Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies. Thank you for this opportunity to share my views.

Sincerely,

Edward Kirk Middleton

 Subject: Dept of Justice on Microsoft Litigation

It is about time that we finally settle this unfair lawsuit against Microsoft filed by rival companies of Microsoft. Most of these supposedly concerned companies are actually interested only in getting more money for themselves and do not necessarily have the public welfare in mind. Given the same position that Microsoft had in the computer field who knows what they would have done. "He who is without sin let him cast the first stone." Let us settle this case finally and allow good, viable companies like Microsoft to go on with their projects. Let us stop the government from spending too much

money in useless litigation and finalize this once and for all. Most companies especially, technology companies are already suffering from this great economic slowdown and adding to this is such unsure and wasteful litigation that has dragged on for so long. Let this case be settled now. Microsoft is agreeing to the settlement conditions, what more do these companies want?

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations,

consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies. Thank you for this opportunity to share my views.

Sincerely,

Nathan M. Linowitz

I ask that you seek to dismiss the case against Microsoft and allow them to continue to create and innovate in a free market environment. If there were TRUE competition, i.e. GOOD alternative software, people would be lining up to use it and BUY it. However, that is not the case, therefore the providers of inferior products have chosen to spend their money on attorneys rather than research and development. Let us put this lawsuit behind us so that Microsoft can get on with the business of doing business and not protecting themselves from frivolous lawsuits.

Sincerely,

Robert C. Adams

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies. Thank you for this opportunity to share my views.

Sincerely,
Bernt P. Martinson

Dear Microsoft Settlement:

It's time to let Microsoft get back to the business of producing good products and creating jobs for the American workers. The Microsoft trial squandered taxpayers' dollars and was a serious deterrent to investors in the high-tech industry. Consumers should see competition in the marketplace, rather than the courtroom. With the economy the way it is now, we should be encouraging businesses, not slapping them down! Most Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, instead of wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the

wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
David H. & Barbara C. Pink

From: Carroll Neblett
To: Microsoft ATR
Date: 1/15/02 11:42pm
Subject: Microsoft Settlement

I want to express my support for the acceptance and finalization of the Microsoft Anti-trust settlement, and an end to the litigation.

I am only a consumer, but I have been an active buyer and user of personal computers and computer software for more than 10 years. I believe that Microsoft has been instrumental in developing software products that have benefited consumers, business and the U.S. economy.

While I cannot speak to any non-competitive improprieties that Microsoft may have committed, I cannot imagine that any more rapid or beneficial development of the capabilities of personal computers could have occurred under any circumstances, no matter how competitive. I don't believe that any more rapid or aggressive availability of computer technology could have been assimilated by the public and business, under any circumstances.

I believe it is time finalize the Settlement and put the Microsoft Anti-trust Case behind us. I think to do otherwise and continue to let the case drag on will hurt consumers, business, and potentially the U.S. economy and its competitive position in the World economy relative to technology leadership.

I will appreciate your consideration of my opinion.

The case against Microsoft should be dropped. Microsoft has made GREAT contributions to the well-being of mankind and to its institutions.

The Justice Dept.'s persecution of SUCCESSFUL American companies because their competitors don't like them and/or can't measure-up in the marketplace, is ridiculous.

If the Justice Dept. is looking for something to champion, why not go after the thousands of FOREIGN companies doing business in the USA while violating American Antitrust Laws.

Sincerely,
William A. Pauwels, Sr.

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies. Focus your attention on the abuses of the airline and oil industry just to name a few.

Thank you for this opportunity to share my views.

Sincerely,
Mark Scherer

Dear Microsoft Settlement:

The Microsoft trial has wasted enough of the taxpayers' dollars. The Governments continued interference in the marketplace at the behest of Microsoft's inept and whiney competitors constitutes a major nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers want competition in the marketplace, rather than the courtroom.

If and when the Government understands that we the consumers want this to end, only then will the investors who propel our economy finally breathe a sigh of relief.

A majority of Americans thought the Federal Government should not have instituted the action against Microsoft. So when the case is finally over, Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable time and resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than

I'm twenty years old, and I've been using computers since I was a small child—I can't imagine a life without them. The first one I can remember properly was our Commodore 64. Seems ancient now, didn't even have a hard drive. And back then, I'd never heard of Microsoft, or Windows, or any of that. What, then, will happen twenty years from now if they're left off with a slap on the wrist? Will future generations ever be able to break away from them?

Please, do something to stop the bundling and hidden APIs and the control Microsoft holds over any manufacturer that wants to use their product. First it was Microsoft Windows, then Windows Media Player and Office and the fact that I can no longer stop using Internet Explorer even if I wanted to. . . what will it be for my kids?

Date: 1/16/02 12:24am
Subject: Microsoft Settlement

Please stop the bickering and settle this case as is. The settlement is fair and reasonable. The whiners are complaining that this will enable Microsoft to gain a foothold in the schools. No one wants a operating system in their classroom that can only supports less than 5 % of the software available on the market today. Mac writes all of their software except Office Suite. My experience with schools is that the Mac's and apples are located in the janitor closet collecting cobwebs and dust. The teachers are migrating away from the former platform

that is more expensive than Microsoft. You cannot run Mac on a Intel platform which businesses are donating to the school. There is only one vendor that sells the hardware for the Mac and that is Macintosh the manufacturer who is crying foul. If it was not for Microsoft who developed a office suite and also bailed them out from going bankrupt a couple of years ago, there would not be any computer platform for any Mac a holic to go to. If monetary amounts are imposed, their is no guarantee that the funds will actually show up in the needed schools classrooms as computer for the students. Case in point is our wonderful state of California and our pathetic schools in Los Angeles. The funds always get diverted to the special interest group who is supporting the corrupt system there.

From: nathan liskov
To: microsoft.atr(a)usdoj.gov
Date: 1/16/02 12:27am
Subject: Microsoft Comments

One remedy that I think is very important to enhancing competition that has not been discussed widely in the press is the following:

Microsoft should publish the detailed formats for the files generated by their office suite programs. Any future changes in these formats should be published at least 4 months in advance of selling updates with format changes. For example, Word produces .DOC files, Excel produces .XLS files, etc. The format of these files is not published and other competitors must use reverse engineering to figure them out. This process is usually imperfect resulting in less than full compatibility. Ideally one should be able to take a .DOC file that someone has written using Microsoft Word, view it and edit it in a competing product (e.g. Lotus WordPro or WordPerfect) and send in back to the originator who is using Microsoft Word. Similarly for .XLS spreadsheet files or .PPT (Microsoft Powerpoint), and so on. With this approach we could have transparency of format allowing use of competing office suite products with full compatibility.

Thanks for your consideration,
Nathan Liskov

P.S. Microsoft should also be required to provide backward compatibility translators so that we will not be required to upgrade each office product each time an upgrade comes out. As it is, Microsoft uses this incompatibility technique to force its customers to continually upgrade, paying for the same program over and over again.

I don't do Windows!

Subject: AntiTrust settlement

This is regarding the Microsoft settlement. I believe that the settlement has no teeth to it. This will allow Microsoft to do business as usual. Any settlement should actually remedy the situation instead of letting Microsoft continue to control the software market while only paying lip service to being fair to competitors. Although I currently use Microsoft's operating system and applications, it is not entirely a "free" choice.

Since Microsoft controls the market, I am forced to use their products so that I can be compatible with everyone else. (And with over 90 percent of the market, they obviously DO control the market and enjoy a monopoly.) This would not entirely be a negative thing IF Microsoft offered the best product out there. Microsoft continues to offer products that have serious bugs and do not work as advertised. I have been a dissatisfied user of their products since MS Windows 3.0 was offered. Since they control the market, the incentive to offer the most innovative AND stable products does not exist for them. They can offer a substandard product with the knowledge that most of their customers will eventually be FORCED to upgrade to the latest Microsoft product. Not only can Microsoft accomplish this without suffering any consequences, but they can then raise prices on the newest products to any level they wish. Consumers should have a better choice. Some viable competition in the software and operating systems markets would give us that. Do NOT let Microsoft off this time with just a slap in the wrist! They have gotten away with this too many times. The previous antitrust actions should be a lesson. Microsoft will not willingly comply with any settlement. (They may follow the letter of the law while spitting in the face of the spirit.) The settlement is a farce. Microsoft will be able to control their monopoly for a long time in the future if the settlement is not made stronger. The only people who benefit from this settlement are those at Microsoft. Not consumers. Do NOT let Microsoft fool you—they do NOT have the best interests of consumers in mind. They want to offer the least innovation and the least amount of stability for the highest price that they can get away with. Microsoft should be punished for their abuse of their monopoly. Thank you.

Subject: Microsoft settlement

Enough of this case! If anyone cares to check, the singular event which caused the stock markets to slide into the basement was the outrageous decision by U.S. District Judge Thomas Penfield Jackson to fracture Microsoft into several parts. If nothing else, the degree to which Microsoft and its products have become the de facto standard in an environment which changes daily, Judge Jackson's decision placed the entire tech world, and, by extension, the new economy on a path to instability. As the appellate court correctly found, that remedy was too severe. Now, with settlement at hand, a few unhappy states are threatening to put their sole interests above the interest of the nation by refusing to accept the settlement agreed to by the Department of Justice and Microsoft. Further litigation of this matter offers nothing for the consumer—the intended beneficiary of the action in the first place—beyond that which has already been agreed. If anything, drawing this out

continues to hurt the consumer by diverting Microsoft's attention away from the creation of new products to defending a lawsuit whose issues are moot. Let's get off the back of one of the nation's most successful companies and end this case once and for all.

Frank G. Scafidi

Subject: Microsoft Settlement.

This settlement is bogus. They will find a way to circumvent the law as they have in the past. Judge Jackson had the right idea. The only way to have any competition is to break up the company into the OS provider and the software provider. Period. But, apparently no one in government seems to care much about the people except that they should shut up and keep one eye closed to the activities in Washington DC MS's offer to give schools PC's and software is merely an effort to make sure that that next generation knows nothing else but their products. Are you people so insulated from the real world that you don't see what's going on. For them to "give away" a million or even 10 million dollars is about as effective as fining the ILECs a million or two dollars for illegal activities when they earn billions! The last president, it seems to me, with any backbone in this arena, seems to have been Roosevelt, Teddy that is.

Karsten Koepcke

MTC-00012398

From: Kat Daley
To: Microsoft ATR
Date: 1/16/02 1:11am
Subject: Microsoft Settlement

I must comment on the Microsoft antitrust settlement. Microsoft has been the big stupid bully in the software game for far too long, stealing younger kids' lunch money and making them do its homework. And so far Microsoft's settlement offers are analogous to the bully saying, "Well, I wouldn't beat them up if they'd just fork it over. . . ."

I have been programming computers since 1977, when I was 12 and my father obtained a computer from a small firm in California. It used an operating system so similar to MS-DOS that I could switch with no difficulty to an MS-DOS computer years later. In fact, I could detect NO difference, which calls Microsoft's claim to "innovation" into question from the start. I have also observed that small programs created by small companies to do nice little innovative things have been stolen repeatedly by Microsoft, which only disgorged licensing fees after strenuous legal battles.

I have been forced to use Microsoft products for many years. In EVERY product, I have run up against faults which should have kept the product from being released. Instead, Microsoft has released these products and has created an environment in which program crashes and operating system errors are normal when they should be hideous exceptions.

When I have used Microsoft's programming libraries, I have consistently

run up against bugs which are simply unacceptable in a professionally made product. When system resources are gobbled up by a program and never released properly, it is the most basic of programming errors. No professional programmer should ever release a product which does this, since it will inevitably cause the computer's operating system to crash—especially one as delicate as Windows. Yet Microsoft has done so consistently.

In fact, I believe Microsoft has cost this country untold billions in code faults alone. Every programmer I have ever known has spent hours or days tracking or fixing bugs which would not be there if Microsoft's products performed as advertised. Every person I've worked with who has used Microsoft's products has a harrowing crash story to tell. Every computer I've ever used has crashed many times for no apparent reason while I was running Microsoft's applications.

In the interests of programmers everywhere, Microsoft must be forced to play nice instead of stomping all over the young smart companies with good ideas. At the very least, Microsoft must be forced to release all methods by which an application may communicate with the hardware of a computer through the operating system at least six months prior to operating system release. If Microsoft fails to comply, the operating system can not be sold to the public. And since Microsoft would undoubtedly give away the operating system free in that case if they thought they could make more money releasing Microsoft Office, NO APPLICATION utilizing the new operating system could be sold either. That is the VERY LEAST remedy which *might* level the playing field sufficiently to restore competition.

I'd really like to see Microsoft divided into an operating system company and an applications company, but the Justice Department has ruled against that. I'd like to see all of Microsoft's actions vetted by the Justice Department to keep them from harassing small companies with frivolous lawsuits and giving advantages to retailers who play their noncompetitive games. I'd like all of Microsoft's "intellectual property" declared public domain because that's where Microsoft stole it from in the first place. Until Microsoft gets more than a "bad boy" slap on the wrist, the USA will continue to lose untold billions to software inefficiency. Hackers—and terrorists, I'm sure—will continue to find easy access to most of the nation's computers. And I and many other programmers will stop programming from sheer frustration.

Sincerely,
Kathleen Daley
Former programmer

Microsoft Settlement
U.S. Department of Justice-Antitrust Division
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars and failed to break up a hi-tech monopoly, viz. Operating Systems and Applications which are tied together in a manner that forces competition to respond to new developments AFTER microsoft already has had their "improved" product on the market for some time. Additionally Mircosoft's predatory business practices have forced HARDWARE (PC clone makers) manufacturers to sell only Microsoft Operating Systems on their new machines.

This has all resulted in a serious deterrent to investors in the high-tech industry who want to start NEW businesses to compete with Microsoft. It is high time for this trial, and the wasteful spending accompanying it, to be over and Microsoft to be split up into at least TWO SEPARATE comapnies, one to do Operating Systems and to release the necessary information to BOTH the other company doing the Applications software development AS WELL AS to any and all competitors. It is my belief that Microsoft routinely makes changes to their software to degrade the reliability of any competitor's software running on any system that also has Microsoft's applications or Operating System software installed. Sadly, this also results in the Microsoft programs crashing more frequently. A case in point is Microsoft "Word," one of the most commonly used word processors in the PC industry that has been around since the very early days of the industry even before Windows 1.0 superceded MS-DOS (Microsoft Disk Operating System) and which is the most crash-prone application I have seen in over 25 years in the computer industry.

I have been an Electronics Design Engineer for 31 years in Silicon Valley and worked in the mainframe industry for Amdahl Corp. in the 1970's and early 1980's when the very first IBM PC was released. (We took one apart as soon as they came out to better understand what new business IBM was getting into in 1981.) I have been building computers since the days of the S-100 bus and the pre-Apple I machines when Steve Wozniak used to bring his "projects" to the Homebrew Computer Club meetings at the Stanford Linear Accelerator Auditorium. Using every kind of computer and software in my electronics design consulting practice in Silicon Valley since the early 1980's, I have seen just about every sort of system crash and software bug imaginable. I have used everything from Mainframes to minicomputers to UNIX workstations and in all cases the largest number of major problems have been with PC's generally caused by software failures in products produced by Microsoft Corp. I believe this general unreliability and consequent lost productivity (it comes right off my "bottom line" as an independent consultant) is caused by a LACK OF COMPETITION enforced by Microsoft's unfair, unjust, and at times illegal and monopolistic business practices that have forced smaller companies out of business. What they can't force out they often

buy out and this, too, is a loss to the end-user/consumer.

Consumers will be more likely to see competition in the marketplace rather than the courtroom if Microsoft is broken up and FORCED to compete in the area of Applications software programs that are compatible with Microsoft Windows or any future Operating System they may create. And the investors who propel our economy can finally breathe a sigh of relief as they realize the possibility of successfully COMPETING against Microsoft under laws that are fairly ENFORCED against ALL software companies, regardless of size.

If the case is finally over, US companies, both large and small, can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means MULTIPLE COMPANIES creating better goods and offering superior services to consumers, NOT a monopoly that can force its business partners to sell an inferior product (in comparison to, e.g. UNIX or LINUX) along with their (the partner's) hardware or that can control BOTH Applications and Operating Systems which have to work together on the same system. With the Microsoft Monopoly out of the business of stifling progress and tying the hands of other corporations and competitors as well as consumers, the "free market" will once again pick the winners and losers on Wall Street. With the monopolistic reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Larry Jubb

Gentlepersons,

How can we say over \$1 billion for disadvantaged public schools is not in the best interest of consumers and the public? Clearly, one of the major reasons why computer usage has grown to what it is today is because of Microsoft products, despite what their competition has to say. Disadvantaged youth is the untapped reserve for even greater household computer usage. And let's face it: These kids have a much greater chance of success in the workplace if they know how to use computers and popular Microsoft software. If disadvantaged kids don't get this knowledge in school, chances are they won't get it at all.

Do what's in the best interest of the consuming public. Settle this case and let's move forward!

To whom it may concern,

I little background on me I'm a professional software developer and have been for about four years now, but computers and the computing industry have been a big part of my life since I started coding when I was 8 and wrote my first video game at 9 (I'm 27 now).

The news that the latest judgements against Microsoft will not break up the company deeply saddens me. Microsoft has consistently used their operating system monopoly to gain unfair advantage in other markets. They've done this in two ways.

1. Microsoft's fails to release their complete programming APIs to public thus giving themselves an unfair advantage in any PC software market they wish to enter.

2. Microsoft adds malicious code to their operating system to hurt competitors in markets they wish to enter. For example Microsoft added the caching of system DLLs in windows 2000 to break Install Shield so they could enter the installer market.

As I result at my current company we will have to spend alot of money either rewriting our install in the new Microsoft installer product (which we would have to buy) or restructure our own product architecture.

I had nothing to do with Microsoft's vendetta against install shield why should I have to pay? This is just one example of how Microsoft maliciously uses its monopoly power. Every second or third developer has a story about how Microsoft stabbed someone in the back (and they did stab Install shield in back because install shield helped them make their installer product). Any solution that doesn't break the operating system group into a separate company won't solve these kinds of problems. Even this may not solve the problem (there may still be lingering favoritism). The world should look toward a solution to the Microsoft problem that eventually breaks up the operating system and moves PC programming and development onto a virtual machine (I say eventually because the technology isn't ready yet give it 5-10 years)

Microsoft is to "give away" software as part of this settlement. Doesn't anyone else see the total stupidity of this? The original case dealt with their monopoly. What software is Microsoft going to give away? Microsoft products. . . thus PERPETUATING the monopoly. I keep hearing more and more about the settlement, and the more I hear, the more I realize that Microsoft is going to be allowed to do whatever it wants, including the blatant breaking of laws and the ability to maintain an effective monopoly.

All throughout the trial, Microsoft wanted its "freedom to innovate." Well, a little research will tell many people that Microsoft hasn't innovated a single thing. DOS was purchased for them. Windows is what they took out of the joint development of OS/2 with IBM. There are too many early word processors to name. Lotus 1-2-3 gave rise to Excel and Harvard Graphics to PowerPoint. NCSA Mosaic gave rise to Internet Explorer, a trademarked name Microsoft blatantly stole from a small company which Microsoft ran into the ground when they sued for trademark infringement. Sybase sold them a copy of their database server and they used it to make SQL Server. Outlook came from various other e-mail programs including Eudora.

The consumers have lost their one chance to be given the choices they should have. This settlement is a sham.

Dear Sirs & Madames:

I strongly feel that penalizing Microsoft by forcing them to pay a small fraction of their sizable cash assets will not improve the commercial software market. Forcing Microsoft to fully document and publish both their Windows APIs and their MS Office file formats will. It will once again allow non-Microsoft developers to contribute their ingenuity and efforts to make our software industry even more innovative and creative.

I am very much in favor of the proposed antitrust settlement that the Department of Justice negotiated with Microsoft. I believe that consumers are benefited by having a strong company that is constantly innovating on the cutting edge of personal technology. I am glad to see some of the more aggressive

acts of Microsoft now subject to monitoring, but I don't think that the government should help AOL/timewarner or any other huge company attempt to tear down Microsoft.

Should the Department of Justice decide that Microsoft pay in cash, rather than in equipment, I feel very strongly that Microsoft be made a party to and be given an ongoing accounting of Moines as they are spent. Government has a magical way of making money disappear. It would be a travesty of justice if this should happen and thousands of people were deprived of access to much needed, new computers. When all is said and done, the pettiness, jealousy and sheer vindictiveness exhibited toward Microsoft by some of its competitors and the government makes one wonder if the entrepreneurial spirit is still alive and well in the United States. . . . and then there's Enron!!!! I wonder what action, if any, will be taken by the Department of Justice regarding the abuses in that situation.

For once, please think of the public good rather than special interests and politics and let Microsoft donate equipment and training. .

We use Wetbusters.com and the Java chat rooms are helpful. Microsoft Corporation has decided to no longer include Java with the new version of Windows (called "XP"), because Java was developed by a competitor, Sun Microsystems. Therefore, if you buy a new personal computer, in order to use Wetbusters chat rooms or many other modern chat rooms on the web, you must first download and install Java. This is a complicated process and takes 15-20 minutes with a standard modem connection. The process is even more complicated for America Online users. We feel that this is unfair to kids because a lot of kids will not be able to understand how to download and install Java, and kids new to the site simply won't make the effort. Because Microsoft is allowed to have a monopoly on the PC operating system, we feel that they have a responsibility to not abandon Java users (e.g. wetbusters kids). Therefore, we are requesting your help in persuading Microsoft to reverse their decision on removing Java from Windows. we request the U.S. Department of Justice require that Microsoft be required to include Java with Windows XP.

Thank you very much for your help.

To whom it may concern,

It seems to me that the problem is that Microsoft is a monopoly in the operating system business. To solve this problem you have to come up with a solution that will allow competition back into the operating system market. Breaking Microsoft up doesn't solve this problem, and certainly still maintains the application barrier to entry, along with disrupting the companies ability to come out with new software products. If a company could create an operating system that would provide the consumer some real advantage over Microsoft's operating system, and still allow the users of the operating system to continue using all the programs that the users is currently using, then this would be the optimum solution. Microsoft's software applications, like Microsoft Word, would still be purchased by users, allowing Microsoft to benefit from their software products, and still allow competition in the operating system business. In order to understand my solution you should understand how a program works. When Microsoft writes applications like Microsoft Word, they do so by using the Win32 API. If the public had access and were given documentation on the specifics of this API, then you could implement the API on an operating system other than Microsoft Windows, and have all Windows operating system application software run on that operating system. IBM was doing this for their OS/2 operating system but gave up because Microsoft kept adding new API's and IBM couldn't keep up. Microsoft has always maintained that the Win32 API can not be licensed to anyone. If Microsoft were to license the Win32 API, then they would have an obligation to make sure that all licensees were informed when new API's were added, and provide support to customers trying to implement the Win32 API on a different operating system. Perhaps putting the Win32 API under public control, by making it a standard, would be the best solution of all. Then all public parties involved would be allowed the right to voice their opinions on new API's being added and the general direction of the standard. If the API were to be put under public control, then Microsoft would have to be ordered to implement the standard coming out of the public body controlling the standard. This is because, as

with most standards, companies can pick and choose which API's to implement, and may even add new API's to their implementation of the standard, or may implement a part of the standard in a manner that is actually contrary to the standard. So in order to make sure that Microsoft doesn't fall back into a monopoly status in the operating system business, they could be ordered to implement the full standard for say, 10 years. After the 10 years they could be treated like any other company implementing the Win32 standard.

In that 10 year span, Microsoft could continue to innovate an release new software products to the public, the operating system business would be open to competition, and the application barrier to entry would be broken down. Business would actually have a choice when it came to an operating system, and they wouldn't have to worry about losing all the knowledge that their employees have gotten from using application software that was built on the Win32 API. For example, if a business were very concerned about security, and wanted to migrate to Linux because they felt that Linux provided them an advantage in regard to security over Microsoft Windows. Then they would only have to retrain their employees on how to use the new operating system, and not all the software applications that would be used on the new operating system.

This solution puts the operating system on the same playing field as all other software applications on the market today. If I don't like the digital camera software application that I'm using today, and a friend recommends a different software application, I can go and buy the other software application and use it, without fear of losing the ability of running my word processor software application.

Thanks for taking the time to read my comments, I hope that they were insightful and helpful.

Gentlemen:

The proposed Microsoft anti-trust settlement does not offer consumers, including federal, state, and local governments, any relief while codifying Microsoft's predatory practices. This blatant approval and accommodation of flagrant violations of law which the Department of Justice is directed to enforce will be the next scandal. If the United States government is shown to be a party to the Enron bankruptcy by not enforcing the law, it will encourage examination of other government enforcement and oversight responsibilities. It would be especially troubling if the Department of Justice did not enforce the law. Public confidence in government would be undermined to the extent that government could not govern.

I believe the facts speak for themselves. My comments do not reflect my personal beliefs.

Distinguished Members of the Bench:

It is critical that we not continue to waste taxpayers dollars and your substantial capabilities rehashing a case that has long progressed past its time to impact those very consumers you purport to protect. The world of the internet is progressing to Gen4 and high tech is changing the way we live at a dramatic rate. You're too late. So please get on with it. Make a settlement now and focus your ample resources elsewhere. If there is anything to be learned from this case it is that your action must be much quicker if it is to be effective. If you have a 'real' case and not something just trumped up by disgruntled competitors who want you to do what they couldn't do in the market place, then you'll have to be able to make your case and win corrective action much more quickly. Not only has the bull gotten out of the barn before you've tried to close the door, but we aren't even using barns any more so it won't make any difference when you finally, if ever, do get the door shut.

Best regards,
Murray B Parker

Subject: Comment on Microsoft Settlement

I was deeply displeased with the lawsuit that the government brought against Microsoft. It has always been my view that antitrust laws were political weapons. It seems to me that there are many megacorporations that deserve antitrust scrutiny, but the selection of which companies to go after always seems to serve some political end.

I have no great love for Microsoft, but I am altogether opposed to antitrust laws. It is impossible for any government to enforce such laws without bias in favor of political cronies and contributors. Monopolies abound in our economy, but one wonders why antitrust litigation is not brought more often. Perhaps it is because most companies know how to cozy up to political parties to obtain a pass on antitrust scrutiny.

In the case of Microsoft, one cannot exclude the possibility that the government sought to plunder its large cash reserves in a sort of punitive tax on success. The entire lawsuit should be dropped. Failing this, the proposed settlement should be adopted by all parties as soon as possible, and the whole sordid mess should be put to rest.

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more

entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Jennie M. Shook

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech

industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Ella R Brown

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief. Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
David Hendley

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better

products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Vivian I. Kersey

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

To: Microsoft ATR
Date: 1/16/02 3:38am
Subject: Microsoft Settlement

Dear Judge,

I would like to request that included in the settlement, MS be required to give consumers a choice of installing a Java Compliant Virtual Machines for running java applets inside the browser. The choice should be real, not one where customers have to choose between downloading one over the internet (i.e 30+ minutes) vs their non-Java Compliant VM that comes on the install CD.

I am an IT professional with 14 years of experience. I would like to say that firstly I was disappointed if not appalled to hear the terms of the proposed settlement. To most IT professionals, Microsoft has successfully exploited the system in the past as there was little or no legal precedence with regards to IT.

However there is little or no reason for this to happen today. Over the past 14 years I have worked with a variety of technologies and have developed software on all three major platforms; Mainframes, PC's and Web-based. The past 3 years I have been developing software primarily in Java, a technology that I love and one truly embraced by the industry.

As an example of how Microsoft is trying to squash this technology (and it looks like they will be successful again), they have refused to give consumers the choice for installing a Java compatible Virtual Machine in their Web Browser. Instead, consumers be default get the Microsoft Virtual Machine intalled to run all Java Applets. Their Virtual Machine is not Java-Compliant, and

consumers should not have to install it without being given a choice. As a java developer, if I cannot count on consumers having a Java Compliant Virtual Machine, I cannot count on my programs executing consistently over different versions of Microsoft's browser. This should not be allowed to happen again to Java; a technology that is being used by so many.

I would like to request that included in the settlement, Microsoft be required to give consumers a choice of Java Compliant Virtual Machines for running java applets inside browser. The choice should be real, not one where consumers can choose to download and install a Java compliant VM over the internet (i.e 30+ minutes) vs Microsoft's non-compliant that is easily available on the install CD.

Thanking You for your time and consideration
Glen Mathias

 Subject: Microsoft Settlement
 Dear Honorable Public Servants, (DOJ), Sen. Boxer, Sen. Feinstein) I strongly support punishing Microsoft to the fullest extent allowed by law. They are repeat law breakers who will continue to willfully break and twist and bend our nation's laws as long as they possibly can. If they were street criminals instead of business predators, the three strikes laws would be kicking in right about now.

The only penalty that really makes sense to me is to force open—quickly and fully—the entire API for all Windows operating systems as well as all Office file formats. They should also be forced to fully divulge all documentation they have on any and all Windows and Office APIs. This would allow truly equal competition on both the operating systems front and (more importantly) the applications front, where they are clearly leveraging the OS monopoly into a longer-term productivity monopoly.

I vote in every election. I pay my taxes. And I put my 2 cents toward punishing Microsoft fully.

Yours,

 Subject: Public comment on Microsoft antitrust case

Ms. Hesse:

I want to register my support for a speedy settlement of what I consider a shameful, even contemptible attack on the very core of American free enterprise.

For the record, I am not affiliated in any way with Microsoft or anyone related thereto. But the Justice Department's decade-old war against Bill Gates and the Microsoft Corporation, apparently for the heinous crime of succeeding in the American dream and profiting justly from that success, is if nothing else a flag indicating the need for a thorough overhaul of the entire edifice of antitrust laws, with an eye toward repeal.

I find it most odd, for example, that if a given corporation creates a new product for which there is high demand, and prices it accordingly under the principles of basic economics (supply & demand,) it is attacked under antitrust law as "price-gouging" and "attempting to corner a market." But if that corporation lowers the price of its creation, (even to zero in the case of Microsoft's Internet software)—to the vast benefit of its customers— it is charged under antitrust law with "unfair competition" and subjected to years of state persecution on a par with a Medieval Inquisition. The modern equivalent of the accusation "Heretic!"—which utterance alone was as good as a conviction and sentence—has merely been replaced with the term "Monopolist!"

The entire action against Microsoft was reportedly initiated by complaints to the government by Microsoft's second-rate competitors such as Netscape, Sun and the like. They ran to the government in the manner of whining, spoiled children throwing a tantrum before Mommy and Daddy, complaining that because they'd failed to produce products to equal or surpass Microsoft's in the courtroom of the American marketplace, they needed a viable excuse to drag Microsoft into the courtrooms of America's legal system—to "achieve" by force what they couldn't by ingenuity and productivity.

Enter the infinitely malleable tool of antitrust law, which Alan Greenspan once equated with the capricious edicts of a dictatorship. The United States Justice Department thereby became, in effect, the "heavy" in a gargantuan protection racket. When private citizens attempt to do this sort of thing, they're arrested and thrown in jail.

Random computer techies have railed for years about their personal likes and dislikes of esoteric aspects of Microsoft products—all of which are irrelevant in this context. Like it or not, the Microsoft operating systems became and remain the predominant choice of computer users. With every revision and with the emergence of each of its

competitors' alternate systems, the market—which means the free choices of free individuals—decided that Microsoft's products would continue to dominate the computer industry. The operating systems of Sun, Apple, etc. were available, but the public chose Microsoft. No one forced anyone to purchase Microsoft products - people simply evaluated them as preferable to others on a consistent basis.

Where there is free choice, there is no coercion. Where there is no coercion, there is no violation of rights. Where there is no violation of rights, there is no justification for the intrusion of the state.

Microsoft became a target for attack for the same reason that every person or entity that rises above others becomes a target: envy. In retrospect, it's arguable that the motives behind the assault on Microsoft are identical at the core level to those behind the assault on the World Trade Center on September 11, 2001: Hatred of wealth, of prosperity, of achievement, of capitalism in general.

There is another aspect of the Microsoft Witch Hunt that I find particularly repulsive. Like the similar Tobacco Witch Hunt, it has become a fairly obvious means for state bureaucrats to milk a very, very deep set of pockets for revenue—without having to go through that tedious and distasteful business of getting a tax increase past voters. (Didn't America once fight a war to shed the abuses of an insulated monarchy?)

Virtually as I write this, California Governor Gray Davis is attempting to "securitize" money extorted from tobacco companies—in order to cover the State's financial shortfall resulting from his policies; In the heat of the Clinton Administration's assault on Microsoft, one could almost hear the salivating of those who stood to rake in the proposed billions in fines and fees imposed under the persecutorial robbery of antitrust.

—Is this any way for state governments to fund their budgets? I regard these actions—against the tobacco industry, Microsoft, and the similar attempts made against Intel and a handful of other American "overachievers"—as, collectively (all puns intended,) the most dangerous abuses of American citizens and institutions by government officials in the history of this country. If the term "justice" is to retain any meaning, this has got to stop.

Pepperdine University economist George Reisman identified the concept of "Platonic Competition"—a situation in which everyone is exhorted to compete, but no one is allowed to win. It's logically and ethically perverse—yet that is the very condition proposed under antitrust.

[Reisman is far more eloquent and precise than me—I will refer you to three of his articles, with which I agree fully. . . "Microsoft and Its Enemies" (9/27/98) at: <http://www.capitalism.net/articles/microsoft.htm> "A Brief For Microsoft" (3/13-14/2000) at: <http://www.capitalism.net/articles/BriefMS1.htm>

"The Meaning of the Government's Proposal to Break Up Microsoft" (4/30/2000) at: <http://www.capitalism.net/articles/Microsoft%20Breakup.html>] My interest in this issue arises primarily out of a concern

for the future of American freedom. Human beings literally cannot survive without the freedom to produce, keep, and trade the material means required for the continuation of life, liberty, and happiness. But political freedom cannot exist without economic freedom—the destruction of one, in whole or in part, necessarily means the proportional destruction of the other.

The famed Austrian economist Ludwig von Mises (Reisman's mentor, as it happens,) warned that government controls on the market inevitably breed further controls, and that if the trend is never reversed, government interventionism will escalate to the point where every facet of economic activity is controlled by the state—the "Zwangswirtschaft" of Nazi Germany being the most vivid example.

It is time to end the witch-hunts, to reform and/or dismantle the corrupt legislation under which they're conducted (i.e. antitrust,) and to restore the battered freedoms we require for our very survival as free individuals.

Thank you for listening, I realize that my conception of "brevity" is frequently stunning. . .

Sincerely,
 Gregory Gerig

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better

products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
jo tarantino

To whom it may concern: pAs an American citizen and a user of many Microsoft products I am certainly happy to see that the Tunney Act is apparently heading in the right direction concerning the antitrust settlement.

Though I am an engineer and not an economist, with what I have read and understand concerning this mater, I believe

that our economy will benefit should this be settled. Our economy is based upon free trade; when a manufacturer makes a product that, in my opinion, is far superior to that of the competition, and a majority of the public wishes to use that product, how can the determination be made that a monopoly exists? I don't support monopolies, but when the competition's products "don't measure up," I don't feel the Microsoft situation is a monopoly. The public demands the superior product, and Microsoft makes the superior product. The Department of Justice is an entity of the American Government, and the government is here to serve the public; please serve the American people and consider settlement.

Thank you very much.

Best regards,
Robert A. (Andy) Wood

From: TS
To: Microsoft ATR
Date: 1/16/02 7:08am
Subject: Use of the Microsoft's \$1Billion offer

I am glad that the DOJ rejected Microsoft's offer to flood schools with their computers. I also believe they should be held liable for their monopolistic tendencies(I know, technically MS is not a "monopoly", just like we are not at 'War' with the Taliban and Al Qaida).

Here are some proposals for remedies in the MS suit to reduce their current anti-trust liability: Have Microsoft give the previously offered \$1 Billion in equipment and software to the US government and the states to be used for computerized voting before the next presidential election. p(remember IBM did all the scores and stats at the olympics, the next election should be simple compared to that and should not cost \$1B) pMany states can not afford the equipment to change from punch card ballots machines to computerized voting. Everyone agrees(at least the intellectual people) that computerized voting will prevent situations like the FL butterfly ballot. Putting machines in a voting area for occasional use does not lead to the same market-share capture that would occur if schoold children were using the machines on a daily basis. (e.g. NCRs control of ATMs does not make people want to have an NCR machine at home)

Even better have them spend a few extra hundred million on a secure database that can be used for the national results and develop training for users. They could also computerize voting cards and provide for voting on the Internet (If the internet is secure enough to use your credit card, why not cast a vote on it). I realize that only 50% of the US currently has access to the internet but allowing Internet voting does not disenfranchise someone from using the old fashioned method of going to a polling location. Let's quit saying what we can't do and take action to prove we are the most technologically advance country in the

world. (Many European countries already allow voting over the Internet so does that mean they are more democratic than we are because they make it easier for their citizens to vote).

If they have another \$1Billion in hardware and software to share, they should send it to support the poor countries that we are fighting to clean up. Put some hardware and software on the ground to help the Afgan and Somali governments. I believe India has more MCP's than the US so we could hire them to work for these governments, leaving more American jobs open for Americans instead of green-card visitors.

Either solution can serve as a punishment for MS and save taxpayers a great deal of money. Both ideas help the US. The last item that is needed with respect to MS oversight is that they need to be evaluated and audited in a manner similar to the automobile industry.

How safe is their software (like the Insurance Institutes crash tests) using typical consumer purchased solutions (i.e. based on average purchased computer hardware and software configurations, not MS specialized configurations: what is the status of crash worthiness, crash frequency, severity of data loss during crash, theft prevention, unauthorized access when on the internet)?

How long does it take the computer to boot up or re-boot based on purchased configurations (something like evaluating a vehicle's gas mileage)?

With reference to Apple's Steve Job, imagine how long it takes to boot your computer. Multiply that effect times the number of computers and the number of times you have to re-boot. Multiply that times the average cost per hour of workers or free time of an individual and calculate the time and cost wasted sitting in front of a computer while waiting for it to re-boot. E.g. a one-minute re-boot times 50 million computers (rough estimate of the MS computer count) at 60 seconds per re-boot is the equivalent of 350,000 man-days or 100 man-years of lost time each day. Re-phrased, the US loses more than one average persons life in time each day waiting for MS computers to re-boot. We need to find a better way to use the time of over 400 people a year than sitting in front of a re-booting machine.

The goal of this evaluation would not be directed at punishing them but instead would be used to drive them to improve their performance in a way that benefits the US public since normal market place controls can not penetrate through their monopolistic characteristics. The evaluations should be done quarterly, they should be based on a few areas of concern (perhaps no more than the two items mentioned above) and like the auto-industry, failure to comply with goals that have been set can result in a penalty.

For instance, set the re-boot goal to the current average time of all computers and if MS computers take longer than others start lowering their allotted time by 4% a year (60 second re-boot would need to be 57.5 after the first year).

Friday, January 11, U.S. District Judge J. Fredrick Motz rejected a settlement that would have resolved more than 100 private class-action lawsuits filed against Microsoft in the wake of the 1999 decision issued by Judge Thomas Penfield Jackson during the trial court phase of the federal antitrust lawsuit.

Under the proposal's terms, Microsoft would have given disadvantaged public schools more than \$1 billion in funding, software, services and training, and around 1 million Windows licenses for renovated PCs.

It seems ridiculous that a Federal Judge would reject such a settlement. The only people who win in class action suits are lawyers. Why not let the public win for a change?

Microsoft, due to its monopoly status, is able to charge exorbitant prices for even its most basic software. Personally, I like their software. I like their OS (although they often cut corners on security issues); but their pricing doesn't make any sense. They are the MOST expensive OS and office software provider, despite well over 90% market share. The MacOS is cheaper, and more secure, and Apple's office software suite is comparable in functionality, but costs considerably less. Linux is free, and more secure, and the main office suite for that—StarOffice—is usable and ALSO free. It should be obvious to even the most casual observer that Microsoft is engaging in price gouging. It's not fair, and it hurts competition, hinders the advance of technology (Just look at the amazing things happening because of the Intel/AMD competition going on right now!), and gives the consumer the short end of the stick.

My suggestion is to force MS to QUICKLY (say, within one year) open up ALL APIs of the Windows OS, if not take the OS business away from them entirely and make it an open source environment. This way, MS could focus on its Office Suite, which, as one who has used other OSes and other office suites extensively, I can say is their superior product, and would allow third-party competition in this field, advancing technology, lowering prices, and making consumers much, much happier.

I don't hate Microsoft. I would fight to squeeze every penny I could out of this situation as well, but that doesn't mean that it's the right thing for the consumers or for the advancement of technology. Both of those concerns should come long before any concerns of the profitability of any single company.

Thank you for your time.
Sincerely,
Aaron Batty

Subject: Microsoft Settlement

I am a computer programmer, a MS software user, a MS stock owner (only 300 shares), and a tax payer. I think other companies often provide better software than MS. As a consumer, however, I believe MS has provided quality products at a fair price in a highly competitive marketplace.

I also think it unfortunate that our federal government and several state governments have spent so much time and money in an attempt to extort money from a company with money. Much of what has happened in the MS Case has been politically motivated which the Clinton administration was only too happy to pursue because MS competitors gave generously. And, MS was not a big contributor to either political party. But just look at their cash position! MS is a lucrative target for the lawyers and others who want to take money away from anyone who has it, even though they earned it through hard work.

Stop the litigation nonsense and maybe the business climate will change so the US

economy will get back on track. When did business confidence begin to slide? And when was the first suit against MS made?

From: Paul Johnson
To: Microsoft ATR
Date: 1/16/02 7:58am
Subject: Microsoft Settlement
Introduction

I write to comment on the proposed settlement between the US Department of Justice and Microsoft (the Proposal). I believe that the Proposal makes progress in the right direction, but does not go far enough.

I am a British subject, and must therefore beg forgiveness for intruding on a case being heard in the United States. However Microsoft is a multinational company, and holds a similar market position in both the US and Britain. If it is implemented then the Proposal will have essentially the same impact on both our countries. Finally I note that the European Union is considering its own action to curb the Microsoft monopoly, but is awaiting the resolution of the US case. I therefore feel that I have a legitimate interest in the outcome of this case, and submit my comments accordingly.

I hold a degree in Computing Systems from University College Cardiff (now part of the University of Cardiff). I have been a practicing computer scientist ever since. I have been following the Microsoft case with great interest since it started. Summary Microsoft holds a dominant position throughout the software industry. A remedy which deals exclusively with "middleware" is not sufficient. All Microsoft software should be covered. Microsoft is a repeat offender and there is no reason to think that this case has changed its character, so remedies must be carefully drafted to avoid leaving loopholes.

There should be no restrictions on pricing or product tying. Microsoft should be left free to develop and sell its products as it sees fit. The only exception to this are the rules which cover OEMs ability to include competing products instead of Microsoft ones.

Microsoft's monopoly position is founded on its control of proprietary interfaces. Microsoft products are linked through a network of proprietary interfaces, making it difficult for competitors to produce software that will inter-operate with Microsoft software. If the proprietary interfaces were published then competitors could produce software that competed directly with Microsoft without the expensive and error-prone process of reverse engineering. These proprietary interfaces are in the form of file formats, network protocols and APIs. All three need to be made available to competing products.

Where two Microsoft products work together the interface between them can best be made available by setting up a "Chinese wall" between the development groups responsible for them, and then requiring Microsoft to publish all the technical data that is exchanged between these groups.

Where one copy of a product communicates with other copies of the same product (such as when an MS word

document is sent to another MS Word user) the file format or communication protocol should be published in a form which allows independent verification that the product conforms to the published description.

Special consideration should be taken of Open Source Software development over the questions of cost, trade secret status and patent licensing. The "security related" exception to disclosure should be narrowed to include only keys, passwords and similar security tokens.

Microsoft's Position

Microsoft currently holds a dominant position in the computer software industry, and as I shall show below it maintains this position through control of proprietary interfaces. I believe that a fair and effective remedy should destroy the competitive advantage that Microsoft gains through its control of interfaces, but still allow it to compete and innovate on equal terms with its competitors.

(In the longer term I would suggest that legislation be created to require all software companies above a certain size to publish the details of their interfaces, and thereby create a truly level playing field in the software market. However that is not the subject of this note.)

Over the past decade Microsoft has repeatedly demonstrated a willingness to evade or ignore regulations aimed at curbing its monopoly power. There is no reason to expect this behaviour to change. Therefore any effective remedy must be drafted to block not only the past misdeeds of Microsoft but any it might devise in the future. The rules under which Microsoft is to operate must be unambiguous and, as far as possible, free from the need to make value judgements as to whether Microsoft has fulfilled its obligations sufficiently.

Product Tying

The current case was originally concerned with the alleged tying of Microsoft Internet Explorer with Windows 95, in violation of anti-trust law. However the list of features which users expect to find in an operating system has evolved over time, and continues to do so. A previous example concerns "disk defragmenters", which optimise the arrangement of data on a disk in order to speed up access. Before Windows 95 these programs were sold separately by competitors to Microsoft. When Windows 95 was released it included a disk defragmenter. The competing companies could no longer sell their existing products, but there was no public outcry because disk defragmentation is generally considered to be a function of the operating system. Similarly when Microsoft first bundled Internet Explorer with Windows a web browser was considered an application. Today most consumers would expect to find it bundled with the operating system. Suppose that ten years ago Microsoft had been effectively prevented from adding new features to Windows: today a modern PC would have to include a dozen or more small packages of software that would be more economically produced and sold as a single product. Computer vendors would have to purchase and integrate all of these small packages, and buyers would have to cope

with a bewildering checklist of small but important items that they would have to ensure their computer included. The variation in quality and operation of these packages would present serious challenges to the use and maintenance of different PCs. Such a situation would not be in the interests of the consumer.

Thus a fair and effective remedy cannot enjoin Microsoft from ever bundling new functionality in its products, even when a market for that functionality already exists and is serviced by third party products.

US anti-trust law deals with this point by requiring that product tying of this sort be of benefit to consumers, and prohibiting predatory pricing. However this principle is of little help in the software market:

The "benefit to consumers" test largely fails because if Microsoft adds a feature to a package then it saves the consumer the trouble of buying and installing extra software to provide that feature. Thus a strong argument can always be made in favour of any particular feature being added. There is no "fair" price for software in the sense that there is for physical products (i.e. the unit cost plus a reasonable profit) because there is no unit cost. The cost of software is entirely in its original development. Left to themselves software vendors will set a price which maximises their income, but there is no link between this price and the cost of development. Any plan to regulate Microsoft by imposing fair prices must therefore remove entirely its right to set its own prices, and this in turn will require it to negotiate a price for software with the regulator before starting development. This is highly unlikely to benefit consumers. But if Microsoft is free to set prices, even to set them at zero, then it can effectively tie products by distributing free add-ons at the point of sale.

Therefore I must reluctantly conclude that regulating Microsoft's ability to tie products is likely to do more harm than good, and should not be included in the final remedy. Microsoft should be left free to determine what functionality is included in each of its products.

The Proposal also sets rules for the related issue of the "Desktop". This properly prevents Microsoft from ensuring that its products are more prominent on the desktop than those of its competitors. Such user interface concerns are important, but are not the subject of this note.

Interfaces

The Proposal concentrates on the "Application Programmer Interfaces" (APIs) to Microsoft "Middleware" (a vaguely defined term, roughly meaning software that sits between the operating system and the applications employed by end users).

The Proposal is right to concentrate on interfaces. Microsoft has always used proprietary interfaces to manipulate the market and lock out competition. To illustrate how this works, suppose Microsoft sells products Foo and Bar that communicate via a proprietary interface. I purchase Foo, and subsequently want the added functionality of Bar. There may be many competitors in the market for Bar, but they are effectively excluded from my

consideration because their products cannot communicate with Foo.

Similarly if copies of Foo communicate with each other through a proprietary interface then anyone wishing to work with me must also purchase a copy of Foo. This creates a "network externality" that ensures that even in a competitive market the best option for an individual consumer is the product with the largest market share, since this brings them into the largest population of potential collaborators.

By creating a web of proprietary interfaces, both between products and between its customers, Microsoft has ensured that it is locked into its market in a way that has never before been possible. It is this stranglehold on the market for software that must be broken. Since Microsoft has used its control of proprietary interfaces to achieve this, it is on interfaces that any effective remedy must concentrate.

The focus of the Proposal on "middleware" is misguided. It excludes applications and operating systems, which are the two areas where the monopoly power of Microsoft most needs to be restricted. Furthermore its vague definition creates too much opportunity for Microsoft to redefine critical interfaces as something other than "middleware", leading at best to argument and delay.

Examples

It is worth looking at two of these interfaces to see how they lock Microsoft into the market. Microsoft Office is the leading "office productivity suite". There are competitors, but they are critically hampered because their users cannot reliably exchange documents with MS Office users. Some degree of inter-operability does exist, but this has been enabled by painstaking "reverse engineering": the competitor can only learn about document formats by inspecting the files created by Office and trying to deduce how each part of the document is encoded in the file. This process is expensive and error-prone, and Microsoft can always introduce new features faster than they can be reverse engineered. As a result no existing competitor to Office can reliably import a complex document. Consumers know this, and therefore avoid these competitors. This prevents the competitors from gaining market share, no matter how good their products might otherwise be.

The Kerberos security protocol was developed by MIT and has now become an important component of many systems. Microsoft included Kerberos support in Windows 2000, but with a small change. Kerberos is an "authentication" protocol: it guarantees that the parties to a transaction are who they say they are. Microsoft added authorisation data to the protocol. This meant that Windows 2000 would only grant access to shared files and printers if the Kerberos "ticket" presented by the user had been issued by a Windows 2000 server. This appears to have been an attempt to lock competitors (including the freely available MIT server) out of the market for Kerberos authentication products. In response to a public outcry within the computer industry Microsoft first insisted that the format of its extra data was a trade secret, and then released the format on its web site under a

"click-through" license under which the recipient promised to keep its contents a secret. I will return to this strange license later in the section on Open Source Software.

The net effect of this web of proprietary interfaces is to make any mix of Microsoft and competing products less functional than a pure Microsoft solution. A pure non-Microsoft solution is not usually possible, either because Microsoft has driven the competition into the ground or because there is a need to communicate with others who are using Microsoft. Hence the only choice is between a pure Microsoft solution and a mix. In a world which is dominated by Microsoft there can only be level competition if the interfaces to Microsoft software are equally open to all competitors.

Files, Protocols and APIs

There are three types of interface which an effective remedy must address: files, network protocols, and APIs. Files stored on disk are an important repository of value for any computer user. The ability to read this data and exchange it with others is the most important requirement for any new software. Therefore Microsoft should be required to disclose the file formats for all its software. This will enable competitors to create software which reliably works with files created by Microsoft software. The main immediate effect of this will be to enable competitors of Microsoft Office to compete on a level playing field. In the longer term it will prevent Microsoft from using the proprietary file format of any popular application to gain a monopoly position through market lock-in.

Similarly, protocols used to communicate over networks should be opened up. The Kerberos example above illustrates how even seemingly minor proprietary extensions can create strong market lock-in. As the Internet becomes increasingly important so the use of proprietary protocols will become an important method for Microsoft to maintain its monopoly position unless it is stopped.

APIs are a much more complicated issue than files and protocols. For every file format or network protocol used by Microsoft there are thousands of "function calls", the basic element of APIs. Function calls are used both within a single product and between products. There is no simple way to distinguish the function calls which are made within a product and those made between products unless the products in question are designed to work separately as well as together. Microsoft has already used this fact to obfuscate the question of whether Internet Explorer is intrinsically integrated with Windows 95. It can be expected to use this tactic again in the future. Since it is not feasible to use product tying rules to prevent this (see above), I suggest that Microsoft be required to identify every API which is used to communicate between software in two different products, and disclose that API in full. The smallest unit of "API" to be disclosed should be the "DLL" (Dynamically Linked library). In Windows a DLL is a single file which provides collection of functions to other software. Making DLLs atomic for disclosure purposes will encourage Microsoft to keep the APIs for communication between products distinct from the APIs within

products, thereby reducing the work required by competitors who wish to offer competing products which offer the same APIs.

Disclosure Mechanisms

Detail

The Proposal has nothing to say about what level of detail will be included in the interface descriptions. This issue is not trivial.

For programmers, the ultimate description of what a function within an API does is the source code which implements that function, which leads programmers to say "use the Source, Luke" when faced with a detailed technical query about a piece of software. However the inspection of source code is not always practical, either because the code in question is proprietary (as in this case), or just because it would take too long to understand. Hence developers routinely produce documentation which describes the functions in an API in a more readable form.

The Proposal seems to envisage this kind of documentation being made publicly available. However there does not appear to be any incentive to Microsoft to make this documentation complete or accurate, other than enforcement by the courts. Since this kind of document can never be 100% complete or accurate the question will arise as to whether it is good enough. If Microsoft acts true to form it will inevitably argue that its documentation is indeed good enough even though it is not, and will carry on arguing this until it becomes a moot point. To avoid this problem I suggest that Microsoft be required to erect "Chinese walls" between the development groups working on different products. Only published documentation may be exchanged between these groups. Hence if Microsoft wishes to sell two products which work together it can only do so if it also informs its competitors how to make products which will can work just as effectively.

The remaining problem on detail is the file formats and protocols used when one copy of a product communicates with other copies of the same product. The Chinese wall system will not work here. However since this problem is restricted to file formats and protocols the problem of ensuring the adequacy of documentation is much smaller.

Established techniques (such as BNF grammars and state machines) can completely describe file formats and protocols, and these can be used as the basis of an unarguable technical finding that either the software or the documentation is defective. This is not a complete solution to the problem, but it should level the playing field sufficiently to allow competition.

Publication and Open Source

Since this case started Open Source Software (OSS), such as the Linux operating system, has become a significant competitor to Microsoft. Therefore any effective remedy must take account of the special requirements of OSS development over normal commercial software development.

The primary issues here are costs, trade secrets, and patents.

Costs:

Whatever disclosure mechanism is chosen for interface descriptions, it must be within

the financial reach of open source developers. A subscription of several hundred dollars a year, such as is required for the Microsoft Developer Network, is trivial for a competing software company but a major hurdle for a volunteer developer working on OSS. Given that interface descriptions must be prepared for competitors, there is no reason why they should not be distributed for free over the web rather than only made available to an exclusive club.

Trade Secrets

Microsoft must not be allowed to pretend that these interface descriptions are trade secrets, as it tried to do with its extension to Kerberos. Because OSS packages include the full source code they inevitably reveal the full details of their operation to any programmer who downloads them. If Microsoft can claim trade secret status on an interface it can effectively block any OSS package from using that interface, since to do so would reveal the "secret" of its operation. This appears to have been the objective of the click-through license on the Kerberos extensions (see above). The "Samba" project (www.samba.org) has reverse-engineered the Microsoft file and printer sharing protocols, allowing non-Microsoft systems to gain access to resources on Microsoft systems. An updated version of Samba for Windows 2000 is being prepared which will need to inter-operate with the Windows 2000 Kerberos extensions. If these extensions are considered trade secrets then it would be impossible for the Samba project to work with these extensions, and a key component in any mix of Microsoft and non-Microsoft computers would be crippled.

Patents

Microsoft has not made much use of patents to protect its market, preferring to rely on proprietary interfaces. However if it is prevented from using proprietary interfaces it may decide to use patented ones instead.

When Microsoft next introduces a new interface, especially a network protocol, it would be a simple matter to obtain a patent covering the operation of that interface. At that point any competitor wishing to inter-operate with Microsoft products using that interface would have to license it from Microsoft. The usual solution in such situations is to require licenses on "Reasonable And Non-Discriminatory" (RAND) terms. However even RAND terms require payment. OSS developers are unable to offer payment. Therefore an effective remedy must require Microsoft to license its patents on RAND terms to commercial software vendors and on Royalty Free terms to Open Source projects.

Incidentally, Microsoft has described OSS as "un-American" and "an intellectual property destroyer". These descriptions try to tar OSS developers with the same brush as software pirates. This is incorrect. Software pirates selfishly take the work of others and use it without paying. OSS developers take their own work and permit others to use it for free. This is a wholly generous act, fully in keeping with the American ideals of volunteerism and service to one's community.

Security Details

The Proposal includes a broad exception for "security related" information. However Microsoft could argue that almost any interface, especially APIs and communication protocols, is "security related" if it is used to carry any kind of authorisation or authentication information. Indeed, it made exactly this argument when it initially refused to reveal its extensions to Kerberos. Therefore the exception for security related information must be narrowly drawn. Fortunately this is not a major problem. It is a basic principle of computer security that would-be intruders will eventually learn the operational details of your security mechanism, either by reverse engineering or by other less legitimate means. Any security which depends on the intruders remaining ignorant of these details is known as "security through obscurity", and regarded by security practitioners as inadequate at best. Therefore the only items which should need to be kept secure are the keys or passwords which operate the software. These can be easily changed if they are compromised. Hence if security interfaces are well designed then they will not need to be kept secret. And if they are not well designed then Microsoft should be required to remedy the fault rather than keep this fact secret.

Conclusion

The proposed Settlement would have little effect upon the business practices of Microsoft. If adopted in its current form then the result will be no change to the behaviour of Microsoft, and yet another prolonged court case in another five or ten years. Any effective settlement must concentrate on opening up the markets that Microsoft has effectively closed by its use of proprietary interfaces, file formats and protocols.

I hereby respectfully submit these comments for your consideration,

Paul Johnson.

From: Wayne Wood
To: Microsoft ATR
Date: 1/16/02 8:02am
Subject: Microsoft Settlement

The Microsoft Settlement proposed by the DoJ is satisfactory to proceed on. The nine states that are against said settlement are backed by and supported by the competition of Microsoft, especially in California.

This competition seems to want the DoJ to hand them Microsoft Rights that competitively they were unable to do themselves in a business manner. The latest proposals by Microsoft and the DoJ are adequate and should be approved as is.

I think the DoJ should drop the settlement and get on with more important things. don't understand why the DOJ sued MS in the first place . So what if they gave their own—or strategic business partners'—products

preferential treatment on the user interface. Every OS manufacturer does—look at any Apple or LINUX commercial product and you will see the same thing. In case you missed it, MS licenses a lot of the software applications it “bundles” with Windows—and so does Netscape and AOL-Time Warner when you get their products. What makes MS so different?

I used to use Netscape’s browser exclusively. It was a great interface, and beat the heck out of MS’s Internet Explorer 2 and 3. But, Netscape sat on their butts and MS improved IE’s interface. When version 4 of IE came out, I switched over and have never gone back. Netscape radically changed their user interface and it backfired on them. They lost market share and IE went to the front. Not because MS did anything illegal—Netscape simply screwed up. Their “new” interface was so bad, they pulled the product shortly after it was released and went back to redesign it. If Netscape had kept improving their original product, they would still have market share—but they didn’t.

Now they want the government to step in and fix a business problem they caused themselves. To prove my point that even they know the screwed up—the latest version of Netscape offers users the choice of their “new” or their “classic” interface. Crappy software products die of their own volition—they don’t need a stake driven through their hearts by MS—and legislation won’t make people buy them, either.

As for being “forced” to use MS products—any high school student can tell you how to either uninstall a MS product or install someone else’s software on a Windows machine. (How do you think all these violent games they are playing get on the computers in the first place? <g>) I think of MS as the Wal-Mart of the industry. They offer a wide variety of products that work well—but there are other products that do certain jobs better out there. Like getting appliances from Sears, or a suit from Armani.

That’s why I use Roxio CD Creator to make CDs and not the software MS provides. That’s why I use several third party diagnostic tools and not the ones that come with Windows. It’s like choosing to have my car customized after I buy it—no one forces me to leave it the way it was when I bought it if I don’t want to, I can add fog lights, or fuzzy dice, a neon license plate holder, or even have it repainted if I chose to.

(Personally, I think the DoJ should look at Congress and the motives of Orrin Hatch, the senator from Utah and home state of MS’s chief networking rival NetWare—strategic partner of SUN operating system and AOL-Time Warner—and see if their was any conspiracy to attack MS amongst them. .)

At this point I feel it is unnecessary to further pursue litigation against Microsoft. Why penalize a company further when there are clearly other alternatives out there for all of their products. And why inhibit a company from integrating their products. I don’t care if my computer comes with Internet Explorer on it, because I know I can just as easily install Netscape or any other browser to access the internet. At this point further litigation is a waste of taxpayer’s money and there will be no economic gain by pursuing further action.

I do now and always have felt that the DOJ’s and various state attorneys suits against Microsoft Corp. are the result of the prejudiced views of elected officials from states where Microsoft’s competition reside. This constitutes what I and everyone I speak to considers an injustice perpetrated against Microsoft Corp. As you know millions of our tax dollars have already been wasted in an attempt to wrongfully punish this company. I like most Americans who used P.C.’s. before the advent of Windows hold Microsoft in the highest regard. I am proud of it’s performance in dominating it’s field because in doing so it took us out of the realm of cryptic DOS code and into the future of computing. Lets face it, the driving force behind any great advancement has always been profit. By punishing Microsoft for doing exactly what any other large corporation or small businessman would do in it’s place sends a bad signal to those of us who have the nerve to gamble in the high stakes world of business. By the way what would the trade deficit have been last quarter if Microsoft did not sell software worldwide?

Please stop this nonsense and accept this settlement that is already much larger then the so-called (but in my mind fabricated) harm done to the “public” Let this great American company thrive and grow.

Thank you for considering my position.

Attorney General John Ashcroft
 U.S. Department of Justice
 Washington, DC 20530-0001

Dear Attorney General Ashcroft:

I am a proponent of free enterprise and I believe that under the terms of the recent antitrust settlement between Microsoft and the U.S. department of Justice, Microsoft has not gotten off easy. In fact, their rights are being violated in some ways. Nevertheless, I support the settlement because I think that all parties involved will be better off without further litigation.

First off, Microsoft is being restricted from entering into third party agreements pertaining to exclusive distribution. This term is ridiculous and biased. Most companies, including some like Coca-Cola, rely on these types of agreements to gain and maintain market share. To restrict companies from this form of business is to hinder their chances for survival. Second, Microsoft will be forced to give up technological codes and data, which will allow competitors to configure and create products that, can be prompted within Windows or are compatible with Windows software. This term alone constitutes a violation of Microsoft's intellectual property rights.

I urge your office to finalize this settlement and look out for the American public. I hope the terms of settlement ultimately turn out to be in best interest of the American IT sector and American public. Thank you for your time.

Sincerely,
 David Provencher

From: Jeff Finkelstein
 To: Microsoft ATR
 Date: 1/16/02 8:46am
 Subject: Microsoft Settlement

I believe it is time for the Federal and State Government to settle the Microsoft case. I believe the current agreement is reasonable and fair given the results of the trial. This agreement will provide reasonable protection for the industry and still permit Microsoft to continue to improve it's products to benefit millions of America consumers.

However, I believe key aspects of the government's case are flat-out wrong, such as the contention that Microsoft holds a monopoly over desktop operating systems. That ignores the resurgent Apple Macintosh and the emergence of new Unix-based competitors, like Linux. Americans can purchase an operating system that cost over a billion dollars to develop for \$89, or they can get a less capable Linux OS free, or buy a MAC. There is no evidence of consumer harm and none was provide in the trial. I see the case being driven significantly by politics. More specifically political use of the DOJ for special interest (Microsoft's competitors).

Consider Microsoft's competitive position; Microsoft must convince consumers that it's

product at \$\$\$ dollars is better then it's competitor (Linux) at the cost of \$0 (zero). How can Microsoft be considered a monopoly when it has this level of competition? Will the government be satisfied when a Chinese version of Linux dominates the desktop and tax revenues and jobs from high-tech industries are lost?

Please review this issue carefully as it affects the ability of our nation to compete in the world economy. Please don't undermine the free market and hard work of millions of American who invest in Microsoft and other great companies.

Regards,
 Jeff Finkelstein

 Attorney General John Ashcroft
 US Department of Justice
 950 Pennsylvania Avenue, NW.,
 Washington, DC 20530-0001

Dear Attorney General Ashcroft:

Though not a regular computer user, as an American who believes in the importance of the entrepreneurial spirit, I would like to voice my opinion on the stance the Justice Department needs to take on the upcoming settlement decision with Microsoft. I believe to take a truly great American company that started from ground zero and earned its way to the top, then break it up or infringe on its right to do business is not in the spirit of fair competition that so many claim to support. Now that Microsoft has offered a settlement, its time to put this behind us.

The current proposal sounds very fair. From what I've read, Microsoft will standardize pricing for its customers, not act against any customer that uses competing software and will even allow other companies to access and license its internal intellectual property. The company has then agreed to a technical committee of software experts to oversee Microsoft's continued compliance of the deal. So, it seems like any concerns from before the lawsuit are being met and the Big Brother approach by the government needs to stop immediately.

Please accept the terms of this settlement and allow Microsoft to focus on creating jobs again, which the country needs most right now. I thank you for your attention to my feedback.

With sincere regards for American enterprise,
 Judyth Sweet

Subject: Lord of the Rings—sort of

Recently one of my friends, a computer wizard, paid me a visit. As we were talking I mentioned that I had recently installed Windows XP on my PC. I told him how happy I was with this operating system and showed him the Windows XP CD. To my surprise he threw it into my microwave oven and turned it on.

Instantly I got very upset, because the CD had become precious to me, but he said: 'Do not worry, it is unharmed. After a few minutes he took the CD out, gave it to me and said: 'Take a close look at it.' To my surprise the CD was quite cold to hold and it seemed to be heavier than before. At first I could not see anything, but on the inner edge of the central hole I saw an inscription, an inscription finer than anything I had ever seen before. The inscription shone piercingly bright, and yet remote, as if out of a great depth:

I cannot understand the fiery letters,' I said in a timid voice. 'No but I can,' he said. 'The letters are Hex, of an ancient mode, but the language is that of Microsoft, which I shall not utter here. But in common English this is what it says:

One OS to rule them all,
 One OS to find them,
 One OS to bring them all and in the darkness bind them.

It is only two lines from a verse long known in System lore:

"Three OS's from corporate kings in their towers of glass,
 Seven from valley lords where orchards used to grow,

Nine from dotcoms doomed to die,
 One from the Dark Lord Gates on his dark throne In the Land of Redmond where the Shadows lie

One OS to rule them all, one OS to find them,

One OS to bring them al and in the darkness bind them,
 In the Land of Redmond where the Shadows lie."

It WANTS to be installed
 Best Regards,
 Paul

 Subject: Microsoft

The Microsoft Marketing Machine is still up to their old tricks with their new products even after being told to cease and desist. I am

actively involved with a deployment of their newest operating system, Windows XP, and it's still the same old issues. MSN Messenger is installed by default and the uninstall is hidden. Obscure file edits are necessary to complete the uninstall. MSN is still the default in Internet Explorer 6, all search functions point to MSN. MSN Explorer is installed by default to the desktop. The OS reports back to Microsoft by default. Many hours were spent uninstalling this unneeded software. The OS should be the OS, not a device to market other products. I think if Microsoft stayed with this philosophy they would have a far superior product, now it is just a mediocre marketing platform.

Attorney General John Ashcroft
US Department of Justice, 950 Pennsylvania Avenue, NW.,
Washington, DC 20530-0001

Dear Mr. Ashcroft:

I am writing to express support for the settlement reached between Microsoft and the Justice Department in their ongoing antitrust case. I feel the settlement is fair, and no further action should be taken against Microsoft.

I work in the software industry as a developer, and I have seen firsthand the innovation Microsoft has provided the marketplace. It should not be punished as the settlement does by forcing Microsoft to disclose its technological secrets to competitors. Ending the case as soon as possible will allow Microsoft to return to developing new products and technologies that will ultimately benefit many consumers.

I strongly urge you to stop all further inquiry into the case, and support the settlement. It is time to put this matter behind us.

Sincerely,
Lee Robie

From: Augenstein, Rob
To: 'microsoft.atr(a)usdoj.gov'
Date: 1/16/02 10:00am
Subject: Microsoft Settlement

I have been following the anti-trust case against Microsoft for almost four years now and believe that Microsoft did nothing wrong. The bottom line is that consumers were not harmed. As a user of Microsoft products, and previously of Netscape Navigator, I actually benefited. When I was using Navigator, Netscape improved and expanded the product due to the competitive pressure from Microsoft. To make a switch in Internet browser compelling, Microsoft had to make their own improvements. Now that I've switched to Microsoft, I wouldn't go back

to Netscape. What no one involved in this case seems to see is that people like me benefited because we had choices and the products available to us were improving at a rapid pace.

It is not necessarily a bad thing if a company has monopoly power and then tries to use it. It is most certainly a good thing in fact if a broad base of consumers will benefit. Unfortunately, Judge Jackson did not see that people like me benefited from Microsoft's actions. In fact, I have actually been harmed since the ruling by Judge Jackson. With Microsoft on the defensive, the pace at which significant new products have come to market has been slow. I think the browser was the latest new product genre—and that was 5 years ago. So I haven't had as much new software to play with as I did before. More importantly, the ruling initiated a long slide in the stock market that still continues. Since my investments in the stock market have declined in value, I have not made further investments in things for my family like a new car, house or computer. And since I believe that I am not the only one who has had this happen, I attribute our country's economic slowdown to the ruling by Judge Jackson against Microsoft.

I am interested in seeing the economy get back off the ground and firmly believe that letting Microsoft pursue its free enterprise strategy of innovating with new products is in our country's economic interests, both domestically and internationally. I am hoping you will see things similarly and will move aggressively to stop the legal challenges aimed at Microsoft.

Sincerely,
Rob Augenstein, CPA

Comments—Microsoft Proposed Settlement

It's time to move on! From the outset this has been an exercise in establishing the rules after the game has been played—or at the very least after the game has been in progress for some time.

Does the proposed settlement benefit consumers? Since the injured parties, judging from who is making the most noise, are

Microsoft's competitors there's no way to know. Consumers have never had a voice in the process. I've neither read nor heard any facts supporting the contention that consumers (you and I) have been injured. Are the high tech competitors bringing the complaint satisfied? Is that important? Apparently the settlement is a fairly good one in that almost every faction is unhappy with it. Microsoft is willing to live with the proposed settlement, the United States (at least most of the Washington DC types involved) has accepted it, consumers have never said they weren't satisfied, and Microsoft's competitors will likely never be satisfied until MSFT is delisted. In short, there's everyone is equally displeased and there's no place to go from this point but down.

You've done your jobs. Let's move on!

You prosecute Microsoft, but you let banks merge, oil companies merge, corporate takeovers, make us dependent on foreign oil. Microsoft gave the consumer something that if it did not satisfy them they could replace with another product, and it was included in the purchase price. We are at the mercy of the big banks, big oil, and corporations that you have given the OK to move most of our manufacturing jobs out of the country. Whose side are you on? Is it the governments porpoise to bring our standard of living to that of a third world country?

If someone builds a better product the public will buy it. It's not like Microsoft made a product that could not be replaced if it was unsatisfactory.

Subject: MicroSoft Settlement

I just wanted to vent about what is happening with the MicroSoft Settlement. MicroSoft started from nothing and is solely responsible for the PC revolution and a good deal of the other technological advancements we know and enjoy today. It is unfair for this country to penalize success. I think it is great that finally a U.S. company is a world leader and is able to compete with other corporations around the world especially when so many of them are subsidized by their governments. Please stop playing politics and look at all the good that the company does. Bill Gates donates a lot to charities, pays more than his share in personnel and corporate taxes and provides a lot of jobs. I was disgusted and embarrassed to be an American under Clinton but have regained my pride and patriotism under President Bush. Please do the correct and honorable thing and put this endless litigation to rest. The only people that win are the lawyers.

Thank you,
Bill Klueber

Date: 1/16/02 10:12am
Subject: Microsoft Settlement

I have been using computers ever since my first Commodore 64. I have used every generation of PC and just about every type of commercial software available. I fully believe the standardization that Microsoft has brought to PC use has benefited consumers more than any of us can imagine. I also believe their software is competitively priced and has always been a good value. Otherwise I wouldn't buy it, and I certainly wouldn't upgrade. Having said that, I am outraged that our government continues to use taxpayer dollars to prosecute a healthy, innovative, American company; not to benefit consumers, but to benefit Microsoft's competitors. To say that a \$100 price tag for an XP upgrade is 'to much' and is 'monopoly driven' seems to me outrageous when I have to shell out \$60 for Palm OS applications that does relatively nothing.

The current proposed settlement is fair to consumers and is fair to Microsoft. It allows Microsoft the ability to continue making better products but does not allow them to strong-arm OEM's. Any State not buying into it is simply trying to use the courts to gain a competitive advantage for their Companies. If Microsoft's competitors were to put as much effort into developing better products as they do lobbying maybe they could compete.

Stop wasting my tax dollars. Settle now.

I think it is insane to not allow Microsoft to donate software and possibly computers to the schools. Wherever students go, Microsoft

is the leader in business and they need to learn it. You are depriving them of this fantastic opportunity. If your objective is to benefit consumers then this is an option. Apple Computers are a personal choice for households but business uses Microsoft. There is no benefit to students to be taught on Apples and then to into the marketplace and not have the knowledge of Microsoft.

Please reconsider this case on these merits.
Thank you.

From: Ron Brown
To: 'Microsoft.atr(a)usdoj.gov'
Date: 1/16/02 10:20am
Subject: Comments from Citizens

I think the government (DoJ) is doing an injustice to the country with this continued suit against Microsoft. It could have been done differently without the negative impact on our economy and the mind set of the citizenry. All this started in Clinton's anti-business administration and now there is so much egg on politicians faces that they cannot let it go. And of course there is so much politics interwoven in this that it is hard to tell fact from fiction and when politics are involved, politicians don't really care so much about fact. That is why politicians are respected by the citizenry either just above or just below used car salesmen, I forget. (It used to be an honorable profession.)

For example, Microsoft proposal for free computers to schools was rejected. That is OK but the reason was crap. When I worked in the school district, we received many, many computers from Apple that were free. Now they yell foul because they don't want MS muscling in on getting the kids used to PCs when they have invested years in getting them Apple oriented. When older, these kids

will buy Apple computers because of their greater familiarity. Yup, double standard.

This case did not cause the market to go into the tank several years ago but I feel it certainly helped with the mindset of the consumer and investor against the market as a whole. You can thank yourself for that. Could have been handled much differently but politicians have egos and constituents with lots of campaign money in the campaign fund, so we all must wade through this crap for the egos of a few. I am sick of it. As a consumer of computer products and software, I don't feel infringed nor hurt by Microsoft software but I do feel infringed by the government's handling of this case.

So get a life and dump this case. Get the positive mindset of the consumer and investor back on track and let's get this economy moving again. You guys, and state governments, need the tax money a prospering economy generates. And this crap has lost you billions; billions. Was it really worth it? Just for the political egos involved? Hell no, not from my perspective nor the from that of the citizenry.

[I sent this before but did not have the correct subject line.]

A penalty is not a penalty unless it stings. The current proposed "penalty" does not sting Microsoft. The simple fact that they are saying positive things about it, calling it "fair", shows that.

A real penalty that would be of great benefit to the computer-using public would be to require that control over the Microsoft Office file formats be transferred to a public standards body such as the American National Standards Institute (ANSI). This would include, at least, the formats for Microsoft Word documents, Excel spreadsheets and Powerpoint presentations.

This would make it possible for a variety of software companies to develop office software that interoperated with Microsoft products. The goal is that an ANSI-conforming document produced by vendor X software would be guaranteed to be readable by vendor Y's software. Since it is a common practice to e-mail documents, spread-sheets etc. from person to person and business to business one would expect that the formats should be standardised and that the standardisation process be impartial.

As well as revitalising the software industry this remedy would also go a long

way to solving the problem of archived documents. It is well recognised by historians and librarians that much of the documentary material in an electronic format produced by today's society is ephemeral and will not be available to historians of the future. This is not only because physical formats such as magnetic tape become obsolete but also because the file formats become obsolete. Even now, if you have a Word document from 10 years ago you will have great difficulty in reading it as current versions of Word do not recognise formats that old.

You will have to hunt around for a software product that can convert it to a newer format. This problem will continue to get worse in the future. In short, since office file formats have become an integral part of the information infrastructure that the public depends on in this day and age it is important that they be under impartial, public control rather than be subject to the whim of Microsoft's marketing department.

I believe that this would be the biggest step that could be taken to level the playing field for business software.

I know you guys are trying to figure out what's best for everyone in this case, and I think a clear solution—given that Microsoft is an unrepentant repeat offender and an obvious monopolist—would be to simply require that Microsoft document and standardize all its APIs. It would be allowed to create new ones, of course, provided it also documented and standardized all of THOSE.

This doesn't remedy the problem of bundling, of course, but does make it easier for competitors to at least challenge Microsoft on a more level playing field without having to force consumers into abandoning their existing infrastructure.

Tom

Legislators,

You will never arrive at a common decision acceptable to all parties. The American people supported the last settlement, but it was recently rejected by U.S. District Judge Motz. Microsoft would have given disadvantaged public schools more than \$1 billion in funding, software,

services and training, and approximately 1 million Windows licenses for renovated PC's. Enact this settlement as supported by the majority of the American people. You will find no better way than to assist disadvantaged youth in uplifting and enhancing their education!!!

Government and the justice system have had more than their fair share of time and opportunity to arrive at a settlement. The American taxpayers are done footing the bill for this ongoing affair. It's truly unfortunate that our country can unite when it's attacked, but we can't work out an internal conflict. We just drag it out a few more years until the related technology we're trying to incriminate is itself already obsolete. Give our economy and our people some respect, enact the previous settlement.

Subject: Microsoft Settlement

Briefly, I feel Microsoft is getting off far too easy for its blatantly anti-competitive behavior. Specifically, I am concerned that, by allowing Microsoft to continue as one company, it will continue to shut out competing products and services. Although I appreciate that punishing OEMs for choosing non-Microsoft products is now "prohibited behavior", it is too late for many companies to recover from being squeezed out of the market. I can see how this behavior will continue as it costs Microsoft next to nothing to replicate a software product once it has been created. As such, Microsoft (because of its monopolistic size) can afford to give away any new product it desires by bundling it with the operating system. This will effectively prevent any smaller competitors from entering that product space. Once the Microsoft product is in wide use by the consumers, Microsoft can begin charging money for it, or for an upgraded version of it, and most consumers will pay because they are loathe to switch from a tool to which they have grown accustomed.

The only effective remedy I can see is to force a separation of the Microsoft operating system business from the products and services businesses. While this may not help products or companies that have already been pushed out of the market, it, along with the defined prohibited behavior, will help level the playing field for emerging companies, products, and technologies.

Atty. Hesse:

I wanted to take this opportunity to encourage you to support the Microsoft settlement. I was told you are the person to talk to, so allow me to make a couple points regarding this issue.

First, this case has gone on long enough. Just like the other legal wars that play out in DC, this one has overstayed its welcome. Once you can get to the point where some form of agreement has been reached, the DOJ should accept the terms and move on. Second, taxpayers should not have to fund legal wars that spend money on issues like this when there are plenty of other things the Feds can spend money on that really matter to people like myself (the war on terrorism comes to mind). Third, in my opinion, Microsoft is king because they have the best product. That's as it should be. Accept the settlement and allow them to innovate and produce a product that serves the market place. We do not need Washington to act as the legal firm for Microsoft competitors who are unhappy with their place in the market. Let them build a better mouse and they will be king.

Thanks for your time.

Subject: Microsoft Settlement

In 1990 I bought my first computer. It had a profound effect on my ability to express myself. There were three basic choices. Apple, IBM or IBM compatible. A friend advised me to build my own IBM compatible and save several thousand dollars.

His assessment was that Apple is the easiest to use, but any modification to Apple is much more expensive. Because I had no idea how a computer works, I decided to buy an IBM to insure quality. Looking back, I can see the wisdom in buying an IBM compatible. Over the years I have purchased a lot of software for computers. All Microsoft software proved to be a good purchase. If they are overpriced, the marketplace will adjust their position.

It is understandable that Mario Monti would like to have American ingenuity at a reduced price. I don't understand why anyone in the US would like to kill the goose that laid the golden egg. The bottom line is that Microsoft puts out a product that allows individuals to increase their productivity far beyond the cost of the software. Why does the US government want to add on all of the legal fees to the cost of the software.

Please tell the attorneys to go get a productive job.

LINDOWS.COM FILES MOTION TO DISMISS PENDING TRADEMARK LAWSUIT FILED BY MICROSOFT CORPORATION

SAN DIEGO—January 15th, 2002—

Lindows.com announced today that it filed a motion to dismiss the pending trademark lawsuit filed by Microsoft Corporation (Nasdaq "MSFT") against Lindows.com. In the lawsuit Microsoft seeks to prevent Lindows.com from using the term "LindowsOS" and "Lindows.com." Because Lindows.com has no presence and conducts no business in the state of Washington, Lindows.com has filed a motion to dismiss the claim citing a lack of personal jurisdiction over the San Diego, CA based company. Both Lindows.com's motion to dismiss and Microsoft's motion for preliminary injunctions are tentatively scheduled for hearing on February 1, 2002.

"We're looking forward to showing the Court the widespread use of the term 'windows' or variations thereof by literally hundreds of companies which are not endorsed or sponsored by Microsoft. The fact that Microsoft has chosen not to sue these companies demonstrates their true motivation in this case is to crush competition from a promising new technology which threatens their illegally obtained monopoly," said Lindows.com CEO, Michael Robertson. As part of the legal process, Microsoft Corporation demanded that Lindows.com turn over its entire database of names, email addresses and physical addresses for parties interested in the yet-to-be-sold operating system which will run both popular Microsoft Windows software and Linux software.

"We're not happy that a company known for illegal business practices took the unnecessary step of gaining access to our database. In spite of their assurances it will not be used for any purpose outside this case, we've alerted our users of Microsoft's actions and believe this is another way Microsoft is attempting to intimidate a potential competitor," commented Robertson. In spite of the delays encountered while producing nearly 15,000 pages of documents demanded by Microsoft, development of LindowsOS is continuing. Screenshots of the product are available at <http://www.lindows.com/screenshots>http://www.lindows.com/<http://www.lindows.com/screnshots> screenshots.

A Sneak Preview is expected shortly. The Sneak Preview will not be a fully completed product but will showcase many of the unique features such as a friendly install alongside an existing Microsoft Windows operating system, a streamlined installation process which requires no computer knowledge and the ability to run popular Windows-based programs. This will be followed by version 1.0 which will go on sale in early 2002 for \$99.

About Lindows.com, Inc.

Lindows.com is a consumer company that brings choice to computer users.

Lindows.com, Inc. uses the latest technology to create affordable, intuitive, user-friendly products. Lindows.com, Inc. was started by Michael Robertson, founder and former CEO of MP3.com. At the core of Lindows.com is a new operating system called LindowsOS?, a modern, affordable, easy-to-use operating system with the ability to run both Microsoft Windows(R) and Linux(R) software.

About Michael Robertson

On the frontlines of music aggregation and distribution, Robertson founded MP3.com, Inc., the Internet's premier Music Service Provider (MSP) in March 1998. MP3.com revolutionized both the way new artists distribute their music as well as the way music lovers acquire and enjoy music. Robertson and the rest of the MP3.com team built a unique and robust technology infrastructure that facilitated the storage, management, promotion and delivery of digital music. MP3.com hosts the largest collection of digital music available on the Internet with more than 1 million songs and audio files posted from over a hundred thousand digital artists and record labels with millions of music fans. Robertson stepped down as CEO of MP3.com to start Lindows.com. Robertson continues to serve in an advisory capacity to Vivendi Universal. MP3.com, Inc. is a wholly owned subsidiary of Vivendi Universal, S.A.

Subject: Microsoft Settlement

Dear Sirs:

I would like to comment on the settlement regarding Microsoft and the state attorneys general. My interest in this case is strictly as a consumer of software products.

I feel very strongly that it is in the best interest of the consumer for the antitrust litigation to be concluded promptly without being allowed to continue as the attorneys general are advocating. That would just raise costs of software without any real benefit to the consumer. There is no question that Microsoft has stepped over the line, but they will be penalized for that. The motives of the attorneys general appear simply to be to enhance their political visibility, to aid Microsoft's competitors, and to enrich trial lawyers. Anyone who has purchased the latest versions of Microsoft's products has seen a dramatic rise in the prices. It doesn't take a genius to figure out that much of the money is going into litigation costs. It seems like there is some truth in the famous comment by one lawyer to another that "It's not whether you win or lose, it's how long you can keep the meter ticking."

Subject: Some History Worth Reading

The court proceedings against Microsoft should continue.

I worked over 30 years for IBM, much of which was with their Software business. We felt much of the effects of the Government's IBM Antitrust Suit. Everyone thinks the Justice Department lost the IBM Suit, but their oversight caused an entire new industry to be created.

Did you know that Microsoft, Compaq, Dell, Internet (as we know it today) and the Software Industry would never exist if it had not been for the antitrust laws, the IBM anti-trust case and the government's oversight. Microsoft should have the same oversight.

Before 1970 IBM gave all Software away free when you purchased IBM's Hardware. The Antitrust Suit caused IBM to unbundle software from the hardware and to show a normal (30%) profit in their business case for each individual software product announced (no ?loss leaders? were allowed). This started the independent software business.

As part of this procedure, IBM also did not acquire any other company's software on an exclusive basis. When IBM developed the Personal Computer in 1979, the PC Division could not buy Microsoft's Operating System exclusively.

The IBM PC became a huge success, and within 3 years IBM had the dominate share of this market. But because IBM did not have an exclusive agreement from Microsoft, Compaq in 1982 (and later many other clone companies) was able to get the Operating System from Microsoft and clone the IBM system.

From this base:

- Compaq became the leader in the PC business,
- None of IBM's competitors wanted to use IBM's proprietary networking software (SNA) and Internet took its place,
- The price of PCs dropped significantly, and
- An entirely new software and hardware business was created.

It would not have happened without IBM's Antitrust Case.

Like IBM, Microsoft has grown to be a monopoly in the PC Operating System business. They should also be constrained like IBM was:

- Each product should be unbundled to the lowest level of competition.

- All products should be announced showing a normal profit business case.
- Software products should not be purchased from others on an exclusive basis.
- All proprietary software interfaces should be opened up.

This type of settlement would also create a new competitive environment and many new and creative companies. Not unbundling Microsoft will allow them to continue to release non profitable software and to bundle products into the operating system that could not otherwise survive in the market. This is competitively unfair and prevents many new and innovative ideas from reaching the market.

TO Judge Colleen Kollar-Kotelly
FROM Susan Cowling
30 Brough Lane, #107
Hampton, VA 23669

It is my understanding that you will soon prepare a final opinion on the Proposed Final Judgment completed by the Department of Justice regarding the Microsoft case.

I am a Microsoft shareholder. As such, it would probably be to my best personal financial advantage to support the arguments presented by Microsoft and the recommendations of the Justice Department in the Proposed Final Judgment.

However, it seems to me that the well-being of our economy and, specifically, the technology sector in this country, is best served by open and fair practices. The unanimous decision by the US Court of Appeals that Microsoft had violated antitrust laws suggests to me that Microsoft has acted in the best interest of Microsoft to the denial of the best interests of our nation and the long term interest of its industry.

Admittedly, I am not privy to all the arguments, facts, and conditions on which any of the court decisions have been based. I do conclude that Microsoft has in the past broken antitrust laws. I feel Microsoft should be penalized strongly for these actions. To do otherwise is to undermine the antitrust laws, to encourage illegal behavior and to condone anticompetitive behavior.

Thank you for your consideration of my opposition to the Proposed Final Judgment as prepared by the Justice Department.

To: Microsoft ATR
Date: 1/16/02 11:06am
Subject: Microsoft Settlement

Dear Sirs

I urge all parties in this case to adopt a speedy settlement. The proposed remedies seem reasonable and fair. It would appear that certain States, and certain corporations, are trying to prolong the process for their own self-interests rather than for the good of the US economy.

Microsoft has clearly abused its near-monopolist power to do harm to its competitors, and SHOULD be punished. However, the proposed remedies do just that: they prevent Microsoft from repeating its misdeeds; and will punish it for its sins. Please encourage all parties to complete the settlement now. Any delay not only hurts Microsoft, it hurts the US economy as a whole.

Yours Very Sincerely

From: Tom Owen
To: Microsoft ATR
Date: 1/16/02 11:40am
Subject: For Renata Hesse: MS settlement proposal comment

I write to comment on the proposed Microsoft settlement. I am professionally concerned with computer operations. Microsoft software is of great importance to me because of that company's global dominance.

I am not a US citizen and my business does not operate in the US, nonetheless the terms of any settlement will have a profound effect on the way I work and the solutions I can offer my customers.

In summary:

- MS is known to use a dominant position to illegally suppress competition
- The settlement attempts to open competition by requiring MS to make technical interface information available to those who wish to create systems to run alongside MS systems

- The settlement allows MS to restrict access to this information to commercial organisations
- The currently available alternatives to MS systems (e.g. to MS file and print service, email service, web service, web browsers, operating systems and others) are not in any sense commercial organisations.
- MS will likely, given its record, use this exemption to deny interface information to these systems, its major competitors
- Interface information kept secret allows competitor products to be disabled
- The effect of the settlement will be to remove competitive pressures from MS and therefore cause harm to the consumer. It's only really necessary to expand on the summary to say that the settlement has been written without an understanding of the current choices available to a software professional. It is striking how often the major competitors are produced by non-commercial organisations.

These systems are created and developed largely by unpaid co-operatives of companies and individuals. This co-operation is made possible by licence agreements (open-source licences, most famously the Gnu Public Licence—GPL) which prevent any person from benefitting from the intellectual property in the text of the system's software. Though for-profit organisations may provide staff, resources and source code for such a system, the system itself and its support group (e.g. Samba, Mozilla, Open Office among others) is not a commercial organisation.

