MTC-00013714

From: Eddie
To: Microsoft ATR
Date: 1/18/02 2:23am
Subject: Microsoft Settlement
To Whom it may concern,

After review of the documents regarding the proposed settlement by Microsoft it is my belief that allowing Microsoft the donate it's own software as a viable means to settle this matter is a joke. All that does is put more of their product into a market that is already monopolized by them.

It is my feeling that any settlement should be paid in cash or a manner that allows the recipient of the award to do whatever they want with the funds received. Having a cash settlement would allow the receiver to purchase products from any vender they want which would help spread the wealth to other venders besides Microsoft. It seemed that the goal of the lawsuit was to change the monopoly influence of Microsoft not to encourage it further.

Thank you for allowing me to express my opinion
Eddie

Gentlemen & Ladies I regards to this suet brought by the 10 +or— states about the way Microsoft runs its business, I think it's a terrible waste of government time and our tax dollars. I am 71 years old and have been a computer user for about 16 -18 years. I've owned 3 different PCs and they have all used MS operating systems. When I got the last one I decided to use E-mail and later to have an Internet connection. My E-mail goes through Juno.com and my Internet is through A T & T. I have had no trouble changing

services. I changed from MSN to A T & T because it was less expensive.

I sincerely hope that this action can be terminated.
sincerely
Glen S. Hawley

Dear Judge,
Approving the PFJ for Microsoft would be deceptive to the public, after all the open controversy regarding Microsoft's monopoly in the computer industry. Not only that, it would be detrimental to the free market idea that America's economy is based upon, and it would seem to grant special preference towards Microsoft and instigate a lot of controversy. Thank you for the time you are taking to review the public's opinion about this important decision you will have to make. I'm sure it will be the right one.

I am a former Windows OS user. I do still use Microsoft products when they are available for Mac.
I think Jackson was correct in his findings. Microsoft is guilty of abusing it's current position of being the dominant OS.
I think they are also guilty of fraudulent advertising. They mislead the unknowing public to believe their product is secure and stable. I had such bad experience with MS over the years with their "upgrades" that I finally gave up.

You would do the public a great disservice if you let MS get off too easy. Please do not let the settlement which they were to donate software and computers to schools go thru.

This would only hurt competing OS's

Dear Judge,
I don't know much about law and politics (though I'm learning), but I know that our economical system is based on free enterprise. If Microsoft is given a monopoly over the computer market, that is the antithesis of free enterprise. I don't see how there could be ANY reason to grant such a proposal. I mean, Microsoft does rule the market, so there seems like there can be no possible competition, but how would we know if we don't encourage small computer developers? A monopoly is wrong, and that's that.
Thank you.

Dear Judge,
I am a middle school teacher, and only have recently gotten comfortable working on a computer for any mason besides using a word processor. When my daughter Lindsay told me about this campaign, I thought I should participate. I try and teach my students to be fair and to challenge them to create. If there was no competition for Microsoft, I think it would stop the growth of the computer industry. You do not run a race by yourself, you out run opponents. If there were no opponents, you could not compare yourself to others and improve. This Proposed Final Judgement is wrong and should not be approved by you, Judge Kotelly, it goes against the free market ideals that our democracy is partly founded upon. Thank you for your time.

From: Austin Fusilier
To: Microsoft ATR
Date: 1/18/02 3:44am
Subject: Microsoft's Proposed Settlement
To Whom It May Concern:
Allow me to review the facts.
(1) Microsoft has been ruled to have been in violation of the anti-trust laws. (Basically, Microsoft has a virtual anti-competitive monopoly over the PC industry).
(2) Microsoft proposes that it give massive amounts of computers and software to the

educational area of the PC industry. (The only portion of the industry that they do not have an iron-clad grip on). It seems to me (a rational human being) that this course of action will not only NOT put a halt to Microsoft's illegal business practices, it will allow them to FURTHER said practices, by further saturating the market with their software.

The monetary "penalty" suggested is both laughable and negligible. Microsoft is one of the wealthiest corporations in the world—their finances are in no trouble whatsoever. They can easily absorb whatever funds would be used to distribute their PRODUCT. In fact, from a business point-of-view, the "fines" could be viewed as an investment in the future proliferation of the company's reach.

In short, I, a voting citizen of the United States, am ABSOLUTELY OPPOSED to this settlement proposed by Microsoft. I believe that it not only would undercut whatever legal actions were taken, the mere fact that it was offered is (I believe) a complete insult—a very revealing glimpse into just how much CONTEMPT the Microsoft corporation has for the United States" Legal System.

I thank you for the opportunity to share my opinion on the subject, and I pray the correct decision will be made—the choice that upholds the integrity of the United States" Judicial Branch, and not the option that FURTHER destroys the solid foundations that the courts were built on.

Renata B. Hesse:

I have recently noticed that two Web sites that used to function properly no longer do so. The two sites are <http://www.businessweek.com> & <http://www.mapquest.com>

Common problem: After going to these Web sites, mouse clicks or data entry is not responsive, followed by the browser becoming quite slow in responding, even if one switches to another Web site. Also, pages do not completely load; the Home page only loads an ad at the top of the page with the rest of the screen blank and a message at the bottom reading Done. The only fix is to quit & then restart the browser. These sites are not authorized to download any code or data-stream that disables or interferes with any of my applications, programs, or files.

My computer is a Macintosh PowerBook G3 FireWire running Mac OS v 9.1 running Netscape v 4.76 browser & Eudora v 5.1.0 e-mail client. I may be wrong, but I suspect that the above sites may be using Microsoft software. If so, then I strongly suggest that you consider the case that Microsoft not interfere with programs, applications, and files that conform to open standards. In other words, Microsoft should not be allowed to break nonMicrosoft code, programs, applications, files, or interfere with computer operations. I, for one, do not consider their behavior as a benefit to consumers.

Thank you for your time and consideration.

From: kellyc001@attbi.com@inetgw
To: Microsoft ATR
Date: 1/18/02 4:01am
Subject: Microsoft Settlement
Gentlemen,

The proposed settlement, plain and simple, is another way for Microsoft to attempt to dominate yet another segment of the American computer market, namely education. It is entirely consistent with MS's previous tactics of gaining a foothold in certain markets to the degree of excluding choices for the end user. The end user who is then firmly entrenched in MS's products to the degree that it becomes difficult to adopt other choices without great disruption or costs. It is an attempt to dominate, not through QUALITY, or by choice of the end user, but by SATURATION.

Did anyone doubt, that when MS began imbedding its own web browser within its MS Windows 95 operating system, that 90 percent of the American computing public would go through the effort and hassle of removing it (made nearly impossible by MS) for the sake of installing a web browser from a competing company?

Once Microsoft has donated (used) computers and (conveniently) thousands of copies of THEIR software to schools, the typical and predictable reaction is for those schools to continue to use MS's products in the future. Not because of free choice on their part, but because it would be too disruptive to look to other alternatives. Is Microsoft sincerely concerned about devoting resources to poorer inner city education? Or is MS trying to further its monopoly? The simple answer would be for you to ask Microsoft to donate the same amount of APPLE Computer Macintosh systems and software to those schools, and watch as MS does an about face so quickly that a giant sonic boom rumbles thru-out the land.

Would the US justice system allow a person convicted of counterfeiting US dollars to pay thier fines using the same counterfeit bills as they were convicted of printing? Gentlemen, this company is thumbing it's nose at the antitrust laws of this country, and at YOU. It is doing it in such a blatant manner that Im shocked to see this offer even being CONSIDERED. Please do not allow this monopolistic giant to put a stranglehold on ever more of this country's computers under the guise of "paying its penance" To do so would be to allow MS to be punished by gaining even more market share.

Thank you,
Kelly Cederholm

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Subject: Microsoft Settlement

I believe that Microsoft has intentionally built up it's Windows operating system to eliminate the competition. They knowingly release products that are incompatible with certain types of software in an effort to eliminate the opposition. The most recent one that comes to mind is Windows XP's incompatibility with Apple's Quicktime, which took plenty of complaining and finally a fix from Apple, not Microsoft. By allowing Microsoft to settle this case by flooding schools with their products will only help to further their infiltration of the consumers home, by getting children used to using a Windows based PC at early age, they are making the consumer identify with their brand, and continue to use Windows based PCs in the future. A more viable alternative would be to fund competitors, or 3rd party software manufactures looking to create applications for Windows (such as an Internet Explorer alternative or support for Linux). I appreciate the government allowing the public to voice their opinion, and look forward to future opportunities.

Sincerely,
Brian Konar

Dear DOJ:

I am very concerned the way you are punishing Microsoft. Microsoft is a successful company because they create products that consumers and businesses want to purchase. No one is putting a gun to their potential customers and saying you must purchase Microsoft products.

Microsoft doesn't have a monopoly on software. Sometimes I don't think the government lives in the real world. For example, I am a professional salesman and I pack a bag everyday and go out and call on potential customers. My customers purchase my product because I sell them the product based on the features and benefits they will receive by using my product the same way Microsoft wins customers at the end of the day. Another key point that you need to consider is this ridiculous lawsuit is costing the government billions of dollars of lost revenue because the stock is severely depressed because of the lawsuit and is having an adverse effect on our economy. This lawsuit needs to be ended and we need to get back to business and getting our economy moving forward.

Let's stop wasting money and energy on this ridiculous lawsuit. The truth is consumers have benefited mightily, as has the entire economy from the hard work and tenacious efforts of Bill Gates. Persecution of such hard work and success is unbelievable to most reasonable people. It is time to put the lawyers out of business. . . . take a look at what they are doing to American business with asbestos lawsuits. . . .no one wins but trial lawyers. No one will win by crushing Microsoft, especially the consumer. Please consider dropping any further action. Sincerely, Pat Saunders (Very satisfied Consumer)

Subject: Microsoft Settlement

As a 26 year old college alumni, I've been using computers for a large portion of my life. From the Commodore 64/128 to the Apple II to various PC's (my own and schools), Mac's (my own and schools), my old Commodore Amiga, and even onward and upward to Unix, Linux, et al. As someone that's used multiple platforms, I can honestly tell you that the state of the computer industry has been a fallacy for numerous years due to lack of government intervention into anti-competitive business tactics.

The previous settlement with Microsoft, in which plans were designed to bring hundreds of thousands of Windows PC's into the lower income schools where a lack of equipment puts them lightyears behind what other students has initially sounds like a good idea. That is until you consider the fact that this exacerbates the problem, allowing Microsoft to get away with further improving their marketable stance, weaseling their way into a market that is currently held by one of their largest and fiercest remaining competitors; Apple.

With this said, what do I perceive should be done? For one, Microsoft should not be sent on their merry ways with a slap on the wrist. If they have been found to be guilty, allowing them to go on with a minimal settlement will do nothing other than strive them of cash that as a billion dollar company, is a mere slap on the wrist. The originally proposed plan to split Microsoft still at this stage sounds like one of the only solutions to bring any form of sanity into the U.S. And International computer economy.

This is becoming and ongoing, outward moving, and even larger threat as Microsoft, like a plague, continues to expand, grow, attempting to conquer, quell, crush, and destroy any semblance of competition that stands in their way. From their efforts at releasing a game console to beat Sony, to attempting to knock off 3Com's spun-off Palm division. To attempts at beating Apple, attempts to destroy what remaining computer makers that exist outside of their reach as in the recently publicized anti-competitive tactics Microsoft took against Silicon Graphics (SGI), and most recently in an article published on The Register, their purchase of much of SGI's 3D graphics standards, which allows them to destroy the OpenGL standard and ultimately work at pushing Microsoft's own Direct3D as the progenitor, not via competition, but via conquering. The gloom nature of the OpenGL purchase is such, that Microsoft will have complete control over all 3D standards, including the OpenGL standard which companies such as Apple, SGI themselves, and various game card developers have depended on. Apple of which has integrated the OpenGL architecture into their latest operating system, and one of the last major competitors to the Windows franchise, in Mac OS X.

Microsoft's Internet Explorer has all but killed off and rendered Netscape a shadow of what it was, via highly anti-competitive practices. Opera is but a miniscule player, as are browsers such as iCab, and OmniWeb, which are both Macintosh specific browsers

further miniaturizing their competitive abilities. Noone can compete against Microsoft in key areas where they bully their way in.

Whose left? Sun Microsystems, who painted into a corner watches as the onslaught of Microsoft, Intel (another anti-competitive and monopolistic player over the years), Dell, Compaq, and others continue to attempt to widdle away at Sun's marketing edge, using more scalable versions of Windows to attempt to do what Solaris can. SGI, which is quickly eroding away into nothing, amidst uncertainties, slow sales, and inability to retain it's focus for any semblance of a future lies struggling, writhing to reclaim some semblance of ability to compete. Apple, funded by Microsoft, dependant on Microsoft products like Word, Excel, Powerpoint, and Internet Explorer; and ability to integrate into PC-controlled MS Exchange servers to use Outlook, Entourage, or Outlook Express to connect. How does Apple survive under these premises when competitors independent now suffer, struggle, writher, and look at the grim potentials? This is why, as the DOJ, it is your imminent obligation to "PROTECT" the economy, the people of this great nation. If Microsoft does take control, which they're already well on the way to doing (as they already dominate the market as it stands), they can stifle any semblance of innovation, control pricings far worse than they do now, and ultimately turn this country into a country whose economy, once largely based in computers, sits wrenching and bellyaching; as the potential to slay the monolithic dragon Microsoft could become in their anti-competitive ability to lie dormant, stagnant. Keeping Microsoft on their toes, forcing them to innovate rather than duplicate, then bully via their massive heft to assure that the market remains theirs. It is time for a computer world with a decisively larger marketshare. One with more than Windows. One that allows companies like Apple, Sun, HP (via HP/UX), SGI, IBM (via AIX), Palm, et al. To compete against Microsoft on all levels. To not allow Microsoft to win by default via bullying, beating, and pounding their competition to death.

Is having the world of computers tied to a single company healthy? From the Melissa virus, to various worms, to the problems with Microsoft's NET strategy; problems that affect Microsoft and Microsoft alone; does having 90% of the world's computing tied to Microsoft make sense? When a virus that affects Windows can't affect the Mac (unless it runs Windows via VirtualPC), can't effect PalmOS, can't affect a Linux box (unless it runs a Windows compatibility layer like WINE) . . . The point is, if a choice is given, which hasn't been an option since the early 1990's; and if there's limited choice in the web browser market as having a browser "tossed in the box" as IE is on PC, and as it ships default on Mac OS CD's (although it's easier to choose the option on the Mac; yet the alternatives are no longer as promising because it's difficult for them to compete with a free browser like IE from a company that does it to control their own destiny), choice in what machines you can run, choice in having those said browsers, office

programs, etc. etc. available on all platforms that remain viable (such as Solaris, Irix, Linux, Unix, QNX, Mac OS, Palm OS, Windows) in some guise. . . You rectify the problem. My personal solution, is that what should happen is this. Microsoft should be split into two factions, one that develops applications like IE, Office (Word, Excel, Powerpoint, Access, Entourage) Outlook, Outlook Express, FrontPage, Publisher, Media Player. The other faction should be Windows for varying platforms (PC, Pocket PC, etc.). From there, Microsoft should be forced to release the source code to the Windows API's, the Application Plug-in Interfaces. API's are the cornerstone to compatibility, and with those being openly available in the market; other companies such as Apple, Sun, SGI can roll Windows-compatibility into their systems with limited performance degradations (applications written for Windows could be recompiled with those API's on all subsequent platforms).

The Application division would still be allowed to build all versions of their software as previous. The Windows division, wholly removed from the Application tie, would be forced to either a) innovate by competing with the competition with all of the same applications available (further forcing Microsoft to prove they can innovate and compete without bullying, which in effect would teach them a lesson if they couldn't); b) it would also give Microsoft an immediate leg-up as they'd still be the first to have full Windows application compatibility remaining, however they'd have to rework their system to support a lack of IE-integration; c) it would also allow variants of Linux to step-up to the plate, and work on their own Open-source alternatives to Windows, and in turn give the Windows division another competitor. Currently Linux struggles to compete against Microsoft because key programs, like Office, IE, Frontpage, Publisher do not exist or are not offered by Microsoft. Doing what the government can to split the market up as much as possible, and bring in a greater degree of competition is almost like "resetting" the market to where it was before Microsoft leveraged and bullied their way to the top (which is where we're at now, market domination and saturation); which imminently was due to the Federal Government's lack of participation, analyzation, and studies into the business acts of companies that deserve extreme scrutiny.

Band-aid's won't help . . . And while Judge Pinfield-Jackson's rulings might be perceived as hasty and ill-advised, so is any light smack on the wrist, light dent into the personal pocketbook, when compared to the business tactics and atrocities Microsoft has achieved over the year's through their own brand of bullying, bulldozing, and brandishing of competitors as Microsoft has done through anti-competitive tactics. From vaporware announcements, to destroying competition by undermining and undercutting (in the case of IE vs. Netscape). Microsoft's brand of competition must, I stress, MUST be stopped before casualties expand into Apple, Sun, SGI, and spread

further into their own blood in terms of Sony (who they supply Windows to for VAIO's, but compete against with X-Box), to beyond. Please read this and seriously consider "FORCING" Microsoft to innovate rather than copy and bully the competition. PLEASE, I beg you . . . Do the right thing, seek justice, and help reset the industry so that it might "FINALLY" be allowed to evolve in a logical sense that makes sense and doesn't leave us falling prey to damages from being stuck and tied to "one" entity in the end.

Sincerely,

Marcus Mackey mmackey27@attbi.com

I have concerns that this proposed settlement neglects the principle of equity in justice. While understanding the need for an expeditious end to a very long case, and while questioning some of the anti-Free market presuppositions brought by the DoJ, I still have to wonder if justice has been served. There has been no admission of guilt by Microsoft. This is remarkable in light of the evidence presented during the trial and even the initial findings of Judge Jackson.

Subject: proposed remedy

Dear Renata B. Hesse,
Having read all of the documents provided pursuant to the revised proposed Final Judgment in the United States vs. Microsoft I have the following comments:

(1) I was relieved that provisions that would have certainly worked to extend Microsoft's monopoly into the one PC market where some semblance of competition still exists, namely the education market, were removed. As someone who works in the technology industry (though not in competition with Microsoft) I was shocked that the court would decide to "punish" Microsoft by granting it the task of providing cut-rate software and hardware to schools where such resources were in short supply. While the intent of this remedy was no doubt noble the impact on competition in the education market would have been devastating. Indeed, if Microsoft had decided to do this of its own volition the legality of such a move would be in question, and would probably have been challenged by Apple Computers, who would stand to lose considerable market share by being undercut by a company that already has a monopoly

in most other areas of personal computing use.

(2) While I am glad that the proposed penalty discussed in (1) was removed, I failed to see any mention of a replacement penalty against Microsoft in any of the documents associated with the revised proposed Final Judgment. Given that it has been demonstrated that Microsoft engaged in illegal behavior in using its monopoly power to place unreasonable restraints on competition, and in so doing caused irreparable damage to many of its competitors, simply putting in place measures to curtail future anti-competitive behavior provides insufficient remedy. The goals Microsoft wished to achieve by engaging in said anti-competitive behaviors as revealed in court documents dating back to 1995, namely the elimination of Netscape as a major contender in the browser market, have already come to pass. This damage to Netscape and to the American consumer has already been accomplished and any reasonable remedy needs to provide some penalty to punish the illegal actions that resulted in an enormous benefit to Microsoft and allowed it to extend its monopoly. Otherwise, Microsoft has quite simply been allowed to reap the benefits of its illegal activities. Penalties that would have sufficient impact on Microsoft as to provide a deterrent to future illegal are necessary in the case. Such penalties that would have an impact on Microsoft would be 1) a very large and meaningful fine, in addition to 2) requiring Microsoft Windows to ship with Netscape in a prominent position, if not as the default browser, possibly along with payments to Netscape to address Netscape's loss caused by Microsoft's misuse of their monopoly 3) requiring Microsoft Windows to ship with the Java Runtime Engine installed (Windows XP has removed all Java support, for reasons that are clearly laid out in court documents). These penalties are even more necessary now that the effects of Microsoft's illegal actions are known: 1) Internet Explorer is now the dominant internet browser, 2) support for Java is now gone from Windows, 3) Microsoft has shown contempt for attempts by the United States to limit the abuse of its monopoly by releasing Windows XP earlier than announced to avoid a threatened government halt on its release. 4) Windows 98 demonstrated an escalation of Microsoft's abuses of its monopoly by tying its operating system controls to non-operating system services provided by Microsoft. For example, a first use of the "connect to internet" desktop icon and control panel misleadingly brings up Microsoft's internet service sign-up as the only option. Even a professional computer-user such as myself had great difficulty trying to figure out how I would set up Windows 98 to connect to the internet with another Internet Service Provider.

(3) I believe that Microsoft's past actions demonstrate clearly that the proposed relief will not be sufficient to avoid anti-competitive abuse of monopoly on Microsoft's part. The current case against Microsoft has not impeded them from undertaking and in many cases escalating anti-competitive behavior, simply because

the slowness of the legal process has allowed Microsoft to eliminate future competition effectively before court action can be taken. As in the current case, the damage has been done long before the court can come to a settlement of grievances. In the absence of any significant, penalty it is unlikely that the few safeguards put into place in the revised proposed Final Judgment (e.g. limited freedom from retaliation by Microsoft against computer manufacturers for allowing the prominent display of non-Microsoft middleware) could have an impact. Microsoft has broken the law and has shown every intention of continuing to engage in anti-competitive behavior and to abuse its monopoly to the detriment of business and consumers. This state of affairs necessitates very serious and profound government action to protect what is quite possibly the most important sector of the American economy from becoming the fiefdom of a single company. I believe a broad investigation into Microsofts current and past business practices and the proper punishment of the abuses that are discovered is the only way to return this sector of the economy to normalcy. Microsoft did not get to where it is today by the traditional business practice of providing the best products and services at the best price, this has been demonstrated clearly by the court, and strident measures should be taken to insure that it does not continue to reap the benefits of its illegal activity as it currently is.

Sincerely,
Aaron Lawson

Date: 1/18/02 9:36am
Subject: Microsoft Settlement.

To the Department of Justice,
I am a mac user that enjoys the use of Microsoft products day in and day out. I'm using microsoft outlook web based email client and Internet Explorer for the Macintosh. What I believe the company is doing is dominating the market by cutting out the smaller developers. They leave no room what so ever for integration. And they do not believe in world standards other than that of their own. I am from a college that runs NT servers, you are no doubt getting this email from an NT server. These are buy-far the worst implementation of a server made. It seems that they didn't work with any other computer except Windows. Yes, they were supposed to, but the DHCP wasn't sending out correct packets to macs on a regular basis as well as to unix computers, so we had to go static IP. We finally switched the DHCP server over to Linux and everything for some reason is smooth. I find their software corrupt.

When did word processors take up more space on your computer than highly intensive 3-D applications and programs like Adobe Photoshop 6.0 for the MAC? They don't seem to care about architecture with in the program. They are a company known only to add new code onto old code continuously with out taking out what old, but instead only relying on processors to get faster to crunch down unnecessary code.

They should make all of their products open source, and whoever modifies the program will be paid money. But hey, a simple chore like that I wouldn't trust to that company at this point. In an ideal world, everyone would make their own operating system for their hardware as Apple, Amiga, and other great computers do. There should be a licensing cap with Windows and everyone should stive to make their own flavor of Unix, which is designed specifically for the computer's general tasks.

Also the U.S. courts should create a set of General Code Guidelines [GCG] which enable programs to be ported easily between "flavors of unix" such as Mac OS X based Unix as well as Red Hat and Debian as well as other great builds. I'll keep this short, but please be cautious of what you are doing and don't listen to their over-paid lawyers so much, they are only out to trick you after all that is their job description isn't it? One more thing, give more kudos to Apple, their only goal in life is to create a computer that is user-friendly at the user and server levels, they are our model company.

From: Brent J. Nordquist
To: Microsoft ATR
Date: 1/18/02 9:36am
Subject: Microsoft Settlement

To Whom It May Concern:

As a software professional of over 10 years experience, I have significant concerns that the proposed settlement is inadequate to provide redress for Microsoft's proven, illegal use of their monopoly power, and to prevent them from continuing this pattern in the future. Here are my concerns:

(1) The disclosure of APIs for the purposes of interoperability is a very important measure, and I applaud its inclusion. Vibrant competition in any market produces the best result for consumers; for example, the x86 instruction set, the recent heated competition of Intel and AMD, and the resulting increase in processing power per unit cost demonstrates this point. However, the security exceptions given in III.J.1 and III.J.2 will give Microsoft the loophole they need to refuse to document modern APIs which increasingly have security built into them. Microsoft's hold on such APIs as WIN32, such protocols as SMB (file sharing), and such file formats as Microsoft Word .doc files, and Microsoft's strategy of altering and not fully documenting them with every release, is one of the ways they preserve their monopoly status and force consumers to upgrade, to the detriment of consumer choice and healthy competition. Certainly "keys [and] authorization tokens" are properly excluded, but the settlement wording should be strengthened to specifically require not only the complete documentation for every API, but also a fully functional reference implementation of each API. This is how Internet standards (such as RFCs and IETF standards) are handled. Anyone who says that an API or reference implementation cannot be fully provided due to security concerns is relying on "security by obscurity" and does not understand how computing security really works.

(2) The conduct of Microsoft in question resulted in their making profits far above what a free, competitive market would have allowed, on the basis of their illegally-maintained monopoly status. This profiting was to the detriment of consumers worldwide. The settlement is wholly inadequate in providing compensation to the consumers who were so negatively impacted. Any settlement should include a substantial refund to consumers who purchased Microsoft products (directly, or through OEM agreements with hardware vendors). The penalty should be sizable enough (given Microsoft's size and resulting extremely large sales and profit numbers) to serve as a deterrent to future illegal conduct.

Respectfully submitted,

From: Tom Dickerson
To: "microsoft.atr(a)usdoj.gov"
Date: 1/18/02 9:57am
Subject: Microsoft Settlement

The purpose of this email is to express my opinion to the Department of Justice with respect to the proposed Microsoft settlement during the "review period", as required by The Tunney Act.

Since I am a Human Being who seeks to live on Earth, I am-by that fact alone-a "consumer". Since I was born and raised in The United States, I suppose that makes me an "American Consumer". I have also followed this case since the investigations into Microsoft's activities began in the early nineties, in anticipation that the DoJ would eventually seek to invoke these arbitrary edicts that we call the "antitrust laws" in order to "punish" Microsoft.

I was right.
So as an American Consumer, I will state that I have benefited tremendously from the existence of Microsoft, including the actions taken by the organization's management, and of its employees. As evidence to my claim, I need to site just one thing: the rise of the price of Microsoft's stock from the point of inception of the corporation. I suspect that

this may come as a bit of a surprise to the Department, but we live in a (semi) free society! Free enough, however, that anyone who believed s/he would not benefit from Microsoft's products, was, and still is, free to "sit on the sidelines" and refrain from engaging in exchanges with Microsoft. And yet look at the rise of their stock, and observe all the "consumers" who decided they wanted to be in the game, including myself. Can the same be said of The United States Postal Service? When they want to raise their prices, you usually help them out, don't you? Funny-both Microsoft in the nineties and Ford Motor Company in the twenties lowered their prices (without anyone's help) and each became filthy rich. But I do not doubt for a minute if the Postal Service did that, they would go out of business. They really need you guys! But I wonder what causes this difference.

I realize The Tunney Act is simply a means for the DoJ to give itself that lacquered look of a department that actually seeks justice-that by letting the "little people" like me bawl or cheer, as the case may be, you will make it appear that you're "considering all sides"-and that the act of me sending this email will be one more stroke of the varnish brush. Nevertheless, I want to participate in this act anyway, if for no other reason than to give you one more email that you have to delete from your hard drive before you behead the greatest corporation in American history. I know that The Tunney Act is a way for you to moisten your finger and thrust it into the air before you act, but the mere fact that you feel you need to do it proves what little confidence you have that the actions you're about to take are just. For if you had such confidence in your knowledge of the difference between right and wrong, you wouldn't feel the need to take an opinion poll of your potential victims-popular opinion will not tell you what is right or wrong, only a reasoning mind can do that. (This is tantamount to a farmer who takes an opinion poll of his sheep because wants to see if they'll be offended when he shears them.)

There. You've got my opinion. Do you want to behead me now? If so, send me an email at the address below and I will give you directions to my apartment. However, I may not be there because, in addition to being a consumer I also happen to be a producer, which means I'm usually really busy. Here's how you can get a key to my building though: ask any employee of The United States Postal Service for one. You see, they get to have keys to my home for some reason, whereas the UPS people and the FedEx people have to leave sticky-notes on the door. I do not benefit from this.

I wonder why that is.

From: panjandrum@mac.com@inetgw
To: Microsoft ATR
Date: 1/18/02 10:14am
Subject: Microsoft Settlement
Department of Justice,

It seems, that the issue of how to punish Microsoft for their behavior can be resolved with relatively simple measures. Here are some simple ideas that would probably work, either alone or in conjunction with each other.

1) Punish Microsoft in a financially meaningful way. I don't mean a slap on the wrist, I mean something that will hurt and hurt so badly that they will be simply unable to consider using the same tactics again. I expect this would run into the hundreds of millions of dollars, maybe even into the billions. Split this money equally between their 100 biggest competitors; Palm, Apple, RedHat, etc. This solution is so simple it seems silly to mention it, but it would work, and well.

2) Limit the markets they can operate in. Get them out of telecommunications, entertainment and "palmtop" devices.

3) Establish quotas for the total number of computers sold with Microsoft software. For example, establish a law dictating that all computer stores sell a minimum of 25% of computers (discounting "palmtops") running something other than Microsoft Windows. This could be Unix, Linux, Mac OS, or any number of other wonderful operating systems that just can't get off the ground due to Microsoft's monopoly. Be comes to mind as the prime example of a dramatically superior product failing because Microsoft holds an illegal and immoral monopoly on the market. (Imagine a small company building a car that was three times as efficient, twice as fast, four times as safe, twice as easy to drive, and cost half as much as any other car on the road. Now imagine that the company just can't sell them because of illegal market pressure from GM, Ford, etc. This is what happened to Be Inc.)

4) A *company* does not make decisions, people make decisions. Go after and punish the *people* at Microsoft who made these decisions. Throw Bill Gates in jail. Send a message to *all* companies that the persons responsible for making the decisions are *responsible* for the results of those decisions.

Truly, Microsoft's Orwellian tactics are frightening.

Sincerely,
David Butler

To Whom It May Concern;
I have just read several articles from different news sites on the Internet which are covering the sale of SGI intellectual

properties to Microsoft. These properties are all related to 3D APIs, and might even include the industry-standard 3D API, OpenGL. It is a well known fact that Microsoft has been trying it's best to kill off OpenGL, in favor of it's own proprietary 3D API, DirectX. There are documented instances of Microsoft dropping OpenGL from builds of it's Operating System, Windows, as far back as Windows 98. Now, in light of the fact that Microsoft now owns the vast majority of SGI 3D API properties, and the fact that Apple Computer uses the OpenGL API as a core component in Mac OS X, I would be afraid that Microsoft is, once again, trying to cut out a competitor with strong-arm tactics. After all, if Microsoft refuses to license OpenGL to Apple, and also refuses to port their propriety 3D API to Mac OS X; well, we have another case of anti-trust in action!

I would hope that someone with the Justice Department could investigate this further, and help prevent Microsoft from taking another stab at killing it's one true competitor, Apple Computers.

Thank you for your time.

Subject: Microsoft settlement
Dear Judge Kollar-Kotelly,

I appreciate the request that we consumers respond to the settlement with regard to Microsoft. I have been a "Microsoft consumer" for many years and am using Microsoft products to produce this email. I truly fear that this whole project by our government against a successful commercial enterprise has been overbearing and largely unjust. It seems to me that jealousy, envy and greed are accurate labels to apply to our system of criminal justice, in this case, from the lowliest attorney to the highest court involved, including the suing states. Class warfare? Yes. Take from the rich to satisfy this baser urge to knock down the successful? Yes. Is success being punished for any right reason? I have my doubts.

I connect the current recession, at least in part, to the anti-big-business efforts that are popular among certain political parties and labor unions. It seems to be a power struggle of the mighty forces of government against a vulnerable big business with enviable success. And the root of this evil is the love of money. Vice President Quayle had it right in his report on reform of the legal profession, reported toward the end of his administration's term in office. Frivolous lawsuits motivated by the money trail continue to dominate our culture. It is

politically and culturally incorrect to criticize our judiciary and the elements that make it up. In fact it can be downright dangerous. Just ask Dan or Bill Gates. It seems culturally and politically correct to pick on the medical profession at will, warranted or not. The cost of litigation, no matter whether or not it is just, has increased our cost of purchasing medical care and pharmaceuticals, autos and airplanes, and you name it, above and beyond what is reasonable. Arbitration should be used between disagreeing parties first. Lawyers should be by-passed, as well as the courts, at this level in our society. Lets get reasonable, enough is enough. Intelligent persons often can work things out to everyone's satisfaction. If not, the legal wars take over at hugely inflated cost.

Many doctors would probably practice medicine a few more years had they not feared the "loss of everything in one fell swoop" on any given response to the emergency room. The chill of this kind of over bearing so called justice is high in the mind of any investor. Is the risk really worth it? The Microsoft settlement is chilling on business and society. The original judge in the matter was awful in his mis-use of power. I sincerely disagree with Mr. and Mrs. Bill Gates promotion of the slaughter of innocents, world wide. Their money could be used humanely in many ways.

Subject: Microsoft Monopoly
To Whom It May Concern,

I am writing this e-mail in regards to the Microsoft Anti-Trust Case. As an educator, I understand the necessity of "having a level playing field." If a student does not have equal access to education, then they will have to overcome incredible odds to achieve success. Microsoft has created an unfair advantage through the use of coercion, deceit and blatant libel. Other companies, such as Apple and Netscape have suffered nearly fatal losses as a consequence of such practices. It is my opinion that Microsoft should either A). pay reparations to all affected parties (which would be nearly impossible, as some entities no longer exist), B). be broken into smaller companies, with assets distributed, and/ or C). Make it's products free to anyone for a period of time.

Thank you for refusing to be intimidated by their bullish tactics!

Subject: Microsoft Settlement

This settlement solves absolutely nothing. How much of a deterrent is this settlement really going to be? Microsoft, even now with

the acquisition of the SGI OpenGL patents, is positioning themselves to dominate the 3d graphics industry, suppressing innovation from 3D card makers by denying them licenses and forcing a standard solely defined by Microsoft, rather than the panel of industry leaders that up until now have encouraged innovation and have provided an open environment to provide 3d graphics implementations on multiple platforms. Microsoft now has the power to eliminate OpenGL in favor of it's proprietary DirectX framework. This is just ONE example of behavior that will continue at Microsoft unless a more encompassing settlement is reached, or unless the settlement is withdrawn in favor of a Final Judgement that is in the interests of the United States. We must prevent this type of behavior from sprouting up again, not just in Microsoft, but in any future corporation. The proposed settlement is like telling companies that it is fine to violate the Antitrust laws because the penalties aren't as bad as the benefits. I for one am deeply afraid of an environment that would allow companies to get away with this kind of activity without severe penalties as defined by law.

Subject: government case against Microsoft was poorly construed

I believe that the government case against Microsoft was poorly construed and demonstrated a basic lack of understanding of modern software technology and the means of technological innovation. The case should be dropped or replaced with specific laws which govern agreements that require EXPLICIT exclusion of third party hardware or software. This could have been dealt with quite easily had Sun and Netscape not tried to do to Microsoft, through a very flawed and partisan legal system, what they could not do in the marketplace. Apart from which, the founder of Sun is IMHO a conceited bore.

From: MTThompson2@aol.com@inetgw
To: Microsoft ATR
Date: 1/18/02 10:36am
Subject: Microsoft Settlement
To Whom It May Concern—

I am, and have been for years, a simple (perhaps more simple than most) Microsoft software user.

I have used, and am still using, Microsoft's products, both at work and at home, and am not wholly uncritical of the quality and reliability of their products (except when you compare them to all the rest). Their computer operating system (beginning, for me in the

early 90's, with Windows 2.0 and its subsequent improvements and upgrades) and their application software (Word, Excel, Money, Encarta, Streets & Trips, etc.) have improved my life beyond anything I can measure. I can't imagine what my life would have been like without the use of their innovative products.

While I have not closely followed the various Federal and State government's suits against Microsoft, I believe an outcome harmful to Microsoft will negatively affect Microsoft's ability to meet my needs, personally, both now and in the future. I do not believe that punishing Microsoft is in the public's (nor my) interest.

While it is true that Microsoft has profited enormously from selling its products and doubtlessly has a very aggressive (and clever) marketing strategy, I don't believe it could have prevailed over the competition unless its products were actually superior. I, along with all the others, would have sought out and used the better products, if there were any. Also, the fact that most of Microsoft's software works with and interacts with most of its other software is very advantageous to me. That this may disadvantage Microsoft's competitors from a marketing viewpoint is of little concern to me.

Furthermore, Microsoft has provided me (and the millions of others) their products at prices that are ridiculously small compared to their usefulness. If Microsoft has a monopoly on selling these products, why have the costs (to me, and everyone else) continued to decline? I do have a complaint about Microsoft: On those occasions (admittedly relatively few) when my lack of knowledge, understanding, and/or computer sophistication causes me to have operating problems with their software, and I have failed as well to discern an answer from their enormously comprehensive (but Byzantine) website designed to provide solutions to users with problems, I am unable to talk directly to one of their technicians without being charged a fee for their "services."

However, it also seems reasonable to me that Microsoft cannot be held accountable for my ignorance (and laziness) and should be entitled to some compensation for providing me with the information I need on those occasions. Their policy, coupled with my thriftiness (cheapness), has sometimes resulted in my digging more deeply into their various free resources, finding solutions myself, and becoming more educated and self-reliant as a result (a good thing).

I appreciate the DOJ looking out for my interests whenever their efforts actually are in my interest (i.e., prosecuting people guilty of election fraud, and terrorists). In this case, I think the DOJ's efforts are misguided, very wasteful of their limited time and resources (which my taxes help pay for), and not in my interest at all.

 Attorney General John Ashcroft
 US Department of Justice,
 950 Pennsylvania Avenue, NW
 Washington, DC 20530-0001

Dear Mr. Ashcroft:
 I write to you today to express my support for the recent settlement reached between the Attorney General and Microsoft. As a nation, America has been under very trying times in the past six months. Uncertainty plagues American confidence in business and the world around us. It seems unreasonable for the federal government to continue to concentrate on possible antitrust litigation against Microsoft during these times. I hope that the Justice Department would have different priorities during this time. Microsoft, in addition, has been readily available to resolve this issue. Microsoft has given computer makers broad new rights that will allow them to reconfigure the operating system to their own likings. Now users will be able to add or delete programs to the Windows system at their discretion. This represents broad new changes in the computing industry. Without doubt, I hope the Justice Department will resolve the dispute. It is unfortunate that the Justice Department has to focus on such matters at this time. I believe it is in the best interest of the nation to enact the settlement without hesitation.

Sincerely,
 Mark B Quick

Dear Mr. Ashcroft:
 I would like voice my support for the settlement of the Microsoft Anti Trust case. It is great to see that our government is working to end this lawsuit. Microsoft has contributed jobs and high-demand products to the economy. It is time to let them get back to business and focus on innovation, not lawsuits. The settlement promises change in Microsoft's business practices that will foster more competition in the IT industry. To put a quick end to this three-year lawsuit, Microsoft has agreed to more terms in the settlement than the lawsuit challenged. The settlement is a reasonable compromise.

I support the Microsoft-endorsed settlement and would like to see an end to the lawsuit. No further action should be taken against Microsoft. Our economy needs this settlement.

From: Thomas Oughton
 To: Microsoft ATR
 Date: 1/18/02 10:59am
 Subject: Microsoft Settlement

To whom it may concern,
 In my opinion the current proposed settlement is not a penalty. Microsoft owns the computer desktop. They have used this monopoly to move into and take over the browser market and the office suite market. They are now using this to move into the streaming media market, pushing out the existing players. Rather than using the existing standards used by the existing players Microsoft has created a new "standard" that will only work with Microsoft players. As they ship these players for free with the OS and can easily start out with millions of players out in the market place, how long until Real and the other streaming media vendors are pushed out? Microsoft is also using their monopoly in the desktop OS market to push their .NET marketing strategy. They require the owners of Windows XP to join Microsoft Passport one of the main parts of .NET or Windows XP will stop functioning.

When cable tv was growing at a rapid pace, US West wanted to use their existing infrastructure to provide cable tv, but because their monopoly would have given them an unfair advantage they were bared from entering into new technological areas. Why is Microsoft allowed to use its monopoly to move into areas where it has an unfair advantage over the companies that pioneered the new area. In my opinion, I say let Microsoft have the desktop OS but don't allow them to move into the new technology areas until there are firmly established companys that can be on equal footing in that area with Microsoft's

juggernaut. These areas include internet service servers, streaming media and large and medium sized server operating systems software. They have already moved into tv (MSNBC, Ultimate TV), video games (Xbox) and as a internet service provider (MSN). They have over 30 billion dollars cash just looking for other areas to expand into. The holdout states" proposed settlement is a lot closer to what I think should be done if Microsoft isn't treated like a public utility and controlled by a commission.

Thanks
 Tom Oughton

 Subject: Microsoft Settlement

Microsoft's monopoly over federal government computers is the source of both Bill Gates" wealth and the disastrous impact on productivity within the federal government as a "new operating system" is "introduced" every year, with its attendant need for more powerful computers, relearning all the software, patching over the millions of bugs, and the inability of older programs to read or work with the "newfangled super-duper" ones. Microsoft should be prohibited from introducing new software until it has been fully tested for smooth operation and compatibility with previous programs, and should be required to provide every new program to the federal government FREE OF CHARGE, in appreciation for the billions they have already stolen from our tax money. In the meantime, the federal government should immediately issue a re-compete process on the full operating system, all results of which must be made public before purchasing or deciding on any standard whatsoever.

 Attorney General John Ashcroft
 U.S. Department of Justice
 950 Pennsylvania Avenue, NW
 Washington, DC 20530

Dear Mr. Attorney General,
 I am writing to address the antitrust settlement reached between Microsoft and the Department of Justice. Bringing the antitrust proceedings to an immediate close will benefit the economy, particularly important now during the recent economic downturn. To that end, I am in favor of the current antitrust settlement with Microsoft.

Under the terms of the current settlement, Microsoft will design all future versions of its Windows operating system to be much more compliant with competitors' peripheral software components. This will allow consumers to have greater freedom in choosing and customize components within Windows.

In addition, Microsoft has agreed to document and disclose various internal interfaces of Windows to its competitors for the purpose of more compatible software development. I have been a long time user of Microsoft's Windows products and I have never encountered any serious problems with them, certainly nothing that would warrant the economic disruption, which the antitrust proceedings have contributed to. In short, I urge you to support the antitrust settlement for the sake of getting our economy back on track. We need our heavy hitters in the IT sector now more than ever.

Sincerely,

Gerald Richard

Attorney General John Ashcroft US Justice Dept. 950 Pennsylvania Avenue, NW Washington, DC 20530-0001

Dear Mr. Ashcroft:

I am writing you today to voice my opinion in regards to the Microsoft settlement that was reached in November. This settlement is fair and reasonable, and I am anxious to see this dispute resolved. This settlement was reached after extensive negotiations. Microsoft ultimately agreed to additional terms than were actually at issue in the initial lawsuit, just to finish. In the end, Microsoft agreed to share more information with other companies, including certain internal interfaces in Windows and protocols implemented in Windows' operating system products. I feel that Microsoft has gone well beyond what should be expected of a company in a democracy to reach an agreement and settle the dispute.

Microsoft is a good company that designs good products. This litigation is a waste of resources, and I believe the ongoing litigation is having a significant negative effect on the economy. Please support the settlement and end this dispute. Thank you.

Subject: Microsoft Settlement comment

Dear People,

Thank you for this opportunity for public comment. I have worked in the Information Technology field all of my professional life. I have observed many good technological advances thwarted by the Microsoft monopoly, either by being muscled out of the marketplace or acquired by Microsoft and diluted. This is extremely hurtful to our country's technological leadership and tradition of entrepreneurship. The most important outcome of the settlement of this case must be that competitive and alternative

operating systems (e.g. Linux, Macintosh OS X) as well as applications and standards (e.g. Quicktime, Java) be given a fair chance to survive and prove themselves on their technical merits. Without DoJ imposed constraints, the Microsoft Corporation will continue its monopolistic elimination of competitors. We will then be left with one option for computing systems from a company with no motivation to innovate or produce quality products.

I urge you to maintain and nurture an environment where existing and new competitive products can be developed and thrive without being squashed by Microsoft.

Thank you.

Michael

ATTENTION: DIRECTOR/CEO
RE: URGENT ASSISTANCE.

Kindly allow me the modesty of introducing myself. I am Martin Kabila, the son of the former head the state / President of Congo-Kinshasha (then called Zaire) President Laurent Desire Kabila.

I got your particulars through the Chamber of Commerce. However, I am contacting you in order to ask for your assistance on this confidential business proposal with full financial benefit for both of us. Before I got into further details, please be informed that I am writing without any other person(s) pre-knowledge of contacting you on this transaction. Therefore, I will appreciate same attitude to be maintained all through.

I have the sum of USD\$48 Million from a secret sale of Diamond by my late father before he was assassinated by his bodyguard (Rashid) on January 16th 2001, which I will like you to receive on my behalf due to security reasons, as my narration below will explain. But before I continue, be well informed that your share in this transaction has been calculated at 20% of the total sum of USD\$48 Million, 5% for expenses and the rest for my family and me. However, my father as a real African traditionalist was a polygamist, thereby having married so many wives, and my mother being the second wife of my father, my stepbrother Joseph, who is the current president of my Country, is the son of the first wife and he does not have my knowledge about this deal. Already, president Joseph is using his power of office to colonize all the money and private properties, which our father left behind for the whole family. Now, my mother and I are left with noting in the inheritance of my late father's wealth. Our situation is seriously critical that we need your assistance to help us receive these funds overseas for proper investment.

Let me quickly assure you the 100% safe proof of this transaction because, the

Diamond sales are packed from the onset in a pattern that shows no trace or linkage with us (Kabala family). At present, the money is in cash and is secured in a Security Company as family treasury.

I am writing for your swift and favorable response. You are to contact me via my direct Tel: 871-762918980. Fax: 871-762918981. or by using the above e-mail address. Your urgent responses is highly needed, and in case you have any question(s), don't hesitate to ask me.

Best regards,
Martin Kabala.

Subject: Microsoft Settlement
Renata B. Hesse
Antitrust Division
U.S. Department of Justice

Please do not agree to any settlement with Microsoft which lets them increase their ill-gotten market share.

One of the most dastardly methods of increasing market share is to give away your product to customers in a sector (such as education) that is contested by a rival. After the customers have installed your "free" software, they get used to using it and base their workflow upon it. Then, when an upgrade is needed (perhaps that version stops working with the latest operation system software), those customers are usually retained, but now at a large cost to the customer.

Do NOT let Microsoft give away copies of their software to anyone! It is NOT a penalty to them in any sense. It is a marketing strategy. One which is not only successful for Microsoft, but is also very detrimental to its rivals, as they have to compete with a "free" product. That is VERY difficult to do. It also seems wrong for an award not to go to those who won the case, but that's for someone else to argue. I understand the difficulties of finding everyone harmed by Microsoft. Perhaps you could just send a small check to every household in America. You'd be certain to reach every American victim, and it would only overcompensate by a small fraction, as their software runs on about 90% of computers. Maybe include a suggestion that if the person does not feel that they were hurt by Microsoft that they donate that amount to the President's Afghanistan relief fund.

Hope that helps,
Randy Boring
233 Merribrook Trail
Duncanville, TX 75116

P.S. I work for a small company, Thursby Software, which writes software that enables non-Microsoft computers (Apple Macintoshes) to interoperate with Windows PCs. So we sort of compete with them, but we work with them, too.

Subject: Microsoft Settlement

Why kill the Golden Goose that made the industry what it is today? With all the other,

more important matters to be dealt with, I don't see how the Justice Department ever thought it right to go after Microsoft. There should never have been a suit brought against the company simply for doing well and producing a product that most everyone likes. I feel that not enough people realize how much Microsoft has given over, in order to reach a settlement in this case and move on. Do people realize, that by giving so much access to their code and by designing future versions of Windows to operate more efficiently with competitor's software. Microsoft is helping it's competition at its own expense? I hope they will learn more about the settlement and come to appreciate just how much Microsoft is giving up.

It is high time for both Microsoft and our Justice Department to move on to more important matters and leave the case behind. I only hope that the states realize their mistake and join the rest of America in supporting the settlement.

Washington, DC 20530
Dear Mr. Ashcroft:

I am writing you today to express my support for Microsoft regarding the antitrust dispute. Microsoft is a great company that has contributed a great deal to our society and daily lives. This company should not be stifled or restricted. The settlement that was reached in November is complete and fair. Microsoft has agreed to all terms of this agreement. Under this settlement, Microsoft must design future versions of Windows to provide a mechanism to make it easy for computer makers, consumers and software developers to promote non-Microsoft

software within Windows. Microsoft must also disclose information about certain internal interfaces in Windows. Microsoft should not be punished for being successful. Success is a goal that every American worker strives for. Please support the settlement that was reached in November. Thank you.

Sincerely,
Pete Baxter

Subject: Microsoft Settlement

I think that the settlement won't work because you have an expiration date of 5 years (with a one time possible 2 year extension). In the technology market, R&D for a killer app could take that long. So basically you're giving MS permission to patch up their current product line, smile while they're working on the next version, then go back to the same old thing. They could too. Thanks to the "Product Activation" in the XP products (for which I, and many people I know refuse to buy or use XP products over) MS could, in 5-7 years, refuse to grant new hardware activation numbers to users not using the "new" Windows. New computer buyers (like today), would not get a choice and would be subject to whatever new scheme MS planned for keeping users. Perhaps it would just be things like Microsoft only digital media formats with rights management that, like the new "protected" CDs (defined as such only because of form, they break the standard), would not work on all machines.

In my opinion, digital rights control is the key to the next generation of computer

monopoly. It should be closely monitored and regulated in—the—interest—of—the—consumer. Personally, I believe that the prices demanded for software and other media should allow consumers to freely use it within reasonable bounds. Microsoft is trying to release several formats only playable in their, or compliant, players. Now that basic HTML browsing is pretty well established, audio and video will be the next area to look at, and MS is already heading there. Your settlement seems aimed mainly at older issues.

Microsoft continues its trail in latching onto consumers in a way that they can't rid themselves entirely of it. Simply allowing OEMs or developers to customize Windows a little won't prevent MS from ingraining itself into consumers lives with formats or agreements that not only replace previously platform independent formats (MP3, MPEG, Realvideo), but also continually pour money into Microsoft's pockets. I do, however, as computer support personnel, like the inclusion of opening up the APIs to allow for a standard network protocol and the like. What I would ask is that several industry-wide standards get put in place.

1. A fair (and I do mean fair as in to the normal user, not fair as in a CEO's dream) standard for software licensing that retail software must abide by. This would include restrictions on dongles, "activation" and the like. Perhaps the "professional level" of the software could dictate what copy protection schemes could or could not be used. I don't support piracy, that's not what I mean. It's more of a fear that my \$2000 computer and \$300 OS might all of a sudden be useless because MS for whatever reason wouldn't issue me a new key. Since Windows XP will pretty much be required in a couple of years for running any newer PC, I don't think it's entirely fair in the interest of keeping computers running and compatibility to have such a potentially finicky system. For a \$7000 3D rendering application, a dongle seems reasonable though.

2. A fair system for rights control (I think none is fair, since that's how things have been since audio recording came into being). Basically I'd like to see a regulation against reaming consumers that actually pay for things.

3. Price caps for software. Again, "professional" level ranking might be needed to control it. I think it's ridiculous that a Windows and Office XP license combined cost as much as decent business machine to run them on. If applications and operating systems cost less, perhaps more people could afford to use them. Or perhaps more people would be willing to legally use applications. Many companies seem to think that a \$100-\$200 stripped down version of their program is affordable for most people. This probably wouldn't work for every single app on the earth. It would be nice if companies would offer actually affordable versions of software, but they probably never will. For things like Windows though, which as assumed before is basically a necessity, the price shouldn't be able to just jump up to half the cost of a low end computer. What's to stop MS from charging \$500 or \$1000 the next time around? OEMs would pay the licensing fee,

consumers would be forced to upgrade for certain things.

Basically, I don't think the settlement would do much in the long run . . . more needs to be done to protect the rights of the consumer. There needs to be a change in policy for digital media that actually helps the consumer rather than restrict them more. Since Microsoft is one of the worst offenders in the game of screwing customers over at the same time they make things "better", this would be a good time to institute new laws and policies for the entire industry.

Attorney General John Ashcroft
U.S. Department of Justice Washington, DC 20530

Dear Mr. Ashcroft,

I am quite pleased that the factious lawsuit between the Department of Justice and Microsoft has ended with a settlement. It appears to me that most of the terms of the settlement are fair for both sides; I find that its greatest advantage is simply to remove the litigation from the courts. Given the inflammatory tone of the trial, it is better for those of us in the IT community, as well as for consumers in general to have this entire regrettable episode concluded. While the

settlement is fair and realistic, providing for new changes in Windows designs and reassessment of licensing agreements that were considered unfair, the best thing about the settlement is that it will be over.

I am writing to lend my support to the settlement. It is my hope that this sort of bitterness between our government and a private business should not be repeated.

Sincerely,
Karen Feltner

Date: 1/18/02 12:19pm
Subject: Microsoft Settlement. (A Cry of the defeated)

Is "compete on the merits" a new "phraseology" or word coinage aimed at pacifying the sniffling ant-Microsoft conglomerate of SUN, ORACLE, AOL, IBM and a string of others I don't care to mention? I have attended Seminars and work-shops at most of these corporations mentioned above. It is sad, at a humorous level, the degree of hypocrisy that prevails within these cultures. A good portion of every presentation is incomplete without the choicest interspersed infusion of real caustic sarcasm at Microsoft's expense. In spite of it, those presentations are a near impossibility without a Microsoft PowerPoint, Excel and the like. I say (If you can do better, make yours.)

IBM introduced and marketed it's various platforms. If a crystal ball could tell of declining market shears years later, IBM would have done everything to stay on top of things. If AOL only new how to eliminate competition in Internet provision, all the free-inets, and MSN included, would be history. Else, why is there so much merging, Partnering and acquiring of any sprouting establishment that has potential in the Communication "promise land"? ORACLE came up the rungs (rolling and scratching). IBM's DB2 and Microsoft's MS.SQL not withstanding. ORACLE wouldn't hesitate to tell you it's product is the only answer, anyone with an ear ought to listen to. Quality of functionality besides, it is perfectly heart worming to Conner at least 60% of the database market. Why not ?

It is a cutthroat competitive atmosphere out there. If winner can take all, why stop at 60%, 65, % or even at 95% market monopoly. Problem is, ORACLE will snatch the opportunity, if only it knew how. And I do not think they have given up that drive or hope.

SUN Micro systems parades a line of it's own platforms, ushering UNIX, or Linux and what ever else it prefers. If SUN, as well as it's back-up cheer leaders and supporters, could only come up with desk-top applications (the parallel of Microsoft Office suit, etc., etc., etc.), to market with its systems, who knows what prayer they might have in that domain? Netscape Navigator ceded to IE, just as DB2 ultimately Succumbed to Oracle. C/C++ are withering under the steam from SUN's hot coffee. Why is Microsoft so able to survive despite the array of back-stabbers? It is a human world , and we as humans have a tendency to

grudgingly concede, to something, or a strategy. We chide ourselves for, larking the foresight, for not perceiving a concept, that was glaringly available, and worst, for letting someone else beat us to it. Why didn't we think of first? Reminds me so much of little Israel, surrounded by a host of nations, that act not much better than they claim they are treated.

This concludes my say about this matter.

Thanks.

Pius (DoD, civil service)

By Email: microsoft.atr@usdoj.gov
Dear Ms. Hesse:

I am an attorney in the Northern Virginia area and have heard that you have some responsibility with regard to the settlement of the Microsoft antitrust case. I would like to commend the Department of Justice for negotiating a fair and reasonable Revised Proposed Final Judgment in the case.

It is my opinion that the settlement is a fair one and should be fully enacted. Further litigation serves no party except Microsoft's direct competitors. The goal of our antitrust laws and regulations is to ultimately help the consumer through competition, not to necessarily reward other businesses that would, like to get "in on the action."

It appears that the revised proposed final judgment strikes the right balance in effectively addressing Microsoft's unacceptable practices and also preserves consumer choice. The agreement calls for uniform pricing and allows computer makers flexibility to configure Windows and promote non-Microsoft programs. Both interfaces and protocols necessary for other software to work with Windows must be disclosed, and both retaliation and exclusive agreements are prohibited. An independently appointed permanent technical committee will monitor compliance and assist with dispute resolution. The U.S. or any of the states have a right to inspect all Microsoft documents and all source code for any Microsoft program, interview any Microsoft employee, and order Microsoft to prepare any report under oath regarding any issues relating to the final judgment. Any person may complain regarding noncompliance to the Justice Department, the states and/or the technical committee and the plaintiffs can immediately initiate proceedings to hold Microsoft in contempt. While this solution may not be perfect, it is certainly preferable to the alternatives.

Thank you for your time and your efforts in this regard. Enjoy the New Year.

Sincerely,

Christopher M. Day

Dear Judge Kollar-Kotally:

I contact you today to urge you not to settle the government's case against Microsoft. The United States Government's responsibility to enforce federal antitrust laws against monopolies is vital to protecting the rights of consumers. Our antitrust laws have protected free markets and enhanced consumer welfare in this country for more than a century. The Microsoft case is a clear example of where antitrust enforcement action is necessary to insure vigorous competition in all sectors of today's economy.

Please continue to support free enterprise and consumer rights by maintaining a fair playing field all.

Respectfully,
Pegi Anton

Attorney General John Ashcroft US

Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I feel that this lawsuit should never have been brought against Microsoft in the first place. To me, it seems, the suit was a result of successful lobbying by Microsoft's competitors. However, I am happy to see that the Department of Justice has finally gotten the sense to resolve this matter. The settlement has taken far too long to be reached and would have liked to see it more deferential toward Microsoft, rather than requiring Microsoft to disclose information, about internal interfaces within Windows and subjecting the company to the scrutiny of a technical review committee. However, I would hope that you would let your decision stand and not be further influenced by anti-Microsoft parties.

I'm glad to offer my opinion on this matter, and I hope that you will use your influence to encourage the rest of the states to settle their suit against Microsoft so they will finally be left alone.

Sincerely,
Robert Nelson

Subject: Comments on Microsoft Anti-Trust Suit

As a programmer in the IT industry, I have been reading most articles and news pieces I could find on this subject. Assuming that the media have not misled me, it seems that Microsoft definitely and purposefully engaged in anti-competitive practices and then tried to deny/hide such actions. If Microsoft is found to be guilty of such actions (or admits to them), Microsoft should be penalized to the point where it is greatly discouraged from ever doing such again. Whatever it takes to discourage such in the future should be done, whether it is breaking up the company, removing officers of the company, or other penalties/preventions. Microsoft should not be simply fined and monitored for a short time, the equivalent to a slap on the wrist, and then allowed to go back to anti-competitive practices.

To boil my opinion down: If Microsoft has engaged in anti-competitive practices, any means necessary to ensure they don't do it again should be used, just short of destroying the company.

Thank you,
Rick Fields

Subject: Comment on the Microsoft anti-trust case

We just received a flyer from Americans for Technology Leadership, and I decided to let you know my impressions of the anti-trust case. Let me first say that the flyer was very irritating—just another Microsoft ploy to get the American public on their side. Of course,

I checked out the website for this organization and found that Microsoft is a founding member. I wonder how much money Microsoft put towards this advertising campaign.

In regards to the US vs Microsoft, I definitely think that our government backed down to Microsoft's big money. This settlement is not fair, and definitely does little to really punish Microsoft. This company keeps making crappy product, which they can do because they have monopolized the market. Let there be no doubt—I believe that Microsoft has monopolized the market! And please note that this comment comes from a technology reseller who sells Microsoft product.

This flyer I received just confirms my understanding that Microsoft has not been punished. They are still spending millions of dollars to defend their position. Funny that they have so much money to waste; they are obviously price-gouging because they have eliminated any real competition. Why are they spending these millions unless they are guilty?

From: Tony Wren
To: Microsoft ATR
Date: 1/18/02 12:31pm
Subject: Microsoft Settlement
To Whom It May Concern:

On January 9, 2002, Robert Lewis, a commentator and management consultant who writes for "InfoWorld," a widely-read technology industry trade weekly, posted the following column. I am including it here for the sake of clarity, with my comments following.

"YOUR HONOR, we find the defendant incredibly guilty!"

Jury foreman, Mel Brooks' The Producers
NEXT TIME I get a traffic ticket, here's what I'll say in court: "Your honor, the court has found me guilty. I disagree. Also, I disagree in principle with the existence of speed limits on our nation's highways. Several theorists claim that highway traffic should be self-regulating—we should allow the overall flow of traffic to determine each driver's speed.

"In the case of the U.S. Department of Justice v. Microsoft, the courts established the precedent that when the defendant disagrees with both the law and the finding of the court, the prosecution and guilty party must negotiate as equals to define a settlement agreeable to both parties. I request the court to handle this case the same way."

Think it will work? Me neither.

Regardless of whether you think antitrust laws are a mistake, obsolete, or inapplicable to the software industry and regardless of whether you personally think Microsoft was actually guilty or not, the outcome of the Department of Justice v. Microsoft was unambiguously disgraceful. With the departure of Joel Klein as lead prosecutor, and U.S. District Judge Thomas Penfield

Jackson—the Lance Ito of antitrust — as judge, the fix was in. Microsoft said, "Play dead!" and our government's executive branch—controlled, ironically enough, by the law "n order party—obeyed. From this point forward, Microsoft has no constraints in its use of nonmarket forces to buttress its market position.

As just one example, take a look at Microsoft's investment in Corel. Almost immediately, Corel discontinued WordPerfect Office for Linux. Because Apple, in its ongoing quest for marketplace irrelevance, persistently snubs corporate IT, Linux is the only significant threat to Windows on the desktop. Which means that just as CIOs and CTOs—faced with increasingly onerous licensing terms from Microsoft—are searching for a credible way to at least threaten to take their business elsewhere, Corel is running away from the opportunity. Instead, it's trying to sell WordPerfect head-to-head against Microsoft in the Windows environment—a battle it has already lost. Pardon me for being suspicious.

For several years I've predicted an impending implosion for Microsoft. I still see serious problems for the company: Microsoft is hemmed in on the server front and has such limited potential for growth on the desktop that it has turned to the only alternative it could think of: predatory licensing. Its problems, however, have receded now that our government has a "for rent" sign in the front yard that lets Microsoft obey—and require its customers and competitors to obey—only those laws it finds convenient.

My comments:

Ever since the settlement between the Department of Justice and Microsoft was announced, I have felt like a victim that has been asked to pay for the losses incurred by the burglar that has been found guilty of robbing me, and to pay for what he stole from me as well. Mr. Lewis' article expresses that sentiment succinctly.

The stated goal of the settlement was to ensure a competitive environment in the technology industry. As an observer and technology consumer for the past 35 years (as a student, researcher and now an academic), I can assure you that the settlement will do nothing of the kind.

The only competitor to Microsoft that has any market share at all is Apple Computer, and their share is steadily falling (from 20% ten years ago to less than 5% at this time). Apple's new UNIX-based operating system, OS X, could compete with Microsoft's Windows under the proposed 9-State Settlement, and help restore some innovation to the industry. But if the status quo continues, MS will re-assert its dominance and its illegal practices, with devastating effect on our economy. Some have said that it is already doing so, although I am not in a position to verify such claims. These facts have become increasingly obvious to impartial observers. Bob Lewis is just such an observer. I have been reading his columns for years, and trust him because he is rarely wrong.

To put it bluntly, the proposed settlement places the current DOJ personnel in a very poor light: observers are universally reporting

that the attorneys in charge of this case are behaving as if they are either incompetent or corrupt. As a taxpayer and consumer, listening to the near-unanimous condemnation of the proposed settlement, and adding my own experiences, I am forced to come to the same conclusion.

I hope that you will reconsider this poorly-conceived settlement and prove the critics wrong.

Sincerely,
Tony Wren

Chips ahoy

AMD competes with Intel, and the public wins. The right Microsoft antitrust settlement can bring the same energy back to the software market.

By Scott Rosenberg

Jan. 16, 2002 ??? The personal computer industry may be in its worst slump in history, but you wouldn't know it by following the news from the processor wars. Over the past two years, Intel and AMD have unleashed an incredible competitive cycle in Silicon Valley. In case you missed it, last Week these two chip companies offered dueling releases of new flagship processors: Intel unveiled its fastest Pentium 4 yet, running at 2.2 gigahertz and built with a new .13 micron process that crams even more transistors into an even smaller space. AMD, extending the huge success and popularity of its Athlon line and the Athlon's most recent and powerful incarnation, Athlon XP, announced the XP 2000—a chip that actually runs at 1.67 gigahertz but, third-party tests show, nearly keeps up with the 2.2 ghz Pentium 4 in most tasks (and even surpasses it in some).

What's going on here is simple: Good old-fashioned competition drives engineers to continue to work miracles. Intel, the market-dominating behemoth, has always pushed new, improved products out the door faster—and dropped prices more readily—when it feels the breath of a credible competitor on its neck. For many years the competition was feeble, but that changed when AMD's Duron and Athlon chips began giving Intel a run for its money—and, for a time in 2001, actually bested Intel for the fastest personal-computer chip title.

Today, these two companies keep spurring each other on, and consumers win big. For most of us, that's all we need to know: Computers keep getting faster and cheaper. The details are of interest only to the legions

of hardware nuts, high-performance system geeks and chip-overclocking fans who flock to the Web's hardware review sites. Right?

Well, the gigahertz specs may indeed be only geek fodder, but the other details of the Intel-AMD rivalry should be of keen interest to a much bigger crowd. That's because the competitive heat driving the processor market puts the relative frigidity of another part of the computer business into bold relief. I refer, of course, to the business of designing personal-computer operating systems—a business that Microsoft has dominated for years and that, according to the confirmed verdict of our federal courts, it now monopolizes.

What if Microsoft were challenged as strongly on its home turf as AMD is now challenging Intel? What innovations, improvements and price reductions would the public enjoy that it doesn't, today, thanks to the Microsoft monopoly? This is the big question that hangs over the continuing struggle to find a meaningful outcome to the endless Microsoft antitrust saga. And the AMD/Intel analogy is worth pursuing to try to find some answers.

Microsoft and its supporters, of course, maintain that the monopoly label is misplaced. After all, can't you buy a Macintosh without buying Microsoft Windows? Can't you obtain a PC and fire it up with any of a dozen versions of Linux or other Unix-style operating systems? Sure you can—and each of those operating-system alternatives has its partisans. But for use by individuals on their personal desktops, Microsoft Windows holds the overwhelming market share—by nearly every estimate, over 90 percent. Is that simply because Windows is superior to the alternatives? There are certainly people who believe that; and, to be sure, with the release of Windows XP last year, Microsoft finally moved its flagship operating system off the aging and increasingly unstable code base it had inherited from its infancy and onto the relatively more reliable Windows NT/Windows 2000 core.

But how much faster might Microsoft have achieved that improvement if it was racing a tough competitor? And how much more incentive might the company have to produce more secure, less virus-vulnerable products today?

The historical record is quite clear (and the antitrust trial record is just as clear): The central reason Windows has maintained and extended its market share over the years is not product superiority but a concept economists call "lock-in." Once you have all your data and all your software applications on one operating system or "platform," moving to a different one is painful — it takes time and effort and money (as economists say, your "switching cost" is high). Over the years Microsoft has not had to push harder and faster to improve Windows because it knew that its customers were unlikely to make a fast switch to a competitor.

Now, that picture would be very different if you could somehow reduce or eliminate those switching costs. What if competing operating systems could seamlessly and interchangeably run the same programs and

utilize the same data files that Windows does?

Here's where the Intel/AMD analogy comes in handy. These manufacturers compete to provide chips that can run the same computer programs—known loosely as "x86 compatible" code—and that retain compatibility with hardware like expansion boards and peripheral devices. If you needed to write different versions of each piece of software and manufacture different versions of each piece of accompanying hardware—one that would work with Intel's chips and one that would work with AMD's—the whole competitive market would disappear. The weaker player (presumably AMD) would vanish and—presto!—Intel would have a monopoly as tough as Microsoft's.

This relatively level playing field in the x86-compatible processor business did not come about by sheer happenstance. The semiconductor industry is marked by a Byzantine pattern of patent cross-licensing agreements; they provide permanent employment for legions of lawyers, and laymen seek to understand them only at great peril. What's important about them, however, is not how they came about but that they work.

Now that the federal courts are trying to figure out an effective remedy for Microsoft's abuse of its monopoly powers, the competition between Intel and AMD provides a valuable model. How would one go about enabling Microsoft's rivals to compete with it as effectively as AMD is competing with Intel?

The key here is something known as the Windows API (or "applications programming interface")—the set of instructions that Windows programs use to "talk to" the operating system. The Windows API has long been a murky issue: Microsoft has always provided some information to independent developers—it has to if third-party Windows programs are going to work. But Microsoft can and does muck around with the API, changing things that break competitors' products, anytime it wants to. And rumors have long buzzed, without ever being nailed down, that Microsoft's own developers take advantage of so-called hidden APIs that non-Microsoft coders can't use. The Justice Department's proposed antitrust settlement with Microsoft seems to demand that Microsoft do more to open up its APIs to competitors. But the fine print makes it clear that Microsoft could pretty much continue with business as usual. A more effective remedy would be one that required Microsoft to standardize and publicize the entire set of Windows APIs and the file formats of its Office applications (another key to Microsoft's monopoly "lock-in")—with the express goal of allowing competitors to build Windows software applications, and operating systems, that compete with Microsoft on a level field.

Such a plan would require careful oversight and enforcement, since Microsoft could easily engage in all manner of foot-dragging. If Microsoft set out to be uncooperative, it could release the API information slowly, in deliberately confusing ways, or in a "Good Soldier Svejk" fashion—assiduously following the letter of the

court's order while flagrantly violating its spirit. (There's precedent here: This is precisely how Microsoft behaved during the trial when it told the court that, sure, it would supply a version of Windows with Internet Explorer removed from its guts, but gee, sorry, then Windows wouldn't work.)

Now, I can already hear the howls from the Microsoft corner that this plan is evil and un-American because it forces Microsoft to give up some of its intellectual property. Well, yes. Microsoft is in court as a repeat offender; the current antitrust suit, in which a federal district court and an appeals court have both affirmed that Microsoft is a monopoly and that it has abused its monopoly powers, arose out of the failure of a previous consent-decree settlement of an earlier antitrust case. At some point, having repeatedly violated the law, Microsoft needs to pay a price, or it will continue with its profitably anticompetitive ways.

There's no reason to think the Justice Department's proposed settlement will work any better than the consent decree of last decade did. And financial penalties can hardly wound a company that is sitting on a cash hoard of tens of billions of dollars. But intellectual property—that's something Bill Gates and his team really care about.

Requiring them to divulge some of it in order to restore competition in the software market might actually get them to change the way they operate. With Microsoft's APIs and file formats fully standardized, documented and published, other software vendors could compete fairly—which, after all, is what antitrust laws are supposed to promote. We might then be faced with a welcome but long unfamiliar sight: a healthy software market, driven, as today's processor market is, by genuine competition.

Subject: Microsoft Settlement

Over twenty years of computing experience, primarily within the DOS/Windows environment—because I had very little choice otherwise—has taught me that the real growth of Microsoft has been on the backs and over the protests of "the little guy." The truth is, there were simply no alternatives to Microsoft, and in spite of the growing financial coffers of Microsoft, there has been a relentless cycle of upgrading expense that has finally grown to the point of absurdity.

In 1987, I began a small computer consulting firm that eventually became a corporation. Our target vertical market, law enforcement records management and municipal accounting, was just coming into its own (especially in small departments and municipalities). Usually, we would install Novell as the internal network. Experience proved that Novell was a company with substantial technical savvy and a commitment to client satisfaction. Novell was a company that had truly pioneered the

network opportunity, offering substantial benefits to those who were motivated to learn and market their cutting-edge technological products. In spite of the great declines in Novell's market position, primarily as a result of the predatory practices of Microsoft, it continues to be a world-leader in networking technology, driving technological advancement with products and features that Microsoft can only dream of having.

We also utilized the fantastically powerful features of WordPerfect, and clients that persevered to learn the power of WordPerfect were never disappointed. Many of us were absolutely thrilled to hear that Novell had acquired WordPerfect, trusting that a knowledgeable market would recognize a true alternative to Microsoft's growing power in the marketplace. The great majority of problems we encountered in our installations were the result of the changing target of Microsoft, changes that I personally believe were a part of a vast corporate mindset in Microsoft—probably driven by the egos of Bill Gates, Steve Ballmer and a few others—that intentionally stifled competition by constantly changing the rules of the game. Because these were corporate decisions, and the only products that could anticipate these changes were, in fact, Microsoft products, the die was cast.

I have used Microsoft products since DOS version 2, and was an early user of Windows(tm). Because of so-called "business compatibility issues," I abandoned Macintosh, and stored my Macintosh Plus in the closet, over 12 years ago; but have recently come back to the Macintosh environment. This decision was compelled by Microsoft's relentless push to control my personal computing life. I have been a savvy user of Microsoft products, but I learned long ago not to have any confidence in the "security" of any product Microsoft puts its hand to.

The current security issues with Microsoft products are the logical outcome of a corporate mindset that has never been driven to technological excellence. I personally believe that Microsoft is a corporation that has never produced a single technical breakthrough. I don't believe the person lives who can point to a single innovation in Microsoft technology, software environment, network security—ANYTHING—that Microsoft did not obtain from the wisdom and efforts of others. To the contrary, it has blatantly robbed and unconscionably stolen, lifted, copied, or otherwise acquired the technical innovations of others, including Xerox, IBM, Apple, Novell, WordPerfect, dBase and a litany of others.

Frankly, I was STUNNED that the court would even consider Microsoft's ridiculous offer of \$1 Billion to buy its way into the one market where it does not have a majority standing. According, I was THRILLED to hear that Microsoft's stonewalling in negotiation forced a wise judge to throw out the entire offer.

Microsoft needs to be hit where it hurts the most. Individual consumers on whom Microsoft has built its empire have funded Microsoft's growth through exorbitant fees and charges, even as alternate sources of product and services have fallen under the

blows of Microsoft monopoly. There should be substantial fines, limited attorney's fees, specific and substantial refunds (including interest and penalties) to "legal" users of Microsoft products, substantial limitations on licensing requirements that unduly stifle competition and/or competitive choice by the consumer, and enough clout within those penalties to insure that these offenses will never happen again.

Respectfully submitted,
Royce P. Bell

I have been very annoyed by Microsoft for years. I could see, and many others also probably, that Microsoft was using bullying tactics with their software. I don't want to take away any credit from Bill Gates and his crew. Windows is a wonderful concept. Certainly a milestone in mankind's communication ability. But, they apparently tried to stifle competition. I remember when firms competed by striving to improve their product. Never resting on their laurels, but continuing to refine product.

If Microsoft gets away with just a slap on the wrist by government, it will send the wrong message to other companies who might also try stonewalling authority. Don't let them laugh at us all the way to the bank. (As if they haven't done that already.)

I strongly feel that it was Microsoft which led the Us into preeminence in the field of information and personal computing—the only field in which this country still leads. All the other companies have benefitted from this leadership. Costs for more advanced equipment and software are always relatively less for better and more. Microsoft leads and has led because it did better thought better and was there first. To punish innovation to me is suicidal. I am a tockholder in Microsoft because early on we saw its potential and we have been rewarded for our vision. Why should Microsoft be punished for its vision?

I don't even know why I'm wasting my time doing this. But I feel we can't ignore Microsoft's activities. They are getting stronger, everyday. Current settlement isn't acceptable. It does nothing to actually hold Microsoft accountable for having been found guilty of being a predatory monopoly. Their motto is BEAT EM, BUST EM, THAT'S OUR CUSTOM. They are the Evil Empire. Look at their relationship with Apple. It was all a muze. He's afraid of AOL Time Warner. His NEW OS XP has made it impossible for their DSL/Cable service to operate on the system. They must be controlled. They have struck deals with Universities to supply software to students at 5.00 a disk. What a human gesture on the surface but you become addicted to using his product and when you leave school and have a FAMILY EVERYBODY is using his product because it's theirs why change etc. etc. we need more options and he buys them out. Like Corel. Can't touch Lotus. its IBM's. It sucks, so does MS.

Subject: Microsoft Settlement

I think the settlement is fair and both sides made compromises. It's time to move on and stop wasting tax dollars on issues like this that amount to nothing more than other software companies using everybody's tax dollars to fight the competition. Over the past 3+ years the general feeling I get from friends family and even strangers is that this whole case was a waste of our tax dollars. I believe the events of Sept 11 proved we should have been using more tax dollars to stop terrorist organizations who want to kill consumers rather than harass US companies that provide goods and services, not to mention the large charitable contributions they give back to our consumers. I believe we are much better off today with Microsoft than we would have been without it. We need to leave all high tech companies alone and let them compete on their own merits. It's time for the DOJ to move on an deal with more important matters like investigating pharmaceutical and fuel companies. I guarantee you that most consumers would agree. We're tired of getting milked by these companies and their prices. It's nice to see we can now at least get cheaper prescription drugs from Canada (due to a recent constructive change in our US laws/regulations). Now when are we going to have more options for getting cheaper and/or alternate fuels?

Thanks
James Younkin.

Date: 1/18/02 12:33pm
Subject: Microsoft Settlement

The settlement is acceptable but the disturbing aspect is the manner in which the United States government goes after organizations that have built successful ventures. The apparent reason is to level the field and give everyone an equal opportunity. When considering the willingness to devote lives to ventures that others will not do or have the inability to accomplish meaningful goals, the result gives the appearance of a disincentive. Microsoft gave an opportunity to IBM and was rejected so they went their own way. Now a settlement has been developed which is already out of date because of the Microsoft competitors moving forward with their own agendas and developments. We are creating a system where the success of some is penalized because others have not the same ability or desire to advance their own programs. The public has always had the ability to purchase other equipment and chose not to.

I own no Microsoft stock nor know anyone in the organization. However I am concerned with the system in place to destroy success which had it been in place years ago, would have prevented the United States from being the most successful and innovative nation in the world. Socialism has failed.

To whom it may concern:
The anti-trust settlement for Microsoft's monopolistic practices is a travesty. Not only does it promote the products of this company but it undermines the hard earned place in the Educational arena that other companies have long invested in. Microsoft gets a free backdoor entry into this market where children will grow up using their products to continue to do so long into their adult lives, much as drug pushers seek to give freebies

to children to get them hooked. The settlement does NOTHING to stop or mediate the unscrupulous and monopolistic practices of Microsoft. Rather it REWARDS the company by allowing it to flood the poorest schools with their products (generating future revenues when these children grow up) and turns what should be a PR disaster into a PR dream (Microsoft helping out education the poor etc.) If Microsoft were at all concerned about these children they would GIVE the products to the schools with NO STRINGS attached. This is not altruism—this is self-serving investment into the future growth of Microsoft Inc.

I urge the settlement be scrapped or the ante upped substantially by requiring Microsoft to invest in the schools by putting COMPETITOR products into the classrooms and NO MICROSOFT PRODUCTS.

I have a hard time figuring what this great country is trying to do. Yes monopolies are supposed to be illegal and not allowed. You have done that with Ma Bell and now Microsoft, but everyday airlines, banks, corporations, etc. are buying each other up and eliminating competition calling it a good move for our country.

This creates more specialization, less competition, and higher prices. If you are stopping one big domination, then why not start stopping the mergers so other monopolies can't get started.

Microsoft has become the successful company that it is today because of creative ideas, careful planning, attention to detail during development and testing of their products, and quality output far superior to its competitor's products and services. Even after the release of a product Microsoft continues to assist the consumer by providing continuous support and assistance through the Internet email and customer support. As a consumer of many of Microsoft's products and services in NO way have I been harmed in the manner the government's lawsuit states. The Democratic party and its notion that the government

should be in control of everyone and their money is the real monopoly. I also feel this lawsuit is just the government's first step in an attempt to ultimately control the Internet. It's obvious the government and laws have not been able to keep pace with technology and this lawsuit is just a way for them to slow down the rapid advancement it can't keep up with.

Microsoft should be free to continue to make their creative ideas become a reality. Ending this law suit will only aid in the swift recovery of our economy and that will benefit everyone, even Microsoft's competition.

Date: 1/18/02 12:57pm
Subject: RE: Microsoft- settle this case quickly and fairly.

The DOJ vs IBM case dragged out for 12 years with NO real conclusion other than draining taxpayers and corporate resources. The DOJ (9 states) vs Microsoft is another example of the same litigation in my opinion. The consumers and the investors "suffer" rather than receive protection. What this really does is slowdown product innovation and development in the technology industry. Competitors need to have better products at better prices, rather than use "public" funds to fight their battles for them.

This case needs settled quickly and fairly so that our economy can return to more positive growth instead on continued uncertainty.

Subject: Microsoft

Thank you for taking the time to e-mail the Florida Attorney General's Office regarding our involvement in the case of United States v. Microsoft Corp.

As you know, several states and the Department of Justice settled this case late last year. Because of concerns that the settlement did not assure increased opportunities for competition and innovation, Florida and eight other states are currently continuing the litigation. Trial on potential remedies is scheduled to begin in March of this year.

Without fair and open competition in the technology industry, America risks losing some of the innovation and imagination that made our nation the industrial and technological leader it is. For this reason, this office remains committed to ensuring that everything possible is done to achieve the utmost for consumers and for competition. Continuation of the Microsoft litigation at this time provides us with the opportunity to maintain that commitment to Florida's consumers.

Subject: On the Microsoft settlement.

Sirs,

After reviewing the facts of this case, and from my own opinions as one who has

observed the effects of Microsoft's monopoly on the development and use of personal computers, I believe that the ends of not only justice, but also simple human decency, would be best served by giving the plaintiff the largest penalty allowed by law. I have many reasons for believing this, the chief one being that Microsoft's de facto monopoly on the IBM operating system has stifled development of competing systems and prevented higher quality systems from reaching the marketplace.

Yours,
E. E. Ball

My name is Phillip Ira Barnes. I live at 11460 Pearl St., West L.A. CA. 90064. My phone # is (H) 310-479-0258 (W) 310-394-7779 EX 514. I saw this article today and felt I needed to make my opinion known to you. I think that any punishment Microsoft gets will be nothing more than a slap on the hand. If I had any say in this process, Microsoft would be shut down and its assets sold off in auction. The worst criminals in history have been given the death penalty and I think Microsoft deserves no less. This is a company that has raped the IT industry and forced it to follow its will. Microsoft has become fat and happy taking the innovations of others and selling them as their own. This company has also plowed under anything that threatens its market share and dictated its terms to the OEMs like a king does to peasants.

I know I am one voice in many, but I feel that many share my views. Microsoft's crimes are blatant, its punishment should be very harsh. Thank you for considering my point of view.

Phillip Barnes

Subject: Microsoft Settlement

The settlement proposed by Microsoft is a complete joke and undermines the laws of the U.S. How can a company that has been accused of anti-business practices be even allowed to continue?? Microsoft MUST be stopped from repeating its offenses.

By allowing Microsoft to get off easy by sending old computers and free software worth "1 billion" is a waste of time. Don't even waste the american citizens time if that is all you are going to do, it is a joke, a complete travesty of our judicial system. Would this have been considered if ma bell would have said, "we're sorry, we will make it up to the U.S. by supplying all satellite, telecommunications for the U.S."???? Absolutely NOT!

Microsoft must be punished and made SURE that it cannot do such practices again! (i.e. look at the new xp operating system and the .net initiative). I propose a breakup and restructuring as the ONLY viable alternative.

"I have a dream. . . of little Macintosh computers. . . playing side by side with little Windows computers. . . and little windows computers. . . playing side by side with little Linux computers. . ."

Subject: Microsoft Settlement
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW.,
Washington, DC 20530

Dear Mr. Ashcroft:

This letter is sent regarding my opinion on the Microsoft (MS) anti-trust settlement. The settlement seems fair and reasonable, and I would like to see the dispute settled. MS has been a great stimulus for the advancement of technology and played a major role in the bull market of the 90s, thus the sooner the dispute is settled, the better!

MS has agreed to: (1) document and disclose the code of the interfaces built into Windows; (2) make it easier to promote non-MS software within its operating system; (3) license its operating system products to large computer makers at uniform rates.

MS has extended this offer to reach a final settlement that will help stimulate the economy and be a continued boon to the computer industry.

Thanks for your attention to this and your support in ending this litigation.

Sincerely,

Alan N. Taylor,
649 Goodwin Drive,
Richardson, Texas 75081

From: Walt Pennington
To: Microsoft ATR
Date: 1/18/02 1:15pm
Subject: Microsoft Settlement

The settlement is deficient in future prevention of monopolistic behavior and in

failure to impose a financial penalty for past conduct.

Microsoft is a determined monopolist with a history of abusing its monopoly power for financial benefit. Microsoft's suffocation of new technologies by its tying practices, and its failure to integrate with new competing products should be penalized financially.

Microsoft should pay a fine in excess of \$500,000,000 or one in quality to that of price fixer Archer Daniels Midland. Profit seeking monopolists rarely renounce abusive desires, but removing financial incentives from abusive behavior will encourage future restraint from abusive monopolistic practices.

Microsoft Windows OS and Microsoft software must be open to integration with competing operating systems and software. Microsoft must allow integration with components such as those from competitors Apple/Mac and Gnu/Linux. Prohibit Microsoft's retailer mandate to charge for Windows OS even if Windows OS is not installed on the computer.

Windows OS, Windows Media Player, Internet Explorer must be separate components, and cannot be integrated. If an end user wishes to use these, it should have the option to add, but middleware such as Opera and Netscape have the same access to integration with Windows OS as Microsoft.

All Microsoft applications must be open to being configured for use on Apple/Mac and Linux.

Subject: Microsoft Settlement
Hello,

I am writing to express my position on the company recently found guilty of exercising

monopolistic powers in the market determining the punishment that is going to be applied as consequence.

If that sentence sounds odd to you at the Department of Justice, it sounds that way because it is. It is almost as odd that this is exactly what Microsoft is being permitted to do by the Department of Justice.

Microsoft exercised its position and levered actions that denied others market position for only one purpose, to be dominate and to be able to dictate to other companies what they will or will not do. It affected offered product lines.

The settlement need be consequential not favorable. Microsoft should either be broken up or ordered to refund all registered software users the money that was overcharge for software riddled with faulty code. If Microsoft is going to be permitted into another sector of the market it should have to use its money to purchase its competitor's products instead of being allowed to use its own. .

The United States Department of Justice's role in this is on behalf of the consumer. If you are to maintain confidence with your clients, then ensure that the settlement reached in the case puts the consumer in the position of advantage over Microsoft. This company has willfully acted to hindered the innovation of its competitors and need have the advantage gained by these acts destroyed.

Microsoft is even bold enough to imply that the computer industry is dependent on the company. This only seals the guilty charge as accurate. Once the company is knocked back a notch or two (preferably two big notches) the industry will rocket with innovation because of being relieved of the pressure applied to it to date by Microsoft.

Your mission is to at this time apply consequence, not allow Microsoft to determine what its punishment should be. Fail in this and you will fail in your mission. The Department of Justice is not paid to fail. As your client, I am not satisfied with the department performance to date.

To: Microsoft ATR
Date: 1/18/02 1:23pm
Subject: Anti-trust.

I am a software developer and competition with Microsoft in the high markets of office products and internet browsing products is extremely difficult. Not only did it endanger companies like Sun and Netscape (which it definitely has). It has also taken control of all the standards and bent the standards to its own whims. I'm forced to submit resume's with their expensive word processing software because many state run job agencies require it. High percentages of websites comply only with Microsoft's type of HTML.

