position, but desire more vigorous prosecution, I urge you to continue this case until an appropriate separation of Microsoft entities is made.

I urge you to continue this case. Do not fold in the face of adversity. You stand for everything this country was found on. Freedom.

God Bless you.

Microsoft has way too much control already, over the direction that the user may take on the internet.

Many people are new to the internet, and MicroSoft attempts to limit their choices, and often the route that MicroSoft uses is of lower quality or less reliability than other choices that are available.

Nothing short of a strong hand is going to prevent MicroSoft to continue to act in a very non-competitive manner.

You are dealing with a Corporation that believes they are a special case, that they can set themselves above their competition...and even above the government offices of the United States of America.

They will look for and find any cracks and crevices, loopholes that they can exploit. They will interpret the rulings in their own favor rather than to the letter of the ruling.

Their purpose is Power and Control, rather than the betterment of the World, as they claim. Users and the internet as a whole will thrive and innovate far more, with strict controls on Mr. Gates and his company. MicroSoft does NOT innovate, by the way. They copy what others are doing, and use every resource at their command to crush those who are the real innovators, and who wish to compete in the marketplace. The marketplace will cease to exist if MicroSoft is not brought to heel with a sharp rein.

Subject: MS Case Settlement does not go far enough

What about the damage caused by Microsoft's monopolistic practices? Many companies have been either put out of business or reduced to a niche market.

The settlement does nothing to address the damage already done. It is too little too late. The damage is done. Microsoft is a stronger monopoly because of their illegal practices. Why wouldn't any other company practice the same crimes when they will come out ahead anyway? Microsoft needs to be held accountable for past actions and the effects of their actions.

Subject: Comments

With respect to the proposed Consent Decree ("Decree") between the United States Department of Justice ("DOJ") and the Microsoft Corporation ("Microsoft" or "Company") in settlement of the antitrust action between DOJ and Microsoft, I must express my condemnation of the Decree in the strongest possible terms and I respectfully request that the Court reject the Decree for the reasons set forth below.

The Decree in no way serves the public interest or the public good.

The Decree approaches, but does not even achieve, a mere slap-on-the-wrist for the continuing behavior of this convicted, unrepentant abusive monopolist.

There are no penalties imposed for Microsoft's behavior whatsoever. Why are there no fines, no court costs, and no DOJ costs of prosecution being recovered? Why

are no damages of whatever type being paid? Why is the management of Microsoft—the same management that has blatantly breached previous settlement agreements—being allowed to remain in charge of the Company?

It is possible for a reasonable person to view the behavior of Microsoft as racketeering and the Company's actions should be investigated to determine if such actions in fact fit that pattern.

In summary, the Decree lacks penalties that fit the crime. The Decree will not end Microsofts monopoly abuse behavior and will encourage the continuation of such behavior in the future. I predict the government will soon be back in court with another Microsoft antitrust suit if this

Decree is accepted.

Thank you. (signed)

Subject: MICROSOFT SETTLEMENT DOJ

In short, I think the government threw in the towel much too soon. From way back in the days of DOS, Microsoft has repeatedly demonstrated an inability to tolerate competition. A small company, whose name I do not remember, came up with a way to compress DOS files in the mid 90's. It was very popular, as it allowed for increased storage on hard disks that were very expensive at the time. Microsoft put the software in its update to DOS and crushed the company. This was just the beginning...

Recent news reports state that Microsoft invested in Corel, the company that owns the

rights to WordPerfect. Corel recently announced that they will no longer make WordPerfect for the Mac. Looks like Microsoft killed the only real competitor to Word for the Mac market. Of course, they will still allow it for the PC market, as they must maintain the illusion of competition.

And now, Microsoft wants to control the Net and forces users to call them to reinstall XP? The monopoly continues. I hope the states' attorneys general continue their lawsuit.

Thanks for the ability to comment.

Subject: Microsoft settlement

Shame on you for caving in!
Microsoft has done and continues to do serious damage to the competitive marketplace in which they operate. Past legal actions have done little to change their behavior and nothing to change their attitude. Significant remedies are needed to keep them in check. If you need reassurance, witness the glee and excitement expressed by Gates, Ballmer, et al after the settlement was announced—they know they're getting off easy. Consider these facts:

- you and eighteen states felt strongly enough to press the case in the first place
- numerous additional, credible charges of anticompetitive behavior have surfaced outside the scope of the formal litigation
- it is widely accepted that Microsoft has ignored and/or flouted earlier court orders
- the EU is pursuing several investigations of Microsoft's anticompetitive behavior

Where there's smoke, there's fire! The rush to settlement seems to have been prompted by concerns about the economy in the aftermath of September 11. The argument suggests that unshackling Microsoft can help boost the economy. This is debatable, but even accepting it as true does not make it a good idea—the short term boost to the economy has to be weighed against the long term harm caused by Microsoft's ruthlessness and the potentially huge economic opportunities created by unshackling innovation, the true casualty of the Microsoft's behavior.

It makes me sick every time I hear Bill Gates talk about innovation. Sure they've added value, but Microsoft bought or copied many of their best products. And we may never know how many great ideas/products/companies they squashed along the way. So, not only are they not innovative but they actively hinder innovation!

In the interest of full disclosure, you should know that I am a Microsoft stockholder.

If the barn door is not yet completely closed, I urge you to revert back to your earlier stand against Microsoft.

To whom it may concern,
I thank you for allowing the public to provide input in this matter. I would like to be brief with this. It is obvious that there is a monopoly and the justice department cannot receive enough evidence from the software developers because this would doom their businesses. In my own opinion, Microsoft needs to be broken up into three separate companies. The Internet and server software group, the application software group and the Operating System Group. This would prevent them from monopolizing the entire software market any further. Even the video game market is going to be taken over by Microsoft in the next year. The company needs to be broken up to allow for better competition which will in turn bring about better products for the customer.

The lack of competition in the OS market has left 95% of the entire computing world using the most ineffective OS in the market. Windows not only provides hackers access to personal files but allows individuals with malicious intents to create harmful and widespread viruses that end up infecting the majority of computer systems. Mac users and Unix users usually are immune to these attacks because the viruses are not written to attack these systems. Please, there must be something done to diversify the OS market and allow some competition within this segment of business. When ever some new

technology comes into our lives, one company seeks to dominate which Microsoft has. ATT did the same thing and now prices are down and the products and services have greatly improved. Please do the same for this new technology. Competition brings about change and better products for everyone. It's the American way.

MTC-00001447

From: Jim Brager
To: Microsoft ATR
Date: 11/20/01 11:13am
Subject: Microsoft Settlement.

As an interested observer of the case against Microsoft, I am still, after all the years the DOJ has spent litigating this case, trying to determine where I, as a consumer, have been harmed by the business tactics of Microsoft.

When Microsoft began producing their products, they met, and continue to meet, all of my desires for efficiency and productivity in the "home computing" area. The mainframe platform is easy to use and allows me to navigate whether I'm at home, traveling, or visiting locally.

The convenience of "integration" of their products has been a blessing to my computing needs, not a hindrance.

If the firms of "Silicon Valley" are unable to compete against the Microsoft products, it isn't due to Microsoft's products, but rather their own inefficient systems that cause the marketplace not to purchase them. Rather than whining and run crying to the DOJ, Silicon Valley should invest in the personnel and R&D to really compete. After all, that's the American System— Competition! Microsoft may not always compete fairly, but that's business, as much as it is in life everywhere. Can you imagine if the San Francisco Giants were told not to put Barry Bonds into their lineup against Toronto, because Barry hits too many home runs! If you want to play the game, then compete, don't ask for someone else to lower the quality of the competition!

Bring this case to a close now with this pending agreement. Our nation needs to get back to the job of growing the economy, and as can plainly be seen, the financial health of the nation has gone downhill since this case began. It's time to end it now.

From: Jeff White
To: Microsoft ATR
Date: 11/20/01 11:10am
Subject: MS Case comments

I would like to add my comments on my perspective of the Microsoft case. As an educator in the state of Pennsylvania, I have been "forced" to use Microsoft Office because the State has adopted it as the

standard software. Normally, this wouldn't disturb me, but in this case it does. The reason is that in order to win the bid, Microsoft drastically subsidizes their software. What would be a \$500 product when purchased on the open market is only \$55 when purchased by schools or colleges. No other vendor could reduce their product that much in cost to compete. The result? Microsoft takes over the office software market and pushes all competition out. They are either substantially undercutting the competition's prices by selling their product below cost, or they are price gouging on the open market. In either case, they have destroyed any sense of competition.

Furthermore, but "forcing" the state to accept a "deal they can't refuse," Microsoft has brought a burden to schools. I was the former Director of Technology in a school district for over 6 years. During that time, we installed over 800 computers and purchased and installed ClarisWorks/AppleWorks on all of the machines. Now, in order to maintain the standard with the state, the district is forced to change their software resulting in a cost for the software, cost of installation, cost of training, and countless hours of instructional prep time lost to converting files to a software package that doesn't have as many capabilities. So much for freedom of choice within schools to teach following best practice principles.

Lastly, since many schools use Macintosh computers, Microsoft consistently offers late, meager upgrades to their software for Mac users. Hence, the Windows users are always ahead, which is an unfair advantage by the company that makes Windows.

In my opinion, the company needs to be broken into two separate unrelated entities.

Sincerely,
Prof. Jeff White

Subject: Microsoft AT Settlement

Hello,

I just wanted to pass on my thoughts regarding your proposed settlement with Microsoft. It is clear that Microsoft has flagrantly abused its monopoly position and I believe your restrictions will not be effective as technology changes. Microsoft has demonstrated a masterful ability to take advantage of new technological distribution channels and business models to extend its business influence and I believe it will continue doing so since the new restrictions can not anticipate all new technologies. I believe the only way to prevent Microsoft from continuing to abuse its monopoly position is to introduce competition in its sphere of influence by forcing its various units to compete rather than collaborate. If you doubt this, consider if there is any other approach which would lower the price for consumers. As things currently stand, if you sell the OS and the key applications you have no incentive to try and make users use one or the other since they will buy both.

Good luck!

Subject: What a Shame

We had our one great opportunity to stop the bully and bring some real innovation back to the market. Instead Microsoft gets off with a slap on the wrist and is sent off to continue on its merry way to gobble up any and all remaining free markets.

As a consumer I am appalled at the governments apparent lack of balls to see this thing all the way through. Microsoft will never voluntarily give up or curb its practices. They have everything to gain and very little to lose by just plowing ahead and stomping on anyone who gets in the way. It saddens me that ten years from now when we have to go through this whole thing again we will wish that we had solved the problem when we had the chance.

Subject: Time for this monopoly to end!

To whom it may concern,

It's time to weaken the grip that Microsoft has on the US and the world. Over the last 20 years they have consistently used predatory tactics against competitors. They have driven many of their competitors out of business because they own the operating system. They have effectively kept their API's secret and used them to leverage their applications. While the tactic has been effective against their competition, this is like owning the product, the railroad and the track. It was wrong in the 1900's and it's wrong now. Microsoft has laughed at past punishments and I believe they will continue to do so. The latest agreement is a slap on the wrist for some rather nasty business practices. It should not be supported. Judge Jackson was right, it's time to split the company in two.

Since when does a judge give a killer a light sentence when the killer does not express remorse? And since when does a judge not put a killer in jail who shows an inclination of killing again? I don't see any remorse or indication Microsoft is changing their illegal behavior.

I feel that the breakup order should not have been reversed. That punishment was just and appropriate. Please come up with a punishment just as strong as a breakup. The current settlement will only inconvenience Microsoft a little, and does very little to stop their illegal behavior.

Sorry I can't provide the evidence that Microsoft is still behaving illegally. But it is widely published and easily visible if you start up Windows XP and try to use it for a little while (but don't ever type in your credit card number or soon you will be singing "Where did all my money go?").

Microsoft is greedy and indifferent and will not stop breaking the law unless harshly punished.

Subject: Microsoft case
Hello.

If you're keeping track of how the public feels about the proposed settlement with Microsoft, put me in the "not satisfied" category. It escapes me how a company can receive such a hand slap in light of their past conduct. Like the O.J. Simpson case, this settlement undermines my already shaky confidence in our system of justice. It only shows that if you have enough money and clout, you can break the law and then buy your way out of any legal repercussions.

Subject: Microsoft Settlement

I am distressed that the proposed settlement is far too lenient and that Microsoft's monopoly will continue to grow leaving computer users with increasingly fewer options for desktop software and operating systems.

If you look at the new "Technologies" or "Features" which are introduced as part of Windows XP the future looks grim. We may be forced to store personal data using Microsoft's Passport in order to use web commerce, we may be restricted to only

playing multimedia sound and movies using Microsoft's proprietary media format, our desktop applications and web pages may automatically sprout unintended web links to Microsoft sponsored sites, and we will be forced to pay monthly fees to Microsoft in order to use their software.

As long as Microsoft controls both desktop applications and the operating system, it will continue to strangle innovation, force users to pay outrageously high prices for software, and behave like 500 pound gorilla.

Subject: Microsoft

Dear Sir's;
I used to be a staunch supporter of Microsoft in it's early days because they used to be very customer oriented and did what made sense. That has all changed. Now they only do things that makes sense for them and anything to take more money out of customers pockets. I, for one, hate to have a conglomeration of software loaded on my computer that I will never use and I am forced by Microsoft to have it on my computer. There is no way of removing it without major and complex jirations that even some computer consultants (like myself) are reluctant to undertake.

The more complex a program, the more likely a possibility of bugs and breakdowns. There is clear evidence of it that even Bill Gates has recently admitted to (he has promised in recent talks to "fix the PC in the next decade).

A more viable solution would be to allow the customer to choose the features that they would like on their computer at setup time much like they choose various application software now. An operating system should be just that—an operating system. The customer

should have an option to choose the applications that they wish to install and not be forced by Microsoft to install everything from them.

Microsoft has adopted a posture of forcing themselves on the customer and since Microsoft has developed a monopoly on PC installations the customer does not have a choice but to buy their system if they wish to be somewhat compatible with the industry.

I say, break them up and allow for a more competitive environment. It worked with the long distance telephone industry and the public is enjoying long distance telephone rates that are the same as or cheaper than local rates. Same thing will happen in the computer industry if you succeed in breaking up

Microsoft. There are software companies that are selling their software for \$30 to \$100 and are able to make a profit. The same thing can be true for an operating system. Microsoft has been jacking up the price of the operating system more and more as they gained more and more of the monopoly on it. Only three or four years ago they used to sell Windows for under \$40 and now they have it at \$300 and even the upgrade is at \$200. I bought the Visual Studio at \$400 just a couple of years ago now it is at \$1000.

When engineering costs are recovered a product usually goes down in price. Not with Microsoft. It keeps going up proportionately to the amount of monopoly control that they have.

I hope I had given you enough reasons to break them up. If you need more, let me know and I'll spend some time and do some research and provide you with more.

From: bob frost
To: Microsoft ATR
Date: 11/20/01 11:31am
Subject: Microsoft settlement

Dear persons:
As an information professional and educator, I am in no small degree dismayed

by the settlement agreement recently negotiated between Microsoft and the Justice Department in the Microsoft anti-trust case. Having also been trained in the economics of industrial organization, I understand such law pretty well, and to me it is clear that Microsoft's violations of the Sherman and Clayton Acts, particularly with respect to tying and predation, are not sufficiently addressed by the remedies proposed.

I worry most, however, that the agreement does almost nothing to prevent Microsoft from repeating on the Internet what it did with operating systems. That is, by dint of its control over the PC operating system, Microsoft effectively destroyed its competition in the sphere of software applications. Using its control over operating system source code and application programming interfaces (APIs), Microsoft gained control over the entire PC platform. Here's a list: Spreadsheets: was Lotus 123, now Microsoft Excel Word-processing: was WordPerfect, now Microsoft Word Databases: was dBaseIII and FoxPro, now Microsoft Access Email: was Eudora and many others, now Microsoft Outlook and Entourage You will note, I hope, that almost all of the original competition not only lost product dominance, many such firms also went out of business or were acquired by others in dire circumstances. By a sharp reduction in the competition, Microsoft has therefore effectively quashed innovation in microcomputing applications. While one might claim, as the Bush Justice Department, that such is the way of legitimate competition, earlier findings of fact in this case indicate otherwise and no credible remedies are proposed.

With its emerging ?.NET? strategy, Microsoft is overtly planning the same strategy for next-generation Internet-based software. With the very recent release of Windows XP, that approach is overt, as, for example, Microsoft implements code that not only precludes the use of competing products (Apple's Quicktime, Real's RealAudio, and Sun's Java), it uses its market share to undermine open and global Net standards carefully and at length designed, negotiated, and affirmed by almost all relevant non-Microsoft players

Finally, in this time of heightened fears about security and privacy, I must note that consumers are systematically damaged and such damage will grow in the future by Microsoft's notoriously insecure products. Over the past several months there has been a raft of costly security holes discovered in Microsoft server software, among them the costly Nimda and RedAlert virii. Worse, just last week, Microsoft had to disable large portions of its new "Passport?" authentication service due to security concerns. Passport is, in simple terms, a repository and serving system for the personal data used in e-commerce. It is integrated into Windows XP. As Microsoft in the future will undoubtedly use its market muscle to impose Passport as the authentication standard for e-commerce, consumers will be in constant danger of leaks of their personal information. In addition, by dint of its control of the Passport database, Microsoft will become the largest repository

of consumer information in the world. Given its past abuses of law and minimal respect for others, I simply would not trust Microsoft to safeguard consumers' vital interests; rather, I can assure you that if there is money to be made in mishandling personal information by Microsoft, they will do so. In conclusion, it is my deeply held belief that the proposed anti-trust settlement in the DOJ v. Microsoft case is unacceptable. Innovation will continue to be stifled, consumer security will be compromised, and software prices will remain at high, monopoly-based levels. I beg your office to reject the agreement. Thank you for your attention in this matter.

Sincerely,

Subject: Disappointed
US DOJ:

I just wanted to take the time to show my disappointment in your position on the current case against Microsoft. I don't know how many people's pockets are being lined by this disgraceful "settlement", but I'm glad to see a few states sticking to their guns. (I notified all of them of my support.)

The tactics that Microsoft uses sicken me and cause me serious concern over the ability of future companies to compete on a level playing field. I have not only seen, but also felt the affects of their ruthless and unethical behavior. One only needs to read of the original investigations to find out the root of all this evil. Repeatedly Bill Gates and other Microsoft cronies stated emphatically that they had done no wrong. And repeatedly internal documents were produced that forced them to admit that they had indeed done exactly what they had been accused of. And without exception, people just shrugged their shoulders! How can that be! They lied to us, to their customers and to a high court judge.

I think it is high time that Microsoft reaps what it has sewn. Kudos to California and the other eight states' attorneys general. I look forward to a day when real innovation can again take place without fear of Microsoft retaliation.

From: Todd Stubbs
To: 'microsoft.atr(a)usdoj.gov'
Date: 11/20/01 11:52am
Subject: Please don't let them off so easy!

Dear Sir or Madam:

I am writing to express my disappointment over the US Justice Department's decision to settle the Microsoft anti-trust case.

I have been a professional user and programmer of microcomputer technology since 1983. Almost from the very beginning of their existence, Microsoft has been more than merely aggressive—they have been deceitful and, I believe, unethical. Their behavior as a company has always been egregious, even if it has not always been illegal. However, at that point in time when they became a monopoly, whenever that was, this pattern of immoral behavior became illegal as well.

The conundrum, of course, is what to do about it. I do not believe that heavy government involvement in regulating the affairs of Microsoft is in either the public's or Microsoft's best interest. And yet, any regulation or injunction you put forth, they will find a way around it, or merely ignore it as they have done in the past. It would seem that there is little else the Justice Department can do to but ask for some remedy that would change Microsoft's structure—nothing else will work.

Let me also debunk the myth that what is good for Microsoft is good for the economy.

It is patently false, simplistic thinking. Microsoft has squelched so much good technology so that their own, often mediocre, products will prevail in the marketplace, that the doldrums the technology industry recently faced may never have happened had the Justice department defended a true market economy several years ago when Microsoft faced a similar charge. In my estimation, the market would already be 2 to 10 times as large as it is now if it hadn't been for Microsoft's egregious behavior.

Microsoft is the single most anti-innovative force in the technology industry today. Period.

Letting Microsoft off easy would probably provide a next-quarter, short-term benefit, but would continue to restrain the innovation and growth as it has done (except for Microsoft) for the last 10 or 12 years. Please, do not do this!

Respectfully yours,
S. Todd Stubbs

From: Joseph Boykin
To: Microsoft ATR
Date: 11/20/01 11:50am
Subject: Microsoft settlement

I am writing as a citizen of Massachusetts in regards to the proposed settlement with Microsoft. As a "computer professional" I am very familiar with the industry and Microsoft and firmly believe that the proposed settlement is unfair to numerous corporations that have attempted to develop competing products, consumers who have used or even those that have *not* used Microsoft products.

I firmly believe that Microsoft has engaged in numerous anti-trust violations. Their unfair business practices seems to permeate the entire company. For example, the company I was most recently at, and held the position of Vice President of Engineering, was looking to raise additional venture capital. We were courting Microsoft as one of those investors. Although the deal never went through, Microsoft required a deal where they would invest \$5M in the company, but *required* that we commit to buying \$2M worth of Microsoft products.

I hope that a more fair and equitable agreement can be reached in regards to this matter.

Yours truly,
Joseph Boykin

Subject: microsoft anti-trust case

Dear Sirs/Madams:

I am glad to hear that your offices have chosen not to join in on the deal that the U.S. Department of Justice recently struck with Microsoft. Unfortunately, my home state of

New York has decided to change its mind regarding the economic evils of a monopoly power in the marketplace.

I will not go into a lengthy discussion as to why a monopoly is a bad thing. Any freshman economics major can tell you that.

I am also sure I do not have to remind you that the previous antitrust case against Microsoft went nowhere because the government chose to use conduct remedies that Microsoft subsequently ignored. As someone once said "Those who ignore history are condemned to repeat it". I am afraid that the current administration does not read their legal history books.

In case you may think I do not understand technology, I have been operating production computer systems for over 15 years. I am well versed in the single vendor versus multi-vendor pros and cons. Please do not listen to the talking heads in various magazines who overwhelmingly support Microsoft either from ignorance or perhaps monetary arguments (Microsoft as a large consumer of advertising may very well influence editorial opinion).

In closing, Microsofts arguments regarding freedom to innovate are specious. Off-hand I can not list five things that Microsoft created for the computer industry that a competing company did not pioneer. Microsofts history is that they wait till someone else creates a market, they buy a small time bit player and use a bunch of money to promote their solution and the business consumer uses it because it is from Microsoft, not because it is technically a better product. The one thing I can give Microsoft credit for is their overriding mantra of ease of use. Much of the success Microsoft achieves in the marketplace is from bundling software titles and from making existing titles easier to use.

Sincerely,
David Lopez

Subject: reject the microsoft settlement

If Teddy Roosevelt were in the Whitehouse, Microsoft would have been split into at three companies five years ago. Since ours is an age in which politics is defined almost purely by money, it is not surprising that the Bush Justice department has entirely caved in the face of Microsoft's monopoly.

I applaud those attorney's general who have balked at the preposterous settlement. Microsoft must be punished for it's anti-competitive practices, it's extortion of pc makers and its racketeering to fix prices and control the digital age.

Microsoft should be forced to compete on an even laying field. This is the only way we can stop the endless production of plagiarized software (every Microsoft OS from Window 3 to the new XP (a blatant rip off of Apple's superior OS X)), application designed to cripple competing operating systems and it's relentless march to acquire and profit from the personal information on

every single pc in the world. Throughout it's history, Microsoft has indulged in not only anti-trust violations but racketeering and blackmail as well.

I hope you will continue your struggle against this behemoth.

Sincerely,
Ben Thompson

Subject: Microsoft deal

Sirs:

I am very disappointed in the settlement that Microsoft has apparently been able to establish with the US Justice Department. They have obviously used their monopoly power in PC Operating Systems to create monopolies in productivity software, development tools, and web browsing. And, their current .NET strategy is clearly an attempt to extend their monopoly throughout the web and into every computer.

While I always felt that breaking up Microsoft was too harsh, the monitoring provided for in the current settlement will do little to blunt their empire-building efforts. And there are no real penalties in the settlement for their past abuses. They have already established that they are willing to skirt and ignore any agreements that they come to with government agencies, continuing with their efforts undaunted.

The argument of some that harsh penalties and restraints will have a negative impact on the US economy are both specious and short-sighted. We do not forgive a woman who attempted to bomb a police car more than 20 years ago, simply because she has lead an exemplary life since. We should not forgive a company that has committed similarly grave offenses simply because they play an important role in our economy. In fact, it is because of the importance of their position in our economy that we must make certain that they toe the line; infractions on their part have a large impact in our lives.

Also, while it's true that imposing severe penalties on Microsoft may result in short term negative consequences for our economy, in the long run, our economy and consumers will all benefit from the increased competition. We do not need a juggernaut to establish standards—the web established useful and important standards that many people use on a daily basis (HTML, POP, TCP/IP, ...) without the guiding hand of a monopoly. In fact, many of these standards were established by non-profit organizations and consumer demand. Finally, while I don't mean to draw a parallel between Microsoft and foreign enemies such as the Taliban or Sadam Hussein, it is clear that we are willing to sacrifice the short-term performance of our economy in a just cause. I believe that Microsoft has committed grave offenses; it is important that they receive proportional penalties for past behavior and real restraints on future behavior. Prosecution of Microsoft

is a just cause for which I and many like me are willing to make a short term sacrifice.

From: Ostravich
To: Microsoft ATR
Date: 11/20/01 12:08pm
Subject: Microsoft Anti-Trust lawsuit

I've been told I can e-mail this address to provide feedback on the Microsoft Anti-Trust settlement currently on the table. Although I am heartened by the advance in the settlement to prevent "exclusive dealing", I am very disappointed that there are no restrictions to prevent Microsoft from bundling any product into their operating system. Microsoft employees clearly stated in the e-mails used in evidence at the trial that the only reason they bundled Internet Explorer into their Windows operating system was because Internet Explorer was an inferior product and the bundling prevented competitor's products from being used. They attempted to do the same thing with Apple's QuickTime and even broke competitor's software so that it would not run properly leaving Microsoft's version of that product as the only alternative.

Now with the advent of Microsoft's XP operating system I am concerned that there

will be no competition for Multimedia products and whatever else Microsoft wants to compete in. The way it has worked in the past is if Microsoft has used technology to redirect any content to Microsoft's products for displaying that content. What they've done with Internet Explorer, they will now do with their multimedia products destroying any competition or reason for a company to make a competing product.

Let me be clear—I don't think the solution should be a financial one. The trial clearly shows that Microsoft engaged in behavior that was anti-competitive and a punitive monetary solution will not correct that. If Microsoft should not be split into an operating systems company and an application company, I would at least like to see a clear division of Applications and Operating Systems so that if a company wants to make a competing product it can be easily plugged in to the Microsoft Windows Operating System. Competing companies must find it frustrating when they invent the technology (Netscape, Real Networks, Sun Microsystems), and then Microsoft duplicates the technology and disallows those competing companies software to work correctly. This is not Microsoft being innovative—they have not invented any of this technology. They've simply embraced that technology, sometimes extended it, and shut out their competition. This means there will be no further innovations in that technology arena because there is no incentive for the companies to extend technology that will not be deployed on the Windows platform.

Please reconsider the current settlement and renegotiate the settlement to prevent Microsoft from stifling competition.

Thanks for your time,
Greg Ostravich

To: Microsoft ATR
Date: 11/20/01 12:07pm
Subject: settlement terms will do nothing to stop Microsoft's monopolistic actions
Justice Department:

The agreement is a joke. It does absolutely nothing to punish Microsoft for its past abuses, and it does little or nothing to stop them from using their monopoly position in the operating system market to abuse competitors in emerging markets that rely on the operating systems. The lack of punitive measures provides a tacit invitation to Microsoft to continue their abuses regardless of potential lawsuits. They can make more money from these abuses than it costs them to defend themselves in court, particularly since they are now conditioned that any agreements are going to be watered down and full of loopholes. In addition, the years-long delays while the suits wind their way through the courts assure that any ruling against Microsoft will only affect markets that they have already used their monopoly power to dominate. Below is a timeline that could be repeated ad infinitum if Microsoft is not punished appropriately. Note, in particular, the claim of your department in February of 1995 that the agreement you reached with Microsoft at that time would

“end Microsoft's unlawful practices that restrain trade and perpetuate its monopoly power.” This is the same claim you are mistakenly making about the current agreement, but you seem hell-bent at repeating this mistake. February, 1995

The Justice Department reaches a settlement with Microsoft in a previous case closely related to the current one. The Justice Department promised in this settlement that it would “end Microsoft's unlawful practices that restrain trade and perpetuate its monopoly power.”

Judge Stanley Sporkin, now retired, rejects the proposed settlement when he determines the decree was not in the public interest. He complains that, “simply telling a defendant to go forth and sin no more does little or nothing to address the unfair advantage it has already gained.” Spring, 1995

A U.S. appeals court overturns Sporkin's decision, saying he relied on inappropriate evidence, and removed him from the case. August, 1995

Judge Sporkin is replaced by Thomas Penfield Jackson, who approves the settlement. 2000

Thomas Penfield Jackson recommends splitting up Microsoft into an operating system company and an applications company as a result of the current anti-trust case. Early, 2001

The same U.S. appeals court that rejected Judge Sporkin's decision and removed him from the previous case, rejects Judge Jackson decision and removes him from the current case. He is replaced by Judge Colleen Kollar-Kotelly. November, 2001

The Bush Justice Department significantly waters down the proposed remedies against Microsoft and assures Judge Kollar-Kotelly that the settlement, if approved by the court, would “eliminate Microsoft's illegal practices, prevent recurrence of the same or similar practices and restore the competitive threat” the company faces from rivals. (Sound familiar?)

Subject: Microsoft settlement

Today I read that Microsoft's proposed settlement with the government over the antitrust complaints may include a donation by Microsoft of computers to U.S. schools.

This is absurd. This goes completely counter to the original problem, e.g., abuse of monopoly power, since this settlement will undoubtedly reinforce that monopoly.

The only terms under which this type of settlement could make sense were if Microsoft were required to donate equipment (software, etc) from other companies.

Please don't let this settlement proceed as is. Alas, I fear the taste for enforcing antitrust has left the Justice department.

Greg Alton

Subject: Microsoft Settlement

I believe the terms of the settlement are short-sighted. For one thing, it creates the impression that Microsoft is above the law. I refer specifically to the apparent perjury (Gates deposition), evidence tampering (doctored demo video), and witness intimidation (myriad companies) which occurred during the trial. Moreover, it is clear that Microsoft was only too willing to flaunt the terms of the earlier restraining order. A slap on the wrist hardly seems appropriate.

Microsoft has consistently acted arrogantly and illegally (as exemplified by the evidence and the verdict), and they can be expected to do so under the proposed terms. Economic theory and practice inform us as to what can be expected from a monopolist, and the case of Microsoft is classic confirmation. The consumer has been burdened by sub-standard, unstable, overpriced Microsoft products for years. Because there is no effective competition, they are under no real pressure to perform and, in fact, they have exploited the situation. Imagine the consequences if the AT&T monopoly hadn't been broken up: today we would have perhaps a half dozen models of telephone available to the consumer, no cell phones, stunted use and development of fax technology, sky-high long distance rates, and no Internet. You can rely upon the fact that Microsoft's domination has resulted in similarly constrained technologies and opportunities in the computer marketplace.

The most frightening thing, however, is the ability their unfettered operating system monopoly confers for creeping into and taking over other markets (multimedia, servers, music downloads, Web browsing, e-mail, office productivity). We now have the X-Box creeping into the living room along with Microsoft's digital recording service for TV. And, then, there is Microsoft's Passport security, the ultimate intrusion and stranglehold.

Where does it all end?

Your proposed settlement reeks of a politically motivated whitewash. Microsoft's money and lobbyists have apparently had their way. The fullness of time will undoubtedly show what a blunder this is and how poorly the citizenry of America has been served.

Subject: Microsoft Settlement

Watching in awe at all of the big companies becoming fewer yet bigger by “joining” I really wonder if Government is able to be in charge. In the Microsoft case, the Justice department has directly sold the small “average guy and gal” consumer out. Lack of competition pretty much gets us a dictatorship type of market. They produce or provide what they want and we have to buy

it if we want anything at all. Plus they get to change it at will whenever they want more \$\$ as we don't get a choice if we want to maintain a viable use of a current product. We don't get a choice to use only a portion of their product, buy all or get none!

Our country was built on small to medium Bsns giving a freedom of choice. You have further choked off the spirit of innovation and small to medium size guy having the opportunity to provide innovative advancements. Look only to the price of medications that are currently prohibitive for many seniors and you get a good idea of "cornering the market". I am not foolish enough to believe all answers are really simple, but I can't be moved to believe that endorsing monopolies and choking out the future hopes of aspiring innovators is what we are about in this country. You basically have rolled over for them!!

Subject: Antitrust remedies for Microsoft

Dear Sir or Madam,

I am writing to express my dismay at the proposed settlement between the Department of Justice and the Microsoft Corporation. After 4+ years of legal wrangling and an equal amount of time chilling innovation and financially destroying good companies, the industry needs an effective solution without delay. The settlement proposed by a number of the states provides, on paper, reform in several areas. There is, however, enough leeway in the proposal for debate. This would result in Microsoft continuing to flagrantly disregard the law and another 4+ years in court while the industry continues to suffer.

The only solution that will provide for real change in the industry is one that provides real and definite punishments for Microsoft's past behavior and provides for a strict adherence, by Microsoft, to open and established industry standards. All protocols, formats, and API's used by microsoft products must be legally bound to open, published, free standards to allow true interoperability with any competitors who wish to enter the market. This would negate some of the economic and technical advantage they have established through the exercise of their illegal monopoly.

I ask that you take my opinion into consideration while dealing with this case. I work everyday with both Windows and UNIX software. My company develops software for mission critical applications. Microsoft's OS's do not provide for the real-time data processing and are not stable enough to support our applications. We are forced, however, to use Windows as well as UNIX because the corporation that has invested heavily in our company uses it and there is no way for other OS's to reliably interoperate with it. That corporation uses it because they need to interoperate with all their business partners who run it, and because when buying a computer it is cheaper to get one that comes with Windows than to get one without any OS at all. This situation is unacceptable.

Thank you for your time.

Sincerely,
Joseph Rock

Subject: DON'T SELL OUT!

Dear Renata Hesse, Trial Attorney:

I'm a 55 year old CPA, whose first computer course was Fortran II (in the Jurassic days of punch cards), former IRS agent, MS in Taxation, and writer. I've used every MS o/s system except CP, which I will never use. I currently have two systems at home, both I built myself. My husband's has Me and mine 2000. I've watched how intrusive MS has become, with the last bit of arrogance being the inclusion of IE and Outlook in both OS system. I don't want to IE or Outlook Express, nor do I want MS deciding what I have on MY desktop. I use Lotus Smartsuite, Opera 5.1 as a browser; however at times, I'm forced to use IE, especially when downloading MS updates. One of the tricks I especially dislike is the rerouting of URL's to MSN affiliates. Also they deliberately include code which negates the use of non-MS equipment. For example, I use a Logitech TrackMan mouse. When I loaded SP 2 for Win 2000, mainly to obtain antiSirCam virus protection, my system crashed. I later discovered from a John Dorvak (sp) column that SP2 isn't compatible with Logitech Trackman. No where in the MS literature is that mentioned. I got my system running again, without SP2. These are only a few examples of why the DOJ needs to pursue MS.

Sincerely,

Subject: Microsoft Anti-trust case

I understand that this email address has been created for public comments on the Microsoft antitrust case.

By its recent actions in the case—dropping the request that Microsoft be broken up—the justice department has shown itself to be completely under the thumb of an administration which cares only about the interests of big business, to the exclusion of anything that could be called "justice." This is especially, glaringly obvious because the justice department was on the right track—going after Microsoft as hard as it could—under the previous administration.

This is a travesty, a national disgrace, and a course of which the staff of the justice department should be personally ashamed.

Subject: MS Anti-Trust

Dear Department of Justice,

As a long time member of the IT community, I have watched with horror and dread as Microsoft has extended its tendrils throughout the industry, wielding its monopoly with self-serving glee. I was very pleased to see the United States stand up to their illegal practices and enforce the law.

While I'm not familiar with all of the intricacies of the case, I've followed reporting on the settlement in the news. I must say that the settlement seems absurdly lenient to Microsoft, and I have no doubt that if the settlement is agreed to, Microsoft will continue to misuse their position of dominance in the industry and some future

government administration will be forced to find a meaningful settlement.

Stop for a moment to consider what a genuinely incredible tool the Internet is. It is genuinely changing the world in a meaningful and positive way. However, Microsoft has positioned themselves to co-opt the Internet itself and make it little more than a profit center for them. Consider that most of the world now accesses the Internet through their tools. There's an ever-dwindling number of options available as they eliminate their competitors. Microsoft alone has the clout and influence to set the standards as to how the Internet will work in the future. Will they select the "best" technology that best serves mankind or will they select standards that will serve Microsoft shareholders?

Obviously Microsoft will pursue their profits. However, the point of the anti-trust litigation, it seems to me, is to eliminate unfair practices and break up a monopoly which has the power to affect the very future of humanity. The proposed settlement terms seem like a weak and ineffectual gesture rather than a meaningful stand to protect the Internet as a dynamic, diverse, robust marketplace for human ideas and communication.

Thank you for soliciting public input on this matter.

Subject: Stiffer penalties

It is time and past time to start actually undoing the damage that Microsoft has done. Currently it is impossible to secure Venture funding for any desktop application development. One could argue that this drove far too much money into the internet—Microsoft wasn't there, so you could actually build a company without it being destroyed by Microsoft. Far from harming the economy, a truly effective set of sanctions (I favor breaking them into at LEAST 4 companies with the exact same rights to all the code) could bring the desktop back to life, prevent them from destroying the internet and produce a huge boom!

MTC-00001490

From: Michael Brook
To: Microsoft ATR
Date: 11/20/01 12:51pm
Subject: Settlement

I oppose the settlement with Microsoft.

1. The settlement gives the company the ability to seek restoration of a microsoft configuration beginning 14 days after purchase. There is no restriction on this practice in the settlement. This means that the company can if it wishes, cause a window or other notice to appear suggesting that I use the Microsoft middleware each and every time I attempt to use another company's software.

2. The company has the ability to prevent me from using chosen software if it fails to implement a reasonable technical requirement 3. This technical requirement is not specified, and the decision is left to the company for its discretion. This gives the company broad discretion to prevent the use of non-Microsoft products on the argument that it fails to implement this unspecified technical requirement.

3. It allows Microsoft the discretion to decide which portions of code and API compromise security giving the company the ability to shield massive amounts of code from developers in order to favor Microsoft products.

4. It allows Microsoft sole discretion to determine what is Windows and what is software. This goes to the heart of the initial case. Users were prevented from removing a simple web browser from their computer because the company had determined that it was part of the OS. I can foresee Microsoft determining that ALL of its software is part of the OS, including such things as word processors, spreadsheets, etc., and forcing users to use these products rather than competitors products.

5. It prevents users from removing Microsoft software from their computer. While users can remove the icons it provides no guarantee that end-users can remove unwanted programs from the drive, but rather allows Microsoft to hide the programs so that they can remain untouched on the drive, and allows the company to constantly remind the user that it would prefer they use the Microsoft product.

All of these aspects allow the company to continue to behave in the way that has

hindered innovation in computer software for nearly a decade, and allows the company even greater freedom to suppress third-party software developers at the expense of the company's own software.

Subject: some thoughts on MS

Hello,

I've been using computers for a number of years as a source of income. I'm a graphic artist by trade. Since computers are my livelihood, I have a keen interest in all things related to this field. I have been following the Microsoft trail, and I keep noticing that certain facts never get brought up. So here is my take on how Microsoft runs it's business.

One of the most obvious things they did to try and kill competition in a field is with web browsers. Microsoft was late to the game, and was worried that Netscape would make the Windows operating system less important by using Sun's Java for browser based applications. Microsoft did not have a web browser of their own, so they did what they always do, they bought one. Or more precisely they stole one! They went to Spyglass and made a proposition to license the Mosaic browser. The deal was that Spyglass would get a percentage of every browser sold. But then Microsoft gave it away for free! This way, no money to Spyglass, and who wants to pay \$35 for Netscape when you can have a browser for free? Interestingly, Mosaic was the original version of Netscape. The analogy here is what if Coca Cola opened their own chain of supermarkets. With every purchase you got a free six pack of Coke. A lot of people would take the free Coke, even if they might prefer Pepsi.

Another one. I use an Apple Macintosh computer, and not a PC running Microsoft Windows. Windows is obviously a copy of Apple's OS and NeXT Step from NeXT Computer. Apple's new OS is named "Mac OS X" ... Microsoft just announced their new OS... "Windows XP." Why the "X" in the name? I think this is to confuse consumers, who have been reading and hearing a lot of positive things about Mac OS X. In Apple's case, the X is the Roman numeral for the number 10, since this is version 10 of the Mac OS. In MS's case, it means nothing. It's really Windows 5, maybe. So why not "Windows V" then? Apple's new graphical interface is named "Aqua" because it has a shimmering liquid look, and a lot of blue. MS decided to name their new interface for Windows XP "Luna" because... well I don't know, except that it has four letters, ends in an "a" and sounds a bit like "Aqua." Plus all the reviews say Windows XP looks a lot like Mac OS X (which was out since March 2001).

Once more, they can't make a better product, so they want to confuse consumers. it's a smoke screen to take the spotlight away from a competitor. They don't innovate as Bill Gates like to remind us so often. They merely copy and steal other's products, change them to their own design, and then drive the products that they copied out of the market. Why? To make a better product, or to have World Domination? This is the real

question. As a consumer I know my choices are fewer because of Microsoft. I am writing this on Microsoft Outlook Express, because there are so few choices of email programs for the Apple Macintosh. Being a much smaller market, it's just not worth it for companies to make a product that has to compete with a Big Company that gives away free software. Also it came bundled with the computer. So MS even has a hand in Apple's pie.

More... they made Windows XP so that the popular audio format, MP3, would not play back with high quality, unless you pay more money for an add-on. This is to make their own Windows Media Player the standard format, and thus giving them undue control over the market place. If they get their way Windows Media Player will become ubiquitous. Forget MP3, and Real Audio, and QuickTime. Every one will have to license the MS format. This is the same thing they tried to do with Java. Add so much of their own proprietary code as to wrestle the control away from Sun, and make their version the standard.

And with them bundling all this stuff... who needs to spend money buying a word processor, when your new PC have MS Office, and everything else you need. True, you might like Word, but maybe not. And removing this software might be very hard. Just look at trying to remove MS Internet Explorer from Windows. I think the DOJ needs to look at a company like Apple Computer, to see the way it should be done. Every program can be removed by just dragging the folder to the trash. And Macs don't come with a lot of software... because Apple wants their developers to make money too!

What I think needs to be done is to make MS release the code and API "hooks" that software developers need to make their products work better with Windows. The way it is now, for instance, parts of MS Office and Internet Explorer are built into the operating system. This makes MS' own products run better then the competition, and I feel gives them an unfair advantage. They claim this is "innovation," and if this is true, let others use it too.

Since MS does not have competition in the PC operating system market, what difference would it make to let another company's web browser have full access to the guts of the OS, and it's build in HTML rendering engine.

Since MS makes no money on Internet Explorer, and they don't have to worry about people buying a different OS, they have no excuse!

Thanks for the opportunity to speak my mind on the matter.

Yours truly

Subject: FW: reject the microsoft settlement

If Teddy Roosevelt were in the Whitehouse, Microsoft would have been split into at three companies five years ago.

Since ours is an age in which politics is defined almost purely by money, it is not surprising that the Bush Justice department has entirely caved in the face of Microsoft's monopoly.

I applaud those attorney's general who have balked at the preposterous settlement. Microsoft must be punished for it's anti-competitive practices, it's extortion of pc makers and its racketeering to fix prices and control the digital age.

Microsoft should be forced to compete on an even laying field. This is the only way we can stop the endless production of plagiarized software (every Microsoft OS from Window 3 to the new XP (a blatant rip off of Apple's superior OS X)), application designed to cripple competing operating systems and it's relentless march to acquire and profit from the personal information on every single pc in the world.

Throughout it's history, Microsoft has indulged in not only anti-trust violations but racketeering and blackmail as well.

I hope you will continue your struggle against this behemoth.

Dear Sir or Madam,

I would like to write to ask you to consider harsher penalties against Microsoft. My role in various IT departments over the past 14 years has lead me to realize that the company has aggressively participated in criminal business practices.

While working for a competitor in 1992 I was shocked to learn that Microsoft would bundle for free their office application with any system sold running windows 3.x, while our product could not begin to bundle that software for free.

Today this has been repeated by missing the .net in the breakup of the company. While this was ignored during the discussion of breaking the company into separate business units, it is the train barrelling down the internet track that we cannot avoid.

Please feel free to contact me for any further information you may need or may want to request.

 Date: 11/20/01 1:00pm
 Subject: Microsoft settlement opinion

I would just like to voice my opinion on the Microsoft case. I would like for Microsoft to give up control of the operating systems that are placed on a hard drive by the original equipment manufacturer (OEM). OEM's should be allowed to ship Intel-based hardware without an operating system, or install another OS if a customer requests it and the OEM sells it. I have purchased a number of computers from IBM, Dell and HP and all "MUST" ship with Windows (Gateway even told me I have to purchase Microsoft Office or another Microsoft product in order to purchase a computer. I did not buy from Gateway). I use FreeBSD (UNIX) and used BeOS (they are now defunct because they were not able to gain marketshare on PC hardware), so I pay Microsoft for software licenses I do not use (generally \$99 for Win98 and \$199 for WinNT... those were the prices for OEMs when I purchased the computers about five years ago).

Perhaps the easiest way to eliminate or minimize OS-monopoly control for any software manufacturer is not to allow OEM licenses with hardware vendors. If a customer requests Windows XP, the OEM must sell a full retail version of the OS (at retail cost) with the hardware. If a customer requests Linux, the OEM sells a retail version of Linux. BeOS... retail version. This would eliminate the control because now the customer/consumer demands what OS they want to use. Microsoft would have to be more competitive. Think about it, most Linux and Unix distributions are \$49 to \$79 at CompUSA. WindowsME is about \$99-\$120 and Windows2000 is about \$199-\$299. Microsoft would be forced to play at the Linux/Unix prices since they view them as the main competitors.

In short, don't allow OEM relationships between OS manufacturers and hardware vendors. The only way around this would be for the OS manufacturer to become a hardware manufacturer too (i.e. Apple Computer, Silicon Graphics, Sun Microsystems, IBM, etc.—none of which have a monopoly).

Thanks,
 Alex Christ

 Subject: Microsoft Settlement—The

settlement, in its current form, is not in the best interests of the country nor ordinary citizens.

To U.S. District Judge Colleen Kollar-Kotelly, the Solicitor General, Attorneys on the Case and Whomever It May Concern:

I am a computer professional with over 30 years of professional experience. I have been a computer professional since before there was a Microsoft Corporation and have watched Microsoft's unprecedented growth of influence in the computer industry with both excitement and alarm. I am writing as a private citizen, albeit one with some expertise in the matter at hand, not as a representative of any company or organization.

In my opinion, Microsoft has made major positive contributions to our industry and our country and has been greatly rewarded for them, both financially and in reputation. However, as Microsoft's influence has grown, its business practices have both become more pernicious and increased in the burden they place on "the rest of us." It is time for Microsoft to cease and desist. Just as behavior that should be tolerated but discouraged in an adolescent should not be tolerated at all

in an adult, it is time for the community, represented by the US Department of Justice, to demand, in the form of a court order, that Microsoft grow up.

"The marketplace of ideas," not unbridled capitalism has ever been the American way. Legitimate business and economic competition should not tolerate abuse of monopoly power (remember, this has already been adjudicated). Microsoft has demonstrated, both over time and recently, its intention and willingness to continue its aggressive repression of all companies and products that it sees as competitors for its products. Microsoft has demonstrated, both over time and recently, its intention and willingness to exploit any loophole, any flaw in wording, any explanation, however outrageous. The settlement, in its current form, ignores this evidence. It is clear that Microsoft will continue such behavior until it ceases to provide financial benefit to the company.

The remedy is likewise clear. Microsoft must be divided into 2 or more corporations: 1 which holds the rights to all of Microsoft's computer operating systems and forbidden to develop other kinds of computer products; the other(s) holding the rights to all other computer software and forbidden to develop computer operating systems, at least for the near future (much as the Baby Bells are forbidden to develop long distance telephone service products until they open their signal delivery systems to competitors. Gee, do you suppose it would be beneficial to commerce and the country as a whole if the Baby Bells were divided into service delivery companies and retail sales companies. Hmmm.) The county's experience with the breakup of AT&T, from Judge Greene's initial order to the Telecommunications Act of 1995, should be a caution to you.

In my opinion, the settlement, in its current form, is a flagrant attempt by Microsoft to continue its repressive business practices. In my opinion, it is your job, as an organization of our representative government, to oppose this with every tool available. The current settlement must not be accepted.

 Judge Should Assess Settlement
 After years in the courts, the proposed settlement of the United States of America and nine states vs. Microsoft is as toothless as the consent decree of 1995 Microsoft again must make only nominal behavior changes. In return, it gains legal protection for many practices that landed it in court. The holes in the proposed settlement are gaping.

First, OEMs looking for non-Microsoft options that better meet the needs of customers may still find Microsoft impeding third-party products that sold fewer than 1 million units in the United States the year before.

Second, Microsoft may keep secret and refuse to license any APIs or protocols to would-be competitors that "compromise the security of ... anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems." These are the very stumbling blocks for those trying to compete with native Windows components for multimedia, e-commerce, messaging and file sharing.

Third, competitors must then, at their own expense, submit their software to a third-party testing organization to ensure compliance with Microsoft protocol specifications.

Fourth, the agreement specifically excludes servers, PDAs and handhelds and may even exclude tablet PCs, which Bill Gates, in his Comdex keynote, said will be the most popular computing platform in five years.

Fifth, Microsoft now has legal protection to add whatever it wishes to its operating systems, offering the same preload and default invocation benefits as before. OEMs have new freedoms to change these defaults, but how many real alternatives will be available?

Sixth, Microsoft is not required to disclose the format of locally stored data files, such as document, address book, mail or stored music formats, that leverage the Windows desktop monopoly to tie users to other Microsoft software as much as APIs or network protocols do.

Finally, the agreement lacks any penalty for Microsoft's gains in market share and revenue as a result of past illegal behavior. The proposed settlement won't protect the marketplace from Microsoft's product- and service-tying, nor will it encourage new competition. The agreement needs to be toughened to provide substantive remedies for substantive violations.

The nine states, plus the District of Columbia, that have rejected this settlement should hold their courses, as should the European Union. We call on U.S. District Judge Colleen Kollar-Kotelly to use the upcoming 60-day public comment phase to carefully determine if this agreement is, in fact, in the public interest.

Subject: Anti-Trust settlement

Dear Sirs:

I read with great dismay the continuing effort of the Justice Departments efforts to settle with Microsoft. I realized that the United States is at a critical juncture internationally and politically, but I am having a hard time understanding why the Justice Department thinks it is such a good idea to settle with Microsoft at this particular point in time.

The thing I am concerned about is that the only thing Microsoft has ever been inventive at was in finding new ways to destroy their competitors. They are a company that has been built upon the premise that they own, or can buy or steal any type of innovation that comes along. Far from being the most innovative company in the 20th century they

are the late twentieth century equivalent of "Robber Barons." They are good at marketing and they are good at recognizing what it is most consumers are willing to live with. What they are not, however, is innovative.

As lawyers who work for a pro business government you must see Microsoft as a wonderful panacea for the future of the United States. As a software engineer who programs using Microsoft tools, on a platform that Microsoft designed, over a network that Microsoft is striving to own, I see Microsoft as a monopolist bent on making my life more difficult. By agreeing to settle with Microsoft you, who should know better, have inadvertently given Microsoft the ability to track more personal data about people in the United States than the U.S. census has ever known. This is what we get with .NET technology.

Please reconsider the settlement with Microsoft. It is a bad idea. It is bad for America. It is bad, even, for Microsoft.

Subject: Regarding the Microsoft Settlement

To the Offices of the California Attorney General and the U.S. Department of Justice, I would like to convey my dissatisfaction with the U.S. Department of Justice's settlement agreement in the Microsoft anti-trust proceedings. As I understand it, California is one of the states which has refused the settlement as it stands and I am glad to see that my home state is attempting to do the right thing against pressure from above.

My principal complaint about the agreement, detailed in today's Wall Street Journal, is that it is not a penalty for Microsoft. It is merely an investment and a sanctioned furthering of their monopoly in a place where it may be seen as political suicide to stand against it. The idea is that Microsoft is always trying to find ways to seed the market to their benefit, to build user dependency on their OS and software products. To permit them to pay their debt to society by donating \$1.1 billion of their own software to schools in need will just make the students of the 14,000 eligible schools into future customers of Microsoft. They will make back that \$1.1 billion in spades over the next few years.

To use a metaphor that the schoolchildren affected may understand, Microsoft is a wolf, and the USDOJ has just handed them a finely tailored suit of sheep's clothing.

The other problem with this sort of a "penalty" is that it lends itself to questionable accounting practices. For example, if Microsoft donates a copy of their new Office X program, does that count against their penalty for the full retail cost, or just the cost of delivery for the unit itself. If it is the former rather than the latter, then Microsoft is getting off with a truly light sentence. Using the example of Office X, the retail price is in excess of \$400.00. The cost of delivery, including the box, full documentation, and a handful of CD-ROMs could not possibly exceed \$20.00.

I would like to propose an alternate settlement with only slight changes which would still have the effect of bettering school environments in economically challenged areas. Rather than permitting Microsoft to seed the market with its own products, the penalty which would be more appropriate would be to have them donate products from competing companies.

What I would like to see Microsoft donate to these schools is something along these lines:

- 1—100,000 iMacs and 50,000 G4 desktop machines
- 2—150,000 generic PCs (using AMD chips, rather than Intel, but that's another issue altogether) with RedHat Linux pre-loaded instead of Windows
- 3—1,00,000 PalmOS-based PDAs (no Windows CE systems)
- 4—14,000 (one per school) Sun Sparcstations
- 5—14,000 licenses for Oracle database software
- 6—140,000 (ten per school) Sony PS2 and Nintendo Cube game systems (no X-Boxes)

I think that this would have the dual effect of penalizing Microsoft while also bolstering the competition enough that a somewhat more competitive environment would be the result.

The people who run Microsoft may be fine people, individually great business people. However, their work in concert has produced a bully of a company. And bullies, if not properly reprimanded will simply go on to become bigger, meaner bullies. I hope that some appropriate action such as I have described can be encouraged.

Sincerely,
Benjamin I. Carroll

Subject: Class Action comment

According to a RedHat newsletter article, DOJ is soliciting feedback on the proposed settlement of the class action suit. If this is not the case, feel free to discard this message. I recommend against accepting the proposed settlement on four grounds: (1) It does not compensate the individual consumers who overpaid (2) It has a significant detrimental effect on the school system (3) There is zero net financial impact to the defending corporation (4) It does not discourage the defendant from repeating the act.

As a consumer who has involuntarily purchased Microsoft's product, and paid the

higher prices for the product after the company has driven a fledgling competitor out of business with a dumping tactic, it would be really nice if the class action settlement could provide me with some benefit (even if tiny) for the cost and hassle incurred. Since I have no children, I therefore receive no direct benefit of the provision of Microsoft computers in the school system. However, we must consider the other people with children, and also the potential indirect benefit that I might accrue by being in a country with a better educated workforce. Is there a benefit to the schools?

Historical data shows that schools, when given a real choice, will purchase Apple's Mac series of computers because they are easier to learn and have a wider range of educational software available. Therefore, the court system is proposing to give these schools something that they would rather not receive; would it not be better to have Microsoft apologize for its price fixing and monopoly position by providing each school with one computer, with the school having the option of choosing the manufacturer and operating system it runs?

Separate to the benefit to the school budget is the impact on the students. While Mac software is designed to educate and encourage its users to explore the information available, the goal of Microsoft software is to entertain (at home) and support business (at work). The purpose of attending school is to learn, not to use a computer that is optimized for video games and pay-per-listen multimedia. In every way, Microsoft aims to separate its user community from any understanding of how the computer works and is achieving the user's requests. As such, I believe that providing these systems will—reduce—the technical and scientific capabilities of the school's graduates and ensure they are better able to function as untrained consumers. That certainly doesn't match my employer's staff needs.

If the school uses its small budget to purchase educational software that will make the computers useful for their teaching goals, an additional problem will manifest a few years in the future. When the existing licensing on the Microsoft-based operating system and software expires, the school will be forced to pay a lot of money that is likely to ruin the slim budget available for software. Several groups have argued that, at that time, the school can choose to either not upgrade or to switch to a different operating system (such as Linux). Neither of these options are viable and need to be eliminated from consideration for the following two reasons. Microsoft's software, as made available at the present, ceases to function correctly after a few years in order to force the upgrade. If the school chooses not to upgrade, the computer will degrade into unusability. Since Microsoft denies independent software vendors (ISVs) the right to sell new software that runs on old Windows versions, the school would also be unable to purchase any software. As an example, I suggest attempting the impossibility of purchasing Microsoft's Visual Basic development environment that runs on a Windows 3.11 based computer. This is analogous to the situation that the schools will find themselves in, in the near future.

As the provider of the computer system, Microsoft can choose the hardware contents very carefully. Many hardware manufacturers, due to the monopolistic situation, have been forced to sign odd agreements. These provide information needed about their hardware to Microsoft—and—prohibit that manufacturer from divulging that information to any other organization. In this way, it becomes impossible for the competing operating systems to run correctly on that computer system, even if the hardware manufacturer would like to do so. Therefore, it is trivial for Microsoft, while complying with this settlement, to deliver computers which will never ever be able to run any non-Microsoft operating system.

The school system is actually one of the few market segments in which Microsoft has not yet succeeded in driving out the competition. Conventionally, a settlement requires the defendant to contribute to a cause that would impair its future sales revenue, instead of increasing its future revenue ... and recovering the settlement cost.

Historically, the marketing value of having its computer, or software, or allied product in an educational setting is shown to be sufficiently high that many computer manufacturers have freely donated millions of dollars in kind, without any pretence of being 'forced' to do so by a US court. For example, when I was in university, I was using one of the highest performance computer systems available from IBM, provided by them in order that I would learn to use it and potentially purchase their systems on graduation. Market studies have shown that the return on investment by these generous acts was better than any conventional marketing campaign. Thus, I find it disappointing that the settlement provides the defendant with a large future revenue opportunity and also forces the existing market segment dominating company to operate at a significant disadvantage for the next decade. Is it really the case that the DOJ wishes to encourage Apple to go out of business?

Finally, the publicity campaign I have been observing recently has described the settlement by Microsoft as an act of generosity with no implication in their media statements about any apology or wrongdoing to the general public. This does not seem to set the stage for avoiding a repetition of their error in future.

I am a PhD Electronic Engineer, involved in the development of Concealed Weapon Detection systems for DOJ and DOD components. The monopolistic status of Microsoft has enabled a deterioration in the quality of its products, such that they are unsafe for use in a critical safety product (as a CWD portal must be), yet the monopoly forces their use in the systems we deliver. I am in the process of attempting to migrate the product to Linux, to provide a safe system to our customers, but the tactics documented in the other lawsuits make this difficult. My involvement in the software industry dates back to 1981, so that I have observed the creation, growth and business tactics of Microsoft ... and their impact on other companies.

In conclusion, I request that the court either (1) Implements my 'school choice' suggestion above, or (2) Accepts the concept proposed by RedHat et al, or (3) Settles but prohibits Microsoft from school donations

Sincerely,
Alexander Perry.

 Subject: Settlement comment
 To Whom It May Concern:

It seems to me that the proposed settlement is nothing short of a government cave-in. The terms neither correct the egregious behavior of Microsoft, nor contain any punishment for their past bad acts, nor any restitution for those businesses wounded or even killed by Microsoft's heavy-handed tactics.

Further, the proposed settlement enshrines forever Microsoft's 'right' to use their proven monopoly power to roll over the competition by imitating their technology, bundling it within the operating system and claiming it is necessary (when it isn't)—witness RealPlayer for example, and making it difficult to obtain competing products. Their new system (XP) even forces the user to use the Microsoft product even when the customer has gone through the trouble of obtaining and installing other software, again on the bogus claim that it's necessary for some trumped-up reason! The "Board of Wise Men," being under Redmond's thumb will have no real effect. The terms of the settlement are written in such an opaque way as to obviate any real responsibility adhering to Microsoft.

Additionally, the new Passport promises to block out (or at least steer the user away from) any but Microsoft's partners for non-related products reached by internet. Add to this, the methodology which will no doubt convince inexperienced users that it is required to send all manner of personal information, including credit card numbers, to Microsoft—whose security lapses are legendary!

Even after the settlement was announced, Microsoft blocked all browsers but their own (Internet Explorer—"IE") from accessing their portal site. Later, they 'relented' and allowed the most minor players (such as the browser Opera) access. They are, to this day, trying to block anyone from releasing information about the security holes in their software; on the excuse that it will lead someone to exploit them, meanwhile leaving the vast majority of users vulnerable. Microsoft has no care for the user—only the users' money. Microsoft is a corporate thug of the worst (or nearly worst) kind. True, they are a cornerstone of our economy; but that should not relieve you of the responsibility; nor them of the onus to correct the situation. Remember that breakup in no way harmed the children of Standard Oil or AT&T.

The proposed settlement should be junked and Microsoft should be punished commensurately for their acts, both past and continuing.

Anything less is a sell out.
 Sincerely,
 C. Alexander Cohen

 Subject: Citizen's view of the Microsoft case settlement.

I have read several reports that claim the current settlement of the Microsoft case

might unfold in such a way where Microsoft provides free technical support, software, and training to school systems.

PLEASE DO NOT ALLOW THIS TO HAPPEN! Who could compete in the education technology market when Microsoft is flooding our schools with free (monopolized) products?

In short, you don't fight a monopoly by making them flood the market with their own product.... Even if it is for free! They did this with Internet Explorer remember?

Just remember, history books will be written about this case and if Microsoft gets away with this monopoly, you will join the ranks of those people who are remembered throughout history as the bumlbers of justice.

If you do not stop this company now, who will?

From: Roger Gliebe
 To: Microsoft ATR
 Date: 11/20/01 1:27pm
 Subject: Settlement Worthless

As an IT worker for the past dozen years, I have observed the many violations of the law that Microsoft has done. They have forced their OEM customers into paying for operating system products they never sold and have offered discounts to customers who would exclusively sell their operating systems. They have also tried to either buy up and destroy their competition in various software products, or force them out by bundling a competing product that they wrote with their operating systems.

The remedy proposed by the DOJ does nothing to punish Microsoft for these past wrongs, including the perjurious testimony and falsified evidence provided by Microsoft during the trial. A large fine equivalent to the estimated amount of business they have illegally destroyed would be good for starters. This fine should be equitably distributed among the many companies that were hurt by their illegal actions after paying for the government's cost of these legal proceedings. Microsoft needs to be prevented from doing similar illegal acts in the future. While allowing third party developers to view Windows code may help them write software that is as optimal as Microsoft software, it does nothing to address the crimes mentioned in the first paragraph. Microsoft needs to be divided up into separate companies so that the operating systems are divorced from the applications written to run on those operating systems. Microsoft (the OS part) also needs to be prevented from bundling their own applications with the operating system without paying royalties to the new Microsoft applications company. They need to be forced to offer other developers similar bundling opportunities, and this should be supervised by a court appointed magistrate. There are many software companies writing good software for Microsoft OSes, and they need to be given an equal opportunity to Microsoft to sell their software in the free marketplace. As far as agreements with computer hardware companies (OEMs) are concerned, Microsoft should be prohibited from offering discounts

for exclusive deals and should only be allowed to charge for actual number of copies that the OEMs ship to their customers. Microsoft should also be forced to provide a fully usable copy of their OS with every OEM sold computer, not a limited restore CD that only works on that one computer. End customers should be free to transfer their license to any computer they wish to use it on.

Forcing Microsoft to give away their products to schools and offer reduced pricing to schools does nothing to address any of these issues and it merely propagates their monopoly. This settlement appears to be crafted by someone at Microsoft to further entrench their products in a monopolistic way.

Roger Gliebe

 Subject: Proposed Microsoft Settlement Comment

The proposed Microsoft settlement with the Department of Justice is a sweetheart deal for Microsoft. The DOJ wants to get on to more important duties like confiscating nail clippers at airports, so the deal looks good to them. But to those of us who got our legal education from old episodes of "Law and Order," the deal stinks.

How does it restore competition? What does it do for those hundreds of competitors who are no longer even in business because of Microsoft's monopolistic tactics? Well, those outfits—if they exist and if they can find the money to do so—can file civil suits. But most of them won't. I would like to see a class action lawsuit against Microsoft. What the settlement seems to do is prohibit Microsoft from breaking the law IN THIS SPECIFIC WAY for a period of five years. Imagine a murderer who shot his victims being enjoined for five years from using a gun, but still being allowed to carry a knife. It is important to understand that Microsoft management does not feel the slightest bit of guilt. They are, as they have explained over and over again, just trying to survive in a brutally competitive industry, one in which they could go from winner to loser in a heartbeat. The fact that Microsoft makes in excess of 90 percent of the profit of the entire software industry, well that's just the happy result of a lot of hard work. Pay no mind to that \$36 billion they have in the bank. And since Microsoft doesn't feel guilty, their motivation in agreeing to this settlement is just to get on with business. This is a very important fact to keep in mind when trying to understand the event. This isn't Microsoft being caught and punished, it is Microsoft finding a path back to business as usual, which is to say back to the very kind of practices that got them here. Microsoft, confident in its innate cleverness, is willing to give up certain old monopolistic behaviors because there are new monopolistic behaviors now available to replace them.

Microsoft has to open-up certain Windows communication APIs to other developers, but there is no restriction at all on the addition of new APIs. So expect a LOT of new APIs,

many of which will do nothing at all except confuse competitors. There is nothing in the agreement that says Microsoft has to tell anyone which APIs it really intends to use. So just like interpreted software is obfuscated to hinder would-be copiers, expect Microsoft to obfuscate Windows, itself. Microsoft has to allow third-party middleware, but a glaring loophole was left for Microsoft, simply to redefine code as not being middleware. If they stop distributing code separately and draw it into Windows, well as I read the proposed settlement, middleware stops being middleware after 12 months. So if something new comes up (all the old middleware is explicitly defined) Microsoft can integrate it and screw the opposition one year after they stop distributing it separately. These loopholes are nice, but they don't amount to the kind of leverage Microsoft would want to have before signing away any rights.

Bill Gates would want us to believe that he has a new and completely unfettered weapon so powerful that it makes some of the older weapons completely unnecessary. He has found that weapon in .NET. But hey, .NET isn't even successful yet, right? It might be a big flop. Wrong. Those who think there is any way that .NET won't be universally deployed are ignoring Microsoft's 90 percent operating system market share. Whether people like .NET or not, they'll get it as old computers are replaced with new ones. Within three years .NET will be everywhere whether customers actually use it or not. And that ubiquity, rather than commercial success, is what is important to Microsoft. Here is the deal. .NET is essentially a giant system for tracking user behavior and, as such, will become Microsoft's most valuable tactical tool. It is a system for tracking use of services, and the data from that tracking is available only to Microsoft. .NET is an integral part of Windows' communication system with all calls going through it. This will allow Microsoft (and only Microsoft) to track the most frequently placed calls. If the calls are going to a third-party software package, Microsoft will know about it. This information is crucial. With it, Microsoft can know which third-party products to ignore and which to destroy. With this information, Microsoft can develop its own add-in packages and integrate them into the .NET framework, thus eliminating the third-party provider. A year later, as explained above, the problem is solved. Alternately, Microsoft could use the information (this .NET-generated market research that Microsoft gets for free and nobody else gets at all) to change Windows to do service discovery giving an automatic priority to Microsoft's middleware. The advantage here is in giving the appearance of openness without actually being open. These possible behaviors are not in any way proscribed by the proposed settlement with the DOJ, yet they virtually guarantee a continuation of Microsoft's monopoly on applications and services as long as Microsoft has an operating system monopoly. When Microsoft talks about "innovation," this is what they mean. Nothing is going to change. My preferred outcome is still that Microsoft be forced to sell its language business, and the proceeds of that sale be distributed to registered users of Microsoft products.

Subject: Microsoft Settlement

Greetings,
I was appalled at the most recent proposed settlement of the case against Microsoft. Everyone agrees at this point that Microsoft is guilty, yet they continue to practice questionable if not outright illegal business practices. The department of Justice seems content to just stand by and let this happen though. You are servants of the public good and it is your duty to redress grievances against the American people, yet you seem content to let Microsoft get away with breaking the law without any punishment whatsoever.

Microsoft needs to be punished for it's actions, not just told that they are "bad boys" and let off. Please pursue this action until justice is done, and Microsoft suffers real punishment for it's illegal actions. Our government is the only organization powerful enough to confront the Microsoft monopoly for us.

Please, for the sake of all of us, do not settle this action until Microsoft has been punished for it's actions, and there are guarantees that it will never act in this way again. Thank you.

Subject: Microsoft Anti-trust Debate

Hi
I am an individual living in central Minnesota that is largely involved in the computer community. I have done a large amount of research during my high school period, continue with updated news and rumors, and of course own and use computers daily. Now I am an Apple Macintosh enthusiast. But the Microsoft anti-trust debate influences many businesses, even worldwide. I have never had support for Microsoft because of their shifty ways. Ever since the beginning of their time they have copied ideas that seem to have a great future. Anything that looks like a good idea they snatch up in a second. Many of these ideas came from Apple's technologies. Such as Microsoft's Media Player closely resembles Apple's QuickTime and Windows XP is a poor stolen idea of the new Mac OS X. Now there are many more examples out there and not all have included Apple. They have also gone much farther than the illegal standpoint. They offer particular; interesting, innovative, profitable looking; companies large amounts of money in order to steal certain shares of the market. A recent example was when Microsoft acquired Bungie Entertainment, a dual platform gaming company. They removed the upcoming release of HALO, planned to be ported to the Macintosh, and specifically forced their new subsidiary to make it

exclusively for the brand new X-Box. I agree Bill Gates and the rest of the higher officials at Microsoft should be punished highly and restricted in the future from such activities as this high priced, dollar spending monopoly will do anything to get whatever is profitable and good. I thank you for your time!

Subject: Microsoft Settlement Commentary

To whom it may concern,
I am writing to let you know my opinion on the Microsoft Settlement. I feel that they have, with forethought and intent, stifled competition and reduced consumer choice. Many of the avenues they have chosen would be legal for a company that was not a monopoly, but that is not the case here. I also feel that they will continue to do things like this, and will use new 'innovations' (such as the X-Box and .NET) to further corner the market. As Microsoft has shown that they are unwilling and/or unable to police their own practices, the only remedies that will actually prevent further abuses are either division of the company or installation of some sort of oversight panel.

These opinions are mine, and do not reflect those of Wacom, it's parent company, or affiliates.

Subject: Microsoft AntiTrust Lawsuit

This settlement is ridiculous. It does nothing to Microsoft, which is what Microsoft and Bill Gates wants, because they think they didn't do anything wrong. And this latest development, where Microsoft is giving \$1.7 billion in software to schools, is just another attempt to sidestep the issues. Microsoft and Bill Gates wants to control everything the consumer buys, from your computers and software to eventually your T.V., phone service, washer/dryer, toaster, etc. Microsoft and Bill Gates are terrorists to consumers.

A child came home from school and asked his mother if he could go out and play. The mother asked did he do all his homework. The child said yes. So the mother let him go out and play. The next day, the child's teacher calls the mother and says the boy hasn't been doing his homework for weeks.

So when the boy came home from school, the mother said, "You told me you did all your homework." The boy said, "I thought I did do my homework." And the mother said, "And how about the previous weeks, how come you didn't do your homework?" The boy said, "I didn't think it applied to me, because all the other kids at school like me. Mom, can I go out and play now?" The mother said, "Well, go clean your room for 10 minutes and give me 2 dollars, then you can go do whatever you want." So, of course, the boy agrees.

Subject: Don't let MS off the hook

If all you were going to do was slap MS on the wrist, why did you even bother taking them to court in the first place. Forcing MS to act the way it should have acted all along is NOT a remedy. Breaking the law usually involves PUNISHMENT! Fines, jail time, community service, etc. MS got away with murder, and the federal government of the most powerful country in the world simple says: "Keep your illegally gained profits, keep your illegally gained market share and customer base, but don't do anything illegal again."

This is crap!!! Thieves don't get to keep their loot; they give it back then they go to jail. Have you forgotten how criminals are supposed to be treated?

Subject: Settlement Unacceptable
Hi:

The proposed settlement is far too lenient and entirely unacceptable. Microsoft, convicted as a predatory monopolist again and again, must pay for its repeated transgressions against consumers.

Far more limits on its conduct, especially tying, must be implemented. A breakup into 3 companies would be satisfactory: operating systems, applications, and internet.

In addition, heavy penalties MUST be assessed, to punish Microsoft's past illegal behavior and to serve as a warning to others contemplating criminal actions against consumers.

Get tough on this criminal!

Thanks,
Ellen Breyer

Subject: What are you guys doing!?

You had a tyrant in your grasp and you let him go. I currently use Microsoft products and have for many years, not because I find them better or like them in any way, but because they have such a grip on everything that I can't use the products I like. To use other products would alienate me from the many others who use the same products, most for the same reason I do. It's a vicious cycle that is supported by every effort of Microsoft because they know their products don't really support themselves. Yeah, it's good business practice, for them, but it really sucks for those of us who want to leave their products by the roadside but can't.

The next time you have Microsoft in court, and there will definitely be a next time now, please bring the hammer down on them.

Subject: microsoft

I really think Microsoft has gotten off too lightly. It's gotten to the point where its impossible to do well in an academic setting without it. Due to Microsoft's domination of the market, students are forced to either purchase grossly expensive MS Office, or make illegal copies of it, just to pass classes in a university setting. Profs require powerpoint presentations, and oftentimes send word files to students, or require students hand assignments in word files.

Because of the domination, students have to keep buying office, and using windows,

and just further microsoft's hold on the market. Some serious changes need to be made with this company.

Thanks for your consideration.

From: Tony Wren
To: Microsoft ATR
Date: 11/20/01 1:48pm
Subject: I don't understand the logic
To Whom It May Concern:

I have been listening to comments in the trade journals, and among my friends and colleagues both in an out of the computer industry. The general consensus among those who actually understand the technology is that the Justice Department pretty much snatched defeat from the jaws of victory, and struck a blow for white collar criminals everywhere. How ironic that an administration that espouses competition and free enterprise should come to an agreement that stifles these two cornerstones of America's commercial might.

This is not my view alone (as someone who has been involved with the industry since 1976) but the view of essentially all the observers of note who have written extensively on the subject since its announcement.

Dissent in the industry against these criminal actions has now ceased, for fear of retribution... for, have no doubt, Microsoft now has no fear of the US judicial system. It can do as it pleases. It has proven twice that corruption, criminal behavior and corporate misdeeds are rewarded, not punished. How sad.

Competition in technology over 20 years fueled our economy. By surrendering competition to Microsoft rule, we now give the mantle of innovation to others.

Sincerely,
Anthony Wren

Subject: Microsoft settlement

I find it appalling that we as a country whose fundamental beliefs in its government are being tested right now would be willing to let a company like Microsoft bully, buy and lie its way out of being penalized for its legally acknowledged violations of the anti-trust laws.

Would such allowances have been made for any other company? Would we allow only one manufacturer of automobiles or aircraft have a 90% share of the market? Especially when that company had illegally stolen that share of the market?

What kind of moral lesson is going to be learned from this by other companies and the people who manage them? That as long as you can kill off your competition before being convicted of a crime, and are rich enough, that no "real" crime has been committed? To hide behind statements like: "it is for our customers benefit" or that "any break-up at this time in our country's struggles would be inappropriate" are despicable.

I firmly believe that Microsoft has destroyed the development and implementation of many real advances in this industry. I work with PC and Macintosh platforms and use a variety of software for both. The amount of truly new and creative applications has been dramatically reduced because of Microsoft's stifling, anti-competitive practices.

The proposed settlement with Microsoft has so many ambiguous and ill-defined terms that it is worthless. The history of this company speaks for itself—it will drag out as long as possible any potential future litigation to the point where that judgment is meaningless. The fact that Microsoft has so much control over the oversight of its "punishment" is verging on the unbelievable.

To have my government lose its strength of will and vision of fair play is truly disappointing.

Do not settle with Microsoft.

We will all lose.

Sincerely,

Guy Peterson

Subject: Penalty, What Penalty?

I'm not sure why this forum is here but feel compelled to write. I am appalled at the injustice done to the American people with the recent settlement in the Microsoft anti-trust case. Here is a company that willfully violated previous agreements and penalties and now they can keep doing business as usual.

Where is the penalty? Please take a look at how many companies are no longer in

business (or not a factor) as a direct result of Microsoft's business practices. Netscape, WordPerfect, Novell, Claris...I'm sure the list is quite extensive.

Please don't buy into the Bill Gates rhetoric that his company should be free to innovate. The only innovation Microsoft can take credit for is taking monopolistic business practices to a higher degree than any company previously. The majority of "innovations" Microsoft takes credit for were already in place by Novell, Apple, and other companies.

What about the court findings? Weren't they (Microsoft) guilty this time as they were in previous proceedings? The soft penalties did not stop them in the past; what makes you think it will stop them this time? I am glad our criminal court system at least puts convicted murderers and rapists behind bars and doesn't just slap their wrists when they say we won't do it anymore.

Subject: Microsoft Case

The law protects the Small as well as the Big. Should the Small do harm to the Big, the Small would be punished with little effort from the Big. And it should be the same if it were the opposite.

This does not seem to be the case with Microsoft. They harmed Smaller companies with their practices. They need to be fined and that fine should aid the Small in their efforts to compete fairly with the Big. They (Microsoft) need to be monitored because they are on parole, they did break laws, they did inflict harm.

Just because the impact to the Small did not reach as far in some states as in others the law should be levied equally across all. Not state by state.

Open source for Operating System—Yes! (Fair competition) No competition in Applications with unfair advantages—Yes! (No proprietary codes.)

Microsoft Monitored for 10 years—Yes (Appoint team 2-3 year terms.) Fined \$20M a year for 10 years to support startups in application design. Managed by the same people who will monitor MS. (Admin expenses not to exceed 10%)

Microsoft to pay Legal bills for anti-trust case. (Payment over 10 years.)

This whole thing is just blown way out of scope. Think small but effective. Think fair so that no-one feels cheated or picked on. Think about a cure.

Good Luck,

Gregory Hammond

Subject: Microsoft civil damages?

Is the Microsoft Civil suit offer of value? I don't know the details & I can only surmise that Microsoft has few options:

pay a fine

lose face publicly

lose opportunity to build market share

or
build market share
build a database of personal user information

build (perceived) dependence

build (perceived) goodwill

do it for free (use money already lost?)

—I believe microsoft knows they would

lose & pay

—the poor schools likely couldn't afford to be customers any way

—the coming .net strategy has similarities

to cigarette addiction—pay per use

—software duplication is cheap beyond the current installed base

—used, functional computers (p100s,

Macs, etc) are practically being given away now

I use many OSs inc W95, DOS, Win 3.1 & choose Mac—it is more productive for me, easier, just plain better & costs MUCH LESS TO KEEP RUNNING... For one I don't worry about viruses, ever...

Microsoft is being sued by the Government while Apple was designated as a "national treasure"... Does the 'state' lead by example in their purchasing? Or is microsoft dependence just another form of glorified UI?

Why is this so difficult for people to understand & to think beyond the lobbyists...

Dependency can lead to vulnerability—ie. the old adage 'strength in diversity'...

Subject: Antitrust settlement

I demand as a taxpaying consumer that my rights be protected from an acknowledged monopolist. I know that arguments have been made by Microsoft that to split them up would damage the US economy, however, we have already had a court determine that Microsoft is using its monopoly position to do damage to the US economy by overcharging and stifling competition. We should not be talking about theoretical damage but in fact damage. How can the

potential damage outweigh the actual past and current damage done to the US consumer and economy by reducing the productivity gains from faster, better, cheaper than open competition bring. Who knows where we might be right now if Microsoft hadn't killed so many budding competitors who would have forced Microsoft to be more efficient and cheaper for consumers.

Microsoft needs to be split up to ensure that the economy can recover from the damage they have done and continue to do.

Subject to: U.S. District Judge Colleen Kollar-Kotelly...

[Text body exceeds maximum size of message body (8192 bytes). It has been converted to attachment.]

Dear Judge:

Thank you for this opportunity for the public to give comments on the MSFT settlement... I am about as public as they come, I have no connection to MSFT or the DOJ or the States, or any Computer or software companies I am an Architect in Boulder, CO. I have bought software from many different companies, including MSFT. My words are True and direct., please read this with all due understanding and importance that this issue brings to our form of capitalism. Without a proper solution, our economy will suffer unbelievable harm from the extinction of true innovative companies that no longer exist because of MSFT

There are four things wrong with this settlement

1. It does not address the most important one of the 8 injuries found by the appeals court where MSFT was found to have violated the Sherman Anti trust act in 8 separate violations.

2. It does nothing to keep MSFT from doing the same thing to other companies, including RealNetworks, as it did to Netscape (which is the cause of the antitrust suit in the first place)

3. The Settlement was brought about because of macro political motivation.

4. Half of your plaintiffs (half the states) do not agree with the settlement... See bottom conclusion for an easy solution to a proper remedy

1) The appeals court found that MSFT illegally commingled application software with its OS to use the OS as leverage in gaining a new market (see violation of antitrust acts, by Appeals court). MSFT's new OS, WindowsXP, still uses this illegal method of commingling code, in direct violation of the Appeals court decision, the settlement does not address this at all nor does it address the Tying issue which is related, and the appeals court asked you, the lower court, to consider this tying issue ... the Settlement does not address this even in a cursory way This is a grieves error, and what the entire trial was about, without addressing this, you will find yourself back in court with MSFT as a defendant, while

they try to justify another complete decimation of another market, like Netscape's market was destroyed earlier

2) The whole trial was about how MSFT, scared that Netscape's product, would subvert the OS, used its Monopoly to take over a new market whether the DOJ or MSFT wants to admit this, this is what it is all about Netscape innovated and created the Browser market, and had 80% to 90% of the market, until one day, 7 MSFT execs came into a Netscape Board meeting, and said: paraphrasing "give us a piece of your business, and a board seat, or we will put you out of business" (this did happen, quoted from a book by Michael Lewis) and sure enough, MSFT did put Netscape out of business, (Netscape's had to be bought out by AOL, after its market share dropped to less than 20%) after MSFT used its OS to tie this new market product too, and then gave this product away for free now we will never see another innovation by Netscape because its main source of revenues was taken away from it All of this is illegal to do when you have a monopoly that you can leverage and this is what the finding of fact and Conclusion of law found, yet the settlement does nothing to address this Worse, it is happening again, this time to RealNetworks MSFT is doing the exact same thing to RealNetworks, MSFT has illegally commingled and tied its "Media player" application software to its OS, as it did with "internet Explorer", and now RealNetworks will suffer the same fate as Netscape, and the settlement does nothing to stop this RealNetworks actually created the consumer demand and Market for streaming video, now they will lose everything, and we will never see another innovation from RealNetworks again, because they will have to declare Bankruptcy within a year or two or they will be taken over like Netscape was mark these words down This is a good way to see how really bad this settlement is, when another company is being completely decimated by what the appeals court has already ruled illegal to do, yet the settlement does nothing about

3) The DOJ had asked for tougher penalties during different administrations and The DOJ had asked for tougher penalties before the start of a War nothing has changed between now and then, except the political climate however important this war is, it does not give the DOJ carte blanche to completely cave away from the people's needs at home The DOJ had asked for tougher penalties even before the appeals Court handed the DOJ a victory in nearly every area, the only exception is the area you are deciding today...the remedies a good way to judge this political situation is that the only people you can consider non political, are the 9 judges who have already heard this case and ALL of them, including the 7 appeals court justices have decided unanimously that MSFT has broken laws which this settlement does not address there is no reason why the DOJ should cave with ineffectual remedies including not even considering the Tying issue and not dealing with commingling there is no reason except that the macro political climate has changed drastically, including a start of

a war this should not be a reason for deciding this issue

4) you cannot have a settlement, when half of the people involved (half of the states) are against the settlement The states have legitimate concerns, yet The DOJ excluded them from settlement talks so that there would be no interference in this settlement, a settlement that gives all and complete victory to MSFT, which everyone who is neutral agrees that the DOJ has handed them the DOJ did not act in good faith by excluding the states from something that the States had worked so hard on

Conclusions...

The solution or remedy is really quite easy to address, I'm not sure why the states wanted MSFT broken up, and I'm very sure why the DOJ wants to levy such easy remedies on MSFT, but the true solution is easy

There would be no disruption to the economy with this solution, MSFT would have very little regulation hanging over its head, and the solution is easily implemented

All you have to do is have MSFT unbundle and unmix its application software from its OS, so that MSFT has to sell the OS on one CD, and the application software on another CD..

(mediaplayer,IE,instantmessaging,MSN..etc) with no ties between these two separate marketing efforts MSFT does not need to be a separate company to do this which means zero cost to the economy, and tiny cost to MSFT, and if a consumer really wanted MSFT's apps, and their OS, they would buy both CD's, and by the time they loaded both CD's, the consumer would have exactly the same product as they would have by buying Windows XP A win win for the consumers choosing MSFT, and MSFT themselves

This would solve all that is wrong with the settlement the settlement does have some good points, like the OEM's must be able to control their own "desktop" meaning they can't be told by MSFT that if the OEM's want the OS, then they have to have these apps on there too or that they cannot have other companies app software

With this solution above other companies can sell their CD's to these OEM's and the OEM's can have both MSFT's apps or CD's and other companies apps or CD's along with MSFT's OS

If you want some punitive remedies too, (which MSFT deserves, if you read the findings of fact and conclusions of law, and the appeals decision), you can tell MSFT that they can no longer invest in other companies for a period of five years, and they must divest from other companies that they own less than 50% of This would be a punitive remedy, and MSFT would think twice about breaking the law again

A very simple solution if you think about it And I really hope you think about it, because true innovation, and the fate of real companies with real products are at stake, RealNetworks will cease to exist with this settlement as it is today think about it, a company who actually created the streaming video market put out of business by a company (MSFT) that actually copied

RealNetworks' product, and bundled this copy with an existing monopoly and then destroyed RealNetworks' market the one that actually brought the innovation to market in the first place a sad state of affairs ... and this settlement, as it is, will do nothing to remedy the situation

Thank you,
jon.

To: Microsoft ATR,microsoftcomments@doj.ca.gov@inetgw
Date: 11/20/01 2:05pm
Subject: Settlement disagreement

I have to say that I am extremely disappointed in the settlement offered by the government in the Microsoft antitrust lawsuit. I live and work in silicon valley and have seen first hand a number of companies that have had to close their doors over the past 6 years due to "competition" with Microsoft. They did not close down due to mismanagement, lack of startup capital, or poor product design. On the contrary, their products can now be found "integrated" into a number of Microsoft products.

I work on multiple operating system platforms including Windows, MacOS, and UNIX and have worked on hundreds of software programs over the years. I have yet to see an innovative program that Microsoft has not tried to copy and replace with one of their own. Of course they should be allowed to create a competing product for anything out there, but they always do so in the vein of eliminating the competition. Microsoft has some wonderful products, but rarely is theirs the first or even the best. In most cases, their product is actually pretty poor, but with the weight of their other products and business tactics, they eliminate the competition and slowly improve their own products after the competition is gone.

I ask you now, what email client are you using? How many choices do you have? What browser do you use? Again, what are your choices? Word processor, spreadsheet,

operating system, the list goes on. Microsoft is an illegal monopoly. They were convicted of that a while back. The punishments in the past for companies like Microsoft have been pretty stiff and effective, why are they different? The settlement, as offered, will not slow them down one bit. I wish I had an appropriate penalty to offer that would work to eliminate the abuses that Microsoft has perpetrated, but I don't. That is not my job, it is yours. I just hope that the remaining Attorneys General continue the fight against an illegal monopoly that is strangling innovation, progress and fair competition. I thank you for your time and consideration.

Subject: Microsoft Case

Hello,

I'm a professional web developer who works in a corporate environment. 95% of our software is made by Microsoft. 98% of our computers run Microsoft operating systems. I am the sole Macintosh user although there are several Linux users here.

It is very difficult in the environment to use anything but Microsoft operating systems and software such as the Office suite of applications including Excel, Word, PowerPoint etc. It is also very difficult to use an email client that is not Microsoft branded since other clients will not interface with the server software. Most people use Internet Explorer, another Microsoft product. More and more websites offer only Microsoft centric video formats.

We are essentially unable to exercise our freedom in this country to choose a computer and operating system, web browser, email program, office software etc from other manufacturers other than Microsoft. I recommend that Microsoft be required to provide the specifications and source code to their operation systems, office software, email server programs, web browsers, and media software so that everyone is playing on the same field and can actually write their own software that is compatible with ALL Microsoft products. Essentially, Microsoft products should be made open source. There can be no open and free market until this happens. Further, the companies leaders should be punished for their lack of cooperation, out right lies told to the court

and their anti-competitive practices that they have practiced and continue to practice. A jail term would work better than mere fines since money means very little to the richest men in the world.

You should take all care to prevent Microsoft from squashing other technology based markets such as the gaming consol market etc. We need restrictions put into place that will prevent big boys like Microsoft from coming in and JackBooting all over the competition.

Sincerely,
Stephen Dampier

Subject: Proposed Microsoft Settlement

I am writing to express concern over the details of the proposed settlement in the Microsoft antitrust case. While it is debatable whether Judge Thomas Penfield Jackson's original breakup order, which has since been vacated, was too extreme, the appeals court unanimously accepted his findings of fact and affirmed that Microsoft is an illegal monopolist.

My concern is over how weak the current settlement is. Microsoft has in the past completely ignored consent decrees, which is what the new settlement amounts to. That aside, I would support a consent decree which actually allowed for significant penalties for non-compliance; however, the only penalty for engaging in future monopolistic behavior seems to be an extension of the "enforcement" period by two years, which essentially leaves the company free to continue on its current course of controlling the market by any means available. Many individuals I've spoken to seem to harbor the opinion that the Justice Department has sold out on this settlement proposal.

I do not know how to go about fixing the situation without the probability of further lengthy appeals. I do, however, know that the current proposal lacks any sort of real punitive muscle, and some real punishment and/or enforcement is needed to prevent a continuation of the status quo. If a structural remedy is seen as too harsh, at least some significant financial penalty (a minimum of 5-10% of the company's net worth) should be applied. Furthermore, at the very least given the company's past behavior under a consent decree, the current proposed settlement could be acceptable provided that there are severe penalties for non-compliance.

Sincerely,
Andrew Fowler

Subject: Windows has become a Public Good

The suggested remedies thus far have been far insufficient in remedying the problem at hand. Microsoft has grown large and so powerful that even the government can't make a fair impartial ruling on the problem. You are probably all typing up your reports and decisions on Windows based PCs. The fact of the matter is that Microsoft's Windows operation systems have become the standard and the system that more than 95% of PCs use. Software must be tailored to work on this platform. In essence Windows is comparable to our roads, a public good and resource. How can one company dictate how the roads will be designed and simultaneously create cars (software) that will run on those roads? The two interests are conflicting interests to the consumer. Microsoft has grown so immensely large that they can afford to give a software program away for free, ie: Internet Explorer, hotmail accounts, Windows Media Player, etc... because it receives major revenues from its operating system sales. Meanwhile companies that rely on the revenue of their one product ie: RealPlayer, Netscape Communicator, etc.. are run out of business. Once they're gone Microsoft can now control the price of that industry: ie: video playback and also its innovation or the slowing thereof. This is so frustrating as a consumer that the US govt. is overlooking this for the benefit of Microsoft. This company has abused its marketplace position over and over again. As soon as any of their products hit critical mass they control that market too. We've seen this over and over again. Wake up DOJ.

Please settle this case so this economy can get back on its feet. Notice the economy began to falter about the time the DOJ started rumberling about Microsoft's antitrust atrocities. Further notice the economy is gaining steam now that the end is in sight. Continue to delay the outcome, and I think you'll find the economy begin to delay its return to greatness.

However, that is not my only concern. I do not think I ever heard the public complain about this "monopoly"; only competitors. To me, this would indicate Microsoft is a fierce competitor, but not necessarily a monopoly. The hundreds of thousands of people who use Macintosh computers, Linnux operating systems, Palm operating systems, Unix, etc. don't buy into that "monopoly" game. Microsoft is NOT the only game in town.

Subject: Justice Department soft on digital monopolism

I was very disappointed to see the recent settlement of the case against Microsoft. The "punishment" meted out simply does not fit the crime. It's as though we caught Osama bin Laden and let him off with a couple of years in reformatory. Microsoft has engaged in monopolistic practices for years, and now is being excused by those people whose view of software is not sufficiently developed to understand what the monopoly is doing, nor why it is important for government to step in.

Let me explain my position. I think that the breakup of the company into operating system/other software/and other investments was a proper part of the reconfiguration of the software world to foster competition, always an important part of American capitalism. I would go further in legislative and regulatory initiatives, not to punish Microsoft, but to make sure that no new Microsoft can emerge. First, I would make it necessary to publish the specs of all file formats. In other words, my new, whiz-bang application saves a file. The specs of that file must be open, so that developer B knows how to treat the data in his application, which may alter it in some way, or in fact, "Save as..." that exact file format. That would go a long way to guaranteeing interoperability, which has great benefits to all consumers.

Secondly, internet standards need to be enforced. Many of the standards developed by the scientific and non-profit bodies, by the American taxpayer, in fact, are being altered—so that only the users of one platform, or the users of one operating system, will be able to access some new service on the internet. Of course, true innovation should be encouraged, but a mere technical trick—locking out users of Real streaming video, for instance, not by adding anything significant to the service, just by tweaking the interface enough to lock out competitors, for instance—should be punished in civil and even criminal courts. If someone comes up with a meaningful advance, it should be protected only to the extent that it benefits all.

Again, the government should require the publishing of details of the new standard, so that a new technique should be swiftly available to all. At the moment, if Microsoft (the most obvious candidate for monopoly, but not the only one) tweaks their treatment of sockets, or java, or ActiveX, so that other developers cannot access it, it's game over. Publication must come simultaneously with the development, or else the natural advantage of an innovator in the digital era becomes an unfair monopoly.

I am disappointed, but not surprised, by the leniency of the Justice Department vis a vis a prime campaign contributor. The American people deserve better.

Subject: Microsoft/Department of Justice
Settlement

I am writing all you Attorneys General and the United States Department of Justice to express my extreme dissatisfaction at the "settlement" that the Department of Justice has reached with Microsoft. I am not a resident of any of the states I am writing to, but my life will be affected by the Department of Justice's cave-in as much as anyone else's. I feel that, as a registered voter and American, my voice should be heard.

Microsoft was ruled to be an illegal monopoly. It's settlement with the Department of Justice does not take even the smallest amount of what are, in my opinion, requisite actions against Microsoft to ensure that it does not tighten its stranglehold of the computing industry.

The new settlement, unlike the one proposed by Judge Jackson, does not require Microsoft to disclose its API's to third parties anymore. Section J1:

No provision of this Final Judgment shall:

1. Require Microsoft to document, disclose or license to third parties: (a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria; or (b) any API, interface or other information related to any Microsoft product if lawfully directed not to do so by a governmental agency of competent jurisdiction.

Section a allows Microsoft to get around disclosing API's and other information by claiming that its security is threatened. This allows Microsoft to continue its closed, monopolistic way of setting new "standards" in the computing industry. This settlement will not change anything at all.

Section b offers Microsoft government protection for its monopolistic acts. It allows for Microsoft's non-disclosure to be enforced by the government. This is totally unacceptable. Microsoft has been ruled a monopoly, and these terms seem more like the government wants to protect Microsoft's monopoly, rather than doing what it should and break it up.

In spite of the fact that it has been ruled a monopoly, Microsoft continues monopolistic and domination-like actions. I shall list some recent actions taken by Microsoft that belie its monopolistic nature:

1: Upon opening the new MSN website, users of the Opera web browser were unable to view the site. Users of Opera were directed to "upgrade" to Microsoft's own Internet Explorer web browser to properly view the content. Microsoft, when questioned about

the incompatibility, accused Opera of being non-compliant with the XML standard specifications. Opera immediately shot back that they prided their web browser on standards compliancy, and submitted an XML standard test of MSN that showed it to not be compliant with the XML standard specifications, thus identifying MSN as the culprit. Microsoft then fixes the problem so that MSN could be viewed by other browsers. Had Opera not made public MSN's non-compliance to the XML standard, Microsoft's attempt to coerce users of Opera into using Internet Explorer would have gone unnoticed. Microsoft has no shame in continuing it attempts to dominate the internet.

2: Windows XP and the latest version of Internet Explorer do not ship with Java support. Java is one of the key components for the internet, because it works with every operating system that can run a Java Virtual Machine. Why would Microsoft not want to support this standard? Because it is a roadblock in Microsoft's attempts to saturate the internet with Microsoft-only standards and products. Java works with every operating system, and Microsoft is attempting to replace it with a Windows-only standard that would force any desiring to be on the internet to buy a Windows PC, rather than a Macintosh or Linux machine.

3: Microsoft's proposed security procedures are based on "security through obscurity." Microsoft disallows the publication of any security holes than may be found in its operating systems or applications for at least 30 days after the said hole was found. Even then, security companies are only allowed to release very general information that is not helpful to system administrators wishing to develop a temporary work-around for the problem while Microsoft works on a patch that fixes the hole. The fundamental problem with this approach is that it leaves the security hole completely open and unguarded for a period of one month. Microsoft is essentially taking the chance that no rogue hackers will discover the flaw and exploit it in 30 days. After making the public aware of the problem after 30 days, system administrators must wait for Microsoft to release a patch. The public release of information cannot contain the information required to exploit the security hole, so system administrators cannot test the problem on their own networks, nor can they isolate and deactivate the part of the network that is flawed. For most companies, this means an indeterminate time of over one month in which their network is vulnerable if it is running Microsoft software as its backbone. Taking the network offline is simply not an option in today's e-commerce-based industry.

Of course, many may say that the alternative is to simply use Linux or UNIX in place of Microsoft's software. However, Microsoft already has enough of a presence in business networks that a transition to Linux would cost a great deal in the short-term in the purchase of new servers and the training or hiring of certified and UNIX-knowledgeable network administrators to replace MCSE-certified ones. While a large company like IBM can make this transition

without worrying about cost in the short term, the large number of startup companies that have sprung up that are using Microsoft's products do not have this option due to lack of revenue and sales. They must use the money they have to maintain their existing network and pay Microsoft outrageous licensing fees.

4: Microsoft is now beginning to try and extend its influence and power to every aspect of the technology market. The recent release of the X-Box to the game console market, coupled with Microsoft's Ultimate Media TV and the presence of the Windows Media Audio format on copy-protected Compact Discs, should be enough to show that Microsoft is not satisfied with mere domination of the computer operating system market. They wish to impose their closed-standard and secretive approach on any technology market that they can.

5: Microsoft continues to write new "standards" for the computing industry that conveniently only work with its operating systems, instead of embracing real standards. Real standards are written by committees which openly-publish their work so that anyone can use it. The Motion Picture Experts Group (MPEG) writes the MPEG standard for the industry, and any wishing to comply with this standard can obtain a license and make it work with any operating system or media player. Microsoft's standards are not available to the public, and they can only be used by Microsoft products. No version of Windows comes with built-in servers for telnet, FTP or any other open standard. All Linux distributions and Mac OS X come with built-in support for these open and accepted standards. Microsoft forces you to buy a Terminal Server application that uses a closed and proprietary communications protocol.

Microsoft is a monopoly and should receive harsher penalties, such as a break-up or forced-disclosure of the source code for Windows. Private organizations should not be able to bully the government into protecting their monopolies and have the government passively approve of such bullying tactics against other companies that offer even the smallest bit of competition.

Please know I desire harsher penalties for Microsoft, and I support any reasonable action taken in seeking these penalties.

Subject: Microsoft Settlement—NO!!!!!!!!!!!!

The feeble settlement that is being proposed by the Justice Department is not in the best interest of the consumers. Microsoft blatant disregard for the law and malicious actions towards it's competitors must be addressed. Just as Judge Sporkin stated in the 1995 U.S. Appeals Court case against Microsoft: "simply telling a defendant to go forth and sin no more does little or nothing to address the unfair advantage it has already gained". Microsoft has proven repeatedly that it can not be trusted. The settlement

must prevent Microsoft from using its monopoly against the industry. The only way Microsoft can be trusted is to separate the operating system from the applications software by breaking the company up into two separate companies.

I feel that Justice Department has sold us out!! If we can't count on the Justice Department to look out for our best interest then WHO????? What is good for Microsoft is not always good for the industry!!

Thank you for your time,
Larry Herfindal

From: Bob Eliason
To: Microsoft ATR
Date: 11/20/01 2:22pm

Subject: Re: settlement

Microsoft has broken the law and continues to extend their illegal practices. The operating system must be broken away from the software business to protect the consumer. They are already eyeing digital television, game boxes, and Internet access and have made major inroads in creating a "standard" that they can control.

Just in the Internet realm, they adopted JAVA, attempted to change the standards by modifying their server software to only use their version, and then dropped it completely from Windows to eliminate it. Not a surprise since it is a potential competitor. Netscape plug-ins were eliminated to disable Quicktime. Hotmail has new "security" that disables other e-mail programs.

Innovation is not taking place. You now even have to get their permission and provide personal data just to use your computer that is running their software. There are better operating systems but the consumer is not given a choice or when there is a choice, the other platforms are not supported by Microsoft servers, services, or equivalent features. We could all just buy a Macintosh but it will be dead on the day that Microsoft stops making Office for the Mac (which doesn't have feature parity now).

Correct this sad settlement and create a punishment. It is a shame to hide behind September 11th. The consumer deserves better.

Subject: Microsoft Settlement

Having been involved in the computer industry since 1984, I have been witness to many trends and developments.

It cannot be in the interest of the American public (or the world's public, or any state's public) for one company to monopolize the computer operating system software and be a major developer or supplier of application software as well.

Microsoft should be two discreet companies—one company dedicated to supplying the Operating System software only, and the other company (applications and productivity software) competing on the same level playing field as other suppliers of computer applications software.

All computer manufacturers should be guaranteed access to the Operating System software regardless of any other software installed on their product.

Furthermore, while I don't think that the government should set the pricing of software, all manufacturers should pay the same for the Operating System as others at a similar manufacturing level. For instance, all manufacturers producing up to 100,000 units per year might pay XX amount, those who make up to 500,000 units might pay 90% of XX, up to 1,000,000 annually maybe 80% of XX, and over 1,000,000 units per year might be at 70% of XX. This would guarantee that computer makers could not be pressured into taking a sister company's product, freeing them from "software extortion".

From: Daniel Bliss
To: Microsoft ATR
Date: 11/20/01 2:32pm
Subject: Microsoft settlement

Keep up your efforts with trying to rein in Microsoft. The proposed settlement leaves gaping loopholes for them to continue monopolistic practices, especially with regard to software that is bundled with the Windows operating system. I see the settlement as being a particular threat to competing (or open source) technologies such as:

—RealPlayer (a key Microsoft competitor that is being pushed off the Windows desktop with the bundling of Windows Media Player)

—Open GL (the open source game acceleration technology that's being pushed out by Microsoft in favor of DirectX, a move that could freeze the Macintosh out of games and other 3D applications because while Open GL is available on both platforms DirectX for now is not)

—Java; the open-source architecture that drives a huge number of web sites and Internet applications (Microsoft is cutting back support for Java from new Windows software including Windows XP and Internet Explorer) customers will have to manually install a plug-in. That's a move that not only undermines Java's designer, Sun Microsystems, but causes serious trouble for businesses across the country that have built Internet commerce on Java)

—the Internet itself, where Microsoft has engaged in questionable practices in the past on web sites it controls with regard to support for Netscape web browsers, and where the company is very ambitious about expanding its presence.

In more general terms, as a Macintosh user, I'm also concerned about the impact that a continuing increase in Microsoft's power would have on users of platforms other than windows. You take away non-Microsoft 3D acceleration, you take away Java and you corral the Internet, and in three strokes you have effectively ended the average consumer's ability to routinely use anything other than Windows, and indeed anything other than Microsoft products for all but the most specialized uses.

I find it very interesting that the Microsoft Office updates brought out during the anti-trust investigation (Office 2000 for the PC, Office 2001 and Office v.X for the Macintosh) have broken from Microsoft's recent practices and allowed full backwards compatibility with the file formats of the previous versions (Office 97 for the PC, Office 98 for the Mac); I think if Microsoft gets off as lightly as the Department of Justice wants them too, we'll go back to the bad old days of significant incompatibility between each new update of Office. We already see a situation in which Apple, which has to work hard for its customers, enables in some cases ten year old applications to use its new OS X operating system through the "Classic" interface that comes included for the \$129 price, while Microsoft, which charges \$200 to \$300 for comparable versions of Windows XP, has dropped support even for applications that are just two or three years old.

Moreover, I'm also concerned about a case in federal court Maryland where Microsoft is trying to get judicial approval for a deal to dismiss more than 100 private lawsuits related to overcharging for Windows by donating used computers—a million of them—to poor school districts. If this settlement fails to specify which platform, Mac or Windows, these computers should be, or worse yet specifies that the computers be Windows-based, Microsoft's "penalty" would be to hook even more people to the Windows operating system in what is the most important market for Microsoft's only serious mainstream competitor in the operating system market, Apple Computer; in any case, it is a deal that would seriously undermine an already beleaguered computer

hardware industry while having a minimal impact on Microsoft with its almost \$40 billion cash reserve. If this is approved, it effectively makes the company even more of a monopoly than it already is. Microsoft already has more than 70 percent of the education operating system market and 95 percent of the market as a whole, a situation that raises anti-trust issues by almost any definition.

Overall, I urge you to keep up the battle to hold Microsoft accountable, because without it, consumer choice and indeed the economics of almost every business other than Microsoft will suffer.

Sincerely,
Daniel Bliss

To: Microsoft ATR
Date: 11/20/01 2:52pm
Subject: Keep them on their toes

To whom this may concern,

I just can't believe you're ready to let Microsoft off the hook so easily, and so conveniently for the company. This settlement really looks like it was politically motivated. Whether it was or wasn't, I honestly can't say, of course. But it sure looks like Microsoft swallowed the DOJ whole, and quite easily, too. As far as the DOJ is concerned, it's game over. You loose. No

amount of press release blab can hide that conspicuous fact. Or the fact that M\$ repeatedly and demonstrably lied to you in court, which is uncomfortably close to laughing at you.

Soon enough, Microsoft will get back to doing what it does best, i.e. being a brutal and abusive monopolist. And expect them to be back at it with a vengeance. For M\$ has just been reminded that strangling competitors using a combination of legal and illegal means is a hugely worthwhile and profitable enterprise that far outweighs the relatively modest price to be paid.

In the name of many consumers from the US and abroad, who mistakenly thought that the DOJ (if anything) might force Microsoft to play by the rules... thanks a lot. You really let us down.

Subject: Comments on the AntiTrust Case

I would strongly encourage you to consider that Microsoft has inflicted significant pain and abuse on the office and home pc user over the past 20 years. They have incorporated features and functions into their base operating system which they made available for free and which caused other vendors of retail software that competed to go out of business (or they were basically forced to sell to Microsoft). They have misled business partners and their customers (reference what Microsoft did to OS/2 for example).

Any settlement must include a brick wall between the operating system, applications, and web divisions of Microsoft and there must be monitors in place with sufficient authority to correct abuses. These comments are my own and do not necessarily reflect the views of Kaiser Permanente Information Technology.

Subject: Break it up!

Microsoft will never reform. It constantly crushes competition both for applications & operating systems. Microsoft programmers can (and do) tip the playing field strongly in their favor. Their new "Passport" service will give them more information about PC-using public than the Government has. Through clever PR their own deplorable internet security loopholes have been blamed on the Web as a whole.

I spent my 40-year working career in software development, mostly at Bell Labs. I have watched Microsoft closely since the early '80s. Every day the average PC/Mac

owner pays more and receives less in return because of Microsoft. The are the "Big Government" of software. Nothing approaching their monopolistic grip has been tolerated in the U.S. within the last 100 years.

Check out Robert X. Cringely's articles in Microsoft. See <http://www.pbs.org/cringely/pulpit/pulpit20011101.html> as an example.

Subject: Comments on Microsoft Case

I am against Microsoft being able to spread it's monopoly by a court ordered settlement. As stated in this web page: <http://news.cnet.com/news/0-1003-200-7928195.html> "Under proposed terms of the settlement, Microsoft would donate software, services, training and licenses for reconditioned computers—an array valued at more than \$1 billion—to 14 percent of the nation's poorest schools, said lawyers representing consumer plaintiffs."

Rather than forcing the schools to use the Microsoft OS (and further Microsoft's goals of monopolizing the operating system market), the ruling should allow schools to choose the operating system that best suits the needs of the school and force Microsoft to purchase what the schools say they need. By forcing the schools to use the Microsoft operating system, the schools will be trapped into future purchases of the same system by default. This isn't a punishment, it's a gold mine for Microsoft!

Sincerely,
Michael E. Rocus

Subject: Microsoft and Monoploy power

I find it interesting that the proposed 'solution' to the anti-trust trial is almost identical to the previous sanctions applied to microsoft in the prior bundling case.

The net result from the prior sanctions applied to microsoft was that nothing happened and microsoft continued to use its market power and position to prohibit inovation and limit acceptance into the market any product which could possibly weaken microsofts position on the desktop.

Since the DOJ has given up any hope of controlling microsoft, it is hoping that microsoft will control itself. Prior actions show that microsoft has no intention to control itself, and has every intention to push any technology which is not microsoft controlled out of the space microsoft wishes to be in.

The courts have ruled that microsoft is a monopoly. This is not contested by anyone except microsoft.

Prior monopolies were broken up. Standard Oil comes to mind... How much market share did it have when it was finally separated?

The same remedy should be applied to microsoft. Anything less will only be giving microsoft the opening it requires to complete pushing all other companies from the market.

When we only have one company to choose from for desktop software, it is too late to try and fix the problem. The time is now, and the only thing which makes since is to apply the 'Standard Oil' solution to microsoft. David

Subject: Short and to the point

I am a Microsoft Windows user both at work and at home. I have no ill feelings toward the company, yet I wanted to address this issue of a remedy to the Microsoft case. Would a Microsoft breakup hurt the economy?

The answer, concisely, in no. Realistically, it would be a major boon to the technology sector. Short answer, no one can compete with Microsoft. Even those that have had success with products outside of Microsoft's control are immediately either purchased outright or carbon-copied into 'extended functionality.'

Consider this: Microsoft, for all their 'innovation,' has never actually created anything substantial save 'integration.' Microsoft did not bring us a Word processor, or a spreadsheet. They did not bestow upon the world a graphical user interface. Even the web browser escaped their notice for several years. They were not the first to pioneer video and audio compression for streaming media. They have never been trailblazers of security.

Simply put, Microsoft has always had the freedom to 'innovate,' however they have never actually done so. What they have is the forced power to 'integrate.' Isn't that the heart of what is at stake?

Dividing the corporation is the only remedy that makes any sense. Level the playing field as it were. No one can compete with Microsoft's integration. By the time 3rd party developers get a hold of the code by which to plan their strategy, Microsoft has had ample time to integrate the applications seamlessly into the OS.

No company can financially target any Microsoft-established market. Look where Microsoft's integration has brought us to date; The abandonment of cross-platform standards such as Java (to be replaced with a nearly identical, yet Windows-only language of C#), the secret 'hooks' in the OS that only Microsoft is privy to, allowing 'integration' between the OS and applications that simply cannot be matched by those who might wish to compete, the OEM agreements that have historically punished a vendor for attempting to give a consumer any choice as to what operating system their computer might be shipped with.

Split up Microsoft. Plain and simple. If the products they offer the world continue to dominate then it will be on their own merits. Force Microsoft to consider a much more open stance, force them to acknowledge alternatives. Allow for competition, which in

turn will drive the marketplace, and thus jump start a fledgling technical sector. Innovation comes from competition, and competition comes from rules. Enforce the rules that have made this nation strong for over two hundred years. It is a far too dangerous gamble to concede that one company has the power to lead the world into the 21st century.

Sincerely,
Kyle Hoker.

Subject: Microsoft Settlement

I think what you have done over these many years to Microsoft has been great for the lawyers but a disgrace for you. Would Japan do this to Sony or Germany to Siemens??. Microsoft is a national treasure for Americans to be proud of and appreciative for all it has contributed to making the U.S. #1 in the world in technology.

Because Larry Ellison came crying to you because he couldn't stand the competition you caused millions of taxpayers dollars to be wasted aside from diverting Mr. Gates time from innovating and causing him unnecessary stress. Don't you understand how rare such a creative brilliant person is? That our government should try to destroy him and his work is really evil.

Unfortunately you are powerful enough to destroy anyone and any thing wasting the taxpayers money. I am so ashamed of the Dept of Justice. Did I say Justice ?? Where is the Justice? Are you going to reimburse the tax payers or Mr. Gates? No, your buddy lawyers have it all in their fat pockets and we are all poorer for your activities.

You were not protecting us. You would have better spent these years getting Universities to inform you when students from terrorist countries disappeared. You could have sent illegal foreigners out of our country. Illegal means nothing to you when it is a foreigner breaking our laws but you attack one of the greatest Americans to come

along. How is it that a Mexican can illegally cross our border and have a baby and it is a legal citizen? You have lost your mind and care not for the law. How do these illegal foreigners get so privileged?

Lets hope you will spend our tax money protecting us from real danger—terrorist not a great national asset such as Microsoft

From: mdw@swoodinc.com@inetgw
To: Microsoft ATR
Date: 11/20/01 2:59pm
Subject: What to do with Microsoft

I believe it would be in the best interests of the computing and software industries to break up Microsoft into a system software company and an applications company.

Then each company's products can compete on their own merits instead of the proprietary links they now enjoy. Competing companies must have access immediately to any information shared between the two new Microsoft entities.

Failure to adhere to this rule would result in a multi-billion dollar fine, (to be determined) such that it would actually make a difference to Microsoft if they had to pay it.

Each of the two companies would be prohibited from writing contracts that preclude installation, nor require the removal of, any other software vendors products from any given hardware product. Failure to adhere to this rule would result in a multi-billion dollar fine, (to be determined) such that it would actually make a difference to Microsoft if they had to pay it.

Microsoft should pay the maximum legal penalty NOW for it's transgressions. This is in fact a punishment. Not a wrist slap.

Subject: Microsoft Case

I don't have a lot of time to write you a long-winded letter telling you all the reasons why you shouldn't settle the Microsoft case, but I'll leave you with this impression.

I work in the computer industry—I hate Microsoft. They are the worst thing that ever happened to computers. I am not saying that I dislike their operating systems, I do think they make the occasional good product, but there is NO COMPETITION. Their pricing is overvalued, and their licensing agreements wouldn't be signed even if the Spanish Inquisition was still in control. Even though my e-mail address is a Canadian address, I am an American and I do vote, and I urge you—BREAK UP MICROSOFT.

I know the DOJ has fought hard in this case, and there is a lot of good work being done by the DOJ in this case—BUT DON'T QUIT NOW. PLEASE. Consumers need a future where they have choice. Open standards will always prevail over proprietary standards—MS does not support open standards. Consumers need security. Microsoft has continually failed in providing the industry with secure products—or support furthering security on the Internet in a collective manner. For instance, IPv6—Internet Protocol Version 6—is a standard that has been developed, and if implemented would make the Internet much more secure. MS has done nothing to promote or implement this standard. Just a quick thought, with the recent rash of virus threats, why hasn't Microsoft 'strong-armed' their channel partners to bundle their software with Anti-Virus software instead of their Internet Browser?

Microsoft deliberately mis-engineers products in order to sell expensive upgrades later. Case in point—Windows Millennium Edition, possibly the worst OS ever created, was released less than a year before “Windows XP (eXtra Pain).” I would propose that Microsoft DID THIS ON PURPOSE, so that consumers using Windows ME would be dying for an upgrade when their systems disintegrate due to a neutered driver base, or networking stack, or complete lack of functionality that was in Windows ME. Why create Windows ME? Grab some quick cash from unsuspecting consumers and then force them to upgrade to Windows XP later.

I could really go on and on, but I must close with one last thought (a repeat)—

KEEP THE FIGHT UP. BREAK UP MICROSOFT.

From: Dr. David A. Zatz
To: Microsoft ATR
Date: 11/20/01 3:17pm
Subject: Proposed Microsoft settlement

I must ask you to reject the proposed settlement with Microsoft. By agreeing to a toothless settlement with Microsoft, you would condone a variety of illegal practices which have bankrupted many companies and sent many people out of work, while suppressing superior technologies. You would also send a clear message to the world—that in America the law is a tool of the wealthy, that if you have been successful enough, your crimes will be forgiven. Certainly that would be the case with Microsoft—essentially destroying WordPerfect, Lotus, Netscape, and, to a degree, Apple (not to mention many others) would be forgiven, if Microsoft would promise to hold itself mostly to the law in the future. That's pretty weak, and given how well they've fulfilled their promises in the past, foolish as well.

Given Microsoft's contributions to the current administration during the election, we suspect the world would consider a settlement like this to be payback, as well.

Microsoft can stand real penalties. What's more, some real prevention would be handy at this time. Microsoft, which owns or has substantial in many media outlets, is soon to take over most of the world's authentication through .Net and Passport. It is practically forcing MSN down users' throats, and I would be surprised if MSN did not pass AOL within two years, given the sheer number of times a new user has to turn down MSN service.

That's too much power for one company—especially one with a history of abuse.

Please make the settlement workable and enforceable, and extract some penalties, or reject it out of hand.

Subject: Make MS carry a JVM

Dear Sirs,
I am an entrepreneur working on a software/web application. I am extremely worried with the current proposed settlement with Microsoft. The company has a long history of squashing any form of competition. I and many other developers are terrified of Microsoft's wrath. There is a genuine fear in the developer community of getting in Microsoft's gun sights. There are so many loopholes in the current settlement that will allow Microsoft to continue their lying, cheating, conniving ways. The settlements need to be far more air-tight.

At the very least, there is one huge concession that Microsoft should be forced to

make. This concession would increase software availability AND compatibility across multiple platforms. It would also lower the costs of software developers in developing new products, because they could write code once and simply recompile that code for the various platforms. This concession would create a proliferation of software titles on all platforms.

What is this concession? Force Microsoft to bundle a Java Virtual Machine with their shipping OS. Java is a language designed to be platform independent. Microsoft tried to usurp control over the Java language from Sun a couple of years ago. A court ruled that Microsoft violated their contract with Sun by introducing code that would "optimize" Java performance on Windows. In reality, Microsoft "polluted" the Java language and ruined Java compatibility across multiple platforms. But hey, it played great on the PC. Recently, Microsoft said they would NOT support Java at all. Why? Because they see this as a threat to Windows dominance.

To reiterate, forcing Microsoft to distribute the JVM (hell, force them to build support into the OS) would allow developers to write software ONCE. They could then recompile that code to work on Windows, Mac OS, Linux, BeOS and Unix. Imagine writing code one time and having it available to ALL platforms! THAT WOULD REINTRODUCE COMPETITION IN THE SOFTWARE INDUSTRY!

I implore you not to settle on the current terms. Should you wish to discuss this, I am enclosing my contact information. For the record, I have no affiliation with any of Microsoft's competitors.

Sincerely,

Van Secrist 3888 Elderbank Drive Los Angeles, CA 90031 323.227.9888 (h) 310.917.2584 (w)

Subject: Concerned Citizen Unhappy with MS Deal

Dear Sir or Madam,

I am writing to you today because I am very dissatisfied with the deal Microsoft is striking with the DoJ. Everything I have read indicates that while all courts have upheld the contention that Microsoft has used anti-competitive and monopolistic practices, they will only be given a slap on the wrist with a very vague bargain. Not only do I believe that the deal is detrimental to the consumer, but I also believe that the deal will end up costing the taxpayers money as they fund future attempts to make sure Microsoft obeys nebulous guidelines. I want a clear cut decision against Microsoft in this case, and am willing to suffer through the trials necessary to get it right. We are willing to fight a war against terrorism for as long as it takes to guarantee our safety, we should be willing to act similarly to guarantee our competitive freedom. It has reached the point in this country that it is practically impossible to buy a computer without buying a Microsoft product, even if we have no intention of ever using the computer with a

Microsoft operating system. Would we stand still if we could not buy a car without buying a Microsoft trailer along with it? What if you could not buy ground beef without buying a Microsoft hamburger bun?

I would have been happy with the original court order splitting Microsoft, and feel that it makes sense. It was easily understandable to the general public, and clearly showed that monopolistic behavior would not be tolerated. Unfortunately, Microsoft got out of that one on a technicality - simply because the judge talked to reporters, the decision was thrown out. Higher courts have upheld the findings of the lower court, but now the penalty is paltry. I can understand (if not agree with) arguments that splitting the company was too drastic, but surely people of reason can see that the proposed deal is too lenient. Please pursue this case with utmost vigilance. Make sure that Microsoft does not threaten freedom again.

Thank you,
Paul Carroll

From: ron
To: Microsoft ATR
Date: 11/20/01 3:38pm
Subject: microsoft has to be delt with To whom it may concern,

I wish to express my thoughts regarding the impotent federal settlement with the Microsoft monopoly.

As a computer industry professional I've had to deal with the problems and—intentional—incompatibilities—that Microsoft has designed into their software. Not only is the market dominance that this company has used to reinforce the perception that the Microsoft way is the only way to conduct business. Limiting the consumers perception what is possible (as I'm sure is many lawmaker) but it also crushes, buy outs and or pirate's the innovative concepts of other business that would promote compatibility... Right now people don't have a option as to what they can buy and use if they wish to conduct business or gain employment due to the intentional incompatibilities with non Microsoft products.

There are many other issues both of common sense and of the technically inclined as to why the monopoly has to be broken up and severely weakened. If not for the general benefit of the society in regards to creative though patterns but to promote a healthy business environment where competitive ideas and technology can enter the marketplace and take root. Not only for the short term but for also the long term benefit of both business and society.

How many billions of dollars have been wasted both nationally and internationally by the dependency upon Microsoft products ? Is not the predominant (if not exclusive) targeting from both virus and computer worms upon Microsoft software not reason enough to diversify the consumers options?

Not only for private and business security but for also of Government? If Microsoft didn't have this monopoly there would never be a foothold for these costly and damaging viruses to gain a foothold much less spread so easily?

I urge you to take severe action against Microsoft: Breaking it up into at least 3 different companies that will be unable to coordinate their efforts (In accordance to both state and federal law).

Severely Fine the company for its practices of using its monopoly to prevent free market competition and needless incompatibilities with both its operating systems and its software.

Require the company to publish its code and adhere to recognized international standards for all its software and forbid it to use its market dominance to pervert such standards to read "into the system" but send out as an industry incompatible Microsoft monopoly standard now unreadable by those "accepted standards".

Thank you for your time in reading this I hope that I've expressed myself clearly so that my perceptions may be known and appropriate action taken. If there are any questions please feel free to contact me at my home (619.294-6631)

Date: 11/20/01 3:38pm
Subject: against settling, against sole-source internet

microsoft's intentions for its monopoly on personal computer operating systems are clear: to leverage it into a control of networks and of software distribution.

any software they have under their roof is nearly impossible to compete with. any computer standards they gain majority control over quickly become impossible to keep up with for other vendors, unless they agree in contract to accept the piece of the pie microsoft has reserved for them.

it astounds me that a conservative republican administration is settling a case of such clear anti-competitive ramifications. there will be things, basic important things, about networking, about using computers, about LIVING in our era, that people will not be able to do unless they are working for microsoft. this is a bad way to ensure flexibility in the future of the network, and the computer. this is a violation of your job to enforce anti-trust law.

Subject: Microsoft Settlement

My comments:
I feel that the US government gave away much of the necessary penalties and regulatory oversights in the Microsoft settlement. I gather that this was done

primarily because of the perilous state of the economy after 9/11.

The operating system clearly has the features of a common carrier and, as such, requires that significant efforts be made to prevent Microsoft from using their ownership of the OS to disadvantage other companies. Microsoft has clearly done this in the past and they will continue doing it into the foreseeable future without more significant restraints. In a few years, they will dominate many other areas (the Internet, PDA's, telephone software, etc.). The Justice Department will be forced to take them to court yet again. The results will be more costly and, ultimately, more disruptive than if the Justice Department had stuck to its guns during this round.

I'm very disappointed and I don't look forward to watching Microsoft take control over the Internet.

Subject: injustice

Hello,

I would like to add my voice to those who oppose the settlement (which I am tempted to call "sell-out") with Microsoft, which leaves monopoly power untouched despite overwhelming evidence that the catalog of illegal activities engaged in by Microsoft that prompted the anti-trust case are and will continue to be the guiding strategy for the monopolist. What is justice, if it bows to the wealthy while baring its backside to the rest of us?

Subject: 1 Billion dollar Private case settlement

I don't seem to have any other method of reporting my disgust at the settlement reached in this case. So I thought I would write here to do what I can to prevent the same in other cases.

The private case settlement is the biggest Microsoft marketing ploy I have ever seen. This is a greater outcome than microsoft could have ever imagined. Forcing every little child in the United States to begin their computer oriented life using microsoft products or even better usig software and machines so generously donated by microsoft. This just further enforces Microsofts death grip monopoly in software,

and gives them them the expectation that all of these children will continue using their products for years into the future. Microsoft has absolutly no problem with spending a billion on marketing, and thus will see no punishment and only benefit from this settlement.

James P. Drummond

Subject: Microsoft Settlement After reading the recent press releases regarding the settlement of a raft of private antitrust cases that would require the company to spend over a \$1 billion to put software and computers into some of the poorest U.S. schools, I nearly fainted.

This settlement would—
* Cost virtually nothing to Microsoft except the cost of some CD's and old, refurbished computers that they can get for next to nothing.

* Give Microsoft an excellent PR opportunity.

* Give Microsoft the opportunity to make money off of the children/schools via their "Passport" service, which is geared to make money from all transactions the user places through his/her computer.

* And, most ludicrously, give Microsoft even more market share than it already has by unseating Apple as the dominant provider of computers to grades K-12! Let me repeat the irony of this—

Microsoft has been ruled a monopoly, so as punishment, they are given more market share! Ridiculous!

If anything, the company should be required to donate the Apple or Linux products instead of their own!

How on earth did it go from a break-up of the company, to giving them more market share on a silver platter?

Jeff Avellanet

From: Craig Bergh
To: Microsoft ATR
Date: 11/20/01 4:00pm
Subject: Microsoft Settlement.

Hello,
This is Craig Bergh from Worthington, MN. I do not want to see the quick settlement for Microsoft. They must have their day on court. They have manipulated the market in a thousand ways.

Today's offer to give some copies of Microsoft products to schools is laughable. Their new software literally a new Pentium 4 computer to even run a simple word

processor. And this maneuver only entrenches their monopoly. A few years ago they forced WordPerfect out of business when they would not give the source code to Windows (so Word Perfect could write the program for Windows 95) until a week or two before it was released. At the same time, Microsoft literally gave Microsoft Word for free with all new computers. Word Perfect market share dropped from 70% to 4% overnight. This was a cold example of using the monopoly power of Windows to also dominate the Word Processor market as well.

The Microsoft products are really not very well written, have poor security from hackers, and crash frequently. Yet because they dominate the market so much, we are forced to deal with the second rate software. This is the United States of America. Microsoft MUST GO TO COURT and defend their behavior. I am sorry the first judge screwed up the case with his pretrial comments. He was probably right, but the judge must be unbiased.

Keep up this case. Do not be in any hurry to settle. Get the facts, determine if any laws have been broken. If so, determine a penalty appropriate for the crime.

Sincerely,
Craig Bergh

I've been in the computer field for about 40 years, as a machine operator, a developer, and as a computer scientist and engineer. I am retired from IBM and currently am an associate professor at Austin Community College in Texas.

A settlement like this is very bad, to say the least. One of the goals of monopolistic companies in the computer field like Microsoft, or IBM, is to capture the technical minds of the coming generations. IBM once did this by providing free software to schools. By doing this, Microsoft can look as though they are settling a suit, but they are simply preparing to further their monopoly into the next generation by making large quantities of their software products available to schools. I hope this does not happen! Microsoft will eventually starve out all competition if it does. Microsoft should be restricted and punished, not aided and abetted in furthering their monopolistic practices.

MTC-00001603

From: Anil (Neil) Gulati
To: Microsoft ATR
Date: 11/20/01 4:13pm

Subject: Microsoft Settlement

This judgement has not been anywhere near severe enough. Microsoft have been using FUD tactics throughout the whole process. As the following extract demonstrates, despite all their wailing about 'innovation' (not something Microsoft is known for) and 'freedom', they have been prepared to increase market share by any means whatsoever, morals and laws not withstanding.

Microsoft needs to be punished and fined as a clear message to other companies that criminal activity is not allowable as part of business in the free world. Also Microsoft needs to have its operations curtailed so that it will be restricted from repeating the same behaviour. There is no indication that they will do this voluntarily. The split up of the company seems to be the most viable outcome as initially ruled by Judge Jackson.

12. Microsoft, however, has not been willing simply to compete on the merits. For example, as Microsoft's Christian Wildfeuer wrote in February 1997, Microsoft concluded that it would "be very hard to increase browser share on the merits of IE 4 alone. It will be more important to leverage the OS asset to make people use IE instead of Navigator." (MS7 004346). Thus, Microsoft began, and continues today, a pattern of anticompetitive practices designed to thwart browser competition on the merits, to deprive customers of a choice between alternative browsers, and to exclude Microsoft's Internet browser competitors.

MTC-00001609

From: Tarantino, Paul S.
To: 'microsoft.atr(a)usdoj.gov'
Date: 11/20/01 4:28pm
Subject: Microsoft Settlement

As a long-time computer user at home and in business, I was appalled to read details of the recently announced settlement proposal in the Microsoft antitrust case. This proposal does not serve the interests of consumers or of open competition. The proposed

settlement leaves Microsoft's illegal monopoly power in place, is full of poorly defined language and potential loopholes, provides for no redress of past wrongs on the part of Microsoft, has no meaningful enforcement mechanism (if Microsoft does not abide by the terms of the settlement, those terms will continue to apply for two more years), and does not provide sufficient oversight of Microsoft's business practices (a sequestered three-person oversight committee, with Microsoft having veto power on public disclosure of non-compliance issues). Microsoft has never acknowledged any wrongdoing, despite District Court findings that were upheld unanimously in the Court of Appeals. Microsoft has a dismal record of compliance with previous consent agreements, and continues to maintain and extend its monopoly power with Windows XP and its bundled products and services. I have absolutely no confidence that the proposed "remedies" will reduce Microsoft's predatory practices.

Even as the court case and settlement discussions have gone forward, Microsoft has radically revised its pricing models, imposing much higher licensing costs on organizational customers, many of whom are essentially "locked into" using Microsoft products and have no effective alternatives. The "applications barrier to entry" remains firmly in place.

The events of September 11 and Judge Kollar-Kotelly's strongly expressed interest in rapid closure should not be an excuse for complete capitulation to a guilty party. A settlement on these terms causes more harm than continuing litigation.

I have read dozens of editorials and opinion pieces in print and online media which characterize the proposed settlement as vague, meaningless, riddled with escape clauses, a "slap on the wrist" or an outright victory for Microsoft.

Here are some suggestions for additional constraints to consider:

1. Each of Microsoft's existing APIs, protocols and file formats (for all of its software products) should be made freely available to the public, not just to a narrowly defined class of OEMs and software producers. New or modified APIs, protocols and formats should be publicly posted well before they are incorporated into new software releases (perhaps in advance of the first beta distribution). Each instance of incomplete or untimely compliance should result in a substantial fine.

2. Microsoft should have no authority over computer OEM decisions re the PC desktop, its layout and contents. Why are the PC manufacturers not considered Microsoft customers, rather than mere delivery boys for the "Windows experience?"

3. Microsoft software applications or functions which have no bearing on the basic operation of the PC computer system (e.g. web browsers, music and video editors/players, photo print ordering) should be completely severable/removable from the Windows installation, and function as standalone applications only.

Thank you for your consideration. I will continue to follow the resolution of this case with great interest.

Subject: Microsoft

Your understanding of how microsoft does business is not adequate enough for you to make a decision.

Your understanding of technology is obviously very limited. Microsoft blocks competition by buying, not creating, functionality and incorporating it into their "operating system". Hell, they didn't even buy it from Sun Microsystems, they stole it!

Did you realize that now Microsoft is competing with manufacturers of MP3 players? Yup, they put an MP3 player into their latest version of their "operating system". And that is just one example of technology that they are destroying by questionable methods. There is also the questionable sales and licensing tactics that they use to keep their competition out of major markets. Then there is the technology that they just steal.

And how do you punish them? By putting the software in question, unchanged, into millions of potential consumer hands, so they can grow up thinking how great Microsoft is. You are literally paying Microsoft to advertise.

It'll be the best ad campaign since Joe Camel.

You are a group of incompetent clods who should have removed yourself from the case for not understanding the technology enough to make a decision. Congratulations on being stupid.

It has been clearly shown that a monopoly exists. This monopoly acts like a public utility without oversight. In its wake are ?minor competitors1 without the leg up of being ?tied1 to an operating system. Unchecked the monopoly moves into other areas of computing and electronic industry like a cancer. Its activities are consistent with a monopoly abusing its position.

The antitrust litigation has brought its practices under scrutiny. Its defense being that it doesn't need to abide by the law because it represents a ?new1 industry.

The monopoly has concentrated wealth and power to the point that it mocks our legal system. Many ?innovations1 are stolen from competitors or ?monopolized1. This monopoly can fund a lengthy appeals process and avoid any law it doesn't find useful. The central question has been debated and judged. This turn toward being less aggressive is an opportunistic moment for the monopoly. A monopoly is a form of tyranny. This one is no different. I have witnessed this form of tyranny, this monopoly without restraint, and ask for you to stop placating to it.

Subject: Microsoft case

Good afternoon,

I hope everyone has a wonderful Thanksgiving.

My email is to state my dissatisfaction at the current agreement reached in regards to the Microsoft anti trust case.

I feel it has been proven many times that Microsoft has abused its position as a global business giant. Even going to the extent to thumb it's nose at the government on several occasions (the latest the release of XP). Microsoft is not bad because it's big or that it contributes significantly to PAC's. Microsoft abused its power as a multinational company. That fact was proven in the case against it. What was dismissed is the fact that Microsoft would not be broken up.

The point, I'm sure you waiting. After spending millions of dollars (or at least hundreds of thousands) of taxpayer money, we don't have a different Monopoly than we had in the beginning. Punishment? I'm sure the definition is much different than what we have just been privy to. Microsoft will continue it's run for Monopoly of the A.D.

Microsoft should be dealt a horrible blow that will not affect its workforce, but affect its opportunity to continue its horrible monopolistic ways.

Don't cower in front of the evil doers! It's not terrorism, its business!

God Bless America! And save us from the monopoly!

MTC-00001615

From: David Irvine
To: Microsoft ATR
Date: 11/20/01 4:34pm
Subject: Microsoft Terrorism

I read with interest (or rather incredulity and resignation) about the settlement of the class action suit where Microsoft is required to give a bunch of free software to make up for their failings.

Microsoft must be laughing all the way to the bank. We have seen here in Australia, many cases where our proposals to develop web applications based on international standards are rejected because the organization is reluctant to put any non-Microsoft software on their servers because it would jeopardize their continued supply of free software from Microsoft. Microsoft uses their monopoly to force the competition out by giving away free software and holding that power over the head of any organization that dares to try anything that could be construed as competition.

On top of this Microsoft is actively encouraging the development of web sites that only work properly using Microsoft operating systems, applications and browsers. Witness the sudden unannounced dropping of support for browser plug-ins that their competition use. Suddenly you must do it the Microsoft way and no other. Very large numbers of web sites must change overnight with no prior warning.

Microsoft represents the most dangerous anti-competitive monopoly the US has ever seen due to the poor quality of their products and lack of attention to security. The homogeneous nature of the US computing environment represents a major opportunity for terrorists. Even relatively uneducated young teenagers know how to attack.

Break it up! Put it in competition with itself. And stop Microsoft's predation on other companies that produce good cross-platform applications. They acquire the company and drop the versions that run on competing systems.

What are you afraid of?

David Irvine

PS. Why is it that Microsoft Office is so expensive and its only real competition must give away their product if it even hopes to compete?

Subject: Microsoft/DOJ Settlement Condone Political Corruption

I'd like to comment on the recent settlement between the DOJ and Microsoft.

I have worked in the software and computer industry since 1989, including several startup firms that have partnered with Microsoft. I have followed the anti-trust cases against Microsoft since the mid-90s and I own a few shares of Microsoft stock.

I am shocked at the settlement the DOJ has reached with Microsoft. By any legal standard it is a weak settlement. I will not go into the details of why this settlement is so weak—that has already been done ad nauseum. The DOJ attempted to create a face-saving settlement that looks tough and is actually quite benign. What has taken place is an abuse of the rule of law. The settlement is worthy of criticism because it blatantly condones political corruption.

Before writing this letter, I researched the political campaign contributions made by Microsoft to the major Parties. It appears to me and no doubt other Americans that Microsoft entered a quid pro quo arrangement with the major Parties—one in which Microsoft drastically increases their campaign contributions and in return the anti-trust suit will go away. Here are Microsoft's donations to the Republican and Democrat Parties since 1992:

1992—\$51,483

1994—\$103,702

1996—\$237,484

1998—\$1,357,746

2000—\$4,356,376

2002—\$837,385

Source: Center for Responsive Politics—OpenSecrets.org

<http://www.opensecrets.org/industries/contrib.asp?ind=C5120&Cycle=2002>

Microsoft's donations significantly increased as their legal troubles increased, reaching over \$4 million in the 2000 election. Now that the lawsuit is "settled", donations for the 2002 general election are drastically reduced, and yet still a large sum. That surge of money in 1998 and 2000 and the resulting settlement represent political corruption in the highest offices of this government. Microsoft bought this DOJ settlement.