While such "free" software is supplied for no more than the cost of the media, it is not free in P&L terms. Just as with any software the effort of installing and setting up is substantial and for any organisation with salaries or limits on staff time this is a cost. MS software is popular because MS take care to minimise setup effort, regardless of create the consequences. By contrast "free" software setup can be daunting. I judge that the major "free" systems have costs in the same order as MS products, though there is often a substantial benefit in increased reliability and reduced licence administration. There is competition on features as well as cost.

Major examples where the major competitor to MS is developed by non-commercial groups include:

- Microsoft File and Print: Samba
- Microsoft NT: Linux + other applications e.g. Bind, ISC DHCP etc.
- Microsoft Exchange: Sendmail + Many mail clients
- Microsoft IIS: Apache

All of these systems work in environments in which MS components also work and because of MS desktop dominance this is a large part of their utility. Apache would not be the most widely used web server if MS Internet Explorer could not access its sites. But this is only possible because the relevant interface standard (http/html in this case) is publically available. The same is true of all the systems and it is noticeable how Microsofts close hold of their inadequately documented MAPI mail server interface has inhibited development of alternative desktop clients for MS Exchange.

The proposed settlement would allow MS to deny necessary interface information to these major competitors. Over time this will destroy these systems and remove choice and the restraint which available and credible, competition imposes on MS prices.

Regards
Tom Owen

Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue
Washington, DC 20530

Dear Mr. Ashcroft,

I write you to ask your help in supporting the recent Microsoft settlement. After three years of negotiations, this settlement has a great deal to offer. The terms of this settlement were negotiated under a painstakingly detailed process and under careful supervision. The settlement addressed many issues concerning antitrust and yielded many productive solutions. In this agreement, Microsoft has agreed to make changes in licensing and marketing terms, as well as to design future versions of Windows with easier access for non-Microsoft software. This is a step toward a more unified technology industry and thereby a step toward a more concrete economy. Supporting the enforcement of this agreement is ultimately beneficial to the consumer, the IT sector and the economy as a whole. The delay of this agreement will only cause the technology industry to fall behind and continue to focus on litigation.

Please help support this settlement by helping to stop any further actions against this agreement. As an Ohio citizen, I have more at stake than many other citizens of this country, since my state is party to the settlement. I thank you for your time and for your continuing support.

Sincerely,
George E. Bryant

Dear Mr Ashcroft:

I am writing today to let you know my feelings about the Microsoft case. First of all I don't think this is an issue that the government should be involved in. However, now that the Government has intervened, I

think they should certainly take responsibility and allow this case to be settled. Microsoft has created a series of unparalleled products that other companies just did not have the resources to make themselves. Now their competitors will be able to compete more fairly as part of settlement. Microsoft is sharing more information about their software and server applications and there is even an oversight committee to make sure that Microsoft is doing all its promises.

I worked for Hewlett Packard for many years and can say first hand that no other company has changed the IT industry as Microsoft has. Their methods may not have always been fair, but this settlement addresses their problems and is the right step to moving the computer industry forward again.

 Chips ahoy

AMD competes with Intel, and the public wins. The right Microsoft antitrust settlement can bring the same energy back to the software market.

By Scott Rosenberg
 Jan. 16, 2002 √ The personal computer industry may be in its worst slump in history, but you wouldn't know it by following the news from the processor wars. Over the past two years, Intel and AMD have unleashed an incredible competitive cycle in Silicon Valley. In case you missed it, last week these two chip companies offered dueling releases of new flagship processors: Intel unveiled its fastest Pentium 4 yet, running at 2.2 gigahertz and built with a new .13 micron process that crams even more transistors into an even smaller space. AMD, extending the huge success and popularity of its Athlon line and the Athlon's most recent and powerful incarnation, Athlon XP, announced the XP 2000—a chip that actually runs at 1.67 gigahertz but, third-party tests show, nearly keeps up with the 2.2 ghz Pentium 4 in most tasks (and even surpasses it in some).

What's going on here is simple: Good old-fashioned competition drives engineers to

continue to work miracles. Intel, the market-dominating behemoth, has always pushed new, improved products out the door faster—and dropped prices more readily—when it feels the breath of a credible competitor on its neck. For many years the competition was feeble, but that changed when AMD's Duron and Athlon chips began giving Intel a run for its money—and, for a time in 2001, actually bested Intel for the fastest personal-computer chip title. Today, these two companies keep spurring each other on, and consumers win big. For most of us, that's all we need to know: Computers keep getting faster and cheaper. The details are of interest only to the legions of hardware nuts, high-performance system geeks and chip-overclocking fans who flock to the Web's hardware review sites. Right?

Well, the gigahertz specs may indeed be only geek fodder, but the other details of the Intel-AMD rivalry should be of keen interest to a much bigger crowd. That's because the competitive heat driving the processor market puts the relative frugidity of another part of the computer business into bold relief. I refer, of course, to the business of designing personal-computer operating systems—a business that Microsoft has dominated for years and that, according to the confirmed verdict of our federal courts, it now monopolizes. What if Microsoft were challenged as strongly on its home turf as AMD is now challenging Intel? What innovations, improvements and price reductions would the public enjoy that it doesn't, today, thanks to the Microsoft monopoly? This is the big question that hangs over the continuing struggle to find a meaningful outcome to the endless Microsoft antitrust saga. And the AMD/Intel analogy is worth pursuing to try to find some answers.

Microsoft and its supporters, of course, maintain that the monopoly label is misplaced. After all, can't you buy a Macintosh without buying Microsoft Windows? Can't you obtain a PC and fire it up with any of a dozen versions of Linux or other Unix-style operating systems? Sure you can—and each of those operating-system alternatives has its partisans. But for use by individuals on their personal desktops, Microsoft Windows holds the overwhelming market share—by nearly every estimate, over 90 percent. Is that simply because Windows is superior to the alternatives? There are certainly people who believe that; and, to be sure, with the release of Windows XP last year, Microsoft finally moved its flagship operating system off the aging and increasingly unstable code base it had inherited from its infancy and onto the relatively more reliable Windows NT/Windows 2000 core.

But how much faster might Microsoft have achieved that improvement if it was racing a tough competitor? And how much more incentive might the company have to produce more secure, less virus-vulnerable products today?

The historical record is quite clear (and the antitrust trial record is just as clear): The central reason Windows has maintained and extended its market share over the years is not product superiority but a concept economists call "lock-in." Once you have all

your data and all your software applications on one operating system or "platform," moving to a different one is painful — it takes time and effort and money (as economists say, your "switching cost" is high). Over the years Microsoft has not had to push harder and faster to improve Windows because it knew that its customers were unlikely to make a fast switch to a competitor.

Now, that picture would be very different if you could somehow reduce or eliminate those switching costs. What if competing operating systems could seamlessly and interchangeably run the same programs and utilize the same data files that Windows does? Here's where the Intel/AMD analogy comes in handy. These manufacturers compete to provide chips that can run the same computer programs—known loosely as "x86 compatible" code—and that retain compatibility with hardware like expansion boards and peripheral devices. If you needed to write different versions of each piece of software and manufacture different versions of each piece of accompanying hardware—one that would work with Intel's chips and one that would work with AMD's—the whole competitive market would disappear. The weaker player (presumably AMD) would vanish and—presto!—Intel would have a monopoly as tough as Microsoft's.

This relatively level playing field in the x86-compatible processor business did not come about by sheer happenstance. The semiconductor industry is marked by a Byzantine pattern of patent cross-licensing agreements; they provide permanent employment for legions of lawyers, and laymen seek to understand them only at great peril. What's important about them, however, is not how they came about but that they work. Now that the federal courts are trying to figure out an effective remedy for Microsoft's abuse of its monopoly powers, the competition between Intel and AMD provides a valuable model. How would one go about enabling Microsoft's rivals to compete with it as effectively as AMD is competing with Intel?

The key here is something known as the Windows API (or "applications programming interface")—the set of instructions that Windows programs use to "talk to" the operating system. The Windows API has long been a murky issue: Microsoft has always provided some information to independent developers—it has to if third-party Windows programs are going to work. But Microsoft can and does muck around with the API, changing things that break competitors' products, anytime it wants to. And rumors have long buzzed, without ever being nailed down, that Microsoft's own developers take advantage of so-called hidden APIs that non-Microsoft coders can't use.

The Justice Department's proposed antitrust settlement with Microsoft seems to demand that Microsoft do more to open up its APIs to competitors. But the fine print makes it clear that Microsoft could pretty much continue with business as usual. A more effective remedy would be one that required Microsoft to standardize and publicize the entire set of Windows APIs and the file formats of its Office applications

(another key to Microsoft's monopoly "lock-in")—with the express goal of allowing competitors to build Windows software applications, and operating systems, that compete with Microsoft on a level field.

Such a plan would require careful oversight and enforcement, since Microsoft could easily engage in all manner of foot-dragging. If Microsoft set out to be uncooperative, it could release the API information slowly, in deliberately confusing ways, or in a "Good Soldier Svejk" fashion—assiduously following the letter of the court's order while flagrantly violating its spirit. (There's precedent here: This is precisely how Microsoft behaved during the trial when it told the court that, sure, it would supply a version of Windows with Internet Explorer removed from its guts, but gee, sorry, then Windows wouldn't work.)

Now, I can already hear the howls from the Microsoft corner that this plan is evil and un-American because it forces Microsoft to give up some of its intellectual property. Well, yes. Microsoft is in court as a repeat offender; the current antitrust suit, in which a federal district court and an appeals court have both affirmed that Microsoft is a monopoly and that it has abused its monopoly powers, arose out of the failure of a previous consent-decree settlement of an earlier antitrust case. At some point, having repeatedly violated the law, Microsoft needs to pay a price, or it will continue with its profitably anticompetitive ways.

There's no reason to think the Justice Department's proposed settlement will work any better than the consent decree of last decade did. And financial penalties can hardly wound a company that is sitting on a cash hoard of tens of billions of dollars. But intellectual property—that's something Bill Gates and his team really care about. Requiring them to divulge some of it in order to restore competition in the software market might actually get them to change the way they operate. With Microsoft's APIs and file formats fully standardized, documented and published, other software vendors could compete fairly—which, after all, is what antitrust laws are supposed to promote. We might then be faced with a welcome but long unfamiliar sight: a healthy software market, driven, as today's processor market is, by genuine competition.

The Justice Department settlement is currently in a public comment period mandated by a law known as the Tunney Act. Through Jan. 28 the public is invited to send in comments on the proposal. (You can also e-mail them, with "Microsoft Settlement" in the subject line.) I'm sending this article in, and I encourage readers to file their thoughts as well. What good is open government if we don't use it?

Dear Microsoft Settlement:
The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,

James Bybee

It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
A. Helm

Microsoft's trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Robin L. Murphree

Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft,

I am writing this letter to express my concern over the prolongation of the settlement process in the Microsoft anti-trust case. The principal parties, with the trial court's endorsement, have hammered out a settlement agreement, which deals with the principal complaints of Microsoft's competitors and critics. The company has agreed to numerous concessions that should satisfy all but its most vengeful adversaries. It's time to put this matter to rest. It appears that doing the right thing is taking a back seat to politics, and that sacrifices money and resources that could help future generations.

Is this a paradox to the "AMERICAN DREAM"? The settlement will require Microsoft to radically alter its business and marketing practices. Windows systems will now be configured to not just to accept, but even to promote other companies' software. Microsoft will share information about certain internal Windows interfaces with competitors. Microsoft will abstain from its past anti-competitive practices and will not retaliate against software and hardware competitors. Microsoft has even agreed to submit itself to ongoing review by a new government oversight committee. Obviously, Microsoft has agreed to a lot! Please give your approval to this agreement. Our now faltering economy does not need an economic giant like Microsoft hobbled by endless litigation.

Sincerely,
Van Sher

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies. Thank you for this opportunity to share my views.

Sincerely,
Fred and Ginny Gates

It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Samuel G. Sheterom, Jr.

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry (look at the NASDAQ index since the Microsoft litigation started). It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of

corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Andre Schan

Subject: MICROSOFT SETTLEMENT

I wonder if there has ever been a greater misapplication of the law than the DOJ action against Microsoft? Certainly the consumer has not been harmed by this company. Could there ever have been personal computers costing less than \$1,000 with the capacity of today's machines without Microsoft? If you understand the dynamics of the computer business you would have to say, "NO." The idea that with more competition in operating system software, there MIGHT have been more benefit to the consumer is ludicrous. The industry needed one stable target for which to build hardware and write application software. The operating system was the one logical target.

Had there been two or more truly competitive operating systems, the efforts of the hardware builders and application software writers would have been diluted, available budgets would have been stretched

too thin, market sizes reduced and a huge element of confusion introduced. The reason there was only one operating system is that the industry could afford to work with only one operating system and still move at the blistering pace that provided inexpensive, powerful machines. Over the years it was Microsoft which took the right risks, made the right decisions and drove their work force to make the right solutions to earn being the provider of that operating system. It is time to resolve this fiasco by our government. Microsoft should have been found innocent by the courts. But because of a rogue trial judge and political fears within the appellate court, that is not going to happen. Take the "ounce of flesh" by causing Microsoft to supply the software to our less fortunate educational institutions and let's get on with life.

To whom it may concern:

A behavioral remedy does not correct the imbalance of competition in the computer software industry, and the technology industry in general, created by Microsoft's past and current illegal monopolistic practices. In addition to the proposed behavioral remedies, I believe a monetary penalty should be imposed, and used to fund education programs and loan programs that encourage the development of new competition in the information technology marketplace. With its large cash reserves of over \$30 billion, amassed at least in part through illegal business practices, Microsoft can extend its monopoly into other areas easily through acquisitions of innovative small companies and even competitive larger ones. The only way to prevent this is through a large cash fine.

Subject: Settlement of antitrust case against

Microsoft

As a consumer, I have a choice as to the products I wish to purchase and no one forces me to purchase one over the other. It was my own decision to purchase Microsoft. This case discourages innovative thinking and those companies who don't do as well as they would like to, have wasted a lot of tax payer money carrying out a vengeful case towards someone who has done better than them. Let's expend our energies for (and get on with) the important issues in America, such as protecting hard working employees as those from Enron who have really been taken advantage of and it is criminal what has happened to them! It must have been a slow day for lawyers and our congress when (under Clinton's admin. or lack of admin.) this trumped up charge was brought against Microsoft. STOP WASTING THE TAXPAYERS MONEY on frivolous things—go for the important issues. We had 8 years of stagnation, let's start working for the good of the American people.

Subject: The Microsoft case

I want to urge and Department of Justice to settle this case. The decision by the Court of Appeals was tough enough. The Company is willing to comply and schools will be helped by this decision to require Microsoft to donate a large amount of merchandise. Just because the Company is large and successful it should not be further penalized. The competitors of Microsoft have gone too far in urging the other states not to accept the agreement, to require the Company to do even more. Microsoft employs a large work force, it certainly contributes a great amount to the American economy and to that of the area where it is located. Let's get on beyond this stage of extracting more "blood from the turnip" to so speak, settle the case and let successful companies free to continue to innovate and succeed, Signed:

To: Microsoft ATR
Date: 1/16/02 12:28pm
Subject: Microsoft Settlement
To Whom it May Concern,

The proposed settlement accepted by 9 of the 18 states is a good settlement. I believe it is fair and in my best interest as a software consumer, computer user and business owner. I believe that the states that don't want to settle are being influenced by big business interest who want more than a level playing field. They want to tip the playing field their way and see this as a great opportunity to do just that. I do not believe for a minute that the states that refuse to settle do so in the best interest of their constituents much less consumers in general. I believe what they want will, in the end, hurt not only the consumer and the software industry but will hurt the economy in general at a time when the economy is in the depths of a recession. How much more do we the consumers have to put up with at the hands of big business and their political cronies?

Put an end to the abuse of industry and the legal system at the greedy hands of a few rich and powerful business men who want nothing more than to ELIMINATE one of their competitors; a result that can only be bad for the consumers.

Thank you for this opportunity to express my point of view on an issue that is very important.

Kindest Regards

Subject: US vs.
Microsoft Settlement

I object to the method of process that this case has taken. The States are looking for a handout just like they got from the tobacco settlement. This is pure greed.

As a user of Microsoft products I fully support their development efforts. Yes they are aggressive in their business practices but no more than many other industry leaders. Netscape's original complaint was a whining company defeated at the market place by a better product. Another cry for compensation only this time from a disgruntled competitor.

Why not let Microsoft do what they do best—provide technology and innovation to schools and public facilities so we all benefit. As proven in the state's tobacco settlement, the money is not being spent on what it was intended for but rather allocated elsewhere for other things.

Subject: Microsoft Settlement
To whom it may concern:

I have been an information technology professional since 1991. In my present career I'm a computer consultant that supports Windows and Macintosh computers. My Macintosh business is almost nil and the clients I do have on Mac are all phasing them out—even though the Macs are fast, and run MS Office quite well. And now more than ever when Mac OS X costs \$149 to upgrade and Windows XP costs \$50 more at \$199—those clients are still staying the course and phasing out Macs and PC's running other operating systems and software.

How can this be. . .

FACT: DOJ has determined Microsoft to be a monopoly.

Even though the judgment was recent, this has been the case since 1995. And is still the case, now! How can you explain it when people \$50 more for a product to upgrade even though the competitive product is equal and in many cases superior: Monopoly. How can it be that my Mac clients are phasing out their 2 year old Macs and buying Machines with Windows XP pre-installed without paying for the cost of the operating system:

Monopoly. Here's the Microsoft strategy even now: Lose money on Windows XP on the new PC's and since Windows is the only choice in the desktop arena, inflate the price charged for upgrades. And from my economics 101 class Microsoft can only do this because they do in fact have a Monopoly.

THIS IS UN-AMERICAN!

DOJ has a tough job. How to remedy? The goals of remedy are correct. But I would urge:

1. Publish ALL Windows API information
2. Chaperon Bill and Ballmer so they are force to—share—this for 10 years
3. Have a group validate the API as to it's correctness

4. Have 2 & 3 be implemented though an—International—standards group like the ISO, ANSI or some other such organization

And more to the point

1. Force M\$ to charge a normal market value for their OS to hardware VARs like Compaq, Dell, Gateway, etc.

Thank you for considering my comments.

In the interest of public comment:

I think the only way that true competition in the interest of the consumer can be returned to the OS/Office Software industries would be to publicize and standardize the API and file formats. The only useful punishment for Microsoft's wrongdoings would be to hamstring it's power embodied by it's intellectual property. But beyond this sort of childish retribution, the only way the software industry can truly benefit the consumer (in the spirit of processors and AMD/Intel) would be take the 'switching costs' out of the equation and allow for the competition in the industry to center around providing benefits to the user not elbowing (and/or strong-arming) one's way through backroom deals.

Thank you

Kurt

Subject: Microsoft Settlement

Microsoft is a great American company that has suffered years of government intervention on behalf of the competitors of Microsoft, not the public. Microsoft's competitors have been unable bring to the

world fantastic products at almost unbelievable low prices that Microsoft has achieved because, Microsoft created numerous visionary useful products that are seamless, and work in harmony with each other without special knowledge of the user. This forward thinking vision produced economy of scale, market interest and lower prices. This benefits consumers and led to tremendous increases in productivity. Instead of relentless pursuit of Microsoft our government should protect Microsoft against worldwide theft of intellectual property and cherish and respect the company that led our country to greater productivity and leadership in the information age. I believe there is plenty of room for challengers with new visions but not much for the less creative. Microsoft rewards its employees, stockholders and created a new paradigm for others to follow.

Therefore without hesitation I recommend that we proceed with settlement of the case without any additional wasteful litigation against Microsoft.

RE: Comments on the Microsoft Proposed
Settlement Agreement

Dear Ms. Hesse:

Microsoft is a company that has long
provided good products to consumers and
businesses. When word of a possible
settlement in the Microsoft case broke, the
markets surged. In spite of gloomy economic
reports, the news was viewed by investors as
a sign that our nation's critically important
high-tech industry could move forward
without the continuing shadow of
government interference. It is my view that
the provisions of the proposed settlement
will be good for consumers, businesses, the
technical sector and our economy as a whole.

As I understand it, the settlement places
sanctions on Microsoft without destroying
the company. These sanctions will foster
greater competition in the software industry
and give consumers greater choice when they
purchase and enhance their computers. I am
encourage by the actions of the Department
of Justice and your efforts to settle this case.

Please accept this correspondence as my
full support for both the Department of
Justice and the nine Attorneys General in the
efforts to finally put an end to this case and
agree to a settlement that is in our nation's
best interest.

Sincerely Yours,
Mike Huckabee

Subject: Undermining our faith in the US
Government

Hi:

My two cents on the Microsoft antitrust
settlement. . . in a word, ridiculous.
Microsoft is the largest, most successful
monopoly in US history and has a corporate
culture, starting with Bill Gates, of lying,
stealing, cheating, badgering and illegally
bludgeoning everyone and anyone whom
they perceive as a "competitor". They will
continue their rampage in the computer
industry until the US Government actually
DOES SOMETHING to end their
monopolistic practices.

The current settlement on the table is not
this solution but rather a pathetic slap on the
wrist. It just goes to show you that when you
have enough money you can BUY the right

to lie, steal and cheat in the marketplace (in
general, the corrupt politicians in
Washington are almost wholly responsible
for this with the Republicans, which I am
embarrassed to admit that I am one, leading
the way in CASH for FAVORS).

Oh yeah. . . and about that rhetoric
floating around about it being anti-American
and anti-Capitalist to prosecute Microsoft. . .
the obvious source of this sentiment is
Microsoft. This is Bill Gates propaganda
campaign to derail the antitrust ruling against
Microsoft and WE DON'T BUY IT.

There is only so much we as American
citizens will tolerate when it comes to the
fleecing of the general public. The time is
drawing nigh where there will be a wholesale
revolt against this kind of crap and WE THE
PEOPLE will begin electing reps who
actually represent us and not BIG
CORPORATIONS.

Subject: Microsoft Settlement

It makes no sense to deny kids to access
to some of the best technology in the world
as part of the settlement just for the purpose
of giving Apple a leg up by forcing to MS to
provide money to buy Apple software and
products. If MS produces inferior products to
Apple there could be an argument, but they
are both good technology. It seems that
schools could get more for their money if MS
donates MS products as part of the settlement
rather than having to purchase a competitors
high priced products that are no better. Lets
think of giving the schools more not less.
Attempts to put MS out of business are
misguided as it will become extremely
expensive to hire technicians who are needed
to resolve issues involved in making the
switch. The technicians get rich and the
schools loose.

How is it that Apple seems to dominate the
market for elementary school computer
technology. Have they engaged in unfair
marketing?? Why can't the two work together
and make their software interchangeable for
each others OS, rather than the government
setting up a scenario where one will be put
out of business. resulting in more of a
dominance of the market.

While I m no real strong fan of Microsoft the government s case against the company is nothing more than a class warfare witch hunt promulgated by the Clinton Administration and carried forward by Janet Reno. This act alone was largely responsible for high tech stocks to plummet in value. Bill Gates and his cohorts are a prime example of ordinary people accomplish -ing extraordinary things in our capitalistic society. What Micrsoft has REALLY done is to pioneer and encourage others (a.k.a the competition) to pioneer inno- vative breakthroughs in computer technology that has brought us consumers better products at the lowest possible prices. If the Microsoft s competition can t stand the heat of competition they should look for another line of work. We had a saying back home: If you can t run with the big dogs then stay on the porch! And the government should end this nonsense NOW and get out of the way of capitalism at work. Uncle Sam has done enough harm to consumers with the wrong-headed persecution of Bill Gate et al.

You have rolled over and died. Microsoft has beaten you with a shape stick. You will probably never see this email. Microsoft is the worst company in the world and the DOJ wants to let them off with a slap on the wrist? Search your history: 1955 Consent Decree between IBM and DOJ. IBM was broken into 3 groups at least and not allowed to disparage or unhook. In 1999 they got you DOJ to recind the CD.

Do the same thing to Microsoft. Dont allow them to have IE an integral part of the OS. Separate the OS from the applications. Tell them to play by the rules or cease and disist. No more bulling of small companies. DOJ should have started from the position of putting Microsoft out of business. They are not the All American firm they want you to believe. They are ruthless and destructive and destroy every thing and every one in

their way. Rant and Rave. I just got a phone call from an organization the called itself Americans for Technology Leadership. It s a front for Microsoft. Someone called and I told him my point and he hung up the phone. No guts. Wanna play hardball. So far DOJ has played softball. Dont send me an automatic response.

 Subject: Microsoft Settlement

I think the settlement set forth is in the best interests of all parties involved and should be agreed to by all.

I believe this case has dragged on long enough at the expense of the American taxpayer. I still believe that the original foundings of the case are not warranted and that in fact the reason why Microsoft has captured the market is because they sell innovative products at fair market prices. Every effort should be made by the Justice department to conclude this lawsuit.

To be brief: too much valuable time and energy have been spent on a case whose outcome thus far benefits competitors and lawyers in a society that claims to value the competitive process. It sets a most dangerous precedent of intrusion and influence on the conduct of ordinary business affairs.

Realizing that the damage done cannot be undone it is imperative to move on with a compromise solution . The States AGs are presumably free to continue to espouse their position leaving one to hope they will come to recognize its past time to bring a sorry event to an imperfect closure. No comment could be more telling than the foreign press who stand in amazement at the huge

contradiction this trial represents and who also wonder at processes that aim to destroy an economic crown jewel.

Thank you for the opportunity to express this view.

The best strength of Microsoft is that despite occasional missteps it methodically plods toward excellence and is more adept at it than most of its competitors. Microsoft has offered solid products at reasonable prices for many years. Microsoft seldom makes protracted missteps and I have confidence that their products will be there for me in the future. Some of Microsoft s competitors have tried to use the courts to undo their failures in the marketplace. It is the end users who ultimately decide who wins based on how a product fulfills their individual value system (features price service etc.). Microsoft does well because it is focused on satisfying end user value systems. Remaining competitively focused is a requirement (not an option) for any company to maintain end user allegiance in the information technology marketplace. It is time for Microsoft s competitors to stop trying to maintain or acquire market share via the courts. If they want to compete for the hearts and minds of the consumer they must do it with attention to their own products.

I think it s past time to get this travesty of justice behind us. Personally I don t think Microsoft or Bill Gates owes the government anything whatsoever. If it weren t for Mr. Gates and Microsoft common working people would not have computers in their homes. Maybe that s why the government is after him.

If his competitors aren t as good as he is and can t compete he should not be punished for being good at what he does. Why isn t Alex Rodriguez punished for being a good baseball player? If the gov t wants to go after a monopoly they should go after their own Postal Service. That s the biggest monopoly in the world and the most inefficient. In areas where private industry has been allowed to compete with them such as Parcel Post or overnight delivery they have eaten their lunch. These Washington politicians and bearaucrats need to read Atlas Shrugged. We will cease to be a capitalist society if the successful keep being punished for being successful. They will say To hell with it. People like Mr. Gates are a treasure to humanity and should be treated as such

especially by our own government. What would our founding fathers think of this fiasco!

 General Against Microsoft

In my opinion, the 9 AG's attempts to coerce Microsoft, extort money, and inhibit their ability to pursue business in an unfettered fashion, while using the guise of "protecting the consumer" is pure bunk! Other than Microsoft's competitors, to my knowledge, there has been no hue and cry from consumers claiming they were taken advantage of by MS. In fact, it's just the opposite. MS has contributed far more to our progress in software development, the economy and numerous other ways than all of the AG's put together could dream of.

Perhaps you should look into the political aspirations of these 9 AG's as the true reason this case is still alive.

This is a frivolous pursuit and should be duly deposited in file #13.

One man's opinion.

From: Sam Cranford
To: Microsoft ATR
Date: 1/16/02 1:42pm
Subject: Microsoft Settlement

To whom it may concern, In reading the proposed agreement against Microsoft, I would like to add that I disagree with Provision III. J. It is essential for Microsoft's competitors to have access to the full Windows and Office APIs, and to the file formats for MS Office.

Without these, Microsoft will forever hold the upper hand in developing any application to run on their OS. This has been their key to their monopoly power, their method of devaluing competing products. If the competition could access these two aspects of the OS installed on more than 90% of the worlds PCs, then the world would benefit from more productive, more secure applications without also suffering from intolerable, hostile vendor lock-in. Let's not forget that Microsoft has arrived where they are, both in market share and legal trouble, by abusing their monopoly position. They must be forced to pay a price much higher than the proposed settlement, which will do virtually nothing to right the numerous wrongs that Microsoft has already committed. Only releasing the APIs and file formats will allow significant reversal of the existing monopoly.

Thank you for considering the peoples' proposals,
Sincerely,
Samuel K. Cranford

From: Jeremy Lassen
To: Microsoft ATR
Date: 1/16/02 1:50pm
Subject: Microsoft Settlement

I have been an IT professional for 10 years, and have watched the Microsoft Monopoly grow and grow, with no relief in site. Currently, I work at the University of California, San Francisco where I run a number of computer labs. In my duties there, I have seen first hand the heavy handed powers of market coercion that Microsoft wields. Their most recent licensing schemes amount to blackmail, forcing us to pay for twice as much for a software product if we want any chance of having bugs fixed down the road. I have watched for years as Microsoft has abused its monopoly powers and eliminated competing companies from the market, going as far back as MS Dos 3.3 vs DR Dos 4.0.

I would LOVE to deploy competing products, but the threat of file level incompatibilities for their office suite of products, and the threat of changing API's has repeatedly made it impossible for me to do so. From my perspective, the best remedy would be to open up the Windows API, and lock in the office suite file standards, and have a third party technical body, or government agency oversee and approve any extension to these standards.

Thank you for taking my viepoint into account.

Sincerely,
Jeremy Lassen

Re: Microsoft Settlement.

My name is Gem Burke and work in the communications industry as an engineer. I do not claim to be a computer expert or geek, although I probably know more about computers & software than the average user. I am simply a user of computers and their software and I would like a statement about the 'Microsoft Settlement?'. I have tried reading at least some of the papers on this action and incorporate that with what seems to be happening in the real world. On this very day, I installed my tax program from Quicken and at the end of it Microsoft's Internet Explorer was installed on my computer. I wasn't asked, it wasn't an option. Then I was asked if I wanted to install AOL. So here it is January 16, 2002 and after all the denials of Microsoft, I'm still getting IE shoved down my throat whether I like it or not. They (Microsoft) are obviously not concerned about anything happening to them in court. This is not the first time Intuit has done this to me and complained to them about this then to no avail.

I could tell you about the site on the internet I logged into that changed all my defaults from Netscape to IE or any of quite a number of other examples of blatant examples of monopolistic behavior but the point I thought important is even on this late date, Microsoft is continuing to muscle out competition confident that it will come through this proceedings unscathed.

I work in the telephone business and one thing for sure, as AT&T was accused of being a monopoly and they were forced to breakup into a dozen smaller companies for anticompetitiveness then, Microsoft should be broken up into 200 smaller companies because not only is Microsoft bigger and stronger, he doesn't even try to hide the fact that he plans to muscle everyone else out. I'm not a lawyer but a blind man could see the blatant anticompetitiveness of Microsoft and

the fact that he can use his resources to beat off anybody including the justice department.

Thank You
Gem Burke

From: Mike DeRosa
To: Microsoft ATR
Date: 1/16/02 2:08pm
Subject: regarding the Microsoft Settlement .

I've read that you are accepting comments from personal computer users regarding the Microsoft anti trust case, and I'd like to make one or two, very briefly.

I purchased my first personal computer in 1986, and have owned six others. I understand Microsoft's desire to keep it's programming code secret, but if they are going to supply the operating system for 9 out of 10 computers they must be forced to allow users and vendors to have access to the basic parts of that operating system, just as a car owner or mechanic has a right to know how an internal combustion engine works, and automotive manufacturers have an obligation to provide dealers with manuals and parts. It's almost that simple.

Microsoft's practice of "hiding" parts of their programming code violates anti trust laws and must not be permitted. I don't advocate breaking up the company, I just want to see a level playing field, and forcing Microsoft to document it's "applications programming interface" (API's) would allow truly free enterprise in the software business.

Thank you for listening, and I wish you good luck and wisdom in this very important case.

Subject: Microsoft vs. DOJ

It is high time to "get over it" and get on with other business. Utah Attorney General Mark Shurtleff and Massachusetts Attorney General Tom Reilly are blowing smoke up everyone's ass for their own political gains (by going public asking for help to make their cause just). This trial has become a circus event ever since the original judge made his negative views on Microsoft open to discussion. The American justice system is ludicrous when lawyers know how long they can bicker over anything they want not to mention when the courts allow those jackasses the ability to do so. We're spending the money of every states' taxpayers, not just Utah and Massachusetts taxpayers' money.

I ask that everything against Microsoft become settled (finally). Keep an eye on them and when they start to get out of line then smack them. Enough has already been done.

Subject: PROPOSED SETTLEMENT

I believe the litigation against Microsoft is outrageous and as usual the end result will be that the only individuals benefiting from the case is the lawyers!!!! I firmly believe we should do whatever is necessary to settle this case ASAP. I appreciate the opportunity to have my "individual" voice heard, however, when I really would have appreciated having my voice heard was when the charges were initially brought against Microsoft. Unfortunately, there was no interest at that critical time. If our elected representatives truly value our "voices" let them be heard when it really matters. Asking now is an after thought and it appears some of our representatives are doing some "grandstanding" for their personal political gain. That having been said—let's settle this thing and let our government officials and the American people move on to more important issues!

Greetings,

This is not the first time I have emailed this address about the currently proposed settlement between Microsoft and the USDOJ. I am wanting to point out that we are listening and watching and that we feel that they are still trying to stifle competition in the computer industry and crush standards that they do not own or developed themselves.

Please take the time to read this article:
<http://www.theregister.co.uk/content/54/23708.html>

Thank you for your time.

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Attorney General Ashcroft:

I would like to give you my comments on the Microsoft anti-trust case. This three-year case has had a debilitating effect on one of

our nation's most outstanding companies, on the nation's technology sector, and on our economy. I recommend that you endorse the proposed settlement plan. The plan is fair, Microsoft will retain its present corporate configuration and be allowed to become more productive, and the Justice Department will now have an oversight responsibility to ensure that Microsoft does not return to its prior alleged anti-trust activities. Microsoft's competitors will now have access to its technology and Windows platforms. This is a fair and workable compromise.

I believe it's in the best interests of our country to end this litigation. Please work to that end.

Sincerely,
Leon D. Boncarosky

From: Robert.Cheetham@radisys.com@inetgw
To: Microsoft ATR
Date: 1/16/02 11:16am
Subject: Microsoft Settlement

I feel Microsoft should not benefit from having broken anti-trust law. It has abused its monopoly position, and as a direct result MS Windows is ubiquitous on the desktop. This may or may not have been good for the consumer but we'll never have to opportunity to know what might have been if MS had not been so (unfairly) dominant.

Remedies. I think that if product support is going to be discontinued then (windows 3.11, windows 95, etc.) then MS should be forced to release the source code for the discontinued product either to the public domain or to a separate company charged with providing support. I feel it is unreasonable to force consumers (whether private or corporate) to buy product upgrades merely to maintain there current application. If Ford or GM refused to provide parts for, or allow 3rd party companies to service discontinued automobiles there would be public outrage.

Subject: Microsoft Settlement

To Whom it May Concern,

This will be a short letter, as I'm sure you have many to go through. Let me say up front that as a computer user, programmer, and IT professional, I feel very strongly that the proposed Microsoft Settlement will do nothing to punish past monopolistic practices, or to prevent future violations of anti-trust law.

Most importantly, what the settlement fails to address is that Microsoft is /already/ entrenched in a dominant, monopolistic position, achieved in large part through unfair business practices. Creating a Technical Committee may (or may not) help with future problems, but does nothing to fix what has already transpired.

Lastly (for this letter; I do not pretend that I am addressing a majority of the problems with the settlement), I would point out that much of Microsoft's monopoly is maintained through mechanisms not mentioned in the settlement. For example, Microsoft Word is the dominant word processing software mainly because it's file format is proprietary and controlled by Microsoft—and changed frequently, so that no other program can reliably use it. If a standard file format were enforced, competing products would have a chance to co-exist and interoperate with Word; something that just cannot happen today.

I urge you in the strongest possible terms to reject this settlement and seek stronger action against Microsoft.

Subject: My view As a consumer As well As Stockholder.

TO WHOM SO IT MAY CONCERN

Hon. Attorney General,

The Microsoft lawsuit should settle as soon as possible. I understand that management harmed Netscape but that corporation was sold at premium. Now in future we should have better government oversight that nor microsoft or any large corporation harmed emerging corporation, or individual entrepreneurship in this country which is good for the country. At the sametime this country is becoming litigatig society which harms corpoation like Microsoft, Physicians, Consulting firms or any small or large business that harms the nation. We are producing more attorneys at the cost of innovation, enterprenurship, small and large businesses and scientist and technologist. this litigating society will be the downfall of U.S.A .

Therefore, settelment is the best interest for the country and we can progress.

Sincerely,
NAYAN DALAL.

From: Robert Schroeder
To: Microsoft ATR
Date: 1/16/02 2:20pm
Subject: Microsoft Settlement

I am a software developer, that has worked with Microsoft products as well as on the java platform. It seems to me that there is an enormous misunderstanding of the software industry and an outdated use of the antitrust law. There are new issues that were left completely unaddressd as far as I can tell, and now it appears that this costly trial is taking another bad turn.

The overwhelming factor in Microsoft's 'monopoly' is the so-called network effect, something they took advantage of by being the most attractive to buyers. It is a natural state for Software Operating Systems. The consumers are much better off if most people use a single operating system, and most developers can code to a single api, as coding for two almost doubles the work.

Some are suggesting that Microsoft's API should then be locked down, so other people can copy it. There are several reasons that this is a bad idea. That API is changing, or rather, growing as quickly as the software industry is progressing, which at this moment is bigger than it ever has in any period in the past (and much bigger than the during the .com vaporware era). Microsoft needs to update its software to reflect this, and they need to do that quickly, and for a variety of reasons. It is also important that they are able to fix poor design, something they should finally be able to do with the versioning built into their new software.

By all means have Microsoft hire a special overseer to make sure they are in compliance, but please do not hamstring the software industry in the process. We are suffering enough in this economy as it is.

Honorables,

It has come to my attention that Microsoft has recently acquired fundamental patents for 3D graphics technology and techniques from SGI. This is a dangerous situation, as it grants Microsoft significant leverage over the independent 3D hardware manufacturers who are currently supporting the only rival to Microsoft's Direct3D graphics API, OpenGL.

Microsoft has in the past worked to delay and distract advances in 3D graphics technology, such as in the abortive "Fahrenheit" plan with SGI in the 1990s. During that period, SGI was transitioning from selling Unix-only workstations to begin selling workstations running Microsoft's Windows NT. At the same time, OpenGL was gaining on Microsoft's Direct3D in terms of features, hardware support, and developer support. If SGI wanted to sell NT boxes, SGI would have to agree to the Fahrenheit plan. The perfectly timed Fahrenheit deal slowed that advance of OpenGL by, among other things, reducing SGI's active promotion of it, and allowed Microsoft's Direct3D to gain a strong lead. Yet OpenGL support still survived due to the interest of software developers and the support of third party 3D hardware manufacturers. This latest move by Microsoft to acquire core 3D technology patents would finish the hatchet job, granting Microsoft the power to force third party 3D hardware manufacturers to drop support for OpenGL, and ultimately stifle competition and innovation in the marketplace.

Please do not let this come to pass.

Date: 1/16/02 2:26pm
Subject: Microsoft Settlement

To Whom It May Concern:

As a citizen I am very concerned about Microsoft's ability to continue to function as a monopoly in the software and operating system markets. I strongly urge the DOJ to pursue the complete disclosure and public documentation of all Windows API function and parameters and file format specifications for its Office software. Allowing Microsoft to maintain this information as secret is limiting the competitiveness of the software markets and hurting consumers.

Also, I urge the DOJ to force Microsoft to stop forcing computer system distributors and marketers into a restrictive licensing policy. Microsoft's current licensing policy is limiting consumer choice and market competition. Computer distributors must be allowed to provide consumers with a choice at the point of sale, to market computers with alternative Operating Systems in a possible multi-boot environment.

Budd Hirons.

US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Sir:

As I read more about the Microsoft settlement, I can't help but think that the government has more important issues to focus on. While there are intense international problems brewing daily, we

spend more resources on litigation against the free market in America. Not only has Microsoft been extremely helpful in many areas, but they have also made a great deal of concessions in this recent agreement with the intent of moving forward.

Having grown up with a father that was blind, I have been particularly impressed by the work that Microsoft has done with the handicapped. Microsoft helped to enrich my father's life and always bent over backwards to provide assistance when needed. Without Microsoft's innovations my father would have never been able to use a computer. They provide help in so many areas and for so many causes, and people tend to miss hearing about these issues. Now that Microsoft has been under fire, they again have agreed to work with the IT sector in moving on and holding our place in the global market. They have agreed to make changes in licensing, marketing and even design. On top of this, they have agreed to be monitored by a committee the entire time. This is definitely a step toward a more unified IT sector. Please help Microsoft provide users with superior products by continuing to innovate in this highly competitive global market. Let us support this settlement and help our technology industry get back to business.

At stake is the USA's position as the number one technology innovator in the world. This is part of what makes America great, and why my father, whose blindness was caused by exposure during the Manhattan Project, appreciated the attention Microsoft gave to his needs.

My biggest fear is the needs of actual users have been subjugated to the wants of greedy competitors who rather spend money on litigation and lobbying than research & development.

Sincerely,
Mark Walsh

From: Neils Christoffersen
To: Microsoft ATR
Date: 1/16/02 2:34pm
Subject: Microsoft Settlement

I'm writing to voice my concern about the Microsoft Settlement. Let me give you a little background about myself first. I'm currently a Senior pursuing a B.S. in Computer Science at a university in South Dakota. I am also employed at a local dot-com company, where I design and develop applications for the web.

The activities of MS in recent years is extremely disturbing to me and my colleagues. The company has repeatedly taken action to force smaller companies out of their respected markets. The latest turn of events came when MS bought many of SGI's 3D patents. Big deal you say. Well, this basically allows them to lock up these technologies, not licensing them to hardware companies that don't agree with MS. This could spell bad news for any company who sells non-DirectX products.

Of even more concern is the continually lack of security in Microsoft's products. The first that comes to mind is Internet Information Services (IIS). Since it's initial release, IIS has had several huge security flaws, and even more minor ones. Last I checked they were averaging about 2 new bugs being discovered every month. These bugs range from ones that allow web users to see the (proprietary) code behind a web site [code that could contain sensitive information, such as passwords, code which should not be seen by the public] to one that allowed IIS to become infected with a virus, and constantly search for new victims. The only way to avoid these security faults now is to constantly keep up with updates released by Microsoft. Now, I only maintain a couple of machines with MS software installed on them, and it's a pain to keep up on the latest patches and fixes. I can't imagine hosting a data center with potentially thousands of computers and having to continually update them.

THIS IS UNACCEPTABLE!

I ask you, no, beg you, to not give Microsoft another slap on the wrist. A fine is nothing to this company.

Thanks for your time.

To: 'Microsoft.atr(a)usdoj.gov'
Date: 1/16/02 2:37pm
Subject: Microsoft Anti-Trust Settlement

Dear Sir:

In regards to the DOJ's case against Microsoft. I've been in the PC software and hardware business since there was a PC and I've seen Microsoft break or bend to the breaking point every agreement they've ever had with the government and all the while driving competitors out of business and stifling any vision of innovation but their own. Also making unilateral changes to their end user and corporate license agreements that are nothing short of Orwellian and all the while foisting bug ridden software with major security flaws off on the unwitting public. With it's millions / billions of dollars in revenue annually Microsoft has gotten to be a law unto itself with no regard for the consumer or in many cases the government since it feels no compunction about breaking prior agreements when it suits the Microsoft Management. I would ask you not to settle for a simple slap on the wrist, I truly believe that breaking up Microsoft would not work to the benefit of the consumer or address the issues that have brought us to this point. I would think that strong oversight by knowledgeable independent industry leaders who could take immediate action should Microsoft break any of their agreements or show further wrong doing would be the best course of action.

Sincerely,
Chris LeFebvre

From: Daniel Raymer
To: 'Microsoft.atr(a)usdoj.gov'
Date: 1/16/02 2:42pm
Subject: Microsoft Settlement

It is in no doubt that Microsoft is a very strong monopoly. But the terms of the settlement for their actions as such leave much to be desired. In essence, to the common man, it is like being caught robbing a bank, being told not to do it again, and then let off the hook. These actions cannot go unpunished. Microsoft continues to strong arm consumers even to this day. If I ask to buy a Dell computer with no OS on it, I still

have to pay for a Microsoft OS license even though I do not get one. If I ask for Mozilla, Opera, or Netscape web browser to be installed instead of Internet Explorer, I cannot get those choices. In the home PC market where MS holds 95% of the OS market, I am not allowed a choice. When a choice does appear, i.e. using DR-DOS 7 or Linux, Microsoft refuses to allow a large amount of software to run on it. Between Windows, Office, and Internet Explorer, I am forced to stay with MS because of my lack of choice elsewhere. Please do something that is more applicable to this situation. The punishment should fit the crime.

Subject: Microsoft

Please permit the following to be entered as part of the public comment period concerning the Microsoft case. As the director of a small, not-for-profit arts council, I must always watch the bottom line. It has been my feeling for a number of years that Microsoft forces me into an all-or-nothing deal every time I must make careful consideration of my agency's evolving technology needs. I am forced to buy what I do not need and, at the peril of compromising a very imbedded operating system, compelled to remove those unwanted programs in order not to have my hard drive uselessly gobbled up.

Please consider seriously the following constraints upon Microsoft:

1. Prevent an extension of Microsoft's monopoly by placing Microsoft products as extra-cost options in the purchase of new computers, so that the user who does not wish to purchase them is not forced to do so.
2. The specifications of Microsoft's present and future document file formats must be made public, so that documents created in Microsoft applications may be read by programs from other makers, on Microsoft's or other operating systems.
3. Any Microsoft networking protocols must be published in full and approved by an independent network protocol body.

Thank you.

From: London.Crockett@scottforesman.com@inetgw
To: Microsoft ATR
Date: 1/16/02 3:06pm
Subject: microsoft settlement

I am quite troubled by the proposed settlement to the Microsoft case. It appears to do little to actually restrain Microsoft's flagrantly anticompetitive and monopolistic practices, nor remedy the damage done to consumers and Microsoft's competitors. Worst of all, it appears to me to offer Microsoft little reason to comply with the already meager punishment the settlement demands.

I hope that the court will consider remedies that have the teeth to get the job done so that the software industry can become a truly competitive environment which routinely births innovative, interesting and useful products without fear of Microsoft "embracing and extending" Windows to shut out the real innovators from their innovations. Already, even in the shadow of the judgement ruling that Microsoft is a monopoly, Microsoft appears to be on verge of forcing its way into control over the Internet media market, effectively killing the innovative products from Real and Apple. One has to wonder if anyone will bother developing the truly interesting new applications which have driven our economy over the last decade if their efforts will soon be overwhelmed by Microsoft's predatory practices. I hope the court will prevent that from happening.

Salon.com's Scott Rosenberg has written an interesting article on the case, in which he proposes that Microsoft be required to release its all of its APIs so that competitors can make functional competing products (see: <http://www.salon.com/tech/col/rose/2002/01/16/competition/index.html>). His argument makes sense to me.

Thank you for your time.

From: Chris Durant
To: Microsoft ATR
Date: 1/16/02 3:06pm

Subject: Microsoft Settlement

Dear Mr. Ashcroft: I believe strongly that the Microsoft Corporation is one of America's greatest assets. It is a company that provides constantly improving products that help make tens of millions of people more productive, happier, and richer. We live in an increasingly global economy. When the U.S. Government attacks and tries to cripple a domestic company that has become "too" successful, there is no shortage of foreign competition that will gladly step in to take market share, unencumbered by governments with beliefs in forced "equality" between corporations, regardless of the value or contributions that the companies make. Microsoft has never harmed me. Its products have enhanced my life tremendously. If Microsoft is a monopoly, why does it continually improve its products and lower its prices? For the good of the American economy and consumers everywhere, please settle with Microsoft as soon as possible. Doesn't the U.S. Government have better things to do than fight one of the best things that has ever happened to this country?

Sincerely,

MTC-00012804

Dear DOJ,

I am writing this as a citizen concerned with the economy of this country. Please settle the antitrust suit as quickly as possible and let Microsoft get back to doing the business that they do best.

Also, any attorney generals that want to drag this out any longer should be reminded to listen to the people of their states. I am ashamed that Wisconsin attorney general Doyle let his greed get in the way of common sense.

Sincerely,

Lawrence M. Kolden

Honorables,

It has come to my attention that Microsoft has recently acquired fundamental patents for 3D graphics technology and techniques from SGI. This is a dangerous situation, as it grants Microsoft significant leverage over the independent 3D hardware manufacturers who are currently supporting the only rival to Microsoft's Direct3D graphics API, OpenGL.

Microsoft has in the past worked to delay and distract advances in 3D graphics

technology, such as in the abortive "Fahrenheit" plan with SGI in the 1990s. During that period, SGI was transitioning from selling Unix-only workstations to begin selling workstations running Microsoft's Windows NT. At the same time, OpenGL was gaining on Microsoft's Direct3D in terms of features, hardware support, and developer support. If SGI wanted to sell NT boxes, SGI would have to agree to the Fahrenheit plan. The perfectly timed Fahrenheit deal slowed that advance of OpenGL by, among other things, reducing SGI's active promotion of it, and allowed Microsoft's Direct3D to gain a strong lead.

Yet OpenGL support still survived due to the interest of software developers and the support of third party 3D hardware manufacturers. This latest move by Microsoft to acquire core 3D technology patents would finish the hatchet job, granting Microsoft the power to force third party 3D hardware manufacturers to drop support for OpenGL, and ultimately stifle competition and innovation in the marketplace. This is just one more example of Microsoft's monopoly power, which will not be curtailed in any reasonable way by the government's (gift) settlement. Microsoft is a convicted monopolist, and should be punished both for the actions for which they have been convicted, and to prevent future abuses.

Thank you,

Charlie Rehor

Subject: Microsoft settlement is weak

Dear Honorable Sirs/Madam:

I am not opposed to all things Microsoft. However, time and again, I feel that I have been harmed as a user, a developer, and an administrator by Microsoft's practices in protecting its desktop monopoly and leveraging it to other markets.

Microsoft has a history of preventing other software from working properly with its operating system. DR-DOS is a notable example. And any user can also tell you how their Netscape, or Realplayer or any other piece of software that Microsoft competes with, suddenly fails to work after they have installed a Windows update.

Microsoft's abuse of its monopoly eliminated choice long ago, and it is now difficult to find a competitive product. Due to this, I am skeptical of the efficacy of the proposed revised final settlement. I also feel that the revised final settlement isn't effective in preventing Microsoft from further leveraging its desktop monopoly. I do not oppose Microsoft's .Net initiatives, as the competition will be useful in forcing both .Net and Java 2 Enterprise Edition to improve. But allowing them to integrate their efforts with their desktop monopoly feels like a mistake.

When AT&T was broken up, there weren't any competitors left in its market. The act of splitting AT&T created competition instantly. In the same way, the barrier to entry is high in all markets tangential to the PC desktop and I believe the situation warrants a similar remedy.

Since the possibility of a breakup of Microsoft has surfaced, many critics have stated that Microsoft is the engine of the technology economy. However, recent evidence shows that the economic impact of a breakup will not be catastrophic. Windows XP has not, and is not, going to jumpstart the economy.

I believe a key benefit of splitting up Microsoft is the elimination of their monopoly on the desktop. Ensure that the companies follow a reference standard that they agree to. Allow them to add functionality so long as it doesn't interfere with their reference standard for the operating system. In this way, they can be forced to adhere to standards and to create compatible systems. This will create competition, fostering innovation, and benefiting customers while minimizing harm.

Though I doubt that a breakup will be agreed upon, I must insist that the current proposal does not go far enough to protect customers.

Thank you for the opportunity to comment on this case.

Sincerely,
S. Cheng

Subject: Microsoft Settlement

Honorables, Microsoft has repeatedly abused its position in the software market to further its own agendas. The release of products such as the latest versions of both Windows and Office only look to continue this pattern of predatory behavior. Through the use of proprietary file formats and forced incompatibilities with older versions of the same software, they force users to upgrade when doing so might otherwise be unnecessary.

In addition, Microsoft has recently acquired the patents to several key features in of the Open GL architecture, a 3D graphics technology. Considering Microsoft's pattern of behavior regarding technologies that are superior to its own, (Embrace, extend, or extinguish) this situation is potentially dangerous. Dangerous because it grants Microsoft significant leverage over the independent 3D hardware manufacturers who are currently supporting the only rival to Microsoft's Direct3D graphics API, OpenGL.

In the past, Microsoft has attempted to modify other technologies to suit its own

needs and at the same time lock out potential competition. A good example of this is the attempt to modify Sun's Java. If you recall, Sun won that case against them and Microsoft, rather than support Java as it was intended, has dropped in-house development of it altogether. The results of this are yet to be seen, but many third party developers are second guessing their need to support an important technology like Java because Microsoft no longer is.

There are many other examples of this behavior that cannot be overlooked, but would take pages to cover in any depth. So I will leave you with those two and advise you to look to Open source and alternative software advocacy sites for more evidence as there is a great deal of evidence to be found in the case against Microsoft.

As an IT professional, I urge you to not take this case too lightly and let them off with a simple slap on the wrist.

Thank you
Robert Boggs.

Subject: let settlement stand

As a voting tax payer I am putting my two cents worth in on the Justice Department and Microsoft settlement. The parties that worked out this settlement have already put 4 years into it. So let it stand and we can move on. Just because some states can not agree does not mean it is not a good agreement. It seems to me the states that are not in agreement do have another agenda besides protecting the consumer. When the state of California is willing to do the financial backing of the other states in order to carry this on, and California happens to be the home state of Sun and Oracle. I do question where the attorney general offices of those states interest really lies. In the time of budget short falls is the average tax payer aware of were their tax dollars are going. When you read in the paper that California is the only state that has allowed a Class Action Law Suit from being settled that would have benefited the poor school district. And the fact that class action law suits only benefit the lawyers. The average buyer of Microsoft software would get just 10.00 back if the lawyers have their way. The whole idea of carrying on with the legal entanglement does not make common sense.

Subject: Microsoft Settlement

Dear Sir or Madam:

I am writing in favor of the settlement the Dept. of Justice has reached with Microsoft. I am a self-employed CPA and a Microsoft shareholder. I have followed the case closely over the last several years. During this time, I have read the trial transcripts, the briefs, the court opinions, and most other commentary on the case.

In my opinion, the proposed settlement closely mirrors the Court of Appeals decision and makes reasonable inferences on how the Court would rule on things it did not consider. I especially like Assistant Attorney General Charles James's recent comment to the Senate Judiciary Committee about how a mythology has grown up about this case. The Court found violations, but many other claimed violations were thrown out. The proposed settlement of the nine litigating states, in contrast, bears no relation to the Court's decision, and simply seems to want to destroy Microsoft.

Subject: Microsoft Settlement

Dear Sirs

I forward the following Scott Rosenberg article from Salon.com. I agree with it entirely.

Jan. 16, 2002] The personal computer industry may be in its worst slump in history, but you wouldn't know it by following the news from the processor wars. Over the past two years, Intel and AMD have unleashed an incredible competitive cycle in Silicon Valley. In case you missed it, last week these two chip companies offered dueling releases of new flagship processors: Intel unveiled its fastest Pentium 4 yet, running at 2.2 gigahertz and built with a new .13 micron process that crams even more transistors into an even smaller space. AMD, extending the huge success and popularity of its Athlon line and the Athlon's most recent and powerful incarnation, Athlon XP, announced the XP 2000—a chip that actually runs at 1.67 gigahertz but, third-party tests show, nearly keeps up with the 2.2 ghz Pentium 4 in most tasks (and even surpasses it in some). What's going on here is simple: Good old-fashioned competition drives engineers to continue to work miracles. Intel, the market-dominating behemoth, has always pushed new, improved products out the door faster -and dropped prices more readily—when it feels the breath of a credible competitor on its neck. For many years the competition was feeble, but that changed when AMD's Duron and Athlon chips began giving Intel a run for its money—and, for a time in 2001, actually bested Intel for the fastest personal-computer chip title. Today, these two companies keep spurring each other on, and consumers win big. For most of us, that's all we need to know: Computers keep getting faster and cheaper. The details are of interest only to the legions of hardware nuts, high-performance system geeks and chip-overclocking fans who flock to the Web's hardware review sites. Right? Well, the gigahertz specs may indeed be only geek fodder, but the other details of the Intel-AMD rivalry should be of keen interest to a much bigger crowd. That's because the competitive heat driving the processor market puts the relative frugidity of another part of the computer business into bold relief. I refer, of course, to the business of designing personal-computer operating systems—a business that

Microsoft has dominated for years and that, according to the confirmed verdict of our federal courts, it now monopolizes.

What if Microsoft were challenged as strongly on its home turf as AMD is now challenging Intel? What innovations, improvements and price reductions would the public enjoy that it doesn't, today, thanks to the Microsoft monopoly? This is the big question that hangs over the continuing struggle to find a meaningful outcome to the endless Microsoft antitrust saga. And the AMD/Intel analogy is worth pursuing to try to find some answers. Microsoft and its supporters, of course, maintain that the monopoly label is misplaced. After all, can't you buy a Macintosh without buying Microsoft Windows? Can't you obtain a PC and fire it up with any of a dozen versions of Linux or other Unix-style operating systems? Sure you can—and each of those operating-system alternatives has its partisans. But for use by individuals on their personal desktops, Microsoft Windows holds the overwhelming market share—by nearly every estimate, over 90 percent. Is that simply because Windows is superior to the alternatives? There are certainly people who believe that; and, to be sure, with the release of Windows XP last year, Microsoft finally moved its flagship operating system off the aging and increasingly unstable code base it had inherited from its infancy and onto the relatively more reliable Windows NT/Windows 2000 core. But how much faster might Microsoft have achieved that improvement if it was racing a tough competitor? And how much more incentive might the company have to produce more secure, less virus-vulnerable products today? The historical record is quite clear (and the antitrust trial record is just as clear): The central reason Windows has maintained and extended its market share over the years is not product superiority but a concept economists call "lock-in." Once you have all your data and all your software applications on one operating system or "platform," moving to a different one is painful—it takes time and effort and money (as economists say, your "switching cost" is high). Over the years Microsoft has not had to push harder and faster to improve Windows because it knew that its customers were unlikely to make a fast switch to a competitor. Now, that picture would be very different if you could somehow reduce or eliminate those switching costs. What if competing operating systems could seamlessly and interchangeably run the same programs and utilize the same data files that Windows does?

Here's where the Intel/AMD analogy comes in handy. These manufacturers compete to provide chips that can run the same computer programs—known loosely as "x86 compatible" code—and that retain compatibility with hardware like expansion boards and peripheral devices. If you needed to write different versions of each piece of software and manufacture different versions of each piece of accompanying hardware—one that would work with Intel's chips and one that would work with AMD's—the whole competitive market would disappear. The weaker player (presumably AMD) would

vanish and—presto!—Intel would have a monopoly as tough as Microsoft's.

This relatively level playing field in the x86-compatible processor business did not come about by sheer happenstance. The semiconductor industry is marked by a Byzantine pattern of patent cross-licensing agreements; they provide permanent employment for legions of lawyers, and laymen seek to understand them only at great peril. What's important about them, however, is not how they came about but that they work. Now that the federal courts are trying to figure out an effective remedy for Microsoft's abuse of its monopoly powers, the competition between Intel and AMD provides a valuable model. How would one go about enabling Microsoft's rivals to compete with it as effectively as AMD is competing with Intel?

The key here is something known as the Windows API (or "applications programming interface") — the set of instructions that Windows programs use to "talk to" the operating system. The Windows API has long been a murky issue: Microsoft has always provided some information to independent developers—it has to if third-party Windows programs are going to work. But Microsoft can and does muck around with the API, changing things that break competitors' products, anytime it wants to. And rumors have long buzzed, without ever being nailed down, that Microsoft's own developers take advantage of so-called hidden APIs that non-Microsoft coders can't use. The Justice Department's proposed antitrust settlement with Microsoft seems to demand that Microsoft do more to open up its APIs to competitors. But the fine print makes it clear that Microsoft could pretty much continue with business as usual. A more effective remedy would be one that required Microsoft to standardize and publicize the entire set of Windows APIs and the file formats of its Office applications (another key to Microsoft's monopoly "lock-in")—with the express goal of allowing competitors to build Windows software applications, and operating systems, that compete with Microsoft on a level field. Such a plan would require careful oversight and enforcement, since Microsoft could easily engage in all manner of foot-dragging. If Microsoft set out to be uncooperative, it could release the API information slowly, in deliberately confusing ways, or in a "Good Soldier Svejk" fashion -assiduously following the letter of the court's order while flagrantly violating its spirit. (There's precedent here: This is precisely how Microsoft behaved during the trial when it told the court that, sure, it would supply a version of Windows with Internet Explorer removed from its guts, but gee, sorry, then Windows wouldn't work.) Now, I can already hear the howls from the Microsoft corner that this plan is evil and un-American because it forces Microsoft to give up some of its intellectual property. Well, yes. Microsoft is in court as a repeat offender; the current antitrust suit, in which a federal district court and an appeals court have both affirmed that Microsoft is a monopoly and that it has abused its monopoly powers, arose out of the failure of a previous consent-decree settlement of an earlier antitrust case.

At some point, having repeatedly violated the law, Microsoft needs to pay a price, or it will continue with its profitably anticompetitive ways. There's no reason to think the Justice Department's proposed settlement will work any better than the consent decree of last decade did. And financial penalties can hardly wound a company that is sitting on a cash hoard of tens of billions of dollars. But intellectual property—that's something Bill Gates and his team really care about. Requiring them to divulge some of it in order to restore competition in the software market might actually get them to change the way they operate. With Microsoft's APIs and file formats fully standardized, documented and published, other software vendors could compete fairly—which, after all, is what antitrust laws are supposed to promote. We might then be faced with a welcome but long unfamiliar sight: a healthy software market, driven, as today's processor market is, by genuine competition.

Honorable Judge Kollar-Kotelly,
I am an employee at the Massachusetts Institute of Technology, and I am upset about the recent settlement between the Justice Department and Microsoft (PFJ).

First, the PFJ does nothing to stop Microsoft from operating as a monopoly through the use of its operating system. Second, the settlement does not punish Microsoft for clearly violating anti-trust laws in the past. Also, the PFJ does not provide an effective enforcement mechanism for the weak restrictions it does implement.

In closing, I'm deeply concerned the recent settlement does not regulate Microsoft enough in the future allowing Microsoft to continue its monopolistic tactics. In addition, Microsoft is not even being punished for laws it clearly broke in the past. This sets a terrible standard. I would request that you do your best to overturn this settlement.

Subject: Microsoft Settlement

As a long-time user of personal computer products (dating all the way back to the pre-Microsoft era), it seems to me that the principle goal in the Microsoft trial should be the re-establishment of a competitive market for operating systems and core software (ie, Office-like applications, browsers, and email clients). The key to this is an open standard to which developers can write, a sort of lingua franca for programmers. This standard already exists, in the form of the Windows Application Programming Interface (API), but the standard is NOT open. The Windows API is defined by Microsoft, and though large parts of it are made public (it is, after all, how programmers are able to craft products to run on Windows at all), other key components are almost certainly kept secret, to be exploited by Microsoft's own development teams. Keeping this information proprietary provides Microsoft with a non-competitive advantage when it comes to writing applications which run on top of Windows, and also prevents anyone else from writing an operating system which will respond appropriately to API calls made by others' applications.

BUT, if the court were to order (and enforce) the opening of the Windows API, Microsoft would find itself playing on the same field as other software developers. While they would still enjoy an enormous advantage as the original creators of the API, in the long run other developers would at least have a chance to fully learn the API, contribute to its future expansion, and possibly provide some real competition to Microsoft in not only the applications arena, but in the operating system market, as well.

That is the goal, right?

Thanks for your consideration. I am sure you have heard, and will hear, a great number of suggestions which run along similar lines to this one, hopefully much more fully fleshed out. I simply want to add another vote for real reorganization, as opposed to some kind of basically meaningless financial penalty. The future of digital technology, which contains so much promise, is in my opinion largely contingent upon the recreation of an open, furiously innovative, market. A slap on the wrist, even a hard one, will not accomplish this. An open API will.

Cheers,
Sean Bell

Dear Sirs:

First of all, I am writing this as my personal opinion, it does not represent the position of the Illinois Department of Transportation. Microsoft deserves no sympathy or kindness. Do you remember the company that developed a disc compression utility called Stacker? Microsoft blatantly copied this, and when Stacker won in court, Microsoft bought the company rather than pay a larger penalty. This is what they laughingly call "innovation". Their "freedom to innovate" is the freedom to steal other's property, force makers to buy their OS for every unit or else pay full retail price, and use the profits from the OS to force other companies (WordPerfect, Stacker, Netscape) out of business.

What they can't control, they mess in. After their purchase of a large interest in Corel, Corel suddenly lost interest in what was arguably the best Linux distribution available. Please investigate this purchase as it surely is anti-competitive.

Besides, since when does a convicted criminal get to pick the punishment he feels appropriate?

A level playing field must be created for every other software and operating system vendor alike.

Microsoft is guilty. That much is true.

The only way to completely level the playing field is to open up, document and publish Microsoft's APIs and file formats. While I don't believe that these should be standardized on (there are much better solutions from third party vendors out there) this will give those companies ways to work around the tangled mess Microsoft has weaved in both their API sets and file formats to: a) prevent the competing software of others to work properly with their OS, b) to create incentives for upgrade's by not being compatible with earlier formats in their own programs and c) to use "hooks" in the API's available only to them.

I thank you for your time and consideration.

 Subject: Microsoft Settlement

I think that even what "Microsoft" settled for is far beyond what the punishment should be. Actually there should be no punishment for being an innovative, successful software manufacturer. Microsoft is the best because they work harder and smarter.

No consumers were hurt. The cost for "Windows" is in line with what other software makers charge for their operating systems. If there was a better operating system out there it would have become the standard no matter what marketing ploys Microsoft used. People just want the easiest, best software available.

If there was a better operating system or even one as good as "Windows" wouldn't you think even one computer manufacturer would have included it with their computers?

As far as bundling is concerned, you don't have to be a computer genius to bypass Microsoft's products that are bundled.

It's clear that this is being pushed by Microsoft's competitors. They should spend more time and money innovating rather than trying to hurt Microsoft. No harm—no foul—no punishment.

 Subject: microsoft acquiring SGI 3d patents.

there are news reports circulating today that Microsoft has acquired patents from SGI, Inc., regarding some 3d technologies and the OpenGL 3d platform. OpenGL is the only competition Microsoft has to it's own Direct3d platform. By acquiring these technologies, it's created a monopolistic situation on the continuing development of 3d technologies. It's not inconceivable that hardware manufacturers would be pressured to stop supporting OpenGL and only support Direct3d, which excludes all platforms but Microsoft's.

I urge you to investigate these matters. thank you.

Steve. . .

 Subject: Settle in Favor of the Microsoft

Proposal and penalize the holdouts
 To whom it may concern:

To Justice Department Officials, States against Microsoft, and their Lawyers: I don't know what is wrong with you legal officials. You must settle this case in favor of Microsoft immediately. The initial attack on Microsoft by all the states was terrible and nearly destroyed the American Economy. Now you have the chance to correct your tragic mistake, which harmed thousands of lives and thousands of families, and settle this problem once and for all. Who knows if the Stock Market and economy will ever recover? Instead, we have greedy holdouts and lawyers wanting to get rich still. . . off of Microsoft, and at the expense of the average American citizen.

Please, accept Microsofts proposal. End this unconstitutional attack on the free enterprise system.

You are so bad, you should be removed from office or position. The States which continue to refuse Microsoft's settlement offer should be penalized for being UnAmerican, the rest of the States should refuse to trade with them, and. . . ask yourself. . . Why in the world doesn't Mr. Bill Gates take his company to Canada or somewhere where ingenuity, hard work, and the free enterprise with it's entrepaneural spirit is wanted and honored. Act now, act right, Free Microsoft, and do your duty to God and country.

 Subject: Microsoft Settlement

As a citizen I wish to express my strong opposition to the microsoft settlement as agreed to by the Justice Department and stand firmly behind the 9 hold-out states seeking to properly address microsoft's past and continuing misdeeds and unlawful behaviors.

Microsoft has continued to leverage its operating system monopoly to gain ground in other areas since the start of the antitrust suit. They are continuing to move to leverage their

operating system monopoly to grab hold of internet commerce, forcing online purchasers to go through microsoft databases on microsoft servers with microsoft software. They are seeking to make the internet a primarily microsoft-driven domain; the internet cannot be allowed to "belong" to ANY corporation in any way. It belongs to everyone and must continue to be accessible by anyone with any operating system.

Microsoft is buying out patents, so it seems, from the faltering SGI. This itself bodes ill for SGI is the source of an OPEN graphics format used in industry and entertainment called OpenGL (Open Graphics Library). It is not likely, given microsoft's past and current behavior, that no harm will come of this. Indeed, it is likely that microsoft will seek to impose restrictive licensing terms on OpenGL licensees or use their purchases control of the library to drive it out of existence in favor of microsoft's own, proprietary direct3d graphics library (which ONLY works on microsoft operating systems).

Microsoft simply must have its teeth pulled. It MUST be forced to compete ONLY on the merits of software and in no way be allowed to ever leverage its current operating system monopoly to drive adoption of ANYTHING else they produce.

I do not know why the DOJ caved in and essentially allowed microsoft to write their own punishment, but it stinks to high heaven. The 9 holdout states stand in the right, they stand for the law, and they stand for fair competition. Their remedy is far and away superior to the toothless "remedy" accepted by DOJ at the behest of microsoft.

From: Jeff Ferland
To: Microsoft ATR
Date: 1/16/02 4:23pm
Subject: Public comment on case

I find there to be two reasonable courses of action to take on this issue, the first being less severe, more fair, and more generic; while the second is almost extreme.

My first reaction is to ban any agreement that forces you to buy an operating system with a computer, and if you opt to not take the offer then the cost of the operating system should not be charged to you. The same ought to apply for bundled software. It is certainly unfair to me to when I go to buy a laptop to know that I must pay what many Unix computer professionals have come to refer to as a "Microsoft Tax." Linux seems much more suited to me and having to pay for another operating system of which I have no intent of using is incredible (this also applies for those of us who already own a license for Windows that is not being used and would prefer to spare themselves the expense of paying for something twice). I can't see this as being anything but fair and competitive as there is no single common computer architecture for which only one operating system is capable of running on.

In addition to the above, I would also find it beneficial should Microsoft (specifically this time) be prohibited from bundling any of their products together at reduced cost. The cost of a complete office suite should be the same as the individual ones, and the same goes for their browser which should not be integral to the operating system. Windows ought to be available without Internet Explorer, and should also cost less without it (though I don't see any argument to it being downloadable for free). My second and much more drastic suggestion is the corporate death penalty. Basically the revocation of Microsoft's corporate charter. All their code would be forced open and placed on publicly accessible servers that will be maintained from some of Microsoft's resources. Their physical parts (computers and such) would be sold at a public online auction. In any case, my belief is that the suggestions I have presented first should be instated. My second suggestions should be weighed carefully and I make no movement to support them—they are merely presented as a possible solution as it is not my right to make such a decision.

To: Microsoft ATR
Date: 1/16/02 4:25pm

Subject: Microsoft Settlement

Microsoft and their supporters maintain that the company must be allowed to continue to innovate in the computer market without restraint on the part of the government. The reality is that Microsoft actually does very little innovation other than purchasing products and companies and either integrating them into their Windows product or if not feasible from a business sense they kill products that would otherwise compete with the Windows monopoly. Microsoft is not so much about innovation as they are about marketing and their corporate behavior has always been one of repression of small (and large) technology businesses, and as such innovation in the computer industry has been held back and in some cases driven back.

To appreciate how absurd these claims of innovation are we only have to look at the origins of Microsoft that go back to a purchase from Tim Patterson of a product called X86-DOS. X86-DOS was then rebranded as MS-DOS and licensed to IBM for use in their computers. No innovation here. Windows was copied (rather badly in earlier forms) from Apples Lisa and Macintosh lines and was not actually an operating system per se as much as it was an application that ran on top of the real operating system that was still DOS. By the way Novell also had a DOS, which Microsoft crippled by making their Windows application incompatible with thus driving that product out of the market and causing harm to Utah residents and consumers as well as possibly the software industry as a whole.

Contrary to popular belief, the web browser was not invented by Microsoft either. Microsoft was late to that game. The web browser was actually invented on the NeXT platform and Microsofts claim comes by way of licensing of code from a company called Spyglass in 1995. They then called the product MS Internet Explorer. Where Spyglass was harmed was in the licensing agreement. Microsoft agreed to give Spyglass any royalties from the sale of Internet Explorer. When Microsoft started giving away Internet explorer to drive Netscape out of business, there were no royalties available to distribute to Spyglass.

As for Microsofts other products, one would be hard pressed to find one that was not purchased, licensed or conceptually stolen from another company. To illustrate: Microsoft did not invent the word processor as there were many examples of the concept before Word on such platforms as the Apple II, the Osborne, Commodore, Atari, and the TRS-80. Excel was not the original spreadsheet program as that honor goes to Visicalc which originally was created on the Apple II computer. The product we know as Excel was contracted for Apples Macintosh computer in 1984 and was called xcel/ Multiplan. Microsoft then created their own "Excel" for Windows. The Microsoft Foxpro database was the result of a purchase of Fox software in 1986, MS-OLE came from Wang labs, Powerpoint came from the purchase of Forethought Inc. in 1987, SQL server was purchased from Sybase in 1988, Visual Basic was purchased from Cooper software in 1991,

and Windows NT which begat Windows 2000 and Windows XP was originally XENIX and was written under contract by Santa Cruz Operation. Even Microsofts games are not home grown efforts. Flight Simulator was purchased from the Bruce Artwick Organization, and their central software product for their forthcoming X-Box game console is the result of a purchase of a company called Bungie which got its start developing for again, the Macintosh.

One could argue that even with Microsofts anti-competitive behavior, they are bringing products to market and making them available to the consumer. But in bringing many of these products to market, Microsoft has used their monopoly status to get away with quality control issues that companies in any other industry would be run out of business for. Microsofts product strategy is not to deliver well designed products based on good engineering, rather their goal is getting products out the door regardless of their level of completeness or the level of quality of the product. They are in reality a timeline driven company rather than a product driven company that even with the benefit of copying others work, they copy and implement that work badly.

The result of this can be seen in numerous bugs that crop up when we are using our computers which for most of us are minor to relatively serious inconveniences, but for organizations like the Navy, they can be deadly as exemplified when Windows NT crashed the computer systems of the USS Yorktown leaving it dead in the water off the coast of Virginia. We can all imagine what would have happened had this crash occurred in combat.

Continuing Microsofts recidivist behavior, the company in releasing XP is tying more and more products into the Windows monopoly and as such they are eliminating consumer choice and continuing to leverage Windows to gain access to other markets and eliminate competition in those markets as well. Does this tying of products into the Windows monopoly constitute innovation? Perhaps loosely but the real question is: How does this affect the consumer? Companies like Spyglass certainly have been taken advantage of as well as the other companies affected by Microsofts behavior throughout the companies history leaving us to ask ourselves, where would we be today if companies small and large were not afraid or unable to compete with Microsoft?

Additionally, it has come to my attention that Microsoft has also recently purchased the patents for 3D technology from SGI. This will possibly allow Microsoft significant leverage over the independent 3D hardware manufacturers who are currently supporting the only rival to Microsoft's Direct3D graphics API, OpenGL. This places development of 3D technology in jeopardy as Microsoft will most likely take what tools they can from OpenGL, integrate them into the Windows paradigm and then eliminate all further development of the OpenGL standard causing significant harm to the consumer and industry.

I am a libertarian Republican.
Having considered the evidence, it is clear that Microsoft is true monopoly, and it has abused its monopoly powers in an anticompetitive manner. Accordingly, its monopoly must be broken. This is the single most important element. It bears commenting that other businesses may be behaving in an anticompetitive manner in other fields (beyond Operating Systems), and those should be pursued as well.
Finally, the "tolerance" of anticompetitive practices by Microsoft may lead other businesses to behave anticompetitively as well, as this might be seen as necessary for survival.

Dear Justice Department,
Antitrust law is illogical, ex post facto, unenforceable. If a business sets a price above the prices of its rivals, it can be charged with 'intent to monopolize.' If it sets a price below those of rivals, it can be charged with 'predatory pricing?' or 'unfair competition?' or 'restraint of trade.'? If it charges a price similar to those of rivals, it can be charged with 'collusion?' and joining a 'conspiracy to fix prices.'? Antitrust law substitutes the free choices of the free market for the coercive judgment of one judge. The alleged benefits to the consumer are a myth; the court takes money away from the people whom the consumers rewarded with their patronage, and gives it by force to those the consumers did not want to pay.

In every case, prices to consumers go up after the courts make an antitrust ruling. The business losses to the United States economy run to the billions of dollars.

In this case, Microsoft is under attack by an envious rival. The several states should be forbidden from pursuing this case.

January 15, 2002

Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft:

I would like to express my emphatic opinion that it is time to settle the

Microsoft antitrust case. The case has gone on for far too long. I believe Microsoft was pretty aggressive in their marketing. However, this was an entirely new area of business with no real way of knowing from past experience what would be considered an anti-trust infringement and what would not. Microsoft's hands have been slapped. In fact, as I understand them, the terms of the settlement not only slap Microsoft's hands, but also ties them in the future. Microsoft has agreed to not retaliate against software or hardware developers who develop or promote software that competes with

Windows. They have agreed to grant computer makers broad new rights to configure Windows so as to promote non-Microsoft software programs. And they have agreed to design future versions of Windows so that competitors can more easily promote their own products within Windows. This seems almost the opposite of free-market enterprise and certainly mandates co-operation with their competitors.

As an Iowan, I disagree with the stand Attorney General Tom Miller has taken. I tried to send him an e-mail (lacking his e-mail address, I ended up sending care of the Governor) telling him this. I have had no reply. I think he is wrong and is letting political interests guide him instead of looking out for what is best for the State of Iowa as well as the nation. Any error Microsoft made in too enthusiastically promoting their growth has been mitigated, in my mind, by the huge advances their innovations have caused in all areas our society and the economy and IT sector. We need more entrepreneurial endeavors in this country. Especially since 9/11, we don't need to spend time and efforts on things like this. That is why it is your job to take a stance and finalize the settlement. Thank you for your time.

To whom it may concern,

For the last 8 years, Microsoft has been the subject of continual harassment by our

Federal Government. This was started one year after Clinton was elected into office as POU.S. The reason for this harassment was and is pure politics. During his campaign for President, Clinton was supported in this effort by Larry Ellison, Pres of Oracle. Oracle competes with Microsoft. Oracle was loosing market share to Microsoft at that time (and they still are . . .). Ellison convinced Clinton to wage war with Microsoft in hopes that Oracle would gain a better position in their market. Microsoft successfully defended itself against this attack. A settlement was finalized that all parties agreed to abide with.

The USDOJ should also honor this settlement. To continue to attempt to destroy an American company the way you have, is contrary to all the beliefs of our free society.

MTC-00012866

From: Tom Kaitchuck
To: Microsoft ATR
Date: 1/16/02 5:05pm
Subject: MS Buys (Some) SGI Patents

It has come to my attention that Microsoft has recently acquired fundamental patents

for 3D graphics technology and techniques from SGI. This is a dangerous situation, as it grants Microsoft significant leverage over the independent 3D hardware manufacturers who are currently supporting the only rival to Microsoft's Direct3D graphics API, OpenGL.

Microsoft isn't in the PC hardware business, and it's unlikely that the patents will change its technical strategy. But they do add significantly to its bargaining position with hardware vendors, giving Redmond important new leverage. Rival APIs, principally OpenGL, are kept alive through the support of graphics hardware vendors. And for a hardware partner, avoiding a lawsuit, or gaining a contract to work on future versions of Xbox, may well outweigh the advantages from continuing to support OpenGL.

Microsoft has in the past worked to delay and distract advances in 3D graphics technology, such as in the abortive "Fahrenheit" plan with SGI in the 1990s. During that period, SGI was transitioning from selling Unix-only workstations to begin selling workstations running Microsoft's Windows NT. At the same time, OpenGL was gaining on Microsoft's Direct3D in terms of features, hardware support, and developer support. If SGI wanted to sell NT boxes, SGI would have to agree to the Fahrenheit plan. The perfectly timed Fahrenheit deal slowed that advance of OpenGL by, among other things, reducing SGI's active promotion of it, and allowed Microsoft's Direct3D to gain a strong lead.

Yet OpenGL support still survived due to the interest of software developers and the support of third party 3D hardware manufacturers. This latest move by Microsoft to acquire core 3D technology patents would finish the hatchet job, granting Microsoft the power to force third party 3D hardware manufacturers to drop support for OpenGL, and ultimately stifle competition and innovation in the marketplace.

Please do not let this come to pass.

Thank you,

Tom Kaitchuck

My opinion: Bill Gates and Microsoft have created thousands of jobs, hundreds of millionaires and have improved US industry and government. There is a lot of competition out there and anyone could surge ahead. There's an old saying that if a person could build a better mousetrap the world would beat a way to his doorstep. That's what Bill Gates has done, and now they're trying to hang him for producing that better mousetrap. Antitrust laws should be abolished. They don't protect the consumer who can always go elsewhere, they just destroy all those good mousetraps.

Subject: DOJ Actions against Microsoft
 "Justice" Department actions to bring down Microsoft seem anything but just to me. Microsoft has built just about the best mousetrap that has ever come on the scene in a country once noted for recognizing and rewarding business endeavors that benefit the entire country. And Microsoft has made a tremendous contribution to the development of information technology that is beneficial to our entire economy and America's continuing leadership in the business world. They have done this in a fair fight in a highly competitive game and, because some of their less successful competitors have whined, DOJ has decided to punish Microsoft's success. Where is fairness; where is justice; where are integrity and honesty? Let's get on with rewarding success rather than punishing it. And at the same time, let's stop punishing those, including self, I proudly note, who have recognized Microsoft's contributions by investing in Microsoft stock and find themselves also financially abused by inappropriate government intervention in a highly successful business enterprise that has vastly benefitted the entire country including those who would tear it down. Please let us pursue both justice and sanity, allowing business acumen, common sense and market forces free rein.

Respectfully,
 Jack S. Kenyon

 Subject: Microsoft Settlement
 DOJ,

As a successful computer consultant for the past twenty years to numerous major corporations including IBM, Michelin, Arco, Deutsche Bank, and Fortune, I appreciate the opportunity to comment on the Microsoft Settlement.

Microsoft's success has been largely due to their ability to develop "best of breed" applications and to distribute and market those worldwide. Their success is also due to the strategic blunders of their competitors. From Novell to WordPerfect to Oracle to Netscape, each of these competitors (and many more) has failed miserably in critical areas of product design, marketing, or support. We have been led to believe that the government should protect these software vendors from their own incompetence. Here are just a few examples of what is a very long list.

WordPerfect failed to grasp the significance of the graphical user interfaces (GUI) used by

the Macintosh and Windows. As a consequence, they were several years late to market with a Windows based product—a very costly blunder. Their market share fell from over 80 percent to well under 10 percent in the very important word processing/suite segment.

Novell once "owned" the file server market. They, like WordPerfect, hung on to their character based user interface. Recognizing this weakness Microsoft developed a competitive product which was so intuitive that server administrators rarely had to attend classes or refer to manuals. Novell still has a few "best of breed" features which are totally obscured by Microsoft's ease of use.

Oracle developed a very good database product. But their real strength was their marketing organization which recognized that Oracle needed to run on virtually every platform. Oracle has been very successful, but has started to lose large numbers of sales to Microsoft's SQL Server, which is considerably easier to install, configure, and use.

Netscape was initially one of the brightest stars in the Internet universe. Netscape virtually owned the Internet browser and server markets. Their browser and their web server were simply the best. But following their IPO, they had lots of money, which allowed them to go off in 20 different directions rather than focusing on their core business. As a Netscape business partner, I received a blizzard of mis-directions on where they were headed.

Microsoft's competitors would like the public to believe that it isn't possible to be successful in the software industry today. But success stories abound, both with large and small software companies. Visioneer's PaperPort, IBM's VisualAge for Java, IBM's ViaVoice gold, NetObjects Fusion are just a few examples of "best of breed" software where Microsoft doesn't dominate.

It is instructional to visit the software department of virtually any computer store in the world where Microsoft enjoys less than ten percent of the all important shelf-space—a key indicator in retailing.

Rather than being a predator, Microsoft has repeatedly capitalized on the strategic blunders of other software companies. The software business, with its very short product life cycles, is much like the stock market or the crap table. You invest your money and take your best shot. If you lose, you have no one to blame but yourself. I know. I have competed unsuccessfully with Microsoft in several spaces.

Because I believe the lawsuit against Microsoft was nonsensical from the beginning, I would like to have the Microsoft case settled—once and for all.

To whom it may concern,
 The computer industry could create much better products for everyday users if Microsoft didn't have a stranglehold on the software business. I urge the DOJ to consider making Microsoft release all of its code so that competing companies could develop software and competition would be restored to the software industry. What a great benefit this would be to the consumer.

 Subject: Microsoft Settlement
 Honorable Sir,

It has come to my attention that Microsoft has recently acquired several fundamental patents for 3D graphics technology and techniques from SGI, Inc. This is a dangerous situation; it grants Microsoft significant leverage over the independent 3D hardware manufacturers who are currently supporting the only rival to Microsoft's Direct3D graphics API, OpenGL. I believe this is further indication that Microsoft intends to extend its monopoly by squeezing out competing standards and technology.

This latest move by Microsoft to acquire core 3D technology patents provides Microsoft with the power to force third party 3D hardware manufacturers to drop support for OpenGL, and ultimately stifle innovation and competition in the marketplace. Discounted support for OpenGL by third parties will seriously inhibit the ability of other operating systems to offer a feasible alternative to Microsoft's offerings for graphic intensive applications. Computer game developers will have no option but target Microsoft's gaming platforms. Scientists and engineers will be forced to use Microsoft's visualisation platforms.

Please do not let this come to pass.

Thank you,
 Stewart Adcock.

Dear DOJ:
Re: your solicitation of consumer opinion concerning the Microsoft settlement

I thought the entire case against Microsoft was weak, its very existence an affront to honest free-market businesspeople.

Note: I use a Power Macintosh, and have always been an Apple user. I am hardly affected by Microsoft. But its business practices have always appeared to me to be earnest, and to think the government would be punitive toward a successful venture is sickening. Microsoft 1.) pays its taxes, 2.) has rewarded a lot of working people with well-to-do incomes and equity, 3.) has a solvent 401-k, and 4.) hasn't cooked its books while finagling its financial situation, as some people in Houston seem to have done lately.

So why on earth did my government ever try to dismantle this company, which exemplifies all that is good about capitalism and the American work ethic? Because of the complaints of its competitors, who apparently weren't as creative or far-seeing or successful as Mr. Gates and his legions?

I have never held, and do not hold, any financial interest in Microsoft, and have never been employed by the company. My perspective is that of an informed citizen who has followed government intervention in the private sector since the mid-1970s—with knowledge of American economic and political history since well before Theodore Roosevelt's first interventions. At least TR had a point, and some righteousness. The Clinton justice department did not.

Subject: Microsoft Settlement
Good day,

When I look at this case in an unbiased manner (which is difficult for me as I am in the IT industry), I see that this issue has nothing to do with technology and everything to do with the basic building blocks of our capitalistic society. Although I must admit that I am a Java-proponent, I am a capitalist first and foremost. The idea of forcing MicroSoft to NOT innovate and NOT expand its business in areas that make sense for itself and for the consumer is offending to the very nature of capitalism, but as we have all learned in Economics 101, one of the serious flaws of capitalism is the issue of monopolies and to a lesser extent, collaborating oligopolies.

Neither phenomena should be allowed to exist in the Information Technology sector as this industry has become the lifeblood of the US economy. It needs to be protected in such a way that healthy competition will encourage dozens of corporations to continue their marvellous innovations. At our current point in time, the IT industry is sick and weak from both recession and redundancies within the labor market and corporate inventories. It will become more and more difficult to build a healthy capitalistic environment as the next few crucial years go by and the country starts taking their applications to the next levels of international computing.

It's time to put a stop to this now, before irrevocable damage is done. Although MicroSoft should not be asked to surrender their intellectual property, they MUST decouple their middleware services from their operating system.

Can you imagine what the world would be like if at the beginning of the Transportation revolution(ie. way back when the car was invented on top of the engine), there was only a single Big Corporation that could make the highways and roads that vehicles could drive on? And then that Big Corporation acquired the few companies in the world that made automobile tires? What if a better vehicle with better tires wanted to drive on the same road? Can you imagine the Big Corporation spending its time, effort, and money inventing ways in which to make the better vehicle's tires deteriorate faster than its own while travelling on its roads? It's a perfect analogy and everyone knows it—the point of it is to illustrate that MicroSoft itself will be better off if it is forced to decouple because it could concentrate on doing what it supposedly does best.

Subject: Microsoft Settlement
Microsoft Settlement

I am a software developer, a Microsoft customer and a Microsoft investor. I am pretty certain that Bill Gates wakes up every morning wondering what he can put in his products that will cause me to upgrade to a new version. He also hopes that I will develop software and sell some that needs his new operating system and office products. A few years ago we had a product that sold lots of NT and Office. Someone from Microsoft called to thank us. But if Microsoft comes up with nothing over a long enough period of time the sales will drop to selling software to only new computers that are not replacements for old computers. That would hurt the bottom line. His competitors would like to fix it so only they can come up with new features that they can sell me. That does nothing for me. All I need is 5 different standards to support.