I feel that Microsoft has harmed and not helped our economy by stifling entrepreneurship. Microsoft now wants to increase marketshare of its operating system by making hardware specs that meet their encryption so that eventually, you cannot use other operating systems on PC hardware. This violates the injunction not to engage in additional monopolistic practices.

I started out by liking Microsoft when it competed with IBM's DOS. But ever since it has ousted IBM out of OS/2. I've begun to feel disgusted with their business practices and abuse of it's marketshare leading to inferior products. This ruling should consider what Microsoft will do in the future by seeing what they have done in the past.

In my opinion, Microsoft and the public would best benefit if Microsoft were split and sold to investors and fined for stealing intellectual property using the loopholes of the system and allowing our privacy to be compromised. Any part of Microsoft software that has potential for compromising our privacy should be opened to the public.

Dear DoJ,

This is regarding the Microsoft antitrust settlement. I think it is a great thing that you are willing to hear from the public, and it shows that you are very open minded about the whole thing.

I personally feel that Microsoft has no other instinct than to grow and assimilate any kind of technology it can legally or not, get it's hands on. They mess with it and try to sell an inferior version of it to the public. People buy it because they have an instinct to try to conform to a standard. A standard that I might add was created only because they manipulated the market to conform to their needs. If you recall the book "1984", you will see how similar Microsoft is to "Big Brother". They tell you what you need, what you can use, and say to hell with privacy rights in the case of their new operating system "Windows XP", because of the fact that they have access to your computer at any time, and that is just wrong.

I feel the only solution to this personal threat is to finally shut them down and pass a new "Big Brother" amendment that says no company can grow to such an extent as to have more control over the public than the national government.

I urge and plead that you take the nessary steps to make sure this monopoly is shut down and not allowed to happen again in another form.

Sincerely,

Anthony Wiedower

To whom it may concern,

The proposed Microsoft settlement represents everything that is wrong in today's economy. Here is a company that destroyed so many companies along the way that I lost count. The settlement was to send a message that monopolistic practices in a competitive free market system are wrong. Instead the settlement for all intent and purposes proposes that we hand over the public school computer business to Microsoft, an area that has been traditionally the strong hold of Apple. Apple didn't get it handed to them, they earned it by working hard over the last 20 years.

The settlement should be simple. Strip Microsoft of half it's wealth and put that x amount of billions in a software/hardware grant system that companies could then apply for. I for one can't even imagine where we could be in the next 5-10 years. Above all else companies need to feel free to develop products without Microsoft looking over their collective shoulders.

Sincerely,

Rocco

MTC-00013865

From: Sean Holt
To: Microsoft ATR
Date: 1/18/02 2:16pm
Subject: Microsoft Settlement

Hello,
My name is Sean Holt-Carden. I am an open-source (<http://www.opensource.org>) software developer. Microsoft "claims" that they are the main contributors to Computer advancements made in the past couple of years. . . when in all actuality they are the main contributors to holding back the computer industry. The main reason for this is they are closed-source. They barely release any source code for their new, what they call, "technologies and software".

Then Microsoft goes as far as not supporting old hardware in order to "boost the computer sales industry". What about the people who can't afford to buy a new computer every year? They have to be left in the "dark" because Microsoft wants to "boost" the industry? That's not very fair in my opinion, and companies should NOT be allowed to make such actions. Yes, you can say the people who can't afford new computers don't have to buy the newest versions of Microsoft Windows, but then all of the software released by Microsoft REQUIRES the newest version of Windows. If these people don't have the newest version, they simply cannot use the newest software.

In my opinion SOMEBODY needs to step in here and make things right. If Microsoft is allowed to get away with all the bull they are pulling when will it stop? The longer they get away with it, the worse it is going to get. I read over, briefly, the "final judgement" which I found a link for on the Sun website (<http://java.sun.com>). In essence, this "final judgement" won't do anything except for spending tax-payers money uselessly. There are WAY too many loopholes in this agreement that, we all know, Microsoft will exploit and take advantage of. This agreement needs to be written stronger and Microsoft needs to be given heftier penalties in the occurrence that they violate said agreement. Also, the "Technical committee" must be knowledgeable of what the source-code they look at actually means, and they must be unbiased in this whole situation. If they aren't knowledgeable in this manner, it's pointless to appoint such a committee to monitor Microsoft seeing they don't know what they're looking at. This would also be a waste of tax-payers money.

Thank you for your time,
Sean Holt-Carden

P.S. If you have any questions or comments on this e-mail, please feel free to e-mail me at mordist@home.com.

Attorney General John Ashcroft

US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft:

I have closely followed the federal government's antitrust case against Microsoft for a long time. Microsoft is not a monopoly, but competitors who cannot compete with Microsoft in this highly innovative market have attacked them aggressively. This settlement is fair and will give the computer/software industry the boost it greatly needs.

I feel Microsoft is improving its business practices by allowing competitors and partnering software developers access to some of the Windows operating system source code. It also agreed to not retaliate against software or hardware developers who develop or promote software that competes with Windows or that runs on software that competes with Windows.

Microsoft must be permitted to implement these new business practices. Far too much time and resources have been spent proving Microsoft is operating as a monopoly. Its time to put an end to Big Brother is watching, and let Microsoft get back to business with the settlement terms.

Sincerely,
John Gilbert

It has been proven that Microsoft (MS) is a monopoly! And as such should be dismantled according to the Sherman Act. We as consumers deserve to have a greater selection and choice in commercially supported software. This settlement has failed to address the bundling of software into the OS by MS, effectively making choices for the consumer. This is not freedom of choice! This is NOT freedom!

With Microsoft being the only choice for consumer based OSs, we are locked into all bugs and security risks related to this monopoly!

I am against the leniency of this settlement.

Subject: Microsoft Settlement

As a long-time Macintosh proponent, I have for a long time felt the sting of Microsoft's monopoly in the OS market. Every time I go into Wal-Mart and find not a single application available for my Macs, I think about the way in which Microsoft has undermined competition in all areas of the computer software industry.

That's why I feel that the proposed settlement with Microsoft Corporation is a terrible penalty for a company so ruthless as Microsoft. Allowing Microsoft to get off the hook by buying refurbished computers and software for under funded school systems is like punishing a serial child molester by sentencing him to community service in a day-care center. That comparison may be a bit crude, but nonetheless, the proposed settlement would simply allow Microsoft to gain a stronger foothold in the one market in which it has traditionally not been dominant. No wonder Apple opposes the settlement so heartily. It would effectively destroy Apple's base and lay to rest any notion that there is real competition in the computer software industry.

I hope the government thinks again before it settles with Microsoft for such a paltry and Pyrrhic victory.

From: Damien Fox
To: Microsoft ATR
Date: 1/18/02 3:05pm
Subject: Microsoft Settlement
To: Renata B. Hesse
Antitrust Division
U.S. Department of Justice

The proposed settlement by Microsoft Corp. is a travesty. Microsoft is obviously a monopoly, with over 90% of the consumer and business personal computer operating system market, and with MS Word used by almost every office or department at schools and businesses. Windows, like Word, is a sub-standard piece of software: clumsy, unstable and blatantly incompatible with other manufacturer's software.

And what of MS's innovation? Stealing the modern GUI from Apple, and failing to even improve on it. Stealing the web browser from Netscape, and failing to improve on it for nearly 5 years (Netscape 4.7 from 1996 is a good as MS's Explorer from 2000). Hotmail, bought from another party and tinkered with until it has become bloated, slow and borderline unusable compared to the way it was three years ago? Have you ever seen the pathetic power management Windows provides for notebook computers?

Do not allow MS to continue its tyrannical rule of the personal computer market. Aside from stifling innovation by forcing the rest of the industry to play it's game, (such as the whole Java fiasco!) and keeping prices high, (forcing users to have a P800 processor to run a file display system, er, OS, that is essentially the same as it was five years ago) , it forces users to play the Microsoft game.

Why is it that instead of an open text standard (along the lines of HTML), MS Word documents have become the de facto document exchange format, despite the high processor power demands of any recent version, the clumsy user interface, and oddities of display and font requirements on different computers and on different operating systems? The answer is simple: Microsoft is a monopoly, and uses it's monopolist's power to force the market to buy it's products, rather than let the market decide. You are in a position to prevent this situation from continuing, and preserve what little competition that exists in the computer market today. DO NOT let MS flood the educational system with cheap junk that costs them nothing to produce, and which they can count at full value in the settlement by tricks of accounting. By all rights, Microsoft should be billed every time a Windows licence is given away for free, as they benefit nearly as much from users running Windows without paying for it as they do if the user were to pay for their copy.

Act in the public interest, the interest of technological progress, the interests of the free market, and NOT in the interests of Bill Gates or Microsoft. By the way, Gates himself should be held responsible for the actions of his company: the limited liability of corporate executives is a relatively novel concept, and should not be taken as the gospel that it has been in the past 90 years or so. Deal with the real problems, not just the current symptoms.

Regards,
Damien Fox

Subject: Microsoft Settlement
Dept Of Justice:

I have worked in the technology industry for about twenty years now, and I've never felt that Microsoft has done anything wrong. Microsoft's products have been very useful to me. I could have used some of Sun's or Oracle's products but they didn't meet my standards. America's economy was built on competition, not lobbying efforts. Sun and Oracle are trying to play catch-up with

Microsoft by pulling weight and encouraging legislators to file suit against Microsoft. That is wrong. Microsoft has hurt no one but competitors, there have been no individuals affected by this. We as consumers have benefited. The government should not hamper good technology.

In the 90's I worked for a software company that lost out to competitors because they knew the market better than us. That's the nature of competition. Yes we whined but we didn't file frivolous lawsuits.

It is hard to imagine what the future will bring in computer software and hardware. But it scares me if the government is going to investigate complaints brought on by competitors. Free Enterprise. Who's next after Microsoft????

For the sake of the economy please end this foolishness now.

From: Robert L Wolpert
To: Microsoft ATR
Date: 1/18/02 3:17pm
Subject: MS Antitrust Settlement Concerns
Dept of Justice,

I'm a statistician and mathematician, for many years a user of a variety of computers in my work, recreation, and personal life. I am writing in opposition to the proposed settlement of the US DOJ antitrust suit with MicroSoft.

For years the MicroSoft monopolies on desktop operating systems and office productivity software have perpetuated each other—competing operating systems (OS/2, BeOS, Netware, DR-DOS, Unix) cannot gain more than a trivial market share because Microsoft constructs its office productivity software NOT to run on the competing platforms (this was especially clear with OS/2); meanwhile competing desktop applications (Netware, Word Perfect, Lotus 123, etc) cannot gain more than a trivial market share because Microsoft conceals and changes their OS programming interfaces (API's) to give their own products an advantage (the MS slogan of the 70's when updating their OS was "The job's not done 'til Lotus won't run"). The resulting lack of competition has hurt American research productivity, American commerce, and all of us who would benefit from cheaper, more secure, and more capable computing platforms. Penfield's structural remedy addresses the underlying problem—if the OS and App portions of Microsoft were separate, then it would be in the Apps portion's (and its stockholders') interest to port the apps to competing OS's, and it would be in the OS portion's (and its stockholders') interest to support ALL app vendors on their platform. In fact I would expect this would make both portions stronger, again benefiting their stockholders, while simultaneously opening the market to competition for the first time in two decades.

Thank you for the opportunity to comment.

Sincerely,
Dr. Robert Wolpert

From: bheller@sushi.toad.net@inetgw

To: Microsoft ATR
Date: 1/18/02 3:36pm
Subject: Microsoft Settlement

I offer here my comments, in accordance with Tunney Act provisions, related to the proposed settlement between the government and Microsoft. The government has chosen to prosecute this case in very narrow terms that do not do justice to the weight and strength of Microsoft's monopoly. The public interest is not served by such self-imposed limits, and the narrow measures provided in the proposed settlement. This case should be used as a vehicle to address the Microsoft monopoly in toto. Much of the proposed remedy consists of offering choice to the OEMs and consumers. While ending excessively restrictive licensing terms is a worthy step, this does nothing in practical terms to diminish the monopoly power wielded by Microsoft in the marketplace. In order to truly remedy monopoly abuse, there must be genuine punitive measures imposed upon Microsoft.

Another deficiency of the proposed settlement is the absence of a bar to future anticompetitive behavior. In the past, Microsoft has often dealt with perceived competitive threats not only by raising restrictive middleware barriers, but also by buying competing technologies, products, or companies outright. To prevent continued abusive behavior and the expansion of Microsoft's monopoly power in the marketplace, Microsoft should be barred from acquiring ownership positions in competing companies, and from purchasing software products and technologies from other companies.

Others, such as consumer advocate Ralph Nader, have made note of the impropriety of Microsoft's sizable cash position. The liquid assets of Microsoft exceed the total market capitalization and assets of many of Microsoft's competitors in the software marketplace. This capacity to buy any company or product which can be seen as a threat or strategic asset hangs as a threat over the industry. As a punitive measure, the government should seek to take no less than half of Microsoft's cash and short-term investments as a fine for anticompetitive actions.

In order to minimize government intrusion in the software industry and the burdens imposed by constant oversight, a structural remedy is likely the most expedient option, and possibly the one which offers the most long-term assurance of market protection.

It makes sense to split Microsoft into separate companies, although perhaps not along the lines proposed by the district court initially. Logically, there is one unit responsible for operating systems, another for software applications, one for internet products and services, and other products. It would seem to make sense to make separate companies for each of those product areas, barring each from most contact with the others for a period of some years.

Without such a structural remedy, there is a need for substantial procedural remedies and fines, more so than provided by the proposed settlement. There are many activities which companies may engage in that take greater significance when executed

by a monopolist. The government should recognize this fact, and place more severe behavioral restrictions on Microsoft.

Disclosure statement: I own no stock in any software or computer-related company, nor have I ever been in the employ of such a company.

Sincerely,
Brian Heller

To Whom It May Concern:

I believe that the settlement agreed upon by Microsoft and the DOJ is fair. I would urge you to proceed with the settlement. As a user of Microsoft's suits of products, I believe that Microsoft has brought unity and standardization to the software industry and should be applauded for its endeavors. I believe that the settlement should be accepted by the DOJ.

As a professional consultant working in the computing industry, I feel it is not only an opportunity, but also a responsibility, for me to submit the following comments regarding the proposed settlement. It is clear in my years of experience that Microsoft's monopoly has had adverse effects on the industry and has harmed its competitors, customers and even its own business partners. The current settlement's purpose, is, of course, to restrain Microsoft's anticompetitive conduct and remedy the effects of its past unlawful conduct. However, I do not feel it achieves these two goals.

The current settlement would not punish Microsoft, but could actually advance its interests and provide the company with a "governmental green-light" to continue its abusive practices. Please insist that the settlement is not acceptable unless it also includes the following: the complete unbundling of Microsoft's products from its base operating system, with those products distributed separately or as extra-cost options; and the complete opening of the specifications for all Microsoft document file formats, APIs, and networking protocols for now and forever.

With Microsoft's market position, it is capable of and seems to be working toward seizure of de facto control of the internet. There is no competitor nor group of competitors that could prevent it from taking this action, just as there was no free market action that could have prevented its seizure of the browser market from Netscape.

The only recourse is for a strong government action that would both punish

the company for its past law-breaking and make it impossible to commit further illegal acts. Please reject the proposed settlement and accept none that do not fully address all facets of Microsoft's monopoly abuses.

Thank you,
Benjamin Horst,

Subject: Microsoft Settlement

While it is no surprise to me that the US position on the Microsoft anti-trust case softened dramatically with the new Presidency, I feel strongly that any settlement short of splitting Microsoft will have little or no effect on Microsoft's anti-competitive practices. Without splitting the operating system from the applications, Microsoft will continue to take advantage of its monopoly of the operating system market to crush its competitors in the applications and internet markets. Do you think that msn.com has grown so much do to its high quality? Think again. When users buy a new PC, MSN is their default home page on the Microsoft browser. Since Internet Explorer is already installed with the OS, most users don't bother to download a competitor's browser. This has given Microsoft an unfair advantage in the browser market, which they are turning into an unfair advantage in the ISP and Internet portal markets. This type of behavior will continue as long as Microsoft can bundle its applications and services with its OS.

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers.

With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Claude D'Amour

Justices,

I believe that the proposed settlement with Microsoft does not go far enough to stop a monopoly. I would like to add my vote against the acceptance of the proposed settlement, and suggest stronger sanctions against Microsoft. I have been a software developer for 20 years and am currently the CTO and co-founder of Annexient, Inc. . I have worked for many different companies, including PTC who develops applications that run on many different platforms.

I believe that we are currently in a "death spiral" with Microsoft. That is, the more market share Microsoft has, the more likely choices are made in Microsoft's favor, due entirely to their market size, thus providing positive feedback to the cycle.

As a developer and CTO I have witnessed and made these decisions. One could say it is supply and demand. For the smaller companies it is, but that is because Microsoft is almost all the market there is.

When a company wants to make another choice, it can be very difficult. We recently had a major customer request that we support the Macintosh. In doing so, it became apparent the significant discrepancy in development products between Microsoft and Apple, much of which I believe is due to decisions similar to the ones described above.

I only hope it is not too late to stop the total domination of Microsoft on the software industry, and recommend that the proposed settlement be rejected, and more severe measures be taken against Microsoft.

Jon Weygandt
CTO/Founder
Annexient Inc.

 Honorable Judge Kollar-Kotally,
 It is my view that the proposed U.S. vs. Microsoft settlement before you is flawed, and I urge you to reject it. Microsoft has benefitted enormously from its past monopoly powers, as every court has concluded.

This settlement allows Microsoft to retain those ill-gotten benefits. Furthermore, there's no means for ensuring that Microsoft will desist from engaging in anti-trust violations in the future. I feel that it is in the best interest of the public to oppose the proposed final judgment.

From: Mike Stone
 To: Microsoft ATR
 Date: 1/18/02 11:24am
 Subject: Microsoft Settlement

It's my belief that at least one point has been missed in the Government's position. The Government's contention, as I understand it, is that Microsoft is using its operating system monopoly to unfairly gain dominance in internet browsers. That browser dominance would then secure their operating system monopoly. Although I believe that this is the case, I also believe that their is more to Microsoft's attempt to gain browser dominance. The internet is a relatively young (at least the www portion of it) development which as of now no one controls. Internet standards are agreed upon and approved by a committee of various internet entities. If a company wants to put out proprietary software for the internet and charge for it there is a good chance that internet users will find a free alternative. If a company has a monopoly in the browser they are also the only company that can ignore the committees standards and use their own. Once they have established their dominance with internet standards they can market their for-profit products (Windows 2000, site server, etc.) as the only products that guarantee internet compliance since they would decide what complies. This would then help them gain dominance in other areas. This is the path that Microsoft has time and again chosen. Gain dominance in the operating system market and then scare consumers into thinking that if you are not using their operating system, then you won't be compatible with the rest of the world. Same with their office suite. For as much talk as Microsoft makes about innovating, I can't think of a single product that they make that wasn't made by another company before them. Windows = Macintosh OS; Word = WordPerfect; Excel = Lotus 123; Internet Explorer = Netscape; etc. They don't innovate, they copy and then bully people into using their versions through fear that

they won't be able to do what everyone else can do. It's another reason they don't let competition in on the same Windows APIs that they use in application development.

I believe that breaking them up is the wrong idea (and was glad when you dropped that as an option). I think the best thing to do is make Microsoft release its Windows APIs to application developers so they can compete on a level playing field. In addition I would require them to develop their browsers to only the commonly agreed upon standards of the internet for the next 5 years. This gives the internet a chance to mature in an open competitive way, instead of just following Microsoft's "innovations."

Thanks
 Mike Stone

Greetings,
 I am a software developer who works across all platforms, and I primarily perform applications programming for the MS Windows breed of OS. Having said that, I would like to comment on the proposed final judgment that is on the table now, during the public comment period.

I feel the the proposed final judgement fails to properly and adequately address the misconduct of Microsoft Corporation in its anti-competitive activities, as well as leaves enough room for Microsoft to find it easy to manipulate the agreement and perform future transgressions in the arena of anti-competition.

I am not a wordy individual, and I have no intention of telling you the facts of your own case. My sole comment here is on whether or not the proposed final agreement is in the public interest, and I think the answer is no. If we allow this, where will that lead in the future? It has only been 7 Years since Windows 95 hit the streets, remember, and Microsoft already has (seemingly) more power than our federal government. What will happen in ten, fifteen, or twenty years? What state will we have come to then, if we let ANYONE think that this sort of attitude is ok for a corporation to have?

Thank you for your time,
 Anthony Levensalor
 Software Engineer

 Date: 1/18/02 4:24pm
 Subject: Microsoft Settlement

First of all, thank you for soliciting comments from the public. I was personally in favor of the original proposal to break up Microsoft, and was disappointed with the weakness of the Justice Department when the time came. Microsoft's cynical idea to donate "almost 1 billion worth of software" to schools is almost certainly yet another flagrant attempt to grab market share and establish a monopoly in yet another sector of the economy. Personally, if Microsoft truly wants to provide a community service and give money to education, they should donate it in cash. That way, the schools in question will have the opportunity to spend the money in whatever way they see fit. Microsoft is an illegal monopoly, and the government must take that into account when they deal with the company. Thank you.

Brian Kichler

MTC-00013898

From: SCHMIDT Victor H
 To: Microsoft ATR
 Date: 1/18/02 4:38pm
 Subject: Microsoft Settlement

I feel MOST STRONGLY that Microsoft should NOT be allowed to profit from this settlement in ANY way. They should be required to pay the settlement in CASH, the cash should be managed by a third party (in a Trust Fund or something similar) and the schools and others involved should have total control of where their part of the settlement money is spent. ie., NO-ONE should be pushing them to buy Microsoft products, to use Windows PC's, or Microsoft software, etc. (No coupons, no discounted software etc as long as it's Microsoft, etc). Apple Computer has worked very long and very hard to get to the place they are in the computer business, and especially where they are in the education market. Microsoft should not be allowed to make ANY progress or inroads into ANY market—and ESPECIALLY into the education market, because of this settlement. This settlement should be a punitive thing which does more than just slap Microsoft's corporate hands and lets them continue to make use of their monopoly position in the computer marketplace.

Thank you, from a dedicated Apple Computer user.

I support the proposed anti-trust settlement negotiated among Microsoft, the federal government, and nine states. Additional litigation would not be in the best interest of consumers or taxpayers. Microsoft is largely responsible for the thriving technology environment we enjoy today. This environment is the result of the open PC Windows-based architecture which has spawned the development of countless third-party applications operating virtually seamlessly across PC platforms.

Thank you for considering my comments.
Sincerely,
Patrick C. Tullo

Washington, DC 20530-0001

Dear Mr. Ashcroft:
I am writing you today to encourage the Department of Justice to accept the Microsoft antitrust settlement. The terms of the settlement are fair and the technology industry needs to move forward. Many people think that Microsoft got off easy; this is simply not true. The settlement was arrived at after extensive negotiations with a court-appointed mediator. The company agreed to terms that extend well beyond the products and procedures that were actually at issue in the suit, simply for the sake of wrapping up the suit. Microsoft is far and away the technology industry's leader. During these tough times the industry needs its leader to be able to concentrate on

business, not government over regulation. The industry needs to move on and regain the momentum that it once possessed. The terms of the settlement are fair and it is time for the entire industry to move forward. Please accept the Microsoft antitrust settlement.

Sincerely,
Jay Newkirk

Dear Judge Kollar-Kotally,
My name is Ron Limb and I am a high tech entrepreneur residing in Silicon Valley. I am writing this letter because I am concerned about the proposed final judgment in Microsoft's anti-trust violations. The proposed settlement does not adequately address the needs of small high tech innovators who are not able to rise out of the long shadow cast by Microsoft's monopoly in the tech industry. The business antics of Microsoft is harmful to the industry. As a concerned citizen, I object to the propose settlement.

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Attorney General Ashcroft:
As a supporter of Microsoft, I write you with concern over the recent developments in the anti-trust suit. Microsoft has made many concessions to appease various parties in this suit, only to be further scrutinized. It is time to move forward and let the terms of this agreement speak out for themselves.

After three years of negotiations, the parties involved in this suit have reached an agreement that is fair and reasonable and beneficial to all involved. Unfortunately, certain politicians have decided to prolong this settlement and waste our precious resources on further dissection of the already agreed upon terms. Under these provisions, Microsoft agrees to make changes in licensing and marketing terms, as well as changes in design. A three-person technical committee with a government representative will oversee Microsoft's work, and consider complaints. These concessions are clearly working toward a more unified IT sector and a step toward advanced innovation.

By instigating further litigation, we do nothing more than slow down our innovative

process. Anyone sensible person can see that slowing down our American technology industry directly affects our American economic growth. Let us not be the ones to stop the very process that we initiated. Please help to stop any further litigation on this settlement.

Sincerely,
John Klemm

Subject: Microsoft has harmed businesses and consumers.

To: Department of Justice
I am disappointed with the proposed Microsoft settlement. I don't see it changing anything that will help stop the problems that Microsoft causes. The case didn't bring up many of the underhanded things Microsoft does. Microsoft and SGI signed an agreement to port a version of OpenGL to windows. SGI committed the people and money to the project, but Microsoft only gave partial support. We spent the next nine months hearing how the SGI programmers were overloaded while the Microsoft programmers were not holding up their end of the deal. After a year Microsoft dropped the contract and OpenGL support from windows and released a new DirectX. This hurt not only SGI, since they were left without resources to improve OpenGL on their own machines, but SGI customers like us. We suffered as SGI was duped into devoting resources. Even personally I have been hurt by Microsoft's monopoly. In 1994 I bought a Gateway computer with Office Pro. The OEM prices was \$229. The were under pricing both Lotus Smart Suite and Wordperfect Suite. There was competition then. In 1998 Office Pro '97 upgrade was \$329, while Wordperfect Office 7 was \$189. The last package I bought in 2001 was Office Pro 2000 upgrade is now \$399 while Wordperfect Office 9 is \$229. Where is the competition now? Microsoft low-balled the prices when they didn't own the market. Now they have 90% market share and their prices have gone up an up as they've

captured the entire market. How is the settlement going to restore competition in the office market? How can any OS vender compete with Microsoft when Microsoft won't allow OEMs to install dual-boot with other OSes?

It seems the only way to compete with Microsoft is to give away the software like with Sun Office and hope that enough people are sick of supporting Microsoft. Unfortunately this won't work where I work since the Sun Office isn't on the government buy list.

Subject: Microsoft Settlement

Dear Representative of the American Justice System:

I write this letter because of concern for my livelihood. I am a computer professional, and have worked with computers and operating systems from a number of vendors since the earliest days of personal computers, and I must say that the Microsoft case has held my attention because it is a case of landmark importance for the security, and financial future of the United States, and the world.

Microsoft holds a vast market share of the personal computer operating system market and there is nothing wrong with that. However, their means of maintaining this dominance has been found illegal, and there are other issues with Microsoft software that need to be addressed if they are to continue holding a monopoly.

First and foremost they must conform to standard networking protocols. Additional features can then be built into an application, but the base application must operate no matter what operating system is being used.

Second, they need to make freely available the formats for their proprietary file formats. Users have been forced into upgrades of software packages that cost as much as hardware for a new computer because they will not be able to read files if they do not upgrade. This is tantamount to price fixing and the exact reason that monopolies are so keenly watched, and closely regulated.

Third, the security of their products needs to be reviewed by outside sources. Microsoft has continually pledged to improve their security, and year after year they release software that subjects even non-Microsoft users to attacks, and intrusions. All of the major Internet security issues such as Code Red, Code Blue, Nimda, Love Letter, Kournikova, Melissa, and more have been based on "features" that Microsoft did not take the time to perfect or secure. Their email server retails for over \$6000 and can not even close a major security hole related to sending spam without customization. Qmail is an open source product available for free download that has no known security holes and a standing offer to pay anyone that can find such a hole \$500.

In summary, if you take away the ability of Microsoft to write programs that will only work with other Microsoft products, truly fair competition can finally occur, this will not be achieved through splitting the company, or "giving" software to schools that Microsoft did not have to purchase at a retail price in the first place. In fact, schools are one of the few non-Microsoft dominated markets and it would be a shame to actually extend the monopoly into untapped markets as part of the settlement.

What needs to be done, is to have Microsoft publish the source code for any proprietary modifications that they make to widely held standards such as the C++ programming language, Domain Name Services networking protocols, or the most recent core of their .Net products Xstensible Markup Language.

In addition, Microsoft operating systems should be as much more expensive when you buy them with a computer, as when you buy an upgrade, or original retail copy. Tacking one to two hundred dollars onto the price of a Windows PC will be cause for the average consumer to reconsider participating in a monopoly, and would leave a very real window of opportunity for other vendors to secure a market share in the operating system arena.

When a security flaw is found in a Microsoft product that endangers businesses livelihood on the Internet the source code should be released for public examination. In this way threats to public, and national security can be abated with a thorough testing. Instead of a never ending series of repairs after the opening is already being maliciously exploited to cause network outages, or data loss. These suggestions would be good for the country, good for consumers, and a bitter, but much needed remedy for the problems of Microsoft that caused this antitrust action to be taken in the first place. I appreciate your consideration.

Sincerely,

Daniel Andrade

From: Kenneth Cox
To: Microsoft ATR
Date: 1/18/02 5:29pm
Subject: Microsoft Settlement: When?

Dear Mr. . Attorney General, After reading the proposed court settlement with Microsoft and the DOJ, then finding out that several states have rejected it, including my own (California) I was very surprised and disappointed. I have sent correspondence to Dianne Feinstein and Representative Cox; relating to this issue several months ago and got an answer from Mrs. Feinstein that was baffling and convinced me that some of our elected officials do not seem to have a firm understanding about the nature of the software business and the impact their decisions can make.

Representative Cox on the other hand seemed to have a ready grasp of the issues and didn't sound like he was preaching from a soap box. I keep hearing rhetoric from the same people and those same people just seem to be not dealing with the realistic issues presented them several times such as innovation impact, property rights, economic impact and so on. This is insane and must stop.

I am a programmer, but more importantly, as a citizen who believes in democracy and capitalism, I support the idea that any company, not just Microsoft should be allowed to keep their intellectual property under lock and key and protected as well as also be allowed to ensure that products designed to work for and with their systems do so without interfering with the normal intended use that system. Anything less is questionable and brings us back to the days when we had no integration or support from big software companies and we were forced to buy a myriad of products both hardware and software to get things to work; none of which could "talk" to each other. Fragmenting Microsoft and/or the browser will effectively roll back years of work many of us as platform developers have put in to deliver value and line of business applications for our end customers.

I work for a very large insurance company in Southern California, our customers have grown to appreciate the speed and flexibility with which we have provided in bringing them new applications such as the ability to download their Fund Performance values for their insurance product. This is because we are able to develop them faster because of tight integration used by Microsoft in their products and the use of Platform technology by Microsoft.

Without increased interoperability of compatible systems and tight integration with operating system products from the same vendor we end up fragmenting a whole industry that has grown up around this idea. In addition, there is a whole cottage industry built around Windows that as developers allows us to free ourselves from "rolling our own software" and focus on delivering value and needed critical line of business applications for our customers; capitalizing on integration and features only found in Windows components and Windows

operating systems; most of which is dependant on the Internet which is why Internet Explorer platform development is so critical to our continued success as programmers and company.

Last, we would never require that Ford Motor Company ensure that a Chevrolet engine fit and be compatible with Ford products and that is essentially what we are talking about. The internet browser has been hailed as an accessory, but in fact Microsoft has integrated that into the operating system to take advantage of features only present in Windows, and not other systems. Netscape tried to integrate their browser into Windows but failed because of course, that's like Chevrolet buying Ford engines and selling brand new cars as Chevy's, with Ford engines. Who is going to be responsible for the engine? If we take it back to Chevy will they tell us to it's Ford's problem? If Ford didn't agree to support the engine if Chevy did this, will Chevy be responsible? This is the potentially weird situation we find ourselves in with this browser issue. It is part of the operating system much like Bank Of America owns all of their own ATM machines, do you think they should be forced to carry Well's Fargo Atm's so they can get a cut of the transaction fee? I don't see this as any different and set's a bad precedent for future development.

No one should have to argue this, it's marketing 101. It's the thing that separates a good operating system from a great one. I speak for many developers who would like to see this come to a successful conclusion so that we can continue to build web enabled applications for our customers without worrying if we are going to have to change hats and become support personnel for the fragmentation that will surely follow if hold out states get their way and the loss of jobs this would cause because of stifled innovation.

Respectfully Submitted,
Kenneth W. Cox

Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft: Microsoft and the Justice Department have reached a settlement in the antitrust case. The reason I am contacting you is because I would like you to resolutely support this settlement.

DOJ officials and Microsoft reached this settlement after three years of costly litigation. Outside interests have been criticizing this settlement, some with the hope this case will resume. However this settlement is thorough and will bring positive change. There is no reason for further federal action. Among other changes the settlement will give computer makers the flexibility to place competing software on Microsoft operating systems. Microsoft is also going to release computer code to competitors so they can produce more competitive software.

Let's end this ridiculous exercise, led by fee hungry lawyers and Micosrolt's competition. Microsoft is one of America's crown jewels, let them move forward at what they do best; create software.

I respectfully plead with you to settle this case without delay.

Sincerely,
Harry McHugh

Microsoft has been "playing dirty" for a very long time. . . at least the past 10 years, if not longer. Do you really think they don't have a plan for working around a self-proposed settlement? Let's not be so na?ve.

The only way you're going to keep them from cheating is to split them up and make them compete against themselves. Otherwise they will continue to use their dominance in some markets to destroy good competitors in other ones.

From: Daniel Cloud
To: Microsoft ATR
Date: 1/18/02 6:40pm
Subject: Microsoft Settlement

So far in the settlement proceedings, Microsoft has been dealt with very lightly. Talks of splitting the company up seemed very reasonable, especially given the fact that in the past companies have forced to sell certain software assets in order to limit a monopoly in certain software categories. Large companies have been treated in this way in the past.

It should be no different with Microsoft. The Operating System, the web browser, the Office suite, etc. are separately salable products. What Microsoft has done, and the court already agreed that this is monopolistic and illegal, is first create an operating system monopoly and use that monopoly to build monopolies in other types of software such as web browsing and productivity applications (MS Office). It seems then that the only way to truly break up the monopoly would be to separate the software applications by selling the code to other companies. The profit from selling the rights to the software should go into a fund for schools to buy computers and software of their choice. Given the clearness of Microsoft's monopoly practices that have been built upon years of unfair and anti-competitive business deals, it is imperative that the company be reshaped so that it doesn't resemble what it is today. This would also be good for Microsoft and the people who actually want their products because by narrowing Microsoft's reach, it will bring focus to building the fewer products better. When the software applications are split amongst other companies, development of competition will occur and the companies that bought Microsoft application code will be forced to make a better product to compete, and the consumer will benefit.

I thank you for the opportunity to speak to you on this subject and hope that in making a final decision, you realize that allowing the guilty defendant to decide its own sentence would be unfair, inadequate, and most of all, unjust.

Thank you.

MTC-00013921

From: Jarod Guertin
 To: Microsoft ATR
 Date: 1/18/02 7:08pm
 Subject: Microsoft Settlement

To whom it may concern,
 I would like to humbly submit the following suggestion relating to the Microsoft Settlement.

It is the objective of the following argument to propose that the settlement should include a provision to force Microsoft to fully disclose to all competing parties the format of the end data files now considered standard. In this context, end data files, is meant to cover the end result file of the most common Microsoft applications utilized by both the end-user and business-user such as, but not limited to: A corollary is that any planned changes in those file formats would have to be communicated to the industry in advance to allow full support and compatibility.

This proposal relies on the argument that the operating system (MS Windows) has maintained its monopoly partly by preventing competing developer in making applications that were able to read and write flawlessly (which means full knowledge of all the structures and features not just a partial disclosure) in the file formats that have become the most common and therefore at the base of most information exchange in the business world and at home. One of the most common argument heard from people opposing or fearing too harsh of a settlement against Microsoft is the fear that they may not be able to exchange data as easily and freely as they now can if they remain in the Microsoft applications/OS realm. It would indeed hurt communications and business alike if suddenly the industry was thrown back in the times where a cacophony of formats existed and were more or less equally supported; this often resulted in corruption or loss of data during conversion and in the worst cases would lead to the inability to read the data altogether because a different application or application version was used. While many formats still exist today, it is hard to deny that the Microsoft formats have become the standard by way of the monopoly Microsoft enforced as found by the high courts' ruling.

Some, including Microsoft themselves, might argue that those formats are known well enough and that many applications can read the files in those formats. User experience however repeatedly and continuously disproves this statement. All third party data conversion seen so far are eventually marred with either glitches, corruption of information, loss of data, misalignments, etc. It would be extremely hard to believe that the entire industry, for the exception of Microsoft, is incompetent. It is much more plausible that full disclosure of those file formats were never carried out but only partial information on the most basic structures were given thus leaving out some of the most advanced features and nuances which makes all those third party applications look deficient to the user. The user then has little choice in order to conduct business effectively but to disregard those apparently "inferior" third party applications and to move to Microsoft applications thus strengthening the monopoly.

Finally one might ask if firstly, such a requirement on Microsoft is just, and secondly if it is a remedy. Given the courts ruling that Microsoft used monopolistic practices to extend their hold on the industry, the popularity which made them become standard file formats is a result of the

monopoly and serves to proliferate and maintain the monopoly. Since those file formats originated and help enforce the monopoly statu quo, it seems fair that they should be included in such a settlement.

Secondly, is this in any part a remedy? Once third party application developers are able to read and generate fully the most complex variants of those popular file formats, the competition between Microsoft's applications and third party's application will become possible again and will be based solely on the merit of the software itself, its features and its price. Once enough third party applications exists that are fairly competing with Microsoft's products, it will enable the industry to fully support any operating system that the business community and end user choose to, without fear of data communication and file transfer problems. At that time, Microsoft's operating system will again face fair competition and will have to resume competing based solely on the merit of the OS itself, its features and its price. Although it is extremely hard to predict how much time it would take to reach that point, a conservative guess would be 5-7 years.

That might seem like a very slow course of action for a remedy but its slowness would allow a smooth and non-disruptive transition from monopoly to fair competition as third party developer catches up to the lead obtained by monopoly. It would revitalize the industry and renew the creativity and commercialism of third party developers, in fair competition. It is even the opinion of this writer, that those file formats should become regulated by standard bodies from the industry like JPEG and MPEG were.

If Microsoft judges that this argument is moot because it pretends to fully disclose those formats already, then including it in the settlement should not be an issue. If Microsoft objects and tries to use patent, trademark or industrial secret arguments, then it only strengthens the validity of the argument itself.

Please note that this suggestion is only seen as an additional item of the settlement and therefore meant as complementary.

Thank you and God bless America.
 J.G.

From: Mark Lawler
To: "Microsoft.atr(a)usdoj.gov"
Date: 1/18/02 7:50pm
Subject: Microsoft Settlement

I find this entire case against Microsoft ridiculous. Just close the books on it and quit wasting my tax dollars.

What type of car do you drive? Does it have a built in heater for your comfort? Air conditioner? How about a radio? Cup holders? You see, if I apply the same logic the DOJ used in this case against Microsoft your vehicle shouldn't have these things at all. A car is nothing more than a platform and as such automobile manufacturers have had an unfair competitive advantage to add these things to their default platform; they should have been stopped from doing so years ago. Just think of the companies squeezed out of business when the auto manufacturers added cup holders to automobiles a couple of years ago? How much revenue did the local gas station lose when people quit buying cup

holders? Forget that it makes sense for a cup holder to be an integrated part of your interior and that a 3rd party add-on that hangs from a vent or a window crack is ugly, ill fitting, and gets in the way: It's wrong and the DOJ should have stopped the automobile manufacturers from using their platform in a monopolistic way against these poor third party vendors. Yah, right. . .

Look guys as stupid as this sounds it's the very same thing with Microsoft and this case. All these features they Microsoft is accused of adding where things that customers asked them to make part of the operating platform for better integration and for a more streamlined and pleasurable customer experience. It is nothing different than what Ford does every day when it makes a design decision for one of its new cars.

Subject: Microsoft Antitrust Settlement
Opinion

I am 27yrs old, have a Master of Science degree in computer science, and have been working professionally in the computer industry for 5 years. I have experience developing on the Windows, Solaris, IRIX, and Linux operating systems. I have also been closely following the Microsoft Anti-Trust case, and wanted to take this opportunity to add my opinion. I am very disappointed with the settlement reached between DOJ and Microsoft. I applaud the nine states who have the strength of character to keep fighting for what is right. It has twice been determined that Microsoft has abused

its monopoly, and yet the DOJ has rolled over and basically given Microsoft a sweetheart (slap-on-the-wrist) deal. I don't, in any way, think the settlement offers fair punishment, or sufficient protection from future behavior.

Microsoft is so blatantly confident in its ability to dominate without interference, that in the midst of this trial it openly pushes ahead with its .NET/HAILSTORM plans. Microsoft has (finally) realized that the internet is the key to control in the future (whereas the OS was in the past) and is making every move possible to dominate that space in the same way.

Microsoft claims it needs freedom to innovate when in fact Microsoft has innovated very little over the years. Most technological breakthroughs commonly attributed to Microsoft were either stolen, copied, or bought. If anything I would argue that Microsoft has sufficiently stifled innovation to put the software industry a decade behind. They are a two-faced company that presents a good (Disney-esque) image to the public, while a minimal amount of scrutiny provides a wealth of information to the contrary.

Microsoft's weakness is being exploited today by the open source movement, specifically the gnu/linux project and the GPL. Here is a model they cannot steal, copy, or buy. It disgusts me, but is not surprising, that in the face of some real competition they don't innovate their way to a better product and compete on merit, but instead look for every possible emotional (FUD), legal solution to the problem. The current settlement provides no real punishment to Microsoft. Further indoctrinating a future generation of computer users is not a punishment in any sense of the word. There is specific language in the settlement which excludes the open source movement from any of the information sharing Microsoft might be forced into. If anything the settlement should spur competition, which as mentioned above means the open-source movement. I also believe the three-person supervisory panel will end up being a facade with no real power. (The selection process requiring Microsoft's approval pretty much guarantees this.) Others have commented at great length as to the loopholes and weaknesses of the settlement and I won't try to duplicate that here.

To summarize, I and the software industry have been harmed by Microsoft's abuse of its monopoly and I do not feel the current settlement does anything to address their past abuses, or insure future protection from such abuses. I am gravely disappointed in the US Department Of Justice for its incomprehensible capitulation to my generation's biggest bully.

Sincerely,
Travis Minke

Dear Sirs,

Given the preponderance of monopoly abuse evidence against the defendant (as

documented in the Findings of Fact), how does the proposed settlement send a message that this behavior will not be tolerated by the United States? In fact, it rewards it! Please make the punishment fit the crime, which should be measured in the billions of dollars for punitive damages. How about using the award to fund a software technology incubator to rebuild the competition that Microsoft has so effectively repressed?

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft: I have been following the Microsoft antitrust settlement since it entered the federal courts three years ago. I do not believe suit should have been brought against Microsoft to begin with, and perhaps the settlement is too harsh with Microsoft, but in the interest of wrapping up the case, I believe the settlement should stand and the Justice Department should move on. I cannot fathom why half of the plaintiff states in this case wish to continue litigation against the Microsoft Corporation unless their ultimate goal is to bring about the destruction of Microsoft itself. There is nothing I see in the settlement that is unfair to the plaintiffs. Microsoft has, in fact, agreed to terms in the settlement that cover issues not on trial in the antitrust suit, solely in the interest of closing the case. Among other things, Microsoft has agreed to provide a party acting under the terms of the agreement with a license to pertinent intellectual property rights to prevent infringement. Moreover, Microsoft has agreed to license the Windows operating system to twenty of the largest computer makers on identical terms and conditions, including price. Mr. Ashcroft, I urge you not to allow this to go on any longer. No more action needs to be taken at the federal level. The settlement should stand.

Sincerely,
William Bogart

To: Microsoft ATR
Date: 1/18/02 8:46pm
Subject: Microsoft settlement

I intend to read the available information regarding the case and follow up this email when I can get some time. However, being a

Macintosh fan I'd like to express my opinion based on my experience over the past decade or so as a Systems Administrator. First, Microsoft doesn't innovate—they copy existing technologies and then put them in Windows. They modify Windows occasionally so competitors software won't work as well or not at all. (Ex. Apple's QuickTime, Sun's Java) In short, they don't compete. They just find a way when possible to crush their competitors. Normally with their mediocre version of the product. Their latest proposal to satisfy this case (donating systems, software, etc. to schools) is just one example among countless other that shows their arrogance and unethical way of doing business. This was so obvious I think a 4 year could see right through it.

I firmly believe that the computer industry as a whole would have advanced much more quickly without Microsoft's illegal practices. I also believe they will continue to do business this way unless this settlement forces them not to. I believe the settlement needs to make so that Microsoft only gains when they develop a better product than the competition. We all lose when the only game in town is Microsoft. I don't think the government should use Windows at all. I believe for all of the obvious reasons the government should use Linux almost exclusively. If they need to run Windows applications they can use a Windows emulator that runs on Linux. Let's face it, Linux is cheaper, faster, more secure, more customizable, comes with more applications, works and looks like Windows and wouldn't force the government to be tied in any way to Microsoft.

I realize none of this is news to anyone familiar with the case but, I just feel better knowing I did something about something that is so obviously wrong. If anyone actually gets to read this, thanks. Here's hoping for a level playing ground,

Rick Borie

P.S. I'm sending this on Mac Cube with OS X and no Microsoft software was used.

Subject: Microsoft Settlement

To whom it may concern,

I was thrilled to see the Microsoft proposal rejected. Kudos. As for having anything monumental to suggest for the penalty, I am afraid I haven't any groundbreaking thoughts. However, I think it is vitally important to remember exactly who the monopolistic and egocentric tactics of Microsoft really hurt. These being the many businesses that were diminished, or extinguished as a result, and the public themselves who lost any opportunity to support and/or nurture any competitors that would have otherwise had a viable vehicle to present their products. Microsoft was responsible for all of this, and more.

The most disturbing thing to, up to this very day, is how Microsoft feels they are above the law; above the rights of the people. . . In general, how they see themselves as having done nothing wrong.

If I were to have the "blood on my hands", if you will, that Microsoft (who knows better than anyone else that it does) has, I would be very afraid. I strongly believe that they should have to pay dearly to the real victims of their actions. As to what that "price" will be, I can only hope that the DOJ and the courts will dispense no less than what they have coming to them, and trust it will be so.

Warmest regards,
Robert Pettigrew

To Whom it may concern, I think the settlement worked out between Microsoft and the DOJ is unacceptable, especially in the area of education. By Microsoft giving their own products to schools, they are going to create a monopoly in about the only area they don't already have one. A better solution would be to distribute funds to the poor schools and let them decide what to buy with it. That way if Microsoft does become a monopoly in education, it will be legitimate. Thank you for your time.

Philip Katz

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft:

I am without a doubt in favor of Microsoft. In fact, this has been the case since the very beginning and no element of the litigation against them has caused me to feel otherwise. If anything, this legal action against them has only strengthened my respect for this highly progressive company. Microsoft has given a true example of professionalism, diplomacy and fortitude. The government on the other hand has given the people reason for confusion and doubt. Confusion because of the distortion of the concept of free enterprise and doubt in the government's ability to reach expeditious and fair resolutions of complex matters.

Microsoft has chosen to accept restrictions and obligations that extend to products and technologies that were not at issue in the lawsuit. They have also agreed to broad terms involving aspects of Microsoft's business and product development that were not found to be unlawful by the Court of Appeals. I think this is a clear indication of that Microsoft is willing to compromise with the government.

This lawsuit has caused severe damage to the economy and has drastically reduced production in the software industry. Putting an end to this protracted legal tussle by accepting the settlement will have a multitude of benefits. I hope that my views and those of others will help bring this matter long awaited closure.

Sincerely,

Robert W Cross

MTC-00013943

From: Harry Reisenleiter
To: Microsoft ATR
Date: 1/18/02 9:16pm
Subject: Microsoft Settlement

Sir or Madam: After following the court case, appeal, and settlement process, I find it necessary to offer the following thoughts.

First, some background. Before entering the computer field fulltime, I spend 4 years earning my undergraduate degree and 4 years in the United States Air Force. I studied computers in college and in my time in the USAF.

I've been in the computer business since 1969, working through mainframes, midrange computers, desktops, laptops, palm tops, and hybrids. I've been fortunate to deal with innovative companies and with ethical companies. I've also had the misfortune of dealing with copy-cat companies and unethical companies. I've been on very successful projects providing customer-lead solutions in retail, wholesale, education, finance, manufacturing and now management services.

Many of my experiences with vendors have been pleasant, and many by necessity, have been with Microsoft.

I believe that the settlement under review at this time is grossly inadequate to address the unethical, monopolistic practices of Microsoft. Microsoft's business practices (unethical pricing, contract manipulation, illegal bundling, hidden code) have driven many creative companies out of business. Do to their actions, there are no longer any real competitors in any software field Microsoft has chosen to enter.

Microsoft gained dominance by controlling the operating system and by bundling (and "dumping") software. Current pricing reflects the lack of competition. One example: When Word Perfect was a real competitor, Microsoft priced MS Word at \$99. Now, MS Word is more than twice that price. Similarly, when Lotus 1-2-3 was a real competitor (and, remember, ther was also QuatroPro), Microsoft "dumped" Excel, too. Then, after purchasing what became PowerPoint, Microsoft began bundling those three pieces of software for a price hardly higher than Word Perfect (or Lotus 1-2-3) alone.

Microsoft has distorted (lied) about "innovation", "great software", "customer focus", and "competition" throughout the trial and appeals process.

Let's take "innovation". Except for Windows OS and Excel (which was originally written for Macintosh), Microsoft has not created any new software. They've purchased Word, PowerPoint, Internet Explorer, FrontPage and Outlook. They've only innovated in pricing and bundling; not real technological innovation.

Let's take "great software". Compare Palm's Desktop to Microsoft Outlook, specifically recurring meetings. In Palm, if you cancel an existing recurring meeting, the software presents 3 choices—"this one", "all future", and "all". Thus, meetings in the past will reflect history accurately. In Outlook, you are only given 2 choices—"all" or "this one". Past recurring meetings, then, are lost. This is not "great", but very poor design. Another Microsoft distortion.

In closing, I have but one request: please don't let this agreement stand. It is far too soft and will not change a thing as it currently is written. Microsoft has earned, and continues to earn, punishment. And that punishment needs to be behavior altering, not a mere shaking of the finger.

Thank you,
Harry Reisenleiter

From: Alex Brubaker
To: Microsoft ATR
Date: 1/18/02 9:28pm
Subject: [Fwd: microsoftsettlement]

To who it may concern,

It is beyond doubt that Microsoft has been judged to have systematically employed monopolistic and unfair business practices. By playing our legal system like a virtuoso, it has avoided any real harm to its core businesses and in fact has proven that it is better to break the law and pay what ever small price in order to gain momentum and market share. Microsoft is unchallenged and there is no end in sight.

Any person that works in high tech sees the on-going effects of the monopoly that continues unabated. Technology important to US technological leadership is diluted and resisted because it doesn't fit into Bill Gate's vision of Microsoft's corporate hegemony.

Now Microsoft is going to be "giving" Windows XP to 12,000 of the nations's poorest schools. What a great ploy. Now these 12,000 schools will depend on Microsoft upgrades as well as train hundreds of thousands of future Microsoft consumers. Let's face it. Microsoft has won and owns us the future of computing for the foreseeable future. Please, someone have the decency to stand up and add an asterisk to this sad chapter in American corporate history. A better punishment would be to forbid Microsoft from giving XP to schools and let Apple use this marketing technique if it so chooses. That's how idiotic this "compromise" is.

Subject: Microsoft Settlement

I am very disappointed with the Department of Justice's proposed settlement with the Microsoft Corporation, which amounts to another consent decree. Unfortunately, Microsoft has already demonstrated beyond any reasonable doubt that it has no respect for consent decrees; its egregious violations of the 1995 consent decree are what brought about the current case.

Those familiar with the computer industry are well aware that Microsoft's success has less to do with superior products (most experts agree its products are of generally mediocre quality at best), and more to do with its ability to leverage its monopoly in the operating system market, in which Windows has become the de facto standard. Its recent pricing changes with respect to Office and Windows business sales—nearly doubling the price of the licenses and now literally forcing business to buy its upgrades, even when they don't want them—demonstrate blatant abuse of its monopoly power, in the face of an ongoing anti-trust case no less! Any other business would lose enormous amounts of sales if it doubled the price of its product without substantially improving the quality, but Microsoft's market power is so extensive that it can do so with near impunity.

The demonstrated ineffectiveness of consent decrees with respect to Microsoft, and the company's continuing abuse of its monopoly power, call for strong and effective remedies. Regulatory remedies in which the government directly supervises and dictates Microsoft's behavior are undesirable for obvious reasons. Instead, the Department of Justice should push for significant structural remedies, such as the breakup originally proposed by Judge Jackson. Only then will consumers benefit and will competition and innovation, the hallmarks of our great economic system, continue to flourish.

Sincerely,
Michael Anderson

From: Chris Klick
To: Microsoft ATR
Date: 1/18/02 10:43pm
Subject: Microsoft Settlement

Dear DOJ:

Despite the fact that the appeals court found Microsoft to have abused monopoly powers, I urge you to settle this case by dropping it, apologizing to Microsoft, and paying their lawyers' fees. Then you should close your antitrust division and wrap up paperback copies of "Atlas Shrugged" to serve as the severance package for your laid-off lawyers.

You should drop the case because antitrust law is immoral. It infringes upon businesses' inviolate property rights. Worse, it targets the most successful businesses because and to the extent that they are successful. Therefore it is ragingly anti-capitalist, like the progressive income tax. Secondly, from a legal standpoint, antitrust law is ex post facto and therefore unconstitutional. There is no way for a business to know that it is violating

the Sherman Act until a court, years later, defines its "market" at the time of the alleged violation. Even if Microsoft itself (as evidenced by their emails) intended to dominate a recognized "market" at the time, this means objectively nothing. It was only Microsoft's opinion at the time.

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft:

Microsoft and the Department of Justice recently settled their three year long court battle. I understand there is now a period of public comment, and I wish to add my support to this agreement. I do not think it should have happened in the first place. The lawsuit was more a problem of sour grapes on the part of the competition than any real unfair business dealings. The antitrust laws were created to protect the consumer, yet Microsoft has done nothing but help the consumer. Computer products are far cheaper than they were ten or fifteen years ago; software programs are simpler and easier to understand, and much more affordable to the average consumer. Bill Gates has made software technology part of everyday life.

The agreement reached by Microsoft and the Department of Justice did not let Microsoft off easy.

Microsoft has agreed to open up the company in such a way that computer makers will be able to configure Windows so as to promote non-Microsoft software programs; companies will be able to achieve a greater degree of reliability with regard to their networking software. And Microsoft has agreed to a technical committee, which will monitor the firm. I doubt other firms would do as much. It is time to go forward again. We have been through a rough time; but we are bouncing back. Letting Microsoft get back to business is a way to do this. Please give your support to this agreement.

Sincerely,
Charles H Kohler

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft:

Thank you for the opportunity for public comment on the Justice Department's settlement agreement with Microsoft. Please make mine a "yes" vote for the settlement.

Microsoft has agreed to terms in the settlement that go beyond the charges in the lawsuit in an effort to settle the case and move on. Microsoft has answered the complaint that I have heard over and over

again about the inability of Windows users to operate non-Microsoft programs within the Windows system.

The terms in the agreement are fair to all parties represented in the lawsuit. I would like to see this case finally settled and satisfied.

Thank you for your consideration.

Sincerely,

Jimmie Lindersmith

Subject: Microsoft Agreement

I just want to say that I have owned every copy of MS Windows since Windows 286. I refuse to go farther. Each release includes more bloated garbage that is just enough to put legitmate software vendors out. How does one compete with free? The free software agreement is like Wal-Mart giving its employees a discount. They work for x dollars then give it back to the company for goods that were purchased wholesale. Through this arrangement, Wal-Mart gets a 90% mark up, keeps its money in house and pays a reduced price for labor. The same goes for Microsoft, they get to spread their wares, thus taking away potential sales from other companies, get free advertisement through the youth of the contry, and pay with intellectual property that has no tangible value. What a bargain for Microsoft. Hit them where it hurts. Give people a smaller Windows and take the cash from Bill and Company. Better yet, have them pay in precious metals. I have decided to hurt them where it counts by exercising my consumer choice. I have begun selling all of my PC's and just purchased a new Macintosh with no MS software installed. In addition, I feel that they have encroached in everyday life too much. The Passport program is a fine example. Why would I want to give someone like a large corporation all of my financial data for "safe keeping?" XP and the ".NET" strategy is another joke. When did software become a corporate lease. In the good old days one purchased a software product and it was his free and clear. Has Washington lost its mind? Why don't they start issuing titles and get the bureaucrats involved? We the people can start paying a yearly tax to hold a valid computer software use license as well. Where will it stop if you don't get

involved and shut Microsoft's practices down? I urge you to come up with a more neutral and agreeable settlement that has American business competition in the best interest.

Thank you,
Lane Spence

Microsoft settlement question

I briefed the settlement information as presented and felt the duration of five years was insufficient. Their misdeeds have been going on far longer than that. I may have missed it, but I did not see a penalty for their illegal business activities. There should be a substantial penalty. I am saying this as a stock holder in Microsoft! But I would like to see the company remain honest and responsible in the years to come.

From: Steve Seaquist

To: Microsoft ATR

Date: 1/19/02 1:00am

Subject: Nothing short of splitting the company will suffice

Only if Microsoft is split at least 6 ways will other companies be able to compete against this evil, corrupt behemoth (*):

- (1) operating systems (Windows)
- (2) applications software (Office, MS Works, Publisher, etc)

(3) hardware (X-Box, UltimateTV, Microsoft Mouse, etc)

(4) development tools (Visual Basic, C++, SourceSafe, etc)

(5) Internet products (MSN Messenger, Internet Explorer, BizTalk, etc)

(6) Internet services (MSN, WebTV, Hotmail, etc)

* Gates and Ballmer must sell their interests in all but one of these. Each of the companies must be prohibited from moving into the other 5 companies' lines of business for at least 8 years.

Only then would the resulting companies' products stand or fall on their own merits, rather than be exalted to de facto standard status by the sheer weight of their company's position in the marketplace.

AND ONLY IF OTHER COMPANIES CAN COMPETE WITH THEM WILL THEIR EVIL BUSINESS PRACTICES STOP.

Because it lacks the element of returning the marketplace to competition, the current settlement proposal is no more likely to work than the appeasement of Hitler did before World War II.

Subject: Microsoft Settlement

Sir/Madam,

Re: Microsoft Settlement

I have read the provisions of the proposed settlement as described at http://www.usdoj.gov/atr/public/press_releases/2001/9463.htm this afternoon. I feel while it is preferable to keep the company in one piece, it does not necessarily go far enough to encourage any major competition.

The licensing provisions Microsoft have employed as described at <http://www.cio.com/archive/011502/meter.html> by CIO Magazine, appear to force customer loyalty by employing a type of subscription model not previously employed in most Windows software—last time I saw this model was on a telnet client a New Zealand government department bought for its mainframe.

While its supposedly oppressive terms could actually be said to encourage purchases of competitors' products, it still could potentially be a case of Microsoft Corporation attempting to use its hold on current users to force more money out of them [corporate users]. Its monopoly position in this case is a bit different. There are competitors in the "office suite productivity software" market to Microsoft Office, but StarOffice (and OpenOffice) and KOffice—with the latter available for Microsoft's Windows grouping of operating systems—do not really have the profile due to Microsoft's Office offering being the de facto standard. Which makes education institutions, companies, non-profits as well as private individual people end up feeling compelled to take it.

This is fine, to a point. Being a de facto standard due to its market share can be okay—if it is not priced crazily like CIO Magazine in the above-referenced article on licence schemes for Office describes. In

analogies, it is like buying a manual gear car versus an automatic gear car. As in, it would probably be fair to say most people buy a manual because it is the standard and virtually everybody (give or take) is trained to drive one. But, it doesn't force everybody to buy a manual— not too much more expensive are equivalent automatic models. (Maybe people buy automatics for convenience and or ease, but that is out of the scope of this submission.)

Credit where credit is due, though. Microsoft's New Zealand operation has issued a version of Microsoft Office, called "Microsoft Office XP Standard for Students and Teachers", selling for about NZD280 to NZD300, inclusive of 12.5% NZ Goods and Services Tax. It requires no student ID or letter proving employment before buying it, so would require a user's honesty before it is bought. (NB: For this package, Microsoft has defined student and teacher as either a student or teacher of any education institution, including primary, intermediate, middle and high schools, as well as tertiary institutions such as universities, polytechnics and what NZ calls "private training establishments". It includes staff.) I would say that is still a high price for essentially a high price for private individual people to buy, however.

Details: <http://www.microsoft.com/nz/office/xp/forstudents/> (That also raises another issue, possibly out of the scope of this submission—piracy. Microsoft needs to adjust its curve of piracy versus pricing. Once it does so, there is a chance it can raise revenues. But as said, there is another story there.)

Lastly, I have a note regarding a scheme tying New Zealand schools to Microsoft software. Software is a slightly fickle business, so I can see some justification in having this scheme, but because of its centralised procurement nature, it does not tend to give competitors a look-in.

Details: http://www.microsoft.com/nz/presscentre/articles/2001/september-18_schools.asp I trust that this is of some use to you.

Regards,
Jonathan Ah Kit.

My name is Mary Glenn and I am a concerned citizen regarding Microsoft and the Proposed Final Judgement. I stand in opposition to allow Microsoft to continue as a monopoly. In this country we must protect the freedom and rights of business to grow and not be monopolized by one company or organization. We promote the rights of the big and small in this country. and monopolies virtually eliminate competition and the ability for us as citizens to choose.

I encourage and urge you to reconsider this Proposed Final Judgement and rather judge in a way that promotes freedom for all organizations not just the one with the most power and money. thank you for your consideration.

Subject: Microsoft Settlement

Please consider this REUTERS NEWS Release. SEATTLE, Jan 17 (Reuters)—Microsoft Corp. (MSFT) on Thursday posted a smaller quarterly net profit — the result of a \$660 million legal charge...

The subtle message is that no matter what additional judgment might occur the lawyers of this country will be the big winners and certainly not consumers. That goes for lawyers employed on both sides of this fight. Consumers could probably have benefited more by having Microsoft focus more on its work of creating software and from the cost savings that might have been, at least in some small measure, passed on to consumers. Stockholders would have benefited and that means that a million households would probably have a bit more in this weak economy. And any number of children will receive somewhat less from the Gates Foundation in years to come. You can be cynical and scoff at my premise but you are probably ignoring facts that are easy to prove. Consumers by and large don't feel put upon by Microsoft or they would not have bought 15 million copies of Windows XP and 1.5 million units of Xbox. Consumers are happy with Microsoft just as it is or was while some Microsoft competitors feel that their chances to gain market share are better with government punishment of Microsoft than the chances their products and services offer.

Move on to more important work with more egregious offenders.

Respectfully,
R. Petrone, P.E.

The settlement agreement is just plain wrong. It is far too weak, and achieves nothing for the American people. It is, in fact, an embarrassing capitulation to corporate power.

The Justice Department tried this once before, to no avail whatsoever. How many times must we watch Microsoft expand its monopoly powers into new markets before something is truly done to put a stop to it. I can see that this administration has no interest in pursuing a breakup of Microsoft. That's too bad. Standard Oil's monopoly prior to its breakup was nothing close to the kind of damage and power abuses Microsoft has wielded. The same can be said for old Ma Bell, when it was broken up. Both of those were good things. Okay, you will not seriously consider doing what should be done: breaking up the big monopolistic 8000 pound gorilla So be it. That doesn't end the matter, though.

There is nothing about Microsoft which excuses what it has done and continues to do the technology sector. Have you noticed the price of the new XP system. Do you remember when Operating Systems upgrades cost \$20 or \$30 dollars. Now, Windows upgrades cost \$200 or \$300, and that has nothing to do with inflation— it is the direct result of monopoly power. If Microsoft is this bold with squeezing every dollar it can even though its case is not settled, what do you think it will do after it settles this case. When all its competitors are completely erased (e.g. Apple, Linux) and there are no viable consumer options, what do you think Microsoft will do to increase earnings in a flat sales market. it will continue to squeeze OEMs, software licensees, consumers, all of us. Its not too late to put a stop to it, but it must be done now, before we have no choice whatsoever.

332 U.S. 392, 401 (1947); United States v. Microsoft Corp., 253 F.3d 34, 103, 107 (DC Cir. 2001). Restoring competition is the "key to the whole question of an antitrust remedy," du Pont, 366 U.S. at 326.

Competition was injured in this case principally because Microsoft's illegal conduct maintained the applications barrier to entr... What, may I ask, does ordering Microsoft to equip schools with second hand or discounted software and hardware systems do to increase competition? I submit that this only strengthens the monopoly position of Microsoft at the expense of open competition from other suppliers. It is a slap in the face of every hard working employee at a competing company to watch Microsoft deduct from their income taxes the value of the software/hardware the U.S. government essentially directed Microsoft to donate into a market (schools) where they presently do not demonstrate a monopoly.

These are not "anti trust remedies" as referenced in the extract of the Department of Justice's own website.

It cannot be denied that Microsoft was found guilty. From the actions of the Department of Justice, it would almost seem as though the DOJ is apologizing to Microsoft for the slap it on the wrist it has proposed. As an abusive power, Microsoft is as important today as the DuPonts or railroads were of yesterday. The leader of our information society is a monopolist, and a dangerous one at that.

Do not coddle a tyrant.

When are you guys going to grow some backbone and put Microsoft in its place?????

They're making a mockery out of the justice system. We all know they broke the law re monopolistic practices, and they're now reaping the benefits of Windows' dominance in just about every field of computer tech. The latest proposed settlement was an absolute joke. Not only was it paltry (given that the company's illegal practices have made it richer than Midas) but they have the gaul to propose giving away a bunch of hardware/software to schools, so they look like heroes, and further undermine the position of a rare competitor (Apple).

If anything **close** to this settlement is ever accepted by the government, **you will all be laughing stalks in the eyes of history**.

You'll make Neville Chamberlain look like a tough guy. If you had any guts, you'd realize that Microsoft needs to be BROKEN UP or SERIOUSLY CURTAILED in its current businesses, to make up for all that it gained by breaking the rules years ago. They are now absolutely dominant in operating systems, application software, enterprise/networking (what ever happened to Novell?). They're threatening to dominate handheld operating systems (seriously threatening Palm, due to synergies with Windows), consumer online services (threatening AOL, due to synergies with their OS and apps), and video games (seriously challenging Sony and Nintendo, and benefiting from their brand name, and the fact a lot of Windows technology has been leveraged into the Xbox). Most of what they do these days leverages off of technologies and business dominance they already have, and so they'll keep getting bigger and crushing more companies.

Please do something. Make the country believe that you're not just some mild-mannered caretaker, trying not to rock the

boat. What good are you if you can't perform when push comes to shove??

U.S. Department of Justice-Antitrust Division
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Microsoft Settlement: The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Kirk D. Smith

Subject: Microsoft Settlement

Dear Sirs and Madams, While the proposed settlement of UNITED STATES OF AMERICA, Plaintiff, v. MICROSOFT CORPORATION, Defendant, Civil Action No. 98-1232 goes a ways towards offering relief for OEMs, I believe the public and OEMS will still be in endangered unless two critical areas are addressed and awarded justice and relief. They are

1. The deep entrenchment of Microsoft operating systems in the Federal Government. and
2. Microsoft, The Public Internet, and Microsoft's .NET Initiative.

Item 1: While the government has been slow to recognize and act regarding the abuse in connection with the monopoly of Microsoft in the crucial area of operating systems, with the advancement of this suit and the absolute documentation of Microsoft abuse of it's monopoly position progress can now be made.

For the Federal Government to recognize and acknowledge the long standing harm done to the public, said OEMs and competitors by the abuse of monopoly power by the Microsoft Corp. on the one hand, and on the other to openly and actively promote the Microsoft operating systems in its daily operation is a hypocritical and a huge miscarriage of justice.

Recommended solution: Set an example for the public and remove the offending Microsoft products from the Federal purchasing system or encourage the use of alternatives by enforcing the requirement of a serious justification for the purchase of new Microsoft products and continued use of legacy Microsoft products with an aim to the eventual removal of Microsoft operating systems from the Federal Government. Or simply ban the use of Microsoft products by the Federal Gov't.

At an anecdotal level, I am Federal employee of the Smithsonian Institution (henceforth referred to as S.I.) operating a web site on their behalf. I have viewed with alarm the increasing enforced reliance upon and blind insistence on the use and preference of Microsoft Operating systems for the operation of the Smithsonian's large and varied web presence. Documents available from the S.I. Webmasters office advise all of the many other S.I. webmasters to switch to Windows 2000 and the Microsoft Internet Information Server web server software (henceforth referred to as IIS). This despite daily documentation by the expert public at large that IIS is the least secure method of operating a web site, as well as the most expensive system when support costs are accounted for. This is a blatant tactic on the S.I.'s part to pander to and court a huge potential donor, Microsoft, as well as a shameful waste of public moneys. The appearance and encouragement of Gov't collusion with a known abusive and criminal monopolist is offensive, unjust, and unwise.

Item 2: Microsoft's pattern of behavior in its destruction of WordPerfect, and Netscape, its elimination of Apple's ubiquitous QuickTime video from serious competition is again evident in its proposed .NET initiative, with the eventual removal of freedoms and choice from the Internet -using public as its aim. Clearly Microsoft has shown no remorse for its actions. The concepts behind the .Net initiative must be studied and finally outlawed if the public is to avoid paying an "Internet tax" to the Microsoft Corp. in the future.

Sincerely,
John Dwight

Subject: Microsoft Settlement

After reviewing what I know about the settlement Microsoft offered and the judge's comments on it, I do believe that while Microsoft had the right idea, it just went about it the wrong way. Since the proposed breakup of the company probably won't

happen, this might be the best answer. However, ANY solution must cripple Microsoft's ability to dominate the computer industry and place restraints on its ability to wield what influence it has.

I do agree that the public school-oriented part Microsoft's settlement was underfunded and that the potential for mismanagement would be great. This is why the amount should be increased and the management should be taken over by a third party. The most interesting part of the public school-oriented section is the donation of several PC's (with Windows software, of course) to the schools. While alternatives, such as Apple computers, were offered, the support and software were lacking, to say the least. This would actually increase Microsoft's domination of the computer market and allow them a huge chunk of the prized education market that Apple Computers still dominates.

My solution to this is that while Microsoft continues with the "donation" to the education field, the amount should be increased and the management turned over to a third party. The other part of the solution is that the fund will be used to buy Apple computer equipment and software. This should include iMacs & PowerMac desktop computers, iBook and Powerbook notebooks and Apple's AirPort wireless network system.

Since the education market uses Apple computers heavily, this will be no great conversion to them. And since the Macintosh operating system supports using Windows disks, files, and networks, it can be intergrated with schools already using some Windows machines and student with Windows computers at home can still take homework files home and use them. The only allowance for Microsoft will be to offer the Macintosh version of Microsoft Office, which will make it easier for students to take files home to use. Otherwise, there is an incredible amount of education software for the Macintosh system, so there should be no lack of software offered through the settlement. Tech support can be handled by Apple's already well-established education division. Oh, yes, and the prices for this hardware and software should be calculated at the education sales price, not the retail sales price.

Thank you for the opportunity to voice my opinion.

Sincerely,
Roger Morse

Subject: Microsoft Settlement

Dear Madam or Sir: From a consumer point of view. Microsoft has provided both positive and not so positive influence in the software industry. Microsoft has made software easy to use for non-technical people and eliminated chaos of uncontrolled software anarchy. On the not so positive side, from the

consumer point of view, the pricing of Microsoft product is not as low as what I would like and it is generally accepted that Microsoft product, between ease of use and technical advancement, is more towards the ease of use side.

What I would like for the whole software industry is:

1. Do not force the consumer to pay a regular annual fee, either through "subscription" pricing modeling, or through "engineered obsolescence".

2. Allow consumer to control the behavior of software on their machines.

3. Licensed software should respect the Rights of Privacy, same as an employee should respect an employer's Rights of Privacy.

Subject: United States v. Microsoft

As a citizen, I would like to make my comments about this case. I have been in the computer field for over 7 years.

First, the largest portion of the "penalty" is in licensing costs. How much is Microsoft really losing by "donating" these licenses? It's already been stated that these are underprivileged schools which probably couldn't afford to buy computers and software on their own. Microsoft is simply getting increased market penetration with minimal loss of revenue. I think I read that support contracts for these schools would be negotiated and given a discounted rate, (i.e. not free). Anything they would lose in licensing they're going to make up in new support contracts.

Secondly, it's a well established marketing strategy to give software to schools so the students learn the applications, then take that into the marketplace when they look for a job. For example, Adobe has used this for a great advantage. Ignoring the fact that PhotoShop and Illustrator are supremely awesome applications, they give the software away to universities so the majority of graduates know these packages. This encourages companies recruiting graphic artists to use these applications because there's no learning curve for new hires. The CEO or RedHat made a public offer to donate the Operating Systems (OS) for these machines *with support* and Microsoft could donate just the hardware. This would mean more schools would get computers and Microsoft would not be furthering their own interests. Please consider this CEO's offer and put another OS on these systems (ie. not Microsoft)!

Finally, the debate on whether or not they have a monopoly is closed, the courts already ruled that they do! Not only do they have the monopoly, but they've abused it and that's why we are discussing their punishment. I hope you will consider a stronger punishment for Microsoft!!

Do not allow them to "donate" PCs and software, at a minimum.

Break Microsoft up. . . it will only make them better.

Case in point: Breakup of AT&T required them to divest themselves of the Unix operating system. Unix has become the unsung hero of Internet server reliability. AT&T long distance phone service is increasingly losing ground to Internet services at a benefit to all of the USA. Break up Microsoft into three units: Productivity software (Office et al), Operating systems, and certification/education; and, force them to create new divisions for "other" categories or divest themselves of "other" categories. The next winners for investors, citizens, and business will come from the "other" categories.

I would be glad to give you my opinion of the proposed settlement with Microsoft.

It is, by definition insane. Someone has said that repeatedly doing the same thing over and over and expecting a different result is insanity. Let us not forget that Microsoft is in court for violating their last consent decree. Do you really expect them to abide by this one. The only reason they have agreed to this decree is that it is vague and flexible enough to allow them to do what they want while the lawyers argue about the details until reversing their actions would be harmful to the country.

If you think that the public (at least the computer literate ones) don't see this for exactly what it is, you are more arrogant or more uninformed than I thought.

This is in support of Microsoft's proposed settlement of their long-term antitrust case. I heard my Attorney General Blumenthal (Connecticut) speak yesterday on this issue

and it appears that he does not wish to compromise and settle this. I believe it is time to settle; for the good of the country, Microsoft and its competitors, and for senior citizens such as myself (72) who are minor shareholders of not only Microsoft, but also Oracle, Sun, and other tech stocks that have tumbled drastically in price. The courts have had to make the compromises so far in this case and have reduced the adversaries to a few states who, under the guise of high principle, seem to refuse to give an inch for what I think are very selfish interests. It's high time to stop this now, with the limitations already in place to curtail Microsoft's questionable actions while still keeping open the legal marketing initiatives that Microsoft and its competitors may want to use. I believe that Microsoft, since its inception has consistently provided the consumer with the best value, best innovation, and best productivity compared with the competition. This holds true not only for the American economy but also the world economy.

Historical facts prove this point. When Microsoft created their first operating system PC DOS/IBM DOS and brought it to market in 1981, the cost was about \$60; the two competitors Digital Research (CPM) and USC-P cost to consumers was about \$120 and \$400, respectively. There was some question about their ability to be "Fast-to-market" also.

The word processing application available for the IBM PC was WordStar. Shortly after, Microsoft came out with MS-Word 1.0; they included a copy free in a PC Magazine issue for trial. This impressed me as a consumer as innovative marketing. Besides the early product from a user standpoint was far superior to any existing competitive product from ease of use to improved productivity. This superior innovation from Microsoft and its partners in a highly competitive environment has continued over the last 20 years.

I believe Microsoft has not behaved in an anti-competitive way; but, rather in a highly competitive, innovative way to provide consumers and businesses a highly reliable and productive way to operate second to none.

They and partners (Intel, IBM, HP, Compaq, others) seized a new and "disruptive technology", "The Christianson Effect" (Harvard), and continuously improved there products and services over time resulting in creating an industry, or at least

a major segment. Those partners and competitors who couldn't keep up with the velocity of providing the marketplace with superior innovation and productivity lost their positions at least in the short-run. The name of the game is sustained, high velocity innovation and productivity, and Microsoft, Intel, and many others have delivered over the last 20+ years. This force has been a major component in growing our economy over the last 20+ years.

Regarding, the case of the 9 States settlement with Microsoft, I believe this is fair and needs to be settled. This entire fiasco over the last several years has cost the taxpayers far too much. It's time to settle and put those who think litigation is the American way in their place. Litigation only helps the lawyers and parasites who want to get a free ride. Prolonged litigation doesn't help the American economy or taxpayer.

It's time to resolve and put this to an end.

Subject: A FINFLASH FROM THE FREEDOM TO INNOVATE NETWORK A FINFlash Update: Settlement News—Public can Comment in Antitrust Matter; Class-Actions Suit Returns to Litigation

Deadline Nears for Public Comment on Antitrust Settlement

The Tunney Act review period, during which the Department of Justice seeks public comment on its proposed antitrust settlement with 9 states and Microsoft, closes Monday, January 28. The settlement is not guaranteed until after the review ends and the District Court determines whether the settlement is indeed in the public interest.

The provisions of the agreement are tough, reasonable, fair to all parties involved, and go beyond the findings of Court of Appeals ruling. Still, while consumers overwhelmingly agree that settlement is good for them and the American economy, and overwhelmingly want to move beyond this litigation, nine states have refused to join the settlement. Some, including Utah Attorney General Mark Shurtleff and Massachusetts

Attorney General Tom Reilly, are urging citizens via email or Web site to submit their comments to the DoJ during the Tunney review period.

While Microsoft commends these public officials for involving citizens in a decision that will affect them so profoundly, your voice is more important now than ever before to ensure that the DoJ hears the full spectrum of opinion on this matter. Concerned citizens already have begun submitting their comments about whether the Microsoft case should be settled or further litigated.

The Department of Justice will take all public comments and viewpoints and include them in a report for the District Court to consider. Please send your comments directly to the Department of Justice via email or fax no later than January 28th.

Whatever your view of the settlement, it is critical that the government hears directly from consumers.

Please take action today to ensure your voice is heard.

Email: mailto:microsoft.atr@usdoj.gov. In the Subject line of the e-mail, type Microsoft Settlement.

Fax: 1-202-307-1454 or 1-202-616-9937

To find out more about the settlement and the Tunney Act review period, go to the Department of Justice Website at: <http://www.usdoj.gov/atr/cases/ms-settle.htm>.

Thanks for taking the time to make a difference.

Class-action Lawsuit Returns to Litigation
Friday, January 11, U.S. District Judge J. Fredrick Motz rejected a settlement that would have resolved more than 100 private class-action lawsuits filed against Microsoft in the wake of the 1999 decision issued by Judge Thomas Penfield Jackson during the trial court phase of the federal antitrust lawsuit.

Under the proposal's terms, Microsoft would have given disadvantaged public schools more than \$1 billion in funding, software, services and training, and around 1 million Windows licenses for renovated PCs.

Microsoft, who sought input from educators on specific terms of the agreement, will review the court's opinion and at the same time move forward with the next steps in the litigation while we continue to look for reasonable ways to resolve the matter.

Subject: Microsoft Settlement

To whom it may concern:

I believe that the only possible settlement that will restore innovation and competition to the market is a breakup of Microsoft into two completely independent companies with identical product lines and equal access to all of Microsoft's current patents, copyrights and other intellectual property. The first should be run by the current management and the second should be sold on the market at the current share price only to people and companies who do not have any current stake in Microsoft. No company in which Microsoft has a controlling interest should be allowed to invest in the new company. Joint shareholding should be absolutely

prohibited. Your attention to this proposal would be greatly appreciated. Sincerely yours, Brian Walsh

Subject: Microsoft Settlement

Dear Sir(s),

I am glad to see that Massachusetts abstained from signing the proposed Microsoft settlement. The original proposal falls far short of providing protection for consumers as well as promoting open and fair competition with computer vendors.

The new proposal will, hopefully, enable fair and open competition for other software vendors, as well as provide the necessary knowledge to software developers and computer programming students at our educational institutions, without imposing heavy licensing fee's for missing, shoddy and often incorrect documentation that Microsoft has sold at outrageous fee's in the past. The requirement of Microsoft to document their products programming interfaces should be placed in public access. I want to point out that most major computer vendors, for example IBM and Sun Microsystems, currently provide programming information for their operating systems, often bundled into the core product, at no additional charge. This practice has enabled other

vendors to make their products available across platforms, and not just lock the product into one platform, so typical with Microsoft applications. Microsoft has intentionally radically changed programming interfaces between product releases, and severely restricted access to programming information to such a degree as to make it cost prohibitive or virtually impossible for 3rd party software developers to make their products available across both Unix and Microsoft platforms.

In consideration of Microsoft's extremely poor implementation of security in their products, I would suggest an additional remedy of requiring a level of computer security exists in all future Microsoft products. I site the numerous security alerts that have been issued from CERT in regards to Microsoft IIS, as well as the office products. The recent release of Microsoft XP has also fallen to severe security holes, thereby leaving consumers quite vulnerable to hackers and identity theft. The security level enforcement could be monitored by an organization such as CERT (Computer Emergency Response Team, <http://www.cert.org>). CERT would require full unlimited access to all of the source code for Microsoft products. This would ensure consumer protection.

In regard to the remedy of Microsoft applications working on other software platforms, I would encourage you to explicitly list the platforms, and not exclude Linux in the list.

Thank you for your time.

Sincerely

Thomas F. Sandholm

Subject: Re: U.S. v. Microsoft: Settlement Information

Thank you for this opportunity to share my thoughts on this topic. I think that this should be considered just a start. Microsoft controls far too much of the computer industry. It forces potential competitors to spend very large amounts of money and resources to follow along in its path, instead of developing new ideas and concepts. The first thing a competitor must ask when developing a new idea is not if this idea will help its potential customers, but if will be compatible in the Microsoft-dominated industry.

Please think of the entire computer industry's health when considering any action regarding Microsoft.

Thank you

From: MARGOFCPA@aol.com@inetgw
To: Microsoft ATR

Date: 1/19/02 12:42pm
Subject: Microsoft Settlement
Gentlemen:

This letter is in response to the request for public comment regarding the upcoming settlement of the Microsoft Litigation.

As a practicing certified public accountant, I am struck by the uneven treatment that Microsoft seems to be receiving.

As an instructor of Economics I have always used Microsoft as a shining example of Adam Smith's theory of the "Invisible Hand" ie. "entrepreneurs who, while acting in their own self-interest, create wealth for themselves, and in doing so benefit society as well".

I was struck by the behavior of the tax-paid legislators, who create no jobs, do nothing to increase the generation of tax revenues, and yet try to sit in judgement of the behavior of company who's only crime, seems to have been that they were too good at what it is they do! HOW IRONIC!!!!!!!!!!!!!!!!!!!!!! Public servants who live off the largesse of hardworking, tax-paying citizens are getting caught up in this whole notion that if the competition is too keen, then there must be something wrong with the manner in which they operate. It couldn't possibly be, that they possess such a unique understanding of the technology that is the lifeblood of their organization, or possess such a focused understanding of how they envision future technology impacting our lives, that the so-called competition can't measure up.

Yet as I watched the hearings and listened to the testimony of the various CEO's, I was saddened to see how very antagonistic the questioning of Bill Gates was. Orrin Hatch and his cohorts did themselves no favors, because in my eyes, it was an absolute travesty of justice to see them treating Mr. Gates as if he were some public enemy to be dealt with!!!!

While I do believe that no one should be above the law, I am reminded of the anti-trust action that was waged against IBM. It turned out to be nothing more than a real waste of taxpayers' dollars.

Had there been a judge, who was truly objective hearing the case to begin with, perhaps the findings would be viewed as credible, but since Thomas Penfield Jackson made it no secret, that he was sure that Microsoft surely did something dreadfully wrong and it was up to HIM to see that they were stopped no matter the cost to the consumer, I view the decision as flawed, and anything after it the same. As to the appeals court, while yes they did indeed come to the same conclusion, am I correct in understanding that no new information or evidence can be introduced at this time? If yes, it too is flawed, because you had an original trial record that reflects the actions and decisions of a biased judge.

Finally, I am troubled by the lack of evidence that the consumer was somehow harmed????????????? No one has yet to prove that the lack of choice of operating systems is somehow bad! You have had Linux touted as both free, and more stable! Well it turns out that its not more stable and now the many companies who moved to its use are finding that the costs associated with system failures are greater and will probably change operating systems.

If you follow this to its logical conclusion the benefits of a Microsoft with a superior product, used as a standard for an industry if of far more benefit to the consumer.

The benefits are enormous to the industry as a whole, because software developers would rather support a product that commands a larger percentage of the total industry than a lot of competing products. In an economic sense this does indeed represent an efficient use of scarce resources. Apple computers made a very poor decision years ago, when it decided that its OS would not be compatible with any other. That decision would come back to haunt them for years. Why should I and many other taxpayers be forced to pay for their lack of understanding of the industry and its extremely competitive nature?

I read recently that Sun Microsystems will not make its software compatible with Intel based systems because they can sell servers for \$20,000. Yet if their computer language is compatible with an Intel based computer the result is the same equivalent system for \$4,000. Are you going to go after them too?

So you see the list of grievances can go on and on.

I do believe that to force Microsoft to make their code available to competitors is nothing short of government sponsored theft. The nature of the technology industry is changing so fast that probably the product that caused this ill- conceived undertaking by the Department of Justice is now obsolete.

As a taxpayer, I am disappointed that you are allowing all of these states to clamor for a piece of Microsoft as if they have all been harmed by them. Again, where is the proof of injury?

Microsoft's not a chorus of choirboys and Bill Gates is no angel, but neither is Scott McNealy(Sun Microsystems),Larry Ellison(Oracle), John Chambers(Cisco) Craig Barrett(Intel)and yada yada yada.

I would think that this current crisis of investor confidence created by the likes of Arthur Andersen and Enron reemphasize the real job of the DOJ.

Thank you for taking the time to read this and I really hope you rethink this whole issue of what is the proper remedy.

Subject: Microsoft Settlement

Settlement of the Microsoft case(s) NOW is in the best interest of the public and especially the people that use computers. It is particularly important to people who use computers to conduct business. I run a small business and I believe that Microsoft will develop new and improved products at a faster rate when they are free of the distractions of these legal matters.

Just a thought: What if the government had spent as much time, effort, and tax payers' money dealing with ENRON in the public's interest, instead of going after the Microsoft Corporation? How many people would be better off today?

Just a tax paying American who cares about what is right.

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry.

It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of

stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,

Rev. Kenneth B. Smith

ADVANCED TECHNOLOGY SYSTEM, LLC
 January 27, 2002
 Attorney General John Ashcroft
 US Department of Justice
 950 Pennsylvania Avenue, NW
 Washington, DC 20530

Dear Mr. Ashcroft:

I think that Microsoft is being far too generous in the recent antitrust case settlement. Microsoft in my opinion never made any antitrust violations. There positive contributions to our nation's economy have far outweighed any negative results of their actions. I am a proponent of free enterprise that thinks government should not interfere with the free market.

Fortunately, the terms of the settlement do not break up Microsoft. They do however give away much of their technological secrets to competitors, such as internal interfaces and protocols.

Microsoft has also agreed to not retaliate against software developers or computer makers that develop or promote software that competes with Microsoft products.