It is reported in the news services today that Microsoft is offering to pay all court and litigation costs to the remaining States, if in return these States would drop their case against Microsoft. This eye-brow raising offer illustrates two things—one, Microsoft isn't subtle when doing political corruption, and secondly, it offers a glimpse at the un-ethical environment they have participated with the major parties in recent years. Would any law abiding American driver, pulled over by a law abiding Police officer, offer to pay the officer's time in court if he in return would not write up a ticket? This is the very definition of attempted bribery. Microsoft's offer to the States is no less the same. Maybe they should donate lots of money to the State level Republican and Democratic Party—they

have already done that. Here is a thorough report detailing the corruption between Microsoft and officials at all levels of the government:

<http://www.commoncause.org/publications/microsoft/microsoftstudy.pdf>

The Democrats, the Republicans, and the Justice Department failed to uphold the rule of law and have set the most blatant precedent that bribery is acceptable practice. Indeed—I anticipate if Microsoft doesn't pony up "protection money" in future election campaigns—they will find themselves in legal trouble again. Case in point—for the 2002 elections, Microsoft is the highest donor to the major Parties in the software industry.

I hope the remaining States and the European Commission have more integrity than the Democrats and Republicans who make up the "Department of Justice". America needs people who not only preach but also practice the rule of law.

Subject: Microsoft Reaches Private Antitrust Settlement

This settlement is a charade. It makes no sense, is just a Microsoft pay off and it is horrible for competition and consumer choice.

It's as though a cigarette companies punishment is to supply schools with free Cigarettes. I'm sure Apple Computer and network hardware and software companies for example, will find the settlement unsettling to say the least. How can they compete in their main market place when a company is given a key to the facility and a green light to wire and network the district with their proprietary equipment and software.

It's a hard place to be in for the schools who see Microsoft waving one billion dollars in front of their face. It's blinding. Who can argue the benefits of technology to our youth and cost reduction to our schools.

However, I estimate this one billion investment will pay off handsomely and be a windfall for Microsoft and its products entrenchment in those very same schools within the near future.

One billion dollars is the same amount of money that Microsoft is spending on Advertisement alone for Windows XP. I think this is also roughly the amount that the company plans on loosing on the Xbox this year in-order to solidify a market presence.

This One billion to the schools, like the XP marketing blitz and Xbox expenditures, solidifies a presence in a market for Microsoft.

This is a strangle hold on those very schools which will now be completely dependent on Microsoft.

The Ironic thing is that if Microsoft was to offer a billion dollars to set up schools with their equipment it would not be allowed because it would be anti-competitive.

You can not punish a company that has 41 billion plus in cash in the bank by giving

them whole markets for pennies on the dollar and call it a Monopoly remedy.

You got to love the Genius behind Microsoft. They pulled another fast one on US, the public.

Subject: Microsoft

Dear Sirs:

I run a small one man business printing very large baseball posters using Microsoft Excell. I have experienced many problems using this software that has caused me to lose many hours of work. Every time that I have called Microsoft for technical help I have been told I would have to either pay for the help or contact the people who sold me the computer for the help. My problems are not mainstream and the computer shop cannot help me. My problems revolve around errors and flaws in Microsoft software (Excel and Windows 3.1).

PLEASE DO NOT LET MICROSOFT OFF THE HOOK!!!!.

Any one who would sell this software and not support it with its errors does not practice ethical or moral business practices. If I could purchase other software from someone else I would but I cannot; Microsoft is the ONLY company who writes software that I can use.

If you would like to contact me I can be reached at :

Subject: Microsoft Settlement too soft.

Dear Attorney General,

I am a concerned citizen writing to ask that you insist that any settlement be much tougher on Microsoft than the details of the proposed settlement currently circulating in press reports. As you know, Microsoft has already been found guilty of violations of anti-trust law, has already been found to be a monopoly, and these rulings have been sustained by the US Supreme Court. Such transgressions, especially where they damage the interests of consumers, as well as the interests of many high technology businesses, demand severe penalties.

Some have proposed requiring a forced revelation of the source code of the various Windows operating systems. Others suggest forcing Microsoft to release versions of Windows with no internet application software included, so that Microsoft's anti-

competitive effect on that market can be rectified by allowing computer manufacturers to include non-Microsoft browser software on new machines.

Whatever remedies you and the other Attorneys General demand, they must be tougher than a mere Consent Decree. Remember, we are here in the first place because the original Consent Decree signed by Microsoft was too weak to stop their monopolistic and illegal practices. Another weak Consent Decree will guarantee that the future of computing, indeed, the future of high technology, will be not merely dominated, but completely controlled by a single predatory monopoly. The victims of this monopoly will undoubtedly be both consumers and businesses, indeed, all the people of the United States.

It is no exaggeration to say that the future of the 21st century is in your hands. Please don't give away the potential benefits of such a powerful technology to a single, greedy, predatory monopoly. Please demand a tougher settlement. I, the voters, and your posterity will surely thank you.

Sincerely,
Raffael Cavallaro, Ph. D

Subject: Suggested Microsoft Conduct
Remedy

As I understand the current state of the Microsoft (MS) antitrust case, MS has been found guilty of abusing its monopoly position. The proposed settlement is that MS will be subject to government oversight for 5 to 7 years. As a MIS veteran with Math and Computer Science degrees and over 15 years experience I would like to offer a simple vision of what "conduct" the government should insist that MS follow.

MS has used its dominance of the OS to achieve dominance of the Applications that run on top of the OS. The object of the government oversight should be to break MS's lock on the link between the OS and the Applications. The only way to do this is to FORCE MS to publish the documented (and undocumented) APIs in the OS necessary to load and run MS Windows Applications. MS will scream bloody murder, and try to spin this as un-American, but running an abusive monopoly is un-American too. Publishing ALL of the necessary APIs should allow other OSs to run Windows Applications (including Microsoft Office). I have emulated other OSs like Windows on top of OSs like Macintosh and UNIX, but this has always been problematic because the MS APIs have to be reverse engineered because MS obviously doesn't cooperate in these efforts. If the government FORCED MS to cooperate then the other OSs could be able to run MS programs natively.

Compliance would be EASY to monitor. If MS were forced to release OS APIs, then there would be a stampede in the LINUX world to support the APIs in order to run native Windows Applications. The LINUX community already has a global and public

means of development and review for projects, and I am sure that a Windows port would become a high priority multi year project. If MS complies then the LINUX world will be able to make a workable clone of the MS OS. This OS clone would run on top of LINUX and be able to run all MS Applications. If MS "forgets" to mention some of the APIs, the LINUX crowd with its global review system will identify what is missing. If a clone MS OS can be built and it runs MS Applications, then MS compliance will have been demonstrated. Microsoft Excel, Word, Media Player, Internet Explorer, and Power Point could be the applications used to verify compliance.

Even though MS would cry, they shouldn't worry unless they are afraid that their OS is so weak that a LINUX based clone would outperform the MS OS. Either way the consumer benefits. If the MS OS is superior, then the consumer now has two choices: buy the MS OS or use the slower but free LINUX clone. If the free LINUX version of the MS OS ends up being superior then the consumer is allowed to use a higher quality lower priced product. Either way the MS monopoly on the OS and the abuses that have resulted from the monopoly will be fixed by this approach. There should be NO time limit on the publication of the APIs, as long as MS makes OSs they should be forced to publish the APIs.

Subject: Re: [Mac OS Rumors]

I am terribly disappointed with the results of the Microsoft antitrust case. This company has built success upon continued thievery of technology developed by other companies and elimination of the source by use of its market share and domineering practices. These are the facts found in the case before some under-the-table dealings ensured the verdict didn't stand and the company was let

off with a settlement. When the trial had begun, I was under the impression that justice would at last be served against a company bent on forcing its products upon all people by way of existing ones and eliminating all competition. The main example I cite for this is the inception of the Internet Explorer web browser, which was released for free on two major computing platforms in the sole interest of destroying such competitors as Netscape, who must charge money for their web browser to stay in business. The especially bothersome part was releasing their browser for the Macintosh when they make no profit from the sales of such systems, and therefore have nothing to truly gain by eliminating other browsers on that platform.

The Microsoft megalith not only makes inferior products, as can be proven by numerous security and stability flaws, but exponentially increases the variety and inferiority of such products. Why must Microsoft now include its instant messenger within Windows XP, with no option for removal I might add, and why must XP continually harass its users to sign up for Passport, a technology that's bound to make its members vulnerable to numerous security breaches, since knowing someone's Passport information allows one to hack into personal information of that member on a number of web sites.

Big business is running this country more and more. The government is losing power to business as we are told to embrace our rich, fat cat friends as the lifeblood of America, no matter how much the CEOs make in comparison to the average laborer in one of their sweat shops. Having worked at such jobs, I can say Capitalism is a failure in the liberal sense, in that the lowest class workers can't even live on the wages of a single job of that type. These people are lucky to be able to own a home in our present economic conditions. I'm tired of big business being the only successful force in this nation.

Capitalism is a failure.

From: Tom Gottshalk
To: Microsoft ATR
Date: 11/20/01 5:13pm
Subject: Microsoft settlement.

Dear Sirs,
Frankly, I have had problems all along with the DOJ's case against Microsoft because I think the main tenant of the suit that the public was harmed by Microsoft was never proved to any degree what so ever. Sure, even the most superficial review of the case one could make an argument that technically MS (Microsoft) violated some dusty corner of anti-trust law. And even show, as has been

done, that MS is a monopoly. But given all that, I argue that it has done no harm to the public in fact just the opposite. The very best thing that happened to the PC buying public was that the MS DOS operating system became the accepted standard. Shelf after shelf at retail stores filled with compatible software products. Computer games exploded and within a matter of a few years the internet became truly global. As a private citizen of the US I regularly browse libraries all over the world from my home. All this happened because there was a standard PC operating system that was compatible with all other so called IBM PCs anywhere in the world.

On the one hand, since 1981 when I purchased my first PC for about \$2900.00 not including software except IBM DOS 2.0. To the one I purchased last year for \$1500.00 including fabulous software compared to my first unit. I have benefited from 120 times in processor speed, 500 times the size of RAM, and 20,000 times the disk storage space of my hard drive. All for about half the cost of my original PC.

On the other hand, since the DOJ action against MS the negative impact on my IRA and my saving investments I would estimate has cost me somewhere between \$50,000 and \$100,000 in stock values and mutual fund values.

At this rate, I will take all the harm MS can dish out. Of course I am being factious. The fact remains, I do not think MS has harmed any consumer this one in particular but the DOJ has, and for what? To prove a legal technical point.

Remember, MS does not monopolize a natural resource. MS could close their doors tomorrow and sit on their copy right and there would never be another version of any of their software. Their engineers could refuse to THINK about improving Windows and Internet Explorer and the DOJ could do nothing to compel them to do otherwise. It is not a matter of getting someone else to drill cheaper or dig mines cheaper and share the product more broadly. All software is the product of thought not muscle and sweat. To what ever extent the DOJ punishes Microsoft it is to that extent that the DOJ will control, restrict, and frustrate the creative impulses of human thought that has benefited mankind thus far immeasurably. The DOJ is judging Microsoft with tools created in a completely different era and for a completely different kind of consumer product than we have before us. The DOJ is like a pre-Copernican, they can not see the true nature of the world because they fear a new vision a new truth because they believe they are right. Fine Microsoft a dollar and be done with it.

Subject: Private Antitrust Suits

Sirs:
I am amazed at the proposed settlement for the private antitrust cases.

Microsoft has been declared a monopoly and in return you intend to turn over an additional 14% of the educational market to them as well. That way, their competitors lose a ton of business and an entire generation of students are indoctrinated into the Microsoft world. Have you bothered to check with the competition to see if they think that they can afford to give up 14% of the educational market to this ruling? Or will this ruling simply help Microsoft drive their last competition out of the personal computer market entirely?

One last question... when is Bill Gates going to go to jail for giving false statements at the original trial?

Because if he can get away with it then I guess I can, too, someday. It may just cost me a donation or two to the right politicians, eh?

Subject: Proposed Settlement

As a computer technician, I have grave reservations about the proposed settlement. Those concerns are tied to the basic problem of preventing Microsoft from continuing to

violate the laws regarding the leveraging of its monopoly into other markets. Microsoft continues to deny it has done anything wrong, even after several attempts to appeal the ruling have failed. This fundamental attitude on their part indicates that they feel they have done nothing wrong, and therefore will see no reason not to continue precisely the same conduct. There must be a strong mechanism to keep competition in the marketplace, or there will be no marketplace, just a choice of 1.

Please consider this factor, and please try to find some method to prevent the kind of conduct that has already been found to violate the Sherman Anti-Trust act.

Subject: Coffee Analogy

The playing field is not even.

What if the largest coffee producer were to package their own brand of sugar with their coffee. That is: you buy a pound of coffee and you get some sugar for FREE.

Wouldn't this effect competition among other sugar producers?

Now, what about if that same coffee producers, also bundles cream, milk, stirring sticks, and a travel mug...for FREE as well.

What would happen now?

Dairy producers are effected, makers of travel mugs and stir sticks are effected, and since the product is selling so well, NO ONE is buying other coffee brands. Eventually the price of coffee starts to rise because competition (in several markets above) is almost none existent. Microsoft's businesses need to be segregated to reflect an even playing field for all to play in the long term.

My humble opinion.

Joe

Subject: Microsoft Settlement—a very bad deal for developers and consumers.

I don't think the settlement accomplishes anything since Microsoft can basically continue doing what it was doing while playing games and doing good PR things (like giving free things to schools—you were going to investigate Apple for antitrust for doing the same thing!).

If Usama Bin Laden is captured, but it takes time and the Appeals court says he is guilty but drawing and quartering (break-up) is too severe, are you going to give him probation if he promises not to engage in terrorism again and give him back all the frozen accounts?

First, there are injured parties, notably Netscape and Sun. Where is the millions or billions they have to pay or give in services like including their browser and Java technology in their windows releases? Or lock out Internet Explorer (Microsoft is free to contribute to Mozilla which is Open Source if they think features should be modified or added) and C#? Nowhere. Microsoft keeps its ill-gotten gains in both money and market share. Or gets to spend the money on what they were going to spend it on anyway.

Second, the courts found Microsoft Guilty. Including the appeals court. Guilty people normally have to pay a penalty. Even if the current administration considers the antitrust laws an ass, the laws are still there and need enforcement. I cannot choose which law I obey, but I don't have billions to argue the point. I find it strange that people voted for the current administration only to have what appears to be checkbook justice going on. If you are going to have a penalty-free decree written by Microsoft, you should simply move to dismiss instead of pretending anything will be done to limit Microsoft's dominance.

Third, the reason they were sued in the late '90s is BECAUSE THEY DID THE EXACT SAME THING WITH WINDOWS 95. They promised not to bundle so they integrated instead and spent years arguing that integration wasn't bundling and that they weren't doing anything wrong while they were doing things to lock out competitors and leverage one monopoly into others.

They promise not to hold back info, but they can just move to patents or add some digital protection thing in every API so everything is effectively exempt from the settlement. And you can spend five more years in court the next time they TOTALLY AND COMPLETELY VIOLATE THE SPIRIT OF THE AGREEMENT (and will the DoJ cave in then?). The devil is in the details and they snookered you with windows 95 in the details and they just did so again—if they weren't worried they wouldn't argue over every jot and tittle.

A short and simple (and painful—given their guilt and assuming the laws are taken seriously—) agreement would have been better. If Microsoft can't live with restrictions on virus, piracy, and DRM controls, then they should go to the marketplace and let third parties develop the technology. If they don't like OEM restrictions then they should simply sell on a non-discriminatory basis—same price and contract for all comers.

Finally, the EULA in every Windows installation says if you don't agree, you can take back THE SOFTWARE where you bought it for a full refund. I challenge the DoJ to try this. Buy a Laptop (for Linux or something else) and try to return just the Windows software. Or even buy an upgrade and try to return it. Microsoft won't even live by the terms of their own written legal agreements. If there was a provision that anyone (user or business) buying a PC could get a refund on Windows (from Microsoft) if they didn't want it, that would by itself fix most of the problems with OEMs.

Subject: Bad Microsoft! Punishment: extend your monopoly!

It seems an odd kind of justice to "punish" Microsoft by allowing it to extend its monopoly into schools. Any settlement that involves Microsoft contributing software is no punishment at all, but something that would help Microsoft regardless. If Microsoft is to pay \$1.1 billion, \$0.9 billion in software (valued however Microsoft chooses to value it, see Monopoly), then Microsoft is actually paying \$0.2 billion to extend its stranglehold on the minds of the population. Remember, the cost for Microsoft to "donate" 0.9 billion dollars' worth of software is essentially nothing. How much do you think your copy of Windows costs Microsoft to produce? A few cents. If Microsoft is to give money to schools as a punishment for its crimes, it should be a punishment, not a victory. Perhaps Microsoft could give the schools \$1.1 billion worth of hardware that works with Linux?

From: Brian R. Burton
To: Microsoft ATR
Date: 11/20/01 5:24pm
Subject: bogus product registration
Dear DOJ:

I have noticed that after installing Office:mac 2001 (which is not my choice for the computer lab I direct, but because of the monopoly, the IT department here requires it; or perhaps Microsoft requires it of them?) on the various iMacs we have in the lab, that to register the product a "Passport" account is required. If you don't have one (I don't), you are just told to register later; thus leaving the product unregistered. This "Passport" account is another product of Microsoft's apparently designed to facilitate their .Net strategy of storing personal information to be used for commerce in the future. I don't think one ought to be required to sign on to another product during the registration process of a product. Whether you care or not, that's my two cents worth.

Besides this, I think your settlement is a cave-in and very wrongheaded. It may protect foreign competitors like Sony who

probably would have had their "oxygen supply" cut off prior to the settlement, what with them being both a Windows licensee and a competitor to the Xbox with their Play Station, but it does nothing for the American companies whose focus has been on innovative products in a "competitive marketplace." As it turns out, the marketplace wasn't that competitive. I currently see an entire industry almost totally controlled by one company; indeed, one man. For the future, I see an entire economy and nation controlled by this same one company; one man.

Anyway, I have somehow managed to continue to use Apple Macs for nearly 15 years now and which has been damn near unbelievable since 1995. I have a feeling that a change is drawing near.

Thanks for nothing,
Brian R. Burton

Subject: Strong Microsoft Remedy

I ask that each of you direct your good offices to make sure that the Remedy in the Microsoft anti-trust case be stringent and strong. I have watched this company manipulate, strangle and stomp competition and harm the computer industry. As a Macintosh technical support guy, I know things need not be that way. (Not that Apple hasn't done bad and manipulative things as well.)

Please help us consumers and technical people *at least* breaking up MS into different elements. At best, put portions of their OS into the public domain.

With Thanks,
Bill Geraci (jer-AW-see)

Subject: Comment on Proposed Settlement

I'm writing to inform you that like many Americans I am extremely disappointed with the proposed settlement between Microsoft and the DOJ. Microsoft's strategy is simple and a blatant abuse of its monopoly power—they pick a product, like browsers, instant messaging, or streaming video, that they want to dominate, and then bundle it with Windows claiming it's a "feature". If lack of competition really produced better products, the Soviet Union would have led the world in technological prowess. The high-tech industry in this country and consumers everywhere can only be hurt by a world where Microsoft, not the market, dictates what products will be successful. If every TV set sold was made by one company and they

decided to throw in a VCR with every one of them, sure consumers would benefit—but not nearly as much as they would if free competition led to a number of manufacturers battling it out to make the best VCR possible.

Free enterprise is what this country was built on, and it deeply worries me to see my government throwing this principle out the window to placate Microsoft.

Don't let the emails I'm sure Microsoft has people writing on their behalf fool you—most people are against this settlement and want to see more stringent penalties imposed that prevent Microsoft from bundling products and crushing new industries before they can be born. I hope the United States will be persistent in bringing Microsoft to justice.

Sincerely,
Brian Smith

It appears that Microsoft has come out unscathed again. Being so kind to our school children will probably teach them that if you are big enough, you can get by with murder.

There should at least be a penalty to keep them from doing the same thing again. As soon as the cases are all settled, I am sure they will be back to their old tricks. Why won't there be a penalty that will make Bill Gates think twice before he beats the little guy to death?

Subject: Simple Solution
Plain and Simple:

The software code to the windows operating system should be made part of the public domain...

Then all software developers will have complete access to the underlying operating system (OS) code; preventing any unfair gain for Microsoft (MS) to practice 'trickery' within the OS to prevent third parties from creating alternative software products that could possibly outperform MS applications at cheaper costs...

For example, what if somehow the first person who created a means for sending and decoding normal television transmissions from the airways, had patented the process, virtually taken control of all the transmission stations, and didn't tell everyone exactly what the limitations of the transmitted signal was that was being used... Only television companies who it liked could use the airways in the best possible fashion... Without full disclosure, they could just tweak the system a bit, so that the picture that they were able to provide on one manufactured TV was slightly better the signal that was possible on competing TV.

Is this not what MS has done in the software industry?

I am reading in the press today that as part of this agreement Microsoft will give 1 Billion dollars worth of services, software, and hardware to schools.

It's a wonderful thing when the remedy to an antitrust violation is to gain even more marketshare and make it even more difficult for companies like Apple to survive. Apple makes a large portion of it's revenue from Education and this might as well put them on the block.

This is just bad.

From: R. W. Potter
 To: Microsoft ATR
 Date: 11/20/01 5:39pm
 Subject: Re: Proposed Settlement

As an average user of personal computers and software, I have several objections to the proposed Microsoft settlement.

1. The settlement does nothing to punish Microsoft for its repeated abuses of monopoly power. Microsoft's practices over many years forced numerous competitors to either cease business in the software area, or to drastically alter their sales/distribution efforts. Yet in the proposed settlement the monopolist is not required to provide any restitution to either the firms that were unfairly abused, or to consumers who now have fewer software choices and must pay high prices for the products of Microsoft. Thus the monopolist is rewarded without any penalty for past misdeeds. (Software give-aways by Microsoft also cannot be considered any form of penalty since they extend the monopolist's market share and reduce further the potential market of competitors.)

2. The three-person tribunal which is to oversee the proposed settlement cannot be expected to be effective. Microsoft will appoint one member, and have a say in a second member. The group will be paid by Microsoft and will work at their offices. It is naive to expect that this tribunal will not become co-opted by Microsoft under these circumstances over the course of several years. Any such oversight body must be completely independent, reporting to and compensated by the Court.

Thank you for your consideration of these views.

 Subject: Harsher remedies needed in MS case

Hello,

I wanted to let you know that I support efforts to seek harsher remedies in the Microsoft antitrust case. The proposed Federal settlement will do nothing to curb Microsoft's anti-competitive practices. I urge you to pursue the case further and hold Microsoft responsible for their illegal actions. Our nation's economy and national security depend on a vibrant innovative technology industry. MS's dominance in operating systems and applications and their insistence on MS only solutions in the server and enterprise markets can only increase the vulnerability of our economy and national security to adverse circumstances. I urge you to reconsider the preliminary settlement provisions and to seek more substantial remedies.

Thanks,

 Subject: Settlement

The just relapsed settlement by Microsoft to furnish schools with software and hardware is the biggest bunch of baloney I have ever heard. Giving an abusive company a free inroads to, probably one of the last truly competitive areas for computing, just does not make any sense.

But Hausfeld said he felt it was the government's job to find a way to curtail Microsoft's power, and that it was unrealistic to expect that a better deal could be reached for such a large class-action group.

This curtails power? You give away free software and refurbished, USED computers. Knowing the way MS thinks, they will donate Windows 95 and 80Mhz computers. Then when all the schools systems sign their licensing agreement, they will be forced to purchase more than \$1 billion in hardware and software to remain compliant with their agreement. This is a BIG, BIG win for MS and a big loss for competition in America.

Yes, it is wonderful that disadvantaged children can gain access to computers and information that was not available to them. But at the cost of innovation and free competition?

You people were elected by me and my peers. We do not pay to have our way. You are supposed to represent our way, but you sell out to some powerful, egotistical company that will not admit that they do not play fair. This is justice? this is punishment for abusive power? Oh, we'll just sugar coat it with some feely good news that disenfranchised children now have access to computers and Americans, who are too busy with their lives and terrorist crap will suck it all up and smile that justice was done. What you have done to the American people is terrorism against new ideas and a free market that is dictated by good products and the will of the people, not by buying and influencing mindless, greedy politicians.

I am ashamed to be an American, the so called land of the free where people's dreams can come true, as long as Bill Gates says you can...

From: Williams, Lance
 To: Microsoft ATR
 Date: 11/20/01 5:54pm
 Subject: comments on antitrust settlement

This note is in response to your request for public comment on the proposed Microsoft antitrust settlement.

To begin, I am a real person, not a fiction, and my comments reflect my own opinions.

You will doubtless receive a great deal of paid commentary from shills for Microsoft, or even comments lauding the proposed settlement from nonexistent people. Microsoft has been so flagrant in their fraudulent manipulation of public commentary that this behavior is evident even to the public. Countless "letters to the editor" in countless publications attest to this sort of corporate disinformation. Out-and-out fraud is accompanied by disingenuous commentary from Microsoft satraps and fellow-travellers. These are all symptoms of the excessive power and wealth Microsoft has accumulated, and the abusive means to which this power and wealth are employed.

A computer operating system has an easily delimited function.

It organizes the use of the computer's hardware—its memory, processors, and peripheral devices — for the user's applications. Applications programs, whether for email, text editing, or entertainment media, are in a clearly separate category. They reflect what the user of the computer wants the computer to accomplish; the operating system provides the means. Microsoft has tried to confuse this distinction with the goal of controlling the market for all computer programs, a goal quite contrary to consumer interests throughout the world. Many valuable applications can be made "features" of the operating system, removing a competitive marketplace for improved products. The features and structure of Microsoft's operating system, which is under their sole control, provide a powerful instrument of monopoly.

The only effective remedy for Microsoft's abuse of their monopoly power is to keep them out of the applications software business. If you vend an operating system, you cannot sell applications: otherwise, you've always got the inside track. There will never be a level playing field without this principle.

The remedies proposed have no more chance of inhibiting Microsoft's criminal behavior than those undertaken in 1995. I implore our Department of Justice to take the greatest pains to avoid the widespread public impression that Microsoft is now sufficiently wealthy and powerful to be above the law.

I admit to my regret that I now share this impression, and believe it to be accurate.

Respectfully yours,

Subject: Microsoft Anti Trust
Dear Sir or Madam,

I write to express my sincere concern as to the terms of settlement of the Microsoft Anti Trust case.

I have read the original judgement given in this case and one can only conclude that Microsoft has continually acted in and unethical and unprincipled manner.

Microsoft has deliberately and knowingly used its power to stifle competition, but more importantly has in so prevented good technologies from coming to market or been accepted.

Microsoft is a ruthless and an unfit company, you will be failing in your responsibilities if you do not take the strongest possible action against them.

There is a consensus in the computer industry that Microsoft has used its power to get a very lenient settlement and this leads to a dis respect for the prosecuting authorities.

I encourage you to take more decisive action to ensure that this monology (Microsoft) gets a settlement more befitting their inconsumable behaviour.

Yours truly

Subject: My opinion on the Microsoft case
I think this notice pretty much says what the outcome is. Microsoft once again takes everyone to the cleaners.
By REUTERS

WASHINGTON—Microsoft said on Tuesday it had reached a deal to settle a raft of private antitrust cases against the company, which sources said would cost the software firm more than a billion dollars.

The agreement with class action attorneys would require the company, which agreed to settle its separate 3-year-old case with the Justice Department earlier this month, to provide free software and computers to more than 14,000 of the poorest U.S. schools over five years, sources close to the case said.

More here:
<http://www.nytimes.com/reuters/technology/tech-tech-microsoft.html>
The settlement should really really make a lot of people very mad.
Namely

Apple for one. It is a great idea to give to the schools badly needed technology. But to force Microsoft products onto schools is not only a really nasty thing to do to schools in one fell sweep it give market share to Microsoft and takes away from Apple.

The thing to do is take the actual MONEY and NOT equipment or software and give it

to the schools so they purchase what they want and how they want.

Not have it shoved down their throat. Besides, allowing them to gain market share in education is a REWARD...it is NOT punishing them in any way. If the money was given to the schools to use as they saw fit they might spend it on other things not related to Microsoft and the school would benefit but MS would not. Look at it in the long run...MS gets to sell them upgrades and updates. That isn't right.

I can't believe this stuff is going like this. How horrendous this is. On the top it looks great that MS is giving to schools and who could possibly be against it. But really, who can be against giving them the money so they can buy the technology they want and can use? NOT whatever MS feels they need. This settlement is just plain wrong. MS is being rewarded all over again rather than punished.

Please someone stand up and tell me that I am completely wrong. Should I be HAPPY about this?

Subject: sell out

To whom it may concern.

You won this case in ever court in the land at every level. You even won it in the supreme court. And you settle for wishy-washy terms which Microsoft will side step by moving to web services—that will make all of this irrelevant.

How was this possible? Kelly-Kotar would never have gone against the Supreme Court who confirmed Microsoft is indeed a monopolist. So in the end the industry and the public needed future behavioural protection from this monopolist and you didn't provide it.

America is fighting for economic survival. Thousands of companies and innovations needed to be protected from this behemoth which has 31 billion in savings. These little companies like Real Networks and Red Hat needed you to collar the monopolist and give them a chance. You failed to protect them. Now small companies like mine have no protection from the monopolist, just when the economy was turning sour.

Don't for one second think their "better" citizen rubbish will stand. They screwed you in 92 and they screwed you again now. When will you learn? You and your team should be ashamed. You win everything at every level and you lose anyway. Bush must be proud.

Sincerely,
Mark.

MTC-00001663

From: David Peavey
To: Microsoft ATR
Date: 11/20/01 6:22pm
Subject: The Microsoft penalty is a disgrace!
Dear USDOJ,

Do you really think that Microsoft is NOT a monopoly? Do you really believe they haven't used their massive size to virtually wipe out the competition? Competition in sooooo many areas such as Word processing, Spreadsheet, Block diagram dwgs, Internet Browsers, Email, etc. has all but vanished. They certainly didn't use a superior product!

Lotus 123 used to be the most widely used spreadsheet application in the accounting profession (where spreadsheets are mostly used). Quattro Pro was better than Excel too. But Excel is the most widely used because MS used their huge marketing, pricing, and development policies to squash the competition. Now Lotus 123 and Quattro are all but gone.

Microsoft couldn't make a graphics program that was worth beans (Draw). So they PURCHASED the ONLY serious competitor (VISIO). Since the purchase, the quality of the product has gone down. And there are no other block diagram type applications on the market.

I LOVED Netscape—but Netscape has basically "thrown in the towel" and given up because IE is free! (But only if you buy their MS Windows). Why isn't IE free for Linux?!?!?

And lets talk about MS Word. What ever happened to a clearly better product—Word Perfect? It has been bannished to the Linux world because MS isn't interested in developing a product where they don't have a "head-start" on the internals of the OS. Word Perfect has a GREAT equation editor—MS Word doesn't. But what do you suppose is the more widely used product? All because MS used it's marketing, development, and pricing strategies to muscle out the competition.

Outlook is not much better—There were plenty of really good email programs on the market until MS started pushing it with Office. Now MS Outlook is the most widely used. Do you really think America is less vulnerable to computer viruses if we all only use one email program?!?!?! How many Netscape Messenger computer viruses are there?!?!? Hint—less than 1. You really should read "Cuckoo's Egg: Tracking a Spy Through the Maze of Computer Espionage" by Clifford Stoll. His basic thesis is there is

strength in diversity—even in computer software.

Thank GOD you actually blocked Microsoft's purchase of Quicken. That was a faint glimmer of intelligence in the Justice department. But why didn't you block their purchase of VISIO? The glimmer was muscled out by Microsofts marketing and pricing strategies.. :)

Besides their huge marketing and pricing strategies, Microsoft dominated because of their unfair development strategies. In the office automation tools, Microsoft Word, Excel, Outlook, IE—All are now dominant because Microsoft knew the internals of the OS as these products were developed.

And they knew the internals before the OS was available to the rest of the world. Hence—they had a head start on the development. In addition, Microsoft unfairly knew about undocumented internal OS calls and functions that the competition could NOT have known about. This forced the competition to work harder. So Microsoft leveraged it's huge dominance in the OS market to dominate the other markets as well.

Do you have any idea how difficult it is now for a competitor to develop a serious competing word processor like Word or a spread sheet like Excel?

There isn't a chance!

Who says "what's good for Microsoft is good for America"? Look at Quicken vs MS Money. Quicken shows real innovation whereas MS Money is crashy trash. This shows the power of real competition. Because of your blockage of MS's purchase of Quicken a few years ago, the products (both of them) have gotten REALLY good! There is NO stimulus to make IE better now is there?

And aren't you concerned about the "big brother" attitude of Microsoft? Consider Microsoft's Passport—where they collect all your personal information (including credit card information and passwords) to allow you to "browse the web" easier! Aren't you concerned about Americans' civil liberties and rights to privacy?!?!?!

This penalty is a sham! Sure the schools could use the bucks but—don't you know that Microsoft ALREADY has a school donation program that donates software and training to schools. All your penalty is saying—"yes, you should continue this". And do this with Microsoft products!

This is absurd! Microsoft didn't even get off with a slap on the wrist! Personally, if I were judge, I would:

(1) Split Microsoft into two pieces—Windows, and all the rest. This would "level the playing field" for all Office automation products giving all competitors an equal start when development commences.

(2) Do the school donation thing—but make it NOT tax deductible (since it's a penalty after all)—and require them to support Apple and Linux OS's in equal parts to Microsoft. Students would then be more diversely educated— which allows for cross fertilization of software structures. Making all computer programs stronger and more resilient. The total amount of donations need to be 50% of their gross profits over the last 10 years.

(Figuring that they would have been 50% less profitable if they had played fairly).

(3) Require Microsoft to make their source code for all past, present, and future Operating systems (Windows, DOS, and any others they try to make that aren't called Windows and DOS) OPEN SOURCE within 3 months of its release. This includes all patches, fixes, and updates. This would force Microsoft to "come true" when competitors accuse them of "stealing" trade secrets. All good software is open source anyway—this would force Microsoft to "clean up their act" and make their programs less buggy.

Subject: Please keep up the pressure on Microsoft

Hello,
Please keep it up.

These guys have ruined and are continuing to ruin the marketplace for software developers. I'm not sure what the DOJ was thinking. Please persuade the judge to do something.

For example, their pulling of Java support from Windows XP has caused us problems as we have a Java based client.

Also based on past experience, as soon as we announce our product, they'll try to announce something similar to freeze the market.

They are simply untrustworthy. Ten years ago I wrote a driver that MS asked to distribute. We signed a contract that said it was only to be distributed with a specific product. What happened, they posted the driver on an "all comers" bulletin board and ruined that business for me.

And for what? Giving someone a reason to buy one of their overpriced bug fix upgrades?

My recommendations for penalties:

(1) Break them up into multiple units, Core Operating System, Server Products (IIS, SQL-Server, etc.), Desktop Business Applications, Desktop Home Applications, Hardware (Keyboard, Mice, etc.). No non-public communication between the divisions. Require each division to port their products to one other competitive platform. Sell the Macintosh Unit to Apple.

(2) "Bug's" submitted to an independent third party. Bug fixes available to meet advertised specifications available at no charge. Upgrades would then be for only new features, not bug fixes that should have been fixed for free.

(3) Possibly require all current software product's source code to be made available for one year. This would stimulate competition and would allow the world to see the bugs and fix them properly.

Thanks in advance!

Subject: Microsoft using Office to keep Windows dominant

Microsoft Office is the most dominant office productivity software package in use today. Since Microsoft makes both the OS and the Applications they have full control of how the applications will run and also how they will be used.

Microsoft Office for windows has the following applications:
Microsoft Word—A powerful word processing application
Microsoft Excel—A spreadsheet application
Microsoft Powerpoint—Presentation (slideshow) application
Microsoft Access—database and database access application

One problem that is forcing companies into abandoning the Macintosh computing platform is that Office for Macintosh has only Word, Excel & Powerpoint. Access is not made for Macintosh. Microsoft rebuffs (annual) requests from the macintosh community saying "that there is not sufficient demand for them to write the software for this platform." They have even stopped other companies from writing a "compatible" program so that the Macintosh business users will gain this functionality. I strongly suggest that they will not include (or allow) this package to be made available to the Macintosh community to continue to push the business community to standardize on Windows and abandon all other platforms.

If the company were split into two independent units... the application group would release a powerful (full) version of Office for all Platforms. (Macintosh, UNIX, Linux...)

Thanks for listening
Peter

Subject: Settlement...

I am writing to express my concern with regards to the pending settlement of the anti-trust case against Microsoft.

I feel that if Microsoft is allowed to continue as outlined in the Dept. of Justice settlement it will be a severe blow to fair competition in the software industry and will make the open-source software movement a thing of the past. In reading the proposed settlement I saw far too much potential for Microsoft to start closing and making illegal to develop cross-compatible competing products. That coupled with Microsoft's often-stated opposition to the entire open-source software community would make it possible for them to use their monopoly position to eliminate open standards and thereby force consumers, businesses and colleges to accept Microsoft's products, and anyone making an open source equivalent that was interoperable with the Microsoft product would be subject to penalty.

I do not live in one of the nine states which is continuing to pursue the case but I definitely support those states in their effort to seek a meaningful and appropriate remedy to the Microsoft case, because I feel that the settlement proposed by the Dept. of Justice amounts to effectively a slap on the wrist and has little to deter continued abuse of a monopoly position.

Subject: Microsoft Settlement

I'd like to express my discontent with the United States v. Microsoft settlement.

I hardly need restate The Complaint that Microsoft has deliberately and unjustly controlled the market through extensive anticompetitive activities, deception, and threats. They have never dominated the market through the merits of their products—indeed the word “merit” can hardly be mentioned in the same sentence with “Microsoft product”, unless coupled with the word “lacking”. They are, in short, the bullies of the software world.

All the proposed settlement will do is validate Microsoft's business practices. Why should they change anything? They can afford powerful teams of lawyers to protect their interests by reducing our judicial system to a game of expensive legal

busywork. They have gotten away with illegal activities for years, resulting in profits numbered in a mind-boggling array of zeroes, and the Final Judgment is, “don't do that anymore; at least not for the next five to seven years.” A gentler slap on the wrist I've never seen.

Microsoft has made it abundantly clear that their only concern is for profit, and market domination. Period. They are the enemies of the American spirits of competitive innovation and fair play. They are not admonished by the Justice Department's censure, or anyone else's for that matter. They WILL NOT stop their illegal practices until forced to do so by specific legal orders. Without jail time or stiff fines, their practices remain profitable, and they will continue to adapt and innovate methods of monopolizing the market for their own gain.

From: Jesse Spears
To: Microsoft ATR,microsoft
comments@doj.ca.gov @inetgw,...
Date: 11/20/01 6:38pm

Hello,
I'm writing to let you know that I applaud your efforts to bring some semblance of justice to the Microsoft monopoly (except for the US DOJ, which is receiving this letter because I want them to know I'm displeased with their actions regarding Microsoft).

In my opinion, the Microsoft monopoly has caused more harm, and brought more suffering to the world than pretty much any other non-governmental entity (with the possible exception of various Oil companies, the World Trade Organization, and the World Bank).

They do this through unfair, unethical, and illegal business practices. Microsoft has forced so many companies out of business by using unfair business tactics that most potential entrepreneurs have given up on competing with them. They either stay away from anything that Microsoft is doing, or create a product with the sole purpose of being bought out by Microsoft.

Microsoft adopts standards, then changes them so they only work with their products (see Java as a prime example).

They create copycat products (usually inferior) and then give them away for free with their OS, for the sole purpose of hurting competitors (for instance, Netscape being forced out of business by the free Internet Explorer).

They force Hardware manufacturers to ship one of their Operating System products exclusively, in exchange for favorable licensing rates (see, well, every PC hardware manufacturer since the Mid 80's). They do this in an attempt to force competing Operating Systems vendors out of business (long list of them, stretching back to many varieties of DOS, and the current one they are attempting to squash is Linux). Dell recently pulled their support of Linux on their Home systems, now requiring you to pay for a copy of Windows.

The few times the US government has done anything, it's never been more than a slap

on the wrist. In this latest case, Microsoft just delayed the punishment phase to wait until an administration more favorable to their monopolistic practices was in power (and, apparently it's worked, showing yet again that US citizens can't depend on the federal government to do what's right for it's citizens...Big Business Lobbyists control it all).

Please, continue to seek justice in this case. I only wish the rest of the plaintiffs had the moral strength to do so also.

Sincerely,
Jesse Spears

Subject: the more I learn about the proposed settlement, the more I'm appalled at what MS will be allowed to do—such as have 14 days to change the software on my machine WITHOUT MY CONSENT, LET ALONE KNOWLEDGE.

Imagine, if you will, buying a car from Ford...and two weeks later, a Ford rep shows up to change out your car stereo to one they like better...would you ever allow this? Of course not.

MTC-00001677

From: Daryn Sharp
To: Microsoft ATR
Date: 11/20/01 7:12pm

Subject: comments on the "settlement"

To whom it concerns:

I do not believe the proposed settlement is satisfactory. The spirit of the agreement attempts to restrain Microsoft from continuing some of its most flagrant behaviours, but yet it fails to effectively create a framework that will realize any tangible goal.

For instance, nearly every provision provides vaguely defined definitions and exceptions. Microsoft's conduct and justifications since the first antitrust suit have demonstrated that they will capitalize upon any available loophole.

The terms of access to the "communication interfaces" are terrible at best. These APIs are one of Microsoft's strongest weapons against competitors. Allowing Microsoft to deny access based upon the "viability of their business model" and other similarly bogus exceptions nullifies the provision. All of the OS-level APIs and application file formats should be fully documented and accessible by any individual or company. This is the only way to ensure that interoperable products may truly begin to exist and compete.

Given no punishment, Microsoft has little deterrent to stepstep the spirit of this new agreement. Past history has shown that behavioural remedies have not worked with Microsoft. Microsoft should be disciplined for their "crimes" in such a manner that will deter them from attempting to violate this new agreement. Letting them off with nothing more than a scolding will result in yet another antitrust suit in the near future. History will repeat itself yet again.

Upset would be a mild term to describe my dismay with the suggested settlement. I've watched this drama unfold for nearly a decade now, and I'm extremely disappointed that this is best settlement proposal that could be reached.

May I please have my wasted tax dollars back?

Sincerely,
Daryn Sharp

Subject: How to settle the lawsuit

Greetings, U.S. Dept. of Justice:

Splitting up the company is the best thing to do. You can still do it. Do it. How else can you level the software/hardware market "playing field?" That was the purpose of the suit in the first place, correct?

Well, MS has been found to be a monopoly; it's been found guilty of using its monopoly status in unfair business practices. Punish them, just as any other person or business found guilty would be punished. And rectify the situation so that this kind of thing will not happen again. Think of the future for the computer industry and the American (and world) economy. The U.S. Free Enterprise System works best on free market principals. Let the free market decide which software to use. Level the playing field.

Donations to political funds should have nothing to do with JUSTICE, so ignore all of

MS' political donations and attempts to influence your decision. We, the people, want JUSTICE. Just do it.

Dean Masai

Subject: stupid!!

You people are incredibly stupid or very supportive (in a campaign repayment kind of way). It is probably a mixture of both, with emphasis on the later! Bill Gates has been supplying software and computers to schools for years...why??? Because then everyone begins at a very young age to use Windows (MS) and know nothing of MacINTosh, Linux, Unix, or any other software.

So as his punishment for wanting to control the world and the Internet, he settles by doing what he's always been doing...making charitable write-offs that will further monopolize his operating system at the expense of the government (tax deduction). Here is the news story: Microsoft said it would provide cash, training, support, computer hardware and software to more than 12,000 public schools serving nearly 7 million of America's poorest children.

"We believe this is a fair and reasonable solution that will benefit consumers, the high-tech industry, and the overall U.S. economy," said Microsoft CEO Steve Ballmer.

What a laugh in the government's face for Microsoft. You have spent \$millions\$ to prove that Microsoft has indeed tried to monopolize the OS and Application software market—and then squandered that investment by giving him what he already does for his own benefit. Now he can further monopolize by influencing the young minds of the public school system.

You have done an injustice to the laws of this country and the people who depend on you to enforce those laws.

To: Microsoft ATR
Date: 11/20/01 7:22pm
Subject: Do not let the latest settlement stand.

How does this punish Microsoft? This settlement further strengthens Microsoft's monopoly on the computing industry, unless the computers and software Microsoft has to provide to these educational institutions provide competing products and not Microsoft Windows or their other software this is a reward for Microsoft. The monetary amount means little to Microsoft as it can easily afford it. Remember Microsoft as been found GUILTY and should be punished to decrease their market share and break their monopoly, not increase it. I'm sorry, but I feel Judge Penfield Jackson's break up ruling was the correct one and his ruling should not have been dismissed regardless of his out of court comments.

I know my comments will mean very little if any at all, but I am a concerned citizen and believe in fair competition in this country. Microsoft Windows should not be the only operating system on computers, PC's workstations or servers, people or companies should be given a choice when purchasing one. This also includes office software, browsers, games, internet, etc.

From: markdoerr@mac.com@inetgw
To: Microsoft ATR
Date: 11/20/01 7:34pm

To Whom it May Concern:

The pattern of behavior that Microsoft has exhibited over the past 10-15 years shows a disturbing trend to monopolistic practices, as borne out in the recent judgement against them in your anti-trust lawsuit. I am disgusted that you now bow to their lobbying efforts and back away from the Justice Department's hard-fought anti-trust victory.

Didn't the previous consent agreement contain provisions for curbing Microsoft's business practices? Didn't Microsoft agree to that settlement only when faced with an anti-trust lawsuit?

Weren't they finally sued because they did not honor that agreement? Although the remedy was thrown out, were the findings in that anti-trust case not upheld?

The argument could be made that they offer much of their software for free and how that is a benefit to the consumer. But that is

the short term view they want you to take. Like a drug dealer, they hook you with seemingly negligible restrictions, an unending supply of goodies and once hooked, are able to control your access to them and how you use them. For a hefty fee, of course. It's insidious. They used the Internet Explorer browser to foil any attempt at loosening their grip on operating systems, by offering it freely and undermining companies that did not have the luxury of OS earnings to fall back on. They have done it many times and will continue to do this until there are no credible alternatives rather than the 2 or 3 that now exist. At least in the server market. There are none for consumers. The news today shows that Palm is losing market share to Microsoft and their Palm PC OS devices. Palm is yet another example of a company who started with a superior product and over 80% market share yet will slowly have their cash position and market share eroded by the slow, unending crawl of Microsoft's corporate weight.

It is the lowest form of self-delusion to think that Microsoft won't treat your proposed settlement any differently than the one they previous ignored. It's also insulting to taxpayers to think we don't see that you are pandering to the interests of one of the largest and most aggressive companies on the face of the earth rather than doing your job to protect the interests of the American consumer. We're smarter than that. I had hoped those who protect our interests were but I find I am sorely mistaken.

I am disappointed in the Microsoft antitrust settlement. I believe that it will do very little, if anything, to curb Microsoft's monopolistic practices. And just as important, I don't see that it does anything to undo the damage to consumers and competitors that has already been done by Microsoft's practices. I believe that splitting up the company was the more appropriate way to go.

Ken Weickert

MTC-00001690

From: Gilbreath, Troy
To: Microsoft ATR
Date: 11/20/01 7:27pm

It appears that the government wants to ensure that Microsoft retains and even adds to its software monopoly both now and in the future by using marketing's "loss leader" approach to conquer the very small percentage of the software market that has not already been crushed by Microsoft.

Isn't there another way to settle, rather than push other software vendors out of potential markets. A school with little or no money may decide to use Linux as an alternative (if that is even viable). Linux seems to be the only significant operating system (OS) option to Microsoft on a typical individual's personal computer (which

happens to be commodity hardware sliding ever so quickly toward obsolescence—what a contrast to Microsoft's applications!). What percent of the American population can think of another OS to load on a individual PC (besides Windows 98, Windows XP, Windows NT, etc.) (or getting all new hardware and OS with a Macintosh. They still make those don't they?). I cannot think of any other operating system to load on an individual PC, not a server, for regular daily individual use. But Linux is free and these schools will have no need to adopt it because the government has intervened in the free market and given these people Microsoft software. Not only will they get software, but they will get trained evangelists leading the classroom. I can only guess how many times a day the word Microsoft will be uttered by everyone, I will be suprised if even one day goes by without the utterance.

Isn't there some kind of legal principle where if a word is used over and over again, superfluously, then that word becomes public domain? Could Microsoft be synonymous for "individual PC operating system and applications." Also, will anyone short of a computer professional, especially in a poor school, be able to find enough time to learn more than one operating system? more than one word processor? more than one spreadsheet application? more than one database management system? more than one presentation program? more than one email program? more than one calender / personal organizer program? more than one browser? What about computer languages, computing paradigms, business models, etc...

HURDLE 1: Can you name...
an operating system that does not begin with Windows?

a word processor besides MS Word?
a spreadsheet application besides MS Excel?
a database management system besides MS Access or MS SQL Server?
a presentation program besides MS Powerpoint, MS FrontPage, etc.?
an email program besides MS Outlook?
a calender / personal organizer program besides MS Outlook?
a browser besides MS Internet Explorer?

GOOD, you made it passed Hurdle #1 but how many answers for each question did you get? If you got one or two, I am willing to bet that you are computer "savvy." Does one or two competitors constitute a market engaged in free competition? You may say that the list was too long for one hurdle, but I would propose that we only scratched the surface. Nevertheless, brevity will suffice for Hurdle #2:

HURDLE 2: What store, down the street from my house, in my neighborhood has this software (answered in Hurdle #1) on the shelf?

I am all for helping the needy; however, it seems that the government may have fallen for a shrewd ploy by Microsoft or even a sucker punch at the end of a tough fight. Better that the government make Microsoft give these schools \$500 million and keep its own software. Let the schools do what they would like with the money. I suppose the MS sales reps would be calling the schools to establish accounts the very next day. Let them compete with everyone else. Or is that

what Microsoft was supposedly doing the past 10 to 26 years?

Maybe not everyone prefers the alternative mentioned above, maybe Microsoft...

"Microsoft will give the nation's poorest schools more than \$1 billion in cash, products and services in order to settle most of the private antitrust lawsuits filed against the huge software company. The proposed settlement, to be disbursed over five years, will pay for teacher training, technical support, refurbished computers and copies of Microsoft's most popular software, such as Windows and Office, at more than 12,500 schools, company spokesman Matt Pilla said." (USA Today 20-Nov-2001)

Subject: MS monopoly

As a consumer, I am appalled that the DOJ is barely slapping the wrist of this monopoly.

The simple facts are that they are guilty of using their monopoly to further their application department. Surely every person realizes that this is not a level playing field so long as they are allowed to do this.

I don't believe they will all of a sudden start "behaving". Why should they? All they would need to do is pay their way outta of any future problem just as they are doing now. (And if they are to earn another billion in the process of breaking these new rules, it becomes quite cost effective to do just that!) The only effective remedy for Microsoft's abuse of their monopoly power is to keep them out of the applications software business. If you vend an operating system, you cannot sell applications: otherwise, you've always got the inside track. There will never be a level playing field without this principle.

Sincerely,
Amber Denker

From: James Lyon
To: Microsoft ATR
Date: 12/6/01 2:33pm
Subject: Deeper Roots
Hash: SHA1

The fact is that Microsoft is an inevitable product of the socio-economic structure in which the Western World operates. Putting that aside for a moment, and dealing with the Anti-Trust case in isolation for the purposes of contributing to the current debate, I have the following comments:

The Anti-trust issue goes far deeper than MSIE being bundled with the OS, and ironically MSIE is one of the few products that could have competed on technical merit and did not need the "leg up". This leads me to my point: The existence of a predominant Operating System whose internals (both technical and political) are known to one or more privileged companies gives rise to the competition obstacles and so on.

The only way to level the playing-field and to ensure there is real opportunity for innovation and enterprise to be able to be delivered to the market-place by new or existing competitors is to remove all the

financial, technical and political advantages that Microsoft (and potentially others) has/have in the Operating System in question. The judgement appears to broadly address this issue. However, Microsoft have a well-established reputation and a clearly demonstrated ability, to make very minor changes retrospectively that will remove sufficient crucial features without appearing to do so.

It is in the process of delivery and in the sustainability of the Judgement that the real risk now lies. Please take care to keep an eye on the proverbial ball as Microsoft become involved on a day-by-day operational basis.

In addition, there is one point that is overlooked. There is an indirect and subtle (therefore hard to measure) leverage of the Operating System's harmony with applications—above the Middleware layer. The problem here is the tendency of a consumer or business to make a buying decision on the implied or real benefit from utilising both Application software and Operating System from the same Vendor, with the private internal knowledge cited above. This is, at best, very weakly addressed in the Judgement and requires better attention if it is not to significantly undermine the worthwhile nature and effectiveness of the provisions outlined.

Finally, if you were really genuine about levelling the operating system metaphorical "playing field", then you would have added the provision that MS would be obliged to make equally available every application or middleware component on at least one other "major" operating system. It doesn't matter which, so long as it was reasonably widely used and supported. This way, there would always be choice and opportunity for users to select operating systems and/or select applications (etc.) without interdependency that might benefit Microsoft exclusively.

I hope this is helpful and constructive—I look forward to your revised press release!

Best regards,
James.

Subject: Microsoft settlement

Dear DOJ,

Please put a stop to the Microsoft empire! The recent settlement in which MS has to provide computer equipment to some of the nation's poorest schools is a total sham. They need to provide \$1 billion in computer equipment, which includes software, and MS sets the price on the majority of that software!!!! That is ridiculous. You are allowing the crooks to dictate their own punishment. Furthermore, the computer software and hardware will be obsolete in a few years (5 maybe less), then what? Those schools have to pay MS to upgrade their operating systems and come up with extra cash to buy new hardware just to keep up-to-date the computer labs that MS so graciously endowed them with!!! Come on, please slap this monopoly in its heart and break it apart!

One last point as to why this settlement is bogus: The current operations of Microsoft

with its introduction of .NET technology & its new line of operating systems (XP) which provide tight integration with the MS website are far worse offenses than why they were brought into court in the first place. If you thought integration of Internet Explorer with Win98/NT was a bad idea, what about the fact that so many applications/services of XP are only compatible with other MS products? That nearly everything in the web browser defaults you to a MS site? That MS products offer zero compatibility with Apple, Sun, HP, Red Hat, etc. software, while all these other companies strive to make software with compatible standards? You already know that MS has a history of bad business practices, and what they are doing now is the worst!

Please seriously consider prosecuting MS again for its newest offenses and reevaluating the most recent settlement. The offer by Red Hat, Inc. to provide open source software with the hardware that MS buys is reasonable. This move would encourage competition between MS and Linux and would lessen the impact of Microsoft being able to dictate the number of computers/OSs that come out of its \$1 billion settlement (although it wouldn't end the chaos because MS has companies like Dell, Compaq, and HP in its pocket). My opinion: If you're not going to hit this monopoly any harder than the current settlement, then make MS buy Sun SPARC machines and load them with Red Hat Linux to give to the schools :) That would at least embarrass the corporate giant.

One last note: Please do not let corporate America (MS) control our country's legal system. From this settlement that is the impression I, and many others, are getting.

Sincerely,
Christopher C. Stump

Subject: Settlement

So, as I understand it, the settlement allows them to INCREASE their installed Win-Tel product base! Rather than require them to donate THEIR software and computers it should require them to actually give \$\$\$ to be used BY the SCHOOLS for software and computers OF THE SCHOOLS CHOICE! Why should the SETTLEMENT of a MONOPOLY allow them to INCREASE their installed base and PROFIT?? Also, THEY should be required to pay ALL LEGAL FEES. Why should I as a taxpayer pay them. The payment of legal fees is NORMAL! I really think more than this should happen but I know from the way you are currently approaching this that more would be unrealistic. Also, the issue was never really MONOPOLY as much as it was extortionate business practices, lying etc. But these are all things that are condoned by government. Microsoft is really just a microcosm of our politics.

 Subject: Microsoft still using same tactics

To whom it may concern:

As someone who is employed in the technology sector I am extremely displeased with the settlement which has been agreed to between Microsoft and the DOJ. This settlement amounts to years of wasted effort and money and it has not changed Microsoft's tactics one iota. Even as you broker a deal, Microsoft continues to use one product to foist another separate product on what is nearly entirely an unsuspecting public.

As an example, take my recent purchase of a cordless Microsoft Intellimouse Explorer—a fantastic mouse. In order to register my new product with Microsoft, I am being directed via their software to sign up for a "Passport" account. If you're not familiar with Passport, it is Microsoft's protocol to store consumer names and passwords so that you are not "inconvenienced" with having to remember multiple passwords on web sites you frequent.

However, if I don't deem Microsoft trustworthy, there doesn't seem to be a way for me to register my product otherwise. And as coincidence would have it, Passport is the centerpiece of Microsoft's new .Net software strategy whereby applications such as Word would be accessed over the internet on a subscription basis. However, Passport is a completely unrelated product to the mouse I purchased yet I don't see how I, as a consumer, am presented with other options.

However, merely giving me a choice about what method of registration I prefer is not nearly the whole issue—DOJ efforts have fallen short on exactly this type of action. Microsoft is attempting to move their monopoly from the desktop to the Internet via their .Net strategy. I do not want Microsoft to be in a position of being able to choose, for example, what Bank I use if in fact they leverage Passport and .Net to promote strategic partners.

Passport is just one more example of a technology which would serve the public better if it were an Open Source standard that did not promote any one company or its partners. And indeed there is an alternative to Passport being proposed by another consortium. However, does it stand a chance? Microsoft can force almost its entire desktop consumer base to use Passport or some aspect of its .Net strategy simply via the sheer numbers of its installed base—THE VERY SAME TACTIC THEY ARE SUPPOSED TO BE UNDER DECREE NOT TO DO with respect to other products. Please, do not let

this kind of manipulation continue. Please don't reduce your penalties to simply forcing Microsoft to provide options and concessions along with the default—which is continued use of these tactics. Simply put: DO NOT allow Microsoft to use one product to force another UNRELATED product on consumers. Make this stop. PERIOD. Do you trust Microsoft with your personal information?? Already, using the same Windows/Outlook/Word/Excel/VisualBasic vulnerabilities which have made a recent rash of Windows-based worms possible, a programmer has demonstrated the ability to steal Passport information from another's computer. Should the products of a commercial company that stands to reap the rewards of my personal data be in control of protecting it? Please, MAKE THIS STOP!! PERIOD.

 Subject: Where do I begin?

Dear sir,

I would very much like to add my opinion regarding the settlement the DoJ reached with MS, but frankly there is so much to say that I don't even know where to begin. Take the recent debacle regarding non-Microsoft browsers being blocked from msn.com, for example. Is there anything in the agreement to prevent such anti-competitive practices as this? Not that I can see.

Sure, they backed down in this case, but do you think they still will when Passport effectively gives them control over all XP users' access to the internet? History has shown us that when they hold the cards, man do they play them. And they tried to do this at a time when they had already been found guilty of being an illegal monopoly on appeal! Does this look like a company that is in any way afraid of the terms of the settlement they have reached? More importantly, does this sound like a company who would even agree to anything that would have a significant impact on their monopoly position? Once again, history tells us no. The mere fact that such a flagrantly arrogant company has even agreed to this settlement in itself demonstrates that settlement's inadequacy. Then there is the simple fact that Microsoft has not been punished in any way for their (legally upheld) past misdeeds. What they have done effectively amounts to theft on an unprecedented scale, yet you let them go without punishment? I understand your desire to expiate this case, but if this was more important than getting a fair result then it would have been better to have reached settlement years ago. But then and again, this entire case was precipitated out of the failure of your previous settlement with MS, wasn't it? Clearly there is something else that is far, far worse than a lengthy court case: an unfair result. And clearly—from the point of view of both the consumer and the computer industry as a whole—that's what this settlement is.

Regards,
 Lee McLean

 Subject: Microsoft settlement

So I as the customer that was/is forced by microsoft to use their product by them disabling or deciding to no longer support a competitors product get no relief. I as a taxpayer will have to subsidize the settlement with my tax dollars as microsoft will be able to write it off as a business expense. The schools, who's leaders decided

that computers where not important to education will now get the "Benefits" without doing anything. The schools, businesses, and people that paid for the software that led to the suit being filed get nothing but the pleasure of watching microsoft make more money at the government trough by writing off the settlement. Writing off the software as good will, or as a charitable donation, and then writing off the cost of manufacturing it also at inflated costs.

I am glad that the justice department is on my side, allowing me to help Bill Gates keep his money on selling incomplete bug ridden systems. Windows is NOT an operating system. It is an application designed to run as a shell over a true operating system. An operating system should only run the guts of the computer. The video, sound players, word processors, Email systems, etc. ARE applications that should be able to run on any operating system, but are restricted by the design of the so called operating system. Any program should be able to run when compiled on the operating system with the operating system sub-routines static on the system.

Subject: Microsoft
Sirs:

I have watched over the years as Microsoft has crushed one competitor after another. It troubles me greatly that the Justice Department had clearly proven that this was done unethically and now you are essentially abdicating the case. Microsoft was shown to be lying several times in court, yet the "penalty" is nothing more than a request that Bill be nice for a while. The company is so devious that what you consider to be restrictions will be twisted into license for further dominance.

Now that Microsoft is well on its way to software monopoly, it is beginning to enter the hardware market also. Examples are the Xbox and the tablet PC. It will never rest until it is stopped by force or there is no more competition, and even then it will be vigilant to stamp out any possibilty.

I believe you have abdicated, probably in the hope of large political contributions. I am thankful for a few state attorneys general who are standing to fight for freedom and truth.

Subject: Great Attempt at Destroying an American Company!

To whom it may concern,
I just wanted to give my sarcastic thanks from consumers around the world in the communist antitrust case against Microsoft. I do not and have never worked for Microsoft so do not misunderstand. But I have followed this case from start to finish and have hoped for one socialist from the DOJ to explain how this case was ever helping consumers; the whole point of antitrust legislation and enforcement. How have consumers been so seriously hurt by Microsoft that years and millions of dollars were tied up in this venture? If so, will someone explain how? Microsoft provided most software for free, such as Internet Explorer, which allowed the Internet Information Age to begin and explode. Operating Systems were provided at market value and consumers were not gouged for upgrades once the OS was installed. Windows OS's allowed the installation of competing software such as Netscape Navigator. I'll tell you what the point of this whole insane abuse of an American company was: Money. Competing companies needed a way and time to catch up and attempt to get a piece of Microsoft's market share. States saw an opportunity to get money....what did they settle for? Money in essence. They get free software from the very company that they were attempting to break up. Is that all they wanted? Microsoft would have given it to them had they asked and do so to many poor school districts around the country. I'll bet if Gates and Microsoft had given money to the Democratic National Committee like the CEO of Novell did and still does, this would have never happened. So, in conclusion, I just wanted to send out a hearty

thank you from consumers around the world. Thank you for sparing me from paying \$89 for the best operating system. I could have payed \$89, but now it will be \$289 to compensate for legal bills caused by the DOJ protecting consumers. Great job once again and another great use of American tax dollars.

Sleep well at night communists. You lost again...Microsoft was smarter than you as usual.

From: Jerry Myers

To: Microsoft ATR

Date: 11/20/01 8:29pm

Subject: the proposed Microsoft settlement is a joke.

I am truly appalled that an agreement as blatantly supportive of Microsoft is even being seriously considered. It does NOTHING to address their behavior at all. Other than the dollar amount involved it actually serves to extend and support their monopoly by adding even more windows machines to schools. This is like punishing a drug dealer by making him give away most of his supply of crack cocaine to schoolchildren. You may think this is too harsh of a comparison. It is not. The situation is exactly like that. "We will give them free software (ours)" offers Microsoft. This will ensure that, later in life, they are a part of the Microsoft masses. "We will get them a bunch of \$500 (or less) computers" says Microsoft. Which, incidentally, will not buy anything by Microsoft compatible computers, so the "they can buy Apple Macintoshes if they want" argument is completely spurious. Ignorant School Boards will always choose to get more machines for the dollar, ignoring all other factors (cost of ownership/support/etc). Microsoft KNOWS that. They encourage it. So do the IT guys who get bigger budgets because they have to spend tons of man

hours supporting those windows machines. So they encourage buying Microsoft as well.

The harm that Microsoft has done to the consumer and to the computer industry as a whole is hard to judge. What would our world be like of Microsoft would have allowed their products to compete on their own merits instead of engaging in all of the seedy and outright abusive tactics that they have? Would we have IBM's OS2 Operating system forcing Microsoft's products to be less buggy and better supported? Would Apple, SUN, and SGI (among others) be more of a presence in the marketplace? Thereby forcing an even higher level of innovation, quality, and lower prices?

I think the answer to both is a resounding YES.

PLEASE do not allow Microsoft to walk away from this with no measures in place to correct it's position and it's policies.

When a man is convicted of a felony he loses certain rights. When a company commits certain crimes (repeatedly) then they should be penalized in ways that would never be considered for a company not guilty of those offenses. Do what is right. Do what is best for our businesses, our consumers, and our economy. Force Microsoft into a position where they cannot repeat their offenses. AND penalize them for having committed them in the first place. If you do not, then you have failed in your oath of office.

Subject: ms settlement

To whom it may concern,

As the CEO of a small information technology firm I have tried to follow the Microsoft suit from it's inception several years ago. As time has gone by I've seen Microsoft not only continue its predatory practices but position itself to completely take over the computer software market and has even broadened it's focus to other markets. The new .net strategy makes the current predatory practices appear miniscule. If this happens, there will be nothing you can do to stop them. From my point of view the settlement is pure and simple politics. The current settlement proposal slaps Microsoft on the hand and asks the company not to do it again. The sad part is that Microsoft makes, at best, mediocre software. The people who are creating great software can't compete so the consumer loses every time.

The way I see it, stopping Microsoft from taking over this and other industries would be too inconvenient. We have long forgotten the principles on which this country was founded. We have sold them out for convenience. It would be too inconvenient to

do the right thing. It was too inconvenient to count each and every ballot in Florida regardless of whether the voter's rights were infringed. It would have taken too long, and well, we were just not willing to wait. My suggestion is to get them out of either the application or OS business. Let them have one but not both. Make them get rid of the Office suite of products so the buyer can make them work equally well under linux, mac, unix, etc. This way they would have to actually create some decent software to keep people in their camp. If only it were convenient.

I'm quite sure that Microsoft will continue to dominate the computer OS and Application software industry forever because no one can afford to challenge them—not even the U.S. Government. With the hidden agendas of the current administration, it would be a pipe dream to think that the justice department would consider the consumer's interests over big business in such a matter. So there, if you couldn't tell already, I'm not happy about the proposed current settlement. Big business wins and the consumer loses no matter how you dress it up.

Subject: shame on you!

It looks like Microsoft has bought themselves a Justice Dept. I understand the pragmatics of politics, but you people swear an oath to serve the citizens of this country. Turning a blind eye to Microsoft's predatory pricing policies and anti-competitive practices and, even worse, believing that they'll actually abide by their public statements, is ludicrous and I have to tell you that the respect I held for the USDOJ is completely dissipated. What's more, I know that many of you agree with me (I've only recently moved from Washington, DC) but choose to violate your oaths and completely reverse yourselves on their criminality. I understand that politicians must roam as the winds of social change blow, but that's the rationale for having civil servants swear an oath. Oh, and if anyone there has the temerity to float an economic rationale for the USDOJ's decision, don't bother. I've spent

the better part of the past decade trying to deal with the problems that Microsoft's technology invariably brings, but I've never doubted their ability to turn a profit. So, shed no tears for Microsoft ... shed them instead for the respect and integrity you once held, and have now squandered.

Finally, I know how easy it is for a civil servant to distance themselves from such things but, in my opinion, everyone at the DOJ deserves a share of the shame ...

So, shame on you all...

Subject: My concerns

Defenders of Justice,
I have no doubt my associates who will also read this may feel the need to fear their careers as a result of my statements here, and since I will also be submitting this for their review, I intend to collect their comments and keep them ready in case they feel I am terribly out of line.

Nonetheless I will express my experience and my perception of these matters, for I see it's negative effect on their choices as much as on my own.

In my own experience over the last 15 years in the computing community I have witnessed a number of individuals decide not to enter into various markets, from desktop software to vertical applications such as film effects, simply because Microsoft threatened to enter into that market. I realize that the competition itself is not against anti-trust laws, but many who see the predatory practices simply do not bother to try, and thus, in my opinion, the market is denied great new ideas, and those who originate them are left with no compensation and no realistic way to exploit their own dream to their own benefit.

As a very small operator, offering customized support operations to creative professionals, I, like others, am in no position to defend my works from the exploitation. I fear, as I have for some time, that the practices of Microsoft are now so entrenched that it is nearly impossible to properly evaluate the extent of the damage. Those damaged have long ago faded away to lowly positions in IT or as private consultants, and have for more than 10 years now, elected not to compete.

We have not given up here at Silence, but as a small firm, we have to work harder to maintain our vision and pursue our dream, all the while fearing that when it is realized, we will be sued by Microsoft for infringing on a market that they will not bother to

exploit until we have success with our product. We feel that to compete with Microsoft, we too, will have to give away a product concept we have worked most of our lives to develop. This fear and the realities of Microsoft's eventual intrusion, also affects the ability of the entrepreneur to secure financing. I am sure you will understand that if I sold out to Microsoft, I could get all the financing I want. Unfortunately I am not willing to roll over and deny my purpose in life. I quote from a letter to us dated July 18th, 1994, where, when seeking legal representation, the law firm we approached, Klarquist, Sparkman, Campbell, Leigh & Whinston (Portland, Oregon) told us in no uncertain terms, "...; In the end, we decided we could not, in good faith, take on representation of your venture, due to a possible future conflict of interest with the work of Microsoft and SoftImage." and ... you revealed just enough of your technology for me to recognize a potential conflict. In particular, you noted that your technology involves generation of video effects base on an audio soundtrack." Although Mr. Cornwell of the above mentioned firm who wrote the letter misrepresented the technology we were developing, we live in a climate today where few legal counselors and attorneys are even willing to take on the legal behemoth that this corporation has become. When I cannot even interest the law in protecting our ideas for money, the issue of monopoly power may be at play. At the very least, the definition of Monopoly Abuse, as the law currently stands, may be in need of review. Standing as they are as the most infiltrated, unsecured and unreliable product line available for personal and business systems, (why doesn't the defense department run their servers and operating systems) they are hardly in a leadership role. We must remember that their position is not based on innovation but intimidation. Everything I have read about the trials shows that these things are true and proven. I do not understand why it takes our government longer to right wrongs than ever before. The Justice department seems more concerned about avoiding economic calamity. I suggest the downturn would not have been as severe for technology stocks had there been numerous operating system and internet browser alternatives.

Microsoft proposes a world in which I am increasingly uncomfortable, and our society becomes ever more enamored of Bill Gates skill at cheating the system and stealing his way to success. Few can prove it, but everyone seems to know it. We are proud that Bill Gates can cheat his way to the wealth level of a small nation unto himself. He has created nothing of value in my eyes, and I wonder why I remain unable to build my firm, and compete on an equal level. Why so many of my professional associates wish I could compete? because they understand and approve of my vision of technology. They are creative professionals, many of them. And they find our works supportive of their needs, and less trapping than the Fear, Uncertainty and Doubt that Microsoft has managed to engineer into every aspect of their product lines. Some of my customers remain upset that I am unable to set them up

with a completely Microsoft Free system. If I cannot, and they cannot produce their works, I am out of business.

As regards remedy, I am certain that most will be pleased by the acts of philanthropy that Microsoft will do, but it will do nothing to motivate the amazing engineers and programmers I have met to complete their dreams free of fear of reprisal and coercion. I have felt this coercion many times in my travels and meeting with computing professionals, all of whom have sadly concluded that competing with Microsoft in any market is a foregone failure.

Please do not reward their behavior.

Subject: Microsoft got off easy....

I don't want to use windows. Ever.

The way things are looking, I'll have no choice in a matter of a few years.

They MUST be stopped. They have bigger plans, and it will be too late if we wait any longer.

A couple of examples (I don't have the time to go into detail): They are in the process of killing the mp3 format. They are trying to kill JAVA, buy replacing it with

their C# (or .NET strategy), which is a stolen and jumbled JAVA.

These will be their next two targets. Just watch.

Anyway, know my friends and I are disgusted with microsoft's abuse of power, and lack of taste and compassion in an otherwise very fertile industry.

Subject: Not a punishment

I have been following this case loosely, but I keep current, and the overriding feeling I get from the case is this is just a big game to Microsoft. They are largely making a mockery of the US Justice Department and national anti-trust laws, and as some of my foreign friends have pointed out this would seem to be the exact case the anti-trust laws were designed for. They shouldn't be any more of a monopoly than a car manufacturer—why would you punish a monopolistic car manufacturer by having them distribute promotional materials to poor children? And with the built-in lifespan of the few years that Microsoft software has, those poor schools will forcibly become Microsoft customers.

Subject: I'm totally against the DOJ's proposed settlement...

To Whom It May Concern,

I'm totally against the DOJ's proposed settlement...and very surprised and disgusted with Mr. Ashcroft's decision to completely reverse the prior administrations' years of hard work by abandoning the case against Microsoft.

Joseph Klein did his job very well, has integrity and dedication which is absent in the current top job in the DOJ.

Judge Jackson was correct in finding Microsoft guilty of anti-competitive business practices, among other things. Even the Court of Appeals unanimously agreed with his findings of fact,—that Microsoft is a monopoly, and illegally maintains a monopoly.

Now the DOJ suddenly abandon's it's case? This, after winning???

John Ashcroft DOES NOT REPRESENT ME, nor do I believe he has the best interests of consumers (the world over, NOT just in the United States) in mind. He is either a foolish man, or a very naive one if he believes that any "agreement" with Microsoft can be effectively enforced. Has Mr. Ashcroft no familiarity with the prior "agreement" between Microsoft and the DOJ? It seems he is completely ignorant of Microsoft's history and business practices.

I support the States who must now assume the burden of performing the DOJ's job.

Mr. Ashcroft, do you have any idea what this world will be like in the future, after Microsoft controls everything in the computing world?

I hope you realize what you've done.

Respectfully,

Kevin Schumacher

Subject: comment

I understand that the DOJ is accepting comments from "joe public" on the Microsoft case.

I found it a bit disturbing, yet not surprising, when the years of court battles and so obvious contempt for the people and laws of the land by Microsoft, that the proposed settlement is nothing more than a slap on the wrist for the offender. I, my family, my friends, and my business contacts would like to observe "justice" served on Microsoft. While there is always some need to take pot shots at, and make fun of, a winner...it is obvious that Microsoft did wrong and tried to hide that fact.

Justice should hurt... and hurt more than ones wallet. Righting a wrong, and punishing previous behavior, should be a burden on Microsoft... not a line item in a spread sheet.

Subject: Microsoft settlement

To Whom It May Concern,

It's remarkable how powerful corporate America has become. So powerful that even our own federal government will bow to their every whim. I am, of course, referring to the latest proposed settlement between the DOJ and Microsoft. It's nothing less than an embarrassment to the Department of Justice. Though the DOJ defends the settlement by stating it will eliminate Microsoft's illegal

practices, prevent recurrence of the same or similar practices and restore the competitive threat, the legal wording has too many loopholes. In addition, it does not adequately punish Microsoft for damage it has already done to the tech sector.

I still have a little faith that this matter will be resolved appropriately, and the mafia tactics Microsoft has employed for many years will not go unpunished. This situation is slowly becoming a travesty of justice ... another black mark on the face of the judicial branch. The best solution is to make Microsoft make retribution in a fashion that they will not soon forget; be it a break up or severe penalty.

If this recent settlement passes, they will walk away from all this with a smirk on their faces ... and no incentive whatsoever to halt any future activity which unfairly and ILLEGALLY bullies competitors.

Subject: Microsoft anti-trust case

I was quite disappointed when I heard that the prosecutors were going to let Microsoft off with a slap on the hand (again). It was so ineffective before, I am amazed that anyone would consider it this time. While I don't know how to deal with the monopolistic and predatory business practices that Microsoft continues to employ, but to let them off without sufficient safeguards is simply asking for more of the same. The current plan does NOT provide enough protection for the consumer, and does not level the playing field for competitors. This is something that I was brought up to believe was an integral part of our business model.

I was pleased to hear that your office also feels that the proposed remedy is insufficient. Please continue to pursue this until a fair settlement is reached.

Thank you,

George Wagner

From: Stanley Weilnau
To: Microsoft ATR
Date: 11/20/01 10:24pm
Subject: Microsoft anti-trust settlement

To US Dept of Justice:

I feel that the proposed agreement with Microsoft on the settling of the anti-trust case to be a total waste of taxpayers money. The judgment came down that Microsoft had performed some illegal acts and the agreement is a repudiation of that finding. The proposed settlement that was rejected before the judgment was stronger than the agreement that is now being discussed.

I do hope that the states continue their lawsuit and that Microsoft actually has to own up to it's uncompetitive practices that have reduced the competitiveness in the marketplace. Past practices of Microsoft are a guide to what the future of an unrestrained Microsoft will be. The entry of Microsoft into the video game console market shows how Microsoft is leveraging its monopoly position in the PC operating system market into another area to dominate.

This failure to hold Microsoft accountable for it's practices shows me that justice is simply a matter of how rich you are and how much you have donated to the current political party in office.

Dear Madam or Sir:

Since you are still hearing on this case, this article says it better than I could:

OPINION: Microsoft on Truth Serum—the Antitrust Settlement Examined
Contributed by Tom Nadeau
osOpinion.com
November 20, 2001

The proposed Microsoft agreement looks good and feels good, but listen to how the definitions in the agreement would play out in real life, and then the agreement doesn't sound very good for competing software companies or consumers.

The recent antitrust settlement between the U.S. Department of Justice and software monopolist Microsoft (Nasdaq: MSFT) has enough loopholes to sew a circus tent.

The settlement actually grants Microsoft extra legal powers beyond what it had before the trial.

Don't think so? Well, here is a simulated conversation that may convince you. This is what I believe a Microsoft official would say to a neutral examiner asking questions about the settlement agreement, if the software giant were under the influence of a truth-enhancing substance.

Microsoft on truth serum. Listen in.

Set You Free

Examiner: "Let us start with the definitions, shall we?"

Microsoft: "Of course. Words mean things, whatever we want them to mean."

Examiner: "A. Application Programming Interfaces (APIs)"

Microsoft: "APIs running on one operating system (.NET) and calling a different operating system (on your PC, remotely via the Web) are exempt from regulation."

Examiner: "B. Communications Protocol"

Microsoft: "Since the settlement exempts code to remotely administer Windows2000 Server and its successors, all our communication software will be embedded with pieces of this code. We will not have any Communications Protocols that can be regulated according to this definition."

Legal Loopholes

Examiner: "D. Covered OEMs"

Microsoft: "The 20 highest licensees? Does that mean licenses paid for, licenses delivered to customers, licenses committed to, or licenses actually registered by the end user?"

Examiner: "H. IHV (Independent Hardware Vendor)"

Microsoft: "The settlement says they're only 'independent' if they depend on us for Windows. Unless we already 'own' them, we don't have to give them anything."

Examiner: "I. ISV (Independent Software Vendor)"

Microsoft: "The settlement says they're only an 'independent' if they depend on us. But if they only sell software for non-Microsoft operating systems, we don't have to give them anything. They will never be able to make their non-Windows products interact with our Windows-only products." Hidden Message

Examiner: "J. Microsoft Middleware"

Microsoft: "The settlement says it's only Middleware if it has a X.x version number. But we don't use version numbers any more. We use year numbers. So our Middleware is not regulated by this settlement."

Examiner: "K. Microsoft Middleware Product"

Microsoft: "The settlement calls it a 'middleware product' if it is embedded in the operating system.... But it's just 'middleware' if it is distributed separately. If it is distributed by a shell company controlled by

Microsoft through stock ownership, then it's not 'middleware' because it is not distributed by Microsoft or a wholly owned subsidiary." A.P.I. Arrogance

Examiner: "L. Microsoft Platform Software"

Microsoft: "We'll ship the APIs as a standalone product through a third-party company, or sitting on a Web server somewhere. But we don't have to divulge any details of the APIs because they won't have a version number. So they're not 'middleware'—and therefore are not covered by 'middleware' clauses. Since they are not part of Windows, they are also not a 'middleware product.'"

Examiner: "M. Non-Microsoft Middleware"

Microsoft: "Sure, like we wouldn't give away free copies of comparable 'Microsoft middleware' to put them out of business. Except that it's not 'Microsoft middleware' if it has no version number, so it would not be regulated by this settlement."

Examiner: "P. Operating System"

Microsoft: "If we ship the APIs separately—on the Web—then it says that Windows is not even an operating system! It's totally unregulated!"

More Monopoly

Examiner: "Q. Personal Computer"

Microsoft: "Right, only PCs are covered. They let us extend our monopoly into game boxes, TV, servers, handhelds, phones, PDAs, whatever."

Examiner: "R. Timely Manner"

Microsoft: "We have to deliver product info as soon as we ship to 150,000 beta testers per version. However, we no longer beta test with more than 148,000 testers per version."

Examiner: "U. Windows Operating System Product"

Microsoft: "Ha! Doesn't even cover DOS-based stuff. We can keep spreading that stuff around any way we want. Oh, and that last sentence... We can put anything we want to in Windows—any code owned by anybody! Yes, just give me that last sentence!"

Best For Last?

About that last sentence.

The slickest part of all is to put the definitions at the end of the document, where they legally overrule all that comes before, and to place the loosest definition of all at the very end of the document, slyly positioned to trump any preceding malarkey.

That last sentence ostensibly was inserted to protect Microsoft from having to ship code that it did not choose—so that Microsoft would not have to ship a rival company's code, such as Java or Netscape, for example. But Microsoft can choose to claim that a competitor's product *is* a Windows Operating System Product, because the last sentence says that the court grants Microsoft the "sole discretion" over "the software code"—not just "the Microsoft software code"—that Microsoft chooses.

Above the Law

While other companies may have their claim to software ownership reviewed by the courts, this "settlement" exempts Microsoft from such review—immunizing Microsoft from copyright lawsuits.

This is a license to hoist the Jolly Roger and sail the seven seas, pirating any rival code that Microsoft chooses.

Peace,
Geoffrey McCabe

From: Alvin L Nazario
To: Microsoft ATR
Date: 11/20/01 11:18pm
Subject: Microsoft Settlement

Hello,

I'm writing this letter to voice my concern about the possible settlement of the Microsoft Monopoly trial.

If what was publish in The Wall Street Journal is true 3Under the deal, Microsoft would provide software valued at approximately US\$900 million to schools where at least 70 percent of the students qualify for the federal free or reduced lunch programs, the representative for the law firm confirmed. Microsoft would also have to supply some 200,000 reconditioned PCs and

laptops, the representative added. In addition, the software maker would be responsible for providing \$90 million in teacher training and \$38 million in technical support. An independent foundation would also be set up to ensure that objectives of the deal were met, with Microsoft shelling out another \$250 million to set up the foundation, as well as seeking \$200 million in matching funds.

Additionally, Microsoft would contribute another \$160 million to help support a program that teaches students how to repair and service computers and networks." then please explain to a simpleton such as myself, how is this going to hurt or eliminate Microsoft's monopoly? Equipping schools with PC's running Windows would only further their dominance in the computer industry, as these schools will become dependent on Microsoft's future upgrades and not to mention hurt sales of other operating systems such as Macs, Linux, BEos etc.

This settlement would only benefit Microsoft by standardizing their operating system for the future generation of America. I hope that fairness will prevail, and all parties hurt by this monopolization will gain to benefit rather than depend on M\$.

Thank You,
Alvin

11/21/2001

Dear U.S. Department of Justice, Attorney General John Ashcroft:

Having read the latest relevant and recommended documents on your website regarding the currently proposed settlement of the monopoly/anti-trust case with Microsoft, I wish to give you my comments, and urge you to reconsider and rewrite this 'settlement', as it does very little, if anything, in offering any meaningful, significant remedy or relief to the average home computer user/Citizen, who has been harmed by Microsoft's prior and continuing illegal, restrictive and extremely invasive behavior/business practices.

I am 49 years old, a disabled American citizen living solely on Social Security Disability, and I have been not only a computer user, but a computer builder, system administrator and computer service person for many years. I have used many of Microsoft's (and other companies') software products for many years, and have followed this court case involving Microsoft with keen interest.

It is my firm belief, and the belief of many Citizens with whom I am acquainted and have spoken with concerning this case and proposed settlement, that Microsoft has in the past, can and will continue to control, inhibit and restrict not only other companies' products (competitive or not) purchased by

the end user from working and interacting well with the Windows OS, but will also reduce the average Citizens' and users' control over and use of their operating systems (Windows XP) and unwanted and competing Microsoft programs 'added into' the Windows OS by Microsoft, (as Microsoft has demonstrated time and again, most conclusively and consistently over many years, and was in fact convicted of).

In examining the Proposed Settlement and Impact Statement, I can find no effective or realistic proposed remedy for or benefiting any of our Citizens and legal computer end users of Microsoft software in the United States of America from the past or the present continued illegal misconduct and monopolistic, invasive and restrictive misbehavior by Microsoft Corporation, unless said Citizen(s) would be fortunate enough to have access to an unlimited amount of funding which would be required to obtain effective legal representation at a powerful and persistent enough level to bring any such violations to the attention of the Court and sustain such action, much less in order to obtain any meaningful Judicial relief. If you, our United States Department of Justice and our Federal Court system cannot obtain effective relief for the public now, at this time, in this settlement as a result of Microsoft's conviction, it is extremely unlikely you will be able to do so at 'some future date', as is commonly stated by most lawyers in their conversations when discussing 'remedies' for violations of court orders or illegal or improper behavior by any person or entity convicted of a crime..

As far as any evidence I can offer for my views and comments, I can factually state that by my own exhaustive efforts, Microsoft Internet Explorer still cannot be effectively removed by the average end user (which was one of the main issues in this case when it was brought), either in past or in the newest and present Windows XP OS released last month (October, 2001). Most if not all home end-user/Citizen control or adjustment of program control involving home user interaction with Internet Explorer and windows XP itself is either eliminated or severely restricted, and most other computer software programs sold for use with any previous Windows OS prior to the date of release of 'XP' is made instantly incompatible with the upgrade installation of XP, and will in fact not function. If I want to upgrade my current version of Windows 98SE to Windows XP as of this writing, 9 out of 10 of my own quite beautifully functioning, very expensive and non-Microsoft software programs will absolutely not work with Windows XP, and I will be forced as a result of this to buy entirely new or alternate versions of the various programs I mention, in order to continue using them with this 'new and improved' version of Windows. As an analogy, why should I have to overhaul the engine of my car, put in a new car stereo, seats and interior, and pay for a new paint job on the exterior, just because I want to purchase a better set of better tires and wheels for the car, i.e., as the new Windows XP OS upgrade represents to me and my use of my personal home computer?

To use an upgrade to Microsoft's 'XP' past 30 days following my legal purchase and

installation of this software on my computer, myself or any other legal home computer user must either have an active Internet connection or physically make a telephone call to Microsoft, in order to 'activate' Windows XP by transmitting or quoting a very long sequence of numbers, and then in turn enter into my computer another extremely long sequence of numbers EXACTLY as quoted to me by a Microsoft representative, in order to receive 'activation permission' to continue to use the software upgrade on my computer; if I do not do so, my computer is made instantly INOPERATIVE, and I must reformat my hard drive, losing all of my programs, data and hard work, since the computer will not boot! Microsoft's new advertising slogan may be, 'Yes, you can', but rest assured that most home users do not and cannot find it amusing to stay on hold on their telephones with a company for 30 minutes, in order to receive permission from a Microsoft company representative to continue using a product they have obtained and paid for legally, that they have taken great pains to install and upgrade on their personal property, i.e., our home PC's.

At this writing, Microsoft has acknowledged that the public uproar and reaction to their newly-adopted 'activation' requirement', has resulted in an illegally written 'pirate' software program that is currently in world-wide distribution as a no cost download, and is readily available to anyone in order to overcome Microsoft's Orwellian invasion of a legal computer user's right to privacy. This illegal software, which if downloaded and used by any legal computer user in order to continue their use of their already-paid-for and installed product upgrade on their home computer, would of course, make said prior legal users new criminals.

Microsoft by their own admission, has clearly stated since the release of XP and the illegal software 'fix', that they had anticipated such an event, so the question is raised, if Microsoft has publicly announced that it anticipated that it's own behavior would inspire otherwise law-abiding computer users to become criminals, in order to continue to use their already legally acquired and paid for software upgrades on their home computers, then why does Microsoft engage in such invasive and restrictive actions in the first place? As the proposed settlement or impact statement does not address this specific matter in any manner that I can recognize, I must state for the record that NO other American software requires this type of outrageous, restrictive and invasive seeking of it's 'permission' in order for it's software product to continue to be used legally by the average home user/Citizen, who has already paid their license/software charge and installed the XP OS software on their home computers. As long as the home user/Citizen pays for their own licensed use of the Windows software/operating system (obtaining by legal purchase of course), it is NONE of Microsoft's business what brand name computer the Citizen uses, how many or what kind of hardware components a Citizen chooses to uses/alter/change, nor what component changes the

home user may decide to make in the future to his/her privately owned personal computer and its components in order to legally install, re-install or to continue to use the Windows XP upgrade or any other Microsoft Operating System on their home computer. It is the same principle, in that it is no more the business of my local Wal-Mart grocer how many dozen eggs I am going to buy from their store, how I will arrange the eggs in my kitchen, how I am going to cook my meals with any of the food I purchase from them, what kind of frying pan, bowl, spatula, microwave oven or stovetop range or oven I cook my food with, as long as I am not going to break the law doing it! (Please note my previous analogy to the automobile tires).

This is another continuing example of the extremely restrictive and invasive behavior being currently forced at this very moment in our history, upon the average home user/Citizen by Microsoft, as it is already illegal to make copies of Windows, or to install the software on more than one personal computer at a time. I believe that not only I, but the vast majority of my fellow citizens and home computer users in this country respect and obey this law, and that I/we do NOT infringe on Microsoft's rights in any way, shape or form!! It is not credible to any reasonable and law-abiding person that Microsoft would honestly respond to any such request from anyone made to Mr. Gates or his company, Microsoft, for their personal information, or that anyone would inform him that he cannot make changes to his own or his companies' computers' components without contacting all of his registered customers first. (I don't think it would be reasonable that I or any other Citizen or home computer user who buys or uses Windows XP would make such an invasive personal request of Mr. Gates or Microsoft, nor would I be realistically interested in said personal information, before deciding whether to buy the Windows XP upgrade from Microsoft., much less before installing and continuing to use it, but this IS my point).

If I or any other legitimate computer user keeps my/his/her legitimate sales receipt and CDKEY registration number provided with the Windows XP OS software upgrade purchase as proof of ownership/license, as has always been the acceptable practice in the past by Microsoft when a Citizen pays for it's software/OS upgrades, why must I/we be forced to comply with such an invasion of my personal computing privacy, by and from a company who in fact has been convicted of monopolistic wrongdoing and lawbreaking, whose only intent is to poke it's corporate nose inside of not only the inside of my computer (my personal PRIVATE property), but more specifically, where my computer is located in my home; in my bedroom??!! I repeat; as long as I or any other legal user is not engaging in illegal behavior, such as making illegal copies of Microsoft's programs or re-selling them, altering their code or installing more than one copy of the XP OS upgrade software, it is MY business what I do with the inside components of my computer, and certainly not Microsoft's!!!

Continuing further, on each bootup of the new Windows XP OS upgrade, and at various

other intervals determined by Microsoft, the end user/Citizen is currently bombarded with constant harassment from Microsoft to entice him/her to enter intimate personal information (including financial information) in order to use it's 'Passport' system, which Microsoft tries to pass off as a computer users'/Citizens' 'convenience', but is actually subjecting me or any other home user to more extremely invasive and harassing behavior, on Microsoft's behalf, to say the least. IT IS NONE of Microsoft's or anyone else's BUSINESS what my personal information is! I don't want to pay for continued, forced sales pitches or Microsoft's corporate propaganda every time I boot my computer's operating system or open a 'window'. I want a functional operating system upgrade for my computer with NO post-installation nonsense from Microsoft. As far as I can determine, there is no clear way to stop this automatic harassment which is now sold and incorporated inside of the XP OS upgrade, short of un-installing Windows XP, which endangers my previous version of the operating system, and my personal data! Microsoft's only concession on this point is to say that their harassing invasiveness will eventually 'go away by itself'.

I note that there is some evidence offered in the Impact Statement concerning the automatic way the Windows XP OS upgrade currently forces unwanted and unapproved changes of configuration or operating system environment conditions, such as, that in the future, the user/Citizen must be given notice and the chance to approve or refuse such automatic, unwanted or unsolicited changes by Windows XP. I applaud this part of the Statement, but it does not address any of the concerns I have raised in my comments above, nor does the Statement address the fact that in buying, installing and using Windows XP, Microsoft forces a user/Citizen to obtain a 'virtual' program from Microsoft in order to run programs containing 'Java', their own 'virtual Java download'. Part of the original complaint in this lawsuit dealt with Microsoft's illegal behavior toward the Java writers (the company who owns the Java code) and subsequent users of programs utilizing Java code. If a home user/Citizen does NOT comply with Microsoft's edicts by downloading Microsoft's 'virtual Java download', the home user's currently installed and used programs utilizing Java will no longer work with the XP upgrade. If the average home user/Citizen who legally purchases the Windows XP OS does not possess an internet connection to download all of these 'fixes' or other such relief which may be provided by Microsoft such as 'virtual Java', or other remedies that may be imposed by the Court, there is effectively no relief or remedy provided to the American public at large in this matter, as Microsoft has never before and most likely will never in the future voluntarily issue free disks (CD's or otherwise) to impacted legal users, consumers and Citizens, without first demanding some type of mandatory charge or fee from those users concerned, to correct/remedy this behavior.

As far as the '3 person, Court appointed committee of computer experts' that will supposedly have total access to all of

Microsoft's inner workings, computer code, documents, etc., to ensure that Microsoft will not further engage in any illegal and bad behavior, could you kindly please reassure and inform me (and all of the other American home computer users who pay for, legally own and use Microsoft software), whom these 'experts' might be, what makes them computer experts, and how any average, reasonable Citizen can be expected to believe that only '3 computer experts' can possibly be constantly examining all of the inner workings of the Microsoft Corporation, all of it's programming activities and business divisions in any meaningful way, so that Microsoft WILL be forced to comply with the Court's Order? Only 3 people/experts?? How many attorneys contributed to bringing this case before the Court, and to it's current status of Proposed Settlement? I don't think that 3 lawyers much less 3 'computer experts', could or would have taken the particulars of this case on for trial, much less to ensure compliance with a settlement, although it might currently take 3 lawyers just to explain the current proposed settlement and Impact Statement to the average end user/Citizen, so that they could fully understand the terms and future implications of said settlement in order to intelligently offer their concerns and comments to the Court!

I strongly believe that there should be NO EXPIRATION DATE of any final order regarding this proposed settlement, just as there is no expiration date mandated by law or court order, for notifications and recalls to the American public regarding dangerous or defective consumer products. As I mention at the beginning of my comments, I have used Microsoft software products for many years, and have NEVER seen a product recall involving the failures of their software (or of any Court order forcing them to comply with any court order or law dealing with flawed products).. If the automobile industry were allowed to make cars that were as restrictive to use, and as defective in use, as Microsoft Windows operating systems and upgrades have proven to be time and again over the years, the auto industry would have gone out of business many, many years ago.

In closing, I again respectfully but most strongly request and urge the U.S. Department of Justice and the Court to rethink and rewrite the 'proposed settlement' of this case, and to instead offer a settlement that will actually benefit the public; the average home user/Citizen, including the stated alternative considerations listed, such as mandating Microsoft to issue a stand-alone version of it's operation systems completely devoid of it's own 'Middleware' products, without the OS's automated changes and restrictive, invasive 30-day 'activation' ploy/scheme, at a reduced price. Allowing Microsoft to give \$1,000,000,000.00 worth of 'free' software to the American public schools is a very nice gesture, and I'm sure our schools will be very happy with this philanthropic gesture by Microsoft and Mr. Gates, as the news media is reporting today.

However, this gesture doesn't protect nor does it offer any relief the average home user/Citizen to any degree, nor does it mandate any form of punishment to Microsoft for

breaking the law in the past or in the future, except to 'extend' the period of time for court-ordered supervision of Microsoft by the '3 computer experts'. Such action does NOT constitute remedy, protection or punishment that is readily observable to the average, reasonable American.. Personally, I don't want to have to go back to high school to use Microsoft's gift of free software to the American school system, in order to benefit from this 'proposed settlement' as it stands. Surely Mr. Gates can do something more meaningful for the public to show Microsoft is attempting to mend their ways and to redeem their illegal behavior, than to give away software to only our public schools, something which Mr. Gates' private 'Gates Foundation' does already. I think that a more meaningful and appropriate condition of settlement would be for Microsoft to be required to offer at no cost, a new and current Windows operating system upgrade (without restrictive and invasive actions required by the end user) to legal computer user/Citizens, who have purchased and installed any Windows operating system during the period of time that this legal action has transpired, until final settlement of this case. To the American public, it might be worth \$1,000,000,000.00 for Microsoft to be mandated in this settlement to undertake such an action, as said condition would truly address the wrongs committed by Microsoft upon the public in a far more genuine and realistic manner than by Microsoft's 'giving' the same/equivalent amount of unspecified 'free software' to the American public school system. Admittedly, our public schools are a deserving but extremely select, publicly supported organization/institution benefiting America's children, but said current offer would not immediately or in any way benefit the majority of the adult segment of the American Citizens whom have been wronged by Microsoft's illegal behavior.

Thank you for your kind and generous time and attention in reading my comments, and I pray that they will be brought to the Court's attention, on behalf of all of the end users and average Citizens in America, so that 'We, the People' (besides the children in our public school system) will have relief from Microsoft's unlawful behavior. (Just how did the original lawsuit allege that the school system was harmed by Microsoft's illegal behavior, anyway? I could not find any allusion to this fact in any of the relevant court documents in this case).

Very Truly Yours,
Dennis Dietzel

Subject: An outrage

Folks,

I truly cannot believe that this settlement is even considered. Why? I can't list everything here, but consider this. If I buy a Windows based system, I am truly stuck. I

choose another OS to run on that machine, I have no other software to choose from to become compatible with the windows world. Novell and Apple are both in the same dilemma they are trying to fight an up hill battle with a 800 lb. gorilla as some would say. However, to be fair both products MUST remain compatible with you know who, Microsoft. Without this compatibility these companies cannot compete. Why should they cater to someone that already OWNS the PC market.

Finally, the use of a gorilla in the above analogy is wrong. A gorilla is a social, caring and docile animal. Microsoft is not.

So please think about your decision. We want Microsoft to be competitive not force others out of business. Many a good company has failed. They tried to compete, however, because Microsoft will either take over or use their leverage to create an anti-competitive market. Read from a few years ago in Business Week a Day in the shoes of Bill Gates then make your final judgement.

Thanks much,
Mick

Subject: proposed settlement

Hi, I wanted to comment on the settlement Microsoft proposed today (or yesterday). I am against this latest proposed settlement. I think that having the only penalty be Microsoft's providing computers and software will only go further toward reinforcing Microsoft's monopoly position, clearly against the intent of the law and the finding of guilt. Microsoft (as have other computer/software companies) has previously donated equipment and software to schools. This can serve several purposes such as good public relations, favorable media coverage (Microsoft has done it during previous trials, apparently to help sway the 'court of public opinion') and increasing 'market share.' Allowing this 'settlement' only reinforces the problem.

Subject: Microsoft settlement is unwise & unjust

What has been proposed by the DOJ is inadequate given the serious misdeeds of Microsoft. The settlement will deter Microsoft from continuing the practices that have been so harmful to many consumers and companies. I read the trial judge's findings carefully, and it is unbelievable that the US government would be so dismissive of the implications.

I urge you to reverse course and propose remedies that might actually have some effect.

Subject: Microsoft Settlement

To whom it may concern, I would like to express my disappointment regarding the settlement with Microsoft. It appears that Microsoft will be left in tact with billions of dollars in profits from its "monopolistic" practices while only being punished for a mere billion. Further, they continue to maintain a monopolistic market share on computer operating systems and key software programs. The capacity for Microsoft to outmanuever competitors through legal and fiscal brute remains. The fear of Microsoft has not been diminished.

There has been no real service to society in the punishments awarded. A billion dollars for schools is token money. Further, their products are often mediocre at best and prone to crash costing me and my business hundreds of dollars each month in lost time. If they had better products, I might be more enthused by this settlement. Instead, I'm feeling locked in without real consumer choices of alternate programs. I strongly oppose this settlement.

Subject: Microsoft Wins Again...

Who is Microsoft fooling when they promise to give 1 Billion in cash and software to the poorest schools in the nation? Don't our children deserve the best? By the time the software gets to our schools it will almost certainly be outdated. Why not just give the American education system 1 Billion dollars in cash. That way the neediest schools can choose their own operating system. Maybe an operating system that is more stable than the Windows platform. Remember our children deserve the best.

Sincerely,

Mr. RJ Carswell

Subject: Good To End This Case

To Whom It May Concern:

I am just an ordinary citizen with little knowledge of the legal system, but have understood, from the beginning, that the Microsoft Antitrust Case is more a case of government interference than a case of/for "justice." Reminds me of the lyrics; "...because I have friends in high places...", wherein the competitors of Microsoft ask the DOJ to fight their case for them vs. duking it out in the marketplace.

Now, I sincerely pray that the states Attorneys General (those refusing to agree to the settlement reached by the DOJ and nine other states Attorneys General) will stop the bullying, tighten their belts and STOP. The entire fiasco has harmed the consumer, the stockholders...and the United States economy! As the foregoing makes clear, I, and thousands of Americans, are extremely pleased with the settlement reached. As a next reform, I would suggest that legislative and judicial bodies stop harassing the tobacco industry and the millions of Americans who choose to smoke. What kind of justice is it to pass the costs of the settlements to consumers, making multimillionaires of the attorneys prosecuting these cases? It is downright frightening what legal, legislative and other administrative bodies are doing TO American citizens in the name of "protection."

Sincerely,
Sharon Dunton

From: Bruce Rogovin
To: Microsoft ATR
Date: 11/21/01 12:09am
Subject: Microsoft

Dear Sir:

I remember as a child reading about the Standard Oil Trust and how the monopoly was terrible for competition and the country. As a result, Standard Oil was broken up, so that the American way of fair competition could prevail.

Whether or not there is a direct correlation with the Microsoft case, it is obvious that Microsoft has become a totally corrupt and completely out of control monopoly. I read with utter disbelief the judge's Statement of Facts on the case. It was hard to believe that one company could do so many illegal activities and still be free to do more. The US government on previous occasions has simply slapped Microsoft on the wrist and allowed it to continue almost completely unchanged. Now the justice department is about to do the very same thing. It is as if the justice department has not read the statement of facts. I would beg anyone involved with the case to watch Bill Gates taped testimony. I have never seen anything as sleazy. This was the president of the world's largest corporation, lying and covering up under oath. I implore you to do something to stop Microsoft from its illegal and immoral attempts to dominate every corner of every market they deem important. Please do something to break the monopoly.

Subject: comment on the draft agreement between the DOJ and MS

I am strongly opposed to the current draft agreement between the Dept of Justice and Microsoft. Microsoft has already shown its contempt with and continued illegal activities following the last agreement they entered regarding their anti-competitive practices. The only ruling that will bring an end to these practices is to breakup the company into at least two parts, perhaps more. Innovation is the fundamental asset the US IT community has; the currently proposed settlement will do much to limit new innovation.

I urge you to reconsider your draft agreement and return to the only suggestion that will be beneficial to computer users, both individuals and corporations.

From: cvers
To: Microsoft ATR
Date: 11/21/01 12:11am
Subject: Penalties To Encourage a Competitive Market

There must be real penalties with the Microsoft settlement. Penalties which improve the competitive software market. Microsoft should be fined a significant amount of money (say 2 billion dollars) which should be specifically allocated to Netscape and other vendors to develop a competitive browser with all browser standards cross platform. Microsoft should be barred from adding to their browser any special capability that is Windows only. If they want to add some special capability, source code should be available to competitors (six months in advance) for other OS's migration. Any significant efforts must be made to maintain the World Wide Web OS neutral design. As for their major leverage with Windows, the settlement should delute their competitive advantage to leverage Windows only applications with their Windows Operating system.

Microsoft should be required to make their applications available on both Linux, Solaris,

HP and IBM Unix for the next five years as they are doing with Apple Computer. This must include all significant Business applications including Office, Microsoft Project, and Visio. Note: for Apple at present, they have this agreement only for Office. Corporations cannot consider switching to another OS until the other Business applications are also available. This should also include any other future significant Business applications. Also, when Microsoft releases updates, all pending competing product vendors (or translator vendors) should have a release at least six months in advance of all information necessary for the development translator. This should be the law for all software vendors anyway. These suggestions I think will make the software market more competitive.

Subject: comment....

To Whom it may concern,
I think this "solution" is ridiculous. It serves to extend the Microsoft monopoly into areas where hitherto they have had no market at all. I think a better solution would be to have Microsoft spend \$1 billion towards computer hardware, thus giving computer access to the less privileged. (This is good) The software should be a form of Linux. I believe that Red Hat... a well established software company has extended their software free of charge. Future updates of their operating and system software can be downloaded for free or purchased for a few dollars.

If Microsoft is allowed this solution... in a few years it will be time to update the software. Microsoft just gained a new user base and who is going to pay for it then?

This is no solution for a monopoly.

Subject: Re: MacInTouch: Mac news, information and analysis

I am disappointed with the press reports that the heavy handed leveraging of Microsoft's monopoly in Operating Systems (and Office applications) has been used against IBM and others successfully and now will not be punished. MS should be limited such that it's sales never exceed 50% of the total sales in any marketplace. This would mean that no more than 50% of all installed OSs was made by Microsoft. No more than 50% of all installed Word Processors could be made by Microsoft. If Microsoft ever does go beyond 50% they should be punished in a trivial and obvious way, say by having it's entire U.S. operation closed for a month for each infraction following the determination of any infraction. If Microsoft truly does innovate and provide better products, they should do rather well with just under 50% of each market they venture into. If they do not, an under 50% market share will spoil all of it's illegal practices and Microsoft will either learn or go away.

Subject: The proposed settlement

Sirs:
After reading some of the details in the proposed settlement of this case, I have concluded that:

- 1) Microsoft has applied political pressure on the DoJ to achieve it's goals, or
- 2) The DoJ team is incompetent / poorly advised and cannot credibly represent the interests of the U.S. in this case.

If either of these are true, it's a sad day for America and for consumers who will be subject to the continued adverse business practices of the monopolistic, ruthless empire that Microsoft has become. As a minimum, Microsoft should be divided, and the applications business should be isolated from OS development efforts.

Sincerely,
James McSheehy

From: Dave Austin
To: Microsoft ATR
Date: 11/21/01 12:59am
Subject: Settlement conditions

I believe that MS's offer of \$1B in goods and services to schools merely serves MS's purposes and is a Trojan horse furthering the monopoly. In the end those schools with MS products will extend reliance on MS.

A better solution would be for MS to spend the same \$1B purchasing their competitor's (i.e. Sun and Apple) goods and services. That would provide the schools with the same or better technology and give MS competitors the opportunity to compete, essentially helping to level the playing field.

MS's offer to give away their own goods and services worth \$1B is ludicrous. That \$1B give away will not only extend dependence upon further goods and services but will earn them that much and more over the an extended period because others (i.e. teachers, parents) will have to purchase equipment and software at home to support school children's work.

Please don't accept the MS offer as a golden goose. It has too many pitfalls.

Thanks,
Dave Austin

 Subject: Comments re MS suit and settlement
 Sirs & Mesdames:

The writer is not a resident of any of your states, but just a retired citizen of Arizona who would like to be heard. By way of background, after receiving my MSEE from MIT in 1949, I participated in the design and construction of one of the very early computers—OARAC, built by the GE company in 1949–51 for the US Air Force. Most of the rest of my career was in the field of military electronics for various military services at the GE plant in Syracuse, NY. I have, however, maintained a serious interest in the field of computers all of my life. First of all, this may be a done deal, but it is nonetheless a bad one. I have just today seen reports to the effect that MS is being allowed to settle one or more suits by giving MS products and equipment to certain schools. That is certainly a back door method of undercutting the only minor competition that they have—namely Apple Computer. This gift should be required to be in cash with the specific provision that the schools should decide what equipment and software they need. If Apple goes down, we are all at the non-existent mercy of MS.

Perish forbid!

Relative to other aspects of this case, it is my opinion that without some provision for the separation of MS into two (or more) separate companies—perhaps 'Operating Systems' and 'Application Programs'—the entire court action will have come to naught! MS has demonstrated on numerous occasions that it is able to find its way around lesser court imposed restrictions. Let's not bother to repeat that experience. It would be a waste of the taxpayer's money and the court's time.

In short, you, ladies & gentlemen, are our final hope that the MS juggernaut can be stopped, and IT MUST BE! Please give it your very best effort!

You people haven't a clue. This will only further the Microsoft stronghold on the consumer market! This money should be made available for schools to buy computers and software from competitors like Apple. Apple is the only real competition to MS and it's software domination. Thus it should benefit the competition not offender. This will show students there is still a choice. What sense does it make to say "look there is still only one choice, Micro\$oft. Think about it.

 Subject: Microsoft Settlement

Dear Folks at the Department of Justice,
 I just watched a local newscaster read a story in the most incredulous manner about the latest in the Microsoft's dealing with the law. Even he couldn't believe what he was reading. The story was that Microsoft would agree to fund the 12,500 poorest schools with computers and software as "settlement in dozens of private antitrust suits." I can't believe it either. Here is a link to a CNN story about it: <http://money.cnn.com/2001/11/20/technology/microsoft/index.htm> What are we doing, feeding our children to the monopolists?

I have to say that I was severely disappointed with the proposed antitrust settlement that came out in early November of this year. It seemed not even a slap on the wrist, but more a pat on the back.

Despite an incredible onslaught of money, resources, lawyers and political pressure, the basic judgement against Microsoft stood: They are guilty of monopolistic practices. Plain and simple. Nothing has changed that. The Microsoft business plan of centralizing all services onto the Windows platform is easily understandable. They are a business operating in a capitalist system which rewards predatory and proprietary behavior. If all roads lead through Microsoft in the computer world, then Microsoft gets to extract its ounce of flesh from all of us and reap great profits. Great work if you can get it.

This business plan works wonderfully for Microsoft in terms of profit and longevity, but does it really serve the public? No. It isn't meant to. No matter what spin it is given.

What is good for the public? Certainly, having more than one operating system in general use is a must. Thank goodness a lot of web servers run UNIX/Apache or the whole internet would be brought down in a regular basis every time a new Microsoft email virus makes its rounds. This happens with increasing regularity. One monopolistic operating system becomes a very inviting target for plain idiots as well as true cyber terrorists.

One monopolistic operating system doesn't really foster innovation as well. If Microsoft only controlled the operating system arena, one could argue that innovation could

flourish. However, Microsoft wants you to use their word processor, web browser, email client (I'm using Outlook Express at this moment), spread sheet, database, et al. Where is there room for third party developers to flourish? How does one compete especially given the programming "hooks" that Microsoft has written into their operating system solely for the benefit of its own applications?

I work on the Internet. I build web sites and teach the same at Cabrillo College in Aptos, California. Although I haven't been in the computer business for that long, I have been happy that the Internet is an open environment that works for all computing platforms. HTML, the language that is used for web pages is a universal language. One should be able to view a web page using any web browser on the UNIX, Linux, Be, Solaris, Mac or Windows platform with equal success. This open environment promotes innovation. Microsoft would like to sew up the internet to only its platform. Earlier this month, the corporate Microsoft website couldn't be accessed except with the Microsoft browser and (I believe) a computer running Windows. They called it a glitch, I see it as a glimpse of the future. Nat a very cheery one.

My expectations of you at the Department of Justice are very high. I expect you to treat these convicted monopolists as the criminals that they are under U.S. law and punish them accordingly. I understand that the current agreement is even easier on Microsoft than the one that Microsoft itself proposed last year.

Microsoft would have you believe that what is good for Microsoft is good for the economy and the country. The truth is that what is good for Microsoft is good for the Microsoft bottom line and not necessarily the rest of us. I hate to say this, but the folks in Redmond Washington are laughing at the Department of Justice and the American public. They arrogantly and apparently correctly felt that could break the agreements they made in the antitrust suit in the mid 1990s with impunity. And so they have. Now, the current proposed agreement looks like candy in the eyes of a kid. The reputation of the Department of Justice is on the line as well. Is the Department of Justice to be known as an arbiter of law, a protector of the American public, a sword in the hand of justice to smite down the enemies of our nation?

Or just another minion of big business.

Well folks, in a long winded way, you have found that I strongly disapprove of the proposed Microsoft Antitrust Settlement. I see it as a travesty of justice. It looks like a sell out by my government to a business and I find that extremely disturbing.

Thank you for your time.

 Subject: Microsoft violated the Anti-Trust law: Why rewarding them!!!

It's sad to find out that people in charge to punish Microsoft are in fact helping them to be a dominant company in American schools.

Settlement terms could bite Apple in schools By Michael Kanellos Staff Writer, CNET News.com

November 20, 2001, 5:45 p.m. PT A proposed settlement agreement in a series of antitrust suits may not only give Microsoft a fairly inexpensive legal resolution, it may also help the company and its PC allies further erode Apple Computer's position in education.

Under a settlement proposal in a series of private antitrust lawsuits announced Tuesday, Microsoft agreed to donate approximately \$500 million to help bring technology to some of the nation's most disadvantaged schools. The deal will also

allow these schools to obtain a virtually unlimited supply of Microsoft software for the next five years.

Those terms, say analysts, could hurt Apple and other software providers. Historically, education has been one of Apple's primary markets. And although the company has slipped to No. 2 in kindergarten through grade 12—behind Dell—it still has a larger installed base than anyone else.

Free software, though, is hard to pass up. Apple, as well as Linux companies and other educational software developers, could find themselves out in the cold in school districts flush with new Microsoft products.

Microsoft could wind up "undercutting everyone in the education market," Gerard Klauer Mattison analyst David Bailey said. The best-case scenario for Apple would be that Microsoft increases the overall level of PCs in schools without directly harming a company like Apple, he said.

Linux specialist Red Hat Software tried to counter Microsoft's move soon after the settlement was announced. The company said it would provide its software to every U.S. school district and encouraged Microsoft to convert the software component of the deal to increased hardware donations, which costs the company little.

"While we applaud Microsoft for raising the idea of helping poorer schools as part of the penalty phase of their conviction for monopolistic practices, we do not think that the remedy should be a mechanism by which Microsoft can further extend its monopoly," Red Hat CEO Matthew Szulik said in a statement. An Apple spokeswoman declined to comment on the issue.

The potential pain for Apple comes in the unique settlement terms. Under the deal, Microsoft will grant approximately \$500 million to help underprivileged schools create self-sustaining technology programs. Of that, \$90 million will go to teacher training, while \$160 million will go to technical support. Microsoft will also match contributions from other donors.

Additionally, Microsoft will donate approximately 1 million refurbished PCs to these schools and provide them with complimentary Microsoft software. The donations would go to public elementary and secondary schools, at which 70 percent of students are eligible for federal meal assistance, or approximately 14 percent of the nation's schools, according to Microsoft. Approximately 12,500 schools, representing 7 million students and 400,000 teachers, would be eligible to participate in the program.

With these donations, Apple equipment becomes far less attractive to cash-strapped districts. Even if the grant funds are used to buy Apple equipment, a district would have to pass up opportunities for free software. In recent years, Apple has seen its share of the market decline because of price competition. Dell is now No. 1 in the education market, with 37 percent of new elementary and high school sales in the second quarter, according to IDC. Apple came in second, with 23 percent.

Familiarizing students with Microsoft technology could also make loyal customers out of today's students. Developing

familiarity, in fact, was the basis for Apple's push into education back in the 1980s. The theory was that students would stick with the technology they understood best. While there may be some truth to this, it hasn't completely panned out in the numbers. Apple's share of the PC market is below 5 percent, far below its share in education.

Microsoft CEO Steve Ballmer denied the proposed settlement was an attempt to boost the company's share of the education market. "The benefits we provide can be used for PCs or Macintoshes," he said. "It can be used for PC software or Macintosh software. Certainly, the money can be used for non-Microsoft software, so I don't view it as some big thing about market share." Microsoft also produces applications for Apple computers, pointed out IDC analyst Roger Kay.

Although the settlement terms will likely help Microsoft's position in education, more tangible benefits come from the relatively light terms. The company is effectively making a \$500 million charitable donation and giving away its own software to settle a case where the liability could have stretched into far higher figures.

The case in some ways is being settled for pennies on the dollar, according to Bob Lande, an antitrust professor with University of Baltimore School of Law.

The company will also likely get positive public relations messages out with the deal, said Gartner Dataquest analyst Michael Silver. "This gets Microsoft out of all these lawsuits in one fell swoop," Silver said. "It's a penalty, but it makes Microsoft look good and gives schools PCs, and in so doing would give Microsoft an even larger installed base than they already have."

Best Regards.

 Subject: Still accepting comments on the proposed Microsoft anti-trust case settlement?

Dear Dept. of Justice:

I subscribe to a daily email "Technology Update" from The Wall Street Journal. In today's issue, the WSJ.com editors write:

Microsoft is set to settle scores of private antitrust cases that charge the company abused its Windows software monopoly. Under the settlement,

Microsoft would provide software and computers to over 14,000 schools at an estimated cost of about \$1.1 billion.

Let me get this straight: Microsoft Corporation is tried and found guilty, in U.S. federal court, of being a monopoly that has deliberately engaged in illegal and abusive practices to achieve and maintain that monopoly status ... and then it is allowed to settle lawsuits against it by "providing software and computers" that will further entrench its monopoly status?

Has the legal world gone utterly barking mad?

I mean, although I'd like to believe otherwise, a small still voice tells me that these aren't Apple Macintosh computers, Linux-based software programs, UNIX operating systems, or even old BeBoxes that

Microsoft plans to dump ... er, "provide" ... are they?

Don't you realize that even in providing "free" software to these schools (or other entities), Microsoft hooks them into the upgrade cycle? That it creates an environment where people will shy away from anything that's not compatible with the Microsoft Windows operating system? Don't you realize that if an anti-trust case settlement allows Microsoft to provide "free" software to schools, you are effectively shutting out the company's competitors? How can any other software maker—for example, Apple Computer—even *hope* to compete in, say, a school district, if Microsoft has already strategically placed "free" Intel-based computers running "free" Windows software throughout it? If you let this happen, you are *furthering* Microsoft in its monopoly, not hindering it. *Please* do something meaningful to penalize Microsoft for its predatory behavior and to allow other companies to compete with it on a more even playing field.

Astonished, incredulous, & appalled at my government's leniency toward this monopoly,

Cliff Crouch

Subject: Microsoft anti trust agreement

I would like to voice my disappointment with the anti-trust remedy being discussed by the DOJ. I feel this remedy falls well short of having any significant impact on Microsoft's predatory business practices.

I believe the only solution is one often discussed in public forums. That is separating Microsoft into two separate companies with one developing system software and nothing else. Any remedy short of bisecting the company is simply window dressing. The US tax payer will be paying for another anti-trust law suit within a short period of time.

Subject: Microsoft is getting off easy.

I have just seen an article on a web site that describes a "Grassroots effort against Microsoft settlement". This is a movement that I am proud to join.

As an avid Macintosh user and supporter, I have been profoundly against anything that has the Microsoft name attached to it—especially software. As it stands Microsoft has been a monopoly since the introduction of Windows 95. Ever since, I and other fellow Mac Users, have been subject to the same pressures and attitudes that is equally seen with racism. Using such a powerful term is the only way to describe what I have endured for my entire life as a Macintosh User.

I personally feel that when the anti-trust case was brought out into the open, it was going to be a step in the right direction for fairness within the computing industry. As it currently stands, I have been let down AGAIN. I felt that with the backing of the Department of Justice behind this suit, things would grow for Computing. Right now I see this situation as another fat cat getting off with a slap on the wrist, getting a stern lecture, where the cat is faking sincerity and has its fingers crossed.

Today we have to stand up to this "giant" and say that everyone deserves equal time and representation. This giant has its grip on just about everything available and this is fundamentally wrong. Please include my name in support in the effort to bring down this bully of the Technological Age.

From: Wallace Karraker
To: Microsoft ATR
Date: 11/21/01 3:40am
Subject: Microsoft offers \$1B to schools—
How is this a punishment?

I must comment on an AP Newswire story this evening (Excite.com) that "More than 12,500 of the poorest schools in the nation would receive \$1 billion in computers, software, training and cash in an unusual deal offered to settle most of Microsoft Corp.'s private antitrust lawsuits." How does this punish Microsoft? Can you please explain to me how the current software and hardware vendors of these schools will be compensated for the loss of income from this arrangement? Won't this effect the local businesses that depend on school districts for their income, as well? This effectively eliminates competition for those school districts and allows Microsoft to become the only provider of services. Doesn't this constitute a "MONOPOLY"? The article mentioned that the company currently has a \$32B cash reserve, so implementing a \$1B levy over five years would hardly be a punishment.

Please reconsider this arrangement. This is not a punishment for Microsoft, nor is it a bargain for the school districts it supposedly assists. The initial investment of hardware or software is typically a small part of overall operational cost. Providing the schools with a solution crafted from Microsoft will lock these school districts into software that is well known for its expense of maintenance and overall difficulty of usage. If the schools are as poor as indicated, anyone trained as an MCSE or above will use it as a ticket out of that system, leaving behind a complex, expensive system that will require expensive support after Microsoft has paid "their dues to society".

This is a red carpet treatment for Microsoft to displace Apple computers small lead in the education community. Apple maintains a narrow margin in the education market through innovation, understanding what their customers want, solid and reliable computers, considerable value for the money invested and remarkable ease of use. By reducing income over five years made on server, hardware and software sales by this free "gift" from Microsoft, any company would likely be in pretty serious trouble at the end. Will Apple survive a shelling like this, possibly, but will the DOJ be able to reverse a decision of this magnitude, within a timely manner, if the company is wiped out?

The current antitrust litigation on the Microsoft lawsuit has been proceeding since 1998. In that time the company has released Microsoft Windows 98SE, Windows Millenium, Windows 2000 and now Windows XP, each progressive operating system has incorporated the best of third party software from the version before. No other company can compete with Microsoft on a feature by feature basis within their own operating system. Microsoft controls all aspects off the computer market, and have been aggressively pushing their technology

into other markets that will provide even more income and inherent power over all of our lives. My suggestion is to have Microsoft provide monetary donations only. With the added cash infusion, poor schools can provide what they need to make their system work based upon what they need, not what is offered. If they decide to purchase Microsoft products, let them purchase it with Microsoft money, but at no different pricing than any other school system would be asked to pay. If a school has another operating system (Apple, Unix, or Linux), the administrators would not feel compelled to dump their existing systems in favor of a Microsoft only solution.

Sincerely,
Wallace Karraker

Subject: Grassroots effort against Microsoft settlement growing

To whom it may concern,

I am shocked by the recent news regarding the Microsoft settlement. Instead of punishing Microsoft for their monopoly strategy you are giving them a green light to basically kick Apple Computer out of the education market by donating an astronomical amount of money in Microsoft products to this industry, thus giving Microsoft a go ahead to continue to do business as usual. I'm sorry but this goes beyond my comprehension. You are playing Microsoft's cards by making them an offer like this.

To my humble opinion they should be punished not by putting more of their product into the market, especially such a sensitive market like education, but by giving them a punishment that1s appropriate. If you want Microsoft to donate zillions of dollars, let them do that to a neutral institution like food for 3rd world countries or something in that order.

What impression do you give Microsoft (and others like them) here? If you monopolize the market by unfair means of business we will reward you by allowing you to do more business and even kill some competition on the way?! By putting more Microsoft products out there you are giving companies like Apple Computer absolutely no chance what so ever to sell their product in the education industry, hence they start to monopolize that industry as well.

A concerned Dutch citizen.

Subject: Microsoft Antitrust Case
 To Whom It May Concern:

I am writing you because I am extremely concerned about the current state of the settlement concerning the Federal Governments case against Microsofts antitrust practices. I feel that harsher penalties should take place. Take as an example, the recent offering by Microsoft as a settlement for the private antitrust cases brought against them. Not only do I believe this offer allows them to continue their monopoly since they will be imposing more of the software, operating systems, and hardware onto users, it also is quite meager since the potential value is \$1.1 billion, when they readily have \$36 in readily available capital. In this case, being a monopoly, Microsoft also controls the value of its products so again it is able to shorthand those involved in the settlement. I understand that this does not directly relate to your case, but it is deeply troubling that a company that is supposed to be punished, in the end will probably come out the winner again. I am not a rogue citizen that has a vendetta against Microsoft. Rather, I am an experienced system administrator that utilizes Microsoft products on a daily basis. In a university setting we are forced into pricing schemes and meager product offerings from Microsoft since our students are not capable of using other offerings since they consistently use proprietary technology and also force developers and manufacturers into sole platform support scenarios. Microsoft continues to test its corporate boundaries by attempting to force users into using their products. A recent example would be that their hotmail service which

once supported email clients for other platforms, no longer supports those clients because of its .netPassport strategy. They also continue to alter known standards into their own proprietary technology.

Please continue your efforts to halt the illegal business practices of

Microsoft.

Re: Microsoft's Great Web Offensive
 "The paradigm shift"—in which corporate customers would move an ever-increasing volume of business functions to the Web—"was going to happen with or without Microsoft," "That's why they jumped in."

Microsoft, the great follower, with tens of billions of monopoly rent dollars available to create paradigm shifts simply waits 5 years after someone ELSE blazes a trail, then flits along the well-cut path just in time to sabotage the pioneer and steal the ripe fruit of his labor.

In short, .Net is a good idea. But can it be done?—As much as we like to pick on big companies, it's the big companies that have the resources, wherewithal, and clout to make something of this scale happen." says Burton Group's Lewis.

WRONGO. Uncle Sam drove aviation, radio, telephone, transistor, UNIX and the internet. So stop selling us your hallucinations about the private sector's competence—the public sector MUST guide the private sector or it will derail—sorry. Truth sometimes hurts. "Give me credit for inventing internet, I'll take it, ha ha ha..."

 Subject: Remedy for Microsoft Monopoly

I venture that remedy, not punishment is the key to a great outcome of the Microsoft anti-trust case. Punishing a bully only serves to inflame and enrage the bully—guaranteeing that the bully will renew his efforts to assert his dominance through, well, bullying.

There is a remedy—elegant in its simplicity, meaningful in its effect—and it would test whether Microsoft's ongoing claim that its aggressive business tactics are

merely reflections of their desire to innovate for the benefit of their customer, is genuine. Let's start with a little comparison to another technological industry, telecommunications.

There are hundreds of different telephones on the market today, offering an array of clever technological features. Your phone can announce who is calling, take messages when you are away, and provide you with a tool to control the lighting in your home, or perform a host of other little tricks. And even if I have a high-tech, feature laden phone made last year by Panasonic, it's no problem for me if you have a plain vanilla phone made in 1920—we can still talk to each other. We can communicate with each other without the slightest hitch, because once phones are plugged into the network, they speak a single, common language. All the glorious features of the handset, or the wonderful advantages of call waiting and caller ID or other phone company technologies which we've come to take for granted do nothing to change the information carried on those thin copper wires from my house to yours. Perhaps call is translated into a digital signal somewhere along it's route, then reconstituted as an analog message just before arriving at its destination. I don't need to worry about that, nor does the person at the other end of the line. We can trust that no matter what kind of phone we use, we can communicate. And with the breakup of AT&T, and increased competition between telephone carriers, it has remained relatively inexpensive to own and use a phone.

Now in the software industry, there is a different paradigm, and one that Microsoft has exploited to its advantage for years. Let's say you buy into the Microsoft value system, and purchase a computer that uses one of the various flavors of Windows. And suppose you purchase a copy of Microsoft Office with its suite of applications. Now you can communicate flawlessly and readily with anyone else who has bought into Microsoft. You can write a document in Microsoft Word and send it to your Microsoft buddies and they will have little problem opening that document and viewing on their computer. Let's say, however, that you have some friends who use Linux, or MacOS, or some other operating system. And let's say they didn't buy a copy of Microsoft Office. Now when you send that same file to them, there is a problem—how do they read what you've written? There is a cottage industry, providing solutions for translating files between operating systems and word processing programs, but the real burden, both in terms of cost and effort, falls on the shoulders of the person who receives the document. If that's how the phone system worked, it would fail miserably. If I needed a phone just like yours so I could talk to you, I would of course be compelled to either have a bunch of phones—one for everyone I needed to talk with—or I could buy a phone from a dominant monopolist who controlled the largest share of the market. Microsoft's goal appears to be to dominate the software/computing/communication/entertainment industries, compelling all of us to buy something from them just to be able to take part in community life. Their argument that their products are dominant because they are

more innovative or easier to use or simply better than the competition's products is hollow. Their products are dominant because Microsoft has cleverly eliminated the competition.

Under the existing paradigm, Microsoft has an easy time squashing competition. Because they can use their control of the operating system to make it just a little easier to use their programs, and just difficult enough to use competitive programs, corporations will do the dirty work of building Microsoft's monopoly for them. Information Technology departments insist on a single, standard suite of programs for corporate use because it makes it easier for them to do their work. Most often they chose Microsoft, because Microsoft controls the whole computing/networking/information environment—everything is just a little easier to use. And each new corporate installation takes Microsoft a step closer to killing all its competitors, once and for all. And since mom or dad uses Microsoft Windows and Office at work, the home computer needs to have—big surprise—Microsoft Windows and Office. The franchise just keeps growing and competition keeps disappearing.

So to the remedy. If Microsoft were compelled to give out a complete specification for all the document formats for all their programs, and agree to maintain an open, standard version of that specification so that every software company that wanted to could write a program that would open, edit and write documents in the same format, there would be a meaningful and real opportunity for competition in the software industry. If every program created documents with an identical structure, it would be just like the telephone. I could choose software that made it easier to compose a letter, or software with a more intuitive interface. I could buy a plain vanilla program that just allowed me to type words on a page, and you could open it with your high-end, Microsoft word processor, with all its bells and whistles. Of course there might be a need for more than one file format. Spreadsheets, databases, presentation programs, etc. would need different specifications—but they could still be standardized. Layout programs with fancy designs already have a well established, open specification in the Portable Document Format (PDF) created by Adobe. (Although, even that format could stand a bit more "openness," too.)

What would be the ramifications of such a remedy? For starters, Microsoft would be forced to live up to it's public relations campaign that it merely does what it does out of it's desire to innovate for customer benefit. No longer could the gang in Redmond compel whole corporations to buy thousands of licenses for it's programs (so that the corporate IT Manager can be assured that everyone in the company can communicate with each other). Innovation and quality interface design would become the currency of the software industry. Competition will thrive, and consumers will benefit through lower prices for software, and greater ease of communication.

I appreciate your consideration.

Mark

Subject: Microsoft SHOULD NOT be allowed to set its own monopoly-extending remedy

How is it possible that a declared monopolist is allowed to set their own remedy. Especially since this remedy is extending their monopoly and even squeezing out some main competitors for that market namely Apple. They should not be allowed to make donations of software to anyone. Firstly because it extends their monopoly and secondly because the retail value of their software is far greater than what they would actually have to dole out. Let's not let them get away with murder here.

Subject: Comments on Microsoft Case

I've been watching the anti-trust case against Microsoft with much interest over the past three years. Like the court judgment, I agree that Microsoft is a monopoly which has abused its position in the market. Unfortunately, the current settlement proposal between the Department of Justice and Microsoft is worrisome. I recognize the fact that the task of finding a suitable penalty for Microsoft is a difficult task, but the current proposal appears too weak to bring any noticeable change in the market. If this settlement is implemented in it's current form, Microsoft will only continue to get stronger. Past cases against Microsoft where it has either won (Apple v. Microsoft regarding GUI designs), come away with a light penalty (previous settlements between Microsoft and the DoJ), or even lost (Sun v. Microsoft regarding Java), it gives Microsoft a sense of invincibility that it can take whatever action it likes without fear of severe punishment.

Microsoft claims that any action against it will harm innovation in the industry, but when has Microsoft ever really been a pioneer in the computing field? It did not invent the operating system (the core of what became MS-DOS was bought), the Graphical User Interface (first developed at Xerox PARC and later popularized by the Apple Macintosh), the World Wide Web (CERN) or the web browser (the first mainstream browser was Mosaic, developed by programmers at the NCSA, and whose code was licensed to Microsoft as the foundation of Microsoft Internet Explorer), or just about any other major computer technology. Instead, Microsoft sits like the spider in the center of the web, waiting for the next major technology to appear and then moves in to dominate it using its position to its advantage and whatever means at its disposal to succeed.

The case of Microsoft bundling Internet Explorer to take the dominant position in

Web browsers has been well documented in the court case, but it is not the only instance of Microsoft using the bundle tactic to gain the upper hand. About a decade ago, the office productivity software market was incredibly diverse. Today, about the only product left is Microsoft Office. Once, programs like Lotus 123 and WordPerfect were the top products, not Excel or Word. On the Macintosh, Microsoft held the high ground with Excel, but Word was rivaled by competitors such as WordPerfect, MacWrite, WriteNow, FullWrite, and others. My choice was MacWrite, having turned away from Word after getting tired of it's bloated nature. Then Microsoft began Microsoft Office, where the only way to obtain a program like Excel was to buy the complete bundle. Since Office came with a word processor, Word, it became harder for businesses to justify the expense of staying with their existing word processor, spreadsheet, or presentation program when one already came with Office. The net result was Microsoft took over the market segment in the matter of a few years. Competing products were discontinued as Microsoft drove them out of business. Now, choice is limited and Microsoft touts it's victory as standardization. But did we get the best product or merely a bloated, buggy, piece of software that cheated in the marketplace to win the top position?

The dominant position with Office also gives it an additional club to use against any competing operating system. It could be argued that the inability of operating systems such as IBM's OS/2, NeXT's NextStep, or Be's BeOS, or Linux to gain market share in the desktop operating system market was that Microsoft Office was not available. The Macintosh continues to survive in the desktop marketplace because Microsoft markets (and makes a large amount of profit from) MS Office for the Mac. The price of this support is that Microsoft's web browser, Internet Explorer, is the default browser on all new Macintosh computers. This has become the Microsoft way: use one advantage to gain another.

Sadly, whatever action is taken against Microsoft, the damage it has done to the market has already happened. Between its monopolies of the Windows operating system and the Microsoft Office productivity package, the odds of any competitor taking market share from Microsoft is very slim. But what can be done is to show Microsoft that its actions are wrong and to prevent it from using predatory tactics to gain market leadership instead of innovation like every other company in the business. This means a STRONG punishment that Microsoft will not forget. Judge Jackson's remedy of breaking up Microsoft was proposed for this reason. It needs a penalty that will get its attention, not one that it will ignore in a matter of months. It will not do much for the damage Microsoft has done already, but it gives a glimmer of hope to future competitors who will take on the giant. The people want choice, not Microsoft taking it away. In no other market sector do we lack choice as badly as in ones where Microsoft dominates. Something must be done, otherwise we face stagnation.

Subject: Microsoft Settlement is Anti-Republican, Anti-Business 11/21/01

Dear Friends at the Department of Justice: I am a former paralegal and law librarian. I am a long-time and relatively happy Windows user (with past experience in FORTRAN, COBOL, DOS, and Mac's Apple OS, and some familiarity with Linux). I am also a current America Online user, with past experience using Earthlink and MSN. So I have some informed perspective on the proposed antitrust settlement with Microsoft. From the numerous press account summaries of the proposed DOJ settlement with Microsoft that I have read, I am convinced that the settlement will not end Microsoft's anti-competitive conduct. The settlement is anti-Republican and anti-business, surprising coming from a conservative Republican administration. Indeed, it appears like a re-run of the failed 1995 antitrust settlement brokered by the Clinton administration.

The settlement (and, by inference, the DOJ) is an object of ridicule in many online computer forums and magazines, even among Windows users. You are being portrayed as patsies for Microsoft. It is said that the DOJ has been directed by the Bush administration to end the suit because Microsoft is a big political money donor. Your settlement with Microsoft is viewed by computer-literate businesses and commentators as a capitulation. I thought that Republican administrations favored increasing competition in various industries and increasing the numbers of small businesses. Microsoft's conduct throughout its history has been exactly the opposite, and I predict that if this settlement is implemented in its current form, new antitrust suits will arise in the future, necessitating DOJ intervention again. Among many other defects in the settlement, Microsoft appears free to continue its pattern of adopting and bundling imitations of 3rd party products, and then crushing 3rd party suppliers.

I am especially disturbed that you will allow Microsoft to "lock-in" the United States with its new and very anti-competitive and privacy-invasive "product activation" policies for Windows XP, restrictive licensing policies for businesses, attempts to force businesses to upgrade every two years, etc., etc. I thought a Republican administration wanted to help businesses! By leaving MS Windows as the default monopoly operating system in the United States, you are giving unfair advantages to an operating system that even its users and defenders admit is full of security holes, buggy, unstable, priced beyond its actual worth, and marketed from a monopolistic posture. (Bear in mind, I'm a relatively sophisticated computer user, and I spend a lot of time running diagnostics on my Windows system.)

Ironically, the rest of the world has already figured this out: in Europe, adoption of Linux

is growing rapidly. The mayor of Mexico City recently announced that his city government and their public school system will adopt Linux, because Microsoft's high costs and restrictive licensing policies place Windows beyond their reach. The Chinese government refused to adopt Windows as its preferred operating system, and has chosen Linux, partially due to cost considerations, and partially due to fears that Microsoft will deliberately plant security holes in systems marketed to the Peoples Republic to assist the US military intelligence-gathering. A Chinese corporation in Hong Kong recently gave an interview to the press in which they said that they were abandoning their Windows servers and desktop computers in favor of Linux after a recent virus epidemic put half of their Windows servers out of business. A story from Kenya says that one of their primary computer development people is urging customers to adopt Linux—he says that Windows' costs will place it permanently beyond the reach of most African countries. Many U.S. corporations have begun adopting Linux for their servers and desktops, including Amazon.com. You notice that the U.S. Defense Department isn't using the Windows Office Suite? They're using StarOffice, which can be used with Windows or Linux.