Microsoft reminds me of Ford and the auto industry in 1915. Ford at that time had 90 percent of the auto market. Ford had to compete with GM who put out a car that was just like the Model T only better. By 1928 Ford had less than 50 percent of the market. Microsoft competitors insist on building an operating system and applications that Microsoft users can't run. If GM had built a car that Ford owners could not drive, they would never have sold Chevies. GM was smart enough to build cars that any Ford driver could operate with out lessons. Microsoft should not be held accountable for his would be competitors stupidity. It costs a 100 bucks to buy windows. But it costs 500 to a 1,000 bucks to train someone to run free Linux. There is a clue there if you can see it. When someone is bright enough to do that . . . to make a system just like windows only cheaper or better, Microsoft will no longer have 90 percent of the Intel market. Microsoft is fully aware of the danger that poses. Microsoft just filed a suit trying to stop little Lindows from using that name. This tiny start up is planning to make a system that is just like windows only it is supposed to cost less an be a tiny bit better.

Microsoft did not sue to stop Netscape, Sun or Linux. They are suing to stop Lindows. There is a second clue there. If you want to take Microsoft down a notch or to make them get off Lindows back. I own Microsoft stock and still have a loss on it, but I would also like to develop for Microsoft competitors. The Suns, Netscapes, UNIX, and LINUX people don't compete with Windows. To put it in transportation terms they want to stop Ford from selling improved cars. They hope that will help their train, plane, truck, bus and taxi businesses. None of them has a product that competes with Windows.

When no one has a competitive product, it is not surprising that the only product on the market has a monopoly.

Microsoft keeps redesigning its Model T. It now is a 55 ford Fairlane with a heater. air conditioning, and cruse control. What needs to happen is for some one to build a 55 Chevie that sells for less than a 55 Ford.

For Microsoft the big problem is not this settlement. The problem is they have run out

of new ideas to put in the operating system to get clients to upgrade. That is why XP now comes in a beautiful shade of blue. There chief designers solution is to try to just lease you an operating system and office software instead of selling it to you. That is right up there with Fords "You can have any color you want as long as it is black."

Microsoft has done nothing that Ford did not do. And Microsoft is no more secure in its dominance than Ford was. All government can accomplish is to turn the software industry in to the aircraft industry where all consumers can afford is a ticket to ride. We can transform the software industry from being a parallel of the auto industry to being a parallel of the aircraft industry. Is that what government wants? Perhaps you would prefer a United Airlines type software industry. But it would never create the jobs Ford and GM have created.

I do not know if the Lindows people are a GM or not, but I am certain there is a GM out there if only you will let them have at Microsoft. The problem is any restrictions you put on Microsoft will also apply to his potential competitors.

The problem is the people who think they are Microsofts competitors are not. They are not in the same game . . . That is why they can't defeat Microsoft. When some one does systems that any windows user can run with out training, they will have Gates in their cross hairs. As long as so called competitors fail to do that you will not stop Microsoft's dominance no matter what the penalty. In fact if you broke Microsoft up one branch would dominate Pc's again, and the others would destroy Oracle and Sun, and Netscape.

The problem is not with Microsoft. Microsoft is just blessed with stupid would be challengers and cursed with government lawyers that think business principles have changed because this time they are dealing with bytes rather than iron and rubber.

As a software professional and someone who tries to not use Microsoft products, my preferred solution to the problem of Microsoft's monopoly would be to require them to provide equal access for everyone to all the file and message formats for all of its

software, including Office files multimedia files, client and server network messages, and any other format used for data which is stored by any Microsoft software, or sent or received by any Microsoft software, now and in the future.

Furthermore, they would need to be required to provide that information at least a couple of months—before—they release the software which uses the formats; otherwise they will continue to do what they have done in the past, which is keep changing the formats as often as possible and then releasing an "updated" version of their software which knows the new format before the previous format had been reverse engineered by the people trying to write compatible software.

This solution allows people to write software which interoperates with Microsoft software, but offers a better value than Microsoft software. Microsoft has prevented this from happening in the past: not allowing people to interoperate with their software, thus retaining their monopoly and precluding competition.

Department of Justice

Dear Sir or Madam:

Please let us get by this Microsoft litigation. It has been going on for years with the only result being that it helps to depress the economies in Washington state and elsewhere in the country and gives a lot of lawyers something to do. The nine holdout states may get some small individualized reward by further punishment of Microsoft to the detriment of the rest of the country and themselves. It is my belief, that the states of California and Massachusetts do not want to share the wealth of technology with the rest of the country. They want to put themselves in first place by punishing Microsoft rather than competing with them.

Microsoft's proposed settlement would have been good for the country in general. Please stop this needless litigation and endless argument and get back to moving our economy forward. Microsoft came up with a reasonable settlement that would have been of benefit to all. There is no sense in destroying Microsoft to please and benefit a few. The Department of Justice has the power to stop the nonsense now. Please do it.

I look forward to a quick and reasonable settlement based on the above thoughts.

Sincerely,
Harry Meyer

Microsoft's current corporate licensing practices continue to display the predatory maintenance of monopoly the DoJ trial was supposed to suspend.

In their new license 6.0, <http://www.microsoft.com/licensing/> Microsoft offers deep discounts to customers who agree to never use or consider a competitors profits. This offer is against the backdrop of a 25%-100%+ increase in software licensing prices.

This abuse of monopoly power to extend monopoly by keeping out competitors is *exactly* what is hampering innovation in the technology industry and what anti-trust law is supposed to address. Competitors should be allowed to create the best products they can and customers should be able to select whichever system they feel provides the best value. Price differentiation used to exclude competitors is a clear abuse and maintenance of monopoly power, and the fact that Microsoft is engaging in it even before the trial is concluded demonstrates how toothless the "settlement" is.

I would urge you to strike the current settlement and draft something which addresses Microsoft monopoly abuses in the past, in the present, and limits their ability to commit similar abuses in the future. Microsoft's disdain for the court is plain to see, and if the current "settlement" passes, I fear disdain for the DoJ will be far more widespread.

Sincerely,
Zimran Ahmed

Subject: Microsoft Settlement
Honorable,

I recently became aware of a deal between Microsoft and SGI wherein SGI has sold and transferred patents and knowledge surrounding OpenGL technology to Microsoft.

This troubles me for several reasons, primarily because this allows Microsoft a great deal of leverage over independent hardware and software vendors. In the past, Microsoft has tried to squash the further development of OpenGL by various hardware vendors through deals and brokerage with SGI. These largely failed though, thanks to a loyal base of hardware and software developers that recognized the superior technological capabilities of OpenGL, and continued in its development. However, because of these deals, OpenGL lost it's foothold in the marketplace and Direct3D took over as the leading API for 3D visualization.

Now it appears that Microsoft may be able to squash, once and for all, the only competitor to it's Direct3D API. If Microsoft own the patents to both Direct3D (part of the DirectX API), and OpenGL, it can strongarm hardware and software vendors into supporting only Direct3D. Through these tactics Microsoft will destroy the abilities of hardware and software vendors to choose the

API they develop with, and kill the only competitor to Direct3D. This deal with SGI flies in the face of anti-trust activities. It seems as if Microsoft cares not what our judicial system may decide, but only on gaining an even larger monopolistic market share in the US. We can be certain of only one thing from this deal, that Microsoft will use these patents to bully hardware and software vendors, and engage in unfair business practices while doing so.

Please do not let this slip by unseen.

Sirs,

For what it is worth, the prosecution of Microsoft was simply a political extortion game. The government attorneys' goal has never been justice or to make things better for customers of Microsoft, it has simply been a vendetta against the most successful company in the technological arena.

Liberals have to scheme up these things from time to time to justify their hatred of capitalism. Since private lawyers will get another unprecedented windfall from this settlement (like the tobacco, asbestos and breast implant settlements/extortions)I suppose even the liberals will be happy with the outcome. Because, no doubt substantial funds from the lawyers' settlement monies

will find their way to Democratic politicians who will further their liberal interests.

Is there anyone, anywhere, who seriously thinks this lawsuit has done anything but enrich lawyers?

What a waste. Please simply end it.

Sincerely,
Joe Glandorf

Hello my Name is Justin Thomas (UK).

My opinion on this matter is based upon my exposure to Microsoft over the last 7 years. I am a qualified BSc Software Engineer.

As an end user I was very surprised with WindowsXP containing so many programs, which did not constitute core to its functionality. My fear is Microsoft are already rubbing salt into old wounds by being allowed to ship so much. Examples include, Rollback software, Firewall, Internet

connection sharing, Instant Messenger, Photo Editing, CD burning. Now its true these add benefit but they do so much harm to other companies. If Microsoft believes their products are the best and we want them then they should have to sell their products as other companies have to. Allowing Microsoft to package all of these features into the OS means other companies are being denied purchases because many individuals lack the knowledge or are content with what is given. This is so unfair on many companies. I do like XP but I also like to purchase the software such as Firewalls or photo editors. Microsoft should never of been allowed to bundle the software in this manor because it gives them such an unfair advantage.

On another note as a developer I can no longer write software that is truly cross platform. Microsoft seems to take the attitude ?Microsoft way of the highway?. This really upsets me because XP has with drawn the Java Virtual Machine from its OS in an attempt to kill it, in favor of its new c# and .NET architecture.

If they are not stopped soon there will be only one company remaining and we will all be at their mercy.

I beg you to take some serious and powerful action to stop Microsoft in their tracks or at least make them adhere to the same market rules. Can you imagine a world with only one model of car? The one car fits all. This is where the computers users are heading because when Microsoft can't have things their way they try and destroy it.

Microsoft should suffer penalties for it's monopolistic behavior. Mr. Gates protestations notwithstanding.

Microsoft has severely limited the software development of it's competitors. Take Apple Computer for example. The Judge ruled that Windows was not a copy of the Macintosh Operating System. With the deep pockets Microsoft has, it browbeats any and all competition in the marketplace.

In my opinion the best way to settle this case is to get cash donations instead of hardware/software donations to give to the schools of this country. If the donation was the same value as that of the proposed hardware/software donations schools would have the right to choose individually how they want to spend the donations. By forcing Microsoft hardware/software onto a school district is doing absolutely nothing to resolve

Microsoft's monopoly status. It merely serves to further that status just in a different sector of the economy. It serves to hurt competition in that sector and it serves as a "pat on the back" to Microsoft for doing such a good job as a monopolist. I don't believe that's the message that you're trying to convey at the end of this hearing.

In summary, cash donations only. Not hardware/software.

Dear Sirs,

I understand that the Department of Justice is soliciting comments on the proposed settlement in your suit at law with the Microsoft Corporation. Whether these comments are of any use will be for you to determine.

If memory serves, Microsoft is accused of providing software to the general public without charge. If the suit had to do with the quality of the software being provided, I could see some basis for the proceedings.

Unfortunately, what seems to have aroused Leviathan was the fact that the customer was not required to expend funds for the software received.

Perhaps things are done differently in the District of Columbia, but in most of the country giving something of value away for nothing is not actionable—it may get you a psychiatric evaluation, but it generally doesn't land you in court (except as regards that visit to the shrink). However, the full weight of the government has been brought to bear in the interest of preventing exactly what? Microsoft's domination of the burgeoning badly-designed-barely-functional-whoops-there-goes-another-blue-screen-of-death-operating-syst em-wan nabe market? It may not of occurred to you, but did you ever consider that Microsoft owns the market segment it does because no other corporation will risk its reputation on such shoddy products. There are ancillary issues—accusations of price-fixing, strong-arm exclusionary contracts, etc.

But none of these have been proved, nor are most illegal—reprehensible maybe, not illegal. Set these against a flawed premise; a blatantly, irrationally, biased judge issuing Through the Looking Glass rulings; and the spectacle of Microsoft competitors using the Department of Justice as a stalking horse. Whatever sins or peccadilloes Microsoft committed pale in comparison to the deliberate actions committed by those in charge of this case.

If there were to be true justice in this case, the Department of Justice would proffer apologies to Microsoft, reimburse them for all of the expenses in this case, then initiate action against those state governments that are trying to blackmail Microsoft with further litigation. However, I am not foolish enough

to suspend respiration until this comes about. I would think a pro-forma settlement would be acceptable, with no admission of culpability on either side. I would not think allowing (or requiring) Microsoft to stuff classrooms full of their product would be to anyone's benefit—the National Education Association is bad enough, why saddle schools with any more handicaps.

I have some sympathy with the predicament your department is in, but it is tempered by the knowledge that it is in the main self-inflicted.

Sincerely yours,
Wm. Picou

It is my understanding that the anti-trust and anti-monopoly laws are designed to protect consumers from financial and market harm, not to protect competitors of the supposed monopolist from such harm. As such, the proposed prosecution, the actual prosecution, and the proposed settlements in the Microsoft case have all caused more financial and market harm than any possible monopolist practices apparent in this case. I have been a Microsoft customer since the days of the IBM MD-DOS product, and have seen their products consistently improve greatly, and the prices for said products either remain below the level of inflation, and in some cases go lower over time.

I believe the US government's announcement that it was "going after" Microsoft has, to date, been a prime cause of the stock market's technology crash, and has cost me personally, many thousands of dollars. Give it a rest, If the US government doesn't want Microsoft to dominate the PC operating system market, then it should start buying Linux for its own uses, and leave the rest of us alone.

Subject: Microsoft Settlement

The real issues in the settlement are those which do not allow Microsoft to continue to profit unduly from the locked in base it developed with its illegal practices. To do this, all Windows APIs must be made available to other software companies. Having these tools, new applications could be written which would allow truer competition.

Additionally, Microsoft should not be allowed to use the settlement to create even more locked in clients. Giving large quantities of their machines and applications to schools would do just that. They would be using the settlement to gain an advantage in a market in which their products have not been as competitive as elsewhere. The effect

would be a reward for yhe convicted party—hardly justice.

To whom it may concern.

I sincerely hope that the settlement results in a computing trust fund set up by the federal government. Microsoft should contribute to the fund and all K-12 schools who wish to use the fund should supply a proof of instructional and administrative benefit before receiving a grant from the trust fund. The schools should be allowed to purchase any computing technologies they choose. The word or concept of 'Microsoft' should not be mentioned or printed in any association of the trust fund. This will keep Microsoft's marketing ineffectual. It is essential that the administrators of the schools acquire the equipment and software that best suits the needs of the students and both students, instructor, and administrators are free from subliminal pressure.

Allowing Microsoft to supply anything but money to a general fund will only extend its monopoly and its marketing practices.

Thank you for allowing my two cents.

Attention: Renata B. Hesse
My Microsoft product experience:
Poorly designed applications that are not user friendly;

* Program bugs that are never fixed or addressed in so called upgrades; one example of many—automatic page numbering some sometimes works, sometimes not unless you print the pages in reverse order;

* Virtually impossible to get a live Microsoft service person on the phone to answer questions that their web site or documentation cannot answer. Microsoft's products perform consistently less well than other competitor's (new and vanquished) programs yet they continue to retain a virtual monopoly in the market and drive out competitors. I would like to know what market mechanism permits them to survive so well? It cannot be direct marketing sales as I, an end user, have never seen a Microsoft sales person. It cannot be the quality of their products as they have remained consistently poor. In a normal market they should not be doing so well. One can only conclude that Microsoft is using other non-market means to retain their monopoly. It should be stopped.

Microsoft should be required to open their APIs to the public.

There should be monitoring into their business practices for a significant period of time, 5 years minimum.

Their practice of forcing OEMs to pay for a version of Windows on every box sold should be eliminated entirely. Major vendors should be able to ship OS free boxes without a penalty.

Their level of interoperability with other Operating Systems is questionable at best. Although much improved since the DOJ cases inception, it is still rife with hidden difficulties. They often mention their adherence to industry standards but in practice their is usually enough of a difference to make inter platform operations more complex than they need to be.

I also feel that a cash settlement should be enforced. It should be restricted to cash only, in a trust fund to be overseen by an independent party. A party not easily influenced.

Thank you

January 15th, 2002

Dear Department of Justice,
I have read the Stipulation/Revised Proposed Final Judgment and Competitive Impact Statement.

This looks like a good disposition of the Microsoft case to me. I'm not a legal or anti-trust expert, just a member of the public. I formerly worked at Microsoft for 8.5 years in product support, mainly in Developer Support. I talked to lots of software developers who were using Microsoft's Visual FoxPro development program.

I don't know what the executives schemed on. I *do* know that Microsoft has for years made information available to the public, through MSDN and KnowledgeBase, articles on using the Windows API as is proposed to be required in the Revised Proposed Final Judgment section III (D). In fact, I remember looking over an article a few years ago on either Microsoft's TechNet or MSDN on how to code your own internet browser.

I know from several of the training classes I had while employed at Microsoft that Microsoft has designed Windows to allow for third party components to be substituted in place of Microsoft's components. One that I remember is the file system. From reading the Revised Proposed Final Judgment, I see that this kind of design is important to the settlement. This is good, for both Microsoft and others. One concern I have on this topic is that hardware vendors will always put their own components into Windows and as a consumer I won't have the choice to purchase Microsoft's unaltered version of Windows. I see this happening already. OEM's put their own "interface" on top of Windows. They stick all their promotional icons and services on the computer. I think Microsoft has tried to make sure I have the choice of using Microsoft's services or middleware by not allowing things like the Internet Explorer icon to be removed. Please don't make it so that consumers can't choose to have an unaltered version of Windows installed on a new computer when it is purchased. Sure, a consumer could just get a "real" copy of Windows from Microsoft but many times OEM's tweak Windows so that it works with their hardware or else various drivers have to be installed in a certain order when Windows is installed. This can create headaches for consumers trying to install an unadulterated version of Windows.

In the Competitive Impact Statement, Part IV, section B(3) relating to section III.C of the Revised Proposed Final Judgment, this is fine but OEM's need to be required to offer All-Microsoft Operating Systems, including All-Microsoft Middleware, if consumers want that on a new computer. This would be in addition to versions of Windows that have had all Microsoft Middleware removed and replaced with middleware du jour. I

personally don't want to be forced to purchase a computer that only comes with, for instance, Netscape Navigator instead of Internet Explorer. Also in the Competitive Impact Statement, Part IV, section B(5) relating to section III.E of the Revised Proposed Final Judgment, the section starting on page 37 with Microsoft Must Make Available All Communications Protocols: underlined: On page 38:

"Section III.E. will permit seamless interoperability between Windows Operating System Products and non-Microsoft servers on a network. For example, the provisions requires the licensing of all Communications Protocols necessary for non-Microsoft servers to interoperate with the Windows Operation System Products' implementation of the Kerberos security standard in the same manner as do Microsoft servers, including the exchange of Privilege Access Certificates. . . ."

This needs to be vice-versa too. Other network and server vendors such as Sun or Novell, need to allow workstations running Windows operating systems to access their servers as if the workstation was running Sun or Novell's workstation software.

In general, the requirements that Microsoft's Middleware components can be easily replaced by non-Microsoft Middleware Products needs to be vice-versa also. Consumers need to be able to switch back to a Microsoft Middleware Product if desired. I believe this is in the Competitive Impact Statement, Part IV, section B(8) relating to section III.H. of the Revised Proposed Final Judgment under the underlined heading End User Access Requirements: in the second paragraph. (the third full paragraph on page 46).

To summarize, I think this is a good settlement. It should be adopted. Figuratively speaking, the judge needs to bop the Attorney Generals of the states not joining in this settlement on the head with her gavel. They need to get with the program !!! This anti-trust case has cost me personally and others much more in lost value in our retirement plans and other equity investments than any \$10 overcharge in the price of Windows could ever add up to. Thankfully we have an innovative and successful company like Microsoft. If Microsoft's competitors were to have the monopoly (and I don't really think Microsoft has a monopoly) you can be sure consumers would be paying more than \$10 to much for an operating system. It would be more like \$500—\$1,000 to much. And computer use would not be nearly as widespread as it is now. I won't name any names here but they are well known and are at least millionaires themselves.

To: Microsoft ATR
Date: 1/16/02 6:37pm
Subject: Microsoft Settlement

Microsoft has shown its clear disdain for the law in its actions following the last consent decree. This conviction is the only opportunity that consumers have to wrest control of the technology sector from a company that has dramatically slowed innovation and increased prices in an industry where prices have traditionally fallen.

It is imperative that something be done, and the present settlement is too weak, lacks enough enforcement, and has too many loopholes. This weak settlement is unlikely to have any greater effect than the previous consent decree.

Much stronger action is required. A stronger settlement is warranted and required by the facts in the case, especially after being upheld by a very sympathetic court of appeals.

Subject: Microsoft Settlement

It is clear that Microsoft has violated anti-trust law by engaging in unsavory business practices for many years. I feel strongly that the company should be *punished* (not slapped on the wrist). I support:

1. dividing the company into an operating systems group and an applications/services group.

Windows should sink or swim according to its own merits, as should the company's applications and services. The monopoly profits from the operating system should not be used to unfairly support inferior products/services.

2. requiring a large cash penalty (actual money, not a donation of goods and services)

to a trust which will go toward school technology purchases.

Some of the enormous and illegal profits that Microsoft's business has generated should be taken from them. I can think of no better place to use the money than in our troubled school system.

Date: 1/16/02 6:42pm
Subject: Microsoft Settlement

How to appropriately punish Microsoft for the abuse of power they have exhibited over the past decade:

First, Split the company! Windows operating system should be one company on it's own.

Microsoft Office programs should be it's own company Internet Explorer and other Internet related software should be one company

Retail products such as Xbox and peripherals should be one company

The Office suite of software should be forced to run on the three major platforms, Windows, Mac and Linux.

If any monetary settlement is involved, it should be in cash and given to each school to use as they wish.

Microsoft should not be allowed to buy up smaller companies only to disband them and cannibalize their assets.

Microsoft should be made liable for any security flaws in it's software. If a hacker programs a virus that erases my harddrive and that virus works because of Microsoft's negligence, I should be able to sue Microsoft for damages. This is will make sure Microsoft does not release any software that is NOT secure.

Stop Microsoft from hoarding money. They do not need the billions of dollars they have in assets. Make them operate without that kind of monetary power. There should be a law that states that if companies amass that much cash, that they have to start giving shareholders dividends or convert it into other tangible assets other than money.

From: Johnson, Sean
To: 'microsoft.atr(a)usdoj.gov'
Date: 1/16/02 6:36pm
Subject: Microsoft Settlement

Microsoft is a monopoly, that is undisputed. The goal to the settlement benefiting consumers is to force Microsoft to open up and publish all of their API's. In addition, there needs to be a punitive settlement so as to force them to assist the marketplace. Microsoft needs to be forced to pay for its misdeeds. A cash settlement (4 to 8 billion) needs to be received from the company. These monies could then be given to the states in the case to establish accounts which schools can use for purchasing systems. The schools should then be allowed

to use the monies as they see fit. They should engage in RFP processes with vendors then use the money to purchase that which would best benefit the schools.

Microsoft should not be allowed to donate any software, operating systems or computers. The money should be used however the recipient sees fit. For the long term, the MS monopoly needs to be closely scrutinized so as to better allow for competition. This would be done by forcing publishing of standards (API's) so that applications can be more easily created by vendors as well as opening up the possibility for allowing other operating systems to run software designed for Windows.

Subject: Settlement Comments

Dear Sir/Madam:

Any settlement must incorporate a requirement that the 'Windows' operating system be open to and convenient to install other browsers. In fact, because it is such a dominant system, the option to use other companies' competing software products must remain an open and viable alternative.

Microsoft (MS) cannot be allowed to block out competitors by bundling proprietary products in with their operating system. Provision must be made to easily install competing software if a company or final retail user is so inclined.

MS company culture has got to change so that we don't keep coming back to this issue.

To whom it may concern:

Here is what I would like to see happen in this case.

With Microsoft's APIs and file formats fully standardized, documented and published, other software vendors could compete fairly—which, after all, is what antitrust laws are supposed to promote. We might then be faced with a welcome but long unfamiliar sight: a healthy software market,

driven, as today's processor market is, by genuine competition.

Also, I would hope any settlement would not let Microsoft assert itself into the education market where it does not have a monopoly YET. If Microsoft is to donate to schools, let it be in the form of money and not Microsoft products. Then the schools would be able to choose the systems and software that best meets their needs.

Thank you and remember the little guys you are fighting for.

Justice Department,

I'm just going to throw in my two cents on this fiasco. . . .

I would make Microsoft be the funding for this economy. Help everyone out here by making them donate cash to our schools (they need it the most) for anything the schools need. New Macintosh systems, more teachers, larger schools or even more teachers. (Did I say that last one twice?)

Bottom line, they were wrong and need to pay for it just like everyone else. Sure this is a special situation, but it shouldn't be treated any differently. They are a monopolizing company with bad business practices. Will they stop? Their too big and that business practice is, plain and simple, how they do business. Can we help America out since they screwed up? You bet we can.

We can't have them fold or get split up. They need to be just as supportive of the American economy as everyone else. They just need to be regulated a bit more.

Thanks for your time,
Jay Runquist

To: Microsoft ATR
Date: 1/16/02 6:50pm
Subject: Microsoft Settlement

To whom it may concern,

I would just like to comment on the Microsoft Settlement. I think it is good that the proposed settlement was rejected. It would have done little to punish Microsoft for its illegal activities and would have instead given them an unfair advantage in the

education market. Any settlement I believe should have the following objectives:

1. It should in no way increase Microsoft's install base or influence in any way.

2. It should promote more competition in the market. For example, if Microsoft is required to donate resources to schools, it should donate systems not associated with Microsoft in any way (like Mac OS X or Linux).

3. If the settlement requires Microsoft to expend money, it should be of a significant amount to reduce Microsoft's ability to continue their monopoly.

4. It should protect OEMs so they can make operating system and configuration choices without Microsoft's pressure (as would have still been present in the rejected settlement).

Whatever the eventual settlement is, I think it should have one final requirement, that it is considered a bad idea by Microsoft. Based on how Microsoft's legal department has worked in the past, I think it is reasonable to say that any proposal Microsoft endorses will ultimately expand their monopoly. In addition, if they like the settlement, they will have no incentive to stop their anti-competitive behavior. Like any convicted criminal, Microsoft should receive a punishment which will make them think twice about acting like they have (and continue to do).

Thank you for your time.

Sincerely,
David Stechmann

for what it is worth, if microsoft is to donate anything to the school systems in the U S that have technology needs, I would suggest a monetary fund be set up, administered by someone outside the system, similar to a trust fund, without exorbitant associated administrative costs, and this fund be used to acquire hardware and software as necessary for any particular school, DETERMINED ONLY by the school and it's teaching faculty, not microsoft.

respectfully,
Nick Baily

Subject: Microsoft Settlement
Dear DOJ:

Pursuant to the Tunney Act, I am submitting my opposition to the proposed settlement RE: DOJ vs Microsoft.

If Microsoft is permitted to "donate" its services, software, and hardware to schools, they will be effectively locking out competition at the root of social and economic structure.

By permitting Microsoft to donate to schools, the Department of Justice is actively facilitating the exclusive promotion of Microsoft products, further enhancing Microsoft's already gargantuan monopoly over technology and the internet. From the viewpoint of Microsoft, it is the best sweetheart deal ever.

Level the playing field, escrow a couple billion in cash, donate it to whatever technology schools and inner-city groups see fit via an independent non-profit foundation.

A cash settlement is the only real, fair, and appropriate option.

Sincerely,
Ronald C. Yochum, Jr.

Subject: Microsoft Settlement

I believe that Microsoft's market dominance will only continue to grow unless it is split the way the original trial judge determined it should be. The many applications brought to market by for Windows by Microsoft itself is a huge influence to run the windows operating system. Splitting the company would remove the barrier to develop only for windows, and would encourage Macintosh / Linux development.

Second, any donations of computers to schools should be the new iMacs (Microsoft Office). I think this would help stimulate the growth of other operating systems, while still providing an alternative for the student. These computers should be distributed to each of the levels of schools (elementary, middle school, high school, and university.)

I've spent a great deal of time in my life following the events of this company. I believe that the tactics that it has exhibited have stifled an industry. It has used its leverage from the operating system to dominate markets which it had never been involved in to begin with. Internet Explorer is an excellent example of this.

I would hate to see such brutal market tactics go unpunished. Splitting up the company, and ordering the ports of all the Microsoft applications to 2 other platforms (Mac, and a distributioin of Linux) would be ideal.

Dear Mr. Ashcroft:

This letter is in reference to the justice department's settlement with Microsoft regarding the antitrust issues raised by the morally and economically bankrupt liberal demarcates under the leadership by Joe Klien, who served an impeached president.

The same justice department which refused to investigate Bill Clinton's shenanigans and Albert gore fund raising practices using the Buddhist temple and other more despicable acts, went after a successful corporation under a socialist populist guide. Egging on are the attorney generals of different states, who need a forum to run for the governor of their respective states. Those who extorted money form Tobacco industry under the guise of covering Medicaid and Medicare costs went in search of other lucrative extortion targets and found Microsoft, which became as damaging to consumers in their eyes as Asbestos, lead paint, tobacco and other extortable industries. In that way, salt, sugar, orange juice, carrots and any product existing on earth is potentially a target for the corrupt liberal democrats.

I fail to understand that while fighting against Taliban and El Khaida, we still have to wage a legal war against our own hardworking innovative corporation like Microsoft, who have brought computers with in the reach of an average American like me.

While the litigation was going on I heard statements to the fact that Microsoft was not a player in Washington, with influence campaign contribution and its own lobbyist, pr personnel and other assorted hangers on and social parasites. Thus our government and the political system has now become as a Mafia like extortionist, where every successful corporation like Microsoft has to pay a tribute and bribe to politicians to conduct its business. Under the settlement Microsoft has to divulge its source code and for the corrupt liberal demarcates even that is not enough. Why should it not protect its intellectual property which it has spent billions to develop Those unsuccessful companies like Novell who have not been successful in the market place, should pull political strings to hobble a successful corporation? In stead of encouraging them, they should be exposed, condemned and denounced. Why a law suit which was started under a draft dodger, pot smoker, financial swindler, morally bankrupt, anti business Clinton should be carried on by us republicans beats me.

But some of these corporations are aptly known as rope sellers, Lenin say that capitalists will sell us the rope with which we will string their neck with. Thus any corporation or any aerate hard working

American who gives a penny to the liberal democrats is digging its own financial and personal grave.

By giving political contribution to the domestic El Khaida and Talibansit like John Dingell, Henry Waxman, Tom Daschel, Ed Markey and other fascists Microsoft created a problem which it is trying to solve through painful compromises with DOJ.

Let us solve their problem once for all by agreeing and quickly implementing the settlement and stopping the extortion once for all.

Dear Sirs

I find myself compelled to write to you with a mixture of frustration, anger and disappointment. I am shocked to witness our judicial system and government failing to do justice on behalf of the people and companies they represent. If there ever was a monopolistic and criminal company, it would have to be Microsoft.

Not only is our government failing to punish Microsoft, the government may be helping it expand its monopoly into areas such as education, which they do not control, at the expense of other companies and us all. A recently published statistic gives Microsoft over 96% of the market share, this "alone" should compel you in favor of a brake up. How can individuals and the market benefit? How can there continue to be diversification, innovation and competition? Please pause for a moment. . . 96%!!

It is time to stop "compromising". It is my hope to see this latest proposed settlement be rejected in favor of a severe and just solution. Microsoft is a "monopoly" and is using its vast resources to squeeze, or acquire, other companies out of business and penetrate new markets with unfair and criminal business practices.

Microsoft's latest business and private licensing fees reflect its arrogance and dominance in the market place. Do the right thing and punish Microsoft, nothing less than a "brake up" will do.

Thank you,
Piero Favretti

Dear Mr. Ashcroft:

I am writing you in support of Microsoft's antitrust settlement with the federal government. I think it is extremely reasonable.

Microsoft has agreed to license its Windows operating system products to the

20 largest computer makers on identical terms and conditions, including price. Also, Microsoft has agreed to design future versions of Windows, beginning with an interim release of Windows XP, to provide a mechanism to make it easy for computer makers and software developers to promote non-Microsoft software within Windows. Additionally, the settlement will establish a technical committee to monitor its compliance with the settlement and assist with dispute resolution.

I think this settlement gives the government what it wanted. It's time to move on, and I seriously hope this case comes to and end.

Sincerely,
Kathleen Gibson

Subject: Microsoft Settlement

While it is certainly no bad thing to allow schools more cash to buy computer equipment and software, I agree with what many have pointed out—namely that it is utterly ridiculous to allow Microsoft to flood the market with refurbished Windows PC's and Windows only software, thus leveraging even more of a monopoly for themselves even as they atone for their sins! Apple is right to point out that education is one area where there is still healthy competition in the industry, and any such proposals from Microsoft would destroy Apple's chances of competing fairly in the education market. If you add that to the fact that it would not be a punishment for Microsoft, but (quite the contrary) a brilliant way to expand their dominance with very little real expense to themselves, it has to be seen that there is no way this deal can stand. If they were to give cash to education, with absolutely no strings attached other than it be used to buy IT equipment and software, that may be fair. But it would be preposterous to cut Apple and other non-Windows systems out of the market.

MTC-00012932

From: Don Rozenberg
To: Microsoft ATR
Date: 1/16/02 7:10pm
Subject: Comment on Microsoft Settlement

Microsoft has been found to be a predatory monopoly; it should not be allowed to use its monopolistic gains to extend and perpetuate its monopoly. A large factor in its ability to continue it strangle hold is a small number of proprietary file formats. The most important one being the format of its Word document. Other important ones are the formats of other Office products. These are so important because so many people send Word documents to one another. Because the formats are proprietary, other software developers have not been able to generate completely satisfactory conversion programs that could run on other operating systems. There are indications that Microsoft is

considering periodic licensing for its office products.

Yours will be forced to by updates to look at documents that they have had for years.

If other software developers were able to interpret word documents then other alternative to MS Word would be available and thereby competition would be enhanced.

My suggestion is to force Microsoft to disclose its proprietary file formats especially for MS Office.

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,

Steven D. Shuler

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

From: Tony K. Olsen
To: Microsoft ATR
Date: 1/16/02 7:13pm
Subject: Microsoft Settlement
To Whom It May Concern

I appreciate the opportunity to present my thoughts on the Microsoft Anti-trust settlement and hope that you find them of value. Microsoft abused their privileged platform as the "industry leader" by directly forcing the hands of the PC "OEM" distributors to accept their licensing deals or suffer the consequences. These deals were so binding that the "OEM" distributors could not afford to exercise their right to allow other Intel based Operating Systems like BeOS (since bankrupt with all its assets purchased for \$11M by Palm) to be included with their distributions with a boot-loader. As a highly technical computer user (programmer/system administrator) I saw the BeOS as an excellent next-generation operating system, one that could easily compete with Microsoft if the playing field was level. It was technologically superior to all home versions of Windows in the way in which it handled digital media and could have proven to be a low-cost alternative if given half the chance. All that needed to be done was for the purchaser of a new computer to be able to choose which operating system they wanted to run when the computer booted up. This can be easily accomplished with free software known as "boot-loaders". Microsoft was so frightened of this option, whereby the user could freely determine what operating system they wanted to use (and please note that multiple operating systems can co-exist on the Intel platform—I currently run Windows 98, Linux and BeOS on my Intel Pentium II-350MHz PC), that they legally mandated that the "OEM" distributors MUST only allow Microsoft.

There is an excellent article at Byte Magazine by Scot Hacker, a computer expert and noted computer author:

<http://www.byte.com/documents/s=1115/byt20010824s0001/0827-hacker.html> which provides the following details of Microsoft's actions with respect to "boot-loading": "So why aren't there any dual-boot computers for sale? The answer lies in the nature of the relationship Microsoft maintains with hardware vendors. More specifically, in the "Windows License" agreed to by hardware vendors who want to include Windows on the computers they sell. This is not the license you pretend to read and click "I Accept" when installing Windows. This license is not available online. This is a confidential license, seen only by Microsoft and computer vendors. You and I can't read the license because Microsoft classifies it as a "trade secret." The license specifies that any machine which includes a Microsoft operating system must not also offer a

nonMicrosoft operating system as a boot option. In other words, a computer that offers to boot into Windows upon startup cannot also offer to boot into BeOS or Linux. The hardware vendor does not get to choose which OSes to install on the machines they sell? Microsoft does. "

This "trade secret" is direct proof of Microsoft's monopolistic practices and inevitably contributed (significantly) to the death of BeOS. Although I have numerous licensed Microsoft products in my home and installed on my Windows 98 partition of my computer I will never again purchase a Microsoft product nor will I upgrade to the new Windows XP operating system that is arguably one of the most intrusive efforts in the history of computing. Their .net strategy is consistent with their earlier behaviour and is an attempt to destroy the "open source" computing community by forcing consumers, including big businesses, into their proprietary solution. I plan on switching directly from Microsoft to Apple as soon as Apple has their new iMacs (or G5 systems) available for purchase. This is a decision I would not have had to make if Microsoft was not in a position to directly impact a user in a foreign country by their monopolistic practices which ultimately led to the computer software I am/was forced to use. This behaviour must be stopped before there are more examples of Microsoft's abuse of their privileged monopoly. The only solution to this is to punish Microsoft for each and every computer shipped that the "OEM" distributors were forced to load Microsoft-only operating systems. The best manner in which to enact this punishment is to ensure that those people directly affected by Microsoft's practices are those that are the recipients of the penalty on Microsoft. Therefore I recommend that all computer users in the United States who were affected by Microsoft's practices be allowed to switch to Apple computers at Microsoft's expense. Microsoft would be responsible for purchasing the hardware, purchasing equivalent functioning software (e.g. Microsoft Office 2000 for Windows == Microsoft Office for OS X), and providing (via a third party) technical support. This way those people most affected have the choice of opting in for Apple or choosing to stay with Microsoft. What could be more ironic for Microsoft than to once and for all allow the users to have the say they were denied before.

Thank you for your time. Sincerely,
Anthony K. Olsen

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Jeff Garrett

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Marsha Nelson

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Edward J. Breza Sr.

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Dear Sirs:

Please end the litigation on the Microsoft case. The settlement is fair and in the best interest of the people.

The money you spent on litigation would serve the people better if it was sent on:

Healthcare
Social Security
Child care credit
A tax credit for single parents and the list is endless get the point?
thanks,

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Subject: Microsoft Settlement

I must say I'm extremely disappointed with this "settlement." The Clinton administration worked very hard to prove that Microsoft hold monopoly power and abused that power at the expense of it's competition. As soon as the Bush administration took office, it seems as if the Justice Department became very willing to give into Microsoft's wishes, to let Microsoft continue to wield it's monopoly power unfettered. I had hoped that the Justice Department would take this opportunity to take a stand. A monopoly is not good for the market, for the industry, for the economy, for the country. This settlement provides almost no putative measures, something necessary to "bring them down a notch." The (illegal?) hoards of tens of billions of dollars in cash Microsoft holds makes and monetary putative measures useless. The only thing that can change the business practices of Microsoft, making the industry more competitive and open, is to attack the one thing that could actually hurt Microsoft, opening up it's Window's API's. These are the only things that guarantee Microsoft it's monopoly power and the only thing that can break that power. I'm not talking about some minor "promise to make some API's more available to some people. . . ." promise. In some way Microsoft must be made to make it's platform completely open, that anyone can have the same access to the underlying code as Microsoft itself has. And if it's found that Microsoft has hidden or not opened up those API's completely, there must be some other, very strong response by the government, including monetary punishment and the threat of a possible breakup of the company (ala AT&T and the proposal by the original trial judge.)

Those are my thoughts on this remedy. I things it's completely useless, does nothing to protect the public nor creating a more competitive market, and is full of so many loop holes that it would be easily circumvented by Microsoft. I urge you to reconsider your position and take a stronger stance with Microsoft. That's why this case was started in the first place.

It seems as though the reason Microsoft is on trial has been forgotten. Plain and simple Microsoft is a Monopoly and action needs to be taken to stop them from continuing to play that roll. Do not allow Microsoft to bribe their way out of this.

The previous solution of breaking Microsoft into separate companies seemed to be more on track. What happened to that line of thinking? Was it clouded by money that Microsoft was throwing around? Please do what needs to be done. Justice needs to be served.

From: Ryo Chijiwa
To: Microsoft ATR
Date: 1/16/02 7:18pm
Subject: suggested remedy

In order to prevent Microsoft from engaging in anti-competitive monopolistic practices, I would suggest one or more of the following:

(1) Order Microsoft to OpenSource all versions of the Windows operating system currently in use as well as all versions that are released in the next 5 years. All other major operating systems (UNIX, MacOS X) have a major portion of the source code open to the public. This is the best way to ensure all API's are open to the public, and may even benefit the Windows platform, as it will be subject to peer review.

(2) Order Microsoft to open up proprietary document formats used by MS Office and other software products like Windows Media Player. This will allow competitors to create compatible software products, making it easier for users to switch from (or to) the Windows platform.

(3) Order Microsoft to adopt standards and technologies overseen by such organizations as the W3C and IEEE to ensure better cross platform compatibility of software and hardware products, as well as network services.

I would like to point out that Microsoft is a repeat offender, and preventing Microsoft from behaving similarly in the future will, at the end, help other businesses as well as consumers. Punishing Microsoft for hurting the industry will not have any negative consequences to our economy, nor will it stifle innovation.

Regards,

Ryo Chijiwa

I'm a computer systems administrator for a private school. I have used computers for 17 years. I vote and pay taxes and I would like to comment on Microsoft and a potential settlement.

1. Microsoft has shown that it will not work fairly with other software or hardware companies, so Microsoft must publish the applications programming interface or API

for all of it's operating systems for the next 10 years, so that other Operating Systems will be assured of inter-operability with Microsoft Operating Systems.

2. Microsoft also needs to publish it's in-house APIs so other software companies are on the same level playing field as Microsoft.

3. Microsoft also needs to release the source code for it's browser, Internet Explorer, because that is the root of the current situation. Those are the things that need to be done so that Microsoft is punished for it's illegal actions.

They committed an illegal act, punish them.

To Whom It May Concern:

Surely there are political forces at work behind the proposed settlements to the Microsoft antitrust suit. How else could one explain the leniency and reckless disregard for protecting the general public against such business practices? Are we to allow this to continue? Have big businesses intimidated the federal government to the point they are granted "carte blanche"?

The current resolution under debate is more than unacceptable. It is a farce because it, in no way whatsoever, represents a punishment for Microsoft's **proven** (again, I emphasize PROVEN) illegal acts. It is a resolution that will only continue to foster Microsoft's growth and stronghold on the PC market (especially where it's most deficient—the education sector), despite it's lack of innovation and morale. Their casual attitude towards the DOJ (and other legal entities opposing them) and their boldface lies (they told the court that, "sure, it would supply a version of Windows with Internet Explorer removed from its guts, but gee, sorry, then Windows wouldn't work.") shows nothing but contempt for the free-market society which helped them build up to where they are; the same free-market society they misused and abused along the way.

I am extremely thankful for the 9 states that have had the insight, intelligence and courage in refusing to accept this situation as is (being from California, I am especially thankful we are one of those 9.) It is only because of them I have had any faith that this matter will be resolved fairly and according to what is in the best interest of society, and most importantly our country. I hope that this kind of unwavering determination will ensure justice prevails.

I urge you to resolve this matter in a manner that may not be consistent with the lingering political motives, but in a fashion that will be in the best interest of the American people.

Sincerely,

Ron Severdia

I am disappointed by the penalties not imposed on the software giant. The software giant does not need to propagate its muscle by giving out and providing computers to the poorest schools. If that was the case. . . LET these poor schools make the choice of which operating system they wish to have in their school system. Besides. . . if they are in fact the poorest schools how can some of these schools justify an IT person or persons on staff to maintain Windows machines. The alternative Operating systems offer much more less maintenance and will not hurt the schools that are poor. This is not a choice. . . it is stuffing every school with an operating system that it is forced to use. . . without given the chance to choose.

I say fine them (very steeply). . . . Allocate the money to the poorest schools and let the people make the bids and offers. . . let the school make the choice. Do not let Microsoft FORCE FEED their power upon these people. . . it will just give them more reason. . . for dominance. That is the very thing that defeats the purpose of the suit. As a consumer that is unfair and uncalled for.

Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Attorney General Ashcroft:

I am concerned not only that the Microsoft antitrust case has dragged out for so long, but also that the settlement which is now pending threatens to be overturned if the correct course of action is not pursued. Nine states with a vested interest in the Microsoft case are currently seeking to overturn the settlement and to seek to reopen the antitrust suit against Microsoft. This has gone on long enough. I do not believe it is necessary to waste the time and resources of the Department of Justice, Microsoft, and the plaintiff states any longer. I urge you and your office to carefully consider the implications of extended litigation before any decisions are made.

First of all, additional litigation is unnecessary. Microsoft, while it may have been in violation of antitrust laws at the beginning of the suit, has agreed to terms in the settlement that would prevent them from further antitrust violations. For example, upcoming versions of Windows will now be formatted in order to support non-Microsoft programs and products, and various line code, interfaces, and protocols will be disclosed to Microsoft competitors so that they will be able to create workable interfaces between their programs and the Windows operating system. Microsoft has also agreed to license applicable intellectual property rights to all third parties working under the terms of the settlement.

Secondly, further litigation is unwise. I do not believe it is in the best interests of the economy, the consumer, or the American IT industry to continue to drag out the suit any longer. It is a waste of time and money and it will lead to no good. The settlement reached is just to all parties involved and needs no further modification. Microsoft and state and federal resources have been tied up for too long in this suit. The American economy, as well as the American IT industry, have been hurt by this stagnation. This is unconscionable. The Department of Justice in antitrust cases is supposed to work in the public interest. As far as I can determine, the public has only been hurt by the lack of swift conclusion. I urge you and your office to take a stand and allow the settlement to pass without further delay.

Thank you.

Sincerely,

John Knox

Subject: Microsoft Settlement

Dear Sir or Madam,

Any settlement with Microsoft *must* contain provisions to curb Microsoft's anti-competitive behavior. I personally favor a solution that would break up the company into at least two companies; one providing operating systems and the other providing applications such as Microsoft Office. Here is a recent example of why I feel this way: Yesterday I ordered a computer from Dell. My *only* choice when ordering one of their

standard configurations would be to get Microsoft Office. I could *not* order a computer without Microsoft Office, except perhaps by calling Dell on the phone and insisting.

In the last 8–10 years, every computer I've owned has come with a copy of Microsoft Word. Is it any wonder that companies like Word Perfect and Lotus have essentially disappeared? Why would I go buy a copy of Word Perfect when I've already been forced to buy a copy of Word? Microsoft's monopoly on operating systems gives them the ability to force hardware manufacturers like Dell to bundle Microsoft Office with every PC they sell.

I repeat, that any settlement with Microsoft must contain provisions to stop this kind of anti-competitive behavior.

Thank you for allowing me to submit my opinion.

Subject: Microsoft Settlement

To whom it may concern:

I'm writing to you to protest the current proposed Settlement in the Microsoft Antitrust case.

Microsoft has shown time and time again that they will NOT compete fairly if allowed any leeway in how to do that. They will corrupt, twist, and abuse any loopholes given to them.

The current proposal does not go nearly far enough in establishing a fair and even playing field for Microsoft and their competitors. It essentially leaves Microsoft free to abuse their competitors as they have been doing for almost 20 years.

I will now quote a recent article from Salon.com, because the author says this better than I can:

There's no reason to think the Justice Department's proposed settlement will work any better than the consent decree of last decade did. And financial penalties can hardly wound a company that is sitting on a cash hoard of tens of billions of dollars. But intellectual property—that's something Bill Gates and his team really care about. Requiring them to divulge some of it in order to restore competition in the software market might actually get them to change the way they operate.

With Microsoft's APIs and file formats fully standardized, documented and published, other software vendors could

compete fairly—which, after all, is what antitrust laws are supposed to promote. We might then be faced with a welcome but long unfamiliar sight: a healthy software market, driven, as today's processor market is, by genuine competition.

Please reconsider your current plan. It will not solve anything, or provide any relief or protection from Microsoft's heavy handed, anti-competitive practices.

Sincerely,
Jesse Spears

I think that handing Microsoft a 2 year moratorium on licensing out Windows would be very fair. They would be allowed to sell the software on retailer shelves only. This would allow them access to an open market, while giving all competitors 2 years to catch up on market share. This would totally open up the licensing market MS used to monopolize the industry. (ie. cheaply bundling their software in with manufacturers PC's.) This would have to be announced in advance to give all parties a lead time. If I can help just email.

Hi,

If you guys want to find out some anti-competitive tactics Microsoft pulled, you should look into the nonsense they were pulling after 1993 or so when they divorced from IBM on the OS/2 project. Among other things they bought the only company that made a program to install OS/2 applications, and cancelled the OS/2 product within days. They also bullied computer manufactures with threats of higher Windows licenses if they dared bundle OS/2 with their machines. As an early developer of OS/2, this had a direct impact on myself and countless other OS/2 ISV's most of which are out of business now.

OS/2 Warp (Version 3.0 of OS/2) was a real threat to Microsoft and they did everything they could (legally or illegally) to sink the product.

Dear Sirs:

I am very troubled as an early adopter of technology and a user of multiple platforms that MS has consistently robbed, raped, and forced independent developers of software and hardware to often go against their best interest.

Just look at their implementation of Java, QuickTime, and Real software for how they have stunted the consumers right to choose.

Further, this company is not an innovator, instead they have cobbled together (badly) a group of programs that they mostly have not developed in house, and the macro language they used (vbasic) leaves all users open to easy hacking and abuse.

Also, the pitiful use of lawyers to block the truth, and more importantly, consumers ability to use other programs or deselect programs forced upon the Windows desktop. i.e., Please examine Macintosh versions of MS Project, Links, Excel, Automap(renamed), all developed on Mac and ported THEN DISCONTINUED or not updated for YEARS. Also, one need only to examine Netscape's browser, the top 5 hardware manufacturers ability to change the startup or desktop, and features continue to be built-into the OS (which wasn't an OS before win 2000) and the inability to purchase an Intel based machine without their software pre-installed.

Freedom demands that you examine ways to make this rogue company pay CASH damages, as this is the only way a juggernaut of this size can be slowed, and please limit any and all abilities for this company to restrict our TV Console and Game Console industries with their underdeveloped, buggy, and sub-par software offerings.

I have been in this industry for nearly 20 years, and this company would be a better competitor if it's wings and the egos of the operating officers were severely curtailed for their illegal and pervasive ignorance of both the spirit and the letter of the laws of the United States.

You are our last, best hope: capitalism is no excuse for immoral gross negligence, and this administration cannot look the other way when the "little guy" is beat up by the fat, slothful bully.

thank you for you time and attention.

Dear Microsoft Settlement:

I have a choice if I want to buy this product or not. I don't have that choice with gas bills, and food etc. Stop wasting my money. I never received a raise. The politicians can give themselves a 5,000 dollar raise, and than tax my family more to pay for this and that. Whatever! STOP. . The Microsoft trial

squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
John Mistura

Subject: Microsoft Settlement.

Dear Renata B. Hesse,

I am a computer consultant who has experience in teaching and supporting computers in a private school for learning disabled students. My experience in computer consulting includes technical support for main frame, Unix, Microsoft products and computer networking support. I am a Microsoft Certified Systems Engineer and provide free technical support to computer users in my free time. Much of the free technical support I provide is for users who have problems with Microsoft products. I have been following the Microsoft Anti-Trust Case and I am glad to see that what would have been the ideal settlement on the side of Microsoft has been challenged. Microsoft's proposed settlement would have

not penalized Microsoft, but in fact would have been a great benefit to Microsoft. Their proposal should have raised many questions about the intentions of such an action and the real cost to Microsoft for the proposed settlement.

If Microsoft were to donate software to schools systems they would be given an unfair advantage in marketing their software. I have personally seen this type of marketing launched by Apple Computer Corporation in the 80s. Apple provided all sorts of incentives and reduced prices to school systems to entice them into purchasing computers for the classrooms. The goal of this marketing ploy was to develop the incentive for parents of the students to buy apple computers. This method helped Apple Computers to increase their volume of sales. This settlement would allow Microsoft to use the same tactics in their punishment. Microsoft could introduce new software for the students use and then subtly encourage the parents to purchase the new software. This is a net plus to Microsoft which in fact nullifies and penalties.

If the judgement is to punish Microsoft then it should be felt by Microsoft and its corporate officers. If Microsoft is allowed to donate software then all they have to do is manufacture CDROMs at a cost of less than \$1.00 per copy and the charge the the market value of the software against their settlement. This is a great deal for Microsoft as they could charge of \$89 for each copy of Windows 98, between \$269 and \$299 for each copy Windows.XP Professional, and between \$189 and \$199 for each copy Windows.XP Home Version. This would effectively produce a pennies on the dollar settlement. This would ultimately be cheaper than an advertising campaign. The net result is that Microsoft effectively feels no pain with this punishment.

Microsoft's launch of Windows.XP would appear to the average American to be a clear case of Contempt of Court. Microsoft Corporation does not have to comply with the court rulings, just as it does not have court good feelings from their product users.

I would like to see real penalties applied to Microsoft for their actions. The break up of Microsoft would be no more adverse to the economy than the breakup of AT&T. Would we have the telephone and Internet services at the low rates today if AT&T was allowed to continue to operate without the breakup? If Microsoft were to be broken up more innovators would be able to step up and compete. If the breakup is not done then the least that should happen is that Microsoft should be forced into making Windows 95, 98 and Windows NT public domain. Other innovators could then improve those products and offer an alternative to Microsoft.

Thank you for your time and consideration.

Sincerely,
Wayne Pinkham

Subject: Microsoft Settlement

I think the settlement should be something along these lines:

To compensate for past abuses:

1. Heavy \$ fine that is proportional to the \$ gain they have achieved as a result of these practices. This somewhat corrects for penalty for past sins.

To avert future abuses:

2. They should have to publicly publish all APIs in the Windows Operating Systems.

3. Require them to release applications programs on ALL platforms simultaneously with equivalent features. They should not be allowed to schedule releases for a competing platform at much later dates than the applications on the Windows platforms. They have used this quite cleverly in the past to yank other companies around by threatening to drop support for other platforms (with their Office Suite) when other platforms need the Windows applications to exist because their predatory practices have created the monopolies. This will remove the "platform preference" issue

that Microsoft so cleverly uses by creating second-rate applications for other platforms. I cite their slow native support for the Macintosh PowerPC chip by not have any native applications for almost two years after most other companies. When Office Word 5.0 appeared, it was doggedly slow. The point of that was to slow the adoption of the PowerPC and to impede Apple from making gains against the Intel Pentium Chip.

4. Require them to publish all file formats for all their applications. This will allow competitors to write similar programs that can compete with Microsoft's and yet interact with Microsoft software at a file level. Currently no one can do that because Microsoft keeps those things secret. Some reverse engineering of these file formats has been done, but with limited success. Microsoft keeps changing them so that if someone were to figure them out, that knowledge would be obsolete possibly on the next release.

Microsoft and its CEO have revealed to the world during the anti-trust trial of what liars and thieves they are. Please impose severe punishment on them and rid America's computing desktop of the Microsoft criminals. They are a blight on technological development!

From: David Lentz
To: Microsoft ATR
Date: 1/16/02 8:12pm
Subject: Microsoft Settlement

This note is in response to the request for public comment on the Microsoft-DOJ "settlement".

Let's see if I understand the settlement purchased by Microsoft—after being convicted of predatory business practices and abusing their monopoly power, Microsoft will:

(1) Not be impeded in any way, shape or form from using their existing monopoly power to extend their influence to other industries by restrictive covenants and bundling products to exclude/crush competitors

(2) Not be required to compensate either the companies damaged (Netscape comes to mind) or the consumer for damages inflicted by their crimes. Indeed, so far as I can tell, our government's position is that the Microsoft monopoly and absence of competitive drive in the small computing

marketplace is the best thing that ever happened to us.

(3) Be forced to push "one" billion dollars, into one of the few markets not completely under their control (education), in a manner virtually guaranteed to give them a dominant influence, leaving them with "only" a 35+ billion dollar cash position.

(4) Be subject to the smallest degree of oversight possible, by a handful of individuals with no degree of control over the actions of the company they are overseeing. I expect the nation's news media to be a more effective control, but only to the degree that Microsoft cares what is said about them. If past reflects the future, they couldn't care less what anyone thinks about the way they conduct their business, so long as they are free and unencumbered.

Is that about the size of it? Do I understand it? I guess my reaction is that Microsoft got one hell of a bargain for their investments in the US Government (meaning the Executive branch, Legislative branch, and Judicial branch). I figure that the additional markets and profits this "settlement" will acquire for them will more than pay for their legal expenses. Looks to me like in the case of "Microsoft vs the DOJ", that regardless of the "official verdict", Microsoft won and the government is begging their forgiveness via this "gift" of a settlement.

Just my opinion and comment.

Attorney General John Ashcroft
United States Department of Justice
Washington, DC

Dear Attorney General Ashcroft:

I believe that, in a capitalist society, it is the role of government to stay out of private industry. I feel that the government's antitrust suit against Microsoft is a direct violation of the ideals that have established this country as the most powerful nation in the world. I am pleased that a settlement has finally been reached, so we can finally put this foolish business behind us.

This suit has done irrefutable damage to the United States economy, and if we continue with this litigation we will only be hurting America more. As we are faced with a possible recession we need to take stock of the damage that this could cause if it is pursued any further. Microsoft is one of the largest employers in America. When times are bad economically you do not attack employers. Microsoft is also the leader of America's fastest growing economic sectors. This suit has caused the IT industry to flounder allowing room for overseas competitors to elbow their way into a field that we should easily be able to dominate.

I thank you for the work that you have done in bringing forth this settlement. I hope that you will have the foresight to protect free trade and capitalism for America's future.

Thank you.

Sincerely
Glenn Johnson

Attorney General John Ashcroft
United States Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Attorney General Ashcroft:

The Department of Justice and Microsoft have finally settled their three year long antitrust case. We are writing to you to give our support to this settlement. It has, in our opinion, gone on far too long. Any further litigation would be damaging to America's economy.

We personally think the antitrust case was more an attempt by Microsoft's competitors to disarm the company than any unfair business practices. "Sour grapes" is the only term we can think of to describe the antitrust case against Microsoft.

Overall, Microsoft has been very fair. Microsoft has agreed to release its intellectual property in the internal interface for the Windows operating system; license other intellectual property; open up Windows to modifications to let its competitor's more easily promote their products; and subject itself to a technical committee checking for compliance with the agreement.

It is time to move on. America has rebounded from last September. We have a great deal of optimism about our economy. We need to let Microsoft get back to what it does so well—innovation in the technology field. We urge you to give your support to the Microsoft settlement. We do.

Sincerely,

Subject: Microsoft Settlement

In my opinion, the proposed settlement does not adequately protect consumers from Microsoft's heavy handed tactics. They continue to bundle product and coerce consumers. To ensure adequate competition, they should be required to publish, with an appropriate lead time, the specifications of all the proprietary file formats and APIs. This would give competitors a chance at competing in an otherwise closed environment controlled by Microsoft and protected by their monopoly. —

From: David M. Ensteness
To: Microsoft ATR
Date: 1/16/02 8:24pm
Subject: Microsoft Settlement

Dear Sir or Madam:

As a college student at a private liberal arts college in Minnesota working in the Information Technology Dept. I have witnessed first hand the outcome of Microsoft's unfettered actions. Our campus suffers directly because of the built-in incompatibility of MS products to work with competitors' products including JAVA, QuickTime, Mac OS, Linux, BSD UNIX, Solaris, and other backbone technologies.

Last year our campus made a rush move to upgrade from Windows NT 4.0 to Windows 2000 because of the promise that we would be able to integrate it into our network structure more smoothly. This has not been the case. While the problems with NT rendered much of the campus network of 4,000 terminals unusable for our 2,400 students and many of our faculty, Windows 2000 has been a mixed blessing. Campus wide incompatibilities still loom large and prevent a true cross-platform environment [which we have been able to create between minority alternative platforms] from existing. Our reliance on MS software due to their various monopolies has ensured that we may not choose to migrate away from the Windows platform.

I have read and reviewed the published information regarding the MS settlement

agreed to by MS and the DOJ and have contacted my Attorney General regarding the matter. I do not agree with the settlement proposed by the DOJ and the nine states which have decided to settle. I do agree with the settlement proposed by the nine states continuing the case which was refused by Microsoft.

I feel that MS must be forced to provide an unbundled version of Windows to OEMs, open source code to monopoly tied software such as Windows, Internet Explorer, Office, and others and license other companies to produce fulling compatible versions of MS software for both Windows and other platforms. These licensees must be given full and complete access to any proprietary code that relates in anyway to the product they are to produce so that they are able to have an equal chance to develop quality software.

As Always,
David M. Ensteness

Sirs:

Thanks very much for giving the public the opportunity to voice opinion in the settlement of the MSFT case. The entire circumstance around this case is very upsetting. Some say it all came about because MSFT and Bill Gates didn't contribute enough to political campaigns, or have a huge lobby in Washington representing their interest. Some say it was the jealous competitors who did give political contributions and have a strong lobby in Washington that got the Justice Dept. to go along and punish MSFT. I personally hope none of this is the case, because if it were the case it would go against every principal, in this opinion, that our country is founded on. Americans today are so cynical and non-trusting of our government, including the Justice Department, that somewhere, someday, someone must have the courage to stand up and say: "This case was dreamed up, schemed up by some special interest. It has no merit. It was intended to destroy and/or punish a very successful corporation of which we are all jealous. Many of us in the D of J have never worked outside government, we are easily swayed by one sided propaganda and lacking experience in the outside world of free competition, we misjudged the collapse of our "Ivory Tower" thinking. We were wrong. We want to correct our wrong.

Microsoft has done no wrong, but instead has contributed vast qualities of knowledge and productivity, while giving our entire country unbelievable economic gains." Yea! Sure! The chances of that happening are zero. But someday, we must stop letting the Government destroy everything that is good for a majority of our nation. Remember what it was like in the 1970's and 1980's, American had almost given up on everything! Then comes the 1990's and just

when we get a leg up, the Justice Department come crashing everything down! If it wasn't so sad, it would be funny. The Justice system says that Bill Gates and company have done TERRIBLE thMSFT tnspericans! Mercy! I wouldn't be e-mailing you now if it wasn't for Mr. Gates and Company. . . My 80 year old Father would not be trading stocks nbspne now if it hadn't been for Mr. Gates & Co. I remember when personal computers first came out. . . We had to learn DOS commands, then we bought our software thnspould just do one tiny thing for hundreds of dollar\$, with hundredsnbsp dollar\$ merripenbsp each application we wanted to use. I remember! It was terrible. Everyone used something different, nothing was compatible, and most everything didn't work well. And, I don't get it. . . I looked at other operating systems as I bought more computers through the years. . . I looked at the Apple Mac system, I looked at the IBM OS2 system. . . How can the government say that MSFT is the only system? MSFT just kept adding new things that made computing easier, faster and cheaper for the customer. We had a choice! We made the choice and the choice was MSFT! Don't punish them for that!

Whatever you do, please don't impose such a harsh judgement that will make competition with other countries impossible! I am a cattle rancher and through the years I have sit by and watched the most productive agricultural county in the world be destroyed by government rules, laws and treaties. We can't compete anymore. . . the cost of labor, taxes, insurance, equipment are so high we can't produce anything as cheaply as it can be imported from other countries. As we in agriculture slowly go broke, it will just be a matter of time before the U.S. is dependent on other countries for all our food. Do we really want to start technology down that road also? We all know that Japan, China, India or some other country will grab the leadership vacuum that MSFT leaves and the good ole US will once again forfit the world leadership position in yet another area!

What will be left in this country to make a living? Surely there can't be enough government jobs for everyone? Just look ahead. . . look down the road before making a punishment decision for MSFT or any American company. Just look at the companies over the years that our Government has attempted to punish as monopolies. Take Standard Oil. . . take Ma Bell. . . Government tinkers, imposes restrictions, punishments, etc., until either the companies go under, or the Government will give them permission to put the company together again. Look at the telephone companies, the big ones grabbing the small ones up until now there doesn't seem to be any profits for any US phone companies, but hold your hat for a foreign replacement. Look at the oil companies. . . didn't I recently read that all the Standard Oil Companies would soon be back under one Exxon-Mobile umbrella soon? "The more things change, the more they stay the same." I just don't get it? Can someone explain? So, please let the "free marketplace" work it's magic and tell us

what we like and what we don't like WITHOUT government interference.

Thanks, Polly Woodress

From: Philip Corlis
To: Microsoft ATR
Date: 1/16/02 8:28pm
Subject: Microsoft settlement

Since Microsoft was found to have violated US law, it is important to penalize them in a meaningful way. Their past history regarding legal actions suggests that any "soft" approach which involves their promise to change their business practices for a light penalty simply hasn't worked. Their corporate culture views kindness as weakness and encourages further rule bending and monopolistic corporate expansion from the top down—simply a new opportunity to quash competition and possibly keep new or better ideas from the marketplace. The only real solution is to provide a penalty scaled to their corporate wealth, a direct connection between "risky" or possibly illegal corporate decisions and meaningful and significant corporate losses.

I applaud the judge's decision not to allow Microsoft to use this legal problems as an opportunity to expand into new markets at an insignificant cost to them. Any solution to the Microsoft issue should impact them—not their competition. There is little competition left in the marketplace and the court has, and should, keep this fact in mind. The world of computing could be made better, stronger, and even less expensive for all americans if more, rather than less, competition were in the marketplace.

I encourage the court to create a cash dollar penalty scaled to Microsoft's corporate wealth—to be paid in one lump sum—with the moneys to be given the states involved in the litigation with the stipulation that the moneys be used to support technological needs of their public schools and local libraries. In this way, Microsoft will be penalized and the moneys used for the public good.

Thank you for this opportunity to provide ideas to the court as this case moves towards its conclusion.

Respectfully:
Philip Corlis

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to inform you of my thoughts on the recent settlement between Microsoft and the Justice Department. I am happy that a settlement could be reached in the three-year antitrust case against Microsoft. This case has been going on for three years now, and must come to an end soon. Microsoft is not getting off easy like it's critics want you

to think. The company will be making numerous changes to its business practices that will restore fair competition and prevent future antitrust violations. For example, Microsoft has agreed to document and disclose various interfaces that are internal to Windows' operating system products for use by its competitors.

Also, Microsoft has agreed to allow computer makers to remove the means by which consumers access various features of Windows, such as Microsoft's Internet Explorer web browser, Windows Media Player, and Windows Messenger. Furthermore, a technical committee made up of three software engineering experts will monitor Microsoft's compliance with the settlement.

I ask that you accept this settlement, and not pursue any further action against Microsoft.

Sincerely,
Samir Puri

From: Gilles
To: Microsoft ATR
Date: 1/16/02 8:26pm
Subject: Microsoft Settlement

I can not help but be offended by the settlement in the case of Anti Trust vs Microsoft. The proposed settlement does absolutely nothing to help third party developers. First of all, let us remember that third party developers have managed to write software without the help of Microsoft for long before the anti-trust case.

Second of all, the problem that seems to be clear to the hundreds of individual creative programmers I deal with everyday, is that Microsoft has the engineering task force to look at an innovative product, duplicate it in a record time (so far no harm done), and use their marketing power but most of all, illegal (often verbal) binding agreements to dislocate the competitors product by offering their alternate solution in ways that are more than questionable.

Going back to the beginning of Windows, we find their very first illegal monopoly offense against Disk Operating System's competitor Digital Research with DR-DOS. Microsoft would force OEMs to buy their inferior MS-DOS with the argument that the OEM would have to pay more for MS-Windows alone that they would if they distributed MS-Windows bundled with MS-DOS. Then they took on Networking companies like Novell by offering Networking services such as those found in Windows for Workgroups and Windows NT. This same monopolistic approach has been clearly seen as a pattern since then in cases like their Disk Compression technology, Windows Media Player (competing with Real Networks and lots of others), Netscape Navigator (probably the most evident case of monopolistic action) and many others.

What saddens me the most, is to realize that most of today's websites can not be viewed properly unless they are visited with Microsoft's Internet Explorer. The World's Wide Web which started as an open project to allow anybody from any machine, anywhere in the world to view anybody else's web site, has now become a Microsoft

only world. By offering tools—first for free—that allowed anybody to create professional websites quickly (tools that use Microsoft proprietary extensions), Web sites that can now ONLY run on Microsoft servers and be viewed best only with Microsoft Internet Explorer have flourished at a rate so exponential that it is becoming more and more difficult to enjoy browsing the web unless one is using Microsoft tools.

As an avid defendant of a free world wide web, overseen by an open group dedicated to keep it free from vendor specific extensions, I am saddened to realize just how much Microsoft managed to turn the web into a Microsoft only monopoly.

I urge you to please reconsider the settlement offering. Forcing Microsoft to be more friendly with their competitors will not prevent them from going after these same markets. Is it necessary to remind ourselves that everything Microsoft has to offer today (including Windows itself) did exist before they made it, from the mind of some other creative individuals? I Could go into details and show you where, everything they make today, comes from and how they managed to turn all great computer inventions into a Microsoft only platform.

I personally believe that microsoft should be broken down into an OS only company and that applications such as Windows Media Player and Internet Explorer (or Netscape) should be add ons. To let them make us believe that an Operating system without these is not a complete operating system is wrong. Many people were browsing and enjoying the web in full multi-media contents and 3D Before Microsoft claimed it to be impossible unless MSIE was part of Windows.

If we allow Microsoft to go on, we will soon witness the results of the long efforts that lead to VRML (by companies such as SGI and Pixar, allowing the web to be browsed in as a virtual 3 Dimensional World) become part of MS IE turning 3D websites into another of Microsoft's only experience.

Please don't let Microsoft become the controlling force of the computer oriented world we live in.

Sincerely,
Gilles Gameiro

Sirs:

I'd like to comment on the proposed settlement between the DOJ and Microsoft Corporation.

What I don't understand is, if Microsoft was found to be engaging in monopolistic practices that were against the law, how could there be no penalty for those actions? It seems that the proposed settlement would only try to keep those activities from happening in the future. (weakly) It makes us wonder whether Microsoft influence and money are tipping the scales of justice. We are saddened at the prospect of our judicial system possibly being compromised in this way.

If Microsoft has broken the law, through the book at them.

—Pat Wilson

Subject: Settlement opinion

Dear Sirs:

I'm sure you have many thousands of these comments to process, so I'll be brief.

If the proposed DOJ settlement is approved, the US Government will be publicly acknowledging that a single company is more powerful than law or government. It means that a corporation will have ultimate say over its behavior and impact on us, but our government and laws, which we are supposed to trust, will not and can not protect us.

Don't throw us to the wolves. The settlement is ineffective to the point of being comical. Come up with something better. Please.

Sincerely,
Doyle Rockwell

Subject: Break Up Microsoft
Hello,

I am writing as a concerned citizen. I really think that Microsoft needs to be broken up into at least 2 companies. The company that makes the OS should absolutely not be the same company that sells applications. There is just too much market control if they are all the same company. I think innovation has been stifled, and consumers lose out. Not only that, but companies that make software applications that compete with Microsoft's products are at an insurmountable disadvantage.

Thank you.

Subject: microsoft settlement

i'm writing to express my deep concern over the proposed microsoft settlement. i firmly believe that in its existing form, this settlement isn't a penalty, it's a total gift. they get indemnity against further prosecution and all it takes is the donation of a few used PC's and a gift of software which costs them next to nothing. microsoft itself couldn't fabricate a better scenario.

if any other company controlled 95% of a global resource, there would be worldwide outcry. microsoft has been shown to have used illegal leverage to push windows into its current position of dominance. only a far-reaching and significant penalty can start to open up the markets which microsoft has spent millions to systematically close down.

for what it's worth, i believe the best course of action is a substantial monetary penalty (far in excess of \$1 billion) which must be paid directly to schools for the enhancement of their computer education programs. microsoft should not be allowed to offer any unusual discounts to encourage windows adoption. instead, schools should be free to purchase whatever hardware and software they deem appropriate. furthermore, i believe a non-partisan oversight committee should be created as a watchdog with court approved authority to investigate and remedy any actions which it deems are anticompetitive for a period not to exceed 5 years.

the sherman anti-trust laws were designed to protect consumers from exactly the kind

of predatory tactics that microsoft has demonstrated over the last few years. already, microsoft has been elevated to the status of a global utility with almost total control of all informational flow across the planet. only a dramatic and well-conceived remedy can help to undo the damage.

microsoft should not be rewarded for anti-competitive behavior. they have been proven guilty and they must feel the full weight of the law.

thank you for listening,

The proposed settlement will be ineffective in deterring Microsoft from its monopolistic practices. It is apparent that either Microsoft is being granted a status above the law or the Justice Dept. is incompetent to understand that what it has done is nothing. Microsoft has repeatedly shown that it has no regard for any law or ruling that is intended to limit its predatory practices. The DOJ seems to have forgotten that MS has been found guilty, and that the task at hand is to disable the offender from continuing its offensive activities ? in the present and future. Any sentence must address all future activities by Microsoft.

I see no other way to do this effectively except to break up the monopoly. The American public sees that the DOJ has no teeth. If this is all you are going to do, then close the DOJ's doors, and save us the expense of running the ineffective Department of Justice.

Subject: Microsoft Settlement

To whom it may concern,

The very idea that Microsoft is capable of doing business in a competitive fashion is flawed. Microsoft came into being on the wings of monopolist tactics. Bill Gates was born into a wealthy family, and has never

relied on Microsoft for a living. He bought the original MS-DOS operating system from acquaintances who had named it Q-DOS standing for Quick and Dirty Operating System. Once he owned it, he changed the name, and changed the help text, while making few if any substantive changes in the functional code of the operating system. He sold this quick and dirty operating system under the Microsoft label for one dollar a copy for several years, thus entrenching MS-DOS as the titan of the operating systems market. After enough years living through these narrow profit margins, he was able to bring about Microsoft Windows and began to raise his margins. Since then, Microsoft has continued to close out, buy out, bad mouth, and sabotage competitive companies to the absolute detriment of both consumers and the computer sector as a whole.

Microsoft claimed to be a technology innovator while retaining legacy MS-DOS code all the way into the Windows 98 operating system, and arguably beyond. I fail to see how twenty year old software code can be called "innovative".

In addition, you must be aware of the contempt Microsoft, its executives, and Bill Gates himself have shown toward the justice system, and toward consumers in their blatant disregard for previous legal settlements, and their tendency to buy, imitate, or steal products from competing companies.

Microsoft has been bad for consumers, bad for the computer industry, and a bad example that nonetheless is portrayed as one worthy of emulation. I strongly urge you to levy the strongest penalties allowable under the law against Microsoft in a manner that does not allow for shoddy enforcement, or slippery noncompliance.

Hello,

This is a public comment for the Microsoft Settlement. I believe the settlement is deficient, because it doesn't address the key impediment to competition in the Office Suite market today—the inability of competing programs to reliably read and write data files of the Office programs (.doc, .ppt, etc), because of a lack of complete, accurate documentation of these formats by Microsoft for third parties to use. I would suggest the publication of all software sources for all present and future versions of Microsoft Office and related programs, as the simplest and most reliable way to aid interoperability by competitive products, as well as a non-discriminatory, royalty-free licensing of all patents related to the reading and writing of these file formats, and to any on-the-wire network protocols that transmit these formats. Anything less than source code is insufficient, because it is in Microsoft's best interest to make any documents describing the formats be incomplete, inaccurate, and out-of-sync with currently shipping software. Note this publication in no way affects the Copyright on Microsoft Office—it merely lets competitors have a level playing field, by showing exactly how to read and write these file format types.

I'm uncomfortable when a major American corporation is about to be hog-tied or split up. Microsoft has been a major innovator in the software industry. The market has not been hurt by it's dominance. On the contrary, Microsoft's competitors are major businesses in their own rights. The benefits to leaving Microsoft intact and unrestrained are:

1. Microsoft sets the standard in the software industry.
2. It is constantly innovating and improving its products.
3. Microsoft products face competition in every facet of the industry.
4. Any settlement that harms Microsoft will damage it's employees and the industry as a whole.

I appreciate the opportunity to comment on this settlement.

Subject: Microsoft Settlement

Dear Sirs,

I note with dismay the terms of the DoJ's settlement of the anti-trust suit against Microsoft. If Microsoft's past behavior—flaunting the terms of the consent decree originally imposed out of the earlier antitrust case—is any example, this settlement is comparable to the receipt of a slap on the wrist for the crime of assault. For there can be no doubt that Microsoft has mugged Netscape, and in turn the public, and will be free to continue its exploits.

Microsoft is a recidivist organization. Its management does not intend to loosen its stranglehold on the operating system market which gives it the leverage to ensure that competitive products do not see the light of day. At some point, Microsoft must be held accountable, its management must learn that the penalty for flaunting the law is certain to result in a terrible price which even its own swollen coffers cannot bank.

The public commonweal is ill used by the capitulating terms of this wholly inadequate settlement.

Sincerely,

Peter Dodge

My conclusion based on what I've read concerning this case is that Microsoft has gone beyond business ethics and legal considerations in marketing their Windows based products.

Very early in the 80's, Microsoft fashioned OEM contracts that essentially excluded other competitors from acquiring any business from the same OEM's. This created a situation where customers could had limited choices in selecting what the best OS would be available in the Markets. In turn, the OEM agreements with Microsoft, was a large disincentive to the OEM to develop their own feature additions on top of Microsoft's own software. As a result, the public, corporations, and governments, had even fewer alternatives to OS features other than Microsoft's stated product plans.

Parallel to the Windows OS monopolization, Microsoft had a great advantage in introducing applications that competed with existing and successful products. The advantage was both technical, monetary, contractual, The end result is a Windows monopoly based on a Windows operating syt

Subject: "Microsoft Settlement"

A few points to add to Microsoft separating themselves for other hardware/software manufacturers' is:

Microsoft wrote their own Java (programming language) to directly take away from Sun. Example: My fiance' is a realtor and when she logs onto the MLS database on our Macintosh computers, she can not get into this database. Because MLS's database is built with Microsoft's Java. Microsoft has every intention to separate itself from all other hardware/software manufacturers.

While others of the computer industry are working together trying to make a solution with the differences in software/hardware. Microsoft has 97% of the market share. If Microsoft chooses to change a technology then the public is forced to change also. Business are also forced to do this because they have no other choice but to change, due to the fact that there are no other options. The opposite can also happen. If there is a new technology and Microsoft chooses not to support it then the new technology is stifled because of Microsoft. Example: Internet Explorer is built into Microsofts' operating system. Therefore, 97% of the market is using Internet Explorer. So, if there is a better internet browser created it is unable to compete with Microsofts' internet browser since it is built into the OS and therefore free. That means a software manufacturer has to compete with something that is free.

Most of the population only see computers with Microsofts' Windows OS, then that leads to misconceptions, which then strengthens Microsofts' monopoly. My belief on how to handle this situation is not as simple as to force Microsoft to pay out dollar amounts, or give to charities. Example: Friday's rejection of the settlement would have given them more control over the market. Apple is known to have a larger market in the educational institutions. This settlement would have taken that market share away from Apple.

The monopoly of Microsoft is shown in the fear factor of the industry. When the only CEO of the industry is able to speak freely without fear of Microsoft pulling it's relationship from their business. My

suggestion is that Microsoft should not be able to have control over the standard (due to it's control over the market).

I think that Microsoft should be split into divisions. Which would be totally separate entities; one being it's software and hardware, the second being it's operating system.

I say separate Internet Explorer from Windows. As of right now you are unable to remove Internet Explorer from it's operating system.

Microsoft would be forced to make software for other operating systems other than Windows. Example: Linux, Macintosh, and any new OS's that could arise.

Make Microsoft build up a fund so that any American company that wishes to switch their Windows network to a cempetitors will be able to draw the money out of this fund and/or give these same companies a tax break to encourage switching.

Have Microsoft and all of the other industries leaders form an organization that vote on the direction of technology and standards. This would redirect the energy from trying to compete with Microsoft to simply competing with each others hardware/software products. It would also take Microsoft's absolute control over the population away. (commercial and residential).

I do admit that this is not a simple cut and dry question that can be answered easily. The solution may not be a perfect one but it will not effect the population drastically. Consider it only as a transitional period. One needs to realize that this computer revolution has happened within the last 7 years. It has happened quickly and before anyone could really realize what was happening. We need to find a solution to this now and not wait any longer. We will all suffer if we let this go on any longer.

The saddest part of this situation is, we don't know how bad something is until we have had something better. When there is only one entity controlling what is, how will we know what is not. . .

Thank you for giving me a chance to speak. Although, I will still ask that you take my words into consideration.

 January 11, 2002
 Attorney General John Ashcroft
 US Department of Justice,
 950 Pennsylvania Avenue, NW
 Washington, DC 20530-0001

Dear Mr. Ashcroft:

I was appalled to recently learn that the settlement between the Department of Justice and Microsoft is being even further delayed. After three years of negotiations, it seems ridiculous to not support the terms of this well thought out agreement. At this point in time, the negotiations have been so well monitored that it is foolish to place them under any further scrutiny.

Microsoft has agreed to rework marketing and licensing terms as well as to redesign versions of Windows that will better accommodate non-Microsoft software. All of this will be accomplished while being overseen by a committee to make sure that they follow proper procedure. The concessions that Microsoft has made are truly in the interest of the IT sector and in the interest of our economy. As we sit idly by and wait for the settlement to take hold, we are slipping in this highly competitive global market.

We need to support our economy by helping to support our technology industry. By reopening the litigation process, we slow down our advancement in the industry and subsequently, affect our economy. It is odd that our recession and the Microsoft litigation seem to be tied so closely together. Maybe our major companies feel that they too will be blackmailed for being successful. This case is a waste of tax dollars, it seems that the major thing that Microsoft did was not contribute enough to the major parties. Since the litigation the prices of all software has risen and the consumer has been lost in the paperwork.

Sincerely,
 Jean Kupferer

 Subject: Microsoft Settlement

Greetings,

I applaud the recent decision to deny Microsoft's proposed settlement. Aside from the fact that Microsoft needs to be held fully accountable for all that it's done, the settlement itself could have proved beneficial to Microsoft.

I am a computer professional by trade, and in my opinion, the damage Microsoft has done is so widespread and pervasive as to be difficult to ascertain. At this point, Microsoft's sheer mass affords them opportunities to simply overpower competition, and buy their way out of other problems (and into new markets). Certainly, these are luxuries that any successful company should enjoy. Not, however, if that

success is obtained through illegal acts. This has been a long investigation, and there are *more than enough* examples of Microsoft not playing fairly in this highly competitive market— everything from intentionally preventing products of competitors from working with Windows, to essentially forcing PC makers to include Windows with new PCs.

I also strongly believe that Microsoft is simply not good for the computer industry, or any other industry for that matter. It is clear that their products and services are designed chiefly to further entrench Microsoft into an ever expanding cross-section of markets. From my perspective, Microsoft's products are generally not the best to be had, and certainly not superior to the degree reflected by their market share.

In conclusion, I fully support continued investigation into relevant details of the case. The thought of Microsoft growing out of control and absorbing all business and markets in their chosen industries is a very sobering one indeed, and I am quite glad that we have the Department of Justice tasked in part with keeping things legal and fair. Thank you for your time.

Oh, and please keep a close eye on .net. I'm very worried :/

 January 16, 2002
 Attorney General John Ashcroft
 US Department of Justice,

950 Pennsylvania Avenue, NW
 Washington, DC 20530-0001

Dear Mr. Ashcroft:

I am in favor of the Microsoft antitrust case settlement. Protracted litigation is never in anyone's best interest. In this case in particular, the effects of the suit are far reaching. As the regional administrator for Spokane County's public health system, we are certainly reliant on the innovative products continually produced by Microsoft. Additionally, the high cost of litigation always seems to be borne by the consumer. Finalizing this lawsuit is certainly advantageous to everyone.

From all that I have read it appears to me that the settlement agreement is fair. In the interest of resolving this case, Microsoft has agreed to very broad restrictions. Some of these restrictions cover business practices that the Court did not even find to be unlawful. I believe that it is appropriate for Microsoft to deal fairly in the marketplace, and I believe that they have. Anti trust laws applied in the technology industry need special consideration and interpretation to define fairness. In an effort to make it easier for the competition to compete with Microsoft's products, Microsoft will be making disclosures of Windows internal interfaces to the competition. They have also agreed to design Windows so that it is easier to remove features of the program and replace it with non-Windows software. In light of these sweeping affirmative obligations imposed on Microsoft, there really is no reason this agreement should not be approved. I appreciate your review of these comments, as well as your efforts to work toward a settlement in this case.

Thank you.
 Sincerely,
 Torney Smith

 Subject: Microsoft Settlement

Hello:

I am just a citizen, not affiliated with any company with an interest in the Microsoft anti-trust settlement. I am a medical transcriptionist for a hospital diagnostic department.

I want to urge the Court to impose sanctions designed to break Microsoft's power in the marketplace that derives from its monopoly. In all that I've read about this case, no one has mentioned the following: Before the big build up in internet applications and the technology advancements of the late 1990s, "innovation" in that marketplace had been all but murdered by Microsoft. I remember reading articles about the fact that companies could get no investment capital if the product they were designing could in any way be made by Microsoft.

Do you remember "vaporware"? When a company Microsoft perceived as a competitor announced a new product, Microsoft would announce that they, too, were bringing out a product just like that. Investment money for the competition would dry up. Oddly enough, in many cases, Microsoft never did

make the product: hence the name vaporware. The first question a venture capitalist would ask a candidate for its money was: Is Microsoft doing this?

When the Justice Department initiated its anti-trust action against Microsoft, that is when the great innovative explosion of the late 1990s began. It would be a terrible thing to let go this vicious thing that has been, if not subdued, at least put on a leash these past few years.

I have always felt that the Justice Department was trying Microsoft on the wrong charges. They should be tried for wrong doing the people who pay good money for software that in most cases is strewn with "BUGS", and have the nerve to charge for an update. No tech support unless you are willing to pay for it. Microsoft has been in the business of developing software, particularly operating systems for many years. You would think they could get it right for a change without having some high school drop out find flaws in it. I for one am tired of their promises that are never kept, and software that has to be fixed with third party utilities.

I strongly oppose the Microsoft settlement, on the grounds that it would be ineffective in preventing Microsoft's continued abuse of its monopoly. The proposed remedy in no more than a slap on the wrist. I am a Macintosh user, and I actually like Microsoft's Mac products. Many of them are the best products available for what they do. However, I cannot say the same for their PC products. None of Microsoft's PC products are nearly as good as their mac equivalents, and the Microsoft Windows operating system is consistently horrible. Furthermore, the PC products are full heavy-handed anti-competitive features that interfere with the usability of the products. Yet many of my co-workers are forced to use Microsoft Windows and Office due to network effects.

The moral of this story is clear. Microsoft can produce good software, but only if they are forced to compete, and prevented from colluding. The only way to do this is to break up the company into an operating system company and an applications company. Furthermore, as a remedial measure, Microsoft must be forced to document its file formats and data structures, in order to avoid the sort of practices that they used to kill WordPerfect.

This will force Microsoft to spend their money developing good software, not buying potential competitors, strong-arming suppliers, and drowning out potential competitors with waves of advertising.

Thank you,
Jeremiah Blatz

Subject: Microsoft settlement

Hello,
I'd like to add to the public comment about the Microsoft settlement. I believe Microsoft is an aggressive monopolist and the DOJ needs to pursue strong action to open up more competition in operating systems and software.

Some solutions I suggest all or in part:
1. Separating Microsoft into Operating systems and Software. This makes the most sense although I imagine this would be hard to implement in a settlement.

2. Require Microsoft to create it's entire line of software (MS Word, Excel, etc) with feature parity and compatibility on Mac OS X and Linux. This would increase and nurture use of Mac and Linux systems which are the only practical alternative to MS.

3. Force MS to sell off or license it's operating system source code to third parties to compete against MS.

4. Require MS to fund a foundation similar to the one suggested by Steve Jobs that would give poor schools the funding to buy Apple, Linux or MS products. Microsoft's original proposal was ridiculous and would have gave them an advantage in education, one area where they don't have a monopoly.

Subject: Microsoft Settlement

As a long time observer of the computer industry here are my thoughts. Microsoft is

a monopoly. They got this way by buying or intimidating their competition. Apparently they have contributed enough money to politicians to get themselves out of their current problem with the DOJ. They have lied to the courts about not being able to remove Internet Explorer from Windows and dragged their feet and hired enough lawyers that they will prevail, but justice will not have been done, just perverted.

Meanwhile it is business as usual with Microsoft, taking away the open music standard of MP3 and substituting their proprietary Window Media Player format is a perfect example of their predatory practices. Yes, a person can add the MP3 player to Windows, but in my considerable experience, less than 10% will and just like Netscape, MP3 will disappear much like Netscape and one more "standard" will be owned by Microsoft. For that matter, why is Microsoft bundling this software in Windows in the first place? It is a separate application, or will we later learn that Windows Media Player cannot be removed from Windows because it is now necessary to the operating system? Deja vu all over again.

And who at DOJ allowed Microsoft to recommend their own punishment?!!!!! Wow, I want that judge if I ever get in trouble. The punishment would be for them to give away their product for free, with government sanction to a market niche currently dominated by their competition. This is absolutely insane. The companies most hurt by their monopolistic practices get slammed with the judges blessing, and then do not get compensated for it. What would I do? Make Microsoft pay all the other computer vendors compensation for loss of sales. Yep, it would be billions, but we might see Unix and Linux and Apple have a small chance to create something innovative, more secure and better for our computers than Microsofts current offerings.