Even though I think the settlement is flawed and unjustified, I also believe the settlement is in the best interests of the American public because our nation cannot afford more litigation. We need our industry leaders innovating and growing to create jobs and more technological breakthroughs.

Please take a firm stance against the opposition and make sure this settlement becomes a reality.

Sincerely,
Warren E. Ponemon

January 19, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I want to use a moment of my time to convey my support for the settlement reached between Microsoft and the Department of Justice last year. I definitely believe this agreement is in the public interest and no further action is needed at the federal level.

A brief review of the terms shows that Microsoft has agreed to many concessions that will require significant changes. One example regarding intellectual property rights illustrates this point. Microsoft has agreed that if a third party's exercise of any options provided for by the settlement would infringe any Microsoft intellectual property right, Microsoft will provide the third party with a license to the necessary intellectual property on reasonable and non-discriminatory terms. And to assure compliance with this and other provisions, a technical committee will monitor Microsoft.

Finally, this settlement will allow the federal government to focus on more urgent matters than continuing this unneeded litigation. This includes helping to stimulate the economy and health care issues.

Sincerely,
Johanna Seth

MTC-00014023

From: David Salinas
To: Microsoft ATR
Date: 1/19/02 2:39pm
Subject: Microsoft Settlement

Dear DOJ,

I think the DOJ's settlement was a debacle. It was clearly big money (the economy, or lack thereof) at work that influenced John Ashcroft's (Attorney General) decision to work out a deal with Microsoft.

It seems as though Ashcroft's main interests was to close the case rather than offer a solution that was best for consumers.

Here's my analogy. If a husband and wife are having marital problems. You just don't make a deal to stop fighting just for the sake of stopping the fighting. That's just putting off the problem.

What you do is find out what's the cause of the conflict and then remedy that problem.

Ashcroft wanted to save tax payer money by passing on the case to the States. He caved. He did not do his job. Sometimes I think that he took a poll to find out if the DOJ vs Microsoft case was high on the priority list

of the American people. Well, if you take polls, you get inaccurate results. Also, as you might know, popularity votes are not the best way to come to a decision. If that's the case, then Elvis would have been the president in the 60's. That's why we have the electoral college vote. The founding fathers knew that the majority of the people were too ignorant to make important decisions about our country.

And this leads me to my point about Microsoft. Most people in the world, much less the US, know little about the unethical business practices of Microsoft. All they care about is surfing the web, or sending email. This is why the majority of the US populace show indifference toward the case. They just don't get it! Most people are NOT technologists, engineers, or IT professionals. I mean, ask the common Joe how to connect to the internet, he'll have to hire/ask a profession to show him how to do it. If a common consumer doesn't understand the technology he uses at home/work, then how do you expect them to understand the complexities of the Microsoft case?

Licensing, XLM, HTML, .Net, Passport, GNU, GLP, cookies, security certificates, digital signatures, C#, Java, WMA, etc. are all technical jargon that can be spoken during the technical case. Do you honestly think that the majority of people know what these terms mean? If they don't, then how can they make a educated decision about a complex technical monopoly case?

So, John Ashcroft basically made the decision to end the case for the DOJ because the American people really didn't understand it, or care about it (in the light of the 9/11 attacks, and the dot-com downturn).

But, the Microsoft case has far reaching consequences if the necessary steps aren't taken to prevent Microsoft from abusing it's monopoly power in the future.

I feel that the States proposal on what to do about Microsoft is a good proposal.

Although some do not feel that it goes far enough (less a breakup). I believe that it cuts out all the potential loopholes that plague the current DOJ settlement (swiss cheese settlement).

Microsoft should be under the spotlight for the next 10-15 years (or however long it takes).

Every move they make, every deal they make are moves that they use to extend their power. And the scrutiny they will receive is justified.

Microsoft has the power now. So, its the watchdogs of the tech world that will keep an eye on everything Microsoft does. Because the company with the power can abuse that power. And they have, in the past, in the present, and will continue to do so in the future unless they are watched and their behavior is curtailed.

I end this letter with a question. . . .

What's worse than a Government Big Brother?

A Corporate Big Brother!

From: Brendan Irvine-Broque
To: Microsoft ATR
Date: 1/19/02 2:40pm

Subject: Microsoft Settlement

I think that Microsoft needs to be penalized in a way that lets them continue production of all products other than their Windows operating system. The Windows operating system should be given a very large setback, such as limiting the amount of computers which it is shipped with each year, but products such as Microsoft Office should be left untouched. I have been a mac person for many years, and while I thoroughly detest the Windows operating system and the scams that have come with it, i greatly appreciate the benefits that Microsoft Office has given to the entire personal computing industry.

At this point, almost everyone uses Microsoft Office, and it would be devastating if as a result of this antitrust suit, Microsoft would be forced to put less effort into the creation of newer versions of Office.

Now, at the same time, this does not mean that I do not want Microsoft to be punished, because I think that it should be punished greatly for how it has not only hurt competing companies, but for how it has revoked the choice of operating system from the consumer. People can talk all day about the many alteritives to Windows, but the fact is that for the vast majority of users, there is no choice.

Linux, the UNIX based Windows alternative, has never been put into a standard version so that the average consumer can use it without spending hours of frustration trying to make it work. The Macintosh Operating System, especially with the amazing new Mac OS X, is thought of as a better operating system than Windows by critics and consumers, including PC users. But because of the Windows monopoly, it is still making a recovery to regain thousands of applications that it lost. I myself am an avid mac person, but just months ago I was forced to buy a new PC instead of a Macintosh because the server that I needed to access was running Microsoft software which my computer was not compatible with. It is sneaky tactics like this that have given Microsoft this monopoly.

As for a solution for this problem, I am not sure what that might be, but what it should do is give other companies and other operating systems a chance to be equal with Windows instead of struggling to stay afloat.

Thank you for listening,
Brendan Irvine-Broque

Dear Mr. Ashcroft:

This letter is to express my support for the recent settlement arrived at between Microsoft and the DOJ. I am presently retired from the workforce however my nephew presently works as a manager with Microsoft.

My interest in the success of the company is therefore very personal. It is my sincerest desire that the remaining States, who are not in agreement with the settlement, will help put this issue to rest as soon as possible so that Microsoft my get back on track and continue to provide excellent service.

I am very satisfied with the efforts that Microsoft has made thus far to satisfy the terms of the settlement with the DOJ. Microsoft has even established an interim release of Windows XP, to provide a mechanism to make it easier to promote non-Microsoft software within Windows. I am confident that anti-trust issues will not present itself in the future.

I appreciate your willingness to hear to the voice of the people by way of the Microsoft Tunney Act. I trust that my input will be considered favorably for Microsoft.

Sincerely,
Don Degroot

From: Bruce Reed
To: Microsoft ATR.mpowell@fcc.gov@inetgw, kabernat@fcc. . . .
Date: 1/19/02 3:00pm
Subject: MSN Broadband and QWest partnership problems

I have been a QWest DSL/ISP customer for a couple of years. In December QWest sent notification that all customers must migrate to MSN Broadband with a deadline in January 2002.

No choices were offered for other ISPs. No mention was even made that you could have QWest DSL with a 3rd party ISP.

I selected the MSN migration. Surprisingly (sarcasm), the migration process was automatic—no human intervention required, no delay in the changeover. But I experienced a few issues with the new service, none of which are explained.

1—All outgoing email MUST go thru the MSN SMTP email server. Connection to any other SMTP server is blocked. This was not disclosed.

2—SMTP access for outgoing mail is strictly by secured password authentication. This was not disclosed.

3—The only email product I am aware of that has secured password authentication is. . . you guessed it—MS Outlook/Outlook Express. By the way, it should be obvious—this was not disclosed. I'm sure I never saw anything with the MSN migration information that said you must use Outlook.

These are just the technical issues. Even more important are the processes.

1—Once migrated to MSN Broadband, MSN owns the entire account, including the DSL physical connection. This was not disclosed.

2—Once migrated to MSN Broadband, you cannot change ISPs. You must completely cancel the MSN Broadband. This was not disclosed.

3—When you cancel the MSN Broadband, you cannot immediately order different DSL service. This was not disclosed. This would seem to be beyond anti-competitive practices, and into if not illegal, definitely improper practices.

4—Once the MSN Broadband is physically disconnected and DSL service is no longer active, YOU STILL CANNOT ORDER NEW SERVICE. You must wait until MSN finishes its paperwork, and no longer owns your account. This was not disclosed. Is there any doubt now that we are at the level of illegal practices?

5—One MSN paperwork is completed, and MSN no longer owns your account, you must order new DSL service, and must wait approximately 10 business days for DSL service. This was not disclosed. Although this may be reasonable for new service, it is not reasonable for an ISP change.

In summary, to change away from MSN Broadband to a different ISP, you must

- 1—cancel service (1/2/02)
- 2—wait for disconnect—about 1 week (1/9/02)
- 3—wait for paperwork—about 1 week (was told maximum of 10 bus. days from cancellation)
- 4—order new service (was told on 1/9/02 that once I could order, it would probably be about the end of January to get service up)
- 5—wait 2 weeks

In other words once you make the decision to change, you are stuck with MSN for one more week, then have three weeks or more without service. Not only is all this anti-competitive, but they never told me ANY of this up front.

I would like to make a personal thank-you to Rick Gray at the QWest DSL Manager Escalation center for his assistance in getting my "new" order placed within a reasonable time in spite of the policies, and in escalating the actual installation.

Microsoft's steps and objectives are plainly obvious. One must question QWest's new practice of turning complete ownership of DSL service over to MSN. One must also blame QWest for not providing some of these details with the migration information.

Subject: Microsoft Settlement

I am part of a worldwide network that is working on getting the BeOS or equivalent back into the market place, but there is no hope of success if the following issues aren't addressed:

1) MS Office needs to be opened, so that developers interested in porting it or understanding the document formats can do so either in form of a source code licence or an allowance to see it, check it and "clone libraries", so that applications on non-Windows OSs can read and write MS Office formats for flawless interaction with Windows users.

2) The Win32 API needs to be available so that BeWine can be successfully ported not only to BeOS but other OS too.

3) The file system needs to be opened, so that BeOS users can continue to access files on non-BFS partitions.

4) The ruling must include a "must-carry" rule, so that any OEM Microsoft is supplying Windows with HAS to "dual-boot" an alternative operating system, in this case BeOS, in order to remedy the damage MS has done to BeOS in the past.

I'm develop for BeOS in my spare time, and had actual plans to work at Be once I finished college. Unfortunately, this won't be possible, due to a lot of reasons, some of them stated above—basically Be's death was due to Microsoft's bussines practices.

I sincerely hope there's light at the end of the tunnel—I've been living with BeOS as my main operating system for three years, and couldn't possibly picture myself running another operating system.

Regards
Mikael Jansson,
Sweden.

Subject: Microsoft Settlement
To whom it may concern:

For a punishment for Microsoft's anti-competitive behavior in the computer market place I would like to see Microsoft provide funding to schools which are the poorest of the poor in the United States of America.

This \$1billion minimum amount would go to funding any areas of the school, which each individual school or school board sees fit. That would mean that a school could use the money to buy new textbooks, new musical instruments, stationary supplies, athletic equipment or other requirements.

In terms of using the money for buying new computers or other technology that would also be fine, but Microsoft would not be allowed to insist that schools buy Microsoft products with their allotment. Schools would be allowed to buy computers from any source, even a competitor such as Apple Computer, Inc., which has a strong presence in the educational industry.

Microsoft has the cash reserves to implement the \$1billion minimum and any proposals below this level should be rejected.

 To: Microsoft ATR
 Date: 1/19/02 3:43pm
 Subject: Re: Web page

Good day,

I am rather amazed at our regulatory institution, in there historically infinite wisdom, to conclude that microsoft is a monopoly in the highest order. There were no questions in the break up of AT&T and going back to the rampage of the steel giants at the turn of the century. How can anyone legitimately think that microsoft is not maliciously stifling competition? They have already been proven to manipulate open protocols to there own needs. (tcp/ms for one and corrupted html code, msn/opera) MS has and is filling a need in the consumer market. They do have a reasonably simple product to use. Not as user friendly as Mac, but runs on much cheaper hardware. It is also much simpler than Linux. What is the problem with microsoft being forced to conform to internationally established protocols? And how can anyone at ms actually keep a straight face when speaking of priracy? (simple search on anything ms will suffice)

I know the chances of someone reading this message is slim to none. I also know that if it is read that it's probably irrelevant. Thanks for the opportunity anyway.

Sincerely,

William Potts

 January 19, 2002
 Attorney General John Ashcroft
 US Department of Justice
 950 Pennsylvania Avenue, NW
 Washington, DC 20530

Dear General Ashcroft:

It is our opinion that if it weren't for Microsoft and their superb ability and

capability to make the operation of computers and the Internet easy for people like us we would STILL be relegated to getting our "news" from the biased newspapers.

Microsoft is getting taken for a ride in our opinion. U.S. lawmakers and politicians have shown no concern for the public's best interests throughout this case, as reflected by the terms of settlement that showcase stipulations that only benefit competitors. Ironically, now you are asking us for our opinion when it doesn't matter nearly as much.

The terms of the settlement will only serve to give leverage to competitors that had no idea how to be more innovative than Microsoft. For instance, Microsoft now has to grant broad new rights to configure Windows so as to make easier the promotion of non-Microsoft products. Microsoft is also documenting and disclosing, for use by competitors, technology that has been developed in-house.

Since we are users and have no complaints as users we think the settlement is flawed. But, because the alternative is further litigation, we would like to see the settlement occur as soon as possible.

Sincerely,

E.R.(Bob) Bamrick

 Subject: microsoft settlement

To whom it may concern,

I am opposed to the Proposed Revised Final Judgment for many reasons, but I shall discuss five points here.

1. Microsoft's power over the OEMs is worded in secret and confidential agreements between the OEM and Microsoft. The Final Judgement does nothing to expose all forms of restraint or potential retaliations hidden in those agreements, only those known today.

There is an attempt to make sure that Microsoft uses terms and conditions that are uniform across the OEMs, however it is well known the OEMs are currently forbidden (because of the confidential agreements imposed upon them by Microsoft as a condition for selling the software) to discuss openly about retaliatory terms and conditions. This stranglehold practice cannot continue.

It must be allowed for OEMs to discuss terms and conditions of these contracts without being "gagged" or retaliated against by Microsoft.

There is nothing in the Final Judgment that would prevent Microsoft from adding future terms and conditions that would be considered by some to be retaliatory in

nature. And if the agreements are considered confidential between on OEM and Microsoft, there is no ability for the OEM to act without breaching the agreement. There is nothing in the Final Judgment to allow the OEM to offer non-Microsoft Operating Systems and any related bootloader programs as the consumer's *first* choice for an operating system in a multi-boot system. It is well known that the existing Microsoft/OEM contracts prevent a non-Microsoft Operating System from being offered as a *first* choice to consumers, only as second or subsequent choices. The Final Judgment wording would continue to allow Microsoft to prevent competition. This wording is an example of what Microsoft has done in the past to get around the previous Anti-Trust judgment.

2. The Final Judgment allows for a vast loophole for Microsoft in Section III J.

For Microsoft to not be required to disclose an API or related information, all Microsoft must do is label it as a necessary component for "security". Many third party software packages will be rendered useless once Microsoft decides through this "security" loophole who can and cannot see what's under the covers.

Microsoft lawyers (probably unbeknownst to DOJ lawyers) have carefully crafted wording to deny Open Source projects as a party in the revealing of any API or documentation. Open Source projects such as SAMBA, a competitor to Microsoft's file and print sharing services, may not fit the definition in III J (2).

"(a) has no history of software counterfeiting or piracy or willful violation of intellectual property rights, (b) has a reasonable business need for the API, Documentation or Communications Protocol for a planned or shipping product, (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, . . . "

The language is horribly slanted towards Microsoft.

It appears that Microsoft is the party which determines whether an organization will meet the criteria set forth and not the Enforcement Authority or other third party.

Condition (a) stipulates that the organization cannot have a "willful violation of intellectual property rights." Who determines whether a violation existed or at all and whether it was "willful"? Apparently Microsoft does.

Some Open Source organizations have indeed reverse engineered what Microsoft might consider their intellectual property. But it is odd that now that Microsoft will be required to expose these APIs. Those that were deemed by Microsoft (and not any judicial entity) to have violated those same API property rights in the past would be excluded from now legally obtaining those rights.

And Microsoft's choice of who is in violation of its intellectual property rights may have nothing to do with Microsoft's choice not to prosecute them in the past for those past violations. This wording is wholly inadequate.

Clause (b) allows Microsoft to determine if there is a business need to an API. Why should any company be required to disclose

to Microsoft the plans on how that company intends to produce a competitive product? Wouldn't that give Microsoft the product idea for themselves to develop and exploit, potentially beating that company to market?

Clauses (b) and (c) also allow Microsoft to determine if an organization is a business or not. An Open Source project is not necessarily (and in fact, most are not) a business in the capitalism model. There is necessarily no corporate structure, shareholders, or employees. There sometimes is simply a loose organization of individuals from around the world. However, these organizations produce some of the world's best software, much of which directly competes with Microsoft's programs.

The Final Judgment wording is easily interpreted to exclude Open Source projects and organizations and this wording is simply inadequate.

3. The Technical Committee (TC) is wrought with problems.

3.a. Why does Microsoft have the right to select a member? Isn't this allowing for a fox to guard the hen house?

3.b Why does Microsoft pay the costs for the TC? Doesn't this create a conflict of interest?

3.c The TC has no authority to impose fines, create injunctions, or limit actions against Microsoft.

3.d The TC is bound by confidentiality agreements to which, of course, Microsoft will require full adherence, thus severely limiting what the TC can discuss with non-parties. The citizenry of the US (and the world) has a right to know the details of a dispute, but when the dispute is classified as confidential at Microsoft's sole discretion, this really amounts to another gag order. How can this be good?

I find the TC severely lacking in its ability to curb any Microsoft behavior at all, especially when there is no real enforcement power given to this body, and when 1.5 people on the TC are appointed by Microsoft, and when the TC's payroll and expenses are reimbursed by Microsoft.

4. The term of five years is wholly inadequate. It has taken just as long to process this case as the proposed five-year term of this agreement.

The term should be indefinite. It should also be on the burden of Microsoft to prove at a later date that they have not violated Anti-Trust laws for a period of, say, no less than ten years before the DOJ should even consider ending the agreement. Microsoft has proven that they are willful law breakers.

After the previous settlement, Microsoft lawyers and executives set out to push the envelope of what was legal. They did not abide by the spirit of the last agreement and cannot be trusted to abide by any spirit of this one. Their past actions indicate that once again, their lawyers will be looking to exploit any and all weaknesses in this agreement.

5. There is absolutely no attempt to address restitution for any injured parties or address fines against Microsoft for breaking the law.

None.

Microsoft has \$38 billion in cash and this Final Judgment does nothing to address the fact that Microsoft made that money by its illegal acts.

I don't know how to explain to my family why one of the biggest corporate criminals in the world was allowed to keep the money they illegally made. The DOJ lawyers should be ashamed of themselves.

In conclusion, I do not support this proposed Final Judgment. It is inadequate to keep Microsoft in check and makes no attempt at restitution or fines. I respectfully ask that this proposed Final Judgment be rejected.

Please put faith and trust back into government. I believe whatever Microsoft has been purported, the accusers have also used whatever means at hand in the efforts of competitiveness.

Microsoft has shown to be far more ethical than its accusers using our governments money to fight a private grievance. This is not the time for our government to be wasting resources and energy on an issue that has already been determined to be fair and reasonable by even our own citizens responses. Don't they hear us?

This continued thirst for revenge by ego driven individuals is to say we are not capable of compromise and not worthy of our faith in the departments into which the public places their trust. I believe you have put forth every effort to get this behind us and move on. Your efforts have been in the public's best interest. The guide lines are firm yet fair. We are hoping you will rule in favor of this settlement.

Thank you for all your consideration in these grave times.

Subject: Microsoft case

Microsoft is a monopoly.

In the United States of America monopolies are not allowed.

Microsoft should be broken up and their influence in the marketplace diminished severely so there is true competition and innovation is allowed to flourish.

Microsoft should be severely punished financially, to the tune of tens of billions of dollars, for their predatory and anti

competitive behavior which has allowed them to dominate at the expense of other companies.

The playing field needs to be re-leveled at Microsoft's expense.

Microsoft does not need a slap on the back of the hand.

The U.S. government needs to stop giving Microsoft contracts and to help other competing companies.

Microsoft should be forced to sell off their browser and email products and not be allowed to expand their influence in new markets.

They should not be allowed to provide financing for companies they own in part or whole to gain control of other markets such as high speed internet access.

The Federal government should act quickly, not act years from now.

It seems as though Microsoft will be prohibited from future anti-competitive actions, but the settlement seems to be very light in punitive action for past actions. What price is to be paid for past actions except to ensure that they do not recur. Microsoft has already won the monopoly war and this settlement does nothing to punish them for the atrocities committed during the battles. There is no punishment and there is no remorse from Microsoft.

Judge Kollar-Kotally,

Throughout the entire Microsoft anti-trust case, every court has found that

Microsoft has abused its market power in a monopolistic fashion and stifled competition while earning unjust profits in the process. Furthermore, Microsoft has consistently shown itself to be unable or unwilling to police its own actions to bring them into accord with appropriate standards of conduct within a free-market community. Consequently, I believe that the proposed Microsoft settlement you are currently considering is fatally flawed. First, it does not adequately punish Microsoft for its violations to date and allows them to continue to enjoy the fruit of their anti-competitive and illegal behavior. Second, it provides no meaningful provisions to ensure that Microsoft will not repeat these sorts of activities in the future, because it does not structurally alter its ability to do so. I urge you to reject this proposal and accept only a more stringent and punitive set of remedies that will address the underlying issues of punishment and deterrence.

Sincerely,

Brian Tvenstrup

From: Ed Gow
To: Microsoft ATR
Date: 1/19/02 5:17pm
Subject: Microsoft Settlement

The settlement of the Microsoft antitrust trial that has been proposed by the Justice Department is weak and inadequate and is not in the public interest. Because of its many exclusions, this settlement would rely upon the greatest of good faith on the part of Microsoft.

Microsoft has not admitted wrongdoing in the present case. They remain as they have shown themselves to be in the past, unwilling to abide in good faith by limits on their conduct. Only the most unambiguous of limits with clear means of enforcement and the prospect of harsh penalties can extract compliance from Microsoft.

Faced with a similarly inadequate settlement in 1994, Judge Stanley Sporkin rejected it. He was overruled and the 1995 consent decree was put in place by Judge Jackson. Microsoft went on to, in the most forgiving view, test the limits of that agreement. A more reasonable view that has emerged from the courts in the present trial is that Microsoft knowingly and systematically violated both the consent decree and the Sherman Act. Accepting a weak settlement in this case will guarantee a repeat of the unfortunate consequences of the 1995 decree.

As a consumer I have watched several times as Microsoft has used its market power to eliminate innovative products that were of interest to me. It is widely acknowledged that venture capitalists will not fund development that Microsoft opposes. This stifles innovation at its root. Microsoft is now moving to use its Windows monopoly to gain control of the ways that consumers use the internet. Although it was deemed unlikely by Judge Jackson at trial, the Internet Explorer browser has approached the status of a monopoly product (many internet web sites work properly only with IE). Such is the power of "comingling" with Windows.

In short, accepting the proposed settlement will harm the public by allowing Microsoft to continue its anticompetitive practices. It should be rejected in favor of a remedy that places clear limits on Microsoft's behavior and meaningful penalties for future abuses.

I would like to see these frivolous lawsuits against Microsoft come to an end. The bottom line of this whole thing is a couple of companies who refuse to compete in the marketplace. They use "consumer protection" lingo to hide behind but what they really want is for Microsoft not to exist at all.

They think this will make their companies strong. All these lawsuits have done is to make America weak.

Just look at the rise of the EU and anyone with the common sense God gave them would see a real problem for American enterprise on the near horizon.

Our government is essentially eating its own young and the states just won't let go of it until Microsoft is so weak from funding lawsuits that they cannot lead America in free enterprise anymore. Please see this for what is really is and has been all along, and it has nothing to do with consumers, only with certain competitors who seem to want a socialist government instead of capitalist.

Computer products have been getting smarter and better for consumers and the prices have been coming down esp. considering the many things software can do now so rapidly.

Let's end this nonsense and get on with getting America recovered as a leader of the free world.

Respectfully,
Marie Timm

Subject: Microsoft settlement

To the Justice Department:

This whole lawsuit against Microsoft has been a case of injustice. It has caused my stock to lose half its value, many teachers and others to have considerable losses in their retirement portfolios, and has made government officials look like fools that can be manipulated by company executives that want to get a competitor out of the way.

I think that the ones who want all they can squeeze out of Microsoft are just like the fools that killed the goose that laid the golden eggs. Microsoft has been indirectly responsible for much of the boom we have experienced in the last decade. What has happened to them has been, and will be, a nightmare in the dreams of many who would like to begin new businesses or make their current businesses grow.

Please stop trying to take away the freedoms we have had in this great country. Stop undermining our justice system with judges that look like complete idiots (Jackson).

Please tell those states to go check on Edward Kennedy if they want to really go after someone that needs to be stopped. Tell them to check on his connections with Merck and Medco and Paid Prescriptions, and then ask him why he wants to have Medicare cover all prescriptions for everyone.

How many other politicians do we have that have connections with businesses that are doing business with the government? How much business have they directed toward friends and relatives?

How many of them have lost net worth in the "service" of the public? How many pardons have been bought and bedrooms been rented out for libraries and campaign donations?

I think the government needs to get the beam out of their own eye before looking at the speck in another's.

Sincerely,
Myra Lamonte

Subject: Microsoft Settlement

I am opposed to the proposed settlement with Microsoft. I am not employed in the software or computer business. I do not own stock in any software or computer company. I just buy and use the products.

Microsoft has been found guilty of conducting illegal acts to maintain its monopoly of personal computer operating systems. But there does not seem to be even a light penalty for their behavior. There is nothing that I have read which would keep them from repeating the acts which lead to their conviction.

The settlement is so mild as to be almost humorous. But those of us who are consumers of software are not laughing. The monopoly which led them to something like 90 per cent of the market almost completely destroyed all other personal computing operating systems, and discouraged inventive software writers from creating new software.

A fair and effective resolution of this matter must provide incentives for Microsoft to comply with the law. No one believes they will become good citizens unless forced to.

Respectfully submitted,

From: Bert Altenburg
To: Microsoft ATR
Date: 1/19/02 1:29pm
Subject: Microsoft Settlement

Dear Ms. Hesse,

Microsoft is able to keep and abuse its monopoly due to the fact that its Office suite uses mainly proprietary file formats. If details about these formats were in the public domain, other companies could create easier to use and cheaper programs while maintaining file compatibility. That is, we would finally have a choice. The file formats should be extendable by every company (using an open architecture, allowing for plug-ins), and Microsoft should be forced to implement any improvements in the form of plug-ins (and not change the file formats again). That is, other companies will be able to do more than just follow Microsoft: they can innovate, forcing Microsoft to start doing the same.

Your attention in this is appreciated.

Yours sincerely,
Bert Altenburg

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of

stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
John O. Petri

Date: 1/19/02 6:08pm

Subject: View of proposed settlements

I am addressing this address because of a report that the Department is seeking public comment on the proposed Microsoft settlement.

Microsoft was caught engaging in anti-competitive behaviors, confirming rumors on the street that had previously been fairly well accepted by observers. These behaviors including various forms of blackmail, such as charging OEM's for the price of Windows times the numbers of units sold, without regard to whether Windows was in fact installed, and charging a higher price to people who would not commit to Microsoft Apps being default apps or exclusive holders of a place on the desktop. The trial judge's findings of fact in these regards are still the facts of the case.

Of considerable interest to me is that Microsoft was caught in deliberate factual misrepresentations to the court more than once, yet showed no remorse or embarrassment, evidencing an arrogance that mocks any future reliance on in their truthfulness. Presumably if they will lie to the sitting judge in an anti-trust case, and ignore the fact they got caught at it, one may assume they will continue to lie to any enforcer/inspector.

The trial judge's remedy was positively inspired. Make sure that the OS folks have no lock on the apps, and vis versa.

This was the second time that Microsoft was in the courts over monopolistic manipulation of the marketplace. It was clear they had violated the intent and spirit of the first court order. They are simply not to be trusted.

As for Microsoft's oft invocation of the right to innovate, one must reluctantly conclude that the only "innovation" ever produced by Microsoft, was their bald-faced adoption of ideas from DR/DOS, Xerox, and Apple, marketed in the press releases as their own wonderful new idea, and gullibly lapped up by the press. They also innovated by introducing to the software business the business model and ethics of the Robber Barons of the late nineteenth century. The highest quality work product of the company is their marketing and propaganda. Their ability to deliver to the public beta software sold as the final product is legendary, not to mention illustrative introduction of XP as "the most secure OS ever" which OS was within the week shown vulnerable to all sorts of attacks. That they charge what they do for products which are as poor as they are, is further proof of the existence of a monopoly.

Do not trust these people. Place no faith in them. Do not rely on them in any way, shape or form. Every representation made to you by them is to be treated as untruthful in terms of designing the remedy.

Oliwni,
Ted

Subject: Microsoft settlement

I am a certified public accountant and programmer. I work with both Microsoft and Novell networks. I program for the Microsoft

environment. I do not feel that the proposed Microsoft/US government settlement is sufficient. It does nothing to remedy the monopoly situation.

Because of the current monopoly situation Microsoft has been able to:

1. Release new software without fixing adequately bugs in the old software
2. Force changes in licensing agreements that significantly increase the price of software

3. The price of operating system software has gone up instead of gone down as other technology items have.

4. The current XP home and XP professional release is just an indication of the problem. Their monopoly status has allowed them to create a Home release that is not supported on computer networks but because of the \$100 price difference, is not available in stores like BestBuy, Staples, Office Depot, etc. (that is readily available). That limits business options.

Prior version of Win9X were also usable on corporate networks which the Home version replaces.

Nothing in the settlement would remedy this.

5. Microsoft's software is similar in function to the engine of a car. If a car engine had as many defects Microsofts operating system products, the likes of Ralph Nader and US Consumer Products Division would have a field day.

Because of the monopoly situation, they are in a position to constantly force new versions without fixing the prior versions. Moreover, the current indications are that Microsoft is pulling support, especially via corporate licensing programs, for older versions even faster. Because of their track record with bugs releases and security problems, support is being pulled for a stable version before the corporate community can adequately test and fully implement these items.

In my view, Microsoft's Operating System Division should be separate from the software division so the operating system division would finally produce a truly stable operating system. Currently, their monopoly status does not allow any viable alternatives as software drives the operatin system choice. Without adequate user software, the greatest operating system will not achieve any acceptable level of wide spread use.

Attorney General John Ashcroft:

I would like to share my opinions with you on the pending Microsoft Settlement. I have used Microsoft products for over a decade. I have purchased many of their software products over the years because I like the software and the software works. I have tried other software to see if it offered something better but I did not find that it did. I am aware that there are other operating systems

available, such as Linux, Macintosh, BeOS, but I choose to use Windows because I feel it is the best. I have a problem understanding why Microsoft is considered a monopoly when consumers have choices and they choose

Microsoft. However, I understand that there is a settlement in the Justice Department's suit against Microsoft and I am sending this e-mail to give my support to this agreement and ask that you also support it. It's time to move ahead and let Microsoft move ahead to develop better and more exciting products for consumers.

I understand that Microsoft has agreed to terms that far exceed the products and procedures that were actually at issue in the suit. Microsoft has agreed to help companies better achieve a greater degree of reliability with regard to their networking software. Microsoft has agreed to design future versions of Windows with a capability making it easier to promote non-Microsoft software. It seems to me that Microsoft has done far more than what was needed.

Thank you

Dear Mr. Ashcroft:

I am writing you today to express my opinion in regards to the Microsoft settlement. I am a Microsoft supporter; therefore, I support this settlement and the end of this costly litigation.

This settlement was reached after extensive negotiations. Microsoft has agreed to fully carry out all provisions of this agreement. Microsoft has agreed to not retaliate against computer makers who ship software that competes with anything in its Windows operating system. A technical oversight committee has been created by the government to oversee Microsoft compliance to this agreement.

This settlement will benefit all of us. Please support this settlement and allow this company to get back to business. Thank you for your support.

Sincerely,
Margaret Green

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

The purpose of this letter is to inform you of my support of the settlement reached between Microsoft and the Dept. of Justice. After three years of protracted litigation resolution regarding this matter is extremely welcome. While I disagree with the original merits of this case, I believe settling this issue is highly beneficial in that it allows Microsoft and other members of the tech industry to return their full focus to business productivity. The changes called for within the terms of the settlement are generous on behalf of Microsoft, which has agreed to disclose the internal interfaces and protocols of the Windows operating system. Thus, beginning with the interim release of Windows XP, users will be able to add or delete software according to their tastes. This ensures greater freedom in user's ability to configure their operating systems.

Obviously, Microsoft is willing to make concessions in the interests of resolution, I would hope that the Justice Department would comply.

Sincerely,
Glae Thien

January 19, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to express my opinion that the recent antitrust settlement between the US Department of Justice and Microsoft has been a long time coming. I think it is ridiculous that litigation has dragged on for over three years now and think that our public's best interests will be served when government stops interfering with successful innovative companies that have made huge contributions to our society.

The terms of the settlement not only reflect the intense lobbying of competitors to Microsoft, but also politicians and lawmakers lack of concern for consumer rights. Ironically, all the terms of the settlement seem to just focus on helping competitors get an edge they could not gain on their own through hard work. For instance, Microsoft will be granting broad new rights to computer makers to configure Windows to actively promote non-Microsoft products. Microsoft has also agreed not to retaliate

against computer makers and software developers who promote non-Microsoft products.

Although unjustified, the settlement is in the best interest of American public because it is better than the alternative of further litigation. Our nation cannot afford any more lawsuits against the cornerstone of the tech sector. I hope your office takes my opinion seriously and that you make the right decision at the end of the public comment period.

Sincerely,
John Schneider

Subject: Microsoft Settlement

Dear Mr. Ashcroft:

I am writing to you to address the antitrust settlement reached between Microsoft and the Department of Justice. Both my wife Adele and I are in favor of the current settlement and putting an end to these proceedings immediately.

Under the terms of the settlement, Microsoft will grant computer makers the rights to configure Windows to promote non-Microsoft software programs that compete with programs included in Windows. Computer makers may now replace peripheral Windows components such as Internet Explorer and Media Player with access to non-Microsoft software such as Netscape Communicator and Real Player. Microsoft has also agreed to release internal operating interfaces of Windows to its competitors for the purposes of their own software development.

We both have used Microsoft products for many years without complaint and have never seen the monopolistic face that has been portrayed by the advocates of the antitrust case. We believe that the litigation process is being unnecessarily drawn out by the remaining unsettled states. Their refusal to the settlement is wasting valuable time and resources, including our tax dollars. Given the current state of our nations economy, we think that it is absurd to continue deliberating this issue any longer.

Cordially,
Merrill & Adele Bradlee

Microsoft is good at playing the game. Even with severe penalties I question whether they will change. Their business practices and attitude are arrogant.

Is it late for you to do anything to solve the problem? Maybe. You blinked and now they feel stronger. Last hope, I think, is to be tenacious in getting a settlement that

punishes them to the point that it actually hurts.

Blink again and you've lost for good. The next fight will be worse than this one. Make the most of this chance.

Dear Judge,

I am a student who is majoring in Business Administration at the University of Southern California. I am a firm believer in this country and the economic foundations that it was established on. Time has proven that capitalism and free market competition are the most effective means of prosperity.

Do not allow Microsoft to tear down this system that has worked so effectively and efficiently for this country.

Every court that has reviewed this case has declared that Microsoft has been aggressive in their illegal conduct, and I ask you to hold up the law and punish them for their actions, do not reward them by giving them exactly what they want.

Sincerely,
Daniel James Bain

MTC-00014070

From: David C.
To: Microsoft ATR
Date: 1/19/02 9:28pm
Subject: Regarding the proposed settlement

To whomever it may concern,

As an unbiased developer who has embraced and employed both Microsoft and Sun technologies during my extensive software development career, it is my personal and professional opinion that the proposed settlement is both a misunderstanding of the nature of the damages caused by Microsoft monopoly tactics, and also a comparative slap-on-the-wrist in relation to what I consider appropriate action to be.

Contrary to popular belief, Microsoft is not the keystone of the American economy, and the economy would not suffer if Microsoft were even broken in two, as was previously proposed. Microsoft is a competition-killer. How has it responded in the face of suits declaring the bundling of Internet Explorer with the Windows operating system? It has bundled even more software for everything

from CD burning to website building, embedded deeply into the core operating system. This will in result make it extremely difficult for existing vendors of such products to penetrate the market with Microsoft's mass dilution, causing a wave of small companies to capsize altogether. The ripple effect will not go unnoticed among medium and large companies, whether Microsoft rivals or not.

Curtailing Microsoft's monopolistic tactics with firm sanctions (e.g., dividing the company) would more than likely result in a *boost* to the economy and an influx of new innovations and opportunities, benefiting both the consumer and our nation's large technical development industries (programmers, architects, etc.)

Of course, this is just my humble opinion and I invite you to take it for what it is worth. Thanks for reading.

Regards,
David Carel
Senior Software Development Engineer

Subject: Settlement opinion

I take great exception to the DOJ's proposed acceptance of this settlement as a viable punishment towards Microsoft. It is nothing more, in my opinion, than another step toward monopolizing efforts that are already under investigation. This may be the equivalent of slapping a drug dealer on the wrist for charging too much for his or her product and forcing them to "donate" a portion of future product to the masses so no one is left out of the deal. Why would I want to propagate such an effort? Does this really punish the guilty party? We all know the answer—NO! It actually reinforces the stranglehold they are currently being "held accountable" for. Apple Computer has long had a foothold in the one market that Microsoft so desperately wants—education. If we as Americans are to punish a "monopolizer" by allowing them to donate their proprietary operating systems and application programs to "needy (non Apple market) school systems", are we not as guilty as Microsoft?

While roughly 80% of the software to be donated is Windows specific, the opposite is true of the operating system of choice in most school systems. This is where I believe we will all suffer. If we offer free or discounted software to schools that cannot afford to purchase the machines it runs on, what good can come of it? Perhaps these schools have functioning, but older, Apple computers, but are ready to propose a budget for staff and/or new equipment in the next year or so. What system do you suppose they will budget for if they are getting Windows specific software for free? We have just furthered the Microsoft cause by forcing more non Apple computers into the system. I thought that was what we were trying to prevent them from doing. I admit that I am a Apple owner and user. I am also a Windows user at work. I am biased towards the Mac/Apple operating system based on my ability to use both and make an educated

decision of which to "own". This is called freedom of choice, I believe. If Microsoft wants to legitimately "help needy school systems", let them donate in the form of trust funds that can be used to staff our schools with qualified teachers and equipment. Let them set up annuities. Give the schools a check. Don't let them "give" the school a \$150.00 software title that they have all of \$1.00 invested in raw materials. This only amounts to a \$ 149.00 charitable deduction at the end of the tax year. Give the people responsible for educating the future adults and voters of our country that same freedom of choice.

Please see this offer from Microsoft for what it really is—a way to get into the market that has eluded them for years and hook them early and for life into their operating system. This will only force the school systems to hire more I.T. people to keep the Windows systems running when they should be hiring more teachers instead of cutting staff.

Respectfully,
Gary A. Vogt

Dear Microsoft Settlement:
The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry.

It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
carl strasser

Dear Mr. Ashcroft:

I was relieved to hear that the Justice Department has finally put an end to its persecution of Microsoft.

Unfortunately, Microsoft had to give up a lot in order to get a settlement in the matter. I hope that you will further publicize the terms so that everyone can know just how much they are giving up.

Microsoft giving up the access that it has promised to its competitors, is like Coke

giving Pepsi the recipes for all its drinks. What's more, Microsoft has promised not to retaliate against their competitors when they use that code to further their own products.

With this and many other hampering provisions in the settlement, I can't see how anyone would be unsatisfied with what's on the table. Let's hurry up and put this issue to rest. There are certainly more important issues for the Justice Department to deal with right now.

Sincerely,
Christopher Ward

I realize that this case is from a business standpoint. Oh the other hand though how can anyone in Washington make a judgment on something they know NOTHING about. If the press has kept things accurate then from my perspective being someone in the industry the federal government looks like a bunch of asses. Does the government actually know what they are breaking up or doing with Microsoft. Most of the IT jobs that the government has aren't worth anything because the best and greatest young minds will go elsewhere where they can be paid better wages and not deal with things like which congress man slept with which intern. Is the government doing the "People" a favor by screwing Microsoft. NO THEY AREN'T. If the government had people dealing with IT as smart as Microsoft, or Apple Computer, or Cisco, or Sun, then maybe they could understand what they are doing to the PC user in the long run and see how they're going to affect the PC users of the world. The government looks like asses now and that's the bottom line.

Next time they pursue an IT giant they need to do more homework.

Dear Justice Department,

Bill Gates's blatant snubbing of anti-trust laws, and his getting by with it this far, is very disturbing to me. Each and every objection he has had to charges and indictments has bordered on preposterous. And the appearance of his buying off his enemies is exceptionally disturbing to me. It confirms yet again that if you have the money, you can get away with anything. Mr. Gates's claims that Microsoft was merely an

innovative company that became obscenely profitable using good old capitalistic tactics. MS software is installed on every computer one buys; the manufacturers have no choice in the matter; and Mr. Gates is clearly responsible for this monopoly.

Having worked in law firms for the past 15 years, I have watched a superior legal word processing system (Word Perfect/Corel) be choked out of existence by MS Windows, an operating system which is ONLY friendly to Microsoft software programs.

I've seen secretaries, paralegals, word processors, lawyers, and computer systems managers struggle for hours and hours, trying to make non-MS software programs work on their PCs. I've seen law firms spend hundreds of thousands of dollars switching everything to Microsoft because MS Outlook would not attach a Word Perfect/Corel document in readable format.

I, like thousands of other consumers, have had no choice but to buy computers with carloads of Microsoft programs already installed—programs which I did not need, did not want, and did not use, but paid for nonetheless. Microsoft (Bill Gates) deserves no slack from anyone. He should be prosecuted to the fullest extent. After all, he will still end up the richest man in the world, proving to everyone that unscrupulous business practices do indeed pay off in the U.S.

Dear Judge Kollar-Kotally,
I am a 20 year software executive who has had the opportunity to both partner with Microsoft and compete against Microsoft during my career. As such, I have spent time in Redmond, WA and gotten to know firsthand both the culture, and Machiavellian management philosophy that has been a legacy at Microsoft.

In recent days, I have come to know through an ex-colleague some of the details relating to the Proposed Settlement made by the Justice Department with Microsoft, and to say the least, I am displeased by them. This is why I am writing to you today.

Your Honor, how could the Justice Department grant Microsoft a government-mandated monopoly of the software industry and even worse— other technology markets? Clearly, this decision would seriously jeopardize all competitors—both now and in the future. This decision would clearly violate some basic principals of Capitalism, such as our right to choose, our right to fair competition, fair pricing, etc.

In closing, your Honor, I submit to you that like never before in our Country's history, Microsoft has unequivocally shown itself to be the proverbial 800 pound gorilla. Their illegal conduct and activities (bribing & threatening partners and competitors) have been proven time and time again. I would like to see Microsoft be brought to justice for the good of our country, our economy, and most of all—the good of our people. I like millions of other Americans are counting on you, and counting on justice to prevail.

And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of

stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
gordon greider

Subject: Microsoft Settlement

I do not see how Microsoft's proposed settlement would follow the nature of the antitrust case against it. A direct abuse of their position to promote their products to a population that may be unfamiliar to computer technology should not be allowable, let alone condonable. I also believe that the damages caused by Microsoft's anticompetitive actions far outweigh the resolutions of this settlement. As a computer user, I know that my right to choose software has been denied by Microsoft's control over the industry. Based upon my need to work and communicate with the rest of the computing world, I find myself using Microsoft's products for the sole reason of an absence of choice. The actions of Microsoft as a company to achieve this monopolistic position are common knowledge, and because of the extreme repercussions they have had on the industry and society, this settlement should not be accepted.

Sincerely,
A Concerned Citizen and Computer User

Subject: Re: U.S. v. Microsoft: Settlement Information

Dear sir:

Like a leaking vessel the apparently illegal and patently suffocating behaviors represent an assault, perhaps not unprecedented but in breadth and scope, or any way you would choose to characterize this matter balanced against the facts an accomplished blatant assault. That a perversion of the sense of fair play formerly ingrained above any power of any law in the ordinary intercourse of American life has occurred, is beyond doubt and lamentably so. The seeping and leaking of this twisted crushing conspiracy to lay waste to honest vendors in a warlike and the subsequent loss of honest exchange is pretty much beyond any defense in 1997. The thought of investing in a superior product seems to have failed to appear as a strategic position of sufficient value to these ladies and gentlemen. I could hardly fail to mention that the organization has lost in every court they have stepped foot in every way and manner presented in this matter.

The history of dilatory and delaying complaints lain before the courts is another example of the stupendous resources

available to this seemingly obvious criminal enterprise. By these actions one see's the scorched earth mentality of men and women at war. These matter's to a man who spent an entire life in fair competition for an ordinary compensation provide as with the Enron debacle a failure of American values as expressed through our history in the political arm's of government. Those who would become a government by fiat through the strangulation of free enterprise and speech are no longer restrained by moral or ethical suasion's if in fact they ever are, but more astonishingly the legal system has denied relief through justice delayed. The price we pay for permitting bullies to swagger are becoming stylish to frown upon, but I think the public awareness is easily manipulated by time, time which has no virtue to clean the filthy but to put the odor perhaps out of probity. Here again the means of this organization to place itself beyond the law through the applications of what appears to the native mind massive exertion a staggering 666 millions in legal fee's this year, for them a trifle, which they possess only by their robbing the consumers of our country and our world with the strange compliance of our perhaps fatally weak political system, paralyzed by money not argument.

That there is no reasonable argument to satisfy the relevant facts against them, has lead to it is fair to say, an open warfare on those less strong, some of whom may not have been the best at least they were not laughable. That by hardening their attitude while thumbing their nose at the institutions of American life and forcing our society to be drained of their qualities and vigor by the inevitable collapse of intelligence, as compared to the robust nature of competition's inspiring branches of thought and improvement not even dreamed of, to support this endeavor of government by fiat and the fracturing of economy to what has become insecure, and the weakest of splinters. Virtually no avenue of restraint of trade has failed to be exercised by the people of this software company. The dizzying scope of low minded bullying, predatory practices, revolts any sense of dignity or decency, and regard for American virtues and essence's of fair play, and English common law which levels the legal profession to every walk of life with a blind eye to privilege as determined by the makers of the law not the makers of money and the subsequent privilege.

I have read the complaint and I have watched for years in sorrow as the mediocre software pushed on the world that has cost all of our friends and ourselves the freedoms of strength in access to knowledge and information by what in any simple analysis is by far the costliest system to use in wasting of power of computer system drives with leaky, and from poorly written programs, requiring systems to live within a narrow form of communication that stands alone in reflecting the American will to embrace all culture denied. Taken as a direct cause of the effect one can see how difficult it might be for an outsized behemoth to repress it's singular wish to mold every face in it's image. However it is seen that this is as a

poor way to write software or any other fine cultural artifact as appears in recent or further memory. I believe that in the end the common sense of ordinary people like myself struggling all our lives for our families with little time or energy left at the end of a long day with no secretaries to pick up the slack can see that any endeavor suffer's when not requiring devotion to it's subject as opposed to subjecting it's objects, and those objects would be us.

Sincerely
Frederick Royce Perez.

Subject: Consultant/end user comments on your proposed settlement
<Nov. 16>

I'm a computer consultant. I believe a stripped-down, basic version of Windows should be required, for less cost than the bloated version. The OS is like a chassis upon which each user builds his or her software set that s/he needs to use to get work done. Microsoft has always complicated things by putting in extra stuff to try to kill competitors and never has focused on stable, quality products. Internet Explorer in Windows 98 never had to be commingled with the operating system for technical reasons. They could have made it a removable component but purposely engineered it to be nearly impossible for the end user to remove. (It is possible. There's a product that does it called "98lite" [www.98lite.net]) In Windows XP, one can't (easily, if at all) remove Outlook Express, Windows Messenger, Media Player, nor Internet Explorer. When there are problems with these applications, they can't be solved by un- and reinstalling. This has always meant wiping everything off and starting a clean install from scratch in the past, and I don't see that changing. It's a major hassle and waste of time, and all of it is unnecessary. Microsoft only does it to shut out competitors. I cannot choose what to have on my own computer, nor can other users. We also can't buy a home PC from a major manufacturer without Windows already installed. None of this is being addressed.

The proposed settlement provides no punishment for all the damage MS has caused to the industry, and to customers. All my *personal* frustration with MS products, which I have no choice but to use for work, receive no redress in the DOJ settlement.

Sincerely,
 Stephen Frost

 Subject: Microsoft Settlement

Thank you, for the opportunity to comment on this subject. I would like to offer a suggestion on how best to settle the current case with Microsoft.

I think the settlement solution could be quite simple. It seems to me that the punishment should fit the crime, and in this case the crime is the way Microsoft used it's monopoly position and it's web browser "Internet Explorer" to do harm to a competitor. I think, the best way to punish them for this would be to take away the weapon they used to commit the crime. In this case it was their internet browser "Internet Explorer". Take away their browser technology and make it available as an open source product. At the same time, do not allow them to produce another browser to compete with it. This will hit Microsoft right where it hurts, and more importantly, the punishment will have fit the crime. You also send a clear message that attempting to use their monopoly position like this again, may result in losing the very technology they are trying to control.

Just my 2 cents,
 Sincerely,
 David Kisner

Dear Attorney General Ashcroft:

I want to congratulate you on your courageous and effective leadership during this time of national crisis.

However, the purpose of this letter is to enter a plea that the Federal Court hearing the Microsoft antitrust case would accept the current settlement of that case. The current settlement encourages consumer product choice, promotes product innovation, and provides nonMicrosoft related computer and software manufacturers with confidence in marketing their own products. I feel that the current settlement is fair on those grounds.

I trust that the Federal Court will accept the current settlement.

Thank you for having considered my plea.
 Respectfully,
 Larry Rodgers

Subject: Microsoft Settlement
 NO COLLECTION OF SPECIAL-PURPOSE RESTRAINTS CAN ALTER THE STRUCTURAL REALITY OF MICROSOFT'S MONOPOLY OVER THE DESKTOP OS.

I am a programmer, software developer, and entrepreneur. I am writing to say that the proposed settlement is woefully short of addressing the fundamental problem of the Microsoft monopoly. Other people have commented on various technical aspects of the proposed settlement (such as enforceability, etc.), and I won't reiterate those points. The larger problem is that no collection of special-purpose restraints (such as forcing Microsoft to cede OEM desktop control, etc.) can alter the structural reality of Microsoft's monopoly over the desktop OS. That is like negotiating over the size and shape of electrical outlets with the company that owns the electric grid. Microsoft's monopolistic advantage is much broader and deeper than any particular business practice that might be restrained.

What hasn't been discussed publicly is the idea that it is APPROPRIATE for the OS to be treated monopolistically. There is great benefit, for businesses, consumers, and developers, to be had from standardization on a single OS. But we will receive this benefit only if the OS is ADMINISTERED AS A PUBLIC UTILITY, for the common good. Microsoft certainly has not done so. The first step in this direction is to force Microsoft to split off its OS unit from every other business unit.

To Whom It May Concern at the Dept. of Justice:

The carping against Bill Gates and Microsoft comes loudest from a couple of ego-maniacs who do the same and would do even more with their own companies if they could. Bill Gates and Microsoft have done what they had to do to succeed in that marketplace against the other sharks in the water.

I support some degree of government regulation of business practices. For the benefit of everyone, these powerful people need to play by some rules. But Microsoft's success has had a beneficial effect in terms of establishing a common platform for most computing. Without that, the benefits of computer technology would not be as widespread as they are, and it would be extremely expensive for businesses and

consumers to accomplish anything across various platforms. Even the fact that there is just one other semi-popular browser besides Internet Explorer has ballooned development costs at the company I work for, where we are making training materials available via the Internet. We'd be so much further along if we didn't have to test and fix everything we did so it would run on two different browsers, and our programs could be so much more engaging if we didn't have to develop to the lowest common denominator of both browsers (which denominator, by the way, is quite a bit lower on the non-Microsoft browser).

Please don't create chaos in the computer industry just so the second-richest megalomaniac in the world can satisfy his selfish desire to be number one. Things were going better for consumers and the economy before the senators from the home states of Microsoft's competitors started skewing the picture by political means. Microsoft's competitors are no more altruistic or deserving than Microsoft. Give us all a break.

From: Roberts, George Gordon
To: Microsoft ATR
Date: 1/20/02 8:47am
Subject: Please break-up the Operating System monopoly!

I would suggest that the following measures be taken against Microsoft:

1. Stop Microsoft from requiring computer manufacturers to place their operating system on all new computers. Presently it is very difficult to find a new system without windows unless you are willing to build it yourself. This excludes about 99% of computer users, and effectively grants Microsoft a monopoly right off the bat.

2. Require Microsoft to be more open with its Operating System code (i.e. the program itself) and File System formats. This would allow other manufacturers to design competing software without a lengthy process of "back-engineering" (that is to say guessing at the contents of what has been up to now a "black box"). Only then can other companies be able to design competing software at a reasonable price. This would benefit Windows users as well by giving them a greater variety of software (that would, incidentally, have fewer bugs as a result of the greater number of people that could correct the program for themselves as a result of being able to spot it in the program code itself).

3. Prohibit Microsoft from forming cartels with hardware manufacturers. Presently,

many pieces of hardware are made to be specifically incompatible with Non-Microsoft operating systems. This is possible because part of the hardware function is replaced by software code that is kept secret by both the hardware manufacturer and Microsoft. Thus, someone wishing to try a Non-Microsoft Operating System often finds that key pieces of their hardware, (such as their modem) does not work, and are thereby forced to endure unnecessary hassle and expense, and thus discouraged from exploring alternatives. 950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I would like to take a moment to express my views regarding the Microsoft antitrust case. I feel that the settlement reached by the Department of Justice was fair and reasonable. It will allow Microsoft to remain the industry leader while granting the competition more chances to compete, and the consumers more choices between products.

Microsoft has agreed to concessions that have made precedent with regards to antitrust cases. Microsoft has agreed to document and disclose for use by its competitors, various interfaces that are internal to the Windows operating system. Also, computer makers have been granted broad new rights to configure Windows so as to promote non-Microsoft programs that compete with programs already included within Windows. It appears that Microsoft has agreed to give up much of its competitive advantage and market share in an effort to conclude this case.

To put it in perspective, it would be ridiculous to see Nike carry the Reebok logo on its most popular products. Microsoft is willing to take on significant restrictions, however, so I will not oppose them. This settlement will bring a much-needed end to this case, and I support it.

Sincerely,
Ellis Howard

US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

As a supporter of Microsoft and common sense policies, I write you with concern over the recent developments in the settlement. Not only do I think that the entire process was ridiculous from the beginning, but to go even further and delay the settlement after three years of negotiations is too much. This settlement is part of a very well thought out process and should be enforced immediately. Further litigation will only force our technology industry to fall behind in the global market.

As our economy continues to dip, we need to support our technology industry in any way possible. By supporting this settlement, we allow our technology industry to further focus on innovation. Microsoft has done their part to make drastic changes for this settlement, and now it is our turn. Some of the changes agreed upon are in licensing, marketing and even design. All of which are beneficial to our IT sector as a whole. This is certainly why we need to help support the settlement and get our technology industry back to business. Please help to stop any

further action against this agreement. Let us help support the IT sector and get us back in gear.

As a Nation, we have to move on to more pressing matters and stop beating a "dead Horse". Enough is enough

Washington, DC 20530

Dear Mr. Ashcroft:

I want to take a moment to express my support for the settlement reached last year between Microsoft and the Justice Department. There is no doubt ending this litigation is in the public's interest and will benefit the computer industry.

The terms of the settlement are comprehensive and require many adjustments to Microsoft's former business practices. One area of change is in the area of intellectual property rights. Microsoft has agreed that if a third party's exercise of any options provided for by the settlement would infringe any Microsoft intellectual property right, Microsoft will provide the third party with license to the necessary intellectual property on reasonable and non-discriminatory terms. Also, any third party

who feels Microsoft is falling short of their obligations can lodge a complaint with a Technical Committee to be formed under the agreement.

The settlement will give a boost to the economy during this current recession. I hope your support for this settlement will continue and no further action will be taken on the federal level.

Sincerely,
John Ford

Subject: Microsoft Settlement

Dear Sir;

I think it is very important that the Microsoft settlement is accepted. The last thing this country needs now is more litigation on this issues. The antitrust laws should first serve the consumers. The consumers have spoken with their dollars and purchased Microsoft products where they were superior to others in the market and/or at a lower price. Second the antitrust laws are not meant to protect businesses from competition. Those special interest groups and companies who have not be able to successfully compete with Microsoft should work on their own products and company and not ask the Government to hand cuff Microsoft so they can win in the market place. And third, unfettered competition among business generally benefits consumers even if a single firm captures most or all of the market. This is the case in the software market.

The consumer wins and is winning with lower priced better products. Settle this case now and let the high tech software industry get back to helping our economy thrive again.

Dear Honorable DOJ,

I am an Information Technologist of nearly twenty years experience.

It is my humble opinion that Microsoft have "the book" thrown at them for their consistant obstruction and abuse with technological progress. Their sheer and overwhelming power dictates Information Technology policy at American business" at a great cost—similar only to a heroin dealer luring potential addicts and doing whatever possible to retain power over the user through manipulating standards, pricing and practices—then by releasing dangerously flawed techology with the hopes that "next time" it will be better. The sheer number of security holes, comparatively over priced software, predatory practices without concern for true innovation and the complete abuse of all that is good in this country disgusts me.

Please don't let them get away with this again. There are many great companies in the US that need to grow, but Microsoft is taking all the sunlight and water away.

Respectfully yours,
Russell Maggio

To Whom This May Concern:

This email serves as an objection to The Justice Department's proposed settlement against Microsoft Corporation. Microsoft has been found guilty by 2 courts of illegal practices and violating the Sherman Anti-Trust Act. When AT&T was sued by the Justice Department, the company ultimately agreed to be split into different "baby bells." The settlement was punishment against AT&T. The proposed settlement between the DOJ and Microsoft would be a slap on the wrist and would not punish Microsoft for any of the illegal practices they committed.

Microsoft would not be punished if the DOJ proceeds with this proposed settlement. No one would benefit from this settlement but Microsoft.

Thank you:

Landon Hundley

To whom it may concern

Microsoft is at it again!

It seems that Microsoft wants to control the 3D API arena in favor of its own Direct3D.

What better way to strangle its mortal enemies (Linux, OSX, etc. . .)

I hope you consider this in your decision to stop this software behemoth from bullying everyone to see their way.

Humberto Ballesteros IT/MIS

From go2mac.com:

Is Microsoft Trying to Kill OpenGL?

Thu, 17 Jan 2002, 07:04

The Register is running a story about how Microsoft has aquired key 3D patents from SGI. 3D technology is not just for video games and immersive systems, but it is also part of the infrastructure that supports important sectors of the economy, such as design visualization and scientific imaging. Such critical infrastructure should be based on open standards, but what happens if Microsoft starts a new round of lawsuits in this arena? What will happen to Mesa3D? It is often very difficult to obtain Apple support for 3D devices, and I wonder what this deal means for Apple users.

Java and its collaborative community provide our company with many value propositions that Microsoft products do not. Working for a small company where every dollar counts, Java is a part of our core strategy set for moving forward. I would hate to see anything help Microsoft continue to hinder companies that choose Java-centric solutions. They have already effected us again this year by taking the Java Virtual Machine out of the browser.

Thanks

Subject: I disapprove of Proposed Final

Judgement in US vs Microsoft

CC: Russell—Feingold@

feingold.senate.gov@inetgw.senate. . .

I'm not a lawyer, but have an Electrical Engineering degree and have been supporting other hardware and software Engineers in computer aided software and hardware design since 1988. I have been involved with computers since 1973.

It means something that I am spending my heartbeats, my time, putting together these comments. They are heart felt; I believe this ruling will adversely affect millions in there daily experience with software; it will impact people's livelihoods- it does matter.

<http://www.linuxplanet.com/linuxplanet/opinions/3952/1/>:

The result is the proposed settlement, which would grant Microsoft its operating system monopoly—indeed, contains wording such that it would no longer be illegal for

Microsoft to maintain that monopoly—while saying that if Microsoft wants to, it can make it easier for people to write Windows applications, but it's by no means required to do so. In short, the settlement is a travesty, an ill-advised embarrassment that flings down and dances upon the law and upon all but the most twisted notion of justice.

I do not understand why the Department of Justice caved in so easily to Microsoft's demands. I want freedom of choice in the software operating system market! I'm frustrated that for years our department has been paying for Microsoft software on my PC that I never use, don't need, and do not want! IT departments all over the country have been brainwashed into thinking the Microsoft software is the only safe choice—this Lemming mentality is foul and counterproductive; we're giving too much power away to Microsoft.

As the quote below suggests the Proposed Final Judgement (PFJ), would allow Microsoft to write their code in such a way as to block non-windows operating systems from running it.

<http://kegel.com/remedy/remedy2.html>: the PFJ (itself, in sections III.D. and III.E., restricts information released by those sections to be used "for the sole purpose of interoperating with a Windows Operating System Product". This prohibits ISVs from using the information for the purpose of writing operating systems that interoperate with Windows programs.

By not providing some aid for ISVs engaged in making Windows-compatible operating systems, the PFJ is missing a key opportunity to encourage competition in the Intel-compatible operating system market. Worse yet, the PFJ itself, in sections III.D. and III.E., restricts information released by those sections to be used "for the sole purpose of interoperating with a Windows Operating System Product". This prohibits ISVs from using the information for the purpose of writing operating systems that interoperate with Windows programs. Specifically LINUX has two popular tools "WINE" and "SAMBA" which allow windows software to run on LINUX and Windows users to share files with LINUX boxes. Both of these applications will become illegal and inoperable under the PFJ if understood it correctly. This would be a severe blow to the viability of LINUX as a competitive OS to windows. Please ammend the settlement to protect the viability of "WINE" and "SAMBA".

<http://kegel.com/remedy/remedy2.html>: Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

Sections III.F. and III.G. of the PFJ prohibit certain exclusionary licensing practices by Microsoft towards ISVs. I want to be able to buy a PC with out any Windows software loaded, and with out paying a dime to Microsoft. Apparently the PFJ allows Microsoft to "retaliate against any OEM that ships Personal Computers containing a competing Microsoft operating system". I object to this! The below excerpt strikes me as direct discrimination against open source software by Microsoft. Microsoft is

specifically preventing ISVs from bundling code they create with the Microsoft Windows Media Encoder 7.1 SDK (software development kit) together with any open source software. This strongly limits the ability of open source software applications to compete with Microsoft. I do NOT understand how this is not outlawed and in fact may be condoned by the PFJ. See excerpt below:

<http://kegel.com/remedy/remedy2.html>:

However, Microsoft uses other exclusionary licensing practices, none of which are mentioned in the PFJ. Several of Microsoft's products' licenses prohibit the products' use with popular non-Microsoft middleware and operating systems. Two examples are given below.

1. Microsoft discriminates against ISVs who ship Open Source applications The Microsoft Windows Media Encoder 7.1 SDK EULA states . . . you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. "Publicly Available Software" means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models . . . Publicly Available Software includes, without limitation; software licensed or distributed under any of the following licenses or distribution models, or licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (SCSL); . . . Many Windows APIs, including Media Encoder, are shipped by Microsoft as add-on SDKs with associated redistributable components. Applications that wish to use them must include the add-ons, even though they might later become a standard part of Windows. Microsoft often provides those SDKs under End User License Agreements (EULAs) prohibiting their use with Open Source applications.

This harms ISVs who choose to distribute their applications under Open Source licenses; they must hope that the enduser has a sufficiently up-to-date version of the add-on API installed, which is often not the case.

Applications potentially harmed by this kind of EULA include the competing middleware product Netscape 6 and the competing office suite StarOffice; these EULAs thus can cause support problems for, and discourage the use of, competing middleware and office suites. Additionally, since Open Source applications tend to also run on non-Microsoft operating systems, any resulting loss of market share by Open Source applications indirectly harms competing operating systems.

2. Microsoft discriminates against ISVs who target Windows-compatible competing Operating Systems The Microsoft Platform SDK, together with Microsoft Visual C++, is the primary toolkit used by ISVs to create Windows-compatible applications. The Microsoft Platform SDK EULA says: "Distribution Terms. You may reproduce and distribute . . . the Redistributable

Components. . . provided that (a) you distribute the Redistributable Components only in conjunction with and as a part of your Application solely for use with a Microsoft Operating System Product. . . " This makes it illegal to run many programs built with Visual C++ on Windows-compatible competing operating systems. By allowing these exclusionary behaviors, the PFJ is contributing to the Applications Barrier to Entry faced by competing operating systems. Microsoft willfully acts to thwart competition using what in my opinion are the software equivalent of "dirty tricks"; they have demonstrated this behavior more than once, why does the PFJ show so much trust in Microsoft- they not to be regulated; they can NOT be trusted:

<http://kegel.com/remedy/remedy2.html>:

3. Microsoft created intentional incompatibilities in Windows 3.1 to discourage the use of non-Microsoft operating systems An episode from the 1996 *Caldera v. Microsoft* antitrust lawsuit illustrates how Microsoft has used technical means anticompetitively. Microsoft's original operating system was called MS-DOS. Programs used the DOS API to call up the services of the operating system. Digital Research offered a competing operating system, DR-DOS, that also implemented the DOS API, and could run programs written for MS-DOS. Windows 3.1 and earlier were not operating systems per se, but rather middleware that used the DOS API to interoperate with the operating system. Microsoft was concerned with the competitive threat posed by DR-DOS, and added code to beta copies of Windows 3.1 so it would display spurious and misleading error messages when run on DR-DOS. Digital Research's successor company, Caldera, brought a private antitrust suit against Microsoft in 1996. (See the original complaint, and Caldera's consolidated response to Microsoft's motions for partial summary judgment.) The judge in the case ruled that "Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft." That case was settled out of court in 1999, and no court has fully explored the alleged conduct.

The PFJ as currently written does nothing to prohibit these kinds of restrictive licenses and intentional incompatibilities, and thus encourages Microsoft to use these techniques to enhance the Applications Barrier to Entry, and harming those consumers who use non-Microsoft operating systems and wish to use Microsoft applications software. My understanding of Microsoft's latest operating system is that it has become more and more "paternal" and intrusive—father Redmond knows what's best for you, and will learn all about you. . an arrogant and disrespectful attitude. .

My view is that Microsoft has stifled innovation. The have taken years and years to catch up to he competition in robust reliable operating systems. They have not won because they create the best products, they win because of their dirty tricks, and excellent marketing. In general I view their software is a closed black bug filled box. Users find the bugs, and users pay Microsoft

to fix them. The process of debugging their software takes years of end users time and is very frustrating.

In contrast my experience with Open Source software (GNU tools and LINUX), and with Hewlett Packard or SUN UNIX has been wonderful. Please see <http://kegel.com/remedy/> for additional links. regards,

Re: Proposed Final Settle in United States v. Microsoft Corp.

I'm writing to protest the proposed settlement with Microsoft in *United States v. Microsoft Corp.*, under the provisions of the Tunney Act (Antitrust Procedures and Penalties Act, 15 U.S.C. ? 16) As a professional in computer, with over 20 years of experience in computer networking and Internet development, I believe that the proposed settlement is fundamentally flawed and will fail completely to address the root level problems that the Microsoft Windows monopoly poses to this country.

In short, I don't believe that the proposed settlement provides adequate redress to American businesses and consumers for the real and tangible damages that they have suffered due to Microsoft's illegal abuse of its Windows monopoly, nor will the proposed settlement ensure that Microsoft doesn't continue it's illegal business practices in the future. The finalized outcome of *United States v. Microsoft Corp.*, 87 F. Supp.2d 30 (D.DC 2000) will have lasting, substantive and historical consequences on American businesses, individuals and the future effectiveness of antitrust law in the United States.

The proposed final settlement does not demonstratively provide of the claimed benefits to consumers as stated in the Proposed Final Judgement. In addition, it offers little or no relief or restitution to the American Businesses and individuals who comprise the victims of its illegal abusive practices. The Final Proposed Settlement should be rejected and, absent a completely new Settlement Proposal from the Defendant, the Court should continue with the Penalty Phase of *United States v. Microsoft Corp.* towards the goal of achieving a settlement or judgement that adequately and permanently addresses these issues.

I offer the following arguments to the Court in support of my request to reject the Proposed Final Settlement.

Microsoft's Monopoly gives it undue political and economic influence and threatens compliance. The de facto monopoly of the Windows operating system and Office business suite makes the majority of the American businesses and individuals

dependent on these products in the course of their daily activities. Thus, everything related to the Microsoft Windows products almost immediately impacts the majority of our institutions. This, in itself, is an enormous problem with potentially devastating consequences for our Country, freedoms, privacy and well being. The pervasiveness of Microsoft's Monopoly and America's current dependence on Microsoft's products prevents the Proposed Final Settlement's ability to deliver on every point of the OVERVIEW OF THE RELIEF section of the Competitive Impact Statement in that every action it takes will necessarily have huge significance to American Businesses and individual consumers and the ability of the Government to react effectively after the fact in restraining Microsoft's actions will be practically impossible. This is evidenced already in the significant business actions Microsoft has already taken during the course of United States v. Microsoft Corp. which are not addressed by the Proposed Final Settlement. In short, by the time the proposed regulatory system can react, to an action by Microsoft, the result will be a fait accompli. Technology in general, and Microsoft in particular move to fast to be effectively regulated under the proposed agreement. The Windows XP and Microsoft .Net are two relevant examples of Microsoft technology that has outstripped the proposed relief before it is even in place. The fact that nine states have rejected the proposed settlement suggests that Microsoft's political power is influencing the DOJ to accept a settlement that is not in the interests of those states in the opinion of their Attorney's General. Window XP and Microsoft .Net vastly extend Microsoft's monopoly. The case itself has proven that Microsoft illegally abused it's monopoly in the past to the detriment of it's customers and the American public. In the time since that ruling, Microsoft has embarked on the most ambitious and aggressive expansion of its business areas in its history. The Windows .Net platform is designed from the bottom up to be a required participant in every business transaction conducted online. Whether they achieve that goal or not will only be known in the fullness of time, but the fact is that they are putting every resource they can towards that end. This point directly addresses the Proposed Settlement's OVERVIEW OF THE RELIEF points: 1, 2, 3, 4, 6, 7 & 8.

In addition, it violates the spirit of the Proposed Final Solution which, ". . . seeks to eliminate Microsoft's illegal practices, to prevent recurrence of the same "or similar practices and to restore the competitive threat that middleware products posed prior to Microsoft's unlawful conduct. " The Microsoft Windows monopoly hurts American productivity. An equally serious problem is the increasing cost to American business and individuals of Microsoft's predatory business practices. The constant stream of required updates, patches, and new releases of Microsoft products is a constant and expensive drain on the American economy. At the same time that most businesses are increasingly dependent on Microsoft products, they are finding that the financial and productivity costs of these

products to be increasing dramatically. This trend will only increase as the pervasiveness of the Microsoft Windows platform increases and it represents an unfair abuse on Microsoft's monopoly on American businesses and individual consumers. Microsoft's the cost of Microsoft Windows products, as they relate to end users is not addressed at all in the Proposed Final Settlement, but any settlement or judgement that is to provide effective relief must address these issues.

Microsoft's New Licensing Practices are abusive. The Proposed Final Settlement, Section III A discusses measures to protect OEM's from predatory and anticompetitive practices by Microsoft. It is an irreparable flaw in the Proposed Final Settlement that it doesn't address these same protections for American business and individual consumers of Microsoft products. A current example of Microsoft's abuse in this area is it's aggressive campaign to proactively police product licensing within it's user base. Through it's own efforts and through proxy groups like the SBA, Microsoft has become an increasingly intrusive and hostile presence in the American business community via their costly, time consuming and abusive "Licensing Audit," and "Amnesty," programs. These practices directly target business and individual consumers of Microsoft products using a "guilty until proven innocent," premise and the thinly veiled threat of legal action to force compliance via expensive and time consuming software audits. These programs reveal a complete disdain for American businesses and consumers that is unprecedented historically.

Compliance itself is a vague and shifting target due to the constantly changing nature and terms of Microsoft's software licensing policies. A complete and confident understanding of the licensing agreements accompanying most Microsoft products is, literally, impossible for anyone without a sound knowledge of contract law. At the same time, laws such as the UCITA are increasing the enforceability of these shrink wrap license agreement. Microsoft has publicly announced that it intends to shift its emphasis from a User License Agreement to a Subscription-based model wherein they will receive regular required payments from users of their products and have the ability to force upgrades on their user base at will. Speaking as a computer professional and a consultant representing a variety of business and individual clients, I can say that no one I know thinks such an arrangement would benefit them or their business. This issue must be addressed with effective and permanent relief in any final settlement or judgement. National Security could be compromised by the Microsoft Monopoly.

Finally, although it is not addressed explicitly in the Proposed Final Settlement, the real and significant threat to National security must be considered in any settlement or judgement of United States v. Microsoft Corp. Many computer professionals and security experts believe that we will soon face a terrorist attack that focuses and is waged against our information systems and national Internet infrastructure.

They are basing their believes on their daily experience in coping with the virtually continuous computer virus attacks that are focused on Microsoft products and which exploit programming flaws in these software applications. In point of fact, any objective review of Microsoft's security performance would have to conclude that they are not capable of producing a secure version of their operating system. Their most recent release, Windows XP was vigorously touted by Microsoft as their most secure version yet. This seems almost whimsical in retrospect in that reality of Windows XP since its public release has been the announcement of one security-related bug after another. This has culminated with the recent UniversalPlug&Play bug which allows a hacker to take complete control of a Windows XP system and do anything that the authorized user could do. The security flaws in Microsoft Windows cost American businesses and individuals billions of dollars in lost productivity, untold aggravation and are potentially disastrous in the event of a determined terrorist attack. Anyone familiar with the technical debate on Windows security will confirm the potential for a DDoS attack against Windows XP that could conceivably shut down the Internet in America. As a monopolist, Microsoft should be subject to legal liabilities for the direct losses incurred through the use of it's faulty products. This issue is not addressed in the Proposed Final Settlement, but it must be considered in any effective and permanent settlement.

Summary, Conclusions and Request to the Court In summary, I believe that the Proposed Final Settlement does not ". . . provide a prompt, certain and effective remedy for consumers by imposing injunctive relief to halt continuance and prevent recurrence of the violations of the Sherman Act by Microsoft that were upheld by the Court of Appeals and restore competitive conditions to the market." The consequence of the adoption of the Final Proposed Settlement would result in the continued abuse of the Microsoft Windows monopoly and further damage to American business and individual consumer. For a multitude of reasons this cannot be allowed to happen. The United States v. Microsoft Corp. may be the best chance that we will ever get to effectively solve this problem and rectify Microsoft's abuse of it's Windows Monopoly.

For the reasons stated in the body of this message, and others, I encourage the Court to unequivocally reject the current propose Settlement and begin the penalty phase of the case again with the stated goal of providing adequate redress to American business and individual consumers of Microsoft products and to ensure that the illegal monopolistic actions Microsoft has been convicted of will not reoccur ever again.

Thank you for your consideration,

To Renata B. Hesse

Dear Ms. Hesse,

I would like to comment on the proposed settlement. I have grave concerns that the terms merely allow Microsoft to further imbed its products into the education and library cultures. I have first hand experience of the restrictions placed on use of so called Gates Foundation donations of CPU's which come pre loaded and unable to be added to with anything other than MS products!

They are currently proposing a Gates Foundation project which will effectively create another monopoly of State Library systems on line data bases and delivery of "technology", substitute MS and CISCO, training for library staffs. While it is certainly true that other vendors such as Dell and Apple offer alternatives—it is almost impossible to match the MS juggernaut!

 Subject: Microsoft Settlement

The Honorable Kollar-Kotally,

I am writing this email as both a concerned citizen and a past observer of Microsoft's business practices in the PC industry while I was employed by Hewlett-Packard.

I am concerned that the proposed final judgment currently under review does not adequately protect the public or private enterprise from the power that Microsoft has and uses as the de facto monopolistic PC operating system provider. My concerns include the following points:

1) Enforcement mechanisms are administratively complex and lack the ability to impose sufficient penalties on Microsoft, enabling future unbridled behavior by Microsoft due to the disproportionate magnitude and timeliness of possible penalties.

2) Admitted violations are not sufficiently accounted for. This sends a clear signal that the risk/reward ratio for monopolistic behavior is clearly biased towards exercising it.

3) Anti-competitive behavior is not adequately defined or restricted, leaving far too many loopholes for Microsoft to continue their monopolistic manipulation of both mature and emerging technologies. When potential financial gain of new, innovative technology companies is reduced through such behavior, capital ceases to flow to where the US economy has its greatest potential return. Any judgment needs to do a much better job around issues such as middleware bolting and communication protocols, manipulation of emerging standards such as Java, and financial arrangements that prevent Microsoft customers from supporting other competitive software.

Thank you for your consideration of these points.

From: Leo Kreymborg
 To: Microsoft ATR
 Date: 1/20/02 2:18pm
 Subject: Microsoft Settlement

I would like to voice my great disappointment at the proposed settlement with Microsoft Corporation. This settlement has no potential for reversing the suffocating control that Microsoft has over end users and software developers.

It used to be just a few short years ago that users had some choice when it came to applications. WordPerfect, for example, formally the preeminent word processor, was destroyed by Microsoft predatory practices. After almost eliminating WordPerfect from the marketplace, Microsoft finished the job by buying 25% of Corel, the publishers of WordPerfect. It is no surprise that WordPerfect for Unix platforms has since been discontinued. Time after time, Microsoft has destroyed competing companies by hiding the details of the operating system from them, bundling software, purchasing competitor's companies, and many other practices designed to eliminate the competition.

Microsoft's latest moves to force registration of its software and operating system, compel business users into operating system upgrades, and its moves toward yearly licensing fees are typical monopolistic practices: once the competition has been eliminated and the customers have no choice, compel them to pay more for your product.

Microsoft has monopolized the operating systems, all the popular applications, and the internet browser. It is further extending its stranglehold on the computer industry by licensing one of its proprietary programming languages, Visual Basic, for use in unrelated 3rd party applications. 3rd party developers, not wishing to be left without good connectivity to Microsoft Windows, are coerced to license Visual Basic for use in their applications. Microsoft thereby extends its reach and control over the industry it yet another way. I am quite saddened that this proposed settlement has no potential for remedying this situation. Except for a valiant few who use Linux and other alternatives, that vast majority of businesses, individuals, developers, and government agencies are essentially forced to use the myriad array of Microsoft products. The entanglement of the operating system, the software, the browser, and the programming languages make disconnecting any one of them difficult, and makes switching all of them almost impossible for most users.

Microsoft is a monopolistic predator whose practices are destroying innovation, and essentially extorting billions of dollars annually from users and government agencies. I implore you not to permit this settlement to go forward, and to take forceful action against Microsoft on behalf of the American people.

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
 Shirlain Kramlich

Subject: Microsoft Settlement

Ladies and Gentlemen:

I have read the proposed settlement between US DOJ, the nine states and Microsoft. I fully support the proposed agreement. I believe the agreement is tough, reasonable and fair to all parties involved. The enforcement provisions of the agreement are sufficient to ensure Microsoft complies with the agreement. All of the states involved in this litigation should be held to this agreement. Most of all I believe it will benefit consumers. It is time to move beyond litigation on this matter. This case has adversely affected consumers because of its negative impact on the U.S. economy. In addition, it has taken away from the industry's ability to innovate and make our future brighter. The problem with the technology industry is not Microsoft but AOL, Sun Microsystems and Oracle.

Their CEOs continuous harping on Microsoft is uncalled for and is hurting the industry. It is hurting the industry's innovation and reputation. The rhetoric from the above companies is getting old. The reason Microsoft is leading the industry in so many ways is their creativeness and innovation. If the above CEOs would spend more time concentrating on their products rather than their perceived enemies they would be better off. So would the consumers!!

Thanks for the opportunity to comment on the Microsoft settlement. I hope the judge approves the settlement.

From: Charles R. Biggs
To: Microsoft ATR

Date: 1/20/02 3:36pm
Subject: Microsoft Settlement

Regarding Microsoft and the proposed settlement;

Microsoft is a monopoly. The District Court found that Microsoft is a monopoly and the Appeals Court agreed. Microsoft is still acting as a monopoly. As an example I offer my purchase of Turbo Tax, which is a program for completing the 1040 tax forms and calculating the amount of tax due. I purchased this program in September 2001 and it was delivered in December. When I loaded the program I was forced to load Microsoft Windows Internet Explorer version 5.5. I had no choice I had to accept this program with the Turbo Tax program. I was given a choice whether or not I wanted to load the latest AOL program. This practice is called "bundling". It was my understanding that Microsoft had been ordered and had agreed to stop this sort of activity. But here it is again and this is typical of Microsoft's monopolistic attitude.

The proposed settlement does nothing to stop Microsoft from continuing this practice. In fact it will damage the market which the Apple Computer Company has developed in the schools. The 12,000, used, rebuilt, computers which Microsoft will give to the nations schools under the settlement will be loaded with the Microsoft operating system plus all of the other Microsoft programs such as Internet access, word processing and spreadsheet. The children using these computers will become accustomed to the Microsoft system, related programs and will in the future be reluctant to switch to other systems or programs. The proposed settlement is a sham and it is my hope that it will be rejected.

Any suggestion that the proposed settlement is "fair and reasonable" is a sham I consider this unfortunate. Microsoft has all most destroyed Netscape an Internet access company which competes with Microsoft's Internet access because it has bundled its access program in with its operating system. This was not necessary and their statements to the contrary in my opinion were false. There were other programs written by other software manufacturers which Microsoft overpowered by bundling such as the Lotus word processing and spread sheet programs. They, in my opinion, did this by making it difficult for someone like me to install these programs and building in quirks which made these competing programs difficult to operate.

To repeat Microsoft is and under the proposed settlement will continue to be a monopoly and the settlement does nothing to punish Microsoft for its past actions and does nothing to keep it from acting as a monopoly in the future. This will damage competition for the development of new operating systems and innovative programs.

I appreciate this opportunity to comment on the proposed settlement.

From: Justin Sevakis
To: Microsoft ATR
Date: 1/20/02 3:48pm
Subject: Microsoft Settlement

This proposed settlement would reward Microsoft by giving them an unfair advantage over Apple by extending market share over the educational market. It does nothing in regards to the complaints lodged against Microsoft, and simply seems to provide them with an outlet for surplus refurbished product and a tax write-off.

AGAINST Microsoft's proposed settlement.

Dear Mr. Ashcroft:

The purpose of this letter is to go on record as supporting the settlement that has been reached between Microsoft and the Department of Justice. I am relieved to see that both sides could come to an agreement and settle the antitrust issue.

The proposed settlement is fair and reasonable, and the time has come to put this matter to rest. Millions of dollars have been spent, and valuable time has been wasted in the pursuit of the Microsoft Corporation. I feel that the settlement will open-up the IT industry, foster competition, and improve the economy. Microsoft has agreed not to retaliate against competitors who produce, promote, and ship software that competes with Microsoft's. This is a giant step in the right direction since companies will not have to worry about angering Microsoft.

I support this settlement, and hope that it is approved as soon as possible.

Sincerely,
Mike Stasko

DoJ, To Whom It May Concern:

The following is the opinion of a concerned citizen, consumer and Microsoft shareholder. Thank you for inviting comments during the Tunney Act review period regarding the proposed settlement of the Microsoft antitrust matter. The provisions of the agreement have been overwhelmingly accepted by the American public at large and by the consumer in general. It now is time to move on and let the matter rest. The

American consumer deserves to have the matter settled. To continue with this extended legal maneuvering is a disservice to us all. No company or its customers and shareholders should be held hostage by 9 State Attorney Generals. Political ambition or personal feelings should not be a reason to disrupt the normal conduct of business. Not once during the entire Antitrust proceedings was it proven that Microsoft harmed the consumer. However it is apparent to many of us that Microsoft competitors and the individual States they are located in are using the system to circumvent competition in the open marketplace. Let Microsoft conduct business without outside interference. A complete settlement without the threat of continued litigation would be a tremendous boost to our economy in this time of recession. Let the consumer in an open marketplace determine what is best.

Dear Microsoft Settlement:
The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
G. Keith Hall

Thank you for the opportunity to contribute. I have a suggestion that would be easy to implement, not involve any break up of Microsoft and would eliminate a settlement that is essentially an advertising gimmick. Since Microsoft has illegally built and maintained a monopoly. And since they have admitted this. And since their recent behavior has continued the practices for which they were sued. It is obvious Microsoft has hidden behind the law and will not participate in any real settlement. I suggest that the tool used to establish and maintain the monopoly be denied them. Just void the patents used for this purpose. I would believe

all patents involving the windows operating system are involved.

Thanks again,

Honorables,
It has come to my attention that Microsoft has recently acquired fundamental patents for 3D graphics technology and techniques from SGI. This is a dangerous situation, as it grants Microsoft significant leverage over the independent 3D hardware manufacturers who are currently supporting the only rival to Microsoft's Direct3D graphics API, OpenGL.

Microsoft has in the past worked to delay and distract advances in 3D graphics technology, such as in the abortive "Fahrenheit" plan with SGI in the 1990s. During that period, SGI was transitioning from selling Unix-only workstations to begin selling workstations running Microsoft's Windows NT.

At the same time, OpenGL was gaining on Microsoft's Direct3D in terms of features, hardware support, and developer support. If SGI wanted to sell NT boxes, SGI would have to agree to the Fahrenheit plan. The perfectly timed Fahrenheit deal slowed that advance of OpenGL by, among other things, reducing SGI's active promotion of it, and allowed Microsoft's Direct3D to gain a strong lead.

Yet OpenGL support still survived due to the interest of software developers and the support of third party 3D hardware manufacturers. This latest move by Microsoft to acquire core 3D technology patents would finish the hatchet job, granting Microsoft the power to force third party 3D hardware manufacturers to drop support for OpenGL, and ultimately stifle competition and innovation in the marketplace.

Please do not let this come to pass.

Thank you,
Matt Lindauer

I can not stand by a let those who are not inside the software "industry" as I am blather on about how Microsoft did not take any steps to suppress and/or eliminate competition.

OK, I'm a software techo-geek. I've been writing, using, and debugging software for 42 years. Most of those years were spent writing compilers, compiler building tools, and related utility programs like debuggers, linkers, and assemblers. In one of my previous jobs, we wanted to port a C compiler to the Windows environment. It compiled code that ran twice as fast as that compiled by the latest and greatest Microsoft offering. Our problem was that we had to take heroic measures to test our compiled code. Why? Microsoft will not and will not release the specifications of the object code that their system supports - the format that their linker accepts and their libraries contain.

Our compiler teams have faced the same problem. Some with deeper pockets than ours reverse engineered the Microsoft object code formats. That worked fine until Microsoft "improved" the formats, requiring another round of reverse engineering. Eventually, most gave up—just as Microsoft intended.

Who loses? Everyone who wants to create efficient programs to run in the Windows environment. First hand, that's not many of you, but second hand, as users of the programs that are available, that's most of you out there. Oh sure, there's the example of Borland, who bit the bullet and created their own complete closed system with its own unique set of file formats and libraries. One counter example with very deep pockets. All of the others eventually have given up chasing a sequence of "new and improved" Microsoft secret file formats. I'm sure that there are those in other niches of the software world who can tell similar stories about the Microsoft predator. Let's hear them!

Then there's Windows, or is that Windoze? It is the most bug ridden, unstable, sophomoric, "designed" by trial and error, half-baked piece of crap that masquerades as "operating system" that I've seen in my 42 years in the industry. I could go on and tell you what I really think!