So, you'll say, what's the problem, if people don't like Windows, they can switch to Linux. But even though Linux and other competing systems are available in the U.S., they face formidable obstacles to adoption in this country because of the "most favored nation" position Microsoft has been allowed to seize. The current antitrust settlement will allow MS Windows to retain its unfair monopoly advantages in the U.S., making the adoption of competing systems like Linux far more difficult than they would be if the antitrust laws were enforced upon Microsoft.

Just for starters, Windows comes pre-installed in virtually every PC—to get a Linux computer or a dual boot computer with Windows and Linux, you must either special order it, or buy a Windows computer (priced accordingly!), uninstall Windows, and then install Linux yourself, or install a dual boot of both systems, a lengthy process that is not always safe for your computer, and a process that is very complicated for average computer users.

Why should the rest of the world have more freedom of choice with regard to their preferred computer operating systems than the U.S.? This is ridiculous. We're the richest country in the world, and we should have the greatest choice in computer operating systems, but we've allowed one company to flout our antitrust laws, circumvent weak settlement agreements, and become a monopoly.

Please, do not continue pursuing this settlement agreement. I hope that the nine states holding out against it continue to do so.

In conclusion, I am seriously considering switching to Linux. My current Windows Millennium system performs reasonably well (if I continuously monitor it for DLL problems, download patches, and fuss over it)—but I am not upgrading to a Windows XP system with invasive privacy intrusions, and

I am very upset at the conditions that Microsoft is going to impose on businesses, including forced upgrades every two years, licensing of every desktop copy, etc., etc.

But I'm a relatively sophisticated user—what about the average consumer, trapped on Windows because the DOJ has, over the last decade, let Microsoft engineer its products and market them, so that it is very difficult to switch to other operating systems?

Can you imagine a situation in which the DOJ would give such advantages one variety of car? Allowing one car manufacturer to gain complete ascendancy over the U.S. market? Every car sold would be say, a DaimlerChrysler, and if you wanted another type of car, you would have to buy a kit, and laboriously remove parts of the car and its engine to install the car parts of your choice? No way.

Very sincerely,
Robin Margolis

Subject: please let my voice count

I read this yesterday..... wired news (wired.com)—Microsoft confirmed Tuesday it has reached a settlement in most of the private antitrust lawsuits filed against the software giant.

Under the proposed settlement, the company will provide more than \$1 billion to over 12,500 of the nation's poorest schools over five years. The money will pay for teacher training, technical support,

refurbished computers and virtually unlimited amounts of Microsoft's most popular software, such as Windows and Office, company spokesman Matt Pilla said....

I think the money should allow the schools to buy whatever systems and software they want. They make their own decisions!!!! they give away more "winodws" and "office" software for free... that expand their market share even more????? a lot of schools use macintosh, I think at least 50% of the education market use Apple Computers. this deal no doubt hurt Microsoft's competitor—Apple Computers.

I am against this settlement. and ask for a better settlement deal!

Subject: I beleive that the proposed settlement does not create a more competitive environment.

Dear Department of Justice,
The proposed settlement with Microsoft does not protect the consumer, and it certainly does not create an environment that advances competition. Out of the many companies that were destroyed by Microsoft's anti-competitive behavior, (such as Netscape, Ashton-Tate, and Wordstar) none of them can be brought back to life. Rather, I would hope that any settlement will allow new companies to come back into the arena, and have a chance at a successful business operation. The settlement also does nothing to facilitate the growing field of open source software. Instead, MS has taken open

source standards, and attempts to reduce their interoperability with non Microsoft systems. Specific examples of this include Kerberos, and the SMB file sharing protocol.

Subject: Comments on Microsoft settlement

This proposed settlement is a sweetheart deal for Microsoft. It will do nothing to repair the damage from their past actions, and it will have no practical effect moving forward. Microsoft will maintain and even strengthen their monopoly.

It's clear why this has happened. The Bush administration is hostile to anti-trust enforcement, and Microsoft has become a major contributor to the Republican party.

The official corruption is evident in the terms of the settlement, which sound ok on their face, but contain enough loopholes that they will not actually have any effect. This allows the government to claim that they're doing something, when in fact, they are not. I strongly urge the government to reject this settlement and adopt Judge Jackson's breakup plan. While Judge Jackson may have personally screwed up, his remedy plan was the right approach. Don't let his personal failure keep us from doing the right thing.

Subject: Microsoft's offer to end lawsuits is not acceptable

The recent offer by Microsoft to give computers, software, and training to hundreds of needy schools is NOT an acceptable means to end any lawsuits. It is entirely self-serving and monopoly-feeding.

They would give computers containing Microsoft software to these schools and train individuals on how to use Microsoft software and manage Microsoft networks. This is merely intended to create future paying customers since Microsoft would NOT provide free upgrades—they would have to pay and feed the monopoly in order to maintain and improve their "generous gift". Not acceptable. It is not acceptable that any punishment or acts of contrition on Microsoft's part would serve to maintain and expand its monopoly, which is has always illegally strengthened and maintained. Nothing in any settlement can in any way enhance their monopoly status now or in the future. ANY settlement must serve instead to enhance competition and erode its monopoly.

You have caved in to money and caved in to pro-monopoly forces in the Republican Party with your giving Microsoft what IT wants in the settlement. You have made a mistake that is undefendable and can only be

corrected by actually acting properly against an inarguably illegal monopolist (there is NO question as to legality here—the courts have clearly and unambiguously determined that Microsoft has acted illegally in maintaining and growing its monopoly—no argument). You do not have to continue your mistake. Correct the situation, reject the current Microsoft offer, and put real teeth and punishment and correction into the settlement.

You really have Gates laughing now. Two courts have ruled he had abused a position of a monopoly and you are giving him a slap on the wrist. He has not been effected by other orders to change his practices, why do you think he will now. In fact he is already positioning things to go around the restrictions and they have not yet been finalized. Microsoft continues to claim the each new version of software adds features the customers ask for. But I can tell you (having 15 years experience in the business world and now in academics) they have added very little to office, since the first windows version, that even advanced users need. What they have done is incorporated features into Windows that little designers have developed and put them out of business.

And now this school 'gift' is part of the penalty, ha! Gates feels if he can get the young using his software he will have them when they are older. He should have to donate 1B worth of other developers software, to make up for past practices, help the competitors and dilute Microsoft' hold on the market.

If Gate's can out muscle IBM (OS/2), Lotus (Office suite, also IBM) and other large corporations, what chance does the consumer have of seeing creative new produces from small developers? You need to do much more!

Subject: Microsoft

Since the economy is in a downward spin anyway shoring it up by letting Microsoft get away does nothing as they are only the last in line to shore things up.

It is the corporation that buy their product that need help. The need it terms of pricing and of choices—and a great way of doing that would have been to break the monopoly up to stimulate growth in the computer sector to allow for this.

All this deal has done is to allow Microsoft to shore up defences and allow it to continue what it was doing all along.

Effects of this agreement will be seen throughout not only the tech sector during the next decade, but aerospace, national defence, banking, and all related activities—and I am very afraid it will be extremely negative.

It is too bad the current administration did not have the courage to do what was right.

I am very worried and sad at the same time.

Subject: Microsoft—Anti Trust (2nd Appendage)

Dear DOJ,

This eMail serves as an appendage of the first eMail sent 11/16/01 and second eMail sent 11/19/2001 (they are included after the following text).

I read in technology news that a aspect of a settlement with Microsoft involved the company supplying a billion dollars of Microsoft software to the dis-advantaged. I did not intend to get this involved with supplying suggestions but I feel very strongly that this type of rectification although expensive, works in Microsoft's favor. They are able to leverage this situation by extending the usage of its own software. My role is not to direct the legal situation, only to observe and maybe comment if the opportunity arises.

This current eMail is just my observation and note of dis-satisfaction.

Thank you for the opportunity to participate in such an important legal proceeding.

Sincerely,

A Concerned Citizen

(The first two emails follow...)

First Appendage

This eMail serves as an appendage of an original eMail sent 11/16/01 (which is included after the following text).

The previous message neglected to mention the browser issue. During the court proceedings under Judge Thomas Penfield Jackson, William Gates (as I have read in technology news) states he didn't know what a browser is. I take his statement to mean that there is no clear definition of a browser simply because his own software package can be found specifying the need for a browser. Further, tying in of his browser to the Windows OS is not as clear an issue as Microsoft has pressed. My experience with Windows and the accompanying browser lead me to understand that:

- 1) The browser technically has nothing to do with the OS.
- 2) The Internet has nothing to do with the OS.

3) Internet access and a browser are two separate things. To explain the above declarations in simple terms. The browser that was originally created as a method of viewing information stored and accessed from the internet was later extended to the OS as a means of maintaining consistency of appearance and usage between the OS and the internet. To simplify further, the code used for the browser and the code used for

connecting/accessing the internet are two distinct components. Competing browser products as it relates to the internet are defrauded on the basis of underlying code that uses the Windows OS (now the primary use) browser to display internet information. Again, to simplify further, it is the internet access code that is the object of tying or commingling. It is this component that should be the focus of litigation.

To clarify why I chose to de-emphasize the technical merits of the browser with the OS (Windows) is that confusion arises from Microsoft's argument about the importance/difficulties of the browser. The browser as it stands today is important to Microsoft only as it relates to the importance that made the GUI (Graphical User Interface) a successful technology. However, my PERSONAL opinion is that this is contrived to a large degree. I PERSONALLY don't like the CONVENTION (browser as it relates to the OS) which is all it offers, in MY OPINION.

Original Message

First I would like to say that this legal proceeding must be handled with great care. It is very economically important to settle a case like this so everyone comes out ahead. It is obvious at this point that your expert opinion is that conduct provisions be established to bring about a beneficial SETTLEMENT.

I am a software developer. My experience with the technology/products in question lead me to conclude that conduct provision MAY be a sensible route to a reasonable outcome. I must stress that technology is pushing forward and is requiring all software developers to use ever greater efforts to bring about products that are desirable. The comfort in the use of various technique matured during the 1980s that still serve as the building blocks for products in the year 2001. These building blocks have to advance in order to meet the needs of the current/next generation of software products. What I am specifically addressing is that Microsoft has advance EXPERIENCE in what ever technology it implements in its Windows OS. Competitors must struggle to implement new FEATURES provided in the Windows OS from the point of view of implementer. We all have to understand that Microsoft has invested money and effort to develop these new features, an intimate understanding of theory behind that technology thus exists. For those who are in competition with Microsoft to develop feature rich technologies timely exposure to privileged THEORY does not exist. Instead, while Microsoft has "the inside track" and is working on next years projects, the competition is just learning how the present features can and should be used.

All of this is said to emphasize that one critical element to this very important legal matter is that there has to be fair access to new developments within the key technology, WINDOWS. If there were a way to maintain a list of technology being implemented and detailed information on the theory behind it, everyone would be in the advantages situation of technical literacy behind "A" target technology (WINDOWS). If there is no efficient method to implement such a strategy then I must urge on this basis

alone that the company (MICROSOFT) be divided into an OS (WINDOWS) company and an Application company, two totally distinct companies, no ties. At this point, if a division was used, I would suggest no further remedy.

If a division of the company was is not selected as a remedy for the Anti-trust case and a "fair sharing of technology is used", then I would also suggest that Microsoft be restricted from bundling "value added applets". Examples range from the simple, (Notepad, a simple text editor), to the more sophisticated (Instant Messaging, Video Editing, the Windows Media Player). These applets have no place under the title Operating System. They have no baring on the OS, they should all be omitted for (I'm no legal professional) legal simplicity. If however one decided not to pursue this aspect of this legality in this fashion, I then suggest at the least, competitors be allowed prominent accessibility/exposure to the OS (WINDOWS) consumer. An prominently exposed method to "use" or "try" a competitor's product should be available. This equal accessible method might encapsulate ALL competitor products to provide a clear distinction between what is "a part of Windows" and what is offered as an alternative.

These alternatives would be included with the Windows OS with respect to competitor participation. This proposal for the Microsoft—DOJ, Anti Trust case is offered as a suggestion(s)

Sincerely,

A Concerned Citizen

Subject: Proposed Settlement

I can not disagree with the proposed settlement with Microsoft enough. Despite the clear ruling that Microsoft is a monopoly, who has illegally used it's power to enforce it's monopoly, none of the settlement terms would affect the key components of Microsoft's monopoly. I will not go into the details here, I'm sure you are aware of what I'm talking about. Please reconsider your proposed settlement and consider positions such as California's.

Yours Truly,

Lee G. Shapiro

Subject: Comments on the Proposed Settlement

I must write to express my dismay that the Justice Department is letting Microsoft off the hook so easily.

Let's look at it this way: I use a Macintosh, not a Windows PC. I'd like to buy a spreadsheet with macro programming capability. I have exactly one choice: Microsoft Excel. This is not a choice I want. This company is so omnipresent that it can

dominate even the computing platform it DOESN'T absolutely control. Something has to be done.

I agree that Microsoft probably can't be broken up at this time; Windows is almost as much a part of our national infrastructure as the power grid. But it needs to be much more strictly controlled. Something needs to be done about the categories it dominates, such as spreadsheets and word processing. The logical solution, it seems to me, is to treat it as a public utility: As with a power or a gas company, it should need advocates for consumers overseeing its pricing practices, and ALL source code for EVERYTHING should be published so that competitors can see what Microsoft is doing.

I want that non-Microsoft spreadsheet. Any solution failing to provide that clearly has not addressed Microsoft's monopoly.

Date: 11/21/01 9:15am
Subject: their performance is unacceptable
From the Macintosh (<http://www.macintosh.com/>) website, dated Tues November 21. Microsoft has admitted it was wrong when it denied earlier knowledge of an Internet Explorer security hole discovered by another firm, according to a ZDNet story: "IT security firm Online Solutions discovered the exploit on 1 November and informed Microsoft's Security Response Center with the technical details of its discovery on the same day. Microsoft acknowledged the alert along with the promise that it would investigate the issue as quickly as possible. But a lack of feedback on the investigation prompted Online Solutions to place increasing pressure on Microsoft to issue a bulletin about the IE hole. After one week of waiting, the security company went public with a press release about the exploit on 9 November—Microsoft published an alert on its Web site later that day."

This sort of behavior is unacceptable from a company that supplies software to the majority of the country. If the company seizes monopoly control of the market, it must remain responsive to threats and problems with its software. If it cannot, I am sure smaller companies would care more about pleasing its customers, and would react in a more timely fashion. Please don't throw away this monumental case. There are far too many important issues at stake to let Microsoft off with a slap on the wrist.

Regards,

David Wisniewski

Subject: The MSFT settlement is absurd

The proposed settlement with Microsoft is absurd for many reasons. Here are just a few, in our opinion:

1. Where is the PENALTY? Microsoft illegally stole/won the browser market through anti-competitive practices. What is the penalty?

2. They are still up to the same practices. Microsoft no longer supports Java, a widely accepted language supported by their arch-rival Sun. Microsoft did so under the spurious claim that Java is an extreme security risk while their alternative implementation of ActiveX (long ago rejected by the free market) is even more so (remember, this comes on the heels of a lost court battle over MSFT's attempts to co-opt and bastardize the Java language in violation of their licensing agreement). Now, all but the most tech-savvy users, a small minority, will have the knowledge or time/effort to add Java support to their machines. In fact, Microsoft products are such large security risks that the Gartner Group recently recommended that Microsoft IIS users immediately migrate away from that platform. Likewise, MSFT is leveraging their monopoly to force the market over to subscription-based services under the banner of .Net. .Net was not something the market requested. Users did not ask for mandatory leasing of their software and operating systems. Most users upgrade when they believe the newer software gives them an advantage; MSFT has realized that word processors etc. can't get any more feature-bloated and that upgrades won't drive their bottom line. They wish to milk the cash cow forever by forcing their captive audience into a subscription-based model. Microsoft is forcing this upon them by virtue of its monopoly position; most other users have no other choice but to give in to this extortion.

MSFT is also leveraging their monopoly to disingenuously convince its users that they must subscribe to Passport/Hailstorm. This requires users to divulge personally identifying and sensitive information which will be stored on MSFT's "secure" server in order to take advantage of the OS features.

Want some more? MSFT, for no apparent technical reason, decided to do away with the standard plug-in feature of browsers in IE 6. This instantaneously removed Apple QuickTime and Real Media players from the IE browser unless the savvy user knew what workarounds were required.

3. Their newly announced private "settlement" of antitrust cases allegedly features a penalty of "free software and computers to more than 14,000 of the poorest U.S. schools over five years". This is not a penalty, it is a REWARD. This will give them an incredible amount of ammunition in finally dislodging Apple from the education

market once and for all. The settlement should be MONETARY with schools free to make their own choice about computing decisions free from the Microsoft hegemony. And if this settlement was to acknowledge unfair practices, maybe forcing MSFT to buy the school whatever Linux and Apple products they wanted instead would be even more fair.

The list goes on, but we'll end here to keep this letter relatively short.

Subject: My view on the proposed Microsoft anti-trust settlement

I find the government's recently-announced Microsoft anti-trust settlement agreement wholly unsatisfactory. I work in the technology field and am a user of both Microsoft and non-Microsoft technologies. In my role at work and my life at home, I am continually pressured to use Microsoft technologies "because they are the standard" or "because that's what everyone else uses." In many cases, I would rather use something compelling from another company, but the demands to "just fit in" are unceasing.

The courts have found Microsoft to be a monopolist. This is undisputed. Nothing but radical measures can reshape or reform the competitive landscape—or anti-competitive landscape, as I see it—that Microsoft has created.

It is true that no competitors have had the willpower to sustain a long and expensive campaign against Microsoft in our free marketplace. But it is also true that everyone just expects Microsoft to win, market after market, dominating each new field they enter. This single company owns the majority of desktop computer systems on the planet with their software, and turned that into dominance of the desktop applications market. They own the Web browser, and are working to make the Internet their own by tying new services to their proprietary Web technologies. They are moving into the hardware realm with input devices (mice, keyboards, etc.) and have worked aggressively to build media properties (MSNBC, MSN). They want to own the handheld computer space, and are doing so based on their already-built monopoly on desktop computers. They seek to own the game console market. They are fighting tooth and nail to push out competition in the server rooms and data centers of the world, and are again doing it by leveraging their position in desktop computing.

Each step is based on their overwhelming control of another market. This is not simply a company trying to stay profitable for its shareholders. This is a company working against the public good of a free and open market. This is a company that has built legal

defenses and deep pockets that sustain it in money-losing endeavors in new markets, until they can push competitors into niche spots. Their competitors cannot fairly respond to these attacks because Microsoft builds upon its past and attacks from all angles at once.

I also find it disturbing that Microsoft offers its products to large organizations at such discounted prices that there's very little chance that a competitor could get its foot in the door with a rival product. There's simply little way an independent developer can hope to outprice Microsoft, whose products can go for much less than a quarter of the retail price when bought on contract. While this saves money, it freezes out other kinds of solutions from different companies.

Do not mistake me: Microsoft builds products that are compelling to consumers and can often stand on their own merits. They are successful at what they do. My point is that they are too successful, and in too many areas, precisely because the technology arena allows them to tie all of their products together so that customers have nowhere to go but Microsoft. I shudder to think that even my government buckles to this pressure, and will not produce a legal remedy which will actually do something to address the systemic problems that Microsoft presents to all of us.

Subject: Microsoft's proposed settlement

Dear Sir,

I am writing to express my dismay at the proposed settlement of the Microsoft antitrust case. I think that many of us believe that Microsoft basically got off virtually free in the federal case, but my comments here are more directed to Microsoft's proposed support the schools tactic to mollify the remaining states.

While on the surface, it appears that Microsoft is being magnanimous in offering \$500 million in cash and an equal amount in software to be distributed over five years to more than 12,000 public schools nationwide, it would seem to this reader that the nature of the settlement only solidifies Microsoft's antitrust stance. If this were in fact a truly strings-free offer of support to the schools I would applaud it vigorously. However, in order to be such an offer, it should contain nothing at all proprietary to Microsoft. This includes the software component, the training component, and most of all the fact that two out of the five members of the new foundation's board would be Microsoft employees. All of these components of the settlement would appear to solidify Microsoft's dominant and dictatorial position in the world computer business. The proposed settlement should be completely vendor neutral—both by providing the schools with the freedom to secure software, hardware and training from any vendor they so choose and by preventing Microsoft from

having any presence or influence on the board of the proposed foundation which will have the responsibility of approving or denying school applications for aid.

I would further be cautious about allowing Microsoft to reap double tax benefits—first by taking a charge against earnings in the amount of the settlement and secondly by further deducting the amount of the settlement as a contribution to a charitable and/or educational foundation.

I would hope that the proposed settlement in its present form is not accepted by the states and countries still considering a real solution to the antitrust case that appears to be being swept under the rug by the Justice Department.

Sincerely,

Stan Diamond

Subject: Your Microsoft Settlement Is A Disservice To America

Dear Friends,

Clearly, the ultimate outcome of the Micro\$oft settlement will be no net change in anything. This "punishment" is so light as to almost constitute a reward for their egregious behavior. In the unlikely event that Micro\$oft even complies with the consent agreement (and they have of ignoring and stonewalling prior court orders), it will do nothing substantive to end their behavior or to spur competition.

What is particularly outrageous is the fact that the latest version of Windows, and the emerging Micro\$oft strategy—and here I'm particularly thinking of their .NET strategy—contain mechanisms that will only create an even broader monopoly, putting a death-grip on the whole computing world. Your office's settlement offer does nothing to remedy the matter. I urge you to do what's right and truly put an end to Micro\$oft's lawlessness.

Subject: Settlement is anti-competitive itself

Hello,

The proposed settlement that requires Microsoft to donate software to schools will further erode competition. Microsoft for years gave away software, initially, just to reap the benefits of upgrade prices and pricing down the road.

By making Microsoft donate software to schools, you eliminate competition for those software manufacturers who'd have to sell software to those schools. Microsoft should set up computer trust funds (of sort) for those schools and let the schools decide how to spend the money. But not only schools, nonprofits too. A general fund for nonprofits, that they'd have to apply for, but at least have access to. Microsoft shouldn't be made to

donate their products to schools, Microsoft should donate funds for computer purchases and let the schools decide how to spend their computer dollars. This allow for hardware and software competition in the schools' decision making processes.

Sincerely,
Paul Gorski

Subject: Microsoft
DOJ,

I am shocked at the total lack of thought that went into this settlement- or maybe the Bush administration is further securing its role as corporate thug-thereby securing more millions for the next election.

Regardless, Microsoft has escaped justice again. They will parlay this into more abuses which hurt our economy and stifle competition. They are not innovators they are thieves. Its only legal 'cause they are getting away with it.

I don't believe Microsoft should be broken up creating more monsters. I believe that a substantial portion of Microsoft's assets should be seized and a sizable portion of Microsoft's future income should be earmarked for a multi-billion dollar pool of money to re-finance businesses that Microsoft has put out of business, help restore the lives of those devastated by their anti-competitive practices and restore the competitive balance in the computer industry. Microsoft uses these practices across almost every related industry. Gates, Balmer, etc. should be left with money but they should be required to work and maintain profitability in order to fund the pool of money under threat of criminal charges against them for racketeering. This case is only the weakest of the allegations against them. That is the appropriate remedy-make them finance the competition they have sought to squash.

While certainly my business is adversely affected by Microsoft (lack of OS security, dirty tricks with their servers, email viruses, on and on)-I would not be claiming any of this pool so it is not self interest that I suggest this solution.

And now, I hear that they are again attempting to escape private class action suits against them by further artificially securing market sector in education. They are laughing at you-again.

Subject: Microsoft Anti-trust suite

I am concerned with the current settlement agreement with Microsoft. It appears that there is no "bite" in this agreement and that business will be as usual with MS. I do not believe that those negotiating this deal are aware of the anti-competitive practices that this company has engaged in and will continue to engage in unless they are stopped. There are many published books on the subject that I would suggest that you read, several come to mind "The Microsoft File", "Barbarians lead by Bill Gates", "World War 3.0 : Microsoft and Its Enemies", "U.S. v. Microsoft: The Inside Story of the Landmark Case" and "Pride Before the Fall: The Trials of Bill Gates and the End of the Microsoft Era" all of which detail the anti-competitive nature of this company. Unless they are stopped from "innovating" which based on the context in which Bill Gates uses this word must mean "steal" or "rip-off" they will continue to kill true "innovation". Of particular concern is the \$1 billion investment in our nations poorest districts.

Although I have not been able to find any specifics on this deal I do know that it involves hardware and software. My question is do the users get a choice of Mac, PC, Linux, Sun box for the hardware or is it strictly MS and Windows machines?? This is important because if it is limited to Windows platforms it only re-enforces the Monopoly they already hold on the industry.

To: Microsoft ATR
Date: 11/21/01 9:51am
Subject: Proposed Microsoft settlement

I wish to speak out in opposition to the proposed settlement of the Microsoft anti-trust suit.

My reasons for this opposition are many, but the primary objections are in that the proposal is so vague and open to interpretation as to insure nothing more than continued legal proceedings as Microsoft continues to leverage it's monopolistic market share in ways that shatter the very foundations upon which any and all competitive markets must sit. The market share held by Microsoft is so extreme that

Microsoft felt it was reasonable to not only consider the blocking of all browsers except it's own product, Internet Explorer, to msn.com they (Microsoft) actually did block access until public outcry became loud enough to make them reconsider. While this action by Microsoft in and of itself may not serve to warn us of the level of this danger, I would like to bring to your attention that a local radio station here in Seattle, Wa. (KVI 570 am <http://www.kvi.com/>) has now blocked all access to it's website to all browsers except Microsoft's Internet Explorer. Should you attempt to visit this site with other than Internet Explorer, you are presented this page <http://kvi.com/NetscapeUser.asp?Site=KVI.com>.

Such actions are contrary to the very foundation of the Internet "The power of the Web is in its universality. Access by everyone regardless of disability is an essential aspect."—Tim Berners-Lee, W3C Director and inventor of the World WideWeb. While it is understood that Mr. Berners probably had in mind physical disabilities when he made this statement, I have little doubt that he never dreamed that a browser would become so powerful as to block all others to "information".

Nothing in the W3C standards supports the single browser concept as a "standard". Indeed, any site that blocks all but IE is also blocking the editor/browser of the W3C, Amaya <http://www.w3.org/Amaya/>. W3C has a page addressing accessibility <http://www.w3.org/WAI/eval/> and it states "2. Use a graphical user interface (GUI) browser (such as Internet Explorer, Netscape Navigator, or Opera) and examine the selection of pages while adjusting the browser settings as follows....."

Your honor, I respectfully submit to you that when a company's product's have become so pervasive in the market that Radio Stations will abandon W3C standards for the internet and block access to their sites to anyone that isn't using a specific browser, then the threat to the public interest represented by that company is almost beyond comprehension. I now see that Microsoft is offering as a "settlement" to other law suits a proposal that only serves to expand it's sphere of influence even further. I urgently request that you reject the proposed settlement in the case before you and examine remedies and punishments that will truly serve the public's interest and not submit to the persuasions of fear.

The American market place is very strong and can easily overcome any temporary setback more extreme measures may extract from Microsoft at this time; however, if this monopoly is allowed to continue it's unbridled growth it, like all other cancers, will one day be so demanding that it will kill the very host on which it feeds.

Sincerely,
Elbert Lee Allen

 Subject: Microsoft Settlement

Dear DOJ Staff,

The proposed settlement in which I have included a short clip below: "Under a settlement proposal in a series of private antitrust lawsuits announced Tuesday, Microsoft agreed to donate approximately \$500 million to help bring technology to some of the nation's most disadvantaged schools. The deal will also allow these schools to obtain a virtually unlimited supply of Microsoft software for the next five years."

How is this punishing a monopolistic company, by handing them a way to penetrate into a market they are not the strongest player in. Apple Computer is still be far the strongest player in the education market, and you are now going to make it even harder for Apple to compete as Microsoft is going to be allowed to give free Microsoft software to schools that would otherwise be buying from possible Microsoft's competitors. Microsoft should be made to give away and support competing OS's like Apple's MacOS 9 and MacOS X systems, or Intel based PCs running only Linux OS, or even Sun Solaris for Intel which is available from Sun for free. This *Punishment* for Microsoft in the end is more of a blessing for them as you are practically handing them long term victory in a market they have had a hard time penetrating to begin with.

Please reconsider supporting this currently poor excuse as a settlement, a punishment should be a painful thing, not something they can be proud of. Make them pay to support their competitors they have practically smashed out of existence instead of helping them complete the task of becoming the only Operating system maker on the planet with any clout.

Its agreements like this that we should all be ashamed of. Thank you for your time.

MTC-00001828

From: Marvin Mellem
 To: Microsoft ATR
 Date: 11/21/01 10:05am
 Subject: Microsoft Settlement.

Hi,

Don't settle! It's as simple as that. I've read article upon article stating how antitrust

cases are supposed to be 'forward looking' and yet I don't see that happening here!

Why did you guys take breaking up the company off the table? There was no pressure to do that or for you guys to NOT go after Windows XP. Sigh...here's my beef. The whole deal is about how Microsoft ties these products into their OS's and kills off competition right? Well have you looked at Windows XP yet? I don't wanna HAVE TO get a MS Passport to enjoy some features in my OS. Especially since some guy has already compromised its security. Yet Microsoft is forcing me to do so, UNFAIR! I mean they killed Netscape for crying out loud, and I've been on the internet for about six years now, yet THIS YEAR is the first time that I have had to switch from Netscape to Internet Explorer as my default browser. The only reason I did that was because more and more sites are optimising surfing for Microsoft web browsers only.

Now all that I've said till now IS valid, but here is my main problem. I'm from South Africa, and economics being how they are the USD is roughly ten times stronger than our Rand. So, say I want to go buy a copy of Windows XP Home Edition, I have to fork out just under R1 100 to buy it directly from the SUPPLIER! And as a general consumer I don't even have the necessary access to buy it from the supplier. I have to buy it from the stores who are bound to charge me more. Now if you think that is bad, listen to this. I work in the IT field, I have a good PC at home, but if I'm to be taking my IT work and studies seriously I can't do it on Windows XP HE, I need to buy myself a copy of XP Professional so that I can learn it to keep ahead of the pack in this cut throat market we have here. But you wanna know the retail price on that? Can you guess? It costs over R3 200 at the SUPPLIER once more...now you see all those figures would be okay if I earned say...R20k per month or so, but I don't. I get to walk home with roughly R3,4k/month after tax deductions...etc. Can you see me getting my hands on a copy of Windows XP Professional LEGALLY? Now I read somewhere that it was discussed as part of a settlement that Microsoft develop a 'barebones' version of its OS? Well I like that idea!!! I LOVE my third party software, there isn't much in the actual Windows OS suite that I actually use. I prefer Symantec for antivirus software as well as disk maintenance software...etc. I used to prefer WordPerfect till MS Office became the standard down here(not that it's tied into the OS thank God). I may use media player from time to time, but that can be downloaded off the internet, and I can live without it because I have another video player(shareware) that actually works better than media player. Heck I even prefer Winamp to play my songs over media player, it's too big/bulky/clunky.

I startup Windows and what do I use? Windows Explorer, the MS Dos prompt(which is gone nowadays from what I hear), rarely notepad(it sucks like wordpad does, I mean why tie in barebones word processors like that which are never used?). I don't use Scandisk anymore since I have Norton's Disk Doctor which works only 100 times better(always has). I don't need to use disk cleanup either since Symantec

Systemorks has Cleansweep which works better than disk cleanup. Heck let's just say that I don't even use any windows 'glitter'. I use the OS, install my own study/work software and that is all I do. I don't sit in MS paint or imaging or any of those Windows apps. I just use the Windows OS.

So the proposed plan to get Microsoft to make a 'barebones' OS is a good one if it will drastically reduce software prices for me. I mean think about it, there is a GLOBAL economy here. MY country is one of many working on plans to BRIDGE the digital divide between first and third world countries, and how can we do that when the Software which is the 'blood' of the digital era is so darn expensive?

Just food for thought, use it, don't use it...it's free. :-)

PS: I read about the settlement that they give funding for PC's for underprivileged schools, well my questions is if you settle with a payment strategy, then how does that answer the question of a 'forward looking' anti-trust settlement? From my understanding it wont answer any of the questions of the laws Microsoft was found guilty of breaking and in doing so it only entitles them to a fresh round of breaking more antitrust laws. <http://www.webmail.co.za> the South-African free email service

 Subject: Microsoft proposed settlement

To whom it may concern,

The recent proposal by Microsoft to give one billion in software and services to underprivileged schools is anything but punishment. While I would not argue that this is something that is badly needed, it will only help Microsoft to maintain their monopoly. Strict regulation of Microsoft is the only way to maintain healthy competition in the software industry.

 Subject: Your Settlement Spells Doom for Hi Tech

Gentlemen:

I've just read an article about how well Microsoft is doing in penetrating new markets... servers, handheld PDA's, even game computers. In servers and PDA's, they're increasing market share much more quickly than their competitors.

And it's no wonder. Microsoft has almost unlimited resources. There's really no market they can't eventually conquer with their deep pockets. In a free market, competition should be allowed to sort out the winners and the losers. And I agree with that. But in this case, it becomes a question of should the profits from the part of Microsoft that's been judged to be a monopoly (desktop operating systems) be restricted in their use in other markets?

I would think the answer is YES.

I bought a Handspring Visor PDA about a year ago. I love it. Walter Mossberg recently wrote a review for the Wall Street Journal about the latest generation of PDA's that uses Microsoft's Windows CE as the operating system. His conclusion was that the Palm/Handspring devices (which both use the Palm OS) would likely be more satisfactory to business users. And after reading his criticisms of Windows CE, I found myself feeling fortunate that I had chosen Handspring.

Well, due to the size mismatch, Handspring & Palm's days may be numbered. If PDA's that use Windows CE are priced significantly less than Palms & Handsprings, it's obvious what will happen. Most companies can't afford to "buy" market share by selling below cost or, as Microsoft did with web browsers, simply giving their product away. Microsoft can not only afford lavish marketing expenses, but can afford to sell below the margins required by their non-monopoly-subsidized competitors.

If it isn't too late, I wish you'd give this some thought in your settlement negotiations with Microsoft. If your proposed settlement is approved by the court, five years from now Palm and Handspring will likely be fringe companies, much the way Novell (remember Netware) is today. I'll be using Windows CE, not by choice, but because the other companies ran out of profits to fund R&D, and then got left behind. And I'll be cursing you because you let this inevitability occur.

Make Microsoft compete fairly in the new markets it covets. Don't let them use their ill-gotten monopoly profits to pave under the rest of the high tech sector.

Hi,

I am very disappointed with the Feds settlement.

Microsoft has been getting away with activities like this for years. From stealing the operating system from the Macintosh to pulling the rug out from under developers that were developing applications for OS/2, to taking control of the internet with their browser. With money brings power and they have much to much power. They wiped out Netscape by offering their browser for free and putting it on every PC that was sold

Subject: The Settlement

To Whom It Concerns,

I just wanted to drop you a note expressing my dissatisfaction with the Microsoft

settlement. The trial demonstrated that Microsoft participated in unfair, anti-competitive behavior and that it harmed consumers and the industry. The whole point of the trial was to determine whether Microsoft had caused harm, and if so to prevent them from repeating their actions and to attempt to correct some of the problems they created. The settlement is very weak and does not go far enough. Microsoft caused many companies to go out of business by bundling and by forcing computer manufacturers not to include competing products. This greatly harmed the software industry and caused many companies to go out of business. The original decision would have caused the company to be split up so that it could not so easily repeat its anti-competitive behavior. This at least would have paved the way to creating a more competitive software market. Instead of striving to correct the problems in the industry created by Microsoft, the current settlement is nothing except the lightest of slaps on the wrist for Microsoft. It does not attempt to rectify anything, and it barely punishes Microsoft for its long history of abuses. If the Department of Justice goes through with this settlement, it is just an invitation for Microsoft to continue its behavior and for other dominant companies to do the same. The Government is suppose to strive to protect the consumers and the settlement does nothing towards this goal.

Sincerely,

Paul Richardson

Subject: Microsoft Settlement

To Whom it May Concern,

I am personally DUMBFOUNDED that the Dept. of Justice has agreed to a settlement in

the Microsoft anti-trust proceedings that essentially ENCOURAGES Microsoft to further extend it's dominance in the desktop operating system/applications software market.

The currently proposed settlement, which would require Microsoft to donate \$500 million to disadvantaged schools, leaves the door wide open for the company to extend it's dominance into one of the few markets where actual competition stills exists: the Education market. In what way does this portion of the proposed settlement punish Microsoft for their anti-competitive practices? By further eroding the slim market share held by their only real competitor in the desktop operating system/applications market, namely, Apple Computer?

It is my personal opinion as an IT professional that the entire settlement is extremely weak in it's scope, and is little more than a slap on the wrist to the continually arrogant and aggressive management of the Microsoft Corporation. However, I find the portion that requires the donation to the Education market particularly offensive and short-sighted. I think the DOJ should rethink this whole thing, and do the right thing for everyone involved. In my opinion, that would be the breakup of the Microsoft Corporation into 2 separate companies, one that produces the Windows Operating System, and one that produces Application software (Microsoft Office, Internet Explorer, etc.). Anything less is damaging to both the consumer and businesses that compete with Microsoft in selling computer software.

Please consider these very important factors before committing to any settlement deal with Microsoft!

Subject: alternate proposal

To the US Department of Justice:

When I read about Microsoft's settlement offer, I thought of the old restaurant joke: "The food here is bad—and the portions are so small!" When it comes to software, you can't make up for qualitative flaws with volume.

I have seen Red Hat's proposal <http://biz.yahoo.com/bw/011120/202744_1.html>, but for all the reasons it makes sense, it would make even more sense to have Microsoft spend that billion dollars on Apple hardware. Wouldn't it be much more appropriate to have Microsoft buy computers that can't run their operating system? If Microsoft would buy the hardware, I'm sure Apple could be persuaded to donate software and support, though Apple computers already come bundled with the operating system and many easy-to-use applications at no extra cost. Microsoft could donate copies

of Office, the Mac version of which is very well liked.

My proposal would be much better for students than either Microsoft's or Red Hat's. For example, Apple's iBook laptops, along with their Airport technology, are a very inexpensive way to get a whole school connected wirelessly to the Internet; there is no equivalent in the Wintel world. Also, Linux is terrific, but it's never been anywhere near the #1 platform in the education market, as Apple is. I doubt Red Hat would expand their offer to include porting hundreds of educational apps from the Mac platform to Linux—or retraining hundreds of teachers and administrators who are already happy with Apple computers.

I believe what I am suggesting is (a) fair to all parties, (b) more appropriate than what Microsoft is offering, and (c) much more beneficial to the cause of educating American students. I hope you will agree.

Respectfully yours,
—Andrew G. Lee

Dear Sir,

The proposed settlement by Microsoft to supply schools with computers and software does nothing but further entrench their monopoly. In fact, it leverages their share into one of the last markets where there is still real choice; education.

Instead of letting Microsoft dump their software into the nations schools, I suggest having Microsoft pay that same amount in cash, perhaps for a "technology" earmarked fund, and let the schools choose what they want to do with it. If they choose Microsoft, more power to them. If they continue to use Macs, that's fine too. At least they will have a choice, and they won't have the monopoly hoisted onto them under the false pretense of a "gift."

Since Microsoft's Applications and Operating Systems groups are at the root of much of the antitrust controversy, my suggestion is simply this: Require Microsoft's Applications Group to release and support versions of their popular software applications (i.e. Office, Visio, Internet Explorer, etc.) for the three main competing Unix platforms: Solaris, FreeBSD and Linux.

This solution would truly spur competition by encouraging other software vendors to also support these competing operating systems. Because of Microsoft's dominance, they're only motivated to support their own Windows and to some extent, the MacIntosh operating systems.

Subject: Microsoft Settlement.

This is exactly what I want to say about the proposed settlement with Microsoft.

Sean Wagner
Dear DoJ,

A recent disturbing fact has been brought to my attention regarding the case against Microsoft. I quote from CNet.com: "Under a settlement proposal in a series of private antitrust lawsuits announced Tuesday, Microsoft agreed to donate approximately \$500 million to help bring technology to some of the nation's most disadvantaged schools. The deal will also allow these schools to obtain a virtually unlimited supply of Microsoft software for the next five years.

Those terms, say analysts, could hurt Apple and other software providers. Historically, education has been one of Apple's primary markets. And although the company has slipped to No. 2 in kindergarten through grade 12—behind Dell—it still has a larger installed base than anyone else. Free software, though, is hard to pass up. Apple, as well as Linux companies and other educational software developers, could find themselves out in the cold in school districts flush with new Microsoft products. "

Here's an idea. Make Microsoft buy \$500 million worth of Apple iMacs to put in those schools. This way the children can learn a great new Unix variant in the Mac OS X and the professors wont have to stop teaching to troubleshoot Windows.

Best,

Subject: Microsoft Settlement

You have absolutely got to be kidding! I guess this is why no one trusts government to do anything right. This whole anti-trust thing has been about Microsoft dominating the marketplace through bully tactics and product giveaways and you think that forcing them to spend a billion dollars to put their product into more locations is a PENALTY?

Do you think the public is foolish enough to believe this is a penalty? Apparently the Department of Justice is. Over the years, they

have given away product for free at a substantial cost knowing that everything they give away will need to be upgraded and that the user will be locked in to the Microsoft Upgrade Revenue Bonanza.

If you want to penalize them, why not have them put 1 BILLION DOLLARS worth of Macintosh computers. They would still benefit in sales of applications, but at least not the operating system too. If not that, at least some semblance of a real penalty.

John Blakley

From: Allen Wicks
To: Microsoft ATR
Date: 11/21/01 11:17am
Subject: OPPOSED to Proposed Microsoft Settlement

Microsoft's business model has been and still is abusively anti competitive and anti innovative (despite what their PR hyperbole claims). The cost to consumers and to industry wide innovation has been immense. Even today after losing all the way to the Supreme Court, MS continues its business model largely unabated. The proposed settlement "penalties" are easily thwarted by MS, creating essentially no penalties at all; so, why should MS—or any other large firm—cease violating anti-trust laws? So far the MS model is a textbook example of the financial success of such unethical and even illegal business practices. Please consider this my request that the very weak Proposed Microsoft Settlement NOT BE ENACTED. MS has been found guilty and has lost all appeals. They made a joke of their earlier (1994) settlement. Now it is time for them to be STRONGLY PENALIZED:

[1] Their anti competitive behavior must be prohibited, and permanently, not just for five years. Any firm with such immense resources can and will make a mockery of any weak 5 year restrictions, simply by spending a few tens of millions slipping and sliding around the legal system.

[2] Very large fines must be imposed, sufficient to make Gates et. al. sufficiently aware of the consequences of the firm's illicit behavior that they are stimulated to want to change that behavior.

[3] Anti competitive business dealings (e.g. it has been and still is virtually impossible to buy any personal computer, even an Apple Macintosh, that does not default to Microsoft's browser whether the buyer wants it or not!) must be clearly and unequivocally prohibited.

[4] Perhaps most important, a permanent "Microsoft Litigants' Defense Fund" should be created from fines levied against Microsoft. Such a fund (with zero influence or participation by MS allowed) should make litigation funding and legal support available to firms who feel that they have been harmed by MS's failure to comply either with anti-trust law or with the (hopefully very harsh) terms of the 2001 penalties when they are promulgated. Use of such funds would be on condition that wins against MS include some sort of financial return back to the fund; legal support would be free to any law firm suing MS, and MS would be specifically prohibited from legal action or discovery proceedings against the fund.

[5] Movement of Microsoft's abusively anti competitive and anti innovative business model into emerging markets MUST be prohibited, and in a manner that is readily enforced. The internet and the "convergence" market spaces in particular (but not limited to) need be kept accessible to small innovators and not locked up by the likes of Microsoft. Much has been expressed that MS is a market leader and that penalizing them penalizes an already weak tech sector. What MS really is is an industry bully; penalizing such business behavior will in a very short time period overall stimulate the tech sector as innovators can again start innovating unfettered by fear of what type of response may come from the industry bully.

Thank you.

Date: 11/21/01 11:15am
Subject: Bad settlement

It seems to me that the remedy (requiring Microsoft to furnish underserved schools with PC hardware and software) actually helps Microsoft. Similar to the monopoly Microsoft already enjoys with its operating system defacto installed on new computers, Microsoft's "gift" to underserved students not only is good PR for the company, but a way to corral in a whole new generation of users and consumers. While providing better than no computers at all, giving these kids a Microsoft desktop will brainwash the kids into believing Microsoft is the only choice. Instead, Microsoft should be required to provide technical grants to the schools so that they can choose the software and hardware they want, be it Linux, Apple, Microsoft, etc. Letting Microsoft "donate" their software ensures that they will reap the rewards from future upgrades. This is no punishment at all for their anticompetitive policies. Contrary to their PR, Microsoft does not make efficient, lean, and troublefree products which can withstand free competition. They run the industry and force us to use their software by swallowing and/or pillaging the competition.

The saddest part of the whole judgment is that the big kahuna Windows XP is a huge step in further consolidating their monopoly, and the past issues have already become moot. Microsoft, as usual, sidesteps its legal troubles by reaching their tentacles further and more omniverously into PC users' lives. The company needs to be broken up if the government wants to ensure its citizens of freedom of choice and true innovation that only real competition can offer. Microsoft's strategy of using their deep pockets (thanks to an unbridled monopoly) to lobby on its behalf has obviously worked. Not only will users be stuck with Windows operating system, an office suite, and a browser, but all content delivery will be channeled through

their proprietary formats (windows media files for music and video), and through their financial payment network. Our whole computing experience will be filtered through Microsoft.

Subject: MS Monopoly

Dear Sirs,

I would just like to express my concern toward any resolution or settlement that would further a monopoly for Microsoft products.

It would appear that the current proposed settlement would cause Microsoft to have to "donate" Hardware, Software, and services to under privileged school systems.

I believe that is should be obvious that this would introduce more young minds to Windows thus furthering Microsoft's control, and ultimately leading to more users of their OS. I think it would be more of a punishment for them to provide another brand of OS, Hardware, Software and Services. If you allow them to extend their control will the result not be a stronger monopoly? If you have kept current with Microsoft's current practices then you will understand that they are already setting in motion a licensing scheme that locks you into their products for years, while trying to setup a "single sign on" system (.NET) that would provide them with everyone's information.

As you can discern from this message I am very much against them providing more MS software. I feel that RedHat's suggestion is viable, let MS Provide everything EXCEPT the OS, and help create a competitive product that will enable consumers to have a truly viable option. The exact OS to provide would not necessarily be RedHat's Linux, but considering their offer would be a very good idea. I also feel that it would be in everyone's best interest to force Microsoft to remove any hint of a penalty, either in their licensing or reseller/OEM agreements, to Computer hardware providers who opt to preinstall any OS other than Microsoft's.

Thank You,
Howard Coles Jr.

From: Leonard Dudzinski
To: microsoftcomments@doj.ca.gov
@inetgw.attorney.gener...
Date: 11/21/01 11:32 am
Subject: A proposal to stop Microsoft

To the States Attorneys General,

I want to begin by thanking you for your courage and judgment in continuing to prosecute Microsoft for is antitrust abuses even as other states and the Federal government have proposed a settlement with Microsoft that, in my opinion, does nothing to stop a very dangerous monopoly. To make matters worse, the settlement that I am hearing about today to allow Microsoft to give free software to poor school districts actually increases Microsofts monopoly power by increasing Microsofts user base,

training a new generation of Microsoft-only users, and disadvantaging Microsofts competitors in the education market!

I have been pondering the Microsoft case currently being tried by the US Department of Justice and your states Attorneys General, and thinking about what solution I would favor. I have an idea for how the DOJ could deal with Microsoft that I have not heard discussed as one of the options, and I am grateful that your State Department of Justice has opened this forum to share ideas on the case. I strongly believe that the ruling is correct that Microsoft's monopoly was gained illegally and hurts consumers. Microsoft has clearly demonstrated the willingness to wield its monopoly power to benefit itself at the expense of others. Microsoft's monopoly power must be ended. I also strongly believe that, especially during these these times of war, it is not in the state or federal governments best interest to be reliant on one computing platform for its function and national security. Recent events have demonstrated that one computing platform can be devastated by hackers or viruses, while others are immune. My proposed remedy is this: rule that your government must support multiple computer platforms, operating systems, and software suites in the interest of government security and in support of the free market.

While the Judicial Branch does not have the power to dictate the market in a free market economy, it does have the power to affect how the government responds to it. A DOJ ruling that the government must foster competition in the computer marketplace where possible, would be fair, effective, and within its powers. To that end, and in the interest of government security, an executive order could be issued that the government will support multiple computer platforms, operating systems, and productivity software suites, and no single computer platform, operating system, or suite of software will hold greater than a 50% market share within the government (The government market share percentage could be debated). This ruling would create an immediate demand for Microsoft's competition within the states and federal government, and with all those who deal computationally with these governments, which, I would think, is a large part of the computer market as a whole. Thus, this ruling would have the effect of destroying Microsoft's power to monopolize the market while preserving the company and its products. This ruling would have the additional effect of driving the computer industry towards standards to improve interoperability between platforms, operating systems, and standard software suites, which benefits all consumers. Microsoft would then be forced to play fair with its competitors products and standards.

I welcome comments on the idea.

Respectfully,

Leonard A. Dudzinski

Subject: Microsoft Settlement

I'd like to comment on the recent settlement between the DOJ and Microsoft.

I have worked in the software and computer industry since 1989, including several startup firms that have partnered with Microsoft. I have followed the anti-trust cases against Microsoft since the mid-90s and I own a few shares of Microsoft stock.

I am shocked at the settlement the DOJ has reached with Microsoft. By any legal standard it is a weak settlement. I will not go into the details of why this settlement is so weak—that has already been done ad nauseum. The DOJ attempted to create a face-saving settlement that looks tough and is actually quite benign. What has taken place is an abuse of the rule of law. The settlement is worthy of criticism because it blatantly condones political corruption.

Before writing this letter, I researched the political campaign contributions made by Microsoft to the major Parties. It appears to me and no doubt other Americans that Microsoft entered a quid pro quo arrangement with the major Parties—one in which Microsoft drastically increases their campaign contributions and in return the anti-trust suit will go away. Here are Microsoft's donations to the Republican and Democrat Parties since 1992:

1992 \$ 51,483
1994 \$ 103,702
1996 \$ 237,484
1998 \$ 1,357,746
2000 \$ 4,356,376
2002 \$ 837,385

Source: Center for Responsive Politics—
OpenSecrets.org <http://www.opensecrets.org/industries/contrib.asp?Ind=C5120&Cycle=2002>
Microsoft's donations significantly increased as their legal troubles increased, reaching over \$4 million in the 2000 election. Now that the lawsuit is "settled", donations for the 2002 general election are drastically reduced, and yet still a large sum. That surge of money in 1998 and 2000 and the resulting settlement represent political corruption in the highest offices of this government. Microsoft bought this DOJ settlement.

It is reported in the news services today that Microsoft is offering to pay all court and litigation costs to the remaining States, if in return these States would drop their case against Microsoft. This eye-brow raising offer illustrates two things—one, Microsoft isn't subtle when doing political corruption, and secondly, it offers a glimpse at the un-ethical environment they have participated with the major parties in recent years. Would any law abiding American driver, pulled over by a law abiding Police officer, offer to pay the officer's time in court if he in return would not write up a ticket? This is the very definition of attempted bribery. Microsoft's offer to the States is no less the same. Maybe they should donate lots of money to the State level Republican and Democratic Party—they

have already done that. Here is a thorough report detailing the corruption between Microsoft and officials at all levels of the government: <http://www.commoncause.org/publications/microsoft/microsoftstudy.pdf>
The Democrats, the Republicans, and the Justice Department failed to uphold the rule of law and have set the most blatant precedent that bribery is acceptable practice. Indeed—I anticipate if Microsoft doesn't pony up "protection money" in future election campaigns—they will find themselves in legal trouble again. Case in point—for the 2002 elections, Microsoft is the highest donor to the major Parties in the software industry.

I hope the remaining States and the European Commission have more integrity than the Democrats and Republicans who make up the "Department of Justice". America needs people who not only preach but also practice the rule of law.

Subject: Microsoft Ruling

To whom it may concern,

As one who has endured the business practices of Microsoft for many years, I want to voice my displeasure with the so-called penalty imposed on Microsoft.

This company was targeted for investigation for its ruthless monopolistic methods. They relegated vast numbers of competitors to the bankruptcy ashbin, while intimidating all those who did not comply with their wishes into submission.

Here we are. After all the efforts to impose justice on Microsoft, they are now rewarded with a guaranteed market share that competitors for those markets will not have access to—thanks to the Justice Department. In essence, DOJ has agreed that Windows is only one operating system, and others need not be considered. So what was the point?

Punitive damages should have taken the form of 5 billion dollars cash, distributed equally indexed on surviving companies inability to do business in the WinTel world, as seed money for development of more software to directly compete with Microsoft, and even to develop for other platforms, such as Macintosh, Linux, etc.

Thumbs down. As a law abiding American—I have been let down by DOJ
Regards

Henry Zeller

Subject: Microsoft settlement

I cannot overstate my disgust at the U.S. Justice Department's proposed settlement of the Microsoft antitrust case. I echo the words of numerous industry analysts: This isn't a remedy, it's a reward.

I wonder what would happen if some mafia boss made the same proposal to Mr. Ashcroft. Would he agree, saying, "Gosh, Mr. Gotti, you mean to all those people you

murdered, but if you promise not to do it any more, you can keep all the money you stole”? Remember, Microsoft agreed to change its ways before in a consent decree, and simply ignored it when it was no longer convenient for them.

Simply put, Microsoft is in the position to dictate U.S. policy today, and it got that way by breaking the law. I strongly urge you to back away from this settlement. Continuing abuses and security problems at Microsoft underline the need for real reform there, not surrender by Justice.

Subject: Microsoft Settlement

Why the gov't should never have been involved in suing M\$oft, there is NO JUSTICE.

But if you believe you can make a difference in this case, read on, first Microsoft's lawyers offer is going to have Microsoft stuff UP THE KAZOO in every aspect of software, like a domino effect, it only serve's Ballmer's plan for world domination, and definitely not the underprivileged schools students. then secondly, it will be a laughter to the world, for those proposing to curve monopoly the Justice Department, are actually INCREASING MONOPOLY , and then double talk on the virtues that monopoly serves no real innovation practices but only commonality and sideroads from real standards or benefit consumers for look at the price of Office suite, where Microsoft makes all their money.

Thus Microsoft's solution of DONATING software, their "so-called product", in settlement serves NO JUSTICE. It only creates more evil in lopsiding the only sector that promises sustained growthAre you blind to this ? However, Red Hat's solution has NOTHING to do with RedHat, for Linux is Linux is Linux not RedHat's and it is source and binary free just like FreeBSD is free, and you can download it for free, upgrades are free , you are only paying for a CD and jewel case when you buy it from a store for a 1/10 the cost of the Microsoft OS software. And further more, those that learn to do system administration in any kind of UNIX know more about the network and system administration than those that are MCSE certified. Both Linux and BSD (FreeBSD, NetBSD, OpenBSD) are FREE OF CHARGE and thus of "branding". It is perfect for students to learn in, and there are world processing applications as well as presentation applications and spreadsheets application totally free of charge that are suited for either the Linux or the BSD environment. One application in point, MacOSX Sever 10.x which is not free, as you very well know, gives you an Apache Web Server application and Tomcat JavaServerPage application, they are not part of the price of the Mac software, you just get them for free, for MacOSX is a professional GUI on top of a Free software foundation

which is UNIX, namely Darwin, a variant of FreeBSD.

I am all in favour of ending the suit, make Microsoft contribute to american schools with HARDWARE, that which is not theirs, for the Intel-Microsoft bully alliance and MONOPOLY that everyone knows it exists, should be shaken up for their prices to be more competitive AND their products to be better than just mediocre at best.

Thank you,
A concerned citizen of the World.

Paper: Private Microsoft Suits Near Settlement

By Matt Carolan
Microsoft is close to settling numerous private antitrust suits against it, and public schools may benefit.
Citing academics and attorneys close to the discussions, The Wall Street Journal's online edition reported Tuesday that Microsoft was putting the finishing touches Monday evening on an agreement for the company to provide software and computers to more than 14,000 of the poorest schools in the U.S. over a five-year period.

Estimated at a cost of approximately \$1.1 billion, this payment would satisfy "most of its pending private class-action lawsuits" the Journal said.

The agreement would have to be approved by U.S. District Judge J. Frederick Motz in Baltimore, who is overseeing the myriad class-action suits from around the nation that have been consolidated in his court.

The Journal reported that the unusual proposal came from one of the lead plaintiffs' lawyers in the case, Michael Hausfeld, who concluded that the estimated 65 million members of the plaintiff class would receive as little as \$10 in a settlement or court victory. After administrative costs and attorney fees even that small amount would disappear.

The settlement would provide, among other things, training for students and teachers in popular Microsoft software, reconditioned hardware, and education in repair of computers and networks.

Under the terms of the deal, Hausfeld and his fellow attorneys would receive their fees from a separate payment by Microsoft to be determined by the judge.

The Journal's online story noted that one of the side effects of the settlement would be to solidify Microsoft's hold on the student computer market, which plaintiff's lawyers shrugged off as an inescapable fact of the marketplace.

But THIS would be JUSTICE BETTER SERVED, please don't continue to monopolize the American People and the People of this WORLD....PLEASE MS/DOJ—RED HAT OFFERS OPEN-SOURCE OPTION ON SETTLEMENT Posted November 20, 2001 04:12 Pacific Time NEW YORK—Red Hat jumped into the Microsoft class-action suits settlement fray Tuesday, offering to provide open-source software to every school district in the United States free of charge.

Red Hat encouraged Microsoft to redirect the money it plans to spend on its own software—estimated at more than US\$500 million—into purchasing additional hardware. Microsoft said earlier Tuesday that

it had agreed to settle the 100-plus class action suits accusing it of using its desktop operating system software monopoly to charge users inflated prices. Under terms of the deal, Microsoft would supply computers and its own software to thousands of the U.S.'s poorest schools For the full story:

Subject: Comment on Microsoft Anti-trust resolution

To whom it may concern:
This comment is with regard to the recent reports I have read regarding Microsoft's offer to donate Microsoft technology to school systems as part of an overcharging for products settlement. As such it is indirectly related to the larger anti-trust settlement currently in progress, but I think serves to illustrate how Microsoft tends to turn penalties to its advantage.

My understanding is that Microsoft is offering to donate up to 1 billion dollars worth of Microsoft technology products to underprivileged schools as penalty in a case where it previously overcharged schools for Microsoft products. I see many problems with this settlement:

1. It is a "first hit is free" policy that entrenches Microsoft products within schools, and makes it harder for schools to move away from Microsoft and future support fees when there may be better alternatives.

2. I assume the value of the penalty is calculated on "Manufacturer's Suggested Retail Price" (MSRP) for the products, rather than what it actually costs Microsoft. I am sure you realize that it costs pennies to produce a Windows CD-ROM that is sold for hundreds. Certainly, there was a lot of research and development to produce that CD, but once that's recouped, the rest is

profit. The penalty should be calculated in terms of costs to Microsoft, rather than MSRP.

3. It penalizes other manufacturers who are in competition for the education market. This includes not only companies such as Apple in the hardware and software sector, but also the Linux and Unix derived operating systems which are starting to make inroads into schools as low-cost server platforms for such things as internal web site creation and mail services.

4. If this plan goes through, the government is in effect sanctioning a monopoly power to dump products into a market in which it is competing. The effect will be to drive out competition and make the monopoly stronger, with very little cost to the monopolist.

These are what I think are the most troubling aspects of the offer. I could go on.

I'll summarize by saying that I think the offer by Microsoft is a cynical attempt to further its monopoly in the operating systems field, and drive out nascent competition (Linux) in the education field in particular. Frankly, I think it is an affront to the intelligence of the Department of Justice and the courts if it thinks neither can see through such an obvious ploy. In my opinion, the correct penalty would be to take the dollar value Microsoft has offered to disperse in Microsoft products, and have them disperse it in cash to the same schools it is offering to "help". The schools can then use the money as they best see fit: Buy Microsoft software, buy competing technology, upgrade hardware or even spend the money to improve infrastructure unrelated to technology. In this way Microsoft is penalized in a manner that is fair to it (since it has suggested the dollar amount,) the schools are helped, and Microsoft competitors are not penalized.

Thank you for considering these comments.

Subject: Microsoft needs to be punished!

To whom it may concern,

Please don't settle with Microsoft. They need to be punished and what I have read so far is that has not happened yet! There should be a huge fine and I'm not talking millions I'm talking BILLIONS!!! Put them down for the count not just for the round.

What the DOJ has done is given them a pinch on the hand and told Microsoft to go ahead and do it all over again and we promise not to bother you anymore. What kind of punishment is this? Why don't they throw some of the executive team in prison. I thought that's what you do with criminals isn't it? Please be more aggressive with this case than the DOJ and don't let them get away with what they have done and continue to do.

Sincerely,
John Horvatic

Subject: Settlement proposal...Please use extreme caution...

As a consumer who is interested in the best economic choice in hardware and software, I ask you to use extreme caution and diligence in accepting the latest settlement proposal. I admit that I do not have all the facts in front of me, so forgive me if my assumptions are incorrect. My understanding is that Microsoft, should the proposed settlement be accepted, would provide \$1Billion worth of technology resources to schools in under privileged districts. While I fully support the use of the money to benefit schools in under privileged communities, I have a significant concern about the long term implications and offer, instead, the following proposal:

Proposal

Before I detail my concerns, I would like to suggest a proposal: The department of justice fines Microsoft for the same amount proposed (in cash and equivalent software costs), and uses the money collected to send grants to the same schools that would benefit from the settlement proposal. The schools then choose what hardware and software to buy, in a free market transaction. Schools will benefit from improved technology, the economy would benefit from a \$1Billion revenue infusion, and the consumer would benefit from free and equitable purchasing decisions.

Reasoning

You will probably hear these arguments, but I wanted you to hear them from a consumer whose only interest is in a free and competitive marketplace. Yes, I am a Macintosh user, but not a fanatic. I use them because they are competitively priced and well designed, and because their presence in the marketplace gives at least a little reason for Microsoft to be concerned in the consumer and education market spaces. As most Macintosh users, I am also a Windows user. I want the freedom to use the best available tool (best from an economic standpoint).

I will keep it short, but have two key concerns. If Microsoft retains significant decision rights or influence over what software and hardware solutions are distributed, they will do so to their own advantage. This means that they will have strong incentives to install Windows based hardware and software solutions, which will result in the following:

1. Microsoft will gain unfair install base in a market that is still a Macintosh stronghold
2. This settlement will give Microsoft brand strength that will materially benefit the corporation and its shareholders.

These two concerns, from an economic standpoint, result in the same outcome. Microsoft, as a result of the settlement, will enjoy future cash flows and, thus, value as a result of this proposal. The proposal is therefore, not punitive, but is actually a good business investment. Here's why. Computer hardware and software are, by design, a sticky business with high switching costs. Once you have invested in a platform, whether Windows, Apple or Unix, it

becomes very costly to switch. Hardware and software compatibility problems, as well as long learning curves, make it costly to change from one platform to another. By donating their software to schools, Microsoft gets a jump step into a market that is still a stronghold for Apple. This will have two effects. First, assuming that some of these donated products supplant those of a competitor, Microsoft gets their products placed in place of a competitor. Since their products have zero marginal cost, Microsoft stands to lose substantially less than the \$1Billion dollars noted in recent articles. Second, vendors of Windows compatible hardware will gain install base and market share in the educational space. Should this share become significant, tipping effects will cause future purchasing decisions to favor Windows-based products by a significant margin. As a result, one of the few remaining competitive markets in the PC industry becomes a monopoly market. Microsoft will also stand to benefit in terms of brand strength. They could enjoy significant goodwill resulting from what seems more like a 'fair deal' than a punishment, and their products are in the hands of potential future consumers. A year from now, no one in those schools will remember the law suit, but they will be looking at the Windows logo on their computer screens every day.

From the standpoint of the shareholder, this is not a punishment, this is a marketing investment: a one time cash outflow that will potentially create a stream of future inflows. It benefits Microsoft materially, and hurts its competitors. Isn't this exactly what this lawsuit was intended to correct?

Subject: Microsoft settlement is no good

Dear Sirs,

I am writing you today to express my dissatisfaction with the settlement arrangement that the DOJ has struck with Microsoft. The DOJ Seems to have received a short memory along with a new Attorney General and new President, otherwise is would remember that MS has violated the intent of those agreements it has made with the DOJ in the past. MS has also lied to the DOJ, the Courts and the Public before and when caught never even bothered to apologize for doing so. As a computer professional I have some recommendations for what would be an appropriate solution for dealing with MS in a manner that will dissuade MS from behaving in the same manner again.

1. Open source all their Operating Systems but only the OS's, allow them to maintain ownership and collect licensing fees as long as it does not violate the next section.
2. Forfeit all MS patents and copyrights to technologies that MS either, bought after driving the pervious owner of those

technologies out of competitiveness or that MS developed based on another companies technology but that been has changed enough of so that MS can win an intellectual property court fight(activeX).

3. Forbid Direct bundling of other software with MS operating systems, the default install of an OS must not contain software other then core system resources, other software such as web browsers, DV editing , Digital picture interface and email can be on the same CD but may not be part of the default install.

These solutions will prevent MS from further their exploiting their monopoly, punish MS for past transgressions against others, and promote new and innovative solutions, software that can be written with compatibility to a level that only other MS applications have been in the past, in my opinion. All this would result in more and better solutions for consumers in an environment where companies can be truly competitive.

Subject: Comments on U.S. v. Microsoft

Proposed Final Judgment
November 21, 2001

To the United States Department of Justice:
I thank you for the opportunity to comment on the U.S. v. Microsoft Proposed Final Judgment. I am motivated to write because I am angry about the Proposed Final Judgment. I believe the court should reject the judgment because it is weak, fraught with loopholes for Microsoft to exploit, and is solely forward-looking. That being said, I believe the court should use the terms of the judgment as part of an interim remedy as it seeks to impose a final remedy.

I speak as one who owns a small software development company and who has observed Microsoft and the software industry for over 20 years. I believe that the point to any settlement with Microsoft is both to punish Microsoft for its past misdeeds and to impose restrictions that will level the competitive playing field. I believe the Proposed Final Judgment does neither of these.

Regarding the past: Microsoft has been convicted twice of using its monopoly in desktop operating systems to achieve dominance in other areas. I believe Microsoft's wrongdoing goes far beyond what

it has been convicted of, and has greatly harmed both the software industry and consumers. I believe the best measure of the harm Microsoft has done is the \$36 billion cash it now has banked, which in a truly competitive environment would be \$0. Microsoft pockets better than 90 percent of software industry profits, and its cash reserves increase by \$1 billion each month. I believe to restore a competitive environment, any settlement should fine Microsoft \$36 billion now, plus \$1 billion per month until Microsoft is found to be in full compliance with a harsher final judgment. Microsoft has ignored consent decrees in the past, leading us to the current anticompetitive situation, and cannot be trusted to comply with any behavioral remedy. The only remedy Microsoft will respond to is judicial force, and I think that begins with the serious fines I suggest. Microsoft is capable of paying these fines with cash on hand, so it cannot possibly harm current operations. The money should be distributed to the 50 states in proportion to their 2000 population. I think of this as Microsoft's payment of punitive damages for past behavior.

Microsoft's prior convictions were based on two specific anticompetitive practices that I believe require additional and more specific remedies. First was the anticompetitive bundling of Internet Explorer with the Windows operating systems, harming Netscape Communications. Second was Microsoft's proven intent to "embrace, extend and extinguish" the Java programming language, harming Sun Microsystems. I believe the punitive damage payments do not cover the direct harm done to the competitive environment and consumers by these specific actions.

The issue with bundling Internet Explorer is essentially the question the question of "what is an operating system?" Microsoft insists that an operating system is whatever Microsoft decides it is, so it can bundle anything it wants. I think that there is little to be gained from arguing with Microsoft on this issue. Let Microsoft bundle whatever it wants in the operating system. I believe the issue to consumers is not what is in the operating system. Instead, the issue is whether the OS is supported and works correctly. I believe that Microsoft's continuing monopoly in desktop operating systems is remedied in part by requiring a lengthy period of OS support. Were there a competitive environment, the duration of OS support would be determined competitively. But Microsoft holds a monopoly, so I think the court must impose a reasonable OS support period. Doing so will prevent Microsoft churning customers by rapid OS obsolescence. I believe Microsoft must be required to support each OS revision, including all bundled software, for not less than seven years. This support must include fixing bugs and offering these fixes in maintenance releases at no cost to consumers, since Microsoft can charge what it wants for the OS up front. As further consumer protection, Microsoft must be required not to bundle enhancements with its operating system bug fixes. And to ensure the Internet Explorer OS component "works

correctly", it must be required to fully support any W3C Internet standard it implements. That support can be monitored through conformance tests by the W3C itself, at Microsoft's expense, and Microsoft must be required to withhold any OS release when Internet Explorer does not fully conform with W3C standards. Note that this does not prevent Microsoft from innovating.

Regarding the direct harm Microsoft did to Netscape Communications: I don't think you can redress this because Netscape has since been bought by AOL and portions spun off. All I think you can do is make sure Microsoft cannot use its Internet Explorer browser monopoly to impose its own standards on the Internet, and I think the requirement to conform to W3C standards does that.

As for the harm done to Sun Microsystems and the Java language, Microsoft's intent was to use the control it has over an extensive developer network to cause them to write "polluted" Java applications that work only on Windows. In doing so, it violated its license agreement with Sun. Microsoft has since settled with Sun, but nothing has undone the harm Microsoft did to consumers. To remedy this, Microsoft must be required to deliver Sun's latest Java Virtual Machine as part of the Windows OS, and to distribute JVM bug fixes under the same standards as it distributes its own Windows OS bug fixes.

Regarding the future, I think the Proposed Final Judgment begins to right the wrongs of Microsoft's current business practices, but it does not go far enough to create a level competitive playing field. I would seek to eliminate loopholes in the terms of the Proposed Final Judgment, and strengthen their enforcement, and I propose three additional terms.

First, Microsoft must be forced to publish the Office file formats. Microsoft has historically changed its Office file formats on a regular basis simply to cause users to upgrade Office regularly. Publishing the Office file formats will cause Microsoft to compete based on the merits of the Office software, and not merely bank on "network effects" and users' inability to migrate their documents to competing office productivity products.

Second, Microsoft should be required to divest itself of its programming language products and to no longer compete in programming language development. Microsoft's language products are closely tied to the Windows operating systems, so divesting Microsoft of the languages business has a leveling effect on the marketplace. It will cause Microsoft to publish the Windows operating system APIs fully and fairly. It will force Microsoft to use the same language compilers as the rest of the industry, eliminating the incentive to create undocumented APIs. Also, the separate languages business will be subject to competitive forces, and may decide to offer the programming language products on other operating systems. Eliminating language products should not affect current Microsoft profitability, and proceeds of the sale should go to registered users of the affected products.

Third, Microsoft should be prevented from purchasing technologies or technology

companies for a period of five years. Microsoft claims to be an innovator, and fights fiercely for its right to innovate. Truth is, most Microsoft innovation has come from copying the products of much smaller companies and then out-marketing them, or from purchasing such companies outright and subsuming their innovations. I think that preventing the purchase of companies and technologies for five years will force Microsoft to innovate in its own right in order to maintain a competitive market position. This will enable the birth of new Microsoft competitors.

I hope you will give my comments some thought. I think they comprise a much fairer remedy for Microsoft's past predatory practices, and provide an effective constraint on future behavior. I also think they do not call for a major oversight effort and its expense, which I think is a great weakness of the Proposed Final Judgment. Finally, I believe the court must immediately impose interim conduct restrictions and monetary penalties until there is a final conclusion of this case.

Sincerely,
John Liston

Subject: Not stiff enough penalty
To Whom it May Concern,

I feel that the terms of the Microsoft agreement are not harsh enough. It might also turn out to be beneficial to the company. Currently one of their competitors has the largest share of the education market (Apple Computers) and if Microsoft is allowed to put up to a billion dollars worth of hardware, software and training then this may severely hurt Apple. These terms should be reconsidered and only allow the company to give one billion in cash for computer purchases. If the schools decided to choose a wintel based system then good for Microsoft.

As you can see if Microsoft is allowed to go ahead with the agged upon terms then they are just using their corporate muscle against another competitor. Please consider this and any other similar issue when deciding the fate of Microsoft.

Thank you
Bryan Thurnau

Subject: Comments on Microsoft Anti-Trust Action

To whom it may concern:

As someone who has used computers for over 20 years, I feel compelled to write regarding the current legal action against Microsoft.

First of all, I think some perspective is needed. The computer industry is, in many ways, an outgrowth of the scientific community. The scientific community has long operated on a particular set of standards and ethics which are designed to allow humanity's knowledge, as a body of information, to grow as quickly as possible. Discoveries are shared so that a breakthrough in one area might encourage a similar increase in knowledge in another.

Computer science once worked in the same way. Computer languages, usually developed by universities, were published openly, as were enhancements to these languages made by others. These Open Standards allowed the entire field of computer science to move forward, adding new innovations to past knowledge.

Admittedly, the industry has changed greatly. In some ways, it is a natural maturation—the field is exponentially larger than it was 30 years ago and the market as it exists today is much different, after the personal computer revolution put machines into most of the homes in America. It is only natural that companies with commercial products will guard their new innovations more carefully than in the days when computers were limited to an academic and research environment. Surely there can be no objection to this by anyone with even a rudimentary understanding of the laws of economy and business that currently exist in both the U.S. and much of the world.

However, some holdovers from the days of scientific research remain, and it is here that I take issue with Microsoft. Open Standards are still an important part of the worldwide community of computer manufacturers and software developers.

A great example of this is the World Wide Web. The WWW operates primarily on "hypertext markup language," a way of encoding text and other information for viewing on the Internet. HTML's Open Standards are overseen by a non-profit

governing body (the World Wide Web Consortium or W3C) which maintains the standard. (There are many similar examples of Open Standards—Apple Computer created what they call Firewire, a data communications standard now recognized by the IEEE—another standards body—as IEEE 1394. Sony uses it, too, and calls it iLink.)

These Open Standards still play an important role in the computing community. They are the common ground shared by all computer users and are the lifeblood of the industry. This cannot be stated too strongly—without Open Standards, the advancement of computer technology will become the sole domain of the largest companies already in the field. There is no true innovation without Open Standards.

Unfortunately, Microsoft has attempted to take advantage of the fairness and equal opportunity of the Open Standards model. They have repeatedly used Open Standards in their products and then, deviously, revised the implementation of these standards slightly, usually while they are claiming to "increase functionality" or "innovate." Due to their omnipresence in the marketplace, the bastardized Microsoft version of the standard quickly subverts the existing standard, which then allows the company to further extend their monopoly—after the buying public discovers that Microsoft competitors' products don't work properly with the new Microsoft "standard."

I will let others with more technical knowledge than me enumerate Microsoft's uses of this strategy. I am familiar with a few—the "enhancements" they made to HTML in order to strengthen the market share of Internet Explorer comes to mind immediately—but I am a writer and not a technologist.

I will say, however, that I find the company's business practices extremely distasteful and I recommend exploring the full range of penalties to them, in order that they should cease their anticompetitive practices.

Regards,
Jay Hipps

Subject: Anti-Trust Settlement

The proposed settlement between the Justice Department and Microsoft is weak, will not stop future abuses, and does not protect consumers. This settlement favors Microsoft to such a degree that it would appear that Microsoft's donations to the Republican party and the Bush presidential campaign were a quid pro quo, and this

directly affected the course of the Justice Department in settling the case. As a consumer, I find it incredible that the defendant in this case has gotten so much influence regarding the nature of the punishment. This is not justice and it's not a remedy for proven anti-trust violations.

The settlement does not address unfair advantages Microsoft has gained using illegal behavior. Companies have been destroyed, not through fair competition, but rather by Microsoft's monopoly tactics to maintain and increase their market share. For all practical purposes, there is no longer any competition in the browser market. Microsoft's competitors have been harmed and many companies completely destroyed. The proposed restrictions will not prevent further abuses. Just look at the features that Microsoft has bundled, or in some cases excluded, in its new Windows XP just released in October of 2001. It was proven in the anti-trust trial that Microsoft attempted to coerce, bully, and illegally obtain and maintain a monopoly with multimedia application technology to the detriment of Real Media, Apple Computer, and others. They include their own multimedia player and exclude other similar products from other companies. By removing support and making it difficult for consumers to add competing products that are often superior to Microsoft's bundled products, consumers have been harmed. They have removed support for Java from Windows XP which will disrupt e-commerce and Java based applications delivered over the Internet. This has harmed Sun and other companies that have invested heavily in Java based technology that Microsoft considers a threat to their monopoly. Microsoft has "modified" their version of another technology, JavaScript, the programming language for Web browsers. These changes to Microsoft's implementation of JavaScript are intended to hijack the previous JavaScript standard and make it their own. As a result, only Microsoft Web browsers will handle this new standard properly. The examples go on and on. Consumers have been and continue to be harmed. The proposed 3 member panel that will oversee Microsoft will likely be biased in favor of Microsoft, or at the very least, not fair in protecting consumers. With one member chosen by Microsoft, one chosen by the Justice Department, and the third chosen by these two members, the judgment of the panel will be questionable. With their oversight activities done in secret and their salaries paid by Microsoft, it looks like the fix was in and Microsoft won.

Subject: Microsoft/DOJ Settlement

To whom it may concern:

Greetings. I am writing to express my deep concern about the current situation regarding the Microsoft-DOJ settlement. It is my considered opinion that there is nothing

punitive about the USDOJ settlement agreement. Rather, it smacks of complacent collusion. Far from dissuading Microsoft from its predatory business tactics, this action is tantamount to handing this enormous company an opportunity to further entrench its stifling monopoly.

I urge you to carefully consider the consequences of the USDOJ settlement agreement. I would hope that the lawsuit against Microsoft be renewed with maximum resolution and vigor, and that this company be made to pay the proper penalty for its cynical, dishonest and harshly anticompetitive policies. I believe that if this action to curb Microsoft's recklessly expansionist tendencies is to have any meaning, the punishment must one commensurate with the company's sheer size and influential power. The DOJ settlement, as it stands, is not even a love tap, but an indulgent pat on the head. Please ensure that the authorities in this case have the boldness and courage to take every measure in seeking justice against a firm that I feel has tragically become a rogue beast set loose in the marketplace.

In closing, thank you for your time and consideration.

Sincerely,
Max MacDonald

Subject: Microsoft settlement

To whom it may concern,

I am shocked by the recent news regarding the Microsoft settlement. Instead of punishing Microsoft for their monopoly strategy you are giving them a green light to basically kick Apple Computer out of the education market by donating an astronomical amount of money in Microsoft products to this industry, thus giving Microsoft a go ahead to continue to do business as usual. I'm sorry but this goes beyond my comprehension. You are playing Microsoft's cards by making them an offer like this.

To my humble opinion they should be punished not by putting more of their product into the market, especially such a sensitive market like education, but by giving them a punishment that is appropriate. If you want Microsoft to donate zillions of dollars, let them do that to a neutral institution like food for 3rd world countries or something in that order.

What impression do you give Microsoft (and others like them) here? If you monopolize the market by unfair means of business we will reward you by allowing you to do more business and even kill some competition on the way?! By putting more Microsoft products out there you are giving companies like Apple Computer absolutely no chance what so ever to sell their product in the education industry, hence they start to monopolize that industry as well.

A concerned Dutch citizen.
With kind regards,
Thomas Bosboom

Subject: Disgusted at settlement

Dear Sir or Madam,

I am disgusted to read about the Microsoft Antitrust settlement. Such a settlement encourages anti-competitive practices for businesses world-wide, because the benefits can be seen to far outweigh the punishments to be. An example must be set, and action should be taken on two fronts. Microsoft must repay society for the tremendous harm it has done to industry and computer-using society to date. Secondly, action must be taken to discourage similar practices from occurring in the future.

The only real way to action this second problem requires separating Microsoft into two companies: Applications, and Software. How else can other software companies (or other operating system companies) compete on an equal basis?

On a specific note, allowing MS to supply schools with its software is probably the best marketing program it could conceive. We already know how important seeding software into school students—managers of the future—is, evidenced by the substantial computer software discounts already given to students. But why would schools bother buying competitors' software if it is now provided with free software from MS? And the cost to MS? Development costs are fixed. How much does it cost to distribute an extra N-thousand copies? Further more, when MS fund other school programs to you imagine they will teach using Word Perfect on a Macintosh? Not a chance on earth. This is no punishment, this is marketing budget well spent.

I urge you to strongly reconsider this settlement. It is not just America that has been disadvantaged and harmed by the actions of Microsoft, it is the world, and now it is likely to continue to be so.

Sincerely,
John Cook (computer programmer)

Subject: Microsoft settlement

Sir or Madam,

I am very disappointed with the USDOJ settlement agreement with Microsoft. The proposed conduct remedy is in my opinion inappropriate and inadequate. There is no punishment for the unlawful actions of this company; I feel that the settlement is merely a slap on the wrist, and there is nothing in the decision that will prevent this company to continue with their business as usual. The company has no incentive to take the new conduct restrictions any more seriously than the old ones. After all, after the 1995 consent decree in which Microsoft agreed not to tie application software to the operating system, they did just that with MS Internet Explorer.

I am now also very concerned about the settlement regarding the private suits. Microsoft is proposing to donate \$1 billion in computers, software, training, and cash to settle private antitrust suits. Again, this is a slap on the wrist for this company with cash reserves of approximately \$32 billion. At least a large part of these cash reserves is the result of illegal, anti-competitive, monopolistic actions by Microsoft. Returning only a small part of this illegally obtained money is incomprehensible to me. Also, the real cost to Microsoft of software bought by the schools is a fraction of what these schools will be charged; this will automatically reduce the total amount of Microsoft's donation.

More importantly, and very ironically, this settlement would even enhance the monopoly position of this company, by introducing more of its software into schools, an area where there has been traditionally more competition (e.g., from Apple) than in other areas. Matthew Szulik, CEO of Red Hat, stated that "We do not think that the remedy should be a mechanism by which Microsoft can further extend its monopoly;" I totally agree with this statement. I do not expect a public statement by Apple regarding this proposed settlement: Apple still needs Microsoft very much because of the importance of Office for Mac, and therefore it cannot afford to publicly criticize Microsoft.

Although it is very obvious that this deal could be beneficial for the schools involved, it inappropriately benefits Microsoft in too many ways. This deal is in no way curtailing Microsoft's power, which should be the goal of dealing with a monopolistic company. What is totally unacceptable is in the details of this agreement. Although the schools could use the donated money in any way they would want, it includes a statement that those using Microsoft-compatible computers would receive more free software than others... Obviously this is a strong incentive for schools to purchase computers with the Windows operating system with the donated money.

In my opinion, the proposed donation by Microsoft would only be acceptable if the donated money could ONLY be used to buy equipment and software that is NOT made by Microsoft (for example, PCs with Linux, or Apple computers). In addition, Microsoft should not even be allowed to donate software to these schools that received donations; donation of Microsoft software again is an incentive for the schools to purchase computers compatible with or running Microsoft Windows. These modifications and restrictions in the proposed donation by Microsoft would actually reduce the monopoly position of this company, which should be the goal of any settlement, and it would benefit companies that have suffered from the illegal practices by Microsoft. This donation should only be part of a settlement; other punishments, restrictions, and actions are still very necessary in order to prevent Microsoft from continuing to illegally abuse its monopoly position.

I hope that the nine states that are still pursuing tougher sanctions against Microsoft

do not give in as easily as the USDOJ, and will be looking for an appropriate punishment of the company that used illegal means to further improve its monopoly position. I also hope that the remaining states will include provisions to stimulate more and fair competition in the computer business.

It would be very ironic if the "punishment" for unlawfully using a monopoly position would be to allow Microsoft to further strengthen its stranglehold on the computer industry.

Subject: Microsoft Victory Ripoff

Hello,

I'm very perplexed today after reading in the business section of the San Francisco Chronicle about Microsoft's punishment being reduced to supplying free computers to poor schools. It mentions that Microsoft would supply the software free too.

Um... If it's Office XP and Windows XP, which is what is already shipping, then the present cost for the schools is moot. Microsoft's activation scheme and plan for regular "rental" charges for use of their software, which has been widely publicized by them, means in the end the poor schools will be paying Microsoft more money than Microsoft will lose by giving them free software and computers. Secondly, it locks out anyone else from trying to sell to poor schools, such as Linux and Apple. Oh, and did I mention the fact that Microsoft gets a tax write off for this? What is going on?

This kind of deal only puts more money into Microsoft's pocket and expands their market share by giving them a stronger hold on one of the few markets that still has competition—education.

Please defend our California schools from this all-devouring beast!!!

Sincerely,
Robert Biggs

Subject: Lost Faith in Justice System

To whom it may concern,
I feel compelled to write this letter to vent my frustrations regarding the Microsoft Antitrust trial/remediation. I feel that if a stricter, more punishing remedy is not laid down against MS, they will continue to break the law well into the future. I find it laughable that a company can be found guilty of breaking the law, yet, will get off with what I perceive to be punishment that in no way will alter their behavior in the future. Why waste the money on discovery of criminal behavior if in essence we are not going to do anything about it. No company in the history of the world (to this point), has used misinformation, monopoly power, false advertising, false endorsements, and coercion to get what they want as vehemently as MS. It must be curtailed somewhere, they must be forced to play fair. The time to hand down an effective, long lasting remedy is now. If this is not done, will we be doing this all over again in 5 years. I seem to recall that they were found guilty of similar charges in

the mid nineties, and that due to the weakness in the punishment, they basically were able to disregard completely the recommended practices that they had agreed to follow. Basically, left to themselves, they will continue to do whatever they want to whoever they want. As a side note, it appears that they are trying to settle their ongoing private anti-trust law suits by way of monetary/software/hardware donations to needy schools. How altruistic. Lets see, we broke the law, we will give away what for us is really quite a small amount of money, and increase our marketshare and our public perception at the same time, yup, that will certainly make us think twice about all the bad things we have done in the past. It is a joke. Please don't let the governments case against MS turn into a joke as well. It is extremely disheartening when a company becomes more powerful than the Justice system of the United States of America.

Subject: Settlement must prevent extending the monopoly

The MS settlement needs to prevent them from extending their monopoly on the OS into other areas, specifically the Internet.

Specifically, they should not be allowed to incorporate proprietary internet communication protocols into Windows, thereby putting technology onto everyone's desktop that no-one but Microsoft can interface to. The "Passport" program is a perfect example. New technologies built into Windows must have published open interface standards, so other companies can build on them. I do not believe the current agreement provides for that.

Date: 11/21/01 12:59pm
Subject: No deals

Hello,
I would like to express my outrage about the outcome of the anti-trust case against Microsoft. I believe that they need to be dealt with in a much harsher way. If the current decisions are the example of how this is to be handled they are not going to solve anything. Microsoft has thumbed its proverbial nose at the United States Department of Justice by choosing to perform

more extreme versions of its anti-trust behaviour with the release of the Windows XP operating system. They have done the same thing that they did with the Internet Explorer browser software and Windows '98, just with a much larger variety of software this time. This company needs to be stopped from doing anything like this again and they should not be allowed to decide their own fate. Their choices will cement their stronghold in the market more than they have already entrenched themselves. Please, make the right decision and do not let these injustices continue.

Thank You,
Erik Snyder

Subject: Microsoft's monopoly also hurts non-customers

One point I have yet to hear raised in the entire discourse related to this case is how Microsoft's monopoly mindset even hurts people who use none of it's products. My company has servers running on Mac OS X and straight Unix, with no MS machines or server software running anywhere. Yet, we have periodically experience huge performance drops on our servers when email viruses have surfaced that exploit well-known security holes in MS's software, as our servers will be deluged with thousands of requests for access to ports that would be vulnerable on an MS server. Even though these requests are otherwise harmless to our machines, just the processor time eaten up by rejecting them can be a drag on performance.

While Microsoft might say blame for this should all be laid on the heads of the "hackers", I feel that MS has been negligent in releasing such horribly flawed software in the first place, and doubly so in taking a very passive stance in making their customers aware of the problems and (only some of the time) methods for addressing them. If a car owner can be successfully held negligent for damages caused by a car thief because he left keys in a running car, I think clearly MS is being negligent by releasing such easily-exploitable software.

This negligence is compounded by the fact that MS's near-monopoly standing in the computer market makes it difficult for those who might prefer to move to another platform, which in turn puts less pressure on MS to actually fix the problems, or to make sure all their customers are aware of the need to fix them.

Subject: Grassroots effort against Microsoft settlement growing

Hi,

I posted the following on several forums last week as well as many Users Groups and the response has been encouraging. Please feel free to share this info among friends/colleagues if you wish. Should Microsoft receive harsher penalties?

I am very disappointed with the Feds settlement. Fortunately nine states' AG's agree with me. I have sent the following to the states' AG's dissatisfied with the terms of the USDOJ settlement agreement. "It seems to me that Microsoft has indulged in not only anti-trust violations but racketeering as well. Is this a possible avenue of approaching their abuses?"

As you can see, my position well exceeds current prosecution parameters. Even if you don't agree with my extreme position, but desire more vigorous prosecution, I urge you to write to the Attorneys General to inform them of your support. You don't have to reside in these states to write them. Write to all of them if you wish. The Attorneys General exist to provide services to their constituency. I believe that for the most part they take this responsibility very seriously. They want to get the bad guys. It is my opinion that Microsoft, Gates, Ballmer, et al, are the bad guys.

Below are the email addresses of the nine states Attorneys General dedicated to continuing with more stringent anti-trust prosecution. Included is USDOJ address to express your displeasure to the Feds. For international readers I have included a link to a USDOJ website listing other countries who are undertaking anti-trust action.

Please include your name and address. This contributes to your authenticity. They may want to send you a snail mail confirmation. Please put it in your own words.

A formulation was made years ago by various entities like newspapers, magazines, politicians, and such.

They figured that for every person who bothered to write to them represented X amount of people who didn't take the time and effort to write but shared similar opinions. X can equal anywhere from one thousand to ten thousand depending the specific circumstances of the recipient. So, as you can see, the simple act of writing can have a multiplier effect.

That's why your single contribution is so important.

If you agree that Microsoft has gotten off too lightly, I plead with you to take a few minutes, write to the Attorneys General and make your opinions known. When we're all using Microsoft Windows at least you'll be able to console yourself by knowing that you at least tried to resist Microsoft hegemony.

This is the time to strike. They believe that they have hornswoiggled a sweet deal. Their guard is down, if just a bit. This is far from over.

California: microsoftcomments@doj.ca.gov

 US Dept of Justice-Microsoft anti-trust
 comments: Microsoft.atr@usdoj.gov
 US Dept of Justice-other sites worldwide:
<http://www.usdoj.gov/atr/contact/otheratr.htm>

This is a real opportunity for those of us who want more stringent prosecution. Before, Microsoft had only to have one team of lawyers to deal with the Feds. Now, their efforts will be diluted by virtue of having to confront nine different government entities. The time to express your opinion is now. Together we can have a positive impact on the future of computing if only we take the time to express our opinions to those who hold the public trust.

 Subject: I firmly oppose the proposed settlement in the Microsoft antitrust case.

Hello:

I am extremely upset about the current state of the Microsoft anti-trust case. As a computing industry professional and business owner, my eyes and heart are very close to what happens here. I am ashamed that our government, our department of “Justice,” feels that the current settlement provides any kind of remedy. It is not a remedy. In fact, it's an insult. I'll count the ways.

For over twenty years, Microsoft has successfully pursued a policy which destroys it's competition. Companies such as Borland, Lotus, and Novell produced products which were vastly superior in terms of quality, stability, and usability. But Microsoft's wildcard is their ability to change their operating system. This is specifically used to create compatibility problems with competing products. Imagine you have a car: it's like changing the size of a bolt so your competition has to buy a new set of wrenches. The ensuing user frustration always works in Microsoft's favor, and the result is a switch to more Microsoft products. It's interesting how in recent cases (Microsoft Word), they create this compatibility problem with older versions of their own products—forcing users to pay the money to upgrade. This would not be the case if there was at least one truly viable competitor in the marketplace.

They have no accountability, and they take advantage of that. We're all familiar with the ways in which Windows needs to be rebooted frequently. Of the six computers I have at home, five are various flavors of non-Microsoft operating systems, and excluding power fluctuations and physical moving of the equipment, none have required rebooting in the past year. This is proof that a considerably higher quality metric is achievable. I really wish that I could use one of these OS's on my laptop. But because Microsoft has destroyed the competition in Word processors, I'm unable to get away from their operating system. Quality metrics are frequently compared with the quality of automobiles or perscription drugs. While the scope of the application is different,

 Date: 11/21/01 1:20pm
 Subject: How fair is this really?

To who it may concern,

It is beyond doubt that Microsoft has been judged to have systematically employed monopolistic and unfair business practices. By playing our legal system like a virtuoso, it has avoided any real harm to its core businesses and in fact has proven that it is better to break this law and pay what ever small price in order to gain momentum and market share. Microsoft is unchallenged and there is no end in sight. Now Microsoft is going to be “giving” Windows XP to 12,000 of the nations's poorest schools. What a great ploy. Now these 12,000 schools will depend on Microsoft upgrades as well as train hundreds of thousands of future Microsoft consumers. Let's face it. Microsoft has won and owns us all. Please have the decency to stand up and add an asterisk to this sad chapter in American history.

 Subject: Microsoft Settlement
 Dear Attorneys General and Department of Justice Officials,

I have spent a large amount of time studying the proposed settlement for the Microsoft antitrust trial and I must express my extreme displeasure with the settlement.

Both the initial trial verdict and the appeals verdict upheld the fact that Microsoft is a monopoly that has illegally used it's monopoly power to deny other companies a chance to compete, and to control the flow of technology. Microsoft official were evasive and borderline to committing perjury in their testimony during the antitrust trial. Microsoft willfully disregarded the terms of their 1995 consent decree. What reason does any of us have to believe that Microsoft will honor the letter or the spirit of the proposed settlement? There are no strong enforcement clauses in the settlement, and there are enough exemptions and loopholes to make it entirely unclear what the settlement even restricts or enforces.

When the 18 states and the Department of Justice began this antitrust action against Microsoft the goal was to establish that Microsoft had illegally exercised monopoly power and to obtain punishment for that crime and to insure that Microsoft would no longer be able to commit further crimes of this nature. The proposed settlement does none of these things. Nowhere is there any punishment for Microsoft's breach of law, and the settlement contains enough exemptions and exclusions to leave Microsoft a broad lattitude to operate how it pleases.

The settlement is hopelessly biased in Microsoft's favor and I believe that Microsoft's past behavior warrants extreme reason to believe that Microsoft has no intention of honoring this settlement. Microsoft has never acknowledged their guilt, Microsoft has never accepted responsibility for their crimes, and Microsoft

will certainly never agree to sign a settlement that limits their ability to continue to operate as they accustomed. The only option is to have punishment and corrective measures IMPOSED on Microsoft. I urge the Department of Justice, the State Attorney Generals, and the Judge officiating over this trial to reject this proposed settlement. A great amount of time, money and effort have gone into establishing that Microsoft did indeed violate the law, and this settlement does nothing to justify that great effort.

With all respect,

Subject: Can we start getting our priorities straight?

This suit against Microsoft should be laid to rest as soon as possible. It should have never been brought in the first place. The Justice Department needs to stay out of private squabbles. I vehemently object to public tax dollars being spent by the Justice Department so they can be the private attorneys for companies that have more than enough money to afford their own. The Justice Dept. was led around by the nose by a group of people who made obscene amounts of money that they didn't earn in the Netscape stock run up, and that in itself is a travesty of Justice. If the actions of the Justice Dept. had been successful, we would now be paying significantly more for software we are getting for free. How can the Justice Department claim to bring a suit against a major corporation in the name of protecting the consumer, and the principal complaint is that the company was giving its software away free, instead of overcharging like the companies whose dirty work you were doing? How can you claim to promote competitiveness and innovation, when you organize a lynch mob to squash it? And lets see, the Justice Dept. has plenty of money to hurt the consumer, but when asked to deal with a serious and harmful illegal alien problem in Florida (which directly led to the events of Sept. 11) the pathetic excuse is that we don't have the money or resources. Here's a suggestion for you: CHASE CRIMINALS, NOT CITIZENS. I am beyond disgusted with this.

Subject: Anti-Trust Case

I am writing this letter to express me feelings about the Microsoft case. Over the years I have heard of a number of great products that were to be developed, only to be either bought or challenged by Microsoft. The future for us looks no better as Microsoft wants to control our living rooms with Direct TV, and the XBox gaming system. It is still unknown how evil their "Dot-Net" services will become, but Microsoft has proven time and time again that they cannot be trusted.

I have read several articles which state that Microsoft will settle with the US. I have also read a recent article stating that as part of settlement talks that Microsoft as a "Penalty" will pay a billion dollars to pay for school computers. At first this seems like a strong penalty, but this too plays into Microsoft's hand. I'm sure they would love to give out a bunch of copies of windows, knowing full well that they can in the future charge upgrade fees. The number of computers will also add to the Monopoly that they already have. Students will be forced to use windows and their parents might decide "Since the

computers at school are Windows, we'll get that at home!" This would just add to the problem. Please consider all sides when enforcing a penalty.

I as an American have the right to choose; If I want to use a computer or not, and if so, what type, what programs. If those choices are dictated to me, then that's not right and something should be done about it.

Doug Birling, Milwaukee WI, USA.

Subject: The Microsoft hegemony

The recent settlement for Microsoft which includes the contribution of one billion dollars worth of software, services, and cash to the 12,500 poorest schools in the nation is a paradox. As you know, MS is on trial for anti-competitive practices. Well, punishing MS by forcing them to further inundate the educational community with MS software and services is, in itself, an anti-competitive practice. So the punishment for MS is to force them to further indulge in their crime? As you know, forcing them to distribute their software and services will only make those recipient schools dependent on MS in the future, while increasing the market penetration and mind share of Microsoft products. Perhaps you could force them to buy iMacs for those schools and provide a lifetime free license of MS Office on each of those iMacs, now that would be poetic justice. It would force MS to support the competition in the OS arena, while furthering their market penetration in the Office arena, but only by giving away their biggest cash cow for free!

This makes no sense to me, as I understand it makes no sense to you. I am writing to encourage you to continue in your efforts to reach a fair conclusion to this situation. Let this trial set a precedent for the future. Let the rich of the world know that our government is not for sale.

You have my support.

Subject: Red hat settlement better

I think there are several flaws in Microsofts proposed settlement. For one it would greatly increase the monopolistic practice by getting there OS in the hands of younger children. It would not give the children the choice that is deserved. Plus the Liscences that Microsoft has put on these computers runs ouyt in 5 years forcing the schools to either buy a new liscense, or upgrade the computer. That's no punishment, it's a business oppertunity! Red Hat's proposal is much better. It put an alternative OS in the schools, and Does not run out of a liscense. And most of all the real punishment that because microsoft used monopolistic practices, the have to provide the hardware for a competetors OS.

Just my 2 cents,
Wayne Sitton

 Subject: Microsoft Settlement is Myopic
 Dear Sir/Madam:

The DOJ's settlement with Microsoft is myopic, short-changes our population including other software companies and business in general, and rewards Microsoft for it's monopolistic practices. It reminds me of parents who cave in to their children when they (the parents) most need to set good examples and demonstrate an unwillingness to accept unacceptable behavior. Microsoft management must be howling with laughter as a result of the amazing good fortune to have the DOJ punishment require them to increase their present and future stranglehold on the PC industry by providing free software to an, as yet, under exploited market sector—the same software that they would generate regardless of the settlement. Astonishing logic.

It is imperative that the DOJ send a clear message that Microsoft's monopolistic practices will not be tolerated. That message needs to include enough real monetary penalties that it is unmistakable. It also must not in any way be capable of assisting Microsoft, particularly by growing more consumers for their product. If Microsoft is to help poorer school districts then it should be in the form of direct funding, not an "in kind" donation of their product offering.

 Subject: Please do not accept Microsoft's Private Antitrust Settlement Proposal.
 US Department of Justice

To Whom it may concern,
 Please do not accept Microsoft's proposal to settle the Private Antitrust lawsuits. This is in no way a punishment to Microsoft but would simply extend their monopoly. How would that 'punish' Microsoft? If this were to truly punish Microsoft it would be 1 Billion dollars worth of competitors hardware and software. The Government's settlement is hardly a slap on the wrist. Please do not make it worse by accepting the current proposal for settlement of the private antitrust lawsuits.

At the very least, make them give 1 Billion dollars cash to the schools and let them decide how to spend the money. But if this is truly to punish Microsoft, make them buy 1 Billion dollars worth of hardware and software solely from competing companies. It has been judged that they are a Monopoly. Do not extend that monopoly by this proposed settlement offer.

 Subject: Microsoft settlement

To whom it may concern,
 I am shocked by the recent news regarding the Microsoft settlement. Instead of punishing Microsoft for their monopoly strategy you are giving them a green light to basically kick Apple Computer out of the education market by donating an astronomical amount of money in Microsoft products to this industry, thus giving Microsoft a go ahead to continue to do business as usual. I'm sorry but this goes beyond my comprehension. You are playing Microsoft's cards by making them an offer like this.

To my humble opinion they should be punished not by putting more of their product into the market, especially such a sensitive market like education, but by giving them a punishment that's appropriate. If you want Microsoft to donate zillions of dollars, let them do that to a neutral institution like food for 3rd world countries or something in that order.

What impression do you give Microsoft (and others like them) here? If you monopolize the market by unfair means of business we will reward you by allowing you to do more business and even kill some competition on the way?! By putting more Microsoft products out there you are giving companies like Apple Computer absolutely no chance what so ever to sell their product in the education industry, hence they start to monopolize that industry as well.

 Subject: Settlement for real.

Dear Sir:
 After reading about the "settlement", I am truly shocked. Forcing Microsoft to push their technology (i.e. Market freely) to all of the student in the under privileged schools is not fair to those who compete in that market. This can almost be seen as a long term investment for Microsoft, not a penalty. The correct answer is that Microsoft pays out cash to the schools. This money should be ear-tagged for technology and training. This will allow the market place and the schools to decide what technologies they choose to use.

In the big picture 500 mil is not very much. This is the amount of money that was "lent" to KPMG Peat Marwick my Microsoft durring the late 90's. The monies were used to rebuild the KPMG infrastructure using exclusively Microsoft products and technology. This was part of an arm-twisting deal that made KPMG to drop their use of technologies from Apple, Netscape and Novell.

Sincerely,
 Robert Lee Little III

 Subject: Proper Settlement
 DOJ Staff,

As a lifetime Republican, I have to say that I disagree with your disicion to settle with MS. By not forcing MS to either open the OS to all developers and users, or split the company in some manner that levels the application developers world, you have limited the number of companies that will invest in new application development.

MS has for too long kept many OS 'hooks' private to the own developers. With the new habit of adding applications to the OS, it will make stand alone development more difficult since they can hide even more from outside developers.

How long will it be before MS Office is part of the OS? MS does not drive the tech economy, their products are tools, just like hard drives, CPU's, and RAM. They should be treated no different.

Thank You,

Subject: Anti-trust settlement

As further evidence that you must not allow this settlement to go forward you only need to look to the anti-trust settlement announced yesterday.

"[11:15 AM CST] Microsoft Scores Another Major Settlement In Its Favor, & One That Might Hurt Apple's Education Sales by Bryan Chaffin at MacObserver

...From a Forbes.com report:

The proposed settlement will pay for teacher training, technical support, refurbished computers and copies of Microsoft's most popular software, such as Windows and Office, at more than 12,500 schools, Microsoft said. Microsoft admits no wrongdoing in the settlement, as is standard in agreements of this kind. The company said it will take a pretax charge of about \$550 million in the current quarter ending Dec. 31 to cover the proposed settlement. After taxes, the company expects to incur a charge of about \$375 million, or between 6 cents and 7 cents per share.

...From a TheStreet.com report:

"Under this settlement, they're giving away their software, which has zero marginal cost for them, and putting it in poor schools that never would have bought it anyway," says Ed Black, head of the Computer & Communications Industry Association, an anti-Microsoft trade group. "They're like the guy on the street that's got people watching the pea in the pod: Microsoft's got everyone watching, but they just put the pea in their pocket and walked to the bank."

"It's not a punishment, it's a reward," says Eugene Crew, an antitrust attorney at Townsend & Townsend & Crew in San Francisco who has been working on the California portion of suits. He says that his firm was taken aback by the proposed settlement, which it first read about in media reports Tuesday morning. He says he'll ask U.S. District Court Judge J. Frederick Motz not to accept the proposed settlement during a hearing set for next Tuesday, or at least release his clients from being covered by it."

It's obvious that monopolistic actions can be used as tactics and that the US Dept. of Justice can be used as an ad hoc sales force. I'm hoping that I might be able to come up with a way to get them to force Hollywood studios to cast me in their movies or TV shows. It'd make my job as an actor so much easier.

From: Art Isbell
To: Microsoft ATR
Date: 11/21/01 2:22pm
Subject: Proposed Microsoft settlement

The proposed settlement of class-action claims of price-gouging by Microsoft wrecks of yet another Microsoft marketing scam that will further Microsoft's incursion into the education market, one of the few markets that Microsoft's only small computer systems competitor, Apple Computer, has a foothold. This will likely exacerbate Microsoft's monopoly which is the underlying problem that resulted in the class-action claims in the first place.

Beneficiaries of this settlement proposal, poor schools, will then be saddled with

computer systems and software whose cost of ownership is known to be higher than that of Apple computer systems and software. These schools are the least able to afford these unnecessary expenses.

Many school systems already have Apple computers, so delivering incompatible computers and software to these schools will result in additional expenses and hardships.

Microsoft values its settlement based on the retail price of its software whereas the incremental cost of the software it proposes to deliver will be almost nothing. So in punitive terms, this settlement is not fair.

A much more reasonable settlement would be grants of \$1.1B cash made by Microsoft to the 14,000 poorest school districts with these grants earmarked to buy computers and software. This would allow the school districts to determine the best computers and software for their particular situations.

I urge you to reject the proposed settlement as it stands.

Subject: Microsoft case

Greetings,

I'm an individual that learned about the DOJ email concerning the Microsoft case from Wired News. I believe that a lot have already been said. However, for some reasons that I guess, I seen all the recent actions that have been taken by the DOJ and the states involved in the case and I believe that the decisions taken are barely helping the great values and principles that the court of the United States are defending.

Microsoft commercial practices not only shows that they endanger the world economy but worse our own culture. For years Microsoft has forged a name not on his technological advances or breakthroughs but mostly on the way it feeds his business from major sources like the innovations of his competitors and its future competitors (i.e. by hiring and swallowing brilliant students from universities). The pattern followed by the development of Microsoft business clearly shows that this company aims a cultural hegemony that she'll be capable to change or sell as she pleased if we let it follow its course. It will severely harm the world economy and, most of all, greatly endanger

what constitutes its soul part, the wealth of human values that rules visibly and silently our balance.

I deplore that some great minds cannot see the harm that has been done not only economically but at every level of human activity. I believe that the price we will all pay for such commercial practices will far exceed what our most brilliant minds can calculate.

I do not wish to sink Microsoft for the fun of it or to defend a cause. This company and his leader are a great asset in every way. I just believe other ways exist to compete sanely with others without excluding totally the others and endangering the process of innovation.

1) The splitting of Microsoft is not a necessity.

2) Letting Microsoft go away that easily without making major changes in its commercial practice will help the economy in short terms but will be only report a danger that will increase in time.

Saving money now, spending more later ?

3) Microsoft must sell a strip down version of his OS Windows and facilitate (not divulgate) immediately its source code. It should propose a new way to share codes that could not impede the competition. It should work in a way that could stimulate the competition instead of microsofting it.

4) The "almost" deal with the U.S., I believe that the U.S. government didn't have the gut to finish the job. Worse because of that attitude, Microsoft signed another deal (software to the poor U.S. schools) that will increase its power in a way that justified is bringing to justice in the first place. Do you think that Microsoft should help more than the U.S. poorest schools ? Don't you think that he has done harm only in the U.S. ?

5) This court of justice & the U.S. has a great deal of responsibilities on its shoulders not only for the sake of the U.S. rights but for the principles and values on which they build their national order and greatly influenced the world.

By sending you my comments, I have done my civic contribution.

Subject: proposed MS private antitrust settlement

This e-mail is in regard to the proposed settlement in the Microsoft private antitrust lawsuits, as mentioned in the 11/20/01 Seattle Times (<http://seattletimes.nwsources.com/html/business/technology/134368881-microsoft20w.html>) I find it more than a bit ironic that Michael Hausfeld feels the best way to settle these private antitrust lawsuits against Microsoft is to seed "the nation's poorest schools" with Microsoft products, thus exposing students to (some might say forcing the students to use) the very software that is considered so ubiquitous as to be a monopoly.

To me, that is analogous to punishing the tobacco companies by forcing them to give

away their products to children too young to know the difference. While I admit that is overstating the health repercussions, I don't think it is overstating the financial ones. A more original, and effective, solution would be to force Microsoft to donate \$1 billion in Apple hardware and software, or better yet open source software such as Linux. Then again, since open source software is free, that would cost Microsoft nothing but the minds and pocketbooks of the next generation.

I can only hope that this proposed settlement is discarded by the Justice Department and/or judge on the case.

Subject: Red Hat alternative in Microsoft

settlement

I think an escrow fund set up to help schools—funded by Microsoft—administered by someone else—and allow institutions that are “need” to buy whatever they feel they need—not just Windows or Microsoft products, which doesn't really hurt or punish Microsoft.

Gregory Youngs

Fairfield, Iowa Red Hat proposes alternative in Microsoft settlement <<http://www.computerworld.com/computerworld/images/1pixclear.gif>>

By TODD R. WEISS (November 21, 2001) <<http://www.computerworld.com/computerworld/images/1pixclear.gif>>

After Microsoft Corp. announced a proposed settlement yesterday to resolve a class-action lawsuit against it (see story), upstart Linux vendor Red Hat Inc. came up with an alternative deal that it says would more fairly punish Microsoft for its monopolistic practices.

In its announcement, Red Hat said Microsoft should be required to settle the cases by distributing rival Red Hat Linux software to thousands of schools across the nation, instead of deepening its hold on the schools by distributing more of its own software.

Matthew Szulik, president and CEO of Research Triangle Park, N.C.-based Red Hat, said his company raised the idea because Microsoft's offer—to give computers and its software to more than 14,000 of the nation's poorest schools—doesn't really punish Microsoft for its past practices.

Instead, he said, the Microsoft approach would simply give the software giant a wider reach in the nation's schools. “Microsoft should not be rewarded for their monopolistic practices,” Szulik said.

Rick Miller, a spokesman for Microsoft, had no comment today on Red Hat's counterproposal but said any additional software donations to the schools from Red Hat would be welcome through an independent foundation being proposed under the settlement.

The software giant announced its offer yesterday, less than three weeks after reaching a deal in its antitrust battle against the U.S. Department of Justice and nine states (see story). Though the company signed an agreement to settle the lawsuits under these terms, the proposal must be approved at a hearing Tuesday in the U.S. Federal District Court of Maryland, which is overseeing the case.

The lawsuits alleged that Microsoft used its Windows desktop operating system monopoly to force users to pay inflated prices for the company's other software. Critics of the company's proposal quickly called it too light in doling out punishment for the alleged infractions.

Red Hat officials said the company's cheaper open-source Linux operating system could bring technology upgrades to far more students and schools than Microsoft's more costly software.

Szulik said the court asked yesterday for public comment on the Microsoft proposal, adding that his company's alternative idea would be far more serious punishment for Microsoft. “My hope is that they at least

know there is an alternative out there” for a settlement, he said. “The judge can make a decision knowing he has multiple options.”

Asked if he thinks his company's counterproposal has any chance of succeeding, Szulik said, “It would have been worse if we didn't do anything. If we don't do it, who else is going to?”

Instead of supplying Microsoft software and using that as a considerable amount of the value of the deal, Microsoft could use that money instead to purchase additional computer hardware for the schools, according to Red Hat, increasing the number of purchased computers from 200,000 to more than 1 million.

Under the alternative plan, Red Hat would provide free copies of its Linux operating system, office applications and other software, as well as online support, to any U.S. school system. The Microsoft proposal covers a five-year period, while the Red Hat proposal has no time limit.

Al Gillen, an analyst at IDC in Framingham, Mass., called Red Hat's proposal “a creative solution” that would more severely punish Microsoft by making it spend more out-of-pocket money for hardware, instead of being able to include its own software at non-discounted prices as a large part of the settlement value.

But, he added, it's not likely to get any support from Microsoft. It's a “turf war,” Gillen said, with Microsoft trying to make inroads in an important market segment by using the settlement to increase its software use in the schools, where students will get used to it and be influenced to buy it on their own for home use.

“Knowing the position, the posture, that Microsoft has regarding Linux and open-source software in general, there's zero chance that Microsoft will [on its own] do anything with open-source software,” Gillen said. “They view that as competition, as they should.”

Subject: Microsoft settlement comments

While I realize that since September 11th you have a great deal more to do than to fight illegal business practices, I hope that you will consider the following in your settlement agreement with Microsoft:—Have a few people who know something about computers and CS to watch the

company. It is my opinion that if they built cars, the result would be closer to a Yugo than a Lincoln.

—Microsoft, like all companies, needs to make a profit. This cannot come from selling blue sky. If you look at their TV advertising for XP, blue sky appears to be exactly what they're pushing. I cannot say that anyone wants to go to a mall where every store is run by the same company. In my opinion, that is exactly what Microsoft has attempted to do in the software industry. With their recent incursions into the PC market and the game and set-top box market, it is apparent that Microsoft desires to control more than software.

—Read the licensing restrictions. If Microsoft made refrigerators with ligatures like this, would you buy one?

—I read that part of the agreement, according to Reuters at <http://www.nytimes.com/reuters/technology/tech-tech-microsoft.html> is that Microsoft is "to provide free software and computers to more than 14,000 of the poorest U.S. schools over five years." While this may seem at face value to be the equivalent of a community service sentence, in my opinion, the sentence is on the schools who get the "free" software and computers, because a—the settlement appears to rule out the choice of non-Windows based systems, such as Apple and UNIX. b—Who is going to pay for support and upkeep? The "poor school districts? With what source of income? If the poor schools have to hire IT people to fix what breaks—and something will break—the computer will hardly be "free". On a broken computer, free software is useless. Unless provision is made for warranty service for a reasonable period of time, the students and the poor school districts will suffer, even though Microsoft will have followed DOJ stipulations.

Thank you for providing an address for comments.

Subject: unfair Microsoft settlement

Dear Ms. Renata Hesse. As a consumer of software products, I am dissatisfied with the Microsoft settlement proposed by the Department of Justice. My main concern is not with the remedies. In fact the provision that PC manufacturers can install dual boot start up programs and install multi operating systems is exactly what the market needs to promote competition. But I have great concerns about the oversight process. Having Justice Department personnel on site at Microsoft offices does NOT guarantee that MS will not water down their restrictions, nor pressure manufacturers and software makers through verbal, "off the record" agreements. I am also opposed to MS's request to give away its programs to school districts. This only further extends their monopoly. I believe that stronger enforcement measures are needed to prevent MS from repeating their past predatory business practices. Thank you for your time and consideration. Sincerely, Douglas Clark, Austin, Texas

Subject: Microsoft settlement

To whom it concerns,
I am shocked by the recent news regarding the Microsoft settlement. Instead of punishing Microsoft for their monopoly strategy you are giving them a green light to basically kick Apple Computer out of the education market by donating an astronomical amount of money in Microsoft products to this industry, thus giving Microsoft a go ahead to continue to do business as usual. I'm sorry but this goes beyond my comprehension. You are playing Microsoft's cards by making them an offer like this.

To my humble opinion they should be punished not by putting more of their

product into the market, especially such a sensitive market like education, but by giving them a punishment that's appropriate. If you want Microsoft to donate zillions of dollars, let them do that to a neutral institution like food for 3rd world countries or something in that order. What impression do you give Microsoft (and others like them) here? If you monopolize the market by unfair means of business we will reward you by allowing you to do more business and even kill some competition on the way?! By putting more Microsoft products out there you are giving companies like Apple Computer absolutely no chance what so ever to sell their product in the education industry, hence they start to monopolize that industry as well.

A concerned Dutch citizen.
With kind regards,
Han Klomps

Subject: comments for the record
please note my comments for the record on the pending settlement of the Microsoft anti-trust suit. the Justice Department is not representing my interests with this proposed settlement.

i prefer a settlement which promotes consumer choice and quality software. the proposed settlement does not do that; it does not significantly alter the conditions that Microsoft has illegally exploited.

if this settlement takes effect, i believe Microsoft will again take illegal action in the market because when the penalties are so light, Microsoft can make more money up front than it will lose during the next protracted litigation cycle.

please don't make breaking the law profitable for Microsoft.

thank you

Subject: Anti trust

Should Microsoft receive harsher penalties? I am very disappointed with the DOJ's settlement. Fortunately nine states' AG's agree with me. It seems to me that Microsoft has indulged in not only anti-trust violations but racketeering as well. An abuse of power on the part of Microsoft (MS) that was not addressed in the trial was that MS has effectively eliminated a consumers ability to choose an alternative operating system when ordering a PC from an Original Equipment Manufactures (OEM's). (Dell, et all)

I believe that MS, in a premeditated fashion, used their Monopoly powers to ensure that the Windows OS would be the only operating system that would be accessible to a consumer when they turned on their computer and because of this they have stifled innovation in the marketplace and harmed the consumer by denying them the choice of an alternative product. Let me describe how MS may have illegally achieved their position in the market.

MS successfully stifled competition in the marketplace by not allowing OEM's (as per contract) to ship a computer that presented a choice of operating systems to the consumer when that computer was turned on. This choice of operating systems could have been provided by the OEM without any cost to MS for the install.

Microsoft blocked consumer choice by pressuring OEM's into signing contracts that obliged them to ship Windows only computers. If they refused the OEM faced the threat of losing the right to ship any MS product.

This type of practice by Microsoft will continue (if not in this form another) unless the monopoly known as Microsoft is either broken up into separate units or another remedy that I am not clever enough to devise is formulated that allows fair competition in the industry.

As you can see, my position well exceeds current prosecution parameters. Even if you don't agree with my extreme position, but desire more vigorous prosecution, I urge you to pre sue this line of inquiry. The browser is not the issue the operating system is.

I believe that the DOJ takes the responsibility of this matter very seriously. This is why I urge the DOJ to expand the scope of this case or start a new one that specifically addresses this problem.

Good luck.

Subject: The Microsoft Settlement

PLEASE don't let Microsoft get away with merely donating computers and software to needy schools. This is so cynical it's pathetic. I saw right through it right away when I heard about it, and I'm not exactly a rocket scientist. It's a way for Microsoft to get a foothold in schools where they already have WAY too much influence. Microsoft is attempting to settle an antitrust lawsuit by committing antitrust actions. How incredible is that? Let them donate the financial EQUIVALENT of those computers and software and allow the school districts to buy what they need most, including other types of computers and software.

Subject: Microsoft Settlement

Hi. I am a California citizen, and I am writing you to let you know how outrageous the Microsoft "Settlement" is to myself and my peers. As part of the settlement, they 'have' to provide schools with free software? If they did this on their own volition, they would be charged with unfair market practice. How can other software companies, who are already struggling against the huge Microsoft corporation, compete with free software?

This decision is basically giving Microsoft the government sanctioned option to wipe out whatever competition they now have in the education market.

It fails me to see how this can be considered a punishment.

I sincerely hope that the Justice Dept does NOT accept the terms of this insulting settlement.

Thank-you for your time.

From: gary miller
To: Microsoft ATR
Date: 11/21/01 3:53pm
Subject: Microsoft settlement is inadequate

I am greatly disappointed that the Dept of Justice has not put adequate restraints on the behavior of Microsoft, and accepted a very weak settlement that does not protect the interests of the American public. I hope the DOJ will give very close scrutiny to current and future behavior by Microsoft.

I am particularly concerned over the provision in the settlement agreement that requires Microsoft to divulge Windows APIs only to competitors that Microsoft determines have a "valid" business plan. Whether intended or not, one effect of this provision is to handicap the "open source" movement in ever inventing a rival technology that could work well enough with Windows to threaten Microsoft's own monopoly.

Open source has hatched such technologies as the Linux OS and the latest incarnations of Netscape. Yet in their earliest stages, open source technologies rarely have a profitable business plan at all, so Microsoft

need not tell them how to make their applications run to best advantage on a Windows machine. Small wonder future Nescapes will appear clumsier than Explorer. Without API disclosure, Microsoft's possibly inferior technologies come out of the gate with a prejudicial ability to integrate more smoothly with the Windows OS, and users will be discouraged from even trying alternative technologies. This element in the federal settlement nips a good portion of future competition in the bud. At the very minimum, a settlement should require Microsoft to sell an "unbundled" operating system with fully disclosed APIs, so that any third party could write an analog to, for example, the Passport technology, that could work as well with Windows as Microsoft's version.

I personally find Microsoft's past behavior so egregious—and so much unchanged even after the upheld findings of monopoly practices—that I hope the nonconsenting state attorneys general and the EU pursue substantial damages, and, especially, injunctions now against any future such behavior by Microsoft. Surely without suitable injunctions, while damage proceedings drag on Microsoft will only further entrench its current monopoly and extend it to such growing sectors of the American economy as e-commerce and internet computing. Microsoft's ongoing behavior together with its de facto omnipresence on the nation's computer desktops easily threatens to extend its monopolistic practices into new arenas, resulting in higher OS costs to every user and stifling new competitors in ever more fields.

Microsoft's continued march to subsume new technologies (instant messaging, media players, etc, and ABOVE ALL e-commerce in its infancy) into Windows XP, its retention of the right to revert all OEM alternative desktop settings to Microsoft's own 14 days after purchase, and its continued refusal to admit any past misbehavior whatsoever all demonstrate that more drastic remedies are needed, and sooner rather than later.

I only regret that Microsoft carries such influence in my own state (Washington) that my own attorney general has not joined in the other attorneys' general case.

Sincerely,
Gary Miller

Subject: Against the Microsoft Monopoly
To the individuals involved in the Microsoft trial:

I wanted to take a moment to let my feelings known regarding the latest decisions with the Microsoft corp.

I am completely against the business practices of the Microsoft corporation and its products.

The release of Windows XP has shown Microsoft's stance on continuing its practices on copying technology, crushing competition, and ruling the industry unfairly. The idea that now Windows directs the user to certain websites Microsoft wants you to visit is infuriating. The fact that XP now has technology that is identical to Apple's iTunes, iMovie and QuickTime raises a whole host of questions. Microsoft stole from Apple Computer the "look and feel" of its OS, and now has done the same with it's "media player". Don't any of these issues raise red flags?

The average consumer has no notion of these things, nor that it's wrong. The average consumer wanders into Best Buy and blubbers out, "Uh, duh, I need a computer to go online with..." Microsoft takes full advantage of the uninformed consumer and pushes its products on with no regard for competition or other software.

Take for instance, if you have a PC that is running Windows (you have NO other choice BUT to run Windows), you HAVE to run Microsoft's Internet Explorer software to browse the web.

What happened to Netscape Navigator?

This is just ONE of the many many examples of the monopoly Microsoft demands.

Microsoft is clearly throwing money at the problem to get people to shut up. I, as a consumer, and not going to stop fighting Microsoft. Their technologies are no good. Better products are out there and as consumers we are all going to be forced to give Microsoft our money for lousy technology. Please, I beg do not drop this case with Microsoft because you are tired of fighting. Don't let Microsoft just throw money at the problem. "Equipment and training" will do no good in breaking the Microsoft monopoly. Microsoft wants to train

children how to use its products. Not anyone elses' but its own. Microsoft is DEDICATED to owning the entire computer industry. We CANNOT see this happen. This is America; we have freedom to choose here. And if Microsoft does what it wants to, we will no longer have freedom to choose. A computer is a very personal piece of equipment. Do you want to trust your finances and all other personal information to Microsoft??

I think not.

If possible, please let me know that you have received this email and have heard my voice. I am one of many, many individuals who feel strongly against the Microsoft monopoly.

Sincerely,
Matt O'Brien

Subject: Settlement with Microsoft—BAD IDEA

I am very displeased with the proposed DOJ settlement with Microsoft. In addition this week we learn that Microsoft has proposed providing software to low income schools as part of the settlement with the states. Microsoft gets to provide the same software it used to violate antitrust legislation, as settlement for the violation—how ironic. Also, this settlement of software basically provides for additional injury to alternative operating systems—such as the Apple Mac OS. You will be taking market share away from Apple in education as a reward to Microsoft for its violation of antitrust laws.

The US DOJ needs to hold Microsoft actually responsible for its actions. They violated antitrust laws and continue to do so with Windows XP (now taking over music and video and eliminating JAVA support). Break the company up as was originally proposed. Microsoft has yet again proved its antitrust mentality and the proposed settlement is less than a slap on the wrist. Microsoft will actually gain in the education market.

From: Anthony Graham
To: Microsoft ATR
Date: 11/21/01 4:56pm
Subject: Settlement is a disgrace

The DOJ settlement with Microsoft is a disgrace and a blow to a strong, competitive American software industry.

As a result of years of Microsoft's anti-competitive behavior, dozens of quality applications and companies have been essentially destroyed including Lotus, Novell, WordPerfect, Corel, and Netscape. Several other companies, industries, and products are now on the list of future victims of Microsoft's monopoly including but not limited to: Real Networks, Eudora (email), Palm, Tivo, ReplayTV, and Handspring. The Web itself is now well on its way to being completely controlled by Microsoft software.

They have behaved illegally and this settlement rewards them for it. After years of illegal behavior there is absolutely nothing in the agreement that prevents them from continuing to behave illegally and nothing that punishes them for past behavior. Forcing them to donate software to underprivileged schools (who wouldn't have the money to buy it anyway) increases their market share and costs them nothing. It even affords them a PR opportunity.

In the face of the Government's inability to protect the software industry, we will continue to be faced with sub-standard software from Microsoft that is protected from competitors by their Windows monopoly and whose flaws permit serious security breaches on a daily basis. We will not see a credible competitor Word Processor, Email client, Web browser, Spreadsheet, or database application in the US. Meanwhile, the software industries in countries outside the US, some of which are shielded from the Windows monopoly (China, India) will grow as the result of talent and competition.

This settlement must be scuttled for our software industry to thrive. The only solution to this problem is to prevent Microsoft (structurally) from behaving in the way it has for the last 10+ years.

Date: 11/21/01 4:33pm
Subject: Sir/Madam, Sir/Madam,

Microsoft by tying Internet Explorer and Windows killed the Innovative product Netscape. Now Microsoft trying to bundle more services with XP to kill competition in other areas. The settlement announced Nov. 2 is inadequate and the company will be able to bypass many of the sanctions as it did in the earlier case in 1995 and hence brought this case in 1998 and the courts have unanimously found that Microsoft violated antitrust laws.

The company had reached a deal to settle a raft of private anti-trust cases to spend more than \$1bn to put software and computers into some of the poorest American schools. The deal will close another chapter in the software giant's legal saga, while helping Microsoft make further inroads into the nation's schools, which once were dominated by its rival Apple Computer Inc. and will reach future customers mind at the early age.

I do not think the remedy should be a mechanism by which Microsoft can further extend its monopoly.

Subject: <no subject>

Dear Sirs and Madams:

I am writing on behalf of the electronics industry and the people of the United States, urging you to hang tough in the anti trust case with Microsoft Corporation.

None of you could imagine where the electronics industry would be right now, had it not been for Microsoft crushing anyone and everyone who had the audacity to think this was a free country. This industry would be vibrant right now, I'm convinced of it, and leading the whole country out of recession. Microsoft's dominance and dirty tactics have cost this nation billions of dollars of GDP and hundreds of thousands of jobs.

I cannot tell you how many times we worked with giant OEMs such as Hewlett Packard, Seagate, Maxstor, Storage Technology, Digital Equipment, LSI Logic, and others, on Windows OS drivers for peripherals, and each one of these firms—to a man—was (and continues to be) terrified of MSFT. They know what side their bread is buttered on. I saw the cancellation of dozens of projects in the 1990's because Microsoft simply wouldn't validate the drivers, favoring one company over another.

I understand that the Bush administration, due to it's war efforts against terrorism, would rather concentrate on that all important goal than to waste resources continuing the fight against Microsoft. The government has won it's case, but now it appears that akin to the giveaway of Eastern Europe after World War II, the US government wants to give this win away as well. I give MSFT executives all the credit in the world for keeping a straight face, as Larry Ellison put it.

But the economy needs this shot in the arm more than ever now, MSFT has strangled the life and innovation out of the computer industry for so long, it's now stagnate. We need desperately to have competition come back to the industry, so small firms with big ideas won't get wiped out. So MSFT can't deny the little guy interoperability with their stranglehold on the Industry anymore. To put Americans back to work and re-invigorate the industry, the US government and the States battling this anti trust violator must level the playing field. It's such an enormous uphill climb now.

Please do not allow MSFT to damage Apple Computer and the 25,000+ suppliers

of Mac OS based peripherals and software. The current \$1 Billion "penalty" Microsoft will take out of petty cash and give to schools will do nothing but increase Windows market share in one of Apple's most dynamic markets. The influx of Microsoft capital into the education market will inflict very serious damage to Apple Computer and thousands upon thousands of small US companies that provide consulting services, peripherals, software, drivers, firmware, and other products that support the Mac OS now used throughout the US education system to a very large degree. Many companies will be forced out of business, many Americans will lose their jobs to Microsoft once again. Only this time, it will be government sponsored.

It is a market that Microsoft has targeted for many years and after falling short in their own efforts, it seems they have now partnered with the US Government and the States to win this lucrative market finally after a 15 year battle.

This deal has to have Dell, Compaq, HP and Gateway licking their chops as Microsoft has sadly duped the government very, very smoothly here. This penalty is a Trojan Horse; it will turn out to be a gigantic marketing ploy, damaging Apple's share tremendously in the education market, while boosting Microsoft's share for years and years to come. Microsoft should realize a return of more than 8X on the measly one billion they will put forth. Some slap on the wrist, folks.

What an incredible blunder by the government. Win an anti trust case and then hand over one of the last remaining non-Microsoft markets! Incredible! What a brilliant and resounding victory for Microsoft. Stand tall, ladies and gentlemen. The whole industry is waiting for you good people to do the right thing.

Would it not be embarrassing to have the US Government & the States surrender to Microsoft, only to watch the European governments come to the aid and rescue of the US electronics industry? This could very well happen. You have won the case in court! But you're losing it in the conference room. Re-group, folks, and please focus on doing the right thing.

"Always do right; this will gratify some people and astonish the rest."

Subject: The DOJ seems to be admitting its own inferiority?

When a company is so "illegally" profitable that the DOJ treats it as the "King of Microsoft," instead of following previous precedents? I mean by the DOJ's logic, there was NOTHING wrong with the Sherman railroad bridge being for the use of ONLY one Sherman company! Instead of "bailing" under pressure from M\$, the DOJ is supposed to represent the interests of everyone in the American population. By the DOJ's current logic, I could place a toll charge over 1 bridge

over the Mississippi River, requiring EVERYBODY to pay me a toll charge before I would let them cross my only one bridge over the river?

I had an "epiphany" or something about this happening when I was a freshman in business at the University of Illinois in Urbana/Champaign in 1987! I could "see" in 1987 how EVERY UIUC official/secretary had an Apple Macintosh computer on their desk to help them with their work? And I had also "heard" about M\$ Windoze 1.0 and I knew then that every software product by M\$ was an addition to the former M\$ product, and I thought of how a future M\$ Windoze would overtake the MacOS? This was precisely what started happening on a big scale with Windows 95 in 1995!

Bill Gates was trained in Computer Science, which entails total domination before applying the "brakes," so this is why the antitrust problem? I can see how my Illinois attorney general has "bailed" from the suit, as is a tendency of Chicago politics, but there are still 9 states that will hold M\$ accountable for its actions!

Subject: Please oppose the proposed Microsoft settlement

To whom it may concern:

If my understanding of the proposed Microsoft settlement even comports only slightly with its reality, then this is no settlement at all. It would do nothing punitive, nothing to remedy past misconduct, nothing to inhibit future misconduct, and nothing to diminish Microsoft's monopoly power—indeed, it would help Microsoft make additional inroads in a computer hardware and software market in which

Apple, for example, now competes against it well (education), thereby enhancing Microsoft's monopoly power. Thus, the settlement does not impose any penalty, but rather it confers a benefit, on a company that has been found liable for unlawful abuse of its monopoly power.

This so-called "settlement" is a joke and an offense, and the Department of Justice and the states should do everything in their power to oppose it.

Sincerely Yours,

Joe Creitz, Esq.

I have watched I have been in the IT industry for more than 14 years. I have watched Microsoft use their market dominance to consistently erode market share from other competitors. They have used same principle time and again Fear, Uncertainty, Doubt to deny areas of the market where they did not yet have a product or where their product was so buggy that it couldn't effectively compete on it's own merits. Does anyone working on the case actually think that any single company can stand up to Microsoft when it has more than 36 billion dollars in liquid assets. Even if multiple companies banded together against Microsoft they can't stand against a 90%+ market share in the PC arena. If you don't stop them now XP will take over the internet and we will all be facing the fully embraced and extended world as written by Microsoft.

Thank you for your time.

Subject: Microsoft Antitrust Settlement

I believe this is a terrible settlement for the U.S. and for consumers. All it imposes is conduct remedies, and for each of those, there is a loophole through which Microsoft can circumvent it. I wish to see Microsoft, who has been found guilty of *criminal* activity, as well as lying during the actual trial, to be punished much more severely than this. One of the remedies would be opening up their proprietary document formats (*.doc, *.xls, *.ppt, etc) to EVERYONE, so that everyone can have a level playing field in competing office suites without having to worry about incompatibility issues.

Windows XP is even worse than the tying/bundling issues that got Microsoft into trouble in the first place, but the government wishes to turn its back on more anticompetitive behavior because the economy is in a recession and they believe Microsoft can help pull us out of it. Kindly stand up for what is right. Stand up for the American PEOPLE for once, instead of some insidious, anticompetitive, illegally competing, mega-corporation.

Thank you.

Subject: Microsoft Settlement

Dear Sirs:

(This supercedes another note I sent earlier today (21 Nov 01) to the main DOJ email address.)

The settlement, or at least the penalty aspect of it as reported in the press (i.e. Microsoft to give needy schools \$1B of computers and software) is utterly inappropriate, even laughable, considering the economic havoc that Microsoft's business practices have wrought. Indeed, this "punishment" or "act of contrition" is simply anyother way for Microsoft to increase its monopoly, and assure itself of more repeat customers! If this offer is NOT part of the DOJ's Proposed Settlement, but a public relations ploy by Microsoft, the following stipulations should, in my opinion, be added to the Settlement for the reasons detailed.

Microsoft, whether or not mandated by the DOJ to dontate computers to schools, should only be allowed to do so by purchasing and donating Apple MacIntosh (or other Apple) computers, with an appropriate Apple OS and, optionally, Microsoft software applications, to the schools. This would help to strengthen Apple's position in the market, which has historically been strong in the educational sector, and punish Microsoft more justly.

This would have an immediate, concrete effect in levelling the playing field, if only slightly, while yeilding some monetary compensation for what may well be \$100M+ in direct and collateral damages in the form of reduced productivity for computer users, losses to investors in businesses crushed by

MS, lossage of work due to the notoriously unstable behavior of Microsoft's products, and even the seemingly trivial cost of having the Windows logo displayed for a couple of extra seconds, just for promotional purposes, every time a Windows computer is booted; cumulative wasted time must run into man-centuries!

Most importantly, it would give students and teachers at needy schools a much better solution to their needs, and a far better base on which to build an infrastructure for educational computing facilities. For, by practically any measure, Apple's computers have always, and continue to be, easier to use, interconnect, and administer than Microsoft's platforms.

While this may sound "contraversial" at first, it seems to me that Microsoft should be penalized where it counts, while redressing some of the damage it's monopolistic practices have done to the company that originated, and made affordable, user-friendly personal computing (Apple).

Why reward Apple and not Xerox, Sun, Silicon Graphics, etc? Because Apple has survived and thrived as the only reasonable, and affordable personal computer, and, if secondary schools are to receive this windfall, Apple is already well-established in this area. Also, Apple computers are more compatable with Microsoft products out of the box than Windows is with anything but Windows. If Atari, TI, Tandy, or Commodore hadn't been driven from the market by the hegemony of Wintel (Windows running on Intel processors), there would be real choices other than Apple. Finally, the Government has an opportunity to emphasize that diversity of computer architectures is as important as diversity of operating systems.

I sincerely hope that this will be given consideration and that you will reply.

Thank you.

Sincerely,

Nicholas Spies

Subject: Microsoft settlement

To USDOJ,

I am writing to object to the Proposed Final Judgement. As per your on-line instructions (<http://www.usdoj.gov/atr/cases/ms-settle.htm>) I have reviewed the current documents and would like to make the following specific suggestions:

1. Since it was found guilty of illegal businesses—and on a huge scale— Microsoft should be responsible for all government court costs. This should also include the costs for any state goverments that reject the current proposal. (The newspapers report this cost as \$15M to-date, a pittance to Microsoft.)

2. Removal/simplification of all extended definitions, e.g. "any middleware with a version number of form X.x." These details are unnecessary and, I believe, only exist to provide loopholes for Microsoft to evade the spririt of the document. The various sub-

sections should be worded in a way that the intent is clearly understandable to IT professionals (if not the general public).

3. Substitution of all references to "Microsoft Middleware" with the more general "Microsoft software." The public's concern is not limited to "Middleware" and the definition therein; we don't want Microsoft to be able to force any software on us, regardless of how we obtain it or how it is legally defined.