To Whom It May Concern:

As a US citizen and knowledgeable computer user, I would like to exercise my right to comment during the Tunney Act review period on the proposed settlement that the US Justice Department has offered to Microsoft. To put it simply, the DOJ settlement is little more than a shameful sellout that will do nothing to restrain Microsoft's monopolistic practices. I fully support the States that are continuing the court case in the hopes of attaining a far more strict settlement. The proposal that Microsoft make amends by "donating" software to schools will actually extend Microsoft's monopoly into the educational system. I strongly support the suggestion by Red Hat that Microsoft should donate hardware with

no OS installed, and allow Red Hat (and other OS vendors) to donate the operating system free so that students are exposed to more than just the Windows OS.

To mention another specific remedy I would like to see: Microsoft should be forced to open all their APIs so that programmers working with other operating systems can ensure that there products will work in a network which contains Windows OS computers. The APIs for Microsoft Office should be similarly opened. Microsoft's attempt to hijack standards and hide them behind closed APIs should no longer be tolerated.

sincerely yours,
Robert Storey

Subject: This proposed settlement is a disgraceful sellout

I want you to think for a minute about the PC you are probably using to read this very email. Think about all the components in it— sound card, graphics card, disk drive, memory, motherboard, CPUs, monitor, printer. Not a single one of those is produced by a monopoly. Even the CPU; odds are it comes from Intel, and even if so, Intel is not nearly the monopoly Microsoft is. Most of the apologists for Microsoft jabber on about how the Operating System has to be controlled by a single company, standards, etc etc etc. Why does not that same logic apply to the hardware itself? You'd think there would be far more reason for monopolies there, both legal and practical. Yet no one worries even a bit about who makes the monitor or graphics card, or puzzles about the mystery of how they work together.

So why have you disemboweled yourself for Microsoft? The Unix world should be proof enough that no single OS is necessary. Add in Apple. Add in the fact that Microsoft OSes are far more fragmented than any random collection of Unix OSes.

There are tons of horror stories about Microsoft stomping out competition. The few examples you brought out in the trial barely touch the surface. There are tons of stories of Microsoft barely staying within the law, and many times stepping far outside it. Did you not learn a thing from the famously fraudulent video they lied about under oath, led about from one end of their empire to the other? Have you not learned anything about Bill Gates' business ethics from the previous many court appearances and settlements? And now this crock of settlement has a toothless, indeed gumless, oversight committee. Are you so naive to expect any changes at all out of Microsoft?

Good gosh! They have \$36 billion in cash, increasing \$1.5 billion per month. They are stomping on game consoles, they are stomping on cable TV, they are stomping on handhelds, they are stomping on anybody and everybody and their dog. And the best you can come up with is a disgraceful sellout. It amazes me that you can sign your name to this garbage and not hide your face in public.

Subject: Comment on microsoft final judgement

To: the judges in charge of United States v. Microsoft Settlement

In my personal opinion The proposed final judgment fails to

(1) Remedy software developers who's jobs have been lost due to the Microsoft monopoly.

(2) fails a good enforcement.

(3) Fails to remedy java developers community.

To all the people who are in the field of Computer Science, it's clear that Java is the Leader in tomorrow's programming languages and

The way software will be written. However Microsoft's strategy has been to push it's own senseless Active X and .net technology and suppress the Java technology.

(4) To completely compensate consumers who have paid allot of money to upgrade their software (because of the bugs in the Microsoft's previous systems).

In my opinion the only judgment that would make sence in this case is to make microsoft to reveal it's code so other companies can make compatible Windows operating system.

Subject: Microsoft Settlement

To Whom It May Concern:

I would like to express my concern that the penalties assessed against Microsoft in the recent antitrust proceedings will not be strict enough. Any settlement that sees Microsoft unfairly increasing it's market share as "pennance" is NOT acceptable to me.

It is my opinion that the only way to keep Microsoft from unfairly "lording" its considerable market share is to break the company into at least two companies; preferably three.

1. A distinct and separate Operating System company

2. A distinct and separate Applications company

3. a distinct and separate Hardware company Separating the company this way would encourage competition across the board.

Under this plan, Microsoft would not be able to "lord" one division's technologies over it's competitors. A perfect example is that of Apple Computer's new operating system, OS X 10.1. Under the current Microsoft structure, Apple is not able to port its operating system to an Intel/AMD platform for fear of Microsoft retaliating (eg. stopping development of Microsoft Office when so doing could potentially put Apple Computer out of business.)

With each individual "Microsoft" company seeking its own profits, the applications division would be looking to expand it's marketshare by developing software for OTHER operating systems such as Linux and Unix (and any of the individual flavors of each).

The same thoughts apply to the OS division and the hardware division. Microsoft's subdivisions should not be allowed MORE access to the technology behind the operating system/applications/hardware than any other development partner.

Microsoft's recent settlement proposal was a slap in the face to everybody who has ever achieved something by dint of hard work and innovation. The 300lb gorilla should NOT be allowed to sit wherever it wants.

Thank you for your time,
David Jansen

To: Microsoft ATR

Date: 1/16/02 10:18pm

Subject: Microsoft Settlement

Dear Madam,

As an IT professional, and having for many years worked in this field, I am sincerely concerned about Microsoft's monopoly position. It should be obvious at the outset that I have no doubt whatsoever that by the definition of a monopoly Microsoft is indeed an very ruthless and insidious one. My concerns are many but focus mainly on what will happen to the field of IT as a whole if MS is allowed to continue to squash competitors and enter (like a cancer) more an more software markets, in which it offers little innovation.

My first objection is an everyday one; why is it that if I buy a PC it comes installed with MS operating systems *even if I do not wish it*? The fact is that a part of the purchase price goes to MS and I have had absolutely no choice inthe matter. You could argue I could buy a PC without the OS separately; but the price of such a PC is guaranteed to be much higher. It is more affordable (by a few hundred dollars at least) to purchase a PC with MS OS pre-installed and then to wipe the drive and re-install another non-MS OS (e.g. Linux). I believe that if I as a consumer am required to buy a product which I do not want and give money to a company I do not want to then that company is a monopoly, as only a monopoly has such an ability to coerce hardware vendors into such an arrangement.

Secondly, I see an ever-increasing and very sinister, replacing of other vendors' software applications with Microsoft equivalents (case in point Real Player with Windows Media Player). This bias is bad enough but I believe it is more sinister than this- I have repeatedly and on many occasions had problems running non-MS software on MS operating systems. Performance is compromised or it simply crashes. But I never experience this with MS apps on MS systems.

There could be many reasons for this of course, but the fact remains that *any* vendor should be able to write software which works as well on MS OSes as

Microsofts does. This is the essence of the solution to this dispute; force MS to open its OS not for copying of course because it is their intellectual property, but so that other software vendors can write reliable software on top of it, and hence compete with MS on their own operating systems. This is a step in the right direction, but only the first step.

I have heard countless stories from colleagues and company executives about the hand-cuffs put on them by MS. They know that they must go with the standard, and the standard OS is Windows. But then they find that they must also use MS software— why!?!— in order to ensure that it works well on Windows. This is wrong! There should be no link between the software and the OS it executes on. But there is and this is the way MS is able to sell software which is clearly of inferior quality, or lacking in innovation, and the way that vendors with better products are shut-out of the market by this monopoly. Once again if software manufacturers could produce MS-like software which can run well on MS OSes then this might give others a chance. Of course it doesnt stop MS from 'upgrading' the OS from under them, and these companies are then forced to play catch up and support this new system (e.g. Windows XP). A company I know of could not afford to support XP, as it involves a considerable amount of effort and testing, especially after they have supported Win9x, NT and 2000. So this tactic effectively pulls the rug out fromunder software vendors and there is nothing they can do about it. This is another monopolistic tool at the disposal of MS.

Finally, I have seen many times the case where MS decides unilaterally to raise license fees on their OS or products. And the fact is that comapnies MUST pay up. There is no choice because they can not do without MW Word or MS Powerpoint or any of the other standard applications used through out the world. How do you stop this? The only way I can see is to allow vendors to build equivalents which can produce documents in these formats (e.g. Word format). Sun tried this with StarOffice but there were niggly differences between the formats and they were not able to completely match the Word formatting, so documents produced in MS Word did not look or behave the same within StarOffice, and vice-versa. Unless the behaviour is exactly the same it is useless to migrate away from MS software. Another monopolistic tactic and MS uses it well to fill their coffers with more unearned dollars. In conclusion I urge you to consider the ramifications of *not* bringing the MS monopoly to an end. The speed of the IT industry is such that within a few years left unchecked Microsoft will have total control over the industry, and not even Sun Microsystems will be able to stem the tide. If this happens my career and that of many other IT professionals will no longer be viable.

Thank you for your time.

Regards,

Adrian Rossi

 Subject: Proposed Microsoft Settlement
 Dear DOJ,

The proposed settlement with Microsoft is a remarkably bad deal for the consumers and businesses of America. It fails to address many of the current abusive practices, takes absolutely no action to prevent new types of abusive practices in the future, and is likely to be ineffective even for the practices the drafters of the settlement intended to cover.

Microsoft has never accepted that it has violated the laws, despite any number of court decisions against it. There is absolutely no reason to believe that this will change if the proposed settlement is accepted. It is far more likely that Microsoft will treat this as yet another meaningless piece of paper that placates the government, just as they did the last settlement.

The proposed settlement is far too full of loopholes and possible/plausible misinterpretations to serve any useful purpose with this type of hostile defendant. If anything, the settlement would give them a legal basis for further abusive practices in the future (such as withholding API information in the name of "security").

As someone who has worked inside the company I've witnessed the abusive practices firsthand. It will take far stronger measures than those currently proposed to correct these practices.

 To: Microsoft ATR
 Date: 1/16/02 10:21pm
 Subject: Microsoft Settlement

I'm sending this personally-written, non cut-and-paste message as my personal input on the Microsoft settlement.

It is imperative that Microsoft be held accountable for their ruthless monopolizing and their grinding of many decent software companies into dust by abuse of their monopoly power. Fines, even extravagant ones, will do nothing for a company with such an enormous daily cashflow.

One appropriate remedy is to force MS to publicly and promptly release all their APIs and their file formats so that competitors in the application software business can compete on equal ground. This would probably require some oversight entity to enforce, with jail time for executives for any noncompliance. Altho they'll probably cry about giving up some of the intellectual property, well, losing something is appropriate for a repeat offender and federally-declared monopolist.

During my 22 years in Silicon Valley I've worked for Borland and Netscape and dealt directly with MS on some of these API issues, and their unwillingness to release full APIs in a timely manner has absolutely hurt market acceptance of competing products. Both companies were nearly driven out of business by this and other abusive MS

tactics. Many good products died. Many good people lost their jobs. Many investors lost money. Consumers lost innovation and speed, and gained feature creep, product bloat, and performance degradation.

Please do not slap them on the wrist again with consent decree-type solutions, or big fines they can pay out of petty cash. Much more important than punishing them for past criminal behavior is to PREVENT THEM FROM CONTINUING to do it. Forcing them to always publish ALL Windows APIs and file formats, especially the hidden APIs they use to break competitors products—is one fair solution that you need to examine.

I'm a senior software product/project manager, and this is my professional and personal opinion. Thank you for providing the opportunity for me to provide this input. America is a great country—let's keep it that way and stop the monopolies.

best regards,
 Kevin Driscoll, Scotts Valley, California

I sincerely believe that it is time for our justice system to consider the many, many consumers that benefit from the technology developed for industry by Microsoft. To continue to allow lawyers to pursue their "legal extortion" is going beyond the average business man's comprehension. As a small business owner, I believe that the present condition of the stock market (and the present recession) is due entirely to our legal system which lets competitors such as Netscape use the laws of our country (and taxpayers money) to support their failing competitive positions. It was this particular government lawsuit that initiated the recession. The ENRON failure doesn't compare to losses incurred in the stock market by millions of our citizens, since the attack on Microsoft.

Microsoft has advanced the rate of progress in the US beyond imagination these past fifteen years. As individuals, and as a nation we have all benefited! Why not expect the nine States opposing Microsoft's settlement with the Justice Department to accept without compensation, so we can all devote our energies to expand and develop these new technologies for a better future for all? Let the market place decide.

Even though I am a windows-PC user, I hoped that Microsoft would have been slit into different companies so that more competition would have taken place, to my and other's advantage. Since this did not happen, I believe that the government would at the very least teach Microsoft a lesson. Please do not allow MS to cheat the government, industry, and the people. They are proud, dishonest, and unrepentant. They think and act as if they are POWERFUL and above the law. At the very least, do not allow them to dictate the terms of settlement—" \$1 Billion" worth of PC's and software which they will dictate, is not really "1 Billion dollars", and will hit Apple in the education market (a real irony!).

Please prove to MS that it is the government exercising justice with and for the people that will prevail.

Subject: Microsoft Settlement

Ladies & Gentlemen:

I would like to know when Microsoft is going to actually be punished for its predatory, coercive, and monopolistic practices. Microsoft has already been found "guilty" by the government on two occasions, given a hand-slap, and then it immediately returned to business as usual after promising to mend its ways. I think that very large fines (hundreds of millions of dollars) AND breaking up the company are the only sensible remedies. A complete split between the OS and Applications arms of the company is the only way to have a chance of stopping Microsoft from stifling competition and foisting over-priced, buggy software on consumers. Please. . . do your job and make the computer business a truly level and competitive playing field. Thank you.

Washington, DC 20530-0001

To Whom It May Concern:

I hope that you will reconsider the decision to settle the United States Department of Justice antitrust lawsuit against Microsoft Corporation. American consumers may have been overcharged \$20 billion by the Microsoft monopoly. Your agreement with Bill Gates' company does nothing to neither rectify past sins by this company nor protect against future gauging. As you know, at least ten consumer groups disagree with your agreement to settle. Microsoft has little incentive to change any of its practices. Their concessions of handing over some operating systems code and offering manufacturers some sovereignty over Media Player amounts to little more than a light slap on the wrists for a multi-billion dollar company.

I am proud that my state's Attorney General, Tom Miller, rejected this Microsoft agreement. I believe that Mr. Miller and the other eight state attorneys general see the many loopholes and problems with enforcement that does little to affect change in the computer software industry. Splitting Microsoft into two or three companies may not be the proper response, but neither is this.

Your decision to prematurely end litigation against Microsoft is a mistake. The agreement offers no real incentive to stop monopolistic, anti-trust efforts. It won't help much smaller companies compete and it doesn't serve the American consumer. Please continue to go

after Microsoft. It is a duty of the Justice Department to protect the average citizen from companies that have grown too large and too powerful by questionable business practices.

Sincerely,
Ben Hildebrandt

To whom it may concern; Microsoft has severe power problems. They want to standardise the whole world, with the Microsoft Standard. This includes the way you listen to your music, the way you check your email, the way people play games. In an ecosystem, where no diversity exists, it is common knowledge that the ecosystem will fail because of the limited tolerance of that system. Any introduction of diversity will strengthen the ecosystem, but to the detriment of the previous conformity.

Thus, diversities such as linux, opengl, macos all strengthen the world economic system but loosen Microsofts control on its abilities to make illegal monopolistic money. But with the illegal money Microsoft has made it can afford to crush all diversities and maintain a non-diverse system, where they can change the system with out opposition to generate as much money as they require to crush the next diversity that tries to enter their 'pond'.

Microsoft is consumer. It is consuming your rights. My rights. It will crush everything until soon all you can buy is Microsoft Ferarri and Microsoft Eggs and Microsoft Government. It needs to be stopped. It needs to be stripped of its illegal money. If not—do you think that wood you use to build your house will be from a non-microsoft mill? And you might think that I am being absurd. Crazy. You probably think I am mad. But, while Microsoft has the power, and while there is a profit to be made, Microsoft will extend its reach to whatever it deems as profitable, be it web servers, operating systems, and crushing diversity. You know how Microsoft needs to be delt with. They need to be stripped of their ability to maintain a monopoly. As soon as you allow diversity into the system, and deny Microsoft of the ability to crush this diversity, and force the system to create open standards of exchange and communication, the system will grow and expand more than it ever could have without diversity.

Your current settlement does do this to a certain extent, but not fully, as is required. Microsoft needs to be crushed as it has crushed others. Microsoft should be forced to pay compensation to companies such as Netscape that allow these companies to become fully competitive with Microsoft products.

And this is only one step that is required to restore partially the current state of the system if Microsoft did not engage in illegal and monopolistic behaviour. I hope that you have the strength to create a final settlement that changes the world for the better.

I am terribly disappointed by the Microsoft proposed settlement. I believe that it is very clear that Microsoft engaged in monopolistic and predatory behavior. It's punishment should be nothing less than being split up. Look at what the split up of AT&T did for the telecom industry! Unfettered by its monopolistic practices that industry flourished throughout the next two decades. The same could happen to the computing industry should the DOJ have the courage to act appropriately.

Thank you for your time in this matter,

Microsoft should have to give a monetary penalty to underprivileged schools. This may be cash or it may be competitor's computers or products. It should not be their own products. Otherwise, this would be "forcing" them to enlarge their market share at the expense of their small competitors. I thought the whole point of the initial legal action was to open up the market place to fair competition and halt or decrease Microsoft's predatory ways. This unfortunately will probably do nothing to actually hurt their de facto monopoly as they have approximately \$36 billion in cash and short term securities.

Richard Zegarra.

 Subject: settlement comments

On this issue I'm a plain John Doe. I know neither software nor the monopoly laws well enough to comment on the technical merits. Nor do I begrudge Bill Gates & Co. their money.

I will only relate what I have observed as an amateur web user:

1. My e-mail accounts via msn are often spammed and other ads for stuff I don't want end up on my computer. (Right now the bottom of the screen tells me that the world's largest casino ad will flash upon my sign out. Don't want, don't need, resent.) My Yahoo account stays clean, and it doesn't leave anything behind after I sign out of it.

2. As user of church-donation computers, I am now on my second PC (if that's the word) and my first Mac. All are noncurrent versions. The Mac is superior for my needs, but is threatened by low market share. It is legitimate to say that Windows 95 is what Mac did earlier.

Limited information. I don't begrudge Microsoft the money, but there is a need to boost its competition.

 Subject: Microsoft Settlement

The fairest resolution would be:

1. Donate \$1 billion in cash for schools, to be earmarked for equipment and software in direct competition to Microsoft (Mac OS, Linux, UNIX)
2. All older Microsoft operating systems from Windows 95 up should be fully supported by them for at least 5 more years.
3. They should not be permitted to buy any other companies for 5 years.
4. They must make their proprietary formats for all their Office products (Word, Excel, Powerpoint) fully open so that other companies may make competing products for less.

5. Any and all contracts Microsoft has made with other companies which involve "exclusivity" in Microsoft's favor should be null and void, with Microsoft's end still intact if it involves them making any kind of payment.

Thank you for your time—I have the utmost confidence that you will take the fairest action.

 Subject: Microsoft Settlement
 To Whom It May Concern:

I have two brief suggestions as to what the settlement with Microsoft should accomplish.

(1) Microsoft should not be allowed to strengthen themselves through the settlement by offering a package of Microsoft products as part of the settlement. Specifically, they should be forbidden to give Microsoft Office and the Windows operating system to the country's poorest educational institutions. Instead, they should either provide cash directly or buy competing software and hardware for the schools.

(2) Microsoft should be open their operating system's source to an independent third-party containing operating software engineers from various competing software companies who swear to an oath of secrecy. This allows, on one hand, the protection of the intellectual right of Microsoft while, on the other hand, the independent third-party can force Microsoft to truly open up their API and can divulge to the public any APIs that Microsoft tries to hide from their competitors.

 To: Microsoft ATR

Date: 1/16/02 11:35pm
 Subject: Microsoft Settlement

Dear Attorney General Ashcroft,
 I am greatly distressed with some of the proposed settlement ideas that I have heard in the media.

Microsoft has broken every anti-trust law and FLAUNTED doing so. When they were asked to remove Internet Explorer from Windows 95, they acted like a three-year-old throwing a tantrum-claiming that they couldn't remove Internet Explorer without making things stop working. That's like telling a kid that he can't have chocolate before dinner and having the kid go on a hunger strike.

What is necessary is a method that will allow software vendors to fairly compete with Microsoft. Now something like this won't be easy. Microsoft is a behemoth. One that has no qualms about running things (and people) over to get its own way. What, then, can be done?

Microsoft's file formats and application programming interface (API) must be documented, published, and standardized. The plan which the judge recently rejected would not do this, rather, Microsoft would have essentially have been left alone to continue business as usual for it. That is not the way.

Microsoft has violated the law, and it the duty of the government to stop it.

Sincerely,
 Jedidiah Sorokin-Altman

From: Tom—McIntosh@telus.net@inetgw
 To: Microsoft ATR
 Date: 1/16/02 11:38pm
 Subject: Microsoft

Microsoft should be prevented from monopolizing the computing industry with their inferior software. If it was not for the IBM name that was attached to PCs, Microsoft would have not had the public following they acquired. They have connived their way into a dictatorial position in the industry. Steps need to be taken to give innovative new companies rewards for doing things better.

Using MS products wastes more productive time than needed. Users spend too much time trying to produce work on very poorly designed software products that are totally non-intuitive. Support staff spend far too much time fixing and working around problems that should have been fixed by now.

Companies spend far too much money upgrading software too what MS dictates then never using 80% of the functionality. The economy will be better off when better products are developed and marketed without being swallowed or beat down by MS marketing.

US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I support bringing the Microsoft antitrust case to a conclusion. Accordingly, I submit the following comments for your review.

The terms of the settlement agreement are more than fair. Microsoft will be making it much easier for its competitors to compete. For example, Microsoft will design future versions of Windows with mechanisms to make it easier for consumers to install non-Microsoft software on their computers.

Microsoft has also agreed to not to take action against computer manufacturers who promote non-Microsoft software, and has agreed not to enforce rights it may have to go after those who infringe on Microsoft's intellectual property rights.

These types of concessions exceed what should be expected of Microsoft. Please see to it that this settlement is approved in an expedient manner.

Thank you,
Sincerely,
Fred Pane

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I want to take this opportunity to give my opinion on the settlement recently reached between Microsoft and the Department of Justice. I feel the settlement is a good development at this point and will be good for the millions of consumers around the country who use Microsoft products. The comprehensive agreement requires significant adjustments in Microsoft's business practices going forward. As an example, Microsoft has agreed that if a third party's exercise of any options provided for by the settlement would infringe any Microsoft intellectual property right, Microsoft will provide the third party with a license to the necessary intellectual property on reasonable and non-discriminatory terms. And to assure compliance with the terms of the agreement, Microsoft agreed to the formation of a Technical Committee that will monitor Microsoft's actions. Truly, there are no winners if this litigation continues. But getting this settlement finalized will allow Microsoft to focus on new variations of the products that have been very good for many years. Also, the government can focus their resources on more urgent matters.

P.S. I trust your judgement in this matter.
Sincerely,
Ann Moberger

From: Jim Gigliotti
To: Microsoft ATR
Date: 1/17/02 12:28am
Subject: Microsoft Settlement

Whatever settlement is reached between the government and Microsoft, it should definitely not include any agreement allowing Microsoft to provide products or services to schools or other organizations as was alluded to in numerous press releases. That would be a reward, not a punishment. Any fines or charges levied against them should be structured in such a way that the company does not profit from the levy. The fact that they would be so arrogant as to suggest that "donating" software as a remedy to their crime, serves to demonstrate further that they still do not comprehend the reason

that they are where they are in the first place. I feel that it is very dangerous to allow them to walk away from this proceeding without subjecting them to regulations or controls which will significantly limit their capability to overwhelm the competition simply by virtue of their enormous wealth and proprietary stranglehold.

Thank you,
Jim Gigliotti

Subject: Microsoft Settlement

Microsoft adversely effected computer technology innovation, value and access throughout the market. Here lies the focus of a suitable settlement—to remedy the damage they have done over the last decade. Remedies to reverse Microsoft's tendency in the marketplace of squashing competitors by customer manipulation and designing OS's with code not completely available to competing software designers is a good place to start. Thus, FULL disclosure of their OS code will help reverse their abuses in the past.

Damages should also be rewarded to companies Microsoft has hurt and, in light of the many small companies they have destroyed, an independently administered grant fund should be established to promote innovation in small upstart software/hardware computer companies.

Richard Pate

Please consider my following comments and opinions on the proposed Microsoft settlement:

It is way past time to end this ridiculous politically motivated attack on Microsoft. It has needlessly cost small investors like myself tens of thousands of dollars and has cost the loss of tens of thousands of jobs in the high tech industry. This case was brought by inferior competitors who cannot compete by producing a better product. Let the free market system and not the politically motivated courts be the judge.

I feel the proposed settlement is more than adequate. If Microsoft is willing to have the cost of this settlement extorted from them by courts to get this case behind them, then it is time to do it.

The case should actually be totally dropped and all costs of defending itself against this should be reimbursed to Microsoft. These wasted costs should be recouped from companies like AOL Time

Warner, Novel, WordPerfect, Oracle, Sun Microsystems and other competitors who thought they could illegitimately enrich themselves by attacking Microsoft through the political process. The costs should also be recouped from states like Utah who allowed themselves to be used and abused by companies like Novell that reside in their state

Thank you,
Charles Olsen

Subject: Microsoft settlement
Sirs:

I endorse the current proposal by the presiding judge: Microsoft pays a cash settlement of a billion dollars, which is distributed among public educational institutions. Needy public elementary, middle, and high schools are suitable.

In keeping with the antimonopolistic philosophy of the judge, the schools would be free to purchase computers and software that are in alignment with their current or planned Information Technology business plan, not Microsoft's. This might be Intel / Windows products, or it might be Apple Macintosh products; the choice is up to the schools.

Microsoft's proposal of distribution of software and used computers simply allows them yet another inroad toward a new monopoly in the education market. What's worse is that donated aging computers will carry a hidden extra expense of maintenance and upgrades (Microsoft's, of course), which school districts are often ill-equipped to support.

Finally, placing a retail dollar value on a Windows CD-ROM and calling it a dollar-equivalent contribution to an intended punitive settlement is wrong. Microsoft can stamp out millions of their product discs for negligible extra expense. Microsoft has already been paid for the development costs of their product. The value of that CD-ROM is measured in cents, not dollars. Make them pay in cash please!

In a perfect world, Microsoft would also be compelled to publish and standardize the entire set of APIs (application programming interfaces) for the whole Windows OS family (95,98, NT, ME, XP), thus levelling the playing field for competing programmers.

Thank you

Subject: Microsoft Settlement
To whom it may concern:

I am writing to provide some public input into the proposed antitrust settlement for Microsoft. I understand that one remedy currently under consideration would be to allow Microsoft to make a donation of computers running Microsoft Windows operating system, as well as a variety of Microsoft software packages, to certain "underprivileged" school systems. It must be quite obvious to all concerned, however, that in the long run this proposal would only serve to benefit Microsoft greatly and more importantly, would augment, not hinder, their monopoly by facilitating their expansion into the education market! What is quite obvious is that if Microsoft is forced to contribute technology to needy school systems, that technology should not be based on Microsoft products, but instead on a competitor's product. Thus, either Microsoft be obligated to provide a CASH donation, allowing educators to CHOOSE their platform of choice, or they be obligated to make a donation of a competitor's (e.g., Apple Computer) product, NOT THEIR OWN.

It is my hope that you will recognize the gravity of this proposed settlement, and afford this suggestion serious consideration.

Sincerely,

Dear Sir or Madam,

Here are my brief comments regarding the Microsoft Settlement. PLEASE. . . let there be no slap on the wrist this time around. Microsoft's strangle-hold on the market does little to enhance computing for the consumer. I want a choice.

Thanks goodness they were not allowed to stomp down Apple in the education market as well.

I have hope that Microsoft will face justice eventually, despite all the money and power they have at their disposal.

Thanks for taking time to review my comments.

Microsoft should be required to provide full and complete disclosure on all programming interface as soon as they are created. This disclosure should also be maintained through the developement of the programming interface. Any, and I mean any, breaking of this policy should entail the immediate breakup of the company into two pieces, the OS piece, and applications piece.

Another idea would be to require Microsoft to "open source" Windows (any version, including XP) immediately and maintain the OS as "open source". This would allow

competitors a fair chance to see what is coming down the road. Remember, Microsoft IS an OS monopoly and they use that monopoly to the best of their ability to further their products and hinder competitors. AT&T was split because of the same thing. In addition, all applications, such as, Internet Explorer, should be removed from the OS. This is software folks. If Microsoft says that it can't be done, they are lying. They are already using programming interfaces internally for these types of applications. All they need to do is expose those interfaces to the rest of the world. If they say this is impossible they are, once again, lying. All one needs to do is ask any TRUE software developer and they will tell you.

Thanks for your time,
Mark Wick

Subject: Microsoft Settlement

On the Microsoft settlement, I think you should seriously consider raising the penalty amount from \$1 billion to somewhere between \$5 to \$30 billion, and make them pay it in cash. Divide it up between the schools in the country, and everyone who has every bought a Microsoft product.

Lets think about this for a moment. It has already been determined that they are a monopoly, and used predatory practices to get that monopoly. What is that monopoly worth? Well, its at least worth about \$40 billion in cash, because that's about what they have in the bank. That doesn't even include the company's assets, and annual sales which are probably worth at least another \$20 billion per year. You are not penalizing a small company, but the largest in the world, the settlement should be the largest in the world, by the same factor. Any company that can get away with the things Microsoft has got away with is deluding the government, and us public into thinking that they are going to change. I just paid \$450 for Microsoft Office, and the only thing that came in the box was a CD, and a 10 page brochure.

Not even a book. I think I deserve to get a book or two for \$450. How am I suppose

to learn the software I just spent 50% of the cost of my computer on? Do you know what kind of profit margin that is? I would venture to say at least 1000 percent. What other business can make that kind of profit, and still claim to have the consumers best interest at heart.

Think really hard, about this decision. Ask yourself what you want to pay for your next productivity suite? If this penalty isn't stiff, you can bet they won't hesitate to jack the prices and mafia type business practices in the future.

Stick it to them.

Thanks.

Michael Fuselier

Subject: Microsoft Settlement

Hello,

The current settlement plan as devised by the Department of Justice is a sorrowful and pitiful answer to a problem of enormous proportions. It does absolutely nothing to rectify the illegal and unethical practices of a business but even encourages it to continue its business practices as had been done in the past. In addition, it can only encourage other businesses to commit similar acts of uncompetitive behavior since our own Department of Justice has implied that it is okay to treat Americans in such a manner and that the DOJ will turn its head to the actions committed against the people.

It appears the DOJ has ignored all of the testimony and evidence of not only the new people who provided information for the court but also the past travesties of Microsoft which caused a previous consent decree which Microsoft only laughed at and totally ignored. By doing what you are doing at this point, you are playing into the hands of Microsoft and only proving their feeling that you will not go through with what needs to be done to protect the American public. What needs to be done is similar to what brave DOJ's have done in the past with companies like Standard Oil Company, the results of which obviously have only benefited not only our country but the long term benefits to the oil industry were evidenced as well.

The original judge had it all correct when he found the company guilty of uncompetitive practices. It would seem the only mistake he made was to publicize some of his information outside of court. That hardly seems like a reason to give up. Judges are people too and therefor make mistakes. However, the evidence is still there. The testimony of many who trusted the DOJ when asked to testify on the government's behalf—for the people—are now being left uncared for by the DOJ. There can be no question that Microsoft will soon be prevailing their predatory practices against those who testified once the settlement is agreed to. After all, what would Microsoft have to lose? They already know that the DOJ will do nothing. Individuals and businesses will have absolutely no incentive to help the DOJ in the future because they will feel it will only help, not hurt, in the long term.

Time and again, the American way of competitiveness has only proven the benefit

of true competition. That doesn't matter whether it is automobiles or toilet paper. The competitive spirit to make things better due to the concern that another company will come out with a better product than you have makes us what we are. . . a great country. If Microsoft had some real competition they would not continue to put out a piece of software that still breaks so often and then require people to pay for the "upgrades" which are actually bug fixes that should be provided for free. Competition would cause them to make a better product. I am sure that is one reason that Apple has what is known to be a much superior operating system because they have a need to make a better product.

There are several ways available to the DOJ to provide some means of remedy to the actions of Microsoft:

*A breakup may not be the most practical or preferable, but the Standard (and other) breakups prove that will be beneficial.

*Putting a dollar amount on what Microsoft has cost people by its monopolistic practices and making them place it into an independent fund where not-for-profit organizations and schools can apply for the funds to purchase applications and operating systems of their choice for use to benefit people might be used but it would need to be an amount that actually punishes the company for what it has done and profited by as a result and would, ultimately, provide more benefit for more people.

*In addition to any of the above, requiring Microsoft to provide complete and entire sets of API's and file formats for Windows and Office (two major items pointed out in court where Microsoft has been found guilty) to a private entity that would be funded by Microsoft but be under the purview of the DOJ would seem to provide an opportunity for other companies to have access to the necessary code to provide operable systems and applications, not require daily watching by the DOJ, cause Microsoft to pay for the effort to remedy their improper actions, and provide the public with some decent competitive applications and systems.

*Maybe another partial solution that would at least cause some grief for Microsoft, though I am not sure of the legality of this part, would be to assess an amount in dollars and the aforementioned API and file formats against Microsoft that they would be required to pay and give directly to Apple and Linux so that they can make their operating systems capable of directly reading and writing any and all Microsoft applications and operating systems so that users of those systems do not have to purchase an emulator for their system. If users could take any disk or application they are able to use in a Microsoft system and just as easily use it in a Linux or Apple system, that would surely help those systems to compete better.

I have grown tired of paying for and having to use operating systems that do not work, or break often, due to the anti-competitiveness of Microsoft. If it were not for their ability to copy another company's operating system, Windows would not even be where it is now and users would have an even lesser product. The Internet Explorer browser was so unusable until recently when they realized

that they had to improve it since they had not completely beaten Netscape but only damaged them to the point they had to be bought by another company. It seemed to me that the DOJ was doing an excellent job of proving its case in court over the last couple years and I had high hopes that finally something would be done to make them make a better product by making them accountable for the uncompetitive antics they inflicted upon other companies and, ultimately, consumers.

When the King of England made the colonists pay excessive amounts for his taxes with only his choice of product, the people revolted and did what a good American would do, toss the rascals out. It is part of what allows us to be Americans, freedom of choice and freedom from improper business antics. We trust our government to protect us from aggressors. If Microsoft were a foreign company would they provided such leniency? Of course not because their true anti competitive actions would be acknowledged by the DOJ and proper remediation accomplished. It is time for the DOJ to help the American people revolt against an uncompetitive aggressor on our own soil and cause something that will truly take care of the situation.

The current DOJ proposal has nothing in it that will do this. Please do something that will, like a good, responsible, DOJ should.

Thank you,
Hugh A. Van Deursen

Subject: Microsoft settlement

Hello:

I am writing to express my opinion regarding the proposed Microsoft settlement.

For what it is worth I think it stinks. It seems to do little to keep Microsoft from using the same tactics to crush its competition. Look at Java for example. Java is everywhere, and developers like it because it works in a variety of different computing environments. Microsoft is fuelling with Sun Microsystems and as a result its recent version of Windows does not support Java. This clearly hurts competition. It also hurts software developers because eventually they

are forced to use whatever Microsoft wants them to use instead of Java. Another problem I have with the settlement is that companies that have traditionally been hurt by Microsoft's tactics such as Apple computer are not protected by the proposed settlement. For example, in the past Microsoft has forced Apple to do things it might not want to do in order to get Microsoft to produce a version of Microsoft Office (even though Office was making a profit), which Apple needs to stay in business. One such instance was that Microsoft forced Apple to start carrying Microsoft Internet Explorer as its default browser when in the past Apple had used Netscape Navigator. Microsoft also tried to get Apple to not produce a version of its QuickTime software for Windows because Microsoft did not want to compete with Apple. Many years ago Microsoft forced Apple to give up some of the rights to its own operating system. This behavior is anticompetitive, and hurts everybody whether they know it or not, especially people such as myself, who like alternatives to Windows.

As I pointed out earlier the new settlement does little to protect Apple. In August I believe Microsoft's agreement with Apple expires, and Microsoft is free to extract more blood from Apple in order for Apple to keep Microsoft producing Microsoft Office. This should not be the case. In the very least, Microsoft should be required to make versions of its flag ship products that are compatible with Windows versions of the products. This is necessary because then Apple could be free to compete with Microsoft in other areas without fear of retribution. Why is Office so important to Apple? Simple: most people use Office at work which is largely Windows based. At home if they have a Mac, or if they are starting a business using a Mac, people want to be able to communicate with their Windows using peers. Office started on the Mac, keep it that way. If Apple goes out of business, about 25 million unhappy people will be forced to use Windows, a product most would probably prefer to do without. Also it might be fair to consider forcing Microsoft to produce a version of Office for Linux.

I also would like to see Microsoft stop being able to bundle features into Windows that other companies made popular and were charging for previously. If it is allowed to do so at least make it easy to remove these features from Windows so that competitors products can be used instead. Recently when I was installing Apple's QuickTime software on a Windows machine, Windows asked me are you sure you want to install Quicktime, it is made by Apple Computer, do you trust Apple computer? Software that Microsoft has no problem with does not ask questions like that. In my view this type of message was designed to make you question software that Microsoft did not like. Microsoft should not be able to use such tactics. Windows should easily accept competing software, especially if other companies are already offering the same product. Microsoft should not be able to give something away for free if another company made something popular and was charging for it, like in the case of Netscape's Navigator.

I also would like to see a couple of other things done. First, I would like to see a person or a small group of people that have the direct power to enforce the settlement without having to go back to the court to do so. Doing so would keep Microsoft from resisting enforcing the settlement. Problems that the person or people find should be public. Second I would like to see Microsoft have to admit guilt, as it would allow for companies previously damaged by Microsoft's anticompetitive behavior to be able to more easily sue for damages if they so chose. If such companies were successful, this would allow the companies to use the money received to improve their own products, hopefully enhancing competition and further benefiting the consumer. Remember the original facts in this case were not under dispute. Microsoft is a monopoly and has abused its power to hurt competition. Letting it off the hook hurts does not remedy the wrongs done, and foster future competition. Thank you.

Sincerely,

Thomas Paluchniak

Subject: Microsoft Settlement

I am a software engineer in Silicon Valley. I do not find the proposed settlement adequate.

I believe a stiff penalty for Microsoft is in order. If this means holding the case open for another couple of years, so be it.

Microsoft, in its practice of attacking open standards and portability solutions (example: java) has been hampering software development for a number of years. In addition to this, it has been leveraging ownership of Windows to provide unfair advantages for Microsoft applications:

1. Performance increase via internal Microsoft-only API's.

2. Product leveraging by including them "free" with the operating system (Internet Explorer). Normally, the market would react to this by going to a competing OS. However, the applications barrier to entry (see Judge Jackson's Finding of Facts) along with Microsoft's control of the desktop market makes this impossible.

Microsoft does not currently control the UNIX/Linux market, but those machines have very little applicability to home and non-technical business users. In the home desktop OS market it does in fact have a monopoly.

Microsoft's monopoly power hinders, not drives competition and innovation in the software industry. An effective remedy really requires a breakup of the company.

Please withdraw your consent from the revised proposed Final Judgment.

Thank you.

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers.

With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
 Bobby Powell

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,

Jan M. Henshaw

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Donna O'Daniel

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

I was happy with the Microsoft proposal being rejected. Here's some settlement ideas:

Microsoft shall not buy any intellectual properties, shares or merge with any company unless approved by the justice department for a 15 years span. Microsoft shall be split into different entities: OS, Softwares and Services and hardware. Microsoft should open their API to other OS. Microsoft shall not have exclusive deal with hardware companies regarding their OS and software for a 5 year span.

If Microsoft is found guilty afterward of anti-competitive practice, Microsoft should be fine 1B\$ given to a world charity group.

This will give a fair options for both Microsoft, consumers and competitors.

Regards,
Gregory Juster

Microsoft continues to steal and copy other companies' ideas, put little guys out of business by any means possible, while at the same time, and because of their large market share, deliver mediocre products with no real innovation.

Apple continues to be one of the few companies to create quality products, with truly innovative ideas that Microsoft simply copies after Apple has done all the work.

Now, Microsoft wants to force the schools to use their cheap, expensive to maintain computers which end up costing more in training and repair than Macs.

Who the Hell is Microsoft paying off to get away with their blatant robbery. Viruses, the Y2K nightmare, are just not an issue on a Mac. Can't someone see what is going on here.

Are you just going to sit by and let them continue to get away with it? What does it take for you guys to wake up? Windows XP is a JOKE! Want to see a really modern operating system? Here you go: <http://www.apple.com/macosex/>

Windows XP takes over your machine like a virus. It converts your files so that you can not go back to using them unless you use Microsoft products. It converts your MP3 music with Media Player so that they will then only play on Microsoft software.

How about making Microsoft donate \$100 million to the schools that they can use to purchase any computer they want. If you do that, they will buy what they really want. Want to see real innovation? Check out what

Microsoft will be copying next: <http://www.apple.com/imac/>

What is it going to take for you people you see what is going on?

Dear Judge Kotelly,

It would be a grave mistake to allow Microsoft to cut this PFJ deal. As a student and especially an American, a decision like this would not show true capitalism, as we are taught by the Constitution and the government in this country.

I know you are probably reading many emails like this but I want to remind you of something my International Relations teacher taught me about the country of Angola in Africa. There are, as of right now, only 2 plane companies that fly into and out of Angola. One flies one night and the other the other night. A plane ticket to Angola costs, ballpark \$5,000. This ridiculous mess is the result of non-competition—a monopoly, if you will, on the plane market in Angola. Not only are the prices terribly high but the public (whoever flies with them) has to cater to their needs (times, etc.) instead of a free choice of the spender. Monopolies, much like what Microsoft has become and will continue to become, are horrible testimonies to what America is about and will be the downfall of the economy as I leave college and try to find a job. Monopolies eliminate a free market and the choice of working class Americans.

Please do not let this happen.

Thank you.

It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,

Kooros Teherani

To Whom It May Concern:

As a professional who relies on computers for a large amount of my income, I wish to express my opinion that "slap on the wrist" remedies are inappropriate in the matter of Microsoft. My general observations of the company while following this matter are that this company has come to see itself as above the law, and, as we move into a new phase internet oriented computing, I find this very threatening. In fact, I find the notion that Microsoft may be allowed to expand its hedgemony into the financial services area of the net, where all of our private information will reside, to be downright scary given its unethical actions during the court proceedings.

Microsoft has exhibited time and time again that it will cut at the knees any company who does not explicitly share its vision, or chooses not to accept Microsoft's designated position for it in its grand scheme of computing. The fact that Microsoft has exhibited this willingness to cherry pick the best ideas for inclusion into Windows means that there will be less incentive for innovators to test commercial waters with new concepts, as they know that once they have proven their concept Microsoft will simply declare it a "feature" of their next version of Windows.

This viewpoint has been exhibited in Microsoft's stance vis a vis Java, and is currently showcased by its exclusion of Real Audio and Quicktime software from the standard Windows XP package to the benefit of its own Media Player software. Despite its pleas that innovation is being stifled, the record shows that Microsoft has never been an innovator. Microsoft has reiterated the idea of windows as espoused by Xerox and Apple; the browser as put forth by Netscape; the media player as created by Quicktime and Realplayer; and more. Microsoft's attempt to dilute Java into yet another proprietary technology is well documented in court. Although I recognize Microsoft's talent at integrating, many of the ideas we accept as common in Windows were in fact developed elsewhere. Perhaps in a normal business environment these actions are acceptable as competitive.

However, with the courts having decided at great cost to the American taxpayer that Microsoft is a monopoly, it is up to you to devise strict and meaningful remedies to ensure that Microsoft does not continue to abuse those companies brave enough to compete with it. To do anything less is to denigrate the public trust, and devalue our tax dollars.

Please resist misguided political and economic pressure and pressure and hand Microsoft a remedy that illustrates public resolve against this kind of business behavior.

Sincerely,

Victor C. Bernardoni

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies. Thank you for this opportunity to share my views.

Also when it is legal or ethical for competitors of Micro-soft to get a slush fund together to lobby the Justice Department to bring a monopoly suit against them? Jim Barksdale, former CEO of Netscape vowed to bury Bill Gates. How did it HURT consumers to get free software from both Micro-soft and Netscape? James Barksdale was hurt because he couldn't make a profit by giving away his product. Freebies have been given away for buying a certain brand of gas, going to a movie, opening an account at a certain bank, going to see a baseball game and much more! For most part the MONOPOLY charge was politically motivated by the DEMOCRATS. They received more donations from SILICON VALLEY that election year than years before.

DO NOT STIFFEL honest competition, that's what made this country great and different from the REST of the WORLD.

Sincerely,

Mr. Andrew Somogyi'

To the Dept of Justice:

I'm appalled at Microsoft's recent attempts to settle this antitrust case by giving away software and hardware. What an absurd and transparent attempt to *increase* their stranglehold on the market, and thank God the judge involved didn't accept their offer.

Microsoft is absolutely a monopoly: I feel this every day as an Apple Mac user. I want—and should have—the freedom to choose what tools I use for my work, and what appliances I buy for my lifestyle. The more Microsoft is allowed to invade every area of my life, the more I'm worried about even having any choice.

Microsoft should pay a *substantial* amount of money into a fund which can be administered by a *representative* group of computer executives: including those with interests in Linux, Unix, Java and Mac OS. But, this fund should be ongoing for some time: some money which finds itself in Microsoft's pockets because users have no choice should go into helping competitors until those competitors are actually helped by it—in other words, until Microsoft's market share drops. Until then, what's the point in offering token gestures? If the free market economy is to survive on competition, then let the competition begin! I'd suggest that a certain sum (or certain % of gross profits) from Microsoft should go into the fund for the next five years.

Subject: Hoping for Justice

To Whom it May Concern,

It is becoming rapidly apparent that our world is on the brink of many turning points. From terrorist threats to political and economic fiascoes, we are experiencing the most turbulent time in our nation's history. If there is any security that we Americans have, it's in knowing that there are competent men and women of integrity running the government and judicial system. Of course, that ideal rarely graces our reality when there are riches involved.

The current Microsoft litigation is a prime example. It is obvious that the company's massive buying power has come into play as they shamelessly continue to utilize the surreptitious maneuvers that earned them the status of a full-blown monopoly in the first place. The company has proven time and time again that it doesn't give a fig about fair play and will use anything in its vast arsenal of unethical tactics to wipe out the very

competition they stole their ideas from! Just listen to their proposed settlement, it actually gives them an opportunity to monopolize the educational market, an untapped resource that is currently dominated by Apple. What happened to our anti-trust laws? Is this American Justice? Will Big Money have the final say in everything?

If answer is yes, then it isn't difficult to see what the future awaits this country. Just take a good look at the repetitive history of all empires and you will see that they all fell due to the greed and corruption of their leaders. We live in a time when the line between corporation and government is blurred. Microsoft has found ways to influence the highest levels of power and authority in the name of the almighty dollar. I am not a capitalism basher by any means. People should be free to get as rich as they want. I just don't want to see another blatant injustice funded by deep pockets. With more resources than any terrorist network or mafia clan, Microsoft is the world's richest bully and must be taught that the court's decision does not have a price tag. I implore you to make our voices heard in this matter so that we can believe in this country again. If justice does not prevail, it is only the beginning of our great nation's inevitable collapse.

My words may sound melodramatic to some, but I firmly stand behind the conviction that we have shed our blood in vain if we struggle to defend something that is rotting from the inside out.

Sincerely,
Heath Davis

From: Bryce Ryness
To: Microsoft ATR
Date: 1/17/02 4:30am
Subject: Microsoft Settlement

Dear Judge,

As a business student at the University of Southern California I've had a little exposure to this case and the parties involved. And I must say that it is unfortunately that where there's a lot of money there's always a lot of gray- both in terms of legal and moral "right". With so much at stake a significant number of people will be hurt regardless of which side the decision favors. You control the fate of a lot of people.

Your decision is one I do not wish on myself. However, it has come to my attention that you're accepting statements of opinion to help you decide this case. Given such an opportunity, I will give you my synopsis of the situation and my opinions on the final judgments.

1. First and foremost, I feel that Microsoft is in violation of all applicable anti-trust laws. The most powerful evidence to this conclusion are the countless stories (and testimonies) given telling how Microsoft has used their size to "bully" smaller computer manufacturers into carrying their products (regardless of the wishes of the end-user). This kills the competitive spirit that keeps the United States' market economy alive and thriving.

2. In addition, their size and market dominance has allowed them to control the

actions, and reactions, of their customers. Simple economics states that one of the characteristics of a monopolistic company is in that company's ability to control prices within their market. At this current time, I've heard nothing but support for Microsoft's "price-fixing" by expert economists. Granted, their "fixing" of prices for their generally-superior products is grossly subjective (how much does a piece of software cost, really?) in terms of dollars and cents, but the motivation and theory behind their pricing schemes shows the primary characteristics of a monopolistic company.

I applaud the efforts of the Department of Justice in putting Microsoft under the microscope. As history reveals to us, all too often monopolistic companies are only challenged when they've grown so big and have taken the industry into such a place of inefficiency that it's difficult to internally justify killing such a societal mainstay. However, you're on the right track by nipping this in the bud early. It makes your job tougher because the margins are smaller, but cleaning up this little mess early will save billions of dollars in the future.

Sincerely,
Bryce C. Ryness

From: Derek Kent
To: Microsoft ATR
Date: 1/17/02 5:00am
Subject: MS Antitrust Settlement Suggestions

There are a few very important steps that I feel should be adopted in any settlement or ruling in the Microsoft antitrust trial.

(1) Force open every API Microsoft owns now, and in the future for at least 20 years. An API is an Application Programming Interface. Having an open API is very commonplace and Microsoft is one of the few companies in the world their close most of theirs. Forcing open Microsoft's APIs would allow other developers to compete with Microsoft software on the Windows platform and create some competition for products like Microsoft Office which haven't seen competition for far too long. Equivalent products could easily be released for under \$100, and because of how important Office has become for many consumers and businesses, this would be enormously beneficial for consumers.

(2) Fine Microsoft heavily. One of the large reasons Microsoft is able to kill companies like Netscape is because it has a huge cash reserve that allow it to price products in ranges that competitors simply can't survive at. Of course Microsoft looks to make a profit off of the software after it has become the standard and has no competition. A large portion of this fine should be divided up among companies that produce products that compete directly with Microsoft and should be enforced to be used for research and development of those or similar products that either compete directly or are related to products that compete directly. A fine of no less than \$15 billion is advisable

(Microsoft has a cash hoard of over \$30 billion). Companies that should receive a

share of this include Apple Computer, Sun Microsystems, Red Hat (and other distributors of Linux), IBM, a number of small open source projects such as Sourceforge.net, AOL, and The Omni Group to name a few. This money could also be offered to developers to be used to bring or continue to develop software for Operating Systems besides Windows, such as the Macintosh and Linux. In addition to this point, Microsoft should be required to continue to support and develop any software it currently makes for alternate Operating Systems to Windows for at least 6 years.

3) A breakup of Microsoft as suggested by Judge Jackson would be most effective combined with the above two solutions. It would strongly advisable, although not entirely necessary.

4) Obviously a number of other solutions are also needed in conjunction with the above, although I'll leave those up to others to propose. The above suggestions focus heavily on restoring competition as quickly and fairly as possible into the computer industry across a broad range of areas to best benefit consumers. However, obviously additional remedies are needed to ensure Microsoft stops (as it is still continuing to) breaking antitrust laws and competes fairly in the marketplace not simply for a short period of time. Many of Microsoft's licensing practices need to be examined and changed, as well as monitored in the future by a third party. Etc. Etc. Basically, 3 things need to be targeted:

(1) Competition needs to be restored (points 1 and 2 that I make, others are also possible)

(2) Competition needs to be ensured

(3) and Microsoft's business practices need to be monitored for unfair business practices similar to the way IBM's were

Hello

There are only one good way for this settlement.

1. Microsoft should be fine much more money than the settlement that they want and all the major of the money should be used to order all the poor schools with ONLY APPLE MACINTOSH computer running Mac OS and continue to supply with Apple computer and nothing else.

2. And continue to write Microsoft Office for MAC for a long period of time as well as continue to update this software a same timeframe as windows counterparts.

Subject: my email views

I hope this will not be binned straight away let me first of all state that I am a mac owner and have had Apple computers since 1980

and mac owner since 1984. I shan't go into all the sordid history or Microsoft, let's deal with the present and what to do now. Microsoft MUST be made an example of, they are even now continuing their bullying ways venturing into other (non-computer) areas as a safety measure so that even if judgment is hard against them they will survive. if you split up microsoft, it is really no solution, they will continue in their ways and the thought that there would be an open playing field is incorrect, the "old boy network" will continue to run and communication between the two companies is appear to be broken, but in reality, meeting "between old friends" etc will furnish them with an added advantage.

Do not consider making microsoft donate software and computers to schools, this will give them a leavage on young minds and rob other companies of a market.

the only sensible solution (and I don't know how you can do this) is to make the OS software open source, make it public property, nationalize it, take it away from them as a resource to valuable for a single company to own, make it free, rob them of their revenue, they can then continue to develop software, but not with an advantage.

thank you for allowing me to have my say.
Michael Foy

Subject: Microsoft settlement

To whom it may concern:

The proposed settlement advanced by the Department of Justice does nothing to remedy the effects of Microsoft's anti-competitive practices, and given Microsoft's track record with anti-trust litigation holds little hope of actually preventing Microsoft from continuing to illegally extend its monopoly. I am disappointed by the DoJ's decision to propose a settlement that leaves Microsoft still in possession of its ill-gotten gains, and still in a position to destroy the public benefit gained by the existence of innovative and competitive companies such as Palm Computing, Apple Computer, Netscape Communications, Novell, Borland, Lotus and many others who have suffered at the hands of Microsoft's illegal activities.

The only true remedy to Microsoft's practices is to require the company to publish the source code to its operating system products. This would immediately eliminate Microsoft's ability to illegally leverage its OS monopoly, and impose a financial penalty on the company that appropriately fits the crime. The resulting economic benefits and innovations that would come from having a competitive OS marketplace are compelling, and I urge the DoJ to consider them as it withdraws the proposed settlement and instead proposes one that is more acceptable to the public.

Sincerely,
Scott Forbes

Subject: Microsoft settlement

Sirs,

Please punish Microsoft in a meaningful way. The only thing they care about is maintaining their strangle hold on the industry. The only relevant punishment is therefore to either break the company up or regulate it *very* severely. A financial punishment is all very well as it will benefit some people in the very short term. In the long term something much more dramatic must be done. We are talking about a company which will stoop lower than anyone in their business tactics, breaks every industry standard ever set up and steals designs at the drop of a hat, they haven't had an original idea ever.

The computer is part of our future, we need you to make sure we get the best one possible. This won't happen if things continue the way they are in the long term.

Sincerely

Simon Martin

From: Brennan Young
To: Microsoft ATR
Date: 1/17/02 6:11am
Subject: Microsoft Settlement

Microsoft has complained that the settlement proposed by the non-settling states is 'punitive'. This implies that the initial proposed settlement is *not* punitive—that they don't see it as any kind of lesson, warning or punishment of or against their law-breaking activities over the last decades. Microsoft's most recent activities indicate that they have no intention of changing policy in regard to competition. The initial proposed settlement makes little provision for what will happen to Microsoft if they continue to abuse their monopoly, making it close to worthless.

Of course Microsoft should be punished. Microsoft are starving the national and international IT market of diversity and growth in the name of it's own proprietary 'innovations'. Microsoft should be treated punitively. They have broken the law and ruined the livelihoods of thousands of innovative companies. They should be obliged to produce their application software, fully supported and uncrippled, for non-Microsoft operating systems, and they should allow third-party developers the same opportunities to create software for Windows as their own developers have, they should absolutely not be allowed to use their desktop monopoly to leverage their position in the emerging handheld device and multimedia player market. Subject: Microsoft Settlement

I can not stand by a let those who are not inside the software "industry" as I am blather on about how Microsoft did not take any steps to suppress and/or eliminate competition.

OK, I'm a software techno-geek. I've been writing, using, and debugging software for 42 years. Most of those years were spent writing compilers, compiler building tools, and related utility programs like debuggers, linkers, and assemblers. In one of my previous jobs, we wanted to port a C compiler to the Windows environment. It

compiled code that ran twice as fast as that compiled by the latest and greatest Microsoft offering. Our problem was that we had to take heroic measures to test our compiled code. Why? Microsoft will not and will not release the specifications of the object code that their system supports—the format that their linker accepts and their libraries contain.

Other compiler teams have faced the same problem. Some with deeper pockets than ours reverse engineered the Microsoft object code formats. That worked fine until Microsoft "improved" the formats, requiring another round of reverse engineering. Eventually, most gave up—just as Microsoft intended. Who loses? Everyone who wants to create efficient programs to run in the Windows environment. First hand, that's not many of you, but second hand, as users of the programs that are available, that's most of you out there.

Oh sure, there's the example of Borland, who bit the bullet and created their own complete closed system with its own unique set of file formats and libraries. One counter example with very deep pockets. All of the others eventually have given up chasing a sequence of "new and improved" Microsoft secret file formats. I'm sure that there are those in other niches of the software world who can tell similar stories about the Microsoft predator. Let's hear them!

Then there's Windows, or is that Windoze? It is the most bug ridden, unstable, sophomoric, "designed" by trial and error, half-baked piece of crap that masquerades as "operating system" that I've seen in my 42 years in the industry. I could go on and tell you what I really think! Windoze usually hangs trying to shut itself down. Often, a crashing program destroys system information. One that I see a lot is that the ESCAPE key's meaning is altered. Guess what the "solution" is. Yep, yet another reboot. This on a machine that has hardware to protect the data of one program from all other programs! The "system" doesn't even protect its own vital data! It stores vital resource use information in fixed size 65,536 byte buffers. Program crashes often trash even them. Normal use overfills them.

As far as I'm concerned, UNIX is "the" operating system. OS/2 was great (after its initial teething problems) until Microsoft cut IBM off from the details of Windows 95 that they needed to be able to run the new generation of Microsoft tools—like Word and Excel. Denial of information necessary to competitors. Does that sound familiar? I say, break up Microsoft, and make the various parts tell the others and all aspiring competitors the details of the file formats and API's. How many pieces? At least three: Windows, Applications, and Development Tools.

From: Terence Crocker
To: Microsoft ATR
Date: 1/17/02 7:08am
Subject: Microsoft Settlement

Hello,

I believe this issue of Microsoft's recent settlement with the DOJ will be the most important issue that faces American life in the years to come. It would be difficult to communicate the differences that could occur if Microsoft were compelled to act in the best interests of American society, instead of in the narrow interests that their monopolistic interpretation of free enterprise has produced. Forcing Microsoft to release documentation that describes the API codes, with the exception of security

issues that would be monitored by the U.S. Government, seems a necessary first-step. The second step is much more difficult and that is allowing Microsoft to implement this release in its own fashion and on its own time schedule. Why? I believe that Microsoft must be allowed to operate in bad faith so that further, more Draconian measures can be applied in the case of flagrant non-compliance.

The final step is the monitoring of the Microsoft Monopoly over the Windows Operating System and the reduction of anti-competitive positions on the part of Microsoft. I believe that this will be accomplished by non-compliance by Microsoft of the settlement once enacted, and a much stricter enforcement by the U.S. Government, following the expected transgressions. Further, while I applaud the efforts of the State Attorney Generals of the dissenting nine states, I believe their efforts do not reflect the best interests of America, as a whole, but reflect the various constituencies' interests within those states. Microsoft must be allowed to decide how to treat their own self-inflicted wounds. Microsoft, alone, needs to determine their role in future events. Further, in light of the events of September 11th, I believe it behooves all citizens of the Western World to emphasize that security is an utmost serious matter and that our future safety should not be left to the whims of an unstructured Operating System marketplace.

My greatest fear is that Microsoft will be allowed to constrict the innovation in Operating Systems and drive OS development underground, leading to unforeseen consequences when further unanticipated OS refinements begin to appear. I take Bill Gates, et al, at their words that they can be relied upon to act as responsible citizens and loyal Americans. In fact, I believe we have no choice but to make that assumption. I note with some trepidation that the manufacturing of significantly sophisticated electronic hardware falls outside the purview of the U.S. Government. And those devices, given an alternative approach to Operating Systems, could prove disastrous to the American way of life.

Sincerely Yours,
Terence Crocker

Microsoft is in court as a repeat offender; the current antitrust suit, in which a federal district court and an appeals court have both affirmed that Microsoft is a monopoly and that it has abused its monopoly powers, arose out of the failure of a previous consent-decree settlement of an earlier antitrust case. At some point, having repeatedly violated the law, Microsoft needs to pay a price, or it will continue with its profitably anticompetitive ways.

Don't let Microsoft get away with breaking the law.

Please stop wasting the Department of Justice's valuable time and the taxpayers far more valuable money on persecuting Microsoft Corporation. Having the Federal Government pester anyone about perpetuating a monopoly is akin to having Ted Kennedy scold somebody for bad driving—its downright hypocritical. If pleas against wastefulness aren't enough to move you, then please consider the fact that millions of citizens have their retirement money invested in Microsoft, and the specter of Federal lawsuits and penalties due to baseless anti-trust actions by the DOJ is needlessly devaluing their investments.

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Lavon Madsen

Honorable,

It has come to my attention that Microsoft has recently acquired fundamental patents for 3D graphics technology and methods from SGI. This is ridiculous because it grants Microsoft significant leverage over the independent 3D hardware manufacturers who are currently supporting the only rival to Microsoft's Direct3D graphics API, OpenGL.

Microsoft has in the past worked to delay and distract advances in 3D graphics technology, such as in the abortive "Fahrenheit" plan with SGI in the 1990s. During that period, SGI was transitioning from selling UNIX-only workstations to begin selling workstations running Microsoft's Windows NT. At the same time, OpenGL was gaining on Microsoft's Direct3D in terms of features, hardware support, and developer support. If SGI wanted to sell NT boxes, SGI would have to agree to the Fahrenheit plan. The perfectly timed Fahrenheit deal slowed that advance of OpenGL by, among other things, reducing SGI's active promotion of it, and allowed Microsoft's Direct3D to gain a strong lead.

Yet OpenGL support still survived due to the interest of software developers and the support of third party 3D hardware manufacturers. This latest move by Microsoft to acquire core 3D technology patents would finish the hatchet job, granting Microsoft the power to force third party 3D hardware manufacturers to drop support for OpenGL, and ultimately stifle competition and innovation in the marketplace.

Please do not let this come to pass.

Thank you,
S Grill

Subject: Re: Microsoft Settlement

To whom it may concern,
As a US citizen who is concerned with preserving the freedom of "choice" among

products and services in our nation, I would like to add my following concerns regarding the Microsoft anti-trust case.

1. Microsoft, unlike auto makers, builds a proprietary car, using proprietary gas, and now they also want to own the road (internet)

2. The only real way to have the punishment fit the crime, is if Microsoft is forced to open up all of it's proprietary holdings so that the world can have real competition.

3. This would force them (as well as everyone else) to compete solely on the basis of the quality of their products. I guarantee that this would get their attention. The fundamental problem with the PC industry is that right now some very bright kids are hard at work inventing the next great computer idea either in hardware or software, but they also realize that it will never see the light of day because it is not Windows compatible, and Microsoft will find a very clever way to kill it.

This will also ensure the fact that you and I will be stuck using the lowest common denominator in the computer industry which is Microsoft mediocrity. The fairest judgment in this case would be to force Microsoft to write all of their applications to run native on all other competing platforms for the next decade. And if they want to donate computers to poor school districts then they have to purchase competitors equipment.

This would be fair. Microsoft illegally gained tons of market share, and so now they must be forced to give market share back!

Thanks
Rick Bennett

To: Microsoft ATR
Date: 1/17/02 8:35am
Subject: Microsoft Settlement

Microsoft has by their monopolistic power over desktop operating systems caused real damage to not only the shape of the marketplace by destroying competition.

The punitive aspects of the proposed settlement do nothing to remedy past infractions—and a total disregard for DOJ sanctions in the past—nor to correct them in the future.

Microsoft's destruction of the competition began with the introduction of Windows 3.1. At that time Microsoft did not hold the edge in office tools or development products.

Within 12 months of the introduction of Windows 3.1, Microsoft had secured the lead in not only operating systems (they controlled only about 95% of the desktops at that time), but also Word Processing products (you can name Microsoft Word—who's number two?) and software development tools (an awkwardly misnamed "Visual" C++). Part of the reason for this success was brought about developing their products to support Windows at the same time as they developed Windows—which did give them an edge. The greater reason was their terribly slow and gradual release of information about how to use and program in their operating environment, a licensing agreement that essentially meant that no matter who developed software, Microsoft would get a

percentage, and extensive use of hidden ("undocumented" in programming parlance) features in their operating system—some of which were specifically designed to disable competitors' products.

These practices have not decreased in pace or intensity.

The DOJ's investigations have clearly uncovered Microsoft's bullying of computer manufacturers to not only promote Microsoft's products, but also to eliminate competitors.

Microsoft has at the same time devoured most of the companies who at one time succeeded by providing software utilities to enhance the operating system. Where are the software backup companies that used to exist? Where are the compression and enhanced storage companies? Where are ALL the Windows utilities companies?

With the revenue stream from the operating system, Microsoft has been able to sell products at less than a market value to destroy their competition as well. This has clearly been the case with Internet browsers. Before Microsoft entered the market place, browser software sold for \$50.00. Now it's free—because Microsoft—whose browse was based on federally funded software—gave theirs away and continues to do so (the subject of another ignored Federal case).

The greatest testimony of Microsoft's crushing the competition is in the Office products arena. Name the number two desktop office suite. On the development side, Microsoft's dominance was so severe that they haven't had to upgrade their Visual Development Studio for 6 years (their last major release was 1996).

While the DOJ proposes sanctions, Microsoft has turned even them into victories. What about the "punishment" of distributing Microsoft free products to schools? What great marketing. Microsoft surely remembers, but the DOJ appears to be lacking a bit of historical perspective: Wasn't Apple prohibited from GIVING schools computers to further cement their market share in the 1980's?

Microsoft has mocked all the DOJ's settlements and punishments in the past, skating past the stupidity and lazy naivete of those working the case. This settlement appears to be more of the same. If the DOJ is to do anything at all, it should make Microsoft change it's practices: Break it up; force them to sell off their office products or development tools; award damages to those affected by past practices; prohibit them from selling products below a reasonable cost; get a bit more creative than the existing proposal which isn't even sufficient to be considered a hand slap.

Subject: Microsoft Settlement

To whom it may concern:

I feel that any settlement should not allow Microsoft to pay a penalty by donating it's technology. I feel it is completely out of step with a punishment—it would only help Microsoft expand it's dominance in other areas.

Any penalty should be paid in cash—an amount that would have a strong effect on the company. Possibly a restructuring and division of Microsofts assets may also be appropriate.

However, the solution that allows Microsoft to expand into education where another company is strong (Apple Computer) only helps Microsoft, and that is not good. That is awarding the lawbreaker and would be outrageous.

I think the whole case was a waste of my tax dollars and I am VERY upset . . . I am so tired of watching the US destroy the best and strongest companies so those that have no real product to sell can have a leg up at everyone's expense.

I do not see anyone going after Ford because all they offer is a Delco radio in their vehicles or maybe they should put 5 different vendor radios in their vehicles and let the consumer choose which one . . .

AOL/Time Warner should be the ones with their heads on the block . . . are they not a "Monopoly" over the consumer ISP market . . . I get a new DVD from them every week offering free hours???? Their market base and revenue continue to grow . . . so I would say they have NOT been affected negatively by Microsoft . . . matter of fact they wouldn't even be in existence had Microsoft not provided an Operating System for them to put their product on . . . I think a lot of companies owe Microsoft an apology not a knife in the back . . .

As far as Sun and Oracle . . . their CEO's should grow up and act their age instead of hounding the media for free publicity about "Poor little old me, Microsoft is squashing me" . . . we all know about the little old boy who cried wolf . . .

sincerely

Attorney General John Ashcroft
UIS Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr Ashcroft:

I am writing this letter to address the recent agreement reached between Microsoft and the Department of Justice.

I am for the settlement, which allows Microsoft to get back to business. Microsoft is a good company, which provides jobs to thousands of people. Employment supports the waning computer industry and the economy generally I think the lawsuit was a political move from the onset. Microsoft is a very successful company, and very successful companies make thir competitors jealous.

I understand the settlement was not easy on Microsoft. Microsoft has agreed to give computer manufacturers access to coding to configure Windows to easy accept non-Microsoft software programs that compete with programs included within Windows. They have agreed to on going monitoring by technical committee to assure compliance.

Microsoft has made many concessions in an effort to settle the suit quickly. Now is time to leave Microsoft alone. Ket's get back to business. Approve the agreement between Microsoft and the Department of Justice.

Sincerely,
Ted Haubein

Subject: Microsoft Settlement

To The Honorable Judge Colleen Kollar-Kotelly,

I am a user of the OS/2 operating system from IBM. I have found this to be a technologically superior product over the operating systems offered by Microsoft, including their latest version, Windows XP. Unfortunately, OS/2 has been in decline for a number of years from what I believe to be unfair monopolistic marketing tactics of Microsoft.

As a result, vendors of OS/2 related products have also diminished over the years. Contrary to arguments by Microsoft that their products encourage competition, I believe the opposite is true; that Microsoft's marketing practices actually discourages competition and stunts technological growth. Consequently, I do not believe the Federal Government's proposed settlement with Microsoft, in its current form, is adequate and that stricter measures be imposed on the

company to prohibit such tactics from being used in the future.

In other words, I agree with the States that are seeking stricter measures to be imposed on Microsoft and encourage you, for all our sakes, to implement them in your judgements against them. Please consider that if IBM's efforts can be marginalized when trying to compete against Microsoft's monopoly then who can?

Sincerely,
Frank D. Mosesso

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

As a Microsoft supporter, I am happy to hear that a settlement has been reached between the Department of Justice and Microsoft in regards to the antitrust case. After three years of legal action, this settlement has been long overdue. Microsoft has produced some of the most advanced technologies for its time and rather than impede its progress any longer, the government should accept this settlement and move forward onto more important matters.

In taking the best interest of the public and the industry into consideration, this settlement offers very reasonable and fair solutions. Microsoft's dedication to this settlement are already apparent in the recent release of Windows XP which is a program that demonstrates the way that Microsoft will make it easier to promote non-Microsoft software programs within Windows. In order to assure the court and the people that Microsoft is adhering to this agreement, the company has consented to the development of a three-person committee that will monitor the software company very closely. This is comforting in the sense that future violations will be prevented.

I feel that Microsoft is a great company and that it is time for progress to be reinitiated. Thank you for your time.

Sincerely,
Joanne I. Yakim

From: Jr.
To: Microsoft ATR
Date: 1/17/02 9:07am
Subject: Re: MacNN: The Macintosh News Network

I urge you to impose significantly more strict measures on Microsoft. This is their second time around the anti-trust issue. They have shown total disregard for the law and the courts. Their own suggested settlement to the class action suits is an example of this. They would like to give away free software,

their own, to schools. This is one of the only markets in which they do not already have a firm monopoly. This settlement, they know, would give them a push toward domination. After all, giving away software costs them almost nothing. Nothing more than the media it is stored on.

I have read others suggestions that MS be forced to open their Application Programming Interfaces to other companies to allow better integration of programs with the Windows OS. This seems like a drastic step, but a necessary one. As long as this company is not broken up into competing entities, constant supervision of it's actions will be necessary. Breaking up MS would benefit consumers in many ways. It would prevent MS from creating features in it's Office Suites and other programs which only work in their own OS. It would force them to create open standards in the Windows OS and create an environment where excellence in developing software is what sells. It would create options for consumers and result in improved products. What monopoly innovates without pressure from the marketplace? What monopoly provides excellent customer service? None. Just look at service from Cable TV companies as an example. They are a disaster. Only threat of government intervention precludes the system from becoming even worse. The result is a system which only provides just enough service to prevent the government stepping in.

In closing I would like you to know that I own MS stock which has been a great investment. However, I can not in good conscience I must stand up and speak out against the actions of Microsoft.

Subject: Monopolies lead to Mediocrity
I have been a part of the computer industry since 1979 and so have observed the rise of Microsoft firsthand and also suffered through its consequences. It has puzzled me over the years why business leaders approach IT technology differently than other aspects of their business. Where else would you ever rely on a single vendor. If I was commissioned to buy a piece of hardware, it was always "Get me three quotes". However, if we needed to purchase software, first it was "Buy IBM" and now it is "Buy Microsoft". Was it fear or ignorance of all things technical?

Now, America must compete on a global stage. Allowing Microsoft to dominate such a key industry leads only to high prices for consumers and mediocrity in the products provided by the monopoly. Our free enterprise system requires competition to survive. That is why we have monopoly laws. One can only speculate on the motives of the DOJ in agreeing to such a ridiculous settlement. The decision to split

Microsoft into two companies was clearly the right choice.

Subject: Microsoft Settlement

To whom it may concern;

As a long time developer—using Microsoft products—and computer enthusiast, I would like to say that any proposed action that does not include harsh punitive measures and very strict “go forward” conditions will not be satisfactory.

Microsoft has repeatedly leveraged its position on the desktop to force competitors out of the business. Many small companies have been purchased by Microsoft—and then never heard from again. Presumably to stifle the direction that the company was moving. Microsoft gave away “free” their Internet Explorer browser as part of the operating system, but in doing so, they ruined the browser market.

They have corrupted web standards in particular by adding in “gotchas”. I am a Web Developer and it is very painful to have to deal with multiple visions of “standards”. Due to Microsoft’s desktop control, anything written with general approved “standards” will frequently not work correctly in their browsers. Microsoft has made feeble attempts at working with approved W3C standards, but, in my estimation, only as a token gesture. Thus, in order to provide content to the millions of people on the internet which should be based on approved “standards”, one must take into account the MS browsers that will inevitably fail due to MS “standards” being the norm as MOST users will be using that browser.

I believe the whole concept is rather difficult to explain, but we have a company that is able to dictate with complete impunity the direction that any future software will take. That situation needs to be addressed and remedied with the same impunity.

Microsoft has ignored improving the state of its software and put the consumer in a very poor position. As we see on a very regular basis, Microsoft’s software is frequently very buggy, full of security holes, and in general something that would not be tolerated in any other market. Yet, currently there is no other widespread option. I personally have turned to Linux in an attempt to rid myself of the Microsoft “scourge”. But I am also a 20 year computer user with serious technical background—and still develop with Microsoft technologies for my employer. That is NOT to say that Linux will not be viable in the future, but currently it is not ready for mainstream. Could computer manufacturers put something else on their machines? The answer currently is a shaky “Yes”, but I believe only due to the current scrutiny that Microsoft is under. The moment the limelight turns elsewhere, Microsoft will heavily discourage and make it generally unprofitable for those manufacturers to choose any other path than that dictated by Microsoft—unless very closely monitored.

Software innovation has been stifled by the Microsoft dominance. As pointed out above, the software that they produce is not the epitome of reliability. If an auto manufacturer released a car that would fail with the regularity of Microsoft software, there would be horrible repercussions until that product

was withdrawn or re-engineered to reliable specifications. Yet we are subjected on a daily basis to software that is very poor. Why? They have no need to innovate or improve as their position is very secure. It has become rather routine for them to buy a company to rid itself of the competition that a startup company’s product may bring at maturity.

Prior efforts by the government to contain Microsoft have failed miserably. They are a very large company with huge cash reserves. The proposed settlement in which Microsoft gives away its operating system to public schools may sound like a grand gesture. In review, it is nothing more than yet another marketing ploy.

I cannot believe that our government, under the auspices of protecting the consumer, would be agreeable to allowing Microsoft to further spread its market share in a government sanctioned settlement such as the one proposed. This particular aspect of the settlement is an incredible miscarriage of justice and in no way protects any consumer—and actually adds to the existing problem by furthering their monopoly power.

Microsoft has shown itself to be monopolistic and predatory in the legal sense. In the “fairness” sense, it has shown itself even further lacking. Microsoft has used every opportunity, that, while legal is not “fair”, to control the market and subject users to current Microsoft whims and desires. They have created a situation where most people in the United States are currently paying them on a yearly basis to have access to the software that is a very important part of this nation’s operations. Worse, Microsoft is showing strong indications that this is to become worse rather than better. They are currently changing their licensing agreements which will cost even more than before to the consumer. Microsoft is obviously doing nothing to change their behavior by themselves. If left unchecked or with poor agreements such as the current proposed settlement, the monopoly and situation can only get worse.

We as a nation have spent millions directly on this case: we as businesses forced to use Microsoft software pay daily in ever-increasing costs of business: and finally, we as consumers pay for it on a daily basis with lost productivity waiting for crashes, software failures and general poor results using the substandard software that has become as necessary as electricity and water to us. The only solution for the end consumer at this point is to look to our government to step in and rectify this problem.

Level the playing field. Restore the competition to the software industry. Do not allow Microsoft to quietly snicker in the corner after they get the opportunity to hook hundreds of thousands of young users on Microsoft software. Reject the current proposal and draft one with some serious remedies. The monopoly must be broken decisively—not coddled or cajoled.

Cheers!

To whom it may concern:

3Microsoft and other victims of antitrust prosecution are being punished for the same moral values that have helped make America the beacon of the world: hard work, creativity, achievement. The producers are being punished for their ability and success. Unlike the kings of the past and governments of the present, Microsoft has acquired its wealth, not by confiscation but by production ? by creating products that other people want to purchase.” Bill Gates ? no less than the poorest citizen ? has the right to his property and to the pursuit of his own happiness. He should not have to justify his profits by appealing to “the good of society” ? in a nation of free individuals, no one exists as a servant of others. Gates has a right to make as much money as he can by offering a product others may choose to buy. Microsoft has the right to set the terms under which it offers these products on the market ? products that would not exist if Microsoft had not created them.

The government assault on Microsoft is being pushed by many of Gates’s envy-driven competitors. Their only moral alternative is to create their own products and try to persuade the public to buy them. Instead ? unable to gain profits by voluntary means ? they have resorted to the Tonya Harding approach: if you can’t win fairly, then physically cripple your opponent. Supporters of antitrust prosecution contend that Microsoft is “anti-competitive” and in “restraint of trade.” The reverse is the case. It is the government, which ? by interfering in the marketplace ? is guilty of these charges. Competition includes the possibility of one company winning all the business, if customers buy its product exclusively. By trying to force Microsoft to promote the products of its competitors, such as including the Netscape Web browser in Windows, the government is interfering with the competitive process and is in restraint of trade (“trade” means voluntary exchange). Such a demand is akin to NBC being forced to run ads promoting CBS programs. Such demands on Microsoft are a violation of Bill Gates’s rights, the rights of Microsoft’s shareholders, and of the American ideals of justice, rights, and freedom.

Subject: Proposed microsoft settlement.

It has come to my attention that the U.S. government is asking the public for "advice" on the Microsoft Anti-trust case.

I am a computer science student, will be graduating next spring, and I have extensive experience with almost all computing platforms.

The problems with microsoft are numerous. What causes friction and causes this company to become monopolistic are two things in my view.

(1) Closed standards and file formats. Microsoft has products, like their Microsoft Office suite for instance, that use proprietary file formats that can only be viewed with Microsoft Office Products. That being the case, if someone e-mails me, or gives me a microsoft word document to read, I absolutely must have microsoft word! Microsoft should provide free viewers for their documents so that people are not forced to buy products that they dont need. Especially Microsoft Office which costs about \$500 USD.

Other companies, like Adobe, have done this. PDF for instance is a format by adobe widely used around the globe. People who wish to author works in PDF format may buy the product from adobe. People who just wish to view the documents sent to them, or downloaded from the internet need only go to adobe's site and download a *free* viewer.

(2) The second thing that makes microsoft a monopoly is the fact that "PC" buyers do not have an option as to what operating system comes with their computer. Computers come "preinstalled" with windows, and the consumer has no say in it. They *must* pay for the price of windows when they buy a new computer even if they do not want it! This seems to me like extortion!

Users should be able to pick any operating system they want to go with their computer, so computers of the intel (or intel compatible chip) kind must not come preinstalled with windows in order to give the consumer choice! Most consumers like myself window-shop, they compare prices, and features, and the bells-and-whistles of a product before they buy. If they have a choice between Windows (Which costs about \$200, \$300 if you choose the professional version), linux (which costs about \$70) which comes with a lot of extras, or other operating systems that are free, or cost less than \$200 and offer more than windows offers, people will go with

what is sensible to their wallet and their productivity.

Let the consumer choose and not be hijacked by microsoft tactics.

Thank you for your time and your consideration.

Subject: Microsoft Settlement

A developer for Windows and Unix based operating systems, I have a firm admiration for the Windows API, but I will always have to play second fiddle to Microsoft, because they have not published the API in detail. On the other hand the API's underlying a basic Unix operating system are not only widely know, but there are a dozen or more operating systems which use the same API, and which can run the same programs (once they are recompiled) thanks to the POSIX standard. These operating systems compete based on a wide variety of features including stability, added functionality, and price. The same should be true in the desktop OS space which is dominated by Microsoft, and that is why Microsoft should be required to publish in full detail the Windows API, and an independent code review should be done on major applications produced by Microsoft to show that they are not using any undocumented system calls. Beyond that,

opening up the file formats for Microsoft Office would do a great deal to allow users to take their data with them, if they do at some point choose to use another operating system at some time in the future.

Yours

The government should leave Microsoft alone. On the charges that it undercut competitors prices yet gouged consumers—does that really make sense. Personally, I didn't happen to notice an increase in their software products. (and if there was over the years I thought it would be due to improvements in the products because of upgrades) I don't see what's wrong in having a standard on a computer or allowing a browser to be connected—it makes things easier when a lot of people don't even know how to navigate around their desktop. This started with the Clinton Administration—they went after the wrong enemy.

A prosperous company that created jobs for many people and they ignored the threat of terrorism. We should THANK GOD that people like Bill Gates exist, it makes this country great and Innovative

Subject: Microsoft Settlement

An article posted on line at <http://salon.com/tech/col/rose/2002/01/16/competition/index1.html> gives a good suggestion and valid reasons to force microsoft to open up and document the Application Programming Interface (API) for windows. This can be summarized as: competition. If microsoft were forced to release the API for others to study and understand, Microsoft would lose nothing. They would still have years of lead time in bringing products to market. However they would have to be aware that others would now be able to support software which was originally tied to the windows operating system on other systems. Linux would probably be the first with a compatible API to allow windows code to be executed in another operating system. This would allow end users to choose between windows and

linux as the 'core' operating system while still using the software they know and love. Office, Excel and other programs, coded to the public and published API would execute anywhere the API is supported.

Microsoft wins, because MORE people would write software which could be run on windows. Further, microsoft wins because if the API was supported in other operating systems (MacOS X, Linux, Solaris) then people would be more likely to purchase Office, Excel, Microsoft Flight Simulator, and other software written by microsoft, since it now runs on their OS, and the current wide spread use of these programs ensures that they are the 'business standard' which everyone would want.

The end user wins because they now have choice about which operating system they want to use. If they want a free operating system (Linux) to lower their cost of computing, with no support, they can do that and still run the microsoft programs that they want or need to run. If they want a supported operating system (windows) to ensure that they have something which will work, then they can pay for it.

The government wins because competition is restored to the market place. To allow microsoft off with anything less would be to repeat past mistakes and allow microsoft to continue to monopolize the personal computing landscape.

Subject: Microsoft Anti-Trust Comment (Tunney Act)

Dear US Government:

Please inform the Judge in the Microsoft anti-trust case that I feel the settlement is fair, and the nine States that are fighting it should be forced to abide by the settlement.

Having software that can interface smoothly is key to the productivity of the nation. I remember 10 years ago when there were so many mix matched programs being used that it could take literally hours just to convert e-mail attachments (if at all) to formats that were common so business could flow smoothly. All I have seen is allot of bang for the buck with regard to the Microsoft software, and a weeding out of the programs that the mass majority of consumers did not want.

Please get this resolved soon so a big component of our economy is not further hamstrung with posturing and politics by those holdout States.

Thank you for taking my comments into consideration when ruling on this case.

As an engineer and software developer with over 12 years of experience I had the opportunity to work with many products from several competing companies. In all these years I have found that Microsoft has been the most open to providing user information, the most cost effective and the only one truly committed to preserving the end users invested value on their product. As an example, I would like to point out over the past 5 years several competitors of Microsoft (i.e. Sun, Apple) have chosen to incorporate new technologies or products which in turn are completely incompatible with their older versions and have truly forced their customers into upgrade paths with disregards to the cost incurred by their users. Microsoft has never had this philosophy which in is why I have become a very satisfied customer.

I truly believe that this whole exercise in futility has only help to enhance Lawyer's careers and has being an attempt to preserve the status quo of a few technology companies who believe that they are owe a particular market segment.

Subject: Microsoft Settlement—Just say NO!!!
DOJ,

Microsoft must pay for it's monopolistic practices.

The market MUST be leveled and protection given to competitors or Microsoft will continue to abuse it's monopoly.

The US Government MUST fulfill it's duty to the people of the United States and not to campaign contributors. The people of the US do NOT want a monopoly to exist no matter what the President or the Attorney General say. This settlement is NOT good for the American people (or the world for that matter) no matter what anyone says. The only people who want a settlement that benefits Microsoft are those who would benefit from such a settlement. Do the math and see for yourself what the answer is.

The DOJ MUST punish Microsoft for it's abuses and put in place remedies that will ensure a fair environment for other software manufacturers. If this means that Microsoft must forfeit intellectual property, then so be it. They have been judged guilty, then like

any other criminal enterprise, they must pay a price for their crimes.

If the DOJ does not punish Microsoft and establish efficient protections for other software makers, then the DOJ will have failed the American people just as surely as it's Attorney General already has.

Do not fail us this time.
Break Microsoft apart.

Public comment regarding the Microsoft Settlement under the Tunney Act: A company is found guilty of breaking the law regarding their monopoly. For "punishment" they are supposed to donate their own product to one of the only markets where they do not have a monopoly (which was gained through illegal methods). How is this justice?

The harm done to Microsoft's competitors (and to the public via monopoly pricing and lost competition) cannot be undone. But the only way to reduce future harm (caused by their monopoly) is to divide the company so that the operating system is produced by a separate company than applications. In this way, the bundling that Microsoft has done so many times in the past to promote its weak products can be stopped and real competition can come back to the software industry.

Looking at what happened to Netscape, who at one time had a superior product with 80% market share, then saw it sapped away because Microsoft forced computer makers to pre-install Internet Explorer if they wanted to be sold Windows, how can anyone doubt the harm that Microsoft has caused through its practices?

Subject: Microsoft Settlement

My comments on the Microsoft Settlement The computer and software business is very different from normal consumer goods businesses. For example, with gasoline, it doesn't matter which brand you buy. But in the computer business it is extremely important to be compatible with existing software. That is why the consumer doesn't

want ten different operating systems. The price of the operating system and other software is relatively irrelevant, compared to the education cost.

That is why customers tend to purchase software from the dominant player in the field. We don't want installation problems and re-training costs. I would guess that the cost for training is more than ten times the cost of the software itself. In other words, the cost of the software purchase is insignificant for most companies. It was different in the early eithies, when the purchase price was ten times higher! (Vax hardware and software). So, for the average company, the so called monopoly is actually good for the economy. The consumer himself, chooses the dominating standard. It have tried to switch to Linux and MacIntosh, but it is so hard to learn from scratch.

I think the economic boom of the nineties, was caused by the expensive standard software created by Microsoft. The economic boom didn't end until there was a threat to damage and split Microsoft. So, law suite against Microsoft has done more damage to the consumer, than Microsoft has done to the consumer.

That is my honest opinion.

Hi: Just wanted to comment that I think Microsoft will benefit from the current ruling as they will now have a "government blessed" path into a market that has typically not been a Microsoft monopoly. (Education) A better solution might be for Microsoft to be forced to buy a competitor's product, such as more Apple computers, and supply them to the Education market. That process would actually create a more competitive market! The way it now stands, schools, which normally have low budgets, will see the option of "free" computers and software from Microsoft or to have to spend money to buy competitors products. Which do you think most schools will choose and how can Microsoft really be "hurt" by "seeding" a foundation of even more kids learning on Microsoft products.

Subject: THE MICROSOFT CASE
To: Department of Justice
From: William P. Liedtke, Attorney

This memo is public comment about the Microsoft Litigation. The Microsoft Litigation should be settled. The terms are fair. All states and parties excluded from the settlement should be brought in by this Court—to avoid a multiplicity of litigation.

As seen in today's Cleveland Plain Dealer, Microsoft will now focus much of its resources on security. Security is to assist all who have Microsoft products.

Get this Microsoft litigation behind us, or it will look like every time a company is successful, the government has to step in, to pull such company down in some manner.

The goal of protracted litigation is damage to the defendant, through the costs of such defense. Here we have the limitless assets of the U. S. government against one company for years of litigation. If such was your goal it has been achieved.

If the goal was to get Bill Gates out of the day to day running of the corporation, such goal has been achieved.

If the goal was to publicly humiliate and bring to public attention one company that was too successful, such goal has been achieved. The goal of public litigation should be clear, spelled out for the defendant and for members of the public at large who pay for such litigation. No one knows the government goals at this time, as all the original goals have been achieved.

Enough is enough. As a fair and impartial Court would say, "Would the attorney for the government please move on."

Subject: Microsoft Settlement
Honorable,

It has come to my attention that Microsoft has recently acquired fundamental patents for 3D graphics technology and techniques from SGI. This is a dangerous situation, as it grants Microsoft significant leverage over the independent 3D hardware manufacturers who are currently supporting the only rival to Microsoft's Direct3D graphics API, OpenGL.