Windoze usually hangs trying to shut itself down. Often, a crashing program destroys system information. One that I see a lot is that the ESCAPE key's meaning is altered. Guess what the "solution" is. Yep, yet another reboot. This on a machine that has hardware to protect the data of one program from all other programs! The "system" doesn't even protect its own vital data! It stores vital resource use information in fixed size 65,536 byte buffers. Program crashes often trash even them. Normal use overfills them.

As far as I'm concerned, UNIX is "the" operating system. OS/2 was great (after its initial teething problems) until Microsoft cut IBM off from the details of Windows 95 that they needed to be able to run the new generation of Microsoft tools—like Word and Excel. Denial of information necessary to competitors. Does that sound familiar?

I say, break up Microsoft, and make the various parts tell the others and all aspiring competitors the details of the file formats and API's. How many pieces? At least three: Windows, Applications, and Development Tools.

I am one of many U.S. citizens deeply disappointed by the proposed settlement between DoJ and Microsoft. As a computer professional for more than 15 years, I have used Microsoft products extensively and watched closely their behavior and actions. Based on both my own observations as well as the findings of this case, it is very clear that Microsoft is not only a monopoly but that it has consistently and repeatedly abused its monopoly position. Furthermore, when it has been called to task for illegal or inappropriate practices in the past, it has failed to end its basic unfair trade practices but has instead simply found new ways to continue its desire and intent to maintain firm control over the desktop computer industry. This control has consistently stifled innovation and competition, directly harming computing practices in this country as well as around the world.

I believe that the proposed settlement will contribute directly to a stagnation of computing growth and innovation that has been very evident in the industry for the last 3 to 5 years.

The best remedy would be to 1) fully split the company into two separate operations, one covering operating systems and one covering applications and development tools; and 2) release the full source code for the Windows 2000 and Windows XP operating systems to the public domain thereby allowing others to demonstrate what innovation and improvements are possible via freely shared ideas and knowledge.

Dear Honorable Judge,
As an immigrant from India, I am well aware of the effects of one business taking over an entire section of the market. While India is technically a free market economy, there is so much corruption, that many sections of the market have been monopolized. Often, it leads to one small group of men who become very wealthy, while the rest of the population cannot even afford the products. While they may claim to keep prices low, they will find loopholes and ways to inch prices up if they are allowed to remain a monopoly. I came to the United States to avoid this type of business practice. I hoped to come to a place where small businesses would not be crushed by an overbearing one. Please keep this from happening.

Instead of letting Microsoft give a large amount of PC's to poor schools, force them

to give competing computer brands to schools. That is the exact opposite of everything that Microsoft has strived for!! Instead of 10 Billion Dollars worth of PC's, give 10 Billion dollars of MACS. That way Microsoft won't be able to make a profit out of this punishment. Giving 10 Billion dollars worth of PC's will only influence schools to purchase PC's in the future, thereby turning this punishment into a profit.

Force Microsoft to use Netscape.com as it's home address, that way Netscape will at least have a fighting chance against Microsoft's free web browser. Also, force Microsoft to ship alternative operating systems on new PCs. The new MAC OS X, may have the capability to run on an Intel chip in the future, though it hasn't been announced yet.

Dear Mr. Ashcroft:
I would like to express my opinion regarding the Microsoft antitrust case. I was hoping Microsoft would not have to give in to the settlement, but understand that sometimes it becomes too costly to continue fighting. The settlement already approved by nine states in more that fair. I certainly believe that those who wish for Microsoft to be disbanded are only jealous that they did not come up with a better product. In my view, Microsoft is a "producer", and I applaud the success of this company. If there are companies that can produce something better than Microsoft, they should do it and let the consumers dictate which is the better product.

I see nothing more to be accomplished by further federal action. Are the states that want to continue litigation more concerned with investment return rather than consumer protection? I believe the settlement has accomplished what is fair to the majority. Let us put an end to this, once and for all.

In closing, I am very proud of the way you and the Bush administration are handling the country's business. Thank you for your service. God bless you.

Washington, DC 20530

Dear Mr. Ashcroft:
The Microsoft antitrust case has been active for over three years. At last, there is a fair and equitable proposed settlement released by the Dept. of Justice. I highly recommend endorsement of this settlement.

The Microsoft Company has agreed to every provision of this proposed settlement that resulted from negotiations with a court-appointed mediator. Microsoft's competitors should be pleased with the basic provisions that will allow them access to Microsoft Windows protocol, programs, and documentation thereby enabling them to link their non-Microsoft software to Windows. Further prolonging of this case should be avoided so that the IT industry can once again fully focus on innovation without the burden of litigation.

I look forward to a fair and equitable settlement in the near future. Thanks you for your consideration.

I believe that Steve Jobs stated it best:
Excerpt from C:\Net news: <http://news.com.com/2100-1001-276267.html?legacy=cnet> <quote>

But Apple, which has a big stake in the education market, criticized the settlement as anticompetitive. On Monday, the Cupertino, Calif.-based company filed a 30-page brief opposing the proposed agreement. "Around half of the computers in education today are Apple computers, and we're the second largest supplier overall and the largest supplier of portable computers to education," Apple CEO Steve Jobs said in a statement released Tuesday.

"Given this, we're baffled that a settlement imposed against Microsoft for breaking the law should allow—even encourage—them to unfairly make inroads into education, one of the few markets left where they don't have monopoly power." </quote> Microsoft needs to be tamed. Right now, they have no fear of the U.S. Government. They have no fear because they have control over you. What do most if not all of your computer run? Microsoft products. How did they get there? Not by being better, but by bullying. Microsoft is VHS tapes and Apple (et al) is Betamax.

See the works of the Lord, and his wonders of the deep.

Dear Mr. Ashcroft:

Thankfully, the government got smart towards the end of litigation and decided not to break up the best asset our country has in the technology industry. I think that the recent antitrust case settlement is extremely harsh, and it reflects the intense lobbying efforts of Microsoft's competitors.

Originally the case was brought to suit because the consumers' rights might have been violated. Even though I have never felt

that my rights have been infringed upon, the settlement does nothing to make my life any easier. All it does is give competition that had less success than Microsoft a chance to compete in a market that Microsoft dominated through hard work. Under the terms of settlement, Microsoft will be giving competitors information about their internal interfaces and protocols. They will also be granting computer makers broad new rights to configure Windows to more easily promote non-Microsoft products. While I believe the settlement is flawed, I still think it is in the public's and our economy's best interests to make the settlement a reality as soon as possible. Further litigation would be detrimental to our nation's health. Thank you for your time and consideration.

Sincerely yours,

Dear Mr. Ashcroft:

I want to use this opportunity to express my support for the settlement reached between Microsoft and the Justice Department last year. This settlement is long overdue and it is definitely time to move forward. I would say the government

negotiated a very tough agreement. Microsoft has agreed to design future versions of Windows that will provide a mechanism to make it easy for computer makers, consumers and software developers to promote non-Microsoft software within Windows. The mechanism will make it easy to add or remove access to features built in to Windows or to non-Microsoft software. Therefore, consumers will have the freedom to choose to change their configuration at any time they please.

I believe this agreement will also benefit the economy. It will bring more certainty to the computer industry and give Microsoft the freedom to design new and improved products.

Sincerely,
Mark Moss

Dear Judge Kollar-Kotally,

My name is Khan Lowe; and I've worked in the software industry for 5 years. When I was an executive at Lotus Development Corporation, I saw how Microsoft leveraged its operating system monopoly position to dominate the software applications market. I don't agree with the Proposed Final Judgment (PFJ) that was recently announced by the Justice Department.

The PFJ fails to terminate Microsoft's illegal monopoly. In addition, this settlement gives Microsoft sole discretion to determine that other products or services which don't have anything to do with operating a computer are nevertheless part of a Windows Operating System product." Doesn't this create a new exemption from parts of antitrust law for Microsoft?

Under the proposed settlement, Microsoft is only marginally penalized for its anti-competitive misdeeds. Every court involved with this case has acknowledged that Microsoft broke the anti-trust laws, yet under the terms of the proposed Agreement, Microsoft would be allowed to retain almost all of the profits gained from these activities.

Most importantly, the PFJ does not attempt to compensate those companies who have been directly affected by Microsoft's monopolistic tactics. Any corporation that violates U.S. antitrust laws deserves a penalty proportionate to its crime.

Where do states Attorneys General get the authority to meddle in interstate commerce? Apparently from the past corrupt Reno Justice Department under the impeached rapist president, they along with several individual Attorneys General seeking political fame and fortune, took it upon themselves to successfully shake down the tobacco industry.

Now they are attempting to do the same to Micro Soft. Hopefully the current Justice Department will stand up and do what is right. It is time to get big government, and states Attorneys General out of the board rooms and return business to entrepreneurs and risk takers; not handcuff them.

I want to buy what I want. Not being a computer nut, I like things simple and easy to understand and use.

From: Fernando Aguilera
To: Microsoft ATR
Date: 1/20/02 9:17pm
Subject: Microsoft Settlement
Dear DOJ:

The new threat posed by Microsoft today is greater than it has ever been. In the past, companies, products, and dreams were shattered by their monopolistic practices. However, with their new suite of development products and their .Net vision, Microsoft is poised at taking over the Internet. How? By selling their Windows XP software, they have introduced users to their passport technology which is used to store user's sensitive data. This in turn produces a demand for their .Net web services which companies will be hard-pressed to ignore. Unfortunately, these .Net web services will only run on Microsoft XP servers, which will in turn increase demand for Windows XP, as well as other products such as databases, server administration tools, and a host of other Microsoft utilities. The next step in the process is to de-commoditize the Internet protocols as revealed in the infamous "Halloween Documents" internal memo. As more users and companies jump on the bandwagon, Microsoft will release "improvements" to these standard protocols.

These improvements will be nothing more than annoying syntax incompatibilities deliberately introduced into the protocols so only Microsoft systems can communicate with each other over the Internet, thus forcing even more consumers onto their bandwagon. Since no new companies will exist to offer any resistance or competition because venture capitalists will cover from anyone offering a competing product, users will be left with no choice. At this stage, users will either join the bandwagon, or be totally left out. Once we reach this point, it's all lost. Microsoft will in effect OWN the once mighty Internet, and start charging small transaction processing fees (taxes) on every business transaction taking place. Likewise, they will be able to dictate what content is suitable for publication on their "private network" and will have the power to starve all non-compliant web publishers simply by not directing any traffic to their site.

It is inconceivable that the once might ARPANET military network, which in turn became the Internet we all enjoy world-wide, would one day be subjugated by a single company for their gain and everyone else's loss. Yet this is the exact thing that is happening today. Our digital medium of global communications is being robbed by a single corporation. Allowing this to happen, would be the single biggest blunder in our country's anti-trust history, one from which we may never recover.

Sincerely,
Fernando X. Aguilera

Subject: Public Comment on Microsoft ruling

In deciding a penalty for Microsoft, I feel that it must be something that actually causes a penalty, not like the settlement reached last fall. I am a computer professional with a BS in Computer Science and Engineering. I have worked in the industry for almost eight years, and was a follower or it for many years beforehand. I have used many versions of Windows in that time, so I am quite familiar with the product and how Microsoft does business.

I feel that since Microsoft was found to be an illegal monopoly, it should be treated in a manner that will weaken its ability to maintain (and/or regain) said monopoly. Unlike the actions against Standard Oil and AT&T, I feel that it would be too problematic to split Microsoft into two (or more) portions.

However, an appropriate penalty, in my view, must:

* Disallow contractual obligations with computer manufacturers that require a payment be made to Microsoft for every computer sold, no matter whether a Microsoft product is installed on that computer. For example, if IBM sells a computer with Linux installed as its operating system, no payment need be made to Microsoft.

* Allow computer manufacturers to customize the appearance of the Windows operating system; for example, they may

remove the Internet Explorer icon from the desktop on the computers that they sell.

* Consider Internet Explorer and similar add-ons to Windows as add-ons and not integral parts of it; if a computer manufacturer wishes to sell computers without such add-ons, they should be allowed to do so. Additionally, the manufacturers should be allowed to include whatever other software they choose (for example, the Netscape Internet browser).

* Force an appropriate charge for Microsoft products, rather than having them thrown in free or at a reduced cost. Also, those products must be available without the computer for that price differential. For example, if a computer without an operating system costs \$100, with Windows costs \$110, and with Windows and Word costs \$115, then that computer seller must make Windows by itself available for \$10, and Word for \$5. (These prices, of course, are theoretical.)

* Force Microsoft to fully and publicly document all of the APIs for Windows; the "hidden" APIs have allowed other Microsoft products (Word, Excel, etc.) to have an unfair speed and functionality advantage.

* Force Microsoft to fully and publicly document all of its file formats, so that other companies can publish software that can read and write them as well. (For example, so that another company can create their own word processor that can read and write Word-format documents without any intermediate translator programs required.)

* Make certain that all networking protocols in Microsoft products are fully documented and approved by an independent network protocol body before being released in a product. Preferentially, they should use public protocols instead.

* Keep Microsoft from announcing products months before release, in a tactic to drive other companies out of business. (Microsoft has, in the past, announced products with apparently the sole purpose of keeping consumers from buying a competing product—then, the Microsoft product either was quite late, or never materialized in the market.)

* Force Microsoft to pay much more attention to security concerns; Internet Explorer, and Outlook (for example) should ship with the most restrictive security settings be default, and indeed, should have a much better ability to defeat viruses and worms than they do.

Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001
Dear Mr. Ashcroft:

I am writing to praise you and the rest of the Justice Department for reaching a

settlement of the Microsoft antitrust litigation. I hope you move forward and resolve the case as soon as possible.

I certainly don't know every aspect of the settlement, and I most certainly have no detailed allegations of the antitrust laws Microsoft is alleged to have violated. It appears that Microsoft will open its Windows systems to more competition, both internally and externally, from non-Microsoft software designers and manufacturers, and that answers the complaint I most frequently heard. I think it is time for everyone to stop wasting time in Court and money on lawyers and get back to work.

A compromise by its very nature means that the parties don't get everything they want. Please ignore the whiners and the carpers and close this matter immediately.

Thank you for the opportunity to address this issue.

Subject: microsoft settlement

I am an engineer who uses personal computers at work and at home. I am continually frustrated by the rotten operating systems and application software put out by Microsoft. They are a monopoly and have no reason whatsoever to make good software at reasonable prices. There is simply no competition in operating systems for personal computers.

As part of the settlement, Microsoft should be forced to release all information about their application programming interface (API) all at once and in full. That way, competitors could write both operating systems and application software to compete with Microsoft.

Competition is finally working in the personal computer hardware market, where Intel and AMD are fiercely battling to put out more and more powerful computer chips, at lower and lower prices. This is competition truly at work.

The same thing should be done for operating systems. Please see the article posted on Salon magazine for more details: <http://www.salon.com/tech/col/rose/2002/01/16/competition/index.html>.

Thank you very much.

Subject: Microsoft Settlement

I agree wholeheartedly with the decision for PC makers to make and sell dual-boot systems. People need to see that Microsoft is not the only game in town. There are other, stronger, better, even cost-free alternatives in operating systems. I particularly appreciate and am all for the idea of an appointed Technical Committee to oversee ALL activities of Microsoft, providing room for competition. For we all know that the Big Bad Microsoft Regime [particularly William H. Gates, III] seemingly cannot stand competition. Just as MS plans to watch over

every transaction on their .NET, the Technical Committee should watch over them—LIKE A HAWK!

MS should learn to live with competition, whether they are start-ups or full-fledged for-profit companies, not steal from and squeeze everybody else out of business.

From: Matthew Black

To: Microsoft ATR

Date: 1/20/02 10:32pm

Subject: My reasons for opposition to the Settlement.

Good Evening,

Before I begin with the list, here is a little background of me with microsoft products. I've been using Microsoft products as far as I can remember, I'm currently 20 yrs old going on 21. I started my time with Microsoft Dos 5. I've used Windows 2, 286, 3, 3.1, 3.11 FFW, NT 4, 2000, and now Windows XP. I use Windows on a consistant basis, I do development, testing, gaming, and internet with it. I also use other operating systems not that of Microsoft's, such as Linux, Unix, and MacOS. Here is my list of complaints with their software (Explanation why this is here will be added at the end):

(1) Windows under a fresh install with no other applications/software installed is the only stability a user can get(not counting with internet abilities counted).

(2) Most of the current/future internet attacks are designed for Windows.

(3) Majority of viruses still being passed around on the internet and in infected programs are designed for MS-DOS/Windows. Where as MacOS has no recent viruses that I'm aware of or that has been popular in the news. There has only been one recent virus for Unix/Linux and it was a cross platform virus that could infect Windows and Unix/Linux.

(4) Poor response to problems. When Microsoft detects a problem or security issue with their products it sometimes takes a month or two to get a update or patch for it. With other operating systems/commerical software sometimes when a problem is reported and is serious it gets fixed in less then a month.

(5) Everytime they release a new product, it seems they have security issues, bugs, or other vulnerablities. Most other software usually under goes rigorous testing to remove 80% of their security issues, bugs, or vulnerablities. These other software companies end up having vulnerablities found about five or so months after the software is released and usually is fixed and a patch is available.

(6) Microsoft opposition to opensource community. While understandable they are out to make a profit, but embracing the opensource community would make their software more popular and offer more avenues for profit.

(7) Inadequet support for the various software and hardware out there. Often leading into some device drivers causing problems with the others.

(8) Inadequet support for their own software on their Operating Systems. An

example of this would be on some microsoft games installing them on Windows 2000/XP will sometimes fails due to a phantom error.

(9) Software is over priced for its value. Some may argue that peoples work allows them to define their value, but the value should be the value of what can be done with it. You can do most of the same things with Windows 98 as you can with Windows XP, the only difference is the core technology backing Windows XP.

(10) New Versions of the software released on a consistent basis. Most of the time just a User Interface change that makes it look different but the way it works still the same. The difference between Office 2000 and XP is the license registration, and the User Interface changed. The fact is while this isnt really that bad, having to force previous version users to pay for an upgrade every year or two ends up costing that particular using anywhere from \$2400—\$3200 considering if the standard pricing for Microsoft Office 2000 and/or XP is 400 for standard and 800 for Premium.

(11) Part of contracts between Microsoft and Computer Vendors is that if they want to distribute Microsoft products with their machines, they can not sell computers with non-product alternatives. You wont see Dell, for example, distribute a machine with Linux installed on it or offer the option of having Linux installed on a machine a person buys.

These are some I can think off the top of my head (especially at 10pm). The point of listing this information and complaints is, in competition you have a company trying to improve the quality and performance of their software, while adding features to the software to make it more unique and attractive to end users. Lower prices then the competition is also a trick. Microsoft has been using a facist appearance. I say this as they give us something to use, we use it, and eventually are stuck with it that we have to listen to them as some dictator saying that we need to do what they say. Currently there is no other Office Suite out there that can read and/or write Word documents, and thus if we want to give a person a document in Word 2000 format that person has to have Word 2000 or better to read it. So we get forced into having to use their software one way or another. This is like being under nazism, where the enemy, according to microsoft, is the open source community, and they try to eridicate the open source movement.

The reason microsoft wants to settle is because right now Microsoft is one company with one person at the helm, if the company was to be broken into several companies then that one man who is incharge would only be in charge of one company really, their profit will be divided, and overall in their eyes its the end of the world.

I feel that if the world was to progress into an age where computer technology and software were to heavily advance it would require not to settle as it would then push microsoft to derive better quality products and overall better quality on the internet.

Sincerely,

Matthew Black

Subject: Microsoft settlement

It is my belief that MicroSoft has provided tremendous products that have helped revolutionize the way we conduct our business and our lives in this ever changing world. I also believe that the settlement agreed to is a fair one and that MicroSoft should not be further penalized for their business practices. No company should be put in jeopardy for having the American spirit and drive to develop products that change the way we conduct our business and our lives. Instead, they should be allowed to enjoy the fruits of their hard work and efforts and not have to apologize to their competitors for their success. Their competitors have had the same opportunity to develop revolutionary products to gain a competitive edge, and apparently have not taken advantage of the opportunity.

Respectfully,

Gary Kincaid

Microsoft Settlement

U.S. Department of Justice-Antitrust Division

950 Pennsylvania Avenue, NW

Washington, DC 20530

Dear Microsoft Settlement:

The Microsoft trial wasted taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. I feel that it is time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft (and I wholeheartedly agreed). If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,

Pat Goyen

To: Microsoft ATR
Date: 1/20/02 11:50pm
Subject: Microsoft Settlement

Dear Justice Department Representative,

While I have no formal legal training, it seems mindboggling to me that the government would allow Microsoft, which has been accused of using its monopoly powers to crush innovation in an industry that affects so many of our lives, to get off the hook by giving away Windows-compatible computers and thereby expanding its monopoly. Microsoft's lies and illegal business practices have given it control of over 95% of the world's desktop computers, which is a shame when one sees the quality of their operating system, Windows. While Microsoft has made some innovative products, (for example, I'm using Microsoft Entourage to type this email) I believe it has been a case of one step forward, two steps back. Microsoft's crimes against the American people and many of its businesses should be severely punished.

Thank you for your time and concern,
Thomas J. Morrisey

MTC-00014183

From: Paul Simons
To: Microsoft ATR
Date: 1/20/02 11:53pm
Subject: Microsoft Settlement

Thank you for the opportunity to submit a comment. I believe that Microsoft has had to both accommodate and compete with other vendors of office, graphics, internet, and operating system software. The sheer reality of this medium is the result of standards coming into wide acceptance and useability. Just as 117 volt alternating current won out as the standard for electricity, Windows has won out as the standard operating system.

However it is not a monopoly- I could be writing this document with any number of word processing programs from various vendors, on any of several available operating systems. The Department of Justice could be reading it using one of many internet communication or email packages. If you are using Windows, it is probably because it is readily available and works. If you are using Linux or Apple systems, that indicates there is no monopoly.

It also bears pointing out that Microsoft sells program-writing tools that anyone can use to create software to sell in competition with Microsoft products.

Thanks for reading this, Paul Simons
Levittown PA USA or another victim.

In the news recently, Microsoft has bought much of Silicon Graphics' Patent Portfolio, specifically the patents for OpenGL, which is in direct competition with Microsoft's own DirectX. By buying the patents of the dying competition (SGI also has no air supply), Microsoft can LEGALLY kill the 3D and gaming capabilities of ALL non-Microsoft Operating Systems. Apple will die. They based their new operating system on heavily on OpenGL Linux will die. Like Apple, they don't have access to Microsoft's DirectX (obviously), and rely heavily on OpenGL to give their system functionality. Who will buy a computer if their kids can't play games on it, especially when Microsoft owns the Office genre and won't allow anyone else to communicate with their product? There's nothing else left. Microsoft owns it all. They have their fingers in with hardware producers now, who will have to exclude other operating systems from their designs in order to appease Microsoft. This isn't relevant to your case, but it is an example of the complete lack of respect Microsoft has for your verdict. They aren't worried in the least. And their business plans continue unaffected and unharmed. They will buy everything that is competition and bury it specifically to harm others. <http://www.theregister.co.uk/content/54/23708.html>

I hope that you will consider my points as you decide what to do to bring equity to the PC market.

I'm sorry for being so wordy (and waxing poetic (badly) in a few places), but as a guy who works on computers 12-15 hours a day, Microsoft has honestly lowered my quality of life, and I'd hate to see them get out of yet another trial unscathed. Which, unfortunately, is what looks like is happening. Bill Gates admitted it when he said "We haven't changed our business practices at all."

Think about it. This may be the last Microsoft case that will ever matter.

Best Regards,
Matthew Squires

MTC-00014184

From: Brian m.
To: Microsoft ATR
Date: 1/21/02 12:27am
Subject: Microsoft settlement

We all know what microsoft is doing is fraudulent, however, nobody seems to have the resources or the legal power to contain this problem. I think it is rather sad that corporations can get away with monopolizing

an entire industry, simply because they can afford to find loopholes, pay off government officials, etc.

I think the time to act is long overdue. The Department of Justice needs to implement a plan that will reduce Microsoft's stronghold on the computer industry- especially when there are far superior products available.

It's disgusting how Microsoft tried "paying off" their settlement by providing underprivileged schools with refurbished computers running their own Operating System. Not only is this increasing their market share, but it is taking away from other viable computer manufacturers like Apple computers- who build a much finer Operating system/ Computer.

It's time to stop this evil money-hungry power machine and let others share in the market.

Increasing competition will only create more jobs, more computers, more demand.

Sincerely,
Brian McGrath

From: m.j.m@eskimo.com@inetgw
To: Microsoft ATR
Date: 1/21/02 12:33am
Subject: Microsoft Settlement

Dear Judge Kollar-Kotally,

The proposed Microsoft Settlement is a very bad idea. It does nothing to end Microsoft's illegal monopoly in spite of the fact that every federal court that has looked at the facts has found that Microsoft violated U.S. antitrust laws. And it does nothing to prevent Microsoft from extending its current monopoly into new areas like its .NET Internet plans. Furthermore it does not punish Microsoft, financially or otherwise, for its past statutory violations and financial gains from its illegal activities.

I could go on with more technical details about why this settlement is nothing more than a political expediency, but since I'm sure you will be getting a lot of mail with specifics about what is wrong with it, let me give you a personal experience I recently had. I use Linux and I want to buy a new PC without Microsoft software on it since I don't want to pay for something I won't be using. I tried Dell, Gateway, and Compaq and not one of them would sell me a machine without Windows. Mind you, I wasn't asking them to sell me one with Linux (although that would be nice), but just without Microsoft software. Furthermore I recently had a cable modem installed and the installer said he needed Microsoft Windows running on my PC to do the installation (even though the cable modem works fine with Linux).

There are those who are happy with only having to deal with one operating system because it makes their life easier. And sometimes it's best to have a monopoly (e.g., telephones, electricity, etc.), but it's NEVER a good idea to have an unregulated monopoly. That Microsoft has a monopoly is an undisputed fact. Either breakup the Microsoft monopoly or regulate them.

 Subject: Microsoft Settlement
 Good Morning

I would like to offer a comment on an aspect of the Microsoft Monopoly that I have not seen discussed in detail.

I am the senior for a large corporate development department. What is happening now is that software such as word processors, spreadsheets, operating systems have matured and are not gaining a lot of new features in the newer releases. A lot of companies and people don't upgrade their software on as regular a basis as the basic functionality is not changing a lot and the stability of today's software is much better than even 5 years ago. i.e. windows 95 crashed every 4-5 hours whereas windows 2000 can run for months or even years without ever crashing. What this means for Microsoft is that there revenue streams are going to start softening up as this newer and much better software provides much longer life spans. Enter a new feature in Microsoft's new software called WPA under the pretext of controlling piracy. This system takes a "picture" of the hardware of the computer that it is installed and then allows only a few minor changes to that computer. The problem here is that when you buy a piece of Microsoft software it is now locked to one computer. What this means when you buy a new computer as your hardware becomes obsolete or even if you upgrade your current computer your Microsoft software is now locked out and you have to buy another full copy in order to regain the functionality you have already paid for in your previous computer and want to move over (not copy) to your new computer. So as people's computers become obsolete or even break and need new parts Microsoft forces them to buy new software regardless of whether they need or want it. This means that if you need a particular piece of software (and in Microsoft's monopoly position it may be a piece of software that they have taken over the market on i.e. operating systems) on your older computer in which case you have to decide on buying a new computer or paying for an expensive operating system that may only have 6 month's or a year of use because they have locked it into a particular computer.

For example I have office 2000 on my current computer While I intend to upgrade my computer in the next couple of years I have no intensions of upgrading my office 2000 as it currently does everything I need it to. Under office xp I would HAVE to purchase the office upgrade at several hundred dollars just to continue using the software I legally purchased to use all my content that is only compatible with MS office.

In an open competitive system I wouldn't have a problem with this. I would simply buy someone else's software But in Microsoft's monopoly position and the fact they either are the only manufacturers of some software or make the only software that will run other software WE DON'T HAVE A CHOICE. We HAVE to buy their software and with this

new WPA, upgrade at whatever intervals Microsoft feels is appropriate to keep their revenue stream up. I feel that as part of this settlement Microsoft should be forced to abandon this monopolistic and restrictive software practice and allow people to be able to remove legally purchased software from obsolete computers and install it on a new machine with paying hundreds of dollars to Microsoft for no other reason then they want to keep their revenue streams up at the consumer's expense.

Thanks for reading my submission

 Washington, DC 20530

Dear Mr. Ashcroft:

As a Microsoft shareholder and firm supporter, I urge you to help stop any further litigation against the recent settlement between the Department of Justice and Microsoft. After three years of negotiations, Microsoft has bent over backwards to support the actions of our technology industry. I feel strongly that it is time to move forward and let our IT companies prosper. By designing new versions of Windows that allow easier installation of non-Microsoft software, Microsoft will be promoting the use of other software. This is extremely helpful to the consumer, the IT sector and our economy as a whole.

I ask you to help stop any action against this agreement. Please help us to move forward and get back to business. I support this settlement and look forward to a swift end in this case.

Sincerely,
 Kathleen Osborne

Over the years I have used multiple computer systems. At this point in time and space there is only one operating system "Windows". Any third party programs have been locked out. Microsoft has even bought Apple after taking there operating system. This is holding the American public hostage.

After receiving a computer for Christmas with MSN as an internet provider the service has been poor to say the least. Calls to MSN are a total waste of time they have no clue and tell me to do things that are absurd.

I know that almost every business and home computer are using these systems with millions of dollars going to Microsoft every day.

What do the words ANTITRUST mean? Nothing anymore.

I am hanging on, hoping that my Government can see the forest through the trees. Please do not let them monopolize a free industry that will surely be tainted for the future if left unchecked. Teddy Roosevelt was a leader in trust busting and he would be all over them if he saw the case. Think like Teddy and say to yourself "how would he handle it." I am trusting you, our patriots, to help us make sure that they do not shape the world according to them only.

Thank you,

 Subject: Microsoft Settlement

As a computer professional and as an American who thinks the rights to liberty and property should be defended, not attacked, by the so-called "Justice" Department, I am outraged at the government's persecution of Microsoft. When the government penalizes the successful at the behest of their competitors, it is a threat to all our rights.

Microsoft has never had the power to force anyone to do anything. Whoever wants to curtail Microsoft's profits and restrict its share of the market has always been free to do so—by simply going elsewhere and dealing with someone else. It is government alone that has the power to use force. As George Washington said, "Government is not reason; it is not eloquence; it is force." Microsoft offers a product that is so good that a large majority of those in the market want to buy it. Why should the government disrupt the free choices made in the marketplace? The only threat to the market is the computer-illiterate power-lusters in government, like Janet Reno, who rely on the point of a gun.

If she (and you) had been in power 120 years ago to "protect" us from Thomas Edison and his "monopoly" on the electric light bulb—where would we be today?

Here is the only settlement that is acceptable:

(1) APOLOGIZE to Microsoft and to all of America for persecuting success and threatening our freedom. (2) REIMBURSE Microsoft for all the money it has had to waste in defending itself against the anti-capitalist looters in our so-called ?Justice? Department. And

(3) SCRAP the Antitrust Laws, which are inherently unjust and non-objective. You cannot FORCE the market to be free—that's a contradiction in terms—you can only destroy our freedom.

Angrily,

Subject: Anti-trust case

To whom it may concern,

As a hard working tax payer I can not believe in this day an age a company as large as Microsoft is allowed to get away with the type of actions they are. I use Apple computers and know first hand how evil Microsoft is. I remember when they threatened to stop production of Microsoft Office is Steve Jobs did not make internet Explorer the default web browser upon installation of a new OS. I, as a minority since I use Apple, everyday watch the deeds that Microsoft is allowed to get away with and wonder how AT & T failed where Microsoft is succeeding. Is that Microsoft is donating more money to campaigns? Helping more politicians? Lobbying in Washington must be an easy thing to do because Microsoft is making it look like child1s play. Microsoft Windows is on about 95% of the world1s computers. Does that sound like a healthy business with thriving competition?

Please don't succumb to the pocket filling ways of Microsoft, the cries of integration of their browser, or any other of their lies an dirty practices. They must be punished as AT&T were. They must face penalties. Bill Gates must be shown he cannot use his companies size, influence and power to do whatever he pleases, to whomever he pleases.

I hope you take action that is justly called for. Their punishment will not affect the economy. It would actually help it giving other companies a chance to vie for a piece of the market.

As a tax payer, you take from me everyday. Stop Microsoft from doing the same to everyone else.

Thank you,
Rick

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Joe Meighan

I resent the fact that my taxes are going to pay for litigation against the most successful business in the USA and one that has contributed so much to our way of life. They have done everything right and they deserve their success. Consumers are not hurt by Microsoft they are helped. You can't put Microsoft on equal ground with any other platform manufacturer. They have to earn it.

I would rather have competitive Electric and gas companies. Both suppliers and consumers are hurt by no competition. Microsoft supplies a unique product. It is actually better to have Apple and Microsoft platforms than to have many others. Unification and standardization are desirable.

I am satisfied with the original settlement.

Comments regarding United States v Microsoft:

I've purchased Microsoft products for almost twenty five years. In every edition, my overhead has increased in order to keep machines stable or secure and to try to install the product and performance claims that Microsoft advertised. I do not believe I have dealt with a company that exercises fair dealing. I also believe that Microsoft attains market by unfairly suppressing, absorbing or complicating the operability of competitor products. I have abandoned software and hardware produced by Microsoft's competitors in order to maintain machine stability and manage arbitrary changes in software interface. As well, Microsoft has developed a means of describing and documenting its products that is an arbitrary artificial language, often confusing, irrelevant and misleading. I have been forced to carry the burden of carrying two languages, one as developed by Microsoft, very often unuseable, and another used by the developer, technician and user in the field. Beyond the simple interface terms, of which Microsoft can claim little ownership, very seldom are Microsoft's technical descriptions adopted by users or systems workers. Microsoft not only produces systems, but unfairly commandeers the mechanism and language to interact with these systems, and charges significant fees to become privy to their new copyright claims as well. Microsoft's practice in the sectors of certification and education have become an unnecessary financial and social drain on the public, and furthermore, tend to steer learning away from machine and software knowledge and thus merely toward an increasingly ineffectual but proprietary Microsoft language product.

I believe that the core of Microsoft's software and its technical descriptions of its software should be relinquished to the public, where much of Microsoft's original claims were developed, funded and improved.

I believe our representatives and agents have been very slow to require commercial market participants to adhere to their claims and contracts, to deliver to their customers the value that they assert, and to recognize that carrying on in our marketplace is both a duty and privilege.

I believe that Microsoft's tenure has demonstrated an inability of our society to encourage and demand good corporate citizenship.

I hope that a vigorous leadership and staff will continue to move Microsoft toward fair dealing.

Best Regards,
Brian Hayes

Subject: The DOJ should have broke up Microsoft.

Dear DOJ,

The DOJ should have broken up Microsoft instead of making any deal.

Microsoft controls (with a iron fist) over 90% of the market of OS for computers.

Microsoft has copied every OS its every made (but DOS) from Apple. The only thing different from Mac OS X and Windows XP is the P! Microsoft has many times try to kill java if fact it's not even in its new OS XP. It almost killed Netscape well basically did because AOL who own's Netscape cant even use its own browser they use Microsoft's browser. Microsoft is a Trust, Monopoly and down right a bully.

I sorry to say this but Microsoft has broken deals with the DOJ before and you all have been fools to trust them. Bill Gates (Microsoft) is Laughing at the DOJ with his 50 billion dollars thinking his more powerful than the United States Department of Justice, because he and Microsoft has gotten away with being a Monopoly that rules with a iron fist. And all it got was a slap no* * * a little tap on the hand.

Come on now what where you all thinking making a deal with the devil like that?

Break'um up

Lets get on with the issues that are really important to the consumer. The special interest groups that have personal agendas to gain from have been heard it is now time to let them know a few can not harm the many people who enjoy what Microsoft has done for the general public.

MTC-00014205

From: Ronald E Hostetler
To: Microsoft ATR
Date: 1/21/02 6:50am
Subject: Antitrust Settlement in MicroSoft vs. Government

I have a number of comments:

1. The major problem with this case appears to be the apparent lack of knowledge of government prosecutors and judges and the lack of adequate legislation creating standards for the computer industry.

2. If you want to land possibly the fatal blow to Apple Computer, the proposed settle may do it, convert more schools over to the PC Windows environment. Apple Computers are still the leading machines for Graphi

Design Applications and schools. The proposed settlement eats away at an Apple Computer market.

2. A great deal of legislation is need for the regulating businesses in our capitalistic system and protect employee assets and jobs.

3. The "rubber stamping" of mergers within the USA and purchase of USA firms by foreign companies to gain full access to our markets is putting thousands of people out of work and capping retirement values.

4. Legislature is needed before settling the Microsoft case. Loading Microsoft software products search out and make inoperative competitors software especially web browsers. These practices need to be stopped. The consumer should have the choice.

5. Microsoft, I'm told, is planning further monopolistic practices. The windows operating systems in the future, will require pass word changes every year that you will rely on Microsoft to provide. You won't buy the software, but will pay a rental fee; then yearly lease payments and up-date down loads from the internet.

MTC-00014208

From: Patrick McCloskey
To: MS ATR
Date: 1/21/02 6:57am
Subject: Microsoft Settlement

You must:

1. Urge the Federal government to use alternative platforms.
2. Keep competition alive by forbidding Microsoft from selling to certain markets. Keep them out of the Educational market,

period. Let someone else (Apple) dominate that market space and keep a competitor strong.

3. Make Microsoft include the top 2 competing products in Windows XP to finally give consumers REAL choice, for example: Make them include Quicktime and Real Audio along with their Windows Media Player in standard XP installation. Make them also include Netscape and Opera along with their Internet Explorer web browser during a standard XP installation. Apple has bee including more than on Interner browser in their standard operating systems installations for years and it has been great for both the Mac user community (consumers) and the Mac market overall. There's no reason that Microsoft shouldn't do this freely for consumers too.

Action must be takes to weaken Microsoft. Without strong measures to adjust themm, they will continue to choke the U.S. technical economy/ecosystem and suffocate other companies and their stock prices * * * Anyone who is their competitor has been struggling without investor backing because investors know Microsoft is lerkng, ready to copy their product and leverage their big name to sell it. More companies must be permitted to be strong to improve the U.S. economy. The fact that Apple hasn't been able to achieve more market share over the years is absolute proof not of Apple's weakness or lack of trying but Microsoft's hedgemony, and stranglehold on the market, and complete reason whu you need to stifled them VERY soon. Make it count thsi time! The American public has been waiting for a looonng time for real justice and equality and freedom of choice.

Thanks for respecting my opinion.
Patrick McCloskey

950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to express my support of the Microsoft settlement. After three long years of litigation, exorbitant amounts of budgetary resources have been squandered over the issue. In the uncertain economic times in which our country currently exists, this waste of federal dollars appears altogether unnecessary. I would hope that the Department of Justice has larger issues to tackle.

Further, the terms of the settlement show much generosity on behalf of Microsoft. Microsoft has agreed to the formation of a technical review board. This board will have the responsibility of watching over Microsoft and ensuring that the terms of the agreement are kept in place; terms that include increased information sharing between Microsoft and its competitors and non-retaliation agreements preventing Microsoft from engaging in anticompetitive behavior. Obviously, Microsoft has been willing to make concessions so that this issue is resolved. I believe it is time we do just that. I support the settlement, and hope that it is implemented soon.

Thank you for your time.
Sincerely,
David Heinfeldt

Attorney General John Ashcroft
 US Department of Justice
 950 Pennsylvania Avenue, NW
 Washington, DC 20530-0001

Dear Attorney General Ashcroft:

The reason for this letter is to express to you my support for the settlement that was reached in the Microsoft antitrust case. I trust you will demonstrate decisive support for this settlement. Forces that are negative toward Microsoft may try to have this settlement withdrawn and this case resumed. This would be unfortunate because both and Microsoft and the DOJ have spent millions of dollars on this case and much time as well. The anti-Microsoft crowd argues that this settlement is too lenient. A careful study of the settlement will reveal the contrary. The settlement will end any contractual restrictions that may be harmful to Microsoft competitors. Additionally this settlement will force Microsoft to share design code with competitors allowing them to create more competitive software. Microsoft concedes much in this settlement; there is no reason for further federal litigation.

I count on you to do your best for what is in the best interest of the American people: to implement this settlement, bring closure to this case, and to open American business once again to the blessings of technological innovation.

Thank you.

With highest regards,

J. Edwin Parrish

 Attorney General John Ashcroft
 US Department of Justice
 950 Pennsylvania Ave., NW
 Washington, DC 20530-0001

Dear Attorney General Ashcroft:

I am writing to address the current agreement between the Department of Justice and Microsoft. I believe the whole lawsuit was unwarranted. The Federal Government had no business in pursuing Microsoft. Microsoft is a successful company. Bill Gates has tried to make Microsoft the biggest and the best. But isn't that what you are suppose to do? I am very irritated with the concept nowadays that being too successful is wrong. Since when does the federal government define what amount of success we should have? Further, I am quite sure that Microsoft's competitors had some input in the lawsuit. They could not compete in the open market; therefore, sought to cripple Microsoft through political means.

The antitrust laws were created to protect the consumer. Microsoft did not harm the consumer. Bill Gates, through Microsoft, has enabled the average consumer to have access to the technological age, at an affordable price. The consumer has chosen Microsoft, not another brand. That is our choice. Is the Federal Government now dictating what companies we have to buy from?

Microsoft has addressed the demands of the Justice Department by agreeing to grant computer makers wide-ranging new rights to configure Windows to promote non-Microsoft software programs that compete with programs included within Windows. Microsoft will share any code or programming that Window uses to communicate with other programs. Microsoft has agreed to a technical committee to monitor future actions. I think Microsoft has more than done its sham. I support this agreement. I ask that you please do so also. Thank you.

Sincerely,

Stephen Corthell

 Subject: Microsoft Settlement

Dear Judge,

The Proposed Final Judgement deal is an assault on the Justice Department's and America's integrity. Monopolies stifle entrepreneurship and are a blow to the good faith of the American people in the government to keep the market diverse and competitive. Without diversity and competition, the market will not grow and the people will be forced to follow the whim of one all powerful company. Further more, by allowing one company to engage in monopolistic activities, it not only shows that the Justice Department supports such actions, but that it will not be against future deals of this sort with companies in other areas of American society. The formation of

this deal by the Justice Department shows that more importance is placed on one company than the growth of the economy and the benefit of that growth for the American People.

This entire case I believe to be an excellent example of big brother government being in the wrong theatre.

Were it not for Microsoft the American People and for that matter the world citizenry would not be enjoying the benefits of computers in general and the internet in particular. Microsoft has kept the cost of using computers within range of the average consumer and this in itself has fostered a tremendous boon to our economy. Our illustrious Government has brought this ill conceived suit against against a company that has pumped billions of dollars into our economy. Would it only be true if the past administration had the where-it-all to do the same. Instead, our government has bowed to the likes of privat busines such as Java to further ther own selfish motives. If Java had its way they would gouge the American public for their procut and computers woul be absent from the average American home.

Let Microsoft run its own business. Our politicians have made a big enough mess out of our government without them interfering in private business.

 Subject: Proposed Settlement

I think the proposed settlement by Microsoft is as huge joke.

I must give them credit. There thinking is brilliant. Since they are going to have to pony up a lot of hard cold cash, they figured out a way to make it do some work for them. So not only are they paying their debt to society, they are also making huge inroads into new markets, furthering their strangle hold on the competition and furthering their monopoly.

Ironic is it not. . . since this type of practice is what originally got them into trouble in the first place.

I am a very concerned citizen living in Germany.

I am concerned about the Proposed Final Judgement in the Microsoft case. If Microsoft is allowed to further develop their effective monopoly, starting in PC operating systems, into network and internet server systems, it will not only hinder development by start up companies in these areas. It will endanger the national security of the United States by forcing government agencies to standardize on systems that offer less than optimal security.

This makes this case critically important. The Compliance Board should be made up of 5 members (not 3). With the following appointees; 1 from Microsoft, 1 from DOJ, 1 from FTC because as a virtual monopoly, it is vital that pricing and it's effects on trade be closely monitored.

1 from FCC because Microsoft is much more than a computer software company. It is also a communications company.

1 from IT industry without association with Microsoft and appointed by the three above. In case of tie vote, The government agencies would vote among themselves.

Washington, DC 20530-0001

Dear Mr. Ashcroft:

My name is Allen Falk, and I am a resident of Springfield, Missouri. I am writing to ask you to end the ridiculous Microsoft antitrust litigation and settle the case NOW. While I know the case did not begin on your watch, I hope you have come to understand how ridiculous this case was from the outset. Microsoft and Bill Gates are being punished for being successful. The government is not taking into consideration the welfare of the American economy or the American people. Further delays in the settlement will only hinder economic growth and will continue to hurt the American people.

Microsoft has been required to make concessions they should never have been required to make, because some other less successful company had made some petty case to the government, with the sole purpose of getting a bigger piece of the pie. The Government was wrong in this matter. Regardless, this matter needs to be settled,

and the sooner the better. Microsoft has agreed to open the Windows system to competition and has agreed to curb marketing restrictions. They have gone far enough. They should be allowed to get back to business. I ask that you do the right thing and settle this matter ASAP.

Thank you for your consideration.

Sincerely,
Allen Falk

Subject: Microsoft settlement

This settlement is an abomination—an example of laziness and lack of will which can only result in further illegal behavior. I fail to see how since it “was only money”, but in huge amounts, this criminal behavior is somehow less worthy of serious punishment and deterrence than any other crime. Microsoft is a pirate organization from the top down; they have proven themselves to be amoral and corrupt. The company produces a shoddy product and then uses illegal means to prop it up in the marketplace. Break up this street gang in suits, force them to compete legally and fairly, and they will wither away. As they wither, the jobs they shed will not be lost, but will actually produce more and more as the market allows true innovators to prosper.

I am an IS professional, and I estimate that Microsoft has cost my company well over \$250K in the last several years due to incompetence and illegal behavior. This is a tax which the settlement you are proposing will only extend into perpetuity.

I am irrevocably opposed to any settlement short of breaking up Microsoft into at least 3 separate operating companies.

The only way this “settlement” would make sense, is if Microsoft was only able to donate NON-Microsoft products to schools. Otherwise, it allows Microsoft to make further monopolistic inroads in one of the few areas where they don't dominate, the school system. And, it's not Microsoft doing the bullying this time—it's the US Supreme Court that's forcing Microsoft on young children and indoctrinating them into a Microsoft life-style.

950 Pennsylvania Avenue, NW

Washington, DC 20530-0001

Dear Mr. Ashcroft:

The recent antitrust lawsuit against Microsoft has gone on for too long. It is time to accept the terms of the settlement and finally close this case.

Microsoft is a leading innovator of technology and should be applauded for all it has done. The terms of settlement seem to be a slap in the face. They require Microsoft to disclose internal interfaces and protocols for use by competitors. The terms also call for Microsoft to design future versions of Windows so that competitors can more easily promote their own products. I do not think the settlement represents the best interest of a free market economy, but I do think it represents the best interests of the public.

Microsoft has agreed to the terms of the settlement so that the case can finally be closed. I support this settlement as agreed and I hope the opposition is quelled.

Sincerely,
Ric Emery

MTC-00014230

From: Melissa Enderle
To: Microsoft ATR
Date: 1/21/02 11:00am
Subject: Microsoft Settlement

As an educator who has worked with disadvantaged children, I would like to offer my feedback on the Microsoft Settlement. I taught in schools that had a 97% free lunch rate, with about an equal percentage of minority children. Even though the need and desire was demonstrated, the school could not afford to place computers in every classroom. Those computers in the school were outdated and needed maintenance. While some of Microsoft's proposed offer would benefit a few schools, it does nothing to address the real issue.

It has been determined that Microsoft had a monopoly that included unfair practices. Apple is one company that has been hurt. Many smaller software companies that create education software have also been adversely affected. How is placing computers in classrooms with lots of Microsoft products going to help those other software companies? How is this a punishment for Microsoft? What about all the consumers who paid way too much for software, including the buggy operating system? Microsoft mentioned that it would allow for other platform computers to be placed in the particular classrooms, but that those schools that chose the Windows operating system would get more software. That isn't free choice! Cash-strapped schools would logically choose the package deal with more software.

If Microsoft would simply offer money in the way of technology to schools (including funds for teacher inservice on integrating technology into the classroom), then perhaps the settlement proposal would be palatable. I would also like to see people who purchased software get a refund, some sort of fine, and carefully monitor future pricing to ensure that Microsoft doesn't pull the same thing again. Microsoft needs to receive more than a slap on the hand to change its practices.

Quality is often inspired by competition. Microsoft's monopolistic practices have

ensured that this cannot occur. I sincerely hope that the justice system will prevail and accept only judgments that are based on fair practice, and not be influenced by the money/power of companies.

January 21, 2002
To Whom This Concerns:

I am very grateful for the opportunity for my own small voice in this process. I sincerely hope that each response you may receive is treated with the utmost importance it deserves. This is not an easy task. Everyone's effort with this case however small should receive high praise.

My name is Steve Penn.

I am a creative director/manager, content and technology developer for media to several delivery mediums from print to broadcast to CD media to the internet. I work primarily within the Advertising Industry. Within the past fifteen years most every aspect of my work has involved the integration and deployment of emerging computer technology in both hardware and software configurations. I have produced work on behalf of clients such as Hewlett-Packard, Micron Technology, The New York Times, Prudential, Nike and Microsoft. In this time I have come to learn the many strengths and weaknesses of the many commercial products both hardware and software I must utilize for my livelihood. It is a constant learning curve of testing the latest or pre release versions of software, operating systems, development languages, video/audio hardware and etc. . .

In this time I have also observed and been unduly affected by the many tactics of Microsoft briefly outlined in this current case summary. I have watched with disappointment as Microsoft has bullied its way both legally and financially throughout several industries which comprise my livelihood. Time and again I have embraced technologies and services developed by a third party company only to have Microsoft buy up and kill internally or legally maneuver to force the company out of business only to have Microsoft later come out with this new ?innovations? as its very own. Of course as the case summary implies these products and services have been tied deeply into the Windows OS and only through buying into additional Microsoft development tools or subscriptions are you as a potential developer allowed to have

access. Many times these previous products and services were deployable on several platforms and were most often of superior quality.

In this time I have also consulted for educational and governmental agencies where literally millions of private and taxpayer dollars have been spent to buy additional products, people and training which have been unnecessarily tied to the Windows OS by Microsoft and or its partnering affiliations. Of course as the record describes, you know all this. There is a very long and consistent profile of Microsoft's behavior documented in case after case since its very beginnings contained in the public record. It is this public record of behavior that so aptly illustrates Microsoft's true corporate culture and blatant disregard for fair competition and ultimately consumer benefit.

After having studied the courts proposed remedy and implications of this case. I feel it is but an extremely feeble attempt to curtail only very recent past and possible very recent future Microsoft behavior in regard to these anti trust violations for which it has been found guilty of and has consistently based its operational model upon. What is extremely troubling about this remedy is there seems to be no mention whatsoever of Microsoft's current and future efforts to dominate the Home electronics market, the entertainment industry and our banking systems, to name a few. These proposed remedies appear far too narrow and quickly outdated. They can be easily circumvented in future Microsoft endeavors for which it is currently developing. Also there appears to be no provision for reparation of Microsoft's current and past deeds for the incredible damage they have inflicted to our economy, several industries, innovative technologies they did not invent and ultimately the mass consumer.

I am very disappointed in our legal system for proposing such an apparent politically motivated and blatantly shallow remedy for illegal acts which have and will seemingly continue to rob us all of economic and intellectual resources, freedom and innovation.

I do not have the specific answers, I am but an individual voice that expresses what I know is a very large and pervasive public sentiment. I pray the court will have the courage, wisdom and insight to rectify this apparently inconsistent and incomplete remedy proposal.

Thank You
Sincerely,
Steve Penn

Dear Sir or Madam,

I do not work for Microsoft nor does anyone in my family. I have disagreed with the case from the beginning. Judge Jackson was biased against Microsoft and could not render a fair judgement. Many companies are guilty of the same charges that Microsoft has been accused of and they continue to operate

today free from interference. Some of the companies complaining against Microsoft are guilty of the same practices. AOL/ Timewarner is one of them. Timewarner has had a monopoly on the cable in my area for over twenty years, raising rates far above inflation year after year and no one in the government does anything.

Any punishment against Microsoft should be as little as possible. I have used their products for years and do not feel I have been harmed in any way by Microsoft.

In my opinion the US DOJ settlement with Microsoft is NOT in the best interest of consumers nor businesses. Microsoft has repeatedly violated anti-trust regulations, and shown disdain for previous settlements (the 1994 consent decree, for example.) Their monopoly power has allowed Microsoft to sell inferior products with little concern for the numerous software "bugs" or security holes that users of said software must deal with.

A stern, well enforced penalty against Microsoft (such as publishing source code for Windows APIs and Office Suite specifications) is the best way to punish a monopolistic company and benefit software users with more choices and better innovation (through the competitive marketplace.)

Subject: Microsoft settlement

The Department of Justice, Microsoft, and nine of the reasonable and level headed state attorneys general have reached a settlement in this very long and drawn out case. Several states are still claiming that the settlement doesn't go far enough, but I think that the settlement is fair and it's time to wrap up this matter and move on. There are some individuals such as Larry Ellison of Oracle, and Scott McNealy of Sun Microsystems who would like this case to drag on in order to distract the competition, but I believe it is a personal issue that these men have with Bill Gates. The country is in an economic recession that is largely due to a downturn in the technology sector. Finalizing this fair and reasonable settlement would help stimulate the technology sector and allow companies to focus on developing new products, rather than worrying about lawsuits.

Subject: Microsoft Antitrust Settlement

I don't think the settlement is any significant punishment at all. I think that Microsoft should have to be made to pay CASH as a penalty. But, I also feel that I as a consumer have been screwed by Microsoft and I get nothing out of it. I think they should be forced to give free upgrades to all Microsoft software until it works as advertised without any bugs for at least 2 versions. That would be a significant penalty because it would force them to lose the revenue stream from upgrades which basically fix problems the consumer has been saddled with and makes the consumer pay extra to "improve" a product the consumer paid for once, which was flawed to begin with.

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Marie Kuzma

From: Jonathan Jacobs
To: Microsoft ATR
Date: 1/21/02 11:47am
Subject: Anti-trust settlement
To whom it may concern:

I strongly encourage you to maintain the strongest possible opposition to Microsoft's attempts to continue the abuse of its monopolistic practices. The evidence accumulated over the its existence unmistakably points to the conclusion that without drastic and enforced remedies, Microsoft will never alter its unethical, and occasionally, criminal behavior.

Much has been said (almost entirely by Microsoft and its associates, whether openly

identified as such, or not) about Microsoft's history of innovation and its critical importance to the computer industry and to the economy of the United States. These arguments are without merit. Microsoft's "innovations" have been made by the co-opting of other companies' technologies, either by outright purchase of said companies, or by blatant theft, or destruction of their opponents.

This has led to a stagnation of true advances in the computer industry, and a serious weakening of the foundations of computing in general. Just as in biology, diversity is necessary for growth, progress and viability of an organism, the uniformity and flaws of a Microsoft-dominated industry has grave potential consequences, some of which have already been felt.

Mr. Gates recently proclaimed that Microsoft's new goal is security. This is laughable. It is also dangerous and frightening to consider the risk to national security that already exists, let alone what will happen if Microsoft is allowed to proceed unhindered in its stated goal of "Microsoft Everywhere."

Sincerely,

Dr. Jonathan Jacobs

Renata B. Hesse

Antitrust Division

U.S. Department of Justice

601 D Street NW

Suite 1200

Washington, DC 20530-0001

I don't know to whom I would address this email. I was told that I could express my opinion to the judge of the federal trial court considering this settlement by filing written comments with the United States Department of Justice by January 28, 2002. I am an IT professional (Network Analyst) for a Bloomfield CT company (The J. M. Ney Co.) and have been so for years. I have been doing computer work for 2 decades and I have been following Microsoft's progress and practices since 1980.

Microsoft seems to be the proverbial "400 lb. gorilla". Since the early 90's I have been watching their business practices with fear and alarm. Windows Operating System as a product or as an operating system was originally a very good idea. Touted as a "software bus", the concept was to have a platform the OTHER developers could write software for, to do specialized things, or to enhance the basic operation of the Operating System.

However, when some company wrote some software that used Windows and became successful, Microsoft would either buy the company, or compete with them, driving them out of business. This predatory stance coupled with the "Fear, Uncertainty and Doubt" that MS marketing would promulgate concerning NON-Microsoft products, AND the lack of access to the programming controls (the API's), would make many smaller companies fall by the wayside since just the fear of not being able to make a program work would cause many a consumer to purchase Microsoft products (instead of theirs) just because they might be less of a "hassle" to operate.

I think this may be the core of the "anti-bundling" argument: Microsoft just "assimilates" good products, and one way or the other quashes the smaller company. Why would a normal consumer buy an EXTRA program, from a smaller company, when Microsoft can just "incorporate" similar functionality into Windows and take the sale away from the other company? Also, in a parting note: Why is it that every other component of the personal computer has gotten better AND cheaper, but Windows just goes up in price?

Thank you for reading this,

Mike Porzio

Subject: Microsoft Settlement

Attorney General John Ashcroft:

As you review public comments on the Microsoft anti-trust case, I'd like to add mine and urge settlement.

My personal opinion is that the suit should never have been brought in the first place, and it is now certainly time—after three long years—to move on for the benefit of the economy, the technology industry, and employees and stockholders.

As one of the consumers who has allegedly been harmed by a "monopoly", I'd like to verify that Microsoft's innovation has never

done anything for me but make software more user friendly and cheaper.

After retiring in 1986 from a 30-year career in the petrochemical industry, I worked out of my home as an office procedures consultant. Not only did I have to purchase a computer but every piece of software needed for my work, usually at a cost of about \$300 per software package. Being of the generation that has to struggle with computers, I even had to pay someone to load my operating system. Nowadays, I call Compaq or Dell and they send me a new computer all loaded and ready to roll. No fonts to install to get a special symbol or type of print, no separate clip art, no struggling to import Harvard Graphics or Lotus, no miserable Word Perfect to deal with. Windows operating system, word processing, spreadsheets, e-mail, web browser are all in one easy-to-use package at a fraction of the 1980's prices.

Microsoft just made a better, cheaper mousetrap! Isn't that what American business is supposed to do. . . its called continuing improvement. Perhaps its greatest contribution was standardizing a fledgling technology. I suspect the States Attorneys General who refused to settle on an agreement that was tough, reasonable, and fair to all parties are looking for a way to refill their coffers after using up all the cash they extracted from the tobacco settlement (and reputedly did not spend on health care needs in their respective States).

Are they really interested in the consumer?

Lastly, in our efforts in this country to assure equality, I fear we have abandoned the pursuit of excellence that made our country great. Why should Microsoft be required to share proprietary information its organization created? Are pharmaceutical companies forced to share their research and patents with competitors? Should Walmart be penalized because K-Mart can't keep up? The much maligned corporations in our country, including Microsoft, pay taxes, provide jobs and health insurance, and contribute to countless charities and educational projects. Let's not kill the goose that lays the golden egg. I urge you to stop this trend of penalizing the successful and let Microsoft get back to running its business instead of spending money and effort on litigation.

From a personal standpoint, I'm a senior citizen living on a set pension and social security while helping support a grandson. I'd really like to recover my \$3000 loss on 100 shares of Microsoft stock. It was doing fine til all this litigation started!

January 21, 2002

Attorney General John Ashcroft

US Department of Justice

950 Pennsylvania Avenue NW.,

Washington, DC20530

Dear Mr. Ashcroft:

I am writing to you to inform you of my thoughts on the Microsoft settlement issue.

This whole debate has gone on long enough. I sincerely hope this dispute will be resolved and no further action will be taken against Microsoft at the federal level. Microsoft has made a huge contribution to our society and economy. At the present, when our economy is challenged, this settlement will do us more good than ever. Under this agreement, Microsoft has pledged to share more information and create more opportunities for other companies. Microsoft has also agreed to be monitored by a technical oversight committee created by the government and to assist in dispute resolutions. Microsoft has agreed not to retaliate against software or hardware developers who develop or promote software that competes with Windows or that runs on software that competes with Widows.

This settlement will benefit our economy. I support it, and hope this comes to an end soon.

Sincerely,
J. Marshall Bradley

Subject: Microsoft Settlement

To whom it may concern,
I have been working in the software industry for over 4 years in both large and small companies, and I have advanced degrees in Economics and Business Management from the top universities in our country. I am concerned about the Proposed Final Settlement falling far short of penalizing Microsoft for its clearly anti-competitive business practices. In my view, this agreement lets the company "off the hook" far too lightly for the competition that it has virtually eliminated in 3 main markets: (1) desktop operating system; (2) personal computer productivity software (i.e. spreadsheets, word processing, etc.); and (3) Internet browsing software. The monopolistic position that Microsoft now occupies is not addressed by this settlement. Furthermore, the lack of competition in the 3 markets listed above will continue to offer consumers little or no choices in the software they can use for business and personal. No competition ensures that consumers and businesses will undoubtedly continue to over pay for software that they must buy in order to make any real use of their computers. Additionally, new companies and their product innovations will most likely fail or achieve unfairly limited success because of the extraordinary market challenges posed by the monopoly Microsoft has. I urge you to reconsider this settlement and its terms in the light of market competition. We certainly need competition to bring out the best in our high technology sectors, but we certainly don't need monopolies in our software industry.

Thanks for your consideration,
Geoff Heredia

I hardly think Microsoft's 1B offer to education is enough punishment for holding the entire computer industry hostage. Microsoft is such a big company that even the DOJ is powerless in getting them to pay. 1 Billion to education is a drop in the bucket and from the looks of things it appears Microsoft is wiggling out of this punishment by elbowing their way into the education market. . . a market they did not monopolize.

The DOJ needs to hit Microsoft where it hurts in order to prevent this kind of monopoly in the future.

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft:
I am writing because I would like to see the Justice Department settle its antitrust lawsuit against Microsoft. Microsoft's success and size has helped the industry standardize, work together efficiently, and grow rapidly. Any further litigation that may call for a breakup of the company is bad for both Microsoft and the computing industry as a whole. The settlement agreed upon is reasonable. Among other things, disclosing internal coding to competitors will allow those companies to write programs that better integrate with Windows.

A key goal in the litigation was to foster more competition to Microsoft in the industry. Given the increased competition that is sure to arise once Microsoft's concessions take effect, I urge you to settle the case.

Sincerely,
John Morotti

Subject: Microsoft is being allowed to take over OPENGL with impunity

Hi,
OPENGL is the industry standard 3D language for 3D developers in fields as disparate as aeronautics and computer games. It is one of the few areas left which Microsoft do not have the monopoly on. Microsoft has

its own proprietary language called Direct 3D. Yet they have just taken over the patents to Silicon Graphics' technologies including as I understand it OPENGL. This paves the way for Microsoft to kill OPENGL and force Direct 3D as the global standard giving them control over yet another market and unopposed sales of its X-box games system yet they have been allowed to do this with impunity even though they are under so called investigation. How is this possible? Do you not have truth and justice in the USA? Or is Microsoft so big now that they own everyone?

Subject: Microsoft settlement

I have been in the software business for twenty years. In that time, I have seen Microsoft grow from a very small company to today's megolithic company. In that time, their business practices have been suspect on more than one occasion. DR-DOS, Lotus 123 running on DOS, the attempted squashing of Netscape, ignoring the earlier consent decree, licensing terms, unfair ability of products to have insider knowledge of the operating system (and get features added that only Microsoft's developers know about). The company behavior that brought the anti-trust suit hasn't changed any. Ever since the threat of breakup has passed, I noticed that their behavior has reverted back to the pre-suit days.

I would like to see very positive action taken to assure that their monopoly is brought under control. A very large fine (several billion would be a good starting point), the removal of all the top company officers/managers, publishing the full API for both operating system and products so everyone can use all added features in them and immediate publishing as new features are added, restrictions on what they are allowed to add to the operating system as bundled software, set the same pricing for all computer vendors for the operating system, allow vendors to change the desktop any way they want with no retribution from Microsoft and very close scrutiny of any companies that Microsoft wants to purchase—if the purchase would seriously impact competition, then it shouldn't be allowed.

Thank you for your time.

Dear Mr. Ashcroft:

I am writing you today to voice my opinion in regards to the Microsoft antitrust dispute. I am a Microsoft supporter and director of Source of Light -East Africa. I feel this issue should be resolved so we can focus on more important issues.

Microsoft has had a positive impact on the economy and consumers. At a time when the economy is lagging, I feel it would be counterproductive to restrict Microsoft. Microsoft did not get off easy in this settlement. In fact, Microsoft agreed to terms of the settlement that go way beyond the issues of the original lawsuit, for the sake of wrapping this up. Microsoft will be disclosing more information to other companies and will be creating future versions of Windows to make it easier to install non-Microsoft software.

I believe this settlement will benefit the economy, the industry, and consumers. Please support this settlement. Thank you for your time.

Sincerely,
John Stiles

Washington, DC 20530

Dear Mr. Ashcroft:

The Microsoft anti-trust settlement has my support. The Justice Department is smart in finally resolving the case with Microsoft.

The details of the settlement include many concessions on the part of Microsoft. Microsoft has agreed to remove contract restrictions on developers. Software and hardware developers are able to enter into multiple agreements with competing companies under the terms of the settlement. Why would Microsoft allow for these concessions? They know that this settlement is in the best interests of the economy. It is about time Microsoft be allowed to get back to business.

I think that the settlement gives us the best opportunity to get back to business and bring this lawsuit to an end. Thank you for your time regarding this issue.

I am proud to support Mr. Gates for several reasons : Capitalism cannot survive without the innovative entrepreneurship exhibited by Mr. Gates. His willingness to share his rewards with many others , especially in the education field, is commendable.

Sincerely,
Charlie Clemons

Subject: Re: U.S. v. Microsoft: Settlement Information

Microsoft has done nothing but steal or rip off innovation, and kill competition since the day it began. Windows gives special privileges to Microsoft applications, and integrates Internet Explorer completely. This is not what an operating system is supposed to be. Even now, with Windows XP and the gigantic ad campaign surrounding it, Apple

and other small, innovative companies are being stolen from. Luna (the UI of XP) is a blatant copy of Aqua (The UI of MacOSX), and a dysfunctional one at that. Their Xbox game console is aimed at putting the game console under their iron fist as well.

When confronted with a lawsuit from apple a decade and a half ago (approximately), they changed the law to get away with it. They have been twisting laws, breaking them, and then changing them. Copyright laws underwent hundreds of changes to make their original OS legal.

This has GOT to be stopped, my suggestion is to divide Microsoft. Into as many pieces as possible.

Erik

Subject: Settlement Comments

To Whom It May Concern,

I am a software engineer with 10 years of experience as a programmer and a system administrator. I have a Masters Degree from Johns Hopkins University and a Bachelors Degree from Georgia Tech in Computer Science. I have closely followed the Microsoft Antitrust Trial and feel that it is my civic duty to oppose the settlement between the Microsoft and the Justice Department. The proposed settlement attempts to restore competition in the Operating System and Software Application markets by forcing Microsoft to "disclose APIs and related Documents" to other software developers (Section III.D). However, in Sections III.J.1 & .2, certain exemptions prevent this disclosure. These exemptions render Section III.D useless for the majority of products that need to interoperate with Microsoft products in order to restore competition. To illustrate this point, I will discuss several areas where competing products need to interoperate but will be prevented by Section III.J.

Samba is a popular software package that allows Unix servers (such as Linux and Sun Microsystems' Solaris) to interoperate with Windows NT Servers and Workstations. Using Samba, Unix servers can share network resources such as files and printers with a Microsoft network. Samba is developed by a group of 20 volunteers and is released under an Open Source License, meaning that the source code for Samba is available for anyone to read and/or modify. Unfortunately, the proposed settlement exempts the Samba team from benefitting from Microsoft's disclosure for several reasons. Section III.J.1 prevents this disclosure because Microsoft networks require authentication to share resources (the exemption states that "No provision . . . shall require Microsoft to . . . disclose . . . portions of the API . . . which would compromise . . . authentication systems . . ."), and Section III.J.2 also prevents this disclosure because Microsoft will never certify the Samba Team as a viable business (the exemption states that the licensee must ". . . meet reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business.>").

Apache is an Open Source web server that competes directly with Microsoft's IIS and

currently powers over 50% of the internet (see www.netcraft.com for details). However, for them to remain competitive, they will also need access to Microsoft's APIs for both the server and client side since Microsoft has monopolized over 90% of the web browser market. While Microsoft may recognize them as a viable business (the Apache Software Foundation is a not-for-profit corporation), Section III.J.1 will permit Microsoft to deny them the ability to interoperate because web servers are considered encryption and authentication systems.

Section III.J is an exceptionally large loophole that Microsoft will use to deny any software developer the ability to compete in any market that Microsoft wishes to monopolize. It can effectively be used to cover Microsoft's Office and multimedia file formats (exempted under the digital rights management clause) and their attempts to control the Internet under their .Net initiative (exempted under the authentication systems clause). Section III.J effectively renders the disclosure clauses in Section III.D useless and will allow Microsoft to keep their illegal monopoly intact.

To solve these inadequacies, I propose that the court completely strike Section III.J from the settlement and force Microsoft to disclose all of their past and future APIs and file formats to an international standards body. The approved standards should then be made freely and publicly available to any competitor who wishes to implement them. Until these protocols become open to all, Microsoft will continue to illegally monopolize any market that it wants.

Sincerely,
David Trimm

Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Attorney General Ashcroft:

As a concerned citizen, I write you in reference to the recent settlement between Microsoft and the Department of Justice. It baffles me when I hear that the process is being even further scrutinized. After three years of well thought out negotiations, it is ridiculous to continue to pick apart the terms of this agreement. Microsoft, the Department of Justice, the nine states and a mediator have carefully arrived at these terms, which are more than fair to Microsoft's competitors.

Microsoft has agreed to reconfigure licensing and marketing agreements and has agreed to do so under the supervision of a technical committee that has been set up for just that. Microsoft has also agreed to design future versions of Windows that will promote easier installation of non-Microsoft software.

It is evident that the terms of the agreement do a great deal to promote the use of non-Microsoft software. Obviously, Microsoft is acting in the interest of our IT sector as a whole. Therefore, so should the government.

I urge you to help get our technology industry back to business by stopping any further litigation against this settlement. I thank you for your time and, in advance, for your support.

Subject: Microsoft Settlement

Dear Department of Justice,
I would like to comment on the Microsoft case. I think the proposed settlement is a bad one, for although it will cost Microsoft some money, it will also give them an enormous boost in the education market, one of the few areas where Wintel machines do not represent an overwhelming majority. In other words, the case against Microsoft was supposed to curb their monopolistic practices, while the proposed settlement actually helps them in this regard. And make no mistake, Microsoft is a monopolistic company. I am surprised that no one has commented on the illogic of two statements repeatedly made by Microsoft: first, they claim that they are not a monopoly, but they also claim that multiple operating systems would hurt the consumer since this would sow confusion. There are already competing operating systems—the two most popular are the Mac OS and Linux—and these two platforms have a dedicated customer base that is not confused or offput by the difficulties inherent in working outside the Windows hegemony. This point needs to be made clear to the public in order to push for a truly fair settlement and to counter Microsoft's aggressive public relations campaign against the anti-trust lawsuit. In conclusion, I encourage the Department of Justice to push for a harsher penalty against Microsoft, one that punishes, rather than rewards, them for their monopolistic practices. —

Attorney General John Ashcroft
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Sir:

I am writing to express my opinions regarding the Microsoft antitrust case. I feel that the settlement agreement reached between the Department of Justice and Microsoft was fair and reasonable. It was received after extensive negotiations with a court-appointed negotiator, and has already been approved by nine states.

I am disturbed by the trend that has arisen since the tobacco settlements, whereby lawsuits are used as forms of state revenue generators. I am also disturbed by what I see as an attack by cry-babies who cannot compete in the free market, and by people whose real agenda it is to attack free enterprise and capitalism.

I feel that if this case is judged by its merits, then one cannot help but see that Microsoft has granted more concessions than was first asked of it. Microsoft has changed the way it licenses, develops, and markets its software. These changes are evident in its decision to license Windows to the twenty largest computer manufacturers, and make available to its competitors any protocols implemented in Windows. Microsoft has basically granted free access to its invention to all that would compete with it. Microsoft has even agreed to allow computer makers to configure Windows so as to promote non-Microsoft software that competes with programs included within Windows.

I understand that the issues that brought about the suit in the first place may have been valid, but that was years and countless dollars ago. Microsoft will soon make or has already made the necessary changes. The only reason that states would consider pursuing further litigation is for a return on investment, rather than a concern for the public welfare. If need be, I hope you will see fit to protect Microsoft just as expensively as you have protected the competition. In the meantime, at minimum, please accept the settlement.

Very truly yours,
Donald W. Cummings

Subject: Microsoft Settlement

To whom it may concern,

I have been using and programming computers since the early 80s. During that time I've seen many hardware and software companies rise and fall. Sadly, in my opinion, I have seen too many companies develop great products and have Microsoft come to them and "learn" from them but in reality steal their code and ideas. Take a look at the litigation Microsoft has undergone to

see what I mean. Microsoft has no qualms about stealing someone's code and then justifying the theft with a settlement. Even the well publicized \$150 million "invested" in Apple was in reality a payoff for pending patent litigation.

Microsoft will never propose any settlement that does not permit them to continue doing what they have always done. Their current proposal would do the unthinkable, give them a leg up in a market area where they currently do not dominate. By donating "refurbished PCs" (read leftover machines after upgrading in-house) and software (read their software, which costs a small fraction to make in comparison to what it retails for) Microsoft gives a surface level display of remorse that in reality furthers its own agenda. A more adequate requirement would have Microsoft spend the \$1 billion on new machines that did not run their operating system, such as Linux or Macintoshes. The findings of fact are clear. Do not reward Microsoft for monopolistic behavior. Microsoft will continue to practice business the same way they always have until you tell them they can't, and back it up with sufficient muscle to force them to change the way they do business.

Any remedy that doesn't hurt them is no remedy at all.

Subject: Too Easy on Microsoft

I just want to voice my concerns about what appears to be too little too late. Those of us who have had to deal with Microsoft Windows in its many flavors, since the early 90's, know full well that the company has not disclosed all necessary information to 3rd parties.

I have been using Wordperfect and Lotus products from the old DOS days and have

preferred to keep using those products. However, the stability of Wordperfect, for one, in the Windows environment leaves much to be desired. It is obvious Microsoft has inside information that allows them to produce an office suite that works within Windows far better than anyone else.

Additionally, I find it abhorrent that the government is too stupid to realize that the bundling of applications, and Internet Explorer is just another application, is against the most basic of our anti-trust laws. We, the consumer and the competition, need government intervention to stop Microsoft from continually abusing its position. I want choices and I do not want Microsoft bundled products. I want a choice of all office suites when I buy a PC, not just Microsoft Office. I want a choice of what browser and email programs are on my PC, not just Microsoft's. Furthermore, I want those programs to work at least as good as Microsoft's within the Window's environment. I am sick and tired of Microsoft bundling software with the operating system and jamming it down our throats. I don't need Microsoft to provide email software like Outlook Express or even Outlook, that is so full of security holes that I might just as well post a web site banner saying "send viruses here".

Unfortunately, there are too many consumers who are totally clueless and accept everything Microsoft hands down. The government needs to realize these people have no idea there are choices that may be better than what Microsoft has provided. Listen to the IS people, the IT people, the engineers and technical people—we are all saying Microsoft needs a short leash and now. Judge Jackson was correct in his assessment that Microsoft should be broken up as part of the remedy. What is done now must be severe and strict controls must be put in place as soon as possible. The gov't already dropped the ball by letting Microsoft issue Windows XP with even more bundled crap. It is time to level the playing field and get Microsoft under control.

Subject: Microsoft Settlement

Dear Sir or Madam,

I am writing to you about the Proposed Final Judgment on Microsoft. 2 areas I am concerned on is that the judgment does not address the arbitrary nature of what products or services gets added to the Microsoft Operating System. By adding on otherwise standalone products to the OS, smaller companies have an unfair disadvantage of competing against an OS that already has a product that they are trying to sell.

Also, the judgment does not does not restrict Microsoft's ability to modify, alter or refuse to support computer industry standards, including Java, or to engage in

campaigns to deceive developers of rival platforms, middleware or applications software. Java technologies exclusion in Microsoft's XP operating system is more than just an oversight.

Please include these concerns with others in the community to express my concern within the software industry of this anti-competitive threat that Microsoft will continue to have on this industry. Free competition will allow thriving new business to form and ultimately help the consumers with excellent products at competitive prices.

From: Brett Sher
To: Microsoft ATR
Date: 1/21/02 1:36pm
Subject: Microsoft settlement

Microsoft has been found to have an illegal monopoly of desktop computer operating systems. This monopoly gives them the power to expand into other areas beside operating systems (Internet browsing, media delivery, electronic commerce, etc.). Microsoft's obvious stranglehold inhibits investors from supporting other companies witch would seek to offer alternatives to Microsoft technologies. This is bad and inhibits innovation.

Microsoft's omnipresence is also a source of vulnerability to computer viruses (a common platform is easier to corrupt). America needs software diversity to protect itself against cyber attacks.

Any settlement must be designed to eliminate Microsoft's desktop monopoly, and not be just a slap on the wrist. Even if today Microsoft was forced to drop the underhanded tactics and fight fairly in the marketplace, they would benefit from an overwhelming advantage gained by years of bullying, bundling, dumping, lying and intimidating. Microsoft must be severely hobbled until a healthy competitive market can reemerge.

Be tough.

With a market share of more than 90%, Microsoft has a profound advantage over companies such as Netscape, Real Networks, and Apple, who are fighting a perpetual uphill battle to maintain a presence in the market. Any application software that Microsoft chooses to package with its Windows operating system is guaranteed to push all other competitors out of the market. Netscape's browser software used to be the most widely used internet software. Once Microsoft started bundling Explorer with Windows, Netscape's market share dropped to almost nothing. Real Networks and Apple computer face similar fates with their media products (RealAudio, and QuickTime) which are steadily being pushed out of the market by Windows Media software bundled with every Intel PC.

Action must be taken to restore a balanced and competitive software market, in which the success of a software application is based on its quality, performance, and utility, not the fact that it's bundled for free with an operating system that runs on the majority of the world's personal computers. The proposed Final Judgment is too weak to counter Microsoft's monopoly position in the market, and I urge the DOJ to pursue the breakup of Microsoft into two separate companies for operating systems (Windows) and applications (Word, Excel, Explorer, etc.). This solution will help maintain a healthy and innovative American software industry for years to come.

January 21, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I want to use this opportunity to express my support for the settlement reached last November between Microsoft and the Department of Justice. I believe it is time to move forward and allow both sides to concentrate on more important matters.

The settlement is comprehensive and requires many changes on the part of Microsoft. For example, Microsoft has agreed to design future versions of Windows to provide a mechanism to make it easy for computer makers, consumers and software developers to promote non-Microsoft software within Windows. Consumers will have the freedom to easily add or remove access features built in to Windows or to

non-Microsoft software. And to assure this and other provisions are met, Microsoft agreed to the formation of a technical committee that will monitor the company's business practices going forward.

This case has been going on long enough. It is time for Microsoft to get back to competing and designing new software. And it is time for the government to use taxpayer money on more urgent matters like stimulating the economy.

Sincerely,
Vern Scoggins

Subject: Microsoft Settlement

I would like to comment on the Microsoft case. I am familiar with several operating systems, including Windows, and use Microsoft software routinely. Although the company makes good products, I am against this settlement. It is a Trojan horse: of course our impoverished schools need computers, and Microsoft is savvy enough to use that inarguable point as a means of further expanding their monopolistic practices. Although Microsoft ostensibly offers a choice of platforms to the schools, few administrators would choose anything other than the dominant Wintel system—dominant precisely because it is a monopoly—over the other platforms. The amount of money it would cost Microsoft to supply the schools is not only relatively painless for them, it is a sound investment in continuing monopoly. Meanwhile, Microsoft is waging an aggressive and effective campaign of public opinion against the anti-trust laws that are trying to contain it.

Whether one admires the products and the success of this company, it must be curtailed in a meaningful way in order to maintain the amount of competition the market offers. I do not wish to see a future in which our only choice for information technology is a single monopoly. I urge you to find a harsher settlement that serves as a deterrent to their practices.

Washington, DC 20530-0001
January 21, 2002

Dear Mr. Ashcroft:

I have not been in full support of this lawsuit from the beginning and am happy to see it finally over. I hope that people will realize what a good settlement that you have worked out and I hope that they come to accept it as well.

The settlement reached was fairly negotiated and equitable for both sides. Microsoft did not get off easy by any means. The settlement does, however, answer most of the complaints from Microsoft's competitors without needlessly burdening the company. For instance, Microsoft will be disclosing internal interface information to its competitors as well as designing future versions of Windows so that software developers and consumers can more easily promote their own products.

I hope that you will listen to the opinion of the many people who write into you, who daily depend on and support Microsoft and their products. Microsoft is a fine company and deserves the opportunity to compete aggressively for business. This settlement gives them that opportunity without denying others that same opportunity.

Sincerely,
Ronald Johnson

Subject: Microsoft Legal Action

Sir/Madam: I own 100 shares of Microsoft stock. I urge support for the settlement agreed to by the US, many states and Microsoft. Based on the facts reported in the newspapers and my own non-professional purchase and usage of computers it appears that the terms of the settlement appropriately address the concerns expressed in the verdicts. As a non-expert computer user the Microsoft products make it easier for me and the prices appear comparable to other products. Also, given the speed with which technology changes, we would be better served if Microsoft's competitors (I own small amounts of some of them as well) would work together and come up with truly competitive products without undue interference from the courts. Further, the remaining states and Microsoft should in due course be encouraged to settle the remaining part of the case. Thank you for your consideration. CC:FIN@ mobilizationoffice.com@inetgw

Dear Mr. Ashcroft:

The purpose of this letter is to express my support of the Microsoft antitrust settlement. Three years have now passed since this case was introduced by the Department of Justice.

Since this time an enormous amount of time and energy has been wasted in trying to mediate this issue. During these economic times, I believe taxpayers would rather have their resources spent on more pressing issues.

Microsoft has been generous throughout this dispute. Wishing for a resolution, Microsoft agreed to many stipulations. Microsoft has agreed to the formation of a technical review board. This board will be composed of external members whose position is to ensure that Microsoft follows the terms of the agreement. I would hope that this would reassure those wary of the settlement's seriousness.

Please enact the settlement at the end of January, as it is in the best public interest. Thank you.

Sincerely,
Cheryl Richardson

Dear Mr. Ashcroft:

I am a professor of information systems at San Francisco State University. It is important to me that I send my students out into a field of work that is stable and profitable. At the same time I want them to be able to engage in fair business practices. For these reasons I am pleased that we have finally reached a settlement in the antitrust dispute against Microsoft. I feel that this suit has created a great deal of trouble within the technology industry, and I feel that at this time we do not need uncertainty in our fledgling profession.

This settlement is fair and I believe that with it in place we can finally begin moving forward again in the utilization of Information Technology in the workplace

without the uncertainty that has held us captive during the period of the Microsoft lawsuit. Microsoft will no longer be permitted to engage in monopolistic business practices. The company will design all future versions of its Windows operating system to be compatible with the products of its competitors. The company will also refrain from committing any further retaliatory actions against its competitors.

I believe that with these provisions in place we will finally be able to get back to the business of innovation. This nation is the worldwide leader of the IT industry, and this is greatly due to the innovation and ingenuity of the Microsoft Corporation, we do not need to destroy one of this nation's best and brightest stars of the IT sector. Thank you for this opportunity to express my position.

Attorney General John Ashcroft
US Department of Justice
Washington, DC 20530-0001

Dear Attorney General Ashcroft:

As a supporter of Microsoft, I write you with concern over the recent developments in the Microsoft settlement. I was happy to learn that the settlement had finally been reached, but was a bit upset when I learned that it is being further delayed. After three years of negotiations it seems ridiculous to further dissect this well thought out agreement. The terms that have been reached are fair and reasonable and should be allowed stand.

Microsoft has agreed to make various changes in areas such as relations with

developers and computer makers, including licensing, marketing and even design. Because the focus of these compliances is supporting non-Microsoft software, it is evident that Microsoft is negotiating with all parties in mind. This is a step toward a more unified IT sector and a step toward a stronger economy. So, why hold up this process any longer?

I urge your help stop any further actions against this agreement. It is clear that further litigation can only harm our economy at this point in time, so let us move forward. I thank you for your help.

Sincerely,
Connie Melton

Subject: Microsoft Case

To Whom I May Concern:

I have commented on your Microsoft case before and reiterate my concern that the government is infringing on private industry operations. MS has done nothing that all of their competitors are not doing. The only difference is that MS is bigger and is doing a better job of promoting their products. MS has been a major force in making personal computers and software affordable to the public and they have done so by packaging their products. This practice is common amongst private manufacturers that are lucky enough to have some unique products. The computer generation would not have advanced nearly as rapidly were it not for MS.

They have been punished enough and the rest of us have paid enough of our money in the persecution of an innocent party.

Please let the ruling stand and stop the ridiculous litigation.

Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft:

I am writing to express my opinion that the recent settlement between the US Department of Justice and Microsoft is in the best interests of the American public. I think further litigation would be detrimental to a company that has revolutionized the IT

industry and made so many contributions to our country.

I realize that at times Microsoft's marketing tactics were a bit heavy-handed, but their aggressiveness only reflects the incentives of our capitalist society, and they are not alone in this respect. I believe they are being targeted for their success, not for their tactics. Were other very successful companies prosecuted in this manner, there would be very few left unscathed.

At any rate, the terms of the settlement should be sufficient to appease all parties involved because they address claims of competitors' inability to market their products effectively. Under terms of the settlement Microsoft will design future Windows versions so that others can more easily promote competing products. Microsoft will also grant computer makers broad new rights to configure Windows so as to make it easier for non-Microsoft software to be promoted from within. Surely a fair-minded look at the situation will show that this step, along with other concessions that are being made in the same vein, is enough to address whatever complaints have been lodged.

Please accept the settlement as soon as possible.

Sincerely,
Ameta Macaluso

Subject: Microsoft Settlement

Dear Judge,

I have been informed of the conduct that Microsoft has taken part in regarding the pfj and I am strongly opposed by it. Microsoft should no longer be given the opportunity to be a monopoly either in the government's eyes or the general public who consumes this type of technology. If Microsoft is allowed to eliminate all other competition then the market for the specific type of technology can only expand and grow at a minimal rate, leaving no room for competition for lower prices, better software and incentives for a variety of programs that can offer different services, these are all disadvantages that the consumer, referring to myself as one of them, will have to face. Please strongly consider this while making your decision. By allowing Microsoft to continue to dominate this specific technological field, the consumer misses out on so many benefits. Thank you for your time.

Washington, DC 20530

Dear Mr. Ashcroft:

I am taking some time to write to you to express an opinion about the settlement reached in the Microsoft antitrust case. I am one of those who believed that this case should have never gone to trial in the first place, and I also believe that the anti-trust laws are very questionable and subjective (i.e., irrational). In a free enterprise, only the Government can create a monopoly. However, since a settlement exists in this case, and it will end this case, I hope you will see it through and end litigation.

I would ask you to strongly rebuke those that want this case back in court. This case has cost your office and Microsoft millions of dollars and countless man-hours. Both parties could be putting their time to better use than going back to Federal court to expend even more resources. The settlement will end this three-year-old debacle, and I am pleased that you have agreed to it. Be steadfast in your support and work to implement the settlement in this case. There is a huge "silent majority" out there.

Sincerely,
Thomas A. Hokel

Dear Mr. Ashcroft:

Justice Department officials have seen the light and offered a settlement in the Microsoft antitrust case. Microsoft has agreed to this settlement and this should bring an end to this case at the federal level.