4. Inclusion of a provision specifically labeled, "Eliminating Microsoft's monopoly control of Internet and Windows desktop standards." This seems a natural conclusion to a 'successful' antitrust action. They can be allowed to maintain their Windows and Office software as they see fit, but they should lose their monopoly leverage. While I appreciate the provisions in the current proposal that require documentation of all APIs, e.g. integration between Internet Explorer and the Windows desktop (assuming that IE is considering "middleware" ...), I feel that the current exceptions clearly allow Microsoft to continue blocking competition. So, instead, I would like to see the addition of requirements such as publicly documenting the formatting information of all current/previous Office document types (so that competitors to Office could offer flawless backwards compatibility). I know Microsoft considers this an unwarranted 'grab' of their intellectual property but since the market for OSEs and office suites has matured, the aspects of their products that belong in the public domain can easily be identified (and it only has to be a one-time event).

5. Clear instructions that OEM customers do not need to pay a Microsoft license fee (for Windows, Office, etc.) for every computer they sell, and that they will not be penalized (e.g. higher prices) for offering computers with non-Microsoft Operating Systems. Currently, the Proposal only stipulates that OEMs will not be penalized for offering dual-boot systems; this still requires them to pay Microsoft for a license!

I have been a computer professional for 10 years. In that time, I have never considered Microsoft Corp. to be a customer-oriented company and I believe this opinion has been confirmed by the testimony in the latest antitrust court case. Please do not allow their behaviour to go unpunished, or the market to continue languishing under their monopoly control.

Subject: Microsoft settlement—my views

I would have a serious look at just what Microsoft is getting in this latest deal. Donating a billion dollars worth of hardware and software to poor school districts is a kind gesture on the surface—BUT, look at it from Microsoft's perspective. What they are being allowed to do is flood the education market with their own products and they are

harming other manufacturers who rely a great deal on this market. Their donation (mildly punitive settlement) could possibly be used to gain tax advantages. The school districts will eventually have to upgrade their products and rest assured it won't be with other vendors' products. There is also the issue of servicing and support. This also is another revenue stream for Microsoft. I understand that the school districts can take the cash option and buy what best suits them. This won't happen since Microsoft rules the computing world—they will buy Microsoft!

Is this an oversight on the part of the government or is this a blatant compromise to just end this whole affair? Whatever it is, it must be stopped.

I do plead ignorance on the terms and conditions of the latest settlement, however, even I can see just what Microsoft is getting here—it's a free gift from the government. Please don't allow Microsoft the opportunity to walk. People are angry and tired—do the right thing.

Thanks for your time.
James

Subject: Please oppose the proposed Microsoft settlement

To whom it may concern:

If my understanding of the proposed Microsoft settlement even comports only slightly with its reality, then this is no settlement at all. It would do nothing punitive, nothing to remedy past misconduct, nothing to inhibit future misconduct, and nothing to diminish Microsoft's monopoly power—indeed, it would help Microsoft make additional inroads in a computer hardware and software market in which Apple, for example, now competes against it well (education), thereby enhancing Microsoft's monopoly power.

Thus, the settlement does not impose any penalty, but rather it confers a benefit, on a company that has been found liable for unlawful abuse of its monopoly power.

This so-called "settlement" is a joke and an offense, and the Department of Justice and the states should do everything in their power to oppose it.

Regards,
Ulla Hald

Subject: Microsoft Settlement

As a professional software engineer and the owner of a small software firm, I have taken a keen interest in Microsoft's development of a personal computer operating system monopoly, and in the subsequent filing and progress of the United States v. Microsoft case. I am pleased that the court has correctly identified Microsoft's pattern of illegal monopolistic behavior; however, I am concerned that the proposed settlement, while carefully written, will fail to make any

substantial impact on Microsoft's future conduct.

Background

As mentioned in the documents associated with the case, the District Court found, and the Court of Appeals affirmed, that Microsoft unlawfully protected and maintained its operating system monopoly in violation of antitrust laws. In the United States' Competitive Impact Statement, two examples are cited of this type of behavior. One example is the elimination of Netscape Navigator as a viable cross platform competitor to Microsoft's own Internet Explorer, thus increasing the barriers to new competitors' entering the operating system market. The other example is Microsoft's partially successful efforts to squelch Sun Microsystems' Java language, thus ensuring that third party applications developers will have a large incentive to develop first—or only—for Microsoft's dominant Windows operating system.

It should be noted that Microsoft engaged in this type of behavior even where it was clearly monopolistic and anticompetitive: the example given is that of threatening Apple with the termination of Microsoft Office for Macintosh, not for any business reason related to the Office product, but instead to force Apple to make the unrelated Internet Explorer product the default Macintosh browser. Microsoft has yet to admit that this and similar examples of obviously unethical and illegal behavior were wrong; indeed, they continue to act in accordance with their own peculiar interpretation of 'innovation', ignoring others' standards of ethics or law. These examples are typical of Microsoft's behavior.

The Proposed Final Judgement

The Proposed Final Judgement seeks to remedy Microsoft's unlawful conduct by prohibiting certain forms of behavior—behavior that Microsoft has used in the past to illegally leverage and maintain the Windows operating system monopoly. In particular, Microsoft would be required to use common Windows licensing terms for the 20 largest original equipment resellers of Microsoft products, would be prohibited from retaliating against them, and would be required to make applications programming interfaces (APIs) available to third party software developers. Unfortunately, these remedies would be unlikely to have a significant practical effect on Microsoft's conduct.

Microsoft's past behavior and present statements indicate that they do not view anything that they have done as wrong, either ethically or legally. In light of this, they are likely to simply continue their present behavior into the future, ignoring any settlement terms just as they have in the past ignored antitrust law as a whole. The plaintiffs will thus have the burden of taking Microsoft to court for each individual violation of the settlement terms. In practice, the vast majority of such violations will likely be simply ignored; third party vendors have development schedules are often measured in days or weeks, and would rarely be able to afford the months or years required

to resolve disputes by appealing to the various proposed committees or the plaintiffs. The result would be little if any change in Microsoft's anticompetitive behavior.

In addition, Microsoft can easily circumvent specific terms. For example, the proposed terms would restrict Microsoft's licensing with respect to their 20 largest original equipment resellers. While these 20 largest resellers currently constitute a substantial portion of Microsoft sales, Microsoft could restructure their product licenses—for example by licensing on a state by state basis—so as to increase the nominal number of resellers, and thus limit the applicability of the proposed terms to a small fraction of their customer base. Microsoft could play similar games with respect to many other portions of the proposed terms, and indeed with any specifically defined behavioral remedies.

Microsoft has also shown a great ability to invent innovative new forms of anticompetitive behavior. However, because the proposed settlement terms are so narrowly defined, they will do nothing to prevent new forms of anticompetitive behavior on the part of Microsoft. Given that Microsoft has not admitted to any wrongdoing in previous behavior that was found to be illegal, they are likely to continue to violate the antitrust laws in new and different ways in the future. Finally, and most importantly from my standpoint as a third party software developer, the technical aspects of the proposed remedies are simply unworkable.

The proposed terms seek to allow third party developers to compete with Microsoft's in house efforts by requiring Microsoft to publish documentation for its APIs. The argument is that such documentation would have, for example, permitted Netscape to compete on an equal basis against Microsoft's own Internet Explorer.

Unfortunately, publishing accurate and complete API documentation at early development stages, as envisioned in the proposed settlement, is not realistic; at those stages, the software itself is being constantly modified and updated, such that any published documentation becomes obsolete nearly instantly.

For one example, I was at one point involved in a project that used certain Microsoft Windows network APIs. We had one particular problem that we could not resolve even after days of effort; eventually we resorted to paying for phone support from Microsoft on the issue. It turned out that one of the API calls we were using had actually been omitted from Microsoft's product because of delivery deadlines, resulting in an unexplainable crash; we had to use a workaround.

This is typical of the problems faced by third party developers when competing with Microsoft in house efforts. Issues that can be resolved with a single email exchange or two minute phone call between Microsoft employees involve, for those who work in other companies, many unanswered emails, hours of hold time on the phone, and the requirement to authorize unexpected expenditures. This is true even in the

presence of published API documentation. The advantages of personal contact and responsiveness at a working level within a company simply cannot be legislated in written settlement terms.

Breaking Up Microsoft

As discussed above, the terms of the Proposed Final Judgement would not prevent Microsoft from continued illegal use of its monopoly power; given Microsoft's refusal to wholeheartedly admit to previous wrongdoing, the best that could be hoped for would be minor changes in a few specific cases, and most of those only after additional litigation. The proposed terms' efforts to legislate a level playing field through the publication of APIs is likewise doomed to failure, since informal communications within the Microsoft organization will always be much quicker than formal and time consuming communications with those outside the organization.

The only solution is to reorganize Microsoft into separate entities, ensuring that it is in the interests of these new entities to behave in ways that are not illegally monopolistic. One way to do this would be to break Microsoft up into two parts. One part would be a Windows operating system company, the other a separate Microsoft applications company which would own both independently marketed applications software such as Office, as well as separately distributed free software such as Internet Explorer. The applications company would then have an incentive to develop for all operating systems, not just Windows, and the Windows operating system company would no longer have any reason to give special treatment to Microsoft applications developers over third party developers.

This solution would benefit both the public and Microsoft's own stockholders.

Benefits to the Public

At present, much of Microsoft's efforts on behalf of its Windows operating system are centered on maintaining the Windows monopoly. This limits the amount of effort that could otherwise be spent on actually improving features or reliability, or on lowering prices. This can be demonstrated by the fact that the only major personal computer manufacturer which does not use the Windows operating system—Apple Computer—has consistently higher margins than any of the manufacturers that do use Windows. Since all these manufacturers, including Apple, use the same component suppliers, the difference in margins cannot be attributed to hardware component cost or quality; instead, it is largely the result of software differences. Either Apple is able to charge a higher price by providing an operating system superior to Windows, or it is able to keep its per unit operating system development costs below the amount competing manufacturers pay for their copies of Windows.

If the Windows operating system were provided by a separate company, this new company could no longer leverage Microsoft's other assets—such as Office or Internet Explorer—to preserve its monopoly. Instead, it would have to refocus its efforts

on improving the Windows operating system. These improvements might take the form of better features or reliability in the operating system itself, or of better and more accurately documented APIs that would make it cheaper to develop higher quality third party software, or simply of price reductions for the Windows product that would be passed along to the consumer. In any case, consumers would see a substantial benefit.

Benefits to Microsoft Stockholders

After a breakup, Microsoft stockholders would own stock both in the Windows operating system company and in the Microsoft applications software company. While the resultant changes in the operating system company would primarily benefit the public, Windows would still have substantial economies of scale that would benefit stockholders no less than they do today. In addition, freed of the need to artificially support the Windows monopoly, a separate Microsoft software company could expect to substantially improve its performance and value.

At present, the efficiency of Microsoft's applications development is handicapped in both obvious and subtle ways by the necessity of preferentially supporting the Windows operating system. One of the more obvious examples is having the continuance of a Macintosh version of Microsoft Office used as a political tool, rather than being based solely on sound business considerations. More subtle are the requirements to preferentially support the Windows infrastructure, eschewing alternatives such as perhaps the Java language—simply out of loyalty to the corporation.

Similar inefficiencies are typical of other large monopolies. For example, the breakup of AT&T into separate regional bell operating companies and a long distance company resulted in substantially improved efficiency and growth—such that the total value of the separate companies today is many times that of AT&T when it was a monolithic monopoly prior to breakup. A separate Microsoft applications development company would no longer be bound to support the Windows operating system except where that would be efficient. Applications could be developed using the most effective tools, regardless of source. The result would be higher product quality, lower development costs, improved market share and market growth, and, ultimately, higher value to stockholders.

Conclusion

United States v. Microsoft has correctly identified Microsoft's past pattern of illegally supporting and exploiting its Windows Operating system monopoly. In addition, simply having both Windows operating system development and Microsoft applications software development under a common organization results in inefficient use of unrelated efforts to bolster the Windows monopoly. Breaking Microsoft up into a Windows operating system company and a separate Microsoft software company would enable both companies to operate more efficiently, benefiting both the public and Microsoft's own stockholders.

Subject: Microsoft "settlement"

Dear All:

Unfortunately, my state's (Michigan) Attorney General was one of the AG's who caved into accepting the truly absurd DOJ/ Microsoft "settlement".

I would like to applaud those of you who understand the law, and, more importantly, have demonstrated a rather refreshing amount of common sense by sticking to your guns and continuing your quest to serve Microsoft—a company that has and continues to practice illegal monopolistic business tactics and strong-arming—with appropriate punishment and justice.

It is completely evident that the remedies proposed and accepted thus far are hardly a punishment—some can even be considered a reward— and it is becoming increasingly clearer that Microsoft may be involved in racketeering and bribery. There is just no other way to explain these ridiculous, "slap-in-the-face" settlements.

For every consumer and for every professional firm like ours, I wish you the best and hope Microsoft finally receives its due—break them up!

Subject: Settlement Much Too Lenient
To Whom It May Concern:

After speaking with many of my friends and colleagues, a majority of us feel that the proposed Microsoft Settlement is far from equitable. I have personally witnessed their wanton anti-competitive behavior and their clear violation of Anti-Trust laws (and Racketeering Laws) in the course of my professional life. The truly unfortunate part of this situation is that it will appear to many Americans that anyone with enough money and lawyers can get what ever they want in this country.

Other countries, with their own disputes with Microsoft, are surely shaking their heads in disgust. Many U.S. States have also voiced their opposition.

The computer industry has likely been the most competitive, innovative industry in the history of this country. After this is over, I can guarantee you, Microsoft will be back to their old tricks again. Your decision to let Microsoft get off easy will come back to haunt all of us.

Sincerely,
Wayne Quimby

Subject: Settlement with Microsoft

I think it would add insult to injury to allow Microsoft to deposit their products in the schools.

Doesn't that create unfair competition to other companies trying to persuade the schools to buy their products?

Why not require Microsoft to give a certain amount of money to the schools and let the schools decide what computer products they want to buy. In other words, they can choose not to buy Microsoft. Isn't that the point of the lawsuit in the first place: make sure the playing field is level and that consumers can exercise choice?

Subject: RE: Microsoft Judgment

As a longtime computer user and someone personally affected by Microsoft's business practices, I urge you to rethink acceptance of the current judgment. Specifically, I am referring to Microsoft being "forced" to donate \$500 million to schools and then allowing them to give their software away. This action only encourages the monopolistic practices that Microsoft has been using for years. As you know, one of the ways a company exploits a monopoly is by controlling price. Most people might think the company achieves this by charging a high price for their products, but they can also do it by charging very little or nothing. By

allowing Microsoft to give away hundreds of thousands of copies of its software, worth millions of dollars, the government is allowing them to compete with an unfair advantage. Microsoft is required to adhere to a verdict that only increases its market share and does not allow other companies to compete. Who in their right mind would buy product "X" for \$100 when they can get product "MS," normally costing \$400+, for free? And don't forget the operating system. If a school, normally short on funds, buys new equipment that requires training, productivity software, the operating system, and other items, why would they buy any equipment that didn't use this free software and free service? Microsoft doesn't sell PC hardware, but, by default, they require users to purchase PC equipment to run their OS. Apple, for example, cannot compete because they cannot sell these schools anything, hardware or software, that can take full advantage of the free Microsoft solution. If Microsoft is providing millions of dollars in training for Microsoft products, why would they want to buy Apple products, and pay for Apple training and support?

Please help us who have small businesses that support the "other" platform. Don't encourage the further development of the Microsoft monopoly.

Sincerely,
David S. Long

Subject: Fox guarding the hen house

Dear DOJ,

I am writing to express my deep personal displeasure with the proposed settlement of the Microsoft anti-trust case.

The provisions in the consent decree amount to letting the fox (Microsoft) guard the hen house. Practically every provision provides an out for Microsoft should they not like the way a particular situation effects them.

Time and time again, I have watched Microsoft yield it's monopoly to crush their competition, by either purchasing companies who over more innovation, or giving away their crapware free to destroy the fledging start-ups.

I honestly believe that had Microsoft not been allowed to cut such a wide swath across the technology industry there would be more companies with a wider array of products—all competing and therefore yielding better products. Microsoft has not help technology expansion—it's monopoly lets them charge whatever they want and there for makes technology more expensive for everyone. They have yet to show that any of their products released actually was worth the price they asked. The settlement does nothing more than reward Microsoft for it's behavior by giving them the go ahead to continue these practices legally. They've crushed countless hopes and dreams, hampered innovation (save for Apple Computer from which Microsoft steals every idea), and profited from a strangle hold on technology. Regardless of current economics or changes in the competitive environment, Microsoft should pay for their indiscretion, possibly be broken up, and face stiff penalties should they revisit their illegal practices.

I hope you seriously consider letting this fox off the hook.

From: Wendell Shackelford
To: Microsoft ATR
Date: 11/21/01 6:46pm
Subject: MicroSoft Settlement

To Attorney General Ashcroft,
I am extremely disappointed in the leniency of the proposed settlement with the MicroSoft corporation.

I have followed this case from the beginning. At every opportunity Microsoft has shown contempt for the law.

They violated the consent decree regarding the illegal tying of Internet Explorer and Windows, and when taken back to court, falsified evidence in an attempt to prove that the web browser and operating system could not be separated. Their offer to provide a broken version of windows without Internet Explorer clearly shows their unrepentant attitude.

When it appeared that the case was going against them, they mounted an artificial "grass roots" campaign by having employees of their publicist write letters to the editor on their behalf without acknowledging the conflict of interest.

The Department of Justice has made a very strong case, and the weakness of the proposed settlement is insulting.

I am proud to say that my Attorney General, Bill Lockyer, understands the importance of this case and the critical role of the antitrust laws in creating a free and fair marketplace.

A monopoly is never good for the economy, and that should be irrelevant in the pursuit of justice in any case. I urge you to continue to prosecution of Microsoft.

MTC-00001961

From: Yann Ricard
To: Microsoft ATR
Date: 11/21/01 7:11pm
Subject: Microsof Settlement

To whomever this may concern:
My name is Yann Ricard. I am a computer technologist with 15 years experience in the industry, seven of which running a software publishing company. I wish to provide these comments on Microsoft settlements.

Specific Remedy

The settlement should not comprise remedies where Microsoft is "condemned" to give away technology to a needy segment of our society (education, health, whatever). This would actually assist Microsoft in furthering its monopoly, by damaging any competition in these markets. In the end the beneficiary of these gifts would be harmed as well by the weakening of competition and alternative technology providers.

General Comments

While the prominent position of Microsoft has had the beneficial effect of bringing on some level of standardization in what might

otherwise have been a chaotic marketplace, it is extremely clear to me that over the years, Microsoft has had a considerable stifling effect on this nascent industry. Computers are still very immature products. They are still ridiculously hard to use and troubleshoot for "ordinary people", and have yet to fulfill many existing promises, let alone develop avenues yet uncharted. We are therefore still at a stage where flourishing of ideas is much more important than standardization.

From a national point of view, I realize that knocking down Microsoft too hard may be seen as weakening the prominence of the US in the world computer market. However, letting Microsoft run unopposed in the US may set up the long range conditions for the emergence of overseas competition that is a generation ahead.

Anecdotal Evidence

I have a very personal experience of the marketing power of a company such as Microsoft. In the early 90's, I ran a small software publishing company. Our latest software product had garnered very positive reviews in the trade magazines, and we had just received very large orders from mass marketers, such as Costco. This was a very big deal for our company. We manufactured a large amount of product specifically branded for Costco. Before we shipped the product, Microsoft announced a competing product (actually a series of products), and Costco and the other mass marketer immediately canceled their order to us in order to make shelf space for Microsoft's product. Our seven year old company had made such a heavy investment in this product based on initial market feedback that it never recovered from the financial jolt of these cancelled orders, and folded thereafter. Microsoft's product turned out to be a complete flop after all, but by then, the competition was dead. I am not blaming MS for my financial mismanagement. I bet everything on one product and lost. My mistake. What is interesting is that MS is so big that the mere announcement of a product snuffs out competition. This is exactly what happened with Windows, which in its original incarnation was considerably inferior to all competitors (who remembers Gem?).

Subject: microsoft settlement

I am opposed to the recent DOJ proposed settlement with Microsoft. It appears that the inclusion of a donation of Microsoft computers and software to schools would substantially increase marketshare for both hardware and software for the districts selected to participate. Instead, I propose that dollar value be determined, donated to

school districts to spend in whatever technological way they wish.

Further, I propose that Microsoft hardware and software divisions be prohibited from federal contract bidding for a period of not less than one year.

Let's give the few other companies with the capability a chance to make a real impact on the market!

Thank you for your efforts,

Subject: Microsoft must be stopped, yet new grievances

I own a small business, and utilize a computer in professional and personal matters. It continues to amaze me how no one will touch Microsoft as it bullies consumers and businesses.

I will limit my grievances JUST to the LAST 3 months!

1. Windows XP knowingly disables Quicktime content on websites within it's latest browsers (5.5 and 6). Quicktime is exceptionally popular (oh and did I mention it is a rival of MS technology?) Sites I previously enjoyed movie previews and software training now don't work with Explorer. The consumer be damned, I guess, is Gates mantra. Furthermore, the quicktime content on my own website won't work when potential clients take a peek. MS wants to destroy marketshare of its competitors anyway it can, and could care less about me as a consumer or as a business man.

2. Java. MS knowingly and willfully is trying to destroy JAVA by making it incompatible with its latest browsers—all in favor of its own new substitute technology.

3. MP3. Again XP avoids what is by far the most common music format in existence—clearly again to man-handle the consumer into its own competing music format. Does it matter what everyone in the public domain has chosen as its' format of choice? Not to Gates.

Let me be clear. Some might say you cannot be passionate or hateful and objective at the same time. I say to be objectively truthful about Microsoft is to passionately hate Microsoft.

Subject: Not just Americans suffering.

Hi,

I'd just like to say I think the settlement is a joke. Does it stop Microsoft from adding applications to Windows that I don't want? No. Does it stop Microsoft from constantly

increasing the price of Windows, forcing me to pay for the applications I don't want? No. The cost of PC's has been dropping rapidly for years... everything except the Operating System.. that has been going up. Also MS claims the Government has been killing their ability to innovate. Rubbish! MS buys other companies ideas then bundles them into Windows and thus forces you to buy them. I preferred Netscape Navigator, but as my new PC came with MS Internet Explorer taking up 60 megs of my hard drive (and I could not remove it!) I ended up using that.

Also, look at the likes of Windows XP... "now users get a stable OS" excuse me? Should have I now been able to expect that right from the start? No one else would get away with selling such unreliable products. Lets also not forget the Microsoft that told computer makers they had to pay royalties on EVERY PC they shipped, regardless of which Operating System was actually on it. What could they do? say no to Microsoft? hardly. And as they had to pay for it anyway, they may as well ship Windows... even if the likes of OS2 was superior (now effectively dead).

Please do not let Microsoft get away with what they have done. Please let there be a possibility of one day being an alternative to Windows. Please give me back the right to choose!

Thanks,
Tony.

PS. You might want to check that some of the Pro Microsoft letters have not come from dead people... MS has been caught pulling that trick before.

Subject: letting microsoft off easy...

Dear Sir/Madam,

I am a avid computer user. I use computers and software daily to make my living as a video and computer graphics person. I implore you to not let Micro\$oft off so easily. The recent deal to let Micro\$oft donate software to schools will be like letting the wolf off by letting him eat only the young chickens. Microsoft would love to create a stronghold on Americas education centers (traditionally a stronghold of rival Apple Computer) and what better way to do that than let them raise a generation of American kids on 1 billion dollars of "donated" software. Micro\$oft has stolen intellectual property from other companies, bundled it in their software and used their dominant position to crush the very companies that it stole from. In doing so, it has also stifled competition and reduced the choices of the Global consumer to near nil.

Please don't let them continue to do this.

Subject: Microsoft Disappointment

Hello

Exceedingly disappointed in the Microsoft settlement. The restrictions are far too weak and there are no punishments for past crimes. I have no doubt that Microsoft will soon dominate the Instant Messenger and Media Player markets—not because their products are superior, but because they are bundled with the operating system.

In a few years the courts will have to deal with those issues. Its inevitable.

Subject: Competitive Suggestion

Dear Sir/Madam,

I write concerning the Microsoft settlement.

First, I should state that I am not a U.S. citizen. This may determine whether or not you may consider my thoughts.

I am Australian. I began my university studies in computer science in 1979, and have since gained an MBA with a focus in strategy implementation. For many years I have used software from many manufacturers. I have a preference for the Macintosh platform, and have therefore experienced many of the problems that have led to the hearings concerning Microsoft's conduct.

I believe that there is a simple settlement available in the Microsoft case that could be a generic solution applicable to all software developers.

Simply, all file formats should be public property. All software should be obliged to save and open defined file formats, that could be updated by an industry committee (preferably made up of users, not manufacturers) every two years or so.

This would eliminate the ability of a dominant market player to extend dominance from one market or product to another. In the case of Microsoft, all of its file types (doc, xls, ppt, and particularly its internet protocols) would become public property.

Alternatively, Microsoft would be required to abandon its own formats and embrace publicly-owned and administered formats. This represents a simple extension of the "rtf" notion that is already embraced by the industry, and particularly, by its users.

There are many simple analogies for this notion. Here is one: We would not tolerate a road system that could only be driven on one brand of tires. If a dominant road-layer (manufacturer) defined the type of tires that could operate on its roads, excluded other manufacturers from the ability to create tires that could work on its roads, and manufactured its own, it would be guilty of anti-competitive behaviour of the highest order.

If file-types were publicly owned (just as road surfaces are universally understood),

then all software developers would be on a level playing field. Not incidentally, Microsoft could continue to thrive with a massive market share if it continued to innovate better than its competitors.

I have posted this suggestion on computer-related bulletin boards and received warm feedback, and confirmation that this represents a realistic solution, from many technical minds, many of whom are U.S. citizens.

If this solution were to be pursued, then Microsoft would not need to be split up, which would be a sad end for an extremely successful innovator.

I thank you for your consideration.

Yours faithfully,
Andrew Bayly.

From: Jim Van Dinter
To: Microsoft ATR
Date: 11/21/01 9:19pm
Subject: Justice Department failure to protect consumers!

The failure of the Justice Department in any way limit Microsoft with this agreement is an insult to that consumer community. And now we hear that you are going to let Microsoft buy out the ed market as part of the settlement. "Michael Theochaes, an educational multimedia specialist at a Massachusetts public school, decried the settlement as "anticompetitive" and "targeted at a competitor with dominant market share" in elementary and secondary schools." (www.zdnet.com) This is what Microsoft did to Netscape and is attempting to do to AOL and Intuit.

And the Justice Department is a partner to the Microsoft monopoly. Notice the word "is." We consumers believe that you are, not appear to be, but are bought and paid for by Bill and his friends. The Justice Department by its actions in this case has notified America that it can be bought.

A judge and the appeals court have both ruled that Microsoft is a monopoly and has abused its position. Now, as part of the settlement, you plan to assist Microsoft in its next conquests. There are no penalties in this agreement. Now Microsoft proposes as a part of the agreement to "donate hardware and Microsoft software to schools. This is the same as giving away Microsoft Explorer to defeat Netscape and stifle Sun and the Java programming language.

This agreement shows consumers that the Justice Department can be bought and that it is not to be trusted.

Message.asp?mid=16148539

From today's Rush Limbaugh program . . . "As part of the settlement with the government, Microsoft has to spend \$1 billion over five years outfitting poor schools with their computers and software. They're also going to cut the prices on their software for all schools. Now, don't you find this ironic?"

The reason Microsoft was in court in the first place was it was giving its product away. It supposedly had an unfair monopoly, it was everywhere, and forcing everybody out, and now in the settlement, the government is forcing Microsoft to be everywhere and give it away. In other words, the federal government is making Microsoft do exactly what they took them to court and sued them for."

Whether or not you agree with his self assessment of "talent on loan from God", he does have a point.

cheers,

Subject: Microsoft Settlement

Dear Attorneys General;

I'm a little confused by the terms of the settlement offer[s] being tendered by to, and additionally those being tendered by, Microsoft to settle the litigation regarding monopoly powers. Of particular grave concern is Microsoft's offer to "donate one billion dollars of software and hardware" as a less than honorable means to settle the class actions suits outside the Federal anti-trust suit.

Does it not strike anybody that this will only EXTEND Microsoft's monopoly? Surely Microsoft is not going to be donating Apple equipment, nor any other software/hardware combination that is outside their existing monopoly. It is clear that this would only continue to hurt American consumers by further eroding any competing platform by simply removing a marketplace. This is no different from Microsoft blanketing consumers with free add-in software that destroyed potential marketplaces for internet browsers and word processing software.

Please do not let Microsoft off without first protecting consumers, and manufacturers, from this monopoly.

Regards,
David Platzker

Subject: Microsoft settlement

As a computer user, teacher, software author, and industry watcher since 1978, it is painful to watch deals being made which fail to adequately punish Microsoft for the arrogant disdain with which it has treated its customers, business rivals AND partners since it made questionable acquisition of Seattle Blue's hack of Digital Research's CPM operating system. Microsoft has continually released products of questionable quality, supported them poorly and at disturbing costs to the consumers it purported to serve.

All of the older computer users remember early days when Microsoft would release a really faulty product, then renege on promises to update and provide corrections. The only way to obtain corrections was to update the product, at great expense to the consumer.

Most of us also remember the many innovative small companies which introduced new and excellent ways of performing tasks, only to attract the attention of Microsoft who, if unable to purchase the companies or ideas outright, created competing technologies that were not better, just designed to use Microsoft's immense power to destroy the competing companies and their ideas and leave Microsoft in control of the market. Finally, it's painful to watch the Court capitulate to the arrogance and whims of a monster company who, in the Court's own ruling, DID stifle competition and deliberately destroy other companies. Anyone, attorney, judge, computer user, customer, competitor, etc., who believes that the proposed settlement will prevent Microsoft from being up to their old tricks or showing any remorse should probably have their vision and hearing checked. They haven't been watching Microsoft closely enough and listening to what its customers have been saying for years.

Ms. Renata B. Hesse,
This letter is in reference to the antitrust suit against Microsoft. It appears to be that Microsoft will only get a slap on the wrist for their actions against the IT industry and our economy. It has been proven in court that the corporation hurts competition, hinders innovation, over charges for their products, as well as markets flawed and insecure software. How will the Department of Justice of the United States of America represent the people if Microsoft will not be broken up into

smaller companies? Since the break-up option has been removed, Microsoft has shown its aggressive, monopolistic character. It would be in the best interest of the economy and for the reputation of the Department of Justice that Microsoft is severely punished for its crimes. Otherwise, the people of this great nation will lose confidence in our judicial system. Please remember that this is the same company that used fraudulent video tapes under oath in court. This corporation lacks any code of ethics. I wish that no preference be given to them, as I expect no preference be given to me shall I make the mistake of committing of any crimes.

Sincerely,
Stephen Thomas

Subject: Microsoft Deal

Dear Sirs;

I am righting to tell you that I do not believe that this deal that is being offered to Microsoft concerning their monopolistic practices is punishment to them at all. They will be allowed to supply school systems with refurbished computer hardware that will be dependant upon their operating system, guaranteeing them a future customer as the schools will then be locked into their system. Is any consideration going into what systems the schools are currently using? If the school is currently using old Mac systems will they also be including training and support for the staff and students moving to a completely different and more complex system. This is also a market place that they have been anxious to get a good foot hold in that is currently their only true competition main market share. Sounds like this deal simply gives Microsoft the opportunity to do to Apple what it already has done to Netscape. If this was truly punishment they would be made to supply the schools with new systems based by one of their competitors like Sun or Apple.

This is a follow-up to my previous e-mail regarding the currently proposed Microsoft Settlement agreement. In particular I wish to address the \$1.5 billion donation of software and hardware. I would strongly urge that this be changed to MS handing over to the SLD 1.5 in CASH to be used in the next funding year for the federal e-rate program. This would provide a total of \$4 billion instead of the \$2.5 billion that are allocated each year. There are many advantages to this. First there is already a plan in place to distribute these funds based on school lunch programs. There are strict requirements for filing and most importantly the schools get to choose the technology that meets their needs and are not forced to use a MS solution that, once again, propagates their monopolistic position and does in fact hurt other companies in the field of academic software and hardware.

From: Moreno
To: Microsoft ATR
Date: 11/22/01 11:24am
Subject: Microsoft's tentative settlement
Name: Guillermo Moreno
Address: 13065 Thoroughbred Way
Whittier, Ca 90601
Profession: Algebra 1 Teacher

I'm writing to let you know of my disappointment in Microsoft's tentative settlement. From what I have read, how could the government agree to a settlement that allows and gives Microsoft an additional 14,000 new corporate clients. By giving cash, software and hardware (none of which hurt them except the cash), we give Microsoft clients to sell their future products to and over 500,000 future customer for free (the students). We can see how Microsoft works with their .Net plan and Windows XP (Microsoft all the time and only Microsoft services), get them hooked, then reel them in.

When Dell donates computers to schools and Universities, it's better than buying advertising time on television because each and every student gets continuous advertisement. In addition to this, Dell guarantees continuing revenues of services and products, not to mention tax breaks. School think is cheaper, but it isn't because they spent millions of dollars replacing a system they already use, millions more training, and millions more on maintenance. But since schools are very political, they do it and make some excuse-mostly their cost saving of buying new equipment. All false.

This will apply to Microsoft as well, they will have continuing crops of new clients each and every year. And as for the Education market that Apple currently holds (now as low as 30%), it will shrink even more. How does this change Microsoft's monopoly status? It doesn't. I want to thank you for standing up to the governments tentative agreement and refusal to settle with Microsoft. To really make any settlement work we need to adjust the playing field not give Microsoft a large playing field. Here are my suggestions.

1. Have Microsoft donate 1.5 billion dollars to some of the poorest schools to purchase computers from Microsoft's competitors. That means that schools should not be purchasing and/or replacing existing non Windows machines. They should be purchasing non Windows machines and creating infrastructure for non Windows networks. This could be Linux, Unix, Mac, or what ever, but there should be choice away from Microsoft solutions.

2. Using Microsoft's dominance of 98% and the industry's NGP a formula should be formulated to allow annual tax levies against them. These taxes can then be divided into three parts.

One, schools should be given continued support to continue non Windows solutions. In other words, schools should be getting moneys every year to continue to purchase non Microsoft software and products. This will allow schools to seek out products from Microsoft's competitors and allow for competition.

Second, moneys should be given to Microsoft's competitors directly to advertise

and allow people to see choice. Linux, for example, has grown in spite of Microsoft because people want choice, but most won't see it at all. Most people will only see Windows because Microsoft can easily purchase and buy advertisement time. So how are company that produce other operating system expected to survive? BeOS just died, Mac is loosing ground, how much longer can the others survive? Some will argue about setting a standard OS. Why, so that killer computer virus kills all the computers at once? We need to have choice, but if these small OS don't get larger, application companies won't make new products.

Since Microsoft got so big by eating up small companies, it makes sense to give them a chance for people to see them and not let Microsoft bury them with Billions of dollars in advertisements.

Third, give some of the money to companies that make Windows products that compete directly with other Microsoft products. Again for advertisement, such as Corel. It's not that Microsoft makes the best products, it's that people just don't know that other products exist, unless they're in the business. The fact that other companies exist at all itself says a lot about how people really don't want Microsoft products. But with all the advertisement and money spent my Microsoft to dominate, the general public doesn't really know and they continue to feed the big monster making it bigger and bigger. Microsoft and others will then claim it's what the people want, no I don't. Most new Windows based computers already come with Microsoft's Office, that's really going to make easy for people to buy competing products isn't it? The percentages and moneys is something that could be worked out, we don't want to destroy Microsoft only hurt them and increase the amount of choice out there. As Microsoft's dominance percentage decreases, their penalty should be decrease and eventually eliminated.

As we can see in Microsoft's new Windows XP, Xbox, and WebTV, they've made so much money on eliminating choice that they can began to expand their dominance into other fields. They will survive.

Now by giving them 14,000 new clients, 500,000 future customers year, and free advertising and calling that a punishment, it's just not right. Please continue to fight for the general public and for freedom of choice.

Thank you.

Subject: Re: Microsoft's Class action settlement, and Antitrust settlement
Good day!

Microsoft just can't ever seem to 'lose' anything that it's tried for. In it's 'CLASS ACTION' suit settlement, Microsoft has promised to 'GIVE' the poorest schools in the USA Free computers and software. How is this a punishment??? It is estimated that the settlement will 'cost' Microsoft \$1.1 Billion, and will benefit MILLIONS of students in the US. Firstly, the 'software' part of it will NOT cost Microsoft that much, as Microsoft's cost

for software is "NOT" the RETAIL cost. Secondly, this is nothing more than Public Relations stunt, and Advertising for the company and it's products. What difference does it make that Microsoft spends \$1 Billion in it's ad campaigns for Windows XP (as Microsoft itself claims), or if it GIVES away it's products to millions of people. The net result of this is a continued propagation of it's products domination and exposure.

The Best possible response to this (and I have abosolutely NO invested interest in this company...) is Red Hat's offer to give all those schools FREE software. I HIGHLY suggest that some consideration be given to the idea that Microsoft use the 1.1 Billion to buy nothing but Hardware and allow ANY other software vendor to participate, if they are offering FREE software and tools.

The very idea that Microsoft would 'give' as a function of it's financial penalties it's very own software does NOTHING less than help perpetuate the very monopoly that it currently holds. I'd like to point out that the very fact that Microsoft AGREED to 'ANY' kind of settlement, would substantiate the fact that the proposed remedy/settlement could not possibly be a significantly serious punishment. Microsoft is NOT stupid, and their army of lawyers will only agree to anything that will BENEFIT the company... At consumers and competitors expense.

In legal circles, as history would dictate, Microsoft has NEVER, ever agreed to any kind of remedy in its long history of offenses that would even remotely hinder the way it conducts business. And this new settlement continues this trend.

If anything, what has been learned in this entire antitrust case is, that if you are an entity that in itself has more financial muscle and endurance than even the government and the 19 states combined, you will eventually reach a point where your opponents will run out of money and 'steam'... As did the DOJ! And the net result will be instead of a serious punishment being dealt, you will get a mere 'scolding'. And will be able to continue your practices with MINIMAL intervention. Although this idea (by the DOJ) was quickly disregarded, I think some credence should be given to the REMEDIAL idea that Microsoft should BE FORCED to release a version of Windows XP WITHOUT all the "UNWANTED" bundled software.

It is NOT FAIR to 'force' people to pay for features they will never use. The idea of an oversight committee overseeing Microsoft's internal activities, is doomed to absolute failure. Please do not take these concerns lightly, as the impact of the proposed settlements will greatly impact the technology industry as a whole, and consumers.

Thank you for hearing/reading my concerns!

Subject: What a shame!

Dear Sir/Madam,

I was very disappointed to hear about a shame in wich DOJ put itself by accepting settlement with Microsoft.

Microsoft predatory politics and practice greatly damaged the development and innovation in computing. If not for Microsoft we would have better and faster computers, friendlier operating systems and better software. By settlement US Department of Justice practically encourages Microsoft to continue its anti competitive practice and harm against consumers. Unfortunately instead of protecting consumers, DOJ decided to protect monopoly. Fortunately we can hope that 9 courageous states that disagreed with DOJ will continue efforts to bring Microsoft to Justice. I am proud that a live in one of these states.

Subject: Microsoft Settlement

To whom it may concern:

This settlement does nothing to redress the losses to the individual end user and small hardware/software companies.

Individual customers, including myself, have spent hundreds of frustrating hours trying to get Microsoft Windows software to work then buying the next version of the software because something that was available was simply left out of the previous software apparently so it could be in a later upgrade— (ICS in win98se is one example). The upgrades for windows continue to be \$100-200 or so each. At the same time hardware has dropped at least 10X in price while there has been a 10x increase in hardware functionality. Each upgrade of windows also consumes a lot more space and processor time for only slightly increased functionality. Most of the improvements were originally the intellectual property of other companies that was bought or just appropriated by Microsoft. Since windows remains a monopoly the market cannot control the price. The government must therefore control the price for windows and it must drop equally with hardware costs— individual consumers should be offered the same price as hardware companies. Service should also improve dramatically. I have bought upgrades for windows (95, 98 (x2), 98se (x4), ME (x3)) for each of several computers—however over the last few years when I call Microsoft service because the software has problems the clear implication is that I first need to prove I have a separate copy of windows including upgrades for each computer—which I do—then I get a solution that does not work.

Developers of Microsoft office, Microsoft Games, and other software also have far more direct access to information concerning the windows operating system than other companies in the United States. I agree that the code is should be a trade secret but all United States companies and individuals that develop software need to have free access to at least how the source code works for the

only operating system available to run their software. Perhaps DOJ should also keep copies of all source code in trust at a site other than Microsoft. DOJ employees will essentially be Microsoft employees if they do everything at the Microsoft campus.

The final comment I have is the corporate culture of our country is changing so short-term gains for stockholders that buy and sell rapidly (Including executives that use stock options and sell them the same day) is more important than preparing for the future. Microsoft does seem to invest in some basic research—that is good. But it is clear that they prefer to buy the ideas of others. The settlement should encourage basic research at the college/post graduate level and not just bring everyone up to the same mediocre level, as will be done by just giving Microsoft software to poorly performing primary and secondary schools.

Very Respectfully
Chris Stacy

Subject: you're letting Microsoft off the hook
Why are you letting these criminals off so lightly?

I am an independent web developer and a multi platform user who greatly fears that Microsoft will continue to abuse it's position in the market to block competition and force usage of it's products. I also believe based on their previous behaviors that MS will eventually use it's position to invade my privacy and/or charge me a Microsoft tax to use the internet simply because they control such a tremendous portion of the market that I have no choice. Their recently announced "generosity" in offering to indoctrinate our children into their ongoing de facto monopoly as a settlement is proof enough to me that they will continue their anti-competitive behaviors. If the DOJ allows this, they are doing further injustice to the future of competition for our industry and for the future of US business in general. Stop them now before they are more powerful than the government itself.

I couldn't put it more better than the columnist below so I will just point you directly at his comments.

Subject: Microsoft Settlement
Office of the Attorney General:

I was very disappointed in the Federal government's settlement in the Microsoft anti-trust case and I hope California will continue to pursue a more severe remedy. I have a suggestion for a part of a remedy. Microsoft should be fined a large amount of money, and that money should be used to help fund software companies in California. Microsoft should be required to help put software companies *in* business instead of out of business.

The money should be used to set up a fund and an independent non-profit organization to administer it. The money would be used by startup software companies or by existing companies developing new software. It could be dispersed as grants, loans, investments, or however the organization sees fit. Some restrictions would have to be in place, such as limiting the funds to companies developing software for Microsoft platforms. Additionally, Microsoft could be required to distribute, on its operating system media, any software developed under this program that a software company wanted distributed. This plan has benefits to software companies, Microsoft, and the State of California. Software companies would have this additional source of funding available in a market where venture capital is not as available as it once was. It would encourage the type of innovation and variety in the software market that led to Microsoft's success in the first place. By making this money available, California would encourage companies to set up software companies in the state, mitigating some of the recent layoffs.

I believe there are other restrictions that should be required as part of the remedy, and the above suggestion is not meant to replace them. Some of the restrictions have been addressed in the Federal settlement, and other, stronger restrictions are needed. However, I do not think an extremely strong punitive action in the form of a massive fine is uncalled for, especially if the money can be put to a constructive use.

Thank you for your consideration.
Sincerely,
Bruce M. Binder

Subject: microsoft settlement

Hi,
I had the privilege to read the settlement documents for the case against Microsoft. To me, it seems quite a joke that our Department

of Justice "settled" in this manner. It leads me to purport that Microsoft has the DoJ in its pockets. I do not see any substantial penalty for Microsoft in this "deal". In fact, I see the DoJ helping Microsoft to continue its unfair practices, given the very vague language used in the settlement, and few clearly defined "penalties" for Microsoft. The "penalties" that are clearly defined, are in my opinion, more supportive to Microsoft's business than a true penalty for its past business practices. The DoJ should reconsider its standing on this case, and not allow itself to be bought by Microsoft.

Thanks,
Jibu Abraham

Subject: Regulate the computer industry!

I can't believe what I'm seeing! First, the Supreme Court lets Microsoft off on conditions containing loopholes big enough to fly a B-52 through, and now the States are letting Microsoft walk with the condition of a \$1 billion educational 'donation' settlement. This settlement contains refurbished PCs and Microsoft software that will surely take great strides in driving Apple Computers out of the education market, furthering Microsoft's monopoly. Could these settlements have actually made matter's worse for what's left of the computer industry?

As a unix user, It makes me sick to see 30 years worth of standardization efforts crumble as an unchecked monopoly forces its closed systems into the server market. Where unix and linux have innovated, Microsoft only sees the opportunity to build a closed system upon the work of others and drive the pioneering developers out of business. I'm really too enraged to put into words.

Why is the FCC not maintaining standards for internet protocols? What if nobody regulated the transmitter power for TV and radio stations? Whoever could afford the most powerful transmitter could overpower the transmissions of any competing networks. Every time a competitor upgrades a transmitter to reach its market, the market leader could upgrade its transmitter to dangerous levels of radiation so that only their broadcasts could be picked up on the airwaves. Eventually, in these unregulated airwaves, even the military would have to bow to the broadcast leader if they needed to do a radio transmission. Now we have XP, every system sold will have all ports exposed to viruses by default. In these trying times, people are jailed for harboring or supporting terrorists. Now Microsoft is intentionally making the most viral operating system on the planet even more virus friendly. Why? Perhaps to place the blame on TCP-IP and use the misplaced blame as an opportunity to introduce yet another Microsoft only 'standard.'

See: <http://www.pbs.org/cringely/>

First Java, then the 'embed' html tag, Microsoft has blatantly chosen to abandon existing standards in order to expand market dominance. The United States have chosen not to regulate any sort of standards in order

to expand Microsoft's market dominance. Granted, some people like to be treated like sheep and have a corporation decide how they should exist in the emerging digital age, but these mindless zombies should not dictate the future of the rest of the world.

So the US has sold out to Corporate America once again. The digital age will be a slave nation of 'subscribers' to Microsoft's corrupt agenda of exclusion. We shall no longer be the technological leaders of the world. Perhaps Europe will have more common sense when they try Microsoft. I can only hope that they can regulate the crimes Microsoft commits abroad, support competition by funding Open Source development, or at least put their money where their mouth is by not using Microsoft products and directly supporting corrupt business practices.

I've never been so ashamed to be an American.

To: Microsoft.atr(a)usdoj.gov
Date: 11/22/01 2:12pm
Subject: Redhat proposal change to the microsoft settlement.

The portion of the MS settlement allowing them to donate their software to schools will do more for benefiting MS than helping the people involved. They will simply be able to inculcate the poor youth with MS software.

Before accepting the MS software/hardware and training proposal, please consider the Redhat proposal. Let MS donate the same amount of money, but just use it on hardware and training. Instead of using just Redhat linux also include Suse, Caldera, Turbo, Debian, if they are willing. If a person understands Linux usage and administration, then Windows is a cake walk. The training on Unix will give them a much better understanding of computers and give them a better understanding of technology. MS software is designed to isolate the user for the computer, opensource software generally is not.

Please do not allow MS to further their monopoly as part of the settlement. Allow them to help out others, but not to their specific betterment.

Thank you.

Subject: Proposed settlement

To Whom it may concern:

The leeway engineered into this settlement agreement is transparent and disturbing. Aside from its general inadequacy in addressing the bases of the expensive and hard-fought case that the DOJ successfully presented against Microsoft, the definitional vagueness will allow even greater abuses than in the past. Microsoft will be unhindered in synthesizing and applying its own definitions to inherently fuzzy and rapidly evolving technologies.

As a single glaring example of the malleability of the terms of this settlement, refer to section III, J, 2 (b); therein Microsoft is essentially given license to restrict its own cooperation in sharing information on the basis that such information is not for a legitimate business purpose.

Microsoft could clearly argue that certain open-source development groups had no such purpose in spite of the fact that such development efforts are clearly in the best interest of the American people.

To clarify: the open source Samba service, reverse-engineered to interoperate with MS client PCs and servers, outperforms Windows

2000 Server file services in a number of scenarios. Samba is clearly a useful product, available for little or no cost, the development of which may have had no "legitimate business purpose" under the terms of this settlement.

Thousands of organizations rely on Samba to host proprietary Microsoft file services, despite the fact that Microsoft developed the protocol and offered no assistance to Samba developers. The long and short is this: Microsoft would prefer that Samba didn't exist, and is given license under this settlement to make such competing technologies unavailable by leveraging the power of a huge base of installed computers and MS software against such encroachment.

The solution to this specific issue is to require Microsoft to reveal all proprietary communication protocols to all interested organizations. The exceptions listed in the settlement (security, native server comm, encryption, etc.) are constructed solely for the benefit of Microsoft.

The open source community, for example, has developed stable, highly secure protocols whose sources are available for perusal by virtually anyone.

In fact, full disclosure is in the public interest because it inherently promotes system interoperability, robustness, and security.

The above example is not in any way meant to be comprehensive; rather, it intends to be illustrative of the flawed construction of the proposed settlement in a single context, and how it might be effectively remedied.

As a resident of Seattle and an advanced user of Microsoft consumer and commercial products, I want the company to succeed for a variety of fairly obvious reasons. However, this shouldn't be attained by the application of anticompetitive business practices that the DOJ has already proven to exist.

Excellent alternative technologies should be encouraged by any settlement; this proposal fails utterly to allow such advances to develop in a competitive, fair environment.

I use Apple products extensively in addition to Wintel systems, and am rapidly expanding my use of UNIX-based and open source software. In the real world, there is a need for each platform; this settlement undermines the potential for best aspects of each to emerge in ways that benefit people, businesses, and organizations.

Sincerely,
Adrian Verwolf

Subject: USA Today Article Feedback:
Microsoft criticized for private suit settlement

Greetings,

As an IT professional, I'm appalled at the Microsoft settlement. You've basically given Microsoft an opportunity to saturate schools with massive pro-Microsoft product marketing. This type of marketing is what they've done all along; This is no punishment! Their products are founded

upon proprietary operability with other Microsoft products, at the expense of operability with competitors products. Don't get me wrong, I use both Microsoft operating systems and software products, but the two are too tightly coupled. The public would have been better served had the Operating Systems group been split from the Software group. That would truly have fostered many potentially lucrative and beneficial partnerships within the industry.

Date: 11/22/01 4:34pm
Subject: Microsoft continues to hurt consumers by illegally extending monopolies

The proposed settlement with Microsoft is completely inadequate. Microsoft continues to hurt consumers by illegally extending monopolies, and your proposed settlement will do little to change that.

This happens in the word processing market in which they now use bundling arrangements to help MS Word and Office displace the competition. Having the documentation of a huge percentage of the world in a proprietary format is bad for our security and for innovation.

Microsoft is now aggressively trying to take over the Internet services market with its Passport and .NET initiatives. In particular, the Passport system puts Microsoft in control of a vast amount of valuable and confidential consumer information. But Microsoft has demonstrated not only the likelihood that it will use that position to the detriment of fair competition, but also that it is incapable of protecting the privacy of that information.

III.J: J. No provision of this Final Judgment shall... Require Microsoft to document, disclose or license to third parties: (a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria Exempting security-related portions of APIs from the API disclosure requirements is not only disastrous for fair competition but also bad for our security. Time and time again it has been demonstrated that "security through obscurity" is bad practice, since the inevitable design flaws and bugs get broadly embedded in the marketplace before the flaws and exploits are discovered and developed, leaving more at risk.

The way this is written, in fact, encourages Microsoft to use protocols which are weak and thus would be protected from disclosure, since disclosure would compromise their security and trigger this provision.

Please reevaluate your position, listen to the state attorneys-general, and ensure that Microsoft cannot continue to abuse its monopolies. A split-up looks like the best approach—into three companies to pursue the OS, the applications, and Internet services.

Thank you,
Neal McBurnett

Subject: Microsoft Settlement

I was amazed when I heard what Microsoft was proposing as its "punishment" for exerting monopolistic practices. The offer is insulting to the US Department of Justice, the country's legal system, and ultimately the American people. That they would advertise offering \$1.1 billion in software (software that is readily reproducible for less than \$1 per computer) is absurd. That they would seek to exert their monopoly on future generations by exposing them to "their" way of computer usage and their way alone, borders once again on the criminal. I would hope that those far wiser and more learned than me can see through such overt deception. If not, we have problems far graver than one arrogant software company.

One additional comment. As a long time professional in the software industry, Microsoft's agreement to make available part of its source code to some of its distributors also leaves me troubled. The original Windows operating system, though a huge franchise, is being replaced by new code. This means that Microsoft has given to the world something that they see has little value to their's or any other organization. Microsoft is the dominant player in the software industry and as such has provided an electronic lingua franca to the world. I would hate to see their demise. I would also hate to see their monopolistic practices continue to squelch the inventiveness of those ideas that Microsoft eventually steals and markets as its own

To: Microsoft ATR
Date: 11/22/01 3:20pm
Subject: Microsoft Settlement

Dear Sirs:

I am writing to express my concern about the recent proposed settlement ("Proposed Final Judgment") of the antitrust case against Microsoft. I believe that time pressure, and perhaps economic concerns related to the events of Sept. 11, have resulted in the antitrust division of your department making a hasty deal that will ultimately harm consumers. I am seriously concerned that we are all witnessing a repeat of the inadequate consent decree of July 1994.

I applaud the state attorneys general who refused to sign this settlement because it delivers no more than a slap on the wrist to a company that has repeatedly engaged in egregious illegal anti-competitive practices, as found by Judge Thomas Penfield Jackson, and upheld by the court of appeal. The proposed settlement states that the code that constitutes Windows "shall be determined by Microsoft in its sole discretion." In conjunction with the provision that Microsoft need not reveal communication protocols for non-trademarked middleware that is not distributed separately from Windows, this

gives the company a large loophole through which it may continue its practice of abusing its (illegally maintained) monopoly by "extending, enhancing, and exterminating" competing software, to the detriment of consumers. There are other large loopholes as well; for instance, Microsoft need not reveal communications protocols to open-source developers or anyone else the company deems not to have a "viable business". Windows XP, with its bundled technologies like Passport, will simply give the company more power to extend its monopoly into other areas. Frankly, I am stunned and amazed that it seems you intend to allow this.

Further, the enforcement measures according to the proposed settlement are inadequate because the three member Technical Committee is not held sufficiently accountable, and there is no easy way to impose penalties for clear infractions, other than launching a further lawsuit. Not only that, but the proposed settlement does not "deny the defendant the fruits of its statutory violation," which is what a remedies decree ought to do according to the Supreme Court. Again, your department seems to have failed in its duty.

I do not believe that entry of the revised proposed Final Judgment will serve the public interest, and I urge you to withdraw your consent.

Yours truly,
Dan Ryder

MTC-00002009

From: Wayne Hammett
To: Microsoft ATR
Date: 11/22/01 7:29pm
Subject: Comments on proposed Microsoft Settlement

The proposed Microsoft settlement has several flaws and loopholes that should be rectified before being accepted by the court.

(1.) The terms +ACI-reasonable convenience+ACI-, +ACI-reasonable opportunity+ACI-, +ACI-reasonable notice+ACI- are much too vague and should either should be replaced with a specific time period, or reasonable should be defined in the definitions section of the document as a time period not to exceed 30 days.

(2.) The technical committee should select and appoint by the court from a list of qualified persons nominated by Microsoft, the Justice Department, and the general public (including Microsoft Competitors).

Each of the three groups above should nominate at least five candidates. The court shall have the option to select any five candidates from those put forth by the general public, or name individuals to bring the nominees of the general public up to five. The court shall have the government investigate the background and qualification of all nominees and report their findings to the court. The court shall appoint one technical committee member from each of

the three groups of nominees, to form the three person technical committee.

If a member of the technical committee resigns or is unable to serve for any reason, the court at its discretion may choose a replacement from that member's sponsoring group, or may request five new nominees be named to choose from.

Upon expiration of the term of service, the same procedure shall be followed to appoint a new technical committee. A committee member may not succeed himself.

(3.) Technical committee members should be officers of the court. They should be permitted to testify, and their work product, finding, and recommendations should be admissible in any court action relative compliance with the Final Judgement.

(4.) Five years of oversight is too short—I recommend a minimum of 10 years. Microsoft has engaged in egregious anti-competitive behavior for at least 20 years, violating previous court orders for part of those years. Rather than fostering innovation, they have suppressed it, killing off good software by bundling second rate imitations into to windows +ACI-for free+ACI-. Actually, with the cost of Microsoft Software getting higher with each new version of Windows while the cost of other Manufacturer's software has stabilized or fallen, the cost to the public has been substantial. Why let them off with a slap on the wrist?

(5.) The provision that allows Microsoft to discriminate against companies that haven't sold a million copies in the U.S. and survived a year is absurd, and should be deleted. The definition of covered OEM's is likewise too restrictive, and should substantially be broadened.

(6.) API's should be disclosed at the time of the First beta release, or at the time 50,000 copies have been distributed outside of the Microsoft organization. Changes in API's after disclosure should be published to all internal and external parties at the same time. Developers using Microsoft API's should not be required to provide their code to Microsoft.

(7.) Microsoft should not be able to terminate any licensing agreements with hardware or software manufactures without court approval.

(8.) Developers should be able to place their icons on the desktop, regardless of whether Microsoft has a competing product.

(9.) Users should be able to configure their system to use alternates to Microsoft Middleware without having to confirm their choice for each use or session. They should be able to specify their preference on a control panel or similar mechanism, and change it at will. For instance, I want to use Sun's Java Virtual Machine, rather than Microsoft's, preferably by deinstalling Microsoft's and installing Sun's.

(10.) Developers of non-Microsoft middleware should not be required to support Microsoft's Active-X controls if they can accomplish the same results within their own code without interfacing to other operating system services. Active-X controls are a security risk, and should not be crammed down anybody's throat.

In general, I consider the Justice Department agreement a sellout, but what

can you expect when Microsoft donated over +ACQ-1 million to republican candidates in the last election.

Subject: Antitrust Microsoft settlement
This is to express my opinion about the suits against To continue your efforts against this company's ways of getting over their competition. But sadly, it seems like Microsoft is now getting away too easily from all these lawsuits. I even think that this settlement in which Microsoft has to give away computers and software is not going to give more market shares to anyone but Microsoft. Sure, they pretend that the schools will have the choice to take the money and spend it to buy from other companies, but what are we expecting to happen? They will surely try to push their own products on the line and then, they'll have an even bigger monopoly. (what will happen with alkl those students who will probably only work with Microsoft's products, they will likely continue to use only these...)

And what about this new Windows XP. It's getting worse to use other products when you realise that they try to force you to use their own Windows Media Player, their own MSN Messenger, their own Internet Explorer, etc... over other products more difficult to install because of supposedly "security issues".

I think Christian Loweth is right when he says that "It seems to me that Microsoft has indulged in not only anti-trust violations but racketeering as well." and I think this case is not solved. So, if nothing is done, it may be possible that other groups or countries will not continue their efforts against Microsoft in this antimonopoly and antitrust case because it wasn't solved properly.

Thanks for the time you take to read this.

Subject: Microsoft vs Department of Justice: Feedback

to whom it may concern
As a Canadian citizen I understand my comments on actions of the American Justice Department are somewhat misplaced. I have however watched the DoJ vs Microsoft lawsuit unfold with interest and some trepidation. I have felt on many occasions that the progress of the technology sector has been both helped and hampered by Microsoft. The real issue in the case however is the degree to which the consumer has been affected. I can claim that, in my opinion,

Microsoft has limited my options as a consumer. Microsoft road blocks have cropped up many times over the course of the 12 years I have used computers professionally and as a hobby. It has been a source of frustration that good 3rd party software has, time and again, been compromised by Microsoft practices.

My own government seems less aware of the consequences of a monopoly in the arena of Operating Systems and Web Browsers. My own experience with these items has led me to believe that they are more important in a national or global sense than just another consumer appliance. I applaud the actions undertaken by the Justice Department and hope that Microsoft's apparent anti competitive practices are given great weight and that a remedy is chosen that prevents Microsoft from continuing to do business in the same manner.

Sincerely
Harry Bardal

Subject: Microsofts proposed settlement is wrong for the US

Hello,
I feel very strongly that the proposed settlement by Microsoft is wrong. It is not punishment for monopolistic practices to extend their monopoly to schools. It does not prevent further Microsoft monopolistic tactics. It hurts the few potential competitors that are left. THE PROPOSED SETTLEMENT IS WRONG.

I urge you to correct this misguided action, while there is still a chance for competition before all of the competitors are wiped out. We the people of the United States deserve better than the Microsoft monopoly.

DO YOUR DUTY, THROW THE PROPOSAL OUT, DONT BE PUPPETS OF MICROSOFT. BREAK UP MICROSOFT.

Thank you

Subject: DOJ-Microsoft Objection

To whom it may concern:

I object to the DOJ-Microsoft settlement. To me, Microsoft's coercive suppression of competitors is actual racketeering, and the DOJ settlement therefore is a capitulation. Please continue to pursue justice.

A case can be made, I believe, that the Microsoft monopoly contributed measurably to the current recession. The largest engine driving the dot-com "irrationally exuberant" expansion was the euphoric assumption that Microsoft had excelled on its merits and was unstoppable, while the truth was its unstoppable and ruthless suffocation of competitor "air supply". Microsoft's racketeering "capitalism" is not healthy, it is tyranny. The healthy rivalry of true competition results in slower growth inherently, but growth that is more stable and longer-term and that leads to better products. Denial of choice devolves to the inability to

choose better. Not only must Microsoft itself bear a comparable brunt of this recession, cessation of these practices will contribute measurably to its reversal.

Subject: microsoft

I do not support such light punishment of Microsoft. A slap on the wrist will serve no purpose at all— it will probably just inflate MS' ego even more. After all, they screwed tons of people (including their consumers) and are getting away with it.

I work in the video game industry. You may be aware that this is an industry that Microsoft has recently entered with their new

console system, the X-Box. Quite frankly, I feel that they will conquer the video game market with their new system. But it will not be because of the quality of their products, or because of brilliant business practices. It will be because they have twenty thousand times more money than anyone else, and because they will ruthlessly screw everyone else in the business. Is this a good, American way of doing things? Is this letting the best man win? No, its lying, cheating, and stealing to get your way. The trials provided substantial evidence of Microsoft's dirty business tactics. By allowing Microsoft to get away with a slap on the wrist, you are showing the world that we essentially approve of playing dirty to get ahead. Not only this, but you set the nation and the world up to be ruled by Microsoft for the rest of our lives. Bill Gates has said before that his dream is to own every electronic device in the world— he wants everything digital to have his name on it. Are we going to give him this power? I don't want to be forced into a position where I have only one platform to develop games for— Microsoft's. I don't want to only have one choice of software to use to develop my games— Microsoft's. I don't want my bloody toaster to have a microchip in it that is running a version of Microsoft Windows. Please stop this from happening, or at least do what you can. In America, being a bastard should not be admirable behavior.

Thank you,

Dear Madam or Sir:

Since you are still hearing on this case, this article says it better than I could:

OPINION:

Microsoft on Truth Serum—the Antitrust Settlement Examined

Contributed by Tom Nadeau
osOpinion.com

November 20, 2001

The proposed Microsoft agreement looks good and feels good, but listen to how the definitions in the agreement would play out in real life, and then the agreement doesn't sound very good for competing software companies or consumers.

The recent antitrust settlement between the U.S. Department of Justice and software monopolist Microsoft (Nasdaq: MSFT) has enough loopholes to sew a circus tent.

The settlement actually grants Microsoft extra legal powers beyond what it had before the trial. Don't think so? Well, here is a simulated conversation that may convince you. This is what I believe a Microsoft official would say to a neutral examiner asking questions about the settlement agreement, if the software giant were under the influence of a truth-enhancing substance.

Microsoft on truth serum. Listen in.

Set You Free

Examiner: "Let us start with the definitions, shall we?"

Microsoft: "Of course. Words mean things, whatever we want them to mean."

Examiner: "A. Application Programming Interfaces (APIs)"

Microsoft: "APIs running on one operating system (.NET) and calling a different operating system (on your PC, remotely via the Web) are exempt from regulation."

Examiner: "B. Communications Protocol"

Microsoft: "Since the settlement exempts code to remotely administer Windows2000 Server and its successors, all our communication software will be embedded with pieces of this code. We will not have any Communications Protocols that can be regulated according to this definition."

Legal Loopholes

Examiner: "D. Covered OEMs"

Microsoft: "The 20 highest licensees? Does that mean licenses paid for, licenses delivered to customers, licenses committed to, or licenses actually registered by the end user?"

Examiner: "H. IHV (Independent Hardware Vendor)"

Microsoft: "The settlement says they're only 'independent' if they depend on us for Windows. Unless we already 'own' them, we don't have to give them anything."

Examiner: "I. ISV (Independent Software Vendor)"

Microsoft: "The settlement says they're only an 'independent' if they depend on us. But if they only sell software for non-Microsoft operating systems, we don't have to give them anything. They will never be able to make their non-Windows products interact with our Windows-only products."

Hidden Message

Examiner: "J. Microsoft Middleware"

Microsoft: "The settlement says it's only Middleware if it has a X.x version number. But we don't use version numbers any more. We use year numbers. So our Middleware is not regulated by this settlement."

Examiner: "K. Microsoft Middleware Product"

Microsoft: "The settlement calls it a 'middleware product' if it is embedded in the operating system.... But it's just 'middleware' if it is distributed separately. If it is distributed by a shell company controlled by Microsoft through stock ownership, then it's not 'middleware' because it is not distributed by Microsoft or a wholly owned subsidiary."

A.P.I. Arrogance

Examiner: "L. Microsoft Platform Software"

Microsoft: "We'll ship the APIs as a standalone product through a third-party company, or sitting on a Web server somewhere. But we don't have to divulge any details of the APIs because they won't have a version number.

So they're not 'middleware'—and therefore are not covered by 'middleware' clauses. Since they are not part of Windows, they are also not a 'middleware product.'"

Examiner: "M. Non-Microsoft Middleware"

Microsoft: "Sure, like we wouldn't give away free copies of comparable 'Microsoft

middleware' to put them out of business.

Except that it's not 'Microsoft middleware' if it has no version number, so it would not be regulated by this settlement."

Examiner: "P. Operating System"

Microsoft: "If we ship the APIs separately—on the Web—then it says that Windows is not even an operating system! It's totally unregulated!"

More Monopoly

Examiner: "Q. Personal Computer"

Microsoft: "Right, only PCs are covered. They let us extend our monopoly into game boxes, TV, servers, handhelds, phones, PDAs, whatever."

Examiner: "R. Timely Manner"

Microsoft: "We have to deliver product info as soon as we ship to 150,000 beta testers per version. However, we no longer beta test with more than 148,000 testers per version."

Examiner: "U. Windows Operating System Product"

Microsoft: "Ha! Doesn't even cover DOS-based stuff. We can keep spreading that stuff around any way we want. Oh, and that last sentence... We can put anything we want to in Windows—any code owned by anybody! Yes, Just give me that last sentence!"

Best For Last?

About that last sentence.

The slickest part of all is to put the definitions at the end of the document, where they legally overrule all that comes before, and to place the loosest definition of all at the very end of the document, slyly positioned to trump any preceding malarkey.

That last sentence ostensibly was inserted to protect Microsoft from having to ship code that it did not choose—so that Microsoft would not have to ship a rival company's code, such as Java or Netscape, for example.

But Microsoft can choose to claim that a competitor's product *is* a Windows Operating System Product, because the last sentence says that the court grants Microsoft the "sole discretion" over "the software code"—not just "the Microsoft software code"—that Microsoft chooses.

Above the Law

While other companies may have their claim to software ownership reviewed by the courts, this "settlement" exempts Microsoft from such review—immunizing Microsoft from copyright lawsuits.

This is a license to hoist the Jolly Roger and sail the seven seas, pirating any rival code that Microsoft chooses.

Peace,

Geoffrey McCabe

Date: 11/22/01 3:05am
Subject: Microsoft—proposal

Dear Sirs,

1) It is my belief that free software, even if donated for charitable causes is not a remedy: (<http://news.cnet.com/news/0-1006-200-7936780.html>—proposed settlement).

I am working for a large organization myself. If you would donate software, we wouldn't need to budget for it. This means when after a few years the license expires or upgrades are needed; we would face enormous challenges to create a budget. Because we would have to create this budget from scratch, we would never be able to justify the expense for alternate solutions, because upgrading the free software will cost less. This creates a de-facto lock-in.

2) What people really need:

My organization owns about 120 servers running NT 4.0; has 3000 users. We are currently preparing for the Win2000 rollout at great expense of manpower, licenses and hardware upgrades (server replacements). We still have 2 servers running Win NT 3.51 which is no longer supported. The migration to Win2000 (later XP) will takes us 3–5 years until the last NT4.0 PC is removed from our premises. As you may know with the release of WinXP Microsoft will stop releasing fixes (including security ?) for Win NT 4.0 because “we only support one version back, which is Win2000” [sic].

3) What everybody would benefit from:

To have regular updates for Windows NT and Office98 available— this includes fixes—for at least 10 years from now. This would force Microsoft to make their stuff work. If the quality of their aproducts is as good as they always claim, this should be a minor issue.

You may know that even with a “Premier Support Contract” (\$30.000 a year) you are still not entitled to receive NT4 fixes. I have two minor issues discovered early 2001 which Microsoft support refused to fix.

Currently Microsoft refuses provide updates for new technologies (FireWire for WinNT for example). On the other hand, third parties don't have enough information.

4) Suggestion:

Microsoft must provide support for Win NT4 and Office98 until 2011. Of course, they could charge for this support around \$50 per incident seems reasonable. Unlike current

support, every confirmed bug must be fixed if the customer pays for the incident. Fixes for known bugs are available for \$10; discount for 10 fixes 20%, 50 fixes 30%, 100 for more fixes 50% (MS releases about 300 NT4 fixes per year). Service-Packs for NT4 and office \$25. They must provide anybody with a source-code license for NT4 for \$1000 (under NDA of course).

Conclusion:

Good for MS—they are forced to provide support. Good for business and consumers; they are not forced to upgrade or buy new hardware. It is ensured that the current software remains functional and secure. regards,

Thomas Berger
PS: If you really want to penalize Microsoft, include Windows 98 as well.

Subject: Microsoft settlement

To whom it read and it may concern,
I am shocked regarding the Microsoft settlement last week. Instead of punishing Microsoft for their monopoly strategy you are giving them a green light to basically kick Apple Computer out of the education market by donating money in Microsoft products to this industry. In that order, you give Microsoft the way to continue business as usual. So, you are supporting Microsoft's by making them an offer like this, instead to punish them.

It is not the way to give Microsoft the change putting more of their product into the education market. If you want Microsoft to donate a lot of dollars, so let them do that to a neutral institution like food for 3rd world countries or something in that order.

What impression do you give Microsoft (and others like them) here? By putting more Microsoft products in (needy) schools or education centre, you are giving companies like Apple Computer no chance what so ever to sell their product in the education industry, hence they start to monopolize that industry as well.

A concerned Dutch citizen.

Subject: MS settlement is a travesty of justice
TO: US Department of Justice-Microsoft anti-trust comments: microsoft.atr@usdoj.gov

I've just read the news on the proposed one billion dollar settlement. As I understand the deal, this seems to me to be very much in favor of Microsoft. In addition to few to no changes to their behavior, a portion of the punishment is, in fact, a real benefit to them. The resolution including the dissemination of their software and compatible hardware, training to use their products, and loads of their often bundled software, seems to fly in the face of the very point of the trial. They have been declared a monopoly for illegal tactics that were specifically meant to increase their market share, for bundling products for free to get market share, and for illegally blocking other's products to gain market share, and now, a good portion of the settlement specifically increases their market share of both the OS and their bundled products.

I believe this settlement should be declined. Microsoft has once again gained the upper hand and will only benefit. The settlement should be made in order to change their behavior, this does nothing to address their behavior and will not change it in the future, allowing them to continue to bilk the public.

Subject: Microsoft not a monopoly ?

Dear Sir/Madame,
I found your email adresses via the internet. I may be somebody from the Netherlands but the outcome of this trial between Microsoft and the different states will also effect my computer use in a positive way. Microsoft is plain and cold monopoly. They have a market share of more then 90% and they move further in other directions. like the handheld device market, server markets... Slowly with there standards they are breaking up a free world, the internet! Some webpages can only be succesfully viewed with the browser internet explorer. Some governments run a large part of there offices with Windows. With this comes higher cost etc.

Its simple to say the consumers, governments and companies have missed out on some great innovations because of Microsofts position on the software market; Microsoft crushed small companies with bad practices. These small companies is where mostly the innovation comes from. Microsoft for instance violated also some patents like Stacker (disk compression software that ran under DOS).

Outside of the courtroom Microsoft paid Stacker an unknown amount of Money. Microsoft stole some code from Stacker and used in there Double Space under MS DOS. The other example is video for Windows. Some of the code Microsoft used came from Quicktime from Apple. My point is that I hope the present deal between Microsoft and the US goverment does not go ahead.

Regards
Roderick Klein

Subject: Perfect solution

I fully support the amended solution proposed by Red Hat, Inc.: http://www.redhat.com/about/presscenter/2001/press_usschools.html If that solution is not accepted by the DOJ, the DOJ will have some serious questions to answer. Allowing Microsoft to give away a limited number of copies of it's software to schools simply hooks more users on it's software you found to be monopolistic. This amended agreement truly helps our children by providing many more computers and free, superior software for life! It also punishes Microsoft a bit more for their crimes by *not* continuing their monopoly via their "punishment".

Respectfully,
Kevin

I am just saddened by the slap on the wrist given to Microsoft. If there ever was a monopoly in this world it would be Microsoft. I feel that no other person has a chance to come up with a new better idea for fear that Mr. Gates would come and squash them and steal there ideas. I would hate to see every computer in the world have Microsoft on it. I mean all the computers are really just Microsoft tools to sell its product. Think about it? All the consumer computer makers all have to use Microsoft's operating system. The only company that doesn't is Apple. I have used both and I have to say Apple makes a better product but that isn't good enough because of the monopoly. Pretty soon it is just going to be all Microsoft. We should really understand that the most powerful man in the world is not the president of the United States. It is the holder of information. We are all depended on computers and who controls them? Microsoft and Bill Gate's. With the power to influence the hearts and minds of the world or To cut us out. I know this may seem dramatic but just a thought. I believe in capitalism but not monopoly's. Thank you for reading this.

Subject: What A Joke

Dear Sirs,
This proposed settlement is truly one sided and it is most definitely not the consumers

side. Microsoft deserves more than a slap on the wrist for business practices it continues to use. Please, please don't just knuckle under to the lobbying of the Microsoft camp. It is so important that these practices stop, if any true advancement in the computer industry is to emerge. This company puts a strangle hold on the industry and it must be stopped.

Respectfully,
David B. Bennett

Subject: Release before being ready!

I am a computer user since 1982 and a Retired USAF Navigator who is good with hi-teck innovations; however, new releases of MS Products is loaded with errors that cause the experienced user and those new to computers very much pain. First they hype their products and then you have to continually download fixes and updates. They especially like to design their software to be not compatible with other software and hardware. I have learned to use Netscape Communicator for email and browsing because it is easy to use and does not crash and require continuous upgrades and fixes. In my view they have done irreparable harm to consumers and other competitors. To them \$5 billion over five years is less than a slap on the wrists and they are continuing their unfair and ruthless tactics.

Now I feel a little better, but will I ever forget their causing so much frustration? NO

Subject: think intention

Just as capturing Osama Bin Laden will not stop humanity from committing acts of terrorism, policing Microsoft will not stop their anticompetitive nature. It's a question of intention. What you intend, you create no matter what protection some silly settlement puts in place. The consumer must be protected from Microsoft's self serving intentions.

This settlement, which is based on money, further promotes money as a source of power and control over people. This has got to stop. Money is getting more and more like a disease and child-like reward system than it ever was. I don't blame Microsoft for being

what they are, a perfect creation from a world that worships money. But I do blame them for trying to push their views on us, you and me. I don't want their unevolved "money is might", "ours is better", "you're less", "we can buy you out", "buy our stuff or suffer" and "we think you're stealing so work harder to earn our dominion" intentions.

Instead of putting some people in place to watch their accounts, sit in their meetings and audit their bottom lines, introduce an ethical review board that will have to be convinced before any future decision Microsoft is put into place within its company. Microsoft does need a baby sitter but not for its money, for its intentions.

Or even better, let the public decide. Have an annual vote of your populations, let the billions that we have have our say in what Microsoft can and can't do like an election. Just as this E-mail opportunity was created, that's a good step to learning the multitude of different truths us consumers experience daily.

best wishes,

Subject: Bad Microsoft Settlement

Hello
The Microsoft settlement is a very short-sighted answer. With such weak restrictions Microsoft will continue to bundle their products and will soon dominate the instant messenger and media player markets because of it.

I am also very concerned that there is absolutely no punishment for them. I can't believe that on such a high profile case the American Judicial system wants to send the message that white collar crime is never punished! Its just offensive!

The next time I go out and break the law can I also get this type of treatment?

To whom it may concern,
I am shocked by the recent news regarding the Microsoft settlement. Instead of punishing Microsoft for their monopoly strategy you are giving them a green light to basically kick Apple Computer out of the education market by donating an astronomical amount of money in Microsoft products to this industry, thus giving Microsoft a go ahead to continue to do business as usual. I'm sorry but this goes beyond my comprehension. You are playing Microsoft's cards by making them an offer like this. To my humble opinion they should be punished not by putting more of their product into the market, especially such a sensitive market like education, but by giving them a punishment that's appropriate. If you want

Microsoft to donate zillions of dollars, let them do that to a neutral institution like food for 3rd world countries or something in that order. What impression do you give Microsoft (and others like them) here? If you monopolize the market by unfair means of business we will reward you by allowing you to do more business and even kill some competition on the way?! By putting more Microsoft products out there you are giving companies like Apple Computer absolutely no chance what so ever to sell their product in the education industry, hence they start to monopolize that industry as well.

From: Jeff I. Greenberg
To: Microsoft ATR
Date: 11/23/01 8:38am
Subject: Microsoft Settlement

Boldly, this settlement is still not restoring any level of fairness to the marketplace. The question becomes, how dominant is Microsoft in the marketplace now, and does the ruling allow competition.

I am not all knowledgeable. I am merely relating my experience as a computer professional. I teach technology to professionals on a daily basis.

1) How dominant?

Microsoft owns, has minimal competition, makes it difficult for anyone to break into the following areas:

Browsers. They have killed their prime competition, and refused to adhere to agreed upon standards, thereby forcing the community to adhere to theirs. This is included free with their operating system. It is reported that 90% of people over the age of 40 will not download a new browser; their only introduction to a new browser is when they buy a new computer.

I still don't understand why they can't unbundle their browser, unless it's to dominate the market. They don't maintain parity on the Macintosh platform. And why should they. Apple is their competition.

Messengers. Suddenly, they need to add instant messaging to their operating system. Did they need to? No. Was the marketplace working without it? Sure. And again, it's bundled with their operating system.

Operating systems. Linux is viable ... but Microsoft considers them to be threat ... so they are a target under the gorilla's gaze. Meanwhile, for someone to be considered a computer professional, Microsoft has invented a number of certifications which provides them even more revenue. Software. Go take a look at how many pieces of software MS makes. Now, how many of which are they the dominant player in the marketplace. I'll name a couple

- * Microsoft Word
- * Microsoft Excel
- * Microsoft Powerpoint
- * Microsoft Outlook
- * Microsoft Works
- * Great plains accounting
- * Halo which was going to be cross platform until microsoft bought bungie
- * Netmeeting
- * Visual Basic
- * Visual C++

In fact, I can only think of two products where microsoft doesn't own the

marketplace. Microsoft Money, because quicken was there first, and Microsoft Publisher, because Adobe & Quark have sold professional packages. Frankly, I'm astounded at the way the current government turns a blind eye to the way Microsoft operates, has operated, and is permitting the settlement to occur.

With each passing day, microsoft becomes further the squatter with XP and the .NET protocol and makes it even more difficult for another company (such as red hat, such as apple computers) to even dream of competing.

Settlement.

Microsoft offered to give schools in poor districts computers with software. Would you let your kids just go out and drink coke in school? But that's exactly what's happening. By capturing the youth market early, microsoft is further entrenching themselves as a monopoly. Today's children are tomorrow's workers. But you say, they have to know the systems that are out there. They're out there because it's a monopoly. And Microsoft's offer, will only make it moreso.

Microsoft ought to pay for computers with the competition to be out there. Such as Apple, such as Red hat linux to be available.

My last thoughts.

How pervasive is microsoft? Simple. Go out to a large computer store. Try and buy a computer fully stocked with a word processor and spreadsheet without one piece of microsoft software on it.

Try it.

Now see if they don't truly have a monopoly.

Jeff I. Greenberg.

Subject: Microsoft Settlement

My understanding of the settlement is that Microsoft will be providing hardware with their operating system, and some of their applications on all the computers. These systems will be given to schools that would otherwise not afford these systems. On the surface it looks great. BUT! This is exactly what Microsoft has done all along. Give away product with the knowledge that you get people hooked on their product and they will be back for more. Not only will the schools be hooked but the students, teachers, parents etc.

This is far from a fair to others in the computer industry. This is not punishment but rather a reward. Why not make Microsoft give the schools the money. Then lets the schools choose between vendors other than Microsoft for the hardware and operating system, and applications. If not that, just make them pay the fine at the very least!

Jody Bevan

Subject: Proposed microsoft settlement

I've been told that the Department of Justice is seeking public comment on its proposed settlement with Microsoft. Enclosed is a copy of a letter I sent to the California Department of Justice, asking it to persevere in its pressure for a more meaningful punishment of the company's predatory business practices.

I'm a long time Macintosh user with a long memory of the often-strained relationship between Microsoft and Apple. Last year, I was encouraged that the Federal Government finally had the wisdom and courage to curtail Microsoft's predatory business practices. Unfortunately, the proposed settlement does NOTHING to accomplish this, and the

contempt with which Microsoft regards those who would attempt to limit its monopoly is evidenced by Microsoft's marketing of Windows XP. It should not be necessary to detail these new transgressions, but the fact that settlement talks proceed in the face of this conduct makes it clear that those who ought to have control don't care, don't understand, have been bought off, or are overwhelmed by the company's propaganda. To wit: 1. XP will refuse to run if a user makes more than some unknown number of modifications to the hardware in his/her system, and cannot be resurrected without a call to Microsoft. Imagine a person working on deadline with his laptop hundreds of miles away from his home office and his installation CDs, who decides he needs more RAM to finish a project. He installs the RAM and his computer becomes non-functional. 2. XP disables the multimedia applications that have become default standards in favor of its own file formats. Some of these are products of other companies (QuickTime, Flash, Real Audio), and some are non-proprietary standards (mp3).

Even more ludicrous is the proposed settlement of other private lawsuits which seems to COMPEL microsoft to strengthen its grip on one market it does not yet control, education. Is Br'er Rabbit working successfully for Microsoft?

I know that the California Department of Justice is seeking more meaningful penalties. I applaud that position and beg you to hold fast to it.

From: John Winson
To: Microsoft ATR
Date: 11/23/01 8:50am
Subject: Microsoft Settlement

It makes no sense to have any portion of this settlement include a grant of software, product or technical support from Microsoft to schools or other not-for-profit organizations. This only serves to solidify Microsoft's domination of the computer industry by giving these organizations the very products and services they will be bound to use.

If a judgment of \$500 million—\$1 billion is imposed as a part of the judgment, Microsoft should send money to be used on computers and computer technology, letting the organizations involved choose what computer equipment, operating systems and its accompanying technical support requirements they wish. Under such a scheme, Microsoft might still get significant return, but it would not mandate the use of funds for the benefit the company losing the judgment.

It was the "donation" of browser software as a predatory, anti-trust activity that spawned this legal action. Please do not allow the remedy to copy the crime.

MTC-00002059

From: Adam Rice
To: Microsoft ATR
Date: 11/23/01 9:26am
Subject: short version: I don't like the proposed settlement
Longer version:

The proposed settlement does not go far enough in dealing with a company that has been found to be a monopoly. It does not defend the interests of consumers, the (rest of the) software industry, or the computer hardware industry with sufficient vigor. It almost appears that the Department of Justice negotiated this settlement as if from a position of weakness, when in fact it is in a position of strength. Some of the verbiage emanating from the government suggests that the Windows operating system should be considered akin to a public utility. If that is the case (I do not agree myself), then Microsoft should be treated like a public utility, with rate boards, universal-access guarantees, and the full weight of bureaucracy that surrounds an electricity or water utility to look after the public's interest. A three-member review panel—with 1.5 members appointed by Microsoft—does not qualify. That is more like the fox guarding the henhouse.

I suspect that Microsoft would, reasonably, find such a bureaucracy very intrusive, and reject the idea. The only alternative is for it to stop being a monopoly. While I did not agree with the specific approach that Judge Jackson took to breaking up Microsoft, I felt the general idea was a good one.

The above comments address the proposed settlement overall. I also have a comment on a specific aspect. As formulated, the proposed settlement essentially allows Microsoft to define anything as part of the operating system. This is exactly what got Microsoft into this suit in the first place. I

would urge a very restrictive definition of "operating system" as a collection of functions (APIs) provided to software applications, with no features that are directly accessible to the user. That, plus some sort of basic file-management application. This definition should be easy to understand, easy to enforce, and most importantly, honest.

Microsoft has shown a stubborn insistence on treating anything it wants as "part of the operating system." A line must be drawn, and it must define a narrow space clearly and inflexibly. As it stands now, the Windows operating system (and all others) come bundled with many small utilities for convenience, plus e-mail and web-browsing applications, etc. The control of Internet access applications is very important. Microsoft must be barred from obtaining greater market share for its Internet applications simply by virtue of controlling the operating system rather than offering a superior product. Breaking the company up would be the most efficient and effective way of achieving that goal. The other options start looking like rate boards micro-managing a utility, but even that would be preferable to a monopoly unchecked. Which the proposed settlement enshrines.

From: Christopher Tiedje
To: Microsoft ATR
Date: 11/23/01 10:30am
Subject: How Could You?

How blind are the people who accepted this deal to allow Microsoft to blitz their way

into the education software market by "donating" up to a billion dollars worth of equipment and software to struggling schools. This is punishment? It might cost them some cash, but it guarantees them a whole new market and new customers. For about the same cost as a major advertising campaign, they get guaranteed exposure to a whole new market which was unavailable to them previously. Now these schools will have to pay for the software updates, network administration, and software trainers which were never expenses prior to this "settlement". It also helps Microsoft perpetuate their monopoly by spreading into the ever-growing education market which they have been struggling to do for over 10 years. Congratulations, you just made Bill Gates even richer.

@doj.ca.gov@inetgw,...
Date: 11/23/01 10:17am
Subject: Proposed U.S. D.o.J. settlement re: Microsoft anti trust case

This message is to add my voice to what must be a chorus of protest against the proposed settlement between the U.S. Government and Microsoft in the antitrust case in which Microsoft has been held guilty. The outline of the proposed settlement, as it has become public is both irresponsible and inappropriate. This company has been held guilty of major and continuing breaches of both Federal and state law. The U.S. Department of Justice has proposed remedies which fail to punish the company for past behavior, fail to provide an effective remedy to prevent future abuses of the same kind, and fail to provide an effective mechanism to detect and prevent new abuses.

One justification for this "softball" settlement has been the economic effects on a major industry that is already in recession. While Microsoft and other companies which ride financially on Microsoft coattails are major financial components of the economy, there is little sense in allowing the

continuation and expansion of the activities that 1) led to the guilty judgment in the first place, and 2) will result in continued restraint of trade, narrowing of competition, and use of illegal tactics to leverage monopoly power in operating systems and development related tools to gain dominant positions in new and emerging lines of business. The settlement would put any competitive challenges by other companies in the same chilling position that they now are in and will hinder recovery the economy on which we all depend. In short, appropriate restraints against Microsoft would **restore* a competitive marketplace and drive faster recovery in the information technologies industries that are now in recession. It is my opinion that the "Microsoft as economic flywheel" argument for settling this case too easily for Microsoft will damage rather than help economic recovery. Overall, the recent activities of Microsoft have confirmed that the direction and goals of Microsoft activities and intentions remain unchanged and are even more widespread, aggressive and damaging to consumers and to the marketplace. These recent actions include:

1) The recent intentional denial of access to the MSN network to anyone using software other than that supplied by Microsoft (Internet Explorer). This action is parallel to and a direct extension of the attempt and near success of Microsoft to put Netscape out of business. A move that damaged both the competitive arena in network browsers and has caused demonstrable damage to consumers by denying access to the MSN service by using their operating system monopoly to, first ,make use of Internet Explorer (IE) nearly mandatory for the average consumer, and then making the use of IE a prerequisite to use of the MSN service. This aggressive and anti competitive move was only deterred by the sensitive position that Microsoft was in at the time of this experiment vis a vis settlement with the D.O.J. It is not hard to imagine this tactic and similar ones becoming common Microsoft practice after the proposed settlement with the D.O.J. takes effect. Microsoft also continues to coerce the consumer to use only IE by corrupting pre- existing network coding standards, thus making Web pages developed with Microsoft tools and to Microsoft's own standards incompatible with other browser software. Such incompatibilities and usurpation of standards makes viewing and interacting with Web sites developed with Microsoft tools hard to view and hard to interact with when using browser software other than Microsoft's.

2) The release of the Windows XP operating system that continues to bundle software of types and in ways that establish and maintain a growing stream of revenue to Microsoft at the expense of many competitors and the consuming public. The settlement does nothing to address this new abuse and does little to prevent future activities of this kind. The ineffectual proposed D.O.J. settlement negates the effect of the judgment against Microsoft in the anti-trust case and leaves Microsoft free to continue to damage to both the IT industry and U.S. economy

3) Microsoft's announced ".net" strategy is another facet of the overall anti competitive

and anti consumer strategy Microsoft is implementing. The result of the ".net" strategy will be unprecedented control over and restriction of Internet use and Internet based commerce to the benefit of Microsoft and it's business partners, exclusion of competition, consumer choice, and allowing Microsoft to have virtually unconstrained control over the prices and terms of licenses and services that are available to the public.

For the above reasons I urge the states to continue to seek more effective penalties and more restrictive controls over Microsoft's activities until both competition in the IT industry and consumer abuses have been addressed effectively.

Subject: Microsoft settlement

I am concerned about the short term settlement. Will Microsoft in 5 years be allowed to run rough shod over smaller and espec. startup companies as they had in the past?

Will the settlement be a means of extending their monopoly and even hurt others? For example, if they contribute 1 billion dollars to schools using Intel products, that will seriously undermine the Macintosh's roll in schools. Why not make it so the schools can get equipment of their choice—either Intel or Apple?

Subject: a mistake

To Whom it May Concern,

How can the infusion of Microsoft based hardware, along with Microsoft software be considered a punishment. Talk about stifling competition . . .this judgment kills competition. Granted, the offer to help disadvantaged schools procure tech resources is well and good, but how can planting Microsoft based technologies in 12K+ more locations do anything but expand its already huge base. It is a well know fact, that many companies have been focusing on the education market because of its rich potential for growth. Well, with one fell swing of your gavel, you have turned over an ever larger section of the education market over to Microsoft. Wouldn't it have been more logical to have told Microsoft to foot the bill

for whatever tech resources these disadvantaged schools wanted, rather than hand them market share on a platter? Such a recourse would have made the company have to compete for the privilege of doing business with our schools! Hasn't the issue been all along to level the playing field . . . I guess not! Microsoft has pulled out another victory here, and to add insult to injury, our government has made them appear to be the "great benevolent ones."

From: Neil McKelvie
To: Microsoft ATR
Date: 11/23/01 10:35am

I think that any settlement should NOT include any provision for Microsoft to provide computers for schools. He may not be a recognized legal authority, but the song by Tom Lehrer, "The Old Dope Peddler", can be cited: "He gives the kids free samples Because he knows full well That today's young innocent faces Are tomorrow's clientele."

Quite apart from legal remedies as such, there could be a blanket policy from the top levels of the US government, that all branches institute a policy of diversification in computers and computer operating systems. At present, that means getting Macs, in addition to computers using the Microsoft operating system, but such a directive could well lead to other possibilities being introduced. Likewise, State governments could follow suit.

Subject: Disapprove

To whom it may concern—

I wanted to send this message to say I strongly disapprove of the proposed Microsoft settlement. How is it a punishment to increase their market share in the education arena? This is exactly what they have been trying to do for years. This would actually increase their illegal monopoly. Once they place the computers and software in the schools, they then get to sell upgrades to the schools.

If you really want to punish them, you should make them give the money directly to the schools so the schools can choose their own computers and software. Then if the schools choose to purchase windows machines, so be it. But at least they have the choice.

Sincerely,
Jeff Shultz

From: Neil Lynch
To: Microsoft ATR
Date: 12/6/01 2:42pm
Subject: Microsoft settlement—not acceptable or effective

Gentlemen,

I am extremely disappointed with the settlement arranged with Microsoft.

In my opinion, the Microsoft settlement should be "cash to be used for Microsoft or competitive products at retail, single user license, prices." This levels the field where alternative products may be considered and provides the companies their highest markup—so they can not undermine the effort with a "special" deal.

The monetary settlement should only be part of a longer reaching change. When Coca Cola's was first introduced and was widely

used, its secret ingredient was a narcotic. The product was addicting, in that, if you ever started using it, you would not be able to function normally without it. "Pepsi just doesn't give you the same feeling."

When children first encounter a crack cocaine dealer, the first sample is "no charge". When Microsoft provides software to schools, governments, and public institutions—Microsoft knows they will have to come back for more. If nothing else, Microsoft will change data formats to inhibit their ability to exchange information until they purchase the latest products. Their current licensing practices will inhibit the ability of these institutions to update their hardware.

It took the government to make Coca Cola change its receipt. Simply extracting money would not have worked.

If allowed to settle in the delivery of Microsoft products, the Microsoft \$1 Billion settlement will:

1) Cost Microsoft less than 10% of that amount
2) Lock the school systems into Microsoft products so that they will hereafter be purchasing "upgrades"
3) Lock out competitors and their products, effectively forever
4) Inhibit the school districts of considering alternatives, effectively forever.

Over the years, I have watched Microsoft effectively kill viable businesses that serviced the interests and needs of the public. (Artisoft, Borland, Coral, Sun, Apple, GEM, Netscape, etc.)

Over the years, I have watched Microsoft use its money (in the form of grants) to influence and inhibit access to alternative platforms (IE: UNIX) in the University Computer Science settings.

Over the years, I have watched Microsoft introduce products that only partially implement published industry standards and provide proprietary extentions that damage the public and industry in many facets. Over the years, I have watched Microsoft introduce "updated" products that cause an entire business to have to update because of the data format incompatibilities they introduce.

Over the years, I have watched Microsoft re-introduce inferior implementations of existing technology, using different terms that already had well established industry standard terms. The effect is that they introduced a language barrier, alienated (and thus obsoleted) computer science and information systems professionals, thus creating a void that was partially satisfied with the H1B Visas (to replace displaced American workers).

Over the years I have watched Microsoft adopt and refine the "embrace and smother" and "financially exhaust a company in court rather than purchase or license their technology, trademarks, or patents" techniques.

I was a Channel Partner with Microsoft, a Solution Provider, a Certified Professional, etc. I carried the Microsoft banner until I took time to examine their practices.

I now teach JAVA for IBM and Sun because it allows me to help the professionals that have been alienated by Microsoft to extend their skills in an industry standard and platform independent strategy. I have adopted a personal mission to help keep

Americans employed, and to promote technologies that are very advantageous (cost, connectivity, broad skill base, etc).

I was dumbfounded and infuriated by Microsoft's effort to confuse, compromise, and corrupt the JAVA technology and to explicitly damage Sun Microsystems. I am acutely aware that Fry's Electronic's in California stocked NO Sun Microsystems products immediately following Microsoft's loss to Sun in their JAVA lawsuit.

I was not able to purchase a retail competitive Internet Browser when I determined that Microsoft's Internet Explorer:

1) invariably connects to various nodes at microsoft.com and msn.com without user knowledge or consent (before your home page and between requests) 2) that the configuration option to disable "ieupdate" has no effect 3) that IE will not work if all communications to Microsoft and MSN are disabled 4) That even with cookies disabled, and no prior use IE still sent system or "cookie" like information to the Microsoft site—judging from the volume of bidirectional data transferred. This means that the Microsoft assimilates and sends personal system information without the knowledge or consent of the user.

The "XP" products have extended this practice even than I describe above.

It took the government to make Coca Cola change its recipe. Simply extracting money would not have worked.

More specifically, Microsoft should not be able to inject their systems and products into schools. The people should not accept a settlement that would force this to happen. The schools, however, should have the option to purchase Microsoft and any other products.

Sincerely,
Neil Lynch

Subject: Microsoft Antitrust Ruling

Hello, I am extremely displeased at the ruling in the Microsoft antitrust case. This ruling smacks of a "sell-out" by the Federal government to "Big Business Crony" and a "whitewashing" of their behavior and activities. The ruling will have absolutely no effect on their predatory, monopolistic practices or their continued quest to dominate the Internet.

The penalties suggested are a joke and indeed the suggestion by Microsoft that they

"donate one billion dollars worth of hardware and software" to poor and underserved schools and children is nothing more than a marketing ploy. Typically, Microsoft will "donate" out of date software and hardware and then take an inflated tax deduction for product that no business would purchase or use. And doubly disturbing, is the fact that by inserting the Windows operating system into these schools, they are just making the schools and the children dependent on Microsoft and their products.

If such a donation is considered, it should be in cash so that the schools can decide what hardware or software they wish to purchase. The schools should be able to purchase from any OEM or vendor and any operating system platform, including but not limited to, Apple Macintosh, Unix, or Linux.

As a small educational, multimedia business, we are typical of Microsoft's victims. Please do not reinforce and continue the destructive, monopolistic behaviors of this behemoth. The petty penalties proposed by this ruling will only encourage Microsoft to continue to search out and destroy competitors. They will not stop until they achieve complete control of the PC industry and the internet.

Respectfully,

From: Matthew
To: Microsoft ATR
Date: 11/23/01 11:42am
Subject: microsoft

As a consumer, I would ask that the DOJ take a much tougher line against a company that has been found guilty of monopolistic evils more than once.

I would ask that you:

a) break Microsoft into various companies, one for the OS, another for applications and perhaps a third for their "internet strategy and services", b) require that any P.C. sold for the next 36 months come without Windows and its various flavours bundled and preloaded (hey maybe by forcing the consumer to see that there are alternatives...) c) require Microsoft to develop for the Macintosh platform for a minimum of 72 months d) require Microsoft to stick to the established standards when creating multimedia and/or web browsing software for a minimum of the next 36 months. e) prevent Microsoft from taking over any software company for the next 36 months (i.e. Adobe).

I see that Microsoft has just completed another legal challenge by agreeing to donate PCs to schools. Somehow, I doubt that training another generation of consumers that Microsoft is greatest/best/all powerful is really a good thing or a very harsh punishment. How about making sure that Microsoft donates Apple computers rather than machines that run Windows? That would be a fitting punishment.

Thank you

Date: 11/23/01 12:23pm
Subject: Comment on proposed settlement

Dear Sir or Madam:

Permitting Microsoft to settle its anti-trust conviction by allowing it to increase its monopoly influence is mind-boggling. I'm referring to the provision in the proposed settlement that would allow Microsoft to donate \$500,000 worth of hardware, software and training to public schools. While this may seem altruistic on their part, it is actually an incredibly smart, if disingenuous, move to spread their Windows hegemony. There are two major problems with this proposal.

First, most recipients will opt for Wintel setups by virtue of the facts that Microsoft is willing to grant Windows licenses at little or no cost and that the vast majority of their software runs only on Windows hardware. This will hurt Apple and help Microsoft, exactly the opposite result that the Justice Department started out to rectify.

Which brings me to the second major problem. The government sued Microsoft because the company was engaging in monopolistic behavior to the detriment of other companies and, ultimately, the public. This aspect of the proposed settlement does

nothing whatsoever to address the issue that originally prompted the lawsuit. It's as if a doctor suggested her patient change the oil in her car as a cure for the patient's cancer. The cure the Justice Department is willing to accept has nothing at all to do with the harm Microsoft does by its monopolistic behavior. In fact, it serves to further the harm rather than reduce it.

I respectfully request that this aspect of the proposed settlement be withdrawn by the Justice Department. If the Department cares at all about fashioning a just solution to the problem that it initially sought to correct, it will replace this remedy with one that addresses the issue of Microsoft's monopolistic behavior rather being an accomplice in perpetuating it.

Yours truly,
Les Fuchs

MTC-00002084

From: Christopher Phillips
To: Microsoft ATR
Date: 11/23/01 12:17pm
To the DOJ:

I am quite concerned that the settlement you have reached with Microsoft will only provide the software company with more opportunities to extend its monopoly. Much like the Gates foundation which already exists, the foundation will buy computers and likely Microsoft software. If this proposed foundation is formed, it will only increase the proliferation of the Windows operating system and other technologies, and allow it to gain a stronger hold on not only the OS and browser markets, but others as well. Additionally, if the foundation results in a greater installed base of Windows machines in public schools, this will only extend their ability to engage in anti-competitive practices, practices which Microsoft has no indication of reversing even given the recent anti-trust litigation.

The settlement does nothing for consumers. It does nothing for the losses incurred by other companies. It does nothing to promote innovation in the industry. Frankly, the DOJ should be ashamed of this settlement, and should be investigated for political influences which could have been involved in the making of this settlement. This settlement is a win-win situation for Microsoft and blow to the plaintiffs, the consumers, and the justice system of our country.

MTC-00002087

From: Woody Hansen
To: Microsoft ATR
Date: 11/23/01 1:18pm
Subject: Microsoft settlement; WHAT settlement?

To whom it may concern:

My comments based on a recent news article shown below:

"Microsoft Reaches Private Antitrust Settlement

By REUTERS WASHINGTON—Microsoft said on Tuesday it had reached a deal to settle a raft of private antitrust cases against the company, which sources said would cost the software firm more than a billion dollars.

The agreement with class action attorneys would require the company, which agreed to settle its separate 3-year-old case with the Justice Department earlier this month, to provide free software and computers to more than 14,000 of the poorest U.S. schools over five years, sources close to the case said."

The Justice Department is waaaaaaay off base on this one. What a sweet deal or "settlement" for Microsoft! What a blow to the market place in general, and to Microsoft's competitors in particular! THIS IS JUSTICE? This misguided "settlement" amounts to little more than a billion dollar investment for the FUTURE SUCCESS of Microsoft! It doesn't take a great scholar to see that this "settlement" provides Microsoft with an additional future client base of 14,000 units! It doesn't take a leap of imagination to realize that in time—probably in less than five years, certainly after five years—these 14,000 "units" will need upgrading of some sort or another.

In time these, 14,000 units will need their computer boxes upgraded. Hmmm, after using Microsoft products for FIVE YEARS, I wonder what operating system (Microsoft Windows?), what hardware (Microsoft compatible?), and what software (Microsoft?) these U.S. school administrators will want, even DEMAND, their school districts purchase as REPLACEMENTS? Is there any doubt? What a FUTURE windfall for Microsoft! Who do we have to thank? Right now, we have to thank the U.S. Justice Department.

It's not that giving computers to the poorest U.S. schools is bad—that's a commendable,

if not somewhat idealistic—approach to education; what is UNBELIEVABLY SHORTSIGHTED, MISGUIDED, AND MISDIRECTED is the fact the GOVERNMENT—THE JUSTICE DEPARTMENT—is simply FURTHER encouraging the monopolistic use of Microsoft products! This is a no-brainer in FAVOR of Microsoft. Whose side are you folks on anyway?

The old Scoreboard of Life would read: JUSTICE DEPARTMENT (read U.S. citizens) "0" ... MICROSOFT "14,000!"

I'll bet Bill Gates is laughing at the Justice Department all the way to the bank, if not NOW ... certainly in five years! Invest a billion dollars now, and reap the "investment" reward in five years! Most business people would LEAP at the same chance.

Let's not REWARD Microsoft for breaking the law! I agree we should not put Microsoft out of business entirely, but we need a better attempt at leveling the competitive playing field. As the decision now stands, Microsoft has little to lose in the present and MUCH to GAIN in the future! The current decision is reward oriented, not punishment oriented.

Please reconsider your position. Thank you.

Woody Hansen

Subject: settlement

After years of Microsoft monopolizing markets, which they have been on trial for, the justice department has let off the hook by further allowing a Microsoft dominated world.

The schools receiving these machines furthers the monopolization of the computer industry. It allows Microsoft another "in" to the consumer. These poorer schools will not have other platforms like Linux or Apple to show students, so they grow up not knowing anything but Windoze.

As an educator, I believe in solutions. I believe that Microsoft should have to provide the money, not their products. In order to fight the monopoly, make Microsoft buy Apple computers, and PCs running Linux. That would be a solution, rather than allowing Microsoft to use Dell and the other companies already in bed with Microsoft to force XP down our throats.

From: Ted Grigg
To: Microsoft ATR
Date: 11/23/01 2:01pm
Subject: Microsoft Settlement a Slap on the Wrist

This settlement is totally inappropriate for this company that has chosen to thumb its nose at US law. The settlement should not only compensate the end-users and companies harmed by its illegal use of market power, but the company should pay billions of dollars in penalties.

The idea of giving away free software to the educational market actually rewards Microsoft for its deliberate and proven illegal

maneuvering in a "free" market place. The court now fulfills Microsoft's desire to steal yet one more more market they do not control.

If the court insists on free gifts to schools, then require a cash settlement to schools so the schools can choose what software they prefer to buy with the money.

The cash should go through the court and not directly to the schools because Microsoft will somehow use the money as a marketing ploy by offering large discounts for their software and treat the cash settlement like a coupon worth several times its value. Do not allow this settlement to become Microsoft's next court-directed advertising campaign.

Splitting the company was the only settlement that began to make sense. Microsoft illegally destroyed Netscape and continues to hurt Sun, Apple and others by punishing hardware suppliers from supporting competing products.

Even if the settlement restrains Microsoft (a highly doubtful outcome), Microsoft should now pay more than it gained for its illegal practices in cash.

I only hope that those states who recognize Microsoft for what it truly is will somehow prevail and find a way to punish Microsoft for its injustices.

We still may have a chance to support the law. It appears, however, that the court may actually reward Microsoft's illegal action. Please punish Microsoft for its illegal actions and lack of respect for the law.

MTC-00002094

From: Jan Steinman
To: Microsoft ATR
Date: 11/23/01 1:58pm
Subject: Microsoft

Dear US Justice Department,
I do not believe the remedies reported in the news are going to have the slightest impact on Microsoft's predatory marketing practices, and subsequent illegal abuse of monopoly power. Take, for one small example, the case that started it all: internet browsers. Since the time the case started, Microsoft bundled their browser for free, and essentially drove all other browsers out of the market. They claim they have a right to do this, and that they are only serving consumer needs. But their most recent versions—including ALL browsers shipped with the new Windows XP—have made a significant change: they no longer support industry-standard third-party browser plug-ins for presenting specialized content, such as movies, sound, animation, and virtual reality.

This means that third-party content providers, such as Real Audio, Macromedia Flash, Adobe PDF, and Apple QuickTime—just to name a few of the larger players—no longer function under Microsoft's browsers using the standard installation procedure. Instead, they must provide special installations that go through an additional

layer of software—Active X—that Microsoft's own content provisioning software does not go through.

This means that ordinary consumers will have to struggle needlessly to install third-party content provisioning software, but perhaps more importantly, if they do actually get through that struggle, the third-party plug-ins will run more slowly and with less capability than will Microsoft's own content provisioning software.

This also means that some 90% of new computers sold cannot properly access my web site, which has Apple QuickTime content, whereas 90% of pre-Windows XP computers could. With this move, done right under your collective noses while you negotiated a cushy "hand slap" settlement, Microsoft not only successfully extended their operating system monopoly into the internet browser market, but now they have extended their browser monopoly into the content provider marketplace! They have broken the law once, and while being penalized, have broken it again.

Take heed of my prediction: now that Microsoft controls content provisioning, content will come next. Within three years, the average consumer with an "out of the box" computer will be unable to view any content that Microsoft has not provided. With all due respect, the Ashcroft Justice Department is asleep at the wheel on this one. Quit meddling with "states' rights" Oregon and California, and concentrate on appropriately punishing large, multi-national companies who are already convicted of breaking laws.

Re: Pressing the case against Microsoft
After careful review, the proposed settlements fall far short of restoring competition and innovation to the computer software industry so important to California and our nation.

The settlement doesn't require careful review because it is impossible that Microsoft would agree to something that's truly effective. The settlement is a failure in the most abstract because it does not remove Microsoft's control of the OS API. By scrutinizing the settlement you legitimize the insanity that behavioral remedies is an acceptable substitute for ending the hegemony. Anyone serious about modifying corporate behavior for public benefit knows that the micromanagement approach will accomplish little else than damage the argument for regulation—exactly the secret result that many want from this case. The simple fact is that the government must guide

industry or it runs off the track. It's happening in PC software & hardware, it's happening in energy, it's happening in military, it's happening in ag/food, it happened in banking, it's happening in pharma, it's happening in biotech, duh, it's happening everywhere.

PC software—MS junk technology, hijacking of interoperability

PC hardware—Intel stifling paradigm shifts, e.g. RISC

Energy—paradigm shift to renewables hijacked by oil interests

Military—Air Force pilot pride hijacking paradigm shift to drones

Ag/Food—refined food creates diseases of affluence

Banking—savings & loan debacle of 1980s
Pharma—bandaid fixes instead of

preventative medicine

Biotech—frankenfoods

Subject: RE: Microsoft reparations

The reparations in the antitrust case with Microsoft should not offer the company another opportunity to further its stronghold in the marketplace. Specifically, the recent news of Microsoft proposing to give technology to education would, I think, be analogous to its original practice of wedging out competitors with its browser software.

Giving to education is a noble gesture and perhaps a good one but only if that giving is not attached to its products but rather monetary, letting the school's themselves decide how to best spend it on technology, even specifically computer technology. This would provide the desired effect of reparation without the undesirable effect of increasing market base unfairly, again.

Thanks for your attention in this matter.

Subject: Microsoft Settlement

I want to express my concern about this MS settlement. It will harm companies like Apple, who have a strong presence in schools. How in the world do you expect Apple to compete with free? You would be better off requiring that they put \$1 Billion into a trust account where the schools can purchase any kind of software/system they desire. Or, require them to give Office: OS X to any school that wants it. I see no reason why you should harm Apple in this settlement. This is absolutely ridiculous.

Subject: I Strongly Disagree with Microsoft School Proposal, Extends Monopoly

Hi !

Do not accept this marketing ploy. The cost to MS will be trivial. No Punishment at all for what they have done. Prior to and during WW II, Adolph Hitler tried to control people by burning books, controlling information. To a great degree he succeeded for a time in fooling the German people and the world. Then the world figured him out and he lost big time but the cost to the societies of the world was very great and reasonable Germans were very embarrassed by their foolishness. Most recently, the Taliban has tried to control the lives of the folks of Afganistan by controlling information and everything else they could do with their lives. They are losing but the cost is very high. Bill Gates and Microsoft have been successfully placing a ring in the noses of everyone they can to do everything the Microsoft way. They are trying to control information and the way we receive and view it. VERY DANGEROUS !!

If Microsoft succeeds much further, we will all someday understand the foolishness of our ways. BUT AT WHAT PRICE ???!

Subject: Microsoft settlement

Microsoft has been found guilty of being a monopoly because Microsoft has used its

power to crush competition, restrict access of new products technologies and, keep consumers from accessing choices that would have otherwise been available in a normal market. Microsoft keeps prices artificially high and delivers software that is defective and/or of poor quality. The security holes in Microsoft products pose a great threat to the computing public (and, as all business and commerce is affected, even to those who do not own or use computers themselves are harmed).

What is the government actually doing to protect me (and other taxpayers) from this abusive monopoly? With billions of dollars at stake, if Microsoft is allowed to get away with a mere slap on the wrist, it will go back to business as usual. I'll be watching and, I'll remember how (and if) the government lives up to its responsibility when I'm in the voting booth in November 2002. I welcome a response.

When someone cheats in an athletic competition, the culprit is disqualified and other contestants are given their proper rewards. However, in the contest of the software business, the culprit is now being rewarded by increasing the power base by giving away more software!

This is like having Gillette give away razors to men. Gillette loves that, because, they will be happy to sell razorblades to those same men in a few weeks.

So Microsoft wins by increasing the user base, and competition looses. Maybe forever.

The guys on the prosecution who went along with this absurd settlement should be investigated for conflicts of interest! This is not even a slap on the wrist. It's a congratulatory pat on the back for Microsoft.

From: Joel Markwell
To: Microsoft ATR
Date: 11/23/01 6:07pm
Subject: DOJ and Microsoft: A Failure to Meet Your Responsibilities to Your Real Bosses

I am incredibly disappointed in the abdication by the Justice Department in the Microsoft Antitrust Case. Microsoft is one of the most aggressive anti-competitive companies in our history and has been proven to be so over-and-over. The list is long and much of their wrongdoing was not even presented at court. Their actions towards lesser companies have stifled creativity, crushed smaller, more flexible and ultimately more consumer-friendly companies by simply threatening to enter their market and have for years they have produced a product that is inferior in almost every way to every one of their competitors and they can only do so because of their size.

No financial backer would ever dare subsidize the creation of a new word-processor to challenge Word or spreadsheet to challenge Excel, yet smaller companies do so every day with intelligence and creativity only to be run out of business by Microsoft. Developers fear MS to the extent that I have seen them refuse to criticize MS on camera for fear of being hurt by MS, yet off camera they clearly hate the company and the product. Because of their iron grip on the computer space, MS has almost no incentive to make their products more secure and often fail to release security patches in a timely manner and often release products they know to be buggy because there simply is no broad-based alternative out there for the consumer and server market in their space.

Bill Gates and now Ballmer have both shown their disdain for the American public and the US Justice Department publicly by their words and behavior and yet the Justice Department has completely abrogated their responsibilities to the American consumer, I assume, at the "suggestion" of the Bush administration.

The biggest loss to the American consumer has been the Republican Congresses consistent failure to agree to even reasonable campaign finance reform and so long as large monopoly corporations like Microsoft continue to own America's politicians, we working American will continue to unrepresented in the halls of justice and the halls on Congress.

Forcing Microsoft to act as a more responsible and competitive American company, even to the extent of breaking it up will not hurt the US economy. The effect of forcing MS to toe the line or even to break it up would be a breath of fresh air to a computer industry strangling in Microsoft's grip. How much stronger would the US economy be if MS were not sitting astride it?

The Justice Department doesn't worry Bill Gates, because he might as well own you as he does everything else, given the present circumstances.

Sincerely,

Joel Markwell

Subject: Microsoft settlement

I'm writing this brief note to express my displeasure with the recent US Dept. of Justice's Microsoft settlement. I firmly believe that Microsoft should have received harsher penalties for their outrageous conduct. However, I'm somewhat relieved in that some of the state attorney generals (who I've cc'ed on this e-mail) are also not satisfied with the terms of the settlement. I hope they continue to pursue a more appropriate and fair judgement.

While I realize that the drawn-out nature of this lawsuit may have made a settlement attractive, I am disappointed in the lack of any real punishment. The message the current settlement sends is that while a company can engage in unfair practices, any punishment will not reflect or in the slightest way compensate for the damage they cause.

I realize that Microsoft now plays a significant part of the day-to-day economy/stock market of the US and the world to a certain extent. A judgement against them will have a trickle down impact. I feel, though, that any financial impact that a Microsoft punishment might cause would be well worth it considering their predatory and overreaching practices. Their behavior has caused irreparable harm to the computer industry, among others, and I believe they must be stopped or at least punished for what they have wrought. Thank you for allowing me to voice my opinion.

From: Dan Snyder
To: Microsoft ATR
Date: 11/23/01 7:19pm
Subject: Why the MS settlement isn't enough
Dear US Justice Department,

I do not believe the remedies reported in the news are going to have the slightest impact on Microsoft's predatory marketing practices and illegal abuse of monopoly power.

Here are three quick examples from the past six months of how Microsoft continues to use their monopoly power in one market to destroy competition in another market.

1. Microsoft used it's operating systems monopoly to eliminate any serious competition in the web browser market. Microsoft is now using their web browser dominance to gain further control over Internet content by dropping support for industry-standard third-party browser plug-ins. Microsoft is doing this to force

competition out of other Internet areas like streaming media. This move forces companies using the competing products to re-design their web sites. This is very expensive for companies and many of companies decide that since they are being forced to "re-design" they should use the Microsoft product to try and avoid a problem like this in the future.

2. Microsoft has removed the Java runtime environment from its Windows XP operating system. Java applications can run on any operating system, which is a big threat to Microsoft's Operating Systems dominance. By doing this, Microsoft is making it harder for the average PC user to use Java based applications. Due to this added inconvenience of not having Java installed, thousands of customers will no longer use competing applications written in Java.

3. In Windows XP, Microsoft has dropped support for saving files in the industry standard MP3 format in favor of their own proprietary format. Again, Microsoft is trying to use their operating system to gain control of another market, the digital music market.

Please reconsider this "hand slap" settlement. Only breaking up the company will open up competition and benefit consumers, since Microsoft could then no longer leverage monopoly power in one market to gain monopoly power in another market.

Subject: MISCROSOFT "SETTLEMENT" IS A JOKE!!!

[Text body exceeds maximum size of message body (8192 bytes). It has been converted to attachment.]

CC Senator Schumer

Dear Department of Justice,
Below please find a copy of my email("LOSE WIN" TRICK) to my NY Senator*** I hope that DOJ does consider how numerous American's, like myself, feel about this issue. The Microsoft MUST NOT BE ALLOWED to practice its "Kill The Competitor, then Appologize-Settle, if need be" policy. This School Donation "Settlement" is Highly UNSETTLING to anyone who can look past its nose. It also is wrong, and un-American!!! When Microsoft expands into almost every other area, like cable TV, Internet, Digital Music, using their ILLEGALLY acquired wealth against their competitors, that scares me. For Microsoft to wrap themselves into American Flag, and say: how can you go after us(MSFT) when our country is at war, when economy is down? THAT'S UGLY HOGWASH!!!! If Microsoft "gets away with it", when and where will it stop? Microsoft MUST be made to PAY for it's crimes! The PUNISHMENT should be made to compensate us the

consumers, the fallen competitors who they killed off. As to schools, let them DONATE \$\$ only, so that schools are free to buy Apple Computers, if they choose to do so, or any other software.

The current "SETTLEMENT" is nothing bad a huge Microsoft banner which is shoved down the throats of those hungry schools. After the time period expires, the graduates of those schools are railroaded into becoming Microsoft customers for life!!! Boy, is DOJ so dumb not see this Microsoft trap? Or worse, is DOJ scared of Microsoft, or worse yet, is someone in DOJ getting a "\$\$ thank you" from Microsoft? Boy, I hope not!!! I wonder how many people who have been working on this "SETTLEMENT" own Microsoft stock! Thus far, this "MICROSOFT SETTLEMENT" looks like a mockery of common sense!

Just cause Microsoft has some good lawyers, that doesn't mean that no crime has been committed. And if they were found to be a monopoly, then they must be punished, and not rewarded!!!

Even if you took half or three quarters of Bill Gate's and his MS Execs personal wealth and distributed it among Microsoft's victims, those execs will STILL be either Multi-Billioners or Multi-Millioners.

Thanks for your time.

Arkady Kofman

Dear Senator Schumer,

With all the focus on Osama, terrorism and such, it looks like Big "Brother" Bill(Gates) and his Microsoft are about to get away with it, and slip right through again, behind our backs!!! If it's just the \$\$ that they want to give away, it's one thing, but free software to schools— THAT'S A JOKE!!! And if the Department of Justice let's them, then DOJ is an even bigger joke. Let's hope that there are still folks in Washington who Think Different ? and are awake enough to stop Microsoft's "Lie Train" before it again steam rolls over US Constitution and the very Justice and Common Sense that it is supposed to represent!!!

I have also contacted Senator Clinton via http://clinton.senate.gov/email_form.html and am encouraging all my friends to contact their representative and speak out ASAP!!! PLEASE DON'T LET MICROSOFT PULL THIS LATEST "LOSE WIN" TRICK ON ALL OF US, US, THE WORLD!!!

Deal may put Microsoft at head of the class
By: Joe Wilcox and Michael Kanellos 11/21/01 7:45 AM Source: News.com

A proposed settlement agreement in a series of antitrust suits may not only give Microsoft a fairly inexpensive legal resolution—it may also help the company and its PC allies further erode Apple Computer's position in education.

Under a settlement proposal in a series of private antitrust lawsuits announced Tuesday, Microsoft agreed to donate approximately \$500 million to help bring technology to some of the nation's most disadvantaged schools. The deal will also allow these schools to obtain a virtually unlimited supply of Microsoft software for the next five years.

Those terms could hurt Apple and other software providers, according to analysts and educators. Historically, education has been one of Apple's primary markets. And although the company has slipped to No. 2 in kindergarten through grade 12—behind Dell—it still has a larger installed base than anyone else.

Free software, though, is hard to pass up. Apple, as well as Linux companies and other educational software developers, could find themselves out in the cold in school districts flush with new Microsoft products.

Michael Theochares, an educational multimedia specialist at a Massachusetts public school, decried the settlement as "anticompetitive" and "targeted at a competitor with dominant market share" in elementary and secondary schools.

"What's even more infuriating is that Microsoft is turning this into an altruistic proposition," he said. "You can't get better advertising than this. This is a settlement?" Microsoft could wind up "undercutting everyone in the education market," Gerard Klauer Mattison analyst David Bailey said. The best-case scenario for Apple would be that Microsoft increases the overall level of PCs in schools without directly harming a company like Apple, he said.

Linux specialist Red Hat Software tried to counter Microsoft's move soon after the settlement was announced. The company said it would provide its software to every U.S. school district and encouraged Microsoft to convert the software component of the deal to increased hardware donations, which costs the company little.

"While we applaud Microsoft for raising the idea of helping poorer schools as part of the penalty phase of their conviction for monopolistic practices, we do not think that the remedy should be a mechanism by which Microsoft can further extend its monopoly," Red Hat CEO Matthew Szulik said in a statement.

An Apple spokeswoman declined to comment on the issue.

The potential pain for Apple comes in the unique settlement terms. Under the deal, Microsoft will grant approximately \$500 million to help underprivileged schools create self-sustaining technology programs. Of that, \$90 million will go to teacher training, while \$160 million will go to technical support. Microsoft will also match contributions from other donors. Additionally, Microsoft would give the schools software and would give nonprofit organizations approximately 1 million licenses for the Windows operating system, which the nonprofits in turn would use to provide refurbished PCs to the schools.

The donations would go to public elementary and secondary schools, at which 70 percent of students are eligible for federal meal assistance, or approximately 14 percent of the nation's schools, according to Microsoft. Approximately 12,500 schools, representing 7 million students and 400,000 teachers, would be eligible to participate in the program.

"A slap in the face" Nancy Hudnall, an accountant from Rolla, Mo., faulted the terms of the proposed deal.

"Settlement of this case as proposed is a slap in the face of all consumers, as well as

free trade," she said. "By allowing Microsoft to remedy their anti-competitive actions by infiltrating our schools, the consumer and Microsoft are in a 'lose-win' situation."

Hudnall emphasized that she is a user of Microsoft products and has no grudges against the company. "However, I do feel that our legal system is not acting in the public's best interest," she said. "The need of schools should be addressed in another manner, not as a means to alleviate our judicial system's inability to deal with Microsoft's unethical business dealings."

With these donations, Apple equipment becomes far less attractive to cash-strapped districts. Even if the grant funds are used to buy Apple equipment, a district would have to pass up opportunities for free software.

In recent years, Apple has seen its share of the market decline because of price competition. Dell is now No. 1 in the education market, with 37 percent of new elementary and high school sales in the second quarter, according to IDC. Apple came in second, with 23 percent.

Familiarizing students with Microsoft technology could also make loyal customers out of today's students. Developing familiarity, in fact, was the basis for Apple's push into education back in the 1980s. The theory was that students would stick with the technology they understood best. While there may be some truth to this, it hasn't completely panned out in the numbers.

Apple's share of the PC market is below 5 percent, far below its share in education. Microsoft CEO Steve Ballmer denied the proposed settlement was an attempt to boost the company's share of the education market.

"The benefits we provide can be used for PCs or Macintoshes," he said. "It can be used for PC software or Macintosh software.

Certainly, the money can be used for non-Microsoft software, so I don't view it as some big thing about market share." IDC analyst Roger Kay pointed out that Microsoft also produces applications for Apple computers.

Although the settlement terms will likely help Microsoft's position in education, more tangible benefits come from the relatively light terms. The company is effectively making a \$500 million charitable donation and giving away its own software to settle a case where the liability could have stretched into far higher figures.

The case in some ways is being settled for pennies on the dollar, according to Bob Lande, an antitrust professor with University of Baltimore School of Law. The company will also likely get positive public relations messages out with the deal, said Gartner Dataquest analyst Michael Silver. "This gets Microsoft out of all these lawsuits in one fell swoop," Silver said. "It's a penalty, but it makes Microsoft look good and gives schools PCs, and in so doing would give Microsoft an even larger installed base than they already have."

MTC-00002117

From: Ian Mander
To: Microsoft ATR
Date: 11/23/01 7:57pm
Subject: Refurbished Macs

The settlement appears to be either badly worded or have little thought for alternative computing platforms.

From pages 23-24 of the settlement:

5. Refurbished Computers. Microsoft will establish a Microsoft Authorized Refurbisher program. Under this program non-profit refurbishers who meet reasonable criteria established by Microsoft for business standards and practices will be encouraged to refurbish Macintosh computers and personal computers for use in this program. Microsoft will provide such refurbishers with licenses and/or software for Microsoft operating systems (Windows 98 SE or more recent as machine specifications permit) installed on refurbished personal computers. Why are Macintosh computers even mentioned? Microsoft does not need to provide software for them under this clause (not even Office for Mac) because Macs do not run a Microsoft operating system (unless they are running Virtual PC or similar to emulate a PC). Also, Macintosh computers ARE personal computers. However, they are not Wintel-based PCs.

Microsoft will administer the program and bear the costs of administration. As part of this program Microsoft will guarantee that a

total of at least 200,000 computers, consisting of Macintosh computers or Pentium-class personal computers or better, will be available to Eligible Schools for each year of the Settlement Period at ordinary fees charged by such Refurbishers. Can we take this to mean that Microsoft is expected to pay for refurbishers to refurbish Macs, without any Microsoft software? Since there is no proportion specified of the 200,000 computers per year that should be Macs, why should Microsoft think they should pay for any? After all, as written it is Microsoft that decides which non-profit refurbishers meet Microsoft's criteria for business practices. So again, why are Macintosh computers even mentioned? It seems a token effort that falls well short of what is needed to properly address Microsoft's strong monopoly position in many areas.

Each such computer will include a color monitor, Ethernet card, speakers, keyboard and pointing device, necessary cables, 56K modem and CD ROM drive. Macs do not generally need an Ethernet card—it is built in. Macs also often do not need external speakers.

The minimum specifications adopted each year will include but not be limited to processor speed, RAM and storage capacity, and will not be below a level sufficient to run at reasonable performance levels, for school use, Windows 98 SE and the application programs to be donated pursuant to Paragraph IV.6 herein. Of course, this paragraph excludes ALL Macs from being included in the scheme unless they are running Virtual PC or similar.

Yours faithfully,
Ian Mander, BSc.

Subject: Unhappy with Microsoft Settlement...

I am writing to tell you that I am very dissatisfied with the current Microsoft antitrust settlement. I strongly agree with the Settlement Enhancement proposed by RedHat inc. (see: http://www.redhat.com/about/presscenter/2001/press_usschools.html) Allowing Microsoft to install their software in schools would turn the US public school system into one of the largest customer bases for the company. This seems to be antithetical to an anti trust settlement, and turns punishment into an award.

Please read the alternative settlement proposed by RedHat inc. It suggests that Microsoft donate computer equipment to public schools, and RedHat provides software and unlimited support, also for free. This is a win win scenario, because it doubles the benefit to the schools, and prevents Microsoft from widening their influence.

Cahill, Dima, Steve McCreedy
Date: 11/23/01 7:26pm
Subject: Doubts about settlement

Dear DoJ:

Microsoft is the most profitable monopoly in the history of man, and one of the more ruthless. It has used its domination of the PC software industry to cripple the open-software movement and has even tried to pass laws that would make that movement illegal. The DoJ settlement should include a strict and comprehensive prohibition of efforts to stifle the open-software movement.

It is hard to imagine how any government committee would be able to supervise Microsoft's compliance with any agreement. Microsoft's recent offer to give \$1 billion in computer products to poor school districts is absurd. The real cost to Microsoft of a software product valued at \$300 is about \$1. So in exchange for some \$3 million of CDs and packaging, Microsoft will settle lawsuits, receive millions of dollars of publicity, and create millions of new customers. The proposal of Red Hat http://www.redhat.com/about/presscenter/2001/press_usschools.html to provide its Linux software for free if Microsoft would donate \$1 billion of computer hardware should be taken seriously by all parties to the settlement. It would be a much better deal for the schools. It is very odd that while the DoJ was suing Microsoft, other US government agencies, such as DoE and NSF, were using Microsoft documents and forms rather than ASCII text documents which can be read by people using any operating system. DoE and NSF have been forcing professors applying for research grants either to use Microsoft's operating system or to jump through hoops using programs that imitate Microsoft Word on a Linux system.

Subject: My View

Please reconsider your decision regarding Microsoft's penalty for monopolistic practices. Please consider mandating that Microsoft be broken into operating system, application software and hardware companies. I have observed first-hand the effect of Microsoft's practices of driving its competitors into insolvency through dirty

tricks, especially compiler and office software companies. This lever has only been available because Microsoft controls the OS and has office and compiler software for sale. Without their control of the OS, and the problems that they caused for users of competing software products, their competitors (e.g., Borland, Wordperfect, Novell, 3Com, etc.) would still be in the market providing the innovations that Microsoft copied just before the companies were driven off the map of out of the market.

Thanks for the opportunity to comment

Subject: The Microsoft Settlement

Dear US Justice Department,

I do not believe the remedies reported in the news are going to have the slightest impact on Microsoft's predatory marketing practices, and subsequent illegal abuse of monopoly power.

Take, for one small example, the case that started it all: internet browsers. Since the time the case started, Microsoft bundled their browser for free, and essentially drove all other browsers out of the market. They claim they have a right to do this, and that they are only serving consumer needs.

But their most recent versions—including ALL browsers shipped with the new Windows XP—have made a significant change: they no longer support industry-standard third-party browser plug-ins for presenting specialized content, such as movies, sound, animation, and virtual reality. This means that third-party content providers, such as Real Audio, Macromedia Flash, Adobe PDF, and Apple QuickTime—just to name a few of the larger players—no longer function under Microsoft's browsers using the standard installation procedure.

Instead, they must provide special installations that go through an additional layer of software—Active X—that Microsoft's own content provisioning software does not go through. This means that ordinary consumers will have to struggle needlessly to install third-party content provisioning software, but perhaps more importantly, if they do actually get through that struggle, the third-party plug-ins will run more slowly and with less capability than will Microsoft's own content provisioning software.

This also means that some 90% of new computers sold cannot properly access my web site, which has Apple QuickTime

content, whereas 90% of pre-Windows XP computers could.

With this move, done right under your collective noses while you negotiated a cushy "hand slap" settlement, Microsoft not only successfully extended their operating system monopoly into the internet browser market, but now they have extended their browser monopoly into the content provider marketplace! They have broken the law once, and while being penalized, have broken it again.

Take heed of my prediction: now that Microsoft controls content provisioning, content will come next. Within three years, the average consumer with an "out of the box" computer will be unable to view any content that Microsoft has not provided.

With all due respect, the Ashcroft Justice Department is asleep at the wheel on this one. Quit meddling with "states' rights" Oregon and California, and concentrate on appropriately punishing large, multi-national companies who are already convicted of breaking laws.

The Lamb that was Slain is the Lion now who Reigns.

Subject: antitrust settlement

Dear Sirs,

I hope you will take the time to really consider the implications of settling the Microsoft antitrust case. By your own findings, Microsoft has used its market power to squelch most competition, giving Microsoft a stranglehold over software and operating systems with its 90% market control. 90%! There is nothing wrong with making a dollar; but Microsoft has so cornered the PC market, it is like being hooked on a drug. Since there are few options available, people are forced to keep buying their products. We've become dependent upon Microsoft. Not only that, but like an illicit drug, we are destroying ourselves with a bad product.

In light of recent develops in another case, Microsoft, in an effort to settle another suit, Microsoft has offered to supply poor districts with new equipment and MORE Microsoft products. This will shift the balance of installed OS in the midwest very much in Microsoft's favor. More districts become dependent upon inferior products and innovation is dealt yet another blow.

Surely, it must be obvious that these settlements are not about Microsoft realizing their aggressive dominance tactics result in innovation being crushed. It's about money, and making a profit. Microsoft is thumbing its nose at the government and business world. Its grip gives Microsoft the impression of being above the law. The world will not benefit from these tactics. Our economy won't. And we may lose the edge as a world technology leader. Please consider employing stricter sanctions against Microsoft and reigning in this juggernaut.

To: Microsoft ATR
Date: 11/23/01 10:10pm
Subject: Microsoft: The world's richest bully
To whom it may concern:

It is becoming rapidly apparent that our world is on the brink of many turning points. From terrorist threats to political fiascos, we are experiencing the most turbulent time in our nation's history. If there is any security that we Americans have, it's in knowing that there are competent men and women of integrity running the government and judicial system. Of course, that ideal rarely graces our reality when there are riches involved.

Needless to say, I was not at all surprised by the latest developments in the Microsoft litigation. It is obvious that the company's massive buying power has come into play as they shamelessly continue to utilize the surreptitious maneuvers that earned them the status of a full-blown monopoly in the first place. The company has proven time and

time again that it doesn't give a fig about fair play and will use anything in its vast arsenal of unethical tactics to wipe out the very competition they stole their ideas from! So now they get a slap on the wrist and are told to back out of the educational market, an insignificant fraction of their mainstream revenue sources and ... that's it? Is this American Justice? Will Big Money have the final say in everything?

If answer is yes, then what does our future hold as a nation? Take a good look at the repetitive history of all empires and you will see that they all fell due to the greed and corruption of their leaders. We live in a time when the line between corporation and government is blurred. Microsoft has found ways to influence the highest levels of power and authority in the name of the almighty dollar. I am not a capitalism basher by any means. People should be free to get as rich as they want. I just don't want to see blatant injustice funded by deep pockets. With more resources than any terrorist network or mafia clan, Microsoft is the world's richest bully and must be taught that the court's decision does not have a price tag. I implore you to make our voices heard in Washington so that we can believe in this country again. If justice does not prevail, it is only the beginning of our great nation's inevitable collapse.

My words may sound melodramatic to some, but I firmly stand behind the conviction that we have shed our blood in vain if we struggle to defend something that is rotting from the inside out.

Thank you for your time and consideration.

Sincerely,

Subject: Comments on Microsoft Settlement

Dear Sirs,

I strongly oppose the proposed settlement in the Microsoft antitrust case. Microsoft has been proven before the law to have abused its monopoly powers and needs to be punished for that and effective rules must be put in place to restore competition in the marketplace. The recently publicized settlement does neither. Healty competition, innovation, and consumer choice are ESSENTIAL to the high-tech economy. The way I interpret the settlement it is full of holes and will not stop Microsoft from steamrolling the competition with unfair business practices and does nothing to prevent Microsoft from gauging consumers for years to come.

In particular:

—Microsoft must be prohibited from engaging in exclude and semi-exclusive agreements with any parties for any time period.

—Microsoft must not be allowed to provide financial or other incentives to other parties for favoring Microsofts products over a competitors product.

—Microsoft must not be allowed to bundle or cross-license its products in any way.

—Microsoft must make public the programming interfaces to all of its major products to allow competitors to implement meaningful interoperability with Microsoft's products. Also, Microsoft must notify all interested parties well in advance before it decides to change any such interfaces and must make these changes available.

—Microsoft must be prohibited from breaking public technology standards by adding proprietary and incompatible features to such standards and then bundling this proprietary technology into hundreds of millions of Windows platforms, thus creating a de-facto standard that overrides the existing public standard.

No exemptions or loopholes can be allowed for the above rules if meaningful relief is to be achieved.

I urge the court to understand the impact Microsoft's past behavior has had on the high-tech marketplace. If Microsoft's ruthless business practices continue unchecked the American economy will pay an enormous penalty in the long run.

Microsoft should compete as much as it wants, but it must stop doing so in an unfair manner. The proposed settlement does not guarantee this in any way.

Subject: Microsoft

I am very troubled that Microsoft, which, indeed has committed AntiTrust violations, as confirmed in the court hearings earlier this year, is now going unpunished.

The Federal Settlement is so wimpy as to be an apologia to the company. The very recent pricing settlement Microsoft made and its "conciliatory" plan to aid schools is a brash ploy to increase its monopoly on education!

While Microsoft has been innovative in many of its products, the company's modus operandi is, for the most part, stifling of the computer industry.

Our legal system must have the courage to do what is right, what has been determined in a court of law to be right. Our justice system should function independent of which political party holds sway at any given time. Do we really want to confirm the stereotype that a Republican US Attorney General will always cave in to "Big Business"?

The recent Microsoft 'settlements' indicate, alas, that this is so.

From: Dr. Mark Waldman
To: Microsoft ATR
Date: 11/24/01 9:17am
Subject: Microsoft Settlement

Dear Sirs:

I have read the Competitive Impact Statement

<<http://www.usdoj.gov/atr/cases/f9500/9549.htm>>

Can you point me to a more concise Competitive Impact Statement and also, one that compares the Penfield Remedy (Microsoft breakup) with the current remedy (WatchDog policing) and how the two remedies will affect future competition? The current Impact Statement has no such comparative analysis.