Microsoft has in the past worked to delay and distract advances in 3D graphics technology, such as in the abortive "Fahrenheit" plan with SGI in the 1990s. During that period, SGI was transitioning from selling Unix-only workstations to begin selling workstations running Microsoft's Windows NT. At the same time, OpenGL was gaining on Microsoft's Direct3D in terms of features, hardware support, and developer support. If SGI wanted to sell NT boxes, SGI would have to agree to the Fahrenheit plan. The perfectly timed Fahrenheit deal slowed that advance of OpenGL by, among other things, reducing SGI's active promotion of it, and allowed Microsoft's Direct3D to gain a strong lead.

Yet OpenGL support still survived due to the interest of software developers and the support of third party 3D hardware manufacturers. This latest move by Microsoft to acquire core 3D technology patents would finish the hatchet job, granting Microsoft the power to force third party 3D hardware manufacturers to drop support for OpenGL, and ultimately stifle competition and innovation in the marketplace.

Please do not let this come to pass.

Thank you,
Nathaniel Adam

I am disgusted with the entire trial of Microsoft by the Federal Government, and by the states. This entire matter is politically inspired, and fostered by competitors that could not compete. Microsoft Corp. is the one company that is successful world-wide, and which offers products and services that the entire world needs and desires. To have our own politicians and courts attempt to destroy it with a "feeding frenzy" is ludicrous, and

will only cause the European regulators to follow suit. I have purchased, and will continue to purchase software for use with my Windows program, and I am thankful that Microsoft has made it possible for some uniformity to exist in this important industry. I am thankful that Bill Gates and Microsoft exists, and that it is a United States corporation, rather than Japanese or European.

Every competitor would like to see their competition slowed down, or destroyed, and it is sad for consumers to see that the politicians, and even the courts, can make these losers, the selfish businessmen, the winners. Let the settlement stand. Microsoft has already been attacked beyond any degree of fairness.

The Telecommunications Industry is in chaos, largely the result of political and legal interventions; please do not do the same to leading companies in all other industries, and specifically, Microsoft.

Subject: Make Them Pay

Microsoft has taken a good stand in talking about \$1 Billion to education. They should be forced to donate the money in cash, not goods. Why give them another inroad into a market which they can monopolize. If money is provided, the local school can have a choice on how to spend it and THEY can choose Intel or Apple, not Microsoft. Don't harm free enterprise any further by granting Microsoft the means to get out from under its obligation by providing less than state of the art computers and accessories to schools that will be locked into staying with the same software and hardware vendor.

Thank You
Tom Byers

Subject: Microsoft Settlement

I would like to submit comments on the Microsoft Settlement issue. As a computer professional of fourteen years and a hobbyist prior to that, I have seen the age of the PC since its beginning. I have been able to witness the advances that have been made and the changes that have occurred in the marketplace. One can hardly have seen these times and not know that something is very, very wrong. It is a principal tenet of capitalism that competition benefits both the marketplace and the consumer. Having twice been declared a monopoly and those findings

having been repeatedly upheld, we must ask ourselves whether we are strong enough to stand by our beliefs.

Status quo is easy; it is comfortable. And it is human nature to seek that where chaos would otherwise be the case. And that is what the Microsoft monopoly has given consumers.

Take, for example, the last four upgrade cycles of the Microsoft Office suite: Office 95, 97, 2000, and XP. Encompassing six years there has been insignificant change except once when they changed their file formats, presumably to break WordPerfect's ability to read and write Microsoft file formats. Even now, would-be competitors struggle with the state of lock-in that Microsoft enjoys. Companies and individuals who would choose to use other software are prevented by this simple phrase, "Please send your resume in Word format."

Take another example, Microsoft IIS. This is widely known to be the buggiest, most insecure web platform available. Combined with their Internet Explorer and Outlook applications, this triumvirate of vulnerability has cost companies by most estimates billions of dollars. Repeatedly new exploits and viruses come to light and repeatedly companies and individuals are forced to react, spending time and money just to protect themselves from these threats or risk losing data, time, and money to an attack. This has cost Americans billions of dollars; that is billions of dollars out of our economy, out of our pockets. How can one company be allowed to exercise its whim in the marketplace while releasing software that causes as many problems as it solves? How can one company be allowed to impose their negligence, irresponsibility, and outright greed upon the American people before the government will interpose itself with the force of law to put an end to it?

And let us examine Microsoft's strategy with the Java platform. Its first strategy was to attempt to hijack it to make it another Microsoft platform. When they lost the court case they took another route: drop Java support and release their own imitation. (C# is designed to mimic Java on many levels with the obvious strategy of luring Java developers to the Microsoft platform.) Java is a technology that has benefited consumers greatly. It has enhanced the internet experience with Java applets that add functionality to web pages. It has enhanced the ability of content and service providers to serve up dynamic content.

Yet with Microsoft's latest release of Windows and with its last two releases of Internet Explorer, it has intentionally stopped shipping a Java Virtual Machine, even the one they are still allowed to by the terms of the court case. Who suffers? Consumers who are unable to browse hundreds of thousands of web sites that utilize this technology.

When these are combined with the forced distribution that Microsoft enjoys through its OEM licenses computer buyers are forced to buy Microsoft software whether they want to or not; whether they use it or not. Microsoft has spent millions of dollars marketing against computers sold without an operating system despite the availability of free, open

operating systems such as FreeBSD. I am a user of alternative operating systems yet when I call Dell and ask to purchase a computer without any Microsoft software, what do they tell me? "I'm sorry, we cannot sell you a computer like that." Forget asking for another operating system.

And Microsoft still tries to maintain this same behavior under more insidious guises: As a settlement to the class action lawsuits brought against them they have proposed giving their software to schools. Why is this a problem? First, this has been the primary market of their main competitor, Apple Computers, for the past fifteen years. This would give them government-granted privilege to force themselves into another market where they could then benefit from lock-in since those schools will have neither the funds nor the expertise to change once locked in to the Microsoft platform. This is a very recent example that Microsoft has not changed its ways, but rather is still constantly seeking unfair advantage in a market it already dominates.

Myself and hundreds others like myself could write pages—volumes—on this topic. The message would be the same. Microsoft has proven itself unable and/or unwilling to restrain its behavior in the marketplace. Therefore it is time for serious government interposition. Another slap on the wrist will not solve the problem. Microsoft has proven with the previous consent decree that they defied that they will not abide the terms of any behavior modification agreements. They have billions of dollars on hand—any financial penalty would be a buy-off.

The only answer is to assert a penalty over the very thing they have abused to gain and maintain their monopoly: their intellectual property. Microsoft should be forced to open up all of its APIs and file formats prior to new releases of software that utilizes them. These should be made available on public web servers that impose no access control or logging facility. Microsoft should be restricted from making changes to these specifications without providing free and public notice a fair period of time in advance of the release of said changes. This should be audited by a government-selected third-party review board who must clear any release of Microsoft software, and in case of violation, an immediate injunction on the release of the violating software must be imposed. Only in such a situation will Microsoft be forced to compete fairly once again.

While Microsoft would of course object strongly to being forced to make available its proprietary knowledge, I would make two points. First, Microsoft is a repeat-offender and must be dealt with more harshly than a first-time offender. Second, this suggestion does not require Microsoft to reveal how they implement those APIs and file formats, any would-be competitors will still be faced with the challenge of implementing those themselves. All this does is provide an opportunity. I hope these suggestions will be given careful consideration and I hope the importance of this remedy be given serious reflection before yielding to a powerful corporation. It is, after all, We the People, not the corporations who the Constitution was designed to protect; and that should be of the utmost importance in such affairs.

Sincerely,
 Andrew K. Martin

 Subject: Microsoft Settlement

Clear Day I am delighted that US District Judge Motz rejected Microsoft's offer to donate pc's and software to schools as part of its settlement. This plays right into Microsoft's hands, allowing them to extend their Windows monopoly to one of the few markets not yet controlled by Microsoft. I work in the Information Technology sector and have used Microsoft products for almost twenty years. I've used Windows from the days of its 16-bit, Version 2.0 incarnation. While the product has steadily improved in function and reliability, it still is not rock solid. Windows XP, the latest version, has significant security flaws. For both businesses and individuals alike, every version of Windows has been a constant source of problems and frustration. In industries where companies face competition, their products do not survive for so long because another company soon provides a superior product. Consider the American and Japanese auto industries. Windows survives because of Microsoft's incredible power to coerce pc manufacturers to pre-install Windows on every pc they sell. This creates very difficult obstacles for any competitive pc operating system. Windows should be considered an infrastructure commodity, much like gasoline, electricity, or the telephone dial-tone. Consumers can choose from many vendors when they purchase gasoline, but the function provided is always the same and it's a stable product. Not so with Windows. The vendors of electricity and dial-tone create and sell their products within semi-regulated markets, which provides some level of consumer protection (how much is a long debate for another time) while providing a stable product. Not so with Windows. Gasoline, electricity, and dial-tone support an economy by allowing many products created by many companies to use the same vital infrastructure. The gasoline infrastructure is stabilized by competition and the electricity and dial-tone infrastructures are stabilized by regulation, thus providing a solid foundation for the diversity of products requiring these infrastructures. Not with Windows. Microsoft is not regulated like the electric and phone utilities, nor is it faced with competition in the desktop operating system market. Thus we have a jittery product in Windows.

I do not wish to see Microsoft regulated like a utility, yet Windows must become a commodity. The Dept. of Justice settlement should force Microsoft to make Windows source code freely available so other software vendors can improve and sell Windows.

Thank you.

 Subject: Tunney Act Comments

Dear Sirs,
 With regards to the pending case against Microsoft, I must say that I have strong reservations about punishing a company that builds a better "mousetrap". I do understand the issues related to some actions undertaken by Microsoft, however, I feel that there are better ways to deal with these issues and any consideration of a break up does not solve these issues. For instance, I would rather see the removal of EULA and the blocking any attempts to produce a block of the installation of their product in multiple computers. The idea of purchasing a product from a retailer, in which, your purchase does not entail the actual Windows disk does trouble me. The forcing of an individual to purchase to licenses for more than one computer in one's home does present a potential harm to the consumer greater than if a company provides supplemental products, such as Microsoft Office. I would prefer that Microsoft was left as is, and a greater look was taken into the practices that may provide a direct harm to the American consumers.

 Subject: Fwd: Microsoft Settlement
 Sirs

This email concerns the Microsoft Settlement: It is true that Microsoft has dominated the PC operating system for the past ten (10) years and has dictated to other software providers the how's, when's, where's and to what extent their product can interface with the windows operating system. However, by directing and setting an industry standard that allowed persons without extensive computer background to operate many different software programs. Because of this commonality (Microsoft Windows) that all other software providers had to adhere to the American Business Productivity has almost doubled. Every business decision taken by Microsoft has resulted in bring the world closer and more efficient.

There is soon coming a time where we will be able to talk to the computer vs. typing (like I am doing) information to the extent that the PC will be almost an artificial intelligent agent for us to utilize. Microsoft will have had it day and sail along into history, but not now!!!! The decision reach I feel is just and the Justice Department can far better utilize their assets than watch and hope to catch Microsoft with their pants down. We need an Industry Standard! and Microsoft is it. The findings from the Court of Appeals is tough but it also fair and good for America. Our foreign friends are waiting

in the wings just hoping that we (USA) will weaken our complete position by breaking up Microsoft.

Please hold to the latest decision and lets get America going again.

 January 17, 2002
 Ms. Renata B. Hesse
 Antitrust Division
 U.S. Department of Justice
 601 D Street NW, Suite 1200
 Washington, DC 20530-0001
 SUBJECT: Microsoft Settlement

Dear Ms. Hesse:

I am writing to urge acceptance of the proposed Final Judgment offered by the U.S. Department of Justice and endorsed by nine state attorneys general to resolve the antitrust case against Microsoft Corporation. I am president and CEO of The Heartland Institute, a 17-year-old independent nonprofit organization based in Chicago. Heartland produces research and commentary on a wide range of public policy issues for the nation's 8,000 state and national elected officials. Our research efforts involve over 100 academics and 130 state elected officials who serve on advisory boards.

Last year, I edited and Heartland published *Antitrust After Microsoft: The Obsolescence of Antitrust in the Digital Era*, by attorney David Kopel. Kopel's findings are directly relevant to the proposed settlement and, I believe, argue in favor of the settlement being approved.

The proposed Final Judgment brings to an end, rightly so, litigation that has been rendered meaningless or counterproductive by changing market conditions. Since 1998, phenomenal increases have occurred in the power of computers, their ability to store information, and the speed of data transmission. Products that were once at the core of the Microsoft case have disappeared, changed dramatically, been superceded by others, or been sold or merged with others. The result is a product landscape that would be almost unrecognizable to a juror or jurist studying Microsoft in 1998. Technological change per se does not mean the Microsoft case was without merit. It certainly does not mean Microsoft is innocent of the illegal business practices it is charged with. What is clear, though, is that Microsoft's actions have not stopped or even slowed the rate of technological innovation. Indeed, Microsoft products continue to play a major role in making much of that innovation possible.

The proliferation of new products and falling prices makes it difficult to defend the assertion that consumers were harmed during the 1990s by Microsoft's alleged monopolistic conduct. Evidence of any harm to consumers was conspicuously missing during the Microsoft trial. The absence in the proposed Final Judgment of payments or restitution to consumers or any of Microsoft's competitors is entirely appropriate for this reason.

Changing technology has transformed the market in which Microsoft competes. Competitors who once complained of Microsoft's market power have now merged with other competitors and become behemoths themselves. Microsoft faces serious competition from companies offering software and hardware products that weren't even invented when U.S. v. Microsoft was launched. Microsoft's core business—writing the operating systems of personal computers—is under serious challenge from Linux and (to a lesser extent) Apple.

The center of gravity for computing is shifting away from the PC and onto such devices as personal digital assistants and Web-enabled telephones. Microsoft's competitors still include AOL, Netscape, Sun, and Oracle, but many new names have been added to the list: IBM, Sega, Sony, Red Hat, Symbian, Phone.com, AT&T/TCL, 3Com, Yahoo!, and even Microsoft's former ally, Intel. Some, like Red Hat, are using Linux to compete with Microsoft head-to-head for control of the PC operating system market. Others work to shrink that market by using non-PC devices to do what PCs used to do, and by writing programs in languages that can be read by computers using any operating system. The rationale for treating Microsoft as a monopolist is evaporating with each passing month as the old battleground of the desktop PC becomes less and less relevant to consumers and to the IT industry.

The proposed Final Judgment prohibits Microsoft from engaging in business practices, such as retaliating against OEMs that promote or sell products that compete with Microsoft products, that the trial court, in line with Justice Department antitrust policies, found to be anti-competitive. The proposed settlement also requires that Microsoft surrender control over the desktop or Start Menu, and make some of its intellectual property available to ISVs, OEMs, and other partners on a non-discriminatory basis. Compliance is ensured by requiring Microsoft to provide on-site office space for and access to its records and personnel to a 3-member Technical Committee and its staff. Microsoft apparently agrees to these restrictions, so there is little reason to argue here that they are unnecessary, except as a counterpoint to those who believe such restrictions don't go far enough in handicapping Microsoft. The practices that the trial court found to be anti-competitive are used routinely and legally by other companies in the IT industry and in other industries; it is dubious whether there can be an objective definition of what constitutes "anti-competitive practices" or under what conditions "competitive" conduct becomes "anti-competitive." Microsoft's practice of giving discounts to computer manufacturers who help develop new versions of Windows, include hardware to take full advantage of Windows, and promote the Windows name is a standard practice in other industries that works to the benefit of consumers.

The antitrust trial showed how easily antitrust laws can be manipulated against almost any company—even a company whose success depends on continuously improving its products and lowering its prices. David Kopel concluded his analysis

convinced that Microsoft was a victim of industrial policy gone awry. Government officials tried to "pick a winner": A Web browser they thought, wrongly, had the potential of becoming an applications platform that could eventually help another company compete successfully with Microsoft Windows in the operating system market. Microsoft's decision to launch and aggressively market its own Web browser—a browser that most computer magazine reviewers now say is superior to the regulators' Chosen One—ruined the plan and embarrassed its authors.

The original remedies sought against Microsoft have little to do with the company's supposed illegal conduct. In particular, the proposed breakup of the company into Operating and Applications Companies goes far beyond whatever would be necessary to stop anti-competitive behavior. Breaking up Microsoft would have forced American consumers to spend \$50 billion to \$125 billion more for software over a three-year period. Competition would not emerge. Innovation, far from being encouraged, would have been squashed. All companies and all industries that rely on the new digital technologies would have been hurt by Judge Penfield Jackson's proposed remedies.

I hope the court resists suggestions that the settlement "doesn't go far enough" in restricting Microsoft's freedom to compete or punishing it for competing too aggressively in the past. Justice in this case requires neither. The proposed Final Judgment protects the interests of consumers and producers by allowing Microsoft and its competitors to compete by producing the high-quality goods and services that consumers want.

As Illinois Attorney General Jim Ryan said when he joined eight other states and the Department of Justice by endorsing the settlement, "The battle has been won. It is time to move on."

Sincerely,
Joseph L. Bast

I wish to state here that I'm happy, at least some states, along with Florida are primed to hold Microsoft culpable for their actions, I very disappointed in Justice and the Administration, for again favoring big business over the interests of the general public. The Bush's involvement in the S/L bailout, now this, and next I'm sure no one at Enron, will be held accountable for their fleecing of the public. I would hope the Justice Department would be above partisan politics, but that is apparently a laughable desire with John Ashcroft in the lead. But, let's see if we can come up with a sex scandal that everyone can be happy about wasting everyone's time with.

BEFORE THE UNITED STATES
DEPARTMENT OF JUSTICE UNITED
STATES OF AMERICA,
Plaintiff,

v.
Civil Action No. 98-1232 (CKK)
MICROSOFT CORPORATION,
Defendant.
STATE OF NEW YORK ex rel.
Attorney General Eliot Spitzer, et al.,
Plaintiffs,

v.
Civil Action No. 98-1233 (CKK)
MICROSOFT CORPORATION
Defendant.
Comment of Robert E. Litan, Roger D. Noll,
and William D. Nordhaus on the Revised
Proposed Final Judgment

I. Introduction

We are filing these comments on the Revised Proposed Final Judgment (RPFJ)¹ and Competitive Impact Statement (CIS)² to provide the Justice Department and the court with what we believe is a useful economic analysis to assist the court in fashioning the

¹ United States v. Microsoft Corp., Stipulation and Revised Proposed Final Judgment (November 6, 2001).

² United States v. Microsoft Corp., Competitive Impact Statement (November 15, 2001).

appropriate remedy in this matter. In brief, we believe that the RPFJ is not in the public interest, as that test is applied under the Tunney Act. Accordingly, the RPFJ should either be rejected outright now, or the court should refrain from ruling on the RPFJ until it has completed its further factual inquiry regarding the remedy proposed by the nine states not party to the RPFJ. If, however, the court accepts the RPFJ in the meantime, we strongly urge it to treat the RPFJ as an interim remedy and expressly leave open the possibility of supplementing the RPFJ with the additional remedies discussed in detail in this comment. We also recommend that in conducting its further factual inquiry in the remedy phase of this litigation that the court actively consider a structural remedy that would create some competition in the PC operating system market that, but for Microsoft's unlawful acts, reasonably could have been expected to have emerged by this time.

A. Interest of the Commenters

Each of the signatories of this Comment is a professional economist with expertise that is relevant to the matter now before the court, namely the design of an appropriate remedy to address Microsoft's antitrust violations. We are filing this submission in our own personal capacities and not on behalf of the institutions with which we are currently affiliated or employed (and identified shortly). We are submitting our views to assist the court in deciding whether to accept the RPFJ and ultimately in fashioning an appropriate remedy. None of us has been employed by or retained as consultant on matters before this court for Microsoft, the federal or state governments, or any other interested party in this litigation. Furthermore, none of us is receiving any compensation from anyone for submitting these comments.

We have followed this case extensively for the past several years, in several capacities. Collectively, we joined in filing an Amicus Brief on remedies before Judge Jackson in May, 2000, before he entered his final judgment on June 7, 2000.³ In that brief, we urged the court to conduct an evidentiary inquiry before adopting a remedy (a procedure that this court will now shortly follow). We also described the merits and drawbacks of three basic remedy options: a structural remedy, a conduct remedy, and relief requiring changes in competitors' access to Microsoft's intellectual property. Our brief established, in effect, a rebuttable presumption favoring structural relief. We did not support the kind of structural relief that the Department of Justice urged upon Judge Jackson and which he ultimately accepted: a two-way split of the company between an enterprise engaged in Operating Systems (the OS company) and the other engaged in applications software (the Applications Company). Instead, we made the case for adopting the only remedy we believed then (and still believe) would truly restore competition to the OS market: a three-way split of Microsoft's OS monopoly (that

would guarantee the end of the monopoly) and a separate Applications company.

We believe that we have relevant collective experience and insight that can benefit the court. We have worked on and studied extensively a wide range of government interventions, including deregulation (in airlines, surface transportation, the financial sector, electricity and telecommunications, water supply, hydrocarbon fuels, broadcasting); structural relief in antitrust cases (including *U.S. v. AT&T*); privatization (electric power, telecommunications and water); demonopolization and marketization in formerly state-run economies (including the former Soviet Union, Romania, and East Germany), and foreign trade cases (including tariff and quota relief and structural adjustment).

We also each have individual experience that is relevant to both the broad and narrow issues raised by this case. Robert E. Litan, currently the Vice President and Director of the Economic Studies Program at the Brookings Institution, was formerly Deputy Assistant Attorney General of the Justice Department's Antitrust Division from September 1993 until March 1995. During his tenure, he helped supervise the first civil antitrust investigation against Microsoft and participated actively in negotiating the consent decree limiting the company's licensing practices, which this court approved (after remand from the Court of Appeals) in 1995. He has closely followed the trial and subsequent judicial decisions in this matter and, in his recent research, has concentrated on, among other things, economic and policy issues relating to the rapid development and use of the Internet. Dr. Litan is both an economist and an attorney. During the course of his career as an economist, he has written or edited 25 books and over 150 articles in journals relating to a broad range of economic, regulatory and legal issues. Roger G. Noll is the Morris M. Doyle Centennial Professor of Public Policy in the Department of Economics at Stanford University. Professor Noll is the author or editor of thirteen books and over 300 articles, focusing on public policies toward business. Among his special areas of expertise are the economics of telecommunications, broadcasting and the Internet. He has examined privatization and regulation of telecommunications, water and electric power firms in many countries around world. He also has served on several boards and committees of the U.S. government, and has been a consultant to the Antitrust Division of the Justice Department, the Federal Trade Commission, and the Federal Communications Commission.

William D. Nordhaus is the Sterling Professor of Economics at Yale University, where he has served on the faculty since 1967. From 1977 to 1979, he was a Member of the U.S. President's Council of Economic Advisers. While at the Council of Economic Advisers, he established and chaired the Regulatory Analysis Review Group, which was charged with analyzing the impacts of major regulations. From 1986 to 1988, he served as the Provost of Yale University. He is the author of many books, among them *Invention, Growth and Welfare; Reforming*

Federal Regulation (jointly with Robert Litan); and the widely used undergraduate textbook, *Economics*, now in its sixteenth edition (jointly with Paul Samuelson). His research has dealt with issues of innovation, technological change, deregulation, and demonopolization for Russia and other economies in transition. Dr. Nordhaus was an expert witness for AT&T during the government's antitrust investigation of that company in the late 1970s and early 1980s, specifically on issues relating to the impact of the breakup of the company on technological change and innovation. He serves on a number of government panels, including membership on the Congressional Budget Office Panel of Economic Experts, and he is chairman of the Advisory Committee of the Bureau of Economic Analysis.

B. Overview of Comments

1. *The Right Remedial Standard: Restoring the Level of Competition that Would Have Arisen But For Microsoft's Exclusionary Behavior.*

This antitrust case is an unusual one for the court's consideration under the Tunney Act because of the stage at which this court is reviewing the RPFJ. The typical Tunney Act hearing comes before trial, in which the parties have entered into a consent decree. Instead, this hearing comes after extensive evidentiary hearings and lower court findings of extensive unlawful acts of monopolization that have been affirmed (unanimously) by an appellate court.⁴ Accordingly, the public interest standard under the Act is higher than it would be for the typical pre-trial settlement. The public interest standard will not be satisfied by an order simply stopping Microsoft from engaging in practices the courts have found to be illegal. Instead, the public interest test that is appropriate for a case at this stage of litigation involves the same remedial standards that courts apply to all parties who are found to have engaged in unlawful monopolization. That is, as the Court of Appeals noted in quoting *Ford Motor Co. v. United States*, 405 U.S. 562, 577 (1972) and *United States v. United Shoe Mach. Corp.*, 391 U.S. 244, 250 (1968), the remedy must not only unfetter a market from anticompetitive conduct but also must terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future.⁵

As we outlined in our earlier Amicus Brief, we believe there is only one remedy that presumptively would terminate the monopoly and prevent its recurrence: a structural remedy that first divides Microsoft into an Applications entity and an Operating System entity, followed by a division of the Operating System entity into three separate companies. The DC Circuit rejected a somewhat different structural remedy in the

⁴ *United States v. Microsoft Corp.*, 84 F. Supp. 2d 9 (D.D.C. 1999) ("Findings of Fact"); *United States v. Microsoft Corp.*, 87 F. Supp. 2d 30 (D.D.C. 2000) ("Conclusions of Law"); *United States v. Microsoft Corp.*, 253 F.3d 34 (DC Cir. 2001).

⁵ 253 F.3d at 103. The DC Circuit also cited in this regard *United States v. Grinnell Corp.*, 384 U.S. 563, 577 (1966).

³ Brief of Amici Robert E. Litan, Roger Noll, William D. Nordhaus, and Frederic M. Scherer (filed April 27, 2000).

absence of a factual inquiry to establish that such a solution was necessary.⁶ We therefore urge the court to evaluate the RPFJ against the backdrop of the factual inquiry that will be conducted in the parallel remedy hearing on the proposal of the nine states (Litigating States or LS) that are not party to the RPFJ.

In the absence of further fact-finding, we think that it is highly unlikely (and certainly premature to assume) that the RPFJ satisfies the public interest test. The reasons for this harsh assessment are that the RPFJ stops well short of changing the structure of the company and introducing any competition into an illegally maintained monopoly market; it provides only the barest minimum of conduct restrictions; and it offers a defective enforcement mechanism. As a result, it will not undo the harms arising from Microsoft's unlawful acts. The Justice Department articulates a standard that a remedy merely must restore competition to the condition existing in 1995, prior to the beginning of Microsoft's unlawful conduct.⁷ This standard does not meet the United Shoe test and is not in the public interest. This is because the middleware threat to Microsoft's operating system monopoly, provided by the Netscape browser and by the possibility of a JAVA-based universal translator (as described below), are no longer present and the Java threat is now much diminished. The Justice Department's proposed standard simply ignores the fact that Microsoft's unlawful acts succeeded in vastly weakening the state of competition that existed in 1995. Not only would the RPFJ fail to meet the United Shoe requirement that the monopoly be terminated, but it would also enable Microsoft to continue to enjoy the fruits of its unlawful acts. Such an outcome is not in the public interest because it would not restore the level of competition that has been lost as a result of Microsoft's antitrust violations. The appropriate standard instead is whether the proposed relief repairs the anti-competitive harm caused by Microsoft's illegal actions. A remedy that satisfies this standard must put an immediate end to the benefits now accruing to Microsoft as a result of its unlawful activity, which means the remedy must restore competition to the condition that would have been present in the market by now in the absence of Microsoft's unlawful conduct. Therefore, an appropriate remedy is one that would produce substantial competition in the supply of operating systems.

We are also concerned that the DOJ's low remedial standard will fail to deter future anticompetitive conduct by Microsoft or other similarly situated monopolists. Under the DOJ standard, if a monopolist quickly squashes a nascent competitor when it comes on the scene, before it acquires a significant market share, the antitrust penalty will be small because of the small impact that competitor has achieved at the time of its demise. This will not deter. To the contrary, it will simply encourage a rapid anticompetitive response to new entry.

In addition, our review convinces us that the RPFJ will not even satisfy the low remedial standard the Justice Department articulated. The core of the DC Circuit decision involved unlawful conduct by Microsoft to maintain the applications barrier to entry. Despite this, the RPFJ does nothing to reduce that barrier. The RPFJ does not even prohibit all the illegal conduct affirmed by the DC Circuit most notably, the integration of middleware into the operating system through commingling of software code and the deception of Independent Software Vendors (ISVs) that led them to use Microsoft's Java tools.

Moreover, the term of the decree is only five years, a period shorter than the six years since the start of Microsoft's anticompetitive campaign in 1995, while the RPFJ is riddled with exceptions and loopholes that destroy its effectiveness. These exceptions will create a substantial risk that the plaintiffs will be required to litigate significant competitive issues every time that they believe Microsoft is not in compliance with the RPFJ. Microsoft, meanwhile, will certainly challenge any non-compliance allegations. The consequent delay will render the decree unenforceable and eliminate any incentives for Microsoft to comply. Indeed, the RPFJ proposes an enforcement mechanism that itself is defective and thus will fail to deter or punish further anticompetitive conduct by Microsoft. For example, the only specific punishment for a pattern of willful and systematic violations is a one-time two-year extension of this ineffective decree.

In short, the RPFJ fails to satisfy the public interest under either remedial standard (the DOJ's or the one we believe is more appropriate for this case). The RPFJ is a pseudo-remedy that will not terminate Microsoft's anticompetitive conduct, let alone restore competition.

2. DOJ's Flawed Rationale for a Limited Remedy

In recent statements, Assistant Attorney General Charles James has attempted to justify the limitations in the RPFJ on the grounds that the DC Circuit significantly narrowed the case.⁸ That justification is unwarranted. The government prevailed on the core part of the complaint, the Section 2 monopoly maintenance count. Furthermore, in reversing the tying and monopoly leveraging counts, the court did not excuse the conduct that the government attacked. Instead, that very conduct provided the basis for liability for monopolization. The fact is that the government won a great victory in this important case and the RPFJ threatens to squander that success.

The Justice Department and Microsoft might argue that the RPFJ will implement immediate and certain relief, free of litigation risk. In particular, the Department and Microsoft might claim that absent a settlement, a full-blown remedy hearing with inevitable appeals would result in substantial delay in implementation.

We disagree. First, the RPFJ does not eliminate litigation risk. Importantly,

enforcement of the RPFJ itself, if approved by the court, will be accompanied by very substantial litigation risk. Certain key provisions of the RPFJ do nothing more than state the antitrust rule of reason, which would require the government to prove a new antitrust violation in an enforcement action. Other provisions contain exceptions that can effectively and inappropriately immunize Microsoft's actions. Thus, if Microsoft were to defend against an attempt by the Department to enforce the RPFJ, the Department inevitably would find itself in nothing short of yet another antitrust suit against Microsoft. In this way, the RPFJ is defective because it invites extensive litigation whenever any compliance issue is raised. That fact will increase litigation risk, not reduce it.

Second, in our view, the potential litigation delay is an inadequate justification for the weakness of the RPFJ. Waiting to obtain an effective remedy is better than implementing a RPFJ that can only be characterized as a pseudo-remedy. In any event, enforcement under the RPFJ will involve substantial delays. Certain key provisions of the RPFJ involve significant and unnecessary delays of 9–12 months before being implemented. Equally important, the reasonableness qualifications and other exceptions written into the RPFJ will lead to adjudication delays in any enforcement actions.

3. More Effective Remedies

So what should the court do now? Given that the RPFJ clearly fails to meet any conceivable interpretation of the public interest standard that would be suitable for a case in which both trial and appellate courts have definitively spoken, the clear course is to reject the RPFJ, or at the very least, to postpone ruling now and to modify the remedy after further evidence is taken during the next phase of the litigation. Thus, we certainly agree with this court's decision to evaluate in tandem the RPFJ and the remedial proposal of the Litigating States. The remedy hearing on the LS proposal will provide the court with the opportunity to evaluate the loss of competition caused by Microsoft's unlawful conduct over the past six years. Comparing the RPFJ with the LS proposal using the evidence gathered on the loss of competition will better enable the court to choose a remedy commensurate with the competitive harm.

As we discuss further below, the evidence adduced at trial and referenced by the trial court in its Findings of Fact already provides adequate evidence to support the conclusion that there was a strong causal connection between Microsoft's unlawful conduct and the subsequent state of competition in the market. The clear implication, therefore, is that a real remedy must reverse that impact to be in the public interest. We continue to believe that a divestiture that creates three competing OS companies is the most effective remedy. But if the court should eventually decide otherwise, we urge it to adopt the additional remedies proposed by the Litigating States (LS). The LS proposal includes several provisions that are designed to reduce the applications barrier to entry and thereby significantly increase the

⁶ 253 F.3d at 80.

⁷ The CIS describes the goal of its efforts as enabling the restoration of the competitive threat that middleware products posed prior to Microsoft's unlawful undertakings. (CIS at 3.)

⁸ Statement of Charles James to Committee of the Judiciary (United States Senate), The Microsoft Settlement: A Look to the Future (December 12, 2001).

opportunity to restore the substantial competition foregone as a result of Microsoft's actions. It also eliminates key exceptions and loopholes and puts teeth into the enforcement mechanism.

We also recommend strengthening the remedy offered by the Litigating States in three ways. First, Microsoft should be required to certify compliance with the decree every six months. Second, the decree should be supplemented with a crown jewel provision that automatically implements a structural remedy—preferably of the type we recommend here and suggested earlier in our Amicus Brief—upon proof of a pattern of material violations of that decree by Microsoft. Third, the term of the decree should be left open, but the decree should be reviewed after five years to see whether it can be terminated or needs to be modified to make it stronger and more effective.

4. Organization of this Comment

This Comment is organized as follows. Sections II and III provide the background for our evaluation. In Section II, we review the record on Microsoft's monopoly power and the applications barrier to entry. We then review Microsoft's illegal anticompetitive conduct. We discuss the harm to competition caused by this conduct, including the entrenchment of Microsoft's monopoly power since 1995. This harm is described in detail because it is relevant to evaluating the RPFJ, which does not attempt to redress this harm. In Section III, we describe the goals that a remedy should attain and the enforcement principles required to implement the remedy in a way that serves the public interest. We then use the facts and principles developed in these two sections to evaluate the RPFJ.

In Section IV, we evaluate the RPFJ on the basis of the CIS's stated remedial standard of restoring the competitive threat to the level prior to Microsoft's unlawful conduct. We find that the RPFJ does not achieve that goal because it does not prohibit all of Microsoft's unlawful conduct found by the DC Circuit, because it contains numerous exceptions and loopholes, and because it contains a defective enforcement mechanism.

In Section V, we explain why the CIS's remedial goal sets too low a standard and why the proper standard would be to restore competition to the level that would have been achieved by now in the absence of the unlawful conduct. In Section VI, we discuss alternative remedies that stand a better chance of meeting this more appropriate standard. In particular, we discuss the full divestiture structural remedy, the conduct remedy proposed by the Litigating States, and our suggested modifications to the Litigating States' proposal.

II. Microsoft's Possession and Illegal Maintenance of Monopoly Power in the Supply of Operating Systems

The proper place to begin to assess the adequacy of the RPFJ is with the fundamental finding of both the District and Appellate Courts that Microsoft has continued to possess monopoly power in the supply of operating systems (OS), with a 95 percent

share of that market.⁹ Furthermore, the courts determined that the Mac OS, handheld devices, Internet portal sites, and the then-available middleware (which is discussed in greater detail below) did not impose any meaningful competitive constraint on the pricing or non-pricing behavior of Microsoft.¹⁰

It is one thing to acquire and maintain monopoly through lawful conduct, but quite another to maintain it through illegal acts. A second core finding of both courts is that Microsoft took the latter route by engaging in a variety of exclusionary activities to protect its monopoly position against growing OS competition. In particular, we describe in some detail below how Microsoft exploited the applications barrier to entry to prevent the emergence of OS competition. The detail is necessary to appreciate the broad insufficiency of the RPFJ.

A. The Applications Barrier to Entry

The government's case against Microsoft rested heavily on the existence of an applications barrier to entry. Every operating system for a PC exposes (or makes available) to software developers application program interfaces (APIs) that developers use to write applications (such as spreadsheets, word processing, or games) for the OS. In particular, the APIs allow developers to access frequently-used routines in the OS that are also used in applications, which reduces the costs of and time entailed in generating those applications.

Each operating system has a different set of APIs. Consequently, if a software developer wants to create an application for multiple operating systems, the developer must tailor the application for each OS. This porting of applications from one OS to another is costly. As a result, if there were one widely used OS, software developers would tend to write for that OS and users of that OS would have access to more applications than users of other operating systems.

The cost of porting an application from one OS to another is the source of the applications barrier to entry in the supply of operating systems. Computer users tend to gravitate towards the largest-share OS, because that OS has more applications available than other operating systems. As the share of the dominant OS becomes even larger, software developers are even less likely to port their applications from the increasingly popular OS to other increasingly less popular operating systems.

One very possible result, therefore, is that in such a market, ever more consumers will flock to the larger-share OS, while ever fewer developers port their applications to other operating systems. Ultimately, such a dynamic can lead to the domination of the market by a single firm, able to charge what economists call "supracompetitive" prices and to earn supranormal profits. If, however, entry into the market were relatively easy, high profits would attract new firms, and the fear of that entry would encourage the dominant firm to continue to innovate in an

effort to retain its position. But if barriers to entry are high, then fewer firms will be able to attract the capital and entrepreneurial talent to challenge the dominant OS than would be the case in a market where entry barriers are much lower.

The applications barrier to entry can produce such a sub-optimal outcome. Such a barrier arises when most users would not switch from the dominant OS because most of the applications software would not be available for another OS offered by a new entrant. Consumers would instead wait until more applications become available (or are imminent) for the entrant OS before switching. The barrier is strengthened to the extent software developers will not write for or port applications to the entrant OS until it has a sizeable user base. In this way, both consumers and developers become locked into the dominant OS. This can happen even though it would be in the collective interests of both consumers and developers to switch to an alternative OS.

This explanation of the applications barrier to entry was not only documented by the Department's own experts prior to the initial remedy exercise.¹¹ It was also found to exist as a matter of fact by the trial court.¹²

In principle, the applications barrier to entry in the OS market could be overcome if there existed a universal translator that reduced the costs of porting applications between the dominant OS and other operating systems. If those costs were reduced, software developers would be more likely to write applications that can run on multiple operating systems. As the courts in this matter recognized, middleware could serve as such a universal translator.¹³ Middleware is software that can run on top of an operating system and expose its own APIs to software developers. Any application that could run on the middleware could also run on any OS on which the middleware can run. As a result, an application written to the APIs of a middleware that can run on multiple operating systems would itself also run on those otherwise incompatible operating systems. In this way, users of the less popular operating systems could have access to the same applications available on the more popular operating systems. Similarly, developers would have an incentive to write to the middleware's APIs because there would be more potential purchasers of the applications software than if the developer wrote the application for only one OS. In short, the availability of middleware would ensure that users' choice of an OS is driven by the price and features of the OS, not by the relative number of applications available that flow from historical market shares.

B. The Middleware Threats to Microsoft's OS Dominance

In affirming the District Court's conclusion that Microsoft had illegally maintained its OS monopoly, the DC Circuit concluded that

¹¹ See, for example, Direct Testimony of Franklin M. Fisher at 9–19, 35–40.

¹² Findings of Fact NN30, 36–37 (84 F.Supp.2d at 18–20), cited by the DC Circuit (253 F.3d at 55).

¹³ Findings of Fact 29,72 (84 F.Supp.2d at 17–18, 29), cited by the DC Circuit (253 F.3d at 55).

⁹ 253 F.3d at 51–52.

¹⁰ Findings of Fact NN21, 23, 27, 28–29 (84 F.Supp.2d at 15, 17–18), cited by the DC Circuit (253 F.3d at 52–53).

Microsoft's unlawful acts specifically were aimed at thwarting two related middleware threats to its monopoly power: Netscape Navigator and the Java technologies pioneered by Sun. As we discuss below, both threats in fact were successfully neutralized by Microsoft's anticompetitive conduct. As a result, Microsoft was able to prevent any erosion in the all-important (to Microsoft) applications barrier to entry.

1. The Netscape Navigator Threat

Netscape's Navigator quickly became the leading web browser after its introduction in 1994, raising concern at Microsoft that Navigator could become the middleware that substantially lowers or eliminates the applications barrier to entry.¹⁴ After failing to convince Netscape that Navigator should not be middleware for the Windows OS,¹⁵ Microsoft embarked on a strategy to reduce the use of Navigator as a web browser. If Microsoft could succeed in substantially reducing Navigator's share of browser usage, its value as a platform for software developers would be reduced and therefore new (and smaller-share) operating systems would continue to confront the applications barrier to entry. In that way, Microsoft would protect its OS monopoly. The tactics Microsoft adopted to implement this strategy effectively eliminated the most efficient means for the distribution of Navigator to consumers:

One of the two most important ways in which Navigator was distributed to consumers was through computer manufacturers (Original Equipment Manufacturers or OEMs) that would install Navigator on computers before being shipped to final consumers or retail outlets.¹⁶ Microsoft imposed restrictions on its OS licenses with the OEMs that effectively prevented the OEMs from removing the Microsoft browser, Internet Explorer (IE), provided to the OEMs as part of the Windows OS package. In particular, the agreements with OEMs prevented them from removing any desktop icons, folders or start menu entries, including those for IE.¹⁷ While OEMs could technically install Navigator as an additional browser, they did not do so because they would then incur substantial support costs in responding to the confusion among novice users caused by having two browsers on the desktop.¹⁸ Given the dominance of Microsoft's operating system, OEMs had no effective competitive alternative to which they could turn if they chose not to accede to Microsoft's request.¹⁹

To ensure that IE would not be removed from Windows by the OEMs, Microsoft technologically bound Internet Explorer to

the Windows operating system.²⁰ It did so by excluding IE from the Add/Remove Programs utility in Windows 98²¹ and by commingling the IE code with the OS code.²² As with the license restrictions, these tactics prevented the OEMs and users from replacing IE with Navigator (or any other preferred browser). Indeed, if the OEM or user did remove IE from the Windows package, the code commingling guaranteed that the cost would have been substantial damage to the Windows OS.²³ Although the OEMs, in principle, could have installed Navigator as a second browser, the additional costs required to support two browsers discouraged such behavior.²⁴

The second important way in which Navigator at the time was distributed to users was through becoming the preferred browser for Internet Access Providers (IAPs).²⁵ At the OEM level, Microsoft prevented the OEMs from modifying the boot sequence of the computer when the user turns the computer on for the first time.²⁶ Previously, many OEMs had used the initial boot to prompt users to sign up with an IAP from a menu of IAPs, many of which at the time used Navigator as the web browser.²⁷ As a result of the restriction, Microsoft effectively inhibited OEMs' from promoting IAPs using Navigator.²⁸

A more direct attack by Microsoft on Netscape's use of IAP distribution of Navigator was embodied in exclusive agreements that Microsoft signed with all of the leading IAPs. In exchange for desktop access in the Windows OS, these IAPs agreed to promote only IE and to limit distribution of any IAP software containing Navigator to typically no more than 25% of the IAP's access software shipments.²⁹

There are two other channels that Netscape could have used to distribute its browser:

Independent Software Vendors (ISVs) and Apple computers. With respect to the former, Microsoft concluded contracts with a large number of ISVs in which Microsoft agreed to provide the ISV with preferential OS support provided that the ISVs use IE as the default browser.³⁰ With respect to Apple, after threatening to terminate the production of its popular Mac Office, Microsoft concluded an agreement with Apple in which IE would become the default browser for Apple

computers and no other browser icon would be placed on the desktop of new Macintosh computers or upgrades.³¹

The District Court found, and the DC Circuit affirmed, that each of these tactics was anticompetitive, violating Section 2 of the Sherman Act. Collectively, Microsoft used these tactics to effectively close the most efficient channels of distribution available to Netscape's Navigator. As the Justice Department's own CIS observes: [b]ecause of its reduced access to efficient distribution channels, Navigator's share of browser use fell precipitously.³² Thus, Microsoft effectively eliminated Navigator as a potential middleware provider, thereby also eliminating the possibility that its OS would have to compete on its merits.

2. The Java Threat

Sun Microsystems developed a middleware technology known as Java, which consists of four tools: (1) a programming language; (2) Java Class Libraries, which are a set of programs in that language that expose the APIs; (3) a compiler, which translates the developer code into instructions. The Java Class Libraries and the JVM are together called the Java runtime environment. Any software application that relies on the Java APIs will run on any computer with a Java runtime environment.

In 1995, Netscape agreed to distribute a copy of the Java runtime environment with every copy of Netscape Navigator.³³ At the time of the agreement, Navigator's popularity ensured that the Java runtime environment would gain wide distribution.³⁴

In combination with the distribution of Navigator, Sun's Java represented a clear and present danger to Microsoft's OS monopoly because as middleware, Java had the potential of substantially reducing the applications barrier to entry.³⁵ Rather than compete on the merits, Microsoft responded to the Java-Navigator threat not only by the steps already described to limit the distribution of Navigator, but by these additional measures:

After developing its own version of the JVM, Microsoft negotiated agreements with a large number of leading ISVs in which the ISVs agreed to use Microsoft's JVM as the default in any software they created.³⁶ These agreements were de facto exclusive because the use of any other JVM would now require that the ISVs incur the costs of porting their Java applications from Microsoft's JVM to a Sun-compliant JVM,³⁷ which, of course, defeats the cross-platform purpose of the Java technologies. In 1995, when Intel was in the process of developing a JVM that would comply with Sun's cross-platform standards,

¹⁸ Findings of Fact 159, 210 (84 F. Supp.2d at 49–50, 60–61), cited by the DC Circuit (253 F.3d at 61).

¹⁹ See, for example, Findings of Fact 158 (84 F. Supp.2d at 49).

Microsoft complained that the cooperation between it and Intel could be jeopardized if Intel did not end its cooperation with Sun.³⁸ Intel resisted Microsoft's entreaties until 1997 when Microsoft threatened to support one of Intel's competitors, AMD, in the development of 3D technology unless Intel stopped its work on Java. After this, Intel agreed.³⁹

Microsoft developed a set of tools to assist ISVs in creating Java applications.⁴⁰ However, unbeknownst to the ISVs, the use of these tools would create applications that were incompatible with Sun's JVM. Microsoft misled these developers into believing that the use of the tools would be of assistance in designing cross-platform Java applications.⁴¹ As a result, ISVs became locked into Microsoft's tools, creating large costs of switching back to Sun's tools after the ISVs discovered the deception. The District Court found each of these tactics to be in violation of Section 2 of the Sherman Act, findings that were affirmed by the DC Circuit. The acceptance of this promising middleware platform slowed as a result of Microsoft's actions. As a result, Microsoft preserved the applications barrier to entry and its OS monopoly.

C. Immediate Harm to Competition and Consumers

The courts found that each of these tactics adopted by Microsoft resulted in direct and immediate harm to competition. By inference, therefore, consumers clearly were harmed. For example, with respect to commingling of the IE code with the Windows OS code, the DC Circuit concluded that: such commingling has an anticompetitive effect the commingling deters OEMs from pre-installing rival browsers, thereby reducing the rivals' usage share and, hence, developers' interest in rivals' APIs as an alternative to the API set exposed by Microsoft's operating system.⁴²

The DC Circuit reached a similar conclusion regarding the technological inability of the OEM to remove IE using the Add/Remove utility.⁴³ Microsoft subsequently requested clarification from the DC Circuit that the commingling would not be illegal if the OEM were allowed to remove

the icon from the desktop. The DC Circuit declined the request.⁴⁴

Thus, it is clear that the DC Circuit intended its conclusion regarding commingling middleware code. With respect to Netscape Navigator distribution, the courts found that Microsoft had successfully foreclosed the OEM route for distribution to consumers. This was especially clear in Microsoft's successful efforts to prevent OEMs from removing IE from the Windows desktop, as to which the DC Circuit concluded that: the OEM channel is one of the two primary channels for distribution of browsers. By preventing OEMs from removing visible means of user access to IE, the license restriction prevents many OEMs from pre-installing a rival browser and, therefore, protects Microsoft's monopoly from the competition that middleware might otherwise present. Therefore, we conclude that the license restriction at issue is anticompetitive.⁴⁵

The courts also found that Microsoft harmed competition by disrupting Navigator's ability to be distributed by IAPs. For example, the DC Circuit concluded that Microsoft's agreements with the IAPs ensured that because: the "majority" of all IAP subscribers are offered IE either as the default browser or as the only browser, Microsoft's deals with the IAPs clearly have a significant effect in preserving its monopoly; they help keep usage of Navigator below the critical level necessary for Navigator or any other rival to pose a real threat to Microsoft's monopoly.⁴⁶

The DC Circuit reached similar conclusions with respect to Microsoft's license restrictions that prevented OEMs from using the initial boot to prompt users to choose from a list of IAPs (many of which at the time used Navigator as the preferred browser);⁴⁷ Microsoft's agreements with leading ISVs to use IE as the default browser in their applications;⁴⁸ and Microsoft's agreement with Apple by which IE would become Apple's default browser.⁴⁹ Similarly,

the courts found that Microsoft's exclusionary tactics directed at Sun's Java served to illegally maintain Microsoft's monopoly OS power. For example, with respect to the agreements by which the Microsoft JVM would be the ISVs' default JVM, the DC Circuit concluded that: the record indicates that Microsoft's deals with major ISVs had a significant effect upon [rival] JVM promotion. Because Microsoft's agreements foreclosed a substantial portion of the field for JVM distribution and because, in so doing, they protected Microsoft's monopoly from a middleware threat, they are anticompetitive. [W]e hold that the provisions in the First Wave Agreements requiring use of Microsoft's JVM as the default are exclusionary, in violation of the Sherman Act.⁵⁰

The DC Circuit reached similar conclusions with respect to both Microsoft's deception of ISVs regarding the incompatibility of Java applications created using Microsoft's Java tools on Sun-compliant JVMs⁵¹ and regarding Microsoft's success in persuading Intel not to support the Sun-compliant JVMs.⁵² In sum, Microsoft succeeded in foreclosing access by the middleware platforms offered by both Navigator and Sun's Java to the most effective means of distributing this middleware to consumers, as well as to other distribution channels. As a result of this foreclosure, neither middleware would develop to its full competitive potential. With respect to the effects on Navigator, the CIS summarized the harm in the following way:

Microsoft's actions succeeded in eliminating the threat that the Navigator browser posed to Microsoft's operating system monopoly. Foreclosed from effectively using the OEM and IAP distribution channels by Microsoft's exclusionary conduct, Navigator was relegated to more costly and significantly less effective modes of distribution. The adverse business effects of these restrictions also deterred Netscape from undertaking technical innovations in Navigator that might have attracted consumers and revenues.⁵³ Similarly, with respect to Java and its distribution via Navigator, the CIS concludes: Through its actions against Navigator and Java, Microsoft retarded, and perhaps extinguished altogether, the process by which these two middleware technologies could have facilitated the introduction of competition into the market for Intel-

substantial effect in restricting distribution of rival browsers, and because reducing usage share of rival browsers serves to protect Microsoft's monopoly, its deal with Apple must be regarded as anticompetitive. (253 F.3d at 73-74.)

⁵⁰ 253 F.3d at 75-76.

⁵¹ Specifically, the DC Circuit concluded that Microsoft's conduct related to its Java developer tools served to protect its monopoly of the operating system in a manner not attributable either to the superiority of the operating system or to the acumen of its makers, and therefore was anticompetitive. (253 F.3d at 77.)

⁵² The DC Circuit found that Microsoft's internal documents and deposition testimony confirm both the anticompetitive effect and intent of its actions. (253 F.3d at 77.)

⁵³ CIS at 15.

³⁸ Findings of Fact N396, 404, 405 (84 F.Supp.2d at 107, 109-110), cited by the DC Circuit (253 F.3d at 77).

³⁹ Findings of Fact N406 (84 F.Supp.2d at 110), cited by the DC Circuit (253 F.3d at 77).

⁴⁰ 253 F.3d at 76.

⁴¹ Java developers who were opting for portability over performance unwittingly [wrote] Java applications that [ran] only on Windows. Conclusions of Law (87 F.Supp.2d at 43), cited by the DC Circuit (253 F.3d at 76); see also 253 F.3d at 76-77.

⁴² 253 F.3d at 66.

⁴³ Citing the Findings of Fact (N159 (84 F.Supp.2d at 49-50)), the DC Circuit concluded that this inability reduces the usage share of rival browsers not by making Microsoft's own browser more attractive to consumers but, rather, by discouraging OEMs from distributing rival products. Because Microsoft's conduct, through something other than competition on the merits, has the effect of significantly reducing usage of rivals' products and hence protecting its own operating system monopoly, it is anticompetitive. (253 F.3d at 65.)

⁴⁴ Order (DC Cir. Aug. 2, 2001) (per curiam) (denying the motion for immediate issuance of the mandate and the petition for rehearing).

⁴⁵ 253 F.3d at 61.

⁴⁶ 253 F.3d at 71.

⁴⁷ The DC Circuit concluded: Microsoft does not deny that the prohibition on modifying the boot sequence has the effect of decreasing competition against IE by preventing OEMs from promoting rivals' browsers. Because this prohibition has a substantial effect in protecting Microsoft's market power, and does so through a means other than competition on the merits, it is anticompetitive. (253 F.3d at 62.)

⁴⁸ The DC Circuit observed that: Although the ISVs are a relatively small channel for browser distribution, they take on greater significance because, as discussed above, Microsoft had largely foreclosed the two primary channels to its rivals. In that light, one can tell from the record that by affecting the applications used by millions of consumers, Microsoft's exclusive deals with the ISVs had a substantial effect in further foreclosing rival browsers from the market. [B]y keeping rival browsers from gaining widespread distribution (and potentially attracting the attention of developers away from the APIs in Windows), the deals have a substantial effect in preserving Microsoft's monopoly. (253 F.3d at 72.)

⁴⁹ The DC Circuit concluded that Because Microsoft's exclusive contract with Apple has a

compatible personal computer operating systems.⁵⁴

D. Continuing Substantial Harm to Competition and Consumers

The middleware platforms offered by Navigator and Sun's Java were in their nascent stages at the time that Microsoft pursued its exclusionary strategy. However, the nascent state of the competitors does not make Microsoft's antitrust violations merely technical in nature and of no significant long-term consequence. By the same token, it would be a mistake to conclude that an appropriate remedy could be limited to one that imposes only minor constraints on Microsoft's behavior. Such a limited remedy would not repair the loss in competition caused by Microsoft's unlawful conduct because the harms to competition and consumers were substantial and continuing in nature.

1. The Shifting PC Paradigm Provided the Opportunity for the Emergence of New and Substantial Competition

What is more apparent now than in 1995 is how central the role of the Internet would become as an applications platform. During the mid-1990s, the maturation of the Internet was beginning to create a new paradigm for personal computing that relied on linkages over the Internet. The occasion of a paradigm shift represents an opportunity for new competition in a market characterized by network effects. We know now with much more certainty than even at the closing of the trial record that the Internet has transformed PC usage from a solo experience one user at one computer, using applications that reside on the desktop to an interconnected computer universe, using the Internet for both interpersonal communications and for accessing applications on the web.⁵⁵ Thus, instead of having all frequently used applications resident in the desktop, more and more of those applications were developed specifically for the Internet, most notably instant messaging, chat rooms, and online shopping, as conventional email always has been. In this way, the Internet has become the new communications medium, with the computer as the new handset.

In the absence of Microsoft's exclusionary conduct, both Netscape Navigator and Sun-compliant Java by now would have developed into a widely-used source for cross-platform applications, and thus would have spurred far more significant competition with Windows. In addition, at least some of the other efforts at the

development of platform-neutral software would also likely have reached competitive significance. These efforts include Intel's Native Signal Processor software, whose APIs for enhanced video and graphics performance would be exposed by Intel, not Windows;⁵⁶ Apples' QuickTime, which offers video and audio playback (among other capabilities) for both the Mac OS and Windows;⁵⁷ and Real Networks' software, which provides audio and video streaming software for multiple platforms.⁵⁸ The loss of competition stemming from Microsoft's tactics likely reduced the rate of innovation in both operating systems and in web-centric applications. But for Microsoft's illegal actions, the paradigm shift would likely have occurred more rapidly and completely. As one of the Justice Department's remedy experts, Professor Paul Romer, observed in his declaration in April 2000:

It is impossible to know with certainty the types of applications that might have developed had innovation continued with full force on [the Navigator and Java] fronts. We do know, however, that some types of applications forecast by the advocates of the browser and Java virtual machine are finally emerging. For example, companies are only now bringing to market server-based applications accessed via a browser that substitute for traditional desktop productivity applications.⁵⁹ Netscape Navigator and Sun's Java were at the center of the new computing paradigm. They had the opportunity to create momentum for a competitive process that would breakdown the applications barrier to entry and Microsoft's operating system monopoly. By eliminating the threats of both Navigator and Sun's Java, Microsoft maintained its Windows monopoly. The browser war is now over and Microsoft won as a result of its illegal conduct. Netscape is no longer any significant part of the market landscape and Internet Explorer has a virtual lock on the market.⁶⁰ By eliminating Netscape as a middleware threat and platform for the development of web-based applications, Microsoft thereby extended Microsoft's power and control into Internet applications.

Meanwhile, Sun's Java has lost its momentum from Microsoft's polluted Java and will not be able to reestablish its position by itself even after Microsoft stops its anticompetitive campaign.⁶¹ This is because ISVs that have invested in developing expertise in the use of Microsoft's Java tools have become locked-in and now face

substantial costs of switching to Sun's Java tools.

Likewise, the Real Networks and the QuickTime applications have never developed into the middleware opportunity that appeared likely in the mid-1990s. They have lost their lead and are now fighting for survival, while Microsoft has gained control over the multimedia platform through Windows Media Player.

Finally, in operating systems, the Mac OS and Linux OS continue to occupy a niche position while OS/2 is virtually non-existent. It is true that the Linux OS has made significant inroads into the server market where professional, technically savvy users are important in buying and using the product. But Microsoft's OS dominance in the desktop PC market continues and is not threatened by Linux, which is an open source, or non-proprietary product.

As one of Microsoft's consultants has explained: Although experience suggests that surprises are possible, open source does not seem a viable model for producing mass-market software. . . . Linux doesn't have a standard easy-to-use graphical interface. And it can't boast of many high-quality, user-friendly applications that appeal to mass-market users.⁶² In short, for Linux, too, the applications barrier to entry into the mass-market for PCs is simply too high to pose any real threat to Microsoft's dominance.

2. The Opportunity for the Emergence of New Competition Was Substantial and Its Loss Was Due to Microsoft's Exclusionary Actions

The evidence that, but for Microsoft's exclusionary actions, the competition to Microsoft would have been much more substantial than it is today, can be found in the fears that Microsoft itself expressed in the numerous memoranda and emails that are part of the trial record— frequently cited by the District Court in its Findings of Fact and by the DC Circuit. For example, in a 1995 memorandum to his staff, Bill Gates expressed his concern that Netscape was pursuing a multi-platform strategy where they move the key API into the client to commoditize the underlying operating system.⁶³ Further, as Microsoft executive Ben Slivka explained in his deposition,

So the point is not that the little Web browser, you know, whether it was Navigator 1 or Navigator 2 or Navigator 3, the point was not that that thing by itself as it stood then would immediately kill Windows. That wasn't the point. The point was that that thing could grow and blossom and provide an application development platform which was more popular than Windows.⁶⁴ Indeed, the central purpose of Microsoft's actions was to divert enough browser usage from Navigator to neutralize it as a platform.⁶⁵

In terms of how to deal with the Netscape threat, senior Microsoft executives made it clear that but for radical exclusionary action,

⁶² David S. Evans, *Is Free Software the Wave of the Future?*, THE MILKEN INSTITUTE REVIEW, Fourth Quarter 2001, p. 41.

⁵⁴ CIS at 16–17.

⁵⁵ For example, the District Court found that events, in which categories are redefined and leaders are superceded in the process, are spoken of as inflection points "The exponential growth of the Internet represents an inflection point born of complementary technological advances in the computer and telecommunications industries. The rise of the Internet in turn has fueled the growth of server-based computing, middleware, and open-source software development. Working together, these nascent paradigms could oust the PC operating system from its position as the primary platform for applications development and the main interface between users and their computers. ⁵⁸ Findings of Fact NN111–114 (84 F.Supp.2d at 37–38).

⁵⁹ Romer Declaration N11.

⁶⁰ The DC Circuit did not find this process of achieving any power or control in browsers to be a separate and independent antitrust offense. However, this dominance clearly flows from the same conduct that was found to illegally maintain Microsoft's desktop operating system monopoly.

⁶¹ This, of course, suggests that any effective remedy should if possible restore Sun-compliant Java to the prominence it would have attained absent Microsoft's illegal conduct.

IE would not succeed in eliminating Netscape and that as a result, Netscape would be a potent competitive constraint. For example, Judge Jackson cited the following statement by Microsoft executive James Alchin: I don't understand how IE is going to win. The current path is simply to copy everything that Netscape does packaging and product wise. Let's [suppose] IE is as good as Navigator/Communicator. Who wins? The one with 80% market share. Maybe being free helps us, but once people are used to a product it is hard to change them. Consider Office. We are more expensive today and we're still winning. My conclusion is that we must leverage Windows more.

Treating IE as just an add-on to Windows which is cross-platform [means] losing our biggest advantage Windows marketshare. We should dedicate a cross group team to come up with ways to leverage Windows technically more. . . . We should think about an integrated solution that is our strength.⁶⁶ Similarly, Microsoft had clearly evidenced comparable concerns with respect to the threat that Sun's Java posed to Microsoft's OS dominance. For example, Microsoft believed that it had to fundamentally blunt Java/AWT momentum so as to protect our core asset Windows.⁶⁷ Indeed, the now-famous Microsoft document made clear the substantial competitive threat that Microsoft perceived Java to be: Kill cross-platform Java by grow[ing] the polluted Java.⁶⁸ Microsoft also made this position clear to Intel.⁶⁹ The competitive importance of Java was also described clearly in an article appearing in the November 1996 edition of Fortune:

To Microsoft's dismay, [Java] is fast becoming what is known as a computing platform a sturdy base upon which programmers can build software applications Java programs, once written, can run without modification on just about any kind of computer: a PC, a Macintosh, a Unix workstation heck, even a mainframe. The underlying operating system makes no difference. In scarcely a year, Java has evolved into a major challenger to Microsoft's Windows family of PC operating systems faster even than DOS and Windows rose to challenge traditional mainframes and minicomputers. Java is also well on its way to becoming the most important Internet software standard, catapulting Sun past Netscape and Microsoft as the leader in Internet computing.⁷⁰

The Findings of Fact make clear that Microsoft both recognized and was deeply worried about the threats from both Java and

Netscape.⁷¹ The court wrote: The combined efforts of Netscape and Sun threatened to hasten the demise of the applications barrier to entry, opening the way for non-Microsoft operating systems to emerge as acceptable substitutes for Windows. By stimulating the development of network-centric Java applications accessible to users through browser products, the collaboration of Netscape and Sun also heralded the day when vendors of information appliances and network computers could present users with viable alternatives to PCs themselves. Decision-makers at Microsoft are apprehensive of potential as well as present threats, though, and in 1995 the implications of the symbiosis between Navigator and Sun's Java implementation were not lost on executives at Microsoft, who viewed Netscape's cooperation with Sun as a further reason to dread the increasing use of Navigator.⁷²

3. Conclusion

Taking Microsoft's own fears at its word, the court should not assume that Microsoft's illegal conduct failed to have its intended significant effects on competition. Instead, the courts should take Microsoft's own contemporaneous views for what they were: fears that these nascent competitors would have led to significant market competition today.

E. More Entrenched Microsoft Monopoly

Paradigm shifts in computing are not events that occur with great frequency. Indeed, only three significant shifts have occurred in the history of the PC industry: the shift from mainframes to PCs; the shift from a text-based to a graphical interface; and the current, nearly completed shift from the use of the PC as a single-user experience to the increasing reliance on the Internet for applications and communications. Microsoft relied on an exclusionary strategy to protect its monopoly power from the competition that would have been spawned by the paradigm shift. But now, Netscape has lost its window of opportunity to take advantage of this latest paradigm shift and Java has been neutralized. This middleware has been supplanted by Microsoft's own offerings. By carrying out its exclusionary strategy, Microsoft effectively destroyed the opportunity for these middleware competitors to overcome the applications barrier, competitors that Microsoft clearly viewed as a substantial threat to its OS monopoly power. Instead of consumers benefiting from the growing competition over the past five years, Microsoft has used the past five years to entrench the monopoly power of the Windows operating system and gain greater control over computing in the new Internet paradigm. Thus, the opportunity for new competition has been lost. Creating competition in the next paradigm shift will be even harder.

In just the past few months, Microsoft has introduced Windows XP, which has technologically bound key Internet-gateway

applications such as Windows Media Player to the operating system and its various browsers. In this way, Microsoft discourages software developers from writing their programs to competing middleware platforms. This also makes it harder for operating system competition to emerge.

As Microsoft's monopoly has become more entrenched, no alternative middleware threat has yet emerged that can match the significance of the threat posed by Navigator and Sun's Java in 1995. And overcoming the applications barrier to entry will be even harder for the next middleware threat. Microsoft now controls APIs and other standards, applications and platforms in browsing, Java and multimedia. This more pervasive control by Microsoft over these platforms means that independent software developers are even less likely to write to non-Microsoft platforms. A new platform entrant must now be able to overcome an applications barrier for these additional applications as part of the process of overcoming the applications barrier for the desktop OS.

Microsoft also has cemented its dominant desktop OS monopoly with the development of the Windows CE operating system for handheld devices as well as its increased share of OS server sales. While this power was not alleged in the government's complaint or found to be illegal, Microsoft's own offerings clearly have benefited from the illegal entrenchment of its desktop monopoly. Thus, a new platform entrant must not only overcome the application advantages that Microsoft illegally obtained in the desktop OS and extended to Internet applications, it must also provide compatibility with the handheld computers, which are rapidly gaining in popularity, and with servers which are increasingly relying on Microsoft's server operating systems.

Moreover, Microsoft has sent a clear and unambiguous signal by its conduct to would-be OS and cross-platform developers. As Dr. Romer explained: In the browser wars, Microsoft showed that it had the power to reduce the return Netscape and Sun earned on their investments in innovative technologies and that it was willing to use this power. This reduces the expected profits that outside innovators can expect to earn from developing technologies that threaten to create additional competition for Microsoft's operating system monopoly.⁷³ Thus, any developer of a credible means of providing applications interoperability across different operating systems must surely expect that Microsoft will use the same kind of swift, broad, and persistent exclusionary tactics to eliminate such a competitive threat to its OS. Similarly, any OEM, IAP, and ISV will consider Microsoft's likely reaction if they were to distribute or use any middleware with the potential to undermine Microsoft's monopoly power. In this way, the effect of Microsoft's actions has been to raise the applications barrier to entry by increasing the risk of investing in cross-platform initiatives. As a consequence, the immediate effects from Microsoft's foreclosure strategy will cast a long shadow into the future. After all, there

is now no rival to Microsoft that poses a competitive threat to Microsoft that is comparable to threat that had been posed to Microsoft by Navigator and Sun's Java. Developments such as the roll-out of Microsoft's XP, which bundles productivity applications on the Internet with the operating system, raise the prospect viewed as nearly a fait accompli in some quarters that Microsoft is leveraging its PC OS monopoly power into the Internet.

Consequently, Microsoft's OS is today considerably more protected from the threat of entry than was true in 1995, because Microsoft has been able to eliminate all threats with seeming impunity. As we subsequently conclude, the weaknesses in the RPFJ are so substantial that if adopted, the RPFJ may encourage Microsoft to become even more aggressive in its anticompetitive behavior. Both Microsoft and any potential threats to Microsoft's market power will recognize that the penalty for Microsoft's antitrust transgressions is far less than what was likely expected prior to the RPFJ. As a result, with a lower expected penalty, Microsoft will find it profitable to adopt some anticompetitive strategies that prior to the adoption of this RPFJ it would have not viewed as profitable.

III. Remedy and Enforcement Principles

In this section, we describe the goals that a remedy in this matter should attain and the enforcement principles required to implement the remedy in a way that serves the public interest. Our review of the relevant literature indicates that the relief phase of antitrust cases is often treated as an afterthought, even in cases as important as monopolization findings under Section 2 of the Sherman Act. For example, Professor Lawrence Sullivan has observed: Perhaps the best hope is that, hereafter, courts facing structural remedy issues will get more help than they have customarily received from the Department of Justice. As Judge Wyzanski implied in *United Shoe Machinery*, the government is sometimes extremely casual about remedy.⁷⁴ A similar point of view has been voiced by Chief Judge Richard Posner (who attempted to mediate a settlement in this case):

Another reason for the poor record of divestiture as an antitrust remedy is that the government's lawyers tend to lose interest in a case at the relief stage. They derive both personal satisfaction and career advancement from the trial of an antitrust case, but gain neither from the post-trial relief negotiations and proceedings, which they frequently tend to pay scant attention.⁷⁵

In our experience, when similar issues arise outside antitrust, even in situations with far less significant potential economic consequences, agencies charged with making these determinations (in rulemaking contexts, for example) generally do so only after extensive fact-finding and, in some cases, hearings.

The public interest would best be served by a similar remedy proceeding in this matter

before any final decisions regarding settlement are reached. This hearing should be expedited in light of the urgency and rapid pace of change in the industry. A fact-finding process aimed at resolving the many complex issues in this matter is far more likely to result in a resolution that advances the interests of consumers than is a brief Tunney Act proceeding. If the court does not reject the RPFJ outright, we would urge the court to postpone the ruling now and modify the remedy after further evidence is offered during the next phase of the litigation. Thus, we certainly agree with the decision by the court to (in effect) use the upcoming remedy hearings on the proposal of the Litigating States to evaluate the RPFJ in tandem. This remedial hearing will be vital to assess the loss of competition cause by Microsoft's illegal exclusionary conduct. Comparing these two remedial proposals using the evidence gathered on the loss of competition during the court's assessment of the LS proposal will better enable the court to choose a remedy commensurate with the competitive harm.

In this section, we elaborate on the proper remedial goals and enforcement principles of an effective antitrust remedy. In the next two sections, we explain why the proposed RPFJ fails to attain these goals. We then discuss more effective, alternative remedies.

A. General Remedial Goals

The court has a deceptively simple task at this point in this landmark litigation: to decide whether the settlement reached between Microsoft, the Department of Justice and nine of the state plaintiffs is in the public interest, as that term is used in the Tunney Act, which governs this particular phase of the proceedings. We say deceptively simple because it is tempting to apply the standard for defining what is in the public interest that was announced by the Court of Appeals for the District of Columbia when it considered the 1994 consent decree reached between Microsoft and the Department: whether the decree stopped the practices alleged in the complaint brought by the government. *United States v. Microsoft Corp.*, 56 F. 3d 1448 (DC Cir. 1995).

However, such a standard is clearly inappropriate at the current point in this proceeding, for a very simple reason: a lower court has found, and an appellate court has affirmed, that Microsoft has engaged in a series of significant violations of the antitrust laws aimed at entrenching its OS monopoly and thwarting effective competition to it. The appropriate test therefore should be much stronger than in a typical Tunney Act proceeding.

The remedy clearly must halt all the practices the courts (in this case both the trial and appellate courts) have condemned as violations. But, in this matter, the test must be even broader than that. Now that the case has been adjudicated to a verdict, the public interest standard should be no different than the standard the courts would apply to any remedy that would be appropriate in an antitrust case. As the appellate court in this case made clear, that standard has been set forth by the Supreme Court in *United Shoe*: a remedy must not only unfetter a market from anticompetitive conduct but also must

terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future. *Ford Motor Co.*, 405 U.S. at 577 and *United Shoe*, 391 U.S. at 250.

Applied to this case, these principles suggest that an effective remedy should accomplish the following. First, the remedy should terminate the conduct that the court has found to violate the antitrust laws. Second, the remedy should within a short period introduce competition into the operating system market. The key to the success of this goal will be the effectiveness of the remedy in reducing the applications barrier to entry as a means of establishing economic conditions most conducive to competition for operating systems. Third, the remedy should reduce the ability of Microsoft to project its current monopoly power into other markets, as a way of inhibiting Microsoft from reinforcing its monopoly in operating systems.

1. Terminating the Illegal Conduct

Any final remedy, whether a consent decree or a court-imposed judgment, should terminate all of the conduct found to be anticompetitive, and should prohibit such conduct in the future. In this regard, the decree should cover all of the conduct found by the court to be illegal. It should also be as specific as possible in describing the kinds of conduct that are enjoined. As discussed further below, the consent decree should provide effective incentives to comply with these conduct prohibitions. Finally, the decree should seek to avoid creating loopholes by which the defendant can maintain its monopoly through alternative means of exclusionary behavior.

2. Restoring Competition to the Level that Would Exist Today, But for Microsoft's Exclusionary Behavior

The consent decree ought to terminate the illegally maintained monopoly by restoring competition. Specifically, the decree should repair the loss of competition caused by Microsoft's unlawful anticompetitive conduct to destroy the middleware threat caused by Netscape and Java. The courts already have found in clear and convincing terms that Microsoft's conduct helped it to maintain its operating system monopoly. The consent decree should seek to restore the market to the competitive trajectory that it would have reached by now, had the illegal conduct never occurred.

This outcome demands more than simply requiring Microsoft's future conduct to comply with the antitrust laws. The central theme running through the trial court's Findings of Fact is that Microsoft's acts have chilled innovation and have therefore distorted the evolution of the software market. While history cannot be rewritten and the world has lost several years of increased competition in operating systems, an appropriate remedy can provide future innovation opportunities to current and would-be entrants. Adapting the court's own language, if one object of the remedy is to restore competition in the markets in which Microsoft competes, Microsoft's oppressive thumb cannot be effectively removed unless

⁷⁴ Lawrence Anthony Sullivan, *Handbook of the Law of Antitrust*, West (1977) at 146.

⁷⁵ Richard Posner, *Antitrust: An Economic Perspective*, University of Chicago Press (1978) at 89.

the scales of competitive fortune are themselves rebalanced.⁷⁶

In dynamic markets that are subject to network effects, such rebalancing will be required because competition does not automatically or instantly spring back to life when exclusionary conduct is ended. Network effects make monopolies durable. Microsoft will continue to enjoy significant monopoly power even if its illegal exclusionary conduct is stopped. Entry by new firms that once might have been possible may be no longer possible, even if additional exclusionary conduct is prohibited. Thus, an effective decree should seek to repair the loss in competition and jump-start the competitive process. The most straightforward and effective method of helping to repair the loss in competition in this matter is to craft a remedy (such as the full divestiture remedy described below) that directly and immediately creates the OS competition foregone as a consequence of Microsoft's illegal behavior. While more uncertain as to the ultimate effect, any other remedy should sufficiently reduce the applications barrier to entry (that the court found helped Microsoft maintain its monopoly) to enable the restoration of the lost competition. The middleware threat by Netscape and Java were on track to reduce the applications barrier to entry. Microsoft's panopoly of unlawful conduct halted this growing competitive process in its infancy. Thus, an antitrust decree should either directly create the lost OS competition or contain specific provisions that enable applications vendors and potential platform competitors to surmount the applications barrier to entry that will continue to protect Microsoft's monopoly even after exclusionary conduct has been terminated. It should also attempt to recreate the strong independent middleware platform that would have been achieved by now in the absence of Microsoft's anticompetitive conduct over the past six years.

3. Detering the Recurrence of Monopoly through Future Anticompetitive Conduct

The consent decree also should deter continued or additional anticompetitive conduct that might allow the monopoly to recur. In this case, the condemned conduct included a variety of exclusionary behavior. It is insufficient simply to prohibit the continuation of this specific exclusionary behavior without also mandating penalties for new kinds of exclusionary behavior that the defendant might substitute for the conduct that is enjoined. Otherwise, the defendant is only encouraged to find alternative means of exercising its monopoly power. This remedial goal 37 should be of particular concern in this case because Microsoft has shown a willingness and ability to exploit poorly crafted decrees.

In evaluating whether the consent decree serves the public interest, the court should be mindful of factors that will tend to make poorly crafted conduct restrictions ineffective. For example, there is an asymmetry of knowledge between the courts and the defendant. Courts do not have perfect

information, and are likely to have incomplete knowledge and observation of Microsoft's conduct. As a result, all conduct compliance issues will require extensive investigation by the courts, if the conduct decree is vaguely crafted. In addition, there are delays in enforcement. And Microsoft has displayed a continuing pattern of the same exclusionary conduct. For example, Windows XP is more tightly integrated than any other previous version of the Windows operating system. Given these realities, a simple injunction that merely prohibits the repeating of past conduct clearly would be insufficient.

B. Enforcement Principles

Whatever the exact provisions of a consent decree, it must be enforceable if it is to be effective in achieving any objectives that the court deems appropriate. An enforceable decree is one for which violations of the decree are quickly and easily detectable, and for which the penalties for violation provide sufficient incentives for the defendant to remain fully compliant. If the decree is not so enforceable, it will not attain any of the three goals described above. The principle of quick and easy detection of decree violations requires that the consent decree have specific prohibitions. It must set clear and easily observed boundaries for impermissible conduct. A conduct decree that merely restates the antitrust rule of reason does not satisfy this principle.

The principle of enforceability also requires that the consent decree provide for specific and sufficient punishment for violations. A defendant may rationally choose to violate a consent decree, and would do so whenever the expected profits from doing so exceed the expected penalties. The expected penalties take into account both the probability of detection as well as the severity of the penalty in the event of detection. In order for these penalties to have deterrence value, they must be equal to or greater than the substantial benefit to the defendant of continued violations.

Enforceability also involves a time dimension. A defendant's decision calculus rationally takes into account the expected timing of both the profits and the penalties. This means that enforcement must occur rapidly, lest the defendant reap all of the benefits of the violation before it is stopped. This issue is a particular concern in a market like this one that is subject to rapid technological change and network effects. In this type of market, opportunities for meaningful competition to emerge may be sporadic. For example, if an entrant were destroyed as a change in technology was occurring, that opportunity for new competition might not reoccur once the paradigm shift was completed. Also, in markets where network effects are strong, monopolies tend to be entrenched and durable. This places a premium on swift enforcement. In addition, an effective consent decree should take into account the fact that the remedy in this case will affect deterrence of anticompetitive conduct in related markets, and even in unrelated markets. This case will set a precedent for the consequences of anticompetitive behavior in technology-driven industries. The consent

decree will send a message to other potential antitrust offenders. If the decree is a full and effective remedy, that message will be that there is no profit in violating the antitrust laws.

C. Implications for Evaluation of the RPFJ

These remedial and enforcement principles can be used to evaluate the RPFJ. They imply three serious flaws in the RPFJ.

First, the RPFJ is flawed because it does not even achieve the limited remedial goal it sets out for itself. The RPFJ is riddled with exceptions and loopholes that will prevent the middleware threat from becoming reestablished. It does not cover all the conduct that was found to be unlawful by the DC Circuit. It also ignores the market impact of Microsoft's illegal conduct. Having neutralized the middleware threat it faced from Netscape and Java, Microsoft has maintained its control over the course of the paradigm shift in computing, a time when the opportunities for new entry would otherwise be expected to be enlarged. There are no equally powerful middleware threats today to replace the ones that have been neutralized. Second, the RPFJ is flawed because it contains a defective enforcement mechanism. The RPFJ will be difficult to enforce in a timely manner and the penalty for non-compliance is weak. Therefore, the RPFJ will not deter future anticompetitive conduct by Microsoft. Third, the RPFJ is flawed because it is premised on improper remedial goals. The stated goal of the RPFJ is to "restore the competitive threat that middleware products posed prior to Microsoft's unlawful undertakings." (CIS at 3.) Instead, the proper goal should be to restore competition to the level that would have been achieved today in the absence of Microsoft's unlawful conduct. This goal is needed to terminate the unlawful monopoly, restore competition, and achieve real deterrence in the future.

We discuss these flaws next. Section IV analyzes the flaws in the context of the DOJ's own remedial standard and the associated defects in the enforcement mechanism. Section V then explains why DOJ's remedial standard is flawed and much too limited given the current status of this particular case. Section VI then discusses alternative, more effective remedies.

IV. The RPFJ Fails Under DOJ's Own Remedial Test

The DOJ's CIS claims that its RPFJ will restore competitive conditions to the market and will restore the competitive threat that middleware products posed prior to Microsoft's unlawful undertakings.⁷⁷ The DOJ argues that the key to the proper remedy in this case is to end Microsoft's restrictions on potentially threatening middleware, prevent it from hampering similar nascent threats in the future and restore the competitive conditions created by similar middleware threats.⁷⁸

Simply restoring competition to its condition prior to Microsoft's unlawful conduct is too limited a goal. The proper benchmark should be to achieve the level of

⁷⁶ Conclusions of Law at 44 (87 F.Supp.2d at 44), cited by the DC Circuit (253 F.3d at 78).

⁷⁷ CIS at 3.

⁷⁸ CIS at 24. 41

competition that would exist today but for Microsoft's illegal conduct. But even if the DOJ's goal were appropriate, the RPFJ still fails to satisfy even the low standard the DOJ has used. The CIS also fails to acknowledge that its goal is more difficult to attain today than it was in 1995 because Microsoft's illegal exclusionary behavior has substantially increased the applications barrier to entry. Moreover, even assuming counterfactually that market conditions today were basically the same as they were in 1995, the RPFJ does not restore the competitive threat that middleware products such as Netscape and Java represented in 1995 prior to Microsoft's unlawful conduct. Thus, the RPFJ fails to meet either the DOJ's own standard or the more appropriate remedial standard we outline later in this Comment.

As we observed in Section II, the computing industry in 1995 was in the process of shifting towards Internet-based computing and web-centric applications. At that time, OS entrants plausibly could have overcome network effects to create new competition in this market because the Internet has begun to render the desktop OS less important to users. Navigator and Sun's Java were at the center of this transformation, permitting users to easily access the Internet and Internet applications, while allowing ISVs to more easily write Internet applications. Through its unlawful conduct, Microsoft succeeded in neutralizing these competitive threats to its OS monopoly power. Netscape Navigator has all but been eliminated as a competitive browser. Sun's original plan for Java as the means for providing a platform to write applications for many operating systems was undercut by Microsoft's unlawful actions that succeeded in converting the version of Java that applications programmers use to a proprietary Microsoft platform.

The shift toward the Internet is now virtually complete, but rather than witnessing a corresponding shift to a more competitive landscape, Microsoft has succeeded in entrenching its OS monopoly power and extending its dominance to the Internet. In particular, Microsoft now controls APIs and other standards, applications and platforms in browsing, Java and multimedia. Web content and other web-based applications are now optimized for IE. In addition, contrary to the claims made by Microsoft at trial, there still is no meaningful competition for operating systems for desktop PCs.

Microsoft's more pervasive control over these various platforms means that independent software developers are even less likely to write to non-Microsoft platforms than was the case when the DOJ's case was launched. There is now no new Navigator or Java to challenge Microsoft's control. A new platform entrant must now be able to overcome an applications barrier for these additional applications as part of the process of overcoming the applications barrier for the desktop OS. Thus, the applications barrier to entry is higher now than it was before. As a result, the market landscape today is less favorable to competition than it was in 1995 prior to Microsoft's illegal conduct.

Thus, an effective remedy under the DOJ's standard would be one that is potent enough to enable OS competition in the face of this higher applications barrier, thereby restoring competition to its 1995 level. However, the RPFJ is not nearly so potent. First, the RPFJ does not enjoin all of the conduct that the court found to be in violation of the antitrust laws. Second, the RPFJ contains numerous loopholes and exceptions that render it ineffective. Third, the enforcement mechanism in the RPFJ is very weak and so will not deter further anticompetitive conduct by Microsoft. As a result, the RPFJ will not and cannot even revive the competition to that level which existed in 1995.

A. The RPFJ Does Not Prohibit All Unlawful Conduct

The DC Circuit clearly held that Microsoft's integration of middleware into the operating system by commingling of code for Internet Explorer and Windows was anticompetitive. Indeed, when Microsoft subsequently asked the DC Circuit whether, in effect, a sufficient remedy to the commingling could be met by allowing OEMs to remove the relevant icons, the Court denied Microsoft's clarification request in a per curiam order, noting in particular that [n]othing in the Court's opinion is intended to preclude the District Court's consideration of remedy issues.⁷⁹ Yet, the RPFJ does not remedy in any way this exclusionary conduct. In particular, the RPFJ contains no prohibition on commingling of code and no requirement that Microsoft offer versions of its operating system that do not commingle middleware and applications code. As a result, the RPFJ does not reduce the applications barrier to entry and thus cannot even return the state of the middleware competition back to where it was in 1995, let alone implement the competition that would have emerged in the absence of Microsoft's unlawful conduct.

The court also held that Microsoft's deception of ISVs by making its Java tools incompatible with Sun's Java was anticompetitive. This deception caused ISVs to become locked-in to using Microsoft's Java tools and helped to neutralize Sun's momentum with Java. Again, the RPFJ does nothing to remedy this harm.

The failure of the RPFJ to prohibit Microsoft from binding Internet Explorer or other middleware such as Windows Media Player and Microsoft Messenger to the Windows operating system is especially noteworthy because it is in direct conflict with the findings of the Court of Appeals. In its opinion, the DC Circuit stated that the technical integration decisions of a monopolist are subject to the antitrust oversight.⁸⁰ It also found that Microsoft's technological integration of Internet Explorer into Windows violated the antitrust laws by commingling the code.

Yet, despite these clear signals from the DC Circuit, the Department's proposed remedy

does not follow the court, but instead takes the opposite position. First, the definition of the operating system in Section VI.U. explicitly states that the software code that constitutes the operating system shall be determined by Microsoft in its sole discretion. This explicitly exempts all future commingling of code and other forms of technological integration from oversight under the RPFJ. Thus, Microsoft can evade all restrictions on middleware simply by embedding the code in the operating system. Second, the RPFJ does not require separation of the operating system from middleware code, but instead only requires that Microsoft permit OEMs to hide end user access to the middleware on the desktop. And, as discussed below, even this condition is subject to a number of significant loopholes.

The Senate testimony of Charles James contains no explanation of why the Department's approach is contrary to the Appeal Court findings. Indeed, Mr. James did not even include this commingling of code as one of the claims upheld by the Court of Appeals. He mentioned only the prohibitions on removing the Microsoft icons from the desktop.⁸¹ Thus, he essentially adopted Microsoft's view in its clarification petition, not the response rejecting it by the Court of Appeals. In light of the DC Circuit's strong statement in response to Microsoft's petition, the failure to include a commingling provision in the RPFJ is inexplicable.

The absence of any prohibition on binding middleware applications to the operating system is a fatal defect of the RPFJ. The ability to bind middleware programs to the operating system gives Microsoft universal distribution of its middleware products. Microsoft can ensure that a copy of its middleware is distributed with every copy of the Windows monopoly operating system.

The universal distribution by Microsoft of its middleware is something that no other competitor will have or could hope to achieve. The importance of Microsoft's unlawful acts that gave it dominance in middleware is that middleware competitors can expect to acquire at most partial distribution while Microsoft gets universal distribution. As a result, the RPFJ will not lower or remove the applications barrier to entry that protects Microsoft's OS monopoly. ISVs that write applications to the exposed APIs of middleware programs will continue to have the incentive to write first, and in most cases only, to the Microsoft middleware program that is commingled with the operating system that they know is installed on virtually every PC that is manufactured, even if end users or OEMs chose to remove Microsoft's desktop icon and direct end user access. In contrast, the benefits of writing to any other middleware are significantly lower, since no other middleware will ever gain universal distribution. Thus, the RPFJ will not reduce the applications barrier to entry.

Further, as found by the DC Circuit, OEMs have a very weak incentive to license and install a second version of a middleware program that already is included by

⁷⁹ Order, *supra* at 1.

⁸⁰ Judicial deference to product innovation, however, does not mean that a monopolist's product design decisions are per se lawful. (253 F.3d at 65.)

⁸¹ Statement of Charles James to Committee of the Judiciary (United States Senate), *supra* at 3.

Microsoft.⁸² As discussed in Section II, this is because the additional customer support costs would be substantial. This was one of the reasons that Microsoft's conduct had an anticompetitive effect even though OEMs were free to license and install Netscape's web browser. OEMs did not want to support two web browsers. These support costs will exist even if the Microsoft icons are hidden because the Microsoft middleware nonetheless will continue to be invoked by applications under some circumstances (RPFJ, Section III.H.) and even if the end user does not realize that it is installed. Thus, hiding the Microsoft icon does not eliminate the need for the OEM to support the Microsoft middleware.

The fact that competing middleware products can try to convince OEMs to carry their products and OEMs can change defaults or hide the Microsoft middleware icons from end users does not reduce the applications barrier to entry. Hiding the middleware icons is not the same as removing the code and the RPFJ allows Microsoft to encourage users to change the default back to the Microsoft middleware. In particular, the RPFJ allows Microsoft after 14 days to continually and automatically (with its desktop sweeper) attempt to persuade end users to revert back to Microsoft middleware that has been replaced by a third-party application. (RPFJ, Section III.H.3.) This raises the probability that a significant number of users will switch to the Microsoft middleware, even if just to get rid of an annoying reminder. This further diminishes the incentives of rival middleware producers to pay OEMs to carry their products and ISVs to write for middleware programs that compete with Microsoft middleware products.