The settlement will create more openness and competition in the technology sector of our economy. This settlement stipulates that Microsoft will share its internal interfaces with its rivals. Also Microsoft will share the protocols of their server interoperability. The release of all these Microsoft secrets will be a great help for MS competitors. Furthermore these compromises by Microsoft are unmatched in the history of information technology.

It is unfortunate that some individual and groups have sought to put a negative light on this settlement. I am pleased to see that you agreed to settle.

Sincerely,
Peter Hartwig

MTC-00014288

From: John Macko
To: Microsoft ATR
Date: 1/21/02 2:33pm
Subject: Microsoft Antitrust Settlement

As a supporter of Microsoft, I write you with concern regarding the recent settlement. After three long years of court battles, it seems strange that the settlement is again being challenged. The negotiation of this agreement was not only well thought out, but was in the interest of the Information Technology sector as a whole.

After examining this agreement, it seems evident that all parties involved will benefit from its terms. Not only does Microsoft agree to reconfigure licensing and marketing terms, but also they have agreed to disclose information about certain internal interfaces in Windows. Overall, the agreement is helping to open up the competitive market in our technological industry, which has been the goal from the start. The provisions of the agreement are tough, reasonable, fair to all parties involved, and go beyond the findings of the Court of Appeals ruling.

It seems foolish to waste our resources on dissecting such a well thought out plan. With all the time and effort put into this suit, it seems that it is time to let the technology industry get back to business. Our technology industry only suffers from the delay of this agreement. This delay can do nothing but have a negative effect on our economy.

Please help support further growth of our technology industry by helping to stop any further action taken against this settlement. I appreciate your time and your support.

Sincerely,
John Macko

Subject: not significant enough

The efforts to settle the Microsoft case have circumvented the protections that Judge Jackson initially laid down. While the dismissal of his punishment due to bias was ruled, I believe his severe measures were completely justified.

Microsoft is dangerous, dangerous as it wields enough power and influence to destroy the burgeoning innovators in the technology industries. As it expands its reach unrestricted, customers of American technology will suffer with fewer and fewer options.

The latest effort to "settle" by donating to education is the most self-serving action I have ever heard proposed. Do not cut the throat of one of only bastions against the Microsoft hegemony, by building the road right into the heart of the educational market. Apple Computer's tiny refuge would be bulldozed under.

Severe punishment and restrictions against Microsoft are the only justifiable actions in this case.

From: Norm Gilbert
To: Microsoft ATR
Date: 1/21/02 2:51pm
Subject: Microsoft Settlement

I fully supported Judge Jackson's decision to split up Microsoft into two companies. Unfortunately, while Judge Jackson's decision was correct based upon the evidence, he was not judicious when explaining his decision to the media, opening the door to Microsoft for an appeal.

I am convinced that, with the change of administrations, the government has decided to give Microsoft a free ride and has backed off in its enforcement of the anti-trust laws, to the detriment of consumers and to the benefit of the monopolist Bill Gates.

Allowing Gates to essentially buy his way out of an anti-trust judgement by donating equipment or software that only furthers his monopoly control is absurd in the extreme.

Thank goodness the states Attorneys General are not so easily corruptible as is President Bush, who has demonstrated that he's for sale to the highest bidder in donations and support (for proof, look at the Enron matter!) If Gates wants to give money to schools and libraries, give it with no strings attached and let it be spent on Apple Macintosh equipment or Sun SPARC servers and not on Windows based hardware and software. However, the best solution by far is to break the company into two parts, with one company owning the Windows Operating System franchise and the other having all the games, applications and Microsoft network.

Microsoft's conduct has been anti-competitive and unfair to its customers and competitors and they should not be rewarded for their illegal conduct. This proposed settlement is simply not good government and reeks of corruption, payoffs, and political favors. Microsoft broke the law; enforce the law and extract a real penalty that corrects the situation permanently and prevents Microsoft from continuing its anti-trust activities in the future.

January 21, 2002
Attorney General John Ashcroft

US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing you today to express my strong opinion in regards to the settlement that was reached on November 6, 2001 between Microsoft and the government. I feel this settlement is fair and reasonable, and I am relieved this dispute is finally over. Microsoft has had an enormous positive impact on the technology industry. Microsoft has made it easier for the average consumer to take advantage of what technology has to offer, both at home and at work. I, personally would not have been able to take a good paying job after a tragic divorce after 30 years of marriage without the technology that Microsoft has developed. The technology of Microsoft allowed me to learn one program and then relate the same logic to other programs making it easier and faster for me to become proficient and take a responsible position very quickly.

I am a strong Microsoft supporter, and I believe that this settlement will serve in the best public interest. This agreement will allow Microsoft to focus on designing and marketing its innovative software, rather than wasting money on litigation.

Please bring an end to what seems to be endless and costly litigation. . . . costly not only for Microsoft. . . . but also the U.S. Tax Payer.

Thank you for settling with Microsoft.
Sincerely,
Sheila Dale

MTC-00014294

From: Wallingford, Ted
To: Microsoft ATR
Date: 1/21/02 2:46pm
Subject: Microsoft Settlement

Hello Justice Department, Attorney General, and Ms. Hesse:

Ideas for your proposal for settling the Microsoft case (or trial of Microsoft, if it happens) are included in this letter. Microsoft does in fact relish an unfair advantage over other manufacturers of operating system software. They control all aspects of software development for Intel-compatible PCs, and even flaunt control over distribution and manufacture of Intel-compatible PCs. PC makers, while sometimes ethically unsure of their software-bundling decisions, invariably end up choosing Microsoft's software to bundle with their machines, whether or not it is in fact better.

Better, more stable products do exist. This is not to say Microsoft's products are bad or good, as that type of judgment isn't what's being requested of the Federal Court. However, Red Hat, Apple, and Corel make operating systems and applications for their alternative operating systems which could raise the competitive ante for Microsoft if only the constraints placed by Microsoft on the PC makers could somehow be loosened. The quality of competitor's operating system products (Apple included) is often held up as superior to Microsoft's, and it has been this way for a long time. Yet, Microsoft's dominance of the market has persisted for well over a decade. This is unquestionable and strong evidence of an unfair monopoly.

The Microsoft-proposed antitrust settlement will NOT solve these problems, or the countless other problems incurred by the MS juggernaut, including anticompetitive stifling of Sun's Java application technology through deliberate introduction of incompatibilities, and subsequent elimination of software competitors by acquisition or other tactics, then subsequent aggressive inflation of software prices in the wake left by lack of competition. I am less concerned about the Netscape vs. Explorer issue, however I submit that Microsoft used (less severe) anticompetitive tactics (forcing Pc makers to bundle) that, when combined with business mistakes on Netscape's part, led to Netscape's irrelevance in the marketplace.

The only way to solve the problems outlined herein is to restructure Microsoft as three separate companies. One which manufactures and markets the operating system software, one which manufactures the application software and games, and one which manufactures the development tools. Only in this way can unfair leveraging the loss of compatibility with one type of software (an OS or a development tool) be reason for consumers not to choose a software product of another type from another vendor. You can't switch away from Windows because Microsoft makes 90% of the applications most commonly used on Windows. You can't switch away from Microsoft development tools because the secret methods in which the best applications are developed are only known to those developers who choose Microsoft development tools like Visual C++. Even then, the core "killer performance" APIs are known only to Microsoft, in order to give the applications they develop a built-in advantage over those of their competitors.

Is it possible to hold Microsoft in contempt because of their recent settlement proposal, which amounts to nothing but a grant of more unfairly-gained marketshare and loss of choice for poor schools? Poor schools may not have as much money as others, but to take away their choice is completely inconsiderate of the constitution, and damaging to the school programs themselves. Poor and often failing schools don't need computers, they need more involved parents, more professional teachers, and more importantly competition. Microsoft's proposed settlement would have done nothing to help the essential problem of poor American schools (which are wealthy by many global standards).

Whatever disciplinary action is taken against the monopolistic giant, please clearly design it to rectify the wrongs Microsoft has been convicted of. Rather than brushing aside the ruthless and morally bankrupt actions Microsoft has committed in exchange for a half-million dollars in marginal (tax-deductible) expenses from Microsoft to poor schools, please make the penalty severe enough to notice, compensatory to victimized corporate competitors and consumers, and relevant to the infractions committed! What do poor schools have to do with the Microsoft-incurred losses at Sun, Netscape, and Apple? Nothing!

Find a way to restore competition to this free market. Begin by allowing Windows

developers to be free enough to develop for other platforms. Then, allow Windows consumers to switch platforms if so desired.

Platform-switching means consumer-spending, and while it will ensure developers who develop for non-Windows platforms won't get burnt for doing so, consumers switching platforms means more competition, lower prices, high consumer spending in the technology sector, more willingness for long-term spending (upgrading software), and more tax revenue.

Finally, separate the Microsoft that makes Windows applications from the Microsoft that makes Windows itself, and force the former to develop applications for other platforms, because a heterogeneous marketplace keeps prices down and innovation up. Imagine if there was only one maker of automobiles! This is where the market it headed unless one of two things happens. 1. The DOJ submits a heavy-handed but fair counterproposal, or 2. Three quarters of Microsoft's competitors merge assets and go in to debt for thirty years in order to buy away a competitive percentage of their monopolized customer base (i.e. Impossible).

Thanks for inviting me to speak. As an American, it is my privilege and thrill to do so.

Sincerely,
Ted Wallingford

Subject: Microsoft Settlement
January 21, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

Being a supporter of Microsoft, I feel as though Microsoft was penalized for its greatness. Bill Gates is a brilliant man and thus, I am not surprised that he is the owner of a brilliant business as well. In this case, it seems as though he has endured this lengthy and needless litigation due to the fact that the competition could not keep up. Bill Gates is clearly at the top of his industry and he should not be punished for having the best product.

I am confident that this settlement was not easy on Microsoft. I am sure that you are aware of the restrictions and obligations that Microsoft has agreed to and I hope this is enough to end this case. I am certain that this settlement will serve not only the best interest of the software industry but also the consumers as well.

I appreciate your time in listening to the public opinion. Thank you very much.

Sincerely,
Thomas Robinson

Subject: Microsoft anti-trust
CC:
tormist@ag.state.1a.us@inetgw
January 21, 2002
Hon. Colleen Kollar-Kotelly
U.S. District Court, District of Columbia c/o
Renata B. Hesse
Antitrust Division
U.S. Department of Justice
601 D Street NW
Suite 1200
Washington, DC 20530-0001

Dear Judge Kollar-Kotelly:

The proposed settlement between the Department of Justice and Microsoft in U.S.v. Microsoft falls far short of what is needed to put an end Microsoft's pattern of predatory practices. This deal does not adequately protect competition and innovation in this vital sector of our economy, does not go far enough to address consumer choice, and fails to meet the standards for a remedy set in the unanimous ruling against Microsoft by the Court of Appeals for the District of Columbia. Its enforcement provisions are vague and unenforceable. The five-year time frame of the proposed settlement is much too short to deal with the antitrust abuses of a company that has maintained and expanded its monopoly power through fear and intimidation.

Microsoft's liability under the antitrust laws is no longer open for debate. Microsoft has been found liable before the District Court, lost its appeal to the United States Court of Appeals for the District of Columbia in a 7-0 decision, saw its petition for reheating in the appellate court denied, and had its appeal to the Supreme Court turned down. The courts have decided that Microsoft possesses monopoly power and has used that power unlawfully to protect its monopoly. The next step is to find a remedy that meets the appellate court's standard to "terminate the monopoly, deny to Microsoft the fruits of its past statutory violations, and prevent any future anticompetitive activity." This proposed settlement fails to do so. The Deal Fails to Meet the Appellate Court's Remedy Standards

This proposed settlement clearly fails to meet the standards clearly laid out by the appellate court. In fact, the weak settlement between Microsoft and the Department of Justice ignores key aspects of the Court of Appeals ruling against Microsoft. Here are several examples of where this weak settlement falls short:

1) The settlement does not address key Microsoft practices found to be illegal by the appellate court, such as the finding that Microsoft's practice of bolting applications to Windows through the practice of "commingling code" was a violation of antitrust law. This was considered by many to be among the most significant violations of the law, but the settlement does not mention it.

2) The settlement abandons the principle that fueled consumer criticism and which gave rise to this antitrust case in 1998: Microsoft's decision to bind—or "bolt" Internet Explorer to the Windows operating system in order to crush its browser competitor Netscape. This settlement gives Microsoft "sole discretion" to unilaterally

determine that other products or services which don't have anything to do with operating a computer are nevertheless part of a "Windows Operating System product." This creates a new exemption from parts of antitrust law for Microsoft and would leave Microsoft free to bolt financial services, cable television, or the Internet itself into Windows.

3) The deal fails to terminate the Microsoft monopoly, and instead guarantees Microsoft's monopoly will survive and be allowed to expand into new markets.

4) The flawed settlement empowers Microsoft to retaliate against would-be competitors and to take the intellectual property of competitors doing business with Microsoft.

5) The proposed settlement permits Microsoft to define many key terms, which is unprecedented in any law enforcement proceeding.
Loopholes Undermine Strong-Sounding Provisions

The proposed settlement shows that it contains far too many strong-sounding provisions that are riddled with loopholes. Here are several examples:

The agreement requires Microsoft to share certain technical information with other companies in order for non-Microsoft software to work as intended. However, Microsoft is under no obligation to share information if that disclosure would harm the company's security or software licensing. Who gets to decide whether such harm might occur? Microsoft.

The settlement says that Microsoft "shall not enter into any agreement" to pay a software vendor not to develop or distribute software that would compete with Microsoft's products. However, another provision permits those payments and deals when they are "reasonably necessary." The ultimate arbiter of when these deals would be "reasonably necessary?" Microsoft.

The settlement does nothing to deal with the effects on consumers and businesses of technologies such as Microsoft's Passport. Passport has been the subject of numerous privacy and security complaints by national consumer organizations. However, corporations and governments that place a high value on system security will be unable to benefit from competitive security technologies, even if those technologies are superior to Microsoft's. Why? Microsoft controls their choices through its monopolies and dominant market share, and still is able to dictate what technologies it will include.
Enforcement

The weak enforcement provisions in this proposed deal leave Microsoft free to do practically whatever it wants.

A three-person technical committee will be appointed, which Microsoft appointing one member, the Department of Justice appointing another, and the two sides agreeing on the third. This means that Microsoft gets to appoint half of the members of, the group watching over its actions. The committee is supposed to identify violations of the agreement. But even if the committee finds violations, the work of that committee cannot be admitted into court in any enforcement proceeding. This is like

allowing a football referee to throw as many penalty flags as he likes for flagrant violations on the field, but prohibiting him from marching off any penalties. Finally, Microsoft must comply with the lenient restrictions in the agreement for only five years. This is not long enough for a company found guilty of violating antitrust law.

The Proposed Settlement fails to Adequately Address Consumer Needs

The settlement does not go far enough to provide greater consumer choice, and leaves Microsoft in a position that it can continue to charge whatever it wants for its products. As a recent Chicago Tribune story said: "If you believe that what's good for Microsoft Corp. is good for consumers, the proposed settlement of the software giant's three-year federal antitrust baffle is cause for celebration. If you believe that consumers would benefit more if Microsoft could no longer use its Windows monopoly as a springboard into new markets, you stand to be sorely disappointed."

In addition, consumer groups have opposed the settlement. Mark Cooper, director of research for the Consumer Federation of America, said: "Wall Street's view is that Microsoft's business model doesn't change. If that's the case, we will continue to be afflicted with the same anti-competitive behavior."

Analysts Conclude that Deal Will Not Affect Microsoft's Practices

Sadly, the proposed final judgment by Microsoft and the Department of Justice has the potential make the competitive landscape of the software industry worse, contains so many ambiguities and loopholes that it may be unenforceable, and is likely to lead to years of additional litigation. Analysts of all kinds have indicated that the weak settlement will not impact Microsoft or its illegal practices. Following are a variety of examples:

"As we have stated before, we believe a settlement is a best case scenario for Microsoft. And, this settlement in particular seems like a win for Microsoft being that it would preserve Microsoft's ability to bundle its Internet assets with Windows XP and future operating systems—a plus for the company. In fact, it appears that Internet assets such as Passport are untouched.

Also, as is typical with legal judgments, this settlement is backward looking, not forward looking. In other words, it looks at processes in the past, but not potential development of the future."

Morgan Stanley, 11/02/01

"The deal . . . appears to be "more, better, and faster" than we expected in a settlement deal between Microsoft and DoJ. The deal will apparently require few if any changes in Windows XP and leave important aspects of Microsoft's market power intact."

Prudential Financial, 11/01/01
"With a dramatic win last week, Microsoft appears to be on its way to putting the U.S. antitrust case behind it. The PFJ between the Department of Justice and Microsoft gives little for Microsoft's competitors to cheer about . . . There is very little chance that competitors could prove or win effective relief from violation of this agreement, in our view."

Schwab Capital Markets, 11/6/01

"This is a spectacular victory for Microsoft."

—David Yoffie, professor, Harvard Business School, New York Times 11/02/01

"This deal appears to fall far short of what could have been obtained in court, and what's necessary to protect the public."

—Andrew Schwartzman, public interest firm lawyer, Media Access Project, Wall Street Journal 11/02/01

"[The settlement] fails to protect competition in the software industry and does not come close to dealing with the problems that were found to exist by the District Court and the Court of Appeals."

—Albert A. Foer, president, American Antitrust Institute, Washington Post 11/05/01

"This is a reward, not a remedy."

—Kelly Jo MacArthur, general counsel, ReaiNetworks, Inc., Globe and Mail 11/08/01

"It looks like the government is giving them a slap on the wrist. I find that sad. It won't achieve any of the goals of the proceeding."

—Robert Lande, law professor and antitrust expert, University of Baltimore, ZDWire 11107101

The strength of any remedy is particularly important given Microsoft's growing dominance in the software markets. Since the end of the trial in the District Court, Microsoft's monopolies are stronger in each of its core markets with both the Windows operating system and the Office suite now higher than 92 percent and 95 percent, respectively. In addition, Microsoft has achieved a monopoly in web browsers, and has seen competitors such as the Linux operating system fade.

The Microsoft Monopoly Should not be Exempt from Antitrust Laws

Enforcing federal antitrust laws against monopolies is not new or novel. Antitrust law has protected free markets and enhanced consumer welfare in this country for more than a century. The Microsoft case does not represent a novel application of the law, but is the kind of standard antitrust enforcement action necessary to insure vigorous competition in all sectors of today's economy.

These same standards have been applied to monopolies in the past. We do not have one oil company determining how much we pay for gasoline, but instead we have suppliers such as Exxon, Mobil, Amoco and Chevron competing with each other. These companies were all part of the Standard Oil monopoly, which was dissolved because Standard Oil was found to have violated the antitrust laws.

Less than 20 years ago, the nation essentially had one telephone company—AT&T. After the government sued AT&T for violating the antitrust laws, the company was broken up, and competition was introduced in the long distance business. Since competition was introduced into that market, real prices have declined more than 70 percent, and there has been more innovation in the past two decades than in most of the preceding century.

Settlement is Based on Flawed Economic Assumption, and Sets a Bad Precedent

Some defenders of the proposed settlement between Microsoft and the DOJ have adopted the view that settling this case could somehow revive the slowing U.S. economy. Their motives are good, but their reasoning is flawed. What economic theory holds that protecting monopolies is better for stimulating the economy than promoting competition?

In addition, this case will set an important precedent. Former Judge Robert H. Bork has noted that:

"In settling the most important antitrust case in decades through a remedy that will have no impact on the current or future competitive landscape, and absolutely no deterrent effect on the defendant, the Department of Justice has effectively repealed a major segment of the nation's antitrust laws. Moreover, any potential witness with knowledge of anticompetitive conduct in a monopolized market has to weigh the potential benefit of his or her testimony against the likely response of the defendant monopolist. The DOJ's proposed meaningless remedy would insure that no witness would ever testify against Microsoft in any future enforcement action."

Conclusion

The end result is that this proposed settlement allows Microsoft to preserve and reinforce its monopoly, while also freeing Microsoft to use anticompetitive tactics to spread its dominance into other markets.

After more than 11 years of litigation and investigation against Microsoft, surely we can and we must—do much better than this flawed proposed settlement between the company and the Department of Justice.

Thank you for your time.

Regards,
Tim Bartleman

Subject: Microsoft Settlement

To Whom it May Concern;

In regards to the so-called Microsoft Settlement. What a sell out. We take a company that has been found guilty of abusing a monopoly to the detriment of competitors and customers alike and you want to let them off. What a joke! It makes me wonder how much Microsoft stock is owned by the DOJ lawyers in this case.

The hard work of the case is finished. Microsoft has been found guilty of abusing monopoly power. Now the DOJ wants to turn victory into defeat by proposing a meaningless remedy. Why do you think half the state Attorney Generals have refused to stick with the DOJ plan?

The best thing to do would be to split Microsoft into two companies. One would control and develop operating systems and the other would develop applications. That way the Application Programming Interfaces that are required to write quality software would all be public. All application programmers would have access to the APIs equally and Microsoft would not be able to disable competitor's programs so their inferior software appears to operate more reliably.

The settlement that Microsoft proposes and the DOJ has rubber stamped does nothing to stop the abuses. Microsoft has thumbed its nose at the laws of the United States and the court system in the past and they will do it again if they are not punished. Just the indication that Microsoft believes that this plan is fair should be a warning that it will not really impact them.

If I break the law I most certainly will be punished by jail time or a fine. It seems that if Microsoft breaks the law they are told not to do it again or else they will need to come up with a remedy. In the past they have simply kept on with business as usual.

After all the hard work of proving abuse of monopoly power the proposed settlement makes the Justice Department look like a joke. What a sell out. Please throw out this flawed settlement and work on creating a meaningful punishment that will once again level the playing field for software developers.

Attorney General Ashcroft
Dept. of Justice, 950 Pennsylvania Avenue
Washington, DC 20530-0001

Dear Mr. Ashcroft,

As a Microsoft supporter, I would like to state my opinions regarding the Department of Justice settlement and have them recorded in the **Federal Register**, pursuant to the Tunney Act. I feel that the agreement was fair and reasonable, and was obviously extensive enough for nine of the states, including Wisconsin, to approve. I do not see what more can be gained by further action, and would like to see this case put behind us. The issues that brought about the case in the first place have been addressed, and provisions have been put in place to handle possible future problems.

Under the terms, Microsoft agreed to grant computer manufacturers restructure Windows licensing so as to allow non-Microsoft programs to be distributed with Windows. This means that Microsoft will allow the competition to use Windows to launch products that will seek to undo the popularity of Microsoft products. Most Microsoft opposition agrees that Microsoft's current concessions are acceptable, but they argue that provisions are not sufficient to deter future litigation. I would like to point out that a technical oversight committee has been put in place to check Microsoft's codes and books, and that the competition will be allowed to sue Microsoft directly in the event that it fails to comply with the terms of the settlement.

In short, the current and possible future problems have been accounted for, and I

would like to see this case put behind us. The settlement should be granted a chance to prove itself before it is written off as a failure. It has been three years in the making, and deserves at least that. Thank you.

Sincerely,
Albert J. Hillman

Attorney General John Ashcroft
US Department of Justice, 950 Pennsylvania Avenue, NW Washington, DC 20530-0001

Dear Mr. Ashcroft:

I am writing to say out loud that this settlement should have occurred long ago and is in the best interests of the American public. Though, I do think many of the concessions Microsoft will be making are unfair to Microsoft and are not in the best interests of free market economy.

For one, forcing Microsoft to increase its relations with computer makers and software developers goes against the basic principles of a capitalist society in which we have the right to choose what we buy, what we do, what we produce, and who we team up with. The second thing is that to force Microsoft to disclose its interface technology to competitors is a violation of intellectual property rights. Microsoft worked long and hard to develop its products and services and it should not have to disclose its secrets to competitors that will then be able to hurt Microsoft.

Right now with an ongoing war on terrorism and many other issues that the government should be focused on, the last thing they should meddle with is free enterprise. I believe the nine states holding out grandstanding for their own political interests and should be punished themselves for their actions.

Sincerely,
Barbara Duncan

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

This letter is intended to express my concern regarding the continued delay in the settlement of the Microsoft case. This matter has been the object of years of litigation, constant controversy and continuous delay. All the while, one of the nation's most dynamic corporations has been hamstrung in a manner detrimental to the whole IT industry and our national economy. It's time to end this controversy and get Microsoft back to work.

The proposed settlement will satisfy the concerns of the government and remedy the

grievances of Microsoft's competitors. The company will be constrained to open up its Windows systems to non-Microsoft software and computer manufacturers. There will be a Washington appointed oversight committee to monitor the company's compliance. In short the fears of Microsoft's competitors are no longer justified.

This case is now no more than a political football, and treating it as such is detrimental to this country and our economy. Please finalize this settlement.

Sincerely,

Subject: Microsoft Settlement
hello and good day;

i would like to say that i believe ANY settlement with those PROVEN in COURT, to have lied, cheated, stolen, faked evidence AND abused monopoly power is too generous. anything less than a breakup will not prevent them from holding the future of computing (and indeed those who rely on the computers- ahem, government?) hostage.

below (end of message) are several quotes from the ceo of palm, inc. in a recent (jan.21,02) interview with yahoo news. notice how he mentions that; a.) they will leverage the desktop monopoly as much as possible. b.) they are content to lose money for long periods of time (and drive palm out of the market) by being funded by the os/office products revenues. Does this remind anyone of netscape? Barely has the threat of breakup been taken off the table, and they are still/already up to their old tricks.

if the outcome of this trial is the same as that of 1994-5, then you have merely wasted the taxpayers money, and have nothing to show for it. you MUST make these people understand that abuse of the american people will not go unpunished, and that there are still branches of government more concerned with the people they serve and protect than with large corporations who BREAK the LAW.

Palm Software CEO Talks Tough on
Microsoft Rivalry
By Franklin Paul excerpted. . .

So far, Microsoft, which holds about 20 percent of the market to Palm's more than 50 percent, has been patient. Experts say the company has steadily grown its share in the PDA market, and can continue to do so slowly leveraging its relationships with corporations who already depend on Windows in the workplace.

Moreover, unlike Microsoft, Palm does not have a multibillion-dollar product like Windows to fall back on.

"Overall, we believe Palm's strategy is now well articulated and the company is executing much better under improved leadership," J.P. Morgan analyst Paul Coster said in a recent note to clients. "However, we believe the competitive threat is also mounting."

Nagel acknowledged Microsoft's dominance in desktop market, and its ability to barge into new arenas. Still he hopes to convince users that a Palm-driven device is an essential tool alongside their desktop PC. "We are not going to displace Microsoft," he said. "Microsoft has a complete monopoly on the desktop. But we want to be the best companion to the PC." end excerpt. . .

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I urge you to settle the antitrust case against Microsoft. The issue has been dragged out far too long, to the detriment of the US economy and consumers. In fact, it often felt like the main reason this case was ever brought up was because its competitors were better at navigating the political world.

Although Microsoft's business dealings may have been heavy-handed in the past, they were not detrimental to the consumer marketplace. I, like most (even marginal) computer users, have always had the option to use products from any software vendor. I personally have used both Internet Explorer and Netscape Navigator, and I still use both Microsoft Media Player and Real Networks RealPlayer. I have both on my computer simultaneously, and both work fine.

The fact is that Microsoft has become a dominant force because it has provided

superior products at good value. The settlement negotiated in November eliminates Microsoft's ability to force programs and products on consumers and manufacturers by requiring Microsoft to allow competitors to place their own programs on Windows. The result is a playing field as level as the competition will ever get.

Please drop the case and settle without further litigation. Everyone has dwelled on the matter long enough.

Sincerely,
A. D. Fakonas

From: Brad Redfearn
To: Microsoft ATR
Date: 1/21/02 3:45pm
Subject: Comments on Microsoft settlement

14 days is too short a time to allow Microsoft (via Windows) to automatically prompt a user to use or switch to a Microsoft product. For many people, this amount of time is not sufficient to have become familiar with the operation of the computer and to have had a chance to explore third-party options for all software/services.

In my opinion, Microsoft should not be able to use Windows in that way at all. If, for example, an OEM wanted to bundle AOL Instant Messenger (or ICQ, or IRC Chat, etc.) instead of MSN messenger, they should be able to do that without Microsoft popping up and asking them to switch without the user initiating it.

It seems to me a likely scenario that a user buys a new computer, learns the interface, gets online, learns to use email, begins to explore the web. . . And BAM! Two weeks have gone by and they still have no idea what instant messaging is. Before they have had a chance to explore the OEM bundled software, Microsoft steps in a pushes MSN (or whatever) on them. This is not much better than allowing Microsoft to force OEMs to bundle their "middleware" in the first place. Microsoft should have to compete with other software vendors on even terms—not tie its software products into Windows. In my opinion this means Microsoft should have to offer OEMs a version of Windows stripped of all other Microsoft middleware and online services let the OEMs choose whether to add in Microsoft's offerings or a competitor's (or both). Then Microsoft would have to just compete for OEMs business just like everyone else. They would not have the unfair advantage of automatically being on every system.

I would also like to make the point that many people who are automatically

prompted to use a Microsoft product don't realize they are being advertised to.

My two cents.

To Whom It May Concern:

I hope that you will reconsider the decision to settle the United States Department of Justice antitrust lawsuit against Microsoft Corporation. American consumers may have been overcharged \$20 billion by the Microsoft monopoly. Your agreement with Bill Gates' company does nothing to rectify past sins by this company or protect against future gauging.

As you know, at least ten consumer groups disagree with your agreement to settle. Microsoft has little incentive to change any of its practices. Their concessions of handing over some operating systems code and offering manufacturers some sovereignty over Media Player amounts to little more than a light slap on the wrists for a multi-billion dollar company.

I am proud that my state's Attorney General, Tom Miller, rejected this Microsoft agreement. I believe that Mr. Miller and the other eight state attorneys general see the many loopholes and problems with enforcement that does little to affect change in the computer software industry. Splitting Microsoft into two or three companies may not be the proper response, but neither is this.

Your decision to prematurely end litigation against Microsoft is a mistake. The agreement offers no real incentive to stop monopolistic, anti-trust efforts. It won't help much smaller companies compete and it doesn't serve the American consumer. Please continue to go after Microsoft. It is a duty of the Justice Department to protect the average citizen from companies that have grown too large and too powerful by questionable business practices.

Sincerely,
Thomas Rial

Dear Mr. Ashcroft, would you please put a stop to law suits against Microsoft. It is a put down to capitalism and for anyone to be inventive and hard work. The government shouldn't go around suing anyone. That's not the purpose of government. This country has

become nothing but one big law suit. I do not pay taxes to the federal government or state government to use my money to sue people.

Crack down harder on illegal immigrants. Deport them and get them out of here. How about a 2 yrs. moratorium on foreign visitors and students. This country will do well without them.

Thank you.
Judith Tom

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I appreciate your stand for justice in the settlement of the case against the great American software company, Microsoft. I feel that the nine that want to continue the case are guilty themselves of self-serving government harassment. Bill Gates has helped his country get to work, with efficiency, and helped get the economy rolling. I won't say that the suit was the sole cause of the economy's struggles, but it certainly has contributed.

Microsoft has agreed to the settlement to get this case behind it and get on with its business of innovating to maintain its leading position in the worldwide technology, if it can. The settlement will open up Microsoft's brainpower secrets, including much of the internal code of Windows. Microsoft agreed to submit to five years of oversight from a government committee which will ensure compliance and resolve complaints, including complaints from competitors. In my opinion, Microsoft has agreed to very generous terms.

Thank you for the continued support of the settlement. Let's pray that the judge accepts it, and America technology continues to lead the world. Thank you.

Sincerely,
Dolores Johnson

Attorney General John Ashcroft
United States Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Attorney General Ashcroft:

In a PERFECT world we would be setting at your desk telling you exactly how we feel, BUT— We are writing you today to express our opinion in regards to the Microsoft settlement issue. We feel that this debate has gone on long enough and that punishing Microsoft for being successful is a horrible crime.

This litigation is just a play to get money out of Microsoft. Rather than working hard for it themselves, competing companies are using this litigation for their own personal self-gain. We hate leeches. We are anxious to see Microsoft allowed to move forward and move on from this costly litigation. The settlement that was reached in November is complete and thorough and will accomplish a closure to this debate. Microsoft has agreed to carry out all provisions included in this agreement, such as: disclosing more information about certain internal interfaces in Windows and being monitored by a technical oversight committee created by the government for compliance.

This settlement and subsequently ending this litigation will serve in the best public interest and will benefit all of us. We urge you to support this settlement. Thank you for your time.

Sincerely,
Ralph Bossert and Helen A. Pasztor

While I have no doubt that Microsoft has acted illegally and unethically in using its monopoly position to dominate and control the PC software market I also question the motivation of the Clinton Justice Department in pursuing the case as it did and probably disrupting and endangering the economy as a result. The proffered settlement by Microsoft is just silly, ridiculous, and probably will enhance their market position further.

I don't see how a company can be fined for persuing a monopoly in a particular market. This is what the American dream is all about. Meanwhile the companies who first brought this lawsuit in have been raking in billions because of their own Mega-Media monopoly (AOL/Time Warner). It just doesn't make sense to me.

It is my opinion that the settlement should be approved at this time. It has been and continues to be, my opinion that MSFT has been unjustly done to in this entire matter. If the court wants the public interest ensured in this matter, it should not penalize MSFT any further. I say that as I believe that the states which don't want to settle are costing us the taxpayers, much money in their attempt to further their cause which is, quite frankly, a joke. As a Wisconsin State employee before I retired, I used a computer all day in my work. Naturally Windows was the platform used in ALL OF THE STATE OF WISCONSIN COMPUTERS. It was and still is simply the best software one can install in the computer. The state chose to use that platform, they weren't forced to use it. Because of that fact, I question as to why in the world would the state attorney general file suit in this matter? If I were Mr. Gates, I would refuse to continually update Windows for those states involved. LET THEM SIT WITH WHAT THEY HAVE. It seems that the states are biting the hand that feeds them. This whole case was, in my opinion, about the greed and envy of certain other companies who obviously couldn't compete on the same level as MSFT. I can't believe that anyone should be forced to divulge any of their technical information so others can benefit. In conclusion I certainly believe that the settlement is clearly in the public's interest even though it is not in MSFT's best interest.

The corrupt Clinton administration is gone; why don't the government leave private industry alone. If Microsoft is such a bad company we will stop buying their products. Unlike the government we know there is someone else to do business with if we feel Microsoft isn't doing the job. oducts that have been reported to be superior. It's time for the Justice Department, courts and other legal entities to stop wasting so much effort and resources on Microsoft and other legal businesses such as big tobacco, especially in light of their failure to go after illegal activities such as a political party and administration that accepted campaign funds from foreign entities, then gave them nuclear secrets in return. It's time to call the whole Microsoft thing off and get on with issues that are really threatening the people of this country. Microsoft made computer ownership and use affordable for all of us. Punish them? Why?ney and proceed with the settlement as quickly as possible. This case should never even have been brought—it was merely at the behest of a few whining competitors who don't understand how free markets are supposed to work as well as the ever-hungry trial /tort lawyers and a biased political administration. I should mention that I am an IT professional with no connection to any of the parties involved except for being a (usually) satisfied customer of Microsoft. This is a rapidly changing field and anyone who gives the customer more product for less inflation-adjusted cost over a period of years as Microsoft has constantly done has my vote. In addition Judge Penfield clearly was such a biased judge that the entire original trial was a travesty!

Very truly yours

David M. Watersitter competitors.

Subject: Microsoft Settlement

Dear Sirs:
You ought to be ashamed of yourselves! Millions of taxpayer-dollars wasted, and this toothless piece of garbage is the best that you can come up with? You might as well have given all that money to Microsoft. It certainly would have had the same lack of effect as your settlement.

The objecting states, including California, want to see Microsoft receive SOME punishment. The DOJ seems to want the case to just go away, so they've come up with this impotent compact. Listen to the objecting states, because unlike Bush and Ashcroft, the American people want something for our money, and we want an end to the abuse of monopoly power by Microsoft.

Hell, if you'd like to follow Judge Jackson's original order and break "em up, I'm all for it! Or better yet (and certainly more just), what about this:

1. Microsoft deliberately cheated capitalism, the economic foundation of our nation, by engaging in anti-competitive abuses of its monopoly power, and
2. The resulting damage to technological innovation (to competing companies who could broaden consumer choice, as well as exponentially advance the usability of the personal computer to said consumers) can never be fully appreciated, measured, or overcome, and
3. Those who would sabotage this country, effectively aiding foreign industries in coming closer to our abilities, are guilty of treason, and
4. Treason can be punished by death, hence
5. Microsoft must be killed. The stock price is immediately frozen, and the company dissolved over the course of the next five years, with all its units and patents on the auction block to the highest bidder to satisfy the corporation's debts and to the extent possible, shareholder equity. Of course, MS officers would not be allowed to sell or retain their stock as it was obtained through illegal acts, and it won't do them any good anyway because they'll be jailed for life for defrauding stockholders by engaging in illegal activity for the past ten years without disclosure.

Now THAT is just punishment. In capitalism, there can be no greater crime than

anti-competitive behavior. The corporations, directors, and officers of this country need to know that if they engage in unfair, unlawful, and/or anticompetitive behavior that they will face the most dire consequences: corporate death, and yes, even death to the officers and directors responsible. The death of a few dozen men will once again allow our nation, even our world, to flourish technologically. You could even televise Bill and Steve's executions to give the public some sense of closure, that the DOJ did its job.

If you were truly a government beholden to the citizens who pay you, and not to the special interests (businesses), THIS is what you would do.

How disappointing and embarrassing you are to our nation.

Washington, DC 20530-0001

Dear Attorney General Ashcroft:

I would like to express my support for the proposed settlement plan in the Microsoft anti-trust case and accordingly urge you and the administration to work for its adoption. The plan allows Microsoft to continue to exist as one integrated entity, which I feel maintains the competitive environment that is necessary for all companies to operate. I feel this is vitally important to the American IT industry and to reenergizing our whole economy. The plan is fair, as Microsoft must now concede to the rest of the IT industry certain rights of access to Windows systems and other company technology. Product licensing by Microsoft will now be at essentially uniform terms for the major consumer manufacturers. Microsoft will be forbidden to take any retaliatory market actions against the complainant competitors and it must cease any future anti-competitive practices. These terms and others should surely satisfy Microsoft's more honest competitors and should suffice to warrant your support of the settlement.

Would you please see your way toward helping to end this controversy at the federal level, for everyone's sake?

Sincerely,
Dana Thomson

From: Rob Steinbach
To: Microsoft ATR
Date: 1/21/02 4:19pm
Subject: Microsoft Settlement.

Dear Sirs:

I believe, in particular, the current proposed DOJ final judgement: Fails to reduce the application barrier to entry that Microsoft was found to have illegally protected.

Fails to remedy the illegal injury that Microsoft was found to have done to Netscape Navigator(TM) and the browser market.

Fails to curtail Microsoft's illegal bundling of middleware programs including browsers, media players, instant messaging software, and, in the future, possibly firewalls and anti-virus software into the monopoly Microsoft Windows(TM) operating system.

Is exceedingly ambiguous and easily subject to manipulation by Microsoft because the judgement lacks an effective enforcement mechanism.

Personally, I would have welcomed a settlement that addressed the numerous Sherman Act violations that were found by the District Court and upheld unanimously by the DC Circuit Court, but I feel this settlement is grossly insufficient to meet this goal.

In summary, I feel that the current proposed DOJ settlement falls far short of the goal set by the District Court ruling.

I have not followed the settlement in detail, but feel the Government is stepping out of bounds to drag this out this long. It is my understanding they have spent more money so far than the first year of the Bush taxcut. I resent the collective federal and State governments to get this involved in trying to suppress what has been free enterprise and the efforts of a brilliant individual. I cannot recognize Bill Gates had any intention of harming any one's efforts, and his genius enhanced many marginal persons production. In my lifetime the Government broke up the AT&T telephone system and ruined it for the world. Stop the litigation now, and get on with the agreement reached by the Government and nine states. We need positive efforts in our economy, and the world-wide association of the public and Microsoft could only be positive.

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the

wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Harry Thompson

Dear Mr. AShcroft,

In regards to the government settlement with Microsoft, I would like to note my approval of going forward with the deal upon completion of the public comment period this month. I have supported Microsoft 100% during this process, and this agreement appears to be the only solution that will appease the critics, yet keep Microsoft's successful business structure intact.

In my opinion this case was inspired by a group of competitors who wished to tear down this fine company, and thereby gain market share for themselves. It was obviously accomplished by political means, and certainly has done no good in my eyes to those who were inferior business—wise. All of the concessions that Microsoft has made, I believe have been made under significant pressure generated by Democrat hacks.

After extensive negotiations with a mediator appointed by the court, Microsoft

has made a serious attempt to offer competitors a wider attempt to succeed where they were doing poorly, a free gift to them that cost Microsoft untold Millions of dollars in defense efforts.

I cannot say that justice was done!!!

At this point, we should let these terms be implemented in the interest of our country in general. This type of frivolous lawsuit should be outlawed. It only makes millions for the lawyers involved.

Sincerely,
Michael McNalley

From: Luke A. Kanies
To: Microsoft ATR
Date: 1/21/02 4:19pm
Subject: Microsoft Settlement

[Text body exceeds maximum size of message body (8192 bytes). It has been converted to attachment.]

To whom it may concern:

My name is Luke Kanies, and I am currently employed as an Infrastructure Architect in the computer industry, and have been in the computer industry for nearly six years. I have worked with all currently popular computer platforms, and have long taken an interest in the computer industry as an entity, rather than just specific technologies or companies.

It is my opinion, based on my technical understanding of how Microsoft impacts the computer industry, that the proposed settlement will be bad for the computer industry, and possibly even bad for Microsoft. Further, even if I thought that the remedy itself were enough, the fact that it contains no actual punishment for not staying within the agreement would be enough for me to be convinced of the agreement's inadequacy.

First, the remedy:

The proposed settlement does not in any way limit the source of Microsoft's power, it merely addresses some of the ways in which Microsoft has already abused its power—it does not attempt to limit the ways in which Microsoft will attempt to gather power in the future.

Some of the key areas I believe that the settlement should have addressed but did not are: Proprietary file formats, illegally leveraging their monopoly to enter new markets (such as game consoles and ISP services), and modifying existing standards in a non-standard way in order to interfere with vendor compatibility.

Proprietary file formats:

One of Microsoft's main sources of income is from their Office suite (I believe it is greater than 50% of their income). In fact, I find it curious that this case covered Microsoft's monopoly in operating systems but seemed to largely ignore their even more entrenched monopoly in office suites.

One of the main reasons that Microsoft has such a strong market presence in office suites is because their file formats are proprietary; for instance, my wife's father owns a commercial architecture firm (Ritterbush, Ellig, Holsing, in Bismarck, ND) which was forced to switch from using Corel WordPerfect to Microsoft Word because many of their customers required

communication using Microsoft's proprietary file formats. Even though he preferred the non-Microsoft application, he was forced to give in to Microsoft's monopoly because other vendors are unable to effectively reverse-engineer Microsoft's file formats and thus support them. That difficulty is not accidental, either. Microsoft has a history of modifying their file formats with each new version of software, both to force users to upgrade and also to make it more difficult for non-Microsoft programs to read these formats. This trick would work against Microsoft if they were not a monopoly, but because of their market share it works very well in forcing users to always spend the money on the latest versions of Microsoft Office while keeping other vendors from supporting the current version of the file formats.

I believe that any settlement agreement should stipulate that Microsoft publicly release specifications for every file format or protocol which they either have a monopoly in (such as their Office formats) or is used or required by a product which they have a monopoly in (such as their file sharing protocol, CIFS).

Illegally leveraging their monopoly:

As we all know, it is not illegal to have a monopoly, it is only illegal to use the power from the monopoly to either maintain it or to enter new markets. The settlement agreement discusses specific instances of this, but in no way attempts to discuss this in general terms. This is a serious failing of the settlement agreement, because it only hopes to address current illegal behaviour but in no way attempts to curtail different types of future illegal behaviour.

Even using specific examples, it is very easy to find examples of Microsoft leveraging their monopoly to enter new markets, which is illegal (because they have already been found to be a monopoly). Two of the most pertinent examples are their MSN service and their Xbox gaming console.

MSN could not succeed if every copy of Microsoft Windows did not come with a client for it. This is an obvious example of Microsoft leveraging their monopoly in operating systems to enter the market of Internet Service Providing. In fact, MSN is now the second largest ISP in the country, purely because of the level of placement it gets in all Microsoft products. According to antitrust rules, this is clearly illegal, yet the settlement agreement does not even mention this very important area.

Another very high profile area which Microsoft has leveraged their monopoly to enter is gaming consoles. The main touted advantage of Microsoft's Xbox is that game developers can use roughly the same programming APIs (Application Programming Interfaces) on the Xbox as they do on Windows, making game development easier. Again, this is a clear example of Microsoft using the monopoly of their Windows OSes and the resulting ubiquity of Microsoft Windows APIs to leverage themselves into another, unrelated, market. This is another example of something which antitrust law states is illegal but which is not even mentioned in the settlement agreement.

In addition to Microsoft using their marketshare to branch into new markets,

both of the above products have lost or will lose so much money that if they had been attempted in the same manner by another company, they would have likely forced that company out of business. However, because of all of the money Microsoft has been able to accumulate, as a direct result of their monopoly, they are able to afford to lose significant amounts of money just in order to get into a new market. Of course, this was exactly how they gained dominance in the browser market, also.

Modifying standards:

One of the practices Microsoft is most famous for, often called "embracing and extending", is taking an existing standard as developed by an independent standards body (such as the IETF) and adopting it while modifying it slightly. This adoption and modification allows Microsoft to claim compliance yet actually makes Microsoft's products incompatible with products which implement the actual standard.

Without going into detail about them, some examples of standards which Microsoft has adopted but modified to suit their tastes are Java (a programming language whose modification resulted in a lawsuit which Microsoft lost), LDAP (a directory server protocol which Microsoft's Active Directory and Exchange services use), and DNS (which their Active Directory also uses).

In a normally operating free market, if a non-monopoly chooses to implement a modified form of a standard, then that company is nearly always punished for that choice. Microsoft's monopoly, however, protects them from the punishment that would normally be inflicted on them; this unfair protection from free-market rules is one of the main reasons for antitrust laws in the first place, so it would certainly make sense if any settlement agreement attempted to make Microsoft once again subject to the laws of the marketplace. Instead, the proposed settlement agreement is strangely silent on this entire concept, thus giving Microsoft further free reign to force their modified standards onto an unwilling computer industry.

Enforcement:

As to what happens to Microsoft if they fail to uphold the restrictions included in the settlement agreement, that is the portion of the agreement that I find most lacking.

The enforcement clauses of the settlement agreement remind me of the old stories of a British police officer's lack of credible threat: "Stop, or I'll say stop again!". As far as I can tell, if Microsoft does not follow the settlement agreement, then their punishment will be that the length of the agreement will be extended. Their will be no monetary punishment, no marketplace or legal punishment, merely that as long as Microsoft does not follow the, the rules will continue to be in effect.

This is purely nonsensical, as it provides no real motivation for Microsoft to even follow the terms of the agreement. There are no teeth to it forcing them to comply, merely an advisory panel which will report of their level of compliance.

As demonstrated by Microsoft's lack of compliance to their 1995 "Consent Decree", it is imperative that any settlement contain

specific monetary or legal punishments in the event of their lack of compliance with the agreement. Anything less is providing them nearly free reign to continue to flout the law.

Even if monetary punishment clauses are added, they must be large enough to actually serve as a threat to Microsoft. They have the largest, or one of the largest, market capitalizations in the world, and have billions in cash and tens of billions in essentially liquid forms; fining them one million dollars, or even ten million dollars, isn't really enough money for them to notice. Any monetary punishment should be equivalent to the money they have gained through illegally maintaining their monopoly, and that number is at least into the billions of dollars.

Conclusion:

Although these are what I believe to be the most obvious problems with the proposed settlement agreement, they are by no means a comprehensive list of the problems I find. Generally speaking, I find the settlement to be extremely light, given that Microsoft has already been found to be a monopoly by the US Court of Appeals and has been found to have illegally maintained and leveraged that monopoly, and given the obviously huge amount of money they have earned from having and maintaining (illegally) this monopoly.

It is especially galling that the US Department of Justice proposed a harsher settlement before Microsoft was even found to be a monopoly, yet now that Microsoft has lost that battle the US DoJ has decided to reduce their demands, rather than increasing them.

Subject: Microsoft Settlement

It appears to me that Microsoft is about to escape responsibility for its continuing anti-competitive behaviors. If true, that would reflect rather poorly on our system of laws and on DOJ as an advocate of the people of the United States.

The fact that those anti-competitive behaviors continue, albeit more subtly, to this day indicate to me that no remedy that relies upon Microsoft self-control will be effective. I would not want to see this company destroyed but I would like to see a significant leveling of the software and operating system playing field.

Splitting MS into at least two parts, one for operating systems and the other for application software seems to me to be the only reasonable remedy.

Thank you for taking the time to read this e-mail.

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

I am not completely familiar with the final agreement; however, I do believe there was no shortage of high-tech companies. Bill Gates did what America is supposed to be about—he built a good “better” mouse trap. It sold. Microsoft thrived. This is not and never was about a monopoly. It is about sour grapes and whining by companies whose leaders choose not to do what Gates did, coupled with a President whose only interest was himself and his personal interests. Clinton used his position in ways it never should have been used and in ways that should not have been allowed.

What Bill Gates did with Microsoft is supposed to be what America is about. But apparently this is no longer true. Instead of being able to enjoy the fruits of his efforts, he was pounced on by, what appears to be, a very oppressive Federal Government. This entire trial is or should be an affront to all Americans.

It happened because of greed and a total unwillingness of anyone in Congress or the Justice Department to say, no this is wrong. But no one did and it happened it. Now it is definitely time to say enough, this needs to and must stop now!

Thank you for this opportunity to share my views.

Sincerely,
Susan Whitaker

Dear Ms. Hesse,

I have been a longtime watcher of the Microsoft case and have e-mailed my elected officials with the position that the case was not in the best interest of the taxpayers in this country. I also believed it showed a strong disregard for the principle that government should try its best not to interfere with the workings of business, whether small or large. Because of Microsoft, computers and software are inexpensive and available to the common user at home. We need to give Microsoft credit, not disdain for what they have done good for the computer user.

But today, there is a settlement on the table between the Department of Justice, Microsoft and nine attorneys general. I believe that in the interest of moving this case along that Judge Kollar-Kotelly will approve the settlement. It will mean changes at Microsoft, no doubt, with an independent group having the power to audit future actions of the giant software company. While such activity is not to my liking personally, I feel that it is worth it to move this case out of court.

As a former member of the Fayetteville City Council, North Carolina, I have seen what damage that lawsuits and potential lawsuits can do to the ongoing process of good government. They are often expensive for the city and occupy the time of employees and attorneys when eventually the suits are settled anyway—but so much farther down the road.

Thank you for allowing me to share my views.

Sincerely,
Don Talbot

January 19, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

The purpose of this letter is to inform you of my support of the Microsoft settlement. Although I believe that the antitrust case was without merit, I am pleased to finally see resolution in the case. The federal government should not have the right to meddle with private enterprise, especially when that enterprise has so hugely benefited a developing industry while well serving consumer's interests and where monopolistic behavior has not existed.

Given these sentiments, I believe that the settlement is in the best interests of the economy and the IT industry, as it will allow Microsoft to return full focus to its business. Microsoft has agreed to the formation of a technical review board. This board will have the position of ensuring Microsoft's compliance with the terms of the agreement.

Obviously Microsoft has made significant concessions in an attempt to resolve this issue. I would hope that the Dept. of Justice would enact the settlement at the end of January.

Sincerely,
Charles W. Barbour

The attached was faxed to Attorney General John Ashcroft.

January 15, 2002
Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft:

As a concerned citizen, I am writing to ask the Justice department to accept the recent settlement with Microsoft. After all the time and money spent on this drawn out federal lawsuit, it is time to accept this compromise.

The action taken against Microsoft has been heavy-handed and will not improve the quality or cost of products of technology. To attempt to break up a company that

manufactures so many widely used computer software products would be a disservice to the general public. People have preferred the Company and its products over other market products. Competitors either need to become innovators like Microsoft, or get out of the business. Although I did not support the idea of a lawsuit from the start, I do think this settlement should appease the critics and is a fair agreement for ensuring future competition. Microsoft has agreed on many fronts to not operate by retaliation against those who offer competitive products while opening their own technology to licensing opportunities. In some cases Microsoft will be delivering more than the government has requested.

As an interested citizen, I would hope the Justice Department would do the right thing. Please accept this good faith agreement between Microsoft and the government after the 60-day public comment period. Your consideration is appreciated.

Sincerely,
Wendy Gretzinger

Subject: Microsoft Settlement

Dear Sirs,
I do not think that there should be any more delay in the Microsoft Settlement. I do not think Microsoft should be punished to the point of inhibiting their freedom to innovate and give us good products at lower prices. They have always kept prices down and had the best products which is good for the public. I do not support those special interest companies that want to take away competition for their gain only. The public doesn't gain by that. We have a choice in what we buy and we choose Microsoft. Millions of stock holders choose Microsoft to help them survive in their retirement and old age. We can depend on them. The public doesn't need protection from Microsoft.

We need protection from phone and cable companies where we do not have a choice! We are subject to price gouging, poor service and telemarketers who don't give their numbers so we can call back and ask them to take our name off their list if we are not interested. That is only fair. They even pester

us with computer calls and no one is there when you answer. We have to pay for them to use our phone service under unfair advantage. How popular a congressman would be if he would stop this unfair practice. Every one hates the constant interruption of these unknown telemarketers. Give us an equal advantage since we pay the phone bill, make them give their name and phone numbers. It should be against the law to call us if we have already called them and asked to be taken off their calling list.

Thank you.

Date: 1/21/02 5:22pm
Subject: Microsoft Settlement

Note: All views expressed herein are my own and not necessarily representative of Adecco or Boeing. This email was written on my own time and not billed to Boeing.

After reviewing the settlement, I am absolutely flabbergasted at how little is being done to rectify the current situation. The suit found unanimously that Microsoft is and does operate as a monopoly. What is being done to break up the monopoly? Nothing! While there are some minor restrictions placed on Microsoft, those restrictions are of little or no consequence or, worse, empower Microsoft to be even more ruthless than it has in the past. How many more software companies must die before we act? We would have been better off without this suit, at least Microsoft had the fear of the DOJ potentially affecting its operations. Now Microsoft will know it is untouchable.

It appears that the only winner in the Microsoft antitrust case is Microsoft, who, quite ironically, is the defendant. Microsoft emerges as a clear winner:

*Microsoft can now terminate it's agreement to ship Windows to any OEM after just sending the OEM two letters for allegedly violating Microsoft agreements. The OEM will have no recourse. Allegations may be real or fabricated as the OEM has no recourse (section III—A).

*Microsoft can still offer predatory pricing on the base OS to promote Microsoft products (Section III—B, bullet 3). The fact that Microsoft has to offer the same predatory pricing offer to all OEMs is a tragic comedy. What good is predatory pricing unless offered to all major channels?

*Microsoft can delay access to the Windows API until after the last beta (section III—D). It is a simple matter to have the last beta end right before release, thus disallowing any competition.

*The very idea that Microsoft cannot alter OEM configuration for 14 days and can then thereafter nag the user to death until they agree to switch back to Microsoft products is at best a cruel trick to users (section III—H, bullet 3). Additionally, the add/remove seems only to apply to removing the icons in major menus, as opposed to actually removing the Microsoft software (section III—H, bullet 1).

*The Technical Committee (section IV—B) does not appear to allow for any real enforcement (in my opinion). Additionally, what are they going to enforce, the broad new anti-competitive powers given to Microsoft?

*While I am not a legal whiz, it seems that the whole document does not preclude Microsoft from bundling whatever it wants into the base operating system (as it did with Internet Explorer to the detriment of other browsers).

Why in the world is this monopoly not being broken up into multiple companies (2 at the least)? Why are the Microsoft anti-competitive practices being sanctioned and not prohibited? Why is the settlement for a such a short time (five years), or is that just to limit all the new anti-competitive powers bequeathed to Microsoft?

The big losers in this case are the user (lack of choice), the US software industry (lack of innovation, fear of Microsoft reprisals) and the DOJ (by delivering the weakest judgement conceivable which weakens confidence in the DOJ).

Subject: Proposed Antitrust Settlement To Whom It May Concern:

As a computer technician who has worked on computers since prior to the release of Windows 95, I urge the Department of Justice to reconsider the terms of this settlement in one primary area. This area concerns the compliance of Microsoft and the future bundling of programs and operating systems.

Under the upheld ruling of the anti-trust trial, Microsoft was declared a monopoly. They were found to be in violation of the law by illegally leveraging their operating system monopoly to promote other programs and eliminate competition. They made previous agreements to not conduct such actions, and consistently violated those agreements.

There must be a strong mechanism to prevent such actions in the future. There must be strong mechanisms to maintain competition in the marketplace, or there will be no marketplace. The computer market has been a market of explosive change and progression precisely because there has been so much competition in the past, but we are watching this competition rapidly erode into nothing.

Socialist systems and history both show the fundamental inability of a large monopoly to operate in the best interests of the economy and the consumer. The anti-trust laws of this nation were created to address this problem, and we risk having to re-learn what previous generations learned for us.

Please examine the past record of Microsoft in this area, and resolve this issue; not in the best interest of one corporation, or the short-term expediency of the government, but in the interest of preserving a robust and competitive marketplace.

Attorney General John Ashcroft
January 12, 2002
US Department of Justice
Washington, DC 20530-0001

Dear Attorney General Ashcroft:

I have very strong feelings regarding the recent settlement between Microsoft and the Department of Justice. I believe that the government's intervention in Microsoft affairs has done much to hurt the local and global economy. Mr. Attorney General, wrap up this settlement now. We can not continue to pride ourselves on our "competitive

spirit" and then take action against a company that has bolstered the entire economy of our country by that very same spirit. And, worse, this action was taken as a result of a few complaining companies that could not prosper in a competitive environment and, as a result, blamed Microsoft for their failure. When the complaining and ultimate threat of legal action drove Microsoft market value down, it deteriorated the overall market creating a hole that many companies fell into. Again, Mr. Attorney General, put an end to this economy debilitating, legal misadventure.

Everyone knows Microsoft has made very significant strides in the innovation of this industry. These major innovations may have given the impression that Microsoft desired to gain unreasonable control over the market. Not so. But in an effort to placate the punitively sponsored objections of its competitors, Microsoft has agreed to remove certain software features from its Windows Operating System to prevent imposition of future antitrust violations. Several changes have been made in their business practices. . . Microsoft will disclose the internal interfaces and protocols of its Windows software to competitors; allow competitors to modify Windows to take out Microsoft software and put in their own; and have oversight from a Technical Committee. Their compliance has gone beyond the restrictions and obligations at issue in the lawsuit. I think that this is more than a fair indicator that Microsoft is willing to get back to the business of developing new products.

It is hoped that my expressed views on this issue will aid in the resolution of this matter. I am more than happy to know that there is so much cooperative effort to that end. Thank you for your wise leadership.

With deepest regards,

MTC-00014377

John Ashcroft, Attorney General
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Attorney General:

As a concerned citizen of this great nation, I am writing to give my support to the recent settlement between the Justice Department and Microsoft. This case against Microsoft has gone on far too long, and needs to end immediately. I use Microsoft products every day at work, and I rely on their reliability. Breaking the company up would compromise the integrity of their products, resulting in down-time at my job.

After reviewing the terms of the settlement, I find them to be amply fair and reasonable. Microsoft has agreed to design future versions of Windows to provide a mechanism to make it easy for computer makers, consumers, and software developers to promote non-Microsoft software programs that compete with programs included within

Windows. Also, the company has agreed not to retaliate against computer makers who ship software that competes with anything in the Windows OS.

As you can see, Microsoft will not be getting a "sweetheart deal" by agreeing to this settlement. The government should accept the settlement that was reached, and move onto other matters like the Enron fiasco and terrorist threats.

Sincerely,
Rohi Puri

From: Bob Lindinger
To: Microsoft ATR
Date: 1/21/02 5:59pm
Subject: Microsoft Settlement

Per my rights under the Tunney Act, I am writing to express my opinion that the Microsoft antitrust case should be settled as quickly as possible, rather than litigated further. I am very pleased with the proposed settlement; it is tough, but reasonable and fair to all parties involved.

I am a consumer that uses many Microsoft products, including their Windows operating system. I have never felt "harm" by Microsoft, on the contrary, I believe that their business practice is based on a virtuous positive feed-back business cycle based on very low price points leading to very high sales volume. This business model ideally suits the consumer who benefits from low prices.

Microsoft has always designed software for mass consumption. Bill Gates realized early on, that if he could design software suitable for a mass market, he could sell it at very low prices and make profits based on large unit sales. Excess profits could be reinvested in innovation and R&D to improve the software and make it more attractive to consumers and businesses. Hence, the positive feedback cycle.

That is why Windows has been such a huge success. Windows is excellent software priced very reasonably. Each version becomes more user-friendly and powerful, with new features to make it easier to browse the Internet, work with digital photographs, digital music, etc.

I believe there can be no monopoly in software. If Microsoft fails to continually improve Windows, a competitor will eventually emerge that offers a better operating system at a lower price. Already we are seeing the emergence of an alternative operating system offered for "free" by Linux and Redhat. This is gaining wide acceptance in some business circles and, if Microsoft were to stop improving Windows, it would only be a matter of time before Linux or some other alternative from Sun, IBM, Apple,

Sony, Computer Associates, SAP (the German software giant), or many other competitors, would start taking market share from Microsoft.

I do not dispute that Microsoft, right now, has a "monopoly" for personal computer operating systems.

However, Microsoft earned it by constantly innovating and keeping prices low. Other competitors have demonstrated that they can compete with Microsoft. Netscape was not inhibited from developing its browser, that threatened Microsoft's position. Sun Microsystems has developed its Java language and is promoting it aggressively.

I believe the saying that "high tech is a contact sport" that should only be played in the marketplace, not in the courts. Microsoft's competitors are the one's pushing for further litigation, not consumers or businesses that use Microsoft products.

The competitors would have us believe that no one can compete with the mighty Microsoft. I guess they don't remember all those prime-time TV commercials a few years ago for OS/2? that dandy little operating system from a wee little start-up called International Business Machines (IBM). But guess what? Nobody bought OS/2, because it was expensive and not as good as Windows.

Lindows.com is preparing to launch an operating system that can run both Linux and Windows applications on a PC, or run as a second operating system on a Windows machine. The point: to offer an alternative to Windows, to eliminate the frustrations that it's CEO, Robertson, says accompany installation and use of the Linux operating system, and to let Windows users run Linux programs without having to jettison Windows. If that's not different enough, he'll sell the Lindows operating system for just \$99, primarily in digital format, and with flexible licensing.

Clearly, Microsoft must continuously innovate to fend off competition. Those labeling Microsoft a monopolist just do not understand how quickly a "monopoly" can vanish in the world of high technology.

Our country would be served well if the antitrust case against Microsoft is settled as quickly as possible.

It will be good for our high tech industry, and be in the best interest of consumers' supposedly the intended beneficiaries of any antitrust litigation.

Finally, on a personal note, I think Scott McNealy is the biggest crybaby the business world have ever seen. I also think Larry Ellison should get a life and stop worrying about his relative worth compared to Bill Gates.

Sincerely,
Robert J. Lindinger

Dear Mr. Ashcroft:

I am writing you today to express my opinion in regards to the Microsoft settlement that was reached in November. I am a believer of free enterprise and would like to see the government allow Microsoft to prosper due to hard work. I support the settlement and am anxious to see this dispute resolved.

Microsoft has gone from a fledgling company to a giant enterprise through talent and hard work. This combination can only benefit the economy and consumers. This settlement will benefit the technology industry by granting more rights to computer makers to configure Windows to promote non-Microsoft software programs that compete with programs included within Windows. Microsoft has also agreed to disclose more information with other companies about certain internal interfaces in Windows.

This settlement will benefit everyone. Ending this litigation will benefit everyone. Please do your part.

Sincerely,
Arlene Harrison

MTC-00014382

From: Larry Campbell
To: Microsoft ATR
Date: 1/21/02 6:16pm
Subject: Microsoft Settlement

I am a software engineer who has worked in the computer industry for over twenty-five years. I have worked for large corporations (Digital, IBM) and small (I founded my own software company and ran it for ten years). I currently work for Akamai Technologies, an Internet content delivery service, but I write in my personal capacity and not as a representative of Akamai.

It has long been obvious to me and all of my colleagues that Microsoft is a predatory and dangerous monopolist who stifles innovation and competition in the industry. Because of Microsoft's total dominance of the industry, consumers have very little choice in not one, but many different product areas:

Operating systems: Microsoft Windows completely dominates this market.

Word processors: Microsoft Word completely dominates this market.

Spreadsheets: Microsoft Excel completely dominates this market.

Presentation software: Microsoft PowerPoint completely dominates this market.

Project management software: Microsoft Project completely dominates this market.

In these five distinct and separate product areas, there is no effective competition AT ALL because Microsoft has destroyed its competitors. Add to this Microsoft's enormous hoard of cash, and it is obvious that it would be suicide for any business to attempt to dislodge Microsoft in any of these categories. No matter how good your product, you'd run out of cash long before Microsoft would. In business, money is ammunition and it's not much of an exaggeration to say that Microsoft has it all.

Microsoft did not achieve this position because their products are superior. The industry graveyard is littered with the bones of competitive products, many of which were superior to Microsoft's at various points in time. But Microsoft, through its initial monopoly in PC operating systems and consequent guaranteed cash flow, has been able to subsidize tremendous marketing and development efforts devoted to crushing any and all competition.

It is widely accepted in the industry that the Microsoft culture is devoted, not to technical excellence, nor to serving customers, but rather to targeting a market segment and completely capturing it by crushing the competition. It is a competitive culture devoted to winning for winning's sake. It's a commonplace often heard from those who have been involved in negotiations with Microsoft that at Microsoft there's no such thing as "win-win"; there is only "win, you lose".

Even if Microsoft were not in the habit of engaging in predatory and ruthless and questionable business dealings, their enormous cash hoard and total dominance of the desktop computing market would make them dangerous.

In my opinion, the Revised Proposed Final Judgement is nothing more than a light slap on the wrist for Microsoft. The Judgement merely states that Microsoft should stop engaging in some of the anti-competitive behaviors that have gotten them to where they are today. May I point out what should be obvious? That it's too late! They have won. They dominate the industry. They are widely feared. It costs them nothing to agree to the Judgement because they no longer need to engage in these behaviors.

It is my firm view that the Revised Proposed Final Judgement will have little or no long-term effect, and that Microsoft will continue to dominate the industry, stifle competition and innovation, and use their

existing monopolies to allow them to gain new monopolies in new markets. An effective response to Microsoft must address these two points, which the current Judgement fails to do:

(1) It must punish them severely enough so as to discourage others from engaging in similar conduct in the future, and

(2) It must prevent them from extending their unlawfully-obtained dominance and strength from unfairly taking control of future markets.

The current judgement does neither. I am not an anti-trust lawyer and so I am not familiar with all of the remedies that might be possible, but I believe that to be effective the remedy must include elements of the following:

(1) Microsoft must be split into at least three independent entities (operating systems, applications, services)

(2) Those Microsoft senior executives responsible for their past behavior must be punished personally, with either jail time or huge fines

(3) The same senior executives must be compelled to choose, after the breakup, which (if any) of the new companies they will be associated with and must not be permitted to be associated with more than one of them.

You know the old saying "crime does not pay"? If the current Judgement stands as the government's last gasp in this matter, we'll have to change it to "crime does pay". Microsoft has shown us the way.

Date: 1/21/02 6:22pm
Subject: microsoft settlement

For the record, I am against any distribution of Microsoft products as part of any settlement of the anti-trust case. Such a distribution could only be considered a reward to the existing monopoly. Leave the issue of children and schools out of it; how can competitors win against "free" software/hardware.

The suggested additional considerations put forth by the State AG's should be carefully evaluated for adoption, as they were put forth without any perceived political influence that Microsoft may have had on the U.S. government through contributions and economic threats.

From: Randy Kramer
To: Microsoft ATR
Date: 1/21/02 6:33pm
Subject: Microsoft Settlement—I am not in favor, the penalties are not sufficient

Ladies and Gentlemen,
I am not in favor of the proposed settlement in the Microsoft case. Among

other things, I believe that the penalties are insufficient. Microsoft has developed a monopoly position in the software market, and it has accomplished some of this using methods that violate the antitrust laws or fair business practices.

Companies have gone out-of-business or been severely hurt by their tactics, and other companies have never started.

The penalties against Microsoft must be strong enough to reverse this trend in the industry, to give other companies or initiatives a chance to survive without fear of being driven out of business by unfair Microsoft tactics. And, as in the case of civil rights, redress must be made for past wrongs.

I do not believe the proposed penalties are anywhere near sufficient, and will, in fact, allow Microsoft to perpetuate and expand their monopoly position.

Microsoft should not be allowed to pay their penalty by supplying copies of their own software—this is like giving them a license to print money—they can produce copies of their software at a very low marginal cost compared to the retail "value".

In addition, allowing them to put this software in schools where it exposes the next generation to the current ubiquitousness of Microsoft software is like giving them free advertising to perpetuate their monopoly.

The penalty should be in terms of hard cash, or real hardware purchased from non-related companies, with no chance of associated sweetheart deals. In fact, the hardware should only be supplied without an installed operating system, or with a non-Microsoft operating system, by a company (or companies) that make a commitment to make the same products (without an installed operating system) available for sale to the general public.

Furthermore, the proposed amount of the fine, \$1.1 billion dollars, is a pittance for a company where one owner of the company has amassed a fortune approaching \$50 billion dollars, some as a result of the unfair business practices.

Some people might be anxious to settle this case quickly, partly as a result of the events of September 11, 2001. I would like to see it settled quickly also, but not at the expense of failing to accomplish the objectives of the case, or providing adequate penalties to redress the wrongs that have occurred and make a more competitive climate in the industry.

I believe our government, country, and people are strong—we can multitask—this case can be prosecuted to the extent necessary without diluting the effort to stop terrorism.

Sincerely,
Randolph H. Kramer

Subject: Microsoft Settlement

I specifically and our office generally are OS agnostic. What we want is a computer and OS that utilize and imbed open standards so that no matter which hardware or OS we choose to use can co-exist with other hardware or OS. Presently this is not

the case with any of the OS's available, though Microsoft has set the standard for hindrance of this ideal. This settlement will allow Microsoft to continue to impose proprietary software code that will block entry by others in the software and hardware areas. Of course others could adopt these proprietary software code but Microsoft would then continue to prohibit any innovation that it would not see benefit its dominance of the market. The present settlement has acquiesced to the demands of Microsoft and not of the people of the United States allowing with little to no penalty for this corporation to continue on with the charade which will allow them to eventually become the only alternative making it impossible without great cost and us economic impact to resolve. It is as if we have given GM the sole rights to the combustion engine so that all cars would be powered by what they conceived with only the others providing the different style exteriors. GM could then hold these motors from anyone who would not use new items that only it could provide.

Moving a car though is not nearly as hard to overcome as the base OS of a computer since it interacts with all the hardware devices of a computer. I hope the representatives of we the people reconsider the resolution and require Microsoft to open up their OS to some form of non-proprietary standards.

Dear Mr. Ashcroft:

For the past three years, the Microsoft and the Department of Justice have been involved in an antitrust case of tremendous proportions. Late last year, after lengthy negotiations supervised by a court-appointed mediator, a settlement was reached. The settlement is currently under review, and Microsoft's opponents are taking advantage of this period to undermine it. I believe it will be to the disadvantage of the American public if this case is not settled soon and on just terms.

One problem I have with the states who did not agree to the settlement is that it seems like they want to make Microsoft suffer unfair consequences. The anti-competitive practices being referred to by the dissenting state AG's occurred before Microsoft had been declared a Monopoly. Microsoft's conduct would not be considered illegal if MS had not been declared a monopoly. But this was post facto. It seems entirely unfair to expect MS to compete with other businesses under the rules governing Monopolies before they had been declared as such.

I believe the terms of the current settlement are fair and that it would be prudent to cease litigation and take the opportunity to settle now. No further action is necessary on the federal level, and it is in the best interest of the state, the economy, and the consumer to move on. Please give your support to the settlement.

Sincerely,
Chris Carver

Statement Re Microsoft Settlement:

As a personal and corporate consumer of Microsoft products, please accept this message as my support for the Department of Justice to settle your case against Microsoft as quickly as possible. I have never felt harmed by Microsoft's business practices. I do not believe that consumers in general have been harmed by Microsoft's business practices. In fact, on balance I believe consumers have greatly benefited from Microsoft's innovation and creativity.

The sooner both Microsoft and its competitors can get this case behind them, the quicker they can turn their full attention to developing and marketing innovative products at competitive prices.

Oregonians have been hit harder by the current recession than most Americans. Oregon currently has the highest unemployment rate in the nation. I and countless thousands of other Oregon investors own shares of Microsoft either directly or indirectly through mutual funds and retirement accounts. The sooner the Department of Justice case against Microsoft is settled, the sooner market uncertainty around its shares will subside. This can only be good for Oregon's faltering economy. Investors who see the risk in their portfolios decline are more likely to engage in new economic activity, put more people to work, etc.

Thank you for considering my remarks in regard to the Microsoft case.

 Subject: Microsoft settlement

The proposed settlement from Microsoft seems more like an ingenious marketing plan than a punishment. With this plan, they are allowed to invest in a market (Education) to guarantee later sales. This is no more than a company giving a customer a free razor, knowing full well that he can only buy the blades from them. By pushing more Microsoft desktop and server products in, it

forces the schools to move farther away from Microsoft's competitors (Primarily Apple, Linux and Netware). As part of my job, I administer PC's, Macs and Servers. Whether it's Licensing, maintenance or day to day operation and administration, Microsoft based units cost us more and are more difficult and more expensive to maintain. All types of computers break or have problems, regardless of brand. The difference is, what does it take to fix or maintain them. With Microsoft based operating systems, Maintenance and Repairs are normally done by a larger IT Staff instead of the user or teacher. This is because an average user will never have the knowledge to perform the troubleshooting required. This settlement may cost the schools much more in maintenance and upgrades down the road than they could ever budget. This is coupled with the fact that Microsoft is constantly pushing its users to upgrade for the sole reason that maybe the new system will actually work. How many upgrades will schools (and their taxpayers) have to suffer through before they have stable system in the classroom? No one will ever know. It's never happened before with a Microsoft-based network.

 January 21, 2002
 Attorney General John Ashcroft
 US Department of Justice
 950 Pennsylvania Avenue, NW
 Washington, DC 20530-0001

Dear Mr. Ashcroft:

In my humble opinion, a lawsuit of this magnitude gives the appearance of punishing a company for being successful. Microsoft is a leader that has set the standard for the industry. Is it fair to punish them for their competitors' inability to keep up? If these competitors were able to make better products, don't you think they would? This long, drawn-out, three-year lawsuit has accomplished nothing except damage the economy and the industry by limiting Microsoft's ability to focus all their time and effort in creating new and better products. This case has also done much to damage the confidence of the average American in the government and its policies. It seems that the message being sent to the public is that is you

work hard and produce a great product; the government will step in and punish you for being successful. Rather than continue to defend themselves, Microsoft just wants to end the lawsuit, even at the cost of big concessions. So much so, they have agreed to restrictions that extend to items that were not even at issue in the lawsuit. They have agreed to allow computer makers to remove (or remove easy access to) Windows features such as Internet Explorer and Windows Media Player, and allow easier installation of and access to non-Microsoft alternatives. In addition, Microsoft has made it easier for competitors by making its intellectual properties and protocols more readily available. It has become so simple for consumers to use other browsers and media players that it makes me pause and wonder if the consumers are the one complaining, or is it the other computer companies? Is it simply a matter of politics? Have politics sold out to computer companies who don't stand a chance in the marketplace because of their lack of vision and inability to "build a better mouse trap"? Does it all boil down to which members of the government can be bought? It's unreasonable to reject the settlement to pursue the case further for even more concessions, when Microsoft's concessions are quite tough as it is. I appreciate this avenue of public expression and hope that my views on this matter will aid in the prompt resolution of this matter. It would be good to know if your office truly values the input of the public.

Sincerely,
 Pam Mitchum RPh

Dear District Court Judge,
Microsoft is company that competes in a free market. I made the choice to buy their products. Microsoft is successful because they currently make the best product on the market. This does not mean that they will always be this successful. If another company comes out with a better product people will buy it. Remember how powerful IBM used to be.

Don't punish Microsoft's success; you will only be lowering the bar for Microsoft's competitors and hurting the consumer. This lawsuit is immoral and I order you to stop it.

Attorney General John Ashcroft
U.S. Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft,
I write today to give my support to the settlement that was reached between Microsoft and the U.S. Department of Justice. This settlement is fair for all parties involved, and the remaining states should settle instead of pursuing litigation against Microsoft. Microsoft has agreed to license its Windows to the twenty largest computer makers on identical terms and conditions, including price. These are heavy hitters of the IT industry, and they will now be able to collectively leverage an extreme amount of power against Microsoft. Also, Microsoft has agreed not to retaliate against software or hardware developers who develop or promote software that competes with Windows or that runs on software that competes with Windows.

I urge that no further action be taken against Microsoft on the federal level, and the settlement be accepted by the Justice Department. This settlement is strong enough for any reasonable person.

Sincerely,
Joe Yarbrough

Subject: Settlement Problems

I am sorely disappointed with our Justice Department for obvious lack of judgement in creating such a soft and ineffectual settlement against Microsoft. This settlement has little more effect than the previously issued injunction against Microsoft, which they flagrantly violated. This current settlement does nothing to address this serious defiance of the American Justice system, does not address the demonstrated contempt of the American Justice System, and does nothing to remedy the half decade of damage to the American public that Microsoft's dramatically illegal behaviour caused.

Furthermore, because this settlement fails to declare remedy for these past serious abuses of our laws, it will prove to be no more capable of restraining Microsoft's behaviour. Indeed, it can be found that Microsoft's newest operating system, Windows XP, may already be in violation of the settlement, by requiring consumers to subscribe to Microsoft services on the internet in order to get full use of features of the software. I would consider this rather prejudiced against other middleware providers that already offer these services that Microsoft is requiring subscription to.

I continue to be astonished at the short-sightedness of elements in our Justice system concerning this case. How can anybody seriously think that such a minor settlement will do anything to prevent future violations against the American public, considering past behaviour. Does the DOJ care nothing that Microsoft violated the previous consent decree within months of its issuance?

I would also like to point out that the form of this settlement requires a rather expensive on-going enforcement by State and Federal agencies. This will prove to be dramatically expensive to the American taxpayers in the long run. Would not a firm and definitive remedy that provided an automatic mechanism of future competitive operations (split up) prove to be much less expensive to the American people?

With the enforcement mechanism currently provided for in this settlement, the American people can expect a protracted period of history of expensive court proceedings, remedies, judgements, filings, etc., and even an entire government agency just for the maintenance of this one settlement.

Though Jackson's behaviour was deplorable, I can't see that the breakup judgement could be set aside so easily. This only proves that our judges are not blind to subjectivity. One spoke out, the other one who turned it around so quickly made just as loud a statement. There is no difference in the lack of objectivity of either of the judges involved.

Subject: Microsoft Settlement
Dear Sir or Madam,

I am a software engineer and a college student. I hope that by the time I have some experience and have gotten my degree that this monopoly of Microsoft's will no longer be what it is today. I look forward to a future in which I can create applications without fear of being pushed out of business because Microsoft does not like my application moving in on its turf. I have been putting off writing this letter for a long time. I have looked over the documents and talked to friends about the case. I tried to get others to write, but with little luck. One friend said he didn't want to be on Microsoft's blacklist. I think this is a little extreme, but I do not know what Microsoft is capable of.

I wished to comment about this Microsoft case and the settlement that has been proposed by the Department of Justice. This settlement worries me. It seems to me that Microsoft has won a reprieve from any punishment for their actions. The lawyers for the people have not secured many safeguards for their clients. The group of three to oversee Microsoft's actions are half chosen by Microsoft. Even if these three people were able to find instances in which Microsoft had misbehaved, Microsoft seems to have cleverly organized the rules so that it dodges the main things that need to be changed. By getting the rules to exclude the Free Software movement, and safeguarding a few of their main business practices, they dodge much of the power of this group. Anyway, Microsoft seems to be changing its business model into one which dodges the constraints completely, a subscription based model.

Microsoft has long been bullying different companies. The attorneys for the Department of Justice seem to feel that a weak settlement is better than none for a few years. I disagree, I feel that a weak settlement will only lead to another case beginning in a couple years. I also have gotten the feeling, the Department of Justice feels this case is harming the economy. Large controlling monopolies have never been good for our economy. The small innovators are the strength behind capitalism. Microsoft stifles these innovators.

For a long time, I only saw one chance for this monopoly to end, and it had to do with the government punishing and limiting its actions. Two new chances have arisen: the European Commission and the Free Software movement. Neither seem ideal, but they can at least fight against the monopoly. Free Software can fight Microsoft, because Microsoft has nothing to use against it. Taken to an extreme, Free Software could put me out of a job. As time goes on though, Free Software seems more and more attractive. After years of seeing Microsoft control the software of the world, Free Software seems the only way in which people can have a choice again. This also allows me to create applications of my own without worrying about them being destroyed. The European Commission is the other chance. They have been investigating lately, and could impose a very large fine. A fine, while not enough, would stop Microsoft from pushing its way into markets by taking huge economic losses

on their products. Two good examples of this are the 400\$ MSN subscription bonuses and the sale of the Xbox at a 100\$ loss, though I have no way to verify the Xbox practice because I do not know Microsoft's price on the boxes. Microsoft has control over not just the desktop market but also the office suite market. This allows them to use either one to support the other. I hope that any agreement carries with it a publishing of the formats in the office suite so that compatible products can be made for other operating systems. I know many companies would like to switch to a Unix based desktop but cannot because the Microsoft Word document format is used as a collaboration tool with other companies. Since this format is so convoluted, it is extremely hard to find an application that is compatible enough to use in the business world. By using this fact, they can force unwanted operating systems from the desktop market.

Part of the reason that I waited was to see how Microsoft would behave after the settlement was reached. Their behavior since then has worried me. It feels as if they are going back to their old behaviors. I hope that the conclusion of this case forces Microsoft to acknowledge their wrong-doing and apologize for their behavior. So far, it seems as if Microsoft still feels they have never done wrong. I see contempt for the world in their actions.

Sincerely,
Kyle Knohl

Subject: Microsoft Settlement

I definitely object to the proposed settlement in the Microsoft case. Microsoft was found guilty in court. Microsoft and it's chairman and lawyers lied time after time in court.

What message is my government sending to me? Break the law, lie about it, and then the government will pretend no one was hurt and help me make more money by screwing other US citizens. Microsoft prevents me, a hard working American from using the very best software in the world. With their monopoly, they force me to buy buggy, defective software at an inflated price because the competition was forced from the market. Any settlement should not be about punishment so much as about preventing future monopolistic and anti competitive business practices.

They must be strictly monitored by outside unbiased monitors. They must not be given the opportunity to break the law again. Strict regulation is in order. Monetary damages are also in order. Companies should not get to keep profits earned through illegal operations.

Again, if I break the law, I am sure the government will seize my assets.

Thank You
John J. Murphy, M.D.

Subject: Microsoft Public Comment

As I have followed the trial on TV and in the newspapers, it has been evident that the trial related to economic, philosophic and business interests. It did not relate to the typical PC owner that wants to buy a machine, turn it on and use it. Fact, there is no viable alternate operating system for the typical PC owner. If there was, people would be glad for the choice and Microsoft would not be a monopoly. Microsoft is being punished for having the only system available for the novice. The bells and whistles, like a browser, are part of what makes a PC salable to the average owner. If we had to buy a stripped OS and add all the features to make a PC work, there would be a lot less machines sitting in peoples houses. I appreciate and thank Microsoft for making my computer work. Look at what I am doing, I am sending an e-mail to the USDOJ. What a hoot! If all of these parties against Microsoft would make a competing OS for people like me, we would not be having this trial. I request that this action against Microsoft be dropped.

January 18, 2002
Attorney General John Ashcroft
Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft:
Yo wassup? Last November, following a six-month period of round-the-clock negotiations supervised by a court-appointed

mediator, Microsoft and the Department of Justice reached a settlement in the Microsoft antitrust suit. The case has spent three long years in the federal courts, and now, as the settlement review period draws to a close, I fear the agreement will be thrown out. Nine states, including Utah, are currently seeking to overturn the settlement and to bring further litigation against the Microsoft Corporation. I do not feel that this is the appropriate course of action to take. Both the defendant and the plaintiffs are dealt with justly under the terms of the agreement, and I can find no reason for further action to be taken on the federal level.

The settlement binds Microsoft to compliance with a broad range of restrictions and affirmative obligations, some of which extend to services and software that the Court of Appeals did not determine to be unlawful. Microsoft agreed to these terms in the interest of expediting case closure. Under the agreement, Microsoft is prevented from entering into any contracts that would require a third party to exclusively market or distribute Microsoft products. Moreover,

Microsoft has agreed to furnish any party acting under the terms of the settlement with a license to applicable intellectual property rights to prevent infringement. The settlement thoroughly addresses all of the concerns brought to the attention of the Justice Department by the plaintiff states. I can only imagine that the motivation behind the litigation on the part of the plaintiffs is less than altruistic.

The economy has suffered while the Microsoft and the various plaintiffs have been tied up in this court battle, and the American public has likewise felt the effects. The IT industry has stagnated as well, and no good can come of extended suit. I believe it is in the best public interest for the case to be settled, Mr. Ashcroft. I urge you to support the agreement.

Sincerely,
Brenner Adams

January 21, 2002

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr Ashcroft:

After three long years of litigation I was pleased to hear that Microsoft finally reached a settlement with the Department of Justice. In reviewing the terms of the settlement I believe that the terms of the settlement are very fair. Microsoft has made many concessions in the hopes of a quick resolution. The settlement will benefit consumers and member of the IT industry. The settlement stipulations contain many concessions. Microsoft has agreed to disclose information regarding the interface and protocols within the Windows system. Microsoft will also license Windows at the same rate to the larger manufacturers of PCs. In addition, they agreed to the formation of a technical review board that will ensure these terms are followed.

Microsoft is obviously willing to make concessions in order to resolve the issue. I support the settlement, and look forward to the end of the case.

Sincerely,

Jim Johansson

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

This letter is to talk to you about my feelings of the Governments involvement with, and the handling of, the Antitrust case against Microsoft Corporation.

To begin with, I do not feel this action is being taken against Microsoft on behalf of the American consumer. Fact is, it was then and is now, the consumer that decided what/ which product they wanted and liked best. It was this very freedom of choice by the consumer and freedom of enterprise for American Businesses that has made Microsoft' and America, the great country it is today.

It has been the great innovators like the John Rockefellers, JP Morgans, Andrew

Carnegies Henry Fords, and the Bill Gates of our time that has made this Country the great success it enjoys today and, it was this freedom to innovate that encouraged them to get up every morning and forge ahead with their ideas and ideals. What might happen to this nation, and its great Corporations, if this freedom to express and freedom to innovate continues to get trampled on.

It appears to me that the consumer can only be hurt and made to suffer the consequence of higher prices and less quality of product should the Government begin the dictatorial regulation of and dictating to a company what it can or cannot supply to, or for the benefit of, the consumer. It has been due to this freedom of innovation from Microsoft that the American consumer can today afford to have a computer in his home. It is also a computer in every home that has spurred an economic growth in this country unsurpassed by any nation in the world.

It wasn't until the dictatorial intervention of our Government into the innovative business of one of this Nations greatest Companies that this Country's economy, over night, started on a downslide, and economic collapse, unparalleled in the history of the world. The economic destruction of recourses that has ensued has been devastating to the American consumer. What, with all this Consumer protection, levied against the consumer in the guise of protecting the consumer, I'm just not sure I can afford, or need, anymore of this kind of consumer protection. I feel that I have received far more value and protection from Microsoft than I have in the protectionist interference from our Government.