The Jackson Remedy called for breaking up Microsoft into two companies: An "operating system company" and a "software application company". In contrast, the current remedy leaves Microsoft intact and sets up a WatchDog Monitoring System. Why was the Jackson Remedy rejected? Which remedy will work better in ensuring free competition and stopping Microsoft from engaging in predatory activities? Do you have such an analysis? Can you send it to me, please, or post it on www.usdoj.gov/

At the moment, after an admittedly cursory analysis, it appears to me that the Penfield Remedy relies, ultimately, on market forces to stop Microsoft from engaging in monopolistic activities; the current remedy, on the other hand, relies on a WatchDog Committee. Market forces are almost always more powerful than WatchDog Committees.

Market forces are made up of millions of consumers; WatchDog Committees are made up of only a few people and, in general, fail in enforcing anti-trust remedies like those being proposed. An example of this failure is the 1998 antitrust settlement against Microsoft which Microsoft simply ignored. Your comments, please.

Subject: Microsoft "Settlement"

Dear Sir or Madam,

I cannot believe the lack of vision and understanding evident in the Microsoft settlement of the monopoly case.

To "force" them to provide a billion dollars of their own products into school systems only further extends their marketing reach. This did not hurt or punish them at all.

Had the justices had some courage and wisdom, they would have forced Microsoft to provide that same billion dollars worth of computer products from some other provider of quality education products like Apple.

Doing that would have had a true financial punishment with no future payback opportunity.

If this was the best you could do with such an identifiably strong case against a corporate behemoth, then I fear for the future of independent business in America.

From: Paul M. Webber
To: Microsoft ATR
Date: 11/24/01 12:44pm
Subject: Microsoft Antitrust Settlement

Dear US Justice Department,

I do not believe the proposed remedy for the Microsoft antitrust conviction is going to have the slightest impact on Microsoft's predatory marketing practices, and subsequent illegal abuse of monopoly power. Consider the case that started it all, internet browsers. Since the time the case started, Microsoft bundled its browser for free, and threatened computer makers who offered other browser software to consumers. This drove other browsers out of the market. Microsoft claimed it had a right to do this, under the guise of "innovation" and "serving consumer needs." This abuse served as one of the bases for the antitrust conviction against Microsoft.

Now consider what is happening with "Windows XP." This operating system does not support industry-standard third-party browser plug-ins for presenting specialized content, using any internet browser. This means that third-party content providers, such as Real Audio, Macromedia Flash, Adobe PDF, and Apple QuickTime, no longer function with any browser under Windows XP using the standard installation procedure. Instead, third party content providers must provide special installations that go through an additional layer of software known as Active X.

This means that ordinary consumers will have to struggle to install third-party content provisioning software. If they do actually overcome that barrier, the third-party plug-ins will run more slowly and with less capability than will Microsoft's own content provisioning software. With this move, Microsoft not only successfully extends its operating system monopoly into the internet browser market, it also extends its browser monopoly into the content provider marketplace. The current settlement proposal does not address this abuse. This is happening even as a remedy for the antitrust conviction is being discussed. I believe that there are intelligent people working in the U.S. Justice Department. How can you let this happen?

Here is what will happen if you ignore this issue: Microsoft will control internet browser content. Within three years, the average consumer with an "out of the box" computer will be unable to view any content that Microsoft has not provided. Microsoft not only want to serve consumer needs, it wants

to control consumer needs. The proposed remedy is insufficient to prevent this from happening.

Subject: I want my tax dollars back
To the collectives who prosecuted Microsoft:

You wasted our time and tax dollars in this fruitless pursuit of a private corporation.

What gives you the right to penalize a corporation for being successful?

I pay heavy taxes each year for this nonsense?

You failed to mount a convincing case against Microsoft, failing to provide solid and convincing evidence of abuses of Microsoft against corporations. You have shown beyond a reasonable doubt what a sham the antitrust laws are. Having done that you (as a collective) managed to strongarm Microsoft into a settlement proposal that forces "altruism" on the part of this corporation whose major purpose is to sell products and services to the consumer market. Well, this effort makes you look like a bunch of hypocrites.

Why?

Because, by accepting this settlement, you are actually helping Microsoft expand its market into the educational sector, practically carte blanche. Also, does the government not run the vast majority of its computers off of Microsoft in its various agencies? where was your desire to maintain a competitive market then, when Microsoft-based systems won the "bid process?" You as a legal collective have wasted valuable time and tax dollars pursuing this case. Judge Penfield Jackson's rulings were unjust and immoral, and should be overturned by anyone who still has a real sense of justice. Shame on you, as a legal team and a collective!

You have failed in your mission, which was immoral, corrupt, and unjust from its inception to its baneful, sickening conclusion.

From: Hector Pereira
To: Microsoft ATR, novalog@tux.org@inetgw
Date: 11/24/01 12:47pm
Subject: microsoft settlement

Dear Sir/Madam:

With this email I want to support the suggestion of Linux vendor Red Hat about the remedy for Microsoft's monopolistic practices that they have been convicted of: at least exclude Microsoft's software from the price tag of the punishment.

The originally proposed settlement, wherein Microsoft would supply computers and its own software to schools otherwise too poor to afford them, is a clever ploy to wiggle out from under paying a painful price for its actions. To Microsoft it costs virtually nothing to make copies of its own software.

To include the market value of the software, therefore, increases the stated price of the deal to a seemingly reasonable level, while the real cost, excluding the software, is very minimal. A similar problem always occurs with large class action suits, where the members of the class typically receive rebates on the Company's products, coupons for free upgrades, and similar freebees. In these cases the lawyers' fees are based on the stated value of the deal, so the only ones who receive real money are the lawyers. The customers get nothing, basically, a bunch of worthless coupons.

The present case is different, since the lawyers on both sides are paid for by their own parties. Still, the principle is the same: any remedy should give real value to the aggrieved party. In Microsoft's case this is the general public, including someone like myself: specifically, I can not find a simple laptop computer without being forced to pay for Microsoft software, while I want one that has linux pre-installed.

I applaud RedHad in its willingness to supply free software as part of the Microsoft deal.

Sincerely,
Nino R. Pereira

Subject: National Security issues of a Monopoly

Microsoft's monopolistic practises are not only bad for businesses, they are a serious threat to the National and International Security interests of many sovereign nations. Homogenous computer and internet services are more readily attacked and brought down by viruses and worms. Microsoft products have been notoriously easy to breach by hackers. It is short sighted thinking to put all of ones eggs in one basket and to entrust the safety of that basket to a single corporate entity who's only major concern is control and profit but that is what we are doing. With each new release of Microsoft's operating system that control is inexorably expanded to increasingly encompass all our information systems, our database mangement, personal information, banking records, taxation, defense, entertainment, internet communication, retail sales, health records, government etc. etc. These issues are far too important to be entrusted to one company that if left unchecked will certainly control almost every aspect of our future lives.

I urge you to consider forcing Microsoft to release its code into the public domain, breaking the company up into two or three seperate entities and encouragin public sector services to be mandated to adopt alternative software solutions designed to encourage diversity and interoperability. Tim Berners Lee invented the World Wide Web in the early 70's to make it possible to share information across language and technology barriers. The idea was to design a system that permitted diversity not a monoculture of clones. Microsoft could make their systems operable with competing or rival solutions but they won't because there is no reason for them to do so. In fact there is every reason for them not to. Nothing I have seen so far indicates that they will change their ways. With the release of Windows XP, Microsoft is about to ratchet up its ability to dominate the sytem one more notch

Thankyou
John Hails

Subject: Proposed settlement continues illegal actions

The proposed settlement by Microsoft of the anti-trust class action suits is unacceptable. It would only server to perpetrate, and in fact extend, Microsoft's illegal monopoly. As a long time computer professional (since 1965), with many years in the school and university market, I find Microsoft's continued arrogance and disregard for the consumer, business, and destruction of the computing market competition to be totally reprehensible. I watched IBM struggle with the same issue in the 70's and 80's only to be overcome by Microsoft. Microsoft has used much more aggressive tactics and blind ambition to prevent competition that IBM or Bell telephone or Carnegie ever did. Allowing Microsoft to give away used Intel/PC equipment and software that would cost

them almost nothing to provide other than media reproduction costs, would hobble schools with training and future upgrade costs in a blatant attempt to penetrate one of their weaker markets. Microsoft can give away as much hardware and software as it wants, but the remedy for its illegal monopoly actions cannot be resolved this way. I do not claim to know the best solution to the issue, but this is not it. Perhaps using the \$1.1B to provide broadband or high speed infrastructure access to more schools would be a better computing solution, and then allowing the schools to set their own technology platform choices.

Subject: MS and our economy USDOJ:

I do not believe that the remedies proposed in the news are going to have a significant impact on Microsoft's predatory marketing practices, and their continued abuse of monopoly power.

Take, for example, the internet browser issue. Before the beginning of the anti-trust case against them, Microsoft began bundling their browser at no cost with their Windows operating system, essentially driving all other browsers out of the market. They have always claimed that they have a right to do this and that they are only serving consumer needs.

Unfortunately for consumers, in their most recent version—now included with all browsers shipped with the new Windows XP—Microsoft has made a significant change: they no longer support industry-standard, third-party browser plug-ins. These plug-ins allow the presentation of specialized content, such as movies, sound, animation, and virtual reality.

This means that third-party content providers, such as Real Audio, Macromedia Flash, Adobe PDF, and Apple QuickTime, to name a few, no longer function under Microsoft's browsers using the standard installation procedure. Instead, they must provide special installations that go through an additional layer of software—Active X—that Microsoft's own content-provisioning software can avoid.

This means that ordinary consumers will have to struggle needlessly to install third-party content-provisioning software, but more importantly, the third-party plug-ins will run more slowly and with less capability than the Microsoft "default" install (which, of course, uses MS's own XP-bundled software).

This also means that some 90% of new computers sold cannot properly access some web sites (say, sites containing Apple's QuickTime or RealNetwork's RealAudio media content), whereas 90% of Windows XP computers could. (Again, all these issues are cropping up only because MS is purposely deleting, bypassing, or internally changing tried-and-true internet standards in

order to "push" their own software exclusively.)

Now that Microsoft is beginning to exert control over content-provisioning, content itself may be targeted next. Seriously think about it, within a short span of years, it is very possible that the average consumer with an "out-of-the-box" computer may be unable to view any content not provided, or sanctioned, by Microsoft. (Remember Standard Oil?)

With this illicit behavior, Microsoft not only successfully extended their operating system monopoly into the internet browser market (already an abuse of monopoly power), but also have extended this monopoly control into the content provider market! Basically, they have broken the law once, and while being penalized, have broken it again. This is wrong; the penalties and decrees currently being proposed are inadequate and will not stop this illicit behavior. Destroying companies by sheer force and size (causing people to lose jobs as a result), taking away choice from consumers, and eliminating competition are NOT the way American companies should be allowed to do business...the penalties and restrictions imposed on Microsoft (short of an AT&T-style break-up) need to be, must be, harsher.

Subject: Microsoft settlement

I strongly encourage you to revise the proposed Microsoft settlement.

I believe it would end up letting Microsoft become more of an abusive monopolist, not less.

When I read the text of the settlement I spotted many loopholes, although I am not a lawyer. Even if Microsoft is eventually forced to divulge some code or change their behavior as a result of the settlement, they would be able to drag the process out long enough to crush the competition. They have already shown the ability to do that.

Windows XP contains an activation mechanism that will reduce piracy. That ought to lead to a reduction in price, but in fact XP will cost more. Only an unreformed monopolist could do that. What bothers me the most is that the settlement is backward-looking. It would not prevent them from using their Windows monopoly to make .Net a monopoly by building it into Windows as they are already doing.

Thank you for your public service.

Subject: Microsoft anti-trust—my comments

As a computer technician (and former educator) at a small, private college, I have followed with interest, the proceedings in the Microsoft anti-trust settlement case.

For what it's worth, below is a summary of the "Microsoft Effect" as I see it at our college.

* The Windows 9x, NT and 2000 server and desktop operating system products were purchased because they promised a greater "ease of use" and lower "training time" than other products (Mac OS, Linux, Unix, VMS). It has NOT lived up to this promise. The products are "buggy" and take HOURS of wasted time applying security patches, updates, service packs, hot-fixes, etc.

As a user of Unix, Linux and MacOS as well as Windows, I can assure you that it is not "easier" than any of the competing products in any respect.

* The Microsoft products including Office 95/97/2000 and Internet Explorer and Media Player have effectively prevented the "practical" use of any other similar products. (Corel Wordperfect suite, Netscape and QuickTime media player for example) The competing products can usually be installed, but the time and effort it takes in "man-hours" to support them on the Windows "integrated" operating systems, makes it unpractical. Virtually all of the Microsoft product installers, updaters, service packs and "bug" fixes, reset all settings to "optimize the system for use and "integration" with the Microsoft products." i.e. it changes our custom settings back to the Microsoft defaults. It is nearly impossible for our small staff to keep up with the continual "resetting" of preferences to make the competing products work again.

* Microsoft "internet" products relating to the Explorer browser, IIS server AND the DEVELOPMENT and back-end products (like SQL) for these programs make any website created with them functional only by a

system using Windows operating system and the Internet Explorer browser. Use of Java, connections to SQL databases, etc. becomes a technical nightmare if they must "integrate" with the Microsoft products. For example, I can edit our website ONLY from a system running Windows OS with Internet Explorer 4 or greater. I cannot edit it from any system using the Netscape browser (or any other browser like Opera, iCab or OmniWeb), or from MacOS, even running the latest Microsoft Internet Explorer software for MacOS.

* We originally purchased Microsoft products because they offered "Professional technical support" unlike the myriad of "open source" products like Linux. However we have found that each call to Microsoft support, at the rate of \$500 per call, is greeted with the same response... "we have never seen that problem before." To date we have 4 of our last six support calls "closed" by Microsoft as "solved" (from their standpoint), even though the problem with their product is NOT resolved on our end. e.g. they essentially said "It *should* work, but still doesn't... oh well, good luck, and call again (for \$500) if you have any more problems."

* We are now essentially "trapped" and forced to continue using their faulty products. We have so much time and money invested in them that there is really no way that we can financially drop Microsoft and switch to other products. Due to the problems with integrating the Microsoft products with other platforms, it is also practically impossible for us to "wean" away from the use of Microsoft.

All-in-all we feel cheated, trapped and caught in an endless cycle of "service packs", forced upgrades, and the inability to use any products other than Microsoft... we are like the professional equivalent of an "abused child".

Subject: Anti-Trust Case

As a consumer with some computer experience, I'd like to say that I disagree with the Department of Justice's decision to settle its anti-trust case with Microsoft. I will not refer to arguments that have been made by those more knowledgeable than I; I will simply address what I know.

If I want to do anything with a computer, it must be running a Windows variant. To me, this is the essence of a monopoly. In the current environment, only MS-compatible software is viable. I use Windows, and I use a lot of MS products. However, I do so out of necessity rather than preference.

I suggest you discuss this case with consumer rights' advocates, like Ralph Nader, and with knowledgeable consumers, like those in the slashdot.org community.

Thank you for your time.

Subject: Microsoft antitrust case

Dear Sir or Madam,

I am writing to express my disapproval for the latest Microsoft antitrust settlement. It is true that this "solution" would help disadvantaged schoolchildren by furnishing them with computers and software, but I fear that Microsoft's goal, and in fact what could very well happen, is that such actions would further establish Microsoft's share in the education market, undermining competitors such as Apple who are struggling to fight the Microsoft behemoth already. Microsoft's proposed settlement is inappropriate to the current situation. I urge you to reject it for the good of the computer industry, including Microsoft's competitors.

Very sincerely,

@doj.ca.gov@inetgw,...

Date: 11/24/01 7:17pm
Subject: I understand your offices are for a Microsoft settlement

Dear sirs,

I am doing this joint e-mail because it applies to all your offices. It appears according to news stories, that you have joined in agreement with Microsoft to let them get by on their penalty for being a monopoly, by letting them face no stiffer penalty than a 1 billion dollar funding program to low income schools. This penalty is a GIFT! It is the schools where the hearts and minds of all our future computer users are being met. And the fact it is low income schools it doubly sends the message that Microsoft is the sole provider of computer services to school systems and their kids. Guess what, most school systems don't use Microsoft. Support costs for schools are much cheaper because most use the Apple Macintosh platform in its stead. If you force Microsoft technology on schools, these school systems will be forced to recoup support costs 100 times higher than they presently have for computers. If you don't believe what I am saying, visit http://homepage.mac.com/mac_vs_pc/Intro.html

And Microsoft is only going to be obliged to cover the first 1 billion dollars. After that, it is up to the poor school systems that previously didn't have to pay these high support costs to come up with the moneys. This means teachers will be laid off. This means music programs will be cut. This means after school activities will be cut. This means the school systems will go further down the hill than they were already. And why? Because now each of the school systems will be forced to upgrade each time a new technology comes. If they don't upgrade and their computer breaks down, they'll be forced to buy new computers if they want to keep any computer systems in their place. Where before with Macintosh systems, they could have a 9 year old Macintosh, and it still act as a functional tutorial machine for using computers. Allowing Microsoft to pay off their penalties as a limited settlement to schools, is equivalent to letting Microsoft expand their market by giving away its systems to people who formerly were happy with their competitor's systems. What waste!

I strongly urge you to reconsider, and find a stiffer penalty for Microsoft, so they don't get off the hook so easily for being a monopoly. Such stiffer penalties would include forcing Microsoft to end its Windows XP and Office XP activation system, which requires people to pay an upgrade cost for the operating system every 6 hardware charges. This licensing scheme means people will be forced to be online to continue to be able to use their Windows XP system and provide personal information each time they want to reactivate their machines after a hardware change. And for people upgrading from their old operating system with more than one computer they have to purchase an individual license for each computer they own. Apple Macintosh doesn't force you to do this. Microsoft is making the cost of computing go up astronomically by its activation scheme. Microsoft should no longer have an integrated web browser of their own on the desktop of the operating system. That feature should be disabled permanently. People being able to launch Explorer straight from the desktop by

manually entering the website address from their desktop and operating system windows means Explorer is everywhere. Microsoft now limits support for MP3 music formats where before they were free. Apple doesn't do that. Microsoft should not disable technologies of third party vendors. It is acting like a monopoly. I'm not the only one sad by this turn of events, and hope you reconsider. Here are other people's opinions of your actions: [http://www.macdirectory.com/4U/comments.fm\\$FIND?title=4001515&max=40](http://www.macdirectory.com/4U/comments.fm$FIND?title=4001515&max=40)
Please reconsider.
Sincerely,
anonymous

Arthur Young

MTC-00002165

From: steves@fortemusic.net@inetgw
To: Microsoft ATR
Date: 11/24/01 10:49pm
Subject: Settlement Proposal

Microsoft has announced a settlement proposal to try to resolve a series of antitrust lawsuits initiated by state Attorneys General:
>Under a settlement proposal in a series of private antitrust >lawsuits announced Tuesday, Microsoft agreed to donate approximately >\$500 million to help bring technology to some of the nation's most >disadvantaged schools. The deal will also allow these schools to >obtain a virtually unlimited supply of Microsoft software for the >next five years. [www.ZDNet.com]

This proposed settlement is an absurd and insulting solution which does absolutely nothing to mitigate Microsoft's anticompetitive behavior, and in fact does exactly the opposite by further dissemination of its products at the expense of other software vendors. Apple Computer in particular stands to lose its critical education market if faced with a flood of free Microsoft products in schools.

With a market share of more than 90%, Microsoft has a profound advantage over companies such as Netscape, Real Networks, and Apple, who are fighting a perpetual uphill battle to maintain a presence in the market. Any application software that Microsoft chooses to package with its Windows operating system is guaranteed to push all other competitors out of the market. Netscape's browser software used to be the most widely used internet software. Once

Microsoft started bundling Explorer with Windows, Netscape's market share dropped to almost nothing. Real Networks faces a similar fate with their RealAudio products, which is steadily being pushed out of the market by Windows Media software bundled with every Intel PC. Action must be taken to restore a balanced and competitive software market, in which the success of a software application is based on its quality, performance, and utility, not the fact that it's bundled for free with an operating system that runs on the majority of the world's personal computers. I ask you to seek an outright and immediate rejection of Microsoft's ludicrous settlement offer, and continue to pursue the breakup of Microsoft into two separate companies for operating systems (Windows) and applications (Word, Excel, Explorer, etc.). This solution will help maintain a healthy and innovative American software industry for years to come.

Subject: Microsoft antitrust settlement

I am really disappointed with the settlement with microsoft is so light and will only benefit microsoft in the long run. In particular the one billion dollar settlement to give software and hardware to disadvantaged schools only sustains microsoft's monopoly. The settlement is clearly political. You should know that microsoft is not innovative but copies mac operating code and tried to copy quicktime code several years ago. Yet the US Attorney's office did nothing. Think about it. Chappy Liu

MTC-00002167

From: Edward C. Williams
To: Microsoft ATR
Date: 11/24/01 9:54pm
Subject: Microsoft settlements

For over one and a half decades I have watched Microsoft grow their power and dominance in the computer industry. They have not grown because they had the best products, but because they were masters at marketing, and once they got large enough to buy out or intimidate almost any competition they have had an extremely deleterious impact on the market.

They had a monopoly of the operating platform for PCs, as proven in the antitrust case, and then with their muscle moved into other fields quickly eliminating the competition that once dominated the given field. Two examples are Netscape in the browser field, and Novell in the network area. When the government slapped their hands in their attempt to buy Intuit so they could extend their domination into the financial field they just set about the same process and have also made considerable headway there. Now they are trying to beat out Palm with their more limited Windows interface and are going head to head with Nintendo and Sony in the games area. It is quite apparent that their goal is to dominate the whole computer realm.

If they always made the best product and refined it to eliminate most of the problems

and everyone flocked to their products for that reason I would object less, but they don't. People use many of their products because they come free on their computer, or because they come as a package with a program that they really want, like Excel, and since they have it they might as well use it rather than buy a competing product. I must admit that Bill has gotten so smooth in his marketing that he can claim that he "knows what the customer wants" and they will buy it. When ever there is a new version out he is so convincing that "everyone wants it" that they have to have it too or they will get lost in the dust.

A couple of years ago I had a coworker with a Masters degree tell me that they went with a Windows machine because that was what "everyone had". Furthermore since they bought MS Windows they decided to get a Microsoft mouse and keyboard too. The fact that they did not choose it because it met a need, or was the most effective way to get their work done, etc. but because everyone had one shows the power of MS's advertizing campaign.

I am not pleased with the settlement direction that has been taken once Microsoft had been proven to be a monopoly that had misused and abused its position of power. I am not sure that they need to be broken up into two or more companies, although I don't see that as a bad thing, but from what I have read the alternative that you have taken does nothing concrete to insure they will not continue to do business as usual. In fact even the potential settlement of the other major suit, involving the state of California and others against Microsoft, will be an enhancement of their market by forcing the schools into using their software and the hardware that runs it. Instead they should be given the money and be allowed to purchase the hardware and software they want to use.

Please reconsider the consequences and insure that something significant comes out of this landmark case. Something that will help the consumer like me by opening up the competitiveness of the computer industry.

From: Shafqat Manzur
To: Microsoft ATR
Date: 11/25/01 12:25am
Subject: Comment on agreement between DOJ and Microsoft Corp.

Sir/Madam,
Following is an opinion on the recent settlement reached between DOJ and Microsoft Corporation in the landmark anti-trust case. I am not in any way affiliated with the state or federal government or Microsoft Corp. and am providing this brief as a consumer.

With all due respect to the involved employees at the DOJ, I strongly disagree with their notion that this agreement will benefit consumers and foster competition in the information technology arena. I don't know if there was any political pressure to promptly conclude the case but it is too obvious that the DOJ staff went out of their way to reach a settlement with Microsoft. The previous administration demanded tough concessions from Microsoft and rightfully so. The current administration

gradually softened it's stance on the case and finally agreed to terms which fall far shorter to even what Microsoft had agreed to during previous settlement talks.

The terms of this settlement definitely do not go far enough to ensure benefit to consumers. There is no indication of any punishment to Microsoft for violating it's monopoly power not only in the operating systems but also the office application suite market. They have repeatedly flouted consumers and the state and federal governments over the years and yet they are simply about to walk away with no punitive damages. This is clear proof that their strategy of an enormous investment in hiring popular law firms to hold the government at bay while they bring in billions in profits over the years from their illegal business model has been a success. There is no question that they have won. With regards to the remedy for future wrongdoing, I guarantee you that competitors will not stand a chance to compete with Microsoft in the future any more then they have in the past. There has never been a competitive market and there is no reason to predict that there will be one. Microsoft has in the past crushed it's competitors and will absolutely do the same again. You have left the Microsoft culture intact and since they don't agree that they have broken any rules, they will not change the 'Microsoft way'.

I thank you for your time,
Shafqat Manzur

From: Dennis Hussey
To: Microsoft ATR
Date: 11/25/01 2:29am
Subject: Microsoft anti-trust case proposed settlement

Your honor,
I personally feel that Microsoft is getting off way too easy for their predatorial

monopoly behavior and it is affecting competition as well as the general consumers and businesses. I am in the computer networking field for the last 10+ years and here are some of the major issues I have with Microsoft and how they have affected the industry and consumers/businesses:

1) Microsoft Office has become the defacto standard and has hurt Lotus and Corel/WordPerfect strongly. I have customers that try to maintain WordPerfect word processing with Lotus 123 spreadsheet due to ease of use, stronger security (my customers are all financial institutions) and less susceptibility to virus infections. They are being forced into MS Office because government agencies (FHA, FDIC, etc.) are sending out documents in MS Office format that are not compatible with WordPerfect and Microsoft continues to change the format of their documents so that the competition cannot read/write the documents. They have to throw the money they spent on WP and Lotus licenses and pay more to get MS Office.

2) In a similar manner, there are applications now that require Windows NT servers to run and most of my customers have Novell networks. Novell as a company has been changed from the dominant player in networks to struggling to survive. My customers are forced to buy NT server to do business.

3) Security problems—Microsoft Office, MS Outlook, Internet Explorer and Windows have major security holes that have cost businesses and consumers untold millions of dollars patching, purchasing virus software and fixing data, yet Microsoft doesn't seem to care that they have these problems. Businesses have to put up with this as there is no competition. If there was open source, these problems could be resolved quicker and more secure. If there was viable competition (Microsoft has squashed all of them on this platform), they would be forced to test more and ensure security to remain competitive.

4) Microsoft has ruined to possibility of open standards. Sun Microsystem's Java was created to produce an open standard to create software that would run on virtually any platform. Microsoft saw this as a threat to their Windows monopoly and, in a deceiving manner, supported Java and proceeded to change it to make a version that would run under Windows/Internet Explorer better. Being the most popular platform (Windows/IE), programmers were writing websites with this making the sites incompatible or running inferior on other platforms. Sun has sued on this for breach of contract.

5) Internet Explorer is built-in and it is difficult to use another web browser. Netscape was leading in the browser competition and Microsoft decided to incorporate Internet Explorer in Windows 95, killing Netscape's ability to make a profit on their product and leaving consumers without much choice. This goes the same for email programs, with Outlook Express being built-in as well.

6) Microsoft produces new versions of Windows and quickly stops support of existing versions quicker than most software companies forcing businesses to upgrade. This causes problems with major software

applications and ensuring compatibility with legacy applications. Our institution uses a bank management system that runs under Windows NT workstation and Windows 2000. There is Windows XP out now and soon we will be no longer able to purchase Windows 2000 and have to invest alot of time and money to ensure that it will work with Windows XP. Microsoft has discontinued selling Windows 98 and will stop supporting it at the end of this year, just 3 years after it came out. There are applications that still require DOS compatibility (Midanet comes to mind which is from Fannie Mae as I remember). Windows XP doesn't support DOS any longer, yet a Windows version of Midanet is still not available.

7) Microsoft has deliberately held back certain technical information about their Windows with features it had to competition so that their own applications such as Office can perform better than competitive products. This is deliberate deception and unfair practices.

I can go on with more examples, but this is some main points I wished to make. These points show that Microsoft's monopoly hasn't helped the consumer and businesses but hurt them and cost them alot of money. It has also shown that competition is being hindered and predatorial practices have been clearly proven. This constitutes a monopoly which is supposed to be illegal. We need to come down harder than the proposed measures to bring back healthy competition and consumer choice. I supported the original breakup, I support forcing Microsoft to release their source code for Windows, etc.

Please do not cave in to Microsoft and give them a light sentence that can allow them to continue doing what they have been doing and further their monopoly.

Sincerely,
Dennis J. Hussey

Subject: Open Letter on Microsoft Settlements

I am an information technology professional with 8 years of extensive experience in software engineering, systems administration, data design, coding, and testing. I have a broad background, but my core competencies are in web systems. While serving as a commissioned officer in the US Air Force, I installed, administered, and developed with my first web server in 1994, at the advent of the world wide web. In my career, I have worked with a variety of operating systems, including flavors of Unix and versions of Microsoft Windows. I've also used an array of open standards, including html, css, http, ldap, cgi, xml, and java. Very recently, I moved an entire internet and intranet infrastructure for a large academic

medical center from a Unix (Sun Solaris) hosted environment to one using Microsoft based servers. Currently, I work independently as a developer and consultant. As such, I feel I have relevant insight into Microsoft's technology and business practices. I favor a best of breed approach to system development, so I also believe I represent an objective point of view. I regularly use Microsoft software at work and home, and continue to do so where I deem appropriate; I am writing this message in Microsoft Outlook, for instance. I also use other operating systems and recommend their use in circumstances where I judge there is a better alternative.

Throughout my career, my ability to provide value to my employers or customers has been adversely affected by Microsoft's technology and business practices on a regular basis. The software they deliver, particularly new software, is typically far less efficient, stable, or secure than alternative approaches. Their products are usually designed with dependencies that require you to use other Microsoft products and sabotage the concurrent use of non-Microsoft approaches. Many of their offerings do not uninstall properly, and leave a permanent presence on the hosting system. Because they write the operating system too, some of their applications make use of capabilities that are not available to non-Microsoft developers. Their licensing practices are mercenary and anti-competitive, using vehicles like sole-source relationships to build inordinate market share. Once Microsoft gains control of a market, they begin raising prices at a rate faster than the industry in general. Most importantly, Microsoft has repeatedly undermined and perverted open standards to serve their own ends, including every one I listed above.

I know that business is competitive by nature, but I agree with the Justice Department's repeated findings that Microsoft's business practices crossed the line and were illegal. Further, I believe that Microsoft created a situation for itself that is bad for the industry and the economy at large over the long term. While I will concede that many dot-coms burned capital on irresponsible business models and implementations, I attest that Microsoft has some amount of personal responsibility for the bursting of the bubble economy and the current economic woes of the information technology industry and the country. The cost of developing on the web should not be as high as it is now, but who knew in the early days of e-commerce the momentum of progress in open standards could be stymied so effectively by one player. Microsoft is in direct conflict with the cooperative culture that brought us the internet, and their long term strategies will exacerbate this problem: where Microsoft succeeds, all others will bleed. History will not be kind if we will have to address the same issues again because of an ineffectual remedy.

If the terms of the anti-trust settlement can be realized, then it may make some difference. However, I don't have faith that Microsoft will adhere to the spirit of the settlement, I have even less confidence in the Justice Department's ability to enforce the

terms of the settlement expediently (especially given how long this initial anti-trust process has dragged on), and I believe the problem is larger than middleware. In particular, I don't believe anything short of making Windows open source would prevent Microsoft from taking advantage of the ambiguous nature of a "middleware interface" to continue to constrain consumers and developers. Don't forget that in addition to the operating system and productivity application markets, Microsoft has a big stake in development tools; a hook into middleware functionality doesn't mean much to me if I have to use another Microsoft product to implement it. And I've read some of Microsoft's published information on its software in the few instances where it doesn't directly involve one of their development tools, and it still didn't enable me to communicate cleanly with the Windows operating system or their middleware (even when it's supposed to). At best, they're support staff has pleaded incompetence. I'll buy it, too; they have no history of successfully supporting cooperative development outside of Microsoft tools. Microsoft's entire oeuvre has a tendency to be black box. To achieve its aims, this settlement would have to completely reverse Microsoft's closed corporate and development culture. I'm skeptical that this settlement will lead to anything more than continued legal squabbling.

On a separate note, the recent class action settlement is too plainly a vehicle for Microsoft to broaden its market share while simultaneously getting good press. I view it less as ineffectual and more as a disgrace to our legal system.

This message is a general statement of perspective, and is not intended to be a basis for reversing any decisions. If you want more insight, specific examples, or verification of my credentials feel free to contact me.

I am disgusted by the decision to let these convicted criminals get off. What a shameful, embarrassing joke of a settlement! Not only letting them off but actually allowing them to expand their monopoly in the education market.

With the Supreme court decision to decide the presidential election, the curtain was lifted to reveal a very ugly side of our government. Even within that context, this decision is shocking. It is now unmistakably clear who is in the driver's seat of our government these days—and it is not the people.

Let us hope the Europeans have not been similarly corrupted. Perhaps they will have the guts, and honor to deal with them properly.

Dear Sirs!

I am at a loss for words, as we will never know how these computers are constructed in full to operate, but with one eye open for the worst you see bits of the truth. Anybody with internet access can most probably tell you that on occasion you get access to the internet without the necessary procedure being completed. This is due in part to the fact that with the server provider blueyonder and internet explorer the initial home webpage can be displayed without the necessary internet access dialing procedure. Even if it seems to have come from the temp internet file it should not come up without internet access availability, and today's news or the available activities. As we know from the temp internet file you can enter the internet with only netscape, as it is windows, however dialing access procedure also apply. For the home webpage to be displayed without the initial dialing procedure then states that every computer with internet access is most probably accessible to Microsoft and bill gates. What are we to do? Even though I know Nokia, Siemens, Yahoo, and other possible interested parties have seemingly stolen from me it is small in comparison to the loss of material as you write it. Also to see a computer still running after you've switched it off is highly none competitive.

The settlement is a complete sell-out. It does not even address the findings of fact in the case. You have not even done your jobs. The findings alone must be addressed; they are not.

It would appear that Microsoft's money has bought them what they want, the right to continue to be a monopoly.

Regards,
Ron Williams

Subject: Microsoft Settlement
Well,

We are just short of just dropping the case, and you guys just gave away the farm. The proposed settlement, is less than a wrist slap. It appears that you simply do not want to

continue the work, and the anti-competitive practices that have served MS so well, will serve them well in the future. I find it hard to understand your strategy when the courts FOUND that MS was illegally using their monopoly power, then the United States Dept. of Justice has basically told MS "well try to stop doing this" I do not support a breakup, but there certainly MUST be some real teeth in the MS controls that MUST be in place. Exactly how many times has MS danced around the law with creative interpretations?

Now, we have MS disabling third party media delivery such as Apple Quicktime and Real Networks realplayer. Clearly, MS is done with the browser wars and moving to the content wars.

I for one, support diversity such as Mac OS and linux based machines. To have content delivery controlled by MS is not acceptable.

Thanks, and Please reach a real settlement.
William Pence

Subject: Do NOT settle with MS

It is NOT in the best interests of AGAIN believing that MS will want to abide by any of the terms, which BTW are not strick enough of this proposed settlement. On top of it, letting MS give 'billion' dollars of software, which is mostly defective and part of the problem to begin with really, to schools to get the kids 'hooked' on MS products. That is ridiculous, as it is like giving a crack seller a punishment for a CRIME (that is what MS has committed, clearly) of selling crack, the OPEN DOOR to the kids and sell them all the crack they want or think they should be allowed because they don't know any better. MS should be forced to admit publically they are criminals, that they have forced mediocre and defective products to customers and charged them a premium for it. If MS was in the auto industry, they would have recalled EVERY single product that they ever produced. MS is bad, very bad for America, and the DOJ should NOT be afraid to tie this thing up more and EFFECTIVELY spend more money on burying Bill and his scammers in legal headaches for YEARS. In the end, like ATT they will likely rule again, but for 10-20 years from now at least consumers would have the ability to choose. Right now they do not, and letting them into the school system will effectively kill any chances of Apple or others to compete. You are out of your fucking minds! Just a concerned, pissed off tax paying consumer. Get your acts together, and do the RIGHT thing, not the chicken things.

 Renata B. Hesse
 Antitrust Division
 U.S. Department of Justice
 601 D St. NW, Suite 1200
 Washington, DC 20530-0001
 Re: Proposed United States vs. Microsoft Settlement

Ms. Hesse,
 I have been a computer user for more than thirty years, and have developed software for both Microsoft and non-Microsoft operating systems.

After reading the proposed settlement, I am very concerned that certain definitions, limitations, and exceptions will make the agreement ineffective in remedying the abuse of monopoly power by Microsoft.

Two very broad goals should be pursued to curb this abuse of monopoly power:

1. Developers must be able to develop applications and middleware for the Windows Operating System Products that can compete with Microsoft Applications and Middleware products.

2. Developers must be able to develop applications and middleware for non-Windows operating systems that can interoperate, as either clients or servers, in networks with computers running Windows Operating System Products.

To achieve these goals, more open access to information, and more restrictions on the behavior of Microsoft applications and operating systems are required. I suggest the agreement be modified with the following provisions.

(1) Microsoft shall publish the following information for the Windows Operating System Products and all middleware applications:

- (i) application programming interfaces (APIs)
- (ii) communications protocols
- (iii) application file formats
- (iv) documentation on (i), (ii), and (iii).

(2) The information should be freely distributable through non-Microsoft sources, including non-Microsoft web servers. No registration for Microsoft services shall be required for access to the information.

(3) Draft or proposed changes to APIs, communications protocols, applications file formats and documentations must be shared with the public as soon as ALPHA test dates are identified in software project

development plans. Software developers understand that drafts are works in progress, but software development lead times are such that waiting until final BETA does not give competitors an even playing field.

(4) No U.S. government procurement, whether by federal agency, or by grant to states, cities, local governments, or non-governmental agencies, shall mandate or specify the purchase of Microsoft Operating System Products or Middleware. Procurements may only specify the required functionality, and compatibility with the published (in (1) and (2) above) APIs, communications protocols, applications and application file formats.

(5) The Technical Committee must ensure that all Microsoft applications and middleware (including Microsoft Office) use only the published APIs, protocols, and formats. The corrective actions include forcing Microsoft to:

(a) Removing unpublished APIs, protocols, and file formats as timely mandatory corrective service packs, or

(b) Immediate publication of such APIs, protocols, and file formats, with monetary fines when such changes were not issued as draft changes in accordance with (2).

(6) Microsoft Operating System and Middleware products have often, without warning or option, overwritten non-Microsoft boot loaders and system preferences, or installed themselves as "preferred" applications in place of non-Microsoft applications. Under the settlement, Microsoft products must respect non-Microsoft boot loaders, applications, and settings, and must allow installation according to user preferences and priorities.

In conclusion, the proposed agreement does not do enough to address Microsoft's abuse of monopoly power. Please seriously consider my suggested modifications to correct the agreement.

Hi,

In my opinion Microsoft has employed predatory practices that have hurt the software, computer and internet industries. They have killed off many competitors, like Netscape and others. I have heard that part of the settlement includes forcing Microsoft to purchase and install copies of their OS for schools. This is stupid. What the deal should be is this:

Microsoft should purchase and install Macintosh computers in schools. Why would you further extend and cement their monopoly? My alternative is a real penalty.

 Subject: Microsoft Anti-Trust Settlement
 Sirs,

As a citizen who values the ideals of innovation and competition in our society, I am appalled at the apparent outcome of the Microsoft Anti-Trust case. I am an artist/architect who is presently acquiring a master's degree in computer visualization. At every turn, I witness the wasted efforts of creative programmers as Microsoft either co-opts previously open standards and integrates/perverts them into their own proprietary system, or establishes competing standards to thwart the development of software it views as "dangerous" to its hegemony. The academic institutions of this country are one of the few remaining environments where alternative operating systems, and an open view of the possibilities of computing persist. I believe the worst possible outcome of this litigation would be if Microsoft were allowed to "pay" damages by further installing their operating system and software on the nation's educational computers. This action will only serve to solidify their business model, and will damage the opportunities for competition at the very foundation. Please stand up to Microsoft!

Thank you,
 Jack Stenner

 Subject: Microsoft (non)settlement
 Sir or Madam,

I would like to express the opinion that the proposed "settlement" of the Microsoft case does not sufficiently punish Microsoft for its past misdeeds and that it will cause my likelihood to suffer. I am a software engineer, and I am concerned in two ways:

1. I know many colleagues at other companies that have been forced out of business by Microsoft, and the light slap on the wrist that's been given to them does not discourage them from such behavior in the future.

2. From what I've observed, Microsoft's behavior has stifled true innovation in the industry, and for as long as they are permitted to behave as they feel they are entitled to this will continue. Anyone who dares to innovate knows that they will be suffocated by Microsoft. Now they know that the U.S. Department of Justice condones this behavior.

Please do the right thing and punish Microsoft.

Subject: antitrust settlement

Dear sirs,

I am not a citizen of your country but I like to give my opinion about the settlement with microsoft.

From the moment Microsoft copied the look of the macintosh, both companies were in a legal battle. Unfortunately time was on the side of microsoft. So Apple had to settle with microsoft or go bankrupt. Microsoft could stretch the process for age's. I think this is a flaw in the american system of justice.

Now an other justiceflaw is a problem for Apple. One market were Apple had a fair part of the bussiness (education) will now get unfair trade differences. The free software that microsoft must give to education is only making it harder for schools to choose. I am not saying that one system is beter than the other, only that the choice for schools is not free anymore. For a country that is known for freedom this is not good. Sorry for my bad spelling,

Greeting,
David van Deinse,
The Netherlands

Subject: Unacceptable MS antitrust settlement

AMERICA MUST FACE THIS
IMPORTANT ISSUE AND RESPOND
CORRECTLY

The proposed terms of antitrust settlement with Microsoft to distribute free operating software to education markets is totally unacceptable and should NOT be passed by individual states. The proposed action is really not a penalty—it is a benefit to Microsoft.

1. Anyone with an abacus can figure out it doesn't cost \$1billion to press, distribute CDs to schools. This is only a slap on the wrist, and certainly no where close to true community service! It's ineffective action against a known monopoly.

2. Sending free Microsoft Windows CDs to schools is only forcing education markets to accept the Windows operating system—a contrived ploy to further perpetuate the very Microsoft monopoly the justice department is trying so diligently to eliminate! Schools who use other computing platforms receive no benefit from this proposed action. The proposed settlement is pure nonsense, designed to benefit no one except Microsoft.

Please do not accept this ridiculous settlement proposal. It would be devastating to our economy in the long run, and it demoralizes America's trust in our justice system.

Hundreds of thousands of parents, teachers and students across our nation have already reviewed and rejected this proposal. These folks are now asking and watching to see if individual states are also wise enough to see the deception behind this proposal and refuse it's acceptance.

MTC-00002190

From: Soila Ochun
To: Microsoft ATR
Date: 11/25/01 4:32pm

The Federal Trade Commission and the 9 states are being deceived by Microsoft. By allowing Microsoft the choice into favoring

its products and giving Microsoft the marketing advantage it loves. The small penalties of the verdict should not be used to favor Microsoft, but penalize it. They are allowing it to mandate how it will spend the money from the settlement. Allowing Microsoft the preference of schools they provide funds to as well as equipment will be devastating. I feel that the money should be granted on the following requirements: Schools should get a Sun with Solaris or a Macintosh with OSX or an AMD with Linux that will show real competition. Software and hardware to accommodate those types of computers.

If the government allows microsoft to invest the settlement their way it will only capitalize on the existing monopoly that Microsoft has not yet cannibalize it with choice. None of the software or hardware that uses its Microsofts OS should be donated. It should be the competitions products, that is the ultimate reason for the investigation. We need to show Microsoft that it will have competition. The education market is an important market that reaches Americans. It provides knowledge to our children. It also shows parents the extra guidance in purchasing computers for their children. These choices out their can first be learned through education. This will truly mean that microsoft is sorry for abusing their power. This will also provide knowledge to Americans and awareness of alternatives. They should also not use this to accelerate their current reputation nor marketing power with a future Microsoft Cares*—promotions and or advertisements. If this is not implemented i can imagine the worst. No Netscape, ICAB only Internet Explorer. No AOL, Earthlink, only MSN. No Corel Word Perfect, Lotus Smart Suits only Microsoft Office. No imovie or idvd but the Microsoft clones that Microsoft makes. This will only help Intel, Microsoft, Dell, and any of those that support the WINTEL environments. I can also see Microsoft using this money to pushing the Macintosh out of the school districts. Please dont make the same mistake twice in allowing them into getting away with the punishment they deserve.

*I thought of that slogan first.

Re: Judge to Weigh Private Microsoft Antitrust Deal

U.S. District Judge J. Frederick Motz will have to decide whether the settlement proposed by the company is a creative solution that will put computers in the hands of poor school children or a legal ruse that will further the company's dominant position in the computer business.

Much more than the private Microsoft antitrust deal, Motz will be deciding whether the US legal system will be hijacked and used by corporations to quell dissent to their economic/technical despotism via philanthropy. We The People do not need Microsoft's philanthropy with a noose attached. Microsoft is destroying our institutions by destroying our value of the principles that underly them.

Central to the dispute is a U.S. antitrust doctrine that holds that only a "direct purchaser" can collect damages in private antitrust suits.

"You see how loophole works for large corporation? Kind of looks like economic/technical despot holds special place in heart of public servant, no? Ha ha ha ha..."

Subject: Microsoft can cripple this country

I would like you to know some simple facts about microsoft.

- 1) They are a monopoly
- 2) Their shark tactics against american soil companies have caused, bankruptcy, a loss in jobs, and poorly written software to become the accepted norm in this country.
- 3) Their software scheme has single-handedly allowed more virus and hacker vulnerabilities than any other Operating System or Server Software used in this country, which in turn would allow terrorists easier ways to exploit the US.
- 4) Think of the small companies that Microsoft has pirated and ravished, (by offering FREE poorly written copies of similar software long enough for these companies to go bankrupt) and then charged outrageous prices when no competition is available.

5) The American public is not necessarily educated enough to understand all that microsoft has done over the years. I am concerned about America, and this company is not concerned in the least about homeland security. The dollar is paramount in their eyes. Sometimes capitolism can destroy, particularly when a monopoly exists. Think about it.

Subject: Disappointed in settlement

Dear DOJ:

I am very disappointed with Microsoft/DOJ settlement. I don't believe it will keep the MS monopoly from continuing to hinder innovation in the computer hardware or computer software industries ... as the Consent Decree signed by MS in 1994 didn't hinder their practices.

Also, I can't believe the settlement that was agreed to concerning the "overpriced" lawsuits against MS. It's a win-win situation for MS ... get rid of inventory during slow times & aggravate the current imbalance in the market place. Come on, MS has cash, have them rebate money to the schools (and others impacted by their actions) and let the schools (and others) decide which brand of technology they want to use.

Get real! You should have worked to get rid of the monopolistic consequences that have happened over the last decade. Our choices are nearly gone as far as PC technology is concerned. Breaking up MS was a much better idea, and that wouldn't have gone far enough.

How would you like to have a choice of only:

- one brand of car,
- one brand of cell phone,
- one brand of shoes,
- one brand of restaurant,
- one brand of wine,
- one brand of shaver,
- one brand of candy ...

We need product diversity in all sectors!!

Sincerely,

To: Microsoft ATR

Date: 11/25/01 4:50pm

Subject: U.S. Dept. of Justice vs. Microsoft

Dear Attorney General of the U.S. Dept. of Justice,

I was very disappointed and dismayed by recent information coming out in the news media regarding the U.S. Dept. of Justice vs. Microsoft case. What is this so-called 3harsh penalty when a company can give away its software (Microsoft Windows) and PC computers/peripherals w/Windows to underprivileged schools? This just adds to the monopoly and bundling Microsoft was accused of in the first place! Am I missing something here? Or am I reading this information incorrectly? Shouldn't the penalty be tied to financing the purchases ONLY and not to giving away their own company's software or hardware/software bundling? Why not Unix, Linux, Sun, Apple, etc.?

Also, if the ruling stands that they were doing something illegal, show the like-minded companies that you have the best interests of the American people in mind and not the monied interests. Do your job for the people not just business! I am ashamed of my present U.S. Government Administration, and this present U.S. Department of Justice in particular, for wasting precious time and

public money from the past Administration and squandering the past ruling with acquiescence in this matter of the future of technology, rather than concluding a ?just1 penalty. What a waste and defeat for the public trust and software companies everywhere!

Advancing a monopolistic technology that is mediocre at best (just adequately gets the job done) rather than striving for real competition with the best quality technology (superior performance) is like a slap in the face to the software/hardware companies that truly feature innovative and advanced feature sets. If we all strived for the mediocre or common denominator in the technology arena, or for that matter in any endeavor, where would we be today? Would our military be as successful in Afghanistan? Would MIT, Stanford, Yale or Harvard pump out B or C students. We certainly would not be the technology innovators we are known for today!

I hope and pray that Microsoft has a ?just1 penalty to pay and not a slap on the wrist for practicing unethical, monopolistic and predatory business practices. No company should be able to profit from such behavior. Surely, my Government should be that 3first line of defense to see that these kinds of companies do not gobble up the competition!

Sincerely,

Ted Abel

Subject: Reasons not to penalise Microsoft Greetings,

I am a private citizen. I believe that I have been driven into unemployment by the tactics and behaviour of Microsoft and its acolytes. However, I offer below six reasons why Microsoft should not suffer further disturbance from the courts.

1. Microsoft is a huge company, seemingly as close to a monopoly as is possible without actually having become the sole supplier in the marketplace of personal computer operating systems and enterprise-level IT support software systems. The marketplace has made rational, reasoned, impartial and unbiased assessment of the available options, and accordingly Microsoft is the beneficiary.

2. The installation worldwide of Microsoft operating systems and other of their software is hugely beneficial to various US government agencies, the NSA for example, making it possible for these agencies to conduct remote surveillance operations on government and corporate activities anywhere. (I would refer you to "The Puzzle Palace" by James Bamford.) This capability is very important to the security of the USA, especially after last September's outrage.

Indeed, if organisations and other governments can be persuaded to use non-Microsoft operating systems, this situation might contribute to compromising the security of the US.

3. The considerable revenue streams from Microsoft's sales outside the US continue to help the rather desperate balance of

payments situation, all the more so as the recession deepens.

4. Microsoft is now at the head of an "empire of technology" enabling and facilitating the operations of, and thereby guiding, the bulk of the world's governmental, commercial and industrial functions. Individuals, organisations and governments which in IT terms are unable to control their own destinies have been and will continue to be well-served by Microsoft.

5. The court's recent decision re Microsoft is simply a reflection of the political realities of the day and of the attitude of Republican administrations to business in general. Why disturb an organisation which clearly is functioning efficiently?

6. The current administration and its advisors are evidently aware of the true nature of the situation and of its ramifications. Their decisions should stand.

Yours sincerely

Subject: confused and disappointed

I've been a software developer for over twenty years and I currently work with MS technologies. In fact in the early to mid 1980's I was a big MS fan. However, their conduct over the past fifteen years has been utterly contemptible and without morals.

I'm as confused as I am disappointed by the token settlement with MS. What exactly was the point of this case?

The government found MS a monopoly then made an agreement that basically rubber stamps all of MS illegal behavior. After reading the agreement it's clear that there was no penalty for it's frequent and obvious pass anti-competitive actions. However, worst than this it's clear that there is absolutely no requirement for MS to change anything that it's currently doing. Rather than run down why the different parts are either useless or meaningless, I challenge the DOJ to document one MEANINGFUL change that has or will occur at MS that either helps the consumer or addresses MS's criminal behavior. ... If you think you have one, send it to me and I'll explain your error. In fact parts of this (like the 10/20 biggest vendors non-sense) actually help MS. Further since MS had already destroyed any meaningful competition by the mid-1990's, what difference does it make that vendors NOW have the chance to ship systems without a MS product???? This agreement makes no sense. At best it's gross incompetence, at worst corruption. I'm still utterly floored by Judge Jackson's conduct. While he was the only person to hand down an even remotely sane verdict, was he really so clueless to believe that his conduct would not disqualify his ruling I think not. Even if MS had been split it would have been 5-10 years before any real gains to the American consumer would have been felt.

When time allows I will be sending a paper and electronic letter to my representative and

sentators requesting that the DOJ be investigated in relation to this matter.

From: Gordon Weast
To: Microsoft ATR
Date: 11/25/01 9:26pm
Subject: Comments on Microsoft agreement
Sirs:

After reading much that has been written about the pending agreement, I feel compelled to write.

At first look, forcing Microsoft to make \$1B available to some educational institutions looks like a punishment. Unfortunately, this just locks out other products from those same markets. While I saw reference to a Microsoft statement that those institutions could spend money on other products, they clearly won't provide customer support for such a choice.

Students who learn computers using a single provider's products will likely think that that is the only option. How does this promote competition?

An additional clause in the agreement that requires some specified fraction of the funds to be used to teach alternative products both on Windows and on other operating systems would do far more to help level the playing field. At least 50% of the funds should be used to promote the competition. This would go far to make up for the anti-competitive tricks they have used to get where they are. I don't want to see Microsoft destroyed, but it is important for the industry that open competition be encouraged.

The discussions I have read indicate that while Microsoft would be required to make the programming interfaces available, they would not be freely available to all developers. Allowing Microsoft to make the information available only under supervision at a Microsoft site would lock out smaller developers who have little or no budget for travel. These are the very developers who will most likely take chances on new technology. Many of these developers are likely working as single people with no budget for travel to a Microsoft site.

Please don't let the agreement stand as it currently exists.

This agreement is not good for the software industry.

From: Wes Rand
To: Microsoft ATR
Date: 11/25/01 9:03pm
Subject: Microsoft settlement

Dear US Justice Department,

I do not believe the remedies as reported will have the slightest effect on Microsoft's predatory marketing practices and illegal abuse of monopoly power.

And developments since the verdict in the case are disturbing. Especially with regard to the internet: Microsoft has bundled their browser for free with their operating system and drove all other browser manufacturers out of the market. They claim they have a right to do this, and that they are only serving consumer needs.

But their most recent versions—including ALL browsers shipped with the new Windows XP—have made a significant change: they no longer support industry-standard third-party browser plug-ins for presenting specialized content, such as movies, sound, animation, and virtual reality.

This means that third-party content providers, such as Real Audio, Macromedia Flash, Adobe PDF, and Apple QuickTime—just to name a few of the larger players—no longer function under Microsoft's browsers using the standard installation procedure. Instead, they must provide special installations that go through an additional layer of software—Active X—that Microsoft's own content provisioning software does not go through. This means that ordinary consumers will have to struggle needlessly to install third-party content provisioning software, but perhaps more importantly, if they do actually get through that struggle, the third-party plug-ins will run more slowly and with less capability than will Microsoft's own content provisioning software.

This also means that some 90% of new computers sold cannot properly access many web sites which use non-Microsoft software such as Apple QuickTime content, whereas 90% of pre-Windows XP computers could. With this current settlement, really just a cushy "hand slap" settlement, Microsoft not only successfully extended their operating system monopoly into the internet browser market, but now they have extended their monopoly into the content provider marketplace! They have broken the law once,

and while being penalized, have broken it again. And they are moving to extend it with their .NET initiative using their operating system monopoly and their new browser monopoly.

Soon consumers will be unable to access content that Microsoft has not provided or approved of. This is hardly protecting or maintaining free market capitalism and undermines a key industry. Please revisit this settlement and work for real punishments. Thank you for your attention.

Subject: Public Comment

From: Kevin Ledgister 1610 Pearson St.

Wausau, WI 54401 kledgister@mac.com

To the US Dept. of Justice
Public Comments on Microsoft Anti-Trust Settlement

As a consumer I wish to express my view that the proposed settlement does not appear to go far enough to protect consumers from Microsoft's illegal monopoly practices.

First, since the Appeals Court unanimously declared that Microsoft had acted illegally, there does not seem to be any punitive remedy that addresses the gains that Microsoft made by acting illegally.

One of those gains has been Microsoft's ability to dictate proprietary web browser standards and technologies because of its illegally gained monopoly. As a consumer, I am harmed because I choose a competing product that adheres to the standards established by recognized bodies that govern the Internet, but I still cannot appropriately view many websites or use their services because many websites are programmed to be accessed with Microsoft's Internet Explorer instead of Netscape, which used to be the

case. Microsoft should be forced to adhere to standards established by a recognized Internet body so that competing browsers are able to freely view websites and obtain services without having to switch browsers because of the proprietary hooks that Microsoft was able to establish based on it's illegally gained monopoly.

Microsoft should not be allowed to continue to control the browser market because it was derived from illegal gains. Microsoft should be allowed to continue to "innovate" but not without incorporating established standards so that consumers have equal access to Internet content.

As a consumer, I have also been harmed by having to purchase Microsoft Windows and having to pay that price, which includes paying for additional software that is not necessary for the operating system to run and allow for the installation of other applications.

Because Microsoft is such a monopoly, any additional software that ships along with Windows, without additional charge, has the potential to create an additional monopoly. Unfortunately, it is usually too late once that monopoly is created to go back and undo the damage.

For that reason, and without stifling Microsoft's ability to innovate, Microsoft should be forced to charge for additional software that it ships along with the Windows operating system. There is a cost to develop these applications, and a formula can be derived. The exception would be for applications that competitors allow to be downloaded for free because of their distribution method, Microsoft would also be able to offer these services for a free download.

That way, consumers can pay less than current prices for the basic operating system and option up for any additional applications that they wish to purchase, e.g. I would rather pay \$99 for Windows XP and not for Microsoft's image editing and music compression software, which I can freely get elsewhere. Consumers who want to buy the whole bundled package should have that option too, if they want to pay extra for it.

Microsoft should also be forbidden from paying manufacturers to carry these additional software applications (such as Windows Media Player) without there being a corresponding revenue model for that software (such as selling a server version or development tools) to offset the cost. Otherwise, as a consumer, I will never be able to truly benefit from the free market forces, but will continue to subsidize Microsoft's ability to run competitors into the ground and support their continued efforts to dominate endless markets.

It would seem appropriate that any remedy should not only include penalties where consumers were harmed, but also be forward looking.

Thank you for your consideration.

Regards,

Kevin Ledgister

Subject: alternate proposal

To the US Department of Justice:

When I read about Microsoft's settlement offer, I thought of the old restaurant joke: "The food here is bad—and the portions are so small!" When it comes to software, you can't make up for qualitative flaws with volume. I have seen Red Hat's proposal (<http://biz.yahoo.com/bw/011120/202744-1.html>), but for all the reasons it makes sense, it would make even more sense to have Microsoft spend that billion dollars on Apple hardware.

Wouldn't it be much more appropriate to have Microsoft buy computers that can't run their operating system? If Microsoft would buy the hardware, I'm sure Apple could be persuaded to donate software and support, though Apple computers already come bundled with the operating system and many easy-to-use applications at no extra cost. Microsoft could donate copies of Office, the Mac version of which is very well liked.

My proposal would be much better for students than either Microsoft's or Red Hat's. For example, Apple's iBook laptops, along with their Airport technology, are a very inexpensive way to get a whole school connected wirelessly to the Internet; there is no equivalent in the Wintel world. Also, Linux is terrific, but it's never been anywhere near the #1 platform in the education market, as Apple is. I doubt Red Hat would expand their offer to include porting hundreds of educational apps from the Mac platform to Linux—or retraining hundreds of teachers and administrators who are already happy with Apple computers.

I believe what I am suggesting is (a) fair to all parties, (b) more appropriate than what Microsoft is offering, and (c) much more beneficial to the cause of educating American students. I hope you will agree.

Respectfully yours, —Andrew G. Lee

MTC-00002209

From: Bill Huggins
 To: Microsoft ATR
 Date: 11/25/01 9:55pm
 Subject: Stupid lawsuit

This lawsuit is so incredibly stupid! You guys seem to want to protect the brand new user, but from what I don't know.

Microsoft has done a very limp job of protecting itself. Windows is not a monopoly; it is a standard. Let's hear it for standards.

You want to pull Internet Explorer (IE) out by its roots. Why? Every modern OS comes with a browser. Perhaps Microsoft should be reamed for not having a splash screen for the new user that would appear every time the system boots that says, "Please go to www.opera.com and www.netscape.com. Download the browsers from these 2 companies. Once you have installed them, you will find that you can run them side-by-side with Internet Explorer. You can make any of them your default browser. Bear in mind that the other browsers are free downloads, as is IE, but you need a browser to get to the other company's websites. We include Internet Explorer in each copy of Windows as a public service."

You accuse Microsoft of including features that make it a monopoly. This sort of attack marks you as a non-user of computers. Microsoft has traditionally offered tools like

Disk Defragmenter (a reduced feature version of Norton Utilities, etc.), notepad, a Media Player and now, with XP, a movie maker. If you were a user, you would know that these tools aren't very good. If you needed such a tool, you would seek one out and buy it.

You have made a big stink about the first screen a new user sees. Big deal. You have again tried to protect the new user. You are only a new user for a couple of months. Any home user can change his desktop with background colors, textures and pictures. It's easy.

I could go on for hours, but I'll spare you. The DOJ has done a great injustice to Microsoft and most of the millions of users of MS software. You have wasted millions of dollars and diverted energy that could have been used more creatively. You should be ashamed of yourselves.

I hope your computer turns on you.

MTC-00002211

From: mmikowsk@demai05.mw.
 mediaone.net@inetgw
 To: Microsoft ATR
 Date: 11/26/01 2:20am
 Subject: Microsoft Settlement

To Whom it May Concern:

I am currently an owner of an Information Systems and software development firm. Based my firm's experience in this field, I propose the following adjustments to the Microsoft settlement:

1. PROPOSAL A
 a. OVERVIEW

The US Government (and other governments) should embrace open standards for file formats for commodity applications such as Word Processing, Spreadsheets, Database, Graphics, and Mail.

b. PROPOSED ACTIONS

A national or international standards committee be formed to oversee commodity file formats, much like the W3C.

Formats be developed for Word processing, Spreadsheets, Database, Graphics, and Mail.

These formats should be based on open, published standards that can only be extended through the committee.

The US government adopt these standards as required for governmental correspondence.

Software producers must show their tools are compatible with these standards before government agencies employ them.

Software producers should be encouraged to publish their compliance to these standards.

c. REASONING

Microsoft's monopoly on the business desktop is not derived from its innate value of its operating systems, but by its anti-competitive use of its monopoly to control proprietary formats used in commodity applications.

Microsoft Word, Excel, Outlook, and others employ proprietary formats controlled, and changed at will, by the company. Any attempt to use other tools to access or edit this data are hamstrung Microsofts propensity to change these formats at its whim. This is the core of its anti-competitive practices.

Microsoft has shown a pattern of first embracing competing formats (such as WordPerfect, and Lotus 1-2-3) and, once market dominance has been ensured, have emphasized their own proprietary formats. This is a trend they have continued to this day. One only need to look at how their "extensions" of HTML standards are currently being used to block access from any other platform besides their own.

In the past, we wrote on paper. There are hundreds of producers of pens and paper. Today, we often write in word processors and spreadsheets. Should only one company in the world control the access to the intellectual property we create?

d. IMPLEMENTATION

The technology and software already exists to move this proposal to a reality in a very short time period. The US Government could change to open file formats with little pain by employing Star Office while saving untold millions in licensing costs. It can require all html document meet the W3C guidelines for HTML. The government would provide the impetus from moving its data, and that of the people, out from under the control of a private interest, and into open formats where we the people can access our own data without being required to purchase a Microsoft product to do so.

e. REFERENCES

Open File Formats: <http://www.computerworld.com/cwi/community/story/O,3201,NAV65-1797,STO64689,00.html> Star Office, which employs open, XML formats with excellent capabilities: [http://www.sun.com/staroffice/6.0beta/;\\$sessionidSROHKZK4E1MJORAMTA1FU3NQ](http://www.sun.com/staroffice/6.0beta/;$sessionidSROHKZK4E1MJORAMTA1FU3NQ)

The W3C group has provided standards which has allowed dozens of competing web browsers to be successfully developed: <http://www.w3.org> Anyware Office, which employs XML-like file formats in a product which works extremely well Anyware Office: <http://www.vistasource.com/products/anyware/office/>

f. DISCLAIMER

We own Microsoft Office Professional. We manage dozens of Microsoft OS's and Office products. We have tested (and are impressed)

with Star Office. We also use Anywhere Office in an office of 5 individuals. We have no other connection with the companies or software presented above.

2. PROPOSAL B

a. OVERVIEW

The proposed settlement for providing Microsoft access to our children's and educators' minds is counter-productive to the good of the people and the government.

b. PROPOSED ACTIONS

Require any software provided to US schools to be compliant with the requirements as set forth in Proposal A of this comment.

Adjust the settlement so that Microsoft is responsible for providing hardware and funding only.

Provide an independent body for determining the software and training employed by the schools.

c. REASONING

The proposed settlement to provide Microsoft software and training only further benefits the company, while displacing other firms such as Apple and RedHat. By taking the proposed value and applying it to hardware and funding only, the public is ensured to receive the value offered by Microsoft.

d. IMPLEMENTATION

I have no additional recommendations for implementation of this remedy at this time.

e. REFERENCES

The RedHat Counter Offer: http://www.redhat.com/about/presscenter/2001/press_usschools.html

f. DISCLOSURE

We own Microsoft Windows 2000 and Mandrake Linux. We use RedHat Linux as our OS for web service development.

These are fair adjustments to the proposed settlement. They will provide innovative competition the like of which the industry has never seen.

I am available for discussion of these remedies at any time.

From: Mr Lynn

To: Microsoft ATR

Date: 11/26/01 8:26am

Subject: Microsoft settlement

To the Department of Justice:

While I am happy to see the government pursuit of Microsoft under the Sherman Antitrust Act come to an end, the proposed 'penalty' of allowing Microsoft to expand its educational market share by placing product in schools is preposterous.

Apple's Macintosh operating system (OS) is the primary competitor to Microsoft's Windows outside of big business, but has only 5% of OS market share worldwide. Education is one of the few areas where Mac OS market share is substantial, though still by no means dominant. The proposed 'penalty' rewards Microsoft and penalizes Apple, thus further eroding competition to the Windows OS in education.

I hope you will reconsider this ill-conceived 'remedy' and focus on reining in Microsoft's anti-competitive business practices, in order to encourage a more level playing field in the OS market.

Subject: Microsoft/DOJ "seattlement"..

Dear Sir or Madam, even though I am not a US citizen I'd like to use this opportunity to express my strong concern about the so-called "seattlement", a cave-in that is without a doubt previously unheard of.

The seattlement has so many holes in it that its effective uselessness is obvious to any journalist, expert and trial-interested person, yet the DoJ still thinks it's a great idea!

I also do NOT see ANY remedies in the seattlement, Microsoft has broken the law in various ways, something that even the Court of Appeals agreed to when they took back the verdict that Judge Jackson had issued! Now I wonder: Where are the remedies for the crimes Microsoft has done? They did blackmail Compaq, IBM, Apple and others, and somehow my feeling for justice tells me that even though it's a settlement, Microsoft should be punished for what it has done!

Or, as one journalist put it: Microsoft is free to enjoy the fruits of its law-violations to the full extent still, and will be even after the settlement! That is something that has not happened before, and it just seems so painfully wrong!

Besides, the DoJ also seems to have a memory leak in other ways, cause I can't remember that Microsoft's faked Evidence-Videos or lying in court, as well as making fun of the court in totally ridiculous subpoenas (Bill Gates: "I don't remember what I meant when I said 'crush Netscape'" etc!) and by releasing a crippled version of Windows just to spite the court, even though it's been proven that the Internet Explorer can be removed from Windows98 without leaving a trace have ever had any consequences!

Like said, I am not an american citizen, but for outsiders it seems like Microsoft can behave in utter disrespect to the court and still not face any consequences for that at all! This casts a rather bad light on US Judicative in my eyes! Or Does this only account for multi-billion dollar companies?

Please, I ask you in the name of countless others: the world is looking at the DoJ to put the raging Godzilla that Microsoft has become into chains to help the economy worldwide by re-enabling competition again (there is basically none at all in the areas Microsoft has a monopoly in!), just like you did with IBM and Standard Oil before! Doesn't the American idea of a free market base itself largely on a living market with lots of competitors, that will result in lower prices and better products for the consumer?

Well—how on earth can you be so sure that Windows/IE/MS Office is the "best" for consumers when there is basically no noteworthy competition (in respect to market share!) at all around? It might help considering the fact that Microsoft has had a monopoly in operating systems right from the start in 1981, and it has never ever faced *real* competition (meaning: it has never

had less than 80% market share, even when DR-DOS was around!) there. The other monopolies with IE and Office were only achieved through massive "leveraging" by integrating both deeply into Windows, a practice that will continue unthrottled in spite of the settlement, just look at what they already integrated into Windows XP even though the trial was still going on!

With best regards,
Daniel Kottmair

Subject: I can't believe it...

If you wish to discourage a behavior you should punish it. This does not appear clear to the DOJ. Allowing Microsoft to "donate" computers to less fortunate schools punishes the schools more than Microsoft. They have always wanted to increase their market share in schools. Make Microsoft donate "money" to the schools and let the schools decide what they want to do with it.

Subject: Microsoft hand slap

I hated the "Clinton Years". But there was one thing that was being done during that time that was warranted. That was the Microsoft case. Microsoft has severely abused its monopoly power by forcing unreasonable licensing agreements (which, by the way, it is doing AGAIN right under your noses!), forcing non-compete agreements, and forcing standards changes that it had previously agreed to (example: Java). Your "remedy" for Microsoft is equivalent to charging a business man \$1 for having his competitors' legs broken! I am a supporter of President Bush, but this boneheaded move by the Justice Department is inexcusable. The currently presiding judge wanted a fair agreement. The ONLY party this agreement seems "fair" for is Microsoft!

Subject: Antitrust settlement

I don't feel like the proposed settlement is strong enough. I don't see what is going to stop Microsoft from including more software in the operating system, which will hurt competition. What they are doing with XP is many times worse than what they did with Internet Explorer. As long as they are allowed to do that, fair competition does not exist.

Thank you,
Aaron Burton

Subject: Microsoft Judgement

I am very disappointed to learn that the Justice Department is providing Microsoft with a leg-up on its way to becoming a more deeply entrenched monopoly.

To consider Microsoft giving computers to schools a "punishment" is foolish. It merely provides the following:

1 Pushes out competition for school sales, among the most notable victims, Apple.

2 Rewards Microsoft by providing them with an assured customer base as a result of indoctrinating students into the operating system and programs of one company.

3 Encourages students to think that Microsoft is endorsed by the schools systems, as well as state and federal governments.

4 Demonstrates that the government supports, rather than condemns monopolistic practices.

A better solution would be to have Microsoft provide FUNDING to school systems, earmarked for purchase of technology and educational materials, without any encouragement towards, discouragement from, or reference to specific brands.

Make it clear that Microsoft is not giving this funding out of the goodness of its corporate heart, but rather as a punishment for illegal and immoral business practices. This must be a lesson in civics, not an example of how to work around the system to get what you want.

Subject: Microsoft settlement

I think it is disgusting that Microsoft may be allowed to expand it's market monopoly by donating it's own software to schools. This only expands the monopoly that the company wants to have of the software market. We will be training our children to use the very product that we are claiming wants to dominate the market. Would we allow drug dealers to donate their product to schools as a penalty? Another problem is that when Microsoft donates \$5 worth of product

they will claim \$500 of tax deduction for losses. What a scam!

I can see Bill Gates proposing this plan, but I can't believe that anyone would accept it! He should be laughed out of town.

Subject: Comments on proposed Final Judgment

Renata Hesse
Trial Attorney
Suite 1200
Antitrust Division
Department of Justice
601 D Street, N.W.
Washington, DC 20530

Dear Sirs:

It is with great sadness and despair that I write you to comment on your proposed settlement with the Microsoft Corporation. I write you as a concerned citizen, former technology executive, and consumer.

First, I fear that my comments and others you may receive from concerned citizens are simply part of the process and can have no bearing on your decision to move forward with any settlement or not. Will my comments really have an impact on your thinking? From all that I have read about the settlement process, you and 9 states AG's have already decided to move forward with the proposed settlement. Sad, indeed.

Next, I fear that you will not even be watching the computer industry by the time the true effects (or lack thereof) of this settlement are seen...you will be off on the next industry, the next project, unaware that your actions in the next few months will determine the fate of true competition in the IT industry—the engine of our economy for the foreseeable future. Under Joel Klein, the US DoJ successfully humbled Microsoft, the most fierce and ruthless monopoly in the history of capitalism. The arrogance and blindness of Microsoft's own actions were turned against them and put on public display for all the world to see. Finally, others were able to see what those of us in the tech industry already knew: Microsoft's dominance and likely illegal predatory tactics were driving innovation out of many new markets, artificially raising prices, and depriving the consumer of ordinary fair market benefits. Would anyone care?

Yes, it seemed. The US DoJ really cared. They were undeterred in their pursuit of justice and remedy. They would not settle for easy work-arounds...instead they wanted to see the problem solved. They knew from MS's history that MS have become experts at saying one thing and doing another. Evidence at trial even suggested that MS's had skillfully maneuvered around the 1995 Consent Decree and had all the power to do it again. A simple decree with new rules for MS to follow would never solve the problems of cultured predatory tactics.

But then something changed. Somehow your thinking turned 180 degrees. Now, suddenly, the DoJ was leading the charge towards a new consent decree through settlement. I read the proposed Final

Judgment and CIS with wide eyes. Could there really be something here? Could this decree actually change MS's behavior? What was in it that would be different this time? The truth is, nothing. There is nothing new here. MS will simply work around any new "rules" which are put in place and will become experts at delaying any of your future investigations into them. The 3-person "compliance" panel will do nothing to change 20 years of behavior instilled in every employee by its management. MS learns from its past. It has won with its tactics of the past and they will be employed again.

Most importantly, this settlement will not give the capital markets any confidence that in markets where MS competes, true competition will emerge. Said simply, just as it has been for the last 15 years, both public and private investors will not fund companies in markets where MS has announced their intention to compete...because MS advantages fueled by their OS monopoly are too great. Without investment, there will be no innovation. In short, you really had the chance to make a difference and change things in the computer industry. And as that is certainly the most important industry to the relevance of the future economy, it was an important task for you. But for some reason, you seem bent on failing by somehow going against the evidence of this very case: that MS has a history of perfectly out-maneuvering the government on decrees of this nature. They are a company who NEVER played by the rules. How then will some new rules solve the problem?

I can't help but wonder what caused your turn-around in strategy? Truly was it pressure from a very business-friendly Administration? Was it truthfully a feeling that SOME remedy had to happen soon (after 7 years of pursuing this case, there was a sudden need to see it end)?

We, the public, will never really know. But we will know the effects of your actions, one way or another. If you are right, we will feel the benefit of renewed competition in the most important world markets. If you are wrong, however, the consequences are too great to enumerate. And if you are wrong, will you be around to correct your mistakes? Will their ever be an opportunity like the one in front of you now to fundamentally alter and restore competition in these markets?

I hope, for the sake of some 300 million US consumers, that you have not yet made up your mind.

(For a more detailed analysis of the impacts of the proposed settlement, I like this article the best: <http://www.pff.org/pr/pr110201settlement.htm>)

Good luck,
David Pakman

Subject: Microsoft Anti-trust proposed settlement November 26, 2001

To whom it may concern:

I am a private individual who has recently purchased the third of a series of personal

home computers since 1986. I have used them for a combination of personal and business work. I have relied on them extensively over this time period. I am a sales and marketing professional and while I am computer literate, I am not a techie.

Each of these three computers came with the Windows operating systems, the first being Windows 3.1, second Windows 95 and currently Windows XP. Basically the only option I had was between Apple and Microsoft and Apple did not have the business software and widespread acceptance of the Windows platform. Never have these programs worked smoothly, and easily. Inexplicable crashes are common across all three versions—Windows 95 being the most reliable of the three.

I have used both Wordperfect and Microsoft Office products across this same time period as well. While I was working for BFI, the company was basically forced to choose a software program that could be used to communicate across all the hundreds of operating districts. Microsoft Word was chosen since it was the program that would NOT (despite published and apparent software choices to the contrary) accept or convert Wordperfect documents into any readable form. Wordperfect on the other hand, had no problem converting the Word files into readable form and was a superior product in every way. The bundling of Excel was the final straw which was also an inferior product but easier to use than Lotus for non computer people which still relied on the crappy Microsoft DOS too extensively.

I have owned Windows XP for about a week at this point and it is a horrible, buggy, nasty program to use. I do not require exotic uses. The very first time I tried to open a Microsoft Word document (older version) with the new version, the whole Word program froze and I became locked into an endless circle of "Did I want to Notify Microsoft of the problem or not". Neither choice worked.

I called my Dell representative and the Microsoft simulation software was not the same as that supplied by Microsoft to Dell as what I was seeing. I called Microsoft. They refused to help me since I did not purchase the program "retail" but instead it was preinstalled on the computer. For \$35.00, I could possibly be helped. I have been forced to call that number before and the only thing the representatives were successful at was taking my money.

This is total market domination and bullying of the individual. Every "upgrade" is never consumer ready. Every "upgrade" crashes and burns even its own earlier versions. The late '80s version of Wordperfect was superior to Microsoft 2000 but I am stuck using the Microsoft behemoth if I want others to be able to read my work.

I agree that the consumer rarely wins in class action suits. I do not want \$10.00 off my next purchase of ever more cumbersome and useless software. Technical support at no cost to all registered purchasers of their products for three to five years after purchase would represent a genuine help. Their products also need to be transparent to me, the consumer, in that I should be able to use Wordperfect or any other basic word

processing software and it should be readable in any Microsoft product as well as vice versa. If part of the settlement is to provide software and equipment to poor schools, it should all be a competitor's product—either Apple or Windows plus Corel software. They should not be given a boost by the government in penetrating their last remaining niche.

Another gross mistake in their software that directly negatively effects the government and government contractors every day is in their Excel software. The spreadsheets have no way of turning off the estimating factor so even if you preset columns to money and multiply by whole numbers and set the estimating to 2 decimal places, the software will still come up with rounding errors so that all columns must be checked by hand and are often sent back and forth several times when a simple three dollar calculator can do such a function with no problem. Feel free to pay the \$35.00 for technical support who will tell you this cannot be corrected. This multiplied across all the government offices wastes thousands of hours annually in productivity. If you have any questions, please feel free to contact me at (703)-237-1964.

Very truly yours,
Linda Lee

Subject: Microsoft Settlement

With all respect, it seems strange to me that the way you deal with a monopoly is to have them "give" computers to school that runs their software so that the schools are forced to become Microsoft users and are then forced to continue to purchase the monopoly software in the future. Wow! That makes sense!

Subject: DOJ settlement with MS—DO NOT ACCEPT IT

To whom it may concern,

Follows is a summary of my position in regards to the proposed DOJ/MS settlement:

I do not believe the remedies reported in the news are going to have the slightest impact on Microsoft's predatory marketing practices, and subsequent illegal abuse of monopoly power.

Why? because the DOJ and MS came to a similar agreements in the previous anti-trust case, and here we are again. MS has shown that it can not be trusted (period). It has broken the original agreement between the DOJ and itself. MS intentionally tried to present "forged" evidence at trial, and continues to advance it's predatory practices into new and as yet uncharted areas.

For two small examples:

One, the case that started it all: internet browsers. Since the time the case started, Microsoft bundled their browser for free, and essentially drove all other browsers out of the market. They claim they have a right to do this, and that they are only serving consumer needs.

But their most recent versions—including ALL browsers shipped with the new Windows XP—have made a significant change: they no longer support industry-standard third-party browser plug-ins for presenting specialized content, such as movies, sound, animation, and virtual reality. This means that third-party content providers, such as Real Audio, Macromedia Flash, Adobe PDF, and Apple QuickTime—just to name a few of the larger players—no longer function under Microsoft's browsers using the standard installation procedure. Instead, they must provide special installations that go through an additional layer of software—Active X—that Microsoft's own content provisioning software does not go through. This means that ordinary consumers will have to struggle needlessly to install third-party content provisioning software, but perhaps more importantly, if they do actually get through that struggle, the third-party plug-ins will run more slowly and with less capability than will Microsoft's own content provisioning software.

This also means that some 90% of new computers sold cannot properly access any site containing content created in any of the above applications. Limiting consumer choice, both in sites that function with their browser, and software used to create content.

Two, Windows Media Player and audio (MP3s): In the newest operating system (Windows XP), Microsoft has used the Active X software layer to EXPLICITLY cripple third party MP3 players/recorders. They do this by limiting the quality of MP3 recording and playback. The only software, on Windows XP, that will record the best possible sound, or play back the best possible music is Windows Media Player.

Windows Media Player is installed as part of the Windows XP operating system installation. So here we are again, Microsoft is "bundling" software with it's operating system, squeezing third party software vendors out of the market.

How can a Third party software vendor compete? Better software?—sure—but the vendor needs to pay the bills and how do they do that, when the product needs to be given away to match the price of its competition. Better Software?—sure—but how does a vendor create that when the operating system on which the software is to run INTENTIONALLY disables access to functionality?

Again the consumer is put at a severe disadvantage—the only choice of software is Microsoft. Additionally—it has recently been found that Windows Media Player—like most other Microsoft software products—has a severe security problem. There is a security hole in Windows Media Player, which can allow arbitrary, malicious code to be executed—in other words a virus.

So... now consumers are forced to choose—best possible sound and risk a software virus

destroying their software, or security and poor quality sound.

All of the above and much more, has been done right under your collective noses while the DOJ negotiated a cushy "hand slap" settlement, Microsoft not only successfully extended their operating system monopoly into the internet browser market, but now they have extended their browser monopoly into the content provider marketplace! They have broken the law once, and while being penalized, have broken it again.

Take heed of my prediction: now that Microsoft controls content provisioning, content will come next. Within three years, the average consumer with an "out of the box" computer will be unable to view any content that Microsoft has not provided.

With all due respect, the Ashcroft Justice Department is asleep at the wheel on this one. Quit meddling with "states' rights" Oregon and California, and concentrate on appropriately punishing large, multi-national companies who are already convicted of breaking laws.

Subject: Antitrust Settlement Between the

Department of Justice and Micros oft
I am strongly opposed to the provision of the proposed settlement whereby Microsoft would "donate" hardware and software to schools. At first this appears to be a noble gesture. However, it is nothing more than a thinly disguised effort to monopolize yet another market, the educational one. It would be far preferable and fairer to other computer system manufacturers to have Microsoft donate money to schools and allow them to select the technology to be used.

From: Larry Winslow
To: Microsoft ATR
Date: 11/26/01 2:27pm
Subject: Microsoft settlement thoughts

I haven't read the complete settlement although I did give it careful attention. It seems to be missing 2 items.

1. What is going to be the punishment for Microsoft? It appears that they are getting off scott-free for their past monopolistic conduct.

2. Shouldn't there be some compensation for those companies and/or public who were damaged by Microsoft's conduct? I wonder how many companies have gone under or have been severely damaged. How much extra has the public had to pay for products? I read a Microsoft statement in the Caldera filings where Microsoft declared it could price things lower and still be priced competitively.

Thanks

November 26, 2001

To whom it may concern,
First, thank you for taking the time to review my comments concerning the U.S vs. Microsoft Antitrust Case's Final Judgment. Included in the following are my questions, critiques, and comments on specific parts of the Final Judgment. I will start with section VI. Definitions, then will address the remaining sections; III. Prohibited Conduct through V. Termination. section VI. Definitions: B:

"Communications Protocol" means the set of rules for information exchange to accomplish predefined tasks between a Windows Operating System Product and a server operating system product connected via a network, including, but not limited to, a local area network, a wide area network or the Internet. These rules govern the format, semantics, timing, sequencing, and error control of messages exchanged over a network.

My comment: ?server operating system product? has not been defined anywhere in this document.

My solution: Specifically define ?server operating system product? as:

Server Operating Systems: Microsoft(R) Small Business Server 2000, Microsoft(R) Systems Management Server 2.0, Microsoft(R) Windows 2000(R) Advanced Server, Microsoft(R) Windows NT(R) Server 4.0, Microsoft(R) Windows NT(R) Server, Enterprise Edition, Microsoft(R) windows(R) 2000 Server, and any future releases not named specifically, but created within the penalty period.

section VI. Definitions: U: "Windows Operating System Product" means the

software code (as opposed to source code) distributed commercially by Microsoft for use with Personal Computers as Windows 2000 Professional, Windows XP Home, Windows XP Professional, and successors to the foregoing, including the Personal Computer versions of the products currently code named "Longhorn" and "Blackcomb" and their successors, including upgrades, bug fixes, service packs, etc. The software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion.

My comment: "Windows Operating System Product" definition should include ALL of Microsoft's Operating Systems: My solution: Define "Windows Operating System Product" as follows:

Server Operating Systems: Microsoft(R) Small Business Server 2000, Microsoft(R) Systems Management Server 2.0, Microsoft(R) Windows 2000(R) Advanced Server, Microsoft(R) Windows NT(R) Server 4.0, Microsoft(R) Windows NT(R) Server, Enterprise Edition, Microsoft(R) Windows(R) 2000 Server,

Operating Systems: Microsoft(R) Windows Services for UNIX, Microsoft(R) Windows XP Home Edition, Microsoft(R) Windows XP Professional, Microsoft(R) Interix 2.2, Microsoft(R) Small Business Server 2000, Microsoft(R) Windows Millennium Edition, Microsoft(R) Windows NT(R) Embedded 4.0, Microsoft(R) Windows NT(R) Workstation 4.0, Microsoft(R) Windows(R) 2000 Professional, Microsoft(R) Windows(R) 95 Version Upgrade, Microsoft(R) Windows(R) 98 Second Edition, Microsoft(R) Windows(R) CE, Microsoft(R) Windows(R) Smart Card Toolkit, and any future releases not named specifically, but created within the penalty period. Concern#1: By starting with Windows 2000 Professional you have left out about 90% of all the Operating Systems currently in use by the public and that Microsoft is maintaining with continuing Service Packs.

Concern#2: You have not mentioned any of the Server Operating Systems in the definition. The Consumer Operating System's code is just a subset of the Server Operating System code.

Question#1: So all of them are exempt?

III. Prohibited Conduct. B.2: the schedule may specify reasonable volume discounts based upon the actual volume of licenses of any Windows Operating System Product or any group of such products; and

Question#1: Who defines reasonable? Microsoft?

Concern#1: What if Microsoft determines that a reasonable volume discount is greater for company X than it is for company Y, to punish company Y for something Microsoft didn't like them doing?

My Solution: Specifically define a standard table of percentage discounts for numbers of actual volume of licenses, e.g. for 10,000—20,000 licenses the volume discount would be 2% (some average industry number).

III. Prohibited Conduct. B.3.b: such discounts are based on objective, verifiable criteria that shall be applied and enforced on a uniform basis for all Covered OEMs; and

Question#1: What is the ?objective, verifiable criteria??

Concern#1: That ?objective, verifiable criteria? is not specifically spelled out in this document.

My Solution: Specifically define ?objective, verifiable criteria? in this document.

Question#2: Who defines the ?objective, verifiable criteria?? Microsoft?

Concern#1: That ?objective, verifiable criteria? is defined by Microsoft.

My Solution: The Plaintiffs (the States, Industry Leaders, and Consumer Groups, none of which would be aligned with or pro-Microsoft) should specifically define ?objective, verifiable criteria? in this document.

III. Prohibited Conduct. C.1:

Installing, and displaying icons, shortcuts, or menu entries for, any Non-Microsoft Middleware or any product or service (including but not limited to IAP products or services) that distributes, uses, promotes, or supports any Non-Microsoft Middleware, on the desktop or Start menu, or icons, shortcuts, or menu entries for applications are generally displayed, except that Microsoft may restrict an OEM from displaying icons, shortcuts and menu entries for any product in any list of such icons, shortcuts, or menu entries specified in the Windows documentation as being limited to products that provide particular types of functionality, provided that the restrictions are non-discriminatory with respect to non-Microsoft and Microsoft products.

Question#1: Who defines ?types of functionality?? Microsoft?

Concern#1: That ?types of functionality? is not specifically spelled out in this document.

My Solution: The Plaintiffs (the States, Industry Leaders, and Consumer Groups, none of which would be aligned with or pro-Microsoft) should specifically define ?types of functionality? in this document.

III. Prohibited Conduct. D:

Starting at the earlier of the release of Service Pack 1 for Windows XP or 12 months after the submission of this Final Judgment to the Court, Microsoft shall disclose to ISVs, IHVs, IAPs, ICPs, and OEMs, for the sole purpose of interoperating with a Windows Operating System Product, via the Microsoft Developer Network ("MSDN") or similar mechanisms, the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product. In the case of a new major version of Microsoft Middleware, the disclosures required by this Section III.D shall occur no later than the last major beta test release of that Microsoft Middleware. In the case of a new version of a Windows Operating System Product, the obligations imposed by this Section III.D shall occur in a Timely Manner.

Question#1: Who defines? Timely Manner?? Microsoft?

Concern#1: That ?Timely Manner? is not specifically spelled out in this document.

My Solution: Specifically define ?Timely Manner? in this document to be the same as a new major version of Microsoft Middleware: ?shall occur no later than the last major beta test release of that Microsoft Operating System Product?.

Question#1: What is the definition of Beta test?

Concern#1: That ?Beta test? is not specifically spelled out in this document.

My Solution: Specifically define ?Beta test? in this document to be the same as the Industry understands it (the last stage of testing before the product is released for consumer purchase).

III. Prohibited Conduct. F.2:

Microsoft shall not enter into any agreement relating to a Windows Operating System Product that conditions the grant of any Consideration on an ISV's refraining from developing, using, distributing, or promoting any software that competes with Microsoft Platform Software or any software that runs on any software that competes with Microsoft Platform Software, except that Microsoft may enter into agreements that place limitations on an ISV's development, use, distribution or promotion of any such software if those limitations are reasonably necessary to and of reasonable scope and duration in relation to a bona fide contractual obligation of the ISV to use, distribute or promote any Microsoft software or to develop software for, or in conjunction with, Microsoft.

Question#1: Who defines the ?reasonably necessary to and of reasonable scope and duration?? Microsoft?

Concern#1: That ?reasonably necessary to and of reasonable scope and duration? is defined by Microsoft.

My Solution: The Plaintiffs (the States, Industry Leaders, and Consumer Groups, none of which would be aligned with or pro-Microsoft) should specifically define ?reasonably necessary to and of reasonable scope and duration? in this document.

III. Prohibited Conduct. G.1:

Any IAP, ICP, ISV, IHV or OEM that grants Consideration on the condition that such entity distributes, promotes, uses, or supports, exclusively or in a fixed percentage, any Microsoft Platform Software, except that Microsoft may enter into agreements in which such an entity agrees to distribute, promote, use or support Microsoft Platform Software in a fixed percentage whenever Microsoft in good faith obtains a representation that it is commercially practicable for the entity to provide equal or greater distribution, promotion, use or support for software that competes with Microsoft Platform Software, or

Comment#1: Microsoft has already been proven to act in BAD faith, that's why this document was created. They should not be allowed to make that judgment themselves.

III. Prohibited Conduct. G:

Nothing in this section shall prohibit Microsoft from entering into (a) any bona fide joint venture or (b) any joint development or joint services arrangement with any ISV, IHV, IAP, ICP, or OEM for a new product, technology or service, or any material value-add to an existing product, technology or service, in which both Microsoft and the ISV, IHV, IAP, ICP, or OEM contribute significant developer or other resources, that prohibits such entity from competing with the object of the joint venture or other arrangement for a reasonable period of time.

Question#1: What in this document is going to prevent Microsoft from entering into a bona fide joint venture, etc. and using that

?ownership? as a way of forcing the OEM, etc. to do what Microsoft wants?

My Solution: The Plaintiffs (the States, Industry Leaders, and Consumer Groups, none of which would be aligned with or pro-Microsoft) should be allowed to scrutinize all of Microsofts joint venture, etc. proposals, before they are entered into, and all through their existence.

III. Prohibited Conduct. H.1:

Allow end users (via a mechanism readily accessible from the desktop or Start menu such as an Add/Remove icon) and OEMs (via standard preinstallation kits) to enable or remove access to each Microsoft Middleware Product or Non-Microsoft Middleware Product by (a) displaying or removing icons, shortcuts, or menu entries on the desktop or Start menu, or anywhere else in a Windows Operating System Product where a list of icons, shortcuts, or menu entries for applications are generally displayed, except that Microsoft may restrict the display of icons, shortcuts, or menu entries for any product in any list of such icons, shortcuts, or menu entries specified in the Windows documentation as being limited to products that provide particular types of functionality, provided that the restrictions are non-discriminatory with respect to non-Microsoft and Microsoft products; and (b) enabling or disabling automatic invocations pursuant to Section III.C.3 of this Final Judgment that are used to launch Non-Microsoft Middleware Products or Microsoft Middleware Products. The mechanism shall offer the end user a separate and unbiased choice with respect to enabling or removing access (as described in this subsection III.H.1) and altering default invocations (as described in the following subsection III.H.2) with regard to each such Microsoft Middleware Product or Non-Microsoft Middleware Product and may offer the end-user a separate and unbiased choice of enabling or removing access and altering default configurations as to all Microsoft Middleware Products as a group or all Non-Microsoft Middleware Products as a group.

Question#1: Who defines ?types of functionality?? Microsoft?

Concern#1: That ?types of functionality? is not specifically spelled out in this document.

My Solution: The Plaintiffs (the States, Industry Leaders, and Consumer Groups, none of which would be aligned with or pro-Microsoft) should specifically define ?types of functionality? in this document.

III. Prohibited Conduct. H.2 (the second 2): that designated Non-Microsoft Middleware Product fails to implement a reasonable technical requirement (e.g., a requirement to be able to host a particular ActiveX control) that is necessary for valid technical reasons to supply the end user with functionality consistent with a Windows Operating System Product, provided that the technical reasons are described in a reasonably prompt manner to any ISV that requests them.

Question#1: Who defines ?reasonable technical requirement?? Microsoft?

Concern#1: That ?reasonable technical requirement? is not specifically spelled out in this document.

My Solution: The Plaintiffs (the States, Industry Leaders, and Consumer Groups, none of which would be aligned with or pro-

Microsoft) should specifically define ?reasonable technical requirement? in this document.

Comment#1: This is exactly how Microsoft gains control of the market for a piece of software. They require the developer to use Microsoft's proprietary code for a specific function to work.

III. Prohibited Conduct. J and J.1:

No provision of this Final Judgment shall: Require Microsoft to document, disclose or license to third parties: (a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of a particular installation or group of installations of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria; or (b) any API, interface or other information related to any Microsoft product if lawfully directed not to do so by a governmental agency of competent jurisdiction.

Question#1: Who determines if it would ?compromise the security of a particular installation...?? Microsoft?

Concern#1: That Microsoft can add ?security code? to any piece of code in any product, which would in effect, make this whole document null and void.

My Solution: The Plaintiffs (the States, Industry Leaders, and Consumer Groups, none of which would be aligned with or pro-Microsoft) should specifically define ?compromise the security of a particular installation...? in this document.

IV. Compliance and Enforcement Procedures. A.2.a & b:

Access during normal office hours to inspect any and all source code, books, ledgers, accounts, correspondence, memoranda and other documents and records in the possession, custody, or control of Microsoft, which may have counsel present, regarding any matters contained in this Final Judgment. Subject to the reasonable convenience of Microsoft and without restraint or interference from it, to interview, informally or on the record, officers, employees, or agents of Microsoft, who may have counsel present, regarding any matters contained in this Final Judgment.

Question#1: Can counsel advise Microsoft not to make its code available to the Plaintiffs? Or is counsel in a passive role?

IV. Compliance and Enforcement Procedures. A.4:

The Plaintiffs shall have the authority to seek such orders as are necessary from the Court to enforce this Final Judgment, provided, however, that the Plaintiffs shall afford Microsoft a reasonable opportunity to cure alleged violations of Sections III.C, III.D, III.E and III.H, provided further that any action by Microsoft to cure any such violation shall not be a defense to enforcement with respect to any knowing, willful or systematic violations.

Question#1: Why is Microsoft given ?reasonable opportunity to cure alleged violations??

My Solution#1: Microsoft should NOT be allowed to ?cure alleged violations?. They should be punished immediately. That is why this document was written.

Question#2: Why are only Sections III.C, III.D, III.E and III.H mentioned?

My Solution#1: Any violation of any section in this document should be punishable immediately. That is why this document was written.

IV. Compliance and Enforcement Procedures. B.2.a & b & c:

The TC members shall be experts in software design and programming. No TC member shall have a conflict of interest that could prevent him or her from performing his or her duties under this Final Judgment in a fair and unbiased manner. Without limitation to the foregoing, no TC member (absent the agreement of both parties):

a. shall have been employed in any capacity by Microsoft or any competitor to Microsoft within the past year, nor shall she or he be so employed during his or her term on the TC;

b. shall have been retained as a consulting or testifying expert by any person in this action or in any other action adverse to or on behalf of Microsoft; or

c. shall perform any other work for Microsoft or any competitor of Microsoft for two years after the expiration of the term of his or her service on the TC.

Question#1: Why shouldn't the TC members have a conflict of interest?

My Solution#1: All the TC members should be either neutral or biased AGAINST Microsoft to ensure the toughest possible scrutiny. They don't necessarily have to act on every violation they find, but they should find ALL of them.

IV. Compliance and Enforcement Procedures. B.3:

Within 7 days of entry of this Final Judgment, the Plaintiffs as a group and Microsoft shall each select one member of the TC, and those two members shall then select the third member. The selection and approval process shall proceed as follows.

Question#1: Why should Microsoft have any representation on the TC?

My Solution#1: All the TC members should be either neutral or biased AGAINST Microsoft to ensure the toughest possible scrutiny. Microsoft should not have in any way, the means to delay, prevent, etc. any ability to scrutinize, find, disclose, etc. any violations. That's what this document is all about.

Comment#1: The way it is set up now, you would get the following TC members: 1 possibly biased against Microsoft (the Plaintiffs choice. Note: if this includes the U.S. Justice Department then this is probably biased for Microsoft). 1 completely biased for Microsoft (the Microsoft choice). 1 probably biased for Microsoft (since the world in 90% Microsoft OS's) So that's 2 pro Microsoft TC members who are supposed to be watching for Microsoft violations.

IV. Compliance and Enforcement Procedures. B.5:

If the United States determines that a member of the TC has failed to act diligently and consistently with the purposes of this Final Judgment, or if a member of the TC resigns, or for any other reason ceases to serve in his or her capacity as a member of the TC, the person or persons that originally selected the TC member shall select a

replacement member in the same manner as provided for in Section IV.B.3.

Question#1: Why should the U.S. determine that a member of the TC failed to act...?

My Solution#1: It should be the Plaintiffs, excluding the U.S. Justice Department, that determines that a member of the TC failed to act...

IV. Compliance and Enforcement Procedures. C.1:

Microsoft shall designate, within 30 days of entry of this Final Judgment, an internal Compliance Officer who shall be an employee of Microsoft with responsibility for administering Microsoft's antitrust compliance program and helping to ensure compliance with this Final Judgment.

Question#1: Why should Microsoft designate an internal Compliance Officer who shall be an employee of Microsoft...?

My Solution#1: It should be the Plaintiffs, excluding the U.S. Justice Department, that designate an internal Compliance Officer, who is NOT an employee of Microsoft...

IV. Compliance and Enforcement Procedures. C.3.g:

Receiving complaints from third parties, the TC and the Plaintiffs concerning Microsoft's compliance with this Final Judgment and following the appropriate procedures set forth in Section IV.D below; and

Question#1: How does this prevent the Microsoft employee (Compliance Officer) from filtering the complaints?

My Solution#1: It should be the Plaintiffs, excluding the U.S. Justice Department, that designate an internal Compliance Officer, who is NOT an employee of Microsoft...

V. Termination. A:

Unless this Court grants an extension, this Final Judgment will expire on the fifth anniversary of the date it is entered by the Court.

Question#1: Why, and How, was 5 years chosen?

Comment#1: This is NOT long enough. Microsoft has been violating antitrust laws for years.

My Solution: At a minimum, they should be punished for the same amount of years that they have been violating the antitrust laws, so their competitors can make up the lost ground.

V. Termination. B:

In any enforcement proceeding in which the Court has found that Microsoft has engaged in a pattern of willful and systematic violations, the Plaintiffs may apply to the Court for a one-time extension of this Final Judgment of up to two years, together with such other relief as the Court may deem appropriate.

Question#1: Why, and How, was just a one-time extension of this Final Judgment of up to two years chosen?

My Solution: Both should be changed as follows: 'one-time extension' should be at least a three time extension, and 'two years' should at least be 5 years. Other Questions:

Question#1: What are the current penalties for all of the years of violating the antitrust laws? Nothing?

My Solution: They should be penalized 80% of their cash holdings as of today. The

monies should be made available as Hi Tech Venture Capital. This will accomplish a couple of things:

1) Will punish Microsoft, but not destroy them, by taking away their ability to control the markets with their huge cash reserves.

2) Will deplete their reserve monies that were gotten illegally.

3) Will provide money to create new markets, via Venture capital, that will compete with Microsoft.

Question#2: Where, in this document, are the penalties for future violations of the antitrust laws? Go back to Court for another 4 years?

My Solution: Define in this document a monetary fine for each type of violation in addition to going to court for more punishment.

Other Comments:

This is about justice, not economics!

The attempt to make this an economic argument is disingenuous.

Punishing Microsoft will NOT hurt the economy. It will help the economy.

There will be hundreds of new companies, with new products, that will not be afraid that Microsoft will either steal, intimidate them out of, or buy their ideas. That's what we lost all of those years that Microsoft was allowed to violate antitrust laws. The market place will continue to prosper, as long as the entrepreneurs are not afraid of losing their original ideas.

Sincerely,

Pat Ricevuto email: cmprice@gte.net 11-26-01.

Subject: Comment on AntiTrust settlement
[Text body exceeds maximum size of message body (8192 bytes). It has been converted to attachment.]

Gentlemen:

It's my understanding that you are accepting comments regarding the Microsoft Antitrust Settlement. Please allow me to express my thoughts on the matter. I have been both a personal and professional user of a variety of computer systems for over twenty years now, and have tried to remain informed on the various issues in both a technical and an economic sense. I now find that there may be a political element involved here, as well. It has been a cause of growing concern for me over the past few years that the almost overwhelming coopting of especially the desktop market by Microsoft is has been so uncritically accepted as a fact of life. I'm concerned because such dominance of such a vitally important area by a single corporate entity cannot possibly be considered beneficial, and could easily lead to abuses. I'm reminded of the situation regarding Standard Oil that originally led to the institution of the antitrust statutes: a single organization that could impose its corporate will into the marketplace. A comparable situation would be a single manufacturer of automobiles being able to dominate the transportation field. Even where other modes of transport still existed such as busses and trains (compare the niche operating systems

in the computer world such as gnu/linux and OS/2), such an all-powerful entity could in short order specify that only a single brand of gasoline could be used in its engines, and that its cars could only be driven on approved highways. Such restrictive control on the major means of transportation would effectively place an iron lock control on virtually every avenue of commerce involving the moving of people and goods. One corporation would exert more effective power than the Congress of the U.S. and the President combined!

This is hardly an exaggerated example. Just such a situation is being foreshadowed by the dominance of the Microsoft-owned Windows OS in many areas, such as internet commerce, communications and the replacement of broadcast entertainment channels with restricted computer-centric avenues. Just as we need a competitive environment among automobile manufacturers, we need a competitive situation in the i-commerce world we are fast moving into. Otherwise a single entity will become the gateway through which all commerce passes. Not only will they be able to impose whatever fees they wish, but they would also be able to subtly (or not so subtly) restrict access by any persons or companies deemed, perhaps, unsuitable. How can an unrestricted Redmond monolith impose its will in this brave new world? Well, consider just for a single example Microsoft's recent election to abandon support of third-party plug-ins in their Internet Explorer browser, which has an overwhelming dominance in the market. In a single sweeping move, they have effectively excluded dozens of what were to this moment industry-standard technologies for the presentation of content such as sound, movies, animation and 3-D. These are technologies developed by non-Microsoft companies, which are in many ways far superior to the mechanisms Redmond is offering, including such media as Apple Quicktime movies, Real Audio and Video, Macromedia Flash, and even Adobe Portable Document Format. All these technologies will no longer function the moment IE is upgraded with the latest servicepack from Microsoft, which simply breaks them (and for no good reason other than it's a handy way to gently move people toward MS's own versions). Suppose in future years Microsoft elects to stop supporting standard networking protocols in favor of its own proprietary versions, which it might easily advertise as "more secure." The existing infrastructure of the computer world would be upset in an instant and a huge percentage of existing systems would instantly become obsolete and unuseable. By unilaterally dismissing a well-established technology as "no longer suitable" for use with its operating systems, Microsoft would cause millions of consumers to be immediately disenfranchised until they were prepared (both intellectually and financially) to accommodate the edict of the month. The impact on the already faltering economy of the country would be devastating (not to mention the devastation caused by the sudden spike in solid waste disposal of obsolete equipment!). By allowing Microsoft to continue its monopoly position

unchecked, the DoJ is making such a scenario an unavoidable economic disaster.

In addition, in now re-coding existing and proven technologies so they will continue to work in their upgraded versions, a proprietary protocol known as "Active-X" must be used. This protocol is dangerously unsecure in that it can easily conceal viruses and other dangerous code that will allow a variety of unpleasant or even destructive things to be secretly encoded into innocent-looking movies, sound files and animations by vandals, crackers and even terrorists bent on destroying computer systems. In the IT field, it is a well-established fact that Microsoft software is excessively vulnerable to this kind of secret tampering (both due to its inherent weaknesses and to the fact that it is so prevalent in the marketplace). It also means that these third-party plug-ins will now have to work through yet another layer of code, which will slow them down and make them appear to be less efficient than their Microsoft counterparts, even in those cases where they are inherently faster and superior (again, Quicktime is a perfect example, being a faster and superior mechanism for displaying motion pictures on a computer screen than MS's own Real Media Player).

This will also mean that both new and existing computers that get upgraded will no longer be able to access many existing internet websites that rely on these tried-and-true technologies, such as JavaScript, the Java language, Quicktime and a host of other languages and protocols which have been adopted over the past ten years. This will instantly exclude a large percentage of the commercial marketplace and the average citizen from participation in the burgeoning i-commerce area, without extensive (and expensive) retooling of their websites and i-commerce engines. Microsoft is effectively using its market domination to impose special controls and requirements on any entities that wish to use the internet, requirements that can very easily be withheld, withdrawn, or excessively charged for in the very near future.

Imagine a commercial marketplace wherein no vendor could market his wares without the sanction of the Redmond giant, who could easily decide that a particular product or service was, for whatever reason, not in the best interests of the economy, the country, or perhaps Microsoft's own monopoly position. It would be akin to saying that only approved people could use American currency for their commercial transactions; all others would need to use the barter system.

With no consideration of such consequences in the recently approved settlement, you are allowing Microsoft not only to successfully extend their operating system monopoly into internet commerce, but also into the realm of the content provider. Not only have they effectively gotten away with breaking the law, in not being called on their moves the Justice Department is setting up the game for them to easily break it again.

Quite simply, it is not an unreasonable projection that within a few years, the average consumer (the kind of person

without the smarts to understand how an operating system works and tinker with it) will simply be unable to view any content that Microsoft has not either provided or at least sanctioned with their corporate blessing!

Is this the kind of situation we wish to set up? We are currently raising enormous security consciousness so we will not once again be blindsided by foreign nationals intent on bringing down our American economic system. Do we really wish to lay the groundwork for this great system to be subverted from within our own shores by a corporate giant with a single goal in mind: to wrest total control over all economic transactions being made using any form of computer, whether on a desktop, in a corporate environment, or using internet connectivity? In my opinion, we should not. The correct remedies should be to impose reasonable limitations on Microsoft's ability to impose mandates on operating systems, internet communication protocols, and interactivity involving commerce, entertainment and personal productivity softwares. If it is considered not feasible to break up the giant in the same way Standard Oil and AT&T were, there should at least be legally enforceable mandates that Microsoft open up a portion of its operating system coding to third-party developers, legally enforceable mandates that they accommodate what is known as "open source" development wherein many people contribute to the improvement of software products for the benefit of all users, and legally enforceable mandates that future upgrades of the Windows operating system continue to accommodate universal standard protocols such as TCP/IP, JavaScript, HTML and XHTML, and others currently being considered by internet oversight organizations and future-looking innovators.

The idea that Microsoft and Microsoft alone should be the sole purveyor of "innovation" is, in the vernacular, bullshit. True innovation has given us the internet as we know it. The kind of innovation that Redmond proposes will just as surely take it away from us and impose the kind of strictures and limitations that lead to stagnation and attrition, while denying the citizens of America (and the rest of the world) the enormous potential benefits of the computer/internet revolution.

As a concerned citizen who has thought long and hard about this matter, I strongly urge the Department of Justice to impose as stringent a set of controls and restrictions upon the Microsoft Corporation as allowed by the law, for the benefit of my fellow citizens of this great country, its own economic security and the continued prosperity of both the United States and the planet Earth.

Subject: Comments on Microsoft School Donation Plan

I am shocked and appalled that this would happen. One of the few places where there

is still some semblance of competition for computers is in schools, where it is common to see non-Microsoft systems. Having Microsoft give schools computers and software for free helps them, it does not punish them.

It helps them two ways: (1) It puts more Microsoft systems in place, thus furthering their monopoly. (2) The marginal cost of software is close to zero. Once you have created the software, the cost of a copy is close to zero. Thus they get to appear to be "fined" when in fact they are giving something that costs nothing to produce.

Subject: AntiTrust settlement

Dear sirs,

As a professional in the high-tech arena for a decade, I am very disappointed with your recent decision to cave in on the Microsoft anti-trust suit. You have proven that they have improperly used their monopoly to inhibit competition, and that they are not above lying and introducing false evidence into a court of law. Furthermore, they have a history of renegeing on previously negotiated settlements—and there are no real teeth in this agreement to force them to obey the law. I strongly disapprove of this settlement and would rather see fundamental changes at Microsoft that would allow free competition.

Sincerely,

Drew McCormick
Product Marketing Consultant

Subject: I object to the proposed terms

To Whom it concerns,

Thank you for providing the opportunity for consumers to email opinions regarding the Department of Justice's proposed settlement with Microsoft. While I think the most of the proposed settlement is rather anti-climatic, I am extremely disturbed by one particular aspect of the proposed terms: WASHINGTON—Microsoft said on Tuesday it had reached a deal to settle a raft of private antitrust cases against the company, which sources said would cost the software firm more than a billion dollars.

The agreement with class action attorneys would require the company, which agreed to settle its separate 3-year-old case with the Justice Department earlier this month, to provide free software and computers to more than 14,000 of the poorest U.S. schools over five years, sources close to the case said.

This is, quite simply, shocking! How is Microsoft's monopoly position weakened if they are "forced" to distribute more product, thus enlarging a monopoly position?! I suppose Microsoft will also be permitted to write this off as a "donation" from their taxes? This is hardly a punishment for an unbelievably cash-rich company that has been labeled by our courts to be a monopoly!

The correct penalty is for Microsoft to purchase a billion dollars in software,

operating systems and hardware FROM THEIR COMPETITORS to place in these poorest schools! The competitors are the ones who have been hurt by the illegal practices of Microsoft and therefore deserve to receive some benefit! This trial was about Microsoft's illegal competitive practices against the Netscape browser, not to mention the many examples of Microsoft's unfair practices that were demonstrated during the trial. Netscape was nearly destroyed by Microsoft, having lost at least 60% of their browser share over the past 3 years. For this reason, the Department of Justice must not allow Microsoft to place the Internet Explorer browser in schools. And since Microsoft has "commingled" the Internet Explorer browser code into the coding of the many flavors of Windows operating systems (XP, ME, 98, etc.) it is clearly inappropriate to permit any Windows operating system to be "donated."

Please, don't let Microsoft walk away once again from their blatant unlawful behavior with another slap on the wrist. I just know they are sitting in their ivory towers laughing right now.

Sincerely yours,
Mary L. Paul Steward

Subject: Comments on the Microsoft settlement

To whom it may concern,

As a student of computer engineering who has followed the progress of the Microsoft anti-trust case from the beginning, I would like to voice my disappointment with a couple aspects of the proposed settlement. Although I believe that Microsoft's unethical business tactics should be punished monetarily and with regulations on OEM pricing and licensing, these are not solutions to the root of Microsoft's monopolist power. The real issue is a more technical one.

Microsoft's ability to twist the arm of the market into buying its software comes primarily from its proprietary file formats—most prominently, those used by Microsoft Office. The MS Office file formats, such as for word processing (.doc) or spreadsheets (.xls), are merely a "map" for storing the data generated by their respective programs. Proprietary file formats do not give Microsoft products any technological advantage in the software market. Instead, they are merely a means to keep competing software from being able to properly load and modify documents created by Microsoft Office.

As a result of proprietary file formats used in Microsoft programs, customers who already use MS Office (or who must communicate documents with people who do) are unable to switch to competing products. Most of this competing software is just as capable, if not superior, to Microsoft's own, but is unusable to many people simply because it cannot properly import data from Microsoft's programs. Because Microsoft has kept its file format "roadmaps" secret, competitors and free software projects are unable to provide the compatibility necessary to win customers.

I believe that the solution to this issue is very clear and should be added to the anti-

trust settlement. I propose that Microsoft be forced to publish, on its public web site, the full specifications and details of all current, previous, and future file formats used by Microsoft Office software. This remedy need not include any Microsoft source code, rather only plain-English technical documentation. Such information would allow competitors to extend their software to be fully compatible with Microsoft Office file formats—although this information should also be made freely available to the public so that charitable free software projects may benefit from MS Office compatibility. Please thoughtfully consider what I have proposed and feel free to respond via e-mail with any questions or comments.

Thank you. And may God bless America!

Date: 11/26/01 8:38pm
Subject: Microsoft Anti-Trust Settlement

I have read of the implications of the settlement of the Anti-Trust case against Microsoft. I understand this email address requests comments on the outcome of that case.

I have been working with computers in education for about 23 years. I've taught with systems from dialup mainframes with time sharing to today's Pentium systems. I understand that the market votes with their purchases of software and operating systems. However, I am very concerned about any action that would actually encourage additional marketshare for any one company.

If one of the terms of the settlement is to let the company "donate" computers and software to schools, I fail to see how this "makes up" for any alleged wrongdoing. It appears to actually enhance the problem that the lawsuit seemed to address. Schools with donated Microsoft software may be less likely to use alternate operating systems or applications, and this simply adds to the "repeat business" that will add to the market share and create an even larger base of Microsoft customers. There are already many problems that arise due to Microsoft dominance, and any remedy should encourage a broader base of platforms and software options, rather than narrowing the options available to users. A better solution would be a donation of equivalent funds to schools, and let the schools "vote" for what is right for their school. Reduced funding for schools choosing products other than those from Microsoft forces the schools into a one-way decision process.

I have found that by using systems outside the "mainstream," we have avoided many of the problems that other users experience. Several of the issues we have avoided are the viruses so prevalent in the Windows world, the security issues often mentioned with servers and networking devices, and overall quality issues. I am concerned about a world where the Passport system becomes "required" defacto to do business on the Internet and where one day we become so dependent on one company to provide all the software we need. If the "mainstream" becomes the "only stream," we may have

fewer choices, quality may be lowered, and consumer options become limited.

Subject: Microsoft Sellout

To Whom It May Concern:

The so called settlement is an embarrassment. Nobody has been able to control Microsoft during it's entire existence. What makes you think I believe a couple of "overseers" sitting in an office will have any effect upon Microsofts behavior and actions. The now spin less Justice Department did nothing to delay restrict or stop the release of Microsoft Office XP. This settlement is basically what was decreed in an earlier acton brought against Microsoft and Microsoft ignored it. This is a completely usless settlement. How stupid are the people running the Justice Department under President Bush? I have read that the governments position that breaking up Microsoft would do greivous harm to the economy. Why doesn't the government care what Microsoft has has done to dozens, possible hundreds of other companies. Apparenty, it is not enough to be declared a monopoly. Apparenty, the lesson to be learned is that you must make yourself so big that it no longer matters how many companies you destroy on your way to the top. Nice lesson for all those "Young Republicans"

Respectfully,
Glenn Gardiner

Subject: Antitrust Settlement Between the

Department of Justice and Microsoft

I am strongly opposed to the provision of the proposed settlement whereby Microsoft would "donate" hardware and software to schools. At first this appears to be a noble gesture. However, it is nothing more than a thinly disguised effort to monopolize yet another market, the educational one. It would be far preferable and fairer to other computer system manufacturers to have Microsoft donate money to schools and allow them to select the technology to be used.

US Dept. of Justice-Microsoft Anti-trust comments:

I consider myself an average American. My father, my brother and I all received Honorable Discharges from full enlistments in either the US Marine Corps or the US Navy. And, having almost 40 years of technical and management experience in Computers and Telecommunications

technologies with several of our largest corporations, I feel an urgency to speak in the face of threatening censorship and secret political employee profiling.

America is sick and despondent with the loss of its freedom and impending doom to her dream. At a time when ad agencies dictate to the US Congress and representative government have generally sold the American Dream down the river, it is indeed a stretch to ask for your compliance to uphold the law, placing your family and career at risk. But, Microsoft and company have brought tyranny to the American consciousness in ways that Bin Laden and our would be destroyers only dream about—the end of freedom—the end of the American Dream is in sight. Read the Global media—Microsoft is E V I L.

Microsoft's family of crime should not only be splintered beyond recognition, but these criminal perpetrators should receive the just rewards of any terrorist hoodlums. They have accomplished through conspiracy and larceny what no outside terrorist can or will do to America, by destroying the freedom and spirit of the American workplace from within. Microsoft has left a trail of tears and broken laws, dismembered hearts and withered creativity; an infection, a collection of rotten, tainted, stolen technologies—the ghost in the machine beckons and cries out for justice.

Now, we all work for the crime family regardless of our beliefs. The Quality principles of America's National Treasure, Dr. W. Edwards Deming, which brought us unrivaled teamwork and prosperity have been co-opted, distorted and twisted to serve a demonic ideology. A continuous stream of disasters is ample evidence of Quality draining from the American infrastructure.

Without real choice, we are just slaves. Without choice, there is only propaganda. Without this basic choice, American consciousness will be divided in digital warfare for the century to come, unless of course, she succumbs to grim tyranny altogether.

Please, in this 11th hour of our freedom, try to preserve the dream that so many in our families have fought and died for. Thank you for your time and consideration,

Kenneth Brauchler

Subject: Microsoft Settlement

I am a voting resident of the county of El Dorado in the State of California, United States of America. I am a working computing professional. I've just read the news on the proposed one billion dollar settlement. I am against this settlement with Microsoft.

As I understand the deal, this seems to me to be very much in favor of Microsoft. In addition to few to no changes to their behavior, a portion of the punishment is, in fact, a real benefit to them. The resolution including the dissemination of their software and compatible hardware, training to use their products, and loads of their often bundled software, seems to fly in the face of the very point of the trial.

They have been declared a monopoly for illegal tactics that were specifically meant to increase their market share, for bundling products for free to get market share, and for illegally blocking other's products to gain market share, and now, a good portion of the settlement specifically increases their market share of both the OS and their bundled products.

I believe this settlement should be declined. Microsoft has once again gained the upper hand and will only benefit. The settlement should be made in order to change their behavior, this does nothing to address their behavior and will not change it in the future, allowing them to continue to bilk the public.

Subject: Microsoft settlement

I will start this out by saying that I am an Apple user/supporter. So to this end I am biased as I feel they make the better OS/Equipment. However, when it comes down to the merits of this settlement I feel you are encouraging Microsoft to continue their already legally determined illegal monopolistic practices. In the long term what will happen is;

Schools so chosen will require upgrades to both equipment and software. They will of

course go straight to Microsoft as that is what they have already and will be less expensive than purchasing all new equipment and software.

Students will have the Microsoft logo in front of them all the time, at a time in their life where they are the most susceptible to influences. When they have an opportunity to purchase their own system they will probably, not necessarily, go with a Windows OS machine.

This settlement pushes the monopoly further. They will gain market share now and make money from it in the future. Not trying to toot Apples horn on this, but this forces Apple OUT of the market in these areas that you are planning on having Microsoft pay their penalty to. As I said, this encourages a more and bigger monopoly.

I feel that if you penalize them, it should be a penalty and not a money making proposition. Make them purchase competing systems. Hands down Apple is overall better. More cost effective to own, easier to maintain, easier to network, more creative tools. But if you think that isn't fair, at least let the school systems decide what they want to put in their schools. And make sure there is no pressure applied either way. Let the schools research to determine what would be in their best interest. Here is a page to help in that thought.

(http://homepage.mac.com/mac_vs_pc/Intro.html)

My whole premise is that if you are judged guilty of a crime you should be punished. I don't think this settlement punishes. It instead pushes the monopoly that you fought to prove, further into our lives.

Thank you
George Verkler

Subject: settlement?

This settlement can only benefit Microsoft and likely to further entrench its monopoly.

Microsoft stands to increase its presence in schools, and decrease Apple's share in the market. The end result will only serve to increase Microsoft's share and influence in the education market. Unless of course they allow schools to choose the software that they use. Even more American workers—not to mention those in Australia—will receive greater exposure to Microsoft products which will benefit Microsoft for many years to come.

In my opinion this settlement will likely have no impact on Microsoft's anti-competitive practices.

And it does nothing to bridge the digital divide outside the US.

Subject: Microsoft Settlement Comments

I write to oppose the settlement with Microsoft. The deal favors Microsoft so strongly that I find I'm actually shocked. The

arrangement will clearly not only fail to correct Microsoft's illegal activity, it will actually serve to benefit Microsoft. Microsoft was found to be practicing illegal, monopolistic behavior for tactics that served to increase their market share, for bundling free products to gain market share, and for illegally blocking other's products to gain market share.

And yet, the proposed settlement will have the ironic result of increasing Microsoft's market share of both the OS and bundled products. As just one obvious example, Microsoft has long struggled to gain a serious foothold in the education market, one of the few markets it does not yet overwhelmingly control. Incredibly, the proposed settlement would result in an increase in Microsoft's share of that market.

The settlement should be rejected.

Subject: Microsoft Settlement

I'm writing to complain that a significant piece of the proposed Microsoft settlement does nothing but further the Microsoft Monopoly. As I understand it, one piece of the settlement is that microsoft will donate a bunch of software to schools. Schools have long been one of the strongest domains of Microsofts only commercial competitor Apple Computer. This donation would only serve to increase Microsoft's Monopoly, and further jeopardize consumers feadom of choice.

I believe this settlement should be declined. Microsoft has once again gained the upper hand and will only benefit. The settlement should be made in order to change their behavior, this does nothing to address their behavior and will not change it in the future, allowing them to continue to bilk the public.

Subject: Microsoft Settlement

This responds to USDOJ's request for public comments regarding the antitrust settlement with Microsoft Corporation.

As a user of Microsoft products as both a consumer and information technology manager for a unit of a Fortune 500 company, I believe the remedies cited in the Proposed Final Judgement are insufficient to either correct the damage caused by Microsoft's past practices or to sufficiently preclude Microsoft from engaging in similar consumer-damaging anti-competitive behavior in the future. My comments below address specific sections of the Proposed Final Judgement.

In general, the relief provided by the judgement is neither prompt, certain nor effective. The relief is not sufficient to prevent recurrence, and the focus on middleware and the OEM distribution channel is too narrow to provide effective relief or deterrents against repeated anti-competitive activities.

Re: "Ensuring that computer manufacturers have contractual and economic freedom ...by broadly prohibiting retaliation against a computer manufacturer that supports or distributes alternative middleware or operating systems." and "requiring that Microsoft provide uniform licensing terms to the 20 largest ...computer manufacturers."

This provision does absolutely nothing to protect developers from direct retaliation. Worse, it does nothing to protect consumers (private or business/corporate) who purchase software products and upgrades either directly from Microsoft or through third party vendors. The cost and implementation time involved in changing software platforms dictates that most Microsoft users will continue to upgrade to newer versions of Microsoft products, and the judgement does nothing to protect such consumers from anti-competitive pricing and licensing tactics.

The focus on the OEM distribution channel is far too narrow to significantly inhibit anti-

competitive behavior in the broad market. It leaves open other opportunities for anti-competitive behavior which will directly impact consumers and end users availability of choice and cost of ownership for several years beyond the initial purchase of computer hardware.

Re: "Ensuring that computer manufacturers have the freedom to offer, and consumers the freedom to use, non-Microsoft middleware, by requiring Microsoft to provide the ability for computer manufacturers and consumers to customize, without interference or reversal, their personal computers as to the middleware they install, use and feature ..."

This provision does not address ease of use of customization as a barrier to such activity. Microsoft can continue to create barriers to consumer choice through continuing to create arcane interfaces which are, at best, confusing to ordinary consumers and difficult for technical staff to work around. This provision will all but ensure that ordinary, non-technical consumers will continue to be directed toward Microsoft products and services and away from competitive products and services which offer better value and ease of use.

Re: "Ensuring that Microsoft cannot thwart the purposes of the remedies ..." This provision does nothing to penalize Microsoft for demonstrated anti-competitive behavior and does not preclude the company's continuing such behavior. The language in the provision only requires them to offer licenses, but nothing in the agreement requires them to provide reasonable licensing requirements which do not create competitive barriers.

Re: "Depriving Microsoft of the means with which to retaliate against, or induce the hindering of the development of, competing products by prohibiting Microsoft from entering into agreements that require parties to exclusively, or in a fixed percentage, promote Microsoft middleware or operating system products."

Like earlier provisions, this provision focuses too narrowly on the OEM distribution channel and does nothing to prevent Microsoft from creating barriers through unreasonable licensing agreements with end users and/or developers.

Re: "The requirements and prohibitions in the Proposed Final Judgment are supported by strong enforcement provisions, including the power to seek criminal and civil contempt sanctions and other relief in the event of a violation, and the imposition of three full-time, on-site, independent enforcement monitors..."

Regarding the claim of "strong enforcement provisions", DOJ has just sought sanctions and other relief for violations which has reached an ineffective end with this judgement. This provision just allows you to repeat this ineffective proceeding.

Further, three persons to monitor the technology development and commercial practices of a company this size is totally inadequate to provide meaningful oversight. At best it will result in a checkoff by the monitors that Microsoft, on its honor, has not violated any law or provisions of this agreement. Microsoft has demonstrated through past behavior that the company will

engage in anti-competitive practices which harm consumers, and the imposition of monitors is not a sufficient deterrent to prevent the repetition of such practices.

The judgement further fails by providing no meaningful penalty against the company nor relief to consumers for Microsoft's past practices.

Subject: Microsoft Settlement
Hello.

I'd like to add my voice to those expressing misgivings about the proposed settlement of private lawsuits, in which Microsoft would work off it's penalty by giving large amounts of its technology to poor schools. I have to agree with those who point out that this would merely serve to add to Microsoft's competitive advantage, in one of the few markets where there is real competition to the Windows juggernaut.

In fact, given Microsoft's immense resources in ruthless marketing practices, it will take a severe penalty, indeed, to have any real and lasting effect. The breakup of the large corporation into separate operating system and applications entities is one of the few solutions I see that might actually improve competition without stifling innovation. And for the record, it is my opinion that Microsoft has never innovated a single technology, choosing instead to take new ideas developed by others, implement them poorly, and then weave them inextricably into their operating system to force them upon the public. It is in this way that Microsoft can successfully thumb its nose at any attempts to implement standards in the software industry, especially the internet/web sector.

I urge you to re-think this settlement and consider something that will actually promote competition, not defeat it. Thank you.

Subject: Microsoft settlement

I believe the "one billion school funding" settlement negotiated by Microsoft and the other class-action attorneys is a ploy designed to entrench the Windows monopoly while allowing the company to pay back only a tiny fraction of what it actually owes consumers.

I find the proposed conduct remedy to be inappropriate and wholly inadequate for a company which has demonstrated nothing but contempt for previous conduct remedies.

A settlement that required the proposed school funds to be spent on non Microsoft/Wintell products would act as punishment, and give the company an incentive to change their criminal behavior.

Thank you,

From: David Godshall
To: Microsoft ATR
Date: 11/27/01 11:24am
Subject: Microsoft Settlement

As a home computer user, computer professional, and computer enthusiast, and with no financial interest in any of the companies associated with the case, and with only a personal desire to see a proper competitive atmosphere within the computer industry as a whole and a fair deal for the general public, I wish to affirm the antitrust proceedings undertaken in the case of USA v. Microsoft Corporation, Civil Action No. 98-1232 (CKK), wherein Microsoft was found to be a monopoly and having violated portions of the Sherman antitrust law. I have read the November 2001 settlement proposed by the US Department of Justice and nine of the plaintiff states and do not believe the proposed settlement is in the public interest. I am no lawyer, but in spite of that I can see and will highlight a number of the more serious problems I perceive with the current settlement.

1. Within the settlement document (Section III, A-B) is the terminology "Covered OEM", which the Definitions section reveals to be the 20 largest Original Equipment Manufacturers. Are not the smaller companies as least as deserving of protection from predatory practices and pricing discrimination as the larger companies, if not more so?

2. Section III, A, 2, prohibits Microsoft from retaliating against an OEM that ships a Personal Computer with a Windows Operating System in addition to competing operating systems, but says nothing about an OEM shipping a computer with a single non-Windows operating system. As such, OEMs which sell some computers with Windows and some computers with a single competing operating system are open targets for

retaliation. Microsoft should have no say in what operating system or systems an OEM includes with any of their computers except in that they get proper payment for each copy of their own operating system actually sold.

3. Section III, C, 1, while initially seeming to disallow such activity, in reality specifically allows Microsoft to dictate in certain circumstances what icons an OEM may or may not place on the desktop or start menu. I contend that the OEM must have the right in all circumstances to include or exclude whatever icons (or for that matter, whatever programs) their customers request, thus allowing healthy competition and differentiation between OEMs, with the general public benefiting by being able to select the OEM that bests accommodates their needs and desires.

4. The Technical Committee, as described in Section IV, B, is supposed to be comprised of three technical persons not affiliated with Microsoft. Allowing Microsoft to select one of those people, and furthermore allowing them to influence the selection of the third person, seems to me to be giving Microsoft too much influence over the selection of this committee and too much possibility of bias in favor of Microsoft. Furthermore, the stipulation in Section IV, D, 4, that nothing the TC does is admissible in court makes enforcement of the entire settlement appear very problematic.

5. Microsoft has full discretion in deciding what constitutes a "Windows Operating System Product" (Section VI, U) and what code goes into it. This is totally unacceptable as it leaves Microsoft free to simply define that a non-operating system component is part of the "Windows Operating System Product" and such code is completely unaffected by this settlement, regardless of how many competing or future non-Microsoft products such an action destroys. The moment Microsoft learns or believes a company is in development on a new product, they would have the complete freedom to write code, regardless of quality, functionality, or user interest, define it as part of the "Windows Operating System Product", and thereby destroy the competition before it has a change to even begin. I believe an independent entity needs to define what is essential in an "Operating System Product" and everything else must be made user/OEM optional and completely removable. In addition to the specific shortcomings listed above, I believe it to be entirely too lax on Microsoft. Microsoft was found in a court of law and on appeal to be a monopoly, and furthermore to have abused their monopoly position. This settlement contains no punitive measures for those past offenses, but worse yet it contains little to effectively curb current future predatory behavior. What is intended to contain such behavior is full of "except for" terminology that dilutes the effects of the statements, and when Microsoft is found to have violated sections of the settlement, it appears difficult to enforce such violations. Microsoft has a history of violating court orders and a more effective way to prevent that must be found.

Finally, it does not appear to me that the settlement effectively addresses Microsoft's growing practices of tying products into their

operating system in such a way that the user no longer has an option to keep or remove such product, and in fact appears to specifically legalize it (Section VI, U). The most visible example, and one that figured prominently in the proceedings, was integrating Internet Explorer into Windows 98 such that the user can not remove it short of using third-party software (for example, 98lite) or difficult manual changes. Internet Explorer used to be a separate Middleware product in Windows 95, and Microsoft was ordered in court to stop requiring OEMs to bundle it. Rather than respecting the intent and spirit of the court order, however, they attempted legal trickery by integrating it into the operating system such that it was no longer be considered bundling. By doing so, in addition to continuing to use their monopoly position to gain a monopoly in a different area (which they have by now largely succeeded in doing), they have stripped users of their choice of installing or removing Microsoft's web browser. With Windows XP Microsoft has continued and expanded this practice, making a lot of other formerly optional components into non-removable parts of the operating system, thus further reducing the general public's choices, and the OEM's ability to give the general public those choices, and effectively destroying the ability for competitors to compete on an even playing field. The end user, and the OEMs on their behalf, must be allowed and given the tools to do more than simply disable or hide all Microsoft Middleware Products, they must also be allowed and given the tools to completely remove (uninstall) them, allowing them to free up the disk space and other resources that the Microsoft Middleware Products might otherwise be consuming.

While this settlement is a good start, after all the work that has gone into this lawsuit the computer industry and the general public deserve better protection from Microsoft's predatory actions than this settlement provides, and I ask that the court to either reject the settlement in its current form and require that the parties come up with a settlement that better fits the offenses and which can be genuinely expected to prevent them from reoccurring, or rework the current settlement to remove existing loopholes and give the user and OEMs complete control over the choice to install or not install all Microsoft products that are not essential to operating system functions.

Thank you.

I think the settlement is a abdication of the government's obligation to prosecute a convicted monopolist. The provisions for noncompliance are nonexistent. The "compensation" paid to schools amounts to a market share giveaway in one of the few markets where Microsoft is not already completely dominant. The only teeth in this settlement are in the loopholes.

I have never been as proud of my government as when David Boies was demonstrating on a daily basis how capricious and harmful Microsoft is to the US technology industry. His successors in the Justice Department should be ashamed of themselves.

Subject: Penalty' Greater Marketshare

To stop a problem, you must begin at the source of the problem and allowing Microsoft (MS) the ability to send in PC's running THEIR software isn't exactly going to punish MS in the way that they were to be tried. The purpose of the court cases...too much marketshare and a monopolistic company. The possible "punishment"...give more people THEIR software. Not only to people that already use PC's and Microsoft's software, but to children. Children that when they grow older, are familiar with the MS operating systems and continue to use them. Hardly affecting MS's monopoly or their funds. To give a verdict, you must look at the consequences... Punish MS by having MS give schools their software isn't holding them back in anyway from gaining more marketshare and making billions of more dollars. Yes, more money as well because in the proposed verdict, MS will be able to charge the schools a licensing fee for the software that they gave them. MS wins all around.

What needs to be carried out is a verdict that will drop MS's exposure and allow other operating systems and software companies to emerge. The market is so saturated with PC's and MS's software that many people do not even know of alternatives like Mac OS X or even Linux. By constricting MS's exposure, this will allow these other companies to step forward and present themselves in a respectable manner. Money obviously is no object to MS. So that will not solve the problem. Marketshare certainly isn't an issue with MS, either. They have 95% of the market and loosing a few percentage points certainly will not hurt their income, but will help these other companies trying to make a name for themselves. If I was one of MS's lawyers, I would be extremely happy right now. (As well as very wealthy.) Microsoft is looking at this verdict not as a punishment, but as an investment.

Thank you for reading my comments.

To Whom it May Concern:

I am hardly the activist type, and this might actually be the first time I have written to a government office.

I am concerned about the proposed remedy for Microsoft's anti-competitive behavior. While I am entirely in favor of bringing technology to the needy, it seems to me that this solution is to Microsoft's competitive

advantage, which seemingly defeats the purpose of the action at all. Microsoft has entrenched themselves very heavily into nearly all personal computing markets. Once an organization is on the Microsoft platform (or any platform), there is a very strong gravitational pull to staying with that platform for many years, as it requires significant investment in both products and training to change. This creates a cycle of dependency on upgrades, upon which much of Microsoft's business model is based. Education is one of the very few personal computing markets left where Microsoft has a real competitor in operating systems, Apple Computer. It seems reasonable to assume that, were this plan to go through, that the beneficiaries would not be purchasing computers from Apple for many years. Furthermore, there would likely be a ripple effect, as there would be a certain tidal force in so many schools adopting a single platform from such a powerful player. What this means is that long after the contributions are made, schools (and not only the recipients) will be paying for Microsoft products and support, at the expense of their competitor.

In sum, this plan could hand to Microsoft one of the few markets they have been unable to dominate yet, yielding no real consequences for the anti-competitive behavior which they have been found guilty of. I am all in favor of bring better technology to schools! But that is a separate issue from the appropriate remedy for Microsoft's behavior. I am hardly a legal or business expert and I submit these comments with humility. I am sure you have received many similar comments already, but I feel obliged to speak my peace regarding this matter. Thank you for your kind attention.

Subject: MS settlement
Justices,

Why on earth do you want to add to Microsoft's monopoly by allowing them to seed their inferior software in schools, which is not even traditionally an MS market? Macs are much easier to use, and Apple has held that market for years. You're doing—nothing—but furthering their marketshare by letting them "give" their software to schools, thus locking up a new market for years to come.

This is not at all an equitable settlement. It does nothing to Microsoft financially, except open up a new market for them. Do you want to punish MS for their monopolistic practices, or help them to achieve their own goals?

Sincerely,
Joanne Kalogeras

Subject: Microsoft Case

This whole issue is getting out of hand. It has become apparent that this is not about justice, simply Microsoft's competitors trying to destroy them. If this were about justice then this case would have been settled.

If Sun Microsystems, Oracle and Netscape would simply build better products, improve their internal business structure and stop spending so much energy on whining about Microsoft they too could be successful.

As an American, I am sick of this whole thing. It has wasted time, money and energy. The U.S. Government has allowed this whole case to escalate by allowing the competitors to go beyond the request of an investigation. It has allowed this to be handled as a revenge case rather than a case about fairness or protecting consumers.

Subject: The Microsoft settlement

It stinks. It isn't punishment at all, it's a chance for Microsoft to establish a monopoly in the last area (education) in which it doesn't have a clear one yet.

This is just like the last slap in the hand that Microsoft got for pushing everyone around and holding the industry back, and will be just as effective—not at all. Microsoft will ignore the new rules it's under because they will know, having had it happen twice, that they can break the law as much as they want, and all they have to do is go to court every ten years and get slapped with a tiny settlement. Stand up and fight them. They have held back my industry long enough. They are the driving force behind making software worse for everyone. We are all affected, we're depending on you to stop it.

Yours,

—Wil Shipley

Subject: Oppose Microsoft private suit
settlement

Dear Department of Justice,

I would like to express my opposition to Microsoft's proposal to settle lawsuits for abusing monopoly power, by providing computers, software and other resources to poor schools.