The incentive to carry a second middleware application is further reduced because there are not now, and are unlikely to be in the future, applications with which non-Microsoft middleware interoperates. This is simply the chicken-and-egg applications barrier to entry all over again. It will ensure that Microsoft maintains its monopoly, and will continue to allow Microsoft to leverage its dominance into middleware markets such as media players and instant messaging. This means that the applications barrier to entry will not be reduced by the RPFJ. Two other aspects of the RPFJ also are relevant to the gauging the effect of the RPFJ's failure to proscribe commingling on maintaining the applications barrier to entry. As will be discussed in more detail in Section IV.B. below, there are significant limitations on the middleware "protections" in the RPFJ. One drawback particularly relevant to the need for a commingling prohibition is the fact that the middleware icon provisions only apply when Microsoft has a competing product. (RPFJ, Section II.C.1. and C.3.). For example, suppose that a competitor creates new voice recognition middleware well before Microsoft. To delay this program from becoming a ubiquitous middleware platform until it gets its own product established (and bundled into the operating system), Microsoft

can limit the ability of OEMs to display the competitor's icon or automatically launch the competitor's program, thereby preventing a competitor from getting a headstart.⁸³ Again, this flawed provision will make it harder for rival middleware to overcome the applications barrier to entry.

Similarly, there is a timing issue. Section III.H. of the RPFJ allows Microsoft to delay for twelve months the technical changes to Windows required to provide the OEMs with the ability to remove the icons or automatic invocation of Microsoft middleware. Our understanding is that such changes can occur much more rapidly than this. Thus, this provision simply provides Microsoft with even more time to cement its control over the OS. This will lead to ISVs having an even greater incentive to write applications to Microsoft middleware. This outcome will further reinforce the applications barrier to entry, yet another reason why the RPFJ is not in the public interest.

B. The RPFJ Contains Numerous Other Exceptions and Loopholes

The RPFJ is also shot through with exceptions and loopholes that limit its value even for those unlawful actions that the RPFJ does address. First, many of the prohibitions contain general language that reduces the provisions to nothing more than a general restatement of antitrust law. These exceptions obviously make the provisions difficult to enforce in a timely fashion. Second, the definitions and qualifications limit the scope of the coverage of the prohibitions and open up significant loopholes in the proposed decree. For these reasons, the RPFJ will not stop the violations and so is not in the public interest.

1. The RPFJ's Test of Reasonableness

Various prohibitions in the RPFJ include exceptions that permit Microsoft to carry out the conduct if it meets a test of reasonableness. Although on the surface these carve outs themselves may appear minor, in fact they eliminate the bright lines. Instead, these provisions reduce virtually the entire RPFJ essentially to, at best, a restatement of the general antitrust rule of reason standard, which prohibits unreasonable restraints of trade.

For example, Section III.F. of the RPFJ prohibits Microsoft from retaliating against ISVs (or Independent Hardware Vendors) for developing, distributing, promoting, using, selling, or licensing any software that competes with Microsoft's OS or middleware. But, this provision also contains an exception that Microsoft may place limitations on an ISV's development, use, distribution or promotion of rival software if those limitations are reasonably necessary to and of reasonable scope and duration in relation to a bona fide contractual obligation of the ISV to use, distribute or promote any Microsoft software or to develop software for, or in conjunction with, Microsoft (emphasis added).⁸⁴

⁸³ Of course, the other exclusions discussed later on that limit the middleware that is "protected" also help maintain the applications barrier to entry.

⁸⁴ As an additional protection against retaliation, Section III.B. requires uniform license agreements

Thus, to establish a violation of this provision, the government must prove that the limitations are not reasonably necessary and not of reasonable scope and duration. This sort of language is contained in statements of the antitrust rule of reason. Moreover, it is quite possible that this particular language in the RPFJ might be interpreted by a court as even more permissive than this. The benchmark for reasonableness under the rule of reason is competition and consumer welfare. The benchmark in the RPFJ is a bona fide contractual obligation. The RPFJ is silent on why the latter term replaced the former concepts, and what distinctions, if any, a future court should make between a bona fide contractual obligation and an anti-competitive exclusionary requirement. Thus, in the best of circumstances, this wording is likely to lead to still more antitrust litigation over its meaning.

Section III.G. contains a similar type of exception with respect to exclusionary contracts with IAPs and Internet Content Providers (ICPs), stating that Microsoft may enter into bona fide joint ventures or joint development or service arrangements that will effectively allow IAPs and ICPs to enter into exclusivity agreements that otherwise would have been banned by the RPFJ. Section III.A. mandates that Microsoft not withhold certain monetary or other consideration from OEMs as retaliation for dealing with Microsoft competitors. But, the provision also contains an exception that permits Microsoft to give consideration to OEMs that is commensurate with the absolute level or amount of the OEMs development, distribution or licensing of Microsoft products or services. At best, that exception would call for a rule of reason analysis, though this provision too may be even more permissive. These broad reasonableness exceptions clearly will make it difficult to enforce the decree: every time the government suspects Microsoft's non-compliance, it must prove a new, independent antitrust violation, complete with analysis of anticompetitive effect and efficiency defense, and possibly even evidence of market power. These elements will take time perhaps a long time to litigate, during which Microsoft can continue to operate unconstrained with its monopoly power intact. As a result, the exceptions mean that not only does the RPFJ fail to achieve immediate and certain relief, it also fails to eliminate litigation risk.

The Justice Department may say that such broad exceptions for reasonableness are necessary to permit Microsoft to compete. That is, of course, the rationale for the rule of reason. But, the considerations involved in a consent decree are somewhat different. In this case, Microsoft has been found to have

with uniform terms and conditions. But at the same time, it allows for volume discounts for either the OS or any bundle of OS products, and it expressly allows Microsoft to offer any other manner of discounts. While those discounts must be offered and available uniformly, Microsoft could creatively design discount programs to favor certain OEMs while still making the discount schedule uniform. In addition, Microsoft is free to terminate an OEM's license on 30-days notice for any other reason.

⁸² Findings of Fact 159, 210, (84 F.Supp.2d at 49-50, 60-61), cited by the DC Circuit (253 F.3d at 61).

violated Section 2 of the Sherman Act for a significant period of time in a variety of ways. To provide incentives for Microsoft to comply with the antitrust laws and to restore the competition lost as a result of Microsoft's actions, an effective conduct remedy must contain more than general guidance provided by the rule of reason. An effective conduct remedy requires specific limits with bright lines that are easy to enforce. This RPFJ has few of them, at best.

2. Limitations and Restrictions in the Coverage of the RPFJ

There are also significant restrictions on the coverage of virtually every prohibition in the RPFJ. Taken together these restrictions will dramatically complicate and delay enforcement of the RPFJ, greatly increasing the litigation risk. As the result, the RPFJ will be ineffective. We 50 provide some illustrative examples here, although this is only a sampling of the limitations and restrictions.

The RPFJ purports to give protections to competing middleware. For example, the definition of Non-Microsoft Middleware Products in Section VI.N. is limited to established middleware products those for which at least one million copies have been distributed within the previous year. Thus, the RPFJ would not apply to middleware of an emerging competitor that has not yet gained broad distribution. Nor does it apply to all existing middleware products, for example, Microsoft's Windows Explorer. Nor does it apply to third parties who repackage Windows with competing middleware. And even in the case of middleware that has met the distribution hurdle, the applicability of the prohibition does not come into play until the competitor has sold one million units in a single year (as opposed to having sold one million units in total). This will create an enforcement delay as new middleware struggles to overcome anticompetitive Microsoft behavior while awaiting the magic threshold of one million in annual unit sales.

Section III. D. of the RPFJ requires that Microsoft disclose the APIs for Microsoft middleware. For a new major version of such software, the disclosure has to be made no later than the last major beta test release. This proposed timing of disclosures makes them too late for rivals to be able to release competitive products contemporaneously. In addition, for new operating system products, the RPFJ requires disclosure only when there have been 150,000 beta testers. We understand that most beta tests are smaller than this. Further, nothing in the RPFJ limits Microsoft's ability to define a beta tester, thereby permitting the virtual absence of a timely release of the APIs. Collectively, these provisions ensure that Microsoft retains its first-mover advantage and thus a head start on any new middleware product.

Section III.D. also does not require Microsoft to disclose all the APIs for the Windows operating system, only the ones used by the Microsoft middleware. Thus, new middleware that relies on APIs not present in any of Microsoft's middleware would not have access to the necessary APIs. Moreover, even if Microsoft did rely on the relevant APIs, Microsoft could designate the

middleware as a component of the OS to avoid disclosing the APIs.

Indeed, the definition of Microsoft Middleware contains a huge loophole that could eliminate all API disclosures. API disclosures apply only to APIs used by Microsoft Middleware as defined by Definition J (not Microsoft Middleware Products, as defined by Definition K). Only "trademarked" code is considered Middleware, according to provision (b) of Definition J. But, the definition of "trademarked" in Definition T specifically excludes software for which Microsoft only claims a trademark in the term Windows or something else and attaches that trademarked name to another name for which Microsoft lacks or has disclaimed trademark protection. For example, it appears that "Windows Media" is trademarked but "Player" is not.⁸⁵ If Microsoft lacks or disclaims trademark protection for Media Player, then Windows Media Player would apparently not be considered Middleware. This then would imply that the APIs used by Windows Media Player would not be covered by the duty to disclose in Section III.D. The same argument could apply to Microsoft Internet Explorer, Microsoft Java Virtual Machine and Windows Messenger. This problem obviously is exacerbated by the fact that Definition U allows Microsoft "sole discretion" over the definition of the operating system. At the very least, these definitional questions create knotty issues that could be disputed by Microsoft in a compliance hearing before the court.

Another significant loophole is contained in Section III.J., which expressly allows Microsoft to withhold any APIs (as well as communications protocols) that relate to security, anti-piracy, anti-virus, encryption or authentication, digital rights management, keys, authorization tokens, enforcement criteria, etc. These are not obscure or minor exceptions, but instead relate to key applications that are at the forefront of Internet and network development efforts. These exceptions will prevent full interoperability between Windows and rival middleware.⁸⁶ In addition, this Section of the RPFJ gives Microsoft a laundry list of credible excuses for not complying with other parts of the decree. For example, Microsoft may claim that its Windows Media Player (WMP) contains protocols that relate to digital rights management. Yet, WMP is currently the dominant media player. Without access to the WMP APIs, the third-party development of middleware is that much more unlikely.

Even if none of the foregoing factors rendered the API disclosure ineffectual in repairing the harm to competitive middleware, Section III.J.2. of the RPFJ will discourage requests by ISVs and others for the APIs. This section permits Microsoft to demand that the ISV provide Microsoft with a reasonable business need for the APIs and permits Microsoft to test the software using

⁸⁵ See, for example, <http://www.microsoft.com/info/copyright.htm>, which lists only Windows Media as trademarked.

⁸⁶ Interoperability is not a defined term in the RPFJ, an oversight that will invite litigation and make enforcement more difficult.

the APIs to ensure its compliance with Microsoft's specifications for use of the API or interface Microsoft thus will be in a position to delay and deny approval of the API use, to either destroy the competition or provide Microsoft with time to develop its own version before its rival. Consequently, ISVs in competition with Microsoft will be reluctant to seek the APIs to the extent it requires disclosing to their chief rival exactly what their next innovations will be.

Similarly, Section III. E. of the RPFJ requires that Microsoft make available any communications protocols that are used by a Microsoft client operating system to interoperate with a Microsoft server operating system. Other than providing that this disclosure be made on reasonable and non-discriminatory terms, there are no provisions as to when Microsoft has to make such protocols available, nor does the RPFJ spell out what it means to make them available. Microsoft's history of openness is relevant. Dr. Rebecca Henderson, a DOJ expert witness, testified earlier that: Even when Microsoft purports to make something open, it has discretion over how rapidly and how effectively it communicates the necessary information. [Findings of Fact] 391-393; GX 1931 (email thread about how Microsoft concealed the availability of the Java RMI class library on Windows). For example, many developers have found that even in the case of published APIs it is often critical to have access to additional information about the functioning of Windows in order to produce quality applications that run smoothly on Windows. [Findings of Fact] 337-340, 401 (First Wave agreements); GX 2276 (quoting Microsoft witness Gordon Eubanks). Since any middleware that desires to be genuinely cross-platform must be able to work with Windows and with IE, the ability to withhold information in this way or to use information as an inducement to ISVs to adopt Microsoft-controlled middleware remains a potent tool. In the worse case, Microsoft can use its control over the Windows operating system to ensure that consumers who attempt to use alternative middleware are met with a jolting experience.' [Findings of Fact NN] 160, 171; GX 334.⁸⁷

At bottom, the issue here is whether the RPFJ can ensure that all the necessary APIs and protocols are exposed and that the documentation is complete (including source code where necessary) and provided on a timely basis. There is nothing in the RPFJ that provides any comfort on this score. Thus, no ISV will be able to rely on this information for the purposes of creating cross-platform middleware. ISVs and others will have to wait for the enforcement mechanism of the RPFJ to more precisely define the scope of Microsoft's required obligation. But as we discuss below, the ISVs will likely be waiting for a substantial period of time before any such precision in the RPFJ is provided by the court in a non-compliance hearing.

⁸⁷ Declaration of Rebecca M. Henderson, Public Redacted Version, April 28, 2000, NN47-48.

C. The RPFJ Contains a Defective Enforcement Mechanism

An additional problem with the RPFJ is its weak and defective enforcement provisions. Accordingly, the decree does not eliminate litigation risk or speed relief. It also means that Microsoft's incentives to comply with the decree will be greatly diminished. By its terms, the decree is scheduled to last for only five years, but in fact, its effective time period will be even shorter because of the various time lags already noted (and as further discussed below). As just one example, the key provision requiring the disclosure of APIs for Windows XP (Section III.D.) may not kick in until November 6, 2002. The sad irony is that the time period of the decree will be shorter than the period of time between the beginning of Microsoft's anticompetitive campaign and the implementation of the decree. To be sure, the enforcement provisions of the RPFJ set up a structure for monitoring Microsoft's conduct. First, Sections IV.B.-C. of the RPFJ create a Technical Committee consisting of three experts in software design and programming plus a Microsoft Internal Compliance Officer. The Plaintiffs and the Technical Committee are given various powers of access to Microsoft documents, code, employees, and physical facilities and a mandate to resolve any compliance issues informally. Second, if the Plaintiffs take issue either with the findings of the technical committee or with the proposed informal resolution, the Plaintiffs may petition the court for a more acceptable resolution.

The problems with this mechanism are so substantial that effective enforcement will likely be too little too late. For example:

—The Technical Committee is made up of software programming experts and will not include experts in the software business. Since most of the conduct by Microsoft that the courts found to be illegal involved exclusionary contracts, and since much of the consent decree consists of prohibitions on this conduct, it is unreasonable to expect that software experts will be effective and efficient monitors of potential consent decree violations.

—Microsoft has half the votes on the Committee, which greatly reduces the effectiveness of monitoring provisions of the RPFJ.

—The Technical Committee also has no enforcement powers. Its role is limited to fact-finding and informing Microsoft and the Plaintiffs as to its findings. Moreover, the Plaintiffs are prohibited by a confidentiality agreement from using the findings of the Technical Committee in an enforcement proceeding. Thus, although the Plaintiffs will have the burden of proving a violation, they will lack the benefit of using the findings of the Technical Committee.

—Enforcement of the RPFJ will involve significant delays that will destroy its effectiveness. After the Technical Committee expresses its concerns, the Plaintiffs will have to independently gather evidence on the compliance violation. Then, the Plaintiffs will have to take Microsoft back to court and make its case that Microsoft has violated the decree, taking into account the exceptions and unreasonableness standards. This

enforcement process obviously will involve considerable time.

Microsoft also has an incentive to maintain its monopoly by erecting roadblocks to swift enforcement because any enforcement delay will accrue to Microsoft's advantage. As we discussed in Section II, the applications barrier to entry has protected Microsoft's monopoly. Thus, how the market has evolved over time affects the degree to which competition can emerge at any given moment. While the market is awaiting enforcement of the RPFJ, nascent technologies will die and potential new entrants will disappear from the scene, unable to overcome the applications barrier. By delaying enforcement, Microsoft decreases the likelihood that effective competition can realistically emerge.

Aggravating the problem of delays are the extremely weak penalties for non-compliance in the RPFJ. The only specific penalty spelled out in the decree is a one-time, two-year extension of the five-year decree. This modest penalty will not deter Microsoft from engaging in unlawful acts but instead will allow the defendant to continue to enjoy the fruits of its monopoly. Under current market conditions, with an entrenched monopoly protected by the applications barrier to entry, Microsoft's incentive is to delay justice for as long as it can. Indeed, that has been Microsoft's conduct so far; witness its latest petition before the court to delay the remedy phase for another several months.

Moreover, the weak penalty provisions apply only if the court finds that Microsoft has engaged in a pattern of willful and systematic violations. (RPFJ, Section V.) Any further relief and penalties are left unspecified, increasing Microsoft's ability and incentive to resist and delay.

D. Conclusions: The RPFJ Will Not Restore Competition

For all these reasons, the RPFJ cannot restore competition even to the level that existed prior to the onset of Microsoft's illegal exclusionary conduct. Even if in principle we could roll back the clock to the period before the introduction and destruction of Netscape Navigator and Sun's Java, Microsoft could continue to discourage the development and distribution of effective middleware almost as freely and effectively as if there had been no trial and no RPFJ. Thus, as low as the DOJ remedy standard is, the DOJ remedy fails to satisfy that standard. In any event, we discuss in detail in the next section, rolling back the clock is impossible: Microsoft's monopoly has become more entrenched since the beginning of the trial, while potential entrants with new products that might compete with Microsoft thus face even higher hurdles in gaining financial backing from venture capitalists.

The Justice Department might argue that these comments ignore the fact that the RPFJ will implement immediate and certain relief, free of litigation risk, arguing that in the absence of a settlement, the DOJ might contend that a full-blown remedy hearing process with inevitable appeals would result in substantial delay in implementation. And if that were to happen, the Justice Department might further argue that the

resulting court-approved remedy may be more lenient than the RPFJ.⁸⁸

We disagree on all counts. First, the enforcement of the RPFJ itself is fraught with substantial litigation risk. As discussed above, certain key provisions do nothing more than restate the antitrust rule of reason. These provisions would require the government to prove a new antitrust violation in an enforcement action. All of the other provisions contain significant exceptions and loopholes that will create litigation risk in an enforcement action. These provisions are difficult to enforce because they raise knotty definitional issues and provide Microsoft with significant defenses. The fact that the enforcement mechanism is defective further raises litigation risk. Indeed, it is not clear that effective enforcement is possible under the RPFJ.

Second, in our view, the potential litigation delay is an inadequate justification for the weakness of the RPFJ. Waiting an extra year or even two to obtain an effective remedy (once all appeals have been exhausted) is better than implementing a RPFJ that can only be characterized as a pseudo-remedy. In any event, certain key provisions of the RPFJ involve significant delays. In particular, the requirement in Section III.H. to allow end users and OEMs to remove icons is delayed for 12 months. The requirement to disclose and document Windows XP's APIs to ISVs and other potential middleware providers in Section III.D. does not take effect for 12 months. The disclosure of communications protocols is delayed for 9 months. And, as discussed above, the reasonableness test and other exceptions will lead to adjudication delays in any enforcement actions.

In recent statements, Assistant Attorney General James has attempted to justify this pseudo-remedy on the grounds that the DC Circuit significantly narrowed the case.⁸⁹ But the DOJ did not lose the case at the DC Circuit. To the contrary, the government prevailed on the Section 2 monopoly maintenance count, which is the core part of the complaint. The other counts were far less important and the conduct attacked in the tying and monopoly leverage claims provided the basis for liability for monopolization. The government won a great victory in this important case. That victory deserves an effective remedy that restores competition to this key industry in our modern economy.

V. The RPFJ Should Have Applied A More Appropriate Remedial Standard

In the previous section, we explained how the Justice Department's RPFJ does not satisfy the Department's own claimed goal of restoring competition to the level existing before the initiation of Microsoft's anticompetitive conduct. In this section, we explain why the Department's goal is not the proper standard by which to evaluate an antitrust remedy for illegal monopoly maintenance. The DOJ has set too low a standard.

⁸⁸ Statement of Charles James to Committee of the Judiciary (United States Senate), *supra*.

⁸⁹ *Id.*

A. Restoring Competition

The requirement in *United Shoe* that the remedy deny the defendant the fruits of its monopoly underscores why the standard set forth by the Department in its Competitive Impact Statement (at 3) clearly is incorrect. The standard in the CIS is simply to restore the competitive landscape as it was in the OS market in 1995 before Microsoft's unlawful conduct began. Of course, unlike the situation in 1995, Netscape has been destroyed and Java has lost its head start. They have now been replaced by Microsoft's own offerings. In order both to restore competition and deny Microsoft the fruits of its anticompetitive conduct, the court should restore competition to the condition it would have achieved by now in the absence of Microsoft's unlawful conduct. More broadly, the *United Shoe* standard requires the remedy in a monopolization case to terminate the monopoly. Clearly, the RPFJ fails to satisfy that standard as it leaves Microsoft's dominance intact. As set forth below, the additional conduct provisions suggested by the nine states that are not party to the RPFJ would at least give competition in the OS market a reasonable chance to work, particularly if also supplemented with an automatic structural remedy for significant violations of a revised decree. A structural remedy that actually terminated the Microsoft's OS market power at the outset would be even better because it would directly and immediately create the OS competition lost as a result of Microsoft's exclusionary behavior.

B. Need for a Remedy Hearing

At the same time that it sets too low a remedial standard, the RPFJ also attempts to short circuit the Tunney Act process of determining the whether the public interest would be served by setting a higher standard. The DOJ's RPFJ implicitly assumes that very little real competition was lost.⁹⁰ By contrast, as our discussion in Section II makes clear, the competitive impact of Microsoft's unlawful behavior has been significant and significantly more competition would exist in the OS market today were it not for that conduct. At a minimum, this court should evaluate through factual inquiry and an evidentiary record what that anticompetitive impact has been. This hearing process would be consistent with the DC Circuit instruction to the District Court to evaluate the actual loss in competition in fashioning relief. The passage of time since the closing of the trial record provides the court with the ability to explore and resolve this issue in a remedial hearing. The RPFJ not only would cut off such an inquiry, but it also simultaneously rejects the need for any such investigation by announcing a clearly inappropriate standard for assessing its adequacy. For this reason alone, the RPFJ fails the public interest test. Standing alone, the RPFJ would deprive this court of the ability to determine whether the RPFJ is in the public interest, or whether a

stronger remedy is need to repair the loss in competition. Thus, we agree with the court's decision to evaluate the RPFJ in tandem with the hearings on the remedy proposal of the Litigating States and in comparison to that alternative remedial proposal.⁹¹

Whatever it is, the remedy in this case will have an ongoing, long-run impact on the course of the computer software industry, a key sector of our modern economy. Too weak a remedy will not repair the damage to the market and restore competition. Too weak a remedy will fail to discourage Microsoft from engaging in future anticompetitive behavior. Too weak a remedy will discourage new competitors from trying to attack Microsoft's illegally maintained monopoly while encouraging other new economy firms with monopoly power to maintain their monopoly positions with anticompetitive exclusion.

C. Evaluating the Impact on Competition

Simply because the Navigator and Sun's Java competition were nascent competitors does not lead logically to DOJ's apparent inference that there has been not much competitive harm from Microsoft's actions. These threats were nascent in 1995 but now six years have passed, a period of a shifting paradigm in which they would have grown to maturity. We believe that after this court conducts a remedy hearing, the court will conclude, as we have, that Microsoft's extensive unlawful acts have had a significant anticompetitive impact on competition. In particular, a review of the facts would take the following points into account.

First, we know that nascent competitors can lead to significant competition. We know now with much more certainty than in 1995 that the Internet has transformed the way we use PCs. It was this occasion of the paradigm shift that offered the opportunity to reduce, if not eliminate, Microsoft's dominance of operating systems.

Second, we know that Netscape Navigator and Sun's Java were at the center of this transformation in the computing paradigm. By neutralizing the threats of both Navigator and Sun's Java, Microsoft maintained its Windows operating system monopoly. As a result of its unlawful conduct, Microsoft has gained much greater control over computing in this new paradigm.

For example, MS Internet Explorer (IE) is now the dominant browser. As such, web content and other applications are now optimized for the IE standards controlled by Microsoft instead of Navigator or any other browser, and no other browser offers a plausible alternative as a platform for applications developers. Accordingly, barriers to entry for a new OS are now higher than they were in 1995. Similarly, Microsoft's Java implementation has become well established. Today many developers have acquired expertise in the use of Microsoft's Java tools and would need to bear switching costs to begin using Sun's Java tools. Consequently, Sun's Java has lost significant momentum that it by itself is unlikely to recover.

Third, as a result of the evidence contained in the internal discussions among the

Microsoft senior management, we know that Microsoft itself was greatly concerned about losing its monopoly power and control over the market during this paradigm shift and about the key role of Netscape Navigator and other middleware in this transformation. In and of itself, this concern is evidence that while nascent, the middleware threat would likely have become a substantial competitive constraint on Microsoft. We have previously (in Section II) cited Bill Gates' own concern that Navigator would commoditize the supply of operating systems. We have also noted that other Microsoft executives believed that IE could not beat Navigator on the merits.

Fourth, we know that in desktop operating systems, monopoly power has not been fleeting. Microsoft has maintained its monopoly over the course of the paradigm shift. The court has found that Microsoft engaged in a series of unlawful acts with the purpose of maintaining this monopoly. Thus, it makes no logical sense to assume that the illegal conduct failed to have its intended anticompetitive effects.

Fifth, we know that Microsoft has used the past six years to entrench the monopoly power of the Windows operating system and gain greater control over computing in the new Internet paradigm. In Section II, we noted that Microsoft's new OS, Windows XP, has technologically bound key Internet-gateway applications such as Windows Media Player to the operating system and its various browsers. In this way, Microsoft discourages software developers from writing their programs to competing middleware platforms. This also makes it harder for operating system competition to emerge.

Sixth, we know that as Microsoft's monopoly has become more entrenched, no alternative middleware threat has yet emerged that can match the significance of the threats posed by Navigator and Sun's Java in 1995. And, as we noted in Section II, the next middleware threat will face an even more imposing applications barrier now that Microsoft controls APIs and other standards, such as those for handheld computers, applications and platforms in browsing, Java and multimedia. Independent software developers are now even less likely to write to non-Microsoft platforms than at the close of the trial record. A new platform entrant must now be able to overcome an applications barrier for these additional applications as part of the process of overcoming the applications barrier for the desktop OS.

All in all, there is ample reason to believe that Microsoft's actions had substantial anticompetitive effects. By holding a remedy hearing, these effects can be made part of the record.

D. The Need for an Effective Remedy

In this environment, the RPFJ cannot restore the competition lost as a result of Microsoft's exclusion. That is because the potent threats that existed in 1995 most importantly, those posed by Navigator and Sun's Java are no longer competitive factors and Microsoft's monopoly has become entrenched and its power more pervasive. As Professor Romer has observed:

⁹⁰ For example, the CIS (at 11) notes that Navigator and Sun's Java had the potential to weaken the applications barrier and (at 16) discusses the process by which these two middleware technologies could have facilitated the introduction of competition.

⁹¹ 253 F.3d at 79-80, 106-107.

There is no way to revive the threat posed by the specific technologies that Netscape and Sun were developing, nor to recover the innovative efforts that were deterred by Microsoft over the last five years. The market has moved on.⁹²

To repair the loss in competition and deter future anticompetitive conduct, a remedy must restore the degree of competition that would have existed today but for Microsoft's exclusionary conduct. As stated by another one of the DOJ's economic experts on remedy, Professor Shapiro, the remedy should operate:

First, to prevent a recurrence in the future of conduct by Microsoft akin to its past anticompetitive behavior, and second to affirmatively bolster competition, which Microsoft has stifled. Given the goal of enabling, but not compelling, competition to Windows in the market for operating systems, it is important to identify, as best we can, the likely sources of such competition in the foreseeable future, both to make sure that Microsoft cannot blockade operating systems rivals, and to inform any remedial provisions designed positively to foster operating system competition.⁹³

Contrary to the DOJ's wishful thinking, the RPFJ cannot simply turn back the clock to 1995 and rerun history again, this time with Microsoft obeying the antitrust laws. To serve the public interest, the remedy must restore the degree of competition that would have existed today in the absence of Microsoft's anticompetitive conduct since 1995. To evaluate this loss in competition that must be repaired, the court must hold a remedial hearing, not simply accept the assertions of Microsoft and the DOJ that the loss in competition has been minimal, irrelevant or unknown.

We believe that after such a hearing, the court will conclude that a more effective remedy also is needed to provide deterrence against a recurrence of anticompetitive conduct by Microsoft. Under the DOJ standard, if Microsoft quickly squashes a nascent middleware competitor when it comes on the scene, the antitrust penalty will be small because of the small impact that competitor has achieved at the time of its demise. This rule will not deter but rather will simply encourage an even more rapid anticompetitive response to new entry. The more quickly Microsoft acts, the lower will be the implied penalty, because the more likely it is that the squashed rival would not yet have had any significant competitive effect. This remedial framework would create a vicious cycle of anticompetitive conduct and monopoly entrenchment. In the end, it would swallow up the liability standard and destroy deterrence, as monopolists find that they have little to fear from antitrust remedies.

VI. More Effective Alternative Remedies

In the Amicus Brief that we filed with this court,⁹⁴ we offered the court our views on the most effective remedy to the anticompetitive harms resulting from Microsoft's illegal

actions. While the DC Circuit only partially affirmed this court's decision—in particular, the core of the Section 2 violations—it still is our view that the panoply of illegal efforts of Microsoft to maintain its OS monopoly power requires the structural remedy we previously suggested.

A. The Full Divestiture Structural Remedy

We urged Judge Jackson to consider what we called full divestiture as the best means for addressing all the remedial goals in this case. We reiterate our recommendation to this court. The full divestiture remedy would contain two elements. First, it would divide Microsoft's businesses into two parts: the operating system and the applications, with the applications residing in a completely independent entity.⁹⁵ We have called this functional divestiture. Second, our proposed remedy would dissolve the monopoly of the operating systems. The dissolution of the Windows monopoly would be accomplished by effectively cloning the current Windows division into two additional companies, so that three distinct firms would have a full license to all the intellectual property of Microsoft's current OS division. We have referred to the functional divestiture combined with the dissolution of the Windows monopoly as full divestiture.

By placing the Microsoft applications such as Office into an entity (AppsCo) that is financially distinct from any operating system entity, the remedy ensures that AppsCo will have the incentive to provide applications for other operating systems, such as Linux and the Mac OS.

That is, Microsoft will no longer be able to ensure that its applications run only on Windows, thereby depriving Microsoft of critical means of raising and maintaining the applications barrier to entry to rival operating systems. By creating three separate operating systems entities (WinCos), the proposed remedy acts to ensure that at the outset, there will be competition in the sale of operating systems.

Why three OS entities? The experience of having just two competitors in a market, such as the duopoly that used to exist in the wireless telecommunications business before the number of licenses was expanded, suggests that having only two competitors in a market is not a reliable protection against monopoly. Significant price and/or quality competition does not generally appear until there are at least three firms. Moreover, in light of the significant barriers to new entry into the OS market, having three competitors provides a margin of safety. With only two competitors, if one stumbles and fails, the market would then revert back into a full-blown monopoly. In addition, with three competitors, the market is less likely to tip back to an operating system monopoly.

Full divestiture would completely meet the remedy goals in the case:

—It would immediately (upon a final verdict) create competition in the OS market. Because even a small increase in the relative price or quality by one of the Windows

companies could easily have a substantial impact on its sales, the three-way company split would stimulate price and quality competition in operating systems.

—Full divestiture would essentially nullify the applications barrier to entry. The barrier would be removed because, at the outset, developers would be able to write programs for all of the WinCos simultaneously. None of the WinCos would have an initial installed base advantage.

—Full divestiture would allow the market to develop unfettered from judicial oversight or other forms of intrusive regulation that accompany a conduct decree. In a matter this complex, a conduct decree will inevitably require that the court at some point become mired in various complex claims, such as whether a particular API is really covered by one of the exceptions in the decree, or that its disclosure is more difficult than initially contemplated, or that in any event, a waiver is justified in light of the benefits obtained. Even if the court sets deadlines, Microsoft can be expected to provide testimony from its managers claiming unexpected technical difficulties or that bugs have slowed the company down. It will be difficult for the court to sort out fact from exaggeration when such disputes arise. And the court will inevitably become the analog to Judge Greene's oversight of the AT&T decree, generating full employment for lawyers, economists, and software engineers. Certain criticisms of the full divestiture option have been raised, none of which we believe should hold back implementation of full divestiture.

The first criticism is that the creation of multiple Windows companies would fragment what is the Windows standard and lead to incompatible operating systems that would raise costs to ISVs and users.⁹⁶ On closer analysis, this criticism is not compelling. At bottom, this fragmentation critique is actually an attack on any remedy that fosters OS competition. It is competition, not the structural remedy, that arguably leads to fragmentation. And the argument simply assumes that competition would lead to significant OS incompatibilities among the three WinCos. This assumption is unwarranted. In the short run, there would not be a fragmentation problem because each of the Windows companies would be using the same existing APIs. Over the longer run, the economies of scale and network externalities (i.e., the large installed base of current Windows users) would create a powerful tendency for the WinCos to maintain a high level of compatibility and interoperability, if not an absolutely unitary OS standard. This would allow applications software developers to write programs for each operating system with minimum additional porting costs. Meanwhile, to the extent innovation in operating systems occurs, it is likely that new features would be added in modular fashion, so that the current core aspects of the operating system

⁹⁶ See, for example, Stan Liebowitz, *A Fool's Paradise: The Windows World after the Forced Breakup of Microsoft* (February 24, 2000) (<http://wwwpub.utdallas.edu/liebowit/msstuff/newact.htm>).

⁹² Romer Declaration N7.

⁹³ Shapiro Declaration at 3 (emphasis added).

⁹⁴ Litan, Nordhaus and Noll, *supra* note 3.

⁹⁵ Judge Jackson's divestiture remedy involved only this functional divestiture. *United States v. Microsoft Corp.*, 97 F. Supp. 2d 59, 64–65 (D.D.C. 2000) ("Final Judgment").

would retain their common APIs.⁹⁷ In any event, if innovation is the price for fragmentation, then that is a good outcome because it will be competition at work.

The second criticism is that the break up of a unitary company like Microsoft would be disruptive and lead to redundancy in operating units. We agree that some disruption would be involved in the divestiture and that there would be some redundancy among the WinCos.⁹⁸ However, we believe that the resulting increase in competition and elimination of the ongoing need for the court to monitor, if not regulate, Microsoft makes these costs worth bearing. In any event, Microsoft has likely exaggerated these costs. For example, a writer for the Wall Street Journal reported that at least a dozen top managers at Microsoft are of the view that the company should be reorganized into smaller, competing units as a way of fostering more rapid innovation.⁹⁹ In addition, relative to other firms, divestiture here is easier to implement because Microsoft's key assets are embodied in its intellectual property, which can be shared rather than divided. This issue can be examined in more detail at the remedy hearing. A related criticism might be that while the intellectual property may be easy to divide among the WinCos, allocating the employees to the three entities in a way that will maintain their viability would be more problematic. Here, too, these concerns overstate the realistic difficulties of implementing this remedy. The critical employees may be higher-level managers, among whom there is enough shared knowledge about the development and deployment of new operating systems to permit them to manage the new companies. Further, there is likely to be enough lead time between adoption of the remedy and its implementation to ensure symmetry in knowledge among the managers of the WinCos. Finally, we suspect that other companies, notably the remaining major middleware, network and applications firms, are likely to jump at the chance to acquire a license on reasonable terms for the current version of Windows. At a minimum, before the divestiture remedy is written off for this reason, an inquiry into the willingness of others to license Windows ought to be made.

We continue in any event to believe that a structural remedy of the kind just described is most capable of repairing the competitive harm resulting from Microsoft's illegal behavior. That remedy is much more likely to result in a reduction in the applications barrier to entry confronting new operating systems than a conduct remedy. This is so because it would immediately introduce competition into the OS market. Thus, ISVs

⁹⁷ A more extensive discussion of the flaws of the fragmentation claim can be found in Robert J. Levinson, R. Craig Romaine and Steven C. Salop, *The Flawed Fragmentation Critique of Structural Remedies in the Microsoft Case*, ANTITRUST BULLETIN (Spring 2001) at 135-162.

⁹⁸ There would not be significant redundancy between the AppsCo and the operating system companies because the way in which Microsoft is organized along functional lines. See Brier Dudley, *Microsoft Does Its Usual Spring Shuffle*, Seattle Times (Apr. 6, 2001) at C1.

would automatically be writing applications that are compatible with multiple OS competitors' products. By introducing real competition into the OS market, the structural remedy will be much more self-enforcing than would a conduct remedy.

B. Litigating States' Proposed Remedy

If the court rules out the full divestiture remedy, the conduct remedy recently proposed by the Litigating States certainly surpasses the Justice Department RPFJ by an order of magnitude and offers the promise of real competitive benefits. The LS proposal addresses all the antitrust violations and closes the gaping loopholes in the RPFJ. The LS proposal reduces the applications barrier to entry to a level closer to what would have occurred in the absence of Microsoft's exclusionary behavior. The LS proposal also greatly improves the mechanism for effectively enforcing the decree and increases Microsoft's incentives to comply. Comparing the LS proposal to the RPFJ demonstrates why the RPFJ is not in the public interest.

1. Addressing All Violations, Eliminating Exceptions and Closing Loopholes

The Litigating States proposal addresses all the violations found by the DC Circuit, unlike the RPFJ. The LS proposal directly remedies the commingling violation by proscribing the binding of any middleware code to the Windows code (or alternatively, by requiring that Microsoft to make available an otherwise identical version of Windows that does not include the middleware). More generally, the LS definitions make it more difficult for Microsoft to define middleware as part of the Windows OS. The proposal also requires Microsoft to include a Sun-compliant version of Java in Windows. Further, the LS proposal eliminates the most serious exceptions and closes the most egregious loopholes in the RPFJ. For example, we noted previously that the RPFJ permits Microsoft to terminate an OEM's license for Windows on 30 days notice. In the LS proposal, Microsoft must provide 60 days notice, provide the licensee with the reason for the termination, and provide the OEM with the opportunity to cure the problem. In addition, unlike the RPFJ, the LS proposal applies to third-party packagers as well as OEMs, thus further restricting the avenues by which Microsoft can harass distributors of rival middleware.

The LS proposal acts to prevent Microsoft from using the same exclusionary strategies to entrench its monopoly power by the newest type of Internet middleware. For example, the entire .Net strategy of Microsoft by which XP users are directed to the Internet to use a variety of Microsoft applications will be defined as middleware by the LS proposal. As a result, OEMs (and others) will have the option of licensing the Windows OS without the default direction to the Microsoft applications. Similarly, under the terms of the LS proposal, Microsoft must offer a version of Windows to OEMs and others that does not bind Windows Media Player and Windows Messenger to the Windows OS. In this way, developers of this kind of web-centric software that could develop into middleware will not face the same distributional hurdles that Microsoft placed in Navigator's way.

2. Reducing the Applications Barrier to Entry

Unlike the RPFJ, the LS proposal actually acts to repair the competitive harm by including four provisions that would reduce the applications barrier to entry. This is very important because only by reducing the applications barrier to entry can the loss in competition be repaired. First, the proposal requires that Microsoft license the source code for IE. This means that third parties can transform IE into a true independent middleware platform to replace Netscape Navigator, while helping to repair the loss in competition caused by Microsoft's destruction of Netscape Navigator. This is a much more effective remedy than simply hoping that another middleware platform will appear, as the RPFJ does. Second, the LS proposal requires that Microsoft distribute a Sun-compliant version of Java with Windows and with IE. This provision will help to repair the loss in competition caused by Microsoft's anticompetitive conduct towards Java that was affirmed by the DC Circuit. Although this remedy does not offset the loss in momentum suffered by Java from Microsoft's exclusionary conduct, it will help Java to become better established as a middleware platform. As a result, it will encourage software developers to write applications in Sun's Java. Third, the LS proposal requires that Microsoft license its Office suite of applications to other vendors, who then could port Office to competing operating systems. This provision should also reduce the applications barrier to entry by giving rival operating systems access to this important application. This porting provision also will prevent Microsoft from repeating its efforts to compel Apple to withhold support for competing middleware by threatening to terminate the production of Office for the Mac OS. Fourth, the LS proposal requires that upon a release of a new version of its operating system, Microsoft must continue to license and support the predecessor versions of the OS. This provision will prevent Microsoft from raising the applications barrier to entry by withholding the mandatory timely disclosure of APIs to would-be middleware contenders. In the absence of this provision, Microsoft could frequently offer new, slightly modified versions of the OS that render the middleware based on the predecessor APIs unworkable with the new version. Middleware developers would be discouraged if they knew that Microsoft could raise their costs simply by slightly revising the operating system code in a way that requires the middleware to be significantly modified. The LS proposal constrains the effect of this conduct by permitting the OEMs to continue to offer the previous version of the OS that is compatible with the rival middleware product.

3. Improving the Enforcement Process

The LS proposal also adds teeth to the enforcement process. Importantly, the proposal streamlines the indefinite and laborious process of investigating violations of the remedy. Of particular significance is the requirement that a Special Master be appointed to conduct investigations in response to complaints and propose

resolutions on an expedited basis. Moreover, the findings of the Special Master may be used by the complainants in other proceedings, unlike any findings by the Technical Committee in the RPFJ. In addition, the penalty for a violation is not merely an extension of the term of a settlement (as in the RPFJ) that offers little in the way of constraints on Microsoft's behavior to begin with. In the LS proposal, if a violation involves Microsoft middleware, the court can order Microsoft to license the source code of that middleware. In the case of a pattern of violations, Microsoft also could be ordered to pay substantial civil penalties.

C. Recommended Modifications

If the court feels constrained to adopting a conduct remedy, then the proposal of the Litigating States clearly is far superior to the RPFJ. However, we think that it could be improved further by making several modifications.

First, although the more severe penalties in the LS proposal will increase Microsoft's incentives to comply relative to the RPFJ's compliance incentives, we prefer a more significant and definitive penalty for a pattern of material non-compliance: one that would require the court to order a full divestiture in the event of a pattern of material non-compliance. We favor this stronger stick because the rapid pace of change in the computer industry means that a failure of the remedy to fully deter anticompetitive conduct can result in substantial and ongoing harm to competition and innovation.

Second, we would strengthen the enforcement mechanism by requiring MS to self-certify compliance every six months. This self-certification procedure adds teeth to Microsoft's antitrust compliance program. It will increase Microsoft's incentives to comply with the order because false certification would justify more severe penalties. Third, in recognition of the rapid pace of change and the strength of network effects, the term of the decree should be left open. After five years, the decree should be reviewed to see whether it can be terminated or, alternatively, needs to be modified to make it stronger and more effective. Our concern is that if the conduct remedy fails to lead Microsoft to fully comply and compete on the merits, its current monopoly position will only become more entrenched over time. If the review concludes that the LS remedy has not been effective, the court could then extend the term, modify the conduct provisions in some way, or order a divestiture. Alternatively, if robust competition has become established, the decree could be terminated.

VII. Conclusion

Antitrust history contains important cautionary signals about the efficacy of conduct remedies, most notably, United Shoe itself. The government successfully challenged the practices of United Shoe, leading to a conduct decree in 1922.¹⁰⁰ When

that decree proved ineffectual, the government successfully challenged United Shoe for maintaining its illegal monopoly.¹⁰¹ This time, the government sought to divide United Shoe into three different companies.¹⁰² Judge Wyzanski in the main disagreed, instead ordering extensive and intrusive conduct remedies requiring ongoing judicial oversight.¹⁰³ Over time, it became clear that the conduct remedies failed to generate a more competitive marketplace and the government asked the court to break United Shoe up into two independent companies.¹⁰⁴ When Judge Wyzanski refused, the government appealed, and in 1968, the Supreme Court intervened and unanimously made clear that a structural remedy was the preferred remedy for monopolization cases.¹⁰⁵ In United Shoe, the conduct remedy failed to restore competition for decades after the initial finding of monopolization. In the interim, consumers lost the benefits that more decisive action would have generated.

Given the rapid pace of change in the computer industry, a long time lag between the initial detection of the problem and its ultimate resolution will impose substantial costs on consumers in terms of higher prices and lost innovation. Worse, unlike manufacturing industries, over time Microsoft's monopoly power will become even more entrenched (as a result of network effects, the applications barrier to entry, and consumer lock-in) if the LS proposal fails to reinvigorate competition. This will make it all the more difficult to implement an effective remedy in the future. At a minimum, an automatic 5-year review of the efficacy of the LS proposal will help ensure that the courts and consumers do not become victims of the passage of time if the conduct remedy fails.

Ultimately, however, it is vital that the court weigh alternative remedies before signing off on an adequate remedy that fails to protect the interests of consumers in this industry, and indeed because of the importance of this industry to overall economic growth, of the economy as a whole.

¹⁰⁰ United Shoe Mach. Corp. v. United States, 258 U.S. 451 (1922).

¹⁰¹ United States v. United Shoe Mach. Corp., 110 F. Supp. 295 (D.Mass. 1953), aff'd, 347 U.S. 521 (1954).

¹⁰² 110 F. Supp. at 348.

¹⁰³ Id. at 347-348.

¹⁰⁴ 266 F. Supp. 328 (D. Mass. 1967).

You will have to be the brave souls who make up for the failings of your predecessors.

Like a parent that is forced to deal with a troubled teen because they did not enforce discipline at a younger age, the current situation demands revolutionary, not evolutionary, action. The issue of structural remedy cannot be removed from consideration.

Fact: Microsoft has been found to be a monopoly.

Despite all PR and marketing effort to the contrary, this ruling is public knowledge and has been upheld in a separate ruling.

Fact: Microsoft has manipulated the marketplace to its own advantage to limit reseller, manufacturer and consumer choice.

The company has threatened the marketplace with drastic repercussions if matters do not run their course in a manner that is advantageous to its bottom line. It has forced competitors out of business, not by quality or innovation, but by abuse of its monopoly position.

Fact: Microsoft has made less than subtle threats that any action taken against it would be injurious to the nation's economy.

These statements have reverberated through the marketplace and political halls. The fact is, if the nation can weather September 11, it can weather structural remedies against an abusive technology company.

Fact: Microsoft has forced bloated and insecure software into the marketplace.

The term 'bloatware' is defined by Microsoft and its security problems are legendary. Even the FBI released an alert as of late asking users to disable features that are core to the future of Microsoft's .NET propagation. While this affected a relatively small number of users, it is the latest example of Microsoft's disregard for consumers.

Fact: Microsoft has amassed a huge cash reserve by avoiding tax payments.

The company skirts the tax laws by having a relatively few individuals hold a large portion of the company's stock, which translates to the company acting on the personal agendas of these few individuals as opposed to a wider variety of company shareholders.

Fact: Similar measures proposed in the past have done nothing to stem the growing monopoly power of Microsoft.

Again, to use the analogy of the parent: when grounding the child and removing their allowance for a few weeks does not resolve the behavioral issues, more stringent action needs to be taken.

An imposed structural remedy (3 companies: 1 for software, 1 for hardware, for internet) will not bring the economy crashing to its knees. The only people that will be upset by such a decision will be the few majority stockholders of Microsoft who have their personal agendas of greed and control upset by a long overdue, but deserving, punishment.

Best Regards,
Paul

I am very discouraged by Microsoft's naked monopoly in the system software and office productivity markets. The range of settlements that have been discussed do not begin to address the real problem.

I would like to see two or more companies competing with Windows software.

I would also like to see two or more companies competing with Microsoft Office software. Without this competition, the monopolies will continue.

Hi Your Honor,

The proposed settlement seems like it could do as much to promote Microsoft's business as some of the monopolistic practices that it is supposed to punish. For example, it will probably have a large impact on Apple's last stronghold, the educational market. Perhaps a more fair solution would be for Microsoft to provide the cash to purchase the same amount of hardware and software for education, but let it be distributed among all computer manufacturers, or better yet, let the educators decide what they want to purchase.

Best regards,
Rob

Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001
January 11, 2002

Dear Mr. Ashcroft:

I am writing in support of the settlement reached between the government and Microsoft in the antitrust case. A lot of time has been spent on this, and I hope finally Microsoft will be able to get back to providing America with its innovative creations. I am dissatisfied with the amount of money now necessary to conduct business in the software industry due to government antitrust laws. I would like the legislature to review and update these laws so that the laws are applicable to today's technology industries.

I think the settlement is very fair, particularly Microsoft's willingness to grant computer makers broad new rights to configure Windows so as to promote non-Microsoft software programs that compete with programs included within Windows. Microsoft's decision not to retaliate against computer makers and software developers who ship software that competes with anything in its Windows operating system is

also a key concession that will benefit competitors and consumers alike

In closing, I thank Microsoft for not wasting taxpayer money in a lengthy and costly legal battle and for being so generous with this settlement. I urge you to approve this settlement, and allow Microsoft to move on.

Sincerely,
John R. O'Brien

Date: 1/17/02 10:58am
Subject: Microsoft Settlement
Dir Sir or Madam,

Coming from the Software development industry I know the power of Microsoft and their Market Share. They totally dominate the competition regardless of the alternatives benefits of these programs clients and business are not willing to use these technologies because of blind marketing that the microsoft product will do what they need, when it doesn't. If they were as good of programmers as they where salesman I might be looking the other way. When we have a wealth of open source software and proprietary software out their and 90 percent of the consumers only know microsoft because of its msnbc affiliation and on air campaigns to deflate and demote any competition.

We can see it in every market Home Entertainment, News Media, Computer Software. If they want control of a certain market, then they can have it. Without regards to the quality of the product.

We as consumers need to have a level playing field to base or decisions on the product.

I suggest one, deny Microsoft the right into other areas like television media, gaming media, etc Make them focus on creating a good OS and Software for that os. I liked the idea of breaking the company up into two companies that seems like it could work.

I hate and have no understanding of the idea that Microsoft would pay 1.3 or 1.8 billion to poor people in the form of computer education. Sounds like a Microsoft training camp to me. I don't want to get malicious here, but it seems like Microsoft is controlling what even the justice department is doing, and that makes me scared.

The problem with their current state is they are going above and beyond that. Using their control over the computer industry to establish control over others and you the government. I am not scared, but I should be.

Subject: Microsoft Settlement
Madam, sir,

I am not a U.S. citizen, but I do hope that you will consider my opinion to be valid nonetheless, for I am as much affected by Microsoft's monopolistic parties as if I was american.

I work with computers everyday. More than a job, they are a hobby—I often play the role of technical support for friends and family (my aunt actually called me for some info as I was writing this). Although only 32 years old,

I have bought my first computer in 1983, and have own at least one ever since (I currently have 3 at home). I have been following the Microsoft Anti-Trust trial(s) since the very beginning, with great interest. Like many others, I do believe that MS has engaged in monopolistic activities. I also believe that their practices have led to a general stagnation in the quality of their product. However, it would be a difficult feat to effectively remove this monopoly, since they have become a de facto standard, especially with their OS (operating system) and Office suite of productivity software. It is their overwhelming market share, more than the quality of their product or their ruthless business tactics, that have made their monopoly unassailable as far as desktop computing is concerned.

Therefore, I do believe that the only suitable punishment to Microsoft (and they do need to be punished, otherwise they will continue with their unfair practices) is also the only one that has a chance of slowly reversing the perverse effects of their monopoly on healthy competition: to open up (i.e. release to the public) the entire source to the Windows API (application program interface) as well as the proprietary format of their office suites. Since these have become de facto standards, they should not be the property of a single company, but rather public domain and overseen by the appropriate government agencies. This will let other companies compete on a level playing field with Microsoft: other OSes (such as GNU/Linux) will be able to run software designed for Windows (such as MS Office) and Office suites from other companies will better be able to better integrate with that of MS, increasing their usability.

Everyone wins in such a scenario: individual consumers will have access to better, cheaper software, competitors will have a better chance of putting out viable software products, and large organization that have to rein in their IT budgets (such as government agencies) will be able to switch to open-source OSes (Linux, FreeBSD) and still use Microsoft's Office program. Even MS will benefit in the long run—though they might lose sales at first, they will be able to concentrate on providing quality productivity software instead of managing the monstrous code of MS Windows all by themselves. By open-sourcing their OS (or at least the API), they'll benefit from the large community of voluntary programmers that already contribute to the rapid rise of Linux, Apache, OpenOffice and other successful open source projects.

Thank you for your time,
?lie Charest

Subject: Microsoft Settlement

To whom it may concern,
My "public comment" on the Microsoft antitrust settlement will probably be ignored since it's clear the DOJ has its own agenda, which is to allow MS to continue its monopoly. That is abundantly clear from the laughable proposed settlement recently turned down by a judge. Suffice to say, the DOJ is not doing its job, which is to protect the consumers from abusive companies like MS and promote competition, which is good for all involved, even MS in the long run. Oh well, perhaps when the administration changes again, the American public will get a DOJ that stands with them instead of the monopolists in this country.

Sincerely,
Tai Morris

United States Attorney General John Ashcroft
950 Pennsylvania Avenue, Northwest
Washington, DC 20530

Dear Mr. Attorney General:

I am writing this letter today to show my support for the settlement that was reached between Microsoft and the Department of Justice last November. The settlement will provide a necessary boost to our struggling economy, and also places restrictions on Microsoft that were necessary.

Microsoft has agreed to reveal internal information about their Windows operating system to competitors. They will also design future versions of Windows to provide a mechanism to make it easy for computer makers to promote non-Microsoft software within Windows. This will open the IT industry up to more competition, which will spur the economy.

All in all, the settlement is fair to all parties involved. Microsoft will still have the ability to lead the industry, but the industry will be much more competitive. I fully support this settlement.

Sincerely,
Pat Nye

Subject: Microsoft Settlement
To Whom It May Concern:

I'm very disappointed that the Justice Department has sold out to Microsoft. I'm angry that a company can be found guilty of anti-trust laws, and then just told "don't do it again." If our entire country's justice system worked like this, we would be living in a state of anarchy. History has proven that warnings, consent decrees, and laws to restrict anticompetitive behavior just do not work with Microsoft.

To quote from Scott Rosenberg's article at <http://www.salon.com/tech/col/rose/2001/11/02/microsoft-settlement/index.html>

It's important to remember that this entire lawsuit arose out of the ashes of the failure of a previous consent decree to rein in Microsoft. Applying "behavioral" remedies once more at this late stage is like giving the class bully a mild lecture and then turning him loose in the schoolyard.

I find the proposed settlement to be upsetting, ineffective, and an injustice to the American people. I'm sure you're finding that many of my fellow Americans agree.

Sincerely,
Andrew Miller

Good Day.

I develop software for many different platforms including Sun platforms. Though there are restrictions that have been imposed on OEMs and ISVs by Microsoft, I believe that overall, what is delivered by Microsoft via Windows operating systems, (including server platforms), is a great benefit to us, the consumers. I feel that the products of Microsoft encourage the use of personal computers for everyone. They make it easy and inexpensive for regular people (the consumers) to become technically savvy. I do not agree that Microsoft products (operating

system), are harmful to consumers or restrict the rights or abilities of users to choose.

I believe that the federal government is overstepping its bounds when it begins to interfere with the everyday business of any company.

Sincerely,
Jim Gergen

Aloha,

Thank you for the opportunity to share my views with you.

I am not sure any punishment can repair the harm that Microsoft Corp. has inflicted on its competitors. The real harm that has been done though was to stifle the industry as a whole. I believe Microsoft Corp. has smothered innovation through their monopolistic practices, which is the real shame. From what I have heard through the media Microsoft Corp. seeks to install their software in our public schools as penitence. This is an insult to the public. There innovating idea is nothing more than a guise continuance of their illegal practice. If anything there punishment should include support for struggling entrepreneurs. Please do not let them greater market share in the educational market as a punishment; that would be a reward.

Once again, thank you for the opportunity to express my opinion.

Sincerely,
Joseph W. Guillaume

Honorables,

It has come to my attention that Microsoft has recently acquired fundamental patents for 3D graphics technology and techniques from SGI. This is a dangerous situation, as it grants Microsoft significant leverage over the independent 3D hardware manufacturers who are currently supporting the only rival to Microsoft's Direct3D graphics API, OpenGL.

Microsoft has in the past worked to delay and distract advances in 3D graphics technology, such as in the abortive "Fahrenheit" plan with SGI in the 1990s. During that period, SGI was transitioning from selling Unix-only workstations to begin selling workstations running Microsoft's Windows NT. At the same time, OpenGL was gaining on Microsoft's Direct3D in terms of features, hardware support, and developer support. If SGI wanted to sell NT boxes, SGI would have to agree to the Fahrenheit plan. The perfectly timed Fahrenheit deal slowed that advance of OpenGL by, among other things, reducing SGI's active promotion of it, and allowed Microsoft's Direct3D to gain a strong lead.

Yet OpenGL support still survived due to the interest of software developers and the support of third party 3D hardware

manufacturers. This latest move by Microsoft to acquire core 3D technology patents would finish the hatchet job, granting Microsoft the power to force third party 3D hardware manufacturers to drop support for OpenGL, and ultimately stifle competition and innovation in the marketplace.

Please do not let this come to pass.

Thank you,

Hans Lambermont

Attorney General John Ashcroft

U.S Department of Justice

950 Pennsylvania Avenue, NW

Washington DC 20530-0001

January 16, 2002

Dear General Ashcroft:

ACU has, in the past, repeatedly requested that the Department of Justice (Microsoft settle their ongoing federal litigation. We were, therefore, very encouraged to learn that a proposed settlement has been reached and after reviewing its terms, we believe it to be in the public's best interest.

It is clear that the benefits of settlement far outweigh any potential benefits that could be realized through continued litigation. In general, the settlement of this case would allow Department of Justice resources to be redirected to other law enforcement needs—to include antitrust enforcement—and would bring certainty to the computer technology industry, its economic markets, competition and employment.

A review of the settlement itself shows that it contains provisions that penalize Microsoft for past conduct, regulate its future conduct, and provide for enforcement of the settlement. The enforcement mechanism provides that any person can notify the Department of Justice, the States, the Technology Committee, or the Compliance Officer of information indicating a violation of any provision of the settlement. Furthermore, the settlement establishes a Technology Committee comprised of three computer experts that have access to and can inspect Microsoft documents and personnel for the purpose of insuring compliance with the settlement. If the Committee finds evidence of a violation, it is obligated to immediately inform the Plaintiffs who, in turn, can seek compliance through the courts. In addition, the settlement requires Microsoft to appoint an Internal Compliance Officer whose duties include educating Microsoft employees on the settlement provisions and their responsibility to adhere to the settlement's provisions.

Established 1964 . . . The Nation's Oldest and Largest Grassroots Conservative Organization As Charles James, head of the Justice Department's Antitrust Division testified: "[t]he proposed decree contains some of the most stringent enforcement provisions ever contained in any modern consent decree."

Accordingly, we ask that you provide this letter to the Federal District Court in support of the revised proposed final judgement that settles the antitrust claims brought against Microsoft. Sincerely,

David A. Keene Chairman

Subject: Microsoft Settlement

Hello. I was informed that the Justice Department is accepting comments on the Microsoft Corp. settlement/case. I just wanted to drop you a line and tell you that from my perspective, the entire fiasco was nothing more than a farce. Antitrust legislation was never meant to provide the Justice Department with an excuse to harass monopolies. Instead, its intent has always been to stifle stagnant market behavior. How in the world can one perceive the computer operating market as stagnant? Not only are new iterations to popular operating systems released yearly, but there are plenty of alternatives as well. Among them: Macintosh OS, BeOS, FreeBSD Unix, SunOS, Solaris, Linux (and all its incarnations), and of course Windows. But that's not all . . . most of the time previous versions of operating systems compete with current ones. To make a long story short, perhaps the Justice Department should pay less attention to the whining of competitors who provide inferior products and more to the task at hand, which happens to be law enforcement.

 Subject: Microsoft Settlement

The terms of the proposed settlement of the Microsoft case seem fair and reasonable. I hope that DOJ will follow through and end this matter ASAP. We don't need to have government specifying how software is designed. In addition, It's disgusting to see that this issue was instigated by competitors of Microsoft and their political supporters.

The use of antitrust laws to disable market competitors calls in to question the rationale for such laws. We need to consider some serious changes.

From: William A. Ogden
 To: Microsoft ATR
 Date: 1/17/02 11:48am
 Subject: Microsoft Settlement

Good Day,

Since college in the mid seventies, I am and have been a computer industry professional. Starting with main frame computers I moved to microcomputers in the late seventies. During the intervening years, I have been involved in programming solutions in FORTRAN to BASIC, from dBase IV to FoxBase, and from MS Access to FileMaker Pro. Working with CPM, Apple DOS, MS/DOS, Mac OS, and Windows, I provided a variety of professional computer services. I have designed, implemented and maintained network architectures. I have setup and maintained e-mail servers, file servers, web servers and many other network based services. I feel well qualified to comment on the proposed agreement between Microsoft and the United States Justice Department.

In the early days, I watched as Microsoft brought a level of professionalism lacking in much of the microcomputer industry. Their products, such as "Microsoft's CPM Card", were well thought out and implemented. Later, their GUI windowing products for the Mac OS were some of the best of class. Developed and available years before Microsoft Windows became popular, in the early nineties.

However since the mid to late eighties I have seen a change in Microsoft's professionalism. Rather than present products based wholly upon merit, which they did in the beginning, they began using questionable tactics to eliminate their competition. These questionable tactics, eventually found illegal by the courts, have eliminated my ability to choose which product I deemed best.

Watching the Microsoft anti trust trial during the last few years, I have been fascinated by the ups and downs of the case and also frustrated by it's lack of progress. I have followed the trial's proceedings in the news and have read many of the published legal papers. I am amazed by the number of times Microsoft's representatives twisted words and meanings in their testimonies,

giving all observers, including the judge, an impression of deceit.

Now Microsoft is guilty of breaking the law. The trial court said so and the Appeals Court affirmed it, unanimously 7 to 0.

And that takes us to the recent agreement between Microsoft and The Justice Department. Where, after reading the settlement agreement, I find no penalty and no punishment for Microsoft. Does this mean Microsoft is exempt from the Rule of Law?

What I do find is the Agreement regulates Microsoft's behavior, much like the agreement in 1994 where Microsoft consented to refrain from anticompetitive bundling and licensing of its Windows operating system. (CNET News.com-September 25, 1997) And of course it was Microsoft's ignoring this decree that gave rise to the anti trust case. And even if the intent of today's Proposed Agreement is followed honestly and ethically, Microsoft's past successes using these, proposed banned, behaviors make any behavioral remedy moot. All effective competition has been eliminated, so how are behavior limitations on Microsoft going to jump start competition? Plus the Proposed Agreement puts Microsoft in charge as all competitors are under the requirement that the licensee(c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business. (d) agrees to submit, at its own expense, any computer program using such APIs, Documentation or Communication Protocols to third-party verification, approved by Microsoft. . .?(section J 2(b),(c)) And even Microsoft could not meet the requirements under section J 2(a) of the Proposed Agreement. "Microsoft has demonstrated time and again that through their sheer power and immense wealth, they can easily evade behavioral remedies designed to constrain their unlawful activity," said Edward J. Black, president of the Computer and Communications Industry Association, which backs Microsoft's corporate adversaries.?

(www.nytimes.com/2001/09/07/technology/07LOBB.html)

Let me finish by asking the questions. How can any settlement with Microsoft be just five years? Particularly when section D requiring disclosure, and section H, of the Proposed Agreement does not require Microsoft's compliance for a year. How can any law breaker, proven and affirmed to be so in a court of law, not be punished? If you have enough money and you burn someone's house down, we let you go if you promise not to do it again. How can we, as a country based on the rule of law, allow a company proven to have broken that law, benefit from their crime and there be no material consequences.

I ask you to please find a way to bring fairness and open competition back to our industry. Let new ideas find a fertile environment to flourish. Please let the market place, not Microsoft's special interests, determine what software products and internet services I purchase and support.

Thank you,

MTC-00013391

From: Mark Kinzie
 To: Microsoft ATR
 Date: 1/17/02 11:41am
 Subject: Microsoft Settlement

To those concerned with the Microsoft Settlement,

I have been working as a software engineer for 20 years, and understand why Microsoft has the power to push others from the market, stifle competition from innovative companies, and to eventually gain control of nearly all uses of computers and communications: they have complete control over a resource that the vast majority of software written today is completely dependent on—the Windows API.

Microsoft controls the operating system that all other application software developers are dependent on. But Microsoft also develops applications. This gives Microsoft extraordinary advantages:

1) Microsoft can change the API, forcing all competitors to scramble to change their applications so they will still work with the new API.

2) Microsoft can use their knowledge of what the new API is going to be (knowledge that no competitor has) in order to be first to market with applications that work with the new API.

3) Microsoft has knowledge of the operating system that no one else has—essentially, part of the API that no one else can see or use. How can others compete when they don't have access to the same resources?

These advantages have allowed Microsoft to take control of the major types of application software in use: Office productivity software, Web browsers and email. Regarding their application software (in particular, Office), their control over the data formats of the software give them the same kind of advantages as control over the OS API's. For example: these days, if you're looking for a job, you need to be able to send your resume to prospective employers though email. Your resume essentially has to be in Microsoft Word if you want them to be able to read it (Word alone costs \$339.00). The competition's less expensive word processing software will claim to be compatible with Word (they have to), but it's not completely compatible because they don't have an established standard to write to. Microsoft controls the de facto standard, changes it at will, and is the only company that completely understands it.

Microsoft must open up it's API's and data formats so that all can play on a level playing field. This must be done in such a way that the unfair advantages described above are no longer in place. It might be argued that this unfairly causes Microsoft to forfeit some of it's intellectual property, and that the advantages listed above are not unfair and anti competitive. But Microsoft is a monopoly controlling critical resources. I've often tried to come up with an allegory to

explain the situation that Microsoft has to non-software people. I was never able to find an allegory that fits, and I finally realized why. It's because software is different than anything that's ever come before. We've just never had anything that is really like software that runs on a computer. You just have to learn about how software works to be able to understand the Microsoft situation. I'm concerned that there are not enough people in decision-making positions in the Department of Justice (or in Congress or the White House for that matter) that really understand how software is built. It's a crucial matter that is only going to grow more important as time progresses.

Thank you,
Mark Kinzie

Subject: Microsoft Settlement

Hello,

I would like my comments on the proposed Microsoft Anti-Trust settlement added to the official record of public comments. As the person in charge of Information Technology for a 500 person company, I have not been happy with Microsoft's business practices for some time now. They have kept their software prices the same or higher, while everyone else in the industry has lowered their prices over the past five years. I believe that they have been able to do this because of their monopoly position in the market for both operating systems as well as internet browsers.

Due to their monopolistic actions, I believe that Microsoft needs a stronger remedy than the one proposed by the US DOJ. I believe that the proposal put forth by the States that dissented from the US DOJ settlement proposal is a more appropriate remedy. As a consumer of many, many Microsoft products, with little choice to change, I urge you to consider a stronger remedy than the current US DOJ remedy.

Subject: Microsoft Settlement
DOJ,

I am a software engineer who has designed software products for commercial and defense companies, using every Microsoft operating system since version 1 of PC/DOS extensively, and have similar experience with older and newer desktop operating systems. For four years, I was a Microsoft "Partner" developing under a Non Disclosure Agreement to Microsoft tools to be used in conjunction with Microsoft Word. I had great concerns that the grossly unfair practices by Microsoft that I had personally witnessed, but was forbidden to discuss per the NDA, would not come out during the recently completed antitrust case. Primarily for that reason, I have read most of the transcripts and rulings published on the DOJ website (listed at <http://www.usdoj.gov/atr/cases/ms-index.htm> <<http://www.usdoj.gov/atr/cases/ms-index.htm>>). Surprisingly to me, most of my concerns regarding Microsoft unfair business practices were adequately expressed in the trial.

I was very pleased that in spite of what appeared to me as gross obstruction of justice by Microsoft exposed during the trial (unbelievable faulty memories, doctored video evidence of lab experiments, memos planted in the "wrong" hands, etc.) that Judge Jackson was able to clearly separate misconduct in court from the facts pertinent to the case, and found both his Findings of Fact and Findings of Law completely accurate to everything I know about the case. I assume that addressing such probably criminal behavior in court should and will be addressed separately.

I am now disgusted beyond words by the near total lack of appropriate punishment, deterrent, and victim compensation in the latest DOJ settlement with Microsoft. It seems

to be less than a slap on the wrist to a company who I believe is a severe detriment to the software industry that I work in (non-competitively with Microsoft). I believe past and present Microsoft behavior is an excellent example of precisely what our antitrust laws were meant to protect the US economy and citizens and businesses from, but are failing terribly to do so with the current settlement offer.

Please do what you can to retract the current offer, and, at the very least, restore some semblance of deterrent to the settlement of this case.

I do not believe that allowing Microsoft to give its products to schools is in the best interest of the public. The school system is the only area where Microsoft does not enjoy a monopoly. I believe that a "cash" penalty is required, which would allow the school system to spend the money as they wish.

I must say that I'm very displeased with the current settlement. I may be biased as I work for a competitor to Microsoft, but the settlement is a near slap on the wrist and offers no real benefit to consumers. In section III, prohibited conduct, you state that Microsoft can still offer discounts, market development allowances, & programs as long as they are "uniformly available" to all OEM's. It is not difficult for Microsoft to come up with ways of making things unattainable except to their "friends" such that they can receive the large discounts. Quite possibly, anyone offering non-Microsoft OS's will sell fewer Windows licenses and fall from the Top10 or Top20 volume group and lose their discount.

In sections D/E Microsoft needs to disclose ways of interoperating with Windows, but that doesn't mean "all" the ways. Frequently, what Microsoft has done is have "secret" API's that they use internally which are much more reliable or fast, thus gaining on the competition. The only way to truly know the APIs is to force Microsoft to publish the source code, something they are completely unwilling to do. I don't believe that this judgement goes nearly far enough to protect us from the Microsoft monopoly. Now Microsoft moves to take over the internet with its .NET architecture, seeking to grab a percentage of every transaction taking place on the internet and holding private records for everyone with a Passport account (which all HotMail users have to have as well as anyone who get's Windows XP, eventually everyone). Microsoft has serious security breaches on a nearly weekly basis, I would love an alternative to .Net/Passport and I hope we get one, but it won't happen while Microsoft destroys all competition.

Subject: antitrust

Microsoft has consistently abused its monopoly position to harm competition. The US government has spent a lot of taxpayer money in order to prove this in a court of law. Now, close the deal and punish Microsoft in a just way. Microsoft is an important company, no doubt, but they cannot be allowed to continue with their current business practices. Allowing them to give software to the schools is not right. Apple has traditionally been in that market and you would effectively be pushing them out of the market. You are playing the way Microsoft plays and that is not right. You must come to a decision which punishes Microsoft. Judge Jackson saw Microsoft for what they were and now it is time for the correct judgement.

To Whom It May Concern:
My wife and I are 100% behind the agreement that Microsoft made with the Department of Justice and nine states. The agreement is fair and it is time that we settle this debate. Microsoft has been the forerunner in its field, and we see no reason to jeopardize a fantastic company. In most free countries of the world, companies are subsidized by their governments. Microsoft is a free enterprise—has tremendous wealth—and innovation. Technology is changing on a daily basis and if want to continue our lead in this arena, we must let Microsoft innovate and get on with their business. We have not been hurt one bit by Microsoft's innovation and products. We remember only too well the nightmare before Windows was introduced. We believe that the settlement is in the public interest. Do not listen to those other competitors who would destroy Microsoft as a viable company. Thank you for your time.

Hello.

I think the proposed settlement stinks. The other 9 states have come up with a far more reasonable proposal, though I think it still lets Microsoft off way too lightly. Their objections to the alternate proposal amount to, "But we thought we weren't going to actually be *punished*! This is punitive!" Please. . . That's the *whole point*! Make them sorry they violated the law, so they

don't do it again. With the DoJ settlement proposal, Microsoft is not punished in any way; instead, they continue to profit from their misdeeds.

Washington, DC 20530-0001

To Whom It May Concern:

I hope that the United States Department of Justice will reconsider the decision to settle the Microsoft antitrust lawsuit and follow the lead of the nine state attorneys general who have rejected this decision to let Microsoft off with a slap on the wrist for its monopolistic practices.

Numerous consumer groups disagree with the decision to settle because they know Microsoft has not been given any serious reason to change any of its practices. Price gouging of consumers will continue. The market will continue to lack choices for consumers. Consumers will doubly suffer as they pay more in an uncompetitive market, while the executives of Microsoft move from being millionaires to billionaires thanks to monopolistic profits.

I am proud that my state's Attorney General, Tom Miller, rejected this Microsoft agreement. I believe that Mr. Miller and the other eight state attorneys general see the many problems with an agreement that does little to affect change in the computer software industry. Splitting Microsoft into two or three companies may not be the proper response, but neither is this.

Your decision to prematurely end litigation against Microsoft is a mistake. A real opportunity exists for the Department of Justice to take a stand and protect not only consumers, but also our free market society. Whereas the agreement does nothing to protect neither consumers nor smaller companies striving to compete, further litigation could effect real change. Please continue to go after Microsoft.

The penalties being placed on Microsoft is a disservice to "Free Enterprise", also, a disservice to the world. The companies/States that are crying should be told to go home and "think of a better way". If the Gov't, DoJ, etc want to get onto something or make a name for themselves, they should go after the "Cable/Elec/Water Companies", now there is a monopoly. Everyone is at the mercy of their rates/rules/etc.

Microsoft has gone out of their way to make the cry babies happy, but nooooo, some just want more out of an Enterprising Company.

From: Steve Wiedemann
To: Microsoft ATR
Date: 1/17/02 12:39pm
Subject: Microsoft Settlement

As a computer professional who deals with many platforms in the multimedia space, the behavior of Microsoft is, in my view, highly anti competitive. The entire industry outside of Microsoft understands that products based on interoperable standards is the key to developing better technologies. All developers may contribute to technical advances as long as the platform remains agnostic, or at least not hostile to a chosen technology. Individuals and companies can compete on a fairly level playing field with the knowledge that users can take advantage of technical advances. Everyone can contribute to our technical landscape and the consumer will see the benefit.

Unfortunately, Microsoft sees every technology it doesn't own as competition that must die. To that end, they have the power

to manipulate the platform [which should be standards agnostic] to cripple or disable the software offerings of their perceived competitors. Microsoft does understand that new technologies not originated by them have a market and they will offer a [generally] crudely inferior substitute for the competing software, thus redirecting the channel of demand to go to Microsoft's door, rendering competing technologies irrelevant and damaging the ability of the user to obtain the performance they seek.

New technologies are either purchased by Microsoft or killed off. If a cross platform technology is purchased or co-opted by Microsoft, most of the cross platform functionality is stripped away to ensure the dominance of Windows and the irrelevance of anything else. If a technology cannot be purchased by Microsoft, a simple change to their operating system or the [now] bundled browser will ensure their version of a similar technology will be as good as it gets.

Microsoft is moving away from interoperable standards as fast as they can. They have already significantly damaged the ability to use technologies like QuickTime, the crown jewel of multimedia, and are working to replace it with the laughable Windows Media Player. Since Microsoft's software integrates very well within Windows, whatever media formats Windows Media Player cannot handle, Internet Explorer or Windows itself will take over thus requiring the complete Windows environment to do things formerly done with the highly agile cross platform QuickTime. As a result, developers write software that speaks specifically to Windows integration which slowly pushes better technologies aside. Since Microsoft makes it very clear which technologies will succeed and fail on the Windows platform, developers have no choice but to develop to the system that ensures success. In effect, Microsoft is dictating

what technologies developers may and may not use, not based on any written orders but on Microsoft's actions designed to pave the road to their sole success. Developers who tow the Microsoft line are handsomely rewarded. Developers who do not will find themselves struggling to open avenues of opportunity. This is technical censorship to the benefit of one company and at the expense of the better world it could be. The Microsoft .NET strategy is intended to render the Internet useless for anyone not using a complete Microsoft sanctioned technology chain. Their goal is for anyone not using Microsoft products to see a blank screen on the Internet which would be a tragedy beyond belief. They are using this precious time while the courts are tied up with delays to entrench these Microsoft specific technologies and entrap millions of individual and enterprise users in their net.

Don't let this happen. It is up to the courts to do the right thing. Break Microsoft into pieces where each division will contribute the good parts of their software to a standards based, interoperable world. Deny Microsoft the ability to leverage Windows to force the rise of their own products at the expense of better technologies and better user experiences. Microsoft will perform better as

a company and will serve the industry better if they broken up and are forced to become less self interested. Otherwise, we are doomed to sink further into a mediocre technology landscape. —

MTC-00013414

From: Robin Colgrove
To: Microsoft ATR
Date: 1/17/02 1:01pm
Subject: Microsoft Settlement

I am sure you are getting a lot of mail, so I will be brief.

I am writing to oppose in the strongest terms the current settlement proposal. Its remedies are incredibly weak and depend entirely upon the goodwill of Microsoft for implementation. Microsoft has already made it clear from its flouting of previous settlements that it has no intention of complying voluntarily with restrictions on its behavior. Even its public statements have made it clear that they have not even accepted their guilt in this matter, despite being convicted, having -some- of the counts upheld unanimously on appeal, and having the convictions be allowed to stand by the Supreme Court. I think it is outrageous that a company found guilty of multi-billion dollar crimes should be allowed to negotiate about whether and in what fashion it should be penalized. This can only increase the perception that the law exists to hammer the poor and that sufficient wealth can buy one a free pass to violate the laws of one's choosing.

It is sometimes said that Microsoft's actions have only helped consumers and that the legal cases against them come only from their competitors. This is grossly untrue. I have been using computers for over twenty years and use on a daily basis computers of all types including Windows, UNIX, and Macintosh machines. Microsoft's practices of monopoly lock-in hurt me every day. Over and over, whether in access to hospital clinical data, NIH grant applications, presentation results, and many other types of data, I find I am forced to use Microsoft software, even though I don't like it and don't want it, not because it is better, but simply because it has an illegally-maintained monopoly. It has taken me enormous effort and resources over the years to keep my

laboratory running in the face of the constant pressure to conform to the Microsoft standard. Since this monopoly has been found to be maintained and extended illegally, this represents substantial harm to me and to millions of people like me.

There are many examples of great harm caused by the Microsoft monopoly (the squashing of innovation, the forced cycle of "upgrades", the loss of consumer choice, etc.), but I want to comment on one area where I have special expertise: viruses. I am a virologist and have studied both real and computer viruses for many years. In the mid-90's, many of us warned that the Microsoft practice of embedding automatically executable programming scripts into its programs (first Excel, then Word, then Outlook/Exchange, and now XP and .Net) posed a serious security risk to users in that they could be used to write software viruses. Again and again this has proved all-too true with one virus after another and billions of dollars in damage done. This is not the place for a technical discussion, but though no system is perfectly safe, these viruses are far, far easier to create and spread using Microsoft software than with UNIX/linux or macintosh alternatives. Virtually all the significant virus damage in the past decade has come from easily correctable flaws in the way Microsoft makes its software. Microsoft does not correct them because the intertwined web of embedded auto-executing code is an important mode by which they achieve customer lock-in and monopoly maintenance/extension. No one would put up with this level of customer abuse except that people and institutions feel they have no reasonable choice but to use Microsoft software. No company could have gotten away with this except one with an illegal monopoly. For this reason alone, Microsoft deserves large and serious penalties. Many good ideas have been advanced for improving the proposed settlements. I want to emphasize two. First, one of Microsoft's key tools in illegal monopoly maintenance has been to use secret file formats and undocumented "API's" connecting to other programs, making it very hard for competitors to write compatible software. As part of any reasonable settlement, Microsoft must be forced to make all its file formats and API's public at the time the software goes on sale. Microsoft complains that this would strip them of intellectual property but this very telling misses the point that they have been found guilty and have earned large penalties for themselves. Second, there must be rapid and serious enforcement of any settlement provisions. The court record shows very clearly how Microsoft has worked to subvert earlier agreements and in so doing they have lost the chance to have a settlement based upon good will.

Microsoft is at present a company with an adolescent character, arrogant and self-absorbed, unconcerned with the harm that they cause others. They will not grow up by choice. Like previous monopolists (such as IBM) or would-be monopolists (like Intel), they need strong Justice Department pressure and the real threat of further serious penalties in order to mature as these other companies have done. As others will point out,

Microsoft is a product of vigorous anti-trust action (against IBM, who otherwise would have absorbed them in the '80s), and is a champion of government intervention in the market (in intellectual property protection). It is typically juvenile of them to claim exemption from anti-trust law now, and is exactly why the Justice Department needs a much stronger and more strictly enforced plan for any settlement that will truly be in the public interest.

From: Joseph Sitoyen
To: Microsoft ATR
Date: 1/17/02 1:13pm
Subject: Microsoft Settlement

I hope the Microsoft Settlement truly remedies the anti-trust nature of Microsoft's dominance of the operating system and software market. In order to ensure that they receive more than a slap on the wrist, a meaningful action must be taken which will ensure competitiveness. Any settlement must require Microsoft "to standardize and publicize the entire set of Windows APIs and the file formats of its Office applications (another key to Microsoft's monopoly "lock-in")—with the express goal of allowing competitors to build Windows software applications, and operating systems, that compete with Microsoft on a level field," as Scott Rosenberg has previously stated. Such a requirement would truly make the Anti-Trust Division worthy of its noble origins.

Respectfully,
Joseph Sitoyen

I believe that the DoJ's settlement with the Microsoft corporation is wholly unacceptable and an egregious error. The proposed settlement has no "teeth" and will only result in further damage to the American consumer, damage which Microsoft has already inflicted upon us for years.

Never mind the anti-trust suit, implications of tax evasion have come to the attention of the public with the idea that Microsoft is refusing to pay dividends to its stockholders because of the enormous tax payment they would have to make on such dividends.

You tell me why a company that has \$18 billion in CASH is not paying dividends.

Microsoft has continually perjured themselves in Federal Court, flagrantly disregarded the rulings of said court, and

now, the DoJ seems to be willing to let the most monopolistic company since Rockefeller's Standard Oil off the hook.

What gives?

From: Stephen J. Lemmons
To: Microsoft ATR
Date: 1/17/02 1:20pm
Subject: Microsoft Settlement

Dear Sir or Madam;

For a new of years I have been watching Microsoft, its products, and the way it conducts business. I've also followed the "Monopoly" court action along with the various proposed settlements. Based on what I have observed, I would like to submit the following comments.

1. Over the years in many court actions, Microsoft has agreed to settlements with promises to discontinue its various inappropriate actions/conduct. In each instance, when things have quieted down, they returned the very same conduct that caused the legal action to be filed. Their promises and signed legal documents mean nothing to them.

2. If they can't get a company to license a feature from their copyrighted software, if possible, Microsoft tries to purchase the company. Case in point; FoxPro, Inc. After purchasing FoxPro, Microsoft Chairman Bill Gates stated in an interview for Database Advisor, that Microsoft would continue to produce FoxPro for DOS (that would at that time have been FoxPro 3.0 for DOS). To date this program still hasn't seen the light of day.

3. Despite court orders to "Unbundle Internet Explorer" from the Windows Operating System, Microsoft to this date has refused to do so. In fact, several of their software packages will not install unless you allow them to put Internet Explorer on your PC.

4. A new software manufacture started up in September or October of 2001. They are offering an alternative to Windows. At Christmas time, Microsoft filed a lawsuit alleging trademark infringement due to the company's name and its products name. The names are easy to distinguish between.

I have read both the federal governments proposed sanctions against Microsoft and the proposed sanctions by the states that disagree with the federal governments. In both cases,

the boat has been badly missed. These sanctions are nothing more than the same type of things done previously with Internet Explorer and in other cases against Microsoft where they continued to what they wanted, placing themselves above the law. There is only one way Microsoft can be brought back in line and made to follow the law like the rest of us; that being a split up into at least two, if not three separate companies. One would develop and produce operating systems, another would develop and produce internet browsers and server software and the last would develop and produce productivity software such as MS-Word, MS-Excel, MS-PhotoDraw, etc. Failure to bring Microsoft back in compliance with the law will have a major negative effect on the development and production of new software and hardware.

Respectfully,

Stephen J. Lemmons

From: David R. Plas
To: Microsoft ATR
Date: 1/17/02 1:26pm
Subject: Microsoft Settlement

To Whom It May Concern:

I am writing in reference to the U.S. government's anti-trust action against Microsoft. I strongly support the position of the Dept. of Justice that Microsoft exerts monopoly power in the computer software marketplace. I also agree that splitting up Microsoft is not the proper mechanism for dissolving the monopoly. However, the goal of the government must be to find a way to prevent Microsoft from leveraging its control over the Windows OS into domination of other areas of the software market. To this end, I strongly support forcing Microsoft to publish all API's of any current OS on the market, and 3 months in advance of any future release of the Windows OS. Publication of the Windows APIs would prevent Microsoft from possessing an unlawful advantage in the fabrication of software that runs within the Windows OS. In effect, Microsoft would be forced to behave as two separate companies: one with rights to modify the OS as it pleases, and another that must work with the published tools provided by the OS to compete with other companies in the development of software. Assuming Microsoft competed well in the marketplace, this remedy would benefit the company by insulating it from further lawsuits concerning anti-trust matters. It would also have obvious benefits for the public and competing companies. Whatever remedy you do pursue, please do not try the previously failed tactic of behavior modification combined with fines. These don't work for any aggressive company, and have already failed in the Microsoft matter. Take a decisive step to end this harmful monopoly.

Thanks for the opportunity to comment on these issues.

Yours,

Dave Plas

In my mind the most un-American thing the US Government has ever done was to bring the suit against Microsoft. One thing this country seems to have a problem with is the American Dream. Bill Gates has lived it and the government can hardly wait to crush him. The lawsuit was stupid. If there was a better operating program than Windows the inventors should put it out there and let the free market decide. Some did and the market decided. They wanted Windows. I want Windows. I want the Federal government to leave Microsoft and Bill Gates alone. Stop trying to kill the American Dream. If the Clinton Administration had been putting its efforts in the correct places 911 would never have happened. But it was too busy trying to crush Bill Gates and Microsoft. End the whole thing.

From: J. Scott Houchin
To: Microsoft ATR
Date: 1/17/02 1:41pm
Subject: Microsoft Settlement

Hello,

Here are my comments on the Microsoft Settlement. The number one goal for the settlement should be to restore a competitive environment where multiple competitors are able to effectively compete to provide application and operating systems products to the consumer. The settlement must allow Microsoft's competitors to do three things:

To write applications that run on Microsoft Operating Systems with equal access to the power and services of the operating systems as do Microsoft applications - To create alternate operating systems that will run applications written for the Microsoft operating system just as well as those applications run on Windows - To create applications that can interchange data and files with Microsoft applications with 100% interoperability There can be no compromise on this issue, as this is the root of Microsoft's illegal exploitation of a monopoly position.

While it is possible to debate a specific solution that meets the requirements I listed, I personally believe that there is only one valid solution that will truly restore a healthy competitive environment: -Microsoft must be forced to publicly document all application programmer interfaces (API's) to the

Windows operating system (both current versions and future versions) and to network accessible products (such as a .NET servers or IIS). The scope of this disclosure must include all software libraries and compiled software that ships with any Microsoft operating system or server product, regardless of whether Microsoft considers that software element a core part of the product, or part of an included add-on service.

- Microsoft must be forced to publicly document all file formats used by its operating systems and application and server products (i.e. the Microsoft Word .doc file format). This will allow users of third party applications to easily and interoperably exchange data with users of Microsoft applications.

- A license to use any relevant intellectual property (with respect to the API's and file formats) must be given to any software developer on a royalty-free and non-discriminatory basis.

- There should be no set duration to these restrictions on Microsoft behavior, the restoration of a healthy competitive environment is dependent on the hard work of third-party providers and the willingness of the buying public to purchase third-party products. The government should consider removing these restrictions only if (through the hard work of third-party developers) Microsoft loses their monopoly position.

Only with all four of these elements would a third party developer be able to create an alternate operating system or application that complete on a level playing field with Microsoft products.

An added benefit to this solution is that, for Microsoft to maintain their monopoly, their efforts must be focused on creating products that are truly better than those of their competitors. For example, if I could purchase a third-party operating system that ran all of my existing Windows applications and read all of my existing files, but never crashed, Microsoft would need to also make modifications to their operating system to reduce the amount it crashes. Even if the majority of people continue to purchase Microsoft product, the buying public still wins, as we are provided with better products.

Once a settlement has been reached, a method to oversee the implementation and compliance with the settlement must be put in place. While some may believe that a specific oversight committee that works with Microsoft will solve the problem, I believe that in the end, that solution will be overly expensive to the public (in terms of tax dollars used to support the committee) and will not be effective.

I believe that the best possible oversight committee is the general software development public. As was proposed a few years ago by a columnist in InfoWorld magazine, I believe that the best way to ensure that all API's and file formats are properly documented is to post a reward, payable by Microsoft, for any developer that discovers an API or file format feature that has not been publicly documented. A suitable starting reward would be US\$10,000,000, payable to the developer

himself (or maybe to a non-profit organization of his or her choice) upon confirmation by a government appointed oversight committee. This reward would increase for every additional API for file format feature that is discovered (i.e. discovering hidden API number *i* requires a reward of US\$10,000,000 times *i*).

The benefit of this solution is great:

- The actual work to verify the documentation of API's and file formats will be spread across a very large number of people, for which doing this work is in their own best interest, by ensuring that they are able to complete.

- The monetary penalty is large enough to be significant given the current financial position of Microsoft, especially if multiple hidden API's are discovered.

- The cost to US taxpayers would be minimal, as the only work that would be required by a government appointed oversight committee would be to verify the discoveries of the public.

In addition, as the US government works to give final resolution to the Microsoft issue, please remember that Microsoft was found guilty of illegally exploiting their monopoly position, and that the guilty verdict was upheld by the Appeals court. In effect, there really is no settlement, in that the law does not require that Microsoft be allowed to provide input on their punishment. The US government, through the justice system, must put in place a solution that serves the best interest of the US public at large, which in general will mean that it is not in the best interest of the Microsoft Corporation.