This should be the business of business and not the interference of Government to dictate to the consumer what he or she can or cannot have and at what price we must pay for it. As a consumer and a Citizen of this great Land, I feel that I, and I alone, should decide what is served on my plate and how it is prepared.

I have Windows on my computer, not because someone else decided for me what I should use? and not because Microsoft decided for me what I should use? I decided which was best for me from the many choices that were, and still are, available on the market today. And yes, there are choices out there. I? m sorry, but I am being made to feel that because of the wishes of a mere handful, it is the masses that must pay and this is just not right. It must not be right.

What kind of settlement is it that would require a company to document and to disclose to its competitors the internal makeup of the various internal interfaces of its operating system products, and yet, that is exactly what this settlement requires of Microsoft. What more could Microsoft's competitors wish for and be more fair than this? Surely, this must be a first for an antitrust settlement.

In closing, I would like to say I am a small-business owner and I depend on Microsoft to keep things running for me. If the federal government pursues three more years of litigation in this matter, it would not only hurt Microsoft, but millions of home computer users and businesses across the country. I urge you to please put these

lawsuits to rest before our economy deteriorates any further. By intervening in business, you would only be discouraging competition by creating fear on the part of other companies wanting to enter the market. Bill Gates made some excellent business decisions, and he is now being punished for it. His company has done so much for the economy, and now the government is just wasting more money picking on their company.

Sincerely,

Luther Moon

Comments on the Proposed Final Judgment in United States v. Microsoft by Robert Thrun

I have downloaded and read both the Proposed Final Judgment and the Competitive Impact Statement. I am speaking for myself and not for my employer.

The Proposed Final Judgment seems to be an agreement by Microsoft to cease its illegal exclusionary tactics and do what it should have been doing all along. There is no punishment for past behavior or any "affirmative action" to re-establish competition. Even so, there are many loopholes that Microsoft can use to continue exclusionary tactics to maintain and extend its monopoly. The Competitive Impact Statement concentrates on Middleware and says nothing about other tactics that Microsoft uses.

Breakup

The Court of Appeals did not entirely rule out a breakup of Microsoft, but the Department of Justice abandoned the idea. I maintain that the best solution would be a breakup. Other solutions would involve micromanagement by either the courts or a government agency. I would break Microsoft into four parts:

1. Operating systems
2. Development tools, such as compilers
3. Application programs, such as Word and Excel

4. MSN, the Microsoft Network

The compilers must be able to access the operating system functions. The Microsoft compilers have an advantage in that the operating system documentation assumes the use of Microsoft compilers, and the Microsoft compiler writers find out about operating system features before any writers of competitive compilers.

The Microsoft application writers can request operating system support for features

they want to put into the applications and they find out about the operating system features before the writers of other application programs.

Internet Explorer and Outlook keep wanting to connect to MSN and use it. This is a great marketing advantage.

Definitions

The Competitive Impact Statement is poorly written. The Competitive Impact Statement refers to "definitions contained in the Proposed Final Judgment", but the definitions are in the Competitive Impact Statement, not the Proposed Final Judgment. The definitions are complex, vague, and written to show where Microsoft does not have to disclose information. Under the terms of the Competitive Impact Statement, Microsoft seems to still be able to define what is Middleware and what is part of the operating system. Microsoft was able to claim that Internet Explorer was an essential, non-removable, part of Windows by simply moving five essential files into the Internet Explorer subdirectory.

Microsoft claims to distinguish a new "major version" of Microsoft Middleware from an upgrade by its product numbering scheme. Then all Microsoft has to do to avoid releasing API details for a new Middleware version under section III.D of the Proposed Final Judgment is to change its numbering scheme.

The Competitive Impact Statement says that Microsoft does not have to disclose API details to any company that has not sold at least a million copies of a similar Middleware Product in the previous year. This would exclude startup companies and established companies wishing to expand their product line.

Prohibited Practice Issues

Microsoft cannot retaliate against an OEM in a logo or software certification program. However, the biggest use of such a program applied to application program vendors at the introduction of Windows 95. Windows 95 will run applications written for the older Windows 3.1. Applications could not use the Windows logo in their packaging or advertising to state that they would run under Windows 95 unless they were written in such a way that they would not run under Windows 3.1. This was a use of monopoly power that effectively killed some emulators that would have allowed Windows software to run under other operating systems.

The uniform license agreements described in Section III.B of the Proposed Final Judgment apply only to Microsoft's top 20 customers. They should apply to all OEM customers. The smaller OEMs are more likely to offer custom configurations of the operating system.

API Disclosures

The section of the Competitive Impact Statement relating to Section III.D of the Proposed Final Judgment seems to say that Microsoft should release documentation about operating system APIs in much the same way it is currently being done. However, the Competitive Impact Statement has a couple of loopholes in its definition of "Timely Manner". For operating system APIs, documentation must be made available when a beta test version of the operating is

released with a distribution of at least 150,000. What if only 140,000 copies are released? For Microsoft Middleware, the documentation must be released at the time of the final beta test version. Microsoft could release a beta just before the release of its product. Either way, this would allow time for the Microsoft products to become entrenched in the market.

Communications Protocols

Under the section of the Competitive Impact Statement entitled "Microsoft Must Make Available All Communications Protocols" is specifically stated that Microsoft does not have to disclose server-server protocols! I don't know what, but it seems obvious that Microsoft has some trickery in mind with this provision.

Preservation of OEM Defaults

A provision of the Competitive Impact Statement allows Microsoft to "override existing defaults" when accessing a server maintained by Microsoft. This translates to a requirement for using Internet Explorer. Microsoft has already done this by blocking competitive browsers from downloading upgrades from its servers. Microsoft should not be allowed to do this.

re Section III.J

Microsoft is allowed to avoid disclosing information for several security-related reasons. Withholding information about protocols and interfaces may slow down an attack, but it does not increase the actual security of a system. The vulnerability is still there. If Microsoft is allowed to define what is security-related, it will be another large loophole.

What Should be Done

For starters, all information about all APIs and all protocols must be made available to all interested parties.

This should be done well before Microsoft ships to OEMs or sells at retail any operating system, Middleware, or application that either provides or uses the API or protocol. Three months seems like a reasonable minimum time. Ideally, the Microsoft programmers should not have access to insider information about the operating system. There should be no secret calls or protocols.

Microsoft has to document the APIs and protocols anyway before they are used by its internal programmers.

The browser war is over. Microsoft won and I can think of nothing that will resurrect Netscape. Many of the issues that were brought up in the lawsuit are now moot. However, Microsoft is still engaged in anticompetitive practices that should be restrained. As I said before, a breakup would be the cleanest solution. Since this is unlikely, there are other restrictions that should be put in place.

Much of the software battle has shifted over to file formats. Many people use Windows because they have to exchange files with users of Word, Power Point, or other Microsoft programs. Since the formats are undocumented, non-Microsoft programs or file converters have to guess at the details. Microsoft enjoys a monopoly or near-monopoly position in most of the application categories in which it competes. Some of the file formats, like the WMF and EMF graphics

files, are operating system file formats. All Microsoft file formats should be disclosed.

A simple requirement that Microsoft disclose all interfaces, calls, protocols, and file formats would make unnecessary many of the definitions in the Competitive Impact Statement, eliminate loopholes, and make the settlement easier to understand.

Microsoft has, by its monopoly position in operating system software, the ability to put almost any software product out of business by bundling a similar Microsoft product for "free" with the operating system. The Microsoft product is not actually free. The computer user pays for it as part of the price of the operating system. Microsoft has put many products off the market. Some, like memory managers or disk cache programs, provided services that are rightly part of an operating system. Others, like the browser, seem more like an application program. There was considerable innovation in all these product categories until Microsoft achieved dominance and very little since then.

The Microsoft product that is included with the operating system has great competitive advantages. The non-Microsoft product has some cost versus no additional cost for the Microsoft product. Even if an OEM were to remove the Microsoft product from the installation, Microsoft is still paid for it. Being packaged in the default operating system installation means that the Microsoft product, in effect, sits on the shelf in front of the non-Microsoft product. Unless the Microsoft product performs very poorly, the market for the non-Microsoft product is very small. Microsoft is now including audio player and file compression software with its operating systems. The only way to keep Microsoft from driving all other similar products off the market is to require Microsoft to reduce the price of the operating system to the OEM if the OEM chooses to replace some Microsoft product that is bundled with the operating system. Similarly, there should be retail versions of the most popular stripped-down configurations. This will give consumers the option to not buy Microsoft products they do not want. Microsoft will still have a strong competitive position by virtue of name recognition.

I use Macintosh computers, I like macs, and can make my own decisions, without the help of the ever wise, ever bungling federal government.

Anti-trust laws are discriminatory to a modern minority called the "businessman." Without whom the level of material wealth we enjoy today would be impossible. Anti-trust laws are so vague and ridiculous that they can not be adhered to. From day one, anyone entering into a business stand in vague violation of anti-trust laws. Why would one want to enter themselves into this situation? Because it is man's nature to produce, to use his/her mind, to invent, to create something better, and most importantly, to be free to do so.

Some of Microsoft's business practices are shifty, but I propose that these be handled case-by-case, by private parties who feel they have been wronged (time-capital wasted) against Microsoft. It is not the U.S. government to enforce what bureaucrats perceive as "unfair business practice."

There are other viable OS solutions out there. My favorite, BeOS. . . but I own two Macs and prefer them to windows. I would not like to be told that I must pay more for MacOS, if some politician decided Apple were in some violation of anti-trust.

If those Federal tax bucks are burning a hole in your pocket just come on out to Utah. . . Our road here in SLC are terrible. Everyone here would love you more for fixing our roads.

Best Regards,
John Norris

Subject: Microsoft Settlement

I am, more or less, an average consumer. I have a personal computer, (obviously) and the following Microsoft products listed from memory: Windows XP, Flight Simulator 98, Age of Empires, Sidewinder joystick, and Streets & Trips 2001. I and others in my family have purchased these products of our own respective free-wills. Although the others aren't available to comment as I write this, I for one have been pleased with these products.

Nobody has ever forced me to either purchase or not purchase a single thing. Microsoft has been no exception. I have never seen any of the coercive force alleged by Microsoft's denouncers. In fact, it is because of this lack of coercion that I DO NOT subscribe to MSN. Instead, I subscribe to a locally based internet provider. Nor have I bought more recent versions of "Flight Simulator" as I don't see the changes as being significant enough to warrant the purchase. How could this be possible if Microsoft was forcing or manipulating people like me, as according to anti-trust proponents?

I find it insulting to hear Microsoft bashers as well as anti-capitalists characterize people like me as helpless victims who cannot choose what software to buy. This implies that we're mindless pawns, completely lacking of anything resembling free-will. I personally find this to be nothing less than a slap in the face.

The very idea that a company like Microsoft can be punished for being successful in the United States of America (of all places) threatens my own future. I am an

aspiring software developer myself, hoping to found my own privately owned company. Although I plan to focus on creating entertainment software only, I still see the fate of Microsoft in the anti-trust suits as being a precursor to my own fate.

Remember: it was not consumers or Microsoft's partners who started the anti-trust case, but Microsoft's competitors. If I were to become very successful in my future venture, what would happen to me if a competitor who wasn't doing as well decided to accuse me of anti-trust violations?

Microsoft competed vigorously in order to be the best. Yet, that is considered anti-competitive, implying that "competitive" means sacrificing one's own interests in order to allow competitors to win occasionally. If that's true, why does nobody apply the same logic to athletic competitions?

It is supposed to be the duty of the United States government to protect each person's rights to life, liberty, and property. To punish Microsoft simply for the sake of whiny competitors is a violation of property rights. It is also a shameful betrayal of the constitutionally enshrined right to the pursuit of happiness, for if someone is punished for attaining what they pursued, (in Bill Gate's case, a software corporation of legendary success) where will it end?

A self-made man like Bill Gates, (and hopefully me too someday) who became successful by offering preferable products and services, deserves whatever money people willingly give in exchange for said products and services. The uncoerced choice of each individual by their own free-will is the American dream, as opposed to edicts of sacrifice to those whose goods weren't chosen by said free-will.

Sincerely,
Mitchell A. Gyde

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530
Dear Mr. Ashcroft:

As a concerned citizen and voting American, I write you regarding the Microsoft settlement. I cannot believe that this settlement is still being dragged through the mud. Doesn't the government have more important issues to focus on? I think it is time we let this well thought out agreement speak for itself and let the IT sector get back to business. Anti-trust isn't there to keep companies from having to compete with their competitors. It is suppose to protect consumers. The longer this is drawn out the more it hurts consumers.

The terms of this settlement are a step toward a more unified IT sector. The terms include changes in licensing, marketing, and even design. In an anti-trust settlement first, Microsoft has agreed to disclose various interfaces that are internal to Windows operating system products. All of these concessions are slated to be overseen by a committee that will make sure that Microsoft is following proper procedure. Not only are their strong statements in these terms, but also there are plenty of safeguards to help non-Microsoft companies along the way.

I support the settlement as it stands, and hope we soon put these terms into action and let the free enterprise system work.

Sincerely,
Shelley Krumnow
President

"The Bush administration would be smart to launch a review of the country's antitrust laws". The objective should be repeal not reform. The principle of America's founding is "Individual Rights", rights to life, liberty, property and the pursuit of happiness. Property rights include the right to set the terms of use and trade of the property a man creates.

Microsoft has created products of great value and set the terms of trade and use of those products to the benefit of millions who bought those products by free choice.

Microsoft has earned huge profits for its employees and stock holders by these free market trades.

Competing companies have failed to keep up and demanded that the government "rein in" Microsoft for their benefit.

Antitrust laws are designed to restrain the successful for the benefit of the envious. They are un-American, unjust and should be repealed! Jane P. Whaley

Since this offer from Microsoft was first published, I have been astonished that it was ever considered by the courts. Could it have been presented with a straight face?

To allow Microsoft to make reparations for its illegal acts by offering to hand it thousands of new customers at little cost simply amazes me, astonishes me.

Is this how illegal behaviour is punished or is it being rewarded?

The whole story is a Seinfeld routine, except, it's not funny.

Subject: Microsoft Settlement

Greetings,

First of all, let me say I am impressed with the depth and breadth of research you performed in compiling the Complaint document of 5/18/1998. I am a software engineer with 15 years experience, and fully understand the difficulty in describing computer terminology and functionality. Your descriptions were accurate, enlightening, and readable!

I must say I was extremely disappointed when the original final judgement, which included the breakup of Microsoft, was overturned. You seem to be very practical in working towards a resolution, knowing any other approach would result in protracted legal action. I wonder how Microsoft's behavior has compared to prior monopoly cases which resulted in company breakups, such as Standard Oil and AT&T?

However I have a concern with the proposed final judgement. I agree with the concept of the TC. You state the members have power to acquire and hire resources as necessary to verify compliance with the judgement. However, given the complexity and content of Microsoft software, is a 5 year compliance period long enough? Even relatively minor software projects with dedicated, experienced staffs, require months to complete. Perhaps 7 years would be more reasonable. The TC will probably require 6 months to a year to get their feet on the ground. Then, given the size and complexity of Microsoft's code, will need to begin hiring resources for assistance. The resources will then need time to get up to speed. In a nutshell, the TC will probably start to do "real" work about 18 months into the settlement.

This also assumes the Microsoft appointed member of the committee is a legitimately objective member of the team, and not just a Microsoft defender.

Regards,
David Atkins

Renata B. Hesse
Antitrust Division,
U.S. Department of Justice
601 D Street NW, Suite 1200
Washington, DC 20530-0001

Dear Ms. Hesse

I believe the antitrust case against Microsoft should be settled by the United States refunding the money Microsoft has been forced to spend in its defense and by

paying to Microsoft such damages as have been caused by the interruption of its business.

I have been using personal computers for many years. Most people would consider me a computer expert and it is clear to me that Microsoft is not a monopoly. On my home computer I use both Redhat Linux and Microsoft Windows 98 operating systems. At work I use UNIX, Linux, and Windows. This letter was written using no Microsoft software at all.

That doesn't sound like a Microsoft monopoly to me. Personally I do not really care for the Microsoft OS—I much prefer Linux. I find the Windows interface unstable, condescending, and insecure. I use Microsoft Windows because it came free with my computer and allows me the flexibility to use some very good software programs that were designed by those who wrote them to run only under a Microsoft operating system. Software developers have the right to choose which OS(s) they write their software to run on. If they choose to program only for Windows, so be it. This is a personal business decision that no one has the right to interfere with. If I don't like it I am not forced to use their software—neither is anyone else.

Microsoft has a right to produce and sell any software they wish. They have the right to bundle this software with their operating system, sell it separately, or give it away. No one can claim the right to make Microsoft work to benefit its competitors. The United States Government should be defending Microsoft against such unjust claims against its property. Yet the government seems to view the men and women who own Microsoft, and the software they have created, as some kind of government property—to be handed out to whoever makes a claim.

The government has made the claim that Microsoft has used its alleged monopoly to hurt consumers. This claim could not be farther from the truth. The presence of Microsoft has caused a great deal of competition which has improved software and the software industry. For example, Linux companies were forced to make user-friendly versions with Windows-like graphic user interfaces to keep up with Microsoft. As a result of this competitive pressure consumers can now buy a complete Linux operating system, like Redhat 7.2, with web browsers and office software for less than \$60. How exactly has this hurt consumers?

This whole antitrust case makes me wonder who will be attacked after Microsoft. Will Redhat be broken up because they bundle web browsers and office software with their OS? Will all those who sell Linux be forced to stop giving out the source code along with their software? It seems to me that the government's role in economics should be to prevent anyone from initiating force or fraud. Then they should get out of the way and let the capitalism work.

Kindest regards,
Reed Kofod

Subject: Microsoft's Settlement

To Whom it may concern

Note acronyms: OS—operating system, IE—Internet Explorer, MS—Microsoft
? As a computer user since 1980, I have witnessed Microsoft's monopolistic practices with horror. I have owned many computers since 1980, platforms including Commodore—with DOS, Atari St with Gem operating system and now Apple Macintosh—with Mac OS for the past 8 years.

? It is sad that a company like Microsoft has continued it's practices of bullying other companies into oblivion, some of course like Commodore and Atari did not have enough finances to compete and made crucial mistakes.

? Apple and Sun are two examples of companies who truly INNOVATE and yet they are kept at bay by Microsoft's practices. A company like Sun comes out with the JAVA language, a language that all platforms can communicate with, then Microsoft seeks a way to render it useless on other's platforms.

? Companies like Apple spend lots of money on R & D for it's innovations and Microsoft turn's the technology into it's own. Rectify Microsoft's practices

? Microsoft claiming that it's IE browser is integrated into it's own OS for ease is nonsense. To split them apart would be damaging is utter nonsense. Microsoft has the power to make it's browser work on it's own. Browsers on the Mac OS platform are their own entity, if you want to delete the browser, just drag the browser (Netscape or IE) to the trash and that is that. They do not wreck the MAC OS by doing so. Microsoft is very capable of making their OS work side by side with a browser. What is next, incorporating their own Picture, Video and Audio editing software into their OS and forcing companies like Adobe products to become impossible of running on Microsoft Windows. From what I've seen, it looks like Windows XP OS is already incorporating some of these programs/features.

Programs should be their own source running with the OS, not intertwined. This means if they are eliminated the OS will still work great. This allows companies like Apple, Real, Netscape to design applications for Windows OS and make them work flawlessly. These competing companies should be able to have their product on every shipped Windows computer with their icon on the desktop or in the start menu alongside Microsoft's apps, so as the customer has choice. The same should be done on other computing platforms like the Mac OS, Linux, Sun, etc.

? Microsoft's source code should be exposed to everyone who wants to see it. This would allow more exciting software development to emerge and compatibility between other platforms could increase.

? Microsoft software like MS Office should continue to be made for competing platforms. Also it's files should be made compatible with competing products. Example—when creating a MS word document, you should be able to save the document to a competitor's

product like Appleworks, Corel Wordperfect, etc. This can easily be done on Microsoft's part. Apple's Word Processor—Appleworks allows one to open MS Word, save as MS word, so why cannot MS Word be designed to open an Appleworks document?

? Microsoft's 1 Billion dollar settlement for schools should be in cash, not Microsoft software. Let the schools decide where to spend the money. Allowing Microsoft to donate their own software and hardware will only increase their monopolistic power and make our children less educated. (meaning children will only be exposed to one type of computer OS, children are the best at learning two or more OS's. It is like learning more than one language, you can form a more honest opinion about one's language when you know the differences and benefit in the real work force which could be using tools like Mac OS or Windows.

I love the computing industry, they are great things about Apple, Sun and even Windows that make my computing life enjoyable. But Microsoft does more damage to this industry by forcing others to use their inferior products. Our world will become even more stagnant if Microsoft is not dealt with very soon. The world would be a pretty boring place if the only car we could drive were Ford Pintos or if the only highway we could take was a gravel road that took us 4000 miles of course towards our true destination. . . . advancement, progress and a better way of life.

Thank You
Michael De Jong

Subject: Microsoft Settlement

Dear DOJ, I support a speedy and non-punitive end to the Microsoft litigation, and if the settlement facilitates that, I support it. I definitely do NOT want to see Microsoft broken up, nor heavy penalties exacted from the firm. I do not hold the position that they did "nothing wrong". The company was a hardball competitor and employed some very unsavory tactics. The settlement should make it clear exactly what sort of behavior they are to refrain from in the future. But I do not believe that they knowingly broke the law, and don't believe they should be severely punished. I also believe the Government has a long history of confusing "protecting competition" with protecting competitors. Slap Microsoft's wrist, clearly spell out what they are not to do, and be done with it. If possible, stop the states from pursuing the matter further as well. Thank You! Ralph Mullinger

Subject: Re: U.S. v. Microsoft: Settlement Comments

I am 50 and have been in the electronics business since I was 15. I grew up with computers and have watched the rise of Bill Gates & Co. I have several conclusions on the anti-trust case:

1. There is no one-repeat no one- in this business who doubts for one minute that Microsoft is a monopoly. Everyone is looking over their shoulder to see if they will be the next casualty. Microsoft is not where they are because of good products. The products have been forced upon the consumer by leverage of their operating system monopoly. This monopoly- through licensing and other means- has NOT allowed the consumer to evaluate alternative products. I could not buy a PC without Windows. Dell and the others COULD NOT sell me one. In my informal polls, the average consumer does not understand that Windows 95, 98, 2000, XP, etc even come from the same company. They do not realize that a PC box from Dell, Gateway, IBM, etc are all the same. They think of it as Ford, GM, or Honda- which, of course, it isn't. There is no choice.

2. I would venture that you- the judges, clerks, etc are close to my generation. No where is the computer gap more evident. I can't believe you have even a clue as to the extent of Gates's reach and the significance of complete control of the operating system. This monopoly goes way, way beyond steel or the Bells.

3. The proposed settlement is a joke. It is known in the art that Microsoft is a monopoly. They have been legally declared a monopoly. And what do you do? This is not even a slap on the wrist. And as with every other involvement with Gates, he is telling YOU what YOU are going to do. The three person oversight is completely ludicrous and unworkable.

4. In the trenches, the conclusion is that this is a buyoff with Bush. This is so blatant there can be no other explanation. As sad as Sept 11 was, it provided an excuse for the administration to back off of Microsoft. Software types that I run into just write this off as a complete sell out by the Justice Department. Your department really is the laughing stock of the software community. You can't be this clueless, can you? How does this settlement help me, the consumer? How does it help the innovative companies that have been steamrolled by Microsoft? How? How?

5. I am sure the boogeyman here is we don't want to hurt the economy by upsetting Microsoft. I would posit that 39 billionaires, 900 multi-millionaires, and 100 just plain millionaires would stimulate the economy far more than one "forty billionaire" who will stop at nothing to own it all. Microsoft does not partner- Period.

6. As XP becomes entrenched, there will be control of so many systems and points of distribution that it will make past actions look like child's play. It is a Trojan horse. Microsoft is pulling out all stops on this one. They are taking no prisoners. You are way too little and way too late.

7. This is the last chance to stop Microsoft. This settlement is a disgrace to your office and to this country.

Sincerely,
Robert Nystrom

From: Jared T.
To: Microsoft ATR
Date: 1/21/02 11:24pm
Subject: Microsoft Settlement

The purposed Microsoft settlement is a slap in the face to antitrust laws and the American public. Here is my opinion on what needs to be done to Microsoft:

1. Stiff fines and monetary penalties.
2. Their ten most popular software titles MUST be developed for the Mac OS X platform (this is excluding the applications that currently exist on the Macintosh such as Office, Media Player, MSN Messenger, etc.). They will be required to continue the development of these software titles for the next ten years.

3. The source code for Internet Explorer must be made public so that developers can take advantage of "hooks" in the code that only Microsoft knew about previously.

I feel that the ideas outlined above serve as fair and just punishment to the Microsoft monopoly. The fines and financial penalties will serve as a remedy for the overpriced software they have pushed upon consumers over the last seven years. The requirement of developing more applications for the Macintosh will help spur more competition

and innovation in the computer industry. And, finally, opening the source code to Internet Explorer will give everyone the tools to take advantage of the "hooks" in the software code. More powerful and secure web applications will result.

Microsoft should not be given a "reward" by having to pay out \$1 billion in cash and products. This is not a punishment; it is a nail put in the coffin of any possible competition that Microsoft might have.

The company should be forced to provide a FAIR playing field for any settlement that is proposed. "Giving" the schools all of those Microsoft products basically guarantees those schools (including the students and faculty) a future reliance on Microsoft. Please do not let that happen.

Microsoft is an overly competitive company that twists the rules of free enterprise however it sees fit with NO regard to consumer needs and RIGHTS.

It does not "innovate"; it SUFFOCATES the industry by force feeding it's own standards. That is not good for consumers, government, or the tech industry.

Subject: Microsoft Settlement

To Whom It May Concern:
As an individual, I have benefited gloriously from the ingenuity, production, and thought that Microsoft has utilized over the years. It utterly baffles me why anyone

would want to punish such life-promoting virtues.

I ask you: What exactly has Microsoft done wrong?

—Bill Gates earned a living by producing products that he chose to trade with others. (Inalienable right to life) Is this wrong?
—No one was forced to deal with Microsoft. Individual people willingly bought Microsoft products, trading goods for goods voluntarily—myself included. (Inalienable right to liberty) Is this wrong?
—Their products were and are so effective, that everyone chose Microsoft over other companies. (Inalienable right to the pursuit of happiness) Is this wrong?

Is this what we are to punish Microsoft for, for its earned success and dissemination of the products of efficacy? Are we to punish Microsoft because it is "too good", i.e., because it promotes life, liberty and happiness "too much"?

It is by this standard (i.e., our constitution) that I pronounce Microsoft as profoundly moral, and deserving of praise—not punishment, fines, and expropriation. Bill Gates and Microsoft have a right to the goods that they produce by their own effort, i.e., they have a right their own property. Expropriating them—and for their success no less—is too scary for words. I ask you, in the name of individual rights, and everything that this country stands for: do not punish the successful because they are successful. Let Microsoft—as well as every other business and individual in our great country—be free to pursue their life, liberty, and happiness.

Patriotically,
Alex Silverman

Subject: Microsoft Settlement

I think punishing microsoft for it's success is not only bad but it is also evil. Microsoft has gotten where it has because of smart business practices.

It wants its product in all hardware is that evil? you say it is. I don't think so they don't force one company to use it's product. When I write force I don't mean pressure I mean with guns. That's what the U.S government(all governments) does when it doesn't like what a company does. You claim to help the consumer but you are frauds. If people say they that they have the right to a product without microsoft products they're wrong. They have a right to a trade but they don't have a right to force a company to make something the way they want it. If they don't want microsoft on there they'd have another operating system with less support(no software would work on it) or the manufacturer of the PC will have to make it's own. Any body can download another operating system or another browser too. That's including netscape.

The people who say otherwise just want to see a successfull company paralyzed. They hate main stream business and microsoft is the most main stream. I urge the justice

department to not punish successful business. It's a lie to say your punishing bad business practices but it's not that at all. All governments support one business or more who stays a monopoly by the force of guns like the U.S postal service. The U.S government is very hypocritical. People clamor for consumer rights but what about producer rights. I see microsoft and other successful companies to be like parants.

They support us and feed us yet like children we don't appreciate that and what's worse we put guns to their heads and make them do what we want. Can the reader do that to their parants? I think not. So what is microsoft it big right now. Can you honestly say another company want make a better more main stream operating system that anybody could use? The justice department has not right what so ever to break up a monopoly. If it's in the name of the people to break up companies then people want must demand sacrifice.

Well if they want to sacrifice companies for the public damn the justice department and damn the public.

To whom it may concern,

We are writing with regard to the proposed settlement of the Civil Action No. 98-1232 The United States of America v. Microsoft Corporation which was published in the Federal Register on 28 November 2001 in accord with the provisions of the Tunney Act and pursuant to the Court's order of 08 November 2001.

In considering the proposed remedy in the above referenced case we take as our starting point the summary in the Department of Justice COMPETITIVE IMPACT

STATEMENT: The Court of Appeals upheld the conclusion that Microsoft had engaged in a variety of exclusionary acts designed to protect its operating system monopoly from the threat posed by a type of platform software known as "middleware," in violation of Section 2 of the Sherman Act. Specifically, the Court determined that, in response to the middleware threat, Microsoft:

(1) undertook a variety of restrictions on personal computer Original Equipment Manufacturers ("OEMs"); (2) integrated its Web browser into Windows in a non-removable way while excluding rivals; (3) engaged in restrictive and exclusionary dealings with Internet Access Providers, Independent Software Vendors and Apple Computer; and (4) attempted to mislead and threaten software developers in order to contain and subvert Java middleware technologies that threatened Microsoft's operating system monopoly.

It is probable in this case that some form of structural remedy would have been the most effective in curbing the monopolistic abuses while avoiding the expected difficulties involved with governmental regulation. Microsoft has worked itself to the level of a utility not unlike the AT&T of the late 1970s. An economic power of this scale ultimately has to be regulated or structurally altered in order to prevent continuing harm of the types found by the District and Appeals Courts. It is a surprise, therefore, that the DoJ chose to remove the structural remedy from the negotiating table so early in the process.

We have examined the proposed settlement in an attempt to judge its effectiveness, both in redressing the harm the Defendant has caused and in preventing further harm by action of the Defendant. We have likewise examined the provisions proposed by the nine states (California, Connecticut, Florida, Iowa, Kansas, Massachusetts, Minnesota, West Virginia and Utah) in their alternative settlement. If the process requires choice of one of these two proposed settlements, then we respectfully suggest that the nine states' proposal be the one selected, as it appears to offer a better chance of correcting the harms found to have been caused by Microsoft's Sherman Act violation by the District Court and unanimously affirmed by the Appeals Court. Detailed information concerning this preference will doubtless be submitted by others, so we will describe only two examples to illustrate the reasons for preferring either the nine-state alternative or structural remedies in this case.

(1) Section VI. U.

The District and Appeals court found that Microsoft had "integrated its Web browser into Windows in a non-removable way while excluding rivals". The proposed settlement contains various rules concerning "Middleware" and some definitions:

Section VI. J "Microsoft Middleware" means software code that 1. Microsoft distributes separately from a Windows Operating System Product to update that Windows Operating System Product;

Section VI. U. . . . The software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion.

This would appear to introduce a large degree of ambiguity. For example:

1. The definitions ultimately lead to the Defendant's defining what is and what is not the "Windows Operating System Product".

2. As long as the Defendant defines what constitutes the "Windows Operating System Product," ISVs will never be sure if they are competing with Windows or with a Middleware product.

3. Consumers will never know the true cost of the Microsoft products they are purchasing, as long as the price is hidden in the cost of the system as a whole and they are uncertain as to what is or is not part of the "Windows Operating System Product".

Under the nine-states proposal Microsoft would offer an unbundled version of Windows, as well as the usual product. This would help to define what constitutes the Operating System and what constitutes a bundled or "integrated" product.

(2) Section III.J.2

The public is best served when communications protocols and APIs adhere to common, publicly available, and documented standards such as the Internet Engineering Task Force Requests For Comment. Considerable effort has been made by researchers, hobbyists and 501(c)3 not-for-profits towards such public interoperable standards.

J. No provision of this Final Judgment shall: . . .

2. Prevent Microsoft from conditioning any license of any API, Documentation or Communications Protocol related to anti-piracy systems, anti-virus technologies, license enforcement mechanisms, authentication/authorization security, or third party intellectual property protection mechanisms of any Microsoft product to any person or entity on the requirement that the licensee: (a) has no history of software counterfeiting or piracy or willful violation of intellectual property rights, (b) has a reasonable business need for the API, Documentation or Communications Protocol for a planned or shipping product, (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, (d) agrees to submit, at its own expense, any computer program using such APIs, Documentation or Communication Protocols to third-party verification, approved by

Microsoft, to test for and ensure verification and compliance with Microsoft specifications for use of the API or interface, which specifications shall be related to proper operation and integrity of the systems and mechanisms identified in this paragraph.

Among the problems that stand out in this section:

1. The defendant will have a conflict of interest in that it will be certifying the authenticity and viability of entities attempting to compete with the defendant.

2. The provision sets up several barriers to many of the 501(c)3s, academicians, researchers and hobbyists that helped build, and continue to help maintain, the Internet in the first place.

A far better approach would be for the defendant to adhere to published standards from appropriate independent bodies than for the defendant to pick and choose who may compete with it.

In conclusion, we do not see how the remedy proposed by the DoJ and Microsoft will address the the harms found by the District Court and affirmed by the Appeals Court.

Respectfully submitted,

/Signed/

Johanna S. Billmyer

Attorney General John Ashcroft
 US Department of Justice
 950 Pennsylvania Avenue, NW
 Washington, DC 20530-0001

Dear Mr. Ashcroft:

I write to you today to express my support of the Microsoft settlement. The Department of Justice has now spent three years toiling over this issue without any resolution. Finally last November a tentative settlement agreement was reached. This settlement should be enacted with haste. It represents a fair mediation between all parties involved.

The terms of the settlement are very fair. Microsoft now agrees to license its Windows software at the same rate to the largest manufacturers of PCs. This makes the marketplace much more competitive. Also Microsoft will agree not to retaliate against companies that use, sell, or promote non-Microsoft products. Additionally, Microsoft has agreed to share information with its competitors that will allow them to more easily place their own programs on the Windows operating system.

Obviously Microsoft has been generous in resolving this issue. The Justice Department must enact this settlement.

Sincerely,

C. L. Walker
 Sincerely,

 Subject: Microsoft Settlement
 January 21, 2002

To whom it may concern,

I am a software engineer in Seattle, Washington. I earned my Bachelor's Degree in Computer Science in 1987 from the University of California at Berkeley, and my Ph.D. in Computer Science and Engineering in 1992 from the University of Washington.

Upon reading the Proposed Final Judgment and the Competitive Impact Statement in the United States vs. Microsoft, it appears to me that the proposed final judgment is too lenient, too lax, and too full of loopholes.

The proposed final judgment is too lenient for Microsoft. They have been flaunting the law since they entered into a final judgment in 1995. The District Court found, and the Appeals Court agreed, that they have been illegally maintaining their monopoly for years, and in the process have essentially killed Netscape Corporation and threatened major computer companies such as Intel and Apple. It is widely believed that no venture capital money is available for a product that will or might compete with Microsoft, as Microsoft will crush any such competitor before it becomes popular, whether by threats, or by folding software similar to the product into its operating system and distributing it "free" to all who use their monopoly operating system.

Despite all this, the proposed final judgment does little to punish Microsoft for this conduct, or to insure that it cannot continue using the same tactics in the future. In particular, definition VI.U. says "The software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion," thus making it impossible in the future to sustain a claim against Microsoft that it maintained its monopoly by illegally tying another product to its operating system.

I would like to see stricter conduct remedies, if not a structural remedy. I also share Ralph Nader and James Love's surprise (see <http://www.cptech.org/at/ms/rnj12kollarkotellynov501.html>) that there is no monetary penalty attached, if only to prevent Microsoft from using its ill-gotten gains to buy or otherwise fund its way out of future competition.

The proposed final judgment is also much too lax. The judgment gives too much discretion to Microsoft, and its enforcement regime seems designed to allow Microsoft to delay its way out of any violations. The Technical Committee seems too powerless; it cannot impose any actual penalties, only report on violations, and the reports cannot even be made available to the public. Much of the apparent recent improvement in Microsoft's behavior appears to be due to publicity about its practices. It follows that the enforcement process should be as open as possible, not closed as the agreement stipulates.

Most disturbing, though, is the number of instances in the proposed final judgment

where Microsoft is given the power to decide things on its own. The company has been found guilty of anti-trust violations, and has acted in bad faith towards the court both with regards to the earlier final judgment, and numerous times during the recent trial actions. Yet in many clauses, the judgment allows the company discretion to make exceptions. By past behavior, we can only expect the company to abuse this discretion, at the very least to delay any action it does not like, at worst to subvert the process.

For example, the 'notwithstanding' clauses after III.H.3 allow Microsoft discretion to void the previous section (and using the vague and undefined term 'reasonably prompt manner' to allow Microsoft to stall against any objections). Particularly troublesome is III.J.2, a clause which seems to be designed to allow Microsoft to ignore legitimate requests from open source software developers (because they typically do not have a business behind them, and therefore no 'authentic' or 'viable' business). This is particularly troublesome because Microsoft has recently made a number of statements declaring open source software for example, 'a cancer', 'unamerican', and the number one threat to their business.

I would suggest that Nader and Love's suggestions about the term of the judgment and its enforcement mechanism be used. The current version merely seems to introduce a level of bureaucracy between Microsoft and actual enforcement power. In addition, instead of giving Microsoft latitude to make exceptions as in III.H.3 or III.J.2, Microsoft should be allowed to *propose* exceptions to the Technical Committee, which would make the final decision, with the stipulation that when in doubt, the committee should err on the side of openness to outsiders.

Finally, open source software should be recognized as the public benefit that it is, and open source developers and projects be accorded the same privileges as standard businesses, if not more.

Finally, as an expert in the field, I would like to point out how riddled with loopholes the judgment is. The drafters seem myopically focused on the current characteristics of Middleware software and products, and unaware how simple it would be to circumvent the spirit of the judgment using its own text.

As a simple example, consider the various definitions of Middleware and Middleware Products. They all implicitly consider software that lies directly between the user and the operating system. It would be simple matter for Microsoft to break the agreement by devising another layer of middleware, between the current middleware and the operating system. For example, according to III.D., Microsoft must eventually release 'the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product'. With an extra layer added, currently existing middleware will no longer operate with the Operating System Product, and thus its APIs need not be released. I'm dubious the new layer, which does interoperate with the operating system, would be defined as middleware, either, as it would not seem to fit the judgment's

definitions, which describe middleware in terms of current products. Even if the enforcers of the judgment would not accept this transparent ploy, it seems likely to me that Microsoft could, as in the past, use their considerable political, legal and monetary power to delay a judgment against them. Given the short term of the judgment, this and similar ploys should be prohibited outright.

Let me give some more examples of how Microsoft could use the narrow language of the judgment to circumvent it. Section III.E. could be circumvented in a way similar to III.D, by imposing another layer between the server operating system and the Windows Operating System (say, another server operating system). The communications between the Windows Operating System and the first server operating system would have to be documented, but not the communications between the first server and the second. If this does not seem sufficiently devious, consider a protocol where the Windows Operating System sends 10 messages to (possibly different) servers, and the servers communicate between themselves to act on 1 of the 10 and ignore the other 9. Anyone who wishes to compete by supplying a substitute for the servers would be hard-pressed to figure out what was actually going on without information about the protocol between the servers, but this protocol need not be disclosed by Microsoft.

Note also that Microsoft's current direction (.NET) is toward Middleware accessing servers directly; it would seem by the judgment that Microsoft is free to abuse its monopoly as much as it wishes in this area, as the judgment does not place any conditions on middleware that does not talk to the desktop operating system.

Another avenue of circumvention is software such as Microsoft Office; clearly Office would not be defined as middleware or part of the operating system. However, there is nothing to stop Microsoft from grafting some communication code into future versions of Office to exploit these definitions. For example, suppose Microsoft includes code in its web browser that, on startup, communicates with a running Office program that it has started up, and the Office program in turn passes an 'OK to browse' message on to the Operating System. Suppose also that the Operating System code is rewritten so that, if a browser attempts to get a web page and the Operating System has not gotten such an 'OK', it terminates the browser program. None of the browser-Office or Office-operating system communication needs to be disclosed to outside parties, as Office is neither middleware nor part of the operating system. But the net effect would be that any non-Microsoft browser would be mysteriously broken.

Another problem arises with III.J.1.a, which allows Microsoft to refuse to disclose 'portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of a particular installation or group of installations of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems.' This section can be

abused to prevent disclosure of information about *any* protocol, by including in the protocol information which helps to disclose sensitive security information. Suppose, for example, that Microsoft devises two different versions of a Communications Protocol, and deems that it will use one version if the last bit of a site's secret cryptographic key is '0', and the other if the last digit is '1'. This means that if you know which protocol is being used, you know information that can help compromise this key (if you think one digit isn't enough information, suppose they have 1024 different versions, which will tell you 10 digits of the key, or 2-20 versions, which will tell you 20 digits, or whatever you like—different versions could be as simple as including a different version number in the protocol's messages). The point is that, by III.J.1.a, Microsoft would be justified in refusing to document the Communication Protocol in question, as it would certainly compromise the security of the key used. And, again, this can be used to prevent disclosure of *any* protocol, whether related to security or not.

While these scenarios may seem far-fetched, we must consider past actions of the company. For example, when faced with an order to distribute a version of Windows "95 without Internet Explorer, Microsoft distributed a deliberately broken version. It is certainly not difficult to believe that the same company would resort to schemes such as these if it felt it would protect its illegally-maintained Windows monopoly.

I would urge the court to take action to prevent such loopholes. For example, it could hire a team of experts to look for any possible way the spirit of the agreement can be circumvented. The definitions, particularly those relating to middleware and operating system should be broadened. Finally, a list of underlying principles should be included with the judgment so that if any loopholes still remain, the Technical Committee and the Court will be able to disallow such evasions.

Sincerely,
Greg Barnes

Subject: settlement of Microsoft case needs to be toughened

I, as a software professional believe that the settlement terms against Microsoft definitely need to be made tougher. Microsoft definitely needs to include a non-Microsoft modified version of the Java run-time environment on new OS's. Other settlement terms brought up by the state's law suit also need to be implemented. —

To Whom it May Concern,

I am very pleased that the Department of Justice has finally found that Microsoft is the "800 pound gorilla" that bullies the pc industry. I am not certain of the monetary loss that will be incurred by Microsoft in this ruling but as an Apple Macintosh user that uses Microsoft software daily, I can verify that the actions that Microsoft has taken against Apple, Netscape, Sun, and other OEMs have been ignored far too long. I was concerned that Microsoft's first proposal by Microsoft (of providing public schools with Windows / Intel-based pcs and Microsoft software) would be a direct infringement on non-Microsoft manufacturers and software developers. It pleases me to know that this proposal was declined.

Microsoft is solely responsible for slow development of software and hardware by third party vendors because of Microsoft's monopoly in the operating system market and anti-competitive practices. The entire personal computer industry as well as the end-user suffer as a result of Microsoft's actions. Microsoft should be punished accordingly.

Microsoft should pay Netscape and other such vendors and manufacturers a substantial amount for their anti-competitive practices against them.

Subject: Microsoft anti-trust suit
Attention: Renata Hesse
Judge Kolar Kottely
U.S. Department of Justice, Antitrust Division
601 D Street, NW, Suite 1200
Washington, DC 20530

Dear Judge Kolar Kottely:

I am writing to convey my opinion that the settlement developed by the U.S. Department of Justice to end the anti-trust suit against Microsoft should be approved.

I feel the case has been going on far too long and has consumed enough of our state and federal tax dollars. I am a Kansas taxpayer that is extremely displeased that our state has not joined the DOJ in working to settle the case. It upsets me that my state tax dollars are continuing to be spent on this suit, even with a worthy settlement proposal on the table.

As a federal taxpayer, I wish we had the millions of dollars spent on the case, back in our hands.

But at least the Bush Administration is smart enough to cut bait on the fishing expedition Janet Reno started.

I urge you to look closely at the merits of the settlement, and then at the continued costs to all parties for continuing the suit. I am confident on both counts, you will decide that settlement is the best option.

Sincerely,
Judy Hageman

What is wrong with the settlement-settle it and be on with it! I don't think any public consumers have been hurt anyway. It looks like a case of "crybaby" competitors who got the government to do something they could not do themselves and now a bunch of greedy holdout states who want to squeeze Microsoft for as much as they can. Settle this unjustified farce now!

 Subject: Microsoft Settlement

To whom it may concern:

This letter is written in defense of Microsoft in it's current anti-trust case. Below I will briefly outline the reasons for my support, and hopefully provide a sound basis for why anti-trust laws as such should be done away with.

I use Microsoft in nearly every application of computing. I use Microsoft Windows(r) XP(tm) for my operating system, I prefer Microsoft Internet Explorer(tm) to other web browsers, I connect to the Internet using MSN(r), and I develop applications using Microsoft's Visual Studio(tm) software. All of these programs offer enormous benefits over their competitors because they are made to work together, besides the fact that they are developed by some of the brightest minds in the software and hardware industry.

Where would the home office be without Microsoft Office(tm)? Microsoft has led the way in productivity software, including more and more innovative features into everfy subsequent release. What other operating system allows as much universality as XP? I couldn't tell you.

Microsoft is not "exploiting defenseless victims." They are simply offering software that can be a tremendous benefit to any individual who chooses to buy it. "Bundling" products such as IE doesn't cause "serious problem concerning competition," unless you consider a companies benevolent policy of giving away some of it's best software for free is a "problem." I actually wish more Microsoft software would be bundled with Windows, so that the software could be more tightly integrated to the core functioning of the operating system, allowing more features like drag-and-drop CD burning to come into existence. If I become dissatisfied with Microsoft's products, I will look to the market for more choices, which there will always be as long as capital is free to flow. And if an extremely large company starts trying to produce products of a lower quality, capital, not government intervention, is what will fix the problem best.

By the nature of this case, I am quite suprised actually at the incessant call to "protect the consumers," when, this case was not brought on by consumers at all, but by unsuccessful competitors envious of Microsoft's success. Pandering to envy is not

the purpose of a court of law, especially not in a free country. Any judgement handed down should call not Microsoft, but the instigators of the trials, to pay fines. It is Sun, Apple, and Netscape who should pay for the cost of the legal preceedings and it is they who should pay retribution to Microsoft for the incalculable damage done to both it's reputation and it's stock.

But that is not the important factor. Hours could be spent discussing the objective value of Microsoft's software, the alleged harm bundling has done to competition, or even an important issue like the very Constitutionality of anti-trust laws. But what is important is: Does Microsoft have the right to control it's own property? If in this land there is still an inalienable right to "life, liberty, and the pursuit of hapiness," then how can anyone—especially a Justice charged with protecting those rights—attempt to call the law down on an organization that promotes exactly that? Man must still live by his mind, and therefore must have right to the product of his mind in order to survive. Man is still a being of spectacular power, but that power lies within his mind. And in sight of this call by the highest legal authority of these United States of America, the nation based on the principle of individual rights, I must quote a most appropriate quote from Thomas Jefferson, "I swear. . . eternal hostility to every form of tyranny over the minds of man." In respect of the very person of whom I just quoted, and in honor of the principles in which he helped erect in this country to allow men, such as those who run and own Microsfot, to pursue their own happiness and achieve their own lives, I ask you to throw down any considerati on of fining Microsoft in any way for the name of this mockery of the very principle of justice that you call anti-trust.

Sincerely, and to the best within us all,

Dear Microsoft Settlement:
 The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry.

It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken

up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
 Mark Suter

 Subject: Proposed
 Microsoft Settlement

To Whom It May Concern;

As a professional software developer and a freelance technology writer, I feel the need to write concerning the currently proposed settlement. From an historical perspective, Microsoft as an entity has been belligerent and hostile to court orders. There is no reason to believe that this attitude will change. A simple review of the number of contempt cases Microsoft has been a defendant in makes this trend clear. With this in mind, I firmly believe that any settlement that leaves Microsoft intact is a disservice to the public at large. I do not mean to disparage the items included in the proposed settlement, I just don't believe they can be effective.

The only solution that I feel is guaranteed to stop Microsoft's anti-competitive practices and allow the computer industry to progress beyond Microsoft's limited vision of the future is to split the company into at least three (3) separate entities. At a minimum, the company should be split into "desktop systems", "server systems", and "development tools". All communications between these organizations would have to be at the level that current competitors are given access.

I believe in an open and competitive market. I believe that the government should be business friendly. I just do not feel that the interests of a single big-business are the best interests of business in general.

Thank you for your time,
 Don.

It seems ludicrous to me that they might receive a "punishment"/settlement that is, in effect, an excuse to make inroads into education, one of the few markets that they do not grip in a stranglehold.

The only people I know who are supportive of Microsoft and its monopolistic practices are Microsoft employees, and even most of them with whom I am acquainted are more ashamed of their company than anything else. As far as I can tell, it is the will of the people that something—significant—be done to diminish their power; as it is, they abuse this power:

* by willfully disregarding well-established standards of information technology that

have been formed by consensus of many and then forcing others to comply with their new proprietary creations

* and by spreading uncertainty, fear, and doubt in the minds of consumers, leading them to purchase Microsoft's products when in many cases their are other products that would work as well or better and cost less ("Well, I really like this other software, but it's not Microsoft; isn't that what everybody else uses? If I want to be compatible with them, I'd better pay more for something I like less. . .")—Not only are there frequently better/cheaper solutions, they almost never suffer from compatibility issues. Developers are aware that we live in a Microsoft-dominated world, and thus tend not to release products that are unable to function in such a world. As I mentioned, it is my belief that it is the will of the American people that something be done to put a stop to this, though Microsoft has in the past attempted to argue otherwise (through numerous well-documented rigged surveys and imaginary statistics they have concocted). I urge you, as the arm of the government which exists of, by, and for the people, to take forceful action.

Thank you,
 Jed Singer

 RE:

Microsoft Settlement
 As a US taxpayer and freedom-loving citizen, I urge you to settle the case against Microsoft as quickly as possible, with NO fines, damages, or other punishment of Microsoft.

Like millions of other individuals across the country, I use Microsoft products daily, both at home and in my office. I use these products of my own free choice—I don't need the government to tell me what I should or shouldn't have on my computer, and I resent myself, or any other private individual, being characterized as some kind of helpless victim of corporate power.

Corporate power is actually financial strength; it comes from creating products for people to buy and use, and a company remains viable only so long as it provides useful products that many people choose to buy. Unless it is granted special favors by the government (which is improper), the only

power a company has is to offer opportunities—in the form of products and services—to anyone wishing to avail themselves of the opportunities.

The U.S. government should protect the property rights of companies—not try to limit or redistribute their property because less successful competitors resent their market prowess. The government should protect free trade, and should laud and protect the accomplishments of companies like Microsoft. It is immoral to punish the successful for being successful! The entire anti-trust concept is an abomination: it is antithetical to capitalism and free trade—and to the United States of America.

Thank you for considering these thoughts.

Sincerely,
Daniel T. Sullivan, DDS

From: Alan Naisuler
To: Microsoft ATR
Date: 1/22/02 1:20am
Subject: Microsoft Settlement

I am writing to oppose the DOJ's proposed settlement and in favor of the Litigating States' Remedial Proposals.

I am a professional Windows software developer with 30 years of software experience and having first written Windows code in 1985 when it was first introduced.

I am disappointed by the DOJ's:
—technical naivete
—reversal of direction once the Republican administration took office
—Ashcroft's public declaration to quit the litigation BEFORE starting settlement negotiations with Microsoft
—failure to see Microsoft's incredible drive to dominate and monopolize
—warning the judge not to rule more in their favor than the settlement agreement.

Microsoft's marketing behavior is criminal but I will not get into that now. However, I need to be protected from it.

I wish to dispute the specific claim by Microsoft that Internet Explorer browser can not be detached from the operating system without harm or hindrance. It is my professional opinion that this is baloney and is a prime example of Microsoft's bold lies to the technically inexperienced. First, please find below a section of a 1996 Microsoft technical article aimed at Windows developers / programmers such as myself. This article bragged about the technology and expertise that Microsoft had used in ushering in the brave new (Microsoft) world in which everyone could write software that could easily and efficiently interface with other software. But when Netscape and Java came along (about that time), Microsoft's APIs, DLLs, COM, ActiveX, and (later) .NET crap somehow could NOT permit Microsoft to detach Explorer from the OS and put it on an equal footing with third party software. As a Microsoft Windows developer (from 1985), I am saying that this is bull%\$ and I think the DOJ needs to hear it.

Second, Bill Gates has recently and suddenly got religion relative to security, privacy and viruses. I have enclosed below a short article concerning his new interest in

the subject. The Internet Explorer, as should all Internet client programs, must be separated from the operating system with a clean divide between the two. Only this would permit commands and data to be monitored as they enter and leave the computer from / to the Internet. Security has always demanded that the browser be separate. It is pitiful that I am trying to convince someone in the DOJ of this. What is your real job? You can't be qualified for judging this. If you bothered to ask an expert, you would have been told this long ago.

Microsoft should be broken up. If Judge Jackson had not given the interview, they would have been broken up. If the DOJ had not become so politicized, then they would have been broken up. However, at this time, I am asking for the Litigating States' Remedial Proposals to be adopted.

Thank you.

Alan Naisuler, MSEI

acn: here is a section of a tech article from about the time Microsoft was blocking Netscape from installing its browser. Note how they describe the easy and free process of having third parties plug their software into applications written with Microsoft technology. That was until someone wanted to plug into their operating system. It shows how Microsoft is lying when they claim Internet Explorer had to be hard-wired into the OS.

http://msdn.microsoft.com/library/default.asp?url=/library/en-us/dnolegen/html/msdn_aboutole.asp
What OLE Is Really About
Kraig Brockschmidt
OLE Team, Microsoft Corporation
July 1996

Kraig Brockschmidt is a member of the OLE design team at Microsoft, involved in many aspects of the continuing development and usage of this technology. Prior to holding this position, he was a software engineer in Microsoft's Developer Relations Group for three years, during which time he focused his efforts on OLE, versions 1 and 2, and produced the books Inside OLE 2 and Inside OLE, 2nd Edition for Microsoft Press(R). He has worked at Microsoft since 1988. . . .

To be used successfully, component software requires that applications always check on what components exist when they need them, instead of assuming there is only a limited set. When a new component is added to the system, it should become instantly available to all applications, even those that are already running. For example, consider a word processor that has a "Check Spelling" menu command whose implementation relies on the existence of a suitable spell-checker component. If a newer and better component is added to the system, that application can immediately take advantage of it the next time the user clicks that menu item.

A system that supports component software must therefore support a generic "service abstraction"?that is, an architecture that defines how all types of components appear and how they are manipulated. In addition, the architecture must be extensible, so that a new component category (as opposed to an implementation of an existing type) can be introduced without having to

revise the architecture. This is the problem of creating an extensible service architecture. For instance, it might be easy to define an architecture that accommodates components that provide content for compound documents, but can that same architecture accommodate later specifications for custom controls? In other words, the architecture must expect that new component types, or categories, will be defined later on. The other big problem that such an architecture must solve is that of "versioning." It turns out that the first definition of a component type is easy to manage, as is the first implementation of any particular component. The difficulty comes in managing revisions to the designs and the implementations over time. COM and OLE are the results of Microsoft's experience with such problems.

acn: it would make good security sense to separate the browser from the OS Locking Windows

Microsoft Announces Corporate Strategy Shift Toward Security, Privacy
WASHINGTON, Jan. 16, 2002
(AP) Microsoft Chairman Bill Gates announced to employees Wednesday a major strategy shift across all its products, including its flagship Windows software, to emphasize security and privacy over new capabilities.

In e-mail to employees obtained by The Associated Press, Gates referred to the new philosophy as "Trustworthy Computing" and called it the "highest priority" to ensure computer users continue to venture across an increasingly Internet-connected world.

Gates said the new emphasis was "more important than any other part of our work. If we don't do this, people simply won't be willing—or able—to take advantage of all the other great work we do."

"When we face a choice between adding features and resolving security issues, we need to choose security," Gates continued. "Our products should emphasize security right out of the box."

The dramatic change comes after the discovery of major security problems in Microsoft products, such as a flaw in the latest versions of Windows that allow hackers to seize control of a user's computer. Another problem allowed the Code Red viruses to cripple hundreds of thousands of computers running Microsoft products.

Gates also referred to the Sept. 11 terrorist attacks as another impetus to stress security. He noted that events from last year, from the terror attacks to the virus outbreaks, "reminded every one of us how important it is to ensure the integrity and security of our critical infrastructure, whether it's the airlines or computer systems."

Microsoft products can be found in almost every government facility, from the White House to aircraft carriers at sea. One person with knowledge of the change said new products and features will be tested for security risks before going any further? if they fail, the feature won't be included.

"Things are going to have to go through a crucible, and the crucible will be security-first," according to this person, who spoke only on condition of anonymity.

Compensation plans of Microsoft product engineers, such as raises and bonuses, will also be tied to how secure their products are.

Russ Cooper, a security expert with TruSecure Corporation, said the change occurred in part after a new security team assigned to attend every product meeting met resistance from product teams. Microsoft has long been criticized for focusing on making products more feature-rich rather than emphasizing security and stability. For example, Windows XP added DVD player software, a rudimentary Internet security utility and a new instant messaging program.

Customers could also see a downside, though. Other than fewer new features, product upgrades could come less frequently or could be pushed back.

Privacy is also a focus.

"Users should be in control of how their data is used," Gates wrote. "It should be easy for users to specify appropriate use of their information including controlling the use of e-mail they send."

MS should be forced to donate \$10 billion over the next 10 years to several (at least 3) nonprofit organisations which would then distribute to the money to the public shools who apply for a grant. MS should be divided at least into 2 separate companies one for the operating system, and one for it's applications software including Explorer and MS Office. MS Explorer and the second most

popular internet browser (Netscape Communicator) should both be bundled in the operating system, like other companies do.

Aharon.

Subject: Microsoft Settlement
To: Antitrust Division,
U.S. Department of Justice
601 D Street NW, Suite 1200
Washington, DC 20530-0001
Judge,

I am writing this in response to the request made to the public to comment on the proposed settlement of the Microsoft antitrust case. I run a software business four blocks south of the now destroyed World Trade Center. We are a software consulting firm providing our services to various firms in the medical, educational and financial sectors. Having worked for more than 15 years with both Microsoft as well as non-Microsoft products, I see that there are two fundamental differences between Microsoft products versus non-Microsoft products:

1: Microsoft suite of products (front, middle and back-tier) helps both us as well as our clients preserve our respective intellectual property rights by providing the necessary infrastructure/culture for clear, verifiable and affordable technical handshakes. In contrast, the culture surrounding the non-Microsoft products deliberately encourage property theft; witness the Napster business model (wherein the artists are short-changed), as well as the Open Source Software movement (wherein the programming community is short-changed). And all of this is being actively pursued allegedly for the furtherment of some Marxist ideal where private property is one day, effectively abolished. As our nation makes greater and greater commitments to the knowledge economy, it is incumbent on the judicial arm of the government to do everything it can to preserve and protect intellectual private property. Instead what I witness as the essence of the anti-trust case against Microsoft is an incredible perversion of Justice where the one company that is doing everything it can to help preserve private property is being vilified and tortured to death by a thousand regulatory cuts at the instigation of incompetent firms that have failed to meet market needs (see point 2 below). Like Gulliver in Lilliput, Microsoft is being brought down by an envious mob eager to despoil it of its proprietary code. And the Justice Department is providing all the regulatory rope.

2: Microsoft products are fundamentally bottom-up and inductive in nature; in contrast the non-Microsoft products are predominantly top-down and deductive in nature. Induction drives our economy. The non-Microsoft firms have fundamentally failed to identify and address the inductive essence of creativity and problem-solving in the knowledge economy workplace. This is the main reason why they do poorly in the marketplace. But instead of identifying this failure and correcting and improving their

product-suite, they waste everyones resources in this bitter fight to bring down the one firm that has got it right. The bottom-line is that our clients and workers are far more productive with the Microsoft products as compared to the non-Microsoft products. The sad fact is that by bringing down Microsoft, the Justice Department will have actively participated in seriously crippling one of the greatest creative engines of our economy. And as history will one day witness, the malaise that infects our economy today has much to do with the destructive anti-trust action against Microsoft.

Even as I recall with horror the immense destruction of life and property from the terrorist strikes of September 11th, I am afraid that the scale of long-range destruction being unleashed by the Microsoft haters is far worse.

Subject: Microsoft settlement?

I don't know what the settlement entails, I can only suggest that Microsoft is very unfair with their products.

I purchased a desktop computer with PREinstalled software and when I asked for individual programs that are installed already in case I have to reinstall, I was refused. I have to get help to reinstall ONE program OR use a double restore disk I had to purchase for an additional \$10 that will remove everything I put on the computer since I purchased it and start from scratch. That is NOT fair. I should also be able to install the programs I use IN MY HOUSE on my computer yet I am told that Compaq and others make a deal with Microsoft to NOT give the customer the programs the company PREinstalls, that is not fair. WE the public are not privy to any agreement Compaq and others have with Microsoft and also think it is unfair for a company to act like the program police and be a middleman? Compaq and others come with preinstalled

Internet Explorer, what if you want Netscape . . . and why do I never get a disk to go with Windows or a separate Explorer either? Their whole system reeks of unfair practices. I accidentally removed two programs and have to reinstall them and was told if I redo the system everything will be removed except what came pre installed originally. Why do I have to have PREinstalled software, why can't I have the disks to install my own if or when I want them installed? I didn't make a deal with Microsoft, only with the computer maker to buy their product? If they want to include the disks they should INCLUDE individual disks they PREinstall instead of eliminating them. Dee

Subject: MICROSOFT SETTLEMENT
Denise Stage 6340
Bates Crossing Road
Nunnally, TN 37137-2502
January 14, 2002
Attorney General John Ashcroft,
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft:

I have been following this antitrust dispute between Microsoft and the Department of Justice for the last three years, and I must confess that I am extremely pleased to see that it has finally come to an end. The settlement that has been reached is fair; in my opinion, the only unfair thing about this situation is that this case was ever brought in the first place. Some people have made the mistake of seeing Shunt's work as a load of rubbish about railway timetables This nation has entered into trying times both politically and financially. Quite frankly, there are more vitally important issues facing this nation than the inopportune pursuit of this case. This settlement is reasonable. While Microsoft has had to make more concessions than was ideal, I agree with the position that they have taken to end this suit as soon as possible, and thus the acceptance of the rather stringent terms of the settlement. Microsoft needs to concentrate all of its resources on innovation and the business that has made this company—and thus the American technology industry—the worldwide success that it has become. But clever people like me who talk loudly in

restaurants, see this as a deliberate ambiguity. A plea for justice in a mechanized society. I want to express to you my support for this settlement, and to thank you for the foresight that you have demonstrated in orchestrating its development. I hope that we can finally put this heinous suit behind us and that we can finally focus on the important issues facing This nation. Thank you. When Shunt says the 8:15 from Paddington he really means the 8:17 from Paddington. The places are the same, only the time is altered. But is suspense, as Hitchcock states, in the box. No, there isn't room, the ambiguity's put on weight.

Sincerely,
Denise Stage

From: Alan (Earthlink)
To: Microsoft ATR
Date: 1/22/02 2:37am
Subject: Microsoft Settlement—Leave Microsoft Alone

To the District Judge, Department of Justice:

Enough already! Leave Microsoft alone! Competitors are trying to destroy Microsoft, to cut off their legs to make others seem taller. They want to destroy it, rather than compete. But you are not just punishing Microsoft, you are punishing the tens of thousands of individual customers like myself who use Microsoft's products to make our lives easier. Everything that you are punishing them for is something that improves my quality life and saves me time and money. Sun, Oracle, Apple, and the other companies who trumped up charges against Microsoft are not the Great Protectors of Competition, they are jealous, whining destroyers of competition, because they feel unable to compete with Microsoft on the strength of their own products and abilities. Microsoft's supposed "monopoly" will disappear the minute their product ceases to be a great product at a reasonable price. The alleged "power" they have, due to their size, can turn against them at a moment's notice, if their product is no longer attractive to the consumer. Their size makes them more sensitive to their public, because one bad release means that millions of people don't upgrade, not just a few, costing them billions in a matter of days. They are no more able to offer lousy products with impunity than any smaller company. They use their billions to produce a great product to serve and keep their customers, no different from a small company. There is no "coercion" here. I chose Microsoft because I like it better than Sun Unix and better than Mac. That's all. That could change the day they offer a better product than Microsoft. They haven't.

If even one of Penfield Jackson's idiotic, destructive remedies is adopted, it will be a loss to us, the American consumer, much more than to Microsoft. If you mandate the removal of the Internet Explorer browser from the Windows operating system, for example, then simple browsing operations will again be fraught with unnecessary crashes. Netscape could use the API more effectively to achieve a similar integration, but they haven't. Microsoft has to publish this interface in order to encourage other

companies to write software for Windows. They are driven by the market to disclose the means by which other companies can write software as good as theirs or better. Some do. Netscape has not. They do not deserve special consideration for their own limitations of ability. One good programmer, like Gates, Jobs, or Torvald, can beat a thousand lesser programmers. It doesn't take millions to "beat" Microsoft, just better ideas and smart marketing. There is no need to cripple Microsoft. That just discourages others from trying to achieve the same level of success. You are considering crippling the system to allow lesser talents to "compete." Would you break the legs of all the non-American runners in the Olympics to give ours a better chance? Who does that benefit? What do those scores mean? They are worthless and tell us nothing about the capacities of human beings. Conclusion: Do not punish Microsoft for the mere fact that they have been a phenomenally well-run enterprise, as a business and as the leader in the personal computer revolution "Antitrust?" This case is anti-American, anti-competitive, anti-business, and opposed to every freedom that we have fought and continue to fight for.

Background Note

I have worked in the Information Technology field for 23 years, none of them working for Microsoft, any subsidiaries, or any of its legal opponents. I speak as an expert in IT and as a citizen of the U.S., not for any organization. I have followed this case for the years that it has dragged on, crippling microsoft and having a continuing chilling effect on other technology businesses and financial backers. Stand up for our rights and our freedoms. Please stop the anti-American attack on Microsoft at once!

Thank you,

Subject: Microsoft Settlement

Dear Sir:

I am sending you a copy of the letter that I sent to former President, Bill Clinton 2-3 years ago (see below). It said/says how I feel about the antitrust case against Microsoft.

The provisions of the Antitrust Settlement appear to be tough, reasonable and fair to all parties involved. I do hope all the states involved settle the case with Microsoft ASAP for the good of the consumer, the industry and the U.S. economy in all.

Copy of letter as follows:

As a PC user and consumer, I would like to speak up for myself and fellow consumers. I don't think Microsoft has harmed me in any way. What I do know is that Microsoft has brought a great deal of convenience to my life and that should be applauded for it, not be punished because of it. I am so glad I can write you via email; I can trade stocks on-line today; communicate with my children and friends in a convenient forum; purchase books, clothing on-line, all things I would never have dreamed of doing years ago. I love the fact Explorer/browser is being bundled with Window's operating system. The case filed by The Department of Justice(DOJ) was a joke and the ruling by judge Jackson greatly disappointed me. I ask you for your kindness to listen to the voice of a real consumer, not from Microsoft's rivals only. It would cause a great deal of harms to the consumer if DOJ and judge Jackson undo what Microsoft has

done for the industry and its customer. Please don't let them stifle the pioneer spirit that has made America what it is today and further, shake the U.S. economy as well as our leader position in the tech world. Let's step back and look up at a bigger picture instead.

Why is it that the tallest trees must be trimmed or, in this case, chopped into pieces perhaps? Believe me, there are countless trees and plants have survived because of their taller brethren. The tallest trees may appear, in some manners, to monopolize certain elements like the sun, the air, the water, but at the same time they shelter those underneath them from those same harsh elements. For those who do not care for the shade, go find their own grounds and plant their trees. They can get all the sun, air and water they wanted. Do you think they won't complain about being discriminated for not getting any shade? Fair competitions, in my eyes, should encourage other companies to come up with better products and to convince industries and consumers to adopt it. Fair competition should not result in us burning our forest down.

Who did Microsoft go to cry to 25 years ago about rivals such as IBM? As you know, Microsoft did not go to DOJ. You know why? The reason is that Microsoft was not, and has not been, a cry baby, unlike some of its competitors. Microsoft won the market over by presenting a practical, quality product, which is what I call a fair competition. Success is a long hard road. Those companies that wished to grab it overnight, have been very disappointed. Even worse, they wanted to grab the market by tightening up Microsoft's arms and legs through DOJ. Do you call that a fair competition? Shame on those companies. What is this so-called "Most Favorable Trade Partner of the U.S.?" Can you explain why Microsoft is not allowed to give a better price to its preferred business partners? Why the bulk buyer almost always gets better rate? Is the U.S. government, as well as these other manufacturers, above the law while Microsoft seems to be penalized for what seems to be nothing? Why can supermarkets and department stores offer special discounts to their members and preferred customers? Why is Microsoft being punished for what is commonly accepted practice? Besides, contracts are supposed to be signed by both parties upon agreement. I assume it is done through the legal departments of both companies. One can always say no. Why is Microsoft being blamed for another party's assent to a contract?

I dropped AOL as my internet service provider in the fall of 1999 after signing up with them for four or five months. The reason I discontinued the service was due to the fact that I was disconnected from the system constantly while browsing. I had contacted their Tech Support Unit a number of times but never received a satisfactory resolution to my problems. To be perfectly honest with you, I just got tired of dealing with it. I am with another internet service provider now and very happy with it. I wish Mr. Case would spend more energy in improving his own business and products and focus on providing quality customer service rather

than placing blames on to his rivals for his loss in market share.

One last message for the representatives of the nineteen states:

Thank you for looking after the benefits of the consumers in your respective states. Don't you think your states have collected enough sales tax from the sales of Microsoft products? The amounts you have claimed that Microsoft overcharged consumers, I believe, they should be refunded to the consumers who actually paid for purchasing of the products, and should not be held onto by the state. The states should refund consumers for the overpaid sales taxes generated by Microsoft product sales accordingly.

Just as a side note, I would like you to know that I bought 320 shares of Microsoft stocks last summer to show my support to the company. I still own the shares. I wish I owned more to show more support.

Thank you for your time and consideration.

Sincerely,

Mrs. Alice Ku

Microsoft Settlement

U.S. Department of Justice-Antitrust Division
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,

Sue Lann

Subject: Legislate Microsoft

Microsoft is a giant in the software industry, more than 20 times larger than the nearest competitor. They can not increase market share except through expansion into new and emerging high tech markets. This is a high stakes game and Microsoft is holding most of the cards. There is no way they won't stack the deck in their favour without government intervention. That is a fact, plain and simple.

First off, Windows must be open equally to all parties writing software for the platform. Microsoft developers of applications must not be allowed to have months (an eternity in high-tech) with the operating system before competitors get a crack at it.

Second off, the operating system must not be allowed to be tied to PC sales. All PC makers must be free to offer any or no operating system without fear of retaliation from Microsoft.

Third off, there should be transparent access to all Microsoft "features" in Windows upon installation and afterwards. The unsophisticated user has no idea how to turn off Microsoft sponsored "Favourites", for example. It often takes weeks to figure out how to turn off a "aalt" link.

There is obviously much more. But I think I've made the main points. Essentially, the operating system must not be tied to anything not directly related to turning the computer into an appliance.

Thanks for your attention.

Rob Ahad

January 19, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing with regard to the settlement that was reached between Microsoft and the Justice Department in November. I support the settlement, as it will allow the government and Microsoft to stop wasting resources on a three-year old battle and get back to doing what they each need to be doing, winning the war, fixing the economy, getting rid of the last administration's thinking (sic); and for Microsoft, producing good software.

The settlement represents an opportunity for the country and Microsoft to move forward. Microsoft has made significant concessions and the government negotiated a strong agreement. Microsoft will, for example, share information with its competitors, which will allow them to place their own programs on the Windows operating system. Any concerns about Microsoft shirking their responsibilities should be alleviated because Microsoft agreed to an oversight committee to be formed by the government.

I support this settlement, and look forward to seeing this case come to a close.

Sincerely,
Edward Harrison

Subject: Microsoft Settlement comments

Dear Sirs,

Thank you for this opportunity to comment.

I find the current proposed settlement to be nothing but an ineffectual slap on the wrist for Microsoft. I think Judge Penfield should have split the company into two. Operating System and Applications. Seemed very fair to me.

Since the above is now unlikely to happen, there needs to be harsher restrictions in the new proposed settlement. To be brief:

Most important:

Removal of Internet Explorer and
\$\$\$compensation to Sun Microsystems.
Removal Of Media Player and
\$\$\$compensation to Real Networksand
the list goes on.

Next:

Open up full documentation of ALL
Microsofts API's to Software Developers.

I'm so tired of Microsoft shutting down my software with each new Service Pack or Revision.

Thank you.

Subject: MicroSoft Settlement

I am glad to see some action being taken. Microsoft has been trying to convert the internet, set up on open/"public domain" standards such as TCP/IP network protocols, HTML and JavaScript, as well as "semi-public" ones like Java, into it's own private domain by means such as forcing proprietary standards into networking and web browsers. Reading through as much of the documentation that I did, I may have missed it, but is there anything addressing Microsoft getting into the cable and web-portal business? Wasn't AT&T ordered to spin off the "Baby Bells" (local phone service) when they wanted to go the opposite direction, from telecommunications into cable and computers? This last point may be irrelevant in light of mergers such as AOL-Time-Warner [-Netscape], but the other large semi-monopolies aren't trying to make the internet proprietary. . . at least so blatantly.

Thanks for protecting Freedom of Communication,

Dear Mr. Ashcroft:

As a Windows user and fan of Microsoft, I am writing to express my interest in the antitrust settlement between Microsoft and the US department of Justice.

First off, I believe Microsoft should be allowed to keep on innovating and growing at a rate similar to the last decade. They have set the standards for product and service growth, and should not be punished for that. They have also made computers more friendly and compatible for many users I know that were unable to navigate through older operating systems.

The recession has left its mark, and I believe that the technology sector should be left alone to do its business. I look forward to seeing Microsoft once again innovate change and I hope no further litigation is brought against them. Thank you for your time.

Subject: Microsoft Settlement

This progresses from my details to my generalizations. But I've kept it very short.

I own a Macintosh at home and use PCs at work. (I'm a software engineer.) I own Microsoft Office at home because of work. I also use a Microsoft track-ball at home. Internet explorer is shipped with Mac OS. That is about it at home for Microsoft products. At work I use Windows 2000, Visual C++, Microsoft Office, and so on. The list here would be rather long.

In all cases the software (and hardware) is useful to me. I had many alternatives as did the company I work for. The Microsoft products fit well where they were chosen. They work together and with non-Microsoft product also in use. As a consumer I have benefited from Microsoft products. So has the company I work for. The same is true of non-Microsoft products of various kinds that we use, some of which compete with Microsoft products.

As best as I can tell from all the reading about this case, including parts of the published court findings, this case is about generally successful (but not as successful) companies wanting to use Microsoft's context to their advantage without meeting the terms Microsoft wants for such. It is also about wanting to block Microsoft from benefiting me or the company I work for (and other folks) on terms the less successful companies did not want to compete with.

I do not see how I or the company I work for is being protected by this. We are not victims. I do see how some less successful competitors would be protected from a more successful competitor. But I do not see why companies should be protected from each other in this manner.

Microsoft is using persuasion —instead of initiating force against anyone (including fraud). As long as that is the case, I find nothing here appropriate to legal sanctions. The law should protect persuasion used in one's (or a company's) self interest as a right. It should not be a privilege one (or a company) can lose by being successful at it, even if wildly successful at it. The consequences of such losses for such a reason would be horrible for a country that places securing freedom as its purpose.

Microsoft should not have an enforceable duty to help other companies. The same goes the other way as well. —

Dear Sir(s);

This case is one in which the "monopolistic" practices are better for the public.

With my newest computer at home, without the benefit of fax software bundled in, I have had a comedy of errors of purchasing and installing separate fax capability.

This situation reminds me of the monopoly previously enjoyed by AT&T in the phone industry. I do believe that we were all better off with one giant entity.

Bring back the good old days! Please allow Microsoft do what they do best.

Sincerely,

Dr. Peter J. Szakacs

I'm amazed at the nerve of Microsoft wanting to offer as a penalty, computers and software to the education market. This is just a ploy to get into the education market and a major disadvantage to other competitors as well. How is this even a penalty against Microsoft. I hope the judicial system sees this as well and doesn't go along with it. Let the government fine them and give the money to the schools and let the schools decide what computers and software they want to purchase.

Thanks for the time, I just wanted to express my views. I feel MicroSoft is a big bully and overpowers companies who don't do what they want. They have become too big for their own good.

Subject: Re: U.S. v. Microsoft: Settlement Information

First, thank you for asking for our feedback. It is a rare thing that a justice department official would solicit comments from the public. Microsoft's offer to supply computers for schools is yet another example of the problem. Many of us are baffled at how brazen this attempt to push other products out of the education market appears! In education we have watched this company steal other people's work (such as the whole graphical-interface concept) without as much as a slap on the wrist. Forcing us to use their Media Player by disabling others is particularly nasty, a continuation of the browser problem which started all this.

Thanks for listening.

Dear Mr. Ashcroft:

For the past three years, Microsoft's progress in the technological field has suffered immensely. Despite this time-consuming aspect of the lawsuit, I am pleased that a settlement has finally been reached. Microsoft is a company that is known for its excellence in technology and they should not have been punished for their success. Within a timely manner, the Department of Justice should bring this case to an end. Included in the settlement are several terms to which Microsoft has agreed to change within their business practices in order to promote the shift back to fair competition within the market. Within these terms, Microsoft has enabled computer makers to remove the means by which consumers access various features of Windows and replace them with the competition's software. In addition to this, select interfaces internal to Windows programs are being made available to the competitor in order to promote software compatibility.

In conclusion, I feel that this settlement has come to reasonable terms. Both the Department of Justice and Microsoft have endured this case long enough. Now, it is time to re-focus on more significant matters.

Sincerely,

Kenneth Rick

Dear Mr. Ashcroft:

This is to ask that you give your approval to the Department of Justice and Microsoft agreement. I do not believe the antitrust suit was right in the first place. I do not think Microsoft was any of the government's business. The lawsuit was political brought on by the jealousy of Microsoft's rivals. They could not compete in any other way and sought to cripple Microsoft. I think it sets a very bad example for future companies. We encourage innovation, entrepreneurship, but punish the company when it becomes too successful.

Further, from what I understand, Microsoft has given away a great deal to appease the Department of Justice. Microsoft will share any code or program that Window uses to communicate with other programs; Microsoft has agreed to license its Windows operating system to the 20 largest computer makers; Microsoft has agreed to allow a technical committee to monitor its actions.

It is time to let Microsoft be. I support the settlement, and the end it can bring to this interminable case.

Dear Mr. Ashcroft:

This letter serves to document my support for the proposed settlement of the Microsoft antitrust case currently before the court. This case has lasted over three years and should be finalized soon. Microsoft has agreed to all provisions of the settlement. The provisions were developed with a court-appointed lawyer. Microsoft will now share information with its competitors, use a uniform price list to determine its licensing procedures, and agree not to retaliate against companies that will use or promote non-Microsoft products. These provisions adequately address all issues stemming from the original lawsuit.

At this point, both the technology producers and the technology consumers need to move forward with a formalized settlement to set the stage for future development. Thank you.

Sincerely,
Jack Beaudry

Justice Department,

When I think of justice, the Microsoft case does not come to mind as a shining example. When market competitors are able to drag their rivals into court for giving away a product, it is a sad day for the cause of justice in America.

Microsoft has and is the victim of the worst evil in the world: Envy. Envy that Microsoft is able to produce the most desirable & affordable products in the software markets. Envy that they are able to make available many products for free.

America is supposed to be a country where citizens are free to make choices. But the choices should not include plundering the wealth of its most productive men & women.

I ask you to please release Microsoft from this 21st century witch hunt. The witch that the previous administration wanted to burn was a hagar that conjured spells for all our personal and business computers, spells that were time-savers and life-enhancers.

During the Inquisition, witch-hunters touted its victims until they pleaded for their lives. The Inquisitors of today on Capitol Hill use the scripture of the wretched Anti-Trust law. With this "law" anyone and everyone can be convicted of practicing the magic of Capitalism, just as the inquisitor's torture always gained a gruesome confession just before the execution of the victim.

The victim today is Microsoft. It has been touted enough.

Hon. Colleen Kollar-Kotelly
U.S. District Court, District of Columbia
c/o Renata B. Hesse
Antitrust Division
U.S. Department of Justice
601 D Street NW
Suite 1200
Washington, DC 20530-0001

Dear Judge Kollar-Kotelly:

The proposed settlement between the Department of Justice and Microsoft in U.S. v. Microsoft falls far short of what is needed to put an end Microsoft's pattern of predatory practices. This deal does not adequately protect competition and innovation in this vital sector of our economy, does not go far enough to address consumer choice, and fails to meet the standards for a remedy set in the unanimous ruling against Microsoft by the Court of Appeals for the District of Columbia. Its enforcement provisions are vague and unenforceable. The five-year time frame of the proposed settlement is much too short to deal with the antitrust abuses of a company that has maintained and expanded its monopoly power through fear and intimidation.

Microsoft's liability under the antitrust laws is no longer open for debate. Microsoft has been found liable before the District Court, lost its appeal to the United States Court of Appeals for the District of Columbia in a 7-0 decision, saw its petition for rehearing in the appellate court denied, and had its appeal to the Supreme Court turned down. The courts have decided that Microsoft possesses monopoly power and has used that power unlawfully to protect its monopoly. The next step is to find a remedy that meets the appellate court's standard to terminate the monopoly, deny to Microsoft the fruits of its past statutory violations, and prevent any future anticompetitive activity. This proposed settlement fails to do so.

The Deal Fails to Meet the Appellate Court's Remedy Standards This proposed settlement clearly fails to meet the standards clearly laid out by the appellate court. In fact, the weak settlement between Microsoft and the Department of Justice ignores key aspects of the Court of Appeals ruling against Microsoft. Here are several examples of where this weak settlement falls short:

1) The settlement does not address key Microsoft practices found to be illegal by the appellate court, such as the finding that Microsoft's practice of bolting applications to Windows through the practice of "commingling code" was a violation of antitrust law. This was considered by many to be among the most significant violations of the law, but the settlement does not mention it.

2) The settlement abandons the principle that fueled consumer criticism and which gave rise to this antitrust case in 1998: Microsoft's decision to bind -V or -"bolt"-V Internet Explorer to the Windows operating system in order to crush its browser competitor Netscape. This settlement gives Microsoft "sole discretion" to unilaterally determine that other

products or services which don't have anything to do with operating a computer are nevertheless part of a Windows Operating System product." This creates a new exemption from parts of antitrust law for Microsoft and would leave Microsoft free to bolt financial services, cable television, or the Internet itself into Windows.

3) The deal fails to terminate the Microsoft monopoly, and instead guarantees Microsoft's monopoly will survive and be allowed to expand into new markets.

4) The flawed settlement empowers Microsoft to retaliate against would-be competitors and to take the intellectual property of competitors doing business with Microsoft.

5) The proposed settlement permits Microsoft to define many key terms, which is unprecedented in any law enforcement proceeding.

Loopholes Undermine Strong-Sounding Provisions The proposed settlement shows that it contains far too many strong-sounding provisions that are riddled with loopholes. Here are several examples: The agreement requires Microsoft to share certain technical information with other companies in order for non-Microsoft software to work as intended. However, Microsoft is under no obligation to share information if that disclosure would harm the company's security or software licensing. Who gets to decide whether such harm might occur? Microsoft. The settlement says that Microsoft "shall not enter into any agreement" to pay a software vendor not to develop or distribute software that would compete with Microsoft's products. However, another provision permits those payments and deals when they are "reasonably necessary." The ultimate arbiter of when these deals would be "reasonably necessary?" Microsoft.

The settlement does nothing to deal with the effects on consumers and businesses of technologies such as Microsoft's Passport. Passport has been the subject of numerous privacy and security complaints by national consumer organizations. However, corporations and governments that place a high value on system security will be unable to benefit from competitive security technologies, even if those technologies are superior to Microsoft's. Why? Microsoft controls their choices through its monopolies and dominant market share, and still is able to dictate what technologies it will include.

Enforcement

The weak enforcement provisions in this proposed deal leave Microsoft free to do practically whatever it wants.

A three-person technical committee will be appointed, which Microsoft appointing one member, the Department of Justice appointing another, and the two sides agreeing on the third. This means that Microsoft gets to appoint half of the members of the group watching over its actions. The committee is supposed to identify violations of the agreement. But even if the committee finds violations, the work of that committee cannot be admitted into court in any enforcement proceeding. This is like allowing a football referee to throw as many penalty flags as he likes for flagrant

violations on the field, but prohibiting him from marching off any penalties. Finally, Microsoft must comply with the lenient restrictions in the agreement for only five years. This is not long enough for a company found guilty of violating antitrust law.

The Proposed Settlement fails to Adequately Address Consumer Needs

The settlement does not go far enough to provide greater consumer choice, and leaves Microsoft in a position that it can continue to charge whatever it wants for its products. As a recent Chicago Tribune story said: "If you believe that what's good for Microsoft Corp. is good for consumers, the proposed settlement of the software giant's three-year federal antitrust battle is cause for celebration. If you believe that consumers would benefit more if Microsoft could no longer use its Windows monopoly as a springboard into new markets, you stand to be sorely disappointed."

In addition, consumer groups have opposed the settlement. Mark Cooper, director of research for the Consumer Federation of America, said: "Wall Street's view is that Microsoft's business model doesn't change. If that's the case, we will continue to be afflicted with the same anti-competitive behavior."

Analysts Conclude that Deal Will Not Affect Microsoft's Practices

Sadly, the proposed final judgment by Microsoft and the Department of Justice has the potential make the competitive landscape of the software industry worse, contains so many ambiguities and loopholes that it may be unenforceable, and is likely to lead to years of additional litigation. Analysts of all kinds have indicated that the weak settlement will not impact Microsoft or its illegal practices. Following are a variety of examples:

"As we have stated before, we believe a settlement is a best case scenario for Microsoft. And, this settlement in particular seems like a win for Microsoft being that it would preserve Microsoft's ability to bundle its Internet assets with Windows XP and future operating systems

-V a plus for the company. In fact, it appears that Internet assets such as Passport are untouched.

Also, as is typical with legal judgments, this settlement is backward looking, not forward looking. In other words, it looks at processes in the past, but not potential development of the future." Morgan Stanley, 11/02/01

"The deal -K appears to be -more, better, and faster- than we expected in a settlement deal between Microsoft and DOJ. The deal will apparently require few if any changes in Windows XP and leave important aspects of Microsoft's market power intact." Prudential Financial, 11/01/01

"With a dramatic win last week, Microsoft appears to be on its way to putting the U.S. antitrust case behind it. The PFJ between the Department of Justice and Microsoft gives little for Microsoft's competitors to cheer about. -K There is very little chance that competitors could prove or win effective relief from violation of this agreement, in our view." Schwab Capital Markets, 11/6/01

"This is a spectacular victory for Microsoft." - David Yoffie, professor,

Harvard Business School, New York Times 11/02/01

"This deal appears to fall far short of what could have been obtained in court, and what's necessary to protect the public."

-Andrew Schwartzman, public interest firm lawyer, Media Access Project, Wall Street Journal 11/02/01

"[The settlement] fails to protect competition in the software industry and does not come close to dealing with the problems that were found to exist by the District Court and the Court of Appeals."

-Albert A. Foer, president, American Antitrust Institute, Washington Post 11/05/01

"This is a reward, not a remedy."

-Kelly Jo MacArthur, general counsel, RealNetworks, Inc., Globe and Mail 11/08/01

"It looks like the government is giving them a slap on the wrist. I find that sad. It won't achieve any of the goals of the proceeding."