This is a breathtakingly self-serving proposal on Microsoft's part. It will further Microsoft's competitive advantage in schools—one arena where its main competitor in the consumer market, Apple, has considerable business. Many teachers prefer Apple products, for their ease of use, longer life-span, and much lower long-term support costs; and I understand that they have expressed grave doubts about this proposal.

It seems peculiar, to say the least, to allow a company to settle complaints of monopoly power, by giving it a golden opportunity to extend its monopoly.

Sincerely,
Linda Palmer

Subject: Microsoft Settlement

US Department of Justice-Microsoft antitrust comments: I believe this settlement should be declined. Microsoft has once again gained the upper hand and will only benefit. The settlement should be made in order to change their behavior, this does nothing to address their behavior and will not change it in the future, allowing them to continue to bilk the public.

How could providing their software and training to schools (or anyone) free of charge not increase their market share? Wouldn't that be adding to the issue at hand? I think it's obvious that Microsoft should be not rewarded with an increase in consumer

usage. Perhaps disseminating their software bundles and a truly steep fine (cash only!) would be sufficient. Donate the cash fine to the schools—NOT as a donation from Microsoft but as an increase in the annual school budgets or a blind influx of books and supplies. Surely you can see that, while donating to schools is a noble endeavor, doing it with a specific company's product who is already the dominant force (the reason for this judgment makes that case) is only helping Microsoft, not punishing them.

Subject: Microsoft Settlement

In reading recent news events, I am quite disturbed by the proposed Microsoft Settlement. I was under the impression that the judicial system was put in place to punish wrong doers. It appears that Microsoft is being further rewarded for their monopolistic practices. By "forcing" Microsoft to give money, computers, and software to schools, Microsoft's monopoly will only be further empowered. This punishment is nothing of the sort; Microsoft regularly donates much more than this punishment even implies. Its called Market Share. If you capture the education, market you capture the future market. Please reconsider supporting this settlement. It will do nothing but make Microsoft that much more powerful. Please go back to the discussions and determine a proper punishment for a company that continues to abuse the people of America as well as the Free World!

Date: 11/27/01 2:15pm
Subject: Microsoft anti-trust settlement
Microsoft is a monopoly.

The question is, under what rules should Microsoft be allowed to continue operations, and what is a just punishment for past abuses. 1. The various proposals that I've seen do not address one of the techniques that Microsoft has used to gain dominance in the marketplace. Often when a company that Microsoft views as a threat announces a product or technology, Microsoft will within a week announce a competing technology or product. Unfortunately, many of those "announcements" are just the start of Microsoft's development, and consumers will not see anything for years if at all. This has the effect of drying up both sales and capitol for the competing company.

Microsoft needs to be prevented from pre-announcing any technology, product, or service more than 90 days before it's actual availability to consumers.

2. Microsoft's offer to provide schools with equipment and software will just help Microsoft gain control of one of the few markets where it doesn't dominate. There are two basic problems with Microsoft's providing software. 1. It improves adds to Microsoft's monopoly. 2. Microsoft's incremental cost of goods for software is under \$1. (The cost of reproducing a CD). A much better settlement would be for Microsoft to provide the schools with cash, and allow the schools to spend it where they see fit. This would actually affect the their bottom line.

These modest proposals will not go far enough to punish Microsoft for it's abuses. The only real solution is to break Microsoft up into many parts: 1. The Windows OS Company, 2. Media Company (MSNBC/MSN),

3. The Office Company (Desktop Applications), 4. The Back-Office Company (Back-Office/SQL Server), 5. The PDA Company, 6. The Game Company (x-box/Flight Simulator, et. al.). There should be NO cross ownership or licensing for at least 7 years.

Subject: Microsoft Settlement
To Whom It May Concern:

Having Microsoft put \$1B of its competitors products into the schools would be a real punishment. The current deal is a fraud. Rather than creating a deal that levels the field and furthers the interests of consumers, Microsoft is making a marketing investment into markets where they are currently losing. Historically, Microsoft has had a competitive disadvantage over other platforms (Apple, Linux, etc.) into the schools. By taking the proposed tack, Microsoft can gain further competitive advantage and simultaneously gain legal protection for their growing power. It is incompressible that we are "punishing" a monopoly by granting them a monopolistic position in the schools.

As Brier Rabbit would say: "Oh no, Justice Department! Please don't throw me in that briar patch!"

Let's not be gullible. Let's take the opportunity to really benefit the schools, consumers, and American business. Microsoft should pay \$1B in CASH and allow the schools to use those funds to buy the products of their choice.

If I can be of assistance, please contact me.

From: William Perez
To: Microsoft ATR
Date: 11/27/01 2:17pm
Subject: justice for Microsoft
US Dept of Justice:

I am writing to ask you to reconsider the proposed Microsoft antitrust settlements. This is a travesty of justice which does not address their previous behavior which is

what resulted in their market dominance. Nor does it justify the horrendous damage they have already done to the computer industry. When a criminal repeatedly breaks the law, the guilty party should be punished. Isn't that how our justice system supposedly works? A gentle slap on the wrist and ensuring they "never do it again" is not enough.

The "Be" operating system which ran on PCs and Macintosh computers is now dead. Palm, Inc. who acquired the company have no intention of trying to compete with Microsoft's unfair advantage again. It's too late to save Netscape which AOL/TimeWarner acquired after they could not compete with Microsoft's Internet Explorer web browser. IBM has documented that they lost millions because Microsoft would not give them an equal and timely license for Windows 95 due to IBM's "Lotus" products which tried to compete with Microsoft Office. Real Networks and Apple's QuickTime have also suffered unfairly due to Microsoft's advantage of tight product integration, which you can be sure they will continue to tighten and make more difficult for competitors in the future. Where is the justice for all this?

Microsoft is the world's largest software company and the company's founders are some of the richest people on this planet. 95% of all computers run their proprietary Windows operating system. Their Internet Explorer web browser remains the number one choice for PCs and even Macintosh computers. Microsoft Office is a \$500 product that also dominates its competition on both Windows and Macintosh platforms. It's clear to me that they are an illegal monopoly which has repeatedly violated the law and yet the proposed settlement is riddled with loopholes, leaving Microsoft in a position of power where they will continue to harm the industry and consumers. The class action settlement proposed (to provide schools with free copies of Microsoft software and PCs) will only further entrench Microsoft's monopoly. Children will grow up accustomed to using Microsoft's tools and will prefer to buy their solutions in the future, which only benefits Microsoft in the long run! You should make Microsoft provide *competing* software and systems not their own. It's no big loss for them to duplicate copies of software they've already written.

I ask that Microsoft be properly punished, not helped, for their past crimes before more companies with great talent and merit end up bankrupt. They should feel remorseful of their illegal actions in the past and looking at their latest offerings, namely Windows XP and Xbox, I don't see that as being the case. Other technical companies that have been investigated for being a monopoly (AT&T, IBM) have not gotten off so easy. It's not fair or just in my opinion so I hope you reconsider a much harsher sentence.

Subject: Microsoft Settlement

TO: US Department of Justice-Microsoft anti-trust comments:

microsoft.atr@usdoj.gov

I've just read the news on the proposed one billion dollar settlement. As I understand the deal, this seems to me to be very much in favor of Microsoft. In addition to few to no changes to their behavior, a portion of the punishment is, in fact, a real benefit to them. The resolution including the dissemination of their software and compatible hardware, training to use their products, and loads of their often bundled software, seems to fly in the face of the very point of the trial. They have been declared a monopoly for illegal tactics that were specifically meant to increase their market share, for bundling products for free to get market share, and for illegally blocking other's products to gain market share, and now, a good portion of the settlement specifically increases their market share of both the OS and their bundled products.

I believe this settlement should be declined. Microsoft has once again gained the upper hand and will only benefit. The settlement should be made in order to change their behavior, this does nothing to address their behavior and will not change it in the future, allowing them to continue to bilk the public.

Hello. I have read the following article on USA Today's website: <http://www.usatoday.com/life/cyber/tech/2001/11/27/microsoft-educators.htm>

I have to say it does sound like you are rewarding Microsoft by letting them donate used computers.

This helps them in the following ways:

People get exposed to their software and Windows machines. So they may be more apt to buy one if they are able to purchase equipment. Microsoft does not have to spend money to throw the computers away. They will probably be allowed to take an income tax charitable deduction for the computers. This is not a punishment for creating a monopoly. It is an incentive to continue the monopoly.

To: 'microsoft.atr(a)usdoj.gov'
Date: 11/27/01 2:59pm
Subject: Comment on case

Before getting into my comment, I must mention that I work for Intel. In my opinion my employment has no bearing at all on my support (or lack of support) for Microsoft's proposed settlement. I am certain that most people would believe it significant. I should also mention that the lab in which I work at Intel was started by one of the main government witnesses in the federal case against Microsoft. Again, I do not believe that this has any bearing on my judgment. As you will see, I support some aspects of the plan and do not support others.

For background, I am a developmental psychologist working at Intel. I have a PhD in developmental and educational psychology from Teachers College at Columbia University. I came to Intel from an academic position where I was doing research on technology in education (at Northwestern University's Institute for the Learning Sciences). I have been doing research on technology and education off and on for over twenty years. Therefore, I have some expertise to comment on Microsoft's settlement offer. I would like to suggest that Microsoft's proposed settlement approaches fairness. I do not believe that donations to schools should be turned down because they would give Microsoft an advantage over Apple. One of the reasons that I came to Intel is because platforms running Microsoft software are the most cost effective means to deliver computational power. I wanted to be able to influence how services might be offered to young students. The cost differential is quite significant here. We know that most schools have decided to go with the "commodity platform" running Microsoft software.

I think that the cost differential is what has driven these school districts to make this decision and there is little reason to think that low income schools could reasonably be expected to go with Apple equipment. However, I also know that Microsoft has a tendency to overvalue its cost in donating

software to schools. Before a particular plan is accepted, I would recommend that Microsoft's real costs in the donation be taken into consideration. The real costs are not insignificant since support would be included. Lost sales are a real concern but we need to consider that Microsoft would have sold this software in an OEM bundle and may have gotten less than \$20 per system. Do not let them treat this as a sale of boxed software.

Finally, I would think that Microsoft would tend to donate systems with WindowsXP. I personally have no plans to run XP on my current Intel provided computer since it is a 600 mHz Pentium II. My computer is really not good enough to run XP well. I'm better off with an older OS. My Pentium II is still useful to me though and I won't be getting a new one for a while. I wonder what the refurbished machines that Microsoft will donate will be. If these computers are older, low power computers; they may have a difficult time running some software. This is important because speed is still related to ease-of-use. You can use the power of the PC to make the task easier. This is only true if the PC is powerful enough. I hate to think that kids with the most need would get computers that are not quite up to the task of helping them out. You know that the schools won't be upgrading any time too soon. It would be best to make sure that they don't have to.

Dear State Attorney General:
Please consider a more stringent prosecution of MicroSoft corporation, that is, in my opinion, stifling the computing industries of which I am a professional. As MicroSoft continues to get its way, we're already twenty years behind. I am a computer systems administrator with a BS degree in computer science and seen over the last ten years the same findings of fact determined against the company by the DOJ. There is very little punishment of these crimes to speak of; in fact it's almost a reward to the monopolist and sets a most disturbing precedent. After Realplayer, Java, MP3, and PC Anywhere go the way of Netscape and Apple, where shall they turn for justice? What happens to our privacy when we cannot escape spam, telemarketers, and door-to-door salespeople who buy data collected from MicroSoft Windows XP activations. Or worse yet, cannot access information on the Internet at all because each site requires .dll compatibility or is choked by viruses. If MicroSoft continues to monopolize, we'll all be paying taxes to them, obeying its rule of law, and suffering intellectual dysfunction at their hands!

Sincerely,
Kevin D. Hall
PS I voted for, and support our president but disagree with the effort that dismissed

the case against MicroSoft. Please continue your pursuit of justice!

To: Microsoft ATR
Date: 11/27/01 3:05pm
Subject: Microsoft settlement objection
I do most strongly object to the idea of Microsoft "atonning" for past transgressions by donating a few billion dollars of hardware and software to schools, and thereby, essentially undoing Apple's small education market niche.

What kind of punishment is that? The Apple company is already suffering by Microsoft copying Apple's system years ago with the "Windows" design that was invented and developed by Apple. But no matter about that old issue, why would you consider undermining a competitive product such as the Apple companies computing system? That would be no punishment at all, but turn out in their favor by driving Apple computers out of the schools.

Apple is trying to recover by making the much more simple and stable Mac computers available for young students, some of which may later choose to buy an Apple Mac rather than the predominant giant PC's all with Microsoft's monopoly of the various Windows operating systems. If you really wanted Microsoft to "atone" or punish them, have them buy Apple computers for the schools, or say half PC and half Apple. I suppose you cannot order them to do that, but you can have them pay the equivalent cost in cash to the schools and let the schools decide which computer (hardware or software) they wish to buy, without any duress or strings attached.

Thank you for listening,

Subject: Micorsoft's proposed settlement—a vote against

Dear Department of Justice
This is to register my protest against the Microsoft's plan to settle its antitrust suit obligations. To allow Microsoft to extend its monopoly power under the guise of this proposed settlement is unconscionable. I do not have any quarrel with a plan to help poor schools. But I think Microsoft should contribute money to a fund that such schools can use as they see fit to fund their technology needs.

This would open up the world of choice to include even Apple Computer's superior (in my opinion) products.

Note I use Macintosh computers at home and Windows computers at work, so I have

some knowledge of each platform. I think Judge Jackson's original ruling should have been left intact— that Microsoft should have been broken up into two companies. But given that this hasn't happened, I would see it as a complete travesty if Microsoft's settlement proposal were accepted by the Department of Justice.

Thank you for your consideration.

From: John.Fox@USPTO.GOV@inetgw
To: Microsoft ATR
Date: 11/27/01 3:19pm
Subject: the settlement is wrong

I would like to express my opinion that the microsoft settlement is wrong. Microsoft's monopoly is so extensive that I cannot buy a computer, just the hardware, in any local store without also buying Windows. They will not sell me a box unless I buy Windows even if I want to use Linux or BE. For example, when my hard drive crashed last year I decided to upgrade the hardware and load my copy of Windows 95 on it. A paid for, legal copy, completely within the terms of the contract and MS license. I could not do it. Dell, HP, Compaq, Erols, Microcenter- no one would sell me the hardware without a new copy of Windows.

What's more, they will not sell me a box with just Windows on it. I have to buy MS Works or some type of office application even though I do not want it and will never use it. This situation is just wrong, and it should not be accepted unless we are willing to accept the total domination of the desktop PC forever by MS.

Thank you,
John Fox

Subject: Microsoft Settlement

I am against the proposed Microsoft settlement, and the proposal that Microsoft donate millions of dollars to help bring technology to schools. Giving Microsoft the opportunity to gain marketshare in education is not a good way to punish them for monopolistic practices.

One of Microsoft's business strategies has been the willingness to take short term losses in order to put others out of business and gain marketshare (eg. Netscape was damaged

by Microsoft giving away the Explorer browser). This has given them the opportunity to make larger profits, and has given them more power to dictate what products will be allowed to compete in the marketplace.

It is too late to repair the damage done to other companies by Microsoft. And Microsoft has shown itself to be untrustworthy in following previous restrictions imposed by DOJ.

I have a potential solution:

I would be in favor of Microsoft giving billions to education IF ALL PRODUCTS IN THE SETTLEMENT ARE FROM MICROSOFT COMPETITORS. This would be a perfect solution. Educational institutions would benefit by gaining needed access to cutting edge technology. Microsoft competitors would also benefit, which is in keeping with a sense of justice for actions where Microsoft hurt competitors by their illegal practices. Consumers would benefit, as more choices are good in a capitalistic society. As an example Microsoft could purchase millions of Apple Macintosh computers for schools, thus helping the schools without enhancing Microsoft's position.

The proposed settlement does nothing significant in the sense of punishment or retribution, and will only enhance Microsoft's monopoly power in the long run—to the detriment of the consumer.

As a user of personal computers since their inception, I am stunned and severely disappointed by the outcome of the case and the proposed remedy.

The governments case was very strong, and weakly settled.

Sincerely
Jeff Drake

Subject: Microsoft Settlement

I've read the news on the proposed one billion dollar settlement. As I understand the deal, this seems to me to be very much in favor of Microsoft. In addition to few to no changes to their behavior, a portion of the punishment is, in fact, a real benefit to them. The resolution including the dissemination of their software and compatible hardware, training to use their products, and loads of their often bundled software, seems to fly in the face of the very point of the trial.

They have been declared a monopoly for illegal tactics that were specifically meant to increase their market share, for bundling products for free to get market share, and for illegally blocking other's products to gain market share, and now, a good portion of the settlement specifically increases their market share of both the OS and their bundled products.

I believe this settlement should be declined. Microsoft has once again gained the upper hand and will only benefit. The settlement should be made in order to change their behavior, this does nothing to address their behavior and will not change it in the

future, allowing them to continue to bilk the public.

A similar proposal from Red Hat (<http://www.redhat.com/about/presscenter/2001/press—usschools.html>) seems to satisfy what should be the goal of the proposal, if a settlement that benefits education is still desired.

Requiring that Microsoft provide copies of Microsoft Windows, Microsoft application, Windows computers, and cash to schools only serve to further propagate their monopoly. This will not really punish Microsoft.

Rather than requiring something that will end up supporting Microsoft's agenda, instead Microsoft should be required to purchase copies of the Mac OS, non-Microsoft applications for the Macintosh, Apple Macintosh computers and give them to the schools.

Respectfully submitted,
 Cal Simone, luminary

 Subject: Microsoft Settlement

I know you are busy, so I will make this brief.

The proposed so-called "punishment" for Microsoft is nothing but a billion-dollar marketing campaign to Microsoft's advantage. Microsoft executives must be rolling on the floor laughing. Putting millions of dollars-worth of Windows computers into our schools does only two things:

1. It aids Microsoft, by helping it to further cement its strangle-hold on the computer industry.

2. It hurts Apple, Microsoft's long-time competitor, by undermining Apple's position in the education market, one of the few markets where Apple still leads.

If you want to really punish Microsoft in a way that will stop the executives laughing, force Microsoft to buy a billion dollars-worth of Apple iMacs to put in our public schools.

 Antitrust Division
 U.S. Department of Justice
 RE: To be entered into the record of U.S.

v Microsoft

Dear Honorable Persons:

I am writing to ask you to reject the Final Judgment that has been proposed as the punishment for the charges which Microsoft Corporation has been found guilty. I do not believe that this proposal represents any safeguard or insurance of future protection for the consumer from Microsoft's monopolistic and predatory practices which were outlined in the Findings of Fact.

In particular, I am appalled with the proposal for a three member review board which is made up of a Department of Justice representative that is pro Microsoft; a Microsoft employee; and a third member picked by the other two. There is no one in this equation that is unbiased. The proposed solution also lacks a means for enforcement if Microsoft violates the agreement. It only returns us to a court battle and completely avoids the issue of Microsoft's abuse of it's monopoly power. Equally important, this remedy lacks opportunity for any public review. How is it that a corporation who is accused of harming the public can be reviewed by a board that appears to be heavily pro Microsoft and, is allowed to conduct business to protect the public in private. The fact that the three member board is paid by Microsoft only makes this more ludicrous.

As a consumer I have been personally harmed by Microsoft's monopoly in the software industry in the following ways:

Microsoft has changed or tweaked standards to make them work better or exclusively with Microsoft products. If I want to share information with a client or colleague that does not conform to their standards I am either hampered or prevented from doing so. My productivity is compromised because Microsoft does not feel they have to comply with the standards that have been determined by their industry. Computer companies that provided alternative products and software applications are no longer on the market. Microsoft has either absorbed them or bought them to prevent competition with their products. For the consumer, this means less choice, fewer applications and fewer 'innovative' new products that are able to be brought onto the market. Microsoft includes messages into it's software to dissuade the user from using a non Microsoft solution such as Netscape Navigator and Apple Computer's QuickTime. These messages provided by Microsoft are nothing short of fear tactics for the purpose of intimidating the user and leading the user to a Microsoft's product.

Microsoft's behavior is criminal and deserves a strong remedy. I have heard arguments that the government should not be wasting it's time and money punishing a corporation during a weak economy. This is not a matter where a weak economy should be made the scapegoat for Microsoft. A weak judgment by the court in this matter will send a very clear message to Microsoft, to other corporations and to the American people. That message being that illegal, unethical behavior by a corporation will be condoned by our government. Please prove that our justice system is just by rejecting the proposed remedy which does little to address the seriousness of their abusive behavior and to prevent or discourage future antitrust violations by Microsoft Corporation.

Respectfully,
 Karen Mirande

 Subject: microsoft settlement
 Dear Sirs,

The last thing we need in public schools, where I have spent the last 21 years teaching, is more donated computer equipment. Somewhere in this school district we must have a warehouse full of useless donated computer equipment. I do not believe the Microsoft settlement would be any different. Actually what we need is money to purchase NEW machines and equipment to enhance our fragile, very slow network. Right now I use a 350 mgz machine with a 6 GB hard drive. Do not let Microsoft off the hook. They have engaged in monopolistic practices, which have been technically outlawed since the 1890 Sherman Antitrust Act!

Sincerely,
 James Kevin Beckcom

Dear Sir,

I am just a lonely consumer who has been using a computer for about 15 years. I have done my best not to buy Microsoft products, which is practically impossible, because I do not believe that there should be such a monopoly as Bill Gates is building. In every interview I have seen and books I have read on Bill Gates, he comes across as this very caring person—certainly he is trying to show that through his foundation contributions. But, I certainly understand his feeling now “that this is fair and let’s just get it behind us.” Let’s slap this man on the wrist again and tell him to go forth and sin no more. Do you really believe that he and Steve B. are concerned about the consumer and not just themselves. I think this is an ego game for Gates, certainly it is not that he needs the money, but the power is more important. It is scary to see what he will be able to do by controlling access to e-mail, the network, music and games.

We are having problems in Pennsylvania now because we allowed a monopoly on electricity believing that there would be a watch dog and the utilities would play fair. Please consider what you are expecting from Microsoft and issue the strongest ruling that does not expect that “they will be play nice.”

Nothing in the past indicates that they will play nice without severe sanctions and without the be forced not to put other people out of business with their control. I look forward to reading a ruling that will do this. Thank you for reading this e-mail.

Sincerely,

Penny and Glenn Sass

 Subject: The DOJ has sold out

It is my understanding that the role of the DOJ is to uphold and enforce the law. The proposed settlement for the Microsoft AntiTrust case shows that the DOJ is not willing uphold or enforce the law. Microsoft has for years unlawfully used its monopoly to dominate each market it enters and to crush competitors unfairly. It has repeatedly done this. But perhaps the most unfortunate fact that has come to light in all of this is that the DOJ is unwilling to uphold and enforce the law where Microsoft is concerned. It seems that the DOJ is to timid to do more than slap the wrists of a company that consistently abuses its monopoly power.

When someone or some company violates the law, there are supposed to be punishments and penalties applied that are supposed to ensure that the behavior is not repeated. There is nothing it the proposed agreement that would even make Microsoft pause or even think twice in its course to dominate any market it enters. There is no real fiscal penalty—everything Microsoft has spent on this trial and everything proposed

in the settlement are no more than a minor business expenses which Microsoft views as a cost of doing business. There is nothing that would help restore competition to a more even keel. There is nothing to prevent a repetition of events or a similar sequence of events from happening in any market. There is nothing that would help undo the damage and harm that has been caused or prevent such from happening again.

I would hope that someone in the DOJ would wake up and realize that this proposed settlement is no more that a light slap on the wrist with a license to repeat illegal behavior—just like the '95 settlement. The worst thing that can happen for our country and for the computer industry as a whole is for a repeat of the '95 settlement to occur. Yet, that is what has been proposed. Please find it in your hearts the courage that it takes to uphold and enforce the law. Make the name of the DOJ mean that it will obtain justice when the law is violated.

Sincerely,

—Johan Jeffery

 Subject: microsoft settlement

I believe the Microsoft settlement will only bring more people to use their software and further to keep the competition from gaining ground. By putting Window’s based computers in the schools the students will not be exposed to other forms of computers such as Macintosh. The Macintosh platform is much easier to use and less susceptible to the many virus attacks (I believe there are only 42 viruses that can attack a Mac platform and hundreds that can attack the Windows platform). I think a better settlement would be to have Microsoft pay damages rather than give away even more of their products.

Thank you

 Subject: opposed to settlement

I am opposed to the settlement terms for the Microsoft Antitrust case. It does nothing to punish Microsoft for past misdeeds and does nothing to prevent a continuation of the behaviour which prompted the suit in the first place. The fine print in the settlement negates all of the alleged remedies. At a minimum a settlement should require Microsoft to publish the specifications for the file formats of all of their products. They have used constantly changing file formats to force users to upgrade and to prevent competitors from being able to provide viable alternatives.

Subject: Proposed Settlement

I find it ironic that Microsoft is proposing to settle their anti-trust case by giving away software to schools—a market they currently do not completely dominate. And guess what, the lure of "free" software will make competing products untenable (because of cost) to schools, thus further solidifying Microsoft's monopoly by expanding it into yet another market! Only the government could think this a good settlement. While I am by no means a fan of anti-trust law and think that for the most part it does not achieve its intended ends, I must say that I find many of Microsoft's business practices to be highly unethical and was pleased to see the DOJ pursuing Microsoft over some of these issues. Especially after they so flagrantly violated the intent of the original consent decree they signed. Do you really think they will abide by the terms of the current settlement that is being arranged? If so, I have some waterfront property you might be interested in...

From: Scott Bartz
To: Microsoft ATR
Date: 11/27/01 10:18pm
Subject: Antitrust comments

After following the case from the beginning I feel that Microsoft is getting off easy for predatory monopoly behavior. Even if they let computer makers change the opening screen and give access to some of the source code. The core issue remains the leveraging of the operating system into other markets such as browsers, streaming video, and office applications. For which Microsoft has obtained virtual monopoly by becoming the defacto standard. In many cases if you try to run some other sort of application other than Microsoft such as Netscape Navigator it either runs extremely slow or not at all depending upon the operating system on the machine. Thus you ending up running Microsoft software by default which ends up limiting consumer choice in the long run. In addition giving Microsoft the ability to determine what is put on the Windows opening screen gives them an advantage when it comes to determining which companies they want to deal with when it comes to vendor relationships. The other issue is that many other products that compete with Microsoft are unable because they are not compatible with the operating system which is essentially locks them out of the market for their products. Essentially Microsoft has convinced software developers to write products designed to their defacto standard which keeps many other products from reaching the marketplace. I appreciate being able to comment on such a vital issue.

Sincerely,
Scott Bartz

From: Freiheit
To: Microsoft.atr(a)usdoj.gov
Date: 11/27/01 10:16pm
Subject: The so-called settlement with Microsoft

Dear US Department of Justice,

We, the people of the United States of America, have been legally refused the right to not run Microsoft software. As an American I am appalled by the so-called settlement of the Microsoft anti-trust case. Two levels of the US court system (US District Court and the US Appeals Court) ruled that Microsoft holds an illegal monopoly with its Windows operating system. How could anyone reasonably allow Microsoft to then walk away without even a slap on the wrist? The proposed settlement is weaker than the 1995 Consent Decree that started this anti-trust trial. It makes absolutely no attempt to repair the damage done by Microsoft's monopolistic, bullish practices to keep competing operating systems (such as IBM's OS/2, BeOS, and Linux) from succeeding. In both written and verbal testimony during the trial, witness after witness legaly testified that Microsoft had abused its monopoly position and that PC makers (OEMs) were strong-armed into refusing to support any non-Microsoft operating system. Take for example the price fixing done by Microsoft against IBM—in sworn testimony it was declared that if IBM

installed even a single copy of its own OS/2 operating system on any PC they sold, they would be forced to pay as much as five times the going rate per license of Windows 95.

How then can this settlement NOT address the Windows monopoly in any way, shape, or form? What becomes of those millions of PC users who have made the conscious choice to not run Windows on our computers? This settlement takes absolutely no action to ensure that competing operating systems will have a fair chance to survive. Those of us who educated ourselves and chose the appropriate operating system for our needs have been bullied and ridiculed in the past, and this settlement will only allow companies to legally continue to refuse our needs and desires. We will be further coerced into running Windows when we have made the choice to not run Windows. We will continue to receive zero support from hardware manufacturers whose products we use. We will continue to be refused the opportunity to purchase OS/2 or Linux on an off-the-shelf PC system. This is not due to consumer choice, as again two levels of the US court system declared that Windows was an illegal monopoly.

And now Microsoft is being allowed to resolve several class action lawsuits by—get this—force feeding Microsoft software to America's schools. How is this ever going to allow non-Microsoft developers such as Corel, Lotus, IBM, Be, RedHat, etc, to make a profit? By legally declaring that America's schools must accept Microsoft's "donation" of Microsoft software, the US court system is going to destroy the concept of competition. I can think of no reason why a child, force fed nothing but Microsoft software from kindergarten through high school, would choose to use any non-Microsoft software later in life. These are the business decision makers of tomorrow—how is breeding them to recognize only Microsoft going to allow them to make the choice to use a superior product? I and many others strongly urge the US Department of Justice to rethink its strategy and to adhere to the court system's legal declaration that Windows is an illegal monopoly.

We, the people of the United States of America, have been legally refused the right to not run Microsoft software. Should you feel the need to confirm my existence (unlike Microsoft I do not send letters from non-existent cities) you may contact me at the address or phone number below.

Thank you.

From: Mike Ireland

To: Microsoft ATR

Date: 11/27/01 10:28pm

Subject: Microsoft Settlement

Having reviewed the decisions and documents on the DOJ web site and reading other sources extensively, I believe that the settlement which the DOJ has ascribed to is patented permission for Microsoft to continue its predatory practices. This is further affirmed by the proposal which Microsoft has made in settling the private suits. This proposal flies in the face of the finding of facts that Microsoft is a monopoly. Their proposal to "fund" up to \$1 billion to bring computers to schools using their own proprietary software and their vested interest in machines that only run their software based on Windows smacks of arrogance and further attests to the monopolistic nature of their company. This actions shows that they show no inclination to make changes.

Coupled with their introduction of Windows XP, which demands that users pay additional fees for the use of their product, this settlement locks consumers further into Microsoft's chokehold on the industry. That the Department of Justice would even consider going along with this settlement after the result of the appeal to the Federal Court of Appeals which stated unequivocally that Microsoft is a monopoly makes me wonder if the decision of the settlement is one based on law or politics or worse—convenience.

I believe strongly that the DOJ should reconsider its stand and withdraw from the proposed settlement, at the least to fend off any duplicity or potential conflicts of interest. As a consumer, I want choice. Just because 90-95% of the world uses a product is no reason to delay the possibility that there is something better that is yet to be invented. Microsoft's monopoly prevents this from happening. The settlement is grossly flawed. The only fair remedy would be to break the company into at least two separate entities in order to foster competition and prevent further predatory behavior by Microsoft.

Subject: Microsoft Settlement

TO: US Department of Justice-Microsoft anti-trust comments: microsoft.atr@usdoj.gov Before I begin, let me state up front that I am a former employer of Apple Computer, Inc.

The termination of my employment was voluntary and I still think highly of the company and its products. I say this to concede that there may be a possibility of bias despite my efforts to be objective. I feel it is important that I disclose that fact.

That having been said, I must strongly urge the government to reject the proposed settlement. In my view the original remedy was appropriate and I was saddened when it became clear that it would not come to pass. As long as Microsoft maintains a dominant position in operating systems, productivity applications and web applications, competition will be reduced or eliminated in each area.

Putting that aside, I find some very specific flaws in the existing settlement as I currently

understand it. As the son of a retired public school teacher I am thrilled at the notion of additional computing equipment for our public schools, especially those in poor districts. I agree, however, with the growing sentiment that Microsoft's plan is inappropriate. The punishment here seems to be to allow Microsoft to gain market share in one of the few markets where they are not currently dominant. Microsoft has demonstrated a willingness to give away products in order to eliminate competition. Indeed, this is exactly what they did to Netscape. Allowing them to use the strategy they have illegally employed as a remedy for that behavior is, quite frankly, a preposterous idea. It is akin to granting permission to an embezzler to embezzle from a subsequent firm in order to repay the initial victim. If aiding our public schools is the goal, then Microsoft should be forced to provide funding exclusively for the purchase of competing products. There are precious few such products in any market space but perhaps several billion dollars earmarked specifically for non-microsoft products would help make linux, or Mac OS more viable.

I sincerely hope that the government will reject this offer insist upon a remedy that will not benefit Microsoft.

Regards,

Clark H. Warner

Subject: antitrust violation

I think that microsoft is violated the antitrust laws already. and if you dont break up the microsoft soon, then they will keep going in monopoly power to force drives other business go out of business. that is not good for us, but apple is good OS and perfectly risc cpu is very fast and efficient than intel. intel used cisc. I believe that cisc is slow. but I want you to break up microsoft for all of us. if broken then we are free to choose.... thank you. and P.S. I don't want apple go out of business. but windows XP is already in violation of antitrust.... they are already violated too many. (microsoft). that why microsoft should be punished.

and bill gates needs go jailed or pay a fine a tons of billions of dollars. thanks.

Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the current terms of settlement in the Microsoft case. The current terms of settlement are self serving for Microsoft. Giving a billion dollars of software to schools, will do nothing to remedy the anti-competitive practices of Microsoft, in fact it has been a common marketing practice of a Microsoft competitor, Apple Computer, to provide bundled Apple products to Schools in order to attract customers later in their buying career.

As a Software engineer, I have seen several cases of gross injustices brought about by Microsoft on Competitors. They continually use unpublished API's to the MS OS from their application software, and this has been proved by the industry time, and time again.

They have used their OS systems to blatantly block out competitor such as DR-DOS back in the early 1990's. Again, this was investigated by the software development community and found to be in the Windows 3.1 code. (See Dr. Dobbs for more information and details).

I realize that these items are not part of the case that the DOJ brought against MS, but it shows a continuing blatant disregard for antitrust practices.

Overall I am disgusted with the non-job that the Department of Justice has done. We have gone from an antitrust settlement to BARELY a slap on the wrist.

**DO NOT AGREE TO THIS SETTLEMENT!
IT IS NOT IN MY BEST INTEREST!**

Subject: Microsoft Settlement

Dear Sir or Madam;

Over the last several years, I have repeatedly been disappointed with Microsoft's callous disregard for any long-term responsibility to their end-users. They remind me of the Detroit automakers in the 60's, arrogantly denying that they were using planned obsolescence as a marketing strategy—not to mention quality (lack of).

I was absolutely shocked when Judge Jackson reached his decisions—but pleasantly! This latest legal decision is a travesty, and the compromise being offered is a victory—for Microsoft. Please do not give

up until we have a decent decision! Please do not quit on us now!

Subject: Is the current settlement stupid or just naive? my vote: IT IS NOT ENOUGH

I'm very curious why the government seems so confident that simply ordering Microsoft not to violate its anti-trust rules will be effective. Even with the "teeth" of financial penalties, Microsoft has already demonstrated a history of flaunting its violations in the face of the court. They have so much profit that even stiff financial penalties create little corporate motivation for compliance.

Microsoft can break the court's anti-trust orders intentionally, knowing they will simply pay the financial cost, take their case to court to remove the ongoing penalties while they're appealing the issue and shift their historically consistent anti-competitive practices to a different mode that isn't the current focus of the courts.

Who loses when Microsoft practices this tactic? Competitors AND consumers. The tech sector moves so rapidly that businesses can go bankrupt in the time it takes to settle a Microsoft issue in court (Netscape comes to mind). This leads to LOSS of innovation through the demise of innovating companies. Microsoft is not threatened by competitors which don't innovate. It is the innovative competitors which represent a corporate threat to them. It is very often the small startup companies that are TRULY innovating—unlike Microsoft which often simply mimics others' innovations. When small companies enter competition with existing monoliths like Microsoft, they can only thrive if they offer a significantly better alternative. The tech sector universally acknowledges that market share often

outweighs innovation in influencing the direction of technology. This makes federal protection of small innovators all the more important for our nation to truly thrive in the tech oriented global economy. These small startups are one of the most valuable American innovative forces. And THESE companies are the ones who go out of business because of Microsoft's predatory practices, or simply resign from competing with Microsoft because they don't have the financial resources to fight a court battle with Microsoft (whose financial resources for such endeavors are almost inexhaustible). This means Microsoft ends up winning the tech competition even if they receive a court judgment against them and pay a heavy fine. Have "we" learned ANYTHING from the history of previous federal injunctions against Microsoft which we were repeatedly broken? What did we learn about Microsoft from their "compliance" with judicial orders to remove Internet Explorer from the Windows operating system? They basically "fingering" the court when they intentionally crippled the operating system as a side effect of their "compliance". While judge Jackson's decision to talk to the media may have been considered an indiscretion for legal purposes which worked to Microsoft's advantage, that in no way lessens the significance of the contempt for the court that Microsoft displayed so many times during the hearings with judge Jackson. This reveals an endemic cultural attitude which can't be resolved by the imposition of court orders and fines. They only way to break that attitude is by breaking up the company.

FINAL POINT: BREAK MICROSOFT UP!

In my opinion, the only remedy which does justice to the federal court's conclusion identifying Microsoft as a monopoly is to break up the company. I believe this is the only way to truly prevent Microsoft from abusing its monolithic power and influence. The more Microsoft diversifies into different markets, the greater its ability to dominate a new market through the misuse of its monopolizing control in a different market segment. Unless something happens to change the current settlement, it appears we're all going to get to sit back and watch this happen.

Dear Sirs

I find myself compelled to write to you with a mixture of frustration, anger and disappointment. I am shocked to witness our judicial system and government failing to do justice on behalf of the people and companies they represent. If there ever was a monopolistic and criminal company, it would have to be Microsoft.

Not only is our government failing to punish Microsoft, the government is helping it expand its monopoly into areas such as education which they do not control at the expense of other companies. It is my hope to see this latest proposed settlement be rejected in favor of a severe and just one. Microsoft is a Monopoly and is using its vast resources to squeeze other companies out of business and penetrate new markets with unfair and criminal business practices.

Microsoft's latest business and private licensing fees reflect its arrogance and dominance in the market place. Do the right thing and punish Microsoft.

Thank you,

Piero Favretti

Subject: Microsoft Settlement

I am writing this letter in order to voice my opinion regarding the settlement deal which the US Department of Justice has accepted in the anti-trust case vs. Microsoft.

I am appalled that the DOJ and several of the states in the original suit are even considering this settlement. The terms as suggested in the current proposal are not only unacceptably weak as a remedy, but are actually favorable to Microsoft.

For example, the part of the settlement deal where Microsoft is offering to provide money, computer hardware, Microsoft Software and Support to public schools, may seem like a good idea but it is obvious to anyone that the schools would then be much more likely to be "locked-in" to Microsoft technology and PC compatible hardware. In addition, students of those schools would be indoctrinated in the use of Microsoft software and PC compatible hardware, and would be more likely to purchase those brands in the future. This would also provide Microsoft and its hardware partners an easy way to write off unsold stock. Not much of a penalty in my opinion... Microsoft defends all this by saying that the schools would be free to spend the money as they want and can decide to go with other software and hardware providers. However, even Microsoft acknowledges that schools which choose that route would not benefit from all the resources they are offering. How many schools systems do you think will opt for just

the money, when they can get the whole ball of wax if they go with Microsoft software? If Microsoft's intent was to benefit schools while paying a "fine" why didn't they just offer to put money in a fund that could be used by the schools in any way they want?

While this offer may be tempting considering the desperate financial situation that many of our schools are in, we cannot allow as remedy an action which will help the company further strengthen their monopoly power. I am heartened to see that several of the states including Massachusetts are not joining the DOJ in accepting this appalling settlement. I would urge the DOJ to re-examine its decision. We cannot let political expedience and our sagging economy temper our punishment of a company which has been found to be anti-competitive, has done everything to find loopholes in previous remedy decisions and is attempting to use this settlement as a vehicle to continue its practices and open new revenue streams in the process.

Subject: current settlement is WEAK! Break up Microsoft!

Attempting to address Microsoft's anti-competitive business practices and monopolistic existence with the current proposed settlement is like trying to keep a freight train which is moving 90 miles an hour from hitting a car on the tracks 100 feet away by issuing the train a speeding ticket. Good luck!

The only way to "stop the train" is by breaking it up. My opinion: reject the current settlement and revert to the previous recommendation of the federal attorneys to break up Microsoft into separate entities.

Think about it! Will breaking up Microsoft REALLY hamper its ability to innovate as they claim? What flaming nonsense! One only has to look at the past two decades of technological innovation to see that small companies can innovate as well or better than big companies. Microsoft's "innovations" will in NO way be hampered by separating them into small companies. They only thing it will do is allow competition an incremental move towards a better ability to compete with Microsoft. Even such a move would only be incremental because of Microsoft's vastly superior financial resources for marketing and extended court battles and its current ability to conduct anti-competitive business practices.

It is the small innovators that need Federal protection, not the monoliths like Microsoft. Get with it.

Subject: settlement

As a computer coordinator for a large school district I can't understand this

decision. It will help Microsoft reach into schools and further allow them to control our software and hardware choices. Microsoft has no real interest in education except has a market for their goods. We are a cross-platform district and we receive zero help from Microsoft except in the area of sales. Currently they are doing everything they can to force us to upgrade to Windows XP at a cost we can not afford. Upgrade costs for XP have almost doubled from Windows NT.

This settlement would do nothing to hurt or punish Microsoft except cost them a few dollars. If a teacher catches a student cheating on a test, they don't get to retake the test after cleaning the room with no effect on their grade. This decision would hurt the only company that truly has an educational interest in schools, Apple Computer. Apple, while not perfect, still believes in helping teachers teach, not selling equipment. They have a legion of employees that do nothing but provide expertise in technology based instruction. No other computer vendor is as committed to education.

I am not an enemy of Microsoft, I use their software daily. I'm writing this message in Outlook. However, just because they have tremendous economic strength doesn't excuse their actions. I love my students, but when they do something wrong, I hold them accountable. This decision does nothing to hold Microsoft accountable.

Subject: Comment on the Microsoft settlement

Ms Renata Hesse,

I would like to comment on the proposed Microsoft settlement. As an independent software developer who has been unemployed for most of the last 14 months, I very much feel the economic recession. Although the "dot-com" bust is undoubtedly a reason for the current lack of jobs, it is the predatory monopolistic practices of Microsoft Corporation which I feel is the main reason for the situation so many of us independent software developers find ourselves in.

The FUD, (fear, uncertainty and doubt) fostered by Microsoft's actions with regards to the Java programming language has severely limited the expansion of Internet software capabilities and the attendant programmer employment. Also, the way Microsoft has positioned its ".NET" strategy, as an alternative to the current Internet experience, rather than positioning it as an embrace and extend, has stagnated the development of Internet based computer applications. As an individual who chooses to develop and deploy Internet solutions on non-Microsoft software platforms, this has locked me out of business opportunities.

The three pillars of justice: restraint, rehabilitation and retribution are not adequately addressed by this proposal. While a measure of rehabilitation needs time for accountability, the settlement provides no

relief from the monopolistic force of Microsoft's Internet browser, why is it that this is permitted? Microsoft must be forced to market their browser independent from their operating system. Also there is no retribution available to the thousands of companies and the over hundred thousand engineers who have been affected by Microsoft's actions. The Microsoft education proposal is a mockery of accounting and a piece of candy for Microsoft's thrust into education. I spent five years on the Riverview School District technology committee which is in King County, Washington; and a third of that time was spent trying to prevent the takeover of the computer resources by those who mistakenly believe that a single computer supplier is beneficial to the educational system.

I have encountered the lies, sabotage and intimidation of Microsoft for fifteen years now and I'm angry about the situation. I have enclosed a link to my resume, from which you can see I have been involved in software development which includes important work I did for the Apollo Space Program.

Subject: Microsoft "Penalty" Proposal

I am simply dumbfounded that a proposed settlement with Microsoft has them donating their products to educational institutions. This is probably the only area in their business model in which they don't have a monopoly. Amazing!

Also, I have the impression that the penalties were to be based on exorbitant retail pricing instead of actual cost. I suppose they could then use such penalties as a deduction on their corporate tax bill. Is this truly meant to be a penalty for a company which obviously engages in monopolistic activities? Please use some of my tax dollars to hire someone who has an understanding of this business.

Your Honors,

I am a Microsoft Certified Systems Engineer and a Macintosh Systems Specialist. I work for R. R. Donnelley & Sons in Warsaw, Indiana as a Systems Analyst. I feel strongly that this settlement does nothing but further increase Microsoft's monopoly. The proposed one Billion dollar "gift" to poorer schools is a very, very bad option. It only benefits Microsoft. Older, re-furbished computers can't run today's Windows software. Re-furbished Apple Computers would be a better choice. The U.S. Government should be required to buy at least 50% or more of the computers they use from Apple. The Mac makes a far superior workstation and can be integrated with any network. Schools use Macs for one reason....they are a better. I taught my kids to use a Mac when they were 2 years old and they have been using them ever since. Even though I am an MCSE I will tell you that the Macintosh is a far superior platform. It takes less time to set up, is more efficient to use and is considered the premier choice for home or small business use. Sure, there are more Windows machines than Macs. There are more insects than people, but that doesn't make them a higher life form. Besides, if it were not for Apple, there would be no innovation, and no Windows operating system at all (It is a crude copy of the Mac operating system).

Subject: Re: Microsoft settlement

Hello.

I was stunned to read of the proposed settlement that would allow Microsoft off the hook so cheaply. In my opinion the cost to Microsoft to settle should be much higher, and just as importantly, they should not benefit in any way from the settlement. The cost to Microsoft of donating their software is minimal—it costs them a few dollars to manufacture CD copies of their software, which they then value at many hundreds of dollars.

If they are going to help the schools, let it be a purely MONETARY fine, which the schools may then spend entirely as they see

fit—whether for computer equipment, or for other purposes. As a long time industry observer, I feel that Microsoft has illegally parlayed their Windows monopoly into a near monopoly on office software, and this has cost the consumer many billions of dollars. Note that Microsoft Office sells for \$400 to \$500, whereas comparable products, such as Apple's AppleWorks office suite, sell for less than \$100. Why? Because they can, because they've systematically eliminated any real competition on the Windows platform over decades. Please read the history of Microsoft, and realize that a leopard doesn't change its spots. They'll never change, but they need to pay for what they've done to the computer industry.

Thank you.

Subject: Settlement

The proposed settlement will have very negative consequences for Apple Computer.

If Microsoft wants to be charitable, then why don't they give a billion dollars cash to poor schools to spend on whatever they want. Why do poor schools need computers so bad? Computers are probably the least of their problems. Microsoft's proposal wont hurt them at all. They could give out a billion extra copies of Windows XP and the only thing it will cost them is the price to burn the CD's. It is in fact a good deal for Microsoft because it will give them more market share in the education market. As Steve Jobs says, this is one of the last markets that Microsoft doesn't have a monopoly in. You see, Bill Gates is being a monopolist right before your very eyes in the courtroom. Don't let this happen!

By accepting this settlement offer from Microsoft you are perpetuating the very thing you fought against, and won, in court. Allowing Microsoft to pay off their guilty verdict with their own software etc you only allow them to increase an already staggering monopoly by infiltrating the one arena they have not been able to compete—education. Should Microsoft be allowed to compete? Yes. Should that that competition be unfair? No. You people have the legal right to impose a settlement that sends a message to Redmond infroming them that unfair business practices will not be tolerated.

The consumer is hurt by this proposed settlement.

Subject: self imposed penalty in Microsoft monopoly case

It seems to me that allowing a company that has been convicted of being a monopoly a chance to further expand into the only realm they do not control is inconsistent with any form of punishment. By allowing Microsoft to give computers using their software to schools you train a young group of computer users to be used to using the applications provided to them by Microsoft. Since they know and are familiar with these applications they will continue to use them in the future. This settlement actually makes good advertising sense for Microsoft. If they can corner the education market in this way they can finally truly control the entire computer industry, or at least an even larger segment of it. A billion dollars in computers to schools sounds good but is not inconsistent with a normal advertising budget at Microsoft. It is a budget very similar to the launch budget for Windows XP and just makes good business sense for them. If they are to supply a billion dollars in computers to schools as part of the remedy for monopolistic practices these computers should not have the windows operating system on them. If they do it only amounts to advertising for Microsoft. If it is your goal in prosecuting Microsoft to reward them for being a monopoly by all means allow them to set this as their "punishment." However, if you truly wish to allow a true spirit of competition and free enterprise to grow in the computer industry you must set a remedy which curtails and does not increase their ability to monopolise this market.

Subject: Microsoft Settlement

To whom it may concern:

I am a professional in the information technology field—and have been for over 13 years. It was with some interest that I saw the Justice Department file suit with Microsoft the first time related to browser bundling (1994–1995). However, I believe that the terms of that agreement have been violated, and are cause for concern that any agreement that does not provide for tough regulation of Microsoft will be similarly violated.

Perhaps the most striking aspect of this case to me is Microsoft's complete denial of

doing anything wrong. They contend this, even to this day. How can a company that doesn't believe it has done anything wrong be trusted to "do the right thing" in future dealings? Microsoft has proven itself to be untrustworthy, and the current settlement is merely a slap on the wrist and will have no long-standing effect against the monopoly that is Microsoft. I do not necessarily believe that Microsoft should be split. However, I do believe the following items should be addressed in any settlement (and are not addressed in the current settlement).

—bundling: Microsoft has pursued a tactic where software is bundled in with the operating system. First browsers, now media players. This needs to stop, as vendors such as Netscape, and now Real Networks, find themselves at a competitive disadvantage when every new PC has competing software already installed by default.

—java: Microsoft's current operating system, Windows XP, is further limiting consumer choice by not supporting java. This is a direct slap in the face to the Department of Justice, and the American consumers as a whole. They call this "innovation", but it is removing functionality already present in previous versions of the operating system.

—.NET: Microsoft is at a dangerous crossroads, where they intend to move their monopoly from the desktop to the Internet. For example, I was a user of the Visio diagramming tool. It was used to generate databases in Oracle. However, Microsoft bought the company, and now Visio is part of the MS Office Suite.

Functionality that used to be in the program is now in the Visual Basic Studio .NET program—and only works with Microsoft products. This is a dangerous precedent, and without strong supervision these sort of tactics will continue.

I urge everyone at the Justice Department to look closely at the current settlement and ask themselves several questions. Is this settlement the best for consumers, rather than just a simple resolution in difficult times? Will this settlement actually cause Microsoft to change its ways? Will this settlement be used by MS as a "vindication" of their practices, since they have admitted no wrongdoing? So in conclusion, I cannot caution strongly enough against the settlement as it stands in current form. It is not effective and will not prevent the kinds of abuses that have happened in the past, and even continue to this day.

Sincerely,
Eric R. Jorgensen

Subject: Proposed Settlement Benefits

Microsoft and Punishes Everyone Else
Please reconsider the proposed settlement that you have made with Microsoft, especially the part where Microsoft will donate \$1 billion worth of Microsoft Software and Computers to under privileged schools. This settlement punishes no one and will

actually benefit Microsoft who stands to gain increased market share in the educational market. Once Microsoft has this increased market share they will use their position against the educational markets to bully them just like they have the business sector. If you want to punish Microsoft you should make them give the \$1 billion dollars divided equally to the 12,500 schools and let them spend it on whatever computer hardware and software matches their technology road maps.

Thanks for your time,
Jeff Hunter

Subject: Comments on Microsoft Settlement Plans

Dear Judge Kollar-Kotelly,
I believe the suggested remedies reported in the news are not going to have the slightest impact on Microsoft's predatory marketing practices and subsequent illegal abuse of monopoly power.

I don't need to recite more examples to you. I'm sure you've seen them all by now. You have seen what has been done by Microsoft to date as well as their indignant attitude during the whole process. You are a judge, and it is time for you to do that now. All I ask is that you don't allow the settlement process to make precedent that will allow Microsoft to continue its roughshod run over the rest of the technology industry and its customers.

Subject: Microsoft

Please give Microsoft the punishment it deserves and quit letting this giant ignore laws. It is a true monopoly and we as americans should have more than one choice when it comes to computer operating systems. Wouldn't you just hate it if there were only Fords with two models to choose from and no options offered that would fit on a Ford. We have hundreds of cars and models

to choose from with an astronomical choice of options to put on these cars.

Please stop Microsoft so we can have a choice, they do not have anyone who has any imagination. They stifle the competition so they end up broke then they buy their ideas at a bankrupt price. Then use their ideas as if it were they who had the vision and skill to design such programs and have the gall to put their Microsoft name on it. Our country is in a sad state morally and economically when we always let the one with the most money win!!!!!! They copied Apple's graphical interface back in the late 80's and got away with it and now they want an open door policy to the education market because they have been a bad!!!

May anyone who condons monopolistic behavior and encourages its survival—rot in hell! Yes I'm mad—that our government has let Microsoft waste our tax paying money on its monopolistic practices and is still wasting our money trying to satisfy this giant's wishes when we should be spanking it ass for being a bad example to the rest of the business world. The government is supposed to protect the people from such practices in a free enterprise society—may you only have a FORD to drive and have only WHITE BREAD for your choice of food.

The U.S. DOJ is the only one that can protect us from Microsoft—so just Do It!!!!!!

That is why we the people elected you to your current position—WE THE PEOPLE—not Microsoft the Monopoly! We the people pay your wages and we the people need your support!!!!

Or can't you spank the hand that funds your political goals????????????

Subject: Microsoft settlement a disgrace!

I wholeheartedly support the notion that the proposed Microsoft settlement is just another attempt by Microsoft to further encroach on the alternative operating systems available to the public.... most notably that of Apple's current position in education. If you want to punish Microsoft for their attempts at domination, make them anty up cash payments.... not just approving their dumping refurbished windows systems on the educational systems which just makes those same school systems even more dependent on Microsoft.. YOUR PROPOSAL DOES NOTHING MORE THAN AID THEIR ATTEMPT TO DOMINATE THROUGH A MONOPOLY!

Subject: Microsoft Settlement
To Whom It May Concern:

I have been watching the Microsoft anti-trust trial and proceedings with interest since

they started. I have been shocked by the blatant lies, twisted truths, and generally poor behavior of Microsoft and its executives. From the beginning they have acted as if they were being unfairly targeted, and that any protestation of innocence should be accepted as the truth. When they were found to be a monopoly it seemed that there was hope that we wouldn't have to live in a world with Microsoft intruding into everything. Unfortunately, the recent settlement talks appear, from the outside, to promote just that. Far from being punished, it seems that Microsoft is being promoted. The worst example is the proposal to give computers and Microsoft software to financially troubled schools. This seems akin to letting a crack dealer stay out of prison by having him give free drugs to underprivileged children. In the case of Microsoft, they get to look like a good guy, and anyone who speaks out against the proposal looks like an idiot. Who can object to giving schools new computers? Short term gains from treating Microsoft gently are being traded for long term losses. If the US truly wants business to innovate and compete, Microsoft should be punished, fined, broken up, and be forced to endure government oversight and regulation. Let them, and future monopolists, know that their business practices are unacceptable, and not in the best interests of the US consumer.

It is my hope that before any final action is taken towards Microsoft that the consequences of those actions will carefully considered for how they affect the US consumer and not how they affect the balance sheet of Microsoft.

Thank you for the opportunity to email feedback regarding this case.

Subject: YOU CAN'T BE SERIOUS

Hi,
I teach computer topics part time, in addition to full time work doing System Administration and part-time computer consulting. I've worked with all kinds of computers and networks for the past fifteen years. You've got to be kidding if you're even considering that insulting Microsoft offer to pump lots of "refurbished" equipment into our poorest schools. I've worked with lots of "refurbished" equipment which has been "donated" to schools, and it always costs more in terms of System Administration time than it did in the capital expense. How about this. Have Microsoft fund the salaries of one or two good SysAdmins for each of the schools first. For the next ten years. Then you can talk about what kind of equipment to set 'em up with.

Subject: Do what is right, thats all we ask.

Please don't let Microsoft trick the courts, don't let them make a fool of the United States government!

I believe that the judgment will be fair, and should be very harsh against Microsoft for there criminal practices. Whatever verdict is dealt, it should be swift and very painful for Microsoft. Splitting up the company is a sound idea for what should happen. For a company that promotes very bad ethics and business practices, we should make an example of them for future businesses to see...what not to do! It is not right that they force everything upon a computer user and make it harder for others to live in a computer monopoly. I once used a Windows PC, until someone introduced me to Apple, I will never look back and hope never to. However, if Microsoft continues to dominate and push better more intelligent products aside, some day if there is no grassroots movement (which this is) than we will have no other choice but to use windows, we are so on the edge of that now. Is that what you want? Most people know no different than windows, but they should! If you have not used a Macintosh yet, I seriously recommend finding an apple store and spend several hours using a mac and OS X. Don't be blinded by the excuses that Microsoft uses, don't be taken for a fool! Do what is right, that's all we ask.

Thank you

Michael Neuman
P.S. If Microsoft does want do donate, let them donate all competitors products. (ie. All new Macs and Apple software to go along with it.) Everything is easier on a Mac, everyone, not just children should be using Apple hardware and software; seriously look at the differences— it's amazing what you will discover. "The mind is like a parachute, it only works when it's open!"

From: BRIAN MCGOWEN
To: Microsoft ATR
Date: 11/28/01 2:23pm
Subject: Beware of Geeks Bearing Gifts
Apple isn't the only one who's worried about Microsoft's proposal to settle various private lawsuits filed against the company following the US Department of Justice's antitrust allegations. BusinessWeek columnist Charles Haddad has offered his two cents' worth in his latest Byte of the Apple column entitled Beware of Geeks Bearing Gifts. Comparing Microsoft founder and chairman Bill Gates to John D. Rockefeller, Haddad said that Gates has the ability "to turn a government antitrust assault to his advantage," and this bodes ill for Apple.

Last week Microsoft offered a settlement proposal that would provide 14,000 of the nation's poorest schools with software, training, tech support services and refurbished computer hardware from Microsoft Corp. The proposal has earned the ire of various sources, including Apple, which earlier this week filed a brief in US District Court suggesting that the proposal was full of holes that Microsoft could take advantage of to dominate the educational market—a market in which Apple currently enjoys relative dominance.

"It's a spectacular offer," admits Haddad. "Gates is not just giving away computers. Ninety million dollars would go to train teachers how to use the computers, and another \$160 million to provide ongoing technical support. Microsoft would also donate one million refurbished PCs." Haddad noted that the settlement proposal doesn't address the core issue, however: "that Microsoft used its stranglehold on computers to defeat competitors large and small."

Haddad accepted that Microsoft said it's willing to make the offer platform-agnostic—schools are free to support whatever operating systems and hardware systems they choose, according to the settlement. Haddad suggested that many school administrators "have a herd mentality," and will probably be only too willing to flock towards Windows-based systems like so many of their colleagues.

Haddad said that Apple has to get itself into those very same schools that Microsoft wants to assist with its proposal. If Apple can "demonstrate the ease of using and maintaining Macs, and set up systems that run everything from attendance to grading," Haddad said that the company may have a good chance of winning a good portion of that market. More details are available from BusinessWeek Online.

Subject: Microsoft Settlement Offer

To whom it may concern,
I would like to add my weight to the side that is encouraging you NOT to accept the settlement offer from Microsoft that would provide hundreds of millions in software, training, support and hardware to schools in the country.

It seems so obvious that the settlement to saturate the eligible schools with Microsoft products is not punitive but a trophy for the company's anti competitive practices. Regardless of Microsoft's rebuttal that the settlement allows for any type of software/computer (e.g., Apple, Linux, and etc.), it is unrealistic to assume that the process will play out that way. You can assume that any settlement proposed by the accused will be in the best interests of the accused. It is disconcerting to watch Microsoft weave its way above the law. Bill Gates said about proposed DOJ settlement that it was reasonable and fair. How many criminals have you heard say that their punishment was reasonable and fair.

The problem with the settlement is that it replaces potential sales with Microsoft products or with products that support Microsoft. It reduces market size in a time of

shrinking markets and it is a major strike against a corner of competition for Microsoft. The education market is not dominated by Microsoft but this settlement will substantially help Microsoft achieve dominance. Is this not counter to the intent of justice?

Punitive action against Microsoft will not have a negative effect on the economy. On the contrary it will help the economy by showing that Microsoft is accountable for its actions. It will also demonstrate that the justice system is not broken.

Thank you for the opportunity to voice my concerns.

Subject: Thoughts on the proposed settlement

To whom it may concern,

I am very troubled by the news of Microsoft's proposed 1 billion dollar settlement. If I understand the issue correctly, and I believe I do. I fail to see how giving Microsoft the opportunity to force their products into one of the few markets they do not hold monopoly power in benefits anyone. From what I see this is going to end up as a boon for Microsoft and a setback for those schools poor enough to qualify for this program. My first question has to do with numbers. How much of the 1 billion dollars can be used for Microsoft software? Then, how does Microsoft price this software? If we're taking retail price then there is something seriously wrong. Next how does this take into account Microsoft's monopolistic licensing fees. Please, please, please make sure you understand the full impact of Microsoft's licensing. Pushing poor school districts into the Microsoft licensing web will do more harm than good over the next few years.

Next, are you telling me that you are going to subject these poor schools to Microsoft support. Ouch!

I would like to see Microsoft invest in poor schools. But, they cannot have any part in the decision making process. There must be a unbiased voice consulting these schools on the best technology solution. If in the end the schools choose to go with Microsoft, great. At least we know that this was a sound decision, not the effect of slimy salesmanship. After all, Microsoft can offer crazy benefits to the schools who use MS software since it costs MS very little.

Additionally, I am concerned with the length that you will go to ensure that the most damaging practices in the MS playbooks are stopped. Most of the coverage I saw was regarding bundling of Internet Explorer with Windows. Although this is a big issue, I don't see it as the most important. For years Microsoft has been hiding the high performance portions of their APIs until they could release new software to utilize it. One argument many pro-Microsoft voices have made is the competitors should just make better software. First off, it's not that simple when viewed along side Microsoft's bundling practices. On top of that Microsoft can ensure

in many ways that their software outperforms the competitors.

I would like to see some sort of software review process not just for Microsoft but all software companies in order to protect the rights of consumers and competitors. After all, are many companies that are including 'Spyware' and other information stealing code in their programs. This could be a benefit on many fronts.

Thank you for your time,
Brent J. Petit

Subject: Remedy
To the Department of Justice.
I share the concern that Microsoft's "remedy" may be an unfair intrusion into the education market.

Apple was correct in launching its lawsuit to block it.

However, there IS a fair remedy:

Have Microsoft install "renovated Macs"—i.e. refurbished iMacs, Airports, and iBooks in classrooms.

Yes, they can even put Microsoft Word and Internet Explorer on these computers (as long as the latter is not the "browser of choice").

This will be a "Solomon-esque" conclusion for this part of the Microsoft case, if Judge Motz accepts it.

Please feel free to circulate as necessary.

From: Dan Reese
To: Microsoft ATR
Date: 11/28/01 3:32pm
Subject: Microsoft Settlement

Hello,

I would like to state my opposition to the currently proposed settlement.

First, Microsoft is not being forced to repair the damage done by their illegal actions. Reparations for illegal actions should be a part of the settlement. Not only did competitors, such as Netscape, receive irreparable harm, but consumers, such as myself, have had to pay higher prices for the Windows OS and also computer hardware where an option to purchase the hardware without Windows was not available. Second, the oversight committee doesn't seem to have the needed authority to impose penalties on Microsoft for not complying with the settlement. A large dollar amount per day for non-compliance (or something similar) should be imposable by any oversight committee. Microsoft has shown in court on many occasions that they cannot be trusted.

Lastly, why is the government settling for less of a resolution than was proposed over a year ago? Since that time, not only has Microsoft been declared a monopoly, they have also been convicted of violating anti-trust law 8 times. Why are consumers getting less from this settlement than could have been had a year ago?

We learned from the AT&T break-up that diversity will increase innovation and decrease prices. This settlement only solidifies Microsoft's monopoly position. The consequences will be a continued DECREASE in innovation and INCREASE in price.

Thank you for your consideration,
Dan Reese

Subject: Microsoft Settlement—Consumer's Objection to Proposed Judgment

As a consumer, I write to object to the proposed judgment because the judgment does not address in a positive manner the most important violation by Microsoft of the antitrust law. The proposed judgment, instead, expressly condones Microsoft's continued violation of the law.

The appellate court specifically held that "Microsoft's... commingling of browser and operating system code constitute(s) exclusionary conduct, in violation of Section 2." [U.S. v. Microsoft Corp., June 28, 2001, No. 00-5212, p. 40, first paragraph of part II.B.2.b.] Contrary to this explicit holding, the proposed judgment specifically provides that "(t)he software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion." [Revised Proposed Final Judgment, part VI.U]. Thus the proposed judgment expressly authorizes Microsoft to continue those acts that the appellate court specifically held violated Section 2 of the anti-trust law.

Microsoft continues to expand the strength and breadth of its monopoly over the PC

operating system by absorbing into the software, which Microsoft calls its "Windows Operating System", functions performed by its competitor's applications and utilities. Because Microsoft sells its "operating system" as a single product, each time that Microsoft adds to its "operating system" a function that previously was performed by the competitor's product, consumer demand for the competitor's product ceases and the competitor is destroyed. Again and again, Microsoft has used this weapon to leverage its monopoly power in the Window's operating system to wipe out its competitors and its competitor's software products while, at the same time, increasing the strength and breadth of its monopoly. The vehemence with which Microsoft objects to any limitation on its use of this weapon evidences Microsoft's recognition of the critical importance of this weapon to Microsoft's continuation and expansion of its monopoly.

Because Microsoft has monopoly power in its "Windows Operating System" I, as a consumer, am forced to purchase the Windows Operating System in order to operate my computer. Each time that Microsoft expands the breadth of its "operating system" by absorbing into it functions previously performed by other software, I lose the freedom to purchase such functionality from other sources, and whether or not I need such additional functionality, my computer is burdened by the additional software in Microsoft's "operating system" that performs these functions.

If the judgment does not prevent Microsoft from commingling its "Windows operating system" with software that is added to absorb functions previously performed by Microsoft's competitors, Microsoft will use this weapon to expand the breadth of its monopoly, to destroy its competitors, and to harm the consumers, all in the manner explicitly held by the appellate court to violate the law. If you do not revise the judgment to forbid Microsoft's absorption into the "Windows Operating System" of functions performed by competitors' software, the legal action against Microsoft will have failed.

Microsoft claims that it wants the freedom to "innovate", i.e. to introduce something new for the first time. Microsoft does not innovate, it instead imitates. Microsoft does not create new products and functionality but, instead, copies the functionality of its competitor's products into its "Windows Operation System". Because Microsoft has monopoly power, its "imitation" of competitors' products harms us all and violates the law. If Microsoft wants the freedom to "imitate", let it imitate with software that is separate from the "operating system".

I can think of no benign explanation as to why the most important provision in the proposed judgment was tucked away at the very end of a long list of Definitions. The clause that would "give away the farm" to Microsoft should, instead, be displayed in bold letters at the beginning of the proposed judgment under the caption: "GRANT TO MICROSOFT OF LICENSE TO CONTINUE TO VIOLATE THE LAW".

Sincerely,
G. Joseph Buck

Subject: Microsoft Anti-Trust Case
To Whom It May Concern,

Personally, I don't consider the latest settlement to be a very wise solution, as it seems to pave the way for Microsoft to have a larger market share. Education is one realm where Microsoft hasn't monopolized yet, and now they want to put Windows into more people's hands.

Though the educators have their own options of what computer to buy, Microsoft has said that the software would be free. It doesn't look like educators would have much of a choice.

Please consider enforcing a tighter and more adequate punishment. Microsoft doesn't want to admit guilt, but maybe this is time for them to do so?

Sirs:

Several comments:

1. Microsoft is a monopoly. This monopoly, while having its positive side (providing a standard for hardware manufacturers, for example) has been clearly used by Microsoft to its own advantage. Word processor document formats which change and which others can only reverse

engineer to has, for example, placed most other word processors other than Word at an unfair disadvantage. This is also true for Powerpoint and the MS spreadsheet. Microsoft should, so long as it has the lion's share of the market, be forced to make public its document coding.

2. The setting up of Web sites with code which only works for MS IE should be watched very closely. Wachovia banking on line has such a site. One cannot print directly ones statement using Netscape, Mozilla, or Konqueror as alternatives. The role as standards make can be very positive, but MS does it badly.

3. Part of this settlement should be the setting up and maintaining sets of standards for Web sites, programs etc. with MS involvement, but not by any means control.

I am primarily a Red Hat Linux user, though I also use MS products when they are better.

Sincerely yours,
W. J. Kossler

Subject: a fitting settlement

Okay Microsoft made a BIG announcement that they would provide 1 billion dollars in software and money to poor schools. Lets make Microsoft spend money on Macintosh computers for these schools and then they can install all the copies of Microsoft Office for the Mac-as well as Internet Explorer web browser that they want. Let's see if they still feel so generous-or not!

Subject: Microsoft Settlement

TO: US Department of Justice-Microsoft anti-trust comments: microsoft.atr@usdoj.gov
I've just read the news on the proposed one billion dollar settlement. As I understand the deal, this seems to me to be very much in favor of Microsoft. In addition to few to no changes to their behavior, a portion of the punishment is, in fact, a real benefit to them. The resolution including the dissemination of their software and compatible hardware, training to use their products, and loads of their often bundled software, seems to fly in the face of the very point of the trial.

They have been found guilty of using illegal means to maintain their monopoly. As I understand it, one of the intents of the Anti-Trust laws is to prevent illegal monopolists from abusing their position in the future. How would the proposed settlement do that when a good portion of the settlement

specifically increases their market share of both the OS and their bundled products? The proposed settlement uses a blatant play on setementality in an effort to escape unscathed (and in fact strengthened by) their conviction as illegal monopolists.

In the past there has been strong resistance to punish illegal monopolists for fear of the effects on the economy. I am not aware of a single case where the strongest possible punishments have been imposed, that have not resulted in benefit to consumers, competitors and the economy at large.

I believe this settlement should be declined. Microsoft and not the Schools or justice will be the only beneficiary. The settlement should be made in order to change their behavior, this does nothing to address their behavior and will not change it in the future, allowing them to continue to further maintain their illegal monopoly.

ZDNet Article on the settlement
Judge to rule over Microsoft's motives
Monday 26th, November 2001
Reuters

A hearing begins Tuesday to determine if Microsoft playing Santa for needy kids with its billion-dollar settlement offer—or the Grinch looking to dominate the education market Is Microsoft a do-gooder, or up to no good? That's the question a federal judge in Baltimore will consider on Tuesday at a hearing on the company's billion-dollar antitrust settlement of private, class-action lawsuits.

US District Judge J. Frederick Motz will have to decide whether the settlement proposed by the company is a creative solution that will put computers in the hands of poor school children or a legal ruse that will further the company's dominant position in the computer business. Microsoft says the private settlement is a civic-minded way to resolve more than 100 lawsuits filed around the country on behalf of customers allegedly overcharged by the company.

Under the settlement, Microsoft would make amends by spending more than \$1bn to put software and computers into some of the poorest US schools. It would assist more than 12,500 schools serving nearly 7 million children under the settlement of the private suits. "It is a settlement that avoids long and costly litigation for the company and at the same time..., really makes a difference in the lives of millions of school children in some of the most economically disadvantaged schools in the country," Microsoft Chief Executive Steve Ballmer told reporters last week.

Different path

But at Tuesday's hearing, some class-action attorneys from California are expected to paint quite a different picture for Motz.

The dissenting attorneys, who have filed a case on behalf of California consumers, will ask Motz to strike down the settlement or allow their lawsuits to proceed separately in California. They portray the settlement negotiated by Microsoft and the other class-action attorneys as a ploy designed to entrench the Windows monopoly while allowing the company to pay back only a tiny fraction of what it actually owes consumers. Central to the dispute is a US antitrust doctrine that holds that only a "direct purchaser" can collect damages in private antitrust suits.

The direct purchaser restriction applies nationwide, except in the more than a dozen states like California that have passed laws repealing it, said Gene Crew, an antitrust attorney heading one of the cases against Microsoft on behalf of California consumers. In February, Motz ruled that in states that had not passed the so-called "repealer" statutes, antitrust litigants could not recover damages from the company. That's because most consumers do not get Microsoft's Windows software directly from the company, but pre loaded onto a machine they buy from a computer manufacturer.

The cases in California and a handful of other repealer states, meanwhile, have been moving forward. The California case is scheduled to go to trial next August.

California attorneys dissenting from the settlement are accusing Microsoft of singling out the attorneys in nonrepealer states—those with the weakest cases—and secretly negotiating a sweetheart deal for the company.

The dissenters fear such a settlement could neutralize cases like theirs in repealer states, which they say still hold the potential for larger damage awards against Microsoft. "It was a clever tactic..., whereby they hijack the California case and use it to lend value to meritless cases elsewhere," Crew said. However, the settling attorneys will tell Motz the settlement is a better deal for consumers than trying to divvy up money among individuals. Michael Hausfeld, one of the lawyers who negotiated the settlement, said consumers would have gotten as little as \$10 apiece if Microsoft had agreed to reimburse them directly.

"This was a very carefully thought-out plan," Hausfeld said. "There's a lot of complaining out there, and there's no relationship between the complaining and reality." Hausfeld said Crew had vastly overestimated the amount of money that can be recovered from Microsoft. And he scoffed at the idea that Microsoft had singled out the weakest plaintiffs for settlement talks.

"Nobody pays over \$1bn to the weak link," Hausfeld said. The five-year program would settle class-action claims that Microsoft abused its monopoly over personal computer operating systems and overcharged millions of people for software. Microsoft said it would take a \$550m charge before taxes against earnings in the current fiscal quarter if the pact is approved by the court. Earlier this month, the software giant agreed to settle its separate, three-year case with the Justice Department and many of the state attorneys general who had sued the company.

The smell test

At Tuesday's hearing, dissenters from the private antitrust settlement will run through a list of legal objections to the deal, Crew said. Crew said the private antitrust settlement is worth only a fraction of the amount Microsoft might end up owing to consumers. He estimates that in California alone, overcharges may total \$3bn to \$9bn.

"Right there it flunks the smell test," Crew said. "It makes the settlement look silly." Crew argued that the settlement deal is actually a "marketing device" that "allows them to further entrench their monopoly" by spreading free Microsoft software into primary and secondary schools.

"I think charity is great," Crew said. "But they should do it as a matter of charity, not a matter of settling a lawsuit."

Ballmer has denied the settlement is aimed at boosting the company's market share in American schools. He said money from the settlement can be used to buy software from Microsoft competitors.

Think it's all over? The antitrust case against Microsoft can still go back the to Court of Appeals, and then there's the European Commission's investigation...

Subject: Proposed Settlement

To whom it may concern
I wish to state my opposition to the propose Microsoft settlement. While I applaud the benefits of helping poor school districts, I'm completely opposed to a solution that will further enhance Microsoft's dominance and encourage further monopolistic behavior.

Wasn't this entire case about Microsoft using unethical tactics dominate the market? Hasn't it been proved that these tactics damaged many businesses as Microsoft forced their own products down the throats of users there by eliminating competition? Wasn't the purpose of this entire trial about promoting CHOICE?

It appears that one again, Microsoft has determined the choice for all of us As a Macintosh user, I can't tell you how many times I visit web sites only to be told that features on the site are not available to me and only to Windows users. Did anyone address this issue?

How can there be parity when the playing field slopes in MS's direction?

Lets face it, this proposal is full of holes that Microsoft will take advantage of to dominate the educational market. If it allowed to stand as dictated by MS, there will be no alternative operating systems within 5 years.

Please consider this before siding with Mr Gates and Company

Date: 11/28/01 4:30pm
Subject: Microsoft Settlement Comment

It is my understanding that as part of the settlement of price gouging in their class action lawsuit, Microsoft has offered to donate computer hardware, software and support to school districts. If it is their intention to donate systems that run Windows operating systems, it sounds to me like they have found a novel way to grow their monopoly and further strengthen their share at the expense of the U.S. Judicial system and the American people. I wish to voice my strong opposition to any such agreement. The court has already found, in another related case, that Windows is an illegal monopoly and now Microsoft may be presented with the opportunity to further indoctrinate our children into dependence upon Windows products and services—in the name of justice. In my opinion this is akin to letting Colombian drug cartels settle guilty verdicts by providing free cocaine to U.S. junkies. Microsoft should not be allowed to profit from a guilty verdict.

May I suggest that any settlement that involves such a donation should stipulate that all of the hardware, software and support be entirely comprised of non-Microsoft products and/or services. To put it more plainly, if Microsoft wants to settle by donating computers, they need to donate only Apple Macintosh, Linux or other high quality non-Windows systems and all of the support should be provided by firms unaffiliated with Microsoft.

Subject: MS Settlement grossly unfair to
Apple

Steve Jobs is right!
The education market is one place where Apple has a good presence, and Bill Gates "donating" \$1-2 Billion of rejuvenated PC's and Windows XP to schools is really cutting Apples' support. If Gates offer is so good why doesn't he donate 50% of it in rejuvenated Macintosh's , or at least the percentage of Apple Mac's in the school system, rather than all PC's—which toots his own horn at Apples' expense.

I certainly believe that this DOJ allowance is not ethical and needs to be redone right by MS giving MONEY alone and none of Microsoft products.

I really believe that the DOJ caved into MS! or there is a mole in the DOJ which likes MS!

That stinks!

Subject: Microsoft settlement offer

Needless to say this is a giant canard. Microsoft is a convicted monopolist. Microsoft has done more to inhibit competition in the last 10 years of any company in the world. The deal is a sweetheart gift to the attorneys (they get the cash), Microsoft gets to buy the rotting pile of unsold PC's that are stacking up at Compaq, HP and Dell, on the cheap, thus bailing out its main distributors. Oh yes, they will buy of few Macs (all obsolete with the new OS X now out) and give away software that costs little more than the cost of the CD's they are burned on. Wake up, that deal won't fly and is detrimental to the competition that

has suffered the most from Microsoft's dirty play. Without Apple innovation where would the computer industry get its ideas to produce itself out of the current slump. By everyone's score (even Bill Gates), innovation is the future of the computer industry and competition is the driving force to making it happen. Any settlement that harms Apple is grounds for another lawsuit.

Microsoft has the cash (32+ billion). Come up with a 25% on the dollar cash settlement of the properly calculated damages, and let these poor schools spend the money, i.e. pay cash for whatever computer and software that they deem best for their students. This is the proper way to help all players in the industry (man would there ever be some fantastic deals given to move inventory) and clear the decks for the next generation of hardware and software. Let the marketplace determine what's best for the students!

Subject: Thank you for your continued pursuit of Microsoft

Greetings.

My name is Tyler Lagrange of Sarasota, FL. I will try not to ramble on for too long and I beg of you to read all I have to say as it pertains to what I believe to be the most significant antitrust lawsuit I will see in my lifetime.

Thank you very much for not accepting the lenient settlement that has been proposed in the Microsoft case. I have been following the case from the beginning and have read many articles that have followed your progress. My favorite was an article in Wired magazine about a year ago that really went in to a lot of detail that even I did not know. At that point I really felt the case was going in the right direction, but that feeling has understandably changed in the recent weeks. I don't feel you need me to point out reasons why Microsoft has committed illegal monopolistic activities, however, I want to point out the ones that really hurt me as both a consumer and an internet software developer. I am a 26 year old programmer with a 4 year Computer Science degree and I've been a computer user since my first grade year at Hunt Elementary in South Florida (20 years ago).

As a consumer, my choices are severely limited by what Microsoft has done. I was really upset by what Microsoft did with the web browser wars as I preferred Netscape (along with 80% of the internet users back then). I can not really understand how they could get away with simply copying somebody else's ideas and designs, and to then force it down everybody's throats. They claim that it is best for me as a consumer and they offer it up to me for free as if that is generous. They only gave it to me for free because there was competition. What I would really want for free is Microsoft Office. Why isn't that a part of the OS? Microsoft Office is the de facto standard for sending formatted

papers and office/business documents to and from people. A majority of the people out there have it and use it for daily use—probably even more than Internet Explorer. The reason that Microsoft will never offer that to us free is not just because it costs them more to develop (that is untrue as they have already recouped their costs), but because they face no serious competition in that realm. If you ask 100 consumers if they would rather have Office or IE bundled with their OS, you know what they would say. Microsoft is not doing what the consumers want, but is illegally protecting their desktop monopoly and extending it in to any other area that they can get in to. I do not want Internet Explorer. I do not want Windows Media Player. I do not want the other stuff they seem to think I do.

As an internet software developer I have also had many problems with what Microsoft has done. My biggest problem is really undocumented and unknown by most people who do not develop internet software. By having such a huge user base, they have made it virtually impossible (undesirable really) to write software that does not support Internet Explorer. They may claim that their browser supports more "standards" but in fact they support whatever they feel they want to. One of the most severe things they have done is to have a more lenient parser (the system that reads the HTML and displays it) that will not enforce strict HTML. This allows coders to be lazy and to not adhere to the HTML standards. Once they get used to that (and for the most part they just debug their sites in IE and don't look at any other browsers), they will most likely NOT adhere to standards and as a result the web sites will only act appropriately in Internet Explorer (I have worked in 3 startups and they all have focused solely on Internet Explorer as the default platform). As consumers see these things acting correctly only in IE, they feel that IE is the only one that works. Now it may look like they are being nice and "guessing" what us web programmers mean to do, but by not enforcing the standards, we will never be able to progress beyond the inadequate capabilities we have today. I don't know for sure, but I bet at least 80% of the web sites out there would break if standards were enforced. I honestly feel that this is deliberately done to prevent other web browsers from gaining a significant share of the marketplace again (unless they are programmed to display improper HTML to maintain compatibility). This also prevents serious progress because they have to maintain this broken compatibility to display those 80% that were not written well in the first place. Web developers must write software to work well in IE or they will have problems with their customers. This just extends their monopoly.

Beyond that, it is hard for me to feel that with an idea I can be successful in the free marketplace. That is a horrible lesson the courts are trying to teach me. Even with the best ideas in my head, as soon as Microsoft has me in their sites, they could embrace it, extend it, build it in to their next OS, and push me aside. I will never be able to charge money for my software, as Microsoft can

always afford to give it away free and to throw more R&D money at it to "make it better" than me. So in order to beat them, I will probably need some capital behind me. But investors, after seeing what Microsoft is allowed to get away with, will be less likely to dump money in to my company with the risk that Microsoft will overtake us and we will lose all that we have. They have too much power and too much freedom and will continue to pursue these initiatives even harder if they are allowed to get out of it this time.

I am disgusted by the bundling that they were allowed to get away with with XP even after it was determined that Internet Explorer pushed and entire company essentially out of the market. They will now push remote administration systems, media players, digital camera software vendors, cd burning software vendors, and many others out of business. This does not help the economy. This is also not about progressing in to a "modern operating system". This is about extending a monopoly. It may seem extreme to a lot of people to break up a company, but it has been done successfully before, and it may need to be done again. I feel that Microsoft makes some good applications, and has some good operating systems. However, if their operating systems division was separate from their applications divisions, it would prevent this overlapping we see of OS services and Application services. It would also allow for more choices and more opportunities for other vendors to produce top quality software that WILL benefit consumers, and WILL boost the economy, and WILL save the future of computing.

I feel so powerless when I sit at home and read about all the bad things Microsoft has done. I watch the arrogance they display when they claim that they know more than you or I do about how the future of computing should be regulated. I beg you to not fall like the others have before you. I urge you to do your best to represent me in this monumental case. I thank you for all that you have done, and will continue to do.

If you made it this far thank you very much, Tyler LaGrange 4902 Ithaca Ln Sarasota, FL 34243

Subject: Marketing Strategy: Donate Software

I believe that the actual present cost and the present value of future sales due to donated software should be considered in the final settlement. It's entirely possible in the long run, that this settlement costs Microsoft nothing. I certainly hope that the Financial Accounting Standards Board, FASB, weighs in on this issue. I think that an all-cash settlement would more equitable.

Jack W Hakala, Bellevue, WA

MTC-00002386

From: Scott
To: Microsoft ATR
Date: 11/28/01 8:46pm
Subject: Damages, remedy.

I would like to see a provision that limits the extent to which retail licence fees can

exceed posted OEM licence fees. Also, an admission of guilt on the part of Microsoft would go a long way in validating any settlement in the public's eyes, and provide a firm basis for action enforcing the agreement, should Microsoft stray from it.

That aside:

The public has been damaged by Microsoft's abuse of its market share, and those damages far exceed four dollars per US citizen. Much more careful consideration must be made on the part of the state to assess the extent of the damages created by Microsoft's monopolistic practices, and seek a judgement more pursuant to that amount.

Futhermore, no anti-trust settlement should extend the power of the defendant. Microsoft derives power from its mind share, the percentage of the population that is familiar with its products. Microsoft already has programs to give away software to students for the sake of extending their mind share. Any settlement should seek to undermine the defendant's monopolistic power, not reinforce it by some of the very means by which the defendant acquired said power. For this reason, a settlement along the lines of Red Hat Software's proposal is much more fitting. (Linked to below.) A remedy needs to be reached that introduces and strengthens competition rather than effectively barring it from public schools!

Microsoft would undoubtedly claim that their software is more fitting to the needs of inner city schools than Red Hat's. I disagree. Linux has progressed to the point where, for basic desktop needs, tools have been developed that suffice for internet and office applications. Furthermore, these tools are priced such that these tools are more affordable: they're free, so poor students having the same software at home as at school is more realistic. Also, for non-basic desktop needs such as software development, most Linux distributions, including Red Hat come with full featured compilers and text editors for multiple languages whereas Microsoft's equivalent products are very costly. So Microsoft paid hardware running Red Hat software would allow for more schools to benefit, while simultaneously increase the benefit those schools could derive from each of the systems.

For all of these reasons, it is my opinion that the most ideal solution possible based on the currently proposed one would include:

1—Free, community owned software on machines going to the benefit of the community and are paid for by Microsoft.

2—Many more machines paid for by Microsoft than are provided for by the current proposal.

Finally, even if my above advice goes unheeded, the settlement should seek to reclaim for the public good compensation for the damage incurred, not temporary rights for the public to utilize the fruits of the transgression. If the state seeks rights to Microsoft's software, it should be in a form that does not become obsolete.

For reference, Red Hat's press release including their proposal is linked to below: http://www.redhat.com/about/presscenter/2001/press_usschools.html

Subject: proposed settlement for microsoft class action

Speaking as an Apple Macintosh owner and investor, let me say that the proposed settlement in both the class action suits in which Microsoft proposes to settle their case by not so subtly dangling a fat meatball in front of a starved school system and the federal antitrust suit, both appear to result in rewarding the perpetrator instead of punishing them and will result in continuing illegal, monopolistic behavior. I personally object to both and hope the respective judges will show truly judicious judgment. LR

Subject: Concerned User

Concerned Apple user here, just letting you know that Microsoft's recent settlement proposal is absolutely ridiculous. They wish to give refurbished systems to schools in need, and that's fine and dandy. The fact is, their software will be running on those computers, and the end result will be an even more monopolistic Microsoft. It's easy to see through this attempt at nullifying their own punishment, and I hope you'll see this as well. P.S. A more understandable punishment would be forcing Microsoft to buy computers for schools in need that would support something other than their own Windows (Apple Macintosh is the obvious choice).

Subject: Microsoft Settlement

I'm disappointed. Yes I live in Washington State, yes many of my friends and fellow co-workers work for Microsoft. For their sake, Washington State sake, and USA economy sake, I should be happy that Bill and Co only got a mild rist slapping, but I'm not.

Microsoft's business practices are monopolistic, which is surely wrong from a good vs. evil perspective as they put little companies out of business.

What really makes me angry about Microsoft and this ruling is that their monopolistic business practices stifles innovation in the technical arena which I am dependent on for a living. Microsoft is on the verge of taking over access to the web after shutting Netscape nearly out of business. Internet Explorer has been forced onto 90% of the PCs in the land. Now the web-site norm is to support InternetExplorer as a requirement. We're starting to see many web-sites no longer work properly with the underdogs (Netscape, Mozilla, etc.). Just like MS-Word before it, nobody loses their job making their web-site talk to InternetExplorer and not Konqueror or Mozilla or some other browser. InternetExplorer is not available for open-source OS's such as Linux. Its not even available for Sun Solaris. Thats a problem. Why is Microsoft giving away InternetExplorer for MS-Windows users but not providing InternetExplorer for alternate OS's, either in compiled binary or source code? Simple. This emerging strangle-hold on web-browsing is positioning alternate OS's out of business. Thats bad.

Subject: Justice

So, the justice department is going to penalize Microsoft by making them give donations and free computers to needy schools?

Lets penalize Microsoft by having them spread their influence even more throughout the world. Lets show the young students of America how "wonderful" Microsoft is by giving them free software and computers. Then when those students become wage-earners, they'll "penalize" Microsoft some more, by buying more of their software, since Microsoft software is most likely the only operating system (Windows), business

package (Office), and web browser and email software (Internet Explorer & Outlook Express) that those students will become familiar with.

Isn't this what putting Microsoft on trial was supposed to avoid? Yes, there are many schools that need financial assistance, and it would be great if you could kill 2 birds with one stone, but if you REALLY want to penalize Micro\$oft, force them to subsidize those schools with Apple computers ONLY, or even PC's loaded with the Linux operating system. Both of these alternatives would provide students with a more problem-free computing experience.

Oh, and if you still want to "penalize" Microsoft, those students could get Apple computers bought by Microsoft loaded with a program called Virtual PC, that allows Apple Macintosh computers to run Windows software. Funny how Windows-based PC's can't run Macintosh software, isn't it?

When is the wedding? Come on, grow some balls and treat Microsoft like the unapologetic contemptuous bunch of greedy law breakers they are. Jesus Christ, is every part of the US Government happily sucking at Micro\$oft's teat or what? How in God's name could Microsoft be allowed to pick their own damn "punishment"? I'd laugh if the reality of the whole thing weren't killing the software company I work for, thanks for looking out for the filthy fucking rich at the expense of all others.

Subject: 20 Year Mac User—Objection

Hello,

I wanted to voice my opinion:

As a 20 year Mac user and a Apple investor I want you to know that I object that the settlement. Apple only has approximately 49% of school computer platforms and only 4% of total operating systems. If you were to allow Microsoft to "donate" as much as you are stating you will foster a new generation of computer users who will only use or become familiar with Microsoft's OS thus the monopoly continues. Please scale back your donation or ensure that Apple Computer is better represented in this settlement.

I would also like to add the following quote: "There are two principal issues: the proposed penalty for Microsoft's violations is entirely prospective and the predictability of the penalty to effect a sufficient diminishment of Microsoft's anticompetitive behavior is completely inadequate, including being overly complex and to vague, especially in light of published comments by Microsoft CEO Steve Balmer after Microsoft's conviction that he does not even know what a monopoly is."

Subject: Microsoft settlement

The only way to protect us the consumer from Microsoft's monopoly is to break up the company into 3 separate entity, Operating System, Internet business and other software. That is the only way that we the consumer will have a fair deal. Right now we have to buy an upgrade every year on the Operating System from Microsoft. The upgrade is mostly just patches to correct glitches that they discover during the year. So, in reality, we are being forced to pay for Microsoft's mistakes make in their software over and over again. As it is now we the consumer just have no chance to try other operating system.

MTC-00002398

From: Stephen Goertzen
To: Microsoft ATR
Date: 11/29/01 7:27am
Subject: Microsoft Antitrust

The settlement with Microsoft is a travesty of justice. We have laws in the United States against most monopolies for a reason. Some of them have to do with freedom of choice. When Microsoft tells manufacturers that you can't put anything else on your computers if you want to have Windows on them, that removes freedom of choice from the manufacturers, and we have another word for that, extortion. Secondly, Microsoft openly states that Windows is an operating system. By definition, an operating system translates commands from programs for the computer, handling all the interfaces with the computer internals. If this is so, then Microsoft must publish all the methods to allow third parties to access these translations, otherwise it is not an operating system, but a vertical monopoly on a computer. Additionally, the idea of adding programs to an operating system is absurd, because this violates the definition of an operating system, once again using monopolistic advantage to restrict choice.

I'm sure you've read the Halloween memos by Microsoft concerning Linux.

This is the mentality of Microsoft. Destroy a competitor by not allowing them to be placed on computers. eg. If Compaq wants Windows on their computers, then they can't have Linux on other computers they sell. Microsoft has apologized for the problems they have caused (to a limited extent). Seems to me if a bank robber apologized for robbing a bank, we would want more than an apology and a promise not to rob banks in the future (take a look at XP, which will not allow certain third party software to be loaded!)

Please do the right thing, and pursue the Microsoft case as it should. Microsoft does put out a decent product, though it does have its flaws, but it must play by the rules in place, the same rules that everyone else must follow.

Subject: Microsoft Antitrust Case

I think the government should take a look at the AOL, Apple, and Netscape practices before they make a final ruling in the anti-trust case against Microsoft.

AOL, Netscape and Time Warner have teamed up to dry the government into their corner. Microsoft may have integrated the IE browser in to the operating system, but why is that bad? People still have the choice of browser, they can use the Netscape browser if they wish. I recently bought a new computer and it had Netscape installed. Over the years I have purchased many computers for my company and most of the laptop systems came with Netscape installed.

Microsoft has "On Lines Services" in the "Add Remove Programs" for anyone to install an On Line service of their choice, yes AOL is there—so is Prodigy, CompuServe (AOL), and a few others that not quite as popular.

Microsoft has as much right to define their operating system as does Apple. Microsoft has been in the business of making computing more fun and easier. I think to a great extent that has been accomplished, just look at the number of people that have

computers today. Apple computers had a big edge in the 80's but software companies didn't right business functional programs for the Apple computer systems.

The primary reason Microsoft was able to gain so much popularity was Novell's purchase and dismantling of Word Perfect and Group Wise. Had Novell been able to maintain the market share, 80%+, then Microsoft would not have been able to move into the application as strong as it did. Novell stripped the messaging software and Unix knowledge from the Word Perfect company before it sold the rest to Corel. In my view Microsoft has done more for the software industry than most any other company I can think of. The products are not always "best of bread" but they sure do a pretty decent job of making work easier.

Subject: Settlement

As an IT professional, I would recommend that Judge Colleen Kollar-Kotelly NOT accept the settlement between Microsoft and the DOJ for the following reasons:

As the courts ruled, Microsoft IS a monopoly. The agreement does nothing to stop this. The DOJ won the case, but then gave up.

There is no financial penalty.

The way Microsoft's lawyers are able to twist things around, anything in the agreement would not hold up due to interpretation and would end up back in court for years to come.

Microsoft can still bundle what ever they want into the operating system even though it has nothing to do with the basic operation of the computer.

Thank you,
Arlen Levin

Subject: RedHat, Microsoft, and Open Source in our schools

I am sure you've received a fair amount of mail on this subject, so I'll cut to my brief opinion:

RedHat's proposal, if enacted, would be very good for our schools, very good for the Open Source movement and subsequently good for all industries which rely on computing. It would be bad for Microsoft. Very bad. And Microsoft knows this very well.

If this is *not* already the view of the Department of Justice, than my opinion is that the DoJ should fully explore the implications of RedHat's proposal and seriously listen to the Open Source and broader computing communities. If the DoJ already sees the positive outcome of supporting some variant of RedHat's proposal, then you should do so. Punish Microsoft in a *real* way that doesn't actually *help* them monopolize computing further, and doesn't push a bloated commercial monopoly into the infrastructure of our public education system.

Subject: Microsoft Settlement

From a public user's perspective it doesn't appear that Microsoft has been given any significant penalty.

They still released their new operating system XP on schedule with many new features that link all of us users more tightly to their solutions. I know they say that their approach has produced a better product for all of us, but without more competition, they will continue to tie us tighter to their desired approach.

In the long run that will not produce better solutions. We need a more significant penalty that would promote more open competition in the OS, Browser and E-mail area. There is really only one solution, the Microsoft solution, available on new systems. That is the case even after the so called slap on the hand.

I use their solutions for most of my work, but mostly because they came with the new system I recently purchased from Dell. The hardware world is very competitive, but these three areas are sewed up by Microsoft.

From: Les
To: Microsoft ATR
Date: 11/29/01 12:00pm
Subject: Comment on proposed settlement
Dear Sir or Madam:

I find it incredulous that the Justice Department is proposing to facilitate Microsoft in extending their Windows-based monopoly. I'm referring to Microsoft's offer to donate one billion dollars' worth of PC's and Microsoft software to public schools.

As for the software component of the donation, Microsoft's cost would be a miniscule fraction of the announced dollar amount. This is because once the fixed cost of developing the software is paid, the incremental cost of burning an additional CD-ROM is merely pennies. The Microsofties in Redmond must be rolling on the floor in laughter at being able to get away with this "smoke and mirrors" agreement.

If the Justice Department is truly interested in punishing Microsoft for its monopolistic behavior and discouraging the company from such behavior in the future, it should require them to purchase one billion dollars' worth of Apple computers and non-Microsoft software for public schools. Anything less is

a sham and goes squarely against the Department's intent when the suit was initially brought against Microsoft.

I respectfully request that this aspect of the proposed settlement be withdrawn by the Justice Department. If the Department cares at all about fashioning a just solution to the problem that it initially sought to correct, it will replace this remedy with one that addresses the issue of Microsoft's monopolistic behavior rather than being an accomplice in perpetuating it.

Yours truly,

Subject: Proposed MS settlement

Just a quick note to express how I feel about the proposed settlement in the "consumer" Microsoft case. I read where one PC pundant described the proposal as a big Rorschach test. Everybody sees what they want to see in it. I think that it's actually a big IQ test, and Microsoft is hoping we really are THAT STUPID.

The proposed settlement is too small and misdirected away from the class of people that actually were injured by Microsoft's illegal misuse of its monopoly position. As much as I think we need to increase education funding for technology, schools were never significantly injured by Microsoft's pricing shenanigans since they largely resisted Microsoft's incursion. Why allow a "punishment" that doesn't address the actual injured class without the company that broke the law having to even admit guilt. And further, this settlement would hurt the companies that obeyed the law and played by the rules by allowing MS to extent its monopoly into an area it surely wouldn't gain on its merits.

So please take this into account when you render your judgment.

Thank you,
Kelly R Graffis

Subject: Proposed Settlement

To whom it may concern

I refer you to this article about the Microsofts proposed private settlement.

Whatever you think about Microsoft, you have to give them credit. I mean, who else could turn a billion-dollar "gift to education" into an anti-competitive business practice?

That's what Apple says Microsoft is doing—using its "generosity" to horn in on Apple's education business—and they're right.

Look at it from a distance, and the deal looks pretty good. A raft of people are suing Microsoft on various antitrust grounds. The cases have all been glommed together, and a single settlement proposal is before a federal judge in Baltimore. The judge has to decide whether it's a good deal.

THE PLAINTIFFS' LAWYERS have done a good job of finding a settlement that seems to work for everyone. In an unusual move, they have even agreed to allow the judge to decide what their fees should be. They've managed to do something the Justice Department wasn't able to in its proposed settlement: essentially, fine Microsoft a billion dollars (which is real money, even to Microsoft) for its past transgressions.

And they have tried to do it in a socially redeeming way, by having the money go to poor schools.

Now I am sure the people on both sides of the table who crafted the agreement—and see it as a big win for education—must be feeling right now that no good deed goes unpunished. But their good deed must be modified. APPLE HAS FOUGHT in the education-market trenches for many years. The company has had its ups and downs, but recently has seen some improvement. It would be terribly unfair for a court to order Microsoft to drop a cool billion into the education space. Even if it isn't money that would have been spent anyway, it would greatly enhance Microsoft's presence in education. Children who might otherwise see a Mac might now see a Windows machine.

Teachers, who've forgotten that this is a legal settlement and not a gift from the goodness of Redmond's heart, might recommend Windows machines to parents. In fact, after about a year, everyone would forget Microsoft wasn't doing this entirely voluntarily, and the company would reap a PR bonanza. That is way too close to allowing Microsoft to profit from its crimes for my taste, especially when it also has the effect of challenging Apple in one of the Macintosh's few major market segments. If Microsoft wants to do this on their own, we can't (and shouldn't) stop them, but it's just too much to consider the further nuking of Microsoft competitors as a socially redeeming activity.

I HATE TO SAY THIS—as I am also sensitive to the good an extra billion (over five years) could do for bringing technology into schools—but the money simply can't be spent that way. If we want to be fair to Apple while still having Microsoft pay penance, the money needs to go to some other public or charitable purpose.

In fact, education is about the only place it shouldn't go. Let Microsoft donate the hardware and software needed to support the fight against terrorism here at home. Most

police departments and emergency service agencies need the technology almost as much as schools—actually more so, in some cases—and that, at least, wouldn't be money taken out of Apple's pockets. Rather, Microsoft would be giving money to agencies that have probably already standardized on Windows, but just can't afford to buy very often.

I got an e-mail from a reader who has an alternative solution: let the money be used by education, but only to purchase Apple or Linux software and systems. That strikes me as perverse, but in some ways fitting. More reasonably, the money might be required to be spent in a manner that reflects current market share—so Apple gets the share it presumably would have gotten if Microsoft hadn't been the source of the cash. Like I said, you've got to give Microsoft credit—they certainly play all the angles. It's just a part of the company's corporate soul—sometimes for better and, sometimes, for worse.

Subject: government should boycott
Microsoft

If the US Government is truly dedicated to a remedy in this anti-trust settlement against MicroSoft, it should begin by no longer being a MicroSoft customer. The government should not be supporting perpetrators of criminal activity, particularly a repeat offender. The current proposed settlement, which follows the philosophy that "what's good for MS is good for the U.S.", is nothing short of empty words. In addition, VAST amounts of tax-payer dollars could be saved if all government at all levels were to invest in open-source/systems software and hardware for all its technology needs. The substantial savings realized through increased data security, and decreased licensing costs could easily be passed back to the "Senatus Americanus Populusque". There are, and always have been, clear alternatives to MicroSoft technology, most of which is based on the POSIX standard; a standard which is ALREADY a requisite for U.S. government software technology acquisitions. Thank you for your time,

MTC-00002418

From: Rick Rutherford
To: Microsoft ATR
Date: 11/29/01 12:41pm
Subject: I am against the proposed Microsoft settlement

I would like to submit my formal opposition to the proposed settlement in the matter of the United States vs Microsoft.

In fairness I must submit that I am an Apple Computer customer and have been using Apple products since 1980. I must also point out that I am a Microsoft customer as well, having purchased each version of Office for the Mac that has been available since 1996.

After reading the proposed settlement I was left with a fear that if adopted it could

be a decisive turning point against Apple Computer in its struggle to compete with Microsoft.

Over the past weekend I wondered if Apple would let this proposed settlement be offered without objection. How fair is a settlement that proposes Microsoft's punishment for illegal monopolistic practices be the furthering of those practices by squashing a competitor in a market where MS clearly comes in second?

Luckily, Apple CEO Steve Jobs took the initial action I hoped he would and received a notable amount of coverage over his objections to the Microsoft proposal. Mr. Jobs hit the proverbial nail right on the head when he said Microsoft was going after the only market it does not have a stranglehold on—education.

The irony of this proposal is that Microsoft is undertaking the same actions that got the company in hot water in the first place. Give away free MS products to create an unfair leverage against any and all competition. It should not be overlooked that this all has huge political overtones. Microsoft chairman Bill Gates donates to President Bush's campaign...Dell Computer CEO Michael Dell is Bush's technology advisor...and the Justice Department virtually cripples the rulings against Microsoft's anti-trust activities leaving the states participating in these proceedings twisting in the wind. All of this less than a year after Bush's election. I do not have a problem with a MS settlement going to help eliminate the digital divide in American schools. They can even put Microsoft Office on the computers they give to schools...as long as it's Office X on Macs. Anything less will potentially deliver a fatal blow to Apple's education market, and maybe the company as a whole.

I find it a bit ironic that Microsoft floats this proposed settlement the same week the company releases Office X for the Mac. It's like "Hey, we're not trying to put Apple out of business. Look, we just released a fantastic version of Office for all of our Apple friends."

In the final analysis, this proposal cannot be implemented as it is currently written. As American citizens (Mac and Wintel users alike) we should not allow OUR government to aide and abate a company in putting its competition out of business. That is not capitalistic, it is fascist at it's most basic level.

 Subject: Microsoft's Slimy Offer
 Hello.

I've been following the anti-trust cases against Microsoft for 2 years now as a private, yet concerned, citizen. Microsoft's recent offer to settle the private anti-trust cases by giving computers and software to hundreds of schools is a sham! This self-serving offer slaps at the entire US justice system—buying their way clear of illegal acts. Education is the one area where Microsoft does not hold a monopoly. It's so ridiculous to settle an anti-trust case by helping Microsoft expand their monopoly power.

Microsoft broke the law. . .

They stuffed inferior products down our throats . . .

They destroyed companies with better products . . .

They have been found guilty . . .

They should receive a punishment befitting a company their size.

Even 1 billion dollars is nothing to a company that makes triple-digit billion-dollar profits.

They should be punished so that they feel the sting, not so they can just write off the penalty to their insurance and forget about it. In the name of justice, please urge the states not to settle for anything short of a punishment for Microsoft that will curtail the company's monopolistic powers and restore innovation and competition back to the market.

Sincerely,

Greg Byerly.

These statements are my own opinions and does not reflect any position or policy of CUPA-HR.

 Subject: When will it (Microsoft) Stop?

This partial agreement/settlement between the DoJ and M\$ will not stand! As a former M\$ employee, (before Windows 1.0 was even released), I consider myself somewhat of a well-informed, and versed user of micro-computer operating systems and software applications. Having been a user of multiple OSs for almost 20 years—Apple Lisa thru Macintosh OS 10.1, OS/2, DOS 1.0 thru and including Windows 2000—I have seen, participated in, and experienced as much of the “high-tech evolution” as Mr. Gates himself, but have NOT been a puppet in his unethical “play” of a corporate dynasty.

True, he and his cast of players have done a lot for the local and national economy, not to mention technology itself, its just unfortunate we ALL have, in some way or

another, been “brainwashed” to believe that M\$ solutions are the best. The truth of the matter is, if M\$ cannot compete with a specific technology in the marketplace, they either infringe on intellectual copyrights, change the standard, or simply buy the creator, eventually to either implement into their own bug-ridden code or phase it out completely!

In spite of numerous court decisions in M\$ favor in the past 10 years, I have been able to sleep at night knowing that I have made the right choice for my family's, and my business's computing needs, which is probably a lot more than what Mr. Gate's can say when he looks through his Windows at night staring out at the dark, cold, and deep waters of Lake Washington.

If there were no judges of men, who would be the judge but the man himself?

Mr. Gates, being the co-founder of one of the most successful monopolies in this nation's history, needs to ponder this question with the utmost of wisdom, integrity, and diligence, but most important of all, honesty!

 Subject: The answer to this problem is NOT by letting Microsoft gain more market

The answer to this problem is NOT by letting Microsoft gain more market share by GIVING (read—NOT competing) its software away to poor schools. Please, please, PLEASE don't let them keep doing what they've been doing what they're good at—devouring innovation and creativity and using their monopoly to squash competition. They aren't playing fairly according to the Sherman Antitrust Act, and they should be more severely punished. But most of all, letting them give away their software will only further cement their monopoly position.

Please do the right thing.

 Subject: Microsoft additional comment

In the last 2 days, I have attempted to access commercial internet sites and have encountered browser “fatal errors” because the site is expecting me to be using Internet Explorer, so it will work with their Microsoft servers. I don't choose to use IE, I prefer Netscape 4.7. Can you actually ignore this reality, and find it acceptable for the consumer? It's not, and it is a clear and ever-present example of how Microsoft has abused its power in the marketplace. THE CURRENT SETTLEMENT IS UNACCEPTABLE, AND DOES NOT SEND THE CORRECT, OR A STRONG ENOUGH MESSAGE TO THIS COMPANY. SUPPLY A STRONGER REMEDY.

MTC-00002427

From: Timothy Allen
 To: Microsoft ATR
 Date: 11/29/01 1:43pm
 Subject: Microsoft settlement

This proposed settlement is like letting the fox into the hen house. The true value of the educational assistance is, for the majority of it, a no-cost solution to Microsoft that will lay the groundwork for future revenue generation and perpetuation of monopolistic practices. It's been proven that Microsoft has abused it's legal obligation, and has damaged fair competition beyond repair for the consumer, and for many companies that are now non-existent. The remedy needs to be structured so that this does not happen in the future. It appears that if this settlement is excepted, consumers and competitors will only suffer further abuse. MICROSOFT NEEDS TO UNDERSTAND IN A SIGNIFICANT WAY THAT IT'S PRACTICES ARE NOT ACCEPTABLE OR TOLERATED. All indications are that their current new products continue on the SAME COURSE of monopolistic practice. Are we willing to wait for new challenges to their practices that will take years to conclude? ACTION NEEDS TO TAKE PLACE NOW.

Subject: I want to express that I think it's a bad idea to allow Microsoft to

I want to express that I think it's a bad idea to allow Microsoft to distribute free software to educational institutions to partially fulfill their anti-trust settlement terms. Simply put, education is one arena where Microsoft does *not* hold a monopoly, and allowing them to place software there runs directly contrary to the spirit of restitution. Such placement gives them a *greater* market share, and would exacerbate the conditions that prompted the anti-trust suit in the first place.

Thanks for the opportunity for input.

 Subject: The Microsoft Settlement Is Fair

I just read an article in USA Today Online
 saying the Senate is going to hold hearings
 reconsidering the Microsoft case. This does
 not serve the public interest. I am amazed at
 how we cannot seem to get this issue put
 behind us and move on.

Microsoft is a terrific US company that has
 benefited the consumer by the development
 and marketing of its products—and I'm sure
 it's benefited our economy by being a
 successful US-based global company. Just as
 Microsoft is a powerful company, so are its
 competitors, and it seems as if they have
 been quite successful in keeping this anti-
 trust issue alive, not for the good of the
 consumer, but to further the interests of their
 own thriving, multi-billion dollar enterprises.
 Consumers should not be deprived of the
 benefits that Microsoft can bring by hobbling
 it to protect enclaves for its competitors.

Thank you,
 Carol

From: Collison, David
 To: 'Microsoft.atr(a)usdoj.gov'
 Date: 11/29/01 2:08pm
 Subject: Microsoft Proposed Settlement
 Secret

To Whom It May Concern ...
 I vehemently oppose the proposed
 settlement between the US Department of
 Justice and Microsoft. The proposed
 settlement does little to rectify the antitrust
 issues brought before the court, and, in fact,
 rewards Microsoft for causing serious damage
 to its' competitors and to those using
 computers.

Microsoft has shown that it will disregard
 any type of constraint placed on it by the
 court, there is no mechanism in place to
 oversee and enforce a change in behavior by
 Microsoft (the three man council proposed in
 the settlement has no power to change
 Microsoft's business practices), the

limitations do not address the antitrust
 behavior exhibited by Microsoft in the past.
 The Department of Justice at one time, it was
 reported, was ready to ask for the break up
 of Microsoft, this settlement is a dream
 escape for Microsoft—the DOJ should be
 ashamed to even make this proposal to the
 courts.

If this settlement is accepted, there will be
 serious damage done to the American public.
 If the DOJ was willing to bring this suit
 before the court, it should have been
 prepared to go the distance. IBM exhibited
 far less antitrust activity when brought before
 the court, yet paid far more serious penalties.
 Microsoft should pay dearly for what they
 have done, as an illegal monopoly tying
 products together, manipulating hidden
 interfaces to disable competitors products,
 taken advantage of hidden interfaces to make
 their own products run better. There needs
 to be a far different settlement, or this case
 needs to run the distance and Microsoft
 needs to have serious constraints placed on
 them or be broken in to multiple businesses.

 Subject: anti competition

As a Sr. Software Engineer at the
 Bell+Howell PSC division and user of both
 Microsoft, Linux and apple operating systems
 I would like to voice my displeasure with the
 proposed Microsoft vs. The States anti-trust
 settlement framework.

The reasons that I think this settlement
 does harm to the consumer is because the
 education area is one of the last bastions of
 free choice when it comes to the type of
 computer and operating system that a student
 can choose, and it is not out of coincidence
 that this is one of the markets that Apple
 computer still effectively competes with
 Microsoft. This settlement will in effect force
 Apple Computer out of the Education market
 and give Microsoft more of a monopoly in
 education. If you look at the full Microsoft
 product line how many of the products are
 for the Windows operating system only
 compared to the programs that will run on
 a Apple operating system. Also of the
 products that support both platforms
 compare the feature set of each. In both of
 these cases you will see that the software that
 works with the Windows operating system
 has a better feature set.

In closing I would just like to says that this
 settlement is counter productive to the
 Nation, Educational Institutions and
 Consumers.

Subject: A public comment

This is a comment from just an ordinary
 person (although I do program computers for
 a living) urging the STRONGEST POSSIBLE
 measures to bring Microsoft under control. I
 base my opinion mainly on two documents.
 I read the findings of fact from the trial and
 found them so clearly written they were
 almost a pleasure to read. I wrote to the
 Minnesota attorney general supporting
 stronger measures and got back from him
 another very clear document explaining why
 the proposed settlement is not strong enough.

I can't believe you all haven't seen these,
 so I would waste your time explaining them.
 I did also look at the settlement documents,
 and found them not nearly as clear. I saw, or
 had pointed out to me, several
 inconsistencies or loopholes that would
 allow Microsoft to continue its documented
 practice of essentially bullying other
 companies in ways that prevent competing
 products from being sold or even offered for
 sale. Once again, I am sure that others more
 qualified than I have pointed them out to you
 and I shouldn't waste your time with my less
 eloquent attempts. Explanations are all over
 the trade press and even in the mainstream
 newspapers.

I am worried that a company that behaves
 in ways that I consider immoral and courts
 consider illegal is being let off without any
 punishment and, because of a less than
 ironclad settlement, being given too many
 ways to avoid changing its behavior. This is
 a company that drove Netscape out of
 independent existence by illegal tactics. This
 is a company that drove DR-DOS and BE-OS
 out of existence (of course they didn't
 actually "do" it, but for all practical
 purposes, they did). This is a company run
 by people who are willing to, essentially, lie
 in court, as they did with the doctored video
 tape episode that the press had such fun
 with. These are the guys who, when ordered
 to make a version of Windows 95 without
 Internet Explorer integrated, made a version
 of Windows 95 that didn't work—
 "compliance with middle finger extended"
 as one newspaper write put it. This is
 company run by Bill "How much can we pay
 you to hurt Netscape" Gates and Steve "To
 heck with Janet Reno" Ballmer. (I'm not
 making that up, it was in the newspapers).

The government wants, I assume,
 companies and individuals to be able to write
 software and have a reasonable chance to sell
 it. Microsoft wants, in my opinion and the
 opinions of others, no software to be sold
 unless it comes from Microsoft. They have
 taken advantage of every way available to
 them to get what they want, and I am sure
 they will continue to do that. You must make
 sure your settlement proposal is not one of
 them.

Thank you.

Subject: brer rabbit and the briar patch
Allowing Microsoft to settle its anti-trust suit by supplying Windows computers to schools is letting the company off the hook. Granted it is a substantial settlement, but it will expand Microsoft's market and increase their monopoly power, as they effectively are boosted in one of the markets which they do not entirely dominate. This seems hardly an appropriate punishment for abuse of current monopoly power. If the settlement guaranteed that the money would be used for non-Microsoft products, the settlement might seem like a real punishment. As it is, many might mistakenly credit Microsoft with good will.

Subject: Proposed Microsoft Anti-trust settlement

Dear Sir:

I would like to take this time to express my views on the proposed settlement. I do not believe that the settlement as proposed, in any way will improve the marketplace for software. The settlement does not impact Microsoft's current monopoly, nor offer any type of remediation to the millions of consumers who have suffered as the result of their illegal acts. The only result of the settlement is that the government will sanction Microsoft's further tightening their grip on the marketplace by allowing them to control the desktops used in schools.

I urge you to totally reject the settlement. It is not in the best interest of consumers, it does not help the businesses hurt by Microsoft's illegal actions in the marketplace, and it does not in any way punish Microsoft for having violated the law.

MTC-00002440

From: Rebecca Helmer
To: Microsoft ATR
Date: 11/29/01 5:08pm
Subject: Microsoft

The people who think Microsoft did nothing wrong are simply average, uninformed people who did not read any of the text of the DOJ's case against Microsoft. They form their opinions without information; indeed, it is ridiculous to count the views of the uninformed as an opinion at all. That said, you should know that there are very many of us, some involved in the open source software community and some not, who know specifically many of Microsoft's unethical tactics and simply illegal business practices. It is your responsibility to rectify some of these injustices; indeed even the American legal

system, where money is everything, could not avoid a judgment against Microsoft—and now you think that we won't notice that you waffle on the sentence. The proposed "solution" does not even guarantee that We the People will be protected from similar actions in the future, let alone force Microsoft to account for previous heavy-handed tactics in maintaining their monopoly. In fact it benefits Microsoft in several ways and is not a punishment but a government-sponsored product promotion.

One letter, indeed many letters, makes no difference to those who will make the decisions; only money matters I know. But let it be said that there are some of us with an extremely profound understanding of the workings of the computers that run our world, and that these machines run your world too. We, the Intellectual People, may not have the sheer numbers of the Ignorant Masses but one of us is worth a thousand of them, and we are the ones who will be watching you.

From: Christopher A. Grasso
To: Microsoft ATR
Date: 11/29/01 5:32pm
Subject: Antitrust case settlement inappropriately weak

I would like to express my disappointment with weakness of the impending settlement of the Microsoft anti-trust case. Microsoft has repeated engaged in anti-competitive practices, as the judicial findings against the company confirm. Use of secret application program interface (API) calls give Microsoft applications an advantage in the Windows environment over competitors, and allow Microsoft to continue to abuse its monopoly status in order to wipe out free choice in the marketplace. The only way to force these APIs to be open is to split operating system developments and applications development into two separate companies.

Furthermore, the penalties to be imposed do not remedy the situation, and in fact amount to free advertising for Microsoft with the next generation of computer users: students. Microsoft will make duplicates of its already-existing software to distribute at a fraction of the cost of retail products, yet these distributions will count against the company as having much higher value.

Even if the company were forced to pay the settlement in cash, the amount is only about 4% of its cash reserves. This punishment cannot in any way be considered a remedy, or punitive. I urge the DOJ to reconsider the leniency it is showing a proven monopolist. The settlement the DOJ is pursuing will not remedy the monopoly practices of Microsoft, nor will it result in greater protections for consumers.

From: John Oswald
To: 'microsoft.atr(a)usdoj.gov'
Date: 11/29/01 5:26pm
Subject: MS case

I read that MS is offering 1 billion in aid to schools in software and refurbished hardware. All this will do is lead to further need for expenditures on new MS products and more hardware for these schools thus paying MS back for its so-called settlement. If they really want to settle it, they should put the whole billion into new and refurbished hardware and allow open source software makers provide the software for free! Since 99% of the work done on any computer is web surfing, email, and simple word processing and spreadsheet work it seems reasonable that since software that can provide these services in an exemplary fashion is available free and will run on used computers which cost as little as \$75, the billion dollars from MS could go a lot further, help a lot more and be more of a real

'settlement' than something that simply generates more revenues for MS. This benefits the schools in that they can get more computers and get more use of the older ones they already have, the students can take all of the software home and use it on computers there as it is freely distributable, and finally, the poorer families may be better able to afford an old Pentium computer for \$75 than a new \$1500 machine thus allowing more students to be able to do work at home and not just those with parents who can afford a machine that's compatible with the ones in the schools running on MS. This is an all around winner for the schools, the students, and MS still gets its settlement.

Just my 2 cents. Thanks.

Subject: Microsoft settlement

I don't understand all the legal ramifications of the settlement that has been reached with Microsoft but I do have some understanding of the ramifications of Microsoft's way of producing software. I am a network administrator, computer support technician, and computer user. Through my interaction with computers and those that use them, I see first hand the daily hindrances faced with using Microsoft products. Because of their market share dominance, I am forced to really look hard if I am NOT to use their products, so the majority of my work is with Microsoft products. From what I see, in their grasp for market share they produce incomplete and inferior products. In my experience with Unix operating systems, their stability and reliability over the Microsoft OSes is many times greater. It seems if Windows was forced to stand on its own as an operating system then Microsoft would have to put more focus into it and make it a quality product. I feel

breaking up Microsoft is the appropriate answer or least something much more severe than what is being done.

MTC-00002452

From: Rich Webster
To: Microsoft ATR
Date: 11/29/01 8:37pm
Subject: Microsoft is a threat, and is unreformable

To whom it may concern . . .

I have found news of the Microsoft trial results to be shocking and horrifying to a degree only surpassed by Sept. 11th. Why? Because Microsoft has, and continues to aggressively use their dominance to manipulate prices, licensing, and market opportunities through aggressive marketing, mergers and acquisitions, and bulk licensing changes.

Yet, the DOJ and the Bush administration have clearly sold out the interests of the industry to the highest bidder, which most in the industry recognize as further proof of Microsoft's overwhelming power. Judge Jackson was not abusing the prudence in jurisprudence, he was simply stating facts when his harsh words for Microsofts behaviour drew such attention.

The best solution is simply to put all versions of Win 95, 98, and 2000, ME and XP into open source. This will maximize competition and innovation and improve the products themselves. Microsoft will still have at least a two year lead in developing for the platform, yet will no longer be able to hide malicious and intentional "bugs" and "features" and security will be enhanced. Microsoft is the Taliban of the software industry. Taking them out of the position of power they hold is the only solution.

Subject: Microsoft Settlement

As an IT professional, I am infuriated at the proposed antitrust settlement with Microsoft. Myself and the majority of my colleagues had hoped, in the end, that Microsoft would be forced to become an ethical competitor which would provide a real choice for consumers at a fair price. The only way to do that would be to split Microsoft into at least 2 companies; operating systems and applications. As it stands now with this "Briar Rabbit" approach, Microsoft will be given the blessing of the court to gain a monopoly in one of the few markets it doesn't already have. If this settlement is

approved, Microsoft will be the winner. As far as the rest of us, we'll be worse off than we were before the antitrust action was initiated!

Scott Warren

Subject: Settlement Atrocity
Dear Justice Department:

I voted for Bush and favor most of his policies and appointments; however, with respect to the Microsoft lawsuit, I am ashamed of our Justice Department which is making a complete joke of our antitrust laws. Even some misguided business experts laud the agreement so everyone can "get on" with their business, but the proposed government and this private settlement make a travesty of our laws and economic principles. The settlement doesn't punish the monopoly power at all, and only tries to reign in some of its behavior. We need true punishment and a solution that will recreate the competition in operating systems, and now all other significant applications bundled into Windows. The settlements so far do nothing to stimulate the competition, innovation, and investment that Microsoft's monopoly has stymied over the last decade. This is bad for consumers, investors and our economy. Let's get our act together.

Sincerely,
Mark R. Belanger

To: 'microsoft.atr(a)usdoj.gov'
Date: 11/29/01 9:00pm
Subject: Severe dissatisfaction

I am sorely disappointed in the manner in which the case against Microsoft has been settled. The abuse of market influence, namely the monopolistic nature and behavior of Microsoft has hindered the progress and health of the Computing Industry. Their predatory behavior can be seen in numerous attempts to squash competition using unfair and manipulative practices. Steps must be taken not only to absolutely prevent this behavior in the future, but to correct the damage that has been done and punish the past violations of anti-trust laws.

The proposed settlement does none of these things and would allow Microsoft to hold an entire sector of the economy hostage. I hope that the settlement is revised to a point that it has some value.

Thank you for your time.
Sincerely,
Brian Eppert

From: Richard Hamilton
To: Microsoft ATR
Date: 11/29/01 10:01pm
Subject: Microsoft Antitrust

Dear Department of Justice:
Thank you for the opportunity to express my opinion on the Microsoft Antitrust case. It is my opinion that the deal does not punish Microsoft. How does this discourage Microsoft from changing its monopolistic practices? Don't drug dealers give away their product to hook new users? Microsoft should be punished, not given the opportunity to promote its product and continue its monopolistic practices.

This deal does nothing for the people that have purchased their products. What about the people who have had Microsoft products forced on them? Microsoft's license agreements with computer manufacturers have forced people to buy Microsoft products regardless if they have wanted them or not.

Call any major computer manufacture and ask them if they will sell you a computer

without a Microsoft operating system. They will tell you "no." When I go to the store and buy a box of pasta, no one forces me to buy a particular brand of sauce. Why should I be forced to buy a computer with Microsoft products on them if I don't want them?

Microsoft talks about innovation. How can there be innovation without competition? The goal of this settlement should be to give Microsoft competition. Level the playing field by stopping Microsoft's monopolistic practices. Let competition be the breeder of innovation, not Microsoft.

Subject: DOJ vs Microsoft

Bonjour,

All I have to say is that I don't understand how you can leave Microsoft give away (I mean, distribute) is software to schools as part of the penalty phase. This situation will only help them to extend her monopoly. I applaud Microsoft for raising the idea of helping poorer schools but I don't think that the remedy should be a mechanism by which Microsoft can further extend is actual monopoly.

By providing schools with a software choice, Microsoft may provide many more computers to these schools. This could also help them to show that they truly serious about helping American schools.

You should take a look at the Red Hat proposal, this could be a better solution than the Microsoft settlement offer.

Date: 11/30/01 12:10am
Subject: Microsofts settlement
Gentlemen,

The settlement that the Administration has agreed to in the Microsoft Anti-Trust case is totally unbelievable. First, consumers are not choosing Microsoft, they are being forced to use it. I work for a U.S. Federal agency and we do not have a choice, we must use Microsoft products! WE ARE NOT ALLOWED TO PURCHASE OR USE NON-MICROSOFT PRODUCTS. That is the case with many other federal agencies and private companies, because Microsoft has stolen the market, brainwashed many Information Technology people and used pressure tactics the resemble those used by organized crime.

Secondly, this settlement is just absurd. In current terms used since Sept. 11, this settlement is like giving the terrorists a FLEET OF AIRLINERS and letting them use them!!!!

Please do what every you can to stop this settlement from happening. A good alternative would be for Microsoft to just give the schools money, with the only strings attached that it would be used to buy computers, network facilities and software.

But Truly let the schools choose for themselves

From: Jason Brockdorf
To: Microsoft ATR
Date: 11/30/01 2:49am
Subject: DOJ/Microsoft Antitrust Settlement

I think this settlement is a gross attempt by microsoft to further monopolize the software market. Teaching their software in schools (software which will account for most of the revenue of the settlement) will only teach those children to rely on Microsoft products. This is exactly what Microsoft wants so that they may maintain their stronghold on the "wintel" software market. If they really wanted to make a contribution to the education of America's children, Microsoft would make available multiple platforms (Windows, UNIX/Linux, Mac OS/OSX) on which to develop different types of software. Training should also be provided free of charge or at cost via world wide web (we do live in the digital age after all, don't we)? The best solution would be to have Microsoft include only hardware as part of the cost of settlement as the software that they would be giving is essentially costless for them. Money saved by using free/public domain software could be used to buy hardware in greater numbers as opposed to the current settlement. With all that hardware in schools, there is a plethora of free operating system and application software that could be used to help alot more children gain proficiency with computers. Thank you for your time and consideration.

From: Erick Nelson
To: Microsoft ATR
Date: 11/30/01 2:07am
Subject: Microsoft Settlement

To whom it may concern,
I am concerned about the possible settlement with Microsoft. I work in the Education sector and fear that with such a settlement most school districts will be forced to use or move to the Windows Platform. If the settlement goes through as it is then Microsoft will have won. They will get their products into a sector where they do not have a Monopoly and they will become more dominant. Plus it will be great publicity for them to give to the needy.

In any settlement Microsoft needs to have some sort of true punishment (no help in making them more of a Monopoly). Perhaps the settlement should be mainly a payment of Money to the poor school districts. Better yet, have them give money and new computer that are from the competitors such as Apple Computer (iMacs, iBooks) or Linux based computers. Now that will be a punishment.

Regards,
Erick Nelson

From: NancySK@aol.com@inetgw
To: Microsoft ATR
Date: 11/30/01 2:06am
Subject: Microsoft Settlement

I urge the US government and the various states to adopt the settlement agreement that Microsoft and the Department of Justice have reached. I believe Microsoft has bent over backwards to honestly settle the federal government's poorly brought case against it. It is time for all parties to recognize that this was a travesty, settle the case and get on with important business.

I truly believe that the people of this country would have been much better served had the governments (federal nd state) taken on a real monopoly, the electric power generators, rather than a company that was the consumer's friend. And in all I have read, the government's position was that it was protecting consumers. The government wasn't protecting consumers. It was (is) protecting a few marginal companies that may not be able to compete even if the playing field is now tipped in their favor.

I think you guys ought to prioritize your cases on the basis of consumer harm rather than how jealous you are over one man's riches. I don't know whether the government realizes it or not, but the attack on Bill Gates caused the economy of this country to go into the dumper. How's that going to look in the history books. You ought to be ashamed of yourselves. I might also ask what you are doing about these US companies who sell products to related companies located outside of this country for unreasonably low prices and buy from the same companies at exorbitantly high prices. Their income is down and their expenses are up. What is the loss of billions in tax revenue doing to the consumers in this country?

Thanks!

From: Nicole Barrows
To: Microsoft ATR
Date: 11/30/01 4:36am
Subject: Microsoft Settlement

To whom it may concern:

The concept of MS suppling schools with software is inherently flawed for several reasons:

1: It costs them essentially nothing and hence is not a punishment. 5000 hackers could supply schools with MS operating systems for free if they wanted to break the law, which (as the DOJ) has proven) MS does on a daily basis

2: It reduces the competition by essentially "brainwashing" students and parents alike. Children who use MS products at school are more likely to have MS products at home. Parents who buy their children computers will be more likely to buy MS products not because the products are good (from a programming aspect, they are not), but because of an "If it's good enough for the schools, it's good enough at home" mentality.

3: Using differing operating systems is much like speaking differing languages. The earlier children are exposed to different languages (or operating systems) the more fluent they become. My oldest child is eight years old and is comfortable using MS-DOS, TRS-DOS, Amiga Workbench, HP-UNIX, various flavors Linux and the all of the MS Windows operating systems and graphic user interfaces.

4: An unnamed software company has offered to supply operating systems for free if MS spends it's money on hardware instead of software. This will expose more students to differing operating systems, allow more computers to be placed in schools and the operating system they wish to supply is more powerful the ANY operating system MS currently has on the market. It is very similar to the OS I use at work for digital powerplant and substation control. I use their OS to train future powerplant operators.

5: When is the last time you have heard of a UNIX, Linux or Workbench OS computer having virus problems? Giving MS software to schools is just providing the schools with more ways to acquire unwanted virii.

6: MS networking is a real nightmare. Networking with UNIX and Linux is much easier and is completely compatible with both MS and MacIntosh networks. In short, just because something is free doesn't mean it is good. A punishment without sacrifice is not punishment. Providing competition cannot be achieved by providing more market share to the offender.

Justice Department
Re: Microsoft Settlement
Dear Chief James,

I would like my opinion reviewed and included in the settlement notes. I am writing as an Independent computer consultant and a consumer. As a 15 year veteran computer user I feel that Microsoft has done much harm by frustrating and flounder the

development of many opposing or superior technologies. This has been evidenced in so many ways only, some of which have been brought out in this trial. YES they used their influence to control developers and vendors in many ways, and they continue to do so today. These are the real losses for the consumer. Many of the competing technologies have had better systems than Microsoft. We will never know what could have been, if some of these other competing technologies had made it to market. The fact that the Department of Justice has little control over big businesses buying small businesses with competing technologies is the real problem. How many new technologies that could change the world sit on the shelves of large corporations? Is this right? Should big business be allowed to protect their current interests, at the expense of the public loss of these new technologies? If so, then how do you settle an unknown and unmeasurable loss to the world?

The settlement offered by Microsoft is a JOKE! This is just chump change to Microsoft. They are going to provide software that costs them pennies to make, and take credit for a billion dollar tax write off. Tell me, how is this JUSTICE? They should be required to help other competing technologies. This could be done by forcing Microsoft to contributing at least 10% of their total revenue to date into a fund that would be used to further new computer technologies. This solution would have two affects. It should deter other big business from this type of behavior in the future, and it may produce some even better technologies. Limitations put on the use of the money should include that Microsoft not be allowed to participate, in any principal way, with any of the businesses receiving funds. Microsoft or its key partners should not ever be allowed to purchase any of the businesses receiving proceeds from the fund. This is the only way that someone may be able to challenge the control of Microsoft.

Sincerely,
Kevin Jones

From: Ben_Tilly@trepp.com@inetgw
To: Microsoft ATR
Date: 11/30/01 11:18am
Subject: Microsoft Settlement

I am commenting as a programmer who is sometimes forced to work with and interoperate with Microsoft products. Microsoft has been ruled a monopolist, and ruled guilty of abusing their monopoly power. The purpose of the settlement, as I understand it, is to prevent them from continuing to abuse their monopoly power. This settlement does not accomplish that goal. Instead, if accepted, this settlement will join the litany of agreements meant to restrict Microsoft which they trivially bypassed on their ways to becoming a bigger, more powerful, and more abusive monopoly. Certainly it does not limit Microsoft's ability to abuse monopoly power to achieve the goals it has reached for before.

Allow me to present some of the obvious bypass mechanisms which Microsoft has. This list is not exhaustive, it merely gives an

idea of how readily Microsoft can continue its abusive behaviour. There are provisions intended to allow OEMs to ship machines that dual-boot with other operating systems. Those provisions do not restrict the ability of Microsoft to have its operating systems, upon boot, identify, reformat, and reclaim partions of unknown types. This feature is not dissimilar from "self-healing" features already in Windows. It would also eliminate dual-boots more effectively than current OEM restrictions do. If this agreement intends to make dual-boots possible, then it fails.

There are provisions intended to allow OEMs to customize various aspects of the appearance of the operating system. Yet there is no restriction that would keep Microsoft from saying that it will not sell OEM Windows licenses at all. Instead Microsoft can allow the OEM to ship the machine with a self-installer, and then upon initial boot the user and Microsoft would enter into a shrinkwrap agreement. This would be an obvious tactic for Microsoft to use. Once they have done so they can negotiate prices for the self-installers exactly as they previously did OEM licenses. And they further retain complete control of what users can see on a purchased computer. If this agreement intends to either limit Microsoft's ability to abuse OEMs or control what users see, then it fails.

Section G has an explicit disclaimer for any agreements where Microsoft licenses intellectual property from a third party. But Microsoft does that with virtually every major software component, either through cross-licensing of patents or through specific licensing agreements. It will therefore be hard to find any agreements which section G applies to that don't fall under the exemption. Section G therefore fails of any intended regulatory effects.

It does not take a prophet to foresee that Microsoft will attempt to interpret the exemptions in section J far more generously than the government or competitors would wish. Even if such interpretations are outrageous, if Microsoft can make the court case drag on for a period of years, they can make much of the agreement effectively useless. Microsoft could, for instance, build authentication into virtually everything they build as part of .NET, and then apply section J as a blanket exemption. Blanket loopholes, properly exploited, will allow Microsoft to make virtually any part of the settlement fail.

I could list many more ways in which Microsoft can circumvent any intended restrictions. But I think the point is clear. If this settlement goes into effect, Microsoft will have no trouble bypassing it while continuing to abuse its monopoly. Given past behaviour, there is no question that they will. I would find this toothless settlement to be a sad resolution to this episode in the ongoing saga of Microsoft's abusive monopoly.

Sincerely,
Ben Tilly

Subject: Antitrust Settlement
Gentlemen,

First of all, thank you for providing an avenue for us to provide feedback. Before I get into the final settlement, I'd just like to mention that I feel the entire case was mishandled from the beginning. By allowing the focus to be on such trivial matters as which browser is on the desktop, you made the ramifications of this case much harder for the (general) public to grasp. There are much bigger issues showing MS' misuse of their monopoly power, which were made available to the courts, but appear to have never been followed through with.

The reason for this (I assume) would probably be similar to the reason I feel the resolution was unsatisfactory—you were in a hurry. The entire thing had the feel of "let's hurry up and get this over with" and the settlement merely amplifies this. Reviewing the terms, I feel that the entire thing ended up being a waste of time—Microsoft is already back to business as usual, and has received no real incentive to clean up their tactics.

Only two groups of people have seen any negative result from this action:

1) the DOJ, who has shown themselves to be ineffective at best, incompetent at worst; and 2) the consumer, who (apparently) is going to continue to be held hostage to the whims of a certain office in Redmond.

You should be ashamed...

Subject: settlement

Dear Justice:

Please let us not be foolish. It is clear that the Microsoft plan of "donating" free 'old' computers and new MICROSOFT software to schools is nothing but a scam of the sleeziest kind. The whole point of the suit was monopoly, and this will simply further entrench such a monopoly. Microsoft co. is apparently betting that the public, and Justice, really are as dumb as we have appeared to be in recent years. However, this is just too obvious to let pass. Once the schools have Windoze, they will be locked in to Windoze. A donation now is a sale later. I repeat: this is a scam of the sleaziest kind. Only a company with ethics as low and/or non-existent as Microsoft could attempt such an act. I urge you to reject this proposal. If Microsoft donates something, let it be cold, hard cash equal in amount to the educational market cost of the software + 'old' computers which they are currently attempting to unload in this plan. However, I would rather just see them fined heavily, and the money put into a fund for poor schools, which the schools could then use as they see fit (such as hiring more real, live teachers!!)

Subject: Settlement of MS antitrust suit

This settlement of shoving even MORE Microsoft products down the throats of future consumers (school children) is a joke. It will only further Microsoft's monopoly—legally, and with the government's blessing. To make a REAL difference, force Microsoft to publish the source to Windows, Internet Explorer, and Office, on an ongoing basis, and publish their internal technical notes and communications about these products. I consider all 3 of these products to be the result of monopoly tactics, incrementally forced on consumers. Remember the days when Office was bundled with every single PC? Hmm... wonder why they don't do that now? Oh yeah—they've killed all the competition, so now it's party time! To ensure that they are providing the REAL source, have a 3rd party run Microsoft's build procedures and ensure that the executable the 3rd party generates is identical to the Microsoft executables it proposes to release. This will ensure that developers at least have equal access to the foundations of personal computing that Microsoft enjoys. Windows and IE I would consider essential. Office, maybe not—I'm not as involved in that market.