I have great fear that by allowing Microsoft to pick their own punishment, we are setting a very dangerous precedent for future cases, both civil and criminal.

Thank you,

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Attorney General Ashcroft:

Please hear my opinion on the settlement of the Microsoft Anti Trust Case. I applaud the government for taking the steps to end this long, drawn-out lawsuit. My hope is that you will make the right decision and uphold the proposed settlement. I believe the settlement is more than fair and addresses the issues alleged in the lawsuits and then some. Microsoft is promising to utilize less aggressive business tactics in running their company. Additionally, they have agreed to share some of their technology information, including the intellectual property they have in the Windows internal interfaces and server interoperability protocols. There are more details to the settlement, but most importantly, I understand that the settlement will restore fair competition to the computer industry. Please maintain the current settlement and set a good example for the remaining states that are pursuing litigation in this matter. By doing so, you will help our American economy and American computer industry begin to flourish again. Thank you for your kind consideration.

Sincerely yours,
Anne D. Schwartz

From: Eric Bailey
To: Microsoft ATR
Date: 1/17/02 1:44pm
Subject: Microsoft Settlement

Hello,

Let me begin by saying that the proposed settlement involving donations to educational institutions is like handing Microsoft a golden ticket on a monopolistic train ride. But more on that later. First, I think a "Competitive Market Advancement" plan should be included in the settlement. This would require Microsoft to fund development in other computing companies, namely Apple Computer and Sun Microsystems. A donation of \$250 million to \$1 billion to each company would seem appropriate. Such funds would allow these companies to take on the staff and fund the research and development required for true technology advancements. I believe that only when these two much smaller companies have greatly superior technology will they be able to compete with Microsoft.

I chose Apple because it is the only true competitor to Microsoft in the consumer and

education markets. The core of Apple's new OS X operating system, Darwin, is open source and freely modifiable by third-party developers. Apple's operating system also attempts to "play nice" by being compatible with both Windows and Unix environments. Sun Microsystems competes in the server and programming language markets. Sun's high-end servers match anything from Microsoft. But the real value in Sun stems from the Java programming language. The language was designed from the ground-up to be platform agnostic. For the most part, I can take a java application in a .jar file and transfer it from Mac OS X to Windows to Solaris to Linux. It is such flexibility that gives consumers choice and wouldn't bind them to a single computing platform because of software needs.

Secondly, I am very worried about Microsoft's recent acquisition of Silicon Graphics' (SGI) patents on 3D graphics technology. OpenGL and many underlying technologies have been transferred to Microsoft's control. The result is that Microsoft may eliminate OpenGL, the freely open graphics library, for its own Direct3D proprietary graphics library. It may even use incentives to graphics card manufacturers that force them to drop OpenGL support for Direct3D. Also affected would be Apple Computer (which embraces OpenGL at the core of its operating system) and countless video game companies, such as Electronic Arts, Nintendo, and Sega.

Now, on to the current settlement. Essentially, low-income schools would be granted computing equipment and software from Microsoft.

Suddenly, Microsoft's share in the education market increases. Wasn't the settlement supposed to penalize Microsoft for unfair market dominance? How are these schools ever going to afford a competing platform? Especially given the "deals" on Microsoft software/Intel hardware versus the sideline concessions for Apple products? Such a settlement connotes, "Please continue your monopoly, Microsoft, and as a gift, please take more of the educational market you've found difficult to crack in the past."

If any settlement terms include education, they should be for financial grants only, thus allowing the schools themselves to decide on the computing equipment they need. No special deals on Microsoft-only products should be allowed.

Thank you very much for your time, and I hope to see a fitting resolution to this case soon,

Subject: microsoft settlement

Dear Sirs:

Microsoft has a virtual monopoly on the PC operating system market, as well as the integrated Office software suite and the internet related software. The only effective resolution for the current case is a settlement that requires that Microsoft make the intellectual property for the API code available to developers/companies, so that these other enterprises can have a fair opportunity to develop products that can interface with the Windows operating system and compete with the entrenched products that Microsoft produces. The consumer can then be the judge, to determine if Microsoft really produces a better product, or if another company offers a similar product at a better price, or a better product at a similar price.

Thank you for your consideration.

Subject: Microsoft Settlement
Dear Sir or Madam:

I'm sure Microsoft employees are stuffing this box with propaganda, as they have reputedly demonstrated their willingness and capability to do so, so I have little hope of being heard, but I must speak out against MS/DOJ settlement proposal.

It is objectionable: they are a company of thugs, and are not doing anyone, not our country, not our diversity of technology, not our economy—any favors with their anticompetitive practices. This rapacious lot of doe-eyed "what, ME?" wolverine monopolists severely limits the number of

good choices I have in hardware and software through their vast, rich, well thought out range of both blatant and subtle anti-competitive practices.

The proposed settlement does nothing to stop this criminal activity. And, they make you look bad, by getting away with it. Right now, they are squeezing my company for cash via software licenses like the mafia; quietly pushing UCITA through state governments—how they are getting key individuals to pass this piece of bogus legislation will come to light, I'm sure—and are quashing creative, innovative work that could make us competitive internationally for years.

Microsoft is a bunch of monopolists, with knowledge aforethought and criminal intent. It was so obvious to the judge handling the case that he frankly was overwhelmed—he simply couldn't contain his outrage. That's no reason to call off a lawsuit and hand Microsoft the keys to the kingdom. A more effective remedy would be one that required Microsoft to standardize and publicize the entire set of Windows APIs and the file formats of its Office applications (another key to Microsoft's monopoly "lock-in")—with the express goal of allowing competitors to build Windows software applications, and operating systems, that compete with Microsoft on a level field.

Such a plan would require careful oversight and enforcement, since Microsoft could easily engage in all manner of foot-dragging. If Microsoft set out to be uncooperative, it could release the API information slowly, in deliberately confusing ways, or in a "Good Soldier Svejk" fashion—assiduously following the letter of the court's order while flagrantly violating its spirit. (There's precedent here: This is precisely how Microsoft behaved during the trial when it told the court that, sure, it would supply a version of Windows with Internet Explorer removed from its guts, but gee, sorry, then Windows wouldn't work.) It would include some penalties: you violate this agreement, you consent to being broken up into three companies, each with all of the Windows source code and a third of MS's developers, on a judge's ruling.

I can already hear them howling in protest. Its too bad that their lawyers are so good at beating up your lawyers. . . . For all of us. These are the people you are supposed to protect us from, and I would appreciate it if you would do a better job. I know I don't have as much money as they do, but that's not supposed to count, hm? Get 'em, boys! Its a hard fight, but our country needs them to step back even if their ego won't let them fight fairly. They don't even fight fairly with you, do they?

Subject: Microsoft Antitrust

To whom it may concern;

On your website you request input on the Anti-Trust case against Microsoft. Although I am not well versed in law I do know what a monopoly is, and Microsoft fits the description better than any textbook example I've ever seen. For Microsoft to propose a settlement enabling them to expand their monopoly into the education sectors is, in my opinion, a joke. Granted, their offer to help the less-privileged school districts in our country is a commendable one, but it seems more like they're trying to use this as a publicity stunt! Let's open our eyes a bit! If Microsoft really wanted to help education, they would provide the monies to the school districts for them to use at their own discretion! Providing a license of Windows to these schools is hardly a punishment! It's a boost in their business! It costs Microsoft less than a quarter to copy a disc containing their software! How is this supposed to break up and discourage a monopoly? I must say that I am sick of throwing money into Microsoft's mediocre operating system, horrible service, and I'm especially sick of wasting my tax money on settling this matter, when it is so obvious that they ARE a monopoly, and have NO intention to stop their unlawful practices.

From: Ben Loftis
To: Microsoft ATR
Date: 1/17/02 2:07pm
Subject: Microsoft Settlement

To whom it may concern: I am submitting this letter in response to your request for ideas about the Microsoft antitrust case. In my opinion, Microsoft is trying to stifle new competition by raising the cost of entry into the operating system market. In addition, they are using their monopoly to "lock" consumers into only using Microsoft products. Both of these practices are damaging to consumers. Unfortunately there are already multiple examples of the effectiveness of these practices. BeOS, for example, was a much more sophisticated and reliable product, but it was unable to compete in the desktop OS market because most potential customers were locked into the Windows monopoly. The two most offensive practices are proprietary file formats created by the operating system and their unwillingness to allow other operating

systems to coincide with Windows on the same machine. By bundling common software packages into Windows (email, word processing, html, media files), and then using proprietary file formats, Microsoft has guaranteed that the majority of users will be dependent on Microsoft products to read and edit their own, personal records! As a user of multiple operating systems, I can personally attest that Microsoft makes it nearly impossible to share basic documents between other operating systems.

Because Microsoft invents their own formats instead of using standard formats for these basic file types, they raise the cost of switching to a new operating system so high that most users aren't willing to switch from Windows. The "boot issue" is also important. If an amateur user tries to install Windows in addition to an existing operating system, he will find that Windows has overwritten the Master Boot Record of the boot disk, apparently making the previous operating system, and all it's data, disappear! Although this condition can be reversed, it can be very disconcerting to a casual computer user, and it makes the prospect of installing a new operating system too scary for most people to contemplate. This results in far fewer sales for competing OS developers. I suggest three straightforward solutions to these problems: 1) Require that Microsoft use open-source file formats in any products that are bundled with the operating system, or available as free downloads from Microsoft. (note: this does NOT include Microsoft Office!) 2) Require that Microsoft publish the format of all previous documents that were generated by software that was bundled with Windows. 3) Disallow Windows to overwrite the Master Boot Record of a disk unless the operator explicitly agrees to do so. These solutions would not incur undue cost to Microsoft, nor are they technically infeasible. They simply help make sure that future versions of Windows will "play well with others" and not trap consumers into using Microsoft-only products.

Thank you,
Ben Loftis

Attorney General John Ashcroft
US Department of Justice
Washington, DC 20530-0001

Dear Attorney General Ashcroft:

I am writing to express my feelings about the settlement in the Microsoft antitrust case. Honestly, I thought the whole thing was ridiculous to begin with, but seeing as Microsoft is satisfied with the settlement that has been arrived at, I won't reopen old wounds. It does cause me some concern, however, that the impending threat of further litigation exists. I am shocked that the nine states that are considering such action have the gall to suggest that the settlement was in any way unfair to Microsoft's competitors. Microsoft agreed to a very wide spectrum of terms in the settlement, some of which

were not even at issue in the antitrust case, simply in the interest of wrapping up the suit. Intellectual property rights are to be licensed to competitors, the Windows operating system is to be reformatted to support non-Microsoft software, and Microsoft has agreed not to take normal retaliatory measures against anyone who introduces directly competing software onto the market.

I believe that justice can demand no further satisfaction from the Microsoft Corporation. The Department of Justice needs to let the settlement carry through and move on. I urge you to please support the agreement so they can do so.

Thank you.

MTC-00013441

From: Andrew Bradley
To: Microsoft ATR
Date: 1/17/02 2:14pm
Subject: A fair future for Microsoft.

IMHO, the problem stems from MS being unclear on the distinction between operating system and software applications in its business model. How about this: the OS side of Microsoft must have freely available APIs and no OS feature development be tied to any application being concurrently developed by MS. Not quite open source, but so that any developer can access any or all of the OS1s features. The application development side of the Microsoft can be as secret as they please, since in effect they would be nothing but a developer for their own OS.

As new capabilities are added to the OS side of MS, they must be made available to all developers, including MS1s application development, simultaneously. No cooperation between application development and OS development sides of the business. Eliminate the hand-in-hand development of applications and OS features that support them. MS1s advantage is that it

had a head start in developing applications that take advantage of its own OS1s features. Take away that head start and it is nothing more than a company that sells an OS, as well as some applications for that, and other, OSs.

For example, the MS applications side make a "feature request" to the OS side. So can any external developer. The OS side adds or changes the OS to accommodate any or all developers' requests. A new OS version is released, with equal access to new features by all developers. Then, and only then, can the application side of MS can develop software versions to take advantage of the new OS. At the same time, so can other developers. Equal competition by all developers, and "freedom to innovate" is retained. Developers can write for MS, or any other OS for that matter, on a level playing field.

There you have my two cents worth. Thank you for taking the time.

Respectfully,
Andrew Bradley

To: Microsoft ATR
Date: 1/17/02 2:16pm
Subject: Microsoft Settlement

Put this in the category of: Microsoft should pay MONEY and be required to go under the government microscope for several years. Their proposal to "give" several millions of dollars "worth" of software to schools is an insult to intelligence. This obviously extends their monopoly further.

Better yet would be to provide a substantial cash payment to an oversight organization, which would in turn distribute these funds.

Microsoft would then be watched very carefully for other non-competitive behaviors. However, an even better solution would be an actual reversal of their monopoly. That would entail Microsoft purchasing competitor's products, and installing them (according to the oversight org), AND providing monies to provide for training and upkeep of the systems. Examples would be mass purchases of Linux systems and Macintoshes.

The above case would serve as a punishment to Microsoft, as well as an overall remedy to their past behavior.

Good luck getting them to agree to it, however. I suggest that you will be lucky to actually get any money from them at all.

Thank you all for your time and attention to this case!

Subject: Microsoft Settlement

Dear US DOJ,

I feel that Microsoft's proposed solutions are just a slap in the face of real justice. The Settlements that they have been giving are no more than a mockery of everything that justice stands for. When the DOJ went after IBM and maBell it didn't who this we have to be nice to you junk. The only solution that I see that would be fair to the rest of the world namingly the software developers is to force them into going open source. That is the only true way to bring justice to the software tyrant.

I may seem a little angry with Microsoft because I am. I have lost many hours of sleep and even some important homework because of thier unfair business practices of making other poeples software no-functional. This may only be a small puddle in the mess they have made out of the business world from downtime and lost profits as well as lost productivity in tech support. Have you seen Mac OS X or Linux and other Unix variants downtime is almost a thing of he past. I have been running Mac OS X and Linux the only downtime I have had was when I had to reboot after an upgrade. This is an acceptable downtime. On my PC running Windows 98 I have downtime almost immediatly after I boot up. Blue Screens are a common occurrence. This would not be a problem if it wasn't for the programs that the school I go to teaches only microsoft products because they are the forced standard. There is no reason for the type of problems that I see constantly in all the programs that Microsoft has realised.

Sorry enough about that little bit of background information but the type of problems that I see as a norm is a bad thing that kills this nations effectiveness in the growing business world.

To sum everything up the only solution to fixing Microsoft's harmful business practices is to either force open-source or to null the company all together. To back up the nulling the company look at all of the standards that they have tried to force onto the computer world. For example the WMA format and the

all of a sudden lack of support for MP3's in Windows XP. Microsoft act like the lack of MP3 support as a way to help the record industry stop pirating music. With the evil recording industries trying to make it impossible for little guys like me run copies of CD's in things like my car so I can keep the original in good shape.

How about the active X form of JAVA that Microsoft has been trying to make as a standard. Which cause problems when other non active X supported web browsers and this to me seems like a form of browser prejudice. Like the little browsers like opera a really good freeware browser that doesn't run active X because it is not the true standard of the web.

Now in finally "this time I am not kidding" The only solution to ending thier reign of poor coding and badly written software I feel open-source is the best solution.

From: Eric L. Strobel
To: Microsoft ATR
Date: 1/17/02 5:01pm
Subject: Microsoft Settlement

The proposed settlement is woefully inadequate when compared to the damage the Microsoft monopoly inflicts on this nation. Let us reduce this to a specific example of the impacts of Microsoft's stranglehold on desktop computers, impacts that have never even entered into consideration (as far as I know).

I am a physicist working at a defense contractor, and I simply don't "get" Windows. I find it almost impossibly difficult to use because it just doesn't work in a way that makes sense to me. Instead, I use Apple Macintosh computers (although this argument logically also applies to OS2, BeOS, Linux, and any OSes that might have been were it not for Microsoft's anti-competitive practices). Now, in a fully competitive environment, my chosen OS might be in a minority, but would still be considered an acceptable alternative. However, due to Microsoft's continuing history of predatory and illegal practices, they have achieved an almost total monopoly. In my case, I am SEVERELY limited as to potential employment

opportunities because the Federal Gov't. and its contractors have largely standardized on Microsoft (to the exclusion of any alternatives, which in the case of the Federal Gov't I thought was illegal). This standardization was done, in large part, because "Everybody uses Windows, so if we must standardize on one OS, it should be Windows." I'm sure the problem is obvious. . . "Everybody uses Windows" because Microsoft's illegal practices had absorbed, crushed, or marginalized the competition.

What Microsoft has achieved vis-a-vis other OSes, it has now also achieved (though to a lesser degree) in the realm of web browsers. Netscape has all but been buried by Microsoft in terms of vigorous competition which would lead to rapid product enhancement and ultimately, to consumer benefit. This must not be allowed to stand, but yet the fundamental weakness of the proposed settlement does exactly that.

I strongly urge you to put some teeth back into the sanctions against Microsoft. Even while the process of the proposed settlement was going on, the world saw Microsoft arrogantly proposing a settlement in another set of cases which would have actually INCREASED Microsoft's monopoly! They MUST be taught a lesson! Their monopoly status means there's no competitive pressure to improve their products, resulting in untold billions of dollars of losses to the US economy due to reduced productivity. And, as you can see from my personal example, the potential is there for Microsoft's monopoly to do tremendous damage to individuals as well.

Lastly, regardless of the outcome, I also can't urge you strongly enough to open an investigation into the Federal Government's IT practices and how these have contributed to Microsoft's continued monopoly, even while DOJ was pursuing an anti-trust case against Microsoft. Any settlement with Microsoft will ring hollow while the Federal Government continues to bolster Microsoft's monopoly status.

Thank you.

The proposed Microsoft settlement is a slap in the face of consumers and the computer industry. Microsoft needs to be reigned in before they completely dominate the entire industry and suppress all other innovation. The current administration has completely caved in to Microsoft. Please throw out their proposed settlement and let someone with some objectivity decide what should be done to prevent Microsoft from remaining the 800 lb gorilla of the software industry.

As a retired Judge of a State Court for thirty-seven years I have never seen a party who has lost the lawsuit (having been found guilty of acts prohibited by law) come off with no penalty other than being restricted from doing what the law restricts it from doing in the first place. It is unfortunate that the remedy fashioned by Judge Jackson had to be reversed because of personal failings of the Judge rather than from any defect in his logic or reasoning.

The court should reject the proposed settlement which has come about by a change in government with a different approach toward monopoly. Microsoft should not benefit by stonewalling until this change occurred and should not now be left in the same position of monopoly that it had before the national election. It should be bereft of the power to again violate the law rather than just promising not to do it any more. The ultimate judgment should make impossible further abuses of our free enterprise system.

Subject: Microsoft Settlement

As a software developer and user of Microsoft products, as well as Apple and various Unix/Linux products, I have been following the court case closely for several years. I believe the current settlement as proposed is a complete travesty of justice. The current settlement, while on the surface looking like it might prevent Microsoft from participating in anti-competitive actions, has no teeth and actually goes so far as to tell Microsoft to expand its monopoly by "giving away" it's products to educational institutions.

My first major run-in with Microsoft occurred about 7 years ago while I was trying to write software for Windows 3.11. At the time, I had a need to access physical memory locations on the machine in order to transfer data from a high-end data-acquisition card. After a few days of searching their online help and discussion forums for the necessary API call, I called Microsoft to ask how to do this (at \$75 for the first three calls), and was told that a competitor's C compiler I was using wouldn't work and I needed to purchase the latest version of Microsoft Visual C++ compiler, which I did. After several days of working with this and we were still unable to perform the above task, I called Microsoft back (for a fee) and was told that the Visual C++ compiler was not enough, and I would also need to pay to join their "developers group". When I ask whether this for sure would solve the problem, I was told that they couldn't guarantee it. In the end we finally found some references to the necessary API (marked

"don't use this as Microsoft doesn't guarantee that it will continue to be available in future releases") and used the competitor's C compiler to build the necessary .dll.

Through this entire process, I couldn't help but think "Well, here I am being bribed by Microsoft to tell me, a person who is trying to develop software for their operating system, how to program their operating system." Every week I'm bombarded with more attempts by Microsoft to get me to buy more of their "solutions" or to give up on competitor's products and use theirs. One need go no further than look in the Internet Options menu on Internet Explorer (Tools -> Internet Options). Under the General tab, there are three buttons that you can use to assign a Home Page: Use Current (makes sense), Use Blank (also makes sense), and Use Default (what's default?). The last one when clicked, assigns Microsoft's home page. Why isn't there a button or pull-down menu to select AOL or Yahoo? I have yet to find a way to make the default something other than Microsoft's web page. Why is Microsoft the only company that seems to pull stuff like this? Or if you click "Search" in Internet Explorer, why is the default search engine Microsoft's? Other vendors, such as Apple with their Sherlock search engine, by default include searches from other major sites such as Yahoo, Google, Excite, etc.

Every time I install Windows on a new computer, why is Microsoft Outlook and Microsoft Internet Explorer the only email and web browsers with not one, but two icons on the desktop (one on the desktop, one in the Start Menu tray)? When I install Apple's OS-X, I get Apple's mail program, but I also get IE/Outlook and Netscape Communicator icons with similar prominence. When I install Suse Linux, I get Netscape and Konqueror. Look at Sun and Java. Why does Microsoft insist on not only not using Java, but goes and develops it's own version and basically makes Java unrunnable on their OS?

You're probably saying "well, that isn't illegal", and I agree. But why is Microsoft the only company that pulls stuff like that? The Justice Department has already determined that Microsoft acts in anti-competitive, monopolistic ways. The current court ruling seems to imply that the Justice Department believes that Microsoft is going to forget it's old ways and just start playing "nice". I have seen no such change in behavior over the last few years even after the ruling, and have a hard time believing that the current weak court ruling is going to have any impact on Microsoft and their traditional business practices. Even if you were to stop the blatantly anti-competitive ways, Microsoft will continue to coerce users in ways slightly less illegally until the Justice Department stops complaining. The only way you can solve a problem like this is to separate the parts. Make it so one company sells operating systems and doesn't care who's browser or email client is shipped with the core OS, make another company responsible for Microsoft's other software applications, such as Office and IE, and make a third company responsible for Microsoft's Internet holdings (.NET, msn.com, etc.). Doing this will help (but not fully) prevent each part of Microsoft

from favoring the others over competition. Doing anything less would be the same as doing nothing at all.

In case you believe that I am just "another anti-Microsoft nut", I would say to you that I believe in the last few years that Microsoft has actually done some innovation. I current run Microsoft Internet Explorer on my Mac at home, not because Apple or Microsoft has forced me to or made it too much of a hassle to choose another browser, but because Microsoft's offering runs 2x faster than Netscape Navigator, has better compatibility than iCab and costs less than Opera. This was a choice I made that was not biased by Apple or Microsoft, but instead was made on the relative merits of various freely-competing company's products. Unfortunately I cannot say that same for any computer that runs a Microsoft operating systems.

January 17, 2002
Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001
Dear Mr. Ashcroft:

I am from Cedar Rapids, Iowa. I would like to offer my strong support for the settlement agreement reached in the Microsoft antitrust litigation. While there is much of the agreement of which I am not aware, I do know that Microsoft has agreed to lessen restrictions on the use of competitive software within Windows operating systems, and to promote greater uniformity in its pricing practices. These concessions certainly go a long way in answering the allegations of anticompetitive behavior brought against Microsoft, although I am sure complaints will remain. It appears to me that much of the criticism of Microsoft is the result of their success. I disagree with the idea that successful individual or organizations should be looked upon as targets of opportunity.

I am not a dedicated fan of Microsoft products but I am sure that the long and drawn out litigation is distracting management attention. At a point in time when economic growth is so essential; we cannot afford to have one of our biggest economic engines sitting on the sidelines. Please get on with this agreement and let Microsoft get on with business.

Your time is greatly appreciated.

Sincerely,
Don Wickenkamp

Subject: Microsoft Settlement
To Whom it Concerns,

Everywhere I look I see Microsoft's hand. There is nothing illegal about being large, but it seems that for years they have used that size to influence every vendor in the industry (even Intel) and they show no signs of stopping. I believe everyone who uses computers has and will continue to be hurt be the stifled development of anything that Redmond does not control. And that is the definition of an abused monopoly. The idea of a settlement that "pushes" Microsoft into the education market under the guise of a penalty is ludicrous. Something much stiffer must be imposed for the good of the computing future.

Rick Roesse

Below is a hidden transaction describing the the transfer of 3D technology from Silicon Graphics and Microsoft. Again the affect is subtle, but cumulative and subversive. MS is not going to stop without pressure from the DOJ or other government agency.

SGI transfers 3D graphics patents to MS
By Andrew Orłowski in San Francisco
Posted: 16/01/2002 at 18:03 GMT
Exclusive Silicon Graphics Inc has transferred much of its 3D graphics patents portfolio to Microsoft. These form the heart of a mysterious transaction which showed up in SGI SECC filings last year, with Microsoft paying \$62.5 million for unspecified "intellectual property" rights to SGI. SGI insisted at the time these are "non core" technologies, but sources close to the Mountain View are emphatic that these represent the bulk of SGI's 3D intellectual property assets, a view confirmed by documents disclosed to The Register.

The 3D graphics landscape is scarred with previous intellectual property litigation, and the Microsoft deal has its roots in an earlier settlement between SGI and NVidia. NVidia walked away bruised but with a license for key SGI technology. Unfortunately for the Xbox team, that didn't extend to NVidia's sublicensees and an eleventh-hour deal was brokered that allowed the Xbox launch to proceed on schedule.

So does the Redmond deal represent good value for SGI? Well, SGI has had console ambitions in the past: developing the N64 for Nintendo, but failed to follow through in those early efforts. SGI has since been supplanted in the newer generation of consoles and has even had to adopt the PC graphics products of erstwhile rival NVidia. SGI shareholders will doubtless welcome the cash.

Neither NVidia nor SGI wanted to comment on this article. SGI is in a quiet period pending its next quarterly results next week. Own 3d? However Microsoft's acquisition of the patents has repercussions for not just the console business, but the future of the PC business, too. The question

of who owns the platform was one of the fissures exposed during the Microsoft AntiTrust trial. According to memos released as part of the trial, and testimony from Intel VP Stephen McGeady (who's no longer with the company), The Beast won a showdown with Intel that obliged the 'Zilla to axe its NSP multimedia hardware project.

Microsoft isn't in the PC hardware business, and it's unlikely that the patents will change its technical strategy. But they do add significantly to its bargaining position with hardware vendors, giving Redmond important new leverage. Rival APIs, principally OpenGL, are kept alive through the support of graphics hardware vendors. And for a hardware partner, avoiding a lawsuit, or gaining a contract to work on future versions of Xbox, may well outweigh the advantages from continuing to support OpenGL. Now that's an area that the three men in a boat—the proposed MS compliance body—might care to examine. We'll be watching. (R)

Subject: Microsoft Settlement

Microsoft should not be allowed to get by with just a slap on the wrist, and that is exactly what their proposed settlement would be allowing. The proposed settlement would allow Microsoft to extend their Monopoly into markets as of yet unaffected by their business practices.

Any judgments against Microsoft should be a punishment not a bolster to the company. The proposed \$200 million that Microsoft says it is liable for is nowhere near \$18.9 billion suggested by plaintiff economist. If this is to be a monetary settlement it should be closer to the billions not the millions.

Microsoft's attempt to mask a settlement that is in their best interest behind a veil of charity, lends more evidence to the accusations that brought them to court in the first place. If a donation is to be made to these schools as punishment, that is fine, but it should be a cash settlement and an amount that more reflects the net worth of a company as big as Microsoft.

It is my opinion that Microsoft should have to set up an \$18.9 billion fund for under privileged schools. This fund would provide money to those schools that need it, and those schools would be allowed to use the funds the way that those schools deem fit. These under privileged schools need more than just technology. They especially don't need the outdated Pentium computers running Windows 98 that Microsoft was suggesting. Microsoft was even suggesting that the schools then pay Microsoft for the licensing of the software.

To allow Microsoft to get a way with a lenient settlement would be a crime against the United States consumers, as well as those consumers affected world wide.

Subject: Microsoft Settlement.

My comments on the settlement are that this matter has dragged on for way too long and is continuing to impact public confidence in the economy and American competitiveness in the global market place. The Wall Street Journal some time back had a number of comments from State representatives regarding the PR exposure that they get from dragging the case on ? I'm surprised that the media has failed to take them to task further. Microsoft is a leading light for the US in the World Economy, if one looks at the size of the company relative to organizations such as IBM, GE & Boeing it is rather small. Success has come from 30,000 people working long and hard day in & day out ? not from Bill Gates alone. This case can do much to crush ?the American dream? and cut back the US's lead in the IT industry. Look at Japan and Europe and how they help to drive their national champions ? how do we ready ourselves to compete with them ? we cut our best players down at the knees ? gee it will be great when the software industry goes the way of the US auto & steel business.

Sun & Oracle are both large players but have invested less in R&D and are seeing a decline in business ? their outspokenness and fighting words of expectant dominance contrast drastically with what was discussed in court. AOL TimeWarner is a formidable competitor today, while IBM is a giant next to Microsoft. Dig into any of these organizations for long enough and one can find something to gripe about. Microsoft is probably the closet thing to a model company, happy employees and share holders who have shared in its success and

Millions of customers who have benefited from reduced prices ? surmising over whether or not prices would have been cheaper with more competition disregards where the IT industry has come from and the role that Microsoft has plaid in making computing affordable for the masses. Let the market sort itself out.

I fully support a settlement at this stage and do not believe this case should ever have gone to trial. It is a breakdown in our system.

Subject: Microsoft is a monopoly

Microsoft MUST donate the proposed money (1 billion dollars) in cash and NOT as Windows OS and hardware. It will only help it become stronger and give it an opportunity to capture education market which will defeat the main purpose of this case against them.

Microsoft had brought some executives as witness to support that it is not a monopoly but those witnesses stand to gain by supporting Microsoft. For example, CEO Doug Burgum of Great Plains Software has always tried hard to be acquired by Microsoft. I know this for fact because I have been Great Plains consultant for almost 10 years. Now that Microsoft acquire it for a cool 1.1 Billion dollars only makes the case stronger. Doug Burgum's statements support should be questioned. He is the direct beneficiary by supporting Microsoft. He doesn't care for the technology industry. Similarly Michael Dell stands to gain from a better partnership with Microsoft and therefore supported them. Again not caring that such monopoly is not good to American consumers.

If Microsoft is set free, than DOJ should allow De Beers to operate in America— justice should be equal for all.

I can go on and on. . .
Best Regards,
Dan Pahlajani

I work in the computer industry and have followed the anti-competitive practices of Microsoft for some time. It is my layman's opinion that Microsoft's proposal to donate computers and software to schools will not have the effect of deterring such practices in the future and will actually give them inroads into one of the few markets they do not currently dominate.

In a nation that prides itself on free-enterprise, it only seems reasonable to assign a remedy that will give the guilty party pause in the future and allow the market to freely determine which products it uses. A \$1B settlement of cash to US schools will do far more to promote learning and keep Microsoft from continuing to bully competitors than in-kind donations ever would.

Thanks for keeping America's interests in mind when making this decision.

Subject: Microsoft Settlement

Dear Ladies/Gentlemen:

Microsoft has used its operating system monopoly to destroy its competition in the application field. It has done this through sweetheart deals with Original Equipment Manufacturers (OEM) and utilization of predatory pricing. The sweetheart deals required the OEM to purchase a copy of the Microsoft OS even if the computer was going to be used for Linux. That is power. It is also abuse of power. If your recommended solution does not prevent and punish this type behavior then your efforts are a waste of your time.

The predatory pricing meant that with the profits from their monopoly in the OS they could sell their applications at a lower price than a competitor. Such a low price that the competitor could not make a profit. Without a profit they went out of business. How many of you think that PowerPoint or Word are the "best" applications you have ever used. How many competing applications do they have in the business world? Monopoly is wonderful when it is benevolent. Microsoft, however, is not and never will be a benevolent monopolist.

If you correct their behavior to the point where others can compete you have done your jobs and done them well.

Good luck,

Subject: Microsoft Settlement

Greetings,

This is in response to public comments on the proposed Microsoft antitrust settlement: Microsoft's monopoly power is evident directly on the Internet where it now controls the browser field, claims the highest use on the internet via its portal, and is claiming control over travel, personal banking, and many other fields.

With Windows XP this power got translated to an almost complete destruction of the publishing businesses on the net (like landings.com) by introducing a new "feature" into Internet Explorer (as default part of the OS) which would highlight words appearing in the browser window and hyperlink these to Microsoft controlled sites. In other words, Microsoft would have hijacked the work of the independent publisher to its own benefit, and due to its monopoly power in the field, the publisher would not have any recourse. This was stopped at the last moment due to public outcry. But Microsoft does not often listen to the public, nor should this be an outcry, it should be up to a healthy market place, where multiple players control the field, so that no single company can dictate the state of the market or its "features". This single new "feature", which would have led to a real destruction for thousands of working, producing, and income providing sites on the net, is only an example. In every single field of influence in the software and many different related net or phone hardware elements, Microsoft monopoly is evident and creates huge havoc to the industry. It limits the choices we make in product introductions (knowing that Microsoft will grab a successful product, copy it, and sell it under its force—prevents many efforts in-house), and other choices are simply discarded because Microsoft already enjoys monopoly in a particular product field. There is endless untold limitations on creativity, and untold losses incurred due to the monopolistic activities of this giant.

There are thousands of small publishers making a living from independent efforts such as Landings.com. These efforts are crucial to the related publishers, but often (just as in the case of Landings.com) provide an extremely important independent source of information, databases, news, opinion, and comment to their respective industry segments.

I am against any settlement that does not break up Microsoft into separate OS and application companies. Without such a separation the result would be quite catastrophic for large segments of the software, hardware, and Internet industries.

Sincerely,
Yonatan Yoshpe, President, Landings.com

To Whom it may concern-

I am writing to state my opinions about the proposed Microsoft settlement. The settlement does not punish Microsoft as it should. Instead, it gives Microsoft a boost when entering the education market due to software deals. The true manufacturing costs of producing the free Microsoft software has not been taken into consideration. The retail value of the software varies greatly from the actual cost of manufacturing. Hence, I feel that the Department of Justice is having the wool pulled over it's eyes by good lawyers.

I want to see Microsoft split into three great companies. It's Office and Internet Explorer software should be separated from it's operating systems. This combination is lethal to competition. Office, Internet Explorer, and Windows should stand alone against competitors. How many people have even heard of alternative word processing applications? Not very many, and I am having a hard time myself. Microsoft Word, has complete control. This is strangling competition. In addition to strangling word processing competitors by connecting themselves to the OS, Internet Explorer is destroying the Browser competition. By connecting Internet Explorer so tightly to Windows, it is hurting competition.

Please break up Microsoft into three great companies. Office, Internet Explorer, and Windows would be three great separate business's for consumers to choose if they wish.

Sincerely,
Tobe Harvey

Subject: Microsoft Settlement

Dear USDOJ,

Here's my short opinion of the settlement: It is basically a light slap on the wrist with a wink. A company as large and powerful as Microsoft is too ingrained in our societies daily life (professional and personal) for any settlement to hurt it.

What Microsoft needs is to be taken down and dragged through the mud like they have done to other companies, but what would be the point, since that would stop the normal day to day flow of American life. This lawsuit against Microsoft should have happened 10-15 years ago. It's too late now. If you levy heavy fines on Microsoft, Mr. Gates will just take it out on the willing morons who are slaves to this mediocre OS. Only God knows why consumer groups didn't stop Gates and Co. years ago when they released lousy product after lousy product. With all the hacking that is done to the Windows OS and security issues with DOS, Windows and Internet Explorer, Microsoft is the software equivalent of the

Ford Pinto. The DOJ has to take a lot of responsibility for these failures. How can a group of products so insecure, so dangerous to security keep on getting worse? When everyone else is looking the other way. It's too late now to punish them properly. They're too powerful and successful. Instead of punishing them, which the average consumer will end up taking the heat for, order Microsoft to radically change Windows and all their products so that they are basically the safest software anywhere in the world. We can all agree that security is more important than anything else in the world right now and forever. That's my 2 cents worth of babbling. Thank you for taking the time to read this letter.

Sincerely, David J. Lennard

Re: Engulf and Devour

As an educator, a longtime business computer user and a concerned American, I have followed the Microsoft Antitrust proceedings with increasing shock and disbelief. Something must be done. Since the beginning of the proceedings some years back, Microsoft's practices have not changed and its position within the industry is stronger than ever. There behavior is criminal and should be treated as such. Every time I think we are close to reaching a solution and putting this behind us, the MS monster rears its ugly head again.

The breakup proposal was far from perfect but would have eliminated the most

egregious problem by eliminating the conflict of interest created by the leveraging the monopoly power in the OS area to build monopolies in other areas. Yes, it would have created two monopolies in place of one; but would have leveled the playing field on the software end allowing for competitors to make inroads.

Microsoft has repeatedly shown that it is incapable of policing itself and their latest proposal was unbelievable in its naked promotion of self interest, furthering my conviction and that of many Americans that they must be made to face up to past abuses and to admit to wrong doing or be desolved as a corporate entity.

Subject: My opinion

I feel it is the People's and the government's obligation to ensure that

companies such as Microsoft do not abuse our system of capitalism, which in most cases, infringes on our Democracy as a whole. It is time these huge conglomerates, such as Microsoft pay for their abuses in our country. Hopefully this will send a message to all other companies, which never seem to pay for their abuses, such as Enron, Ford, etc. Do your job. Don't let their power and wealth scare you.

Subject: Microsoft Settlement.

As a student in the IT field who is nearing graduation I feel compelled to comment on the proposed final settlement between the DOJ and Microsoft corporation. I will be entering a workforce that is compelled to often use products that are less technologically superior and more costly than alternatives. This is due to Microsoft's illegal maintenance of its monopoly in desktop operating systems. Having read the proposed settlement, I feel that it is too lenient and contains too many loopholes to be effective in restoring competition to the desktop computer operating system market and the desktop application market. I also feel that the proposed remedy does little to rectify what has happened to the companies that were crushed by Microsoft's illegal behavior.

It should be clear that with Microsoft's recent entries into almost every consumer electronics device market that Microsoft will seek to drive growth in these markets by leveraging the power of its illegal monopoly. Already we have copy protected audio CD's that will only play on Windows computers and take advantage of the WindowsMedia Player format. Over 90% of all DVD players will soon recognize WindowsMedia format as well. These are direct consequences of the illegal maintenance of their monopoly. What about Apple's operating systems as well as the free Linux operating system which many more people are running every day? As it stands right now there are audio CD's that will not play on my computer if I am running Linux and I feel that the proposed settlement would do nothing to change this matter. As it is outlined in the settlement Microsoft could claim that releasing any API's for WindowsMedia Player would violate the security loophole that they have built into the settlement and further the reliance on Windows.

I also find the section dealing with the technical committee to be absurd. This allows MS to choose one of the 3 people assigned to oversee it. I wish that if I was ever convicted of a crime that I could oversee part of the makeup of the parole board. But of course that only happens for corporations with 30 billion dollars in cash. This board would also only have authority for five years and does not seem to have much power to punish MS if they continue with their wrongdoing. I am publicly against the proposed settlement and call for a stronger remedy that does not allow Microsoft to continue its past practices.

Please understand the strangle hold Microsoft has on the computer software industry. Their clout deepens year after year through continual strategies of political lobbying, hostile takeovers, and bullying maneuvers towards consumers and businesses. With their now current proposal of "donating" computer handouts to underprivileged schools instead of paying the proposed cash settlement, this tactic further restricts the very nature of the whole initial debacle; that of restricting competition. The RIGHT thing to do would be to have Microsoft front the billion dollars and let the schools decide which is the better candidate of computer systems, rather than receiving corporate handouts of second rate PC's and unreliable software.

thank you for giving me this opportunity to write to the Department of Justice.

"The only problem with Microsoft is they just have no taste, they have absolutely no taste, and what that means is—I don't mean that in a small way, I mean that in a big way. . . .so I guess I am saddened, not by Microsoft's success—I have no problem with their success, they've earned their success for the most part. I have a problem with the fact that they just make really third rate products."

January 17, 2002
Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft,

I am pleased that the Department of Justice and Microsoft have reached a mutually acceptable agreement in the Microsoft antitrust lawsuit. I sincerely hope that the designated Federal judge will approve the proposed terms of settlement which I believe are both fair and reasonable for all parties.

However, I am concerned about the other related antitrust lawsuit against Microsoft that represents the interests of the nine states which do not concur with the above approach. It is obvious that they are very biased and motivated by a desire to support several of Microsoft's strongest competitors which are resident in their states, (e.g. Sun Microsystems in Massachusetts). They have seized the opportunity to attempt to "level the competitive playing field" versus Microsoft by means of extended antitrust litigation. At no time during the past two years has there been any substantive evidence presented which shows that the general public customers have been unfairly victimized by the alleged monopolistic actions of Microsoft. Instead, these nine

states are trying to divert the focus of the issues in such a manner as to further provide some competitive advantages to their constituents. This is wrong.

In view of the present state of the U.S economy, it is time to end this legal action and devote our country's efforts and resources to meaningful activities that will promote the general welfare of the American public. I respectfully request that you move to terminate any further efforts to prosecute Microsoft in this regard.

Sincerely,

Robert N. Shelgren

Hello, I am currently not happy to see Microsoft not split up, for years I have been oppressed by others that use Windows, and the Macintosh has always been ahead, and Microsoft is trying to get ahead of the law. Not one company even among the wealthiest obtain the power to buy themselves out of trouble. By buying out companies, they never want to have competition. Apple works hard to keep their competition alive, and the alligators at Microsoft are attempting to get into Apple's remaining pond. Their suggestion of distributing free computers was hypocritical to their monopoly scandal. I must also mention that if they want to settle out, it should have been with the betrayed Apple customers.

Thank you,

Subject: Microsoft Settlement

Dear esteemed members of the DOJ ruling on the Microsoft case: I would like to express my strong concern in the pending decision in the Microsoft Antitrust settlement.

I am a certified teacher and IT professional as well. I am equally comfortable on the Windows and Macintosh platforms. Simply put, letting Microsoft donate PCs, software, and money to schools is not a punishment, it is a reward. This is already a part of their business plan and would strengthen their monopoly on software in one of the few realms in which they were not the omnipresent player.

Apple has long been an advocate for education and has many technological initiatives in schools. If Microsoft wishes to try to create a monopoly in yet another area of business (education software, making Windows the dominant platform in schools), it is essential that they not be aided in this effort by the US government. This seems to completely reverse the reasons why Microsoft was taken to court in the first place.

I certainly hope that Microsoft decides, for philanthropic and not business reasons, to put time, money, and effort into helping education in the US. Microsoft should not be

allowed to put software and money into schools as part of a plan to increase market share. Letting them do so would be completely counterintuitive. Thank you.

Sincerely,

A concerned cross-platform educator

Subject: Microsoft Settlement

Dear Justice Department,

I want to commend you on successfully convicting Microsoft for its antitrust violations and documenting its many anticompetitive business practices over the years.

Further, I urge you to consider harsher punishments for Microsoft than are contained in the currently proposed settlement. The settlement rightly protects the rights of computer retailers to include competing browsers, icons, applications, and operating systems pre-installed in their products. However, it does not do enough to protect end users and competing operating systems. I recommend that Microsoft be required to publish openly the file formats for its Word, Excel, and PowerPoint applications, which are so frequently included as email attachments that the inability of competing products to view them properly helps protect Microsoft's Windows and Office monopolies.

MIT's Unix-based campus network development has given the world valuable technologies such as the X window system and Kerberos authentication. Yet we at MIT, like the rest of the world, cannot read and write publicly traded documents in the ubiquitous .DOC, .XLS, and .PPT formats without purchasing both Windows and Office from Microsoft, for a cost of \$600 per machine, plus the cost of upgrading hardware for the high memory requirements of Windows XP. Forcing these file formats to be published openly would allow real competition in the lucrative office software market, which in turn would bolster competition in the desktop operating system market.

The recent decisions by Microsoft to exclude Apple's Quicktime movie player and Sun's Java runtime environment in its new XP operating system show that the company still values eliminating competitive threats far above consumer choice and convenience.

The settlement you choose must not therefore rely on the goodwill of Microsoft or the belief that they will follow the spirit of the remedy rather than merely the letter. Any loopholes you leave them will surely be exploited.

You are currently in the valuable and hard-won position of having found this monopolist guilty of literally hundreds of anticompetitive acts. We as a nation and marketplace have a rare chance now to put an end to it. I urge you to make the proposed settlement harsher toward Microsoft, not just preventing future practices but also penalizing them for their past acts that have left lasting damage to the industry. Most importantly, I urge you to require open publication of the proprietary file formats Microsoft still uses to maintain their operating system and office software monopolies.

Thank you for your time and consideration.

Subject: Microsoft Settlement

I think the proposed settlement for the Microsoft Antitrust case is a mockery of the American Judicial system. In essence, their penalty would be to donate antiquated Hardware (computers), Microsoft brand Software and a measly sum of money to the only remaining sector of American life that is currently outside the scope of their monopoly, the education market. This settlement would, in the long run, serve to benefit Microsofts interest by opening the door for them into an as yet untapped market. A market that has been served faithfully and reliably for years by their only true competitor, Apple Computer. Furthermore, this settlement may damage, and even drive out of business their rivals. Practically granting Microsoft a government approved, total monopoly of the Software market.

Microsoft's case is consumer based. Yet their proposed settlement revolves around the education market. They are attempting to manipulate the Courts in order to serve their goals. It is the most disgusting display of predatory business practice I have seen from Microsoft to date. Microsoft started out by mistreating and misleading consumers. But now they have grown up, and are disrespecting our Courts.

I believe the original penalty, a split up of Microsoft, was a fair and beneficial to our society. Microsoft makes to much of a profit to be affected by any financial penalties. I urge you, in the name of fair business practice, and for the good of our consumers, reinstate the Split and send a message that we will not tolerate abusive corporations in the United States of America.

Thank You,
Casey Arman

Date: 1/17/02 3:24pm
Subject: Microsoft Settlement

Dear Sir or Madam,

I write to you during this public comment period to express my profound disappointment with the Department of Justice's proposed settlement in the Microsoft case.

In my opinion, the proposed settlement fails to ensure competition, fails to impose any significant penalty on Microsoft for past anticompetitive practices, and fails to dissuade such behavior in the future. Finally, it is my opinion that such remedies as are included in the settlement lack effective enforcement provisions.

Critical to any meaningful remedy would be a requirement for Microsoft to standardize and publish its proprietary Windows applications programming interfaces (APIs), as well as the file formats of its popular Office applications. Publication of and adherence to APIs is commonplace across the software industry. Having public APIs and open standards allow interoperation of many products from disparate sources. This encourages innovation and broad compatability among products, and ultimately benefits the consumer.

As long as Microsoft is allowed to keep details of its APIs and file formats selectively hidden, it can ensure that any particular non-Microsoft product will not work consistently and reliably with its operating systems or Office applications. This further leverages its monopoly powers to the detriment of innovation, competition, and consumer interest.

I also find it disturbing that the proposed settlement includes no redress for or restriction on monies that Microsoft earned as a direct result of its anticompetitive practices. There is no provision to surrender any of these funds, nor even to prevent the company from using them in the future to buy up and squelch its competitors' products or the competitors themselves.

Finally, the enforcement provisions of the proposed settlement are far too weak to have substantive impact on a company with Microsoft's resources. Given the company's history of repeatedly flouting attempts to regulate its monopolistic behavior, it is my opinion that the inspection mechanisms to ensure compliance with DOJ settlement provisions need to be much more rigorous, and the penalties for violating them draconian. His Honor Judge Penfield-Jackson's suggested remedy of breaking up the software company would probably give Microsoft's top executives some pause. Anything less seems unlikely to have a notable effect.

From: Kris Spiesz
To: Microsoft ATR
Date: 1/17/02 3:38pm
Subject: Microsoft Settlement
Findings of Law

The findings of Fact and Law where untouched by the appeal. As such, why does the settlement in the initial whereas section state that "this Final Judgement does not constitute any admission by any party regarding any issue of fact or law."? This feels like giving up much of what has been gained.

Open Source Several sections (III.I.1, III.I.3) of the Settlement state that APIs will be available to other companies that can show a business case for needing it. Open Source Software, by its nature, is not a business and thus cannot show a business case for anything. Note that Microsoft has declared to the press that currently the most important competitor to Microsoft is Linux, an Open Source product. SAMBA, an Open Source interoperability product, would also have problems under this settlement.

Security Loophole Section III.J.1 of the settlement entitles Microsoft to not make available its APIs if a security concern can be raised. As such, given Microsoft's past

historical behavior, Microsoft is likely to put just enough security between items to ensure that any APIsw Microsoft shares are useless without the security APIs not available to Microsoft's competitors.

Enforcement. There is no clause for enforcement in the settlement. If Microsoft violates the settlement a new court case will need to be started to do anything about enforcement. Historically this takes three to seven years, thus is likely to run beyond expected termination.

Termination is five years long enough for this settlement to run. Given the past history of litigation between Microsoft and the US Government, Digital Research, etc.; I expect that five years is not nearly long enough. Twenty would be better.

Microsoft has made the government lawyers look stupid. Or maybe they've just been bought off. It's clear to all us software users that the company concentrated on establishing a monopoly instead of product quality. Their software doesn't work well and doesn't have the feature I want but I have no choice because the bought up or ran off any business that looked like competition.

I'd like the government to do its job, protect consumers from predatory businesses. Make Microsoft open up its software so competition can happen. Breaking up the company would be best.

The government lawyers look like idiots or crooks letting them stall and beat down the first decision. It's like convicting a killer and letting him stay out of jail to kill again. That's what Microsoft just did with the XP, kill competition again. I may have to upgrade to XP to maintain up-to-date compatibility but I don't need any of XP's few new features and I don't like the way the software invades my privacy and narrows my choices. Get off your ass and do your job!!!!

Give them back their bribes and political contributions!!!!

Disrespectfully,
Paul Haney

MTC-00013484

From: Dick
To: Microsoft ATR
Date: 1/17/02 3:39pm
Subject: Settlement with Microsoft

I am opposed to the proposed settlement with Microsoft. Microsoft has been held to be a monopolist but is continuing to exploit its monopoly. Not only does it overcharge for its software, Microsoft continues to act in ways that only a monopoly can get away with. Its newest software products (Office XP, XP At Home) are keyed to fail (stop working) if the user changes her hardware configuration. So if I replace a failed hard drive or decide that I need a new modem then I must call Microsoft to plead for a new key code to get my system to keep working. And if there are any (inevitable) snafus or Microsoft does not believe me or agree with me? Why then I might have lost all access to important

financial records, be unable to continue electronic commerce and go bankrupt. Rational business people would not incur such risk if there were viable alternatives but Microsoft has used its monopoly position to systematically stamp out alternatives. A competitor could not use such extortionate methods. Subaru (Fuji Heavy Industries) might disallow warranty claims if I change the configuration of my car but they have no legal basis to disable its operation and attempting to do so would guarantee their quick exit from business. Microsoft would like to be able to remotely intrude into customers computers to sabotage working software. That is one of the goals of the UCITA state legislation they back.

This is only one example of Microsoft's arrogance and abuse of monopoly power. It is vital to the future of this nation that Microsoft be stopped. They must be stopped from crushing innovation and alternatives as they are bent upon doing. The proposed settlement does not come close to doing that and will see continuation of abuses.

Thank you for your attention.

Subject: Microsoft Settlement

Dear DOJ,
Microsoft's illegally acquired dominance in computer operating systems is enabling them to dominate network protocols and services. From both a personal and professional standpoint I would strongly urge the DOJ to pursue the strongest possible punishment so that Microsoft is rendered incapable of controlling the future of the Internet.

For example, Microsoft products should be disqualified from any tax-funded technology use within the US Federal government, including all Federal employee computing and federally funded educational technology programs.

Alternative operating system and application software developers would then have a significant opportunity to recover from Microsoft's anti-competitive crimes.

The wealth Microsoft has generated is a pittance compared to the costs associated with de facto use of their mediocre technology and the untold lost opportunities for productivity improvement and technological advancement that an even playing field would have allowed.

The more the DOJ does to eliminate Microsoft's ability to propagate proprietary technology, the better the world of technology will be for the citizens of this country.

I continue to be amazed at the continuing behavior of Microsoft and the continuing information brought to light.

Yesterday I read on slashdot (<http://www.slashdot.org>) that Microsoft has purchased the rights to the OpenGL graphics programming interface from Silicon Graphics.

This API is in direct competition and is superior to Microsoft's DirectX API. These programming interfaces are used for creating computer games. The only intent Microsoft has in purchasing the OpenGL patents is to kill OpenGL, leaving DirectX the only tool available to game developers. Since OpenGL is used for creating games for the Linux platform, this also serves to eliminate the availability of games for Linux, forcing computer game players to use Windows.

I don't understand why Microsoft is allowed to purchase competing technologies, given their continuing monopolistic behavior.

To the United States Department of Justice,

I'm a self-employed computer consultant working in eastern Washington. As a small business owner/operator, I don't have much time to spend on superfluous activities like composing long editorial diatribes. After all, I have to be the janitor, accountant, tax lawyer, bread winner, well. . . you get the picture.

In any case, I felt compelled to add my voice to this issue of the "Microsoft Settlement." I've been in the the computer and information technology industry for 18 years. In those 18 years, I have personally seen how the Microsoft monopoly has developed, from its embryonic beginnings in the early '80s, to its stranglehold in present time.

I am a true believer of capitalism, and hold dearly to the idea that you get what you work for. But when a company controls all but 5 percent of the world's computer systems, something needs to be done. This is not speculation or exaggeration, it is a fact. When a customer, or supplier, can order any computer system they wish from a top-tier PC manufacturer, as long as it comes with a Microsoft Operating System, it's gone too far. Allowing Microsoft to continue on its way will only hasten the development of the Microsoft refrigerator, Microsoft Motor Company, Microsoft Burger King, and Microsoft Grocery Store line.

The computer and information technology industry needs true competition in the operating system and productivity software markets. Please add my voice to those that hope for a settlement that would at minimum, break Microsoft into two parts, operating systems, and productivity applications. Anything less than a breakup, will do nothing to stop the monopoly. Even then, the two Microsofts would own their respective markets, but at least it would hopefully put an end to the unholy alliance

between the two, and allow some semblance of competition.

Subject: In reference to the Anti-Trust case.

While a capitalistic society is necessary and desirable, there is a line that companies should not cross on their journey to success. I approve of the charges set forth against Microsoft claiming that they are a monopoly. However, I do not think that a punishment that really is not a punishment would help. I was deeply pleased that their punishment would not be that they must donate Windows based machines to poorer school, because in reality that would actually help them. Of course all this already happened. What I would like to see happen with this case is, Microsoft would have to start bundling Netscape or Mozilla web browsers, and remove their seamless interaction with Internet Explorer, but rather allow the user to chose which Browser Windows should interact with "seamlessly."

Also, I believe Microsoft should have to pay educational facilities with the intent of technology. However, in the interest of the free market, they should be able to chose their own OS, Parts, and Applications they would like to use. In reality, many schools prefer Apple/Motorola based systems because of their network ease.

All in all, I am sure this will work out, and the best decision will be made.

Thanks for your time,
Emory D. Dively

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a

serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Dan Shipos

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers.  Subject: Microsoft Settlement
 To Whom It May Concern:

I wanted to take a moment to let you know how strongly I feel about this case. I am appalled at the things Microsoft has done and the things that they always get away with. As a computer software professional, I think the detriment they have caused to our industry is immeasurable. They claim to innovate, but they simply squash whomever they can. They claim to leverage disparate technologies, but they simply buy out the competition and throw it away in preference of their own product. I don't think that Netscape is the only company or group of people to have suffered at the hands of Microsoft. I think Apple may be one of the hardest hit, as a company. I really feel that the entire population has suffered, though. The lack of viable competition to this juggernaut of a company has slowed (and stopped, in many cases) the rate of innovation usually experienced in our industry.

I find it difficult to express my disappointment and anger at the outcome of every failed battle against Microsoft. Please, just take into account that I represent a large

group of unsatisfied people in the public that wish something would be done to protect us from the iron-fisted rule of Microsoft. Just because they have a potentially limitless barrel of cash, does not mean that they should be able to do whatever they want.

Microsoft deserves to be punished. I think they should have to pay the billion dollars they offered, but 100% of it should go towards competitive software and hardware. Buy Apple Macintosh computers and software from Corel and smaller independent software vendors. Let Microsoft feel the cutting edge of their own money.

Thank you for your time and I respect the difficulty of your decision.

Please take your time and consider the ethics lesson our future leaders will receive from the outcome of this case.

Sincerely,
 Ted Rust

 Subject: Microsoft Settlement

The opinion stated here is mine and does not reflect the opinion of my employer.

As a Windows user, a Windows developer, and a Macintosh user, I think that a settlement for Microsoft abuses of its monopoly should include a mandatory development of all Microsoft non-operating system software (such as fully featured Microsoft Office) on other operating system platforms than Windows, especially for Mac OS X and possibly Linux. The Visual Studio Suite should also be completely portable to Mac OS X. This will ensure that Microsoft will not be able to use its Windows OS monopoly to crush competition from Apple. The mandatory period should be long enough (5-10 years) to make sure that these software development efforts will be mature.

Sincerely,
 Songsdhit Chongsiriwatana

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With

the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,

Karen Antunes

MTC-00013527

From: Douglas Aalseth
 To: Microsoft ATR
 Date: 1/17/02 4:05pm
 Subject: Microsoft settlement

The proposed settlement is a total sell out. I cannot say too strongly how disgusted I was when I read the details. I have been working in the computer industry for over a decade on many platforms and can without any hesitation say that Microsoft has measurably hurt its competitors, the industry, and this nations computer infrastructure. They deserve to be as severely punished for their crimes as the rest of the industry and this country has been punished by their monopoly.

The current settlement proposal does nothing to punish Microsoft, to redress its past actions, or even to do anything to prevent future rapacious behavior. After all Microsoft has a well documented history of signing legal agreements and then ignoring them. It is a total sell out being proposed for purely political reasons by the Bush administration. The punishment proposed by the trial judge was set aside by higher courts on technical grounds, not due to any intrinsic flaw in the remedy. It is still the best answer. Only by dividing Microsoft into many parts, perhaps many more than that proposed by the trial judge can Microsoft be forced to give up its monopoly. To do anything less would be to betray the trust of the American people and to undermine their belief in our judicial system. We did it a hundred years ago with Standard Oil. It is now time to do it again.

I strongly urge you to reject this settlement and impose a fitting punishment, one even harsher than that proposed by the trial judge.

 Subject: MICROSOFT SETTLEMENT

To the Dept. of Justice,

Enough is enough of hounding Microsoft. From reading The N.Y.Times, The Wall Street Journal and other publications, it is perfectly clear that the litigation against Microsoft has been (and is) politically motivated out of competitive pique. In its short life, Microsoft has given us consumers, the world over, an innovative & high quality product (second to none) which has enriched our lives. Microsoft has been accused of predatory marketing practices—not so. In my opinion, Microsoft's marketing strategies are in the best tradition of American Capitalism and economic competition. Those who can't compete should work harder or just drop out of the fray. In the best interest of the U.S. economy and the consumer, all litigation against Microsoft should be resolved and terminated as quickly as possible so that Microsoft can get back to doing what it does best—research and development of software. Microsoft has made America proud.

Sincerely yours,
 Marcia Pe?a Thompson

From: Dan Herman
 To: Microsoft ATR
 Date: 1/17/02 4:13pm
 Subject: Microsoft and the OpenGL patents
 Any question whether Microsoft now finally plans to play well with others? They just purchased from SGI the patents to OpenGL. Make that ClosedGL.

Can you explain why Microsoft would want to own, as opposed to license, those patents? If you can't, then you haven't been paying attention for the last 10 years.

Perhaps it's to leverage their competitors out of the graphics industry by obstructing OpenGL progress and thereby advancing the cause of their own closed-solution, incompatible Direct3D? OpenGL is already struggling to stay current in the face of D3D's standards-excluding march across the application developer landscape. If Microsoft is successful in bringing on the collapse of OpenGL, I'd find it very difficult to imagine that Apple or Linux could survive (unless they licensed D3D). The lack of a D3D engine for the PlayStation or Nintendo's Game Cube means that ultimately these companies would follow Apple's & Linux's demise or they would be forced to license D3D from Microsoft. All of those alternatives are very bleak pictures. As a Microsoft developer for 15+ years, I'm quite sure that's precisely what Bill has in mind.

Please, someone, make this nightmare end!

Attorney General John Ashcroft
 US Department of Justice
 950 Pennsylvania Avenue, NW
 Washington, DC 20530

Dear Mr. Ashcroft:

I don't feel that Microsoft was treated fairly at all in this matter. The government seems to be persecuting this company for being too good at what they do and making a product that many people like. The government should support American companies like Microsoft that do well and make a hearty contribution to our economy.

This settlement is not only good for getting Microsoft back in business but it will have a direct impact on the consumer as well. By

increasing access to Microsoft's code, more programs with greater Windows compatibility can be designed and they can work better together. Both of these factors are a big draw to many people and I know that people especially those who daily depend on Microsoft products, will be pleased with it.

Please let's all get on to more important matters and leave this mess behind. The settlement will help us do that and will bring an end to this case.

Sincerely,
Patricia Lakoff

MTC-00013536

From: John J. D'Alessandro
To: Microsoft ATR
Date: 1/17/02 4:24pm
Subject: microsoft settlement

I am trained as a physicist, but have quite a bit of technical expertise in computer use and work both as a High School physics teacher and as a consultant on both Windows platforms and Macintosh platforms.

Microsoft products are on nearly 100% of hard drives, particularly if one includes applications along with the Operating System (OS) involved in this case. Microsoft is clearly a monopoly. Microsoft's dominance has grown in the last 3 years, despite the fact that Apple Computer has been one of the few profitable computer manufacturers, and that Apple has a proprietary (non-Microsoft) OS. Also, there has been the growth of a free version of Unix (a competing OS), called Linux. While Linux has gotten quite a bit of press, it has not been able to grow due to lack of commercial software packages (like Microsoft Office). Microsoft Windows (in various versions) has crept from about 90% to about 96% of the market in the last 10 years according to the IDC corporation which logs these things. This means they have grown stronger in dominance.

Microsoft has cash reserves in the tens of billions of dollars. It has monthly PROFITS in the tens to hundreds of millions of dollars. Microsoft is an extremely cash-rich, low production cost company. It can afford a lot of punishment before the punishment really stings. There recent proposals have been insulting in that they have want to "give" a small amount of cost worth of goods, rating at suggested retail value, and services to schools. This would allow them to defacto infuse themselves into one of only a few market segments in which Microsoft does not dominate, while allowing a great Public Relations campaign, and all at very little real cost to the company. That was, in my opinion, showing contempt to the courts.

Microsoft should be required to pay billions of dollars in fines. They should not be allowed to continue practices like adopting industry standards, and then changing them. A recent example, try to use Apple Computer's Quicktime plugin with the Internet Explorer XP on Windows XP. You can't, because microsoft insists their architecture is "better." They have, in fact, disabled the internet software plug-in architecture that has been around for over a decade and was introduced in Mosaic and then Netscape Navigator, I believe. It is an industry standard. All other versions of Internet Explorer use it. Now Microsoft wants to drop it. They are mean and nasty in business dealings, and they need to be regarded as such. They are not "evil," but will use anything to their advantage. Please do not let their final "punishment" end up being a reward.

From: GORDYmac 2K
To: Microsoft ATR
Date: 1/17/02 4:46pm
Subject: Microsoft Settlement

Microsoft should not be able to expand their market share as a result of any settlement.

Rather, the courts should force microsoft to adopt standards in HTML (based on the W3C), XML, OpenGL, and other open standards—and not allow them to modify these standards in their own software. Microsoft cripples their competition by "adopting" standards like HTML, and then using their monopoly power to force the industry to change the standards. They have done this with HTML and XML already.

Now that they have purchased some of SGI's intellectual property, it's only a matter of time before they try to force OpenGL out of the 3D graphics arena. Furthermore, they should be forced to pay damages to every company mentioned in Judge Jackson's opinion. They have seriously hurt these companies, and they should pay damages. Furthermore, this would reduce the court's workload, because if you awarded damages here, then companies could not do it in the future.

Finally, Microsoft should not be allowed to continue charging extremely high prices for their software. Please stop them. Thanks for hearing my opinions.

MTC-00013542

From: Kris Brinkerhoff
To: Microsoft ATR
Date: 1/17/02 4:45pm
Subject: Microsoft Comments

To whom it may concern:

I believe that Microsoft needs to be punished just like any other company found guilty of practicing a monopoly. The industry usually has to conform to what they say they are going to support or not support in their operating system. To have your hardware item listed as being "made for Windows" gives you an edge over the competition. As for their trying to appease the government by providing PCs to lower income students and schools, they should actually provide Macintosh computers or cash otherwise they are again undercutting competition and widening their customer base and dependence/influence upon them once again.

Also if they have a piece of software on CD they can just duplicate the software on the CD. It is pretty much like being able to print their own money. They can copy as many as

they want and call it 500 million in software because they are selling the license to use the software. The damages should be paid in monetary figures not in software which can be produced once and published an infinite number of times.

Thank you for your time.

Hendersonville, NC 28791
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft:

I am writing today to express my opinion in regard to the Microsoft Settlement issue. I am a supporter of Microsoft and feel that this litigation has gone on long enough. This three year case has been costly, and I believe it is time to focus on more pressing issues. The settlement that was reached in November is a complete agreement. Under it, Microsoft has agreed to share more information with other companies and to follow pro-competitive procedures, which will make it easier for other companies to compete. Microsoft has agreed to design future versions of Windows beginning with

an interim release of Windows XP, to provide a mechanism to make it easy for computer makers, consumers and software developers to promote non-microsoft software within Windows. Microsoft has also agreed to make available to its competitors, on reasonable and non-discriminatory terms, any protocol implemented in Windows' operating system products that are used to interoperate natively with any Microsoft server operating system.

This settlement is thorough. Please support this settlement so that this dispute can finally be resolved.

Thank you for your support.
Sincerely
Larry Heimbinder

Subject: Microsoft Settlement

I could go on for a week spewing out reasons why Microsoft needs to be stopped at all costs from it's ambition to control all of the world's information, but suffice it to say there are no words to describe how often and how much Microsoft has hurt and will hurt us all. Most of the computer using world cannot see the war of coding they are waging in the underpinnings of their operating system. They are able to keep this war completely concealed from 99.9% of the population due to people's ignorance about the subject. If Ford wanted to make a truck engine that got worse gas mileage than it was capable of on purpose, just to damage the US economy, slowly, over a 20 year period, do you honestly think anyone would find out? What if they were the sole makers of 99% of the vehicles in existence? Such is what Microsoft can and does do to YOU. Even if a small population KNOW that ANY other computer platform is better than Microsoft Windows, just try convincing a 99.9% majority of that! Impossible. Impossible to compete against their monopoly.

Subject: Microsoft Settlement
Public Comment:

I must say I am astonished that anyone would call this a "settlement". It appears to be a billion dollar gift to Microsoft. They DID lose their case, right? The "settlement" gives them a way to dump old equipment, and a guaranteed entry into a key market dominated by a competitor (public schools). If I came in as a CEO with such a business "solution", I'd be praised and get a big salary increase. To be given this by the federal government as a penalty for "losing" a case? WOW!

As you can see, I think this so-called settlement is absolutely absurd, and I convey my opposition in the strongest possible terms.

Sincerely,
Eric P. Godfrey

Subject: Microsoft comments

Though most of the information I may have gathered about the Microsoft settlement may be somewhat inaccurate, I do believe that Microsoft deserves to be punished.

For what it's worth, I am an Apple Macintosh user and college student. I am writing this in support for Microsoft to show a bit more "software fairness" for not only Macintosh platforms, but many others as well.

From what I have recently understood, Microsoft is trying to show its compassionate side by giving up to \$1 billion to needy schools in hopes to alleviate itself from these concurrent lawsuits. And though this may be a good for schools, Microsoft only intends to give away its very own products and refurbished PCs serving its operating system, while forgetting about support for any other platform. This, in turn, could cause problems for school districts who may rely on the sole usage of say, Apple products.

In my honest opinion, I believe such things as Microsoft is doing (or has done) are wrong and perfectly define the word "monopoly." Such things are the epitome of the word.

It is my hope that Microsoft be brought to justice and that in doing so would realign equal opportunity and give consumers the "right to choose" benefits that should be practiced diligently within our technological industry, not oppressed by Microsoft.

Sincerely,
Jim Robinson

Subject: Microsoft Settlement

I am baffled at an arrangement where Microsoft actually gains ground in the educational computer industry (where a smaller competitor has a healthy share of the

market) as a settlement for misconduct and unfair business practices. Any provision of equipment or software donation (in educational or other environments) in lieu of actual cash actually promotes the further purchase and use of Windows and Windows-compatible PCs. I cannot imagine that Microsoft would provide schools with anything other than their own product—even for schools who would, if given a choice, select another product.

I agree with the position of Apple Computer, Inc. in their objection to this proposed settlement and request that the Justice Department demand a more equitable solution—one that does not pave the way for increased future sales via “donations” from Microsoft. Do not reward this company with future profits disguised as restitution for past wrongs.

Thank you.

From: Rick Russell
To: Microsoft ATR
Date: 1/17/02 5:06pm
Subject: Microsoft Settlement

Hi. A quick comment about the Microsoft/DOJ Settlement.

I'm concerned about the following section of the settlement: A. Microsoft shall not retaliate against an OEM by altering Microsoft's commercial relations with that OEM, or by withholding newly introduced forms of non-monetary Consideration (including but not limited to new versions of existing forms of non-monetary Consideration) from that OEM, because it is known to Microsoft that the OEM is or is contemplating: . . . (2) shipping a Personal Computer that (a) includes both a Windows Operating System Product and a non-Microsoft Operating System, or (b) will boot with more than one Operating System; or

If I read this section correctly (and I readily admit that I am no lawyer), Microsoft is prohibited from putting commercial pressure (“retaliate”, “altering commercial relations”, etc.) on companies that choose to ship a non-Microsoft operating system and a Microsoft operating system on the same personal computer.

Let's say I sell 5000 computers with Windows, and 1000 with Linux. Another company sells 4000 with Windows, and 1000 with Windows and Linux. Both companies purchased the same number of Windows licenses, but the first company is not protected by the prohibition because they didn't install Linux and Windows on the same computers. The second company is protected, because all of their non-Microsoft offerings include the corresponding Windows product on the same computers. And what about computers that can't run Windows? Apple, for example, is a consumer of Microsoft's Office for Macintosh product (in fact, they sell it with new Macintoshes). But you can't run Windows on an Apple Macintosh, you can ONLY run the Macintosh operating system. By definition, Apple cannot comply with this clause of the

prohibition to protect itself from commercial retaliation. Can Microsoft therefore retaliate against Apple (e.g., by charging more money for copies of Office that Apple resells to customers), in an attempt to undermine Apple's business and force its customer to move to Windows PCs?

I will grant that this prohibition does not explicitly permit Microsoft to “retaliate” against companies that choose to ship non-Microsoft operating systems without Windows. But I don't understand why Microsoft gets special treatment in this regard. Surely the prohibition should be broadened to the general case: that Microsoft cannot retaliate against a customer simply because that customer chooses to do also purchase products from a competitor. Any computers that a company sells without a Microsoft operating system are not Microsoft's concern.

From: Kevin O'Hehir
To: Microsoft ATR
Date: 1/17/02 5:12pm
Subject: microsoft anti trust case.

I recently purchased a computer from Dell and returned it. Here is a copy of the letter I mail to Mr. Dell I also find it quite interesting that Microsoft has been called a monopoly and is allowed to extract monopoly profits. Take a look at the cash and marketable securities it holds. Then try to find another monopoly that is as rich as they are. Microsoft came out with a new operating system XP and doubled the price for the upgrade and for a new system. It is confusing to me how PC manufacturers continue to drop prices, but the monopoly has raised them.

Thanks in advance for taking time to read my email. In closing, Microsoft has done positive things for consumers and the computer industry as a whole by setting standards, but in doing so, they have extracted monopoly profits from consumers and businesses. Look at it from a business perspective no debt and a lot of cash.

January 10, 2002

Dear Mr. Dell:

Regarding RMA 23497302

Recently, I purchased a Dell Dimension 4300S computer. I received the free memory upgrade to 256K and I upgraded the video card and harddrive. Although I already have 4 computers, I was very excited to receive this one because I heard that Microsoft XP was a very stable operating environment and I was having problems with Disney Magic Artist (Classic) crashing on windows 98.

I received the computer; set it up; and installed Disney Magic Artist and tried to run it. Magic Artist would not load and computer told me I could send a report over the internet to Microsoft and Microsoft would look into the problem. I tried this but this did not work either. I am assuming this did not work because I did not set up internet access set up on this machine.

Then I search XP help for compatibility issues and found that I could flip a switch

to get the program to run in Windows 95 mode. After flipping the switch and rebooting, the program still did not run. I was slightly frustrated at this point. So I decided I would poke around and see if pinball was on the computer. I found that it was and I started the game. Immediately, I noticed that the ball spit in two when it was halfway down the pinball table. I had played this pinball game at least 3 years ago on a windows NT machine which was not designed to play games and there were never any graphics problems with that game. At this point, I decided that I had my fill of the new computer and new operating system.

Regrettably, I decided to package the computer up and send it back to Dell. I would have kept the computer if I would not have immediately experienced the apparent design defects.

In closing, I would like to add that it is very unfortunate that Microsoft continues to use consumers as testers of their programs. Dell has lost a sale because of poor operating system design by Microsoft (and possibly undersizing the video engine by Dell). I hope that in the future your sales are not impacted because Microsoft or any other software vendor has not done sufficient testing to find the bugs in their programs. It appears that when a product is released too early some companies rely on free testers (the public) to uncover the bugs. If a consumer purchased a car and the steering, headlights, turn signals or any other item had intermittent problems a recall would be done on a fix provided. When a computer is purchased, the consumer gets the opportunity to talk with a technician over the phone and fix the problem themselves. I do not have time to spend with a technician on the phone fixing a brand new computer and neither do a million other consumers.

Thanks in advance for reading my comments.

Sincerely,
Kevin O'Hehir

Subject: Microsoft Settlement

Dear sir or madam:

If Microsoft wishes to settle this case, please do not allow them to use what may

look like generosity to capture a new market share. Microsoft has proposed to offer millions of dollars of support to the education market, which I fully support. However, this cannot come in the form of free Microsoft software which would cost Microsoft next to nothing to provide while at the same time extending their monopoly into the schools. If this settlement is considered by the DOJ, please ensure that Microsoft pays in cash, not assets, with no strings attached, so that the schools are free to choose the software that they need in each individual situation. Please take these issues into consideration, and thank you for your time.

Subject: Microsoft Settlement

To the United States Department of Justice, I'm a self-employed computer consultant working in eastern Washington. As a small business owner/operator, I don't have much time to spend on superfluous activities like composing long editorial diatribes. After all, I have to be the janitor, accountant, tax lawyer, bread winner, well. . . you get the picture.

In any case, I felt compelled to add my voice to this issue of the "Microsoft Settlement." I've been in the the computer and information technology industry for 18 years. In those 18 years, I have personally seen how the Microsoft monopoly has developed, from its embryonic beginnings in the early '80s, to its stranglehold in present time.

I am a true believer of capitalism, and hold dearly to the idea that you get what you work for. But when a company controls all but 5 percent of the world's computer systems, something needs to be done. This is not speculation or exaggeration, it is a fact. When a customer, or supplier, can order any computer system they wish from a top-tier PC manufacturer, as long as it comes with a Microsoft Operating System, it's gone too far. Allowing Microsoft to continue on its way will only hasten the development of the Microsoft refrigerator, Microsoft Motor Company, Microsoft Burger King, and Microsoft Grocery Store line.

The computer and information technology industry needs true competition in the operating system and productivity software markets. Please add my voice to those that hope for a settlement that would at minimum, break Microsoft into two parts, operating systems, and productivity applications. Anything less than a breakup, will do nothing to stop the monopoly. Even then, the two Microsofts would own their respective markets, but at least it would hopefully put an end to the unholy alliance between the two, and allow some semblance of competition.

Best Regards,
Jesse Mireles Yakima, WA

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I have heard about the proposed settlement between Microsoft and the federal government. It seems like a reasonable solution to me, and I urge you to support it.

Microsoft is giving up a lot here; even agreeing to give easier access to programs from competing companies, and changing how it handles prices it charges to computer makers. Microsoft will, for example, give coding to its competitors, which will allow them to place their own products on a Windows-based system. Also, Microsoft will agree not to retaliate against companies that use or promote non-Microsoft software. Clearly, this settlement doesn't let Microsoft off easily. It's time to get this lawsuit behind us. The settlement offers the best opportunity to get past this lawsuit and get the nation focused on business again. As such, I support it.

Sincerely,
Richard Meckley

Subject: Microsoft Settlement

I would like to voice my opposition to the proposed settlement with Microsoft.

Allowing them to pay their fines in their own products only enables them to further restrict the market the operate in. It is unfair to but our public schools in the position of having to choose what they may consider to be an inferior product because they are free. Perhaps making Microsoft pay their fines in cash and establish an endowment that would make grants annually to schools in need to buy whatever technology products they desire would be a better solution. I believe to allow Microsoft to get away with a plea bargain that essentially strengthens their monopoly is foolish.

The Justice Department should make an example of them. Breaking the law is breaking the law.

Subject: Microsoft Settlement

Hello,

Although I am not a United States citizen, I am a Canadian who is very concerned about the lenient settlement the US DOJ has come up with in the Microsoft Anti-Trust case.

While I've followed this case with much interest in the past, I was provoked to register

my opinion with you today after learning that Microsoft had procured 'intellectual property rights' for assets from Silicon Graphics Incorporated last year.

It GREATLY concerns me because SGI currently owns the licensing rights to OpenGL—a set of 3D graphics APIs that much of the 3D industry is built upon. Though the deal was made by completely legal measures (a backroom deal between SGI and Microsoft), the implications of Microsoft owning OpenGL are tremendous.

Microsoft currently develops (and forces down many a manufacturer's throat) their own 3D APIs called 'Direct X'. OpenGL is a direct competitor and is free for developers to implement. Its foundation is also a type of open source project, as the name would imply. Apple's Mac OS X operating system uses OpenGL as a core technology as do hundreds of pieces of software from scientific applications to 3D video games.

Should Microsoft terminate OpenGL, it would destroy many companies that make software with OpenGL exclusively. It would automatically make Microsoft a leader in 3D software where it had very little presence in the past. It would also severely limit the options for developers and force them eventually to license Direct X from Microsoft—a closed API.

I sincerely urge you to reconsider your soft settlement and side with the 9 opposing states who are calling for far more appropriate action like the break-up of the company into smaller pieces and the unbundling of "middleware" products from the operating system. I also urge you to remove clauses and language that give Microsoft the ability to decide for itself what 'middleware' is and what is a monopolistic takeover and what is not.

Microsoft's size and budget as well as their buy and destroy attitude have already severely altered the software landscape for the worse. Please show them the United States won't tolerate such blatantly anti-competitive behavior from ANY company. Your decision here affects far more than just US citizens.

From: Diane Cunningham
To: Microsoft ATR
Date: 1/17/02 5:32pm
Subject: This case must be settled

The Microsoft case has dragged on for far too long. The reason for the protracted prosecution of Microsoft is that other companies and individuals who have found it difficult or who have failed to compete successfully in a highly competitive marketplace insist on depicting their failures as the result for egregious acts by Microsoft. The Justice Department should consider the source of some of these complaints before

punishing those who succeed in the free enterprise system. The Justice Department should consider the message that it is sending to the American public, the business community and to our youth when they consider the punishment that will be issued against Microsoft. The message should be exclusively about monopoly. It should not be about issuing rewards to those who not only were not damaged by Microsoft but who would not exist if it were not for Microsoft. It should be about assuaging the ailing egos of those who could not keep the pace and it should not be about delivering revenue into the hands of those who have not earned it, have not been damaged and who do not deserve to receive such benefits.

Microsoft—whether the Dept. of Justice likes it or not—has done more to initiate and carry on the technology revolution than has any other company or sector of this country. Let us be done with this witch hunt and proceed with that revolution. The Justice Department has issued strict guidelines for the future business transactions of Microsoft. That combined with the anticipated penalties should be sufficient. The Justice Department should put an end to this trial; stop supporting an untold number of attorneys—the only true benefactors of all of this; and tell the nine states to go home and balance their budgets without the aid of Microsoft.

The greatest benefactors of Microsoft and it's work have been the American people. Microsoft has opened a new world, created innumerable new jobs and enhanced the lives of the American public. The Department of Justice is supposed to act for the benefit of the American public in cases such as this. Not on behalf of a select group of wealthy private interest groups. Perhaps it is time for the Department of Justice to remember their marching orders. If the American people were truly polled, this would have been over long ago.

Subject: Microsoft Settlement

I would just like to point out that if the DOJ backs off on this issue that the future of the US is in the hands of Microsoft. You can say goodbye to any personal freedoms and privacy in the future. This company, has thumbed its nose in the face of the DOJ and President Bush appears to be in complete support of the illegal actions and behaviour of this corporation. Their intention is to have a piece of their hardware and/or software in every home and once that is done, they intend to fleece the country. Microsoft must be required to pay a fine that is substantial to them, it must be in cash and it should go to the people that have had to suffer with their inadequate software. Then the company should be split into at least four separate companies. The software division for operating systems, the software division for web browsers, the UltimateTV division and now, the Xbox division. This illegal practice of tying the software together and making competitors software run worse in their operating system cannot be allowed to continue. The problem is that Microsoft has

already released a successor to the software that they are currently on trial for, so the decision must have a far reaching grasp to stop them from doing what they've already done again with the release of Windows XP.

Thank you,
Erik N Snyder

US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

The Tunney Act mandates that after a settlement to an antitrust suit, in which the Department of Justice is involved, there must be a 60-day period of public comment and review before a decision is made final. I am submitting this letter to make you aware that I am in favor of the proposed settlement between Microsoft and the Department of Justice.

I am a believer of the free market system in which the government takes a hands-off approach. I did not see anything like this over the past three years. The government claimed to be helping people when they brought Microsoft to court, but were they really? During the time from the announcement of the antitrust suit till now, thousands have lost their jobs, companies have been closing at alarming rates, and our economy has sunk into a recession. This has to stop, and that is why I support the settlement. I agree with the part of the settlement that prevents Microsoft from retaliating against computer makers who ship software that competes with Microsoft's. This will open-up the industry and encourage competition.

I appreciate this outlet so my opinion can be heard. I fully support the proposed settlement between Microsoft and the Department of Justice.

Sincerely,
Allan Nadler, Jr.

From: Abbott, Christopher
To: 'Microsoft.atr(a)usdoj.gov'
Date: 1/17/02 5:39pm
Subject: Microsoft settlement public comment

To whom it may concern:

I feel the proposed settlement with Microsoft falls short in several areas. I also do not feel that this proposal, though it be expeditious and favored by approximately half the plaintiffs, to represent the desires of the American public. I believe this for several reasons.

1—Microsoft has been found to be a persistent monopolist by the prior Court(s) in this case. Through Microsoft's written communications, court depositions, and by their very actions they have shown this to be true. Indeed, we have seen one of the other pending legal actions against them have a settlement brought forth, just like this case. However, it was turned down by the presiding Court due to it being seemingly skewed towards aiding their monopoly. What kind of a company, under trial for antitrust activities, puts forth a settlement, in any legal proceeding, that aids its monopolistic behavior? From all this evidence the public has seen and heard, how can we believe that the company is negotiating in anything close to good faith? I would almost have to put forth that any agreement Microsoft agrees to is not one worth accepting.

2—This judgment, while achieving several things that will hinder Microsoft in certain areas, does not where near encompass the future of the company. Many industry analysts and pundits have stated that Microsoft is "betting it's future" on .Net and web services. Why then does the settlement deal with mostly OS-based issues, which are perhaps Microsoft's past and partial present but in no way it's future? This kind of a monopolist is different from others prosecuted in the country's past. There is no way Standard Oil would ever do else but produce oil, up and down the supply chain. That can not be said of Microsoft. When they began, they were a software company. Then they became an operating system software company. Then they branched into multimedia services. Now they are pushing towards web-based services. While the OS is the cash cow that feeds their monopolistic activities now, it will not be in the future, other things will be. The rendering of this

court will mean nothing if it does not take that into account. And Microsoft knows this and is expecting this to be the case.

3—I believe in the guiding principles of capitalism. Indeed, I have several friends who work for Microsoft and I wish them no ill will. To me, it would seem that the problem with Microsoft is not the programmers or the people who work for it. No, the problem seems to be the people who run Microsoft. From their predatory activities to garner a monopoly on the desktop, to their railroading OEM's to utilize their software alone, to their most recent leveraging of their monopoly by restructuring their licensing agreements to attempt to force businesses to increase the speed of their upgrade cycle; Microsoft has consistently shown that the people who are guiding them are ruthless profit-mongers with no morals, who do not have the best interests of their users or the American public at heart. Why then, is there not any provision in the settlement to deal with the actual cause of the problem? There should at least be a provision in the agreement for the future punishment of Microsoft executives, should they be found to continue their monopolistic practices, albeit beyond the scope of this agreement. I personally feel there should also be an agreement for the punishment of current executives for their actions, but I have little hope that shall occur.

In the end, Microsoft is a monopolist, period. End of story. While I am not suggesting that the example of Standard Oil should guide the Court's decision, I do say Microsoft should come away from these proceedings with little more than a slap on the wrist. Otherwise, I may as well begin ignoring everything I hear about Linux, Apple, IBM, Sun and the rest, for it won't be too long before they are nothing but "monopoly shelters" for Microsoft to hide behind. Microsoft will garner as much of the market as it feels it can take before the government steps in and then will rest on its laurels, growing fat (as it is now with it's \$36+ billion in accrued unused cash), stagnating the industry and the information technology revolution as a whole in the United States.

Please, I ask the Court to do the right thing. Reject this settlement and force the parties to go back to the table at least. Perhaps even push them to follow in a similar fashion to the dissenting states. They have the right idea for limiting this monopolist and it's unscrupulous executives from continuing to perpetrate their illegal activities on the American public. Thank you.

Sincerely,
Chris Abbott

Subject: Microsoft Settlement

Microsoft's proposed settlement for the antitrust case is outrageous. They are, with their proposal, thumbing their noses at the Justice Department. Their proposal has

practically no disciplinary value and would unfairly increase their market share in an already competitive area (the education market). This action would also seriously cripple Apple Computer, a cooperative company that has driven the computer industry to continue to innovate. In my opinion, the Justice Department should discard their proposal outright.

A hefty monetary fine on Microsoft would not be an adequate punishment. Microsoft could just raise prices momentarily to cover their losses and still continue to do business as usual, making their monopoly stronger. What I would suggest is to, once again, look into breaking up Microsoft. It is a very viable idea and would be easier to ensure that they do not continue to practice business illegally. Microsoft can be divided into three parts very easily: Operating Systems, software, hardware. In my opinion, this is the best method of punishing Microsoft not only because it curtails their strong-arm business tactics, but because it benefits the public with increased choices on the market.

Please remember that Microsoft has been taken through anti-trust suits before and been found to be conducting business in an overly hostile manner. In each case, Microsoft has broken their promises to do better and ignored restrictions placed on them. It is time to deal with this company and put it in its rightful place.

Dear Mr. Ashcroft,

I think that this whole case stinks. I can't believe that Microsoft was even charged with this in the first place. Microsoft is being attacked for being successful and should instead be praised for helping out the economy like they do. Microsoft is now going to have to share its source code for Windows, which will essentially give freely to competitors what Microsoft worked hard to develop. Microsoft doesn't need to be punished any more than that.

Also, I hope that you do whatever it takes to get the other states that refuse to join onto the settlement to sign on and do what's in the public's best interest. I appreciate you taking the time to listen to my comments on this issue. I know that many people feel the same way and I hope you take our opinions into account.

Sincerely,
Carole M. Bullick

Subject: Microsoft Settlement

This settlement is contrary to every sentencing principle. Primarily, it flies in the

face of both general and specific deterrence. This will deter no one from abusing monopoly power, most obviously not Microsoft. Rather, it encourages disrespect for the law and fair competition because there is no negative consequence to the illegal behaviour. A monopoly that uses its power to crush competition can now look forward to:

- no punitive sanctions IF it is prosecuted,
- having conditions of doubtful effectiveness imposed on it, that MAY hinder some of its future malfeasance.

If this settlement is concluded, it will beg the public to conclude that it was motivated by politics rather than principle—that this administration looks the other way when its friends do wrong.

Thank you for your consideration.

Re: Tom Miller, Attorney General of the State of Iowa, My hero.

Dear Ms. Hesse:

As you know, at least ten consumer groups disagree with your agreement to settle the United States Department of Justice antitrust lawsuit against Microsoft Corporation. Microsoft has little incentive to change any of its practices. Their concessions of handing over some operating systems code and offering manufacturers some sovereignty over Media Player amounts to little more than a light slap on the wrists for a multi-billion dollar company. I hope that you will reconsider the decision to settle the United States Department of Justice antitrust lawsuit against Microsoft Corporation. American consumers may have been overcharged \$20 billion by the Microsoft monopoly. Your agreement with Bill Gates' company does nothing to rectify past sins by this company or protect against future gauging.