-Robert Lande, law professor and antitrust expert, University of Baltimore, MD Wire 11/07/01

The strength of any remedy is particularly important given Microsoft's growing dominance in the software markets. Since the end of the trial in the District Court, Microsoft's monopolies are stronger in each of its core markets with both the Windows operating system and the Office suite now higher than 92 percent and 95 percent, respectively. In addition, Microsoft has achieved a monopoly in web browsers, and has seen competitors such as the Linux operating system fade.

The Microsoft Monopoly Should not be Exempt from Antitrust Laws Enforcing federal antitrust laws against monopolies is not new or novel. Antitrust law has protected free markets and enhanced consumer welfare in this country for more than a century. The Microsoft case does not represent a novel application of the law, but is the kind of standard antitrust enforcement action necessary to insure vigorous competition in all sectors of today's economy.

These same standards have been applied to monopolies in the past. We do not have one oil company determining how much we pay for gasoline, but instead we have suppliers such as Exxon, Mobil, Amoco and Chevron competing with each other. These companies were all part of the Standard Oil monopoly, which was dissolved because Standard Oil was found to have violated the antitrust laws.

Less than 20 years ago, the nation essentially had one telephone company -V AT&T. After the government sued AT&T for violating the antitrust laws, the company was broken up, and competition was introduced in the long distance business. Since competition was introduced into that market, real prices have declined more than 70 percent, and there has been more innovation in the past two decades than in most of the preceding century.

Settlement is Based on Flawed Economic Assumption, and Sets a Bad Precedent

Some defenders of the proposed settlement between Microsoft and the DOJ have adopted the view that settling this case could somehow revive the slowing U.S. economy. Their motives are good, but their reasoning is flawed. What economic theory holds that

protecting monopolies is better for stimulating the economy that promoting competition?

In addition, this case will set an important precedent. Former Judge Robert H. Bork has noted that:

"In settling the most important antitrust case in decades through a remedy that will have not impact on the current or future competitive landscape, and absolutely no deterrent effect on the defendant, the Department of Justice has effectively repealed a major segment of the nation's antitrust laws. Moreover, any potential witness with knowledge of anticompetitive conduct in a monopolized market has to weigh the potential benefit of his or her testimony against the likely response of the defendant monopolist. The DOJ's proposed meaningless remedy would insure that no witness would ever testify against Microsoft in any future enforcement action."

Conclusion

The end result is that this proposed settlement allows Microsoft to preserve and reinforce its monopoly, while also freeing Microsoft to use anticompetitive tactics to spread its dominance into other markets.

After more than 11 years of litigation and investigation against Microsoft, surely we can -V and we must -V do much better than this flawed proposed settlement between the company and the Department of Justice.

Thank you for your time.

Regards,

Bridget A. Carberry

Renata Hesse

Trial Attorney

Antitrust Division

Department of Justice

601 D Street NW, Suite 1200

Washington, DC 20530

Dear Ms. Hesse,

I am the government relations representative for two associations of small business owners in North Carolina. Hardly a day goes by that members in either of my groups-Independent Auto Body Association or North Carolina Glass Association-do not have a dilemma to deal with that has something to do with government, either state or federal.

That is why when I heard about the **Federal Register** notice on the Microsoft case I was interested in expressing an opinion. In my view, I hope that Judge Kollar-Kotelly will agree to the settlement in this case as quickly as possible so that the parties involved can move forward and the matter can be finally put to rest. As I have expressed at an earlier time in letters to my congressmen and senators, I have always pushed for a speedy ending these proceedings.

Now that Microsoft has agreed to a settlement that will open their facilities to an independent panel and agreed to other

provisions the government wanted in the first place, I see no reason for delay. It makes no sense to hold up with one of the world's most successful companies from moving forward with new products and more innovations.

I am delighted that this settlement will end years of litigation and that North Carolina has agreed to withdraw its state lawsuit. I earnestly hope that the agreement is approved by the judge.

Sincerely,

Mike Causey

Subject: Microsoft Settlement

THE COMMENTS BELOW ARE MINE ALONE AND DO NOT REPRESENT THE OPINION OF MY EMPLOYER OR ANY OF MY CLIENTS.

I believe that the proposed conduct-based settlement will not produce any effective change in Microsoft policy. Microsoft has violated conduct-based settlements in the past, and continues its aggressive and anti-competitive bundling practices in a way that will result in complete Microsoft domination of all products and allow it to continue to improperly foreclose any competition by rendering all competition incompatible or less readily available.

I believe that only a structural settlement has any hope of avoiding these problems. I urge the Department of Justice to reconsider its settlement proposal and seek instead a settlement that may actually achieve results. It is worth remembering that Microsoft's past use of anticompetitive practices has allowed it to develop such a dominant position in the OS platform and in other software areas that even "normal" business practices in the future will serve only to exacerbate the effects of prior anticompetitive practices. —

Subject: Microsoft Settlement

In reference to the federal settlement with Microsoft regarding its monopolistic and predatory practices, I have some comments. They can all, however, be summed up in one sentence: The settlement, as written, is a bad idea.

As a long time user of Microsoft products, and student of their actions, I have the following comments.

Fact: Microsoft has been convicted of illegally extending its monopoly through the use of predatory practices. These have ranged from outright plagiarism of competitors products (as when they included source code from Stacker in DOS 6.0, and when beaten in court promptly bought up Stacker for significantly less than the penalty), to deliberate inclusion of code to decrease performance of competitors products (I can recall installing an earlier version of Wordperfect Office Suite on a Windows 3.1 machine, a process which took over 12 hours to complete. Meanwhile, Microsoft office installed in a relatively short timespan.) to deactivation of competitors software on installation of MS software (again, a recent installation of Wordperfect Office Suite 2000 on my Dell Laptop was rendered inaccessible after I subsequently installed Microsoft Office). This is not opinion, these actions have been substantiated in court proceedings and by analysis of independent software developers.

Fact: Microsoft is continuing to extend its monopoly even in the face of legal proceedings. This is a continuation of their behavior following the DOJ suit regarding bundling of applications with Windows 95- not only have they continued to bundle software, in the process moving into competitors markets, but they have increased the amount of the bundling (as is evident in Windows XP). While the Windows 95 lawsuit was particularly concerned with the bundling of Internet Explorer, now a significant number of previously 3rd party products are moot- with the inclusion of MS Media Player among other software innovation is driven from the marketplace in Microsoft's move towards inclusion.

Fact: The settlement, as presently written, will only serve to allow Microsoft to further extend its monopolistic position into areas where it does not currently have a strong position- specifically the educational K-12 market in which Apple Computer is a strong player. The "donation" of software and hardware to "disadvantaged" schools will serve only to entrench Microsoft in those locations, which will subsequently be directed into the spiraling costs of future hardware and software upgrades as Microsoft continues to massage its licensing models. The "donation" of software (for which Microsoft will, I am sure, take a significant tax deduction using overinflated value for its product) will cost Microsoft little and gain it a tremendous foothold- this is hardly something which I or any reasoning person would consider a fit punishment for illegal practices.

Fact: If allowed to continue on its current path unpunished, Microsoft will continue to extend its presence. Through its .NET initiative, redirection of browser page errors in Windows XP/Explorer to the Microsoft Network and its forays into games (XBox) Microsoft continues to extend its reach. As demonstrated by its current lawsuit against LindowsOS, Inc Microsoft is still exercising its schoolyard bully persona to drive out potentially competing products. Please note, the objection here is not to competition- for healthy competition spurts development of new products and is of benefit to consumers.

It is to predatory and unfair competition, which Microsoft has consistently been demonstrated as exercising, and which stifles innovation to the detriment of consumers. With the above in mind, it would be wrong to object without offering other options. I would suggest the following:

1) Microsoft be required as a condition of settlement to donate CASH amounts to eligible schools, which can use monies to purchase whichever technologies they deem necessary.

2) Microsoft be required to publish their Application Programming Interfaces (API's) to ALL interested parties (including those in the Open Source community) and not just those parties which Microsoft recognizes as business entities. Note this is not the same as requiring them to publish their source code—only the links to programs to aid competitors in developing new and innovative products.

3) Microsoft be regulated. Due to its pervasive in the computer marketplace, it can legitimately be argued that Microsoft now functions more as a Utility than as a software provider. Even in an atmosphere of deregulation, utility companies have strict guidelines to follow to conduct business—Microsoft, to date, does not and has shown complete disregard for previous court rulings against the company. Regulation may include, but not be limited to, separation of the application and OS sections of the business, which may spur development of competing products.

4) Microsoft be discouraged from releasing incomplete products (as reference I cite the huge security hole discovered upon release of WindowsXP) by rewriting of liability laws to allow injured parties to seek damages in the event they are affected by “buggy” software. This should, I believe, be limited to software sold “for profit”—extending it to cover “free” software such as software distributed under Open Source models would only serve to stifle innovation.

Without significant changes to the settlement as currently worded, Microsoft will be rewarded, not punished, for actions which have driven competitors into niche markets (or out of business) and will continue to extend its monopoly throughout society. The future of innovation within the software industry is in your hands.

From: John Opfer
To: Microsoft ATR
Date: 1/22/02 9:38am
Subject: Microsoft Settlement
To whom it may concern:

I am writing to comment on the proposed settlement of the Microsoft antitrust case. In my judgment, all of the settlement proposals unjustly harm Microsoft and/or its competitors. To do justice to Microsoft, I recommend that we look to historical precedent.

The precedent I have in mind comes from the trial of Socrates, who was found guilty of the “crime” of impiety and corrupting

Athens’ youth. The Socrates case seems an appropriate model. Neither impiety nor “anti-competitive practices” are strictly definable, but always decided ex ante. Neither Socrates nor Microsoft did any identifiable injury to any one—no one but their competitors complained (the Athenians who couldn’t persuade the public to buy their arguments, the software makers who couldn’t persuade the public to buy their software). And both seemed to be on trial for their virtues—competing vigorously with their intellectual work, challenging the status quo, and defining new standards.

The proposed settlement that Socrates offered included a statue of himself in the marketplace and free meals for life. Similarly, let the Dept of Justice erect a statue of Bill Gates in front of its headquarters and provide the cafeterias of Microsoft with all the government cheese that it can handle.

No doubt others would prefer to hand Microsoft a cup of hemlock and a stiff fine, but I think the verdict of history would be far more favorable were less punitive measures taken.

Bill Gates brought this county from the dark ages to enlightenment just like Thomas Edison. He develop one common platform for everyone to communicate on. His company develop and marketed the software and operating system that everyone utilizes to communicate with. Yes there are other platforms that develop off his ideas. But he move this county forward in technology jobs and product development.

Look what his company did. He created jobs that were not here 10 years ago and not to mention he added to the Gross National Product. IBM did not want his operating system. . . .if they did you would be taking IBM to task. The federal government did not take IBM to task for their development of the larger computer systems. Why is that? Payoff? Bill Gates is a genius just like Edison or Ford he more this great nation forward. Now the Federal government wants to take the wind out of his sails. Communication is vital and one common vehicle will get us a platform to communicate with one another easily. Maybe future wars can be prevented by using one common platform. If the federal government kills the company who else will they kill regarding product development?

That Microsoft is a monopoly is clear. It is proved again and again by the lack of competition and the subsequent laziness of Microsoft to provide stable and secure products. They have been able to set the bar so exceedingly low that most people who use personal computers are happy when their computers crash less than usual. We all assume some level of instability because we have been conditioned to accept their mediocrity. Upgrades are forced regularly because the previous versions of operating system and applications are so incredibly poor. This seems more of a practice to ensure good returns to their bottom line than actually improve the quality of the software.

Over the past few years our Federal government has wasted more money attacking and harassing Microsoft than it spent pursuing Osama Bin Laden and every other terrorist organization known to man.

What a waste of taxpayer resources! As long as a monopoly is operated by the government it is fine. A good example of which are the cable TV and internet services in our local markets. Service is only provided in our community by one carrier due to the local municipality sanction of only that one provider.

The city is rewarded with fees kicked back by the provider. Costs escalate service is poor no competition is allowed. This we are told is fine however because the government sanctions the monopoly.

Competition would of course bring prices down and force carriers to provide better service or forfeit business. Microsoft on the

other hand is one of those many competitors in the market. It prices its product to the market accordingly or it's rivals evaporate their market share. Prices are market driven service if you have a problem is a click or call away. If you ever have requested service you would also note it is very efficient and timely. Let's stop the nonsense and get off Microsoft's case.

Microsoft investment in our economy through its employee payroll corporate tax and charitable donations are unbelievable. All this whining would come to an abrupt halt if they moved their operation into Canada would it not? Microsoft is a successful American business. How refreshing. Quit wasting our money pestering them!

Granted we have had anti-trust law in America for many years. These laws are by their very nature bad for the economic health of individuals and the nation. A true monopoly can only persist through the power of government. Without that power a company must be forever vigilant to competitors replacement technology changing taste or need and numerous other possibilities. . . . including unsuccessful competitors and their attorneys. Microsoft has done everything they could to gain and keep as many customers as possible and in doing so have increased the wealth of and improved the standard of living of millions of people in this country and in the world. And now it seems the governments of the USA and of the individual states intend to punish Microsoft. This is moral and just? . . . No it is un-American.

Sincerely
Franklin Hill

this case against msft is a farce based on jealousy not fair competition. It has cost all involved millions and the only benefit has been to posturing lawyers. It is time to stop all of this and to allow innovation and business to progress smoothly. If giving computers to schools etc can create a continuance of this farce then an amount of money to buy competitors machines should be provided. It will be interesting to see what happens to the \$\$\$ in the end they will be buying Microsoft services.

I believe that this entire lawsuit by the federal government has not been in the interest of americans. They have used our tax money to pursue a company that has been successful. Had Microsoft not been a profitable company our government would not have ever gone after them. I believe that those who have been pushing this law suit at our expense should reimburse the american tax payers. If this could happen to a large company just think what our government could do to small companies. We no longer have free interprise nor can we establish a competative business without being penalized. Watchout Americans! Who's Side is our Government on? I love America and I serve in 82nd Airborne in Cambodia during the Viet Nam War for 3 years but I think our government is moving away from having the purpose of upholding and representing the beliefs and interests of its citizens.

Thanks and God Bless.

I find the whole antitrust litigation disturbing from the standpoint that as a software consumer I don t view myself as being harmed by Microsoft s place in the market. We run Windows NT Windows 2000 Windows 98 MSOffice Explorer Publisher etc. And while these programs are not flawless they have increased our productivity immeasurably for a relatively small investment. There have certainly been alternatives to Microsoft products that I could have chosen but we felt that the Microsoft products gave us the most for our money. To penalize a company for being the best in its industry is un-American.

There are no greater barriers to entry in this market than in any other. If someone can offer me a better price/performance combination with their product then I will migrate to it. Linux Sun Oracle are all names that compete with Microsoft but none could meet my needs as closely as the products we purchased. The irony of all this is that I work

closely with an industry that is rapidly conolidating and will do far more to hurt the average consumer than Microsoft ever will yet this monopolistic drive rolls along with the government s blessing. Joel Klein has made a name for himself the government has wasted millions of taxpayer dollars the media has gotten to bash Microsoft—everyone should be happy.

I would also think the DOJ has more important things to worry about right now. So please accept the settlement and put an end to this travesty.

Antitrust law was intended to protect consumers not competitors. Sun Netscape Oracle et. al. engage in much the same behavior as MS. Why wasn t Novell taken to court when they had the corner on the networking market? Maybe the federal gov t should write a public domain operating system and office suite and give it away. Does anyone really believe you d get meaningful support from the gov t? This is just the politics of envy trying to accomplish in the courts what they couldn t accomplish in the marketplace.

My 2 cents.

Subject: Microsoft Settlement

To whom it may concern,
As an Information Technology professional, a US Navy veteran and a citizen of the United States, I feel the proposed settlement if the Microsoft Antitrust case to be a great disservice to the American consumer. The proposed remedies are little more than a 'slap on the wrist'. To truly promote fare competition in the Operating Systems/software market, much stricter constraints must be placed upon Microsoft. My recommended remedies are as follows:
1. Open & standardize the Windows API and file formats:

The Windows API (or "Applications Programming Interface") is the set of instructions that Windows applications/ programs use to "talk to" the operating system. Microsoft provides these APIs to 3rd party software vendors in order for them to develop applications for Windows. However, it's widely known that Microsoft often 'fiddles' with the API, changing things that break competitors' products. For instance; if a competitor developed a multimedia application, which competes with Microsoft's own Windows Media Player (such as RealPlayer or QuickTime), Microsoft can easily alter the Windows API to allow these competing products to no longer work properly. It's also known that Microsoft's own programmers take advantage of so-called 'hidden APIs' that non-Microsoft developers can't use.

Microsoft's file formats also need to be opened. That is, file formats for its MS Office applications (Word, Excel, PowerPoint and Access), Windows Media format, along with any other proprietary formats, need to be standardized and publicized. This would allow competitors to build Windows software applications, and operating systems, that compete with Microsoft on a level field.

2. Compliance & adherence with open standards:

The Windows operating system uses many, "Microsoft only", proprietary formats and technologies, that make it incompatible with competing products. For instance, Microsoft uses an API called "Direct 3D", for all its 3D development/rendering. Direct 3D is only usable on a Windows operating system. If an application were written using Direct 3D, all other operating systems would be unable to take advantage of it. An alternative product such as "OpenGL", would be a much better solution, as it is vendor-neutral and governed by a standards committee. In fact, Apple Computer made OpenGL the basis of its 3D API in their new operating system, "Mac OS X". Indeed, there are many open source/vender-neutral APIs that could be used in place of Microsoft's proprietary ones.

With Microsoft's APIs and file formats fully standardized, documented and published, and having Microsoft adhere to open, industry standards, other software vendors could compete fairly.

From: Kevin Ryan

To: 'microsoft.atr(a)usdoj.gov'

Date: 1/22/02 10:15am

Subject: "Americans for Technology Leadership"

As I'm sure you're aware, Microsoft has started an "association" (the title is in the subject line)—actually a captive lobby of MS and whoever it could pressure into lending names, as far as I can tell—to encourage (pro-Microsoft) comment on their case/settlement. At their web site (<http://www.techleadership.org/5010/>), they have a mechanism for posting comments which will supposedly be posted to the address I'm sending this to. Yesterday (1/21/02) I posted some comments disparaging Microsoft's business practices, and questioning its commitment to software innovation. I thought that you might be interested in checking to see if you receive them; I know I am curious, since I would not rule out the possibility of filtering in the forwarding

process. The return address associated with my comments will be the same as the one at the bottom of this note.

The thrust of my comments was that Microsoft got off easy, and that it perniciously exploits its market dominance to stifle potential software competitors and to coerce manufacturers into pre-installing its software, and that the overall effect is to guarantee only MS the opportunity to innovate, as well as to guarantee that they only need to innovate just enough to sell updated versions of their products. If their practices aren't illegal, they should be, but I know that's outside of DoJ's area of responsibility.

Please feel free to forward this to any other government officials seeking public comment on Microsoft. Be aware that these are my own views, not necessarily those of my company. But also be aware that I am a network administrator, with several years' experience with Microsoft software, and a good deal of knowledge of the software industry.

There's another issue that no one is taking Microsoft to task for. . . that is in regard to the new XP operating system. Users who purchased it can be denied use of the product and caused hard trouble to get a fix from Microsoft if the software thinks you are trying to steal it. But that event is so easily triggered that many innocent and legal users will experience denial of use of the product just because they changed components in their computer. It is shameful that Microsoft is so protective of the rare instances of copying that they put their legitimate customers to so much trouble. This copy protection scheme should be required by government to be removed or softened so that it is less drastic.

Microsoft has done more for American Industry and the American People over the last 10 years than most companies do during their entire existence. They offer superb products at fair prices. Unfortunately their whiney butt cry baby competition has seen fit to enlist the Zealot Federal regulators to further their own causes instead of competing on a straight up basis. In my opinion the President of the U.S. should issue an Executive Order to the Federal Trade Commission & the appropriate Judiciary directing that all charges against Microsoft be dropped and further that Microsoft be allowed to bring suit against both Federal & State Governments for damages. It seems strange to me that the same regulators that are trying to destroy Microsoft are sitting on their hands and doing nothing while foreign interests are being allowed to destroy our steel industry. I AM AN AMERICAN AND THERE IS NO DOUBT IN MY MIND THAT WE ARE THE GREATEST COUNTRY THAT HAS EVER BEEN OR EVER WILL BE. THE REASON FOR THIS IS NOT FEDERAL REGULATION BUT IS FREE ENTERPRISE AND THE HEARTS SOULS AND TENACITY OF THE AMERICAN PEOPLE.

In reference to Mr. Gates Problem: I think the Federal Government went too far in regards to Microsoft!

I have heard all my life—build a better mouse trap and people will run to your door. I believe Mr. Gates built this mouse trap!! The Federal Government should back off Microsoft!! Case in Point: Banks are getting together and making a great big bank—This could be very bad for the taxpayers if they fail.

However the Government is doing nothing about these mergers. I believe Mr. Gates forfeited the American dream and The American Government should get out of his face. I do not believe there was any wrong doings—so there should be nothing to settle.

I feel the anti-trust case against Microsoft was political and unwarranted. The suit was to protect competitors to Microsoft not to protect Consumers. That being said I know other feel differently. I strongly believe the settlement is a good compromise and should be embraced. If it is not it could have negative effects on everyone.

Thanks

To whom it may concern:
In regards to the U.S. vs. Microsoft court case, I urge the government to seek stiffer penalties against Microsoft for their anti-competitive practices. As a consumer of Microsoft products and worker in the IT field, it is frustrating to have pc's crash and a buggy windows operating system. The consumer can only benefit by the break up of Microsoft, or something as forceful, that would allow other companies to compete on an even playing field. For Microsoft to own and market the windows operating system and create products to run on this OS is in my opinion unfair to competing software companies. This advantage I am sure is used to ensure that Microsoft products are "compatible" and competing software find their performance degraded.

Also having more competition can only drive prices down and quality up. Microsoft is notorious for releasing buggy software early and then fixing it later. Often selling them as "upgrades". I wish they would create an OS that would just work well and not include all the extras that Microsoft thinks everyone needs.

Please do not let this company off with a hand slap. Doing so would only reward its ruthless behavior.

Thank you.
Sincerely,
Robert Marshall

Dear District Court Judge, Microsoft should not be punished in any way whatsoever. It should be honored and congratulated. At the least, the government should apologize to Microsoft for persecuting—yes persecuting—that company.

I have been appalled at the government's treatment of one of our most productive enterprises. We should be honoring Microsoft for good work, for raising our standard of living, for increasing employment, for widening the circle of job opportunity, for offering at fair market value products that enhance our lives, for continually expanding our ability to work and play. Microsoft extends each of our lives in countless ways. Microsoft doing its business in freedom and without government interference is in my self-interest, as it is in yours and each US citizen's.

I do hope that the Antitrust laws will be abolished completely. They work only to destroy our country and its economy.

Sincerely,
Sylvia Bokor

Monetary penalties are not the solution for Microsoft. It's like asking a farmer who has 4000 bushels of corn to pay the 10 bushels; a drop in the bucket. The crime is similar to an illegal monopoly. The only solution is to hurt it's market share (of which it's illegal acts helped increase). I few suggestions on how this can be accomplished:

Offer competitor machines to school and have Microsoft flip the bill. AKA Apple (computers), Linux and Unix (servers).

Allow Microsoft to continue current operations but force a price increase in the software (a tax that can go towards all schools.

I don't have all the answers but as a computer user for 75% of my life I understand the need to keep a competitive edge on all fronts including software. Imagine a software company so powerful that Unix Linux and others must be given away free for people to even consider using them. Bottom line, it's unfair to the economy to continue to have Microsoft operate as they plan. Big changes are needed and I suggest action is taken soon. The same issues of which this legal battle started with have only tripled in degree from 2+ years ago.

Thank you for your time and please feel free to include this e-mail in any documents you may need.

Subject: Microsoft Settlement

Without going into a multipage document about Microsoft, I will try to sum up by ideas quickly, as you all must have lots to read already.

?MS is a company that has used business practices in the past which are illegal, or at the very least strongarm tactics.

? Much of MS's success is derived from it's constant ability to twist and stretch the rules to its own good. MS is a machine, based on marketshare and \$\$.

? Companies which are innovative have been shut out by MS, either by buying them or changing their own products to render the innovative ones obsolete, inoperable, or out of the public's mind.

?Most MS products work, but not very well. The entire IT industry is based on the inability of windows and other MS products to work well with others. Look at systems like Linux or the Mac. Mac marketshare is 5% or so, but the IT industry supporting macs is 1/10 that which supports MS products (ie 10 techs to support every 100 Windows Machines, 1 tech to support every 100 Macs)

The inherently flawed systems produce a cyclical motion of buy MS product, get someone to fix it, buy something else, get someone else to fix it. Reminds me of social communes in which factories built cars, that there was no market for, then got paid to take them apart, then reassemble once more. . .

?Microsoft creates the idea in people's minds that there's nothing else out there. In this way, people don't argue to buggy software, or pricey upgrades. They have been sold long before the purchase is made.

? Recently Apple introduced OS X (pronounced Ten). Several months later, MS introduced Windows XP. This is a small infraction that simply adds to the long list of white lies and "thanks we'll borrow this for a sec" day to day actions from MS.

If you bought a washing machine, would you not expect it to work for years before having someone come out to service it? Why are personal computers different?

Comment on Microsoft antitrust settlement
Sydney

1 January 2002

Dear Sirs,

I am an Australian citizen with about 15 years in the computer industry. What happens in the US vs. Microsoft antitrust case affects me professionally as well as personally, since I am a fairly heavy user of computer software and technology. I would like to comment on the settlement jointly proposed by the Department of Justice and Microsoft. To be blunt, I believe the proposal is a dishonest one that sells out the public interest. I will explain why, and offer some guidelines for a fairer remedy.

1. Microsoft's main crime (not bundling, but the prevention of bundling) has had lasting anti-competitive effects that the settlement should address but doesn't. The argument that has most often been used against Microsoft is the "bundling" one, the allegation that Microsoft bundled its browser (and now its media player and instant messaging software) with its operating system. By doing so, it leveraged its monopoly in operating systems to enter other markets. Though this is a classic antitrust argument, people who believe in a free market are not convinced because the remedy does not sound right from the standpoint of the consumer interest. Consumers enjoy greater convenience, not less, when extra software is bundled with the operating system they buy. That is why the harsher remedy proposed by some of the states is also wrong. Forcing Microsoft to unbundle such software needlessly inconveniences the consumer. It also takes away from Microsoft's legitimate right to decide what goes into its products and puts the courts in the avoidable position of having to define the scope of technologies such as operating systems when they are not technically qualified to do so. The only parties that are benefitted by such a remedy are competitors. Doesn't this add credibility to Microsoft's claim that its competitors are inefficient and require government intervention to survive?

However, the prosecution has failed from the start to argue this point with the right emphasis. What Microsoft did that seriously disadvantaged the consumer was not so much bundling its own browser with its operating system, but preventing computer

resellers (OEMs) from offering consumers a choice by bundling competing browsers such as Netscape Navigator. Microsoft threatened OEMs such as Compaq with the withdrawal of their Windows 95 license if they dared to bundle Netscape Navigator with the PCs they sold. Given the overwhelming dominance of Windows 95 in the operating system market at that time, a withdrawal of that license could have bankrupted even an OEM as large as Compaq. The threat was credible and secured the compliance of all OEMs. So certainly, Microsoft did leverage its monopoly in operating systems to gain entry into the browser market, and it did so both through the relatively benign means of bundling its own browser, and by the decidedly illegal means of preventing consumers from sampling the wares of its competitors. Any free market advocate can readily see the consumer harm in this latter action of Microsoft's, but the prosecution has damaged its own case by not emphasising this enough.

Microsoft has also had secret agreements with OEMs that prevent them from offering consumers the choice of which operating system to boot when they start up their computers. This is often known as the "bootloader clause". Microsoft abused its monopoly in operating systems by threatening OEMs and blocking, at the source, the entry of other operating systems into the market. Consumers have had no opportunity to know about or sample competing operating systems. In other words, Microsoft abused its operating system monopoly to maintain that monopoly, which is another violation of antitrust law. The fact that no OEM except IBM dared to testify against Microsoft during the trial is itself proof of Microsoft's terror tactics. Their silence speaks louder than any testimony.

Microsoft's history is full of such anti-competition and anti-consumer actions. Bristol Technology won a case against Microsoft (over Microsoft's sudden withdrawal of support for their Unix interoperation software Wind/U) but was awarded a laughably poor compensation of one dollar. Caldera had a strong case against Microsoft (over the illegal way in which Microsoft used Windows 3.1 to force consumers to buy MS-DOS rather than Caldera's DR-DOS) but its silence was bought through an out-of-court settlement. The consumer has been the ultimate loser in all these cases because Microsoft's actions removed competitive choice and interoperation options.

The DOJ's proposed settlement shows an awareness of these abuses and aims to prevent their recurrence, but it needs to be far stronger and bolder. The damage to the industry has been done systematically, over more than a decade, and significant network externalities have been created that work to perpetuate the Microsoft monopoly. How can this damage be reversed by a mere forward-looking arrangement? Consumers and Microsoft's competitors now face nearly insurmountable market hurdles to creating a viable alternative computing environment, even though technically good alternatives are available. Even if Microsoft's abuses are halted, the structural and systemic forces

they have created over the past decade will continue to work in their favour. At a time when consumers look to the government to right these historical wrongs, the settlement that the government proposes is inexplicably defeatist. It resigns consumers to the status quo! One would imagine that a prosecution that has had its argument upheld by two courts would have the momentum, confidence and real power to broker a deal that restores genuine choice to the consumer, not step lightly around an entrenched monopoly that was the problem to start with.

2. A criminal should not be allowed to keep his ill-gotten gains

Microsoft's monopoly profits are the direct result of these and other illegally anti-competitive tactics.

The antitrust case established that the absence of competition emboldened Microsoft into charging \$89 for Windows instead of \$49. In other words, consumers paid extra merely because of a monopoly that was being illegally maintained.

Four eminent economists filed an amicus curiae brief during the remedies phase of the trial in which they showed that Microsoft's rate of return on invested capital was 88%, while the average in other industries was about 13%! [See www.econ.yale.edu/nordhaus/homepage/Final%20microsoft%20brief.pdf]

Microsoft could never have made such huge profits without its illegal maintenance and extension of its monopoly, and therefore a major part of its current wealth is illegally earned.

There is absolutely nothing in the proposed settlement that addresses the issue of these ill-gotten gains, or how these will be reimbursed to the public from whose pockets they came. This simple omission easily amounts to billions of dollars, and by itself makes the settlement a sellout of the public interest, even without an assessment of its other shortcomings.

3. Ill-gotten gains should not be allowed to influence the outcome of this case It is disturbing to read that many states are settling because they are running out of funds to pursue the case further as they would like to. Meanwhile, Microsoft, with its multi-billion dollar war chest, has no such constraints. They can outlast all their opponents. The world is learning the cynical lesson that the American justice system is a mere extension of the free market—you get as much justice as you can afford to pay for.

What happened to the principle (so successfully applied in the Al Capone case) that criminals should not be able to use their ill-gotten gains to pay for their legal defence? Wouldn't a scrupulous application of that principle prevent the distortion we see here? If a convicted abusive monopolist has more funds than its prosecutors, and that fact is forcing them to settle, can't the monopolist's funds be frozen, or can it not be made to pay the legal costs of its prosecutors? A simple ruling along those lines might see Microsoft scrambling to agree to a fairer settlement, one that will better safeguard the freedom of the consumer.

4. There is no attempt at punishment for wrongdoing

Though it has been established that Microsoft has repeatedly broken the law, the

settlement only defines mechanisms to prevent future wrongdoing. What about punishment for past wrongdoing? Are murderers let off scot free with mere provisions to prevent future murders? What kind of example does this set? And what confidence does this inspire in the American justice system? Any remedy must include appropriate punishment.

5. The economy is being used as a bogeyman to prevent punishment

It is being argued that in the current difficult economic climate, Microsoft should not be broken up or otherwise punished, because that will in turn affect the rest of the economy (through a fall in the stockmarket index, a delay in the recovery of hardware sales, more unemployment and hardship, etc.). On the contrary, the lessons of Economics are that monopolies are always bad. They reduce efficiency, innovation and economic activity. In other words, Microsoft's monopoly has already affected the economy adversely. An end to the Microsoft monopoly may result in some churn, but that churn will be the ferment of genuine innovation from the rest of the industry. The impact on the stockmarket from a fall in Microsoft's share price will be more than offset by the rising stocks of independent software companies that can operate without fear of a monopolist's wrath. A decisive curbing of Microsoft's stifling influence will create more confidence in the rule of law, generate more jobs and help the economy.

Therefore, it is dishonest and self-serving on the part of the DoJ to suggest that this settlement proposal is the best one from the viewpoint of the economy. Moreover, the state of the economy should not determine whether or not a crime should be punished.

It takes a statesmanlike judge to see beyond the petty posturing and to do the right and wise thing.

Guidelines for a fair remedy:

Any remedy in a case that has been so clear-cut in its findings must be more assertive in its defence of consumer interests. Regardless of specifics, such a remedy must address the following:

1. Recurrence: Microsoft must not be able to continue to abuse its monopoly the way it has in the past.

2. Reimbursement: Microsoft has no right to retain the excess profits it has earned as a result of its illegal actions. This money should be repaid to the consumer.

3. Reparations: As Microsoft is responsible for the current uncompetitive market in operating systems and related applications, it must underwrite efforts to restore competition and consumer choice. The rest of the market should not have to pay to recover from Microsoft's abuses.

4. Reference: Microsoft must pay punitive damages over and above its reimbursement and reparations obligations, to serve as a warning to deter future monopolists. The remedy must in no case send out a signal that a large enough violator can get off lightly. Future tax dollars can be saved by discouraging abuses instead of having to prosecute them.

The DoJ is supposed to be acting on behalf of the consumer, and they must pursue a remedy that addresses all the above issues.

For example, a remedy that required Microsoft, among other things, to only sell through channels that offer at least one other operating system, could address the reparations issue and break the structural forces perpetuating their monopoly (If an OEM requires training to support another operating system, Microsoft may be forced to subsidise such training).

The proposed settlement goes partway towards addressing the issue of recurrence, but does so only half-heartedly because it creates significant exceptions and loopholes for Microsoft to take advantage of. It completely ignores the other three issues. An impression is created that the DoJ is more sensitive to Microsoft's interests than to the interests of consumers who have been systematically robbed of both their choices and their money.

Therefore this proposed settlement must be rejected as not being in the public interest.

History will be the judge

After the immediate tumult over this case dies down, there will be a dispassionate analysis of all aspects of the Microsoft phenomenon in the computer industry, and the roles of all players will be dissected. It seems fairly certain that the Department of Justice will be likened to a champion boxer who was paid to throw his fight. Judge Jackson will probably be faulted for his many indiscretions, but it may be remembered that his analysis was on the mark, and his verdict fearless. The appeals court will probably be remembered as being fair though it started with a reputation for being consistently lenient towards Microsoft.

What will Judge Kollar-Kotelly be remembered for? Will she be known as the one who meekly accepted an agreement that sold out the public interest, because it was politically expedient to do so? Or will she be remembered as the person who braved the prevailing political winds to do the right thing and restore balance to a corrupted system?

The world is watching to see what she will do. Regards,

From: Anthony Myers
To: Microsoft ATR
Date: 1/22/02 10:33am
Subject: my opinion

My name is Anthony Myers. I work for a company called Service Is Us, Inc. in

Chicago, IL doing general administration. A majority of my job is payroll, however I do make most of the recommendations for our IT system, and I make sure that our network keeps running as it should. In addition, I am training on the side for a career change to be a programmer. I have just a few small observations that I have made with regard to all the "controversy" surrounding Microsoft that I wish to share. In working for a small business, I have had the pleasure of exploring new software trends that come our way, as well as advising the owner on new purchases. Our network server runs on Windows NT 4.0 using Citrix ICA client stations. Although we have had the opportunity to explore many options, it seems that Microsoft has designed their operating systems to intertwine so much with their own applications software, that it is virtually impossible for us (a small company without a full-time IT person) to implement non-Microsoft applications to their full capabilities when the operating system so heavily favors its "own kind" Finding software that often better fits our needs, ends up being futile because it would end up being alone in a Microsoft world that does not cooperate. What started off as being a pleasure—looking at new software—ends up being a waste of time.

The other effect Microsoft's monopoly has on us stems from the consumer market. Since this huge monopoly is able to flex its billion-dollar muscles with all of the pc manufacturers, the general public (that are not software experts) end up buying, in every case, new pcs loaded with some version of Windows bundled with none other than Microsoft Applications. The average individual going to a discount store such as Best Buy or Circuit City is not given the opportunity to select basic software, they are going to just use that which comes "free" with the computer (not realizing that Microsoft did indeed charge them for it, further up the supply chain). Since people in the past 5–10 years have become so accustomed to this hand-in-hand software bundling, they do not become exposed to anything else. The manner in which this affects a small business now days, is that if we were to choose non-MS Office software, we would also have to spend the money to train our office staff. With each passing day, Microsoft becomes more and more dominant and tightens its grip on the entire industry, both consumer and business (and each one does influence the other).

These are just the observations of one individual being written down, but I know they exist to some extent in small business across the country. Microsoft should not be allowed to use its dominance in operating systems to feed its growing monopoly on the applications software market, which in turn feeds its growing power in business systems and networks, which in turn ADDITIONALLY feeds the monopoly in software, and back and forth, and back and forth. Will we NOT be happy until this entire country becomes the United States of Microsoft?

Subject: Microsoft Settlement

Dear Sirs and Madams,
As citizen of the United States, I would like to weigh in with my opinion on the U.S. vs Microsoft trial and judgement: That Microsoft has been found guilty of abusing its monopoly power, first by Judge Jackson, and having that opinion unanimously upheld by an appeals court, I find it both shocking and disheartening that Microsoft has not had to face any penalty nor pay any fines for such a finding of guilt of its past crimes.

I find the settlement proposed by the US DOJ to be a weak and useless compromise, clearly in Microsoft's own interests and plans. Microsoft has shown, time and time again, that it is not only an abusive monopoly, but that it is unwilling and/or incapable of abiding by any remedies for its behavior set forth by the courts.

Microsoft does not innovate. It either buys up, undercuts or blatantly copies the competition. The real losers in this situation are consumers at large, to say nothing of the computer industry. I implore you to find and mete out a punishment and remedy of behavior that fits the magnitude and history of Microsoft's illegal behaviors. To not do so is an injustice to millions.

Thank you.
Sincerely,
David Sopchak, Ph.D.

Date: 1/22/02 10:38am
Subject: Microsoft Settlement

Hello,
I use Microsoft products and benefit from them and their features. I resent the government's characterization of me as a helpless victim who cannot choose software that is useful to myself. I do not think that the government has any right to decide what can be in my computer.

I resent the idea that a successful business and its product are a threat to anyone. The complaint against Microsoft originated not with individual consumers, or with Microsoft's partners, but with Microsoft's unsuccessful competitors. Failed businesses must not be allowed to set the rules for the markets in which they failed. Politicians that protect some businesses from others is a dangerous policy. Continued application of the antitrust laws against successful businessmen can only lead to corruption and economic disaster as shown in many other countries.

I want to see an America where success is not throttled, but embraced. I want a free America where anyone with enough intelligence and hard work can be a self-made man like Microsoft Chairman Bill Gates.

And lastly, and most importantly, Microsoft has a fundamental right to its

property, and that it is the government's job is to protect this right, not to take it away.

US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft:

I am writing you today to express my opinion in regard to the Microsoft settlement. This settlement will serve in the best interest of the public. Continuing litigation against Microsoft will accomplish nothing but adverse effects on consumers.

Microsoft is a company that has contributed a great deal to technological advance. This company should not be stifled or restricted any further. This settlement will allow Microsoft to continue designing and marketing their innovative software. At the same time, this settlement will benefit companies attempting to compete. Microsoft must share more information with other companies and must give consumers more choices. Microsoft must design future versions of Windows to make it easier to install non-Microsoft software. Microsoft has also agreed to provide a license to any third party whose exercise of any options provided for by the settlement would infringe on any Microsoft intellectual property right.

This settlement is strict enough to deal with the issues of this antitrust dispute. Please support this settlement and allow this company to get back to business. Thank you for your support.

Sincerely,
Franklin & Brenda Holland

To whom it may concern,

I am writing to you to express my concerns and opinions as a citizen of the United States on the matter of the Microsoft antitrust settlement. I personally have read the transcripts from the entire trial and the finding of fact. The recent attempt by Microsoft to settle this matter was completely unfair and biased in favor of Microsoft. By accepting the terms of that prior settlement agreement, MORE Microsoft computers would have become established in schools, a market that is currently even shared between Apple Computer and Microsoft. The end result of this "punishment" would have been that Microsoft's market share would have gone UP in the education market and their competitor's market share would have gone down. What I believe, as do others as well, should be the only solution to this matter is as follows:

1. Microsoft should be divided into two independent companies sharing no officers or employees between them. One would be the company that develops the operating system and the other would be the company that develops applications. This would assure that Microsoft would have no leverage in forcing OEM computer manufacturers to bundle Microsoft applications because of unfair advantages or forced disadvantages that would be imposed on computer manufacturers who accept or refuse to bundle Microsoft applications.

2. Bill Gates should be completely removed from any position in the resulting companies, as the evidence in the antitrust trial clearly shows that he was, and is the catalyst for all of Microsoft's aggressive monopolistic/anticompetitive business practices. To further keep him from unfairly influencing these two new companies, all of his stock holdings in them should become "nonvoting" holdings.

I am a technology coordinator who uses various computers and operating systems every day. Microsoft, in my opinion and the opinion of many, is in their current position of power, not because they have produced a superior product, but because they have leveraged their monopoly illegally to gain and control market share. Please create a fair and balanced marketplace for computer operating systems and consider my suggestions.

Thank you.

Respectfully,
Christopher M. Hamady

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing today to encourage the Department of Justice to accept the Microsoft antitrust settlement.

The issue has been dragged out for long enough, and it is time to move on. A settlement is available and the terms are fair, the government needs to accept it. Many people think that Microsoft has gotten off easy, in fact they have not. The settlement was arrived at after extensive negotiations with a court-appointed mediator. Microsoft will share information with its competitors and allow them to place their own programs on the Windows operating system. The company agreed to terms that extend well beyond the products and procedures that were actually at issue in the suit, simply to put the issue behind them.

Microsoft has given up much to settle this issue, it is time that the government agrees and moves on.

Microsoft and the industry need to move forward, and the only way to move forward is to put the issue in the past. Please accept the Microsoft antitrust settlement.

Sincerely,
Mack Wilson

Subject: Microsoft Settlement

Dear Sir or Madam:

I work for a national corporation based in Kansas and am very much involved in the computer industry. The proceedings of the Microsoft case have been of particular interest to me and I was pleased to learn that a settlement of this case is likely.

I have many opinions regarding the broad consequences bringing this case has had on the technology sector. However, this is not why I chose to write to you today. Whether this case was just to begin with is of little matter now; instead focus must be on whether this proposed settlement is a good one.

Both Microsoft and the Justice Department deserve commendations for a job well done. The provisions of this settlement that have been made public through the media appear to be fair.

This settlement outlines the creation of a committee that will serve as the enforcement mechanism for the agreement. This committee is an independent one over which Microsoft has no influence. Microsoft will be responsible for the costs of this committee.

Other provisions include the guarantee of freedom for users to select applications from competitors more easily and Microsoft will be required to provide its competitors with technical information making it possible to create compatible, and competing, applications.

Please support this settlement.

Subject: Microsoft's Penalty

Having read through the documentation and having considered the gross nature of the illegal behaviour engaged in by Microsoft Corporation, it is clear that a large cash penalty is the only solution which will force Microsoft to address and correct its behaviour.

This penalty should be:

1) Payable only in cash, not in cash equivalents, equipment, goods, or services.

2) Microsoft should have no voice in the distribution of this cash penalty. The cash penalty should be administered by and applied by an independent council of non-affected industry experts if it is meant to address industry concerns (such as aid to schools) or remunerative litigation specialists if it is meant to address consumer relief directly.

Any settlement which does involve a drastic monetary penalty for Microsoft will utterly fail to impress upon the company that their behaviour was (and still is while waiting final administration of the current case) not only monopolistic but quite simply illegal.

Subject: Microsoft Settlement

My name is Dominique Yarnell and I would like to voice my opinion concerning the Microsoft Antitrust case.

Actually, I would like to voice my opinion concerning antitrust law, since it is of a far greater threat to our nation than companies that are arbitrarily defined as monopolies. The very idea of punishing a company for its success is so anti-american that it makes me sick. Unfortunately, such government intervention into the realm of private enterprise seems to be a trend that has been all too prevalent throughout the twentieth, and into the twenty-first century.

Why does the government intervene in the marketplace? As a student of economics, I am familiar with concepts like, "economic surplus," and realize that relatively large firms in any industry will result in less of that surplus. But where is the justification for maximizing economic surplus? Is our government to ensure that goods and services are to be delivered "from those of the greatest ability to those of the greatest need?"

Capitalistic competition has led our country to its current state of technological and economic superiority.

Antitrust law, a weapon wielded by comparatively inefficient firms against the most productive firm in a given industry, works to undermine our global superiority. This weapon is not one of free market competition, but of political pull and bullying. As such, antitrust law can only result in a decrease of overall production and an increase in overall corruption.

For the sake of my beloved country, I hope you take my words to heart.

Sincerely,
Dominique Yarnell

Dear Mr. Ashcroft:

My name is DeArmond Canaday. I am a resident of Greenville, South Carolina. I am writing with regard to the settlement recently reached between the Justice Department and Microsoft.

The settlement, as I understand it, requires Microsoft to allow competition for such services as Internet access within its Windows operating systems. It is also my understanding that Microsoft has agreed to a pricing structure program that will help level the playing field among computer manufacturers. As you can see, Microsoft did not get off easy. I hope that you accept the settlement in its present form.

Thank you for giving me the opportunity to express my opinion on this subject.

Sincerely,
DeArmond Canaday

From: Damon Butler
To: Microsoft Anti-Trust at USDOJ
Date: 1/22/02 11:28am
Subject: Microsoft Settlement

I am writing to urge the USDOJ to *reject* the proposed settlement of the Microsoft anti-trust case. Time and again, Microsoft has been proven *time and again*, in court, to be a monopolist and to have abused that monopoly power. As such, any proposed settlement must be both:

(1) a fair and just *punishment* for breaking the law, and

(2) a powerful inhibitor that prevents Microsoft from continuing its anti-competitive behavior. Any settlement that does not satisfy both of these criteria is insufficient. As recent history has proven, court orders, consent decrees, and other out-of-court settlements have failed to prevent Microsoft from abusing its monopoly. ANY SETTLEMENT THAT GIVES MICROSOFT THE SLIGHTEST CHANCE OF CONTINUING ITS ANTI-COMPETITIVE BEHAVIOR MUST BE DISMISSED! Not only does it make real, rational sense, it is also the law.

Why must the current proposed settlement be dismissed? Because it fails both of the listed criteria.

In regards to point (1), the only real "punishments" being levied are minor. If the settlement is accepted, for example, Microsoft would no longer have absolute control over the appearance of the Windows desktop. Is this really a punishment? Windows already has, "integrated" into it, software for multimedia applications and Internet access. Windows favors such software whether or not it is prominently displayed, and users are *very* aware, thanks to marketing, about what is and is not "integrated" into their computer's operating system no matter what icons appear on the desktop or what items appear in the Start menu. Software from other manufacturers must be independently purchased or downloaded, and then installed. And even then it may not work properly with Windows (witness Microsoft's court-proven attempts to handicap non-Microsoft software). Users are aware of these issues. Do you really think changing the appearance of the desktop will really change the behavior of users and Microsoft? Another prominent "punishment" of the settlement: the proposed giveaway of hundreds of millions of dollars of PC-compatible hardware and Microsoft software to school districts, is again NO PUNISHMENT AT ALL!! The value of these giveaways, about \$1 billion, is not punishing to a company with many times that amount of cash in the bank! It can be argued that giving computers to needy schools is a good thing. For the sake of argument, I will agree that this is a good thing, but this settlement all but guarantees that such giveaways be of a nature that benefits Microsoft and only Microsoft! IS IT REALLY "PUNISHING" TO "FORCE" MICROSOFT TO GIVE MICROSOFT'S OPERATING SYSTEM SOFTWARE TO HUNDREDS OF MILLIONS OF AMERICAN CITIZENS WHEN THE COMPANY IS GUILTY OF EXTENDING AND PRESERVING A MONOPOLY OF OPERATING SYSTEM SOFTWARE?!!! How can such a move be considered a punishment?!!!

In regards to point (2), the settlement does *nothing* to actually inhibit Microsoft's maintenance and extension of its monopoly. In fact, if the settlement takes effect, and Microsoft is allowed to supply Microsoft software to school districts, the government and pursuant states will be actively enabling the extension of Microsoft's monopoly!!

If Microsoft has a monopoly in PC operating systems, as has been proven, then the settlement should do the *opposite*! It

should *curtail* Microsoft's monopoly. Such remedies must also be true *punishments* in accordance with point (1).

It is difficult to say what combination of remedies can be specified that are both legitimate, real punishments for a law-breaker that also prevent the law-breaker from continuing in its criminal activities.

But it should be obvious that the current proposed settlement of the case is woefully inadequate.

January 21, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

Microsoft is the best thing that has happened to the IT industry and I cannot imagine where we would be were it not for the innovation of Microsoft and companies like it who are willing to press for change and increased productivity. I recently read a government survey of strong American companies that ranked Microsoft at number two. It is therefore amazing to me that a company that is supposed to be held in such high regard by the government is being pursued so vigorously by the legal system. In my estimation, this type of litigation is in total opposition of the concept of free enterprise and has done a wealth of damage to the country's economy, and the way the country's government is viewed.

Microsoft deems the settlement as fair and has made several strides to honor the terms of this settlement.

They have agreed to make it much easier for competitors to interoperate in the Windows environment, submit the decisions of a technical committee, and have agreed to grant intellectual property license and release internal protocol to competitors. These are small examples of Microsoft's efforts to cooperate with the terms of the settlement.

I am truly looking forward to this matter being wrapped up as soon as possible. There is really no good that can come from continued litigation. In fact, wrapping the case up now will be in the best interest of the economy, as it would give Microsoft the opportunity to refocus all its attention on creating new products.

Sincerely,
Robert Johnson

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I have had trouble seeing Microsoft as a malicious monopoly. It appears to me that Microsoft is powerful because of the demand by everyday consumers for its products. American economists claim that if you build a better mousetrap, you will experience success under capitalism. This appears to be case, except when dealing with Microsoft.

Although the settlement calls for more concessions than Microsoft may have wanted, it realizes that settling the case sooner is better than later. The longer that this case proceeds, the greater the risk that our country may lose its competitive advantage within the world technology market. Also, let us not forget the devastating effect that a break-up of Microsoft would have on the IT industry as a whole. The loss of standardization and inoperability that would result would almost certainly stalemate the software market for years.

I feel that Microsoft's concessions have gone above and beyond what the states called for. Microsoft is more or less opening its patents and products to its competitors in an effort to stimulate demand for non-Microsoft products. Furthermore, there is a technical oversight committee that will ensure Microsoft's compliance with the terms and conditions of the agreement. Most importantly, competitors will be allowed to sue Microsoft directly when they feel that they have been treated unfairly, thus avoiding another debacle at the federal level.

Thank you for providing this platform for my opinions, and for taking the time to hear my thoughts.

Sincerely,

January 20, 2002

Attorney General John Ashcroft
Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft,

I am writing in regards to the Microsoft antitrust case. Let me begin by saying that I do not agree with everything that Microsoft has done, but I understand that in a capitalist economy, the market will choose who is granted success. There may be issues of the antitrust case that have merit, but we should fix these problems and move on. The longer this case goes on, the more that lobbyists' concerns are put before the end users."

The Department of Justice and Microsoft have reached a settlement agreement that has already been approved by nine states. This settlement is both fair and reasonable, and the fact is that under the settlement, Microsoft will grant computer makers new abilities to reconfigure Windows to access non-Microsoft software. For software companies, Microsoft has agreed to document and disclose for its competitors various interfaces that are internal to Windows' operating systems products. This will make the software more efficient, and, as mentioned, the hardware makers will be able to access it easier. That will spur competition. It doesn't make sense to spend scarce resources on issues that have already been resolved. This case has been harmful to the economy and has forced the industry leader to turn their focus from innovation to litigation. It is time to resume business as usual. Let the competitors compete and the leaders lead. The consumers should decide what companies will succeed, not the government.

Sincerely,
Steven J. Rovell

Subject: Economic Liberty

To the District Court Judge:

When I shopped for my first computer I went to a store that exclusively sold Macintosh. The saleswoman gave me her pitch and let me examine a working computer, yet she was not successful in demonstrating the superiority of the system over my Dad's PC. I'd been told by friends that the Mac was easier to use, was better for graphic art creation, and they had urged me to choose a Mac. But when it came to the hands-on demonstration, I could not see any advantage, and if there was one, the saleswoman didn't know how to show it.

I went to CompuServe and was greeted by a salesman from Packard Bell. He gave me a thorough tour of his product. He answered all my questions clearly and with elaboration, and demonstrated all the product's advantages. I would get more of everything I wanted on that computer for a lower price than the Mac, plus more programs were available. In my judgement I was getting more for my money, so I bought the PC. I'm still happy with it nearly 4 years later.

My Windows system came with the Internet Explorer browser. When I started building a web page, I learned that different browsers display web pages differently, so I went over to Netscape and downloaded the Navigator so that I could view my pages through the two most common browsers, and make sure they'd look good to most viewers. While I was using Navigator to check my pages, I also examined it to see whether I might prefer it to IE. I didn't. My dad also downloaded the Navigator and used it for awhile, but had some problems with it and went back to IE, downloading the latest version off the "Net for free.

I am a free adult, capable of exploring the market and making my choices without the

government interposing itself between me and the companies offering their goods. Microsoft made it possible for me to get more of what I wanted for the price I could afford. I had full access to Mac on the market, as well as to Netscape Navigator. I freely chose to try my options and to buy what I wanted according to my means and my own standards.

That is how the free market is supposed to work. Microsoft did not threaten me or anyone else with fines, imprisonment, or any other form of coercion. I do not see the company as a threat to my or anyone else's liberty.

I cannot say the same for the anti-competitive tool used by the less successful against their more successful competition: Antitrust Law.

Please protect the right of the successful to the fruits of their achievements. Leave Microsoft alone.

Sincerely,
Barbara A. Himes

Subject: fair settlement
to whom is concerned,
is the MS settlement adequate?
more than adequate . . .

in my industry, specifically publishing, I would ask . . . where was the gov in the '60s, '70s, and early '80s.

this was the infancy period when chaos reigned. no common op systems, no common disk formats, no gov effort to establish standards. so what happened? the public "users" sorted their way though the mess and selected the system that best provided a clear path to the future.

and what did the future hold . . . legal morass. A gov initiated suit where MS is said to injure "consumers". A suit where not one real consumer was called to testify. A suit where only MS competitors whined their laments to a judge who requires 3 names just to know who he is. probably by now you know how I feel.

MS op sys with their Office applications, and Adobe applications, with Intuit, with . . . is the any end to the list, has made my work easy. In the '50s I needed 10 semi-trailers to handle 5,400 fonts, today I hold them in my hand. In the '50s it took 3 people 8 hours to compose a newspaper page . . . today 1 person creates 16 pages in the same time.

I can paginate 500+ catalog pages in 4 hours. I helped create this MS monster . . . and I would have to do it again.

please allow the current judgement stand without alteration.

please don't allow further penalties that will injure MS or injure consumers, especially as in the "tobacco suits" where injured smokers are not aided by states languishing in their spoils.

respectfully

 Thomasin LaMachia
 January 16, 2002
 Attorney General John Ashcroft
 United States Department of Justice 950
 Pennsylvania Avenue.

NW Washington, DC 20530-0001
 Dear Mr. Ashcroft:
 This lawsuit against Microsoft has been going on from the beginning. Instead of fighting on issues both sides engaged in bitter accusations and posturing.

It is therefore preferable that there is a settlement. It will prove for Microsoft to mend some of its fences by promising to end its retaliatory practices and even change its licensing and software development. Some of the terms are really fairly drastic such as Microsoft's distribution of its codes, but in my hope that all the terms will lead to end this debacle.

I am writing to convey my support of this settlement, along with my disappointment that this matter could have ended with a little more grace, and a little less cynicism and spite.

Sincerely,
 Thomasin Lamachia
 President

MTC-00014631

From: Ron Keller
 To: Microsoft ATR
 Date: 1/22/02 11:45am
 Subject: Microsoft Settlement
 (All opinions presented are those of Ronald Keller exclusively and do not necessarily represent the opinions of any other person or organization)

To whom it may concern;
 As a voluntary user of Microsoft products, I think that it is critical that the court hears my opinion. I have been trained in and used Microsoft products for seven years as a computer professional. I have had the opportunity to use products and operating systems from many corporations including Macintosh, Linux, Corel and several others. I have found Microsoft products easier to use, more consistent, more powerful and more compatible than any other companies products. I find Microsoft's integration of common computer functions, such as the Internet, Local Area Networking and Multimedia functionality provides a comfortable, simple and entertaining experience.

The court seems to be insinuating in this case that I am somehow a helpless victim forced to use Microsoft's products. This is completely false and insulting. I have freely chosen to use their products after using the products of many different companies. Microsoft, in my opinion, produces the best available. It is patently untrue that I am forced into the Windows environment as the continued popularity of Macintosh products and Linux products attests. I could have used one of these products. I chose

Microsoft. As a consumer, I have voted with my wallet. I question that the court has the right in a free market to change that vote. Microsoft's success is a threat to no one. There is no such thing as a true monopoly in the rapidly changing and advancing technology market. Microsoft continues to be successful not through throttling competition, which is not possible, but through producing a superior product. The moment Microsoft stumbles from their high quality standard, which may never happen, another company will be there to pick up and run with the ball they've dropped.

The court should be reminded that it is not consumers which have initiated this suit. Consumers have overwhelmingly shown their support for Microsoft in several polls. This suit was initiated by Microsoft's competitors who have been unsuccessful against Microsoft in the market. Unable to achieve their goals through fair competition, they have come to you, the courts to attempt to do so by government force.

Economic and market policy should not be set by such failed corporations. Such a policy is a condemnation of success and praise for failure.

I do not wish to see my nation enacting policy which punishes success in this manner. The American Dream is the ability of a person to rise based on his ability and willingness to work. If the suit against Microsoft is successful, it sends a clear message, "Don't become too successful or we'll punish you for it."

We should be praising and looking up to self made men and women such as Bill Gates, not condemning them.

All of this is in direct relation to what our government's, and any government's, most important role is; protection of our individual rights including our right to property. Microsoft has earned its place in the market and its billions through its own productive effort. It has neither stolen nor used force to achieve this. The reason for the existence of government is to make sure that that success is not taken by force. It is not the role of the government to take Microsoft's or Bill Gate's years of hard work and success away from them because a few lesser competitors were unable to be better.

Thank you,
 Ronald Keller

From: Travis Butler
 To: Microsoft ATR
 Date: 1/22/02 12:20pm
 Subject: Microsoft Settlement

I am extremely disappointed with the proposed settlement with Microsoft Corporation. Among the reasons why I think this settlement is a bad idea:

1. It appears to contain no significant punitive action for acts that Microsoft has already committed. For all practical purposes, Microsoft has succeeded in the attempt to dominate the web browser market that was the subject of the original complaint; Netscape's browser product has been

marginalized in the software market, and Netscape itself was forced to sell out to America Online—at which point it has virtually disappeared as a moving force in the software arena. This is, in my opinion, exactly the sort of anti-competitive act the antitrust laws were intended to prevent. While I admit this is essentially a fait accompli at this point, and that very little if anything can be done to reverse this result, I believe Microsoft should receive a severe punitive judgement for its actions in this case—both from the standpoint of abstract justice, so that it should not "get off scot-free" for its successful monopolistic practices, and as an incentive to behave better in the future. I believe the latter point is especially important, as:

2. Microsoft has shown little sign of changing its behavior, even in the face of the ongoing antitrust case, as evidenced by the release of Windows XP. Windows XP contains multiple examples of the exact same behavior that led to the original complaint, taking various functions that were once provided by third-party software and incorporating them into Windows XP. While I am somewhat ambivalent about this point—as the included functionality *does* provide a benefit for the consumer—I believe this could have been accomplished in a more competitive fashion, such as licensing one or more of those third-party software products and including them with Windows XP, instead of putting them out of business by creating their own versions.

3. I have very little faith in the enforcement provisions of the agreement. The 1995 antitrust suit that formed the roots of the current case included similar enforcement provisions, and proved to be singularly useless in preventing Microsoft's anti-competitive behavior.

Thank you for your time.

Lorenz Kraus,
 Albany, NY USA

I am vehemently against cutting down successful people to make way for weaklings.

A society that cuts down its most productive for its least productive becomes an inhuman society, where savages like Stalin and Hitler or Bill Clinton rise to the top using hatred and envy as their tool for taking power. Bill Gates has been a weak advocate for himself and his company. That is why this case has dragged on for so long. He is not for freedom and innovation as much as he thinks because he supports the anti-trust laws.

He is not my hero. But, the fact remains that ripping down successful companies allows the Enrons of the world to take over.

How long has the Justice Department attacked good people and ignored the bad?

All this time Microsoft was producing real new products, while Enron was screwing people over. Where was the Justice Department?

When terrorists were plotting to destroy freedom, the Justice spent its time attacking Elian Gonzalez. The evil of that policy is in the body count at Ground Zero.

There is something viciously wrong and dangerous in the choices made at the Justice Department. Hard-core pro-freedom Americans can see that.

The Microsoft case illustrates that we no longer live in a free country.

It's basically illegal to be "all that you can be." The Anti-trust laws don't allow it.

The anti-trust laws are anti-American.

Microsoft has been attacked for shotty products and for market domination.

Look at that contradiction. A company whose products truly fail the customer loose market share. Yet, the government thinks there's a crime going on there.

There is. It the crime of evading the contradiction.

The crime is the propagand campaign by liberal fascists who want the state to regulate and dominate the marketplace.

There is injustice in the marketplace. It is the unregulated intervention of government in our lives, in our schools, in our hospitals, and our markets.

The injustice is tipping the balance of good companies towards the bad.

As a court, your job is to ensure justice. Now is the time to publicly absolve Microsoft of any wrong-doing and apologize to the millions of Americans who have lost over \$5 trillion in the stock market collapse caused by the USG.

Throw this case out of court.

It's the least you could do.

 Attorney General John Ashcroft
 U.S.Department of Justice
 Washington, DC 20530

Dear Mr. Ashcroft:

I write today to give my support to the settlement that was reached between Microsoft and the U.S.Department of Justice. This settlement is fair for all parties involved, and the remaining states should settle instead of pursuing litagation against Microsoft.

Microsoft has agreed to license its Windows to the twenty largest computer makers on identical terms and conditions, including price. These are heavy hitters of the IT industry, and they will now be able to collectively leverage an extreme amount of power against Microsoft. Also, Microsoft has agreed not to retaliate against software or hardware developers who develop or promote software that competes with Windows or that runs on software that competes with Windows.

I urge that no further action be taken against Microsoft on the federal level, and the settlement be accepted by the Justice Department. This settlement is strong enough for any reasonable person.

Sincerely,

Joe Yarbrough

 inetgw.letters@capitalis. . .

Antitrust legislation is immoral, evil and ultimately destructive. Our Supreme Court declared: "The historic phrase "a government of laws and not of men" epitomizes the distinguishing character of our political society. . . . [L]aw alone saves a society from being. . . ruled by mere brute power however disguised." This principle is completely flouted by antitrust laws that function in a completely arbitrary manner. Banning "unfair" trade practices and "unreasonable restraint of trade" is a dangerous and pernicious joke. "Unfair" to whom? "Unreasonable" by what standard?

Under antitrust one can be punished if you charge less than the competition (dumping), the same as the competition (collusion) and more than your competitor (gouging). The list of companies betrayed by this vicious practice reads like a who's who of success and productive achievement: Microsoft, Intel, McDonnell-Douglas, Northrup-Grumman, Standard Oil, Alcoa, DuPont, IBM, American Airlines, Wal-Mart and many others. All these companies were vilified not in spite of their record of success but because of it.

The American spirit is embodied in the success of the individual who triumphs despite the odds— he who creates wealth through voluntary trade for mutual benefit. Our antitrust laws represent the exact opposite kind of philosophy—the philosophy of envy and of hatred of the good for being good.

Repeal antitrust laws and let Microsoft in peace.

 Subject: Microsoft Settlement
 Attorney General John Ashcroft
 US Department of Justice, 950 Pennsylvania Avenue, NW
 Washington, DC 20530-0001

Dear Mr. Ashcroft:

I want to take a moment to express my support for the settlement reached between Microsoft and the Department of Justice. I believe the settlement is clearly in the public's interest and gives everyone involved a chance to move forward.

After looking over the terms of the settlement, I believe Microsoft has made significant concessions that will require major adjustments in their past practices. For example, Microsoft will provide to its competitors various interfaces that are internal to products on the Windows operating system. This provision represents a first for antitrust settlement. But Microsoft realizes that the best course is to put this case to bed and wrap up this suit.

The settlement, in my opinion, will also boost the sagging economy. It will also provide consumers with more choices, which will give them the freedom to choose non-Microsoft products if they so desire. So I hope your support of the settlement will continue without further action on the federal level.

Sincerely,

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into

the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Carole A. Weston

Washington, DC 20530-0011

Dear Attorney General Ashcroft:

I have been in business for some time and have observed that there have been some reasonable settlements that have come from the prosecution of anti-competitive practices cases and there are some that leave consumers and businesses worse than before the settlement. I do not believe that measure proscribed by Judge Penfield Jackson would have helped the consumer or business in general. The proposed settlement appears reasonable to me.

Therefore I support the ending of this three-year litigation. Let Microsoft devote 100% of its efforts to developing and supporting innovative new products that are easy to use and universally compatible. In the past three years the company has diverted too much of its attention to defending themselves in this lawsuit, and the net result is that they have been spending less time innovating. This settlement appears to offer reasonable terms and, bringing it to a close now will be in the best interest of our economy, and the consumers that want to use a rich range of software applications.

The settlement imposes several specific restrictions and obligations on Microsoft's business practices. "I believe that these restrictions insure that fair competition will not be jeopardized.

Microsoft has agreed to design future versions of Windows that will promote non-Microsoft software within Windows. These are benefits that can help consumers and help stimulate economic growth.

To end this litigation now is in the best interest of American consumers, businesses and the economy in general. Thank you.

Sincerely,
Richard Evans

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to you today to express my support of the Microsoft antitrust settlement. Three years have now passed since the inception of this case against Microsoft. During this time much money has been wasted over this issue. Considering the recent budgetary deficits, the exorbitant amount of money spent over this antitrust issue is increasingly perplexing. To add to this fact that our nation is currently in a wartime period, any continued waste of funds would be ridiculous. The Justice Department must enact the terms of the settlement at the end of January.

Further, if anyone was to believe that the terms of the settlement were not harsh against Microsoft, they are very wrong. Microsoft will now have to disclose the protocols and internal interfaces of the Windows system. In addition to this, Microsoft has agreed to the formation of a third party technical review board. This board serves the purpose of ensuring that Microsoft complies with the terms of the agreement. Thus, anyone that would worry whether or not Microsoft would enact the terms of the agreement should be reassured.

Finally, I believe that the Justice Department should enact the settlement quickly. No more funds should be wasted.

Sincerely,
Ed Schoenharl

The views expressed here are my own and in no way represent those of the company I work for or the employees of the company. I work for Microsoft as a tester. Three years ago I was failing in sales and my wife and I were struggling to make ends meet. I took a year's worth of classes and next thing I know I'm working as a contract employee for Microsoft. Hard work, dedication and creativity are rewarded here and in less 7 months I was hired as a salaried employee. I'm now working up to a managerial position, and have just bought a brand new four bedroom home for my family on just my salary. My story is common for a lot of my fellow employees. None of this would be possible if Microsoft wasn't growing and increasing it's market. This company is a prime motivator of the computer industry, it's not far off to say if Microsoft sneezes Silicon Valley catches a cold. Damage Microsoft and what will you do to the small companies struggling to become the next Microsoft?

As for Microsoft being a monopoly? What are you talking about? If Microsoft were the all powerful, industry dictating, monopoly you think it is we would have released Windows 95 and told the world to love it or leave it. There never would have been Win98se, WinMe, Win2000, WinXP and we wouldn't be working on the next version. Everyone here knows that we're in constant, high pressure competition with every brilliant Tom, Dick and Harriet out there with the next big idea.

One thing about the whole browser issue, do you really know what you're talking about? I test our browser and do so with Opera, Netscape, AOL and a load of other lesser known browsers running in tandem with Internet Explorer and MSN Explorer. I regularly delete IE and MSN Explorer from my machine and install one of many other browsers and use them instead. If the browser/OS were such an issue could I do that? Every user can easily download Opera and run it. Every user can sign up for their local Mom and Pop ISP or EarthLink and use them to access the Internet.

Dear Mr. Ashcroft: I was extremely pleased to find out that the federal government had reached a settlement with Microsoft.

Although I felt commencement of this litigation was unwarranted in the first place, after three years I know the best thing for the country is to settle and move forward. The Justice Department negotiated a very comprehensive agreement with Microsoft that will require numerous concessions from the company. One requirement involves Microsoft designing future versions of Windows that provides a mechanism to make it easy for computer makers, consumers and software developers to promote non-Microsoft software within Windows. This will give consumers the freedom to add access to non-Microsoft software onto their computers. Also, Microsoft will be monitored by a technical committee to assure compliance with their obligations. Ending this needless litigation will allow Microsoft to focus on new and improved products. I am sure these products will continue to be supported by consumers who know that Microsoft products are the best.

Sincerely,
Jill Bowling

On behalf of the Ohio Taxpayers Association, and our over 5,000 Ohio members, I would urge that the Justice

Department adopt a settlement with Microsoft and not pursue any further legal action. Thousands of Ohioans are employed in well paying jobs because of the work of Microsoft, in addition, many more Ohioans are shareholders in the company. The only thing these lawsuits have succeeded in doing is to drive share prices of technology companies down, and drive unemployment up. Further litigation would only worsen this situation.

Subject: Microsoft Anti-trust

I have been following with interest the current proceedings in the Microsoft Anti-trust trial. While I admit that Microsoft has for the most part, a positive influence in the computer industry over the past two decades, their actions over the past few years have begun to bother me. While I am concerned somewhat about their marketing techniques, which allow them to maintain their operating systems monopoly, I am concerned that the lack of competition is stifling the computer industry in producing solid, stable and secure products.

I have used Microsoft products for years, first with DOS and later with Windows. With each new version, I have heard that this version is more stable than the last. I am a technical user who is always working with my system, installing and removing software. On the older Windows 95/98 platforms, I normally rebuild my systems twice a year when they become unstable. Even with the newer Windows 2000 professional, I still rebuild every eleven to twelve months. Each rebuild costs me at least a day to reload and install software and patches. I also use Linux based systems on a similar basis and do not run into this type of problem at all. I have had Linux systems run for years without the slightest instability. I understand that operating systems are not perfect and have defects. However, Linux has incentive to fix its problems.

Security is also another issue that concerns me. As part of my job, I maintain our organization's anti-virus software. Because of the constant influx of new viruses, this software must be maintained in on a constant basis. Even with constant attention, the release of a new virus can stop the Internet cold until the infected systems are found and disinfected. Looking at the source of the infection, we find that the majority of viruses are caused by defects in Microsoft. Many defects have not been caught though several versions of the products. The damages to a single virus can run into ten to hundreds of millions in damage. This damage is harmful to the industry as a whole and to our national infrastructure because the frailty of the software.

Microsoft has now announced that they will make security a top concern. This comes after major issues with XP that have even gotten the FBI involved. From my long experience with technology, I know that fixing the problem will not be as easy as

Microsoft wishes us to believe. As with any design, the further along in the design process, the harder it is to make fixes. After the implementation, the cost becomes prohibitive. Meaning, we might not see a secure version of Windows until the next release, several years from now. I am sure Microsoft were more concerned with pushing Windows XP out the door before the court had a chance to review their latest product. However, this is a bad practice which puts their personal interests above the country's.

The question becomes, what is wrong with the settlement as it now stands. First, the settlement does nothing to address Microsoft's ability to maintain its monopoly in the operating system market. This is bad because Microsoft claims that it innovates it products in response to market needs. However, with no competition Microsoft has grown complacent. Other operating systems such Linux and OpenBSD have already addressed the security and stability issues plaguing Microsoft products. However, because they do not hold market share large enough to threaten Microsoft, as would happen in a thriving open market has not responded to these innovations. In a way, Microsoft's plan for the future reminds me of the old USSR's planned economy. While this plan worked for a while, the lack of open market forces eventually doomed it.

I submit that to follow the current agreement put forth by the Microsoft and the Department of Justice is leading us down a path that has not worked in the past and is not healthy for our country or economy in the long run. A system which promotes healthy competition in the technology industry and does not allow one company to illegally maintain a strangle hold is needed to protect us from this future.

Subject: Proposed Final Judgement—
Insufficient—

Re: Proposed Final Judgement US vs. Microsoft

Microsoft has been found guilty of illegally using monopoly power to further its commercial gains, stifle competition and harm the consumer, and illegally sustaining and extending monopolies in distinct software markets. This letter is to inform you of my own strong conviction that Microsoft Corporation has shown by its past conduct that it cannot be trusted to abide by its own legal settlements. The proposed Final Judgement is weak and contains serious loopholes. It was negotiated in haste and under pressure to settle.

I urge the Federal Government to take the strongest action in this case, including the breakup of Microsoft, to create a level playing field for technology companies and to protect the consumer. Consider the proposals of the States of California (of which I am a resident), Massachusetts, Iowa, et al as reasonable and effective remedy in this case.
sincerely

To the people listening to us out here: Please hear my voice too, I am an american citizen and have been following the entire microsoft trial since the beginning with very personal interest. It reminds me so much of my classes long ago on busting up antitrust moguls of long ago, like Bell Telephone or Rockefeller or the railroad barons and its is so important. Please hear my voice: Its time for this example to be closed now, and settled. Enough time and effort and opinions and money have been spent; I'm sure everyone has learned as much as they can, and any further pounding on Microsoft is going to be ignored as the world moves on and has all its attention on the current war we are in and the recession. It is time to close this down and settle it and move on . . . Im sure, looking at the history of this country, that there will be more Microsoft companies in the future to use as examples, but this lesson has been learned and its time is over!

Thanks for your time and attention.

Dear Department of Justice, It is my humble opinion that now is the time to END the trial against Microsoft. Microsoft is a great company, and has done so much for the way we work and live. It has produced the best software ever made and has put it in the hands of ordinary people. Microsoft may not have been perfect, but they have paid for their indiscretion. What about the indiscretions of the competitors that are making so much noise?? Surely, we don't believe that THEY have none! This is about jealousy, and bringing the leader DOWN. Enough already. Let's get on with it. Let's start moving forward, not standing still. Let's get COMPATIBLE!

People WANT to be compatible. Anyway, we need to put this this behind us. It will be a sigh of relief for more people then the people who are complaining. To them I say, STOP COMPLAINING AND START CREATING A GREAT PRODUCT.

Thank you.

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing this letter to express my opinions about the settlement that was reached last November between Microsoft and the Department of Justice. I am in favor of this agreement because it brings an end to the three years of litigation that have been plaguing Microsoft, and hampering innovation in the entire IT industry. Microsoft did not get off easy in the settlement, and they have had restrictions and obligations placed on them that were never even an issue in the initial suit. They have agreed to turn over, to their competitors, interfaces that are internal to the Windows operating system, as well as coding in Windows that is used to communicate with other software. These terms go a little far, but what is done is done. We now need to put all of this behind us and move on.

Although I don't feel this case should ever have begun in the first place, I support the settlement since it squashes the litigation that has been hampering the technology industry for years now. The proposed agreement between Microsoft and the Department of Justice must be approved as soon as possible.

Sincerely,

Subject: Microsoft Settlement

The US DOJ should end the abuse of letting Microsoft Competitors use the court system to stifle Microsoft's innovations for their own selfish interests. It is ludicrous to take the position that a company such as Microsoft should be forced to provide a product that is inferior (i.e. removal of certain features) just so the competition can gain market share. This is America what is going on? This would have the consumer buying a lot of products separately working through the technical bugs of each product and buying later revisions of each product rather than have the option of buying all features in one clean package. This increases the complexity and wastes valuable consumer time and money. Oracle has apparently never even read their own advertisement where they brag about how their software package is integrated and replaces the piecemeal approach by a system that uses SAP Peoplesoft etc to handle corporate IT needs. Get real! You would think the government could attack a real monopoly like the Oil companies that truly do use OPEC to rig pricing or the Sugar Growers who are backed by Congress to unfairly elevate US Sugar prices. Now these are monopolies worthy of the name and Congressionally sanctioned. You would think the congressmen would be embarrassed by their own hypocrisy but some people have no shame.

Subject: Microsoft Judgement

I glanced over the documents and what I saw made me quite pleased. Microsoft has always said it was "innovate" but it has been innovate as far as strong arming non-Microsoft companies. I love the wording that stated that Microsoft can fairly compete based on innovation—boy, are THEY in trouble! :) . . . There are a lot of companies I would consider innovative: Sun, Apple, etc . . . Microsoft doesn't seem to be there—though, to be fair, they probably don't need to be. Like huge coffee companies that distribute "plain coffee" leaving the "special coffees" to smaller companies like Starbucks, Microsoft can offer "plain's/w" and leave "special s/w" to smaller companies. Also, breaking the stranglehold on what O/S and applications can be loaded on the PC is also good. If someone wants Linux and NOT Windows, then the OEM should be able to supply that. If someone wants Netscape and NOT Internet Explorer, the OEM should be able to supply that too! Forcing everyone into the same straightjacket for only Microsoft's benefit is not good for anyone—even Microsoft in the long run. Still, like a big kid

in the sandbox being told to "play fair", Microsoft will continue to "accidentally" toss sand at the other kids—even those kids who help make Windows more attractive because it is viewed as "threatening" (i.e. non-Microsoft). Having a supervisor on the corner of the sandbox (i.e. a TC representative at Microsoft headquarters) would be a good step to minimize that. Finally, my 2 cents as far as penalizing Microsoft. The settlement for Microsoft to give "billions" away of Microsoft s/w and old PC h/w to poor schools sounds good—until you realize that that \$495 MS-Office CD costs Microsoft only \$2 to manufacture! And putting Microsoft Windows in the Education with Microsoft Software benefits Microsoft far more than the poor schools—I bet Microsoft is wishing for "more punishment" like that! Hit them in the pocket book! Make them actually write out a check for \$2 billion and not the "fake money" they are proposing.

All in all, the judgment looks like a good thing . . . Keep the Microsoft Giant from squishing the little guys! Tony Biehl, Head of Computer Science Department, Columbia Union College

To whom it may concern: I have purchased many Microsoft products over the years. I do so because I believe Microsoft's products are superior to other products. I don't believe that I have been overcharged. Microsoft has been unfairly drawn into a lawsuit because they manufacture a product line that their competition is unable to compete with. Microsoft has competitors who each year spend billions of dollars trying to develop a product that will compete with Microsoft's products. No one is forced to buy Microsoft products obviously Microsoft has grown to one of the world's largest companies because of customer satisfaction. Please settle the lawsuit against Microsoft and let an innovative company get back to what they do best without the burden of an anti-trust lawsuit burdening the company.

I feel the settlement amounts to a slap on the wrist for Micro\$oft. Now Micro\$oft is back to thier arrogant ways because they know that with a Republican in the Whitehouse they can get away with anything. After all Micro\$oft gave them enough money to make the difference. I don't mind Micro\$oft being the leader in areas that they have better technology but they have used thier advantage in those areas (Desktop basically) to stifle competition in other areas where there products were/are inferior (Directory Services Word Processing Enterprise Servers). Micro\$oft has done some good things but in just about every occasion some other company did it first and Micro\$oft merely ripped off thier technology. Thier licencing fees for software are a joke. When people get educated and realize they don't need to pay hundreds of dollars to have the lattest office software and don't need all

the bells and whistles for most things they do Micro\$oft will suffer. This is especially true in homes with more than one pc. People spend the majority of thier time either cruising the net or reading email. Why buy a new pc with the latest Micro\$oft software to do this? Those who do are either foolish ignorant or both.

 Attorney General John Ashcroft
 US Department of Justice,
 950 Pennsylvania Avenue, NW
 Washington, DC 20530-0001

Dear Mr. Ashcroft:

I am writing you today to encourage you and the Department of Justice to accept the Microsoft antitrust settlement. A settlement has been reached, the terms are fair and the government should accept it. The states that have not accepted the settlement are simply dragging their feet, and I do not wish to see the Federal Government drag their feet also or spend anymore tax payer dollars on this issue.

Many people think that Microsoft is getting off easy, this is simply not true. The settlement was arrived at after extensive negotiations with a court-appointed mediator. Microsoft agreed to terms that extend well beyond the products and procedures that were actually at issue in the suit, simply for the sake of putting an end to the issue.

The settlement is fair and should be accepted. Microsoft, the technology industry, and the government all need to move on. The antitrust case needs to be put in the past and business needs to return to normal. Please accept the Microsoft antitrust settlement.

Sincerely,
 Kelli M. Adam

 Subject: Microsoft Settlement

Dear Mr. Ashcroft:

I am writing you today to express my opinion in regards to the settlement that was reached in November between Microsoft and the government. I support Microsoft in this dispute, and I believe this settlement will contribute to the economy and society.

This settlement contains provisions that not only allows Microsoft to devote its resources to designing and marketing its innovative software, but this settlement will also have a positive impact on competing companies. Competing companies will benefit from receiving more information from Microsoft about software, and companies can sue Microsoft if they feel the company is not complying with the agreement. Microsoft has also agreed to be monitored by a technical oversight committee. Microsoft has also agreed fully to carry out this agreement, for the sake of ending this three-year litigation.

During a time when there are so many issues facing us today, I believe we should rally up our energy and time into dealing with more pressing concerns.

Thank you for your support.

Sincerely,

Mary B. Jones

To Whom It May Concern:

Get government out of the antitrust field entirely. Antitrust litigation has become nothing more than an arena for unsuccessful competitors to cry and whine about the success of market leaders. Microsoft, like Standard Oil, and any number of other high profile antitrust cases is accused of controlling market share while prices to the consumer persistently decline.

Who cares if a company controls 100% of market share if prices decline? In fact, many economists would argue that you can only continue to gain market share if prices are declining.

Microsoft litigation was foolish in the first place and guided by politicians from states that were homes to Microsofts competitors. Not only should the whole mess be dropped but an apology should be issued to Microsoft and the public.

This would be an opportune time for government to vocally and prominently admit the failure of the antitrust paradigm. Please read Armentano's great book, "The Myths of Antitrust."

 Subject: Microsoft Settlement

I would strongly urge the Court to propose breaking up Microsoft into separate companies to insure that it does not continue to monopolize on its stranglehold on the PC market. Microsoft has shown that its behavior will not change even in lieu of recent injunctions or possible penalties. Forcing Microsoft to break up into two separate companies, one for the operating system only and one for the middleware such as Office and Explorer, would insure that other software and hardware companies have a fighting chance to compete on a fairly level playing field. I don't think that any other solution would be effective against a company so large and one that dominates a market as much as Microsoft.

Attorney General John Ashcroft
 US Dept. of Justice,
 950 Pennsylvania Ave. NW
 Washington, DC 20530-0001

Dear Mr. Ashcroft:

Microsoft has been the subject to court action for more than three years in the antitrust case: as they say, justice delayed is justice denied. You should support the settlement that was recently reached and allow Microsoft to give its attention to software development and not legal proceedings. Outside interests with ulterior anti-Microsoft agenda do not want this settlement implemented because they believe it does not harm the company enough. The fact is this settlement is very equitable. The settlement allows competitors to view Microsoft blueprints to create better software. This concession by Microsoft is very generous and only a fraction of the settlement.

Settling this case is the logical action at this point. Microsoft is one of America's most important companies, and is a very large employer. An improvement in Microsoft's situation could improve our nation's situation as well.

Sincerely,
 John H. Costello, 3611

Dear Mr. Ashcroft:

I write today out of concern over the settlement of the Microsoft antitrust suit. I

support the settlement you reached. It is past time to get this atrocious lawsuit over with. It is better to grow, better to build, better to innovate, than to destroy. Microsoft has grown its business from nothing, built the best software in the world, and introduced amazing innovations to worldwide audience of computer users. Let's stop the ankle biters who want to destroy Microsoft. Now, with the settlement, Microsoft will become even a better partner to its industry. Sharing internal interfaces and server protocols, while also licensing other intellectual property on reasonable terms; renouncing the standard business practice of exclusive marketing contracts; building flexibility to substitute non-Microsoft software in Windows; publishing a uniform pricing list for large competitors; and having an oversight committee visit its facilities to monitor the situation for five years will lead to growth of the Windows community of companies. I support the settlement and look forward to the end of this case.

Sincerely,
 Eugene Cook

 Date: 1/22/02 2:45pm
 Subject: Microsoft Settlement

To Whom It May Concern:

I am strongly opposed to the settlement plan being considered presently by the Department of Justice. I would like to explain why. I am an average home computer user with no special knowledge of computers. Over the years I have been frustrated by the relatively poor quality of Microsoft products and angered by their unfair, and shall I say underhanded, business tactics. There is Microsoft software on my computer (not Windows) that I cannot delete no matter what I do. There is code on my computer that prevents competing products from operating properly. I have found it challenging, to say the least, to NOT use Microsoft products, even though that is my choice.

The thought of children at school being indoctrinated into the world of Windows and Microsoft products gives me shudders. This is not punishment, this is complicity in the strong-arm tactics Microsoft has been using for years. I do not believe this is the intention of the antitrust laws in this country. Schools especially should have a CHOICE as to which products they use to educate our children, whether that's Microsoft, Apple, or other.

If competition is supposed to serve to improve the quality of goods and services, I suggest we allow that process to run it's course. It is simply contrary to our way of life and business to allow one company to succeed because they continually push the limits of what is fair in the marketing of their products. Please do not let us down.

Sincerely,
 Sydney Nash

 Subject: Microsoft Settlement

Microsoft is arguably one of the most innovative companies in existence today. Their undeniable impact on the accessibility of computers, and gains in productivity are only one reason Microsoft should be left alone. The people at Microsoft produce things they like, and are good enough at making their goods to earn a profit. What now does it say to the future geniuses of this new century if the life work of others is altered just because others can't come up with something better?

Some say that Microsoft has used its "monopolistic" power to prevent other corporations from competing. Microsoft has never had the power (and never could in our republic) to prevent me from buying software from a competing firm. Consumers still willingly, year after year, make Windows their choice over products from Apple, IBM, Sun, and Linux companies. No proposed legal remedy would improve these other companies' products. Since they can't win freely in the marketplace, their plan is to hamstring their better adversary. Punishing Microsoft only lowers the standards for every one.

Dear Mr. Ashcroft:

As a supporter of Microsoft, I write you with interest in the recent developments of the settlement in the anti-trust suit. The terms of this agreement are fair and reasonable and should be enforced as soon as possible. These terms include bold changes toward the technology industry and should be allowed to speak for themselves.

Microsoft has agreed to some very bold changes in the technology industry that include licensing and marketing alterations. They have also agreed to make changes in design, which allow non-Microsoft companies to install their software on new versions of Windows. All of these concessions will be monitored by a committee that will oversee the enforcement of this agreement. The technology industry is ready to use this settlement as a guideline to move forward and get back to business. Let us not be the ones to slow down the process that we initiated in the first place. Please help to stop any further actions against this agreement and help get our economy back on track.