It's utterly sickening to me that the government has thrown up its hands and said "Hey, Microsoft is going to make this difficult for us, so let's just slap them on the wrist and move on." They are a disgusting company that wants monopoly control of any market related to technology that has huge profit potential, and its the consumers that suffer because they have the means to enter related markets incrementally, kill any existing or potential competition, and then do as they please.

Subject: Settlement Comments

I am a computer professional. I am very concerned about the Microsoft monopoly. I feel that the settlement is not a deterrent. It will NOT change a thing at Microsoft. They will continue to squash competition. It is already past the point where any company could possibly compete with Microsoft. It is so far beyond that point that the only possible competitor is a NON-company.

If Linux were a company, it would have been killed by microsoft a long time ago. Apple has such a niche market as to be negligible. The Unix variants are on the way out, except for Linux and possibly BSD. Be aware of microsoft's .NET strategy. The battle for the desktop is over. They are well entrenched and fighting hard for the battle for the server. They have incredible penetration in the handheld market. With ".NET" they will own the internet, and everyone's experience on the internet.

DO NOT BELIEVE Microsoft if they say Linux is a competitor. It is not... It is not even a corporate entity! Nobody can possibly compete against Microsoft. It's been that way for a long time. Only you can change that.

Thanks,
Chris Synan

Subject: One clean solution: Open MS file formats

If Microsoft were required to open and keep open the proprietary file formats of their most-used office productivity software (MWord .doc, PowerPoint .pp, etc.) it would be *much* easier for other products, both free and commercial, to be made to interoperate with these nearly ubiquitous Microsoft products. I think this one requirement, for open file format specifications, would do more than another other single thing to loosen Microsoft's monopoly on office productivity applications. It would be inexpensive to monitor because many software development companies would be constantly on the lookout for discrepancies between the open, published file format specifications and the ones actually used in Microsoft's latest office productivity applications.

Thanks for listening.

Subject: Microsoft settlement

Attorney General,

It would be a great injustice to allow Microsoft to settle its monopoly suit by giving millions of \$'s of software to the schools. This would create a marketing opportunity for Microsoft. In the long run Apple would lose its market share in education. This underhanded so called honorable jester by Gates is only to increase his sales. This punishment for Microsoft is no punishment only another profit strategy. Please do not support this settlement.

Subject: DOJ/Microsoft Antitrust Settlement
Gentlemen:

I believe the antitrust settlement negotiated between the DOJ and Microsoft Corp. is useless. There are too many ways for Microsoft to interpret the agreement to their advantage and continue business as usual. Microsoft will still be able to unfairly dominate their competitors. Microsoft is still able to force users to accept software and licensing terms whose main design and purpose is to maintain monopolistic control.

For all the work that has been done in the past three years I expected better results. DOJ has rolled over and Microsoft has won after being found to be a Monopolist.

Subject: Microsoft Settlement in Favor of
Microsoft

Sirs:

It is my professional opinion as a computer programmer (over 25 years) that this settlement handed Microsoft everything they wanted. Why would I say this? Let us look at the ramifications to small business (less than 50 employees) and the typical home user of computer software:

- 1) Tax Software that will not install unless IE is installed.
- 2) Accounting Software that will not install or run correctly unless IE is installed
- 3) Payroll Software that will not install or run correctly unless IE is installed
- 4) 98% of the desk tops using Intel platforms are Microsoft controlled.
- 5) VB can't run on anything except Windows platforms
- 6) ISPs that will not support their customers unless they are running a Windows environment
- 7) ISPs and others who put out software that will not install unless IE is installed (this goes beyond the business software listed in points 1-3 above). How is it that IE is needed to do payroll and/or accounting? Just what does IE have to do with getting W2s, 1099s, 940, 941, and other federal returns printed? How is it that IE has to be on a system for downloads to work? FTP has been around for quite some time, so why did PeachTree, Intuit, H&R Block, and others decide that

their software had to be connected to IE to get updates for their software?

Why is it ISPs demand a Windows environment or they can't support you (blatant example is AOL/Time Warner's Road Runner)? What is so special about IE that they can't seem to deal with Netscape, Opera, or any other browser? Why do they [ISP and Software Makers] have trouble if you don't use Outlook or Outlook Express?

Now take these things and look at what you have. If small business is forced to use Microsoft environments, how do we get them to look at a cheaper and faster operating system, such as Linux? What about IBM's OS/2? Why did it die (and it is a much more stable O/S than ANYTHING Microsoft has put out AND it supported the Windows APIs!)?

What you've done is made sure that everyone will find the Microsoft environment to be the cheapest to go to. You've done this via case law that makes the Windows API the standard!

Total Cost of Ownership is not what people look at in too many cases. They look at what is the "easiest" to deal with. When all the game makers make games for Microsoft, what will drive the Microsoft purchases in corporate America? It is the familiarity people have with Microsoft. Meanwhile, better systems will fall by the wayside because small business users will not pay the up front costs to train their people—not realizing their back end costs are going up!

Again by case law, you have made Microsoft's new licensing plan the standard. That new standard is a subscription plan for their office products and operating systems starting with "XP". What will be the cost of this? Well, if you don't subscribe, then you can't buy upgrades at an "upgrade" price, but at the full price (per Microsoft). Meanwhile, various independent groups have shown the overall costs for small business to be a LARGE price increase.

Meanwhile, Microsoft has a reputation for buggy code. Why is it that the vast majority of malicious code is geared to Microsoft applications? Is it any wonder Microsoft supports UCITA? Via case law you are pushing poor code/software by ensuring that Microsoft is the standard (e.g. Windows API). How many more "innovations" will Microsoft wrap into their operating system that will shut down ISVs (Independent Software Vendors)? And how many of those innovations will have serious security problems? Again, by case law you've made this the de facto standard.

And so, who would deign to bring another case against Microsoft for predatory practices, anti-trust or outright fraud? Think about this new "NET" ("#") environment being pushed by Microsoft and what effect "myWallet" (or whatever Microsoft is going to call these things) is going to have. Once Microsoft gets out there with XP, and people are losing money (stolen myWallet contents and the like), what attorney is going to file a suit against Microsoft (keep in mind UCITA as well).

The settlement agreement you have entered into with Microsoft was very well described the other day as "the DOJ having snatched defeat from the jaws of victory." I submit to

you that this settlement is the worse possible thing you could have done.

Sincerely,

Steve Thompson

Subject: Microsoft and DOJ

Microsoft has done more than any company in the last half of the 20th century to help and advance the global community. They have provided a wonderful product and emerged as an American Icon for efficiency, aggressiveness and the American dream institution. Put simply, Bill Gates worked hard and made it big. So big in fact that the US government felt it must STOP them because competition could not.

Your DOJ actions have been a major part of the problem with our country and economy in the past 5 years. Things take time to slow down in the US economy. So it has taken that time for you to help ruin it with your actions against this successful giant company. This is just another example of Govt intrusion into private industry that is unjustified.

They make the best products and consumers buy them. Their competition cannot make competitive products because

they are not as creative. So they do the only thing they can...they get the DOJ to compete for THEM.

I am disappointed and saddened in how our Government and how the DOJ action is typical of the way our society has drifted from people who want to pursue freedom and individuality and democracy to how your actions instill the "socialistic" ideals into our government. The govt is big and bureaucratic, full of power points and small "empires" within the big one—a fat non productive Government system! As a voter and non Microsoft employee I demand you STOP these stupid actions tying up time and talents in NON PRODUCTIVE areas. Go after crime, not great institutions and companies like Microsoft!

Subject: Microsoft case

I find it hard to believe that as a punishment, Microsoft is going to be permitted to put their products into schools so that our children can be brainwashed into believing that the Microsoft platform is the only one to use on a computer. That is supposed to be a punishment for being a monopoly? What other possible reason could the company have for suggesting such a plan?

My understanding is that Bill Gates purchased \$250 million worth of stock in Apple computer a few years ago. He did give up his voting rights for 5 years so the article stated. Has anyone considered the ramifications of this purchase when he is able to vote? What if Microsoft decides to port their operating system to the Apple systems and no longer support the Intel platform? This would force millions of users to buy new hardware as there are not many competitors that have survived Microsoft's strong-arm tactics. Is this where things are going? Would it be in the best interest of my organization to start purchasing Apple computers now? Can you imagine what this would do to Intel? What about Dell, Compaq, IBM and other competitors?

I currently am an IT person and I run approximately 10 Windows servers. On one of these servers, I installed a DEMO version of a program called ZoneAlarm by Zone Labs. This is a small firewall program. During configuration, I find that my server is sending information to Microsoft. Why would they want information about my server? What are they doing with this information? Why is this not documented? Why is it legal for a company to write software that will send information back to the manufacturer without the permission of the owner of the product? What gives Microsoft the right to have my server talk to their server without my permission? I felt truly violated upon learning this. I don't want my configuration information or any other information from my servers to be bantered around at Microsoft. This is equal to the telephone company listening in on my phone calls and making notes. This cannot possibly be legal.

Whoever owns the information, is the one with the power. Continuing to let Microsoft go unchecked is a very bad thing and will surely come to be a severe problem for the United States. Microsoft is on a power trip where business ethics are non-existent.

I hope that you are willing to stand up to such a power and make the company follow the ethical business practices that the rest of the United States is forced to follow. I would hope to see the government take this company and give them a good shake while it is still possible to do so. Computers are a very powerful tool in the world today.

Having a company with little or no business ethics (not to mention moral ethics) controlling this industry is just a disaster waiting to happen.

Thank you for reading.

Subject: Appropriate Penalties
Sir,

The proposed settlement of the Microsoft Antitrust case is absurd and we applaud your decision to pursue harsher penalties.

Microsoft has been adjudicated and found guilty. The company should not be able to dictate or determine the consequences applied. The consequences should be that which best serves the public interest and that only can be achieved by reducing the leverage Microsoft has over smaller

companies; leverage that Microsoft has been applying to the market place for years.

Any action that results in the generation of revenues or entries into areas of the market that currently are not dominated by Microsoft or increases dependency on its products would only reward Microsoft for the practices which resulted in their being found guilty for violating anti trust laws.

The only justified punishment is to break up the company, accompanied with substantial fines. The failure of the US Justice Department to pursue this reduces the confidence that citizens can get justice. Now we know the true meaning of criminal justice.

Subject: settlement

This is bad solution. It allows Micr. to do have the same effect as before. What is needed is for the consumer to have the chance to get \$100-\$200 back that was usually paid to Micr. if he agrees not to use their software. This should be a mandatory part of all liscenses Micr. signs with OEMs. This has never been the case and the proposed settlement doesn't help. As long as a Windows/Office tax is bundled in, nobody else has a chance. Just look at Hewlett Packard—they will sell you a linux box for \$100 more than Win 2000. They should have an option where you you pay \$100 LESS for no Windows 2000 and then they could just get something like Linux for free. from Red Hat/Linux Central/ or a friend. Until the consumer has a chance to save the \$100 there is no point.

From: donald j mcmeen
To: Microsoft ATR
Date: 11/30/01 2:59pm
Subject: The Great Microsoft Debacle
Dear Sir or Madam:

My input is simple. Here we have a company that single-handedly created many, if not most of the tools necessary to implement an incredible capability accessible from nearly any place on earth. They, starting with Bill Gates and Paul Allen, combined their unusual skills with great initiative to bring this capability into being.

The results have so many superlatives associated with their efficacy that it would be pointless to start trying to delineate and enumerate them. And I, the ordinary consumer, am able to utilize them for my own interests at a tiny cost. Information availability and communications capability beyond anyone's wildest dreams of a few decades ago are the legacy of Microsoft's initiative, industry and invention.

Everyone who is in a position to affect Microsoft's progress needs to wake up and smell this enormous field of roses, this gift beyond imagination.

Naturally, there are those who, seeing the results that Microsoft has obtained, along with the commensurate rewards which came along with it, are eager to share in.....the rewards. That they didn't have the same qualities that Microsoft manifested would be overcome by resorting to ...why...litigation!

Of course! It's the American way, or at least, becoming the American way. Replace honest effort and industry with a lawsuit!

The Justice Department needs to be a bit more pragmatic about their pursuits. The American economy started slumping over when the Justice Department decided to show Microsoft who had the most power. The stock market joined in the malaise, particularly the technology sector, with many solid companies that will determine much of our future economic health and indeed, quality of life, losing a very large percentage of their value. The temporal relationship between Justice's actions and this change in the value of our economy seems unlikely to be coincidental.

If Justice has a problem with the concept of pragmatism versus idealism, it needs to come to grips with the genesis of idealism. Idealism is the best guess as to principles that yield the greatest success, in some sense, at the time they are formulated. Those guesses shouldn't be taken as immutable or beyond review.

It's time for Justice to take a long look at what they're doing in this business arena, while also coming to grips with the likelihood that a full understanding of the inner workings of the target industry business model may be beyond their reach. Like the stock market.

To: Microsoft ATR
Date: 11/30/01 3:52pm
Subject: Microsoft Give-Away Re: proposed
Microsoft Settlement:

As a U.S. citizen, voter, and user of both Microsoft and Linux operating systems, I feel that the DOJ proposed settlement only furthers Microsoft's monopolistic practices. While the idea of helping school districts with computers is a fine principle, the proposed settlement mostly allows Microsoft to get credit for giving out their own software at virtually no cost to them. This is obviously a market where the consumer (poorer school districts) would not have been able to purchase at Microsoft's outrageous prices anyway. Microsoft should at least be credited only for costs of hardware, not the inflated price of their software as if it was sold. And it should have no license expiration. What good is a 'gift' that has to be returned or paid for later?

Further, since this is about monopolistic practices, it is my opinion that other operating systems and office applications should be part of the deal. Red Hat or another Linux distribution, Star Office or another office application, should be provided. And any cost should be incurred by Microsoft. (The aforementioned products are available free of charge. Only the cost of distribution and manuals would be required.) Other parts of the settlement are even more difficult. Example: "Microsoft will be required to disclose server protocols and interfaces." Good luck enforcing that! Have you tried to just keep up with the changes required to keep your own computer current from the "Windows Updates". They'll just keep changing the protocols and interfaces so no competitors have a chance. Or they'll find a way to sell a service to keep current, thereby furthering their monopoly and getting paid for it in the process!

You've made a step in the right direction. Please make it a meaningful step.

Sincerely,
William G. Lundell

Subject: Microsoft Settlement

The present proposal for Microsoft's settlement is the equivalent of allowing all driver's education autos to be fitted with defective Firestone tires, to the exclusion of other brands, and then expecting the schools system to pay for the fixes that will be necessary. It isn't a penalty—it's a golden opportunity for an abusive company.

I am a long-time computer user [since 1984] and feel it necessary to protest the present proposal for Microsoft to donate software/computers to schools— This merely extends MS's monopoly into the future, with even broader control than that which prompted the lawsuits in the first place.

Microsoft is infamous for producing "rough-cut" software- things that do not function properly—and then charging for upgrades, support and patches to fix whatever the problem is—They are also infamous for providing things that CAN'T be upgraded—and then charging exorbitant amounts for updated changes—e.g. Windows Millennium—was touted as the next generation—It turns out that this system cannot be upgraded to Windows 2000 or any other subsequent upgrade—it is an evolutionary deadend, composed of bits and pieces of previous operating systems, including outdated programs, drivers, and code.

Window XP promises to be just as problematic—or more so. It was sold as the latest and best—as it turns out, there are no drivers available for a wide variety of programs that ran under Windows95/98—the customers who paid upwards of \$500 for this O/S will just have to wait—this is fraud. The Microsoft strategy is to let the consumer find all the bugs for free, and then pay Microsoft to have them fixed—to introduce this kind of confusion into a school system is ridiculous, not to mention the hidden costs of sorting out the problems when they have proliferated across a school intranet.

And then there's security—Consumers should not end up having to pay, either through hidden school costs, or bloated retail prices, for an inferior product just because it dominates the marketplace—that is precisely why Microsoft should not be allowed any possibility of further domination in the future—it's time for alternatives, Linux being one of them.

Subject: Proposed Microsoft Settlement

To whom it concerns,
I'm writing in opposition to the "penalty" that Microsoft is supposed to pay by installing their operating system on thousands of schools across the country. I'm opposed to any "solution" which encourages the spread of Microsoft's monopoly any further then it already has. Look at Microsoft's primary competitor's responses (Apple, Redhat, etc.) to get a feel for what a bad idea this is. Redhat's recommendation that their OS be installed on hardware paid for by Microsoft is a much better alternative, as it would be stunting Microsoft's monopoly position (ie. an actual penalty!) while providing poor schools with much needed educational tools. It's also instructive to observe two key points. First, the cost to Microsoft is not \$1 billion in cash, but rather software equalling \$1 billion in retail value. Equating this to a \$1 billion penalty is ludicrous, as the real cost to Microsoft is much, much less. Second, the party's that originally brought the lawsuit get virtually nothing from this settlement, other then perhaps a (misguided) feeling of justice.

Please resist any recommendations by Microsoft that allow them to further their monopoly position. My favorite quote summarizing this foolishness was made by Albert A. Foer, president of the American Antitrust Institute, who told Motz in a letter that the proposed settlement could be considered anticompetitive, and likened Microsoft's position to that of "Brer Rabbit seeking the briar patch."

Subject: Microsoft Settlement

In addition to the various proposals for structural changes in Microsoft's business practices (published Windows price sheets, etc.), please consider the following.

Microsoft should have to divest itself of its programming tools group. It should not be allowed to write, sell, or distribute programming languages and tools for, say, four years. Such a penalty would help check future Microsoft hegemony without the risk of permanently crippling the company. The new tools programming company would be free to develop Microsoft's programming tools as it sees fit—hopefully to make them as robust and interoperable and platform-neutral as possible.

Such a sanction would be relatively easy to implement; nor would it be excessively disruptive of Microsoft's ongoing business (while I think Judge Jackson was on the right track splitting the company into separate applications and OS companies, I fear that would have created chaos to Microsoft and, indeed, the to software industry as a whole (not to mention all the uncertainties and delays related to determining what exactly is application code and what's operating system code)).

Subject: Proposed MS Antitrust Settlement

If I understand correctly, the wrong that MS has been found to have committed (by the Circuit Court) is that MS abused its monopoly position by giving away its browser, to the harm of Netscape. This "remedy" will require MS to give away its operating system, and possibly other software to various schools, to the harm of Apple. It makes little sense to require MS to carry out precisely the kind of behavior which has been found to be an abuse of its monopoly. If the schools were allowed to take value equivalent to the software that MS offers in cash, at the choice of the schools, I might be persuaded to support the settlement.

With all respect:

Sounds to me like Microsoft is being rewarded for breaking all the rules. "Allowing" them to "donate" millions of dollars worth of computers to poor schools is ludicrous. 1) They will of course inflate the value to lessen their loss; 2) They will quickly gain 1000's of seats in a market where they actually have competition and don't own the market share; 3) Each one of these "donated" computers will require the schools to purchase additional software and hardware from Microsoft; 4) Each of these poor schools will have to find money to hire support staff to keep up with the constant maintenance and upgrades required. I could of course go on and on. But I doubt that what I think will mean a thing to you or if this will even be read.

The irony of the DOJ/Microsoft settlement astounds me. Microsoft's punishment is actually a public relations maneuver intended to garner public support as well as a marketing maneuver intended to gain greater mindshare in future generations. I think Redhat's proposal makes sense. Let Microsoft spend its money on hardware alone while Redhat provides free software. Microsoft can still gain public support, but it does not use its defeat in court to gain market share.

From: Wayne S. Mery
To: Microsoft ATR
Date: 11/30/01 5:38pm
Subject: MS antitrust

To whom it may concern,

After considerable taxpayer expense, Microsoft is found to have violated anti-trust laws to the detriment of the consumer, and to the detriment of the law abiding companies with which Microsoft competes. In any settlement one would think there would be :

- * restitution to the damaged party
- * fines which are cumensurate with a society and government that punishes a law breaker and seeks preventative, punitive fines to show other companies that breaking the law will cost you not just pennies on the dollar (as in the case of this judgement relative to Microsoft's profits)

- * action or oversight to prevent recurrence, within a company culture and leadership that allowed gross illegal actions to take place—indeed, they sought aggressively the means and tools which were foresable to be breaking the law.

To give computers and software to schools is a noble, but too easy and inequitable settlement.

This settlement, agreed to by both the US Government is a joke, and apparently convenient for both.

What happened to the consumer??

Subject: Microsoft Settlement

Sirs,

As someone who has used Microsoft products extensively and as someone who has had to deal with the problems thereof, I would like to comment on the Microsoft Settlement. It does not seem, to me, that the proposed settlement does more than simply give Microsoft a slap on the wrist. I say this because the insurance which Microsoft carries on its operations costs more than the amount it is being asked to pay in this settlement. Bill Gates alone makes more per year than what Microsoft is being asked to pay. This, therefore, is no burden to Microsoft. A "burden" is something which places you at a disadvantage, makes it hard for you to operate, or otherwise inhibits your ability to function normally. This settlement does none of these. It is merely a minor hinderance easily overcome.

I feel that, due to what happened on September 11th, the importance of this case has been lost to the Department of Justice. Instead of remembering what Microsoft has done, the Department of Justice simply now wants to "get this over and done with." This may not be true—but that is the impression which is being handed out to the people of America. That it is ok for the biggest corporation in America to destroy, manipulate, or circumvent the laws which lesser people and companies must adhere to simply because they have enough money to buy their way out of the problem. To slick the palms of some officials, or to promote offers behind closed doors which, on the surface, appear to be genuine but upon closer inspection simply increase their holdings. A true settlement would have included provisions to ensure that none of the systems thus purchased could have a Microsoft Operating System installed. Such as requiring them to be Apple Computers—thus reducing Microsoft's ability to extend their holdings. This would have allowed both LinuxPPC (Linux for the PowerPC) or MacOSX to be installed. Or require that no Microsoft software be installed on any of these systems period. This would have allowed Corel's Office package, Sun's StarOffice, KDE's KOffice, or any of the other so called "Office Packages" to be used instead of Microsoft's. These are minor burdens. To enlarge these minor burdens into major ones extremely stiff penalties such as time served in prison, heavy monetary penalties, and the like would have to be

incorporated into the terms. Which would make the entire affair unpalatable to Microsoft. Thus, these would have to remain minor burdens.

A major burden (in and of itself) to Microsoft would have been to make Microsoft give up something like ten percent of their annual income for the next ten years and that this income go to such things as the Free Software Foundation(FSF) or the National Science Foundation(NSF) (who helps to back the FSF) or for the intended purpose proposed above. THIS would be a burden. Especially if they were forced to pay the taxes on this money before it is distributed. Further, the proposed ten percent deduction on their income would not destroy the company—all it would do is to slow them down. Which is what should happen. Let me reiterate that: It is not our intention to destroy the company—but we most certainly do wish to slow them down so other companies have the chance to compete. Therefore, if Microsoft itself were forced to aid its competitors through the use of a ten percent tax, this would not only be a major burden—but everyone in the United States would benefit from this settlement. This is because Microsoft, according to Standard & Poor's last recording (if I remember correctly), earned over \$300 Billion dollars last year. \$30 Billion dollars is a few more dollars than amount presently in the proposed settlement.

Finally, I would like to turn your attention to the committee which is to be set up to oversee Microsoft. I believe that the people who should make up the committee should be picked, randomly, each year, from those companies who have borne the brunt of Microsoft's attacks. Who better to ensure that Microsoft conforms to the letter of the law than the very people to whom they have done so much? My proposal on this matter is that each of the plaintiffs in the lawsuit must present a list of names of all employees who work at the various companies. (No job titles or any other information should be used.) These names are fed into a computer program which randomly orders the names. Starting at the top of this list, these people are contacted and asked if they wish to work on the oversight committee. If they do, then some of the money from the settlement is used to pay their salaries for that year.

Each year this is repeated with no company able to send the same person more than once. From this second group of people the final people are picked to act as the oversight committee. Again a list is devised and a random selection is used. I suggest five people instead of three and I believe that the committee should be set up in a manner similar to a small claims court in that there is a litigant and a defendant. The problem is laid out for the "judges" who then decide—with the help of an AntiTrust Division person—whether or not there has been a violation of the AntiTrust Settlement. If they find that there has been a violation, then the matter is turned over to the AntiTrust Division for further investigation. If not, then the reasons for not turning it over must be made clear to both parties as well as the AntiTrust Division. In all cases, a written report of the entire proceedings, with each

“judge”’s reasons, must be made available to the AntiTrust Divison. In addition, all cases should be posted on the Internet for public viewing along with each “judge”’s opinions and the AntiTrust Divison’s decisions.

You, who are reading this, might feel the above to be absurd—it isn’t. First, it ensures that no matter what—Microsoft can not determine ahead of time nor control who is going to be on the committee from year to year. Second, it gives the AntiTrust Divison a say in what happens. Thus, there will not be a “kangaroo court” outlook and anyone who acts otherwise should be removed from the panel and replaced with one of the alternates. Third, many different viewpoints will be presented as the years follow. Thus, someone who is not highly affected or who might be pro-Microsoft may still be on the panel as well as someone who might be greatly against Microsoft. Thus the reason for five “judges” instead of three. To give a greater breath to the proceedings. Nor should the “judges” be of a certain age, ethnic background, nor education. (Although a college education might ensure a greater depth to the person’s outlook and someone of an elder age would give a person [hopefully] more of a scope to life. Still, discriminating against someone simply because of their age or number of years in school or college should not be tolerated.) They should simply be employeess of companies who are affected by the manner in which Microsoft has operated. Last, it alleviates the AntiTrust Divison of the burden of listening to endless streams of companies complaining about Microsoft’s operations. Or at least partially. And it places the burden upon the very people who have complained in the past to monitor the future. (Although Microsoft would be the one who is paying for these people to sit in judgement on what Microsoft itself is doing.) Thus, everyone—except Microsoft—would win.

Thank you for your time in reading this.

Yours,

Mark Manning

1) microsoft is a monopoly, if you couldn’t prove that ...

2) the judge who got thrown off the case was right about his categorization of microsoft and bill gates

3) If you let microsoft “contibute” to underprivilege schools, take the billion and let the schools decide for themselves what they want to buy with it. don’t let microsoft copy there own software and give it away.

4) What i’ve learned from this case is break the law and get richer before and after cause the government can’t or won’t do anything to stop a billion dollar company.

Finally, how much money was wasted on this case to simply let microsoft get away with it and even get to strengthen their monopoly on top of it.

No one is paying attention to the costs and benefits to the home consumer. The home consumer WINS if Microsoft is left as is. Yes, the average consumer does not want to make choices around which operating system to purchase, then having to figure out which software applications are compatible. The average consumer also does not want to worry about interfaces between those pieces and parts that are not compatible, because when something goes wrong, there will be no one to take ownership of the problem. Additionally, once the consumer has purchased all of the pieces and parts, chances are that he/she will need to install all of them, instead of the PC coming reading to use. In the business world (I am a business software consultant), we call the best of all the pieces and parts “best of breed”. “One stop shop” is when everything comes from the same vendor (or partners that have produced products using the vendor’s tools, thus making it seem like they are from the one vendor). Most companies shy away from “best of breed”, because they don’t want to deal with various vendors, interfaces and consultants during installation, and even more so once they are in production. In a “best of breed” situation, there is a lot of passing the buck. This costs time and money for the customer.

To the average consumer, “one stop shop” is less expensive and more efficient. Generally, we don’t have the time or knowledge, which results in us being passed around from person to person (on the phone, after being put on hold) when we have a problem. Maybe I can dig through it, but my husband and my father certainly cannot.

They are not in the tech industry at all! I buy my home personal computer with everything installed—operating system and applications. When something goes wrong, I make ONE phone call. I don’t have to make several calls (like I must do with the phone company, because data, voice, equipment, etc., is all handled by individual parties, and after an hour, you still don’t have the problem solved).

I think Microsoft is an innovative company, and I think the tech companies who have sued are exhibiting nothing more than sour grapes. Let’s face it, they lost the game. There are other business that effectively partnered with MS. In our culture, business is survival of the fittest, isn’t it? Sales have always been aggressive in the places I’ve worked. If companies choose not to do business due to aggressive sales tactics, so be it. That is their choice. Those who can handle it, will and those who can’t won’t (in this case, they are suing which I guess is the American way, as jaded as it sounds).

Breaking up Microsoft will damage the home user’s experience with the personal computer. It will increase the cost in dollars and time, and be inefficient.

It is truly a pity that the DoJ invested so much time and money and got a guilty verdict against Microsoft and now proposes not to have them suffer any consequences as a result. Truly crime does pay.

You are all fools at the DoJ if you believe that they will follow this settlement any more than they followed previous ones.

Let me make this simple for you, (all the top attorneys must have left with David Boies)

1. Microsoft is a monopoly, they do not innovate.

2. The landscape is littered with companies that were innovative and had products that they were able to sell at a profit when Microsoft incorporates what their product does into windows. The innovative company goes bankrupt.

3. The only way to prevent this is by severing the operating systems from the other applications. Judge Jackson had it right.

Joe Balbona

Att: Renata Hesse,
Trial attorney, Antitrust Division,
U.S. Department of Justice

Dear Renata,

I am very pleased to be allowed to comment on the settlement of the Microsoft Antitrust lawsuit. We have followed this case quite closely and are not too happy with Judge Jackson's biased statements and some of his rulings. We cannot see where this company has harmed the consumer in any way with it's business behavior. The real issue is that they have been more aggressive in their marketing techniques than some of their competitors, but that is not against any law we're aware of. The most interesting thing about this whole case has been that the only parties that have been against MSFT have been their competitors such as Oracle, Sun Microsystems, AOL and a few others. Common sense tells you that this would be a great way to help your own company if you could get the government to tie up your main competition for a few years in a legal battle. We believe that is exactly why this has been done. The companies mentioned above have also been very helpful in raising campaign funds for the previous administration and those politicians who have supported the legal battle.

Again, we can see no evidence that this company has harmed the consumer in any way. For sure they didn't when they gave away their web browser for free. Of course Netscape would complain because they were charging \$80 for their browser while MSFT

started giving their browser away (free) but that certainly didn't harm the consumer in any way! Netscape didn't like it but then we consumers didn't like paying \$80 for something that we could get for nothing either. We weren't harmed at all.

We would also like to convey to you that as MSFT goes so goes the economy, here in Washington State and over the whole nation. They have done nothing to harm the consumer only doing what their competitors don't like.

Sincerely Yours,
Mr. and Mrs. Chris E. Messmer

To: Microsoft ATR
Date: 12/1/01 12:59am
Subject: Proposed Settlement = slap on the wrist

Dear People

No other software company/OS vendor on earth controls both applications AND the OS they run on as Microsoft does. Their dominant applications (“Word” etc) allow them to ignore problems in the OS. The temptation to sabotage competing applications through manipulation of the internals of the OS is irresistible. That was the fate of Wordperfect, a better Word Processor. Checking the most recent reviews, it is STILL better. It is also almost completely bankrupted.

Microsoft has been found guilty, and quite correctly. Their greed and their incompetence have led us to things like “nimda” and “code red” which have cost the REST of the industry billions of dollars. If they split into an OS company and an applications company, the OS company would quickly face competition from “Word” running on Linux that would cause it to take security and reliability seriously. Word has to run on Linux for that to happen. Can you order that without breaking up the company? It is that or breaking the monopoly that MS Office has on the desktop.

No... but you DO propose to “force” them to provide software free to the schools of the nation and they will be laughing all the way to the bank. They have been trying to wrest the schools away from Apple for a decade and you will REWARD them for their criminal behavior by handing them an even larger mind and market share. Since profanity is not appropriate to this letter I cannot tell you what I really think of this. Force them to distribute Wordperfect Office Suite instead of hustling “Word” in the schoolyards... but they won't go for anything that actually “punishes” them.

You are the watchdog. If YOU roll over and play dead we are defenseless. It is my opinion that this “settlement” does nothing

to punish Microsoft for the crimes of which it has been found guilty and far less than nothing with respect to the crimes it has actually committed. I am furious with this supposed punishment. It is bizarre, it is a travesty of justice and if it stands it will be remembered as a black day for the US computer industry.

THREE monitors for their code base? Pardon me while I laugh... and cry. I am a software professional with long experience in the industry. I often am forced, unwillingly, to use the bug ridden trash that Microsoft provides. That tells ME that they are a monopoly. I *have to* use their products when someone elses product is a better more reliable choice. I know the difference. I know their history. I know their products. BREAKUP is the very best solution, best for the country and best for Microsoft.

Having to really compete with other platforms instead of riding their application's dominance and exclusivity would really tighten up their security and reliability. I would LIKE to be able to recommend a Microsoft product once in a while... but unless they are broken up it will not happen in my lifetime.

Subject: Please revise the microsoft settlement

Dear Sir or Madame:

I am writing to ask that you revise the settlement with Microsoft. Microsoft has done many, many things to illegally squelch competition and continues to gouge our pockets. The latest Operating system release, Windows XP, has even broken the tradition of not changing core systems. These changes have resulted in “existing software” written by other companies to break when systems are upgraded to Windows XP, or simply fail to install and work on a new system.

The Red Hat Corporation has suggested an alternative that I, as a Computer and Information Technology professional, feel benefits everyone. Please view this plan at http://www.redhat.com/about/presscenter/2001/press_usschools.html Red Hat is offering to give away services that it usually charges for (support and printed documentation for its operating system package) in place of Microsoft software products. Microsoft is in the business of software, so giving away 200,000 copies isn't going to do anything to them. Please, help our schools by increasng the number of computers from 200,000 to 1 Million and make Microsoft PAY for it's crimes completely by forcing them to spend the money to purchase hardware.

Thank you very much!

 Subject: Comments on the Microsoft Settlement

I am very sadden that the DOJ is permitting Microsoft to go unpunished after being found guilty of monopolistic practices. Having the most dominant and richest software company in the world provide free software to the end user is not a punishment it is a joke! This only permits Microsoft to expend its user base at very little cost. The time to act agents Microsoft is now. It is the responsible of the DOJ to ensure the punishment fits the crime. Microsoft must not be permitted to impose its will on the user by killing off the competition. This is not how a level playing field is created. As a side note, this is not he first time Microsoft has been found guilty of monopolistic practices. How many more times will it take for the DOJ to act. Action speaks louder then words.

Thank You

 Subject: Microsoft Antitrust Joke

DOJ, As a software developer interested in the real progress of technology I'm disappointed in recent developments concerning Microsoft and so-called 'Department of Justice', since the Bush regime came to power. Computing is such an important issue for the whole of society that it should be encouraged to progress, or at least allowed to progress freely. It should be realized that talking about innovation in sound bites is not the same as being actually technically innovative! For the Department of Justice to live up to it's name (i.e., Justice) and at least be worthy of some respect, perhaps companies convicted of monopolies should be held accountable for their behavior.

Allowing Microsoft to place many Intell computers, running Microsoft OSS, in the schools as some sort of punishment is so unfortunate. Is the Bush DOJ part of Microsofts Marketing department?

 To whom it may concern,

I appreciate the notion to put computers in our poor schools. However, I recently read an alternative proposal from Red Hat. http://www.businesswire.com/cgi-bin/f_headline.cgi?bw.112001/213242744@ticker=RHAT When I first heard of the proposal, I instantly began to wonder if this proposal from Microsoft was actually an investment into their own future rather than necessarily a punishment or act of sheer graciousness. Indeed, I am very much in favor of being able to put even more computers in the schools at no more of a cost to Microsoft and at the same time, allowing students to benefit from the wealth of quality software from the Open Source community. This software, as well as the operating system, will not carry burdensome licensing fees. The lack of such fees will enable these schools to continue offering the latest software and programming techniques to students.

I favor Red Hat's proposal, and sincerely hope that it is considered.

Thank you very much for your time.

Very Respectfully,
 John H. McArn

 Subject: Microsoft non-settlement

I am furious with the lack of an appropriate resolution to the suit. I feel that Microsoft has indeed far exceeded it's rights. They are clearly a monopoly and a cruel, aggressive and brutal one at that. Microsoft should not be allowed to exist as a single entity. The corporate culture is so predatory that they are still left with all of the cards in their hand. If they are allowed to continue to go on getting their way there will be no chance for new companies to spring-up and compete. Innovation has already been crushed by a company that doesn't know how to innovate to save its (already lost) soul. Business IS competition, but the praying field should be level, not the face of a cliff!

D.O.J. has sold out! I am deeply disheartened by the settlement as well as the disingenuous Microsoft "donations". You can do so much better for the American people.

Sincerely,
 Jim Thale

 Subject: I support the Red Hat variation of the MS antitrust settlement

Despite estimated damage awards of 10 to 15 dollars per harmed consumer, these

specific economic damages cannot reconcile the larger social harm Microsoft caused through stymieing innovation. Competition and the chance to earn economic profit spawns innovation. However, Microsoft's market power allows it to enjoy monopoly rents and use those rents to protects its monopoly: all at the expense of society!

The best remedy to this case would have been to break the company into two non-competing firms—one firm to make operating systems and browsers and the other to make applications. In this way the applications barrier to entry and thus the network effect would not be such an onerous obstacle for a competing OS to overcome. The new "applications specific" firm would have an incentive to port Office to Linux, Unix or other new OS's. The DOJ is taking the easy way out of this case. When "society" is injured the proper remedy ought to be to eliminate the source of the injury and not to exacerbate it! How could society benefit from having Microsoft increase it's market power?

Red Hat's proposal upholds this philosophy. If adopted it would instantly provide a sufficiently large installed platform base for software venders to have an economic incentive to either port existing application or develop new ones in a non-Windows environment. Increasing the number of venders coding in alternative platforms will lead to more reliable and efficient software notwithstanding Microsoft's arguments.

Subject: Sysadmins Speak.

Microsoft continues to be a highly destructive force in the IT business. There is a subtle form of monopolistic leverage they use that is rarely discussed.

Because management never sees any OS but the one on their desktop, they are confused when told that certain services and or servers could perhaps better be run on another OS. They and most of the rest of the non technical world is simply unaware that there is an alternative. They continue to build incompatibilities into their own products to force user to 'upgrade'. It is next to impossible to buy a Laptop without Windows.

They are now trying to make discussion of security issues and bugs in their products a criminal act.

They need to be stopped before they ruin the internet, which they are well on their way to turning into they own DMCA protected Microsoft Disney Land.

MTC-00002542

From: John Ziriaux
To: Microsoft ATR
Date: 12/1/01 5:46pm
Subject: Controlling Microsoft

Microsoft (MS) is a monopoly. What's more is, it is a predatory monopoly. To me that

means that rather than inovate, it copies small companies' successes and gradually forces those companies out of business by the strength of their monopolistic position. MS has done this so many times that this behavior must be regulated. It cannot be allow to use its dominate operating system position to promote its other products and punish its rivals as it has in the past and continues to do today.

Capitalism can only work if everyone is given a 'chance'. MS is in a position to deny other even well-funded companies a 'chance'. This stifles inovation and eliminates any competition which would preasure MS to improve its products.

It is worth noting that one of the biggest threats acknowledged by MS is Open Source software. This is largely because there is not viable business competitor left.

Part of the reason for this is the MS's aggressive behavior and but also the nature of the software business. In software, as in previous monopolistic enterprises, standards are critical. Once a given operating system, word processor or spreadsheet is the de facto standard, the owner of that standard can use that position as a weapon against all competitors. MS has done this repeatedly. That's why the most useful standards, like the ones that power the Internet are not owned by anyone company.

Even in the case of established standards, however; MS has at first adopted, then added proprietary extensions to existing standards, then having polluted the environment, MS drops the now useless standard in favor of its own proprietary standard. This MS tactic is so well know that it has been named "Embrace, Extend, Extinguish."

Another tactic, is called "Fear Uncertainty and Dread" or simply FUD. FUD is when Microsoft announces that use of a competitors products with be incompatible with future MS products. This announcement alone is enough chill the market.

I believe that MS is so powerful at this point that only severe government action has any hope of leveling the playing field. I don't think creating multiple MS's split along lines of business would be and advantage. Three companies from Windows NT/2000 and Windows 98 and Windows XP would create real competition. And so on.

Another possible solution is for the government to force the development of public standards for certain file formats, such as word processing and spreadsheets. This would rob MS of much of its monopolist power. One thing the government can do is to modify its own purchasing practices. That is. Don't standardize on Microsoft to the exclusion of all else. The government is such a large customer that if the government were to adopt a variety of office suites and operating sytems and insist that they work together. Then they would. However, if it encourages monopolistic practices by buying and supporting only one company's products, a Microsoft monopoly is almost certain to continue.

Finally, whatever regulations are implemented care must be taken not to discourage one of the most innovative sources of software in existance today. Open

Source. This is truely a free speech issue which MS would love to destroy.

Thank you for giving me this opportunity to comment.

Subject: proposed settlement

Renata Hesse, J.D.
Trial Attorney
Antitrust Division
U.S. Department of Justice
Dear Ms. Hesse:

Thank you for this opportunity to express my concerns. This proposed settlement is I think more than fair. Microsoft's competitors are merely seeking help from the Justice Department and from their respective state governments to gain ground on Microsoft...something they could not do on

their own in the free market environment. It should come as no surprise that the states holding out for further litigation are home to some of Microsoft's biggest competitors.

The original premise of the legal action against Microsoft is that the American consumer has actually been HARMED by Microsoft's actions. Have we really been harmed? It is estimated that 75% of Americans now have access to the internet, and many of us now consider the computer to be an integral part of our lives. Prior to the emergence of Windows, where was the U.S. computer market? Where was the mass appeal of the computer that we enjoy now? Is the U.S. now leading the Western nations in terms of computer and software advances? I watched in the mid 1980s how a roommate of mine struggled to learn the IBM operating system...that came with about 11 volumes of material he needed to read to learn how to use it. I, who at one point in early 1990s never envisioned owning a computer, now have three...including one for my five and three year old daughters. So, I ask once again, has the U.S. consumer been harmed by Microsoft, or has Microsoft led the way in making the U.S. so technologically capable as it is today.

One final point.....I think that the rest of the world is shocked and amused at how our country would use its taxpayer resources to try to hamper and almost tear down one of the world's most successful companies, which happens to be American. Would the French do this against Microsoft, if Microsoft were a French company? Would China do this against Microsoft, if Microsoft were a Chinese company? I think not. In addition, during such tumultuous times, when our country is concerned with so many foreign and domestic threats to our security and to our way of life, the battle against Microsoft by the remaining states seems to be misguided and totally inappropriate.....if not downright unAmerican.

Let's do the right thing and get this issue behind us, and look to taking care of this country.

From: Chris Johnson
To: Microsoft ATR
Date: 12/1/01 7:00pm
Subject: re: Microsoft Antitrust Settlement

Some of the best software alternatives to Microsoft's products are open source software projects. There is nothing in this settlement which addresses Microsoft's FUD (Fear Uncertainty and Doubt) campaign against its competition, including OSS. This campaign of mis-information is of course much better funded by the Microsoft monopoly than its competition and should not be permitted.

Furthermore Microsoft has lobbied and campaigned heavily (and very likely bought a few politicians) for changes to licensing and commerce such as those proposed in the UCITA which would strip consumer rights and effectively place non-commercially developed software such as OSS at a competitive disadvantage. If the whole idea of anti-trust legislation is to protect consumer

rights and prevent unfair anti-competitive practices, then clearly your settlement does not do enough to block these Microsoft practices which fail both tests.

Lastly the settlement does nothing to recover damages from years of Microsoft illegal practices nor prosecute the Microsoft executives who felt they were above the law. If this settlement stands it will prove to a new generation that it's illegal to steal food to feed your family but it's ok to steal millions from people and government. That the rich don't have to worry about the law. Don't make that statement. Assess damages and require compensation from Microsoft that is to consumer advantage, not Microsoft's. And prosecute the individuals responsible for the willful and blatant violations of law of which the company has already been found guilty.

Sincerely,
Christopher Johnson

To: Microsoft ATR
Date: 12/1/01 7:54pm
Subject: Bad Proposed Settlement

Greetings,

It seems that there is no substance at all to the proposed settlement. Has MicroSoft purchased the DOJ? Specific issues:

1. There seems to be nothing to curb or discourage the found anticompetitive practices exhibited by MicroSoft.
2. There is nothing that dilutes the monopoly power, oversees it, or otherwise mitigates or regulates it.
3. The settlement only deepens the Microsoft monopoly—by providing \$1 Billion in products, services, etc... to schools, they are INCREASING their market penetration, especially into schools which have traditionally had a reasonable representation of vendors and platforms.

It seems it would be better to say "tsk, tsk... no remedial action necessary" than to proceed with the proposed action. In light of the findings of the case, this is a mockery of the concept of justice, and has made the entire process seem some sort of sham. This is simple capitulation on behalf of the entire justice system. AT&T was forced to break up, and it was a good thing in the long run.

Breaking up Microsoft—applications and operating systems would be a logical division line. This would increase competition in several ways—and force clearer communication of the APIs associated with Windows and the core MicroSoft applications.

I am severely disappointed and have lost a tremendous amount of respect for the Department of Justice.

Sincerely,
Rob Ferber

 To: Microsoft ATR
 Date: 12/1/01 9:13pm
 Subject: VERY UNJUST settlement

Dear Sirs:

I am writing to express my extreme displeasure with the settlement proposed by Microsoft in their Anti-Trust lawsuit. I make my living servicing Microsoft products, however, that's only because they are the only real competitor in the marketplace. I would be only too happy to spend my time servicing Sun or Linux boxes, but there just isn't a big market for those skills. The proposal to let Microsoft give "free" computers and software to thousands of underprivileged school districts nation-wide would be like catching the wolf who killed one of your sheep and then forcing him to eat the rest of the flock or like the drug dealer who gives your kid his first "hit" free. If this settlement is allowed, Microsoft will have scored the biggest victory in legal history in having been found guilty of Anti-trust law violations only to be allowed to increase that monopoly 10 fold as the supposed penalty. If Microsoft wants to help underfunded school districts as part of their penance, Great. Let them donate money, NOT SOFTWARE. If they want to donate hardware, fine that works too.

If this settlement is supposed to be a penalty, then why not as the CEO of RedHat, Inc. suggests, let them pay for the hardware and allow RedHat, Inc to provide all the FREE LINUX software and support. If we want to level the playing field, that's your true answer.

Thanks.

Sincerely,
 Michael L. Van Scyoc

From: John Borchardt
 To: Microsoft ATR
 Date: 12/1/01 9:07pm
 Subject: MS Settlement

To whom it may concern:

In my opinion, the proposed "punishment" of Microsoft for their monopolistic business practices is a joke.

A joke.

It does not punish Microsoft at all. \$1 Billion dollars means little to a company as large as Microsoft. Furthermore, the proposed "punishment" in fact extends Microsofts monopolistic tendrils even further into our economy and society. The current settlement is not a punishment at all. It in fact benefits Microsoft.

I suggest you take a look at the punitive action proposed by Red Hat, Inc. Their proposal states that Microsoft will provide only computer hardware, and no software, to the nation's most disadvantaged students. Red Hat will provide all the software, from the operating system to the productivity suites, and unlimited technical support for these systems. In turn, Microsoft will use the funds they would have "spent" on licenses for Windows and Office to purchase even more computers for these schools. Red Hat predicts that as many as five times as many computers may be delivered to schools under this settlement as compared to the current settlement. Put simply, Red Hat's plan punishes Microsoft, benefits more the nation's poorest schools, and fosters a long-term solution to Microsoft's monopolistic business practices: competition. I thank you for your time.

From: Bruce Brandligt
 To: Microsoft ATR
 Date: 12/2/01 2:46am
 Subject: Microsoft Settlement

After reviewing the proposed settlement I find some glaring omissions that need to be addressed.

First of all, I propose that the settlement should be amended to included that Microsoft should be prevented from distributing any of its software for free or at well below development and distribution costs when other software companies have competing products in existence or in development that are part of the competing companies' revenue stream. This would prevent Microsoft from unfairly eliminating competition as was the case with Microsoft's free release of Internet Explorer and the negative impact this created for Netscape Incorporated. This would also prevent the donation of software to schools and other institutions which results in an unfair advantage over other competing companies such as Apple Computer and Sun Microsystems. Companies that rely on revenue on the sale of their goods that are in direct competition with Microsoft can not compete against "free." Microsoft should not be allow to make these donations that eliminate their competition and further expand Microsoft's market share beyond their current monopoly.

Secondly, from what I understand of the current proposed settlement, Microsoft is basically told "not to do it again" and a oversight committee will be established to prevent future infractions. However, no damages have been awarded to the countless businesses and persons who were victimized by Microsoft's actions. I understand that persons who feel they have been victimized are entitled to sue and possibly recover three

times damages. But what of those that have been financially ruined and have little means to file suit against such a large corporation? What of the companies that were so damaged that they are no longer in existence? Employees, former employees, and users of products developed by companies such as Apple Computer, Sun Microsystems, Word Perfect, Novell, Netscape, Silicon Graphics Incorporated, and Bungie Software, should be immediately compensated. Additionally, rebates should be provided to all registered users of Microsoft products that were forced to purchase MS products due to the elimination of the developer of the competing product (ie. Word Perfect users who were forced into switching to MS Word to maintain compatibility with both the OS and the proprietary MS Word files.)

I hope that my proposed amendments to the proposed settlement are given due consideration so that justice may be served.

Sincerely,
 Bruce V. Brandligt

 Subject: Microsoft Antitrust Action
 To: Renata Hesse, Trial Attorney
 Dept of Justice

I would like to make several comments relative to the Microsoft case, as well as other large class action cases. I think the Microsoft action should be put to bed, if Microsoft committed antitrust actions, I'm glad they did. I am very happy with their products and the fact that they are integrated so a "low tech" user like myself has a chance. I don't want to go to 27 different software companies to get the best, up to date products. I want it bundled all in one neat package. I don't feel that I have been overcharged, in fact the competition in the marketplace is fierce. Please compare the price of a wordprocessing software package 20 years ago to the price today—not to mention the features in today's product.

I also feel that the states' attorneys general are a pack of blood sucking thieves, trying to suck as much \$ as possible from Microsoft or any other deep pocketed company. Compare the action against the tobacco companies. They handed a bunch of money to the states and then turned around and raised the price of their product \$.50 a pack to cover the cost of the award. Most of the states took the money and ran. They didn't use it to help smokers like myself quit, but used it to balance the states budget.

I support Microsoft and hope that you and the states can come to a speedy agreement that stops wasting taxpayers \$ and lets Microsoft continue to improve their products. Thanks for taking the time to listen to an overworked, overtaxed citizen.

Sincerely,
 Fred D. Venables

Subject: Must have competition and free markets in computer software

Dear Sirs: I feel it is very important to have an open, free market with full competition in the computer software marketplace, including computer operating systems. This is essential to foster the fullest development of the greatest variety and quality computer resources at the lowest prices to the largest market of customers. Open source software plays an important role, which I myself benefit from enormously. In most industries, the US government would consider the domination of over 90% of the market by one company to be an illegal monopoly, and this should also be the case for hardware, software and operating systems.

Furthermore, computer file formats that become the commonplace standard for that type of file should not themselves be copyrighted, such as .doc and .exc, in the sense that any person or organization must have the right to write software that can read and write such files. Neither should the appearance of the graphical interface of a program interface be copywrited, where such an interface has become a standard for that (or many) types of programs. Further, persons and organizations should be free to obtain and develop open-source software and freeware without requiring any kind of license, if the program's authors themselves do not so require one. Finally, companies should be encouraged to sell multiple copies of the license for software, all sharing one set of installation disks and manuals, at a significant discount, to discourage illegal copying.

Sincerely, Clifford Felder

ATR.mcarona@ocsd.org@inetgw
Date: 12/2/01 4:10am
Subject: Macadamia Nuts

Today's subject of this email refers to the academic & business rivals of Microsoft Corporation who will take the lead in the nine state holdout of the US v. Microsoft settlement. The nine attorney generals and their legal teams have challenges with the extrapolation of (for those who just don't 'get it').

In other related news, local electricians turn off the "W" on the Wells Fargo Bank—Irvine sign overlooking the 1-405 freeway near MacArthur Avenue and John Wayne Airport as a communication that Larry Ellison, CEO of Oracle Company, is a major player at the Bank. The 'Ells Fargo Bank' beams this 'coded' message almost every other day to all who enter the 24 Fitness Sporting Club as well as the thousands of commuters and travelers near the Lakeshore Tower corporate campus across freeway 1-405 in Irvine. Apple Computer & Sun Microsystems will continue to distract Microsoft's lead negotiators, forming the alliance with Oracle Corporation to lobby the remaining nine states from a 2001 Holiday settlement, instead focusing on March 2002 for the next phase of the US v Microsoft trial.

Today's LA Times hints at ID fraud in the NY based 'Attack on America. This fraud has

been one of the main reasons that my settlement has yet to occur. Local family as well as conspiring US & state government officials have stalled any just settlements through illegal payoffs, overseas money transfers, as well as international subversion. Most of the illegal efforts have been from "egitimate" foreign and US sources, that 'apologize' when errors occur, yet do nothing for damages caused or delays in my business future. Recent business stalling at the Garden Grove, CA, Crystal Cathedral by local Orange County businesspeople, including billionaire Donald Bren of the Irvine Company have involved Major League Baseball contraction talks and purchase proposals of the Anaheim Angels and NHL Mighty Ducks Hockey Team at the Arrowhead Pond. This week's MLB discussions have tabled the baseball contraction talks for a year, placing the sale of the Angels, Marlins, Twins & Expos on hold while the players conspire for future business. Face it folks, not even new stadiums from the past ten years is going to keep baseball from expanding inside or outside of the United States! Baseball is too slow for most people, and the US Anti-Trust exemption may end as baseball acknowledges over \$500 million dollars in losses, and only 5 teams profitable! The United States is a free market society, and the public wants NFL football, NBA basketball, as well as extreme outdoor and indoor sports now! Even two professional wrestling organizations had to merge in order to remain competitive in the world of television sports.

More to follow ...

Subject: Stop MS, it's enough !! Red Hat Proposes to Enhance Microsoft Settlement Offer By Providing Open Source Software to All U.S. School Districts <cid:part1.07080501.05000608@netscape.com>

Open Source leader proposes to provide software to every school district in the United States if Microsoft provides

computing hardware for the 14,000 poorest school districts Research Triangle Park, N.C.—(Business Wire)—Nov. 20, 2001—Red Hat, Inc. (Nasdaq:RHAT—news) today proposed an alternative to the settlement announced today of the class-action lawsuit against Microsoft. Red Hat offered to provide open-source software to every school district in the United States free of charge, encouraging Microsoft to redirect the money it would have spent on software into purchasing more hardware for the 14,000 poorest school districts. Under the Red Hat proposal, by removing Microsoft's higher-priced software from the settlement equation, Microsoft could provide the school districts with many more computers—greatly extending the benefits Microsoft seeks to provide school districts with their proposed settlement. Microsoft had proposed that, in settlement of class-action claims of price-gouging, the company donate computer hardware, software and support to 14,000 poor school districts throughout the United States. Under the proposed settlement, a substantial part of the value provided to schools would be in the form of Microsoft software.

The Red Hat's alternative proposal includes the following:

*Microsoft redirects the value of their proposed software donation to the purchase of additional hardware for the school districts. This would increase the number of computers available under the original proposal from 200,000 to more than one million, and would increase the number of systems per school from approximately 14 to at least 70.

* Red Hat, Inc. will provide free of charge the open-source Red Hat Linux operating system, office applications and associated capabilities to any school system in the United States.

* Red Hat will provide online support for the software through the Red Hat Network.

* Unlike the Microsoft proposal, which has a five-year time limit at which point schools would have to pay Microsoft to renew their licenses and upgrade the software, the Red Hat proposal has no time limit. Red Hat will provide software upgrades through the Red Hat Network online distribution channel.

A Win-Win Approach

The Red Hat proposal achieves two important goals: improving the quality and accessibility of computing education in the nation's less-privileged schools, and preventing the extension of Microsoft's monopoly to the most-vulnerable users.

"While we applaud Microsoft for raising the idea of helping poorer schools as part of the penalty phase of their conviction for monopolistic practices, we do not think that the remedy should be a mechanism by which Microsoft can further extend its monopoly," said Matthew Szulik, CEO of Red Hat. "Through this proposal all of the states and all of the schools can win, and Microsoft will achieve even greater success for its stated goal of helping schools. By providing schools with a software choice, Red Hat will enable Microsoft to provide many more computers to these schools. At the same time, the schools can accept this offer secure in the knowledge that they have not rewarded a

monopolist by extending the monopoly. It's now up to Microsoft to demonstrate that they are truly serious about helping our schools."

Dear sirs,
Though not an American citizen, I'd like to complain about your dealing with the monopoly of the Microsoft company. I hate the way Mr. Gates organizes my computer and my work and insists on knowing better what I want. His arrogance beats everything. But far worse is the fact that there are no real alternatives. His monopoly is a very bad thing for the development of computer software and everything connected to it. Please take action.

Kind regards,
Onno Vinkhuyzen, The Netherlands

Subject: Red Hat Proposal

As a past college professor and a current professional in the software industry, I urge the Department of Justice to consider seriously and look favorably on the proposal by Red Hat, Inc. to modify the Microsoft Antitrust settlement regarding computer equipment to be donated to public schools by Microsoft. The Red Hat proposal provides a much larger net benefit to the schools than the original settlement proposal, at no additional direct cost to Microsoft.

Sincerely yours,
Jeffrey A. Bell, Ph.D.

Subject: What consumer harm???

This entire trial has been a farce—THE CONSUMER (ME) HAS NOT BEEN HARMED, I used to own a Mac but when Windows 98 surpassed the Mac OS in '98 I switched to Windows. There were many more third party applications that were compatible with Windows.

There is plenty of competition: Mac, 3 varieties of Linux, Sun O/S, Unix, and others. I like the bundled utilities. They provide a benchmark for competitors to shoot at. Would you buy a GM car without their radio or seats or carpeting or air conditioning etc.?

This whole trial has been a mockery—the only one's that stand to gain anything by this 3 ring circus are MSFT's competitors. Once again:

THE CONSUMER (ME) HAS NOT BEEN HARMED!!!!!!!!!!!!!!

Subject: Microsoft Proposal

I was reading a recent article in USA Today about Microsoft's proposed settlement by supplying poor schools with refurbished computers and software/tech support. As an educator in a poor school, I don't believe that this is a just settlement. It will take away our power choice as a school on what technology we can purchase. We are long users of Apple computers and this would inhibit our ability to choose. This is not an answer to Microsoft's wrongdoing. This will only strengthen their monopoly in the arena of education thus leaving us with fewer choices of technology. I would like to see a proposal with Microsoft that has nothing to do with them in the schools as an act of capitalism.

Thank you,
Jerry Moreno

Subject: Settlement comment

I am an Apple Computer fan. I love the innovation and class that they have brought to the marketplace. The Education market is one of their last strongholds, and IF Microsoft is allowed to dump PC's into the ED market as their 'punishment' you will have succeeded in unfairly damaging Apple's position in those markets. My guess is that if Bill Gates could get away with it, he would LIKE to seed markets such as education, just the way he captured marketshare with his early OS releases of Windows... 50.00 per copy. Now he's up to 200.00 for an upgrade.

Subject: Microsoft Settlement

Do not * * * I Repeat do not allow Microsoft to get off with such an inexpensive, inexpensive, non-punitive settlement after becoming a bigger monopolistic business in

the U.S. than any oil company ever thought about being!!!

I am a programmer/analyst and I feel that Bill Gates Billions really belongs to every computer owner in the world! Through the use of glorified blackmail to manufacturers, he made is billions; and we, the consumer, have had to live with Microsoft's operating system ever since. We were not given the options for an operating system as we are now with web browsers; and this should have always been an option in a free enterprise environment that the United States claims to be! Because the personal computer market was a new thing, and IBM was under scrutiny for anti-trust violations, when Microsoft was demanding their DOS operating system be the only one on computers, is no excuse for the consumer to have to be stuck with an inferior product permanently. Microsoft was never playing on a level playing field once DOS was established as a unregulated monopoly—and I thought all things were suppose to be fair for all who wanted to compete in our capitalistic economy. IBM was under Federal Oversight at this time, as the government tried to keep them from being so monopolistic; yet Microsoft was never taken seriously enough to have the same strict regulations apply to them!

I feel it is the government's responsibility to make Microsoft PAY BIG TIME for their greed and misuse of consumer confidence. If you can restrict IBM, why didn't the government restrict Microsoft?? Microsoft has lost in court, and lost all the appeals that have been set before the courts. If they are not SEVERELY punished and this SEVERE punishment made known to the public, we can only assume it is due to the change in administration since the guilty verdict was rendered. If this is true, and the Republican big-business backers are the reason Bill Gates and Company get off the hook, what signal is this sending to the American consumer and the world. The consumer means nothing... it's all about money??

The only way I would agree to the government allowing this settlement to stand—1.1 billion dollars—is if there is an added penalty. Since the aforementioned settlement is really just chump change to Microsoft—given the wholesale cost of the software is much, much less than this to them; and the PC program is PC's that there were getting rid of anyway—where is the punishment here??! How convenient is this? Where is the prevention of abuse of monopolistic power that I thought was law in this country?? In reality, there is absolutely none being applied here!!

So I propose and added penalty and give you two options:

1. Bill Gates and Microsoft have to totally fund the War on Terrorism Worldwide!!

This punishment for their crime of making the money illegally worldwide, would be used for the civic good of all. Or 2. If you don't think number one is feasible, then at least make the penalty something that costs them about \$25-30 billion is REAL loss-CASH; wholesale marked up to retail prices in Microsoft products is not acceptable!!

Thank you for your time,
Bonnie Cox

 Subject: Proposed Microsoft Antitrust Settlement

I doubt there are any additional points I could hope to make or add to the list of reasons why this settlement should not be accepted... I only wish to ensure that my extreme opposition to acceptance of this agreement is noted somewhere because I feel I must do something instead of doing nothing to try to stop it... Our government and the judicial branch should look beyond the quick solutions proposed in this settlement to the Microsoft anti-trust problems and should continue to work further to seek out resolutions which will ensure the protection of fair market competition for all now and in the future...

It is my opinion that an acceptance of this proposed settlement with Microsoft only postpones an inevitable reoccurrence of the problem and does not appropriately address nor resolve the issues on which this lawsuit was originally initiated...

From: Mark Alexander
 To: Microsoft ATR, microsoftcomments@doj.ca.gov@inetgw, ...
 Date: 12/2/01 3:19pm
 Subject: My comments about the Microsoft Antitrust Settlement

OVERVIEW:

This email is in regards to the Revised Proposed Final Judgement (Settlement) for the case of US v Microsoft (98-1232) and NY et al v Microsoft. (98-1233) It is a list of specific defects in the proposal as well as other areas that need to be addressed for a comprehensive solution. The computer industry, especially the software industry, used to be a very vibrant exciting space with a large number of competing technologies and solutions. Microsoft has become a dominant player in this space by multiple methods. The fact that Microsoft is persistent and keeps on trying even after a product is not well received is a strength of Microsoft that others should emulate. The fact the Microsoft believes that to compete it needs to "cut off the air supply" of potential competitors is a method that should be eliminated.

PERSONAL INFORMATION:

My name is Mark Alexander. I am a US citizen residing at 46 Lynwood Rd in Scarsdale, NY. My email address is malexander@acm.org. I have been working in the computer field for over 20 years. I currently work as a Senior Information Technology Architect for General Electric Card Services, the private label credit card business of GE Capital in Stamford, CT. The opinions expressed in this email are my own personal opinions and not those of GE. I currently own stock in a variety of technology companies including Microsoft.

OVERALL:

1) The proposed settlement does not appear to be the complete agreement between the parties. From comments made by some of the State Attorney Generals about this settlement, it appears that an agreement not documented in the current proposed settlement has been made. The comments are that Microsoft will reimburse the states for their legal fees incurred during the course of this proceeding. Since the agreement seems very one sided to the advantage of Microsoft, a large number of individuals believe that some additional secret agreement has been reached. The best way to resolve this is to add wording to the settlement that states it is the complete agreement between the parties and add the sentence about the reimbursement of legal fees.

2) Microsoft has been found guilty of being a Monopoly by the District Court that was upheld by the Appeals Court, yet to date, Microsoft has refused to admit to its guilt. The settlement should include an admission of guilt on the part of Microsoft.

3) The settlement does not include any penalty for past and current activities that were and are still in violation of the law.

4) The primary beneficiary of the settlement, other than Microsoft, is the OEM rather than the consumer.

5) Microsoft has always been very innovative in how to work around or by a very technical reading of prior legal decisions and this settlement should be very carefully vetted to eliminate loopholes and areas that are open for an interpretation by Microsoft that is not the intent of the settlement by the DOJ and States.

SECTION BY SECTION COMMENTS:

III-A-2: Should allow an OEM to ship a PC without any Microsoft Operating System. Microsoft has in the past had licenses that charged an OEM for each PC sold, regardless of OS installed.

III-B-3 a: Should allow for 21st and lower largest OEM.

III-C-3: GUI of similar size and shape will limit 3rd party products ability to innovate and add value for users with their product.

III-D: Limiting API disclosure to just Middleware does not provide a fair, even playing field. Microsoft also needs to disclose APIs for the base Windows Operating System product. The settlement should state the any API of the Microsoft Windows Operating System used either by a Microsoft Middleware or Microsoft Application should be publicly released.

III-D: Timing of release of Middleware API documentation should occur prior to last major beta release, it should occur at initial beta release and then be updated as needed during beta cycle. The APIs need to be released to public no later than they are released to other internal groups within Microsoft. Releasing it at the last beta release gives Microsoft a huge competitive advantage to incorporate those APIs into other areas or products for release simultaneously with the Middleware solution. Also, since Microsoft controls the release schedule for the beta releases and the final product, it can release the last beta just moments before the final release. See Overall 5 above, Microsoft will always work for its own advantage and to the detriment of other parties.

III-D: API disclosure for new Windows Operating System product "Timely Manner" should be defined as per above.

III-E-ii: Need to add Used to interoperate natively or in conjunction with a Microsoft Middleware product to a Windows Operating System or Microsoft Server Operating System. It is important to include any PC to PC protocols as well as PC to server protocols, used both natively by the OS and added by any Microsoft Middleware solution.

III-H-3: Need a section 4 that Microsoft does not alter an End User change as well.

III-H-1 (After Notwithstanding): Need to add if 3rd party Middleware is installed and fails to perform operation, then and only then can Microsoft Middleware be used. The Microsoft Middleware should allow connections to an end user or OEM specified server, which may be the Microsoft server or that of some 3rd party.

III-H-2 (After Notwithstanding): The end user should be the party to determine whether to change the Middleware in use or just to get an error message. It is inappropriate for Microsoft to make technical decisions about requirements for 3rd party products because it is too easy for them to abuse the power.

III-H (Microsoft's Obligations): See III-D above.

III-I-5: No license of Intellectual Property from Microsoft should require a license of 3rd Party Intellectual Property to Microsoft.

III-J-1-a: Security software of anti-piracy, anti-virus, software licensing, digital rights management, encryption and authorizations is a very active and competitive market. This section is worded in such way as to allow Microsoft to keep all information regarding these activity private. The intent implied in the Competitive Impact Statement is to limit access to the internals of Microsoft implementation. That should be limited, but APIs and Communication Protocols for these areas should not be different than other parts of Windows product or Middleware information requirements.

III-J-1 b: This paragraph sounds like a big brother type deal between government and Microsoft to suppress information from public. Should be eliminated.

III-J-2-c: Microsoft should not determine viability of a business. If needed, it should be determined by a 3rd party based on either court or government provided guidelines. Also needs to allow for individuals and organizations, not just businesses.

IV-B-3: Microsoft should not select any member of the TC. Microsoft should solely be allowed to object to the selection of a TC member as outlined in IV-2.

IV-B-10: New paragraph of Either the TC members or the Plaintiffs or the Court will release every six months to the public a summary of all violations, recommended actions and actual actions performed by Microsoft to remedy said violations. This public disclosure will not include any proprietary information of Microsoft or of any complainant, including name of complainant, without prior written permission of the party to disclose that information.

IV-D-4-d: The TC or work of the TC may be admitted in a legal proceeding with the

consent of at least one of the Plaintiffs or the Court.

IV-D-4: Missing section on Penalties for violations that are not resolved using Voluntary Resolution are to be addressed by the Court. Without any penalty or even a method to address penalty for violations leaves the Plaintiffs with no recourse other than a whole new lawsuit with attendant time and expense. It is critical that any violation of this agreement be immediately able to have penalty hearings in court.

V-B: The only penalty specified in this entire agreement for violations of this agreement is to extend the agreement for 2 more years. Since there is no penalty for any violation as currently outlined in the settlement, extending this settlement merely allows Microsoft a longer period of time to continue its violations without penalty, basically ignoring this settlement and its intentions.

IV-A: API definition should include programmatic interface to Windows Operating System Product and not just Middleware.

IV-B: Communication Protocol is not for a predefined tasks, but rather for any type of data exchange between two or more computers or computing devices.

IV-D: Coverage for OEM should not be limited to just the largest volume 20, but should include all the smaller OEM who by nature of their size have less of a bargaining position with Microsoft to begin with and as a group represent a large portion of licenses sold.

IV-J-2: Trademark requirement should be eliminated. Microsoft will simply stop Trademarking the name of its Middleware products to give it the ability to have them not covered by this settlement.

IV-J: Using version numbering is an easy way for Microsoft to work around this settlement. A better definition may be an upgrade is a release that provides new or improved functionality. It should be covered under this settlement. An update is solely a release to fix bugs and other defects.

IV-K-2-b-iii: see IV-J-2 above.

IV-N-ii: There should be no limit on the number of copies required for a 3rd party product to be protected by this settlement. Setting a threshold of one million copies will allow Microsoft to squash any new 3rd party product prior to it reaching a critical mass of end user support and prevent it from ever reaching the one million to be covered under this settlement. If there is a need for a number, I would suggest a value of twenty-five thousand. It is large enough to indicate the beginnings of interest and still is small enough that the product would be below Microsoft's RADAR screen to notice it and work to eliminate it.

IV-Q: An Intel processor is not a requirement for a system to be a Personal Computer. A Personal Computer with an Intel or compatible processor would be an Intel Compatible Personal Computer. IV-Q: Servers, set top box, handheld, game consoles, telephones, pagers and PDAs also need to be protected from Microsoft using its monopoly on Desktop Computers to allow it an un-fair advantage in these other markets.

IV-R: see III-D above.

ADDITIONAL CONDITIONS NOT INCLUDED IN PROPOSED SETTLEMENT:

1) Windows Operating System Product: Complete APIs for 3rd Party products to interact with the Windows Operating System Product also need to be disclosed. No Microsoft Application or Middleware or Server product should have access to an API that is not also available and documented to the ISV community as well.

2) Microsoft Applications: Microsoft has often used its dominance in the Application market as a threat as well. It should therefore be required to make its Application File Formats available for licensing under Reasonable and Non-discriminatory terms.

3) Microsoft Server Products: It should be required to make its Communication Protocol Formats available for licensing under Reasonable and Non-discriminatory terms.

4) Microsoft Network Services: It should be required to make its Communication Protocol Formats available for licensing under Reasonable and Non-discriminatory terms. I believe these changes would allow Microsoft to still be a vibrant part of the economy, the software industry and business community as a whole, while allowing for other companies to compete with Microsoft on a more level playing field. The field cannot be made completely level due to the financial and marketing strength of Microsoft. I believe that if Microsoft competed solely on the Merits of its products rather than using them as a tool to destroy other products, they would still be an ongoing success.

Sincerely,
Mark Alexander

Subject: Settlement

I don't see how the proposed settlement with MS is in the best interest of consumers. First how can a company that was found guilty by the court has so much to say in what their punishment should or will be. I think the DOJ is very weak when it comes to punishing those with lots of money. I think the court should have said "you broke the law, this is your punishment". That is the way it work for everyone else. We can no longer trust the DOJ to bring those to justice who have been proven they broke the law.

From every effort so far by the DOJ to rein in MS has fail and this joke of a settlement will fail also because it does nothing. As a poor Black man in America I am shocked that they are letting MS of so easy, if it had be me I would already serving time in jail.

So much for justice

Subject: Microsoft AntiTrust Settlement

Microsoft has offered to provide significant donations of products to schools as part of a settlement.

I don't like that offer since Microsoft is essentially just building future business by "educating" users in their product. MacIntosh receives a good portion of business for the school market and will likely be harmed in that type of settlement. If MacIntosh isn't around, then MS has the whole market. I ask for a tough settlement that addresses the predator practices that Microsoft has engaged to dominate the market.

Date: 12/2/01 4:42pm
Subject: Microsoft Settlement

Dear Department of Justice,
Hi! I was wanting to comment on my feeling of disappointment with regard to the Microsoft Antitrust case. I use Microsoft products (I pay and pay and pay), but also enjoy the Apple Macintosh platform (actually I prefer it). Due to Microsoft's anticompetitive tactics over the years, many software companies that were viable are no longer viable and have either been bought out or taken into receivership.

I do not think that Justice Department should drop this case by settlement. I am not out to get Microsoft, but I will say they are more than a monopoly on a national level. They are a global monopoly and they work to maintain that monopoly. Justice Penfield Jackson, despite the lack of control he displayed, was right. The settlement does nothing to restrict Microsoft's practices. It will take the EU, rather than the U.S. due to the companies global reach.

I've seen too many very good software packages go the way of losing to Microsoft's software, not because Microsoft has had better software, but because they competed in an unfair way circumventing real market forces. I am a consumer. I like competition. It helps innovation and price for me. Today I get no additional benefit from the Microsoft products I have to use (simply because there are no others that are cross-platform due to Microsoft's practices) but to upgrade I still pay astronomical prices, even though the additional benefit is non-existent.

Back to the Global Monopoly idea. I am a U.S. citizen living in Poland as a part of my work. Here, even though Apple Computer offered to underwrite the localization of Microsoft Office for the Mac (i.e., make it a Polish program), Microsoft refused to localize it, even though all the costs of localization would be paid by Apple. Microsoft only stood to profit (it also tells you Microsoft's motivation for investing in Apple in 1997 was more to avoid the appearance of a monopoly than altruism on their part).

I cannot use a competitor's product with regard to Word Processing, Spreadsheet and presentation software, because there is no competition any more due to Microsoft's practices (i.e., Microsoft owns those markets). Each of their products needs to become a separate company. Now, the DOJ wants to settle, but is it because Microsoft actually has the deeper pockets in this case? Is it because they donate to politicians? Or is it because

they in fact are not an intrusive, aggressive monopoly (I thought the findings of fact said so)? As a consumer, it is clear to me that Microsoft is a monopoly that warrants needing government intervention and remedies prescribed to curtail their anticompetitive practices.

Now, I am not a lawyer, but I am saying I don't want to see Apple go the way of the rest due to Microsoft's practices. Apple and its OS is the only viable alternative.

Thanks for listening. You know this stuff already. I need to speak up.

Sincerely,
Doug Mitts

Subject: Reject Proposed Settlement with

Microsoft
Renata B. Hesse
Antitrust Division
U.S. Department of Justice
601 D Street NW
Suite 1200
Washington, DC 20530-0001
December 2, 2001

Pursuant to the Tunney Act, members of the public have an opportunity to comment on the proposed settlement between the U.S. Department of Justice and Microsoft. Please find the documents attached which contain comments from:

Mark R. Hotchkiss—Software Engineer
7291 Brockway Drive Boulder, Colorado
80303 “Dealing with Microsoft's Policy of Deception.”

I. The Record

From the record of The United States Court of Appeals for the DC Circuit decided June 28, 2001; No. 00-5212.

From section: II. Monopolization; B. Anticompetitive Conduct; 5. Java; c. Deception of Java Developers: pp. 56; paragraph 2:

“Finally, other Microsoft documents confirm that Microsoft intended to deceive Java developers, and predicted that the effect of its actions would be to generate Windows-dependent Java applications that their developers believed would be cross-platform; these documents also indicate that Microsoft's ultimate objective was to thwart Java's threat to Microsoft's monopoly in the market for operating systems.”

From paragraph 3:

“Unsurprisingly, Microsoft offers no procompetitive explanation for its campaign to deceive developers. Accordingly, we conclude this conduct is exclusionary, in violation of Section 2 of the Sherman Act.”

II. Challenge to Developers

Software developers have the wonderful opportunity to create incredibly powerful tools for people utilizing nothing but their brains, a piece of hardware, and a well documented platform language or API to guide them. Indeed, many admire Bill Gates and give him credit for doing just that. But tragically, the policies of deception that his company has been convicted of, have already eroded much of the fertile ground on which he and his company built their foundation. If the Court accepts the settlement that the

Department of Justice has proposed, that ground will be washed away for any developer hoping to gain significant access to users without that developer having to pay or depend on Microsoft in some way. To PC software developers the market has not been free for a long time. Given Microsoft's scorched earth criminal past, Internet software is the next technology to get locked up from creative people.

III. They Own All of the Stages

Technical merit, quality, and price should be some of the primary measures by which software products succeed in a marketplace, if it is a relatively free one. Ever since Microsoft has gained a monopoly position in the operating system market; the “stage” on which a developers must perform, Microsoft has elevated the measure of whether it will increase their own market share over all other measures. Intel owns a good portion of the “theaters”, but will host most any production. By contrast, Microsoft owns virtually all of the stages and claims imminent domain to them from competing productions whenever they decide to produce their own show, as long as they can increase market share to that new audience.

But of course, questionable priorities and being a monopoly is not against the law. But when Microsoft decides to enter a new market, rather than using the methods any other player on the stage would have at their disposal to use to win an audience, they can control the lights, props, background, special effects, even funding, and can turn any developer's production into an unintentional farce, all without the members of the audience knowing it.

Borland, Quarterdeck, and Netscape are but a few companies who have had the chance to bring the issue of Microsoft's habitual secret sabotaging of their applications before the court. But this method of dealing with competition is usually saved as a last resort and is done very subtly. Microsoft has very distinct and regular script on how it deals with competition.

IV. Embrace and Smother

At the heart of the case before the court was Microsoft's deceptive technique launched against Netscape. From the court record, Microsoft's own Paul Maritz, called it “embrace, extend, extinguish” or “embrace and smother” corroborated by several Intel executives. Microsoft makes its competitors think they like the show, read the script and promise to produce it, and kill it before it opens to make room for a production they have been rehearsing in the wings. Sometimes, before the competitor ever got their first check.

v. Embrace and Pollute

Sun's Java “resurfaced” the stage with a set of tools that could even be extended to the Internet and beyond. Developers could cultivate their productions for free in different theaters and produce “road shows” on all kinds of stages. But because Microsoft was no longer in direct control of what was seen on the stage and could not continue to charge fees that suited them, they resorted to sabotage as reflected in the court record. They tried punching holes under Sun's performing platform by polluting it with a

“Windows only” advantage and have been convicted for it. Because this approach did not achieve their intent, they deployed their third anti-competitive method.

VI. Replicate and Extend

Today, the anti-competitive method of choice is a variation of “embrace, extend, and extinguish”. It is what was used against Apple when Windows was first introduced. Microsoft is in the process of virtually replicating Java in their new language C# (C Sharp). A glance at any sample code can convince almost anyone that the “new, innovative” language is a complete knock-off of Java. But Microsoft maintains that it has nothing to do with Sun's creation.

The fundamental difference is, it won't play on anything but Microsoft's stages. As an expected action, Microsoft will no longer make any effort to accommodate a Java stage in their latest monopoly production of Windows XP. Developers who prefer Sun's version of how the stage is equipped will have ask the audience to help them set it up by having to download components that were previously supplied by the stage manager. This is something Microsoft claims will “increase choice for consumers”. How can these actions be perceived as competitive?

VII. Bundling When It's Convenient

Microsoft has used the deceptive reasoning that bundling application products with the operating system is simply a matter of convenience. But in effect, they mean their convenience, not the consumer's. They only bundle products when they don't already own the market for that application software.

Until recently, word processing and spreadsheet applications were easily the first reasons to buy a computer. As a matter of consumer convenience, why doesn't Microsoft bundle MS Office the way it did Internet Explorer? These applications are still the main reasons people buy computers? The answer is easy. They virtually own the office applications market now and can charge very high prices and keep their customers locked in by their proprietary document formats. They wouldn't kill their cash cow in the name of giving the customer what they really want and have touted as their reason for bundling.

They don't own the market for video software yet, but with absolutely no hindrance from the court, they have bundled Windows Media Player with Window XP and will eliminate RealPlayer in no time at all. Little of their success will be decided on technical merit, quality, or price. If this is not evidence of leveraging a monopoly market to gain another, what is? The proposed settlement does nothing to stop such blatant violations of the Sherman Act.

VIII. Control of Hardware Vendors

As a matter of research, contact one of the major PC distributors such as IBM, Dell, or Gateway, and attempt to purchase one of their high volume, low cost package PCs, but ask that you don't want Windows XP pre-installed for whatever reason. XP's default configuration of exposed IP sockets is a legitimate security concern that users should be able to reject it, but any reason should be valid. Then explain you that want a discount (any amount) for the absence of any Microsoft products. You will find that they

will not accommodate you. Linux users have to indirectly pay Microsoft to get reasonable prices on the same hardware. How can this be termed a competitive environment and how does the settlement before the court remedy this situation?

IX. Relative Exposure of the APIs

The way the settlement is worded, Microsoft will be able to greatly limit the access developers have to make their products successful. Microsoft will still be able to protect their arsenal of secret weapons used on their platform. Exposure is a relative term and the settlement reveals far too little for it to be effective in improving competition. Hiding their malicious intent in millions of lines of code to a few inspectors to see will be a cinch. They can always build another "substage" under the one the inspectors see to achieve this.

X. Giving Up

Nothing hurts a non-Microsoft developer more than hearing friends and family conclude that Microsoft software and services must be the best based solely on the fact that they have taken over so many markets. Terms like "sour grapes" and "quit your whining" cut deeply into a developer's incentive to create products that may not run on Windows only. As they should, PC users attempt to equate technical merit, quality, and price with proportional success. This is of course, not the case with Microsoft as stage manager. Users can't see what sort of treachery and deception takes place in a developer's attempt to get on the stage, let alone, get the lights to come up on their show. Explaining the stagecraft is rarely possible and is generally futile. Developers interested in a level playing field have been hoping that the court would understand the ropes and backstage operations that keep them off of the stages. So far, that expectation has been dashed. Microsoft deceives and cheats in every way possible gain market share. A developer is faced with a simple choice at this point: Microsoft's way, or the highway. Help entrench their monopoly and reduce choice in virtually every sector of computing, or get out of the business. If the DOJ settlement is accepted, it will only be a matter of time before a significant portion of the development community decides to take the latter option. The settlement contains no remedy and in fact, legitimizes Microsoft's criminal anti-competitive behavior.

XI. Effective Remedies

Even though a remedy of separation of the operating system and application software business units has been cast out as a possibility, it would have been the most effective and expeditious way to remove the incentive for Microsoft to leverage its monopoly and reduce customer and developer choices.

Short of that, Microsoft should be forced to sell its language business, and the proceeds of that sale should be distributed to registered users of Microsoft products. Their proprietary formats, and APIs should be opened to those registered users. Perhaps then some semblance of a level playing field might be restored.

Microsoft's Bill Gates should also be required to publicly state that his company repeatedly broke the law using deception as

a policy. As it stands, the majority of the public still believes as he does, that they've "done nothing wrong" and that the court has no place in the matter. This is tragic.

Thank you for your time.

Sincerely,
Mark Hotchkiss

Subject: MS settlement

I feel the settlement as proposed does a great injustice to the American consumer. It is nearly impossible for the average person to go out and buy a pc without Windows on it. I don't use windows, I must buy it if I want a pc though. I say go hard on these boys, I want restitution for every MS os I was forced to buy. That would be 3.1, 95, 98, and ME all of which were removed from the systems that came with them forcefully pre-installed. I never wanted windows, I had to buy it to get newer, up-to-date pc's.

Maybe opening the source of their kernel would be more fitting. Or a complete separation of the os and apps dept's while removing the apps already "integrated" into the os, ie Internet Explorer, Media Player, There are many options, the proposed settlement is not even a slap on the wrist.]Do the right thing here and punish the monopolist Microsoft in a way that leaves no uncertain terms, monopolist behavior will not be tolerated. They've misled the court during hearings and showed no respect to it's authority in the past, and been convicted of being a monopoly, treat them accordingly. It's called throwing the book at them.

Respectfully,
Richard Gore

Subject: Microsoft settlement

Any settlement with Microsoft MUST afford individuals OEMs the right not only to feature competitors products but more importantly earn discounts for any and all applications, utilities, middleware or features removed or not featured by the OEM.

The amount of the discount must be reviewable by the federal court to make certain fair and open competition returns to the windows platform. The court must make a determination of both the wholesale and retail price for these products to include networking subsystems, browsers, compilers, development systems, disc utilities and windows managers as well as any and all "user applications". User applications are those programs that actually provide a service or function for the individual user including but not limited to browsers, media players, file viewers, data base systems, spreadsheets or any other application that exists in the marketplace for Microsoft systems or any other operating system. Any and all "trademarked" products must be subject to such removal and discount handling by OEMs.

Furthermore, the illegally gained monopoly in browsers resulting directly from

illegal acts must be reversed. Prior to the illegal acts non-Microsoft browsers had approximately 80% of the market. Until those market conditions return no settlement terms should cease and the full restrictions upon Microsoft must remain in place.

Subject: Microsoft Settlement

Dear Sir or Madam

I am writing you in reference to the proposed settlement with Microsoft. After reviewing the terms as published in the various news media I have great concern that this is nothing more than a minor inconvenience for Microsoft and does not address the core issues at hand. With the release of Windows XP and the public statements concerning the .Net future of Microsoft it is easily apparent that Microsoft wishes to Hijack the Internet and e commerce to it's own advantage. The mandated usage of Passport to install Windows XP, it requirement in Hotmail accounts and Microsoft Messaging service only extends the reach as neither service needs Passport and XP doesn't either. The IE 6.0 departure from JAVA and other Internet standards only shows how far they will go to press Microsoft as the holder of all things with PC and Internet. Microsoft's continues to advance itself at the cost of others.

If it cannot gain market by providing a better product then it makes sure that its products cannot be used with others recent example the ending of support for navigator plug in's in IE6 which is included with XP. This rendered useless anyones Apple Quicktime. No warning just can't use it. If you want to see in print how far they will go to control everything read the EULA that is in MS FrontPage 2002. Pre censorship. All to ensure that if you don't say nice things about MS you can be sued. Is this a company that is remorseful and willing to change it's ways from destroy, devour and intimidate. I think not. If the Judicial systems accepts this agreement in its current state it is only a endorsement for Microsoft to continue unabated as it can still devour, destroy and intimidate unchecked by just "making it a feature" and it is ok. I endorse stronger and specific remedy that is enforceable. Just like any convicted person they have been found guilty and as such should not be able have say in the over site of their behavior. It is the duty of government to do those things that individuals cannot do and one of those is to

protect the public from predatory behavior whether it is a person, a group or in this case a company.

Sincerely,
Herbert L Green

Subject: MS antitrust settlement
To whom it may concern:

I would like to offer my opinion on the current proposed settlement between the DOJ and Microsoft. Let me summarize by saying the decision is a travesty to the justice system we all believed operated in this country. Now I will expound on the reasons.

First, it will be clear to any free thinker that any company that controls the foundation of an industry will have an innate advantage over its competitors in creating products that are built on that foundation. This applies to any industry. In particular though, this has now become most notable in the software industry. Given this situation, the simplest solution would be to sunder this tie as judge Thomas Penfield Jackson has suggested. I would go so far as to say, MS should have been broken up into five companies: consumer OS, business OS, consumer apps, business apps, and internet services and hardware. Each company would then have to learn to support other platforms and thus "biodiversity" would have a chance. Second, by allowing MS to remain whole, it will use its position of dominance, to extend itself into other adjoining areas such as publishing, gaming (witness the Xbox), and even consulting services. It is not hard to imagine a day when not just the entire computer industry, but any industry built around thoughts and ideas would be controlled by this company. And we would have our weak willed government to thank for this. In fact, our very own government would be controlled by this company, even more so than it is now.

Third, and lastly, keeping MS intact was a bad idea because it will send a message to all companies who are trying to dominate a market that if you keep fighting the government long enough, they will back down because there really is no teeth behind their bark and they are just a bunch of wimps. This is not the DOJ that I want in my country. We should be lobbying our

representatives in the legislative branch and executive branches to remove the current crop of spineless, ill-informed judiciaries.

A simple solution to legal wrangling would involve not necessarily breaking up MS (although that is still a good thing) but rather to cut right to the heart of the company- make its code open source. Not that anyone should be able to copy it or even modify it, but people should have the right to see what they are paying for. In fact, the government should go so far as to demand that any software sold to it should come with the source code-period. This way, the government will never be held hostage to closed, proprietary code.

In summary then, I think the current settlement is more of our government settling than a real middle of the ground deal or settlement. Microsoft came out the winner hands down, and the DOJ skulked away with its tail between its legs, humiliated and beaten soundly by a much more vigorous and financially powerful opponent. The DOJ should go for the gold: split the company into five and demand that all software sold to it come with the source code.

Thank you for your time in reading my opinions.

Dr. Nath

Subject: Microsoft Antitrust Solution—Slit

So That Application Programming Interfaces MUST Be Published

Dear sir,

I am a Canadian, but the unavoidable presence of Microsoft has affected me as

well. I do database development for a major Canadian university.

When Windows 95 came out, it broke dBase, Lotus, and WordPerfect and it was six months at least before they could even be run on Windows. On the other hand, Word, Excel, and Microsoft Visual C++ was already aware of the impending changes and were not affected.

Today, Oracle installations MUST replace several Windows programs as a routine part of the installation process and downloads of Internet Explorer have broken Oracle installations, by changing the dynamic runtime library for Visual C++, I suppose.

When I purchased my computer for home, I had no choice but to buy Windows, even though I run OS/2 on it. I tried to obtain a Linux system from Dell, but they would sell nothing but Windows, even if it meant losing a 5,000.00+ sale.

In my opinion, the computer industry will be seriously hurt by the continued unfair practices of Microsoft. The protection of software vendors, in particular, requires that Microsoft be split into no less than FOUR parts: Development Tools (C,C++, Visual Studio, any tools used to build Windows) Operating Systems (Windows 95, 98, NT, 2000, XP, etc., strictly mapping the hardware to an API with Development Tools) Applications Software (Office, Word, Excel, Access, Visual Basic etc.) Web Services (Internet Explorer, MSN, C#). In this way, other vendors, even if they use MS tools or systems, will have the same public access to APIs at the same time as those parts of the former Microsoft that used to obtain early and secret access, months and years in advance of competitors. You might also consider requiring hardware vendors to OFFER at least ONE non-Microsoft operating systems on their computers as a general rule to foster competition. Linux and many others are free, after all.

Good luck with your decision,
Sincerely,
Michel G. Rainville

Subject: Microsoft
DOJ;

I beleive that the continued existance of Microsoft as an intact entity poses an extreme danger to all other software companies. Microsoft has a long history of using any method available to kill competition and stifle innovation in the computer industry. Quite simple they cannot be trusted to uphold any agreement they enter into.

To mitigate the continued danger of Micro\$oft, I propose that the corporation be divided into two separate entities. One that will continue to produce Operating Systems (OS) and One that will develop end user applications (office, Internet Explorer, etc). Absolutely no communications, other than normal discourse between two rival companies, should be permitted between the two halves of the company.

To mitigate the advantages already achieved by the company, Microsoft need to be forced to disclose all proprietary information regarding the various protocols and file formats used by the company's software. If Microsoft continues to try and "pollute" public domain standards (HTML, TCP/IP, ETC) they should be quickly and severely punished and forced to recind the changes. The end user needs to have the option to un-install or decline the installation of any "bundled" software (Internet Explorer, Media Player, etc.) without crippling the operation of the OS or any other software component.

As the final step, all of the current Microsoft senior executives should be forced to sell off their Microsoft holdings and seek employment elsewhere. It seems patently unfair to me that they should be rewarded with the continued leadership of a company that has engaged in criminal behavior for 20+ years.

Subject: Proposed Microsoft settlement

Dear Department of Justice,

I am writing regarding the proposed Microsoft antitrust settlement, which proposes a payment of cash, hardware and software to schools serving impoverished areas. I feel this settlement is flawed in several respects:

First, if Microsoft is guilty of violating anti-trust laws, then the magnitude of this fine appears modest, considering the market losses of other corporations and individuals who may have benefited from a more open competitive environment.

Second, the nature of the penalty is boldly ironic (some might say nearly contemptuous). Microsoft currently has a very small share of the educational marketplace. That Microsoft would be able to promote its own system and educational software to a sizeable portion of the educational market, and to do so in the favorable position of offering "free" equipment, seems to be of considerable benefit to Microsoft and thereby diminishes the impact of the penalty significantly. Why should Microsoft receive government-provided exposure in the only computer market it hasn't yet penetrated and dominated?

Third, the nature of the penalty is too similar to Microsoft's core business. Why have the company give equipment and software which it has ready access to, when cash would be a much more flexible and more readily useable resource for the schools? Why limit the payment to only cover acquisition of computers? Why not allow the schools to choose how the money will be spent—after all, the educators in the locality will likely know what resources are most needed and what will have the highest impact.

I think that the penalty for Microsoft needs to be reworked and crafted in a fashion that

achieves a reasonable penalty—one that doesn't implicitly reward Microsoft for its behavior. Thank you for considering my opinion.

To: Microsoft ATR
Date: 12/3/01 12:32am
Subject: Settlement is a bad idea

Hi,

I saw this email address to whom I could write my opinion of the Microsoft settlement.

I am an entrepreneur & software developer of 4 years, and have used & own Microsoft windows products: server NT, desktop Windows 95; and used competing Unix products like Solaris & Linux. As a web developer, I believe the way in which Microsoft crushed Netscape through its OEM bundling practice really hurt the progress of computing as a whole, and I feel that the settlement idea that tries to value the overcharging of Microsoft products is not getting at the crux of the problem ... that Microsoft had used its monopoly powers to crush competing technologies, and significant penalties need to be levied with the possibility of restructuring to make sure it never happens again.

Microsoft has a desktop monopoly and does everything it can to make sure that it remains in this position. As a web developer, I cannot tell you the pains it has caused application development that Microsoft ended up beating out Netscape as the browser of choice. See, what Microsoft does it once it gets a significant foothold in a technology, it warps that technology until developers have to do it the Microsoft way ... on this one project in particular where the development costs exceeded \$200,000 in a year, I would estimate that 20% of the time we were resolving web browser incompatibilities. Had Microsoft not become the majority browser, they would have had to remain more compatible with Netscape & there would have been little burden on web application developers.

And I was only talking about HTML rendering issues, we were not even using Java, which Microsoft also screwed up. Do you begin to see my point? Any estimate of the damage that Microsoft has caused consumers & business through its monopolistic practices cannot hardly be estimated by anyone. Will the \$40,000 that my consulting client got charged just to make their web application cross-browser compatible be factored into the Microsoft damages? I doubt it. The effect that Microsoft has on the industry is to raise the barriers to competition by breaking competing standards that exist that could use other technologies that Microsoft cannot license. In this way, web & software development costs increase as standards (like HTML & Java) get fractured. Please do something punitive & significant to Microsoft to make sure this does not happen again. I would recommend that large penalties be assessed, rules against

bundling be set up and enforced, and a possible restructuring that would keep Microsoft the operating system business separate from other Microsoft businesses. To prevent bundling, I would suggest Microsoft be forced to offer especially to OEMs the opportunity to select which parts of the OS they want to install like Media Player, Disk Defragmenter, Web Browser, etc. For every piece that an OEM excludes from a distribution, there should be a real & significant price reduction in the OEM version of the software, to allow other companies to compete for that software business.

For example, to not bundle IE, perhaps an OEM like Dell would save \$10, and be able to pass those savings on to the consumer. Dell would be able to install AOL or Netscape for the consumer (or other browser like Opera), at possible price savings ... if Netscape had been able to continue to sell their browser to OEMs, it may be that Netscape would still be the dominant player in the browser market with superior technology ... who knows the difference this would have made to the development of the internet as a whole? Thank you for taking the time to hear my arguments. I hope that this letter actually got to someone?!

To whom it may concern,
I am dumbfounded!

Having followed the Microsoft Antitrust case closely, from its inception, I find it unconscionable that Microsoft could be let off with nothing more than a 'slap on the wrist'. I've never seen such a lopsided case. I liken this case to having a suspect, caught on camera murdering two people, while witnesses stand watching, and the police arriving as the suspect stands over the dead bodies, with the gun still in his hand. You (DOJ) have the proverbial 'Smoking Gun', and yet you let MS walk away.

I know there are more important things going on in the world right now, but does that nullify all common knowledge? As a veteran of the US Navy, I know full well what is happening in the world, but if we cannot maintain unconditional justice in our own country, how can we expect to in another? Would a convicted murderer in our country be given probation, because Ramon Eduardo Arellano-Felix (FBI's 10 most wanted) is still roaming free? You call yourself the Department of Justice, but I find this proposed remedy neither just, nor appropriate.

From: Denny Wyss
To: Microsoft ATR
Date: 12/3/01 8:57am
Subject: This Settlement is a complete sellout

The proposed settlement between Microsoft & the DOJ will be completely ineffective. It does not address or correct the fundamental issues of the case. It simply is a slap on the wrist. The proposed "restrictions" on future behavior are a joke. They are full of loop holes. Several of which, depending on how they are read, could prove to be severe blows to competing open source software and in fact strengthen the monopoly that MS holds. Further, these checks on future behavior have already proven themselves ineffective since Windows XP with all of its bundled software is already on the market allowing MS to gouge more money with their ridiculous licensing

scheme and further entrench themselves as a monopoly. To accept this settlement that appears to have been written by Bill Gates himself as a penalty for its illegal acts is very indicative to me that our Justice department is too involved in politics to really pursue justice, sadly misinformed of the true impact of what MS has done and frankly oblivious to the longer term implications of what they are doing. If this decision/settlement is indicative of the work the DOJ does, God help us all when it comes to handling even more serious matters such as terrorism.

Denny Wyss

MTC-00002595

From: Leisner, Greg
To: 'Microsoft.atr(a)usdoj.gov'
Date: 12/3/01 9:47am
Subject: Microsoft Settlement

My name is Greg Leisner and my profession is software engineer. My education includes a Masters of Science in Computer Science with an emphasis in Security and Cryptography. I work for a manufacturing company in Wisconsin. I would like to comment about the Proposed Settlement of the Microsoft Antitrust Trial in DC District Court.

I oppose the Proposed Settlement on the grounds that it doesn't prevent Microsoft from leveraging it's monopoly power into new markets. In fact, the Proposed Settlement actually shields Microsoft from legal remedy for future anti-competitive actions in violation of the antitrust laws. Specifically, I call attention to REVISED PROPOSED FINAL JUDGMENT section J number 1:

"J. No provision of this Final Judgment shall:

1. Require Microsoft to document, disclose or license to third parties: (a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of a particular installation or group of installations of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria; or (b) any API, interface or other information related to any Microsoft product if lawfully directed not to do so by a governmental agency of competent jurisdiction."

Since the digital world is now highly interconnected, the above exemption allows Microsoft to spread a function between two processes on the same host or different hosts and connect those processes with a "Communications Protocol" that employs some form of encryption or authentication. Because it is good design to authenticate all connections and communications, Microsoft will be able, within the terms of the Proposed Settlement, to leverage it's OS monopoly for Intel systems into ANY other market it chooses to. This will be possible by simply authenticating all communications between processes.

For example, Microsoft could have some or all network communications pass through an Authentication Layer in the Windows OS. This is actually good security design. (The communications could optionally also pass

through an Encryption Layer.) Under the Proposed Settlement, no other OS vendor could support the server side of the communications. Thus if Microsoft desired to increase it's Web Server market share, it could require all http communications to be authenticated. This could be enforced without override, or with popup windows to the user warning them that the attempted website access is 'not secure' and asking if they wish to continue. Obviously, this would have a chilling effect on competition. And the Proposed Settlement allows it to happen.

Another example on the same host this time could be application launching from the browser. Internet Explorer (itself benefiting from anticompetitive actions to gain overwhelming market share) could require authentication before launching an application to handle a particular data stream. Thus all audio and video data streams could require an authenticated application. If Microsoft choose not to license such authentication to, say, Real Networks, then Windows Media would effectively become the only way to play music and video on a Windows OS.

When I compare the Interim Remedy from the previous trial court to the current Proposed Settlement, I am shocked at the lack of thought and due care taken in crafting their respective terms. There are many other issues I find fatally flawed, but, being just a private citizen with limited time to devote to this issue, I am constrained from elaborating on them. I ask that my limiting my comments to section J.1 not be construed to be supportive of any other clause in the Proposed Settlement.

Thank you for the opportunity to comment,
Greg Leisner

Subject: It's Just Packaging!! For Crying Out Loud!!!!

Who would have the radio taken out of his car? How about the air conditioning? How about any of the new enticing accessories that come with a new car that is intended to make that car more attractive to a prospective buyer? Have you ever noticed that each of the auto manufacturers has installed his own brand of accessory? Is that causing the customer that buys a Ford to have to purchase Ford auto parts (if he doesn't, his warranty is in jeopardy)? The answer is "yes", but in that case, it's all right? What Microsoft did is no more than that! Business competitors that have a great deal of trouble competing with Microsoft have finally found an easy way to stay in the game.....run to big brother!

Microsoft has done no more than any other leading corporation would do to maintain its business position. It's called competition, guys! It really strikes me as strange that a company that has NOT been declared a "monopoly" can do exactly what Microsoft did and that's OK, because it makes them more "competitive" but, if a declared monopoly

does it to maintain their market position (to maintain their competitive level), it is unlawful. When did this country become so sophisticated that it desires to punish successful businesses? And where is the harm to the consumer? I personally have at least three browsers loaded on my computer and I use whichever I need at any given time. The fact that another browser resides within my operating system means nothing.... it's superfluous! Somebody made a really big deal out of nothing.... the business rivals maybe? Congressmen wanting to represent business interests in THEIR constituents' areas?

The current "tech wreck" is holding the economy here and around the globe hostage. If Microsoft is brought down for such a minor thing as "commingling its code", i.e., adding accessory components to its operating system, what will be the effect on that industry sector and the rest of the economy? It seems that there are those in government (e.g., Schumer) that would find this acceptable in order to further their own agenda.

If you care about product innovation, competition, fairness, and the economy, you will do whatever you can to counter the incessant roiling over this issue.

I think you do care and I look forward to seeing your supportive position for Microsoft and the technology industry unveiled in the very near future. If Microsoft goes down, our economy will take YEARS longer to turn around. That event will destroy the current and future budget outlays. This shouldn't be a partisan issue. It should be an American citizen issue.

Best regards,
Joe Stevens

Subject: Comments on MS/DOJ settlement
Hi,

Just want to give my comments on the Microsoft/DOJ settlement. It really sounds to me that Microsoft came out the winner with this one. Where else could a designated monopoly actually get more of a monopoly by supplying more software as a punishment. Take a look at Red Hat's offering to provide its Linux operating system at no cost and let Microsoft provide the hardware. This is a much better solution.

The anti-trust/monopoly case wouldn't be necessary if the Government would just adopt plans/policies to purchase proprietary software solutions. Initiate a plan/policy to only purchase software that has open standards. This way other companies can compete and we all get better products at better costs. Microsoft ensures that its products only work with other Microsoft products so it can maintain its dominance. Why do you think that every time a new Microsoft Office suite comes out that it doesn't work with the previous versions? It forces others to buy the upgrades so they can read the new formats. An example: We are

currently using Office 97. My boss loads Office 2000 and starts creating documents. He sends them to me to edit/read/etc, but I can't open them because they were created with the "new" format. He doesn't want to delete and reload Office 97. He is going to make everybody else load Office 2000. On top of that, Microsoft doesn't share the format of Office 2000 documents so the only software that will work with Office 2000 documents is Office 2000.

By using open standards, everybody can compete. Isn't this the American way? It isn't so much of what Microsoft does, but the Government shouldn't be buying in on it. The Government must use open standards. This will set the example and Microsoft will adjust to this. Punishment and policies will not change them.

For more than two hundred years, free and open competition has been a hallmark of the American experience. Our judicial system

protects society from unfair business practices and ensures a fair and level playing field for all competitors in the market place.

Microsoft Corporation has engaged in documented monopolistic practices which unfairly limit free and open competition in the market place. Alternative solutions, such as Red Hat Corporations offer to provide their Linux products free of charge to school systems should be reviewed and considered by the Department of Justice prior to enforcement of the antitrust settlement consent decree.

America is a free and open society. In my opinion, American business should reflect the values of its citizens.

Subject: DOJ/Microsoft Antitrust Settlement

To whom it may concern:

The proposed DOJ/Microsoft Antitrust Settlement does little but further the Microsoft monopoly the lawsuit is intended on prosecuting. My initial reaction was that this was more of a public relations victory and marketing ploy by Microsoft than a serious attempt to address the wrongs this company has done. As a professional computer programmer, the proposed ruling deeply disturbs me. The class-action lawsuits were filed in behalf of the people, yet it seems like the people are getting little from this settlement. I emlore that those considering this settlement sincerely look to other alternatives, particularly that solution proposed by open source company Red Hat Inc. (http://www.redhat.com/about/presscenter/2001/press_usschools.html).

Let us not do further damage to the computer industry and to the consumers than has already been done due to the illegal practices of Microsoft.

To: Microsoft ATR
Date: 12/3/01 12:02pm
Subject: Injustice

Dear Department of Justice

I write to complain about the proposed settlement with Microsoft. The enormity of the anti-competitive practices of Microsoft is

quite astonishing. Hundreds of vendors have been deliberately put out of business, and their superior products (wordperfect and harvard graphics are but two examples) have been replaced by inferior "standards" such as word and powerpoint that Microsoft has been able to force on the business and home computing communities merely by virtue of providing the operating system. Even worse, their operating systems are inferior to competitors' such as linux, as they are less stable and it is much more difficult to write software for them. In addition, it is not possible to debug programs properly because the Microsoft operating system code is not available, so when something doesn't work as expected, it isn't possible to find out why. In essence, Microsoft has committed crimes similar to the September 11 World Trade Center events in their unprovoked attack on fair competition within the computing community and destruction of their competitors.

For these reasons, I think the operating system source code should be forced to be freely available. In addition, software products such as MS office should be developed for other platforms—Linux, Apple (which it already is) etc. If dividing Microsoft is the only way to achieve this end, as previous legal authorities have demonstrated, then it should be done.

Finally, allowing Microsoft to 'infect' classrooms with its own products is far from a penalty—it is the opposite of one. They should be made to provide much larger numbers of computers and these should be installed with Red Hat linux or Apple OSX operating systems instead of MS windows.

From: Harry Yingst
To: Microsoft ATR
Date: 12/3/01 11:18am
Subject: My opinion about the antitrust settlement with Microsoft

Having worked in the computer industry for over ten years I feel that the proposed solution from Microsoft is not in the best interest of the proposed beneficiaries (our schools).

I personally see it as furthering its monopolistic grip on the software market and in turn ultimately taking more from the schools in renewal fees etc. than they (Microsoft) are giving.

As I understand it the Microsoft's proposed solution has a five-year time limit at which point schools would have to pay Microsoft to renew their licenses and upgrade the software. This will cost these poorer districts a great expense at a time when many of these computers will be in dire need of replacement, further draining the limited resources of the schools. I feel that the alternative proposal as set forth by Red Hat, Inc. is a far better proposal due to the fact that our school system will initially be provided with far more hardware (provided by Microsoft) and software (provided by Red Hat) then under the Microsoft proposal.

Additionally the Red Hat proposal has no time limit. Red Hat will provide software upgrades through the Red Hat Network online distribution channel. This in turn will allow greater access to computer resources then would be present under the Microsoft proposal (about five times as many computer systems).

I salute Red Hat in there generosity to provide not only the software but to also provide online support for these computers, that's free support for the software more than one million computers that will be provided by Microsoft. The true winners here will be our students!

Thank you,
Sincerely,
Harry L. Yingst III

Subject: Microsoft Settlement.

This is personal opinion. I am not representing the view of the company I work for.

I was disappointed in the terms of the settlement.

As a Data Security Professional I believe the bundling of software in the operating system is a critical issue. Complexity is the enemy of security. Microsoft's business model of putting more functions into the OS drastically increases complexity. The fact that companies using their software can not

strip out this functionality to create a more secure and business oriented system is a major problem. As an IS Professional I see Microsoft's actions as an effective tool to stop the next set of bright young people from creating the next Microsoft. It is what they did not Netscape. Business should fail because the business model does not work, not because they threaten someone else's monopoly.

MTC-00002610

From: Daniel O Winkless
To: Microsoft ATR
Date: 12/3/01 12:03pm
Subject: The Microsoft Settlement

Dear DOJ,

I am really disappointed. I had been hoping that Microsoft would be broken into three or more independent companies. I would have settled for a two-way split. But a slap on the wrist and a warning not to do it again is simply not sufficient.

I use Microsoft products daily. I am daily angered by the poor quality of the products I am using. As you can tell from my email address, I work for the US Geological Survey. The Survey and the Department of Interior have made significant investments in PC based programs. Our computer staffing has increased as we have made larger investments in PCs. This, while total staff has decreased. It is the wrong direction and it is caused by bad software. Fortunately, we have been able to keep our mission critical applications in the Unix environment. Our Unix support staff has decreased to where we have only one Unix support person. Again, not a good situation should he get sick or find another job.

If Microsoft's Office product were implemented on a stable platform, like Solaris or Linux, it would truly be awesome. If the Microsoft Operating systems had to compete fairly with other OSs, it would either improve rapidly or die rapidly, just as a free, open, and competitive market would dictate.

As it is, Microsoft will promise to be good and will continue its monopolistic practices because it can. The next suit will be harder to bring and Microsoft will be harder to break up. If you won't break up the company, at least recognize that it is a monopoly and regulate it as such, the way AT&T used to be a regulated monopoly.

Subject: Microsoft settlement

Greetings,

As a programmer who specializes in educational projects I can tell you from personal experience that the way Microsoft conducts business has held back the usefulness of computers to education at all

levels. Schools just can't cope with the additional expenses generated by Microsoft's attempts to own the world. The losers here are our kids and therefore our society.

Allowing Microsoft to buy their way out by giving schools hardware and software will only increase the problem by further limiting competition. Instead, and at least, make them give the thing the value most COLD HARD CASH and let the schools decide how to spend it without restrictions of any kind. Some excuse Microsoft by saying that they are just good technology manipulators.

So were the robber barons of almost a century ago. Through new technology they then and Microsoft now manipulated, circumvented, squashed and laid waste the honest well intentioned efforts of many people all in the name of filling their own wallets. If what the robber barons did was criminal then what Microsoft is doing is criminal.

Having lived and worked in the silicon valley I know that there are thousands of Gates want to be's. How this settlement goes down sends a message to the entire industry about what behaviors will or will not be tolerated.

Please make it a RESOUNDING message!

MTC-00002615

From: Nick Haddock
To: Microsoft ATR
Date: 12/3/01 1:21pm
Subject: The judgement against Microsoft
As an IT professional, I feel you have let Microsoft off incredibly lightly. As the evidence has shown, they use bully boy tactics to stifle young companies and technologies, thus dominating every market they are involved in. This is a monoploy position, however the lawyers dress it up, which is extremely unheathly in a capitalist market.

When you think that the only software currently able to compete with Microsoft on the desktop is free, Linux, and the Apple Macintosh, both of which have small percentages.

My recommendations would be: You should, split microsoft into seperate companies that will stimulate competition.

Stop Microsoft having the ability to decide that everyone who buys a standard PC must have there software, if they want it or not. Force them to pay the people they destroyed (Netscape etc) compensation Force them to donate money (not free software—thus perpetuating the monopoly) to your countries education system.

All I can hope as a European citizen is that our European government deals with this predatory monopolist in a far harsher manner than you have. I can only conclude that certain other previous monopolists (Oil, Telecoms, IBM) must be very annoyed at the way this company is being dealt with. It does raise the question, does the public know all there is to know, or are there some new Swiss bank accounts being filled as I type. If there are not, it's what it looks like to me from the other side of the pond. I hope this email in some small way adds to the debate.

Subject: the MS proposal:
the MS proposal:

putting more MS software in the schools does not address the original issues of contention—it only increases the monopoly. I don't like the proposal. MS should be penalized, not given another foothold in another arena—this time against Apple. Take the money MS would have spent and divy it up to these poorer districts for computers and software of their choice. let Apple, MS, and the Linux world each have a share of the pie.

MTC-00002618

From: James Emerson Willis
To: Microsoft ATR
Date: 12/3/01 3:04pm
Subject: Settlement Fails to Address Bundling

Unless I missed something, the reason microsoft is able to dominate so many markets is because they bundle their products into the OS (Netscape died because Microsoft bundled IE).

Since most people in DOJ are probably not tech-heads, let me give an analogy about Televisions and Toasters. Let's say there's only one company that makes televisions (let's call them company A). However, there are many companies that makes good toasters (companies B and C). One day, company A decides they would like to be the king of toasters as well. So, since everyone needs a TV, they will throw in a "free" company A toaster with every TV they sell. (The important thing to note, is that the toaster is not really free, but included with the cost of the TV).

Although company A's toaster isn't great, people don't see the need to go out and buy any others. Eventually, companies B and C go bankrupt. With the compatability measures you talk of, it will make applications on the operating system no different from company to company. But if the consumer is forced to buy your product because of bundling, it's a rather moot point for anyone else trying to compete.

Windows XP bundles additional products with the operating system people used to buy seperately (i.e. firewall software). Although microsoft's products are initially inferior, they eventually win out since users are forced to pay for its development even if they don't use it.

Thank you for your time.

Subject: Disagreement with Proposed
Microsoft Settlement

Hello,
I, Stephen W. Gulyas, a resident of Michigan at 1094 Greenhills Dr, Ann Arbor, MI 48105, oppose the proposed settlement between Microsoft and the various states:
I am fully dissatisfied with the proposed agreement between Microsoft and the state governments regarding its monopoly charge. The proposed penalties do nothing to weaken

Microsoft's current powerful position and do little to discourage them from changing practices in the future. I find some public gestures, such as donating computer to schools, simply nauseating.

The penalties to be imposed do not provide for a fair, competitive environment for the computer industry going forward. Ample time must be given to have new companies time to blossom. Stringent agreements preventing software and hardware ties must be implemented. Microsoft's ability to work with and contract to third parties, in attempts to circumvent any proposed penalties, must be disrupted. I fully support the original decision to break up Microsoft into AT LEAST two companies. Finally, Microsoft must be harshly reprimanded for past wrongs. They have shown no remorse throughout this process, and have continually rebuffed the system. Only monetary penalties in the tens of billions of dollars range will get their attention.

The computer market has been stifled of creativity for nearly a decade. Please severely increase the tenure and amount of penalties against Microsoft to ensure a fair marketplace in the future.

Subject: Re: Microsoft Anti-trust case

You asked for comments to help Judge Colleen Kolar-Kotelly to decide the case in the best interest of the consumer. I am a consumer who thinks that Microsoft got a bad rap from the beginning along with most everyone else in our area. I have been very satisfied with Microsoft products. The Companies and States who think the settlement is inadequate are just looking for something for nothing. Bill Gates just knew how to build a better mouse trap and stay ahead of his competition. Sure, maybe Gates has been a little too aggressive in the past, but his company hasn't hurt any consumer that I know of. This whole business from the beginning has been a case of "sour grapes".

Warren Scheweppe (retired)

Edmonds, Washington

MTC-00002626

From: James Worster
To: Microsoft ATR
Date: 12/3/01 5:26pm
Subject: Breakup

Justice Department,
Microsoft continues to build and maintain it's monopoly in the computer industry and should be broken-up. The proposed settlement with schools is a clear indication they have not changed. They will continue as they have in the past. A monopoly does more harm than good and the proposed settlement proposed by Justice is inadequate and ineffective.

I owe a PC as well as other computers and I use computers at work daily, so I'm not saying this to hurt Microsoft. I think they are a good company and a bigger monopoly will hurt them more in the long run. This can't go on forever. I think it's better to break them up now, as it will cause less problems than at some point in the future.

Please reconsider the Justice Departments' decision to let Microsoft off the hook. The only effective remedy is to break up the Microsoft monopoly, NOW!

Sincerely,
James Worster

Subject: MS Antitrust Suit

I appreciate that the DoJ is seeking new comments on the Microsoft antitrust situation. My insight and comments as a customer and proponent for holding Microsoft accountable are as follows:

Why does Microsoft build players, plug-ins, and applications that work on HP Unix, but not on Linux?

Netscape and Real Networks build applications that run on Unix, Linux, Windows, and NT, and they are significantly less well "heeled" than Microsoft ... Why does Microsoft not support file systems of other operating systems, such as Linux (ext2) or MacOS? Linux supports Microsoft file systems, and the open source movement has much less resources, funding, and corporate backing than Microsoft...

Why is Linux the last Unix-based operating system Microsoft targets for the few applications it decides to port to other OSes, when Linux is the most widely used of all Unix-based OSes? Netscape, Apple, and Real Networks offer releases on all these operating systems almost simultaneously...

Why do major vendors, such as Compaq, build their hardware to work specifically with a certain version of Windows, thus requiring a new PC purchase to obtain the benefits of a new Windows version? I can install all versions of Red Hat Linux on my Compaq laptop, but the BIOS explicitly prevents my modem from working with Windows 2000 (even though the PC is listed on the 2000 hardware compatibility list)...

Why do Windows operating systems not recognize partitions dedicated to other (competing) operating systems? Install Windows on a PC with Linux on it and you will generally lose your boot sector pointer to the Linux partition, while Linux during installation will notice Windows operating systems on partitions and seamlessly allow you to boot from and use those other operating systems...

Why is it that Microsoft has so easily been successful in preventing hardware vendors from openly supporting other operating systems? Up until a few years ago, you could not buy a Compaq or HP server or desktop with Linux installed on it, due to the exclusive license agreements they secured, and to this date most companies have a robust Linux offering even though it's generally well hidden within their site (in the /linux directory, etc., with little or no associated advertising or direct links to it from their main page)...

Why is it that when you buy hard drives and other peripherals, they explicitly say on the package that Windows 98 (or other Microsoft OS) is REQUIRED, or that it was "designed for" Windows? A hard drive is a hard drive, and I have had no problems installing any version of Red Hat Linux on any of these hardware devices, with or without Windows installed...

Why is it that the direct experience of countless IT shops (and off the record Oracle comments and opinions) is that Oracle on a Linux server, other hardware being equal, outperforms Oracle on NT/2000 by orders of magnitude, and yet there have been no industry efforts (especially by Oracle, who may be getting their arm twisted) to prove it using any of the many metrics they have for doing so? Instead, they continue to compare Oracle on HP or Sun to Oracle on NT/2000...

Why is it that Microsoft was successful in getting DoD to modify (water down) their DII-COE standards to allow NT to be certified, but there has been little or no effort to provide the same level of certification to Linux so they can get the all important "seal of approval" to compete against Microsoft in one of the most lucrative sectors of IT spending (the US government)? The Air Force has done studies proving that DII-COE compliance would be straightforward for Linux, but nobody is leading the charge to make it happen, so Microsoft maintains their stranglehold on the market...

Why is it that Microsoft is once again allowed to "embrace and extend (choke to death)" evolving standards, such as the Sharable Content Object Reference Model (SCORM) being pursued by the DoD? The SCORM standard is inherently non-OS and non-browser dependent, but along comes a well-heeled Microsoft-led consortium to develop a competing standard "CLEO" that, surprisingly enough, ONLY WORKS WITH MICROSOFT INTERNET EXPLORER!!!!...

The stranglehold Microsoft has on the market has resulted in some of the worst dichotomies of our times. The DoD loses hundreds of millions, possibly billions of dollars per year, due to down time and cleanup of Internet Explorer and Outlook related viruses that proliferate due to the widely known poor security models of

Microsoft products designed to be "user friendly" rather than secure. However, DoD continues to use both widely, rather than the much more secure and relatively trouble-free Netscape products. They have this stranglehold because the DoJ has been incapable, and recently unwilling (since the election and rise to power of our business-friendly Republican government), to hold Microsoft accountable.

Everyone in the marketplace knows Microsoft dearly deserves to have their ears slapped back some, and that in the long run the market will be much better off for it, despite any near-term impacts. Based on his direct quotes in the trades, and the fact that he brought forth a class action lawsuit, the Compaq CEO was clearly livid about the way his company was being manipulated in the early 90's by Microsoft, but his memory became extremely fuzzy on the issue during the trial—amazing how that can happen after you realize a few years later that being "in bed" with Microsoft is not exactly a bad thing for your company, its stock price, your stock options, etc. However, the lucrative nature of these relationships, and the ensuing unwillingness of those bringing suit to hold their course, should not prevent DoJ from attempting to do the right thing and hold Microsoft accountable for breaking the antitrust laws, where it can be proven they clearly are doing so.

I have not been able to get the full text of the proposed Microsoft settlement. I am responding to the following quote from www.redhat.com/about/presscenter/2001/press_usschools.html Microsoft had proposed that, in settlement of class-action claims of price-gouging, the company donate computer hardware, software and support to 14,000 poor school districts throughout the United States. Under the proposed settlement, a substantial part of the value provided to schools would be in the form of Microsoft software.

I agree with Red Hat Software's conclusion that allowing Microsoft to reduce restrictions by donating software is poor public policy. I would argue that one, such donations cost Microsoft far less than their stated value, and two, they encourage the very behavior the consent decree is intended to prevent.

Please consider banning Microsoft from including the values of their own products in the valuation of any donation made under the consent decree. This will encourage them to donate much-needed hardware without providing them with greater market share.

POINT ONE: Software production costs, far more than production costs for any other good, are almost entirely spent in development. As Microsoft itself has pointed out during complaints against software piracy, it costs perhaps five or ten cents to produce a copy of an existing disk. Furthermore, in most cases the actual disks are not included with new computers; the programs simply are copied to the new computer's disk. It is not inconceivable that in this case the production cost may, in fact, be well below a penny per computer.

If you will concede that a poor school is unlikely to purchase a new computer and is more likely to simply make do with donations, then software donations should not be viewed as lost sales.

Therefore, it can be concluded that software donations cost Microsoft almost nothing, and therefore do not, in themselves, punish Microsoft.

POINT TWO: Academia is one of very few areas where Microsoft is not the leading software provider. By donating large amounts of their software, Microsoft extends their market share, at no cost, while gaining a great deal of positive publicity. I am most concerned with the the market extension, since it will provide them with yet another foothold with which to maintain their monopoly.

From: Jeff Boody
To: Microsoft ATR
Date: 12/3/01 7:43pm
Subject: DOJ/Microsoft Antitrust Settlement DOJ,

I believe that this settlement is a step in the right direction, however Microsoft is already several steps ahead. One example is Microsoft's MSN network. I currently use Qwest.net as my internet provider but recently received a letter from Qwest which announced that they had "formed an alliance with Microsoft Network (MSN)." The letter informed that I MUST transition my account

to avoid service interruption. In addition, the letter states that "MSN Internet Access is available to users of the Windows (R) 98 or later operating systems."

This action seems to have been taken without regard to users of non-Microsoft operating systems (except for Mac OS 8.6 or later ONLY). As a Linux user, I especially despise this action. Qwest has made no attempt to inform customers how to obtain an internet provider other than MSN. Hopefully one of their customer representatives will be helpful in resolving this problem.

I know that this is just one example, but I don't think that the current settlement will be very successful in resolving problems such as this.

From: Michael Wang
To: Microsoft ATR
Date: 12/3/01 7:27pm
Subject: MS's proposed remedy will fatten the beast further more?

Of course they will provide THEIR goods and THEIR services to stomp out the competition even more.

The penalty they pay must not benefit themselves.

"The goals of the government were to obtain relief that stops Microsoft from engaging in unlawful conduct, prevent any recurrence of that conduct in the future, and restore competition in the software market. . ."

—DEPARTMENT OF JUSTICE I liked the idea of having them provide solutions where it compensate the competitors and consumers the damages and harms they have caused.

Red Hat Inc had brought up a very good point, that if Microsoft spends one million on hardware alone and let all other vendors provide the softwares, this would seem to be more beneficial for the under-privileged populations and allow more competitions in the market.

"This would increase the number of computers available under the original proposal from 200,000 to more than one million, and would increase the number of systems per school from approximately 14 to at least 70."

http://www.redhat.com/about/presscenter/2001/press_usschools.html

Allow the willing vendors to place their softwares on those systems and not that of Microsoft again, lest we worsen this problem for the future.

sincerely,
System Administrator and QA Engineer
Michael Wang

From: Stephen
To: Microsoft ATR
Date: 12/3/01 7:08pm
Subject: Microsoft settlement inadequate

I implore you to fight the settlement offer tendered by Microsoft and the Department of Justice. Microsoft has again and again shown willingness to use its significant market power to shut other developers and platforms

out of the software and hardware market. As a loyal Apple user form many years, I have tried to resist the Windows monopoly only to find with increasing frequency, that the service or software are no longer available to non-Windows users.

For example, Intuit stops producing Quickbooks for the Macintosh because of the market size. Microsoft never published the Access Database software for the Mac. Why, because if the Mac does not have a Office bundled database, it will be viewed as an inferior platform and business will go with the Windows version of Office. Why has the Mac been able to read Windows formatted disk for over 10 years but a Windows computer cannot read a Macintosh formatted disk? It is not a hardware problem but a software problem. You can buy third party software to do this, but Microsoft has chosen not to include this software in Windows. The only reason again can be to cripple a competing computing platform.

Now I am finding websites on the internet that are using Microsoft only technologies that exclude non-Windows platforms. The web designers have a choice but Microsoft ties the features to their software. Example is Passport and Windows Media Player. Media Player is always a version or two behind in the Mac version, so the new features will not work. Passport is a nominous concept that has already locked non-Windows users out of sites that use it. I'm not talking about small hobby sites, I have even seen this on large catalog sites. Microsoft is already using its muscle to change internet standards consortium's set standards its way.

Through experience, Microsoft will continue its ways unless stopped. The settlement is extremely inappropriate as it continues with tying products. Microsoft will give \$1 billion in software, training and hardware (which will actually cost a small fraction of this after taxes and mfg. cost), so that schools will be required to use Microsoft product to teach new computer users because that is the only way they can afford to get computers in poor schools. They have billions in the bank and can make a billion in 6 months. The actual cost of the settlement can be made in a few months of normal business and they then are free to care on their marry old ways.

Behavior must be changed. Please do all that you legally can to stop Microsoft's continued monopoly behavior. Monetary punishment will not work, you must take markets away from them like the AT&T breakup removed local telephone service from AT&T markets. That way, competition will have time to develop and survive and the market evolve.

Thank you for your consideration and time.

Sincerely,
Stephen Henry

Subject: Microsoft anti-trust suit

What Microsoft is proposing is absolutely insane. They already have a Monopoly, what are we trying to do encourage more of that monopoly? Right, encourage our young people to use the monopoly and train them in it. It is like letting the cat watch over the hamsters.

I can't believe that this is even being considered. What has happened to this country anyway? Why the hell are we letting corporations run our lives for crying out loud? Sure let microsoft give the schools computers, but if nothing else WITHOUT SYSTEMS ON THEM. Those computers should be loaded with Linux, or Unix so the students can learn what they will have to anyway. The Open Source Way is the epitome of the American way. It encourages competition and allows freedom. The Linux and Unix systems on the market today are far and above better than anything microsoft will ever come out with. By the time the grade school students of today get out in the real world they will be behind horribly if they do not know Linux or Unix.

Open your eyes, fools. Get somebody in there who knows computers and common sense.

You guys have no teeth and have lost a great deal of respect. I respect Bill Gates to a degree and some of what he has built. But if you cannot see a monopoly when it is right in front of you, you need to change your line of work.

As to the schools getting mired into Microsoft. They cannot afford the upgrades

down the road. Let them have the money and do with it as they will. Personally I would have preferred to see two or three competing OS's that consumers paid for. Unfortunately, Microsoft has created a market where the only contender is created and distributed for free, and that is Linux. As to the few Linux companies, they are different business models based on a free OS that they package and support only. Apple can barely be considered a rival to MS.

I could say more, but all you have to do is go out and talk to the technicians and businesses.

Subject: Microsoft "Settlement"

Ladies and Gentlemen:

It is my understanding that you have solicited public comment on the proposed settlement offer, particularly with respect to the plan to provide computers and software to schools.

I would simply say that I strongly object to this offer. It does not punish Microsoft in any way—it simply serves to promote their monopoly. I recognize that a monopoly is not illegal, but the means by which Microsoft has achieved their market share has been clearly anti-competitive. I have the utmost respect for true innovators and inventors, and Microsoft has been neither. Unfortunately, our patent laws have not been adequate to let the true innovators profit from their inventions, and now it appears that our laws will not protect the "little guys" who have been coerced to sell or have been driven out of business by the anti-competitive business practices. Our country and its competitive position in the world will ultimately suffer in the long term if this short term "fix" is allowed to stand. The fact that lots of investors and institutions in this country have investments in Microsoft stock is not a reason to prop up the company with this settlement. Please reject the settlement—Microsoft must answer for their past actions and be prohibited from similar actions in the future.

Thanks for the opportunity to voice my opinion.

I think the proposed settlement offer by Microsoft is no punishment at all, since it would propagate their monopoly further, enhancing Microsoft's dominance. Red Hat's <<http://www.redhat.com/>> offer is great. I hope the government takes them up on it.

Sol Schumer
4033 36th Street #4
San Diego, CA 92104-2380
RED HAT COUNTERS MICROSOFT'S
EDUCATION OFFER

Microsoft has proposed settling over 100 private antitrust lawsuits by pledging to donate more than \$1 billion in hardware, software, services, and training to the poorest schools in the United States, but Red Hat has put forward a counter-proposal. It will offer its open-source Red Hat Linux operating system to all U.S. school districts free of charge, and has suggested that Microsoft concentrate solely on purchasing new hardware. In this way, more computers could

be made available to schools and Microsoft's monopoly would not be extended further into the education sector, says Red Hat CEO Matt Szulik. He estimates that over one million computers could be allocated to schools under the new proposal, compared to 200,000 under the old one. In addition, Szulik says that Red Hat will provide free software upgrades and license renewals in perpetuity, whereas Microsoft would only provide such services for five years. MTC-00002644

From: Sammy Dadds
To: Microsoft ATR
Date: 12/3/01 10:17pm
Subject: Microsoft class action suit and DOJ settlement

To whom it may concern:
Class-action suit.

It seems in the class-action suit that Microsoft is really getting rewarded if it is allowed to put any of its software or related products into any of the school systems. Sure, the schools would benefit but students that use Microsoft's OS and products at school will certainly lean towards the same when not at school. This would give Microsoft a built in up and coming client base and further extend its monopoly.

A true punishment for Microsoft and even greater benefit for the schools would certainly be to have Microsoft provide all monies for hardware and competitors software. Apple, Mandrake, RedHat and many other software companies would surely provide a wealth of free or low cost software for the cause. DOJ settlement.

Since Microsoft will not be split into two companies why is there no provision to keep all operating system (OS) code separate from the application code. This is the major problem. As Microsoft prepares new features for the OS the applications are immediately prepared to take advantage of the features. Competitors (me) are not able to even start building applications until Microsoft releases an approved Application Programming Interface (API) (which does not include everything Microsoft is using) for the new features. This keeps competitors completely in the dark. Could Microsoft applications be made to wait before being able to develop for the new features? Maybe the panel of experts could look for this. The latest example is Microsoft Office XP being released months before Windows XP OS was released. Microsoft is a monopoly and has won this battle. I think the DOJ did the best they could under today's circumstances. I, however, am feverishly working with other OS's and developer tools to help equal the balance of power. Same thing when I vote, I like equal amounts of Democrats and Republicans.

Subject: College Student

Hi. I would just like to let you know that I use RedHat Linux on my computer, and use the office programs for my work at school. I

feel that linux would be great in the classrooms. First off, the Star Office suite offers productivity programs of the same quality as Microsoft. Also, they are fully compatible, by exporting file formats into Microsoft Format. Second, linux is a great learning tool of the computer, seeing as how it's source code is available for perusal by everybody. What better way to understand how an operating system is built than to look at the programming code? With Microsoft, you can't see the code, so the operating system is a mystery. I do not understand how that can teach kids. Third, linux has become a standard desktop for millions of people worldwide. The strides in ease of use have been phenomenal. A look at www.kde.org will show you the effort made to make the operating system easy to use. Fourth, almost all software for linux is free! Almost all software for windows is not! By placing Windows OS on the computers, the schools will have no choice but to put a significant amount of money into them at a later date. Linux distributions offer their latest versions free for all. No limitations implemented. Fifth, since Linux source code is available to all, it is frequently being fixed and updated. With Windows, only employees get to browse the source code, so mistakes and improvements take much longer to fix. Using Windows on these computers simply allows Microsoft to continue its monopoly. However, using Linux gives these children the same working knowledge and use as Windows does, only the benefits will outlast the licenses of the Windows ball and chain. Thank you for your time.

Sincerely,
Michael A. Sacco

Subject: Microsoft Antitrust Comment—GET THE MONEY BACK!!!

Microsoft stole money. Billions!

When someone steals money, you put them in jail and take back the money. Microsoft illegally profited by exploiting its monopoly position. They stole money! Maybe you can't put Microsoft in jail, but you should at least try to recoup the stolen money and reimburse the victims. Reimburse the consumers who were forced to buy Microsoft's inferior products and were overcharged in the process. Reimburse the shareholders of Microsoft's competitors who were drummed out of business or otherwise devastated by Microsoft's illegal tactics—Software Publishing Corp., for example. Your proposed "settlement" might, at the very best, compel Microsoft to steal a little less for a while. More likely, they will continue to pillage at a record pace knowing that maybe, just maybe after another six years and hundred billion dollars you might, once again, politely ask them to stop. But then, they'll still get to keep the money.

I'm sure other would be antitrust bandits are quaking in their boots.

Date: 12/3/01 10:26pm

Subject: Microsoft's "settlement"

I am very, very disturbed that Microsoft's proposal to donate a huge number of computers to schools is being considered seriously as part of a monopoly settlement case. The only large market in computing that Microsoft does not completely dominate is the education market.

To allow the company greater inroads into this market as a "punishment" for abusive corporate methodology is an insult to the American people. It is a slap in the face of anyone who dares believe that Big Business does not pull the strings of the federal government (as if that government were just one more company to bully, threaten, and coerce). Microsoft's tactics here are as aggressive and obvious as their business practices.

As a taxpayer, I hope that the word 'monopoly' still has some meaning. Give Microsoft what it wants here, and you undermine the very concept of monopoly protection for your citizens.

As a veteran who served his country with distinction, I demand that my government act with honor. Please do not embarrass us all in the eyes of the world. . .

Very sincerely,
Michael A. Bair

MTC-00002649

From: Scott Ashton

To: Microsoft ATR

Date: 12/3/01 11:43pm

Subject: Anti-Trust Settlement

To Whom It May Concern:

I do not believe that the settlement proposed by the Department of Justice provides a reasonable penalty for Microsoft. In fact it would appear that the Department of Justice is actually helping Microsoft to secure business within the education sector.

First and foremost, the software portion that Microsoft will be "giving away" isn't exactly a gift. In most cases, Microsoft will in fact be securing additional market share. By providing Microsoft operating systems and Intel based hardware to run their OS on, Microsoft will in essence have a captive audience.

Additionally, Microsoft will only provide technical support for three years, at which time they stand to generate even more revenue by selling support services.

Microsoft being ordered to "give-away" its software is like the tobacco companies being

ordered to install cigarette machines in schools.

Throughout the DOJ probe in fact Microsoft continued its monopolistic practices. In fact several months ago I was speaking to a sales representative at Gateway (a personal computer manufacturer that my company deals with on a regular basis) I was considering ordering our computers without an operating system, so that I could install an open-source operating system called Linux. I was told by the sales representative that they could ship the computers without the operating system, but we would still have to pay for the Microsoft operating system because they had a contract with Microsoft. The business that I work for is a non-profit hospital center in an urban environment. We recently replaced approximately six hundred computers. If we could have installed an open source operating system (at no cost) versus two hundred dollars per computer for Windows 2000, we would have saved one hundred and twenty thousand dollars.

Microsoft has damaged many businesses via its unscrupulous practices. I would propose that Microsoft have to provide non-Microsoft based systems (there are many viable alternatives) in order to fulfill the DOJ sanction.

Over the years companies like Apple (very popular among schools), Sun Microsystems, Netscape, and many others (quite a few no longer in business as a result) have been damaged by Microsoft. All of these companies offer hardware and or software that could be used as part of this settlement.

And what recourse for organizations such as mine that have been strong-armed by Microsoft? Certainly we can't afford to litigate against such a giant. Its sad, one hundred and twenty thousand dollars could have bought vital medical equipment, or underwrote desperately needed charity care. For the sake of my organization as well as so many others that have been harmed by Microsoft's illegal business practices I hope that the DOJ will make the right decision.

Thank you for your consideration.

Subject: Microsoft Settlement

I believe the recent settlement agreement with Microsoft and the DOJ is one that does not punish Microsoft for its illegal actions, but rather rewards them. This settlement allows Microsoft to place its products into the local school systems where it currently does not exercise a monopoly. But this settlement will now give them a monopoly where once Apple and Open Source software could compete for desktop space.

I am further appalled at the language of the settlement that finds no wrong-doing by Microsoft. This language seems to ignore the monopoly and strong-arm tactics evident in this case. In my opinion the DOJ should come down much stronger against Microsoft, forcing the company to publish the source code for its operating systems, as well as:

- * adhere to standards established by the W3C organization in the development of browser technology.
- * integrate all browsers within the operating system
- * provide consumers with some type of refund for exaggerated software costs
- * provide businesses with a similar refund
- * submit to review of all contracts with 3rd party developers, hardware manufacturers, etc.

The DOJ should also take a serious look at the proposal by Red Hat at http://www.redhat.com/about/presscenter/2001/press_usschools.html. This proposal allows Microsoft to be punished financially while providing more equipment for schools. It also allows no one company to begin a monopoly in the school system, where people begin their computer experiences and become consumers of the future.

Subject: Microsoft monopoly

I'm not sure if you wish to take into account the opinions of a foreigner, but you can always junk this if not.