I am proud that my state's Attorney General, Tom Miller, rejected this Microsoft agreement. I believe that Mr. Miller and the other eight state attorneys general see the many loopholes and problems with enforcement that does little to affect change in the computer software industry. Splitting Microsoft into two or three companies may not be the proper response, but either is this. Microsoft is spreading its dangerous monopoly into everything it touches. I currently have Qwest DSL, which is bad enough, but they are forcing me to take MSN now even though they can't even help me transition my account. They (MSN) are so

inept that for now they have agreed to let me remain on Qwest. Then, they have the GALL to put stuff on their website like "Learn why one million people just switched to MSN. ." Don't you think that is a bit misleading? I could go on and on. Microsoft is like testicular cancer: Slow growing, but it kills you just as dead someday. Your decision to prematurely end litigation against Microsoft is a mistake. The agreement offers no real incentive to stop monopolistic, anti-trust efforts. It won't help much smaller companies compete and it doesn't serve the American consumer. Please continue to go after Microsoft. It is a duty of the Justice Department to protect the average citizen from companies that have grown too large and too powerful by questionable business practices.

I wonder if Arthur Anderson also audits Microsoft? Hmmm.

Subject: Microsoft Settlement

Hello:

I'd just like to comment on the Microsoft Settlement. I believe that Microsoft should not get away with giving any sort of software or hardware directly to the schools. This will, as we already know, illegally encroach on Apple's leading position in the education computer market. In addition, even if Microsoft only offered software compatible with Mac and Windows, they would still be neglecting the market for Linux software (which they do not manufacture software for). Even though Linux is not a hugely popular OS, it is becoming increasingly used in schools as training for systems administration. I think the best way to settle this would be for Microsoft to give cold, hard cash to the school and let the schools themselves decide what to buy, instead of being obviously coerced by Microsoft to use their products instead of the competition's. Thank you for listening to me.

Subject: Microsoft Settlement

To whom it may concern,

Personally, I believe that the proposed settlement does little or nothing to change Microsoft's business practices. I would recommend that you review their recent purchase of intellectual property from Silicon Graphics Inc. The pertinent point is not the purchase itself, but the leverage it will give Microsoft in forcing hardware vendors to abandon support of an open source graphics standard, OpenGL, in favour of Microsoft's own proprietary graphics

engine, Direct X, or similar. They are simply up to their old tricks, even in the middle of this so called "settlement". Nothing has been settled, except perhaps, the question of whether Microsoft is powerful enough to intimidate even the United States Department of Justice.

I have absolutely no doubt that Microsoft will use any and all means to eliminate any company, technology, or open source solution that they perceive to be an obstacle to their total domination of any market they set their sights on. They have demonstrated this behavior time and time again and will continue to do so until the company is restructured such that it can no longer exert such power over it's competition. Splitting up the company is the only sensible remedy, and the amount of money, certainly in the billions of dollars, that Microsoft has cost American industry due to the shoddy performance and security of their software products might serve as an appropriate starting point when considering punishment for their misconduct.

From: Brad Bower
To: Microsoft ATR
Date: 1/17/02 5:50pm
Subject: Microsoft Settlement

News sources confirmed that the strange anomaly in SGI's SECC filing was a result of the sale of all its 3D intellectual property to Microsoft. Please, don't let Microsoft kill the OpenGL standard! They can knock it off whenever they want now, and FORCE developers to use their own, proprietary DirectX and Direct3D which companies have to LICENSE from Microsoft! They are only extending their monopoly to be the ONLY company with an existing 3d standard.

Microsoft is going to continue this kind of behavior . . . it completely negates their competition, and any future competition. They've done it before, there are SO many cases of it it's almost comical. I think I speak for all gamers, non-Windows-enthusiasts, 3d programmers, and designers, when I say that Microsoft needs to be split up into enough companies that smaller companies can again thrive in the technology sector.

Again, please don't let Microsoft skate by with this, Department of Justice. :(

Dept. of Justice—

I cannot believe that this case has progressed to this point. Why does the US Government attempt to take down one of the most successful corporations in the world when daily the competitive market requires that Microsoft continue to innovate? If Microsoft is required to breakup or even to open up their operating system to others, consumers worldwide will be harmed because the defacto world standard of communications will be harmed. Look at what we are capable of doing today. This message is coming via email. In the early 1990's your only means of conducting email was Compuserve and AOL. Today, you can still send your email via Compuserve or AOL, and you can utilize about 100 different means to send your email as well (including Microsoft's products). Microsoft didn't harm this process (or takeover this process). It facilitated it through a common platform for computers to communicate. That common platform could have been (and is today) Unix just as easily as it was MS-DOS/Windows.

This case needs to be settled, and settled immediately. It is not good for our high-tech economy to have this circus continue any longer. Pressure needs to be brought to the remaining states that have not decided to participate in the settlement. Please do the right thing for our economy, and our competitiveness in this new worldwide economy—SETTLE IT NOW!

Thank you for your attention to my opinion.

Subject: Microsoft Settlement

By its very nature, a "settlement" should address the problems in the original complaint. This settlement does not address the monopolistic practices of Microsoft. The fact that Microsoft has stifled competition has been a given in the software industry for many years. This suit was filed to stop these practices. Many competing (and arguably better) technologies and products, such as Lotus, Netscape, Borland's development products and Java are not addressed. This settlement is yet another insult to those of us who have faith in the US judicial system. Most of the competitive advantages enjoyed by Microsoft are left in place. They may still bundle more features into their operating system that used to be separate and competitive applications. Their application developers still have huge advantages over those with similar products. By allowing these practices to go unpunished, you are ignoring the laws that the courts are in place to protect.

Renetta Hesse, Esquire
Trial Attorney
Antitrust Division
Department of Justice
601 D Street NW, Suite 1200
Washington, DC 20530

Dear Ms. Hesse:

I want to write today to urge Judge Kollar-Kotelly to approve the settlement which has been proposed between the Department of Justice plus nine state attorneys general and Microsoft. This action would end the federal antitrust lawsuit against Microsoft and, I am proud to say, the state lawsuit filed in my

home state of North Carolina as well. First of all, as an attorney, a former state legislator and once commissioner of a state agency in North Carolina, I am fully aware of the consequences when government prosecutors seek to take major legal action against a major corporation, especially one the size of Microsoft. Unless the case is very good, which the Microsoft case certainly was not, the proceedings can drag on much longer than necessary, using up unnecessary tax dollars and causing undue turmoil both for the company and the government agency involved.

That is why I believe that when a case of this nature can be settled, it should be. From what I see reading the summary of the settlement, it is clearly the case that both sides have won key concessions. It is clear that Microsoft must provide "guaranteed flexibility" and must not stand in the way of computer manufacturers distributing Microsoft products and other companies' products on the same machine. Microsoft must guarantee more flexibility in disclosing technical information for those who use Microsoft servers, middleware products as well as end users. For enforcement, the settlement creates an independent Technical Committee with unlimited staff and on-site access to the entire Microsoft campus.

I can't imagine that this is not an excellent settlement for the federal government which spent \$30 million of taxpayers' money and more than five years on this case. Nine states' attorneys general have agreed and I wish the other nine would as well.

Thank for your kind consideration of my opinion on this matter.

Sincerely,
Edward L. Powell

Hi,

I cannot believe that the U.S. government are not going to tear Microsoft apart for years of bullying and abuse of their monopolistic position. They now have access to SGI's 3D technology which they will use to force OPEN GL out in favour of their own propriety Direct 3D. A cynic would suggest that this makes much of the US government look as though it is in Microsoft's pocket. To suggest that the best way of punishing them is to give them a monopoly in Education is disgusting. Who runs the USA? The government? the people? or Microsoft?

Thanx

Subject: Microsoft Settlement

I am a college student, and I have essentially grown up with the computer industry. I cannot fathom why the United States government, a supposed voice of the people, could accept a settlement that more than a dozen states, let alone millions of people, completely disagree with. It doesn't sound like representative government to me, but maybe I should have studied more in civics.

The Government has a important chance here to influence an industry that is being squashed by Microsoft, and affect the minds of a public (particularly my generation) who see nothing but greed, favors and dirty politics in the institutions which claim to represent us. This settlement is a joke, and I'm guessing the executives at Microsoft are laughing the most. Unless Microsoft is forced to stop its anti-competitive practices, companies with true ingenuity and creativity can never hope to survive—let alone flourish to a small fraction of what Microsoft currently dominates.

As a consumer, a voter and a citizen I stand strongly against this settlement and feel cheated by a government that is willing to accept it.

Tyson Evans
tyson@ucla.edu

MTC-00013584

From: E.Palmer
To: Microsoft ATR
Date: 1/17/02 6:05pm
Subject: Money is no object.

Thank you for this opportunity to speak regarding the settlement. I am a person of few words, especially when I am not entirely embroiled with the details of this case. I would rather convey more of a personal and professional take on this matter. Microsoft has created a generation of people that feel victimized every time they load Microsoft products onto their machines. Many of us outside the corporate structure have little time and resources to deal with the inadequacies of their products, but since Microsoft has embedded itself as the industry standard, it is near impossible to be productive with any other software.

Making them pay exuberant amounts of money is almost ineffectual for what they lose in a year to this case, they will make back in three years with little or no serious change within their company. Bill Gates and his close friend Steve Ballmer, will be able to walk through this and continue to prosper. Microsoft is still a major influence on all levels, and I think the punishment should adhere to all of these levels. I am not requesting a complete overhaul, or disassembly of this company. I would rather see it humbled before the law, for in this professional computer user's opinion, they

will continue to laugh their way to the bank no matter what obstacles they will step over. It is already the opinion within the tech world that our justice system's lack of current technology and trends allowed Microsoft to skate by on ignorance and misinformation.

In Summary, I believe the correct punishment should cover the crime. If Microsoft has made billions of dollars for it's anti-competitive practices than it should relinquish that which connected it to the money. I truly believe if you take away their swagger on invincibility, they will come off of their cash lined cloud, and join the rest of us on the ground and really see what they have done to those who depend on them. They frighten all of us because if they do not fear the law, how can the common programmer or elementary teacher make a stand. Thank you and good day.

Subject: The Death of OpenGL

Dear DOJ,

I'm writing to inform you that yesterday Microsoft gained the licensing to most of the SGI OpenGL libraries that are in existence. What are they planning on doing with this? If the past is a model to go by, they are attempting to kill one of the widest used OPEN graphics programming libraries (everyone can use them, they are an open standard, not proprietary) in favor of their own proprietary DirectX. Please, Please, Please, this cannot happen!!!! We as computer users and developers should be free to develop and use open standards that can be shared by all for the mutual benefit of the computer industry and the consumer. It will be the consumer who will have to pay the price of Microsoft dominance of the computer graphics industry, because we will have to foot the bill for all the fees, etc. that Microsoft will use in its tyrannical use of DirectX. They cannot control the market and kill off competition! The power to prevent this lies in your hands. Please, for the sake of the consumer and the computer software/hardware development community, don't let Microsoft kill off open software/hardware standards in favor of their own proprietary and closed systems.

Subject: Microsoft Settlement
III. Prohibited Conduct

H. Starting at the earlier of the release of Service Pack 1 for Windows XP or 12 months after the submission of this Final Judgment to the Court, Microsoft shall:

1. Allow end users (via a mechanism readily accessible from the desktop or Start menu such as an Add/Remove icon) and OEMs (via standard preinstallation kits) to enable or remove access to each Microsoft Middleware Product or Non-Microsoft Middleware Product by (a) displaying or removing icons, shortcuts, or menu entries on the desktop or Start menu, or anywhere else in a Windows Operating System Product where a list of icons, shortcuts, or menu entries for applications are generally displayed, except that Microsoft may restrict the display of icons, shortcuts, or menu entries for any product in any list of such icons, shortcuts, or menu entries specified in the Windows documentation as being limited to products that provide particular types of functionality, provided that the restrictions are non-discriminatory with respect to non-Microsoft and Microsoft products; and (b) enabling or disabling automatic invocations pursuant to Section III.C.3 of this Final Judgment that are used to launch Non-Microsoft Middleware Products or Microsoft Middleware Products. The mechanism shall offer the end user a separate and unbiased choice with respect to enabling or removing access (as described in this subsection III.H.1) and altering default invocations (as described in the following subsection III.H.2) with regard to each such Microsoft Middleware Product or Non-Microsoft Middleware Product and may offer the end-user a separate and unbiased choice of enabling or removing access and altering default configurations as to all Microsoft

Middleware Products as a group or all Non-Microsoft Middleware Products as a group.

2. Allow end users (via a mechanism readily available from the desktop or Start menu), OEMs (via standard OEM preinstallation kits), and Non-Microsoft Middleware Products (via a mechanism which may, at Microsoft's option, require confirmation from the end user) to designate a Non-Microsoft Middleware Product to be invoked in place of that Microsoft Middleware Product (or vice versa) in any case where the Windows Operating System Product would otherwise launch the Microsoft Middleware Product in a separate Top-Level Window and display either (i) all of the user interface elements or (ii) the Trademark of the Microsoft Middleware Product.

3. Ensure that a Windows Operating System Product does not (a) automatically alter an OEM's configuration of icons, shortcuts or menu entries installed or displayed by the OEM pursuant to Section III.C of this Final Judgment without first seeking confirmation from the user and (b) seek such confirmation from the end user for an automatic (as opposed to user-initiated) alteration of the OEM's configuration until 14 days after the initial boot up of a new Personal Computer. Microsoft shall not alter the manner in which a Windows Operating System Product automatically alters an OEM's configuration of icons, shortcuts or menu entries other than in a new version of a Windows Operating System Product.

Begin my comments:

You know that a simple change in terminology made by Microsoft (the "Start menu" is now the "Begin menu" and the "desktop" is now the "playground" under Windows XP version 2.0) basically voids any hope of the end user custom configuring his or her system. Notice that these two terms are NOT defined in article VI—Definitions. Sheesh—and I thought anti-trust law was about giving the user a choice.

From: John Herber
To: Microsoft ATR
Date: 1/17/02 6:02pm
Subject: Microsoft has abused it's market position

To whomever is listening,

I still feel that a break up of Microsoft would be the best solution. It's the only way you can assure that they won't abuse their Monopoly position as the dominant OS.

But since a Break up isn't going to happen, the playing field must be cheated. Companies hurt by Microsoft should get some of Microsoft's profits. Giving some software to schools is seems nice, but how does that help the companies that Microsoft bullied out of business. When someone is caught cheating in a game, they don't get to keep the winnings they received unfairly. It goes back to the players that were cheated. I don't care what the details are, but Microsoft should not be allowed to take out the competition. Then from on top of those companies remains give some software to some schools and act as though they are being charitable. When the real motive of these actions is to become an even bigger Monopoly. Can they wipe out some other area of business and then plan on giving some money away and then that makes it "all better". The real question is do you want Microsoft to continue to do this. If not, then punish them to the point that they say "we'll never do that again". So far all I can see is encouragement for Microsoft to go right on doing what they've always done. This is not the first act of abuse, if you don't punish them they will continue to force other companies out of business. The fact that their proposed solution to the problem was to extend their monopoly into the education market proves that they have no remorse. Please send a message to them and to other companies. We have made the rules of fair competition, we need to make sure all companies follow those rules, and that there are consequences for breaking those rules. If there are no consequences for abusing Monopoly power, why is the DOJ wasting taxpayer's dollars trying to enforce a empty law.

Thank you,
John Herber

Subject: Microsoft settlement
Good day!

I've just thumbed through the recommended documents regarding the Microsoft case and settlement. The legal aspects of this case are rather bogging to the average consumer, but when you boil it down it is obvious what is going on. Microsoft has taken advantage of millions of consumers, and hence, their own good fortune. I, for one,

am completely outraged. It is appalling to me that they find themselves "above the law", or that they believed they could out-fox the lawmakers of this country. Did Microsoft think it would work? Why would they think it could? How stupid do they think our government is? Their actions are a slap in the face of capitalism, and our judiciary system. Shame on you, Mr. Gates.

Frederick Good

Subject: Comments about Microsoft settlement

To whom it may concern,

As regards the Microsoft settlement of its antitrust case, please do not let Microsoft get away with merely giving away PC products and Microsoft software to satisfy the dollar value of the settlement.

I strongly agree with executives from Apple Computer who have pointed out that this action in itself would be anti-competitive in that it creates larger market share for Microsoft.

I am a long time avid Macintosh computer user, and do not want to see Microsoft slip away with this token gesture on their part.

Thank you for considering my comments.
Richard Shuren

From: Javier Morales
To: Microsoft ATR
Date: 1/17/02 7:16pm
Subject: suggestion

I think it would be rather simple:

Get the PC manufacturers out from under the MS boot.

1. Give licenses to MS OS to anyone that asks under non-discriminatory licenses. MS should not be able to use the threat of rescinding licenses to prevent computer users from putting software from other companies in their boxes.

2. Allow companies to bundle any software they want with their hardware without conditions from MS. If a manufacturer wants to put an AOL icon on their desktop, they should not be forced to also put an MSN icon in the desktop. This is particularly galling when you consider that AOL offered \$35 per subscribed and MS offered nothing.

There's plenty more, but I am certain you have heard it before.

Respectfully,
Javier

To: Microsoft ATR
Date: 1/17/02 2:51pm
Subject: Microsoft Antitrust

To whom it may concern,
As a professional Designer/Web developer, the stranglehold Microsoft has on the tech industry is unjustifiable.

It maintains that it innovates, while in reality it buys companies that are innovating and uses its sheer size to stamp out unwanted competition. This has been well documented so I need not revisit these claims.

One example being its well known demand that Apple Computer use Microsoft Internet Explorer for Macintosh as the default browser on all new machines or it would cancel development of Microsoft Office for the Mac—a blow which would have meant almost certain death for one of the few true innovators in the industry. This probably doesn't come close to touching on the goings on that aren't documented.

They should not have the power to demand what canned OS or software feature set does or does not run on PC manufacturers machines.

I think they have stifled innovation and set the industry years behind where it could be—all at our expense.

Subject: judge made correct decision

The correct decision was made in disallowing microsoft to flood schools with their operating systems. If allowed it would have been a brilliant way to further an already massive monopoly. Microsoft doesn't even make computers. They enforce the way most people use computers. This is not the American way. I hope the courts and the government realize this. In the U.S. we take pride in having choices. I love being able to choose amongst an array of deodorant, furniture, or cereal. And, if I don't have a choice I'd rather the government have control over it. Imagine how much money we could budget if microsoft were a government entity.

thanks.

brooks williams
PS: and there were a few non microsoft computers that weren't affected by Y2K (which cost taxpayers a lot of money). More brilliant minds = more choices = more ideas = more solutions.

Ladies and Gentlemen,

You may not have read that Microsoft took an 8 cent per share charge for legal expenses and you may not care but 1,000,000 stockholder households do and so do tens of millions of other Microsoft customers who won't gain a damn thing by prolonging a settlement of this matter that has dragged on since 1995.

You are not saving consumers from anything from my own informal survey. And from my past work with Microsoft customers, by and large, they don't seem to care about what you are except for a few people who complain about everything in their life being unfair.

I urge you to spend taxpayer money where it will achieve justice in matters where is more clearly some offense. (How are you dividing your time on the Enron case? Have you ever looked into the practices that catapulted Walmart to its near monopoly status?)

If anything more should be done it should involve retrying this matter from scratch to address the judicial misconduct of Judge Jackson. But all such activities are counterproductive for EVERYONE in this country.

And finally, in order to achieve uniform justice, I trust that your department will monitor donations of large industry leading companies to schools. We have heard from the courts how such activity constitutes unfair competition so let's make sure that companies with similar market positions as Microsoft don't help our school system as well. Let's work to preserve those companies that customers no long prefer by natural choice.

Sincerely and respectfully,
Raymond Petrone, P.E.

Subject: Microsoft Settlement
Dear sirs,

I wish to express my opinion that any settlement reached with Microsoft NOT include any provisions that would increase their already obscene monopoly position. Specifically, I mean, NOT allowing them to "donate" software or hardware to ANYONE as part of the settlement. To me, that would be almost exactly the same as the tobacco companies giving away cigarettes at sporting

events. It is NOT a form of punishment, it is a form of ADVERTISING!

My personal opinion is that the company should be broken into two parts, one that makes only operating systems, and one that only makes other software. In other words, I agree with the original judgment handed down by Judge Jackson. I see no other effective way to insure that the monopolistic and illegal activities of the company can be curtailed. Please do not let the power of this giant corporation push you to a position that you would not tolerate from an equally guilty defendant with less sway with people in high places.

Yours sincerely,

Subject: After reading all the data I could

find on usdoj.gov on the Microsoft
After reading all the data I could find on usdoj.gov on the Microsoft anti-trust case, I've come to a personal conclusion that Microsoft is still trying to turn this entire case into a positive experience for themselves. Think of the recently shot-down idea of giving free Windows to schools. Sure it would cost Microsoft about 3 cents per CD to give the schools Windoze, but those schools would then have to buy more software from Microsoft and would eventually have to upgrade to a higher Windoze operating system.

As you can probably see from my email address, I am a mac user. I am a very proud and extreme Mac user at that, so bear with me if this seems biased. If Microsoft were forced to simply pay the schools vast amounts of money, I think it would make everyone happy but Microsoft. The amount of money would have to be well over a billion dollars to be more than a slap on the wrist to Microsoft. Now the biased part. I still

believe that Microsoft should be split up, not just into 2 companies, but into at least a dozen small companies. Windows development company, office and other productivity software company, games company, small hardware company, Xbox company, etc. My experience with all of Microsoft's hardware and software with the exception of Office v.X for Mac OS X has been thoroughly negative. Microsoft's tactics are clearly to make their own life better, even now that they are under investigation. Microsoft needs to be punished and punished *hard*

From: MMalone@burntsand.com@inetgw
To: Microsoft ATR
Date: 1/17/02 8:13pm
Subject: Microsoft Settlement

Folks,
If Microsoft is going to be punished it should be through them providing x amount of dollars with which the education sector can use as it pleases. Allow MS to provide products will be letting them off easy. The real cost of software is quite low and I'm sure that if the settlement is \$10 M they will use the S.R.P. their products to calculate how much they need to provide.

Another thought is that it would be nice for the settlement to result in something that doesn't support the high tech industry. Like paying the salaries of librarians in the inner city, or buying new books, a coat of paint or a new building for a school.

183 Notchwoods Drive
Bowling Springs, South Carolina 29316
January 16, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:
This lawsuit is entirely baseless! I fail to see the stability in a government who on the

one side, endorses free enterprise, while on the other, punishes those who excel in their industry. This is how I view the treatment that Microsoft has had to endure over the past three years. This is truly unfair. Microsoft should not be blamed for being a leader in their industry and yet, their efforts to innovate, improve the economy, provide affordable and user-friendly software, have all been rewarded with friction on both the state and federal level.

I realize that the federal government has recently reached a settlement with Microsoft and that the opposition now is mostly at the state level. I am therefore writing to express my opinion and to ask that you continue to do all you can to bring this case to a close. Microsoft has truly been cooperative in this entire matter and have opened up their infrastructure—so to speak—in order to accommodate their competitors. They have agreed to uniform pricing, and disclosure of internal interfaces and protocols. Microsoft seems to be satisfied with the settlement as is evidenced by their compliance. Please make every effort to relay this compliance to the remaining opposing states.

Sincerely,
Aubrey Pointer

From: Richard Hamilton
To: Microsoft ATR
Date: 1/17/02 8:31pm
Subject: Microsoft Settlement

Hi—

Having read through the proposed settlement for the case, namely a consent decree, I must say that this 'punishment' for Microsoft (Microsoft having been found guilty) is not entirely appropriate. The essence of this decree would be Microsoft promising not to do it ever again, and allowing their work to be monitored, to a certain extent. However, this same punishment was meted out previously to Microsoft several years ago—and yet, the consent decree imposed upon them did nothing to discourage them from continuing in their ways just as before. Indeed, despite the consent decree, they still had another case for a similar matter brought against them, and they were found guilty! One can see from this that it is quite likely that Microsoft simply ignored the previous consent decree, and would quite likely do exactly the same thing all over again.

Also consider that, given the effectiveness of consent decrees in relation to Microsoft in the past, this consent decree would have little impact—almost certainly meaning that another case would be brought up against Microsoft in a few years. And we'd start the circle all over again, wasting time, and taxpayers money. Simply put: a strong punishment now, showing that the Department of Justice is not to be trifled with, would prevent further court cases, as well as further infringements by Microsoft.

A consent decree has not worked in the past, and by all likelihood, will not work in the future with this particular company. A better solution to Microsoft's infringements must be found.

Thanks,

Richard

From: Clyde Rogers
To: Microsoft ATR
Date: 1/17/02 8:42pm
Subject: Microsoft Settlement

This is a comment on the Microsoft antitrust settlement. As a citizen of the United States, I wish to express my deep disapproval of the recent proposed Microsoft settlement (which allowed Microsoft to dump their products on the educational market). In fact, I believe that any settlement that involves Microsoft products to be only a boon to the company, and not a punishment in any sense. If Microsoft is to atone for its unfair practices, it must move to level the software development landscape.

Microsoft should be required to publish detailed interoperability documentation for existing versions of its Windows operating systems. No Microsoft program should be allowed to take advantage of undocumented operating system features, and no Microsoft application program should be developed with insider resources unavailable to other corporations. If Microsoft is unwilling to propose reasonable plans that ensure and verify this separation, then Microsoft operating system development and application development must be split into separate corporations.

Microsoft should also be required to publish (and adhere to) complete specifications of all defacto standard document formats (Word, PowerPoint, Excel, Access, etc.). Many of these formats were published in previous times, but are no longer published now that the competition has been dispensed with. As these formats have become the standard format for their respective applications, no competition can be expected to arise without access to accurate documentation of their construction.

Microsoft also must be required to maintain these documented interfaces as

public standards. Microsoft must retain ownership of the standards, but must not be allowed to change the standards gratuitously (to drive the competition out of business again). Thus either an industry committee must be involved in making changes, or at the very least, changes must be approved and published some months before products implementing those standards are released to the public by any corporation.

Thank you,
Clyde Rogers

From: David Simpson
To: Microsoft ATR
Date: 1/17/02 9:04pm
Subject: Microsoft Settlement

Microsoft settlement comments,
I don't believe that the proposed settlement goes far enough to prevent Microsoft from continuing its monopolistic practices.

By virtue of the fact that Microsoft already has an illegally-acquired monopolistic share of the computer software marketplace, it will be very difficult for any competitors to gain market share. Therefore I believe that the only remedy to the court case which will serve to promote competition and redress the offenses which Microsoft has committed is the breakup of the company. If Microsoft was broken up into at least two parts: an operating system supplier, and an applications software developer, competition would be restored. As a provision of this type of settlement, Microsoft should be ordered to develop its operating system for other hardware platforms (Sun—using Sparc processors, and Apple—using PowerPC processors—hardware as a minimum). The applications software division should be ordered to re-develop all of its applications for use under Sun's Solaris, SGI's IRIX, Linux, and Apple's MacOSX operating systems.

Date: 1/17/02 9:04pm
Subject: Microsoft Settlement

Dear Sir or Madam,

Market economics is a beneficial system because it produces a variety of product solutions and allows the consumer to choose. Monopolies function to the opposite. Microsoft certainly has a monopoly, actively seeks more control of its own market, and related services to reduce choice. It is not using advertising and competitive products as a tool of market share acquisition, it is seeking to use product coercion.

Consider current necessity of Windows operating system on storebought hardware, or Internet explorer in windows, would we

permit a doctor such coercion "You can take this blood pressure medication, but the prescription comes with prozac and a laxative, in the same pill." Or microsofts goal of making its browser only search for, list and go to microsoft sites. Could A phone company demand that users not call people with other long distance plans? Or not call 911 because it is not a part of their package?

Companies and service providers are allowed reasonable control over their product and services. Microsofts actions are not reasonable, not good for the consumer, the market, or our country. (is dependance on a bug-infested, inefficient and self-obsoleteing system a good thing?).

Thank you for your time

-Michael Scoblete

From: William Kuhle
To: Microsoft ATR
Date: 1/17/02 9:05pm
Subject: Microsoft Settlement

Hello:

Microsoft treated the PC hardware platform as if it owned it, and thus hurt consumers, software developers, PC OEMs, OS competitors, and the industry in general. Microsoft is an unrepentant monopolist. I believe that the best settlement would be:

Microsoft is broken up into separate Systems, Applications, and Internet Explorer companies.

Barring a breakup of Microsoft, penalties should include:

(1) Microsoft must standardize and publicize the entire set of Windows APIs;

(2) Microsoft must standardize and publicize the file formats of its Office applications;

(3) Microsoft must allow the "bootloader" on PC hardware to be controlled by the hardware manufacturers. (The Windows license agreement with PC OEMs specifies that any machine which includes a Microsoft operating system must not also offer a non-Microsoft operating system as a boot option. In other words, a computer that offers to boot into Windows upon startup cannot also offer to boot into Linux or other PC-based OS. The hardware vendor does not get to choose which OSes to install on the machines they sell ? Microsoft does.)

See: <http://www.byte.com/documents/s=1115/byt20010824s0001/> for more information regarding the bootloader issue.

I believe that monetary penalties will be inadequate. The current remedies proposed by the DOJ and some the the states are inadequate.

Sincerely,

William Kuhle

Subject: Microsoft Settlement

As you have invited comments, I will speak as an average citizen who uses technology. I have earned my living using personal computers for almost fifteen years.

During that time, I have rarely seen any Microsoft product demonstrate genuine innovation or creative imagination. Instead, they seem motivated only by a desire to control and dominate the entire digital world. Their use of anticompetitive practices and strongarm tactics have won them great wealth and power while providing the computer users of the world with mediocrity and lack of choice.

The computer has revolutionized the world we live in and made tremendous contributions to our society and economy. The decision the Court will render in this case will greatly influence the development of technology and civilization over the next century. As only one small working-class person, I have no hope of standing against the world's richest corporation. All of society is composed of small, insignificant specks like me and our only defense against an amoral giant such as Microsoft is you.

In a criminal case, much emphasis is placed on the defendant's remorse over his/her crime. Microsoft demonstrates absolutely no remorse, continues to deny that a crime even took place, and displays no respect for the Court or its proceedings. They provided doctored evidence during trial (the videotape), contradictory and misleading testimony, and as a "remedy" they actually proposed an action that would extend their monopoly even further in the area of education. What criminal defendant could display such utter lack of remorse and not receive the harshest possible sentence?

What I ask from this Court is simple: Whatever settlement terms are arranged, there must be an absolute and completely Independent Oversight Agency who can monitor and, if need be, neutralize future anti-competitive actions by Microsoft. If Microsoft is allowed even the smallest loophole, they will find a way to slither through it. And all the world, tiny computing nobodies like me, will suffer for it. I beg you to defend us against that dire fate.

Sociopath is the word we use to describe a human being without a conscience but what word shall we employ for a corporation without a conscience? Microsoft CANNOT be trusted and will immediately start seeking ways to evade and undermine any remedies that the Court will devise. I urge you to keep that one thought foremost during your deliberations.

Thank You

Subject: comments on Microsoft settlement

Microsoft's settlement proposal is the most clever self-serving plan I think I have ever heard presented in public. After having seeded the education system (the one market they don't own yet) with their software (by giving hardware requiring their software), they would probably realize at least a 10 fold return on investment during the next 10-15

years. Refusal of this plan is imperative if a nominally competitive market place is to remain. If the government likes the idea that Microsoft donate equipment to schools, then require that they donate their competitors' equipment. In this case, since they own the operating system used by most computers, then there are few choices (donating Intel equipment that could use other operating systems is not viable because it is clear that most users would opt to use Microsoft's Windows on this equipment). The obvious choices would be Sun equipment or Apple equipment. Given the significant anti-competitive practices of Microsoft over the years, it seems reasonable that their retribution should include strengthening their competitors position in at least one segment of society. While the education market is of significant size, it is not a particular threat to Microsoft itself since their primary market is business, an enormous market which they would retain. An alternative might be to help school districts higher up the chain by donating large equipment (servers, mainframes) that also do not have any possibility of benefiting Microsoft (they also wish to enter the server/mainframe market with their operating system).

If the government is not interested directly helping Sun, Apple or other manufacturers, then the settlement should assiduously attempt to rectify Microsoft's anti-competitive practices by only considering alternatives that clearly do not benefit, even indirectly, Microsoft in any way. This may seem obvious at this point but each proposal needs to be scrutinized by other parties (as was done in this first proposal).

Sir or Madame,

As far as I am concerned, Microsoft is guilty of all charges. By allowing them to settle it is sending the message to other countries and our enemies (including Osama Bin Laden) that the United States Government cares more for the financial well being of large, wealthy profitable incorporation then the hard working little guys that they step all over in their quest to rule the marketplace. Microsoft should be held accountable for their monopoly in a court of law and not in a business deal. Such an act would be no more then a slap on the wrist. A settlement would also give the impression that the court's decision that Microsoft is a monopoly was a waste of money and all those tax dollars proving the case were a waste. If you spent all that time and effort to prove, then why not convict and sentence? I am not saying "put them out of business", but to treat them as any monopoly in the past.

 Washington, DC 20530-0001

Dear Mr. Ashcroft,
 The antitrust lawsuit against Microsoft has gone on for too long and has been a waste of taxpayers dollars. The original reason for the lawsuits I thought was to protect consumer rights. But instead, under the terms of the settlement it seems that only competitors of Microsoft have made out. The terms state that Microsoft will not be able to retaliate against computer makers or software developers who develop or promote software that competes with anything in its Windows operating system. The terms also force Microsoft to disclose numerous technological secrets to its competitors. These concessions only give competition a chance to gain an edge on Microsoft ? an edge they could not accomplish without lobbying politicians and lawmakers.

This case has gone on for too long and it is time to settle. It is in everyone's interests to end this matter so that the IT sector can rebound from its dormant state.

Thank you and I ask your help in finalizing the agreement.

Sincerely,
 Sonja Reinhardt

My name is John Boatwright and I am a resident of Tega Cay, South Carolina. I am writing to congratulate the Justice Department and Microsoft on reaching a settlement of the antitrust litigation, and to express my support for the settlement and an end to the court proceedings. I believe that the settlement reached adequately addresses the primary complaints raised by Microsoft's competitors. Microsoft has agreed to open its Windows applications to competition both by allowing the removal of Microsoft based programs from the Windows system as well as by allowing promotion of competitors' software within the Windows system. I also support the non-retaliation provisions to which Microsoft has agreed in its dealings with software competitors. I sincerely appreciate the opportunity to express my opinion. Please move forward with the settlement as quickly as possible.

Sincerely,

John M. Boatwright, III ps.

 Attorney General John Ashcroft
 US Department of Justice
 950 Pennsylvania Avenue, NW
 Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to express my opinions regarding the Microsoft antitrust case. As a supporter of Microsoft and an American taxpayer, I would like this case to be concluded.

Under the terms of the agreement, Microsoft has agreed to changes that make antitrust precedent. The company has agreed to document and disclose for use by its competitors various interfaces that are internal to Windows operating systems products. This means that Microsoft has more or less opened its inventions for the competition to use as a platform to launch their own competing products. This is most apparent in Microsoft's decision to grant computer makers and software engineers broad new rights to configure Windows in order to promote non-Microsoft products that compete with programs included within Windows.

The settlement is extensive in the sense that it lays out methods of preventing and handling future dilemmas. A technical oversight committee will ensure that Microsoft complies with the terms and conditions of the settlement, and competitors will be allowed to sue Microsoft directly if they feel they've been treated unfairly. It appears to me that the issues that brought about the case have been addressed. This case has dragged on for three years, and may drag on more if those that will never rest until Microsoft is broken up, have their way. I just want to remind you of the devastation that would ensue if standardization and operability were lost, not to mention the stalling of innovation. I hope that you will judge this case by its merits, and not the depths of lobbyists' pockets.

Thank you for taking the time to consider my thoughts.

Sincerely,
 Linda Balsley

 Subject: Microsoft Settlement

As posted on your website, <http://www.usdoj.gov/atr/cases/ms-settle.htm#submit> regarding the DOJ/ Microsoft settlement, I would like to submit this comment.

I do not believe the current settlement between DOJ and Microsoft is in the best interests of the consumer or the country. I strongly believe the original decision to break up the company is the only sensible way to level the playing field between Microsoft and its non-operating system competitors. Note that its competition in the operating system market is non-existent. Microsoft is a monopoly, it has abused its position as a monopoly, and it will continue to do so under the current agreement.

Even under the cloud of the current litigation, Microsoft has continue to bundle

components in the newly released XP operating system, namely a media player, instant messaging, and others. This is to the detriment of Real and other media player vendors, and to the number of instant messaging vendors. Clearly these practices are anti-competitive, because when Microsoft makes these component available "free" in the operating system, it is really shifting the costs of delivering those products to the operating system. Consumers tend not to pay for additional components when they already have a "free" one, therefore putting companies like Netscape and Real Networks in jeopardy because they cannot realize substantial revenues from their products, nor the operating system.

1) Microsoft should be allowed to bundle the products. However, consumers must be required to pay for them, and Microsoft must be required to provide an operating system FREE of these products at lower cost should consumers (via the OEMs) request them. Microsoft must stop hiding the cost of these products (like Internet Explorer) in the operating system so that other companies can realize revenues and better compete with Microsoft.

2) Microsoft must give the same level of access to the operating system to other vendors that it gives to its own applications developers. Why do Microsoft Office and other products open so quickly? Because some of their components reside in the operating system and are therefore "preloaded." This makes the Microsoft products look better than its competitors products. Other features available to Microsoft applications that are not easily available to other vendors products also enhance this perception.

How do we better level the playing field? Structure some sort of breakup of Microsoft. It is the only reasonable and enforceable approach.

Thank you,
David Godbey, Ph.D.

Dear Mr. Ashcroft,

I use Microsoft products. A lot of them. I use the software, the operating systems, everything. There is nothing better on the market, which is why I was very irritated with the antitrust case brought against Microsoft. Antitrust laws are brought because of a business' monopolistic practices. There were no such practices with Microsoft. I choose Microsoft because they work. Period. Microsoft's competitors whine about Microsoft, then make a better mousetrap. Mr. Bill Gates worked long and hard to make his company what it is today. He did so by providing consumers what they needed: quality,affordable products. Now he is being persecuted for it.

Now, a settlement has finally been reached. And I want to urge you to give your approval to this agreement. We don't need to nitpick over what should be the final decision. Why else are there courts? If we continue to revisit these decisions, it will only undermine the legitimacy of this and future decisions.

And from what I understand, Microsoft has more than done its share to end this lawsuit. Microsoft has agreed to a technical committee to monitor future adherence. It will even share code or programming that Windows uses to communicate with other programs.

It is time to go forward. Give your support to this agreement

Sincerely,
Patricia Keator

Dear Mr. Ashcroft:

Recently, I noted that there is a 60-day period for public opinion regarding the Microsoft antitrust case. This case has been active for more than three years. The proposed settlement was arrived at as a result of extensive negotiations with a court-appointed mediator. The terms of settlement are fair and equitable. I am in favor of finalizing the settlement at the earliest possible date.

Microsoft has agreed to allow competitors access to its documentation, protocol, and programs so that they may attach their non-Microsoft products to Windows without any retaliation from Microsoft. Microsoft has also agreed to have a neutral technical committee monitor their compliance with all provisions of the settlement.

I appreciate the time and effort you've given this case.

Thank you for your consideration in this matter.

Sincerely,
Alan D. Hirschhorn

From: Tim Wright
To: Microsoft ATR
Date: 1/17/02 10:16pm
Subject: Microsoft Judgement and Remedies

Any remedy in the Microsoft judgment must restore competition to the marketplace. Microsoft's monopoly position and persistent anticompetitive behavior were issues that brought the case up in the first place, and normal market forces of competition would have prevented these problems. Restoring competition will balance the market and allow end users the choice that we value so highly in a free and open market.

An effective remedy must employ rigorous measures to correct the market imbalance and prevent future anticompetitive behavior from Microsoft. Their established patterns of violating consent decrees and continually testing how far they can step outside of the Court's orders indicate that Microsoft will continue to employ anticompetitive business practices for as long as they are capable. Past behavior and published internal documents from Microsoft support the suspicion that this corporation will continue to stifle competition to unlawfully maintain its monopoly position.

The most effective measure to restore competition to the marketplace is to break up Microsoft. This remedy proved highly effective in the cases of Standard Oil, the Bell System, and countless others. History has proved out that neither the petroleum nor the telecommunications business sectors suffered ill effect from breaking up Standard Oil and the Bell System. The facts show that both sectors flourished substantially after breaking up monopolies into smaller business units and restoring competition to these markets.

As the Bell System was broken up into "Baby Bell" telephone operating companies, and Standard Oil was broken up into smaller, competing petroleum companies, Microsoft should be broken up into an operating systems company, an applications software company, and an Internet services and communications company. This follows the successful pattern employed with the Bell System, where AT&T retained long distance telephone service, and local service was provided by a group of competing, local Bell Operating Companies, the "Baby Bells."

To clarify matters, applications software is defined as computer software intended for specific tasks: word processing, database processing, graphic editing and rendering, audio/video/multimedia rendering, enterprise resource control and planning, local and wide area network administration, communication clients, Web browsers, utility functions such as encryption and data file management, and numerous other, similar functions. These applications all require an operating system to function.

An operating system is defined as the computer infrastructure required for the basic operation of the computer hardware and supporting applications software: data input/output, data storage, and other functions to allow hardware to communicate. Operating systems carry out general tasks necessary to support the computer system and make it useful, leaving specific tasks to applications software that can be added and removed by

the end user without degrading the operating system.

Internet services and communication are remote location services accessed via the Internet or similar telecommunications means. These services include, but are not limited to, information, telecommunications via text (e-mail), voice, and/or video images, access to the World Wide Web, business transactions (e-business, e-trade), and similar wide area communications. Breaking up Microsoft in such a fashion puts the company on a more equal footing with competing firms in the computer software and Internet communications service industries. Breaking the operating system monopoly away from the applications software business unit will prevent further occurrences of unlawful and anticompetitive software bundling, an issue that brought this dispute into court in the first place. Making all the participants in the applications software market equal will foster competition and innovation, as shown by the telecommunications boom that occurred after the Bell System breakup. The Bell System precedent illustrates that end users will not suffer any loss from breaking up Microsoft. In fact, the end users will likely be the biggest beneficiaries as competition encourages innovation, reduced costs, and improved quality. This was the case with the Bell System breakup. An adequate and competent monopoly was broken up to pave the way for substantial innovation and excellence in that business sector. End users currently pay less for more and better telecommunications service in a competitive market. The same benefit will come from breaking up Microsoft.

In the event that the Court chooses not to break up Microsoft, the following remedies are suggested as alternative means to achieve a restoration of competition in the computer software and data communications market:

Regulate Microsoft and the MS-Windows operating systems as a public utility, much the same as electric and water utilities. This will require additional government infrastructure to administer. Such regulation would have to remain in effect as long as Microsoft holds a monopoly. The political overhead of establishing and operating a regulatory agency may be unwieldy, and this will likely require action from Congress to establish and fund such regulatory activity. Prohibit exclusivity clauses in operating system software licenses. Microsoft's practice of requiring hardware vendors to exclude other operating systems as a condition for purchasing MS-Windows only perpetuates Microsoft's monopoly position. End users should have a choice of operating system software, to include double and multiple boot options to use more than one operating system on the same computer. A healthy and competitive marketplace allows end users to select which operating system(s) they want, rather than having vendors dictate to customers what they will use. Consumers must be free to decline pre-loaded copies of the MS-Windows operating systems and return unused operating system software for a refund. Computer hardware manufacturers and distributors must be free to load any operating system(s) that they and their paying customers choose into computer

hardware. Current business practice has the operating system tied to the hardware by a monopoly (Microsoft), leaving purchasers obliged to pay for software that they may not want and cannot return for credit. Microsoft has abused its monopoly position to bar potential competitors from the market, using business practices not too far removed from those of the Standard Oil monopoly in its day.

Another alternative or adjunct to breaking up Microsoft into three companies would be to make the MS-Windows family of operating systems public domain, and Microsoft would have to agree to leave the proprietary operating system market in order to prevent re-establishing a monopoly. This action would effectively dissolve the monopoly that has been at the heart of this case. This action must be voluntary on Microsoft's part, because it could be construed as a taking by the government, rather than the remedy in a lawsuit. Microsoft's violation of antitrust law must not be parlayed into an occasion to collect taxpayer dollars, should Microsoft give up proprietary ownership of the MS-Windows family of operating systems. A public domain Windows operating system can be standardized and administered by nonprofit industrial standards governing organizations, much the same way as World Wide Web domain names and related administrative Internet infrastructure is maintained by the user community. Such a move would place the Windows operating systems in a position analogous to industry standards that serve the general public as a whole.

The overriding concern is that whatever remedy the Court imposes on the Microsoft case, it must restore competition to the market. The best solutions are those that allow natural market forces to prevail, rather than increased governmental oversight and regulation that diverts taxpayer dollars from more pressing issues. Like Standard Oil, Microsoft has persistently and continually employed unlawful practices to maintain a monopoly, and only the most rigorous measures will be effective at correcting the situation.

these guys CC:

jwdsail@gotocrystal.net@inetgw 1/17/02:

I'm saddened by Microsofts continued anti-competitive behavior, and the governments inability to put them in their place. As additional proof that they plan to continue to restrict innovation and competition, they have acquired several patents from SGI. These technologies are important to many fields (3-D imaging, modeling, high-end graphics) and until now have been fairly open (OpenGL). Under Microsoft control, companies like Apple, Adobe, Macromedia, Sony, and other developers will be forced to adopt perverted closed versions of these technologies. True innovation and competition will be even more restricted than before. Microsoft has proven time and time again that they don't care about security or innovation—For the consumers sake or the governments. Microsoft does a great song and dance about being inovaters and their concern for security of computer systems, but when push comes to shove Micosoft is only interested in control.

Take these guys down.

Thanks.

Jeff

I am ashamed at the DoJ even considered the last proposal of Microsoft as an actual settlement worth mentioning outside of Redmond's boardroom fantasies.

You have them in a hard spot, not the other way around, correct? It's your big chance to do something that will change the course of history not perpetuate the status quo. The last time we had this chance the US settled for a \$5,000 slap on the wrist to the automakers for effectively putting the railroad out of business in this country.

Microsoft wants a settlement, so make them one you think they need to refuse, and you may have your answer. make them bleed, but if you worry over public relations on this and they know it, you've essentially decided not to have a backbone. Make them bleed. It will benefit future diversity and perhaps deter them from doing it again so obviously. When else are you going to get this chance to actually DO something to send a message with the world waiting?

I am opposed to the settlement.

Basically, Microsoft is not being punished, and is allowed to dump their product on the school market the last hold out of the competition (Apple) The competing software should be purchased with the money (GNU/Linux, Apple) and installed in schools so that new computer users develop knowledge of the competing products. Microosft should be enjoined from anti-competitive practices, such as making their

OS's work with LILO or other multi-boot loaders.

I agree that Microsoft, should be broken up, because their continued refusal to apologize for their wrong-doing indicates that their attitude has not changed.

Subject: Comments

Hi—
I wanted to give my comments on the proposed remedy for Microsoft vs. DOJ.
I am a computer consultant, and I make my living using Microsoft software. I believe Microsoft has done nothing that other companies such as Oracle or IBM wouldn't have done if they could. That said, I do believe Microsoft has a monopoly on desktop operating systems, and just as importantly, office software. Specifically, there is no competition to Microsoft office.

This situation is bad for the economy since Microsoft can continue to add "tures" to either Office or one of its operating systems, forcing smaller companies and businesses such as mine to go bankrupt. I believe in the not-to-distant future Microsoft will start integrating a database into its operating system, and this will have an adverse affect on Oracle corporation, the #2 software company in the United States.

To remedy this situation, I believe there are two possible courses. The first is to force Microsoft to spin off their Operating System development and sales into a separate company. The second is to force Microsoft to spin off Microsoft Office development and sales into a separate company. Either of these two remedies will have the desired effect of creating more competition, and a more stable economy since it requires either monopoly to compete more evenly with other software.

Thank you,
Drew Moll

Subject: Microsoft Settlement

Hello I am writing an opinion on the Microsoft settlement.

First and foremost I believe that any punishment short of dividing the company is

not harsh enough. Second the proposal for them to donate software to schools is yet another thinly veiled attempt to increase their presence in the world. Giving away their own product for free is something that has absolutely no effect on their monopoly status and will only do more to increase it. Apple computer is right to object to this proposal. Being that Apple has relatively zero market share in the corporate world, education is their biggest non consumer market. Their small market share could be diminished much more for Microsoft to simply give away their own stuff. This would eliminate the competition between the two thus bringing up the Anti-competitive practices Microsoft has used to date to become the monster it is.

How the company was allowed to get to this point is beyond me. Imagine if GM was the car maker that supplied 95% of the planets cars. A settlement now is irrelevant. They should have been dealt with a decade ago. However I do have an idea short of splitting up the company. Hows this? Microsoft must pay a sum to schools who haven't opted for the Windows platform for future purchases. They should also donate money to business and schools who opt out of renewing a Windows license for a competitors platform (Linux, Unix, Macintosh OS). In addition they should be allowed to donate money to low income schools and communities to let them use the money as they see fit.

Microsoft must allow OEM computer manufacturers to configure OS preferences AS THEY WISH, free of hidden penalties and injunctions. OEM's should be allowed to put a Quicktime or REAL player icon on the desktop and not a Media Player icon if that is what they want to do. Microsoft must face continual sanctions for their past actions (much like a terrorist state) limiting their market reach. Especially in the area of forcing companies to upgrade to newer product licenses even when they don't want to upgrade or have no reason to other than for Microsoft to keep their stronghold.

Microsoft must keep producing OFFICE for the Apple Macintosh platform even if Apple doesn't want to make Internet Explorer the default browser. A personal gripe: Microsoft must make their programs easier to delete off a computers hard drive, Macintosh or PC.

These are just a few suggestions. If only one is helpful than that is at least a start. Anyhow SOMETHING EFFECTIVE must be done.

Thank You.

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Gordon E Giles

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
John Baker

Attorney General John Ashcroft, US DOJ
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft,

My name is Jerry Lowry, of Harris, Iowa. I want to let you know that I am pleased with the Justice Department's settlement of the Microsoft litigation, and I hope that you implement it in the very near future.

It has been difficult for the average person to fully understand all the accusations and counter-accusations hurled by the parties in this litigation. As I understand it, the most frequent and compelling complaint dealt with the inability of computer owners to utilize non-Microsoft software with Windows operating systems on their computers. Microsoft has agreed to allow such competition. Microsoft has also offered to have its compliance with the terms of the settlement agreement by a Technical Committee to avoid further problems and further litigation. I believe the company has gone the extra mile to resolve this case, and I do not see the need for it to drag on and on.

I sincerely hope that you see the wisdom of this agreement (after all, the DOJ wrote it), and allowing its implementation. It's time for the government to get out, and let the market decide who succeeds in the industry.

Thank you for the opportunity to address this matter.

JERRY A. LOWRY
Sincerely,
Jerry Lowry

Subject: Microsoft Settlement

Hello,

I would like to thank you for reading my opinion on the Microsoft Settlement.

At the moment Microsoft has a clear monopoly over many aspects of the desktop computer industry and is spreading to others.

An example of this monopoly would be how when you buy a computer from Dell or Compaq, Internet Explorer is pre-installed on the system. I personally dislike Microsoft's browser and naturally chose to use Netscape instead. Upon having Netscape installed I had several error messages appear when I use the internet. If I chose "close" my computer would lock up forcing me to restart my computer. After consulting my friend he informed me that having both of the browsers on the computer would cause conflicts and the only way to remove the errors was to uninstall one of the browsers. Since I preferred Netscape I proceeded to uninstall Internet Explorer which was quite a difficult task because it is tied into so many things in the Windows OS.

Once Internet Explorer was removed I was confronted with two more problems. The first one was that I would have problems when I open folders, which appear to be browsed using Internet Explorer, (Note the "Back" and "Forward" buttons on the top of the window). This was quite a problem since I have many files on my computer and I now could not access them. The second problem was with Microsoft's "Critical Updates" which are patches which usually fix some problem, usually with the OS, (They sure have a lot of updates). These updates can only be accessed using Microsoft's Internet Explorer. Having uninstalled the program from my computer I now could not access them. This left me with a serious problem which could only be fixed by using there browser.

Another problem which deserves some attention, is Window's compatibility with Apple's QuickTime. Many videos and forms of media are in Quicktime format. On newer versions of the Windows OS the Quicktime Player (which is not insatled with the OS) causes conflicts which leads to crashes and a whole bunch of problems. Since many people still wanted to view Quicktime formatted files, they would call up Microsoft and ask how to fix it. Microsoft would say that yes it was a conflict with the Windows OS and that the only solution was to remove Quicktime. Rather then update their OS through there many "Critical Updates" they forced Apple to make a new version of Quicktime if it wanted to run on Windows computers (which take up most of the market).

These are my reasons I believe Microsoft has a clear and growing control of the market. Thank you for your time.

Sincerely,
Eric Watson

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Robert F. Goorey Jr.

Subject: Re: U.S. v. Microsoft: Settlement Information

Microsoft might have been found guilty, but I hope that the justice dept understands that Microsoft destroyed an entire industry with their practices, and they expect the justice dept will do nothing except slap them on the wrist for it. Thousands of people out of work, ideas stolen, and tactics that would land any normal american in jail. Why not have them just payback what they have done? Rebuild netscape and leave the browser market? Thou splitting them up would be the smartest thing, unless you want to go threw this trial again, because Microsoft will pirate and bully again, its their history.

The proposed settlement seems more like a reward to Microsoft than any type of penalty. Three years ago, when I tried to buy an Intel based computer without Windows pre-installed, no one would sell me one. Every place I tried said they were not allowed to. One place did offer to remove Windows for me, but they still wanted me to pay for it. I consider that direct harm to me.

At the minimum, Microsoft should be required to make ALL their APIs public information. They even offered to, before the DOJ decided to do their best to drop the case. And the oversight group should not be dominated by Microsoft— they should be allowed only a token representative. Anything less will perpetuate their monopoly, and they have already shown evidence that they intend to become even more "aggressive" than before.

First off let me say I think MS is getting off way to easy period. You allow the Giant to continue doing business as usual while they play the wounded lamb. But enough of my personal rants. If MS is going to be giving anything to the community the last thing it should be is products of the monopoly. A large 10 figure donation in cash to the proposed areas would be more inline. Let the scholl admins decide what and when they will purchase with the "MONEY". Its just a shame the DOJ and more so the courts had to be so spineless in this case. Oh well at least maybe some schools will get something out of it because the public at large is getting the usual shaft and someplace at the bottom is the gold that Microsoft will steal anyways.

I do not understand why you are letting microsoft off so easy. Netscape is dead with no innovation in the last few years since aol "purchased them". (And why would aol want a browser, they are competing against browsers. A Company with 88% market share is a monopoly. They crush opponents with lawyers, vaporware. The original software code of windows was stolen wholesale from apple, and from this apple extorted them to support the apple platform with office. They create risk for all entrepreneurs in that they have no qualms about stealing their ideas, but they do not keep running with it, they drop it once the entrepreneur gives up. The innovations they have destroyed have made america stagnate.

Our laws say monopolies are bad and i feel the law is right about this. I believe in business men being able to compete but a natural dominance is 70% market share. Above that and you can gouge the consumer. \$250+ per upgrade, excuse me, this is a software program. Who can afford Office? . . . Or should i say who can afford not to afford it. What happened to wordPerfect. They use the fact that hardware is now as expensive as a toaster to hide their huge markup. PC's should be will beneath 500 for a complete system at this point.

I feel an extremely pro business establishment is turning a blind eye to their monopoly. Their products are poorly written, buggy, prone to hackers and viruses that are extremely easy to write. This causes extreme dangers to american businesses that are dependant on these machines. Competition has been lacking for quite a while and the only group that can restore it is the government.

Yes there are some good points in what they have done, but we would be much better off with a true remedy to a monopoly, the appointment of a governing body to guard the public, a general breakup of the same, or extreme restrictions that cause rapid loss of market share. The entire settlement is a joke, very political, and will have a serious effect on the prosperity of our country.

From: Matt Craighead
To: Microsoft ATR
Date: 1/18/02 12:02am
Subject: Microsoft Settlement

Dear Sir or Madam,

I am an MIT student in the Class of 2002 studying computer science. I have worked in the computer software industry since 1998, both at a small game development firm in Minnesota and more recently as an OpenGL driver developer at NVIDIA Corporation, based out of California. I have had extensive experience developing software on Windows and on numerous other platforms, and I have closely followed the Microsoft antitrust lawsuit since at least 1996. Early in the lawsuit, you probably could find few tougher critics of Microsoft than me. I despised the company, I despised its software, and I despised its business practices. Indeed, I recall writing an email to the DOJ urging that Microsoft be broken up back then.

However, I have since come to realize that I was wrong.

Indeed, I, like many other Microsoft critics, was rather hypocritical in voicing my opinions. I wasted no time in attacking Windows and other Microsoft products, yet I didn't put my money where my mouth was. I could have downloaded and ran Linux. I could have used alternatives to Microsoft Office. But did I No, I didn't. -In fact, I tried Linux for a short while and quickly came back to Windows, having discovered that Linux was a rather difficult operating system to install, configure, and use, even for a computer-savvy person such as myself. The more Microsoft products I tried, the more happy I discovered I was with them. Most people are familiar with just a few, like Windows and Office. However, for my own software development, I started using Microsoft Visual C++ (MSVC) 5.0 after I received a free copy of it from Microsoft for participating in a computer programming

competition. After the initial learning curve, I quickly discovered that I greatly preferred MSVC5 to the previous software I had used, Borland C++ 4.5.

It was easier to use and its compiler ran faster and generated better code; and it was much better for writing Windows applications. I recall one application that I recompiled using the Microsoft compiler. To my great surprise, the application ran twice as fast with no effort on my part. I also began to reinvestigate many of my political views when I took an economics course in high school. I frequently argued with my economics teacher about all sorts of issues, and, to my surprise, I discovered that he was frequently right and I was frequently wrong. I discovered, for example, that pollution trading credits were a better solution for all parties involved than were laws that set strict upper limits on emissions. I also began to learn more about the stock market and about business in general. My study of economics has continued though college, both inside and outside the classroom.

I also discovered firsthand, on my first job, that, in the words of George Washington, "like fire, [government] is a dangerous servant and a fearful master." The surprise started when I discovered that taxes are not paid with a check to the Treasury on the following April 15; instead, they're deducted from every single paycheck in advance. I also learned about state laws that, for example, prohibited me from working overtime because of my age, even if I, using my own best judgment as a competent individual, thought I wanted to do so. And where in 1996 I had supported Ralph Nader as a candidate for president, by the 1998 election I was cheering for the Republicans instead.

How does all this relate to Microsoft?

The essential issue in the Microsoft case is: are businesses free to make their own decisions about how to design their products and how to profit off of them, or shall government make those decisions?

For example, Microsoft wishes to put certain features in Windows; other companies object, saying it would be an unlawful use of monopoly power under the Sherman Antitrust Act. I will not address the legal issue of whether Microsoft's actions did or did not meet the standard of the Sherman act; I am not qualified to do so. However, what I do believe I can pass judgment on is the issue of whether it is right or wrong for Microsoft to do what it has done. Microsoft is a corporation, and the purpose of a corporation is to make money; not to serve the public, not to help consumers, not to improve our society. No, in fact, the legal obligation of every corporation is to maximize its own shareholders' wealth, and indeed it should be. The corporation is simply a pooling of resources (those of investors), and those investors have not joined together out of charity, nor out of goodwill to fellow men; their goal is the pursuit of their own happiness—one of the fundamental ideals of our nation, expressed in the Declaration of Independence.

Their pursuit of wealth (and, by proxy, of their happiness) does not harm others. In fact, in their desire to earn as much money as possible is far more likely to benefit others

than to hurt them. For if Microsoft can make a better product, it can sell more of it. Microsoft benefits, because it earns more money. Consumers benefit, because their product is better.

Only a few individuals do not like this picture—those whose own businesses are threatened by Microsoft's actions. Indeed, look at the companies attacking Microsoft—Sun, Oracle, etc.—and you will see that they are, by and large, Microsoft's competitors.

If Microsoft truly drove these companies out of business, would that be a bad thing? No, of course not! For all that would mean is that Microsoft had produced a better product or sold it at a lower price -and so consumers would have benefited. Of course, many of the companies in the lawsuit are in no risk of going out of business; they are merely feeling the competitive pressures of another successful company. This is entirely healthy.

When you look at the actions these companies wish the Department of Justice to take, you can see that they serve to do little other than cripple Microsoft. They want Microsoft to "de-bundle" features—in other words, to put fewer features in. They want Microsoft to not engage in exclusive licensing—yet this is a fundamental element of Microsoft's freedom of contract (and surely these companies don't want their own exclusive licenses revoked!). Ultimately, they want a standard set that if Microsoft wants to put a feature in Windows or pick a price for its products, their competitors and the government must approve of it—a system of crass protectionism.

Fundamentally, Microsoft has harmed no one. Everyone who engages in a business transaction with Microsoft does so voluntarily—by purchasing a product, applying for employment, or signing a contract. Anyone who dislikes Microsoft or Microsoft products or any other aspect of the company can choose to not do so. What would its competitors do? They would restrain people who do wish to engage in such voluntary transactions from making them! So who is involved in the real restraint of trade here? Surely not Microsoft. Instead, we ought to look to those who wish to slap restrictions on Microsoft. I am not saying we should prosecute them under antitrust laws; I am simply pointing this out, illustrating the absurdity of the situation, and the absurdity of the antitrust laws themselves, which claim to promote "competition" by destroying it.

In fact, I believe that the current Microsoft settlement, if anything, is too harsh on the company, not too lenient. I believe Microsoft is innocent of any wrongdoing, and that they should not receive any penalty whatsoever. Yet, there are those who wish to slap yet greater penalties on the company, or even force it to break up. This is highly misguided. The real threat to competition in the computer industry is not the actions of Microsoft, but instead George Washington's "fearful master"—the intervention of the government in a healthy industry where no crime has been committed.

In any case, I must beseech you that, if you do put penalties on Microsoft, you minimize them. I don't believe that companies have an obligation to serve consumers, but at least

consider the people who benefit from Microsoft's market position, such as myself.

Consider Microsoft stockholders, whose \$376.2 billion in wealth is in danger. (For the record, I hold no Microsoft stock.)

Consider the millions who happily use Microsoft software.

Consider all the software developers, such as myself, who are grateful that Microsoft has made Windows into a de facto standard for computer software, rather than having to code for numerous operating systems.

Consider all the money Microsoft pumps into research and development every year.

Consider how Microsoft has been instrumental in building the personal computer industry nearly from scratch.

Consider the role model Bill Gates serves as to millions of Americans -the epitome of the American Dream.

So, please, fight the demands of the 9 state Attorneys General to increase penalties for this innocent company, and instead put your efforts into tracking down the real criminals, violent and nonviolent, of our nation.

Sincerely,

Matt Craighead, MIT Class of 2002

From: dizzynoise(a)mac.com

To: Microsoft ATR

Date: 1/18/02 12:13am

Subject: Microsoft Settlement

I'll put it plain and simple:

Microsoft is a monopolistic company that can NOT be trusted. They don't seem to be learning either. Their tendencies have become so BLATANT, and so outright, that they seem to be bragging about it.

Example 1: PocketPC

"Choose the power of Windows. Choose the PocketPC." This advertising campaign is ubiquitous. Microsoft is promoting their PDA's by using slogans like "Use the software you know & trust" and "[program] is like a trusted friend." Even though the Palm OS handhelds (the hands-down direct victim of this campaign) offer full compatibility and in some cases, better compatibility (WordSmith or DocsToGo for example), Microsoft is creating the deceptive image that Palm OS handhelds are not much more than a Memo Pad, and that because the OS on the computer at home is Windows, that the OS on the PDA should be "Windows." Although, unlike Netscape, this isn't a case where Microsoft is beating their technology into the operating system, they ARE using words to do a very similar action.

Microsoft is also doing a bit of deceptive advertising along with the PocketPC campaign. Palm OS handhelds such as the Sony CLIE PEG-N710C & N760C can play Mp3 files, and play converted movie files with stereo sound. Palm OS handhelds such as the HandEra 330, as well as a great deal of the CLIE's also have high-resolution screens, something Microsoft does not even make mention of. Instead, they compare their PocketPC to a significantly lower-priced Palm model, assuming that they all are the same. Yet the PalmOS models that DO compete with the PocketPC in price terms are not listed.

This is simply an example, but it illustrates the point that Microsoft is using deceptive advertising to promote their products.

Example 2: Windows Media Player

This proprietary technology is starting to clamp down on competitive media. Although RealNetworks is holding its own, if nothing is done, Windows Media will head down the same route as Internet Explorer. Unlike the file format Quicktime, Windows Media files are "locked" in the format, and cannot be decoded or exported into other formats. The problem arises when web sites encode media. Windows Media support for the Mac OS is absolutely terrible. . . . to say the least. (then again, Realplayer isn't doing so well, either.) Not all WMP files are viewable, and even then some bizarre things happen when trying to access media off of the internet. Although one might argue that Apple's Quicktime favors the Mac platform, at least Windows users are able to view ALL QT content, not just some of it. And as mentioned earlier, if trouble arouses when sending a home movie to a friend on a PC, the file format is never "locked", so it can be exported to another format. Microsoft is doing a lousy job of multiple OS support, and although I would never expect the Mac version to be as nice as the Windows version, the shoddiness of the product tells me that their chief concern with WMP, is keeping users locked into Microsoft's programs. I should also mention, that Microsoft builds in a "Windows Media" button into the IE browser, as you may be well aware of.

Example 3: MSN & Passport

Microsoft, as usual with their first attempts, hasn't exactly thwarted AOL with their MSN service. But they're now starting to move in for the kill (as with Palm and RealNetworks.)

"There are some things you grow out of, AOL is one of them." Ads like this run like crazy. And I know if I start up IE on a Windows PC, the default page will be MSN.com. When a family member of mine purchased his new Sony Laptop, it came with an MSN internet access disk. Even Apple recommends Earthlink as their ISP, but a big difference with Apple and Microsoft, is that when I install OSX, I don't get 30 reminders telling me I should sign up for an iTools account. Microsoft's .net is Microsoft's goal to dominate the net, in my opinion. Microsoft already controls the browser, OS, Office, and several other categories (not to mention the areas they're currently trying to control), now they want to control people's personal information.

What needs to be done:

Any proposal needs to benefit a neglected group: start-up companies, and standards not controlled by Microsoft. Had Microsoft never set out to milk one more market by crushing companies that pioneered it, people would most likely be using Netscape, Quicktime, WordPerfect / Clarisworks, and companies like Palm would not be hanging by the skin of their teeth, and Netscape would be thriving.

Already facing challenge is the controversial but now "icial" format of Digital Music: Mp3. Microsoft isn't even supporting it (very much) with Windows XP, in favor of. their own, proprietary

format. Although it sounds like "big brother", Microsoft should be BANNED from bundling ANYTHING with their OS, or even remotely "requiring" certain things be bundled due to "proprietary formats" developed by Microsoft. (i.e. Windows Media) The PC makers (Compaq, HP, Dell, Sony, etc.) should solely decide as to what goes with it. Also, the source code of Windows needs to be openly available for developers. Netscape can't even integrate their browser, because Microsoft won't let them! Along with that, more work needs to be done to let other OS's be more compatible with Windows. Java is a great example of this.

One final note. As if Microsoft could be more outright about their desire to become a monopoly, I should mention the "lock-out" of Msn.com people of other browsers experienced (Opera, Netscape, etc.), claiming that the browser's didn't support the page due to the lack of support for certain types of code. Microsoft later admitted that Opera's page rendering ability had nothing to do with it. —

Subject: Microsoft Settlement

This settlement is nowhere near strong enough! Microsoft has to be stopped from using its competitive advantage to take over new markets! Have you looked at the Passport part of their .Net initiative? They now want to own everyone's online identity, passwords, credit card numbers, And, they have a good chance of succeeding because their monopoly on PC operating systems and browsers allows them to lure people into their .Net clutches. Also, have you noticed the incredible security holes that constantly pop up in their operating systems (eg, XP) and applications? These will allow malicious hackers and terrorists to bring down any website, or even the whole internet by taking over the PCs of unsuspecting users

and using them as zombies to do the DOS attacks. uSoft can only get away with such callous disregard for the people of our country, and even our country itself because of their monopoly on desktop machines. Please get serious about this and punish Microsoft in accordance to the severity of their past and continuing crimes! Thank you. James Holmlund 73 Erstwild Ct. Palo Alto, Ca. 94303.

From: Gail and Fred Follmer
To: Microsoft ATR
Date: 1/18/02 12:41am
Subject: Microsoft Settlement

In January 2000, we bought a new HP Office Jet printer. We were running Windows 98 and everything seemed to be okay. Some time passed and we, my wife and I, noticed that if we were on the internet and wanted to print some information, our PC would hang up (do nothing) until the print operation completed.

We called HP support and they sent us a new/updated print driver—but they were not certain this would fix our system hang problem. It didn't. HP told us to contact Microsoft as they, HP, felt we had some sort of synchronization problem between the print buffering and the 98 operating system. We called Microsoft, its now late April, and Microsoft tells us that Windows 98 is not the "currently supported" environment—we need to be on 98 Second Edition for supported assistance, unless we're willing to pay for support on 98. I ask how much will the support cost? Answer, "don't know, it depends on how long it will take to resolve the problem, but that a minimum would apply. It was pointed out that Window 98SE only cost \$99.00 and fixes many 98 base problems, plus it adds functional support and performance. So we buy 98SE and install it, now I have the same system hang problem and several other problems, but at least they, Microsoft technical support will talk to us free of charge. It's now July, we have various system problems/hangs, even when not attached/connected to the internet. Microsoft tells me we need to download Maintenance level 1, as it fixes many problems. I download and apply Service Level 1 and still have the same printer hang problem, plus a more severe problem that the system periodically hangs for no reason—it doesn't matter what we were trying to do (use the mouse, keyboard, write a letter, search our data base, etc.). Finally in late September, Microsoft determines that I have incompatible levels of various modules within my system and I need to scrub everything and re-install Windows 98SE, then re-apply the SE maintenance package and see what happens—but Windows ME is highly recommended—especially for the home user who wants enhanced multi-media and internet functions. I don't know, more \$\$\$. Anyway, re-installing my system and everything seems to work. The problem, I was told, was that when I was using Windows 98 and the accompanied Microsoft Internet Explorer, then applied the first maintenance package to base Windows 98, I should have UN-INSTALLED Internet Explorer, then applied the maintenance, then

re-installed Internet Explorer. I told them, hey, IE came bundled with 98 when I bought it and I had no choice about its installation nor were there any instructions to un-install IE before installing the Windows 98 maintenance package. My point, their bundling of IE with Windows98 is what caused the problem of me having incompatible module levels—after I applied the maintenance package. But because of the age of my system, I either had to pay for service or pay for an upgrade to 98SE, which didn't solve my problem. I think Microsoft should have been willing to do what they call "problem determination" to determine what the initial problem was (their problem, my problem, or HP's problem) regardless of what Microsoft Windows product and product level I was running. Then once they knew the problem, fee or free resolution could be discussed. My point, they are the only "game" in town and you either do it their way or you don't. One thing for sure, if I had been running Netscape instead of MSN IE I would not have had the problem (we know this because my printer worked fine when connected to my daughter's PC). I don't know if I would have been running Netscape if IE didn't come with my system, but have you ever tried to un-install IE from your system??

Also I don't know if the above is what the anti-trust lawsuit is all about, but I think the whole issue of what's supported and for how long and what's the real problem should be determined before you tell an end-user customer, who's at your mercy, you have to pay for service.

For what its worth, I'm now running ME because I upgraded to an Intel P-IV processor so I had to go to ME to get the function and performance. It's a circle that never ends. Pay me, pay me! Fred Follmer, 276 Fireside Ridge Dr. Dahlonge, Georgia, 30533. 706.219.4835. PS: Here I am complaining, but I no longer have the documentation, HP or Microsoft problem and/or incident numbers, to support my grievance—but thanks for listening.

Subject: MICROSOFT SETTLEMENT

TO WHOM IT MAY CONCERN:
It is our belief that the duty of the Department of Justice in anti-trust actions such as the Microsoft case is to protect the interests of the consumer, not the competition which was not wise or aggressive enough to stay in the running.

The consumer, we the people, were never hurt by Microsoft. We were only hurt by the

actions taken against Microsoft by the Government, adding to the decline in the tech stocks, dominoing into the decline in the overall market and contributing to the existing recession.

We believe that the settlement offered by Microsoft is fair and that it should be gratefully accepted, thereby preventing further damage to the consuming public and the economy.

Sincerely,
Charles R. Kerby

Subject: Re: U.S. v. Microsoft: Settlement Information

Why is a monopolist allowed to negotiate terms? I wonder if criminals w/o so much money would be given such "equal protection under the law"? Quit coddling and start 1) dividing up the company, 2) releasing the source code and 3) forcing Microsoft to compete fairly. Or are you too busy helping to protect the President's rear-end from the Enron scandal to put any more effort into this?

It is imperative that the Department of Justice NOT accept Microsoft's proposed settlement. It is anti competitive and will only ensure Microsoft yet a greater control of the software world. Companies like Apple would be diluted even further by acceptance of the proposed settlement by allowing Microsoft to implement 1 billion dollars worth of computers to the poor schools. Apple will be hit hard by such a move.

Subject: Microsoft Settlement

Thank you for this opportunity to comment on this case. After reading the Complaint, Stipulation and Revised Proposed Final Judgment, and the Competitive Impact Statement, I have a much better understanding of the DOJ's case against Microsoft. I feel that the proposed final judgment is a fair and equitable way to correct the past misdeeds of Microsoft, especially in their dealings with ISPs, computer manufacturers, and other software companies that must interface with the Microsoft Windows operating system. I am of

the firm opinion that the states that are against the proposed judgment but are pushing for more radical treatment of Microsoft, are acting in the interests of corporations or other special interests within each state's jurisdiction that wish to see nothing else but the imposing of restrictions so strict that their solution would in effect, be stifling and anticompetitive in nature. In this pursuit, I do not believe that these states have the interests of the public in mind.

The Revised Proposed Final Judgment would remedy the practices that have brought Microsoft to this trial, while looking after public interests, without unduly restricting Microsoft from pursuing its legitimate, legal business.

Again, I wish to thank you for this opportunity to express my opinions in this case.

Sincerely,
Michael Leamer

Subject: Microsoft Settlement

The tactics used by Microsoft in the recent years, including the "browser wars", were apprehensible at best. By using their dominance as sole provider to 95% of the world's Intel users, it assured itself the top position. It has also begun the same tactics with their .Net strategy, but that is another case. The settlement that Microsoft has proposed is even slimmer than the original deeds that brought about the case. Microsoft, as expressed by Steve Jobs and Apple Computer, Inc. and others, is once again trying to put itself into a market where it does not already have control with their "donated" software. It is known, in fact, as the judge agreed, that the real cash value of the settlement is a fraction of what Microsoft is offering in its own product. How can it be possible for a business to be punished by allowing it to disseminate a new market? This must not be allowed, and my faith in the Federal Judicial system tells me that it won't be.

RE: Microsoft antitrust lawsuit

Dear Renee,

I believe that I recently heard on the radio that proposed settlement in the Federal government's Microsoft antitrust case (where Microsoft would donate \$1 billion in

computers and Microsoft software to the nation's poorest schools) had fallen through. If this is true, I applaud the collapse of this totally inadequate settlement agreement for the following reasons.

First, here is a quote from a TheStreet.com article <http://thestreet.netscape.com/tech/software/10004818.html> on West Virginia's new suit against Microsoft regarding the federal case. "Under that settlement, proposed last month, Microsoft would donate more than \$1 billion in software and computer equipment to the nation's poorest schools. Critics have characterized the proposal as a ploy to increase Microsoft's share of the education-software market, one of the few areas within the software sector where it still faces significant competition, namely from old-time foe Apple Computer (AAPL:Nasdaq). Proponents characterize it as a win-win situation that benefits underprivileged students."

I would like to ask the proponents of this settlement why they think Microsoft should be a winner for the monopolistic antitrust crimes they have committed. I don't think we should be rewarding individuals or corporations for criminal behavior.

Had AT&T come to such an agreement in their federal antitrust case they would not have been broken up. Instead AT&T would have been able to stay a monopoly and would have agreed to providing free long distance to the customers of all its long distance competitors for just long enough to drive its competitors out of business. This settlement would be a windfall reward for Microsoft for criminal behavior, not a punishment. Microsoft's lawyers had found another shrewd way to devastate the competition of their product line in the nation's schools and weaseling out of this antitrust case at the same time.

In the part of this settlement where Microsoft agrees to donate a billion dollars worth of computers to the nations schools, if Microsoft is allowed to make this donation using computers running Microsoft operating systems, or running Microsoft software, then it succeeds in the following.

1. Microsoft displaces other vendor's hardware and software out of the schools. A prime target here is Apple Computer, who maintains a large market share of computers in schools because of their superior ease of use and graphics capabilities. Microsoft will also displace other operating systems such as Unix, Solaris, and Linux, and other application software such as Netscape, Corel, Applixware, Appleworks, Apache, etc. from the schools. As good as the other products are, they can't compete with free hardware and software. It may well put some of these competitors out of business by flooding the schools with free Microsoft products or computers dependent on Microsoft software to operate.

2. Microsoft will force schools to have to buy software from Microsoft for future upgrades.

3. Microsoft will make children come home to their parents saying they need Microsoft software and computers running Microsoft operating systems and software to do their homework.

4. They will make themselves look like the good guys to schools, administrators, and

children who will think Microsoft is coming bearing gifts, rather than buying themselves out of a criminal prosecution. A true public relations victory for the wolf in sheep's clothing.

5. Microsoft does not have to make reparations to the victims of its criminal antitrust crimes and does not get broken up. Instead, Microsoft gets to further steal market share and customer base from it's competitor victims with money that should rightfully be paid to it's victims or the government as a fine.

6. While Microsoft can say it donated \$1 billion dollars worth of hardware and software, let's realize that Microsoft can produce software at pennies on the dollar of retail value, and can surely acquire new and refurbished hardware from PC vendors for pennies on the dollar through any number of sweetheart deals. The true cost to Microsoft of this settlement would probably be less than a third of the advertised \$1 billion value.

As a current user of Windows, Macintosh, Unix, and Linux, plus many others in the past, I can say with expert confidence that while Windows is an acceptable operating system, it still lacks the system stability, virus resistance, advanced features, open source software, and user empowerment of creativity offered by the other operating systems. This settlement could wield a death blow to Apple and possibly others by robbing their customer base. It not only keeps the abusive Microsoft monopoly intact, it strengthens it, leaving the computer consumer world stiffly under Microsoft's thumb.

Microsoft truly needs to be broken at least into two separate companies to separate their operating system business from its application software business. The current structure gives Microsoft continuing opportunity to sabotage competing application software with "incompatibility" changes to it's operating system with each OS revision, and to provide other operating systems with slow, buggy, or otherwise dysfunctional or nonexistant versions of its application software. Its further expansion into internet services with msn.com, and its plans to deny msn.com web service to browsers other than its own Internet Explorer because other vendor's browsers are "incompatible" are further examples of Microsoft's plans to cut out competing vendor's products through the use of its monopoly powers.

My opinion is:

1. Microsoft should still be broken up.
2. Microsoft should not be allowed to flood schools with free computers and software unless the computers are up-to-date Macintosh, Linux, Solaris, Unix, or other non-Windows computers. Any freely provided software should be that of current competitor software (AOL, Netscape, Kodak, FileMaker, Apple, Red Hat, Yellow Dog, ApplixWare, gnu, Sun, etc.) Only then will this settlement make any kind of reparation to Microsoft's victims and aid in discouraging and diminishing Microsoft's monopolistic abuse.

3. Microsoft should not be able to provide free internet service to schools as a part of

any revised settlement, as msn provides good service and up-to-date software only for Windows based computers.

4. If Intel or other PC clone based computers are provided to schools for free as a part of this settlement Microsoft should be required to bar these computers from being activated with Windows XP or other versions of Windows for a period of at least 5 years. This is technically doable at least for XP, as activation of XP requires users to call Microsoft and provide the computer's unique machine ID for activation.

5. An alternative would be to require Microsoft to first pay victim competitors (if they are still in business) directly for damages, and use the remaining funds as described in 2 to 4 above. I hope that you will reconsider separating Microsoft's operating system, application software, and internet operations into three separate companies to promote fair competition for the benefit of all of us, and totally drop plans of this incredible competition devastating free giveaway of computers to schools unless they conform to restrictions like I mentioned in 2 to 5 above.

Thank you for your time in reading this,
John Nakai

Subject: Microsoft Settlement.

I feel the Microsoft settlement recently discussed (\$1 bil of educational computers) was so inappropriate that I began to lose faith in the process. As a consumer, and multimedia developer I use both Macintosh and PC (Windows) computers. Microsoft's insistence in making the world comply with it, rather than it complying with industry standards affects me both professionally and personally. They seem to operate unilaterally, ignoring what is in the best interest of IT professionals, creative developers, and consumers. I believe they use their market dominance to bully everyone that stands in their way.

Microsoft:

1. Tries to co-opt Java, adversely effecting both web site visitors and developers. MS is clearly trying to destroy any computing standards other than its own proprietary standards.

2. MS Explorer pops up warning screens about "dangerous scripting" whenever I try to view a quicktime file (again, quicktime is an competing but extremely popular file format). This also dramatically affects me as a developer.

3. Maintains monopolies in word processing, spreadsheet, and business presentation software (Word, Excel, Powerpoint). This monopoly is not limited to the PC—but also impacts the Macintosh world. Microsoft's persistent bullying in the past, and with other enemies—and "partners" makes me suspicious that they can coerce Apple computer anytime they really want to.

MS has seemed to steamroll everyone—including the government. I strongly support significant punitive charges(\$), as well as the partitioning of the company into discrete business entities.

Thank you

Subject: microsoft settlement

i have read the terms of the settlement concerning the company. Microsoft. i have followed the case and have followed the company for many years. it is fairly obvious that Microsoft, the company has one goal, that is to be the biggest and only software company for PC's. i think this is the definition of the word monopoly. as to their business practices, even they admit to being monopolistic at times. yes it is convenient to have a common operating system for PC's, and yes it is convenient to have a common source for software to use on these PC's. However, it is not in the best interest of the consumer or the operators of PC's to have only one option for software and for operating systems. it has been shown time and again that the pressure of competition fuels innovation and improvements in any endeavor and as to the fairness of pricing and distribution of product under a monopoly, that doesn't even need to be stated it is so obvious. so why this settlement? that is the only question, why the terms of this settlement which will allow Microsoft to essentially operate as is???????

Subject: Fair Justice

Microsoft should pay damages to companies that were crushed in unlawful acts.

1. I think a fair settlement would be for the US govt. to stop using microsoft products in a stance for the right and lawful thing to do. Use some sort of open source software. APPLE OSX would be a safer and cheaper option for our govt.

2. Make microsoft pay 5 billion cash to the schools of this country for their own choice of use for technology. Suggest they buy apple products instead.

This would be a fair punishment. It would open the door for competition and the most monopolized company a chance to compete on a level playing field.

Subject: Microsoft suit

Hi:

I noticed a site with the info about the Microsoft antitrust suit. I wondering why the various Federal agencies never went after Microsoft as some legalities go after car sales or car manufacturers for "lemon laws" for problem vehicles and forced recalls. The reason I bring this up is that fact that Microsoft has been selling flawed products for all these years with known bugs. Then bugs are sometimes taken care of IF you buy their new version that fixes the bugs (and normally has more).

That is like car dealers selling a product with a problem (and no recall is done) and says the problem will just be corrected in the current model IF you buy it. Just thought I would send you a thought to ponder (and hopefully can pass it on the agency who can act on it :-)

Thank you for your time,
Jerry

We would like to comment about microsoft litigation.

1. We think the law suit has been going on too long, wasting tax payers money. Nobody especially public will benefit from this lengthy court process but the lawyers. Microsoft will have to spend more and more for their lawyers and in return will have to get those back from consumers by raising the price of their softwares.

2. It seems to us what the government is doing not for the consumers benefits but for Microsoft competitors' benefits. We use window operating system because we like it even though we were given choice when we bought our new computer. We also have both internet explorer and Netscape but we use internet explorer more. We never feel that Microsoft inhibits us to choose anything, besides it makes easy for us to have internet explorer comes with the operating system. We are share holders of microsoft, oracle, Sun microsystems and AOL but that isn't the issue.

3. Microsoft settlement to provide fund and computers and softwares to public schools is good thing. Apple is not happy because they dominate the school system. Why isn't it a monopoly issue for Apple? It's a free market, let's the students decide what they like.

4. What the government try to control Microsoft is the worst thing that can happen to new innovation. Please let the companies compete freely in the open market allowing consumers to choose what they want not what the department of justice mandates.

Sincerely,
Mirin Bartle, M.D.

 Your Honor:

I wish to take just a few minutes of your time to express my views regarding the pending action you will take on the issue before you : Proposed Final Judgement re: Microsoft I would implore you to look at this situation in a true ethical American way. If you should, you will find your decision very easy to make.

This country is founded in the ethics that all are created equal and have the same rights. Success, such as Microsoft has had, does not give them the liberty to dominate the software technology market just because they have the bucks to be the big Daddy. The kids need a chance to succeed as well. America thrives on competition.

Please allow America to continue to provide a fair market place for the smaller guys. Please do not make "Money makes might" right. Personally, I like Microsoft and hardly use anything else. BUT—please don't choke the others out. Please retain my right to have a choice!!! I am a 52 year old professional—Registered Nurse with a Master's in Nursing and hopefully, soon to be a Nurse Practitioner.

I was raised as a janitor's daughter. I have lived and traveled all over the world. I have spent 18 years as a single Mom, raising two fine boys from the ages of 7 and 5 at the time of their father's unexpected death. I know hardship and grief. But I look to you to make sound decisions in cases like this where politics go out the window and common decency rules. I look to you to do this to maintain my faith in this government and country—to give me a sense that my personal sacrifices paying taxes and supporting this country are validated and worthwhile.

You really don't have a choice if you are to maintain what the terrorists, anarchists, and other NON-law abiding folks would take from us: our integrity and purpose as a nation: FREEDOM. Please rule in favor of the small guys. The regular folks. Please don't strangle their chance to make a living—let alone a bust!!

I pray for God's peace and blessing in your life. He has afforded you this authority in our beloved country. Please exercise prudent and fair judgement.

Sincerely,
 Jeanette Jones, RN, MN

Microsoft again demonstrates utter disrespect and mockery for the judicial process by proposing a settlement which not only minimizes their punishment but also extends their monopoly power and hurts the very companies they have exercised this power against for so many years. Microsoft should pay damages to Netscape, Sun, and Apple. They should also pay several billion dollars to schools with which the schools

would have to purchase Apple computers. Finally, Microsoft should be broken into a "Windows" division and a "Applications" division. They should be made an example of.

To Whom It May Concern:

I am a manager of a Silicon Valley startup and would like to quickly express my concerns about the Justice Department's Proposed Final Judgment in the Microsoft Antitrust case. It seems that the PFJ does not adhere to the U.S. Court of Appeals decision that any government settlement should have three elements:

1. Terminate Microsoft's monopoly.
2. Deny Microsoft the profits of its past violations.
3. Prevent any future anticompetitive activity. To protect consumers and small competitive companies from monopolistic entities such as Microsoft, I believe that the elements proposed by the U.S. Court of Appeals should be followed.

From: Richard Motofuji
 To: Microsoft ATR
 Date: 1/18/02 2:13am
 Subject: Microsoft Settlement

Hi,
 I, for one, would like to see Microsoft heavily punished for their anti-competitive tactics. They have used unethical tactics and have leveraged their market dominance to pressure other companies, both partners and competitors, into furthering their monopolistic strength.

I believe the computing world would have been a better place if Microsoft had not

crushed various competing platforms. Here are some of the most glaring examples:

1. Netscape would probably have thrived as an alternative web-based computing platform, had Microsoft not tied Internet Explorer to Windows. Instead, Netscape lost market share and momentum.

2. IBM's OS/2 operating system was technically superior to any of Microsoft's OS products. Regrettably, IBM was pressured into stopping the development and shipment of OS/2 by Microsoft.

In addition, although it may not affect the judgement of a truly objective court, it is clear that Microsoft has not been forthcoming when producing testimony or evidence in court:

3. Bill Gates' testimony consisted of obvious stalling tactics, clear hostility toward the prosecuting attorneys, and far too many claimed memory lapses. It is clear to me that he was hiding facts and attempting to avoid answering embarrassing questions.

4. Microsoft produced falsified evidence in the form of a videotape purporting to show that it was impossible to extract Internet Explorer from Windows 98. So, although Microsoft has mounted a public relations campaign to plead its case, we are left with a monopoly that not only controls the vast majority of the business and home computing market. Microsoft is now attempting to enter into the home video console market and has recently purchased the most of the intellectual property of SGI (formerly Silicon Graphics.) Microsoft has also attempted to co-opt the Java programming language, and others, by creating their own variants that will only interoperate with the Windows OS. The sheer market share of Windows could cause Java to lose its cross-platform interoperability to become yet another proprietary

Microsoft API.

I believe that with alternative platforms such as Netscape and OS/2, the computing world would have been a better place. Microsoft would have had to compete on the ease-of-use, security, and reliability fronts. Now, with no major competitors, we are left with Microsoft products that are difficult to use, have an enormous number of security vulnerabilities, and are crash-prone.

To me, it is clear that Microsoft has broken anti-trust laws. It is also clear that they have not fully cooperated with the Department of Justice. And it is clear that their tactics have not changed at all since the period under scrutiny in the Department of Justice anti-trust trial. Microsoft must be punished harshly for their actions, and they must not be allowed to act so arrogantly ever again. I think that a separation of the Windows and application program groups would be appropriate. A physical separation of the two groups, to different states, would also be necessary.

Thank you,
 Richard Motofuji