Microsoft has a long history of stealing the bulk of its software. Even the first version of MS/DOS was merely QDOS (Quick and Dirty Operating System), a microkernel developed for embedded applications, with disk drivers added by Bill Gates. Hence the emphasis placed on the disk drivers in the name MS/DOS (Microsoft Disk Operating System). As far as I am aware, the only company to win a lawsuit against Microsoft was Stacker, and

they were promptly taken over, lock stock and barrel, by . . . Microsoft. Few can afford to oppose a company with Microsoft's budget. Such theft hampers, or in most cases prevents, the development of competing software companies.

If mere theft and suppression of competition were the only issues, one might say that Microsoft was little worse than many other large corporations. A deeper issue is that the continuing monoculture of operating systems is a threat to the health of the software industry in general, and to all industries which rely on computers. Viruses targeted at Microsoft systems can do immense damage to the entire infrastructure of your nation, by damaging business records and hindering communication.

There exist no viruses which effectively attack Linux, because security was considered from the outset of the design, and because problems are rapidly tackled as soon as they are found; often, an effective patch is freely available on the internet within hours of the discovery of a problem. This demonstrates that an operating system, even a popular one, need not display the extreme vulnerability of Microsoft's systems.

Unless Microsoft can be spurred to improve its systems, particularly in respect of security, the U.S. will remain vulnerable. By encouraging their monopoly position, the D.O.J. is effectively encouraging them to continue to produce poor, insecure, and excessively vulnerable systems. It is likely that the U.S. national interest would be well served if real competition existed in operating system design, so that viruses targeting particular systems were less effective. At present, there appears some danger that Microsoft could collapse altogether under the weight of its own incompetence and complacency, leaving a vacuum which could be filled only by Linux. This would lead to another monoculture, admittedly of a much better quality system, but not necessarily much less dangerous.

I would urge you to reduce the power of Microsoft to dominate the operating system market, in order that Microsoft may survive.

Subject: Microsoft Settlement

I appreciate the Justice Department's attempts at coming to a speedy conclusion to the Microsoft anti-trust dispute.

However, I do not believe the proposed settlement is a sufficient remedy. In fact, in many ways I feel the "settlement" amounts to capitulation on the part of the Justice Department. The fundamental problem with Microsoft's *illegally created* monopoly and its continuing existence is the amount to which it is limiting competition in the computer industry. Companies like Apple, RedHat and Be have had an incredibly high barrier to entry simply in virtue of

Microsoft's "ownership" of the entire desktop market. While I applaud Microsoft's success in building a very successful business, I do not appreciate their strong-arm tactics which have made it near impossible for competitors to fight on an equal playing field. I want as much choice in free enterprise as our country can create and encourage.

Microsoft's contracts which preclude any modification of the boot loader, for example, inherently makes it impossible for any other operating system vendor to compete side-by-side with Microsoft.

Furthermore, the proposal in this settlement whereby Microsoft will "donate" hardware and software to the country's poorest schools is, at best, a tap on the wrist and at worst it actually *extends* Microsoft's monopolistic practice into yet another marketplace where Microsoft does not yet have dominance. Please reconsider your settlement. You are not doing us consumers and software developers any favors by failing to reprimand Microsoft for its illegal practices.

Thank you.

Subject: Opinion Regarding Microsoft Settlement

Greetings,

I am expressing this opinion as an individual and not speaking on behalf of my employer or anyone else.

I am of the opinion that you have not done enough to stop & reverse the monopolistic behavior of Microsoft. The recent changes in licensing along with the invasive nature of the Passport feature of Windows XP are examples. Also, notice the high prices of Windows XP and Office XP. These are exorbitant and would not exist if there was competition.

This company has proved that it cannot be trusted and it appears to me that your settlement shows that the DOJ is willing to look the other way and grant Microsoft a de facto license to continue along the path it wants. This is a bad deal for the public and holds us hostage.

Thanks for providing me the opportunity to express my opinion.

Regards,

Jerry A. McMunn, R.Ph.

Subject: Please rein in Microsoft

Sirs:

Strong sanctions against microsoft are appropriate.

Controlling Microsoft is not just about their domination in the market place. Yes, they have good products, but compared to what? Compared to alternatives that have never

seen the light of day. But moreover, it is a matter of speech: Microsoft is media, and behemoth corporations are not a good thing for this country.

Yes, there can be other behemoths that might compete with them, but that is NOT the way to run a train. AOL-TimeWarner, Rupert Murdoch, Microsoft and someplace in there is the United States government, which is the representative of the people, growing relatively smaller and weaker and subject to influence of corporations that can run their states ragged. California knows the railroads, West Virginia knows the coal industry, and even the United States has known Standard Oil.

This is serious business. The only remedy for Microsoft is now structural: without an effective means of defining and enforcing consent decrees, that is all that is left.

Absent structural changes, we will see very unpleasant effects of Microsoft's dominance in the next 10 years that may remind us all of the one basket approach, in Ireland, when that basket held one kind of potato. Here, an overwhelming percentage of the population will have the same software, through which most of their information will flow but whose workings are unknown to us.

Subject: Antitrust

A judge has ruled that Microsoft violated the antitrust laws a view which has been painfully obvious for some time.

The current agreement however allows them to continue their predatory practices. This is wrong and will in the end inhibit inventors, developers and investors from working in any area that might be in competition with Microsoft. It doesn't make sense to invest in any application that Microsoft can integrate into its operating system.

When the World Wide Web first entered the scene Microsoft was caught napping they didn't believe that the Internet would be so popular. Yet by virtue of their control of the Desktop they quickly supplanted Netscape. Their New product XP with Windows Media Player and Active X is supplanting Real Radio Player and Sun's Java. Nothing has changed. Microsoft has continually disregarded consent decrees. What makes this one any different?

Without a strong deterrent or break up, which the current plan does not provide, Microsoft will continue with its predatory ways. Innovation and investment will be depressed and the public will be short changed not to mention the risk however small that new revolutionary technology could be developed outside of the United States and supplant our leadership.

Subject: Microsoft Settlement

Dir Sir or Madam,

While the proposed settlement does do a lot to try and make a level playing field within the computer industry, I do not believe it goes far enough. Microsoft has shown us in the past, that it is a company that cannot be trusted. In the eyes of many people, Microsoft has done no wrong. The reason people believe this, is that they don't really have any direct involvement with the company, outside of the fact that they probably use there operating system and other products.

People don't realize that they could have a better computer "experience" if other companies could have competed with Microsoft. Case in point, being the BeOS, made by Be, Inc. This company is now going out of business. They had a truly great operating system, that was small, but powerful, and could do almost anything the Microsoft OS's could do. Some may say it was poor marketing on Be's behalf, that caused them failure. But, due to contracts Microsoft held with OEMs, they could not get their OS installed on manufacturer's machines. Making Microsoft open up the contracts a little to allow multiple OS's on a newly distributed machine, does not help out companies have been hurt in the past. Especially now, that the only OS really around that can be used on an Intel machine, is Linux, and most people would not want to use that. Forcing of the API and related documents to be published by Microsoft will not help in any way. The current documentation that they release is dreadful, and I cannot expect that it would get any better. Forcing Microsoft to remove icons and and menu entries to their products does not mean those products are uninstalled. Microsoft has tied the Internet Explorer browser so tightly into their operating systems, that uninstalling them would mean a lot of work, but this would not be impossible. They may say that it is, but I tell you it is not. Nothing is impossible.

This should be a punishment, not a slap on the wrist. Microsoft has hurt a lot of people and businesses. Yes, they have helped in making computers more common place, but they did this while fattening their own pockets, and not allowing others to join in the rewards.

So, as you can see, I am against this settlement, and hope that it will be rejected. Microsoft should not be allowed to get "off" as easily as you are proposing.

Thank you,
Paul Ashford

Subject: what to do with microsoft
Microsoft has proven to be an anti competitive company. its actions benefit only microsoft.

I believe that:

1. linux should be brought to all of the schools in the U.S
2. microsoft should transfer a few bilion dollars to companys like Netscape (companies that they caused damage to by using the ms os monopoly)

3. there should be greater government support of open source companys (not only moral support...)

4. make companys that sell computers sell them with other operating systems.
5. restrict production of microsoft software.
6. give microsoft heavy fines.
7. take out the i/e from the os

Subject: Comments on Microsoft and Settlement

(1) Is it true that companies had to pay Microsoft royalties for Windows even if they didn't put Windows on their machines? If so, Microsoft must be punished, and punished enough that the damage will get its attention.

(2) The idea that Microsoft is not able (= competent) to separate its Internet browser from Windows is, well, laughable. Their defense should be consider offensive to anyone with even marginal intelligence.

Again, they must be chastised in a way they cannot ignore.

Subject: Settlement
Good day.

I would like to add my voice among those who disagree with the proposed settlement of Microsoft's antitrust suit. Education is the last (and fading) stronghold for Apple computer, and to have Microsoft place its products for free in schools would be the death of Apple. The only way this would work is to have Microsoft PURCHASE NEW APPLE EQUIPMENT with the fine \$'s and place it in schools—this being an actual punishment.

Think, please.

Subject: Microsoft Settlement

Hello. As a user of an Apple computer for many years, I have watched in dismay as we have been squeezed into a smaller and smaller corner. I don't think that people outside the field realize the tremendous pressure that Microsoft has put on everyone else.

The basic fact is that computers are interconnected. More and more interaction and complexity is the wave of the future. If one company has monopoly control of the standards, and control means any power to create incompatibility for others, then we will be looking at a 100% monopoly in the not too distant future.

It is only in education at the moment that Microsoft does not have a crushing monopoly. Allowing them to give their software to schools is not a punishment for them. It costs them almost nothing to give software to schools, especially to schools

which could not afford it otherwise, and they have money to burn in any case. It is control they are after. Only the government has the power to stop them at this point.

That in itself says something about their stranglehold on the industry. Please do not encourage them to expand their monopoly. That is not what this country is about.

 Subject: microsoft settlement

I can't believe that the Dept of Justice is proposing a settlement where in you are extending Microsoft's Monopoly power! you are about to let them get a foothold into another area of commerce, namely the schools. This is the only area of the computer industry where Microsoft isn't in the majority. Don't you realize that even as their attorneys were negotiating with the DOJ that Microsoft was still bullying computer manufacturers over Windows XP. When will you learn that Microsoft doesn't play fair. Time and time again the expressed interest in one company and silently developed a competitive product after accessing their secrets and then dropping their offer to merge.

This proposed settlement is only another advance for Microsoft. A real settlement would be for them to donate millions or billions directly to the affected school districts and let the districts decide how to spend the money. Also give monies to the affected corporations named in the lawsuits so they can truly compete with "the Evil Empire" Microsoft.

One-Liner

A father/son lawyer/computer-engineer learn presents disturbing facts in the Microsoft case that the average person has never heard about, criticisms of the remedies proposed to date, and a novel analysis of the case that points directly to the only remedy that would prevent Microsoft from repeating its illegal behavior in the future.

Abstract

In this article we present an analysis of one of the main threads of the Microsoft "Browser War" and a proposed remedy that we believe is the most effective way to prevent Microsoft from repeating its illegal behavior in the future. Microsoft saw a combined threat to its operating system enterprise from the fusion of the World-Wide Web, Netscape's popular web browser, and Sun's cross-platform Java technology. Microsoft was so concerned about protecting its operating system monopoly that it put economic pressure on various corporations to harm Microsoft's competitors, and it subverted standards of compatibility to undermine the attempts of numerous organizations to increase the ability of computers to interoperate with each other. Reorganizing the company into two parts, akin to the "Baby Bell" break-up, will not prevent future repeats of Microsoft's more subtle maneuvers. Neither will the settlement agreement of November 2nd, 2001. Instead, we propose an open-standards measure to put Microsoft's most widely used computer interfaces into the public domain and their specification under the control of an independent body representing the public. This measure is based on the power of the United States District Court to enforce the antitrust laws of the United States.

Introduction

As the Microsoft antitrust case nears a close, it is becoming clear that one of the most significant aspects of the case is being overlooked. At issue is Microsoft's abuse of computer interfaces to harm others, a theme that is not mentioned directly in any of the court records and that is not fully addressed by any proposed remedy to date. All remedies proposed so far—from Judge Thomas Penfield Jackson's remedies to those

proposed in the latest settlement agreements between Microsoft and the United States Department of Justice—fall short of a complete solution to the problem. Neither breaking the company in two nor Jackson's interim provisions nor the watered-down remedies in the proposed settlement of November 2nd, 2001 would prevent Microsoft from behaving in a manner that is effectively identical to its past improper behavior. Moreover, the company's latest operating system release, Windows XP, violates the very same laws, and in the same manner, that the company was charged with breaking in the first place. We present an analysis of the facts in the case that ties together a string of seemingly unrelated actions. The main issue of the case is not whether Netscape's browser and Microsoft's browser should have equal access to the preloaded PC desktop, nor is it whether Microsoft should be allowed to embed browser technology into its operating system. The facts in the case are much more interesting, and far more insidious. Microsoft took on Netscape not because it felt its browser enterprise threatened (at the time, Microsoft had no browser enterprise whatsoever); Microsoft took on Netscape because Netscape's browser had the potential to make Microsoft's operating system enterprise irrelevant. Court records [1,2,3] show that Microsoft anticipated a combined threat against its operating system enterprise from the fusion of Netscape's popular web browser, Sun's cross-platform Java technology, and the open-standards communication protocols of the World-Wide Web. Microsoft diverted this threat by intentionally undermining the attempts of numerous organizations to make computers more compatible with each other. Where other companies and groups proposed and implemented open standards, Microsoft implemented its own proprietary and incompatible standards, and through its monopoly status was able to divert attention from and effectively neutralize several key software interfaces proposed by others. In this particular instance, had Microsoft tailed, and had the Java/Netscape vision achieved its potential (as seemed very likely at the time), computer users would have had the option to run whatever software they wanted, using whatever operating system and hardware platform they cared to use, rather than be tied to the Windows/PC platform.

It is crucial to understand that Microsoft maintained its monopoly status not only by bullying other companies (which is obviously illegal once a company is found to be a monopoly) but also by manipulating computer interfaces—both its own and those of others. It is this latter behavior that has been overlooked and which is not fully addressed by any remedies proposed to date; we will show that this manipulation of computer interfaces was just as effective a method for extending Microsoft's monopoly as bullying. Our conclusion is that the only way we can prevent future misconduct on the part of Microsoft is to require the company to not only disclose to the public its internal interfaces but also relinquish its rights to those interfaces and, furthermore, to adhere to existing open standards.

Note that this remedy goes one step further than Judge Jackson's interim provision that Microsoft fully disclose the details of its Windows operating system's interface 1. Microsoft has demonstrated in the past that it will target selected competitors and implement changes to the Windows interface that render the software of those targeted companies suddenly incompatible with the newest version of Windows. The ultimate effect of this behavior is obviously to reduce the market penetration of the targeted competitor's software. This behavior, we believe, violates the Sherman Act and must be stopped. Simply divulging the details of the Windows interface will not curb Microsoft's behavior, as we will discuss in more detail later. The only way to stop Microsoft's illegal behavior is to take away the company's right to manipulate the Windows interface at will; this is an interface that is so widely used that it has become the de facto standard for writing software in today's world-wide computer network, and any change to this interface affects potentially millions of people. Because Microsoft has a clear history of manipulating this interface to intentionally harm competitors, the company's behavior must be stopped.

1. Throughout this article we will be dealing with computer interfaces; when we use the term "interface" we mean "internal" computer interfaces, which should not be confused with the "user" interface. The user interface is the arrangement of words and diagrams that is drawn by the computer on a computer screen and with which a person interacts; the article is not about this type of interface. We will define in more detail what we mean by the term "internal" interface as this article progresses.

Sidebar: A Brief History of the Microsoft Case

In 1998 the Justice Department of the United States filed an antitrust action against the Microsoft Corporation, alleging that Microsoft was an illegal monopoly and was engaging in activities that violated the Sherman Antitrust Act. A number of states also filed federal antitrust actions against Microsoft. Those actions were joined with the suit by the Justice Department, and United States District Judge Thomas Penfield Jackson, of the United States District Court in the District of Columbia, was assigned to the case. Efforts were made to bring the government and Microsoft to a settlement, but those efforts failed. A trial was held, and Judge Jackson issued Findings of Fact on November 5, 1999 and Conclusions of Law on April 3, 2000, determining that Microsoft did violate the Sherman Act. Microsoft requested a hearing on the issue of the remedies that should be imposed, but Judge Jackson, disgusted with the behavior of Microsoft's defense during the trial, said a hearing was not necessary—because many of Microsoft's witnesses had perjured themselves or presented falsified evidence [24], and Jackson felt it was clear that the same would be true for any of Microsoft's future witnesses. Jackson issued his Final Judgment on June 7, 2000, and that judgment contained a bombshell—Jackson issued a structural remedy that split Microsoft into

two corporations: an operating systems business and an applications business, in addition to other remedies.

Microsoft appealed to the United States Court of Appeals for the District of Columbia. On June 28, 2001, that Court issued its opinion in the case. The Court upheld that portion of Judge Jackson's decision finding Microsoft guilty of violating the antitrust laws of the United States, but the Court modified the remainder of Judge Jackson's decisions. The Court stated that Jackson had erred in not providing Microsoft a hearing on the issue of remedies. Also, Jackson had made remarks to the press during the case which showed a bias against Microsoft on his part. The case was remanded to the District Court, and a new judge was to be assigned to the case to re-determine the remedies to be imposed against Microsoft.

Microsoft sought review of the decision of the Court of Appeals upholding the finding that Microsoft was an illegal monopoly, in violation of the Sherman Act. The Supreme Court, in October, 2001, rejected Microsoft's request.

The case is now before Judge Colleen Kollar-Kotelly of the District Court. She appointed a mediator in October 2001 to help the parties try to settle the case. Within a month, the Justice Department and nine of the states entered into a proposed settlement agreement with Microsoft while nine others of the plaintiff states refused to sign the agreement. Judge Kollar-Kotelly will have to decide whether to approve the settlement and will also have to resolve the pending suits by the nine states that have not joined in the agreement. A date of March 4, 2002 has been set as the beginning date for the hearing to determine what remedies should be imposed against Microsoft.

A Primer on the Computer's Internal Interfaces

Definitions and Clarifications

A computer interface is a language. It is a set of rules by which computer components, both hardware and software, interact. It is a contract between specific components that specifies the syntax and semantics of any and all interactions that involve those components. Interfaces are found at all points of contact between computer components, including application-to-application, application-to-operating-system, software-to-hardware, and hardware-to-hardware:

- Application-level interfaces dictate the level of compatibility and interaction between different software applications. Example: for a Netscape plug-in to work correctly, it must use the correct application-level interface to interact with the browser.

- The interface between computer programs and the operating system, often called the application programming interface (API), determines what services a program may request of the operating system. Example: for a computer program to work correctly on the Windows operating system, it must use the Windows API, the interface into the Windows operating system.

- Interfaces between software and hardware, called instruction sets, determine what operations a program can perform in hardware. Example: for software to run correctly on an Intel-based computer, it must

use the x86 instruction set, the interface that the hardware understands.

- Hardware interfaces that connect devices—including chip-to-chip interconnects such as PC-100 SDRAM, DDR SDRAM, Rambus Channel, and the Intel P6 bus, as well as peripheral bus or networking protocols, such as SCSI, PCI, USB, and Ethernet—specify how hardware components interact and, in the case of peripheral and networking protocols, also specify how software is to use the hardware to communicate. Example: for a computer to successfully talk to a USB device, such as a mouse or printer or disk drive, the operating system and the device must understand the USB interface, and the computer must have a USB connector.

- USB Keyboard/Mouse
- SCSI SCSI Hard Drive
- Browser Extension (e.g. Java Applet) Ideal
- Java API Browser (e.g. Netscape Navigator)
- Windows API Operating System (e.g. Windows)
- IP Internet
- AGP Graphics Accelerator
- x86 Instruction-Set Architecture (ISA)
- Microprocessor (e.g. Intel Pentium III)
- Intel P6 Memory Bus
- Main Memory, usually DRAM (e.g. PC-100 SDRAM)

Figure 1: The various interfaces found in a typical personal computer. Computer components are shown in light grey; the interlaces through which they interact are shown in darker grey. Components that are not separated via an interlace cannot communicate directly with one another. For example, the keyboard cannot write directly to the Internet—typed messages must go through the operating system. The interface between the browser and browser extension is labeled "ideal" because it does not exist exactly as drawn. Microsoft ensures that all software running on a PC must depend at least partly on the Windows API; Microsoft allows no piece of software to even partially supplant the Windows API, otherwise the importance of Windows might diminish.

Figure 1 illustrates examples of these interlaces as found in a typical personal computer. The figure shows a browser running on an operating system and a Java applet running within the context of the browser. The Java API between the browser and the browser extension is an application-level interface that allows a software program to use the services of another software program. The Windows API is the interface through which software programs request services from the operating system that they cannot perform by themselves. For example, the browser does not have direct access to the Internet and must ask the operating system to send network packets out on its behalf; typical programs do not have direct access to the keyboard and mouse and must ask the operating system for user input; and only the operating system can read and write the hard drive. The instruction-set architecture is the interface between hardware and software and consists of very simple requests such as add the following numbers, or multiply the following numbers, or store this value to memory, etc. As the figure shows, all software has direct access to the

microprocessor through this interface; for example, while the browser is running it interacts directly with the hardware until it makes a request that only the operating system can service (such as sending a network packet or retrieving user keystrokes from the keyboard or writing a file to the disk). Lastly, hardware-to-hardware interfaces such as the Intel P6 memory bus allow hardware components to interact directly, and peripheral busses such as USB (Universal Serial Bus) and networking protocols such as IP (the Internet Protocol) allow the operating system to talk to hardware devices connected to the computer and other computers across the Internet, respectively. One thing to note is that the operating system plays a critical role within the system, as it represents the crossroads of all activity: very little happens in a computer that is not under the direct control of the operating system.

Note that the Java applet is shown executing entirely within the context of the browser; in particular, the figure shows the Java applet executing without having to use the operating system directly. This is an ideal organization: in reality, due to the particulars of Microsoft's Java support, a Java applet is at least partly dependent on the Windows operating system. Nonetheless, this serves as a good example of what interfaces do and how they do it. Interfaces are designed to separate components from each other and thus simplify the business of developing complex computer applications. If the operating system supports a particular interface or device, then applications can use that interface or device without much additional effort. For example, if programmers want to use a certain graphics coprocessor, and the operating system supports that device, then the programmers can develop software that uses the graphics coprocessor without having to incorporate its interface into their software because that interface is already incorporated in the operating system. The flip side of this is that if the operating system does not support that particular device, the programmers are usually prevented by the operating system from interacting with the device at all—as the diagram shows, software programs are separated from hardware devices by the operating system.

As we have said, a computer interface (as opposed to a graphical user interface) is a language, and as with any other type of language, if either the syntax or semantics are disobeyed, even minutely—which can often happen by writing imperfect software code or building imperfect hardware—then communication between components fails. Similarly if two people are speaking the English language, but one occasionally uses the wrong tense for verbs or forgets to use articles or occasionally speaks in another language with which the second speaker is unfamiliar, then the second speaker will have enormous difficulty with the conversation.

The problem of violating computer interfaces is more serious than speaking human languages improperly, and this is why we have described computer interfaces as contracts as well as languages. Because computers and computer components tend to

be generally intolerant of errors, it is the case that even simple violations of an interface, such as swapping the order of two control statements (analogous to switching the order of subject and verb in a sentence), typically have devastating effects, such as a computer program running erratically or not at all, or perhaps the entire computer reaching a state that requires a reboot. To avoid such miscommunications, designers are very careful to be both precise and thorough when they write up the specification of an interface; such specifications are very complex and contain, among other things, all of the valid command codes of the interface, any expected responses, and semantics attached to each valid command code. To redefine the interface is to make changes to its specification. An open interface (often called an open standard) is one in which all of the details of the interface are made publicly known, often through documentation freely available on a widely publicized website. A public interface or public standard is one whose specification is open and controlled by an independent public organization (more on this later). A de facto standard interface is one that is widely used; de facto standards may be public, and they are usually open, but this is not always the case. The Windows API is an example of a de facto standard that is neither public nor open.

An interface is an abstract entity and must not be confused with the software codes or hardware mechanisms that implement it. Software codes and hardware mechanisms are concrete entities; they can be created, destroyed, held in the palm of your hand. Interfaces are like the terms of a contract—though you can define them on a piece of paper, burning that paper does not make the terms of the contract (or the details of the interface) disappear. Most importantly, because an interface is not the same thing as an implementation of that interface, one does not have to divulge the details of an implementation to divulge the details of an interface, and disclosing the details of an interface in no way compromises the security of any implementation of that interface. In the case of Microsoft's Windows operating system, the company can easily divulge the full details of the operating system's interface without having to make public the details of its implementation—i.e. the software code of Windows that implements the interface, and it would be impossible for even a computer expert to infer any details of Microsoft's software code just by looking at the interface specification.

A good analogy is the steering interface of a car. The car has a steering column that, if used properly, turns the wheels of the car and thereby changes the direction of the car's movement. The steering column's interface is relatively simple and can be described with the following specification.

STEERING INTERFACE: If the steering column is twisted clockwise, the car will turn to the right; if the column is twisted counter-clockwise, the car will turn to the left. How far the column is twisted determines how sharply the car turns. The car will continue to turn from a straight course until the steering column is returned to its original rest position in the center.

Though this may not sound much like a language or contract, it is: This interface specifies exactly what actions a driver may perform and exactly what the car will do in response to those actions.

This interface has numerous potential implementations. An obvious one is a wheel attached to the steering column; a driver grips the edge of the wheel to get better leverage on the column. Another implementation is a set of handle bars, such as one would find on a motorcycle. Another implementation is a rudder sticking out at right angles to the steering column. An ad hoc implementation similar to the rudder is a pipe wrench gripping the steering column directly. One could create a "power steering" implementation by attaching an electric drill to the steering column, such that pulling the drill's trigger twists the steering column, and the direction of the twist is determined by a setting on the drill. The alternatives are endless.

The important point to note is that each of these implementations is a concrete object and involves some degree of creativity and invention to construct. The interface specification applies to all the implementations and is embodied by them, but it is not a concrete thing. One can divulge the details of the interface without mentioning or implying any particular implementation of that interface (as is the case with the specification given above); and it would be impossible for even an expert engineer to infer any details of any particular steering implementation just by reading the interface specification (as is also the case with the specification given above).

In this analogy, the interface specification given above would correspond to the Windows API, and any one of the interface implementations (e.g. the rudder example) would correspond to the software code that implements the Windows operating system. One writes code to build a program that supports or uses a computer interface, just as one would build a steering wheel or set of handle bars to use the steering-column interface. Just as the paragraph above detailing the steering interface gives no hints as to how one would build a particular steering wheel, knowing the full details of the Windows API gives no hints as to how the Windows operating system is built.

The analogy extends even further. If the interface's specification were to change, then potentially all the implementations would be affected, meaning that they may or may not implement the new interface. For example, if the car's manufacturer redefined the interface to heat or cool the steering column (heating up the metal turns the car right; cooling it down turns the car left; magnitude of temperature change determines sharpness of turn; car moves in straight line if temperature of steering column is 75° ...), then all of the steering implementations above would suddenly no longer work with new cars using the new interface. Though the example might seem a bit whimsical, it uncovers one of the fundamental dangers of widely-used interfaces, as detailed in the next section.

The Impact That Interfaces Have on the High-Tech Industry

Because of computer interfaces and the highly structured ways in which computers

interact, there exist today modes of corporate behavior that were not possible a decade ago. It is now possible for a powerful corporation to exploit the way computers are made to injure others who build computers and computer-related products. Because the economy is heavily intertwined with the high tech industry, such actions today can adversely affect a large number of corporations, whereas such actions might have been little more than annoyances ten years ago. This mode of corporate behavior is something akin to twisting the rules (i.e. the specifications of widely-used computer interfaces so as to harm those who have no choice but to follow those rules. As we have indicated, internal interfaces are the languages, or sets of rules, that specify how computing components interact. If either side disobeys the rules (e.g. attempts to use a control signal that does not exist or is not recognized by the other component), then it is as if one side is speaking gibberish, and communications between components fails. Therefore it is of utmost importance that both sides adhere very strictly to the interface's specification. When an interface changes—for example, when it is time to “upgrade” the interface to include features that cannot be provided through any other means—then all products previously compatible with that interface must be redesigned to comply with the new specification, else they become out-of-date and quickly lose market share. Redesigning a product for a new interface specification is a substantial undertaking: Such redesign can require enormous amounts of money, time, and engineering effort, and oftentimes a company will simply give up on a product line rather than update it to comply with the latest interface specification, simply because of the cost involved.

As the members of the Court of Appeals mention in their opinion, “Once a product or standard achieves wide acceptance, it becomes more or less entrenched.” [1: p. 12] It is therefore extremely important to prevent that entrenched standard's misuse. We believe this is fundamental if we are to prevent monopolistic abuses in the high-tech industry, because through the manipulation of computer interfaces a monopoly can do much more damage than it could by simply offering competing products. These interfaces have wider impact because not only are end-products and therefore end-consumers dependent on them, but those hardware and software vendors that build compatible end-products are dependent on them as well. Modifying an interface makes potentially all products based on that interface instantly obsolete—because, as soon as the modification is made, those products affected by the changes no longer conform to the current interface, and an interface is ultimately more influential in its scope than any particular product that embodies it ... provided the new interface catches on. Because a monopoly is capable of successfully creating and promoting new interfaces at will, a monopoly controlling a widely used interface can, by manipulating that interface, dominate its direct competitors, its indirect competitors, and even those corporations that provide complementary products and do not compete with it in any way.

Given this depiction of the importance of interfaces and the economic impact of their re-definition, it is easy to understand that if a company is allowed to control an important interface, it can very easily change the shape of the computing world. Just such a situation is quite possible because many interfaces are proprietary, and therefore the developer of an interface can change its specification at will. Often, the owner of a proprietary interface can effectively prevent any other company from building or marketing products that use the interface: While interfaces are not patentable, many companies obtain wide-reaching patents for their implementations of those interfaces that make it difficult for any other company to build its own implementation of the same interface without infringing on the first company's patents. This is an unfortunate situation: An analogy would be the “developer” of the English language preventing others from speaking the language, or forcing them to pay royalties to do so.

In most instances, the owners of interfaces do not rapidly change the interface specifications, nor do they charge outrageous licensing fees or single out individual corporations and prevent them from using the interface. If a company were to do any of the above, other companies would most likely realize that dealing with this particular interface is more trouble than it is worth, and they would go find another interface or develop their own. However, if the interface in question is the de facto standard, if it is used by all other companies in the same industry, if support for this interface is expected by the end-user, and if there exists no practical alternative, then a company would be in serious jeopardy if it were to run afoul of the owner of that interface. This is exactly the situation in which many companies have found themselves. The interface in question is that of the Windows operating system, owned by Microsoft. Windows is the de facto standard of Intel-compatible operating systems:

Every year for the last decade, Microsoft's share of the market for Intel-compatible PC operating systems has stood above ninety percent. For the last couple of years the figure has been at least ninety-five percent, and analysts project that the share will climb even higher over the next few years. [2:• 35]

Any software company that wants a significant market share must write its software for Windows. Any hardware company that wants a significant market share must design its hardware to be interoperable with Windows. Perhaps the most important point of all is that the software companies know this, the hardware companies know this, and the officers of Microsoft obviously knew it as well.

The situation is particularly trenchant as it applies to alternative technologies—i.e., possible competitors to Windows. Because such an enormous portion of the world's computer users are dependent on Windows, any technology with the potential to compete with Windows must also be compatible with Windows, otherwise no significant number of computer users would ever use it (or even know it exists). Through its ability to change the Windows API, Microsoft has the power

to determine what software is compatible with Windows and what software is incompatible. Because of this, Microsoft can target any potential competitor and make its product incompatible with Windows for a long enough period of time to make consumer interest in that product wane; at that point, the product poses no more threat to Microsoft's monopoly. This article will describe Microsoft's use of that power to eliminate the potential threats of Netscape and Java.

The Facts of the Microsoft Case and Their Implications

Microsoft has a history of manipulating interfaces so as to harm other companies and maintain its monopoly status. Microsoft changed the Windows API substantially and rapidly so that other companies failed to keep up with the changes and so lost market share (example: IBM OS/2): Microsoft created small-scale changes to its Windows API so as to disable the software of targeted companies (examples: Netscape, Apple, RealNetworks, America On-Line): Microsoft divulged the details of its interfaces selectively so that the software products of targeted companies would become incompatible with Windows and remain so until Microsoft chose to divulge the details to the targeted companies (example: Netscape Navigator): and Microsoft watered down open or public interfaces by offering incompatible proprietary alternatives and using its monopoly status to lure (and in some cases force) developers away from the standard interfaces (examples: Java, HTML). The rest of this section gives the details of these examples. The effect of its manipulation of interfaces has been to destroy any newly developed, innovative software application that has the potential to compete with Microsoft's software. Because Microsoft is a monopoly, such tactics are illegal. And therefore Microsoft's practice of manipulating interfaces must be stopped.

The Netscape/Java Threat

In this article we discuss only one of the series of actions taken by Microsoft to protect its software monopoly. The opinion of the Court of Appeals and the Findings of Fact of the District Court contain many more examples, but this one is particularly enlightening because it illustrates Microsoft's extensive monopolistic activities concerning computer interfaces. The saga begins with a description of how technological advances tend to occur in the high-tech industry: The software industry in general is characterized by dynamic, vigorous competition. In many cases, one of the early entrants into a new software category quickly captures a lion's share of the sales, while other products in the category are either driven out altogether or relegated to niche positions. What eventually displaces the leader is often not competition from another product within the same software category, but rather a technological advance that renders the boundaries defining the category obsolete. These events, in which categories are redefined and leaders are superseded in the process, are spoken of as “inflection points.” [2: • 59]

In common parlance, these “inflection points” are “paradigm shifts” during which an entrenched company can be blind-sided by a new technology that renders the

company's particular segment of the industry unimportant. When this occurs, the company's dominance of that now-unimportant segment becomes irrelevant: Despite their position, the company becomes marginalized along with their segment of the industry. Given that only ten years ago, less than one household in one hundred recognized the word "Internet," yet today the Internet is given credit for the economic revival of the 1990's, it becomes clear that the rise of the Internet represents one of these paradigm shifts.

The exponential growth of the Internet represents an inflection point born of complementary technological advances in the computer and telecommunications industries. The rise of the Internet in turn has fueled the growth of server-based computing, middleware, and open-source software development. Working together, these nascent paradigms could oust the PC operating system from its position as the primary platform for applications development and the main interface between users and their computers. [2: • 60]

Internet-based computing was seen by Microsoft as a potential threat to the Windows operating system because the Internet represents the ultimate in computer compatibility: Any computer that speaks the language of the Internet—its interface, the Internet Protocol (IP, see Figure 1)—can speak to any other computer that speaks the same language, regardless of the computer's hardware class or instruction set or operating system controlling it. Such ease of interoperability posed a threat to Microsoft because if computers became more interoperable, especially if Internet-based computing allowed users easier access to run programs that interested them by making them available on any machine in the world that was Internet-compatible, this would make one's choice of underlying operating system unimportant. Any operating system would suffice, and competition among vendors of these systems would take place on a level playing field.

The primary question is how? How could a computer user take advantage of the Internet to run applications without regard to the particular operating system on his or her computer? The answer lies in the operating system's interlaces: Offering similar interfaces via some channel other than the operating system would eliminate the importance of using any particular operating system.

The channel that became available was the combination of Netscape and Java. By 1994, Netscape was becoming synonymous with the Internet, the company's browser was used by nearly all those who explored the World-Wide Web, and the browser ran on nearly every type of computer—not just those using the Windows operating system. Due to intense interest in all things Internet-related, many consumers were buying their first PC just to see what all the fuss was about. For many consumers, Netscape's browser was their portal to the networked world; it provided browsing, access to newsgroups, and email—and many consumers used their PCs to do little more than that. These consumers were in effect insulated from the

underlying operating system; because their primary interaction with the computer was through Netscape's browser, they could have been using any other operating system and would have been oblivious to that fact.

At the same time, Sun Microsystems was promoting a new development environment called Java that promised a "write once, run anywhere" level of compatibility. In other words, a computer programmer could write a program using Java and fully expect it to run on any computer anywhere, whether it was a Windows computer, an Apple computer, a Unix computer, or any other breed on which Java ran. In general, only those applications written for Windows run on Windows computers, only those applications written for Apple computers run on Apple computers, etc. Because Netscape ran on Windows, it was immediately available to that 90% of the consumer PCs that used Windows, and this widespread availability was one of the main factors that helped it succeed. For Sun's Java environment to succeed, it would need to run on Windows too, but, because Java was an obvious threat to Windows in that its goal was to make the choice of underlying operating system immaterial, it was unlikely that Microsoft would ship Java technology with the Windows operating system; moreover, Microsoft executives recognized early on the possibility that Java could erode Microsoft's position [2: • 75–76].

In May 1995, Netscape promised to integrate Java into its browser. This provided Java direct access to every machine on which Netscape's browser ran, and because of the popularity of the Internet, the Web, and Netscape's browser, this represented a large number of machines that would potentially run Java applications. For developers of computer programs, this meant that programs written in Java would run on nearly every desktop, laptop, and server computer in the world, and this would constitute an even larger market than the market for Windows desktops alone. In addition, Java incorporated abilities that supported computing over the Internet, including the ability to easily download new programs and run them locally, which would enable low-cost, effortless software distribution over the network (one small example of this is the running of Java "applets" that appear on many websites). The increased market for software and the low-cost distribution channel for that software made this environment an exciting potential for program developers.

If the Netscape/Java environment ever reached its full potential, program developers would be able to reach larger markets than before, yet with less cost overhead than before. Doing so would also free consumers to choose whatever operating system they wished, provided it supported Netscape's browser, which, as mentioned, already ran on nearly every operating system then in existence. This scenario would be exactly the kind of "inflection point" that would diminish the importance of Windows and displace Microsoft from its position as software market leader. Bill Gates saw this potential as soon as Netscape and Java merged:

In late May 1995, Bill Gates, the chairman and CEO of Microsoft, sent a memorandum entitled "The Internet Tidal Wave" to Microsoft's executives describing Netscape as a "new competitor 'born' on the Internet." He warned his colleagues within Microsoft that Netscape was "pursuing a multi-platform strategy where they move the key API into the client to commoditize the underlying operating system." [2: • 72]

Netscape's "multi-platform strategy" was simply the fact that the browser ran on nearly every operating system existing at the time, not just Windows. This evidently worried Gates because it might make alternative operating systems attractive to consumers. The "key API" was the operating systems API being offered by Java, which could displace the Windows API, and "the client" into which it was being moved was Netscape Navigator itself. Doing so would enable computer users to run Windows or Windows-like applications from within Navigator, possibly over the Internet. Because Navigator ran on nearly every operating system in existence at the time, this would "commoditize" or make immaterial the underlying operating system: Any operating system would be a viable substitute for any other, provided only that it ran Navigator. Obviously, if one could run Windows or Windows-like applications on any operating system one cared to use, this would weaken the appeal of Windows. Users would perhaps start to shop around for operating systems using criteria such as ease of use, or compatibility with other systems, or system reliability (e.g. relatively infrequent crashes). A competitor with a product easier to use than Windows, or more reliable than Windows, could have taken away much of Microsoft's business and caused a reduction in the sales of Windows.

Microsoft's Actions to Remove the Threat

In response, Microsoft took a number of complementary steps to eliminate the threat posed by the merger of Netscape's browser and Sun's Java technology. All but the first of these steps later would be found to have been illegal, when the courts declared Microsoft a monopoly. It is therefore important that any remedies decree should address these steps. Microsoft first attempted to dissuade Netscape from allowing its browser to execute other applications, Java or otherwise [2: • 79–87]. When this failed, Microsoft ran a campaign to erode Netscape's dominance in the browser market, subvert the ability of Java to run on all platforms equally, and weaken the compatibility levels that made the World-Wide Web so popular:

1. Microsoft created an alternative browser to Netscape's, called Internet Explorer.

2. Microsoft brought pressure to bear on OEM (Original Equipment Manufacturer, e.g. Dell, Gateway, etc.) and IAP (Internet Access Providers, e.g. America On-Line, CompuServe, etc.) channels, to ensure that they used Microsoft's browser and not Netscape's.

3. Microsoft changed its Windows API to make existing software incompatible; in particular, the API for its Windows95 release was structured so that Internet applications, e.g. Netscape's browser, would no longer work unless they used the new interface.

4. Microsoft selectively disseminated the details of its Windows API changes; in particular, Microsoft withheld key information about the Windows95 Internet-related interface from Netscape, which delayed the release of Netscape's Windows95-compatible browser until after the release of Microsoft's Windows95-compatible browser.

5. Microsoft subverted the Java interface standard, by creating a Java implementation for Windows that did not comply with the Java standard and thus undermined the portability of Java applications to and from the Windows operating system.

6. Microsoft attempted to subvert the HTML interface standard, by adding its own incompatible extensions to HTML (Hyper-Text Markup Language, the format of documents posted on the World-Wide Web) and building its own extensive web portal using this non-compliant HTML, thus ensuring that the web site would fail to work correctly for anyone using any browser other than Internet Explorer.

The following sections discuss each of these actions in more detail. Microsoft created an alternative browser to Netscape's. Microsoft only began to develop a web browser after it became clear that Netscape would not abandon its efforts at making a cross-platform program that was powerful enough to run applications directly (i.e. via the incorporation of Java technology). Microsoft knew that software developers would only write applications, or programs, for Netscape/Java if they believed that the Netscape/Java combination would emerge as a new widespread standard for Internet-based computing. Therefore, Microsoft sought to prevent the Netscape/Java combination from succeeding in the marketplace. Microsoft's initial goal in building Internet Explorer was simply to divert attention away from the Netscape/Java platform: If users believed Internet Explorer to be equal to or better than Netscape's browser, then Netscape would never reach the level of a widespread standard [2: • 133].

To reach this goal, Microsoft knew that it had to capture at least half of the browser market. "From 1995 onward, Microsoft spent more than \$100 million each year developing Internet Explorer," [2: • 135] and it spent an additional \$30 million per year marketing it [2: • 140]. Moreover, Microsoft never charged a single cent for its product: It offered the browser without license fee, either from users or Internet Access Providers (such as AOL), and, beyond offering the browser for free, "Microsoft actually paid AOL a bounty for every subscriber that it converted to access software that included Internet Explorer instead of Navigator." [2: • 139] Had Microsoft stopped at simply creating an alternative browser, it is likely that the company would have avoided legal trouble. The problems started when Microsoft used other avenues besides direct competition to win the browser war:

Decision-makers at Microsoft worried that simply developing its own attractive browser product, pricing it at zero, and promoting it vigorously would not divert enough browser usage from Navigator to neutralize it as a platform. They believed that a comparable

browser product offered at no charge would still not be compelling enough to consumers to detract substantially from Navigator's existing share of browser usage. This belief was due, at least in part, to the fact that Navigator already enjoyed a very large installed base and had become nearly synonymous with the Web in the public's consciousness. If Microsoft was going to raise Internet Explorer's share of browser usage and lower Navigator's share, executives at Microsoft believed they needed to constrict Netscape's access to the distribution channels that led most efficiently to browser usage. [2: • 143]

Microsoft brought pressure to bear on OEM and IAP channels. Because consumers rarely customize their PC desktops to the point of replacing software that comes with the computer by some other software that performs the same function, having one's software pre-installed by an OEM onto a computer is one of the most direct and cost-effective means to get consumers to use one's software. The other primary channel, at least for Internet-related software, is for Internet Access Providers to bundle that software with their product. In the case of a browser, the browser would be the primary access tool to the IAP's content. The District Court agreed that "no other distribution channel for browsing software even approaches the efficiency of OEM pre-installation and IAP bundling. The primary reason is that the other channels require users to expend effort before they can start browsing." [2: • 145] Therefore, the OEM and IAP channels were identified by Microsoft as the most important conduits to close down for Netscape if Microsoft were to ensure the failure of Netscape's browser.

Microsoft achieved this feat [(closing down the OEM channel)] by using a complementary set of tactics. First, it forced OEMs to take Internet Explorer with Windows and forbade them to remove or obscure it—restrictions which both ensured the prominent presence of Internet Explorer on users' PC systems and increased the costs attendant to pre-installing and promoting Navigator. Second, Microsoft imposed additional technical restrictions to increase the cost of promoting Navigator even more. Third, Microsoft offered OEMs valuable consideration in exchange for commitments to promote Internet Explorer exclusively. Finally, Microsoft threatened to penalize individual OEMs that insisted on pre-installing and promoting Navigator. Although Microsoft's campaign to capture the OEM channel succeeded, it required a massive and multifarious investment by Microsoft; it also stifled innovation by OEMs that might have made Windows PC systems easier to use and more attractive to consumers. That Microsoft was willing to pay this price demonstrates that its decision-makers believed that maximizing Internet Explorer's usage share at Navigator's expense was worth almost any cost. [2: • 241]

Microsoft knows that because of the popularity of the Windows operating system, the company has substantial control over what the OEMs pre-load and what they do not pre-load. "Microsoft knows that OEMs have no choice but to load Windows, both

because it has a good understanding of the market in which it operates and because OEMs have told Microsoft as much." [2: • 55]

"Without significant exception, all OEMs pre-install Windows on the vast majority of the PCs that they sell," [2: • 54] and Microsoft helps to ensure this "by advising OEMs that the), will be, charged a higher price for Windows unless they drastically limit the number of PCs that they sell without an operating system pre-installed." [2: • 58] In general, Microsoft "charges different OEMs different prices for Windows, depending on the degree to which the individual OEMs comply with Microsoft's wishes." [2: • 64]

Microsoft used this power to force OEMs to pre-load only Microsoft's browser, Internet Explorer, despite the fact that many OEMs and their customers preferred Netscape's browser, Navigator. Microsoft's first tactic, by making select changes to the Windows API, was to make it technically impossible to remove Internet Explorer from the operating system. Further, Microsoft built the operating system in such ways as to override the user's choice of "default browser" in many circumstances and to open up security holes for users who chose to use Navigator [2: • 155–198]. Some examples:

[I]n late 1995 or early 1996, Microsoft set out to bind Internet Explorer more tightly to Windows 95 as a technical matter. The intent was to make it more difficult for anyone, including systems administrators and users, to remove Internet Explorer from Windows 95 and to simultaneously complicate the experience of using Navigator with Windows 95. As [Microsoft official] Brad Chase wrote to his superiors near the end of 1995, "We will bind the shell to the Internet Explorer, so that running any other browser is a jolting experience." [2: • 160]

Microsoft's engineers ... [made] Windows 98 override the user's choice of default browser in certain circumstances. As shipped to users, Windows 98 has Internet Explorer configured as the default browser. While Windows 98 does provide the user with the ability to choose a different default browser, it does not treat this choice as the "default browser" within the ordinary meaning of the term. Specifically, when a user chooses a browser other than Internet Explorer as the default, Windows 98 nevertheless requires the user to employ Internet Explorer in numerous situations that, from the user's perspective, are entirely unexpected. As a consequence, users who choose a browser other than Internet Explorer as their default face considerable uncertainty and confusion in the ordinary course of using Windows 98. [2: • 171]

Microsoft's refusal to respect the user's choice of default browser fulfilled Brad Chase's 1995 promise to make the use of any browser other than Internet Explorer on Windows "a jolting experience." By increasing the likelihood that using Navigator on Windows 98 would have unpleasant consequences for users, Microsoft further diminished the inclination of OEMs to pre-install Navigator onto Windows. The decision to override the user's selection of non-Microsoft software as the default browser also directly disinclined Windows

98 consumers to use Navigator as their default browser, and it harmed those Windows 98 consumers who nevertheless used Navigator. In particular, Microsoft exposed those using Navigator on Windows 98 to security and privacy risks that are specific to Internet Explorer and to ActiveX controls. [2: • 172] Having multiple browsers on the machine would likely confuse users, and thus, Microsoft concluded, many OEMs interested in providing pleasant computing experiences to their users would opt to pre-install only Internet Explorer. However, Microsoft executives felt this step was not strong enough.

Decision-makers at Microsoft believed that as Internet Explorer caught up with Navigator in quality, OEMs would ultimately conclude that the costs of pre-installing and promoting Navigator, and removing easy access to Internet Explorer, outweighed the benefits. Still, those decision-makers did not believe that Microsoft could afford to wait for the several large OEMs that represented virtually all Windows PCs shipped to come to this desired conclusion on their own. Therefore, in order to bring the behavior of OEMs into line with its strategic goals quickly, Microsoft threatened to terminate the Windows license of any OEM that removed Microsoft's chosen icons and program entries from the Windows desktop or the "Start" menu. It threatened similar punishment for OEMs who added programs that promoted third-party software to the Windows "boot" sequence. These inhibitions soured Microsoft's relations with OEMs and stymied innovation that might have made Windows PC systems more satisfying to users. Microsoft would not have paid this price had it not been convinced that its actions were necessary to ostracize Navigator from the vital OEM distribution channel. [2: • 203]

OEMs customized the Windows desktops primarily "to make the experience of setting up and learning to use a new PC system easier and less confusing for users, especially novices. By doing so, the OEMs believed, they would increase the value of their systems and minimize both product returns and costly support calls. Since just three calls from a consumer can erase the entire profit that an OEM earned selling a PC system to that consumer, OEMs have an acute interest in making their systems self-explanatory and simple to use." [2: • 210] Because most computer users were familiar with Navigator, and because, at the time, Navigator was perceived by nearly all in the industry as superior to Microsoft's Internet Explorer, many of these OEMs included Navigator on their computers. To block this development, Microsoft imposed restrictions on OEMs through its licenses that forbade OEMs from customizing anything, despite the fact that doing so would ultimately provide for a far less satisfying computing experience on the part of the end user.

The several OEMs that in the aggregate represented over ninety percent of Intel-compatible PC sales believed that the new restrictions would make their PC systems more difficult and more confusing to use, and thus less acceptable to consumers. They also anticipated that the restrictions would increase product returns and support costs

and generally lower the value of their machines. Those OEMs that had already spent millions of dollars developing and implementing tutorial and registration programs and/or automatically-loading graphical interfaces in the Windows boot sequence lamented that their investment would, as a result of Microsoft's policy, be largely wasted. Gateway, Hewlett-Packard, and IBM communicated their opposition forcefully and urged Microsoft to lift the restrictions. Emblematic of the reaction among large OEMs was a letter that the manager of research and development at Hewlett-Packard sent to Microsoft in March 1997. He wrote:

Microsoft's mandated removal of all OEM boot-sequence and auto-start programs for OEM licensed systems has resulted in significant and costly problems for the HP-Pavilion line of retail PC's. Our data (as of 3/10/97) shows a 10% increase in W[indows]95 calls as a % of our total customer support calls Our registration rate has also dropped from the mid-80/(range) to the low 60% range.

There is also subjective data from several channel partners that our system return rate has increased from the lowest of any OEM (even lower than Apple) to a level comparable to the other Microsoft OEM PC vendors. This is a major concern in that we are taking a step backward in meeting customer satisfaction needs.

These three pieces of data confirm that we have been damaged by the edicts that [...] Microsoft issued last fall....

From the consumer perspective, we are hurting our industry and our customers. PC's can be frightening and quirky pieces of technology into which they invest a large sum of their money. It is vitally important that the PC suppliers dramatically improve the Consumer buying experience, out of box experience as well as the longer term product usability and reliability. The channel feedback as well as our own data shows that we are going in the wrong direction. This causes consumer dissatisfaction in complex telephone support process, needless in-home repair visits and ultimately in product returns. Many times the cause is user misunderstanding of a product that presents too much complexity to the common user....

Our Customers hold HP accountable for their dissatisfaction with our products. We bear [...] the cost of returns of our products. We are responsible for the cost of technical support of our customers, including the 33% of calls we get related to the lack of quality or confusion generated by your product. And finally we are responsible for our success or failure in the retail PC market. We must have more ability to decide how our system is presented to our end users. If we had a choice of another supplier, based on your actions in this area, I assure you [that you] would not be our supplier of choice.

I strongly urge you to have your executives review these decisions and to change this unacceptable policy.

Despite the high costs that Microsoft's demands imposed on them, the OEMs obeyed the restrictions because they perceived no alternative to licensing Windows for pre-installation on their PCs. [2:

• • 214–215] Microsoft engaged in similar tactics with Internet Access Providers to prevent Netscape from success in that channel [2: • • 242–310]: The company licensed Internet Explorer and related development kits to hundreds of IAPs for no charge (though those companies were all willing to pay large sums for the software), then entered into exclusivity contracts with the largest IAPs in exchange for valuable promotion within Windows, and even offered to pay back IAPs for any contractual obligations they had with Netscape.

The District Court summarized Microsoft's actions relating to the OEM and IAP channels: Neither the desire to bolster demand for Windows, nor the prospect of ancillary revenues, explains the lengths to which Microsoft has gone. For one thing, loading Navigator makes Windows just as Internet-ready as including Internet Explorer does. Therefore, Microsoft's costly efforts to limit the use of Navigator on Windows could not have stemmed from a desire to bolster consumer demand for Windows.

Furthermore, there is no conceivable way that Microsoft's costly efforts to induce Apple to pre-install Internet Explorer on Apple's own PC systems could have increased consumer demand for Windows. [2: • 141]

In other words, the only conceivable reason for Microsoft's actions was to maintain and extend its monopoly.

Microsoft's flagrant bullying of OEMs and IAPs succeeded in closing off distribution channels for Netscape's browser and therefore Sun's Java technology as well. However, Microsoft was not content with this—Microsoft further destroyed any chance of either Netscape's or Java's survival, with or without the OEM and IAP distribution channels. Microsoft did this by ensuring the incompatibility of both software packages with Windows and Windows-based software. Because Windows is the de facto standard operating system for the world's desktop computers, this tactic would ensure that only an insignificant portion of the world's computer users would use these two software packages. Therefore, the Windows monopoly would never be challenged by these alternative technologies.

Microsoft changed its Windows API to make existing software incompatible. Microsoft continually modifies the Windows API, and each of these modifications makes software written for Windows immediately out-of-date because that software no longer conforms to the latest specification of the Windows API. This applies to not only applications but hardware and compatible operating systems as well. "IBM discovered this to its dismay in the mid-1990s when it failed, despite a massive investment, to clone a sufficiently large part of the 32-bit Windows APIs. In short, attempting to clone the 32-bit Windows APIs is such an expensive, uncertain undertaking that it fails to present a practical option for a would-be competitor to Windows." [2: • 52]

The Windows API keeps changing, and software vendors are forced to keep up with the changes because Microsoft ensures that the latest version of the operating system is always being shipped. Microsoft takes pains

to ensure that the versions of its operating system that OEMs pre-install on new PC systems are the most current. It does this, in part, by increasing the price to OEMs of older versions of Windows when the newer versions are released. [2: • 57]

Therefore, computer users have no choice but to move onward to the latest version of the operating system, whether it is an improvement over the old version or not. Software vendors have no choice but to update their software to comply with the new operating system interface, if they expect to sell any software to those computer users who have recently purchased their computers and therefore have the latest version of Windows. It is through this rapid update mechanism that Microsoft keeps consumers and software vendors chained to the latest version of Windows: moreover, through this mechanism Microsoft can harm any software vendor it chooses.

Netscape's browser ran on the pre-Windows95 versions of Windows, but for the Windows95 release of the opt, rating system, Microsoft changed the API so that Netscape's browser would no longer work. This required a re-write of Netscape's browser if Netscape wanted their browser to run on the (then highly anticipated) Windows95 release. The following paragraphs illustrate the power that Microsoft wields over other companies through its ability to modify the Windows API:

Microsoft knew that Netscape needed certain critical technical information and assistance in order to complete its Windows 95 version of Navigator in time for the retail release of Windows 95. Indeed, Netscape executives had made a point of requesting this information, especially the so-called Remote Network Access ("RNA") API, at the June 21 meeting. As was discussed above, the Microsoft representatives at the meeting had responded that the haste with which Netscape received the desired technical information would depend on whether Netscape entered the so-called "special relationship" with Microsoft. Specifically, Microsoft representative J. Allard had told [Netscape CEO James] Barksdale that the way in which the two companies concluded the meeting would determine whether Netscape received the RNA API immediately or in three months. [2: • 90]

Although Netscape declined the special relationship with Microsoft, its executives continued, over the weeks following the June 21 meeting, to plead for the RNA API. Despite Netscape's persistence, Microsoft did not release the API to Netscape until late October, i.e., as Allard had warned, more than three months later. The delay in turn forced Netscape to postpone the release of its Windows 95 browser until substantially after the release of Windows 95 (and Internet Explorer) in August 1995. As a result, Netscape was excluded from most of the holiday selling season. [2: • 91]

As we have said, because the Windows interface is such a predominant feature in the high-tech industry any modification to the interface affects potentially every piece of hardware or software that is compatible with Windows. By changing the Windows API, Netscape's software was rendered

incompatible with the newest version of Windows and therefore essentially useless. Microsoft selectively disseminated the details of its Windows API changes. Simply modifying an API is only harmful to the extent that other companies need to expend possibly large resources to play catch-up and to update their products to be compatible with the new specification of the API. As the quotes from the previous section show, the power to modify APIs becomes devastating when those APIs are not public information—i.e. when information regarding those APIs may be handed out selectively. Because Microsoft withheld crucial information from Netscape, Microsoft was able to finish their browser ahead of Netscape, and Netscape was not able to release their Windows95 compatible browser until months after Windows95 was released. Microsoft behaved in similar ways in most of its other dealings with Netscape.

Microsoft similarly withheld a scripting tool that Netscape needed to make its browser compatible with certain dial-up ISPs. Microsoft had licensed the tool freely to ISPs [Internet Service Providers] that wanted it, and in fact had cooperated with Netscape in drafting a license agreement that, by mid-July 1996, needed only to be signed by an authorized Microsoft executive to go into effect. There the process halted, however. In mid-August, a Microsoft representative informed Netscape that senior executives at Microsoft had decided to link the grant of the license to the resolution of all open issues between the companies. Netscape never received a license to the scripting tool, and as a result, was unable to do business with certain ISPs for a time. [2: • 92] It is well known that Microsoft implements numerous "undocumented" features in its operating system, usually to the benefit of its own software. "Microsoft has special knowledge of its own products, and it alone chooses which functionalities in its products are to be documented and which are to be left undocumented." [2: • 179] Furthermore, Microsoft frequently enters into agreements with some software developers in which those developers are granted "preferred" status and are therefore given access to more (but not necessarily all) information about the undocumented features of the operating system [2: • 84].

Because software running on a PC cannot use any hardware feature without the consent of the operating system, restricting access to the operating system cuts off the ability of software to do anything useful. Microsoft's dealings with Netscape are simply one example that demonstrate the enormous power that Microsoft wields and the extent to which the company has used that power to stifle individual corporations and to reward others. Microsoft subverted the Java interface standard. As mentioned, Java is a technology that enables computer programmers to write programs that will run on any operating system, and any hardware, anywhere. The fundamental concept behind Java is the idea that such interoperability is far more valuable than the ability to execute programs quickly, because the performance of computer hardware is improving at an astounding rate, and this will more than

make up for any lack of performance seen in Java. Therefore, developers who write Java code are typically those who are willing to give up a small amount of performance in return for a larger market in which to sell their software.

However, this is not what Microsoft wants—Microsoft is best served if all software that is compatible with Windows is completely dependent on Windows:

For Microsoft, a key to maintaining and reinforcing [the difficulty of potential competitors to create an alternative to Windows] has been preserving the difficulty of porting applications from Windows to other platforms [e.g. operating systems], and vice versa. In 1996, senior executives at Microsoft became aware that the number of developers writing network-centric applications in the Java programming language had become significant, and that Java was likely to increase in popularity among developers. Microsoft therefore became interested in maximizing the difficulty with which applications written in Java could be ported from Windows to other platforms, and vice versa. [2: • 386]

Microsoft set out not to restrict Sun's ability to sell Java technology, but to extinguish the entire Java phenomenon. Microsoft recognized that the best way to do this would be to ensure that a significant portion of developers wrote Java code that would not, in fact, run on any operating system, any hardware, anywhere—Microsoft ensured that Java written to be compatible with Windows ran correctly only on Windows, and not on any other operating system. The District Court investigated and analyzed Microsoft's campaign against Java: Specifically, the District Court found that Microsoft took four steps to exclude Java from developing as a viable cross-platform threat: (a) designing a JVM incompatible with the one developed by Sun; (b) entering into contracts, the so-called "First Wave Agreements," requiring major ISVs to promote Microsoft's JVM exclusively; (c) deceiving Java developers about the Windows-specific nature of the tools it distributed to them; and (d) coercing Intel to stop aiding Sun in improving the Java technologies. [1: p. 52]

"JVM" stands for Java Virtual Machine and is the primary component that is required to be present on a computer if that computer is to run Java programs. By creating a JVM that was incompatible with Sun's and ensuring that a substantial fraction of developers used it and not Sun's, Microsoft went far beyond denying Sun a market in which to sell its own JVM—Microsoft ensured that Java itself would fail.

On March 12, 1996, Sun signed an agreement granting Microsoft the right to distribute and make certain modifications to Sun's Java technologies. Microsoft used this license to create its own Java development tools and its own Windows-compatible Java runtime environment. Because the motivation behind the Sun-sponsored effort ran counter to Microsoft's interest in preserving the difficulty of porting, Microsoft independently developed methods for enabling "calls" to "native" Windows code that made porting more difficult than the

method that Sun was striving to make standard. Microsoft implemented these different methods in its developer tools and in its JVM. Microsoft also discouraged its business allies from aiding Sun's effort. For example, Gates told Intel's CEO in June 1996 that he did not want the Intel Architecture Labs cooperating with Sun to develop methods for calling upon multimedia interfaces in Windows. [2: • 388] Sun had already developed a JVM for the Windows operating system when Microsoft began work on its version. The JVM developed by Microsoft allows Java applications to run faster on Windows than does Sun's JVM. Findings of Fact p 389, but a Java application designed to work with Microsoft's JVM does not work with Sun's JVM and vice versa. Id. p 390. The District Court found that Microsoft "made a large investment of engineering resources to develop a high-performance Windows JVM," id. p 396. and, "[b]y bundling its ... JVM with every copy of [IE] ... Microsoft endowed its Java runtime environment with the unique attribute of guaranteed, enduring ubiquity across the enormous Windows installed base." id. p 397. As explained above, however, a monopolist does not violate the antitrust laws simply by developing a product that is incompatible with those of its rivals In order to violate the antitrust laws, the incompatible product must have an anticompetitive effect that outweighs any procompetitive justification for the design. [1: pp. 51–52]

The Court of Appeals found that simply creating this non-standard JVM was not in violation of antitrust laws. However, the Court also stated that "to violate the antitrust laws, the incompatible product must have an anticompetitive effect that outweighs any procompetitive justification for the design." It is our position that this is exactly the case here. The fundamental point of Java is to promote cross-platform compatibility. Any computer engineer knows that one can sacrifice generality for better performance; such trade-offs are trivial to make. and it is little wonder that Microsoft was able to create a high-performance JVM by sacrificing compatibility. However, doing so outweighs the procompetitive justification for the design, because, as we have said, the fundamental purpose of Java is not to achieve the highest possible performance but to provide generality—i.e. compatibility with all operating systems and all hardware platforms. Had Java developers known what Microsoft was doing, it is quite possible that they would have opted for Sun's JVM implementation over Microsoft's. In addition, Intel had built a high-performance JVM that did comply with the Java standard, and it is likely that the Java developers would have chosen this over either Microsoft's implementation or Sun's implementation. However, Microsoft prevented either from happening.

First, Microsoft entered into agreements with numerous independent software vendors (ISVs) in which it forbade the ISVs from using any Java technology offered by Sun.

Recognizing ISVs as a channel through which Java runtime environments that

complied with Sun's standards could find their way onto Windows PC systems, Microsoft induced ISVs to distribute Microsoft's version instead of a Sun-compliant one. First, Microsoft made its JVM available to ISVs separately from Internet Explorer so that those uninterested in bundling browsing software could nevertheless bundle Microsoft's JVM. Microsoft's David Cole revealed the motivation for this step in a message he wrote to Jim Allchin in July 1997: "[W]e've agreed that we must allow ISVs to redistribute the Java VM standalone, without IE. ISVs that do this are bound into Windows because that's the only place the VM works, and it keeps them away from Sun's APIs." [2: • 400]

Microsoft took the further step of offering valuable things to ISVs that agreed to use Microsoft's Java implementation. Specifically, in the First Wave agreements that it signed with dozens of ISVs in 1997 and 1998, Microsoft conditioned early Windows 98 and Windows NT betas, other technical information, and the right to use certain Microsoft seals of approval on the agreement of those ISVs to use Microsoft's version of the Windows JVM as the "default." Microsoft and the ISVs all read this requirement to obligate the ISVs to ensure that their Java applications were compatible with Microsoft's version of the Windows JVM. The only effective way to ensure compatibility with Microsoft's JVM was to use Microsoft's Java developer tools, which in turn meant using Microsoft's methods for making native calls and (unless the developers were especially wary and sophisticated) Microsoft's other Java extensions. Thus, a very large percentage of the Java applications that the First Wave ISVs wrote would run only on Microsoft's version of the Windows JVM. [...] The record contains no evidence that the relevant provision in the First Wave agreements had any purpose other than to maximize the difficulty of porting Java applications between Windows and other platforms. [2: • 401]

Nonetheless, developers, especially those "wary and sophisticated," might have chosen to use JVMs written by a party other than Microsoft. However, Microsoft assuaged potential fears of developers by essentially committing fraud: The company deceived developers as to the portability of code written for its JVM.

Microsoft's "Java implementation" included, in addition to a JVM, a set of software development tools it created to assist ISVs in designing Java applications. The District Court found that, not only were these tools incompatible with Sun's cross-platform aspirations for Java—no violation, to be sure—but Microsoft deceived Java developers regarding the Windows-specific nature of the tools. Microsoft's tools included "certain 'keywords' and 'compiler directives' that could only be executed properly by Microsoft's version of the Java runtime environment for Windows." Id. p 394; see also Direct Testimony of James Gosling p 58, reprinted in 21 J.A. at 13959 (Microsoft added "programming instructions ... that alter the behavior of the code."). As a result,

even Java "developers who were opting for portability over performance ... unwittingly [wrote] Java applications that [ran] only on Windows." Conclusions of Law, at 43. That is, developers who relied upon Microsoft's public commitment to cooperate with Sun and who used Microsoft's tools to develop what Microsoft led them to believe were cross-platform applications ended up producing applications that would run only on the Windows operating system.

When specifically accused by a PC Week reporter of fragmenting Java standards so as to prevent cross-platform uses, Microsoft denied the accusation and indicated it was only "adding rich platform support" to what remained a cross-platform implementation. An e-mail message internal to Microsoft, written shortly after the conversation with the reporter, shows otherwise: [O]k, I just did a followup call.... [The reporter] liked that i kept pointing customers to w3c standards [(commonly observed internet protocols)].... [but] he accused us of being schizo with this vs. our java approach, i said he misunderstood [—] that [with Java] we are merely trying to add rich platform support to an interop layer.... this plays well.... at this point its [sic] not good to create MORE noise around our win32 java classes, instead we should just quietly grow j++ [(Microsoft's development tools)] share and assume that people will take more advantage of our classes without ever realizing they are building win32-only java apps.

GX 1332, reprinted in 22 J.A. at 14922–23.

Finally, other Microsoft documents confirm that Microsoft intended to deceive Java developers, and predicted that the effect of its actions would be to generate Windows-dependent Java applications that their developers believed would be cross-platform; these documents also indicate that Microsoft's ultimate objective was to thwart Java's threat to Microsoft's monopoly in the market for operating systems. One Microsoft document, for example, states as a strategic goal: "Kill cross-platform Java by growling] the polluted Java market." GX 259, reprinted in 22 J.A. at 14514; see also id. ("Cross-platform capability is by far the number one reason for choosing/using Java.") (emphasis in original). [1: pp. 55–56]

It is interesting to note, in the last excerpt, that even Microsoft officials recognized that Java's strength lay in its cross-platform interoperability.

Lastly, Microsoft killed Intel's high-performance JVM, which was fully compliant with the Java standard and could therefore easily have overtaken Microsoft's JVM.

The District Court held that Microsoft also acted unlawfully with respect to Java by using its "monopoly power to prevent firms such as Intel from aiding in the creation of cross-platform interfaces." Conclusions of Law, at 43. In 1995 Intel was in the process of developing a high-performance, Windows-compatible JVM. Microsoft wanted Intel to abandon that effort because a fast, cross-platform JVM would threaten Microsoft's monopoly in the operating system market. At an August 1995 meeting, Microsoft's Gates told Intel that its "cooperation with Sun and Netscape to develop a Java runtime environment ... was one of the issues

threatening to undermine cooperation between Intel and Microsoft.” Findings of Fact p 396. Three months later, “Microsoft’s Paul Maritz told a senior Intel executive that Intel’s [adaptation of its multimedia software to comply with] Sun’s Java standards was as inimical to Microsoft as Microsoft’s support for non-Intel microprocessors would be to Intel.” Id. p 405.

Intel nonetheless continued to undertake initiatives related to Java. By 1996 “Intel had developed a JVM designed to run well ... while complying with Sun’s cross-platform standards.” Id. p 396. In April of that year, Microsoft again urged Intel not to help Sun by distributing Intel’s fast, Sun-compliant JVM. Id. And Microsoft threatened Intel that if it did not stop aiding Sun on the multimedia front, then Microsoft would refuse to distribute Intel technologies bundled with Windows. Id. p 404.

Intel finally capitulated in 1997. [1: pp. 56–57]

The downfall of Java is important because, at the time, Java represented a potential competitor to the Windows hegemony. Currently, most software developers write code for the Windows platform because it represents the largest possible market for their software. As we have mentioned before, code written for one operating system does not run on another without considerable effort in re-writing that code so that, instead of using the first operating system’s interface, it uses the second’s interface. This rewriting of a software program is called “porting” the code and represents a substantial undertaking. Java offered developers a way to increase the size of the market for their software, by allowing developers to write software that would run not only on Windows but on every operating system and hardware platform imaginable. As the Court’s records show, in the mid-1990’s developers recognized this benefit and were moving in large numbers to use Java [2: • 386]. However, the high-tech industry is very fickle, a byproduct of its highly dynamic nature, and if a technology fails to catch on the first time around, it has a difficult road ahead of it. By taking away the main benefit of Java—its promise of universal compatibility—Microsoft allowed developers to become cool to the idea, and Ibis essentially killed it.

Had the Java vision been realized, it would have offered competition in the PC operating systems market. Microsoft waged its campaign against Java for exactly this reason: Had the Java vision come true, it would have weakened the stronghold of Windows, because a user’s choice of underlying operating system would have become less important. This would have increased the likelihood for computer users to consider alternative or “fringe” operating systems such as Unix, Linux, BeOS, Mac OS, etc. Microsoft’s successful subversion of Java took much of the momentum out of the Java movement and in so doing ensured that neither Java nor Java-enabled operating systems would present any significant competition with Windows in the PC operating systems market.

Microsoft attempted to subvert the HTML interface standard. Microsoft attempted a

similar destruction or undermining of the HTML standard (the language of the world-wide web), by creating its own incompatible “extensions” to the language and forcing as many developers as possible to use those extensions. As early as 1995, Microsoft had developed HTML control words that were incompatible with all browsers but its own Internet Explorer. For computer users viewing the web through any browser but Microsoft’s, web pages using these control words would either display incorrectly or fail to display at all. Evidently, Microsoft hoped that, if it could make Internet browsing a confusing and irritating experience for enough people (those not using Internet Explorer on Windows), the popularity of the Internet would wane, and the “inflection point” that the Internet represented would not have the potential to injure Microsoft. Microsoft entered into numerous agreements to spread its non-standard HTML. For example, in 1997, the company set up agreements with website developers (also called Internet Content Providers, or ICPs):

[T]he agreements required the ICPs, in designing their Web sites, to employ certain Microsoft technologies such as Dynamic HTML and ActiveX. Some of the agreements actually required the ICPs to create “differentiated content” that was either available only to Internet Explorer users or would be more attractive when viewed with Internet Explorer than with any “Other Browser.” For example, the agreement with Intuit provided: “Some differentiated content may be available only to IE users, some may simply be ‘best when used with IE,’ with acceptable degradation when used with other browsers.” [2: • 322]

In addition, Microsoft began forcing even OEMs, such as Compaq, to put non-standard HTML features into their websites.

When Compaq eventually [capitulated to Microsoft’s wishes], it did so because its senior executives had decided that the firm needed to do what[ever] was necessary to restore its special relationship with Microsoft. [...] Compaq agreed to offer Internet Explorer as the preferred browser product for its Internet products and to use two or more of Microsoft’s hypertext markup language (“HTML”) extensions in the home page for each of those products. [2: • 233] Microsoft targeted software developers as well:

Microsoft also targeted individual ISVs [Independent Software Vendors] directly, extracting from them commitments to make their Web-centric applications reliant on technology specific to Internet Explorer. [2: • 337]

In dozens of “First Wave” agreements signed between the fall of 1997 and the spring of 1998, Microsoft has promised to give preferential support [...] to important ISVs that agree to certain conditions. One of these conditions is that the ISVs use Internet Explorer as the default browsing software for any software they develop with a hypertext-based user interface. Another condition is that the ISVs use Microsoft’s “HTML Help,” which is accessible only with Internet Explorer to implement their applications’ help systems. [2: • 339]

By exchanging its vital support for the agreement of leading ISVs to make Internet

Explorer the default browsing software on which their products rely, Microsoft has ensured that many of the most popular Web-centric applications will rely on browsing technologies found only in Windows. [2: • 340]

Despite Microsoft’s efforts, consumer interest in the Internet did not wane, and irritation at the inability to view certain web pages did not drive users to forgo browsing the web. It is likely that Microsoft’s failure in this particular campaign was due to the fact that Microsoft attempted to subvert the standard only once it was already in wide use—i.e. once it had already succeeded. In comparison, Java was killed in its infancy, before it had reached a critical mass of support. It is important to note that these are not isolated incidents chosen simply to disparage Microsoft. The record shows that Microsoft saw similar threats from other quarters and responded to them in much the same manner as the maneuvers described above. The following are three examples of how Microsoft responded to quash the development of either direct competitors to Windows or “middleware” for Windows, as well as a brief look at Microsoft’s latest anticompetitive action. Middleware is a type of software program that serves to hide the particulars of the underlying operating system, Java being one example of a middleware system. The very nature of middleware makes it a threat to Microsoft’s operating system enterprise because it has the potential to make Windows obsolete:

A middleware product written for Windows could take over some or all of Windows’s valuable platform functions—that is, developers might begin to rely upon APIs exposed by the middleware for basic routines rather than relying upon the API set included in Windows. If middleware were written for multiple operating systems, its impact could be even greater. The more developers could rely upon APIs exposed by such middleware, the less expensive porting to different operating systems would be. Ultimately, if developers could write applications relying exclusively on APIs exposed by middleware, their applications would run on any operating system on which the middleware was also present. [1: p. 18] In the early 1990’s, Intel created multimedia features in their hardware that would enable computers to play movies and high-resolution computer games, but Microsoft refused to make these hardware features available through its operating system. Typically, as shown in Figure 1, hardware devices and other sophisticated hardware features are available to software only through the operating system, and if the operating system fails to support the hardware, no software running on that system can access that hardware. Intel began developing software called Native Signal Processing that would allow programmers to use the new multimedia features without having to go through Windows, so as to encourage software developers to write multimedia programs. In response, Microsoft threatened to terminate compatibility with Intel’s chips if Intel persisted in offering programmers a way to run software on its hardware without having to use Windows. Intel was ultimately forced

by Microsoft into giving up its software experiments. Five years after the fact, Microsoft finally integrated into Windows most, but not all, of the multimedia capabilities that Intel had developed. The Court's explanation for Microsoft's behavior was a "fear at Microsoft that the NSP software would render ISVs, device manufacturers, and (ultimately) consumers less dependent on Windows. Without this fear, Microsoft would not have subjected Intel to the level of pressure that it brought to bear in the summer of 1995." [2: • • 94–103]

IBM expended enormous effort to reverse-engineer the Windows API and thereby build their own, fully interchangeable, version of the Windows operating system. IBM's operating system was called OS/2 Warp, and, because IBM faithfully reproduced a substantial portion of the Windows API, OS/2 Warp was able to run Windows applications directly. The operating system was billed with the advertising slogan, "A Better Windows Than Windows," which by all accounts was true: The operating system was faster than Windows, it was more reliable than Windows (it did not crash nearly as easily), and it ran most Windows applications flawlessly.

Because it was faster and more stable than Microsoft's operating system, it had the potential to weaken the appeal of Windows. In response, Microsoft swiftly changed the Windows APIs, leaving OS/2 Warp offering an obsolete version of the operating system interface. IBM could not keep pace with the interface changes and ultimately gave up on OS/2 Warp as a PC operating system. [2: • 52, • • 115–132]

Apple created its Quick Time standard to be a multimedia authoring tool and audio/video publishing format that would run on any computer, whether Macintosh-based or Windows-based. Microsoft saw this as a threat because QuickTime enabled software developers to write multimedia programs that would run on Windows but that did not depend directly on Windows. Microsoft developed its own multimedia standard (DirectX) and threatened to develop multimedia content-development software that was incompatible with Apple's and to expend every resource available to ensure that it won out over QuickTime, unless Apple ensured that QuickTime would not run equally well on all platforms. Microsoft's proposal was for Apple to make their Windows-based QuickTime software entirely dependent on Windows. "[Apple's CEO Steve] Jobs reserved comment during the meeting with the Microsoft representatives, but he explicitly rejected Microsoft's proposal a few weeks later. Had Apple accepted Microsoft's proposal, Microsoft would have succeeded in limiting substantially the cross-platform development of multimedia content." [2: • • 106–109]

Windows XP is Microsoft's latest version of the Windows operating system, released in November 2001 in the midst of the trial's conclusion. The operating system flouts the very same laws that Microsoft was charged with violating in the first place. The operating system disables the software of competitors—including Apple's QuickTime

media player, AOL Time Warner's America On-Line version 6.0, and RealJukebox from RealNetworks [23]—and supplants them with Microsoft's proprietary alternatives. Note that these are the very companies with which Microsoft had similar run-ins previously [1,2]. Not only is the browser tied to the operating system, but so is nearly every aspect of the computer user's experience, from Internet content to popular multimedia formats. The writing on the wall is very clear: No software vendor is safe—Microsoft can destroy any competitor's software it chooses and replace it with its own.

Solutions to the Problem

According to the Supreme Court, there are four primary goals for an antitrust remedy. "The Supreme Court has explained that a remedies decree in an antitrust case should seek to 'unfetter a market from anticompetitive conduct,' ... to 'terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future.'" [1: pp. 99–100] We propose a multi-part remedy that addresses each of these goals.

Most Importantly: Prevent Future Monopolization

We treat the last goal first because we believe it to be the most important. The first three goals—to restore competition, to terminate the illegal monopoly, and to deny the illegal monopoly the fruits of its misconduct—are addressed in the next section. As the Supreme Court indicates, an antitrust remedy is not sufficient if it merely returns us to the status quo [9,10]. An appropriate remedy must also seek to prevent future monopolization. We believe that the best way to prevent future misconduct from Microsoft is to look at those of its actions that are problematic and devise a remedy that prevents similar maneuvers in the future. The list, again, of Microsoft's actions:

1. Microsoft created an alternative browser to Netscape's. Action #1 alone is an example of behavior that is perfectly legal and should remain so: A monopoly clearly should not be prevented from competing in a market just because of its status as a monopoly. The rest of the actions, however, are objectionable:
2. Microsoft brought pressure to bear on OEM and IAP channels.
3. Microsoft changed its Windows API to make existing software incompatible.
4. Microsoft selectively disseminated the details of its Windows API changes.
5. Microsoft subverted the Java interface standard.
6. Microsoft attempted to subvert the HTML interface standard. It is this second group of tactical maneuvers, numbers 2 through 6, that we will explore for direction, and doing so leads us to further remedial steps to prevent future misconduct. Action #2, pressuring OEMs to pre-load only Internet Explorer, and action #4, selectively disseminating information on its changes to the Windows API, are both obvious violations of the Sherman Act. For instance, as detailed earlier, Microsoft's manipulation of the Windows API harmed both IBM and Netscape, and therefore action #2 is part of the illegality. The other actions represent very serious and very effective abuses of

power, and Microsoft violated the Sherman Act when the company used its abilities to harm other companies through these actions. For instance, Microsoft's undermining of the Java standard harmed Sun, and therefore action #5 is part of the illegality. Clearly, it is imperative to prevent all of the listed behaviors if we are to prevent future monopolistic abuses by Microsoft.

Microsoft undertook these anticompetitive actions because it believed its Windows API—its operating systems interface—to be threatened by other technologies that could potentially supplant it. As we have said, like contracts, interfaces are extremely powerful things. Compared to a tangible product, an internal interface differs in its impact on economic systems because not only are end-consumers dependent on it, but other hardware and software vendors that build products compatible with the interface are dependent on it as well. Furthermore, the effect of modifying an interface on which competing companies depend is markedly different from the effect of simply developing a competing product: Whereas a new end-product simply offers consumers an alternative to the competitor's product that will have to stand the test of the marketplace, modifying an interface can make the competing company's products instantly obsolete—because as soon as the modification is made the other company's product no longer conforms to the interface, and an interface is ultimately more influential in its scope than any particular product that embodies it. Therefore it is clear that a monopoly controlling a widely used interface is perfectly capable of controlling its direct competitors, its indirect competitors, and even those corporations that provide complementary products and do not compete with it in any way.

The obvious conclusion is that monopolies should not be allowed to control widely used interfaces. We propose two remedies that would prevent future misconduct: A. Microsoft's widely used interfaces (in particular the Windows API) should be turned over to the public—i.e. Microsoft should give up its right to modify at will those of its interfaces that have become de facto standards. The authors would prefer to see the interfaces handed over to the IEEE (the Institute of Electrical and Electronics Engineers), as the IEEE is an independent, non-profit body already involved in the specification of many public computer interface standards, both hardware and software. However, the choice of a governing body is a matter of opinion.

B. Microsoft should adhere to existing de facto standard interfaces: The company should not develop or fund the development of any interface that provides substantially similar function as an existing standard but that is incompatible with that standard.

Note that remedial step A differs from Judge Jackson's interim provision in which Microsoft was compelled to provide all information about the Windows API to all developers in a timely manner and equally to all [13]. His Final Judgment stated that, until full implementation of the divestiture plan which he imposed, among other things the following was to be required of Microsoft:

b. Disclosure of APIs, Communications Interfaces and Technical Information. Microsoft shall disclose to ISVs, IHVs, and OEMs in a Timely Manner, in whatever media Microsoft disseminates such information to its own personnel, all APIs, Technical Information and Communications Interfaces that Microsoft employs to enable—

i. Microsoft applications to interoperate with Microsoft Platform Software installed on the same Personal Computer, or

ii. a Microsoft Middleware Product to interoperate with Windows Operating System software (or Middleware distributed with such Operating System) installed on the same Personal Computer,

or

iii. any Microsoft software installed on one computer (including but not limited to server Operating Systems and operating systems for handheld devices) to interoperate with a Windows Operating System (or Middleware distributed with such Operating System) installed on a Personal Computer.

To facilitate compliance, and monitoring of compliance, with the foregoing, Microsoft shall create a secure facility where qualified representatives of OEMs, ISVs, and IHVs shall be permitted to study, interrogate and interact with relevant and necessary portions of the source code and any related documentation of Microsoft Platform Software for the sole purpose of enabling their products to interoperate effectively with Microsoft Platform Software ... [13] Judge Jackson's judgment essentially makes the previously "undocumented" features of Windows openly available to all 2, and the judgment prevents Microsoft from withholding key information as it did to delay Netscape's offering of a Windows95-compatible browser. Our proposed remedy A would push Judge Jackson's judgment a step further—our proposed remedy would take the Windows API from Microsoft's control and hand it over to an independent body as a public interface. Note that this does not mean that Microsoft would have to divulge any source code to the public; only the Windows API would become public.

2. The "undocumented" features of Windows are those features that exist in the operating system but that are unavailable to all but a select group by virtue of the fact that the features are not specified in any publicly available document.

Public interfaces, often called public standards, are those that are not proprietary, are controlled by an independent body (such as ANSI, the American National Standards Institute; IEEE, the Institute of Electrical and Electronics

Engineers; IETF, the Internet Engineering Task Force; etc.), and are typically designed to make computers of different types compatible with each other. Generally, all who wish to participate in the specification of a public standard are allowed to contribute to the effort: Because of the public nature of such discussions, no one is prevented from playing a part. Conversely, no individual or corporation is allowed to make unilateral decisions about the standard. A perfect example of a public interface is the World-Wide Web: It uses the Internet Protocol—a public standard—to transmit documents

written in HTML—also a public standard—from web servers to web browsers, using yet another public standard called HTTP (hypertext transmission protocol) that runs on top of the Internet Protocol. Any computer anywhere that supports these standards can browse the web, whether it is Windows-based or PalmOS-based or Macintosh-based or Unix-based or BeOS-based or Linux-based, and the fact that the standards are public increases the chance that any particular operating system will support them. The fact that the web uses nothing but public standards is one of the characteristics that attracted developers to the web in the first place: Any programmer can build a web server or web browser and know that it will work with the web; moreover, because the standards are public, the programmer need not pay any royalties to anyone; lastly, because the standards cannot be changed by any one person or company acting alone, the programmer can be assured that his work will not suddenly become obsolete due to unannounced changes to the various interfaces.

A monopoly should certainly be allowed to help define these public computing interfaces—who better to help realize the future of computing than a company with years of experience in the computer industry? However, a company should not be allowed to use its monopoly status to do an end-run around an existing public standard and undermine the efforts of others to make computers more compatible with each other, more useful, and easier to use. These two proposed remedial steps together would prohibit Microsoft from doing just this: Together, they would ensure that Microsoft will not be able to create, either directly or indirectly (i.e. by persuading smaller companies to do its bidding), new products that undermine public standards. Moreover, Microsoft's own primary interface, the Windows API, would become a public standard, which would prevent Microsoft from modifying that interface at will, as the company has done in the past to ensure that Netscape's browser would fail to work with Windows95 and to ensure that IBM would not be able to keep up with its reverse-engineering effort that made OS/2 possible.

Unfetter the Market from Ant/competitive Conduct, Terminate the Illegal Monopoly, and Deny Microsoft the Fruits of its Misconduct

As mentioned in the previous section, the court, in fashioning remedies, should go beyond merely restoring the status quo. The court should impose a remedy that will cure the effects of the illegal conduct and, at the same time, prevent the continuation of the misconduct and prevent the violator from reaping benefits in the future from their conduct [9, 10]. Because the "relevant market" for a monopoly is defined as including all products that are "reasonably interchangeable by consumers for the same purposes" [1: p. 15], a monopoly exists by definition if there are no such products available. No product currently exists that is reasonably interchangeable with the Windows operating system, and Microsoft's present monopoly will not be terminated until one does exist. The solution is rather

clear: Microsoft eliminated the threat of potential competitors to its Windows operating system by exclusionary tactics, and therefore it should bear the responsibility of funding the production of such a competitor. Or perhaps more than one. Doing so would introduce competition into the market, would end Microsoft's monopoly, and would deny Microsoft the fruits of its anticompetitive behavior.

We propose the following additional remedial steps, in addition to those already discussed:

C. All non-compliant Java technology developed by Microsoft (its Java Virtual Machine and its development environment) should be destroyed, and Microsoft should be prevented from distributing it in the future, either directly or indirectly.

D. Microsoft should pay Intel to finish the development of its high-performance Java Virtual Machine, and Microsoft should also pay at least the initial costs of marketing the product.

E. The non-compliant Java Virtual Machine in Microsoft's browser should be removed and replaced with Intel's compliant and high-performance JVM.

F. Microsoft should pay Sun Microsystems to finish development of Java technologies and market the product. In particular, the marketing of Java technologies should be handled in much the same way as Microsoft's "evangelizing" of the Windows platform (Microsoft spends hundreds of millions of dollars per year inducing independent software developers to write applications for Windows [2: • 43]). Microsoft should pay Sun a large one-time sum, perhaps equal to a year's worth of Windows evangelizing, to be used by Sun to seed development of Java applications by independent software vendors.

G. Microsoft should pay IBM to update OS/2 to be compliant with the latest version of the Windows API (e.g. Windows XP), so as to provide an alternative operating system to Windows. Because Microsoft's ability to manipulate the Windows API at will is what drove OS/2 out of the PC market last time, such manipulation should be regulated in the future for OS/2 to remain a reasonably interchangeable alternative. Thus, remedial steps A and B are necessary.

H. Microsoft should make its browser and MSN portal compatible with the World-Wide Web Consortium's HTML, HTTP, and XML interface standards. In particular, the MSN portal should not shut out access by browsers other than Internet Explorer, as it presently does [25]. These remedies would create two alternatives to the Windows operating system. The first alternative is based on Java middleware, which could be disseminated by itself or bundled with a browser. As the appellate court stated in its opinion, this is one of the ways in which to make the PC operating-systems market competitive:

If a consumer could have access to the applications he desired—regardless of the operating system he uses—simply by installing a particular browser on his computer, then he would no longer feel compelled to select Windows in order to have access to those applications; he could select an operating system other than

Windows based solely upon its quality and price. In other words, the market for operating systems would be competitive. [1: p. 29]

Remedies C–F provide for the Java alternative. This would create a layer of middleware that is truly cross-platform. If it is marketed well, the average end-consumer might become familiar with it, thereby making it a viable alternative to Windows. If Microsoft were to be prevented from undermining the Java standard, software developers could write applications and know that their software would run on any operating system equally well, from Windows to Mac OS to Unix to Linux to BeOS, etc. This would create larger markets for the developers' software (as opposed to writing software that runs on only one operating system) and could also raise consumer interest level in alternative operating systems—provided that enough developers begin to write compelling Java applications, such as a reasonably interchangeable alternative to Microsoft's Office suite. Fundamental to the scheme is a truly cross-platform, high-performance environment, which is what Intel was attempting to help Sun deliver. Therefore, it is crucial that Intel's high-performance JVM take the place of Microsoft's incompatible JVM, and all of Microsoft's non-compliant Java technology be kept off the market and thus out of circulation and unavailable for public consumption.

Because the future widespread availability of Java applications that rival their Windows counterparts in features and sophistication is merely speculative, even with seed funding from Microsoft, it is best to provide a second alternative as well: a full-blown operating system having the same features as Windows and able to run Windows applications. Remedy G provides for the OS/2 alternative: a truly interchangeable alternative to Windows. This was the promise of OS/2 before Microsoft changed the Windows API more rapidly than IBM could reverse-engineer it. With Microsoft funding its development, IBM should be able to bring OS/2 up to the WindowsXP API in a very short time (in software development, emulating an existing product is much simpler than creating something new from scratch).

Remedy H simply ensures that Microsoft would be required to maintain open standards, rather than undermining them.

To avoid simply returning to the status quo, Microsoft must be prevented from performing future acts that mirror its previous acts. If Java compatibility is ensured by the eradication of the non-compliant technology, Microsoft should be prevented from building future incompatible Java technology, else history will be repeated. If there is a revival of OS/2, Microsoft should not be allowed to manipulate the Windows API so as to make the new version of OS/2 instantly obsolete, as it did in the mid-1990's to eliminate the threat of OS/2 Warp. Remedial steps A and B together prevent future monopolistic abuses of this type.

Discussion

Making the Windows API a public standard owned by an independent

organization separate from Microsoft and preventing Microsoft from manipulating the interface as it sees fit are both essential if the remedial steps in the previous section are to work for any length of time. If Microsoft has free reign to modify the Windows API, it could very quickly make Intel's JVM non-compatible with Windows, and, if OS/2 were to become again an alternative to the Windows operating system, Microsoft could quickly make OS/2 obsolete again simply by changing the Windows API. If Microsoft retains control of the Windows API, it can target any company's software and make it instantly obsolete by appropriately modifying the API. By the time the company re-writes its software to reflect the changes, Microsoft could modify the Windows API even further, and thereby ensure that the targeted company would never have a software product that is compatible with the latest version of Windows.

For example, Microsoft's Passport system is a software package bundled with WindowsXP that handles the financial side of e-commerce transactions, and it provides Microsoft with a small fee charged to the user for every e-commerce transaction Passport handles. If e-commerce is to become as pervasive as predicted, Passport represents future revenues that dwarf the revenues Microsoft currently receives from Windows and Office combined: Because Windows-based PCs represent 80–90% of the world's desktop computers, one can expect that 80–90% of the world's e-commerce transactions will be handled through Passport. If a competitor to Passport arises, Microsoft can simply change the Windows API in a matter of minutes, release the new version of the operating system to OEMs, and in so doing make the new e-commerce software incompatible with Windows—which will temporarily bar that competitor from the Windows desktop. It will take time for the new company to build and release a new version of their software that is compatible with the newer version of Windows, and during this time Microsoft will be able to make further modifications to the Windows API that will render the competitor's revision out-of-date. By allowing Microsoft to own the Windows API, we give Microsoft the ability to arm any targeted company indefinitely. Microsoft has already demonstrated that it is willing to use this power: Remember that Netscape's browser ran perfectly well under Windows 3.1, but Microsoft's changes to the API made Netscape's browser incompatible with Windows95. Remember also that Microsoft's latest version of Windows, WindowsXP, makes numerous software packages by its competitors incompatible. There is every reason to believe that Microsoft will continue to use this ability in the future to harm potential competitors in any promising market, and it is therefore critical to any remedies decree that this ability, to modify the Windows API without the permission of its constituents (i.e. independent software and hardware vendors as well as the public consumer), be stripped from Microsoft.

An argument against this remedial step is that it could stifle competition by preventing Microsoft from creating new features at

will—by curbing Microsoft's ability to “innovate.” In rare cases, new features do require changes to interfaces, but the vast majority of new features tend to work quite well with the old interfaces. For instance, assuming the company is not prohibited from doing so, Microsoft could easily integrate its browser into the Windows operating system without having to change the operating system interface at all. The Unix file I/O interface is an extremely potent example of an interface that has not changed in the decades since its inception yet is still allowing innovation to this day. The interface was defined to allow software to open, read, write, and close files stored on disks. Numerous features have been added to the Unix operating system using the same interface, and—just to name a few examples—software programs can now send messages on the Internet, interact with other programs, use input devices such as mice and drawing tablets, and even talk to smart cards using the same, unchanged, interface as reading and writing files on disks. Clearly, innovation is not at all stifled by restricting changes to interfaces, while this entire article illustrates numerous potent examples of stifling innovation by allowing such changes. Changing the nature of Microsoft's competition with other companies would not hinder its ability to innovate; it would simply force Microsoft to pay more attention to interoperability, ease-of-use, performance, and reliability, as these would be the characteristics on which their products would be judged in the marketplace.

Note that the proposed remedies would still guarantee Microsoft the opportunity to participate in the specification of any given public interface, including Windows, by virtue of the fact that the interface would be public. Microsoft certainly would be allowed to build products that comply with a given public interface—as would all companies, by virtue of the public character of that interface. The only thing Microsoft would be prevented from doing is undermining the public interface by watering it down (making slightly incompatible products) and/or drawing attention away to a proprietary alternative (as it did when it encouraged Java developers to use its own non-standard version of the Java runtime environment).

In addition, this proposal would increase competition in the marketplace by allowing other companies to offer compatible products. By making Microsoft's Windows API a public standard owned by an independent entity other than Microsoft, any company would be allowed to create alternative products that offer the same functionality. Moreover, by virtue of the interface being controlled by an independent body, Microsoft would not be allowed to change the interface more rapidly than other companies could develop new products; changes to the interface would occur at a pace decided by the independent body and contributing members of the public. How could this suggested remedy—that those of Microsoft's computer interfaces that have become de facto standards be made public and that Microsoft be prevented in the future from changing them at will—be enforced against Microsoft? The answer is that the

District Judge Kollan-Kotelly, as part of her decision imposing remedies against Microsoft, could retain jurisdiction over the case rather than closing it completely when she issues her decision. If Microsoft should violate any of the terms of her judgment in the case, the Justice Department could call this fact to the attention of court and ask for a contempt order against Microsoft or other relief, thereby compelling Microsoft to continue to abide by the judgment of the District Court.

Could this proposal put Microsoft out of business or make the company a minor player in the computer industry? We do not think so. Microsoft has three major strengths on its side that no other firm in the world has: (1) the ability to shift markets as it pleases, (2) an astounding number of talented software developers who know how to build system-level software, and (3) the deepest pockets in the computer industry. In addition, Microsoft spends a large amount of its revenue on research, which endows the company with excellent perspective on the future of computing; though this last point gives the company an edge over many of its competitors, it by no way gives Microsoft an exclusive edge. Our proposal would only take away one of Microsoft's strengths: the ability to shift markets as it pleases. The company would still have financial resources and human resources that outweigh any competitor, and its commitment to research should keep the company abreast of any new technologies. Moreover, there is a perfectly good precedent to turn to: Intel makes the computer chips on which Windows runs, and the company has several competitors that manufacture compatible chips. Though Intel has had to face fierce competition, it has responded with rapidly increasing processor performance and thus has continued to own a lion's share of the PC-chip market. One could argue that the performance increases of the last decade would have been far less dramatic than they have been, had Intel faced no competition. If our proposed remedy is implemented and competition is returned to the PC operating systems market, it is likely that Microsoft, like Intel, will have a "brand name" advantage in that it will create the gold standard by which all reasonably interchangeable products will be judged. After all, any Windows-compatible operating system would be judged on its ability to emulate Windows, while the reverse would not be true.

Could a small company abuse this proposed remedy? Could it build a product, declare its product's interface to be the de facto standard, and thereby prevent any form of competition from Microsoft? Not really: One cannot mandate that one's product be a standard; it must be demonstrated to be the most popular interface among alternatives for a given function. Even if the interface were the de facto standard, Microsoft would still be allowed to offer compatible products that comply with the interface. Non-monopolies would be allowed to build and market products with alternative interfaces, and this would certainly happen if the original interface was a poor design and became the standard simply by being the first to market. If any alternative interface superseded the

original public one, then that alternative would become the de facto standard, and Microsoft would be allowed to build compatible products for it. Could Microsoft ever be put in the position wherein the de facto standard for some function is proprietary, the interface is protected in some way by intellectual property rights, and the owner of that interface chooses not to license its technology to Microsoft? This is conceivable—but the authors are aware of only two companies that frequently and selectively deny access to computer interfaces that are proprietary and de facto standards; both of those companies are monopolies; and one of the companies is Microsoft itself (the other is Intel).

Our proposed remedy prevents a monopoly from subverting public interfaces. It does not prevent a monopolistic company from competing in the marketplace; in fact, it encourages competition on the basis of good product design. The proposed solution would simply prevent a type of competition that currently allows large corporations to make small ones irrelevant instead of having to compete head-to-head with them.

Non-Solutions to the Problem

Given this list, then, it is easy to evaluate potential solutions to the problem, producing a number of potential fixes that would not actually solve anything:

- Reorganize the company into an operating systems company (responsible for Windows) and an applications company (responsible for all other Microsoft software, e.g. Office, Visual Basic, Passport, etc.). It is likely that this will not happen anyway, due to the current direction of the case. This remedy was ordered by Judge Jackson of the District Court probably because it would tend to slow down the rate at which the Windows API changes—this would be the case because Microsoft's applications company would not be able to exploit those changes any more quickly than other companies. Therefore, the proposal would likely eliminate abuses stemming from action #3. However, the remedy would not prevent abuses stemming from Microsoft's actions #5 or #6—subverting the Java interface standard and attempting to subvert the HTML standard.

- Shorten the length of time a technology patent is in effect. This is not satisfactory because Microsoft's behavior #3—changing the Windows API to make existing software incompatible—would still be legal. In addition, any patent-holder, including Microsoft, could periodically change its product with the intent to acquire a new and different patent on the product's implementation, effectively extending the lifetime of a patent indefinitely. This remedy would also not prevent actions #5 or #6.

- Force Microsoft to divulge all (hidden) interfaces. This addresses behavior #4—Microsoft's decision to selectively disseminate its Windows API changes—and is covered by Judge Jackson's interim provisions. However, a company such as Microsoft can adhere to the letter of the law and still disobey its spirit by changing its interface more rapidly than other companies can keep up, and Judge Jackson's Judgment would not prevent this from continuing to occur. With a large programming staff,

Microsoft can breed new interfaces faster than other companies—especially smaller companies with modest-sized staffs of programmers—an write software for the old ones. This would keep a targeted company in the perpetual state of being prevented from releasing software for the latest version of Windows. This remedy would also not prevent actions #5 or #6.

- Force Microsoft to pay a simple fine (e.g. to government agencies). Clearly, this would merely be a slap on the wrist to the world's most powerful software company.

- Force OEMs to include alternative browsers and/or office software on the computers they ship. This would still allow Microsoft to produce hidden features in its operating system directed at its own browser and/or office applications, giving them an advantage over the applications of other companies. It would prevent none of the abuses we have described.

- Prevent Microsoft from embedding its browser technology into its operating system. Like the other non-solutions, this would not solve the problem. It would ensure that competition exists to a degree in the browser market, but this competition would only exist insofar as Microsoft is prohibited from the maneuvers #3, #5, and #6. Moreover, it would do nothing to foster competition in the operating system market.

Sidebar: Why Version 7.0 of Internet Explorer Won't Work, But Version 7.0.1 Will
The settlement agreement of November 2nd, 2001 and the revised agreement of November 6th contain a number of proposed remedies that are also obvious non-solutions to the problem. There are so many ways that Microsoft can adhere to the letter of the agreement but still perform acts of monopoly-continuation identical or nearly identical to those of the Browser War that their descriptions would fill an entire article by themselves. Here are, very briefly, a few of those loopholes.

The strongest remedy in the settlement agreement is an attempt to force Microsoft to divulge fully and equally to all the Windows API so that (a) there remain no "undocumented" features of the operating system and (b) no party is excluded from learning the particulars of the API so as to hinder product development or product release. The wording of the requirement is as follows: "Microsoft shall disclose ... for the sole purpose of interoperating with a Windows Operating System Product, ... the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product." This simple remedy has been watered down by so many mechanisms that it is all but useless:

- "For the sole purpose of interoperating with a Windows Operating System Product" means that Microsoft does not have to divulge the APIs to anyone who intends to write their software for other platforms.

- The only portion of the Windows API that Microsoft must divulge is that portion used by "Microsoft Middleware." Microsoft Middleware has been defined in the document to mean software that is distributed separately from Windows. Therefore those APIs used by any software

shipped with the operating system need not be divulged. Very little of Microsoft's software is shipped independently of the operating system.

The only portion of the Windows API that Microsoft must divulge is that portion used by "Microsoft Middleware." Microsoft Middleware has been defined in the document to mean software that is "Trademarked." Trademarked has been defined to exclude all software that has the name "Microsoft" or "Windows" in it. Therefore, Microsoft must divulge APIs only for Microsoft software that does not include the name "Microsoft" or "Windows," so those APIs used by Microsoft Internet Explorer need not be divulged.

The only portion of the Windows API that Microsoft must divulge is that portion used by "Microsoft Middleware." Microsoft Middleware has been defined in the document to mean software that provides the same function as a "Microsoft Middleware Product." Microsoft Middleware Product has been defined to include only the following software products, most of which are shipped with the operating system: Internet Explorer, Microsoft's Java Virtual Machine, Windows Media Player, Windows Messenger, and Outlook Express. The list specifically does not include Microsoft Office; therefore, that portion of the Windows API used by Microsoft Office need not be divulged, unless it is used by the other products as well. Moreover, Microsoft can craft its "Middleware" software so as to use an arbitrarily small portion of the operating system's interface, in particular avoiding that portion used by Office, so that no software vendor could attempt to write a software product that competes with Office.

The only portion of the Windows API that Microsoft must divulge is that portion used by "Microsoft Middleware." Microsoft Middleware has been defined in the document to include code that controls Microsoft Middleware—in other words, Middleware is defined in terms of itself. Therefore, a good lawyer could argue that Middleware is a meaningless term, and, by implication, Microsoft would therefore be required to divulge none of the Windows API whatsoever.

Lastly (this is the personal favorite of the authors), "Microsoft Middleware" has been defined in the document to mean all the above, subject to the following: "Software code ... shall not be deemed Microsoft Middleware unless identified as a new major version." This means that, even if Microsoft is thwarted from exploiting all of the other above loopholes, the company need only divulge that portion of the Windows API that is used by version 1.0, version 2.0, version 3.0, etc. of its Middleware. Therefore Microsoft can ship a crippled version of Internet Explorer 7.0 that uses none of the Windows API, along with similarly crippled versions of all its other Middleware products, and then ship an immediate bug fix in version 7.0.1 that uses the entire API. Microsoft would not have to divulge any of the Windows API at all.

Again, the agreement is riddled with holes such as this—these holes are all found in one paragraph alone, so one can imagine how

useless and unenforceable the entire agreement is. Perhaps the most telling feature of the agreement is one of the document's last lines in which "Windows Operating System Product" is defined thusly: "The software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion." In other words, if Microsoft wants to put a ham sandwich into Windows, it has free license to do so.

Legal Precedents

The federal government has the power, and has used it in the past, to regulate an industry in such a way as to require common standards of interoperability, rather than allowing individual corporations to create their own incompatible standards. Allowing the creation of incompatible standards allows one company in an industry to eliminate the availability of reasonably interchangeable services, thereby precluding direct competition. There are many examples, but, for illustration purposes, one is the setting of standard rail specifications.

Rail Track Width

The Constitution of the United States grants to the federal government the power to regulate interstate commerce. Congress therefore has authority to legislate in this area, and, among other things, Congress may regulate competition that takes place in interstate commerce. Congress has enunciated the "rail transportation policy" of the United States to include, among others, the following goals:

(1) to allow, to the maximum extent possible, competition and the demand for services to establish reasonable rates for transportation by rail. ...

(5) to foster sound economic conditions and to ensure effective competition and coordination between rail carriers and other modes [of transportation]. ...

(12) to prohibit predatory pricing and practices, ... [6, section 10101] The construction of a second or duplicate rail line may be prevented when it is not necessary and when it would depend for its revenue on taking traffic away from the preexisting line [4]. Competition in such a case would not be beneficial to the health of the national rail system. Allowing the duplicate line would create a different sort of competition as would be the case if the different carriers were forced to provide service over the same rails.

Congress may act on its own in regulating commerce, or it may delegate to a federal agency the power to regulate a particular industry. The railroad industry, for example, was placed under the jurisdiction of the Interstate Commerce Commission when that agency was created in 1887. In 1995, Congress abolished the ICC as such but established a new agency, the Surface Transportation Board, and transferred to that new agency much of the authority over the railroad industry that previously had been exercised by the ICC.

The Supreme Court of the United States held [5] that, under the Interstate Commerce Act, a railroad carrier owed to shippers of freight in its possession destined for points beyond the limit of its line, a duty to deliver that freight to a connecting line for further

transportation to reach its destination. Also, the connecting line has a corresponding duty to receive and to carry that freight to the next carrier or to its ultimate destination if that destination was along that rail line. The Court indicated that, under that Act, the federal government could require the interchange of traffic between respective railroad lines and could require that those lines establish connections where such interchange may take place.

A rail carrier is required to provide facilities for the interchange of traffic and freight. The Supreme Court has declared that the ICC (and now the STB) has the authority to require the interchange of traffic, including not only trackage, but terminal facilities as well [7]. Congress also has required facilities for the interchange of traffic:

A rail carrier providing transportation subject to the jurisdiction of the Board ... shall provide reasonable proper and equal facilities that are within its power to provide for the interchange of traffic between, and for the receiving, forwarding and delivery of passengers and property to and from, its respective line and a connecting line of another rail carrier ... [6]

Title 49, section 11102(a) of the United States Code provides that the Surface Transportation Board "may require terminal facilities, including main-line tracks for a reasonable distance outside of a terminal ... to be used by another rail carrier if the Board finds that use to be practicable and in the public interest without substantially impairing the ability of the rail carrier owning the facilities ... to handle its own business ..." Section 11102(c) provides that the Board "May require rail carriers to enter into reciprocal switching agreements ... where necessary to provide competitive rail service."

Title 49, section 11103 reads as follows: On application of the owner of a lateral branch line of a railroad, or of a shipper tendering interstate traffic for transportation, a rail carrier subject to the jurisdiction of the Board shall construct, maintain, and operate, on reasonable conditions, a switch connector to connect that branch line or private side track with its railroad ... when the connection

(1) is reasonably practicable;

(2) can be made safely; and

(3) will furnish sufficient business to justify its construction and maintenance.

Before 1862, railroads in this country ran on tracks of different widths, or gauges. We quote from a letter received from an official of the Federal Railroad Administration: At the beginning of the U.S. Civil War there were 7 different gauges in use in the U.S. and Canada. Standard gauge accounted for 53% of the total, with 4'10", 5'0", 5'6", and 6'0" accounting for significant mileage. The Civil War brought to everyone's attention the problems associated with transferring people and freight from one rail system to another. The Northeast rail systems of the U.S. had used standard gauge from the beginning, because they had imported Stephenson Locomotives from England. [27]

In 1862 Congress enacted legislation to make possible the construction of the first transcontinental railroad, "for Postal, Military and Other Purposes." One of those

“other purposes,” obviously, was to facilitate interstate commerce. In section 12 of this statute, adopted on July 1, 1862, Congress provided as follows:

... The track upon the entire line of railroad and branches shall be of uniform width, to be determined by the President of the United States, so that, when completed, cars can be run from the Missouri River to the Pacific Coast; ... [14]

Congress was not satisfied with President Lincoln's decision with regard to the gauge of tracks for the transcontinental railroad [15], and on March 3, 1863, enacted another statute, which stated: Be it enacted ... that the gauge of the Pacific railroad and its branches throughout their whole extent, from the Pacific Coast to the Missouri River, shall be, and hereby is, established at four feet eight and one-half inches. [16]

This Act thus established four feet eight and one-half inches as the North American Standard Gauge [27].

The Surface Transportation Board has adopted many pages of detailed regulations on the subject of tracks. Many of these are for the purpose of setting a standard or uniform width between rails for railroads in interstate commerce and therefore under the Board's jurisdiction. These requirements specify that the rails must be no less than 4 feet 8 inches apart and no more than 4 feet 10 and one quarter inches. This makes it possible for any rail car to fit any tracks. See, e.g., 49 Code of Federal Regulation • • 213.51 and 213.323. The stated purpose of these particular regulations is safety, but since the government has power, under the Interstate Commerce Clause, to prevent monopolistic practices, and to ensure fair competition, such regulations also could have been enacted for those reasons as well.

Let us now describe two examples to aid in making our point.

Ex. 1: Suppose, hypothetically, that there is a very well-known railroad company that owns a large fraction of the world's rail lines but that does not own the rail line connecting Boston and New York. By the fact that this company owns so many rails, it has the “brand-name” advantage of being known to nearly all railway passengers and shippers.

Suppose this company recognizes that running its cars on the New York-Boston route would increase its profits substantially, but the company does not want to pay the owner of the line for the right to use its tracks. Suppose that the large company has bought a right of way between New York and Boston and is beginning to construct tracks on the right of way. The company will depend for its revenue on taking traffic away from the preexisting line, and there is little doubt that the large company will be successful in doing so, because it is a well-known rail carrier, and, given the choice between a rail carrier that one is familiar with and a carrier that one has never heard of, any given passenger or shipper is likely to choose the familiar name. As mentioned before, the federal government has the power to stop the construction of the duplicate line [4].

Ex. 2: Suppose, hypothetically, that there has been no rail line for many years directly connecting Boston and New York, and rail

traffic must pass through other cities and travel in a roundabout way for several hundred miles more than the direct route, to carry freight or passengers from one of these two cities to the other. Many years ago there was a direct line connecting the two cities, but it has been abandoned for many years.

Suppose that the large company from the previous example has just bought the old right of way and is beginning to construct tracks on the right of way. However, instead of building rails that are the standard gauge of 4 feet, 8 and one-half inches apart, this company is placing its rails six feet apart. The company may claim that their reason for doing this is efficiency or better service, but the direct and obvious effect is to make it impossible for railroad cars of other companies, which are built for standard-width tracks, to run on the newly constructed line. Other carriers will have to unload freight and passengers and reload them on cars built for the non-standard tracks (owned by the large company), and this will make it possible for that company to earn more revenue and greater profits.

Can there be any question as to the government's authority to block the company from building wide-gauge tracks? Clearly, the government has power to require that the rails be standard width. The government has authority to prevent the construction of non-standard-gauge tracks, also to prevent monopolistic practices or anticompetitive practices, which the construction of such a line would represent. After all, railroads in interstate commerce are subject to the Sherman act, which prohibits conduct that extinguishes competition. [11, 12]

The adverse effect of monopolistic practices over several hundred miles of railroad track is infinitesimal compared to the effect that a monopolistic practice by Microsoft has on our economic system. The repercussions throughout the economy are much greater when Microsoft performs anticompetitive acts, but these hypothetical examples can be useful in explaining Microsoft's actions and their impact on competitors.

The Microsoft interface-abuse analogy is the combination of these two examples: It is as if (1) a railroad company were to build a duplicate set of tracks that (2) are also incompatible with preexisting tracks. If Microsoft were to offer compatible, alternative software, that software would compete head-to-head with other alternatives. However, by building and promoting alternative software that uses incompatible interfaces, Microsoft offers an alternative that depends for its revenues on taking business away from other companies' products, by preventing software by those other companies from competing head-to-head with Microsoft's software. This is the case because, by virtue of the fact that Microsoft's software is incompatible with that other software, a customer must choose one or the other and cannot (easily) have both. For example, developers writing software for Microsoft's implementation of Java cannot then run that software on the Sun JVM. Developers creating websites using Microsoft's incompatible HTML control statements are forced into the situation where

their website works correctly only for Microsoft's web browser.

As we have shown in the railroad example, the government is justified in forcing companies to adhere to standards of compatibility if doing so furthers fair competition. The government is similarly justified in forcing Microsoft to adhere to standards of compatibility—doing so would not only further competition, but it would also prevent Microsoft from repeating many of its recent anticompetitive actions.

Intellectual Property Considerations

Copyrights and patents constitute property in the holder of the copyright or patent, and such property normally should not be taken away by the government except for good reason and should not be taken without providing compensation to the owner for the loss of that property. There is some authority to the effect that even if the owner of intellectual property has violated antitrust laws, the courts cannot take the intellectual property away from that owner [17]. May Microsoft and other companies in the computer industry claim the protection of our copyright or patent laws for their interfaces, even when those companies have violated the antitrust laws of the country? Computer programs may be copyrighted, and innovations in the workings of computers can be patented. Some user interfaces apparently can be copyrighted if at least some literary creativity has been used in the development of that user interface [18, 19, 20]. What about the “internal” interfaces that have been the focus of this article? Are these copyrightable, patentable? Judge Jackson, in his Final Judgment, had no difficulty in imposing his interim remedies against Microsoft, in requiring Microsoft to disclose its internal interfaces (the Windows API) to the public [13]. Copyright and patent law posed no barrier to requiring Microsoft to give up control of its interfaces, as far as he was concerned.

Even if internal interfaces are copyrightable, they cannot be used in such a way as to violate the nation's antitrust laws. In a case involving the Morton Salt Company [21], a competitor company was using a patent as a means of restraining competition, in violation of the antitrust laws. That company sought injunctive relief against Morton Salt, to restrain the latter from allegedly violating the patent. The court ruled in favor of Morton, reasoning that a patent should not be enforced where the patentee has used its monopoly power and the patent as a means of illegally restraining competition. Microsoft has used its Windows API, its most widely used computer interface, in ways that have violated the antitrust laws, and therefore the company should not be allowed to claim the protection of our patent or copyright laws to prevent the interface from being made public property.

The author of an article in the Stanford Law Review, written in 1993, before the advent of the current Microsoft case, said in that article that although the user interface may be copyrighted, since it may involve some literary or artistic creativity, an internal interface must not be copyrighted or patented. In that article, the author foresaw the problem that has arisen in the Microsoft

case. He predicted that antitrust problems would occur if such interfaces receive copyright or patent law protection:

[N]ew hardware manufacturers may find themselves compelled to use a computer's internal interface in order to make their machines compatible with software already independently developed for the competitor's computer. Without compatibility with preexisting software, the costs and possible limited availability of software will make consumers hesitant to buy the new hardware, even if it is superior. Thus, a copyright over an internal interface may yield a monopoly over computer hardware As one commentator suggests, copyright protection for elements necessary to achieve compatibility would encourage large, established firms to create incompatible products in an effort to set new standards, which they could then monopolize. Yet the public may embrace these new standards not because they are objectively preferable to either the previous standard or alternatives possessed by smaller firms, but because of the large firms' "penetration pricing" strategy or powerful brand name recognition.

[T]he law must be cautious about protecting elements necessary to achieve compatibility because even though such protection may, in some cases, serve innovation, it risks granting far-reaching, unjustified monopolies. Any intellectual property regime that covers interface elements necessary for compatibility must be able to weigh these factors in order to protect only those elements that are truly innovative enough to warrant protection Given the potential monopoly effects and the ambiguous innovation effects, not protecting elements necessary for compatibility, while imperfect, is preferable to overbroad, long-lived protection. Specifically, copyright should leave the following elements of software unprotected: (1) elements dictated by efficiency; (2) internal interface elements required to achieve compatibility; and (3) elements of user interfaces that have already become de facto interface standards. [22]

The author of the Stanford Law Review article foresaw clearly that internal interfaces must not be copyrightable or patentable, else serious abuses of the antitrust laws, such as those perpetrated by Microsoft, are likely. An internal interface that has become the standard for the industry should be considered public properly. Otherwise, problems such as those caused by Microsoft in the current case before the District Court are inevitable.

Our Position

To summarize, we propose two remedial steps that would prevent future misconduct on Microsoft's part. In remedial step A we propose that those of Microsoft's most widely-used interfaces, especially the Windows API 3, should be made public and should be made universally available, without the threat of Microsoft's manipulating those interfaces to injure competition in the future. Furthermore, remedial step B proposes that Microsoft be prevented from undermining public interfaces so as to prevent future acts similar to fragmenting the Java interface.

3. A similar argument would suggest that the Office file formats be included in this list as well. To restore competition to the marketplace, we propose the largely monetary remedial steps C-H. These are aimed at redressing Microsoft's illegal, anticompetitive behavior towards Sun, Netscape, Intel, and others. Clearly the United States District Court has authority within current antitrust laws to impose those remedies against Microsoft.

Whether the District Court has the power to impose steps A and B as part of the package of remedies against Microsoft under current antitrust laws is not entirely clear. The United States Court of Appeals, in its June 28, 2001 opinion, did not mention this as a possibility, and these steps were not included as a remedy by Judge Jackson in his decision. It can be argued that declaring the Windows interface public is beyond the power of the courts under present antitrust laws, and that such a remedy can only be imposed through future legislation by Congress or through administrative regulation or adjudication under future statutory authority from Congress. On the other hand, it can be argued that the District Court does have the authority to declare the interface public as part of the array of judicial remedies against Microsoft in the case now before it. Antitrust law, after all, consists of federal statutes and the case law interpreting those statutes, particularly the body of case law generated by the Supreme Court of the United States over many years of antitrust litigation. These cases provide the District Court with a wide range of possible remedies and with a great deal of flexibility to address the problem at hand. The Supreme Court has said that in imposing remedies for antitrust violations the trial court is not limited to merely restoring the status quo. That court should compel the violator to take actions that will cure the ill effects of the violation or violations and also should take steps that will prevent the violations from continuing into the future and should deny the violators any future benefits from their wrongdoing [9, 10].

Arguably, the United States District Court has authority under present law to make the interface public as part of the remedies to be imposed against Microsoft in the present case. But, if not, Congress should enact legislation giving a federal administrative agency the authority to adopt regulations giving it the power to hold hearings regarding interfaces and the power to declare interfaces public when they become so widely used that commerce would be adversely affected if they are not declared public properly.

Conclusion

Computers fail to work when their internal interfaces, the rules by which computers and computer components operate and interact with one another, are disobeyed. These interfaces are essentially sets of rules, and we have shown that simply changing these rules can have significant economic impact. It is our contention that when one is in the position of writing the rules—any rules that affect a significant number of people—then one is obligated not to manipulate those rules to further one's own selfish interests.

The computer industry is similarly bound to the rules by which computers interoperate,

and therefore any company with the ability to manipulate rules that affect a significant number of corporations has the ability to bend the behavior of those corporations to its will. Microsoft's ownership of the Windows API represents such an ability, because a substantial fraction of the world's hardware and software is dependent upon the specification of the Windows interface, the Windows API, and, when that API changes, all affected must update their hardware and/or software to remain compatible with Windows. Microsoft has demonstrated in the past that it is willing to use this ability to harm individual companies, and there is no indication that it will refrain from this behavior in the future. Therefore, to prevent future anticompetitive behavior from Microsoft, the ability to change the Windows API without limit to scope or timetable must be taken from the company. This is best done by making the Windows API a public standard and handing it to an independent standards institute (such as the IEEE, ANSI, etc.) to control, and to not allow Microsoft to change the API in its own products except under guidelines established by that institute. Microsoft could be prevented from suddenly changing the interface for its products so as to stamp out competition.

The effect of Microsoft's anticompetitive behavior is that the company retains its position as industry leader not by offering the most innovative, reliable, user-friendly products available, but by ensuring that any competing software product that shows the potential to be more innovative, reliable, or user-friendly than Microsoft's products is killed in its infancy.

Ultimately, it can be argued that Microsoft is cheating every computer-user in the world out of a better computing experience by holding back innovation in the computer industry and thereby keeping consumers' expectations of its own products artificially low. Judge Jackson ended the Findings of Fact expressing exactly this sentiment, and the excerpt summarizes Microsoft's behavior towards its constituents very plainly:

Most harmful of all is the message that Microsoft's actions have conveyed to every enterprise with the potential to innovate in the computer industry. Through its conduct toward Netscape, IBM, Compaq, Intel, and others, Microsoft has demonstrated that it will use its prodigious market power and immense profits to harm any firm that insists on pursuing initiatives that could intensify competition against one of Microsoft's core products. Microsoft's past success in hurling such companies and stifling innovation deters investment in technologies and businesses that exhibit the potential to threaten Microsoft. The ultimate result is that some innovations that would truly benefit consumers never occur for the sole reason that they do not coincide with Microsoft's self-interest. [2: • 412]

We have shown that Congress has the power to enforce industry-wide standards of interoperability and that Congress has used this power in the past. We have also shown that the regulating of its corporate behavior with regards to computing standards is the only way to prevent Microsoft from performing nearly identical acts of

anticompetitive behavior in the future as it did during the mid 1990's. Were Microsoft's Windows API to be named an open standard and the company to become regulated with respect to open standards, Microsoft would not be allowed to stifle and destroy other software vendors using its demonstrated ability to shift markets by manipulating the Windows API and undermining popular interfaces; the company would instead, for the first time in a long time, be forced to compete entirely on the strengths of its product.

Microsoft has engaged in violations of the antitrust laws of our country and continues to violate those laws. Judge Thomas Penfield Jackson's Findings were accurate—they showed just how relentless Microsoft's actions have been, and his decision showed that strong remedial steps are necessary to ensure compliance with the Sherman Act. The Court of Appeals agreed with his decision in its important aspects—that Microsoft was a monopoly and had violated the Sherman Act, and that preventive steps needed to be taken by the District Court, although by a different District Judge.

But Bill Gates kept denying and denying that Microsoft had done nothing wrong. He and other Microsoft officials kept denying the truth for a long enough period of time for another political party, the Republican Party, a party generally more favorable to big business than the Democratic Party, to come into power in January, 2001. President Bush appointed a new Attorney General to head the Justice Department and had the opportunity to appoint a new set of Assistant Attorneys General. So, one of the most powerful corporations in this country, a business founded and headed by a man who happens to be the wealthiest person in the world, with tremendous power and influence, and with the capacity to contribute substantially to political parties and the candidates he favors, violated the law but repeatedly denied any wrongdoing over a long enough period of time to enable another political party to come into power, with a new set of lawyers in the Justice Department, lawyers with an obviously different viewpoint when it comes to enforcing the antitrust laws.

Then the economy, in 2001, went into a serious downturn, and on September 11, 2001, our country was attacked by terrorists. In October, 2001, the newly staffed Justice Department entered into a proposed settlement with Microsoft that does not address the problems created by Microsoft's activities of the past several years and which will not prevent it from continuing to engage in the same kinds of illegal conduct in the future.

Hopefully the proposed settlement will not be signed by the states that, as of this writing, have refused to join with the federal government in attempting to settle the case. Also, hopefully Judge Kollar-Kotelly will refuse to approve and accept the proposed settlement and instead will impose meaningful and effective remedies against Microsoft. We hope that the suggestions in this paper, which would make the Windows API public property, owned and controlled by the public—will be included in any set of remedies imposed in the case.

The facts of the Microsoft case show unfortunate behavior on the part of Microsoft and its officers, and if they are not stopped from continuing to engage in that conduct, our system for regulating antitrust violations will have broken down. The facts of the case, as outlined in the Findings of Judge Jackson, require that significant, effective remedies be imposed. If this is not done, the system will have miscarried because Gates and Microsoft refused to admit to wrongdoing, even though it is clear that violations took place; because a different political party, with a different approach to antitrust law won the November, 2000 election and was able to replace the Attorney General with another; because the economy faltered, thereby placing pressure on the Bush administration to ease up in pursuing antitrust violations; and because the September 11, 2001 terrorist attacks required the full attention of the Justice Department and left little time for battling Microsoft. Thus, instead of reaching a decision based on the facts as developed by Judge Jackson, the District Court will have made a decision based on extraneous factors that have nothing to do with the merits of the case. Our system of justice will have failed.

The Authors

Bruce L. Jacob is an Assistant Professor of Electrical and Computer Engineering at the University of Maryland, College Park. He received his Ars Baccalaureate, *cure laude*, in Mathematics from Harvard University in 1988, and his M.S. and Ph.D. in Computer Science and Engineering from the University of Michigan in 1995 and 1997, respectively. In addition to his academic credentials, he has extensive experience in industry—he designed real-time embedded applications and real-time embedded architectures in the area of telecommunications for two successful startup companies: Boston Technology (now part of Comverse Systems) and Priority Call Management (now part of the Sema Group). At Priority Call Management he was employee number 2, the system architect, and the chief engineer. He built the first working prototype of the company's product, and he built and installed the first actual product as well. His systems architecture helped the company grow from start-up to a \$200 million leader in its segment of the telecommunications industry. In academic research, Jacob was responsible for the cache and memory-management design of the DARPA-funded PUMA processor, which demonstrated the viability of software-managed caches for use in general-purpose systems. His work in advanced DRAM architectures is the first comparative evaluation of today's memory technologies, and he recently received the prestigious CAREER Award from the National Science Foundation for this research. He has authored papers on

computer architecture and memory systems, low-power embedded systems, distributed computing, and astronomy.

Bruce R. Jacob began his career in 1960 as an Assistant Attorney General for the State of Florida. There he represented the respondent in the United States Supreme Court in the landmark case of *Gideon v. Wainwright*, 372 U.S. 335 (1963). Upon leaving that office, he engaged in the private practice of law in Barrow and Lakeland, Florida, in the firm of Holland, Bevis & Smith, now Holland & Knight. Following the completion of his LL.M. degree at Northwestern University, Professor Jacob joined the faculty of Emory University School of Law, where he established the Legal Assistance for Inmates Program at the Atlanta Penitentiary. He was appointed by the Supreme Court as counsel for petitioner in *Kaufman v. United States*, 394 U.S. 217 (1969). He received his S.J.D. at the Harvard Law School. While at Harvard, he served as a Research Associate in the Center for Criminal Justice, assisted in the establishment of the Harvard Prison Legal Assistance Project, and supervised the work of law students in the defense of criminal cases and in the representation of indigents in civil matters in the Community Legal Assistance Office, Cambridge, Massachusetts. Jacob subsequently served as Professor and Director of Clinical Programs at The Ohio State University College of Law, as Dean and Professor of the Mercer University School of Law and as Vice President of Stetson University and Dean of Stetson College of Law from 1981 through 1994. Presently he is Dean Emeritus and Professor of Law at Stetson. He is an author and co-author of articles on Criminal Law and Procedure, Civil Rights and Civil Liberties, and the Administrative Law of Corrections. While on sabbatical leave during 1994–95, he took courses in the LL.M. program in Taxation at the University of Florida College of Law, and received that LL.M. in 1995. He has taught courses in criminal law as well as in tax law, administrative law, and state constitutional law. Copyright ?? 2001, Bruce L. Jacob and Bruce R. Jacob

Subject: Proposed Microsoft settlement
Renata Hesse, trial attorney, Antitrust Division

Dear Ms. Hesse:

Thank you for giving consumers an opportunity to respond to this proposed settlement. As a teacher, I had access to a computer lab from the early 1980's until my retirement in 1995. During that time we progressed from Commodore 64's to MAC's and the more sophisticated PC's. Whenever given a choice, I always opted for Microsoft software because the subject selection was excellent, it was user friendly and the price was reasonable. The very small budget we were given to work with made it imperative to put a price on value. I was impressed through the years that while both content and user friendliness continued to advance, the prices remained reasonable. The limit on my budget, needless to say, had not advanced.

After retirement I continue to watch my grandchildren from tots on up develop, improve and enrich skills with software that is affordable; and I am delighted with the capabilities of my PC.

Therefore, based on my very positive experiences as a consumer, I would like to see this settlement stand. I think it is time to put an end to all of the time, energy and money that has been expended on this case. Surely future time, energy and money can be put to better use by all parties concerned.

Thank you again for considering my response.

Sincerely,
Adelaide Bodoia

Subject: Microsoft's Proposal
Howdy Folks,

Just want to offer my two-cent's worth... I feel very strongly that Microsoft's proposal is a blatant attempt by the company to extend its monopoly even further.

They should be heavily penalized for their crimes. The Justice Department should take the money and use it to help defray the expenses that our federal government has incurred in helping to bring up the level of technology in the schools.

Regards,
Gordon Tillman

Subject: Help Benefit Students

I believe Redhat's idea of offering their O/S and software freely that Microsoft may donate more hardware is an excellent idea. Allowing Microsoft to provide students with all and only their software, hardware, etc. will only increase Microsoft's monopoly in the long run. Students will be forced and will become accustomed to Microsoft products. Don't allow Microsoft to secure their future through what should be a punishment. Thank you for your time.

Subject: Microsoft vs DOJ settlement

I am a shareholder in several companies that have been injured by the monopolistic practices of Microsoft. As a result, I, too, have been injured by Microsoft. As an injured party, I am opposed to the DOJ settlement because the settlement in no way punishes Microsoft for its past practices for which it has already been found guilty. How can a party be found guilty and not be punished for its criminal activities?

The proposed Settlement undermines our whole governance by Rule of Law. As for the settlement preventing future transgressions, I

call your attention to code written into Microsoft's Office X for Macintosh which limits the life of the product to one year unless the user pays Microsoft an annual fee even though the user paid full price initially for the product. The only reason Microsoft has not activated the code is because it didn't want to jeopardize the DOJ settlement. It will do so once the settlement is finalized. That certainly smacks of a "Predatory Practice" to me especially since businesses that use the Macintosh platform have to be able to interface with others that use the Wintel platform that is dominated by Microsoft software. Please re-establish the Rule of Law by making Microsoft at least pay retribution to the Companies it injured or drove out of business. The DOJ has not even considered the injury caused to shareholders. You need to factor that into your Settlement decision as well.

Thank you for allowing the injured public a chance to comment on such an important matter.

Respectfully yours,
Peter G. Robertson

Subject: More anti-competitive, pro-Microsoft propaganda from Intuit.

Hello DOJ.

The snip below is from this web page which appeared 12/4/01:

<http://www.macintouch.com>

Intuit is the maker of Quickbooks and Quicken financial management software. See what Intuit supervisors are telling the employees about a Microsoft competitor.

MacInTouch reader Paul Taylor wrote about a recent experience with Intuit sales:

"I just received an unsolicited phone call from Intuit to sell me TurboTax. The agent [...] finished her sales pitch, and I agreed to purchase TurboTax. I have used MacInTax (now known as TurboTax for Macintosh) for many years now and believe it to be a good product.

"When I informed [her] that I used a Macintosh, not a Windows machine, she informed me that the price would be \$10 more than she had been quoting. She had said the Windows version was \$39.95, and the Mac version would be \$49.95. When I asked why the Mac version was \$10 more, she said she had been told by her supervisors that the "Macintosh was an outdated computer," and that "it ?????? was more expensive to produce [TurboTax] for [the Mac]. There are more Windows computers."

Thank you for listening.
M. Clark

Subject: DOJ/Microsoft Antitrust Settlement

The settlement that has been reached between the DOJ and Microsoft will do nothing more than strengthen Microsoft's monopoly of the PC/OS industry. I am ever amazed by the inability of our Government to control Corporation's such as Microsoft. Any half-educated person should be able to deduce that if Microsoft is allowed to replace software in our school's, which is still a large part Mac (non-Microsoft), with their software this will do nothing more than eliminate the competition completely. This will be done by seducing our students into becoming familiar with their products and when released into the 'real-world' they will have no experience with any other technologies other than 'MS Windows'. Though this is not a forum for technical opinions and/or debate, most knowledgeable IT "guru's" agree that Microsoft continually produces inferior products. On the surface appearing more user friendly and available while beneath the scenes threatening our very Security. If the DOJ had been thinking they might of come up with something like Red Hat's offering which I have included below. Consider what will happen in 5 years when Microsoft is allowed to charge these schools for renewing their licenses.

RESEARCH TRIANGLE PARK, N.C.-
(BUSINESS WIRE)-Nov. 20, 2001-Red Hat, Inc.

(Nasdaq:RHAT—news) today proposed an alternative to the settlement announced today of the class-action lawsuit against Microsoft. Red Hat offered to provide open-source software to every school district in the United States free of charge, encouraging Microsoft to redirect the money it would have spent on software into purchasing more hardware for the 14,000 poorest school districts. Under the Red Hat proposal, by removing Microsoft's higher-priced software from the settlement equation, Microsoft could provide the school districts with many more computers—greatly extending the benefits Microsoft seeks to provide school districts with their proposed settlement.

Microsoft had proposed that, in settlement of class-action claims of price-gouging, the company donate computer hardware, software and support to 14,000 poor school districts throughout the United States.

Under the proposed settlement, a substantial part of the value provided to schools would be in the form of Microsoft software. The Red Hat's alternative proposal includes the following:

*Microsoft redirects the value of their proposed software donation to the purchase of additional hardware for the school districts. This would increase the number of computers available under the original proposal from 200,000 to more than one million, and would increase the number of systems per school from approximately 14 to at least 70.

*Red Hat, Inc. will provide free of charge the open-source Red Hat Linux operating system, office applications and associated capabilities to any school system in the United States.

*Red Hat will provide online support for the software through the Red Hat Network.

*Unlike the Microsoft proposal, which has a five-year time limit at which point schools would have to pay Microsoft to renew their licenses and upgrade the software, the Red Hat proposal has no time limit. Red Hat will provide software upgrades through the Red Hat Network online distribution channel.

A Win-Win Approach

The Red Hat proposal achieves two important goals: improving the quality and accessibility of computing education in the nation's less-privileged schools, and preventing the extension of Microsoft's monopoly to the most-vulnerable users.

"While we applaud Microsoft for raising the idea of helping poorer schools as part of the penalty phase of their conviction for monopolistic practices, we do not think that the remedy should be a mechanism by which Microsoft can further extend its monopoly," said Matthew Szulik, CEO of Red Hat.

"Through this proposal all of the states and all of the schools can win, and Microsoft will achieve even greater success for its stated goal of helping schools. By providing schools with a software choice, Red Hat will enable Microsoft to provide many more computers to these schools. At the same time, the schools can accept this offer secure in the knowledge that they have not rewarded a monopolist by extending the monopoly. It's now up to Microsoft to demonstrate that they are truly serious about helping our schools."

Subject: Opposed to proposed Microsoft settlement

Dear Sirs:

I wish to express my opposition to the proposed anti-trust settlement with Microsoft. Microsoft has, through illegal means, driven many good software companies out of business. This often repeated behavior has directly reduced the choices available in the software marketplace.

Microsoft's illegal behavior has directly increased the cost of that software which we

can buy. Moreover, Microsoft's monopoly has indirectly increased the cost of maintaining that software by forcing shoddy, low quality software on the public as its only choice. The proposed settlement will, in my opinion, do nothing to change or curtail Microsoft's illegal predatory business practices. Therefore, I do not believe that the proposed settlement is in my best interest nor that of the general public.

I respectfully request that you set aside the proposed settlement and that the Federal Government pursue a more substantial punishment against Microsoft.

Sincerely,
Marvin Watkins

Subject: DOJ/ms penalty—edu/pc vs mac free choice

Since anti-competitive behavior is a core issue in the doj/ms case, may I please suggest that any penalty imposed on MS which results in ms underwriting the cost of pc and software—especially in the education marketplace—be constructed such that the either the recipients are given an equal and unencumbered choice of a mac vs a wintel box, or indeed that a portion (fixed, or indeed perhaps all) go to macs. since ms makes lots of money from its mac business unit, t should in principal be indifferent as to which platform it spends its money on. therefore, in the interests of preserving competition in the education market (which is very key for apple), the settlements should not have the perverse effect of actually further limiting competition in the edu marketplace.

Thus the settlement should provide an opens system that lets edu users (predominately institutional buyers) chose for themselves, or in fact mandate the whole thing be mac—in order to actually increase competition (or at least diversity) in the edu marketplace.

regards:dlf

Subject: Microsoft Antitrust Settlement Comments

For years now computer buyers and sellers have had to deal with Microsoft. Buyers were saddled with Windows whenever they purchased a new system regardless to whether or not they really wanted the operating system. Further more the product itself was generally shipped with known flaws which Microsoft took it's own time to finally get around to fixing often times requiring upgrades to newer versions of their code which the consumer then had to pay for. It is time that the monopolistic practices of this behemoth be stopped. I applaude the court system for finding Microsoft in violation of the law.