Microsoft Settlement

To Whom It May Concern: This letter is my public response to the Microsoft settlement. Most of my adult life has been influenced by computers and, specifically, Microsoft operating systems and applications software. I have also used several programs that were specifically targeted by Microsoft in its monopolistic fervor. Two that immediately spring to mind are the following:

—DR-DOS, an operating system from Digital Research, was the installed alternative to MS-DOS and PC-DOS (from IBM) on my first IBM-compatible PC, purchased in 1988

—Netscape Navigator, the commercial successor to the NCSA Mosaic web browser, was my first browser, and the target browser platform of choice during my first few years of web design work (1996-1998) Until last summer, I was a devoted Windows user, one of the lucky few who had few problems with compatibility, system crashes, or even email viruses. This track record was in direct contrast to other members of my family who are less technically astute than me: their ignorance of virus scanning software and other difficulties in maintaining their systems resulted in many tales of hardship and confusion. At least three fresh installations of Windows have occurred in their household in the past year; I myself found myself reinstalling last summer, after unexplainable system instabilities began affecting my ability to work. I also discovered that the latest generations of the Linux OS had become significantly more user-friendly, and since it is free, I decided to give it a whirl.

Again, I am technically more capable than the average computer user, and thus the transition to Linux was not difficult. I have found ways to do virtually every task that I used to do under Windows. Free software exists to rival, even exceed, the software that I paid thousands of dollars for in my Windows environment. However, there is one very interesting gap in most free software's capabilities: the ability to read and write Microsoft-compatible file formats. This feature gap is a shining example of Microsoft's monopolistic practices: the large percentage of the world uses Microsoft Office and its proprietary file formats, which encourages, if not requires, other businesses and individuals to purchase Office in order to communicate. Although there are dozens of ways to send a letter electronically, most are unfamiliar to the average typist, and thus the default format, "Microsoft Word .doc" is the ubiquitous, de facto standard. Unless a competing software package can flawlessly read and write this format, the public at large will be uncomfortable adopting this software, no matter what other wonderful features the program may have. The result is, obviously, a competitive advantage for Microsoft through predatory proprietary controls.

Until and unless Microsoft is required to publish complete specifications of all of its file formats (both existing and in the future) its monopoly will remain uncontested. Open Source software developers can reverse-engineer the Office file formats at significant cost, but never at 100% accuracy. Moreover,

Microsoft can change their file formats at a whim, disseminating the patched code for their software to read and write the new formats via automated update procedures or, better yet, through high-priced "upgrade releases," rendering competitors' efforts useless. Most of the world uses public file formats and communications protocols; the Internet itself was built using common, open-source software. The proposed settlement's requirement to publish the Windows API is a good start in this direction, but unless all of Microsoft's file formats and protocols are required to be kept in the public domain, competition, as well as cooperation, will be stifled.

Undoubtedly, Microsoft has improved the computer industry in many ways, but it has also used its success and power to crush competitors, stifle innovation, and infiltrate the Internet with proprietary software. The antitrust decision made clear the abuses Microsoft is guilty of. The penalty phase should not be toothless. Without controls, Microsoft will continue to put its own domination over the best interests of the world, resulting not in competition, but stagnation. Left unchecked, we are condemning the high-tech sector of the entire world economy to the direction of one monopolistic company.

I urge you to consider the future of computing in light of the past behavior of Microsoft Corporation. Thank you for your attention.

Sincerely,
Christopher M. Lake

MTC-00014701

From: Espey, John
To: Microsoft ATR
Date: 1/22/02 3:00pm
Subject: Microsoft Settlement

Dear sir or mam,

I would like to voice my opinion on the treatment of Microsoft and its founder, Bill Gates. I use a few Microsoft products for things at which they do particularly well (Excel, Windows 2000/XP, Outlook, Internet Explorer, and a few others). These products are excellent products despite the fact that there are no real competitors in the marketplace. None of these products has had any serious competition for the last few years, and yet they continue to get better with each new release. My point is that Microsoft does not think the same way that a typical federal employee or bureaucrat does. That is, Microsoft realizes what so few in our society today do, that in order to remain competitive in the marketplace, one must wake up every morning with a renewed focus on how to add more value for less money to one's customers. This is how Microsoft destroys their competitors, and this is why Oracle, AOL, Sun, IBM, Apple, Novell, et al. are so scared of this company. They are choosing to battle Microsoft in court under the ambiguous veil of the public good, rather than in the marketplace via innovation.

Well, I represent the public, and I do not feel that Microsoft has harmed me in any way. I am not a helpless victim as David

Boies would have you believe; I can make a choice for what software I want to install on my own machine. I do not need a legislator deciding what software needs to be installed on my machine. I want that to be decided in a free market. And if there are no competitors capable of surviving in the market with Microsoft, then so be it. The only way this can occur is if Microsoft provides a vastly superior product. While this may not benefit the owners of the competitors of Microsoft, it is certainly a tremendous benefit to consumers.

I truly resent the idea that a successful business is a threat to anyone. A band of thugs is a threat, a company that seeks to sell me products that are superior to those of their competitor is a good thing. I feel as if Microsoft is being attacked not because they are evil, but because they are good. What kind of message does this send to our children? Don't work too hard, otherwise your jealous competitors will sue you until you see your company broken in two? Please rethink the message you want to convey to the next generation of entrepreneurs.

I love my country because the express purpose of the government is to protect the right to life, liberty, and the pursuit of happiness. What these rights translate into is really one thing: the right to property. Without this right, no other rights can exist. Without this right, we would live in the Dark Ages or worse yet some backwards Middle Eastern country. Every person in this country has a right to their property as long as they aren't using it to coerce others. Why then is this right being denied to the shareholders of Microsoft? I think it is time to rethink the position that has been taken for the past 8 years about Microsoft. The owners, employees, and partners of Microsoft must be afforded the most basic of all rights. They must have the right to their own property and you must protect this for them.

Thank you for your time,
John Espey

From: Cliff Crouch
Subject: United States of America "versus" Microsoft???

Just when I think events can't get any weirder, they do: I go into a United States Post Office today, and encounter a poster touting, not the latest stamps, but Microsoft Windows XP—*plus* a Windows XP promotional CD-ROM display.

Yes, today is the "Martin Luther King birthday" holiday, officially observed throughout the United States, but this is the one post office in my hometown of Houston that stays open regardless (it's at Bush Intercontinental Airport).

I take care of my business with the clerk at the counter and am headed back out when I observe, mounted in the window, a full-size poster (with the ubiquitous "flat-green-landscape-against-blue-sky" theme of MS's latest marketing barrage):

Microsoft
THE DIGITAL WORLD IS CALLING.
Please take a free demo CD.
Microsoft Windows XP

I stand there mystified for a minute, and the clerk calls out, "Did you need something else, sir?"

I motion to the poster and say, "What's this all about?" By way of response, she bustles over to a corner of her workplace and fetches a promotional CD-ROM in a pasteboard slipcase: "Microsoft Windows XP — eXPerience the excitement!"

"Here ya go!" she says as she hands it to me over the counter.

"So, uh . . . did Microsoft buy the Post Office recently?" I ask.

"Oh, I think you can get these from UPS or FedEx, too," she says blithely, by way of "explanation," and goes back to work.

On my way to the door, I now notice a similarly themed Windows XP "dump"—that is, a cardboard display with a niche for holding two-dozen or so promotional CDs—sitting atop one of the tables in the customer area.

Neither the poster nor the cardboard dump even pretends to have any tie-in to the U.S. Post Office; it's just plain, unvarnished Windows XP puffery . . . the kind of material that Microsoft pays to run in print media and on TV.

Has anyone else come across anything else like this? And am I simply naive, or is there something profoundly disturbing about such shenanigans going on even as District Court Judge Colleen Kollar-Kotelly allegedly mulls the proper punishment of the Microsoft Corporation, an illegal monopoly, for violating U.S. antitrust law?

Bemused, befuddled, & bewildered, Cliff Crouch

I am just a citizen who uses computers at home and at work. I have read about the proposed settlement and have the following comments:

1. Microsoft clearly has monopoly power and they use that power to limit choices in operating systems and applications. As a result, consumers have limited choices that are expensive (try paying \$500 for a copy of Microsoft Office software—a fantastic price that is sustained only by monopoly market power).

2. Microsoft is wildly profitable because they have used monopoly power to extract an unreasonable price for their products

3. The solution is NOT to allow microsoft to settle the case by printing monopoly money (ie give "free software" to schools that costs them \$.50 a copy but credits them \$500—the monopoly price) AND extend their monopoly into the last area of the market they do not already control (education).

Microsoft is the Standard Oil of our time.

Subject: Re: U.S. v. Microsoft: Settlement

Information

from what I read concerning the revised proposed Final Judgment, it looks alright to me. I do have a concern however. The portion of a compliance officer sounds good. However, I am concerned about the compliance officer being appointed by Microsoft. I fear that Microsoft may abuse this by appointing somebody to this position who could be easily influenced by Microsoft. Thus determining that actions are compliant with the Final Judgment, even if such actions are questionable.

What I feel would be a good safeguard against this possibility, is that the Technical Committee would serve as a "supervisor" for the compliance officer. Meaning that the compliance officer would have to answer to the TC, and the TC making sure that the compliance officer's duties, and findings are unbiased in any way.

Thank you for allowing us, the public to have our input on the proposed Final Judgment against Microsoft. Having this avenue to submit our input helps me appreciate the judicial process even more, especially when major companies are on trial.

Sincerely,
Daryl Courtney

January 10, 2002

Dear Mr. Ashcroft:

I want to use this opportunity to extend my support for the settlement concluded between Microsoft and the Justice Department last year. I believe the agreement is good for citizens as it allows both sides to focus their attention to other matters.

The settlement is extremely stringent and will require many changes from Microsoft. One good example is Microsoft's agreement to document and disclose for use by its competitors various interfaces that are internal to Windows' operating system

products. To assure compliance with the settlement's provisions, Microsoft has agreed to the formation of a Technical Committee to monitor Microsoft. This committee will also take complaints from third parties who feel Microsoft is not complying with their obligations.

In the long run, I think the settlement will also be beneficial to our economy. It will free Microsoft to focus their attention on developing new products that will boost efficiency and productivity. Also, by taking no further action at the federal level, the government will be able to use resources for more urgent matters. This company has brought us into the 21st century in a fashion we could only have imagined twenty years ago. When are we going to stop punishing success? Lets put an end to this and get on with life!

Sincerely,
David Gorman

Subject: Microsoft Settlement

Your Honor, It is my understanding that the forthcoming settlement involving the anti-trust case against Microsoft in fact does not uphold what other federal courts have determined necessary to break-up this monopoly. It is my opinion that this deal should not be entered into and that an agreement that more closely reflects the rulings of the other courts be enforced. I am certainly no expert, but it would seem that this agreement simply benefits Microsoft and does not really promote free enterprise in their areas of technology and development.

Respectfully Submitted,
J. David Freer

To whom it may concern, I fear that the courts decision to force microsoft to donate computers to educational institutions is a mistake. I believe it would give microsoft an unfair advantage to influence educational PC users and young PC users. The educational market has been a large market for Apple, another competitor of Microsoft. I believe this settlement will not punish Microsoft for their illegal doings but only reward them in the long run.

Sincerely,
Dave Smith

Subject: Tougher penalties needed for MS

Dear Sir:

There is nothing new in Microsoft's behavior—their predation dates back to before the first finding against them. They showed their stripes back when WordPerfect, the #1 word processor by far (and still

arguably technically head and shoulders above MS Word even today) was trying to make the transition from DOS to Windows, and Microsoft was making noises about positive "co-opetition" with other vendors of word processors, spread sheets, etc. But WordPerfect was having tremendous problems, continually falling behind schedule because of conflicts with calls to the Windows OS that kept making the program crash. According to Info World insider article I read at the time, the internal slogan of the Windows programming team was "The Code's Not Done 'Til WordPerfect won't run." In other words, so much for the "Chinese Wall" between MS Program and Operating System teams. Even if they weren't trying to help their own programmers (which I'm sure they were); and even if the programmers weren't exploiting undocumented API's in programming MS's own applications (they were, and it's said, still are), it was still a joke because the OS team could sabotage the Independent Software Vendors (like W.Perfect) through making the API a moving target, and taking their time in informing the ISV (or possibly misinforming them).

Further, with all their holdings and activities now, they can leverage this kind of behavior much further than back at that time.

If this slap on the wrist is all MS gets after all of their anti-competitive activities, this Justice Department will be immortalized for its total failure to protect the whole American economy from one of the least responsible corporations of all time. I suggest watching the original Roller Ball movie with James Caan for a view of that world. Forget all the government-intrusion heavy remedies, though. The main thing is to open up the API's (not the entire code base) to level the playing field and levy major fines. And forcing a Linux Office?? That just lets MS start to dominate Linux. That's a real help????

Jim Keller
PO Box 84
Orangeburg, NY 10962

PS: I never worked for MS or WP and am only a semi-professional in this industry, but many people care a great deal about this case.

Attorney General John Ashcroft
U.S. Justice Department
Washington, DC 20530

Dear Mr. Ashcroft, We would like to take a moment to express our opinions regarding the Microsoft antitrust case. The settlement reached by your Department was fair and reasonable, and is sufficient enough to end this case. We see no need for further action at the federal level, especially while Microsoft is involved in negotiations with the remaining states to reach a conclusion.

Microsoft has made concessions that have set a new antitrust precedent. The company

will more or less allow the success of Windows to be a launchpad for the competitions' programs. Under the current agreement, Microsoft will allow computer makers to manipulate Windows to allow non-Microsoft programs to compete with Microsoft's programs. Most importantly, Microsoft has agreed not to retaliate against any company that engineers programs that compete directly with Microsoft. We fear that this case has had a rather negative impact on the IT industry as a whole and the economy. Putting this case behind us could have only positive ramifications on the market, and would ensure our country's place as the world technology leader.

Sincerely,
Ernest A. Beier, Jr.

From: Scott VandePol
To: Microsoft ATR
Date: 1/22/02 4:42pm
Subject: Microsoft Settlement
To whom it may concern

1. The proposed Microsoft settlement is not fair to the people of the United States. Microsoft will be allowed to print NEW monopoly money to settle its damages arising from the exploitation of the economy through monopoly power (i.e., give away software that costs the company almost nothing for each incremental unit but which is credited towards its damages at wildly overvalued levels due to its monopoly power). It costs Microsoft \$0.50 to make distribute a copy of Office software that it sells (only through monopoly power) for \$500. That is monopoly money, and Microsoft should not be allowed to settle its debts on this basis.

2. Microsoft proposes to settle its legal debt to the people by extending its monopoly into the only area it does not dominate—the education market. This is insane. This is rewarding a criminal enterprise. If Microsoft were to give away software to the education market outside of a settlement agreement, the government would rightly see this as an attempt to destroy a competitor—yet this is proposed as a settlement for monopolistic practices. Insane! I am just a citizen who uses computers at home and at work. I do not own any computer stock or work in the industry. Microsoft is clearly the Standard Oil of our time. In 1911 the DOJ had the courage to take on the largest and strongest economic private force in the nation for the sake of the people of the United States. How will history judge the current DOJ in its attempt to protect the people from Microsoft? I think the DOJ should feel the eyes of the future upon it and go for the correct answer that would restore true competition to all areas of the computer industry: break up Microsoft. In the long run, only this will restore competition to the marketplace.

To: Microsoft ATR
Date: 1/22/02 4:44pm
Subject: Re: U.S. v. Microsoft: Settlement Information

The proposed settlement seems inadequate considering the magnitude of Microsoft's monopolistic activities. In my mind there are some central issues that relate to the security of the country. The wide-spread adoption of the Windows operating system has encouraged a computational monoculture. Monocultures in complex systems are always more susceptible to attack and recovery is slower. In light of the September 11 event I would like to see a major adoption of a non-trivial number of operating systems and application suites by the government. For example—for a five year period all government purchases (especially in the military and other sensitive areas) would have to include a minimum of three operating systems with none of them accounting for more than 49% of the total. This would constitute enough business for growing players that they could devote the appropriate resources to building world class product. Apple's OS X is clearly good enough now as is Linux and some of the BSD flavors.

Dear Mr. Ashcroft:

I am very happy to hear the Department of Justice has reached a settlement. I firmly believe that this settlement is in the best interests of the state, the IT industry, and the economy. Microsoft opponents would like us to believe that Microsoft has gotten off easy in this settlement, but this is not the case. Microsoft has been made to endure three long years of litigation in order to arrive at the terms of this settlement. The terms of the settlement, in my opinion, are fair and reasonable, and, if adhered to, will do much benefit consumers and avoid future anti-competitive behavior. Microsoft has already proven its willingness to comply with the terms of the settlement. They have agreed to establish a uniform pricelist, grant intellectual property licensure to third parties, the establishment of a three person Technical Committee consisting of software engineering experts to help with dispute resolution. With the current recession and its devastating effects on the state and federal budget, is very important that the technology industry be allowed to concentrate on business now rather than being distracted by a suit of this magnitude. The public appreciates your efforts to resolve this as soon as possible.

Sincerely,
Richard Gardner

January 22, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft: I am writing to urge that the Department of Justice settle the long prosecution of the Microsoft Corporation. As a consumer, I am more than satisfied that I have not been harmed and in fact have greatly benefited from the products and practices of this company. No one disputes that they dominate the software market for PCs in many areas but, at least in my opinion, no one has shown that they have used their position to unfairly price products or prevent others from competing.

Microsoft has agreed to the terms of the settlement and has demonstrated their willingness to change business practices and give more access to competing companies. It seems to me that they have agreed to more than was fair and what was specified in the original suit. Prolonging this settlement will only hurt the consumer, prevent a good company from developing new and innovative products for the consumer and end up costing the tax payer millions. This suit has gone on already much too long. There are other priorities (like a recession, unemployment and the war against terrorists. Please use your good offices to pressure my state and the others who are holding things up to desist and let us all get back to business. Thank you for your time.

Sincerely,
Dale Cook

Dear Attorney General Ashcroft: I strongly feel that it will be in the public's best interest to stop federal action in the Microsoft case. This is why I am writing to urge your approval of the settlement that was reached in the case, and resist calls for those who want to keep the company tied up with litigation. I feel that the agreement is fair and reasonable, and has already proven extensive enough for nine states to approve. The agreement will require Microsoft to change the way it licenses, develops, and markets its software. It has agreed to stop retaliating against software and hardware developers that promote products that compete with Microsoft programs. Most importantly, these engineers and computer makers will be allowed to configure Windows so as to promote non-Microsoft programs that compete with the programs already included within Windows. Although these changes

seem to go against the principles of free enterprise and competition, Microsoft is willing to concede this in an effort to move the industry forward. Settling this case sooner, is truly better than later. The longer that the IT focuses on litigation, rather than innovation, the greater the risk that we may jeopardize our country's position as the world technology leader. I see no need for further federal action, and hope your office will see fit to allow the industry and the economy to move on.

Sincerely,
Edwin Miller

Subject: MICROSOFT SETTLEMENT

Dear Sirs:

I feel strongly that Microsoft's innovation in computer operating systems has seen the driving force behind the rapid expansion of computers into almost every business and home. Some business practices, while structured to further the growth of their company, have not hurt the consumer. To the contrary, their continuous innovations have consistently expanded the usefulness of computers at continuously lower cost. The antitrust suit may have had some merit relatively to their competitors but little or no value to consumers. The antitrust proceedings seem to have the tone of a vendetta rather than rational legal proceedings. The time has come to end it.

Sincerely,
Thomas and Beverly Thornton

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech

industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief. Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Margaret Sorrells

I am writing to you with the hope that one honest voice may be heard above the shouting and screaming of special interest groups across the nation. I'd like to start by stating that I have no financial interest in Microsoft whatsoever, nor do I belong to any organization that has said interests. I am coming to you, specifically, as a freedom-loving American consumer. Microsoft has, time and again, created the cheapest and most efficacious software available in its industry. I use Windows daily, and have found it both easier and faster than alternative products I have used (and there are many). Microsoft's software is, in a single word, superior. Microsoft is currently being penalized by a lawsuit raised, not by the consumers, but by those who failed to compete with them fairly, and seek special help from "Uncle Sam" to force their own software into the market. I don't want their slow and unreliable software, and as an intelligent, (mostly) free human being, resent the fact that you are attempting to remove yet another choice from me. Success and innovation should be rewarded in our nation, not penalized. Bill Gates is an icon of the American dream, and to steal/destroy/control his property is an affront to civilized society as a whole. It is your job to protect his, and the other Microsoft shareholders, rights, not to ingratiate upon them. Please, take this opportunity to show the citizenry that the government of our proud nation will protect the rights of its people, and not give in to lobbyists and talking-heads. Please, preserve our freedom.

Subject: Microsoft Settlement

It is obvious to the informed observer, that the Antitrust case against Microsoft is not a case of righting wrongs, but a legally sanctioned method for Microsoft's competitors to achieve, via the courts, what they cannot competently achieve in the open marketplace. Within the group, containing hundreds of persons that I have discussed this issue with, I have yet to find anyone who believes it to be anything else.

Therefore, it is my assessment that this antitrust case has and will continue to set the stage for a publicly accepted establishment of a marketplace of litigation that will supplant the marketplace of competition in the United States and very soon the world at large, and all at the ultimate expense of the consumer.

Even to the uninformed, it is obvious that it is not difficult to determine if someone or some corporation is and/or has used "strong-arm" tactics, instead of open competition, to gain and/or maintain their position in the marketplace. And it is also quite simple to understand that strong-arm, mafia tactics or anything using the same methodology should be punished according to a strict code of justice. On the other hand, open competition via superior quality, lower prices, free products or services, aggressive marketing, etc. should be highly encouraged to keep the marketplace healthy and long-lived. Never should such competition be punished as it is being punished in the antitrust case against Microsoft.

If such punishment is allowed to be upheld in the mode desired by Microsoft's competitors, then we will surely soon see the end of the the business world as we know it. It will become the competition of the strongest litigator and all else that once drove the marketplace will be lost to history.

From: R Warfield

To: Microsoft ATR

Date: 1/22/02 6:00pm

Subject: Microsoft Settlement

I am writing to express both my disagreement with the judgment against Microsoft in the antitrust suit, and my view that any penalty forced upon Microsoft as a result of this judgment will be unjust and destructive. Everyday people all over the world have chosen to use Microsoft products, not because Microsoft forced them to use the products, not because there are no competing products, not because everyone loves the Microsoft logo, but because the products are superior to their competitors' products. As a consumer, and as a computer industry professional, I am outraged that the U.S. Government, specifically the Department of Justice, is attempting to control what products are available to me in my profession, based on their views of fair competition rather than my views, and the views of an overwhelming majority of consumers who choose Microsoft products rather than inferior products of their competitors.

This case was not brought about by consumers. This case was brought about by Microsoft's competitors who, rather than focusing their resources on creating better products, and improving their existing products, have chosen to portray their failures as the result of Microsoft's successes. This is complete nonsense. Microsoft's success has led to greater markets for even these competitors; markets the competitors were unable to create on their own, and a flourishing high tech industry.

To punish Microsoft is to punish success, and to reward failure. This is a political position that has led to corruption and destruction throughout history in every region and among every people where it has been implemented. Again, Microsoft has never used force in any way to influence the marketing or sale of products. But the U.S. Government is now in the dangerous position of doing exactly that. Whose interests are to be protected by punishing Microsoft? Obviously not the interests of the consumers, who freely choose which products they purchase. No, it will be the interests of competitors who have failed to produce

superior products. The foremost function of the U.S. Government is to protect individual freedom and property. This function should not be abandoned. Microsoft's success is the result of individual choices by individual consumers. This success should be congratulated, not punished.

From: Girish Vasvani

To: Microsoft ATR

Date: 1/22/02 5:58pm

Subject: Microsoft Settlement

Hello, My name is Girish Vasvani, am a software industry employee in California.

My resident address is ,

34144, Kasper Terrace,

Fremont, CA-94555

Ph: 510-742-1549

Over the past three years every federal court that has reviewed the Microsoft antitrust case has found that Microsoft repeatedly and aggressively violated U.S. antitrust laws and was liable for its illegal conduct. The way Microsoft "Crushed" Netscape using it's Monopoly power is, pretty evident, and if Microsoft is not punished adequately for this, people in America will not trust Anti-trust Laws any more. I don't agree to Proposed Final Judgement in Microsoft Settlement case for following reasons.

1. The PFJ does not End Microsoft's Monopoly and Even Allows Microsoft to expand its Monopoly into Other Technology Markets. The deal fails to terminate the Microsoft monopoly, and instead guarantees Microsoft's monopoly will survive and be allowed to expand into new markets. Microsoft has always found it advantageous to leverage its operating system monopoly position in order to maximize its own profits, which many of us have experienced firsthand. In other words, to maximize profits (the goal of every public company), monopolists are almost forced to maximize the market power that their monopoly gives them. And this is why all monopolies must be carefully watched to make sure they don't abuse their monopoly position. Indeed, many monopolies are either broken up or carefully regulated in order to protect the public interest. Why is Microsoft allowed a waiver to this general rule? Does the Justice Department think that Microsoft is going to suddenly change its operating methodology? The proposed deal with the justice department does not address the fact that Microsoft has abused its monopoly and is likely to do so again, and again, and again in the future to the detriment of others.

2. The PFJ Does Not Adequately Address Anticompetitive Behavior Identified by the Appeals Court. Retaliation. The proposed settlement does not address Microsoft's proven ability to retaliate against would-be competitors and to, in effect, appropriate the intellectual property of its competitors ? and even its partners ? in fact all who do business with Microsoft. The Appeals court found such past conduct by Microsoft highly egregious yet the Agreement does not address these issues. Again, many of us have been on

the receiving end of these types of Microsoft bullying tactics.

regards,
Girish

Subject: Microsoft Settlement

Dear Sir/Madam:bbb

Microsoft is guilty on not just one count but on several counts. First, Microsoft has provided a quality software platform from which hundreds of thousands of American software companies could launch their products. Secondly, as a corrolary directly and indirectly Microsoft has created economic value for the United States of America. providing jobs to millions of Americans. Thirdly, Microsoft has demonstrably, thankfully, and undeniably, led the way in providing stability and growth to the overall economy of The United States of America. Fourth, in a free economy, there

are in fact no monopolies since no one is prevented from entering the market with their products. Accordingly, the only monopolies in the United States are the government created monopolies such as the utility companies, and the Post Office. Neither of which should exist as such in a free economy. Fifth, the argument that we need a level playing field is an oxymoron since there is no sports analogy here whatsoever. The quality products are not a matter of competition but of productivity. Competition comes into play as a secondary issue and requires no other adjudicator other than the market place. Miocrosoft's detractors would lead you to believe that it has market share because it shoves products down the throats of its customers. This argument belies the fact that customers can purchase whatever they wish to purchase. And, the argument that a consumer would like to see the so called underdog get a fair shake and therefore Microsoft should be made to turn over part of its product to a competitor is the sheer use of government force at the behest of those weak sisters who can not compete in the open market. It is clear that microsoft's detractors are its major competors rather than their customers. Customers do not materialize out of nowhere—they come forth when their is value to be had from the market place. Finally, the argument that Microsoft has a monopoly is belied by simply looking at the market place historically. If large companies could dominate the market place in a free market simply by some sort of intangible force that its detractors allege then we must ask, "How did Sears beat Montgomery Ward? How did K Mart beat Sears? How did WalMart beat KMart? And yes, how in the world did little Microsoft take the PC software market hands down away from IBM?." The answer is simple.

These companies all had excellent quality products. When other management and its innovators became more productive, American individuals percieved the new source of excellence and made their purchases accordingly. Accordingly, the market place in a free economy guarantees that the best products are always available to the market. Rather than peanalizing Microsoft it should be rewarded for its creation of opulence for America in the form of international economic excellence; better software tools for American industrial production; and the contribution to a higher standard standard of living enjoyed by all. Why is this heroic American company being slapped on the wrist at all. Microsoft should be rewarded for being what it is—one of the best examples of genius and creativity.

Regards,
Frank Schneider

Date: 1/22/02 6:17pm
Subject: Microsoft Settlement
10671 S Willowstone Circle
South Jordan, UT 84095
January 22, 2002
Attorney General John Ashcroft
US Department of Justice,

950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft:

I am deeply concerned for the future of America. For the past three years, the Microsoft antitrust case has remained unresolved in the federal courts. America's economy, already declining, has been injured by the costs of the trial, both private and public. The technology industry has lagged during the proceedings because Microsoft fears the products of its innovation will be opened to what amounts to legal plagiarism. Now, when a solution seems imminent, Microsoft's competitors and the states in which they hold sway are actively seeking to undermine the proposed settlement and bring further litigation against the Microsoft Corporation. I find myself questioning the sanity of their motives.

Microsoft was indeed in violation of antitrust laws, and was, by law, required to account for its wrongs. I object, however, to the avarice that now motivates the remaining litigious parties in the suit. Microsoft's wrongs have been justly righted, and the settlement prohibits further antitrust violations. This no longer seems to be a question of fulfilling the requirements of the law, rather, it has become a rally to destroy Microsoft and give the underdogs a piece of the corporation on which to stand. The destruction of Microsoft will not suddenly enable its competitors to produce magnificent software that will blow foreign technologies away. Indeed, were Microsoft to be crippled by the results of this trial, it is quite probable that America would lose its competitive edge in the international market and, instead of driving our own technology industry, we would become driven by those who do not have our best interests at heart.

The settlement is entirely fair. It not only restricts future monopolistic behaviors on Microsoft's part, it also requires the corporation to make a variety of changes in its products and procedures that would enable its competitors to piggyback on Microsoft technology and therefore more easily compete. For example, Microsoft has agreed to reformat upcoming versions of Windows so that the operating system will support non-Microsoft software. Competitors will also be allowed broad rights to reconfigure Windows to their own specifications. Moreover, Microsoft has agreed to provide third parties acting under the terms of the settlement with a license to applicable intellectual property rights. I do not believe any more should be required at the hands of Microsoft. I pity smaller companies who are truly unable to compete. I am sorry Microsoft was successful and they were not. But I do not believe those who made good decisions should be punished for the mistakes of others.

Microsoft was a big part of the computer boom, and a lot of companies were carried with them. Since then, Microsoft has not ceased to put money back into the economy. Antitrust laws are supposed to be in place to protect the consumer. I believe it is time to reconsider the laws and how it will affect America in a global economy. Microsoft's competitors are using the law to further their own interests; if they are successful, the

consumer will suffer terribly. Foreign-based companies have a distinct advantage over American businesses because they do not play by the same rules. It is vital that the American interest is protected, and if that means sacrificing those who are unable to take a hit and keep moving, then so be it. If weak companies are protected at the expense of the strong, the entire industry is weakened. If America continues to punish the frontrunners, we will only succeed in putting ourselves at the mercy of foreign companies. I urge you to support this settlement, and not to allow industrial narcissists to put the entire economy at risk. The future of America is at stake.

Sincerely,
Roger Chamberlain

Subject: Microsoft Settlement

My name is Blake Ross. I'm a concerned citizen. I don't believe the proposed final judgment does anything to remedy the monopolistic behavior that Microsoft has engaged in for years. For example, what tangible steps does the judgment making toward preventing Microsoft from using its dominance in the operating system market to leverage its other products? I recently installed Windows XP and was appalled at the prevalence of bundled Microsoft products. Microsoft Windows Media Player, MSN Internet Explorer, Windows Messenger, etc.—they're all over the place, and the user can't uninstall them! In fact, just trying to delete the programs from your file system makes them magically reappear. Why is Windows Messenger so "tightly integrated" that I can't even uninstall it? It used to be called MSN Messenger, and it used to be separated—then Microsoft just renamed it Windows Messenger, and it immediately became a "necessary component" of Windows. How can companies compete against this monolith? Do something that makes a difference.

Date: 1/22/02 6:22pm
Subject: Microsoft Settlement

I am writing in response to a call for public comment on the proposed Microsoft settlement.

I use Microsoft products, and I benefit greatly from them. This includes the various versions of their browser over the years. The notion that I'm a helpless victim who can't choose software that's useful to me, is deeply insulting. I don't think the government has any right to decide what can be in my computer, and for the same reason I don't think the government has any right to determine what computer I may or may not buy, or what computer features. I want you to know that I resent the idea that a successful business and its products are a threat to anyone. Remember that the complaint against Microsoft originated not with individual consumers, or with

Microsoft's partners, but with Microsoft's unsuccessful competitors.

Failed businesses must not be allowed to set the rules for the markets in which they failed. For politicians to protect some businesses from others is a dangerous policy, leading to corruption and economic disaster as shown in many other countries.

I want a *free* America where anyone with enough intelligence and hard work can be a self-made man like Microsoft Chairman Bill Gates. I want to see an America where success is not throttled but embraced.

Lastly, I would remind the court of its fundamental job. Microsoft, like any other business or person, has a right to its property, and it is the job of the government (including this court) to protect this right, not to take it away.

Sincerely,
David Rowlett

From: Patricia K. Walker
To: Microsoft ATR
Date: 1/22/02 6:24pm
Subject: Microsoft — Yeah

Microsoft has written off approximately \$750 million in Attorney fees and costs on this litigation at the expense of its stockholders:

1. Under the proposal's terms, Microsoft would have given disadvantaged Public Schools more than \$1 billion in funding software, services and training, and around 1 million Windows licenses for renovated PCs.
2. The provisions of the agreement are tough, reasonable, fair to all parties involved, and go beyond the findings of Court of Appeals ruling. Still, while consumers overwhelmingly agree that settlement is good for them and the American economy overwhelmingly want to move beyond this litigation, nine states have refused to join the settlement.

This has been a tremendous cost to the taxpayers because of all states where the Attorney Generals have spent millions of dollars on this case. We feel the settlement is fair and good for the consumers and the economy, in addition to being a tremendous help to the school system.

From: Peter Skan

To: Microsoft ATR
Date: 1/22/02 6:25pm
Subject: Microsoft Settlement

Dear Sir, I would like to submit the following comments on the proposed settlement of the United States v. Microsoft case.

I believe that the remedies described in the proposed final judgement are woefully inadequate, either as penalties for Microsoft's past abuse of its monopoly power, or to restrain Microsoft from similar behavior in the future.

To be more specific, the proposed settlement:

1. Does nothing to stop Microsoft illegally bundling middleware programs such as media players, browsers and instant messaging software, etc. with the operating system. As can clearly be seen in the recent release of Windows XP, Microsoft continues to extend its monopoly unabated.

2. Does not remedy the damage done to Netscape and other independent browser suppliers.

3. Does not remedy the damage done to the Java programming language and it's users.

4. Does nothing to lower the "application barrier to entry" which was illegally protected by Microsoft.

5. Is ambiguous and contains many loopholes that are subject to Microsoft's interpretation.

6. Lacks a sufficiently strong enforcement mechanism.

7. Will do little to change Microsoft's behavior or restore competition.

In summary, the proposed final judgement is not in the interest of consumers. Much stronger remedies are required if consumer choice, competition and innovation are to be preserved and enhanced. In my view the original remedy, which specified the breakup of Microsoft, was much more in line with the magnitude of the injuries it has caused. N.B. I am a resident of the United Kingdom, but nonetheless feel that my views should be taken into account since Microsoft's conduct has affected both companies and individuals in all parts of the world.

Yours faithfully,
Peter Skan

To: Microsoft ATR
Date: 1/22/02 6:38pm
Subject: Microsoft Settlement

Dear Sir or Madam: I am appalled by the Department of Justice's ?case? against Microsoft. Even if Microsoft were a ?monopoly? (which it isn't; the ?Bill Gates controls 90% of the market? claim is false and bizarre), the government should have no right to prevent private monopolies. The Antitrust laws are a mess of contradictory edicts intended by their collectivist originators to punish successful individuals and businesses simply for being successful. Antitrust should be ruled unconstitutional.

To label as ?criminal? business activities that involve superior ability and strategy but

do not involve physical coercion, to declare honest businesspeople to be "dishonest," to damn the actual working of the free market, to reject and seek to undo by force of law the legal choices of millions of consumers worldwide? is a monstrous thing, an intrusion of a gangster into a marketplace, a perversion of justice. Whiners, cry-babies, and losers who oppose Microsoft are running to Washington to "correct" the free market. Why? Because Microsoft refused to underwrite their aspirations. Because this Big Company didn't behave like Big Daddy and let every two-bit Mom and Pop outfit ride to riches on its coattails. The opponents of Microsoft are declaring that they are owed not only a living, but also all the glory, success, wealth, and adulation that Bill Gates has. But, for what? The consumers (I am one of them) didn't agree; the suppliers didn't agree; the market, as such, didn't agree. What we're seeing in the loser companies who complained about Microsoft originally (consumers love Microsoft, only their competitors do not), is no more than a desire for unearned wealth and prestige and an immoral feeling of envy and jealousy when they don't get it. This leads them to demand government action "against someone whose only "crime" has been achieving success in that particular field. The court, at the very least, must uphold the free market and the right of property.

Yes, there will be winners and losers—but as long as no physical coercion, or threat thereof, is involved, the winners and losers deserve their lot. When businessmen are punished for their achievement, and the greater their success the harsher the penalty, society is devoured by envy, and the end of that road is the grim egalitarianism that has ravaged every socialist wasteland.

Subject: Microsoft Settlement

The proposed settlement is fair to all parties, is in the public interest and should be accepted by the court. Our free enterprise system is why we have the strongest economy in the world and the most admired society in the world. Let us not hamper this envied position with governmental and judicial intervention. To maintain and advance this strength into the future we need less governmental and judicial intervention—not more. Innovation in all areas of all industries is necessary to maintain and enhance productivity to remain the world's leading economy and power base. This case is an example of innovation being smothered before it has a chance to be judged by consumers. In our free society consumers are

the ultimate judge of products offered for purchase. To date consumers have voted in favor of Microsoft products with their purchases. Acceptance of this settlement will allow continued product offerings to consumers for their vote.

Thank you,

Subject: MS anti-trust case

Mz. Hesse, I have received a mailing from a Microsoft sympathetic organization that pointed out that there is a public comment period and where I might send my thoughts to best be heard. My supervisor at work encouraged me to pitch in so I thought I'd put in a word from a person intimately familiar with the dynamics of the computing industry. My view of this business' effects (over the last 20 years I've been associated with its products, primarily in a support role) is that it has admirably worked to create affordable products for mass consumption. I've used the resulting products and supported them for years and though I often wished they'd be of higher dependability and quality, they are flexible enough, powerful enough, and inexpensive enough to be made available widely and positively impact businesses, home computing users, and advanced computing as an efficiency tool worldwide. I think its business practices have been rabidly capitalist (unnecessarily so), and damaging to firms involved with hardware, software, and even creativity in general. The techniques used by it have been seen before at least 100 years ago, and resulted in anti-trust legislation to protect everyone and promote fair and free commerce. Those rules and laws apply very much to the way MS has behaved and I don't feel they have been effectively excersized, at all, by the government regulators and law enforcement whose responsibility this lies with. I think they should be strongly and immediately employed to once again send a message, to all, that free and diverse commercial activity is desirable for a healthy capitalist economy and desirable to promote and encourage innovation (so that those who create the good may be rewarded and thus continue to do so). The scope of the harm that has already been done to so many

companies can only be guessed but is larger than any of us would probably guess. (the "Its a Wonderful Life" or "Scrooge" effect) Companies, squashed, products stifled or acquired cheap, lives altered, revenues lost, taxes foregone, jobs eliminated before they were even created. That is the cost of the behavior of an organization on an unchecked monopolistic rampage, and that is the price the world has and will continue to pay as long as just and decisive action is withheld.

Dear Ms. Hesse:

I would like to register my opposition to the proposed remedy in its current form. My comments are based on twelve years experience as a software developer, systems administrator and security manager on a variety of hardware platforms and operating systems. Although the problems with the Proposed Final Judgement (PFJ) are many, I will only cite a few here.

1) The PFJ does not require Microsoft to release the format specification for Microsoft Office documents. These formats for spreadsheets (Excel), documents (Word) and presentations (Powerpoint) have become a de facto standard. Competitors in the marketplace need to interoperate with these formats and need access to the format specifications well before changes are released on the market.

2) The PFJ does not prohibit anti-competitive license terms with "enterprise" users such as universities, corporations or state and local governments. The license agreements are often written on a "per-processor" basis, and remove incentive to use non-Microsoft operating systems on the covered hardware platforms. Such per-processor licenses were prohibited by the 1994 consent decree for OEMS, and should be extended to all end-users.

3) The PFJ defines API narrowly, excluding many important interfaces to the operating system. It should be extended beyond middleware to include all Windows APIs and all network interface protocols, including Microsofts extensions to the Kerberos authentication protocol.

Further discussion of the PFJ's shortcomings are detailed in a comment from my colleague Dan Kegel. I urge the that this remedy be thoroughly revised to adequately curtail Microsoft's historic and continuing anti-competitive practices.

 Washington, DC 20530-0001

Dear Mr. Ashcroft: It is three years later, and we still are talking about the Microsoft antitrust case. It certainly is a landmark case, and I would like to say that the current settlement agreement is in the public interest. Microsoft has endured prolonged legal proceedings and negotiations to reach the current agreement. Thankfully, it is one that is beneficial to all parties involved. The government was able to ensure that consumers and the computer industry are protected from unfair business practices. Microsoft has now agreed to amend its practices, open up its information, fully allow non-Microsoft applications in Windows, and comply with an oversight committee monitoring its conduct.

This is a remarkable achievement and should remain in its present form. IF MERGFIELD PARA2 But clever people like me who talk loudly in restaurants, see this as a deliberate ambiguity. A plea for justice in a mechanized society.<>

Microsoft, with its improved practices, is good for our troubled economy. While the technology sector experiences decline, the company continues to create innovative and high-quality solutions. Microsoft supports my work as a computer user, and so I write to you today to support Microsoft. Thank you for your time.

Sincerely,
 Jean Macdonald

 Subject: microsoft settlement

I am often embarrassed admitting I'm a resident of "The Peoples Republic of Massachussets" Tom Reilly and other AG's extortion of Microsoft is just another reason to be embarrassed. Microsoft is not an angelic company, but there are valid reason why they achieved thier dominant position. Microsoft provides an excellent product and offers standardization. I remember the days of not being able to transfer data from one application to the other. If microsoft wasn't allowed to expand the utility of thier operating systems as judge Jackson and others have advocated we might still have to be installing print drivers for every application we install instead of letting the OS handle it. What people in the Real

World—people that have to be productive—want is what Microsoft has generally offered.

Everyone speaking the same "language" has greater benefits than multiple languages that have only minor improvements over one another. The software and OS industry has a built in propensity to standardization and that standardization benefits most users. When a significant advancement comes along people will slowly evolve to that advancement. Technology is always ahead of the masses.

I'm in the HVAC industry and as an example digital thermostats are in every way superior to bi-metal "round one" thermostats. Digital and programmable t-stats have been around for thirty plus years, but they are only now becoming common place. Part of the reason for the slow transition is that everyone instinctively knows how to operate a "round one" thermostat and because of this Honeywell dominated the market. (Maybe they should have been sued). Ease of use and standardization was more important to people than accuracy, comfort and features. In reality digital thermostats are very easy to use. The problem lies in the lack of standardization. Just because you know how to use your digital thermostat at home doesn't mean you'll have an easy time with the one at work or your neighbors house. Why so many—because each variation has some minor improvement, feature or function that the other doesn't. I'm NOT saying that the Government should get involved to promote standardization here. That's my whole point. In the software industry the people have directed the market toward standardization and someday maybe because of accuracy, comfort and features Microsoft's "Windows" may become just like Honeywell's "round one". Honorable Judge, I am a concerned employee in the high tech industry. Every court has found that Microsoft has used its operating system monopoly to dominate other software markets as well, thus violating anti-trust laws. The many billions of dollars Microsoft earned illegally from its anti-trust violations are being given to the company without penalty. The proposed final judgment also does nothing to prevent Microsoft from continuing in this behavior and would amount to a government mandate of the monopoly. With such serious flaws in the proposed U.S. vs. Microsoft settlement, I urge you to reject it.

Respectfully,
 Amy Chaves

 Subject: Microsoft Settlement

I heard that a Proposed Final Judgment (PFJ) in the U.S. vs. Microsoft case is being

considered currently. As a software developer and a concerned citizen, I have serious concerns about the proposed settlement. Microsoft has been egregiously abusing its monopoly power to crush competition and stymie innovation. Last year Microsoft decided not to distribute Java technologies with Windows XP. This is yet another example that Microsoft is using its illegally obtained monopoly power to kill innovation and competition. Because its monopoly position, consumers are forced to use Microsoft technology and software developers are forced to build on Microsoft technology. Other innovative technologies like Java are being forced out of the picture, not because of lacking of technical merits but because of being a competitive technology to Microsoft. This is a very serious issue. However the issue is not addressed at all in the proposed settlement. In fact the settlement does not address the three key elements that my co-workers and I are considered mandatory:

1. Terminate Microsoft's illegal monopoly,
2. Deny to Microsoft the fruits of its past violations, and
3. Prevent any future anticompetitive activity.

I strongly urge you to reconsider the settlement with Microsoft and address the above three elements.

Washington, DC 20530

Dear Ms. Hesse, In accordance with the invitation posted in the Federal Register (Vol. 66, No. 229, p. 59452), I wish to have my comments regarding the proposed final judgment in the United States vs. Microsoft Corporation published in the Federal Register. Microsoft has been found guilty of illegally maintaining a monopoly, in violation of Section 2 of the Sherman Act. As such, the proposed settlement is not sufficient because it does little to address the underlying problem, namely that Microsoft continues to illegally maintain and extend its monopoly.

Any final remedy which intends to truly provide a just and lasting settlement must include the following requirements:

1. All current and future Microsoft products must be required to be extra-cost options on new computers, so that consumers have a realistic option to purchase machines without Microsoft software if they so choose.
2. All current and future Microsoft file formats must be opened to the public, so that

consumers and competitors have the ability to use files generated by Microsoft products with other software without the producers of that software being at an immediate disadvantage. For similar reasons, all current and future application program interfaces for Microsoft operating system must also be made public.

3. All current and future networking protocol must be made public and approved by a independent network protocol body.

4. The source code for all Microsoft products must be made public, primarily because there is ultimately no other way for individuals to ensure that their large, complex products are secure. This issue is especially important given their current dominance in both the operating system and application markets.

I believe these kinds of restrictions would let consumers decide on software based the quality, price, timeliness, and support, rather than having to choose based on backward compatibility and unreleased, proprietary information. Microsoft has repeatedly shown resistance to moderate its behavior in the marketplace. Therefore I urge the court to take a firm stand to relieve the current situation and set a precedent so this kind of monopoly does not occur again.

Sincerely yours,
Ronald E. Kumon, Ph. D.

Innovation comes from a free market place not one that's run by government. If you force crippling sanctions on Microsoft you will go back to the stone age. Ninety percent of the computers use Microsoft product for a reason. They are affordable on any persons budget consumer friendly, great flexibility. It allows even a seventy year old blue collar worker like myself without great effort to operate it. This settlement on the table is a plus for the consumer. Don't let the states or rivals greed for money stop this.

Subject: Microsoft Settlement

Good Day, I must express my concern regarding the current PFJ in the case against Microsoft. I have been in the computer industry for close to a decade and in numerous cases have had occasion to detest some of the practices that I see Microsoft engage in. Many of those practices have had direct detrimental impact upon my trying to establish my own business. They have in the past, on more than one occasion, either been convicted of, or settled out of court for, practices that are anti-competitive. This most recent ruling is only one example of many. In each case the remedies sought have only been effective at curtailing practices based on old technology that no longer has any bearing. The current case is no different. The

court MUST find a way to stop their illegal practices in the future. The portions of the current PFJ that I am familiar do not do that. One portion I find particularly distasteful and downright shameful is the requirement that they should donate a certain number of PC's running Windows software to schools that don't have them. That is not unlike requiring the drug pusher to supply drugs and paraphernalia to people that are not users. It gives opportunity to have many more people locked into a platform that has already been determined to be anti-competitive.

A far better solution would be to increase the number of computers being donated by at least a 100 fold with the caveat that those PC's may not be allowed to run any software written, developed or sold by Microsoft. Those computers should run some version of Linux and they should be supported entirely by monies supplied by Microsoft for the entire time that each of the computers are in service. In other words as long as any computer donated as part of a settlement action is still being used in any capacity, Microsoft should pay whatever funds are necessary to support those computers. This should include paying for upgrades to memory and hard drives and replacement of ANY failed components during the entire time the computers are in service.

Microsoft has used illegal practice to beat competitors into the dust. They have been convicted of being a monopolist. Whatever settlement there is should be punitive in nature and should have the effect of stimulating their competition, weak as it may be, and not their user base in any way shape or form. The other effect it should have is to discourage such practices by other companies.

Another suggestion I would make is that they be broken up into several different companies. A personal operating systems company, an applications company, a server company and a services company. These companies should be absolutely separate in all aspects. They should publish those parts of their API's that are required to interoperate with their software royalty free. In this way others will be able to compete on a level playing field that does not currently exist. One last point I should make. One of the definitions (definition U. to be specific) in the PFJ states in part:

... The software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion. Microsoft should not be allowed to determine in its sole discretion anything of the sort. This is tantamount to a crook being allowed to define what theft is and would be a huge hole that Microsoft would then use to redefine what an operating system is. This would in effect sabotage yet another Federal judgment against them as they have done in the past. Instead, outside agencies and experts intimately familiar with software development should be the ones determining that. An excellent example can be found at: <http://www.kegel.com/remedy/remedy2.html#fix.defs> In the past Microsoft has been convicted of similar practices and the judgments have done nothing to cause them to change their behavior. In fact they

are more arrogant and brazen now than they were in the past. I cannot help but believe that is due in part to past failed and insufficient judgments being crafted. I adjure you to craft a settlement that will actually have teeth to it. Both punitive and preventative in nature. I appreciate the time taken in reviewing this. While I am sure it is not as learned as many other objections are, it is none-the-less submitted with great concern.

Thank you.

To Whom It May Concern:

I wish to express my displeasure with the current Microsoft Settlement. It is much too favorable to this company. I recently purchased a new computer. To get a computer from my manufacturer of choice I had to surrender any choice in the area of operating system. The new XP software is a nightmare of complexity. Surely there are better minds and better systems that exist but are not given equal footing in the consumer market. I wonder if there are fewer problems with XP if you also use the Microsoft Browser. As long as I still have some choice in that area I will refuse to go that route.

I would urge you to return to the original decision in this case and open the market place to all. We need only look at the great advances made in automobiles and telephone service to see how greatly the consumer benefits when competition exists.

Subject: Microsoft Settlement

I wrote the stuff below the line yesterday. Today I am fit to be tied. The Post Office (Houston, Tx) is distributing Windows XP disks. First off, I can't believe that it is legal to distribute and promote a private "for profit" product in the US Post Office (on my nickel, no less). And one from a company that has been declared a monopoly, and is the subject of ongoing anti-trust actions!! Is there anything in the Bush administration that is not for sale? How blatant can you get! You guys and this lame "settlement" should be run out of town.

I am 50 and have been in the electronics business since I was 15. I grew up with computers and have watched the rise of Bill Gates & Co. I have several conclusions on the anti-trust case:

1. There is no one- repeat no one- in this business who doubts for one minute that Microsoft is a monopoly. Everyone is looking over their shoulder to see if they will be the next casualty. Microsoft is not where they are because of good products. The products have been forced upon the consumer by leverage of their operating system monopoly. This monopoly- through licensing and other means- has NOT allowed the consumer to evaluate alternative products. I could not buy a PC without Windows. Dell and the others COULD NOT sell me one. In my informal polls, the average consumer does not understand that Windows 95, 98, 2000, XP, etc even come from the same company. They do not realize that a PC box from Dell, Gateway, IBM, etc are all the same. They think of it as Ford, GM, or Honda- which, of course, it isn't. There is no choice.

2. I would venture that you- the judges, clerks, etc are close to my generation. No where is the computer gap more evident. I can't believe you have even a clue as to the extent of Gates's reach and the significance of complete control of the operating system. This monopoly goes way, way beyond steel or the Bells.

3. The proposed settlement is a joke. It is known in the art that Microsoft is a monopoly. They have been legally declared a monopoly. And what do you do? This is not even a slap on the wrist. And as with every other involvement with Gates, he is telling YOU what YOU are going to do. The three person oversight is completely ludicrous and unworkable.

4. In the trenches, the conclusion is that this is a buyoff with Bush. This is so blatant there can be no other explanation. As sad as Sept 11 was, it provided an excuse for the administration to back off of Microsoft. Software types that I run into just write this off as a complete sell out by the Justice Department. Your department really is the laughing stock of the software community. You can't be this clueless, can you? How does this settlement help me, the consumer? How does it help the innovative companies that have been steamrolled by Microsoft? How? How?

5. I am sure the boogeyman here is we don't want to hurt the economy by upsetting

Microsoft. I would posit that 39 billionaires, 900 multi-millionaires, and 100 just plain millionaires would stimulate the economy far more than one "forty billionaire" who will stop at nothing to own it all. Microsoft does not partner- Period.

6. As XP becomes entrenched, there will be control of so many systems and points of distribution that it will make past actions look like child's play. It is a Trojan horse. Microsoft is pulling out all stops on this one. They are taking no prisoners. You are way too little and way too late.

7. This is the last chance to stop Microsoft. This settlement is a disgrace to your office and to this country.

Sincerely,
Robert Nystrom

From: Jay Lieske
To: Microsoft Settlement
Date: 1/22/02 8:08pm
Subject: Microsoft Settlement
To Whom It May Concern—

The following is my Tunney Act comments to the Microsoft antitrust settlement.

I do not think that the proposed antitrust settlements with Microsoft— neither the Dept. of Justice's nor the States' proposals— goes far enough to remedy Microsoft's monopolistic behavior. There are far too many legal loopholes in the document, so that Microsoft will not have to modify its behavior.

Instead, I believe the best remedy is to force total disclosure of all programming interfaces (APIs), file formats, and network protocols, used in the major, market-leading Microsoft products (including Microsoft Windows, Microsoft Office, Microsoft Internet Explorer, and Microsoft Media Player), so that a third party can create a fully-compatible version of one or more of these products by following the same interfaces, formats, and protocols. There must be no omission from the disclosures, as would be allowed under the proposed settlement. The key to Microsoft's monopoly is that old customers have become locked-in to the Microsoft products. For example, producers of third-party desktop operating systems cannot compete with Microsoft, because the 3rd party OSs would be incompatible with the software written for Microsoft Windows. But if Microsoft were forced to open up the interfaces, formats, and protocols of Windows, the market would become open, and other competitors could come out with new OSs: perhaps one company could come out with a more secure OS, and another company could sell a more user-friendly OS. Then the companies, Microsoft included, would all be competing in an open market, with customers able to choose the best product based on features and services. Additionally, it is important to remove any language in the settlement that only regards commercial competitors or customers of Microsoft. Many of the products that compete with Microsoft come from the non-commercial world, often created through volunteer labor. Microsoft must also be forced to compete with such products in the

same open market as with commercial products.

Thank you for listening,

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft: This letter is so that I may go on record as being a supporter of the proposed settlement that was reached between Microsoft and the Department of Justice. Although I was not supportive of the lawsuit against Microsoft in the first place, I will stand behind any reasonable agreement that brings an end to the senseless litigation that has been plaguing Microsoft.

There was a time not too long ago, for example, when it took the better part of several long hours to produce a reasonably efficient database application. With the advent of Microsoft's Windows operating system, along with their integrated software suites, this task now takes mere minutes.

Microsoft has been extremely beneficial to the economy in the past, and will continue to do so after this settlement. They have agreed not to retaliate against competitors who are making and ship software that competes with Microsoft's software. This will open-up the market, and encourage their competitors to be more innovative.

Why those in our government think that this sort of innovation deserves wrath, rather than praise lies completely beyond my scope of understanding. In any event, there is now a settlement on the table. This settlement is more than fair, given the dubious intentions of the lawsuit to begin with. It is my hope that this settlement will prevail and that those in government can get on with far more important issues.

In addition, Microsoft stock was and is a significant of my retirement portfolio and I am not at all please with what this litigation has done to the value of my Microsoft Investments. Sincerely,

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft: I'm writing to urge you to accept the terms of the settlement recently reached between Microsoft and the United States Justice Department. The settlement will result in a much more competitive environment beneficial for all parties involved.

Microsoft has, for example, agreed to grant broad new rights to computer manufacturers and software developers to configure Windows to promote non-Microsoft software programs that compete with Microsoft programs included within Windows. This means computer manufacturers can replace Internet Explorer with Netscape Navigator; Microsoft Media Player with RealPlayer; and Windows Messenger with AOL Instant Messenger. Microsoft has further agreed to not retaliate against computer makers and software developers who choose to take this route, nor will Microsoft retaliate against computer makers who ship competing operating systems. Overseeing the terms of the settlement will be a Technical Committee comprised of three persons who are software engineering experts. This Technical Committee will assist in any dispute resolution, should a complaint be filed.

Based on these facts, I respectfully request you to accept the terms of the settlement.

Sincerely,
Don Easterbrook

FROM: Jack Noel
TO: MS ATR
DATE: 1/22/02 8:24pm
SUBJECT: Microsoft Settlement

As a user of a competitor's platform, operating system and Netscape browsers, I'd like to thank the Court for the work that has been done to arrive at a Final Judgment in the Microsoft case. I endorse and applaud the settlement. But, as a citizen of Michigan, (one of the plaintiff states), I am concerned that remedies do not go far enough. Michigan has launched an initiative to promote computer-based education and my investigation shows that past invasive practices of Microsoft has subverted this. Also, as a low-income user of a non-Microsoft platform/OS, I find that I'm significantly impaired and partially barred from enrolling and participating in Michigan's online education program (Michigan Virtual University). I can enroll, I can do course work, but the instructors have no way of monitoring portions of my course work.

So it appears to me that prior monopolistic practices of Microsoft have unduly influenced those who planned and created "MVU." The software developed for this education "institution" is designed with the assumption that all students and teachers will be using a PC with Windows OS installed. This has damaged me, in the sense that I'm hampered in taking online courses here, should I want to do so. When I inquired about this with MVU, I was told that Apple Computer had been unable to come up with software that would make their computers and OS fully inter operable with MVU's system. While this situation may indeed be resolved by Apple Engineering, it will take time and no one can say how long it will take. Still unanswered is the question of why those responsible acted on the assumption that we are in an "all Microsoft / PC World."

I can only add that Microsoft's recent self-serving effort to "make good" with state education systems by providing another flood of inferior software / hardware was another concern. But I see the states, in their wisdom, rejected this offer. So, my opinion is in favor of imposing the Final Judgment as described in documents posed on the Justice Dept. website.

Thank you,
Jack R. Noel

Date: 1/22/02 8:26pm
Subject: Microsoft Settlement <—Please read all the way through before passing judgement

To Whom It May Concern:

I just wanted to make a comment on the whole concept of placing a lawsuit against Microsoft. It occurs to me that Microsoft simply wrote a program that runs on a computer. Plain and simple; a basic fact. This program can, however, have other programs run from within it that were not written by Microsoft. People sell these programs. This ability is a bonus to those people that write this additional software. Microsoft does not

have to make it easy for other people, besides Microsoft employee's to write software for the main body of the program.

The mere fact that they, (Microsoft), write tools and document how-to's, are a definite sign that Microsoft supports the users that want to take advantage of the OS/Program to its fullest. Suppose for instance that the DOJ wrote a program that ran directly on hardware, written in assembly for the sake of argument, and it took years of development and many revisions. Now, someone found that you made an interface that was easily accessible, and programs could be written to run off of it, making the original software better? They sold this addition and made money based on the current function of the DOJ OS/Software?

Now imagine that you, the writer of the original software wanted to make a change(s), that would enhance the overall operation of the software, helping all those that use the program at the DOJ out, making their lives easier? Now imagine that that programmer that wrote the parasite program sued you because the enhancement you made created a conflict within his software that made it impossible to run? Do you think that this lawsuit is just? What if you, wrote tools to help that programmer make changes to his original software to help him out, make it easier to make a revision? Do you think he should be grateful? Think about it. The suit against Microsoft is ?injustice? by definition.

A programmer,
Andrew S Chadick
Paulson Computer Systems, Inc.
253-581-3150
7501 Bridgeport Way W
Lakewood, WA 98499

By the way, ? the changes that Microsoft is currently making? ie, the ones that are phasing out MS-DOS, are stopping our software from being able to run? Are we complaining? NO. We are thankful that we had a good run using the OS's that Microsoft made, i.e. Dos 5.0 ? Win2k. . . We have made hundreds of revisions over the years.

And, WE will adapt; write the software again new; and make use of the new languages and tools now available by Microsoft.

Subject: My Comments

This is Stephen Lucas, just a simple computer user, a real estate broker, without ties to the companies involved, and I am voicing my complaint about one issue in the Microsoft lawsuit pertaining to alleged damages to Netscape. I remember when Netscape went public with it's IPO, and that was the first time I learned what this internet thing was about and how to access it. The problem was that Netscape was charging the public for software to access the internet, up to \$40. Later, Microsoft came out with a free browser, Internet Explorer, which was distributed with my new computer and was available free through a MSN CD-rom received in the mail. As a consumer, Microsoft did me and millions of other consumers a lot of justice, of distributing this

free browser. This is not a crime. Netscape deserved to lose business for gouging the public with their monopoly browser at the time. Leave free market capitalism alone, and dismiss this frivolous law suit. The cost of this lawsuit will only be passed on to us consumers.

Re: Proposed Microsoft Settlement

I am a CPA employed by a large computer software company, and I would like to add my two cents to the proposed settlement between the DOJ and Microsoft. First of all, I agree with most of the third party analyses, which came out when the proposed settlement was announced. Most analysts thought that the settlement was highly favorable to Microsoft. I agree with their assessment, and share their puzzlement about why Microsoft deserved a favorable settlement. I could understand giving a favorable settlement to a company that admitted guilt, was a first time offender, and had agreed to change it's ways, but none of those descriptions apply to Microsoft. This is their second time in front of the courts on this issue, having apparently learned nothing from their first brush with the law in 1995. The weak settlement from the first case was directly responsible for the second court case. I am afraid that if the settlement goes through as proposed, there will inevitably follow (if the DOJ doesn't completely play dead) a third case. History and this court case have shown that when it comes to competing in the marketplace, Microsoft is not a company that is greatly troubled about ethics and morals. For example, this fall while their case was on appeal, Microsoft blocked users of a competing Internet browser from accessing the MSN community of websites.

Microsoft claimed that the competing browser did not correctly implement some of the Internet standards. Only when it was demonstrated that Microsoft's browser also did not correctly implement the same standards, and that the browser from Opera was more compatible with the standards than Microsoft's did they relent and allow the competing browser to be used. The transparency of some of Microsoft's explanations can leave even the most ardent of Microsoft supporters speechless with embarrassment. Microsoft continues to insist that they are innocent even after losing 8-0 at the Appeals court. Innovation is a word that Microsoft has been hiding behind for quite some time. Microsoft persists in believing that it can take any anticompetitive action it wants as long as they call it "innovation". Is an unrepentant, two time offender the kind of company that should get a favorable settlement? The history of this case, and common sense argue quite forcefully that the answer is no.

The DOJ has not provided a convincing "in the public interest argument" for their weak settlement. In order to learn to be a good corporate citizen, Microsoft needs a punishment that it cannot rationalize away. Unrepentant companies like Microsoft need a strong punishment that will convince them of their guilt, and that will deter future illegal acts.

Punishment That leads to one of the biggest arguments against the proposed settlement. There is absolutely not punishment in it. Basically, under the terms of the proposed settlement, all Microsoft has to do is to behave legally and ethically, like they should have been doing from the very beginning, for a period of several years and all will be forgiven and forgotten. There is no punishment, not even a small fine for a company that is sitting on 30 billion in cash and cash equivalents. This also means that Microsoft gets to keep the market position it gained from its illegal behavior. Who would propose a policy that let robbers keep the goods they stole as long as they behaved in the future? Yet, that is exactly what this settlement proposes to do. APIs and Interfaces One very specific part of the settlement of the settlement that needs to change are the provisions that call for Microsoft to publish their interfaces and to cooperate with all companies who want their software to run on or in cooperation with their software. Specifically, the settlement says that Microsoft and Microsoft alone get to determine what is, or is not a business. But Microsoft's greatest single threat on the operating system front comes from Linux—a non-commercial product—and it faces a growing threat on the applications front from Open Source and freeware applications.

Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: ". . . (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business". Not only does

Microsoft get to specifically exclude its biggest competition, it is the judge and jury in deciding what constitutes a business.

This part of the agreement needs to be rewritten so that all APIs and interfaces that are necessary to interoperate with Microsoft software are open to everyone, regardless of their status. Java The states opposing the settlement have a very good idea when they want Microsoft to include the Java computer language as a standard part of it's operating system. Java is a powerful force for competition in the computing world because it is platform neutral. That means that a program written in Java can run on any operating system. By forcing Microsoft to include Java, that will encourage programmers to write Java programs which means they will automatically be writing programs for competing operating systems at the same time. Having more programs available for competing operating systems, makes the competing operating system attractive to end users. Microsoft knows that Java has the affect of making the specific operating system less important.

That is why they dropped it from their latest version of Windows even though it costs Microsoft nothing and would make the computing experience for their customers better. To foster competition, the final settlement should force Microsoft to include Java with their operating system for a reasonable period of time. The settlement as it is proposed does not protect the public interest. The court should not rubber stamp a weak settlement for the sake of disposing of the case. The software development portion of the U.S. economy is too important to let wrongs go uncorrected. The American consumers deserve an active and competitive computer software marketplace, and the Microsoft competitors who have played by the rules and been damaged by Microsoft's actions deserve relief and justice.

I am opposed to the current line of thinking with the settlement. While I agree it is time consuming and expensive process to bring things to a conclusion, I think that with the high-level of involvement computers have in every business in the country, we are running a serious risk of falling even further behind other countries who are finding themselves more free to use other, more appropriate platforms and applications. Many U.S. businesses are being cornered into a set of products that is often inferior—especially in terms of security—to those used by our european and asian counterparts. In the long run, we will lose the one thing that has kept our trade in check with countries that have less expensive labor: our superior management skills.

I am a Technology Coordinator at a Knox County Middle School. I spend 3–4 hours every day keeping the computers our teachers and students use up and running. These are relatively new, already upgraded, and are used by a staff that has undergone extensive training. Microsoft's proposal to settle their lawsuit by giving older computers to poor schools is total lunacy. Schools are drowning under the strain of keeping their computers running now. We are the third largest system in the state and we have five technicians to repair all of our computers, TVs, overhead projectors, et al. If Microsoft wants to do something for the schools, let them pay for a technician in each school in the US. Or even better, let them donate Apple products to the schools, they require less experience, less maintenance, and last longer.

Thank you,

The settlement with Microsoft, as now framed, is clearly in the best interests of the public—particularly in the light of our sluggish economy. Whatever its sins have been, it has certainly been whipped enough by now—and no-one can deny the contributions Microsoft's inventiveness and innovations have made to our growth and prosperity over the past decade. It's time to free that energy from the constraints of needless ongoing litigation which may serve the egos and ambitions of a few at the cost of the rest of us who are content with the reparations already made and offered.

The prosecutorial energy that seems to abound in the breasts of those who seek to persist in flogging this company would be better directed against the likes of ENRON which has caused real damage to so many, as well as against those whose collaboration or inattentiveness have permitted that company's abuses to go unchecked for so long.

Why has there not been similar scrutiny and attack upon the practices of those major oil interests which have been permitted to join forces and either support or turn a blind eye to the intentional price gouging which is causing major damage to our economy? Or the ongoing elimination of competition by the unassailed merger of major banking interests?

Subject: Microsoft Settlement

Dear Judge Kollar-Kotally, After a lengthy process, our court system found Microsoft Corporation guilty of violating anti-trust laws in this country. The suggested settlement is nothing more than a slap on the wrist and does not address the future or provide retributions to those harmed. This proposed

settlement does not terminate Microsoft's illegal monopoly nor does it force them to change their future business practices to prevent more anitcompetitive actions. It is laden with loopholes that Microsoft will use to continue business as usual. It also does not calculate revenues gained by these practices and provide retribution to those businesses which were affected.

Don't be swayed by the stock market or other pressures. Remember that other people lost their jobs or money by Microsoft's actions and will continue to if you allow the proposed settlement to go through. There is room for competition in the software industry. It is your job now to ensure it and to make a bottom line settlement where Microsoft will remember it's past and not repeat it!

Sincerely,
Alison S. Appel —

Subject: Microsoft Settlement

I'd like to express my opinion regarding the proposed Microsoft settlement. In short, I'd like to see the matter settled, as proposed, so we can all move on. This suit was never about consumers; it was always about Microsoft's competitors. Besides, with Linux and Apple gaining strength, I am not even convinced it is a monopoly, as the courts contend. Please quit wasting the taxpayers' money and trying to destroy a great American company in the process. Thanks.

From: Ernie Welcker
California U.S.A.
To: Renata B. Hesse
U.S. Department of Justice
Antitrust Division

As I type and e-mail this correspondence, a great deal of gratitude must be extended to Microsoft in providing the means to do so. Continued efforts by Microsoft makes it possible for me to remain on-line with the latest advancements in software technology at no further cost to me. Heck, I don't even have to stand in line for the ongoing, varied practical gratuities that are always offered at great convenience: and that's my contention in morally supporting Microsoft against any anti-trust action.

The point is, nobody at Microsoft put a gun at my head while purchasing their initial required hardware and software. What really irks me is that enviable competitors have decided to grovel at the feet of powerful brokers to—in effect—put a gun at Microsoft's head to cease and desist in their overwhelming superior productivity. I should add that not all my computer and related wireless products are made by Microsoft. A real monopoly, in other words, cannot exist in the business world; only among government entities (and that is precisely where no competition is allowed for fear of going to jail or worse).

America must remain a land of opportunity, even for those individuals who may eventually trump Microsoft at their own game. . . . Meanwhile, private property rights must exist for any ambitious enterprise to succeed—minus any vicious acts of force or fraud.

Hence, I hereby advocate the repeal of all anti-trust laws. Favoring one business over another is not a legitimate function of government in a free world. Don't get me wrong, I have a great deal of respect for the legal profession. A solemn court house is surely preferable over a bloody battlefield to settle any differences objectively.

THANK YOU FOR YOUR TIME

Dear Mr. Ashcroft,

Thankfully a settlement has been reached in this costly Microsoft Anti Trust case. It seems to me that it is fair for all parties and certainly good for the American consumer. Now is the time for the parties to act on the settlement requirements, shake hands and get on with the important business of working on computer security systems that would stop hackers in their tracks. Now that would be in the public interest!!!

Lets not forget that Microsoft played a key role in giving the American people young and old the tools to waltz right into the computer age. We must be thankful for that just as we are thankful for the Wright Brothers.

Wishing you a pleasant day and thank you for your service to our country.

Cordially,

Wilma Ballard

I support severe punishment for microsoft actions, in the amount equal to the size that the company has become. It seems likely that most if this companies gains were made illegally and should be taken away. The damage caused is unlikely to be restored because of its ruthless destruction of smaller members of the computer industry. Untold billions are lost because this monopoly has not needed to produce quality secure programs. Choice is not readily available and competition is stifled. The paid journalists writing in false praise, and lobbyists bribing our government are a corruption of society and a mockery of justice. Our interests are best served by an example being made of them in this case.

Respectively,
Citizen
USA

Dear Mr. Ashcroft:

It recently has come to my attention that the federal government is considering public comments on the Microsoft antitrust case to determine if the settlement actually serves the public interest. I would like to take this opportunity to express my opinion that the settlement does in fact meet the needs of the public interest.

I have followed this case for years, and I believe it is high time that both the government and Microsoft return to work. Microsoft will return to work with improved business practices that will ensure equity in the computer industry and choice for consumers. The corporation will comply with an impartial technical committee that will monitor its actions and assist in dispute resolution.

The government can return to work with the countless other pressing issues that face us at this time. I would like to see this matter resolved, and I am confident that the current

settlement agreement is satisfactory to all involved parties. As a computer user, I support Microsoft and its quality products, and as an American I support the hard work of our public servants such as you.

thank you for your valuable time.

Sincerely,
James Day

Dear Mr. Ashcroft:

We have learned that a settlement has been reached in the Justice Department's antitrust suit against the Microsoft Corporation. The both of us support this settlement, and think it is in the best interests of the government to accept it.

By accepting the settlement, Microsoft will not be getting off easy, as its critics would like you to believe. The settlement was reached after extensive negotiations with a

court-appointed mediator. Microsoft has agreed to license its Windows operating system products to the 20 largest computer makers on identical terms and conditions, including price. Also, they have agreed to document and disclose for use by its competitors various interfaces that are internal to Windows" operating system products. Furthermore, Microsoft has agreed to the establishment of a three person technical committee that will monitor Microsoft's compliance with the settlement, and assist with dispute resolution. We ask that the government leave Microsoft alone by not pursuing further legal action against them.

Sincerely,

950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

The Microsoft Corporation and the Department of Justice have finally agreed to terms on a settlement that will put an end to the antitrust issue which has lasted for over three years. We are writing this letter so that we may go on record as supporting the settlement, and would also like to ask that it be implemented as soon as possible. Enough is enough; this has gone on for too long. The government needs to shift their focus to more relevant and pressing issues such as divesting the Enron executives of the illegal proceeds from their insider stock sales prior to the demise of the company and requiring those funds replace the 401k and retirement fund monies their employees lost when they were barred from selling their stock. I guess it took a huge business failure like Enron and a recession to open-up some eyes in Washington.

We can't understand why Microsoft continues to be under fire, we do not see their competitors being subject to such treatment. Nor do we see their competitors doing much but whining and urging anyone they can get to listen to prolong the issue. Now AOL (was this part of the purchase agreement with Netscape?) has brought suit against Microsoft. That bandwagon is getting mighty crowded.

Where are all of their donations to schools—apparently they spent all their money in Washington DC? Do you really think AOL has any consumers' interests in their plans? In addition we feel AOL, Sun Microsystems and the other competing businesses in all the hold-out states should also have technical oversight committees assigned to test their compliance with good business practices. The settlement is reasonable, even with the oversight

committee, and the government should be satisfied and let Microsoft get back to their business.

The lawsuit is over, but their competitors are still trying to force the issue so Microsoft has to concede even more. It sounds like the agendas of the competitors should be questioned. I would ask that the Enron issues be examined as closely as Microsoft has been, but given Enron's level of political contributions, I'm sure that won't happen. Wouldn't it be nice if the people in Washington DC who could make a difference actually did?

Sincerely,
Ron and Sallie Rueter

Subject: Microsoft's exploits

To the honorable judge Kollar-Kotelly,
I am writing you as many others are in regards to the concern of Microsoft's business practices. Microsoft is a company that hinders the freedom of every computer user out there. As you know they represent a majority of the desktop market in the technology industry. It is only here in the US that the majority of desktop computers actually have a valid license though. Many other countries resort to piracy because of Microsoft's pricing. If you've read technology headlines of any lately you'll notice many countries are making a switch to other operating systems such as Linux.

Linux as you may have heard is generally free. Most major distributors of the linux operating system freely give away their product via download or offer boxed sets with support options. By offering a stable reliable operating system for a cost of next to nothing but time many government agencies around the world including the USA have been embracing this operating system as a means of cutting costs and saving millions upon millions of dollars in licensing costs for years to come. Further evaluation of Microsoft's practices will show they are making every attempt possible to ensure customers are caught in an agreement which guarantees Micro\$oft an income while guaranteeing the consumer nothing at all.

Already in place in Microsoft's latest operating system XP and their OfficeXP product are agreements and practices more of an annoyance than a protection. They are only trying to protect themselves in these manners and are causing more of a headache for the consumer.

This letter is of more importance to show you the exploits of Microsoft and to make you aware there are other operating systems and standards available. Microsoft has done it's best to exploit Sun and the Java standards, Apple and it's entire product line, as well as making every effort to conquer AOL in the ISP front by purchasing/forcing many smaller ISP's out of business and even handling ISP account related to QWest's DSL service. Many customers are given little to no choice when such changes are made.

To end, I even sympathize with the poor soul who distributed the notice I received about the Microsoft gameplay as I noticed it

was a ".doc" type file which is proprietary to Microsoft's Office product. Fortunately I use an Open Source (free) word processing program which allows me to read such a file and even save to such an evil format should I desire.

Thank you for your time and consideration in this matter.

Mike Owen
notanatheist@yahoo.com

P.S. As a final wish. . . The latest settlement requiring Microsoft to pay/donate millions of dollars in equipment to schools should be payed out in ONLY hardware. Surely there are enough companies willing to DONATE an operating system for the hardware. America is freedom is it not? Thank you. God bless.

Dear Microsoft Settlement:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more

entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Attorney General John Ashcroft
US Department of Justice,
950 Pennsylvania Avenue, NW
Washington, DC 20530-0001

Dear Mr. Ashcroft:

The Justice Department and Microsoft have been tied up in a court battle for the past three years, and for the past six months, negotiations have taken place under the supervision of a court appointed mediator.

Microsoft has, I think, been dealt with fairly in the settlement, and I do not believe

further litigation is necessary. Unfortunately, nine plaintiff states involved in the case do not agree. They are currently seeking to overturn the settlement and bring further suit against Microsoft. This matter has been pending for far too long, unfortunately to no one's benefit except the highly rewarded lawyers to the detriment of the consumers like myself. Therefore I feel that it is about time for the case to come to a quick conclusion.

I believe Microsoft has the right to remain in control of its own software, but I believe the terms of the agreement are beneficial because they allow more freedom on the part of the user. By comparison, I look at other major Companies Ford, Mercedes Benz, Bacardi, etc. We could all say that these other companies hold a monopoly as well. Will all these companies be required to comply with policies being asked of Microsoft? Under the terms of the settlement, Microsoft will be required to disclose source code for use by its competitors. Microsoft has also agreed to reformat future versions of Windows so that the operating system will support non-Microsoft software. Now, computer users whose computers run on Windows will have the ability to configure Windows as they see fit. I am pleased that the suit did not result in Microsoft's division into smaller parts, and I believe that this settlement is in the best interest of both computer makers and the consumer.

Mr. Ashcroft, I do not believe further litigation is at all necessary. Such litigation will only increase not only the governments' costs which in the end is the taxpayers, like myself. Pushing the issue any further would be totally counterproductive and would be, I believe, ultimately detrimental to the economy, the technology industry, and the American people. I urge you to support the settlement.

Sincerely,
Signed,
Gonzalo H. Iglesias

Washington, DC 20530

Dear Mr. Ashcroft:

Your unyielding support of the settlement that was achieved in the Microsoft antitrust case is needed.

After three years of holding Microsoft in court the settlement represents the best way to set Microsoft free from federal litigation.

Unfortunately there are those who would like to have this settlement discarded and this case brought right back to court. Their priority is too see Microsoft harmed and impeded in the courts, not to see more competition. Thankfully this settlement will bring more competition to the IT industry. The settlement necessitates Microsoft to

share vital code, including internal interfaces, with competitors. With this non-Microsoft companies will be able to create better software and compete better with Microsoft.

It would be a great development if the federal antitrust case could finally terminate. I think that you should promote this settlement and help to end this case so our economy can move forward.

From: Haradon Zeb
To: Microsoft ATR
Date: 1/22/02 11:00pm
Subject: In regards to Microsoft antitrust case

It is my understanding that the Department of Justice is seeking public comment on the Microsoft settlement. My intention in this letter is to state my opinion on this matter. First, I would like to explain that I believe any producer (an individual or a business), has the right to produce or legally acquire a product or service and offer it for sale under any conditions they deem fair, if such merchandise is represented accurately. As a consumer, I should have the right to accept their offer or refuse it. In the case of Microsoft, this right has not been infringed. Never have I felt compelled to purchase a Microsoft product or service. I am not aware of any action Microsoft has taken to force me to purchase any of their products or services. I have explored other operating systems, such as MacOS, Unix, and Linux, and have remained a user of Microsoft Windows due to its superior stability and usability. I have also exercised the choice not to use Microsoft products in certain cases. For example, I have used MSN Messenger Service, and ultimately uninstalled it from my system because I was unhappy with it's performance. I now use the competitor's products ICQ and Yahoo Messenger. I will reiterate: Microsoft has never interfered with my choice as a consumer to choose which product I want to use. The reason Microsoft has a large market share in certain areas is because they excel in those areas. I do not consider bundling software (such as the Internet Explorer web

browser) with the operating system to be a limiting of my choices.

On the issue of misrepresentation, if it could be shown that Microsoft has intentionally written code into the Windows Operating System which would cause other applications to not work, without warning consumers of this so that they could make an informed decision, then this would be a case where they had limited consumer choice. To the best of my knowledge, Microsoft has not done this.

For these reasons, I recommend the absolute minimum penalty, preferably none at all, as Microsoft's punishment in this trial.

Thank you for your time,

Zeb Haradon

From: Dan Trevino

To: Microsoft ATR

Date: 1/22/02 11:21pm

Subject: Oppose

Microsoft Settlement

I am against the proposed settlement with Microsoft corp. The judgment does not

address the serious anti-competitive practices that Microsoft continues to employ.

I believe Microsoft should be forced to allow other html rendering engines (browsers) to be integrated with all Windows operating environments. Microsoft can continue to assure the (albeit questionable) quality of their customer's experience by making available the Application Programming Interface (API) used to integrate Internet Explorer into Windows. In addition, I believe Microsoft's exclusive licensing practices with OEM computer manufacturers limits customer choice and has been the main limiting factor in the lack of further competition in the Operating System market.

In conclusion, I believe that unless substantial revisions are made to the final judgment, Microsoft will continue to exercise its monopoly power to the detriment of the computer industry and consumers.

Thank you.

Subject: Microsoft Settlement

To Whom It May Concern,

Please be informed that as a concerned citizen and hence concerned consumer of the United States, I would like to side with the Department of Justice against Microsoft Corporation. I have been in the information technologies field for over eleven years now and I have constantly had to submit to the very limitations on innovation that the company has set forth. In fact, throughout the company's history, it has inhibited technological advancement by controlling if not completely subjugating its competition. The company was formed by Mr. Bill Gates with the sole purpose of getting ahead not technologically, but fiscally. His goals have always been to destroy that which opposes him and in their stead dominate the

computer market. I have seen competitive operating systems rise, and then fail, causing the collapse of companies as a direct result of Microsoft's monopoly. An example of this is Be Incorporated, a software company that marketed its BeOS (www.be.com). The company was recently forced to sell "substantially all of its intellectual property and other technology assets to Palm, Inc. and [cause] the dissolution of Be through the adoption of a plan of dissolution." (Source: http://www.be.com/) There have been several other attempts to compete against Microsoft, but have failed and resulted in the dissolving of software corporations. Not only does this affect the technology industry, but the gross U.S. economy, as it removes the very competitive viability that defines capitalism. In the best interest of technological and economic growth, I strongly believe that the Department of Justice must curb the overpowering corporation and put an end to the monopolistic practices and restricting technologies of Microsoft. As the world moves towards complete electronic commerce, and billions of dollars go into electronic transactions annually, we must ensure that this new marketplace remains corporately viable and economically in tact, open to all who want to expand and grow. Intervention is the safety net for innovation, and the US Government must protect the interests of its domestic industries in order to protect the interests of its consumers. Where do I want to today? Towards technological advancement and away from restricting corporations. Thank you for your time.

Sincerely,

Kunal Arya

Subject: Comment on Microsoft Settlement

I feel strongly that justice has been blinded by the color of commerce. Each day that passes, Microsoft works to strengthen it's monopolistic holds. Monopoly in itself is not illegal, but the practices Microsoft uses to accomplish it's goals are.

This settlement is nothing but a slap in face of those who seek faith in the Department of Justice. Not only is this settlement a far cry from justice, but it furthers the monopoly of Microsoft.

The citizens of the United States rely on the Department of Justice to mete out and preserve justice. Protect the naive and serve the principles of our country.

Choose wisely and be diligent in your duties. You are the arm of the law.

Sincerely,

David

Subject: Opposition to proposed Microsoft settlement

I believe that the proposed settlement to the Microsoft anti-trust case is unacceptable. The settlement allows, and even encourages,

the advancement of the Microsoft monopoly by requiring them to supply hardware and software to schools. Microsoft does not traditionally carry a majority of the school market share, yet this move would allow them to increase their percentage of the educational market while also allowing them to use roughly 1/4 of the total 'cost' of the settlement to pay for hardware while using the other 3/4 to pay themselves for the software they're providing, which is helping their overall market penetration. This is a settlement that was obviously proposed by a company who has no respect for the justice system and is counting on the system being too stupid to see through their plans. I hope that you all will do the right thing to encourage competition in the US marketplace. While a truly appropriate penalty will be hard to come to, one that rewards a defendant for wrongdoings of which they have been accused is clearly not in the interest of the American people.

From: Matt Squires
To: Microsoft ATR
Date: 1/22/02 11:49pm
Subject: Microsoft Settlement

Hi Renata,

First, let me apologize in the event you have received another email from me with much of the same content. I recently had to reload my Windows due to chronic instability, and after the fresh install of Windows, the Netscape email software I go out of my way to download and install didn't work at all for some reason, and I had to find alternate software. With my new software, I still don't know my way around, and inadvertently hit the "send" button on a half-finished email. How embarrassing. Of course, since I'm writing to let you know about the damage Microsoft's abuse of their monopoly has caused the average user, this may be a telling example, and a taste of the average Windows experience. If you can, please remove the other, unfinished copy of my email from your records, as it is disjointed, garbled, and incomplete.

I am a longtime Microsoft Windows user (not by choice), and I have been constantly disappointed over the years by the weak judgments handed out against Microsoft time after time by the legal system. I am even MORE disappointed by the fact that Microsoft has blatantly broken the already lenient terms set out by the government in the past, and has not been amply punished for their disobedience in any way whatsoever. Justice is more than a judgment on a piece of paper. The "appearance" of justice is also important, and that is one thing that is sorely lacking, especially in this most

recent case. From what I've seen so far, Microsoft has won again, managing to get watered-down restrictions that won't slow their assault on the consumer and their competition in the least. Most people have told me not to even bother writing this letter to you, that the government is either:

a) paid off by Microsoft, or
b) under orders by George Bush to let Microsoft go free regardless of findings of fact. This is the current public perception. Of course, I am hoping that neither of these foul possibilities is the case, and that there still is a chance to have a fair and reasonable set of terms and conditions set down in the Final Judgment.

I ask that the Department of Justice strengthens the terms and conditions against Microsoft in the Final Judgment SEVERELY. I have read the information at the DoJ website concerning the Microsoft antitrust case, and I do not feel you have gone far enough to create a level playing field for all parties in the technology marketplace. Looking at the ideas put forth on <http://www.usdoj.gov/atr/cases/f9500/9549.htm>, I am afraid that these restrictions will not force Microsoft to:

a) change their savage anticompetitive tactics,
b) lose marketshare to superior, more deserving products, or c) understand that they are being punished for their behavior. They have made hundreds of billions of dollars directly because of their abuse of their monopoly, and this judgment should attempt to counterbalance that gain, since the power they have gained in the last 10 years of domination has guaranteed their stranglehold for the next 20. This judgment feels like it is a good step in "starting clean", but it does not punish Microsoft for their past offences. They have still profited greatly from their crimes. And the inroads they have made into all walks of digital life are a great barrier to competition, even if a level playing field were miraculously established.

I am a Canadian, so what I say may not hold as much sway with your department. But the results of this case will, and should, have worldwide ramifications. Canadians, Germans, Australians, Africans, Japanese people, and the rest of the world, are ALL feeling the negative effects of the Microsoft monopoly. I personally feel that I have suffered greatly because of Microsoft's business practices. As a user, I DIRECTLY relate their influence and predatory policy to the downfall of many technologies that were superior or more popular at the time of Microsoft's attacks on the competition. I, as a consumer, have suffered because of their abuse of their position. I have had my choice and options restricted by their behavior.

I wish I could switch to another operating system to become Microsoft-free, but Microsoft has been giving out Microsoft Office CD's free with OEM computers long enough that they have pretty much killed Corel's Wordperfect Suite (among others), which used to have the 90% market share that Office now enjoys. And since I receive documents daily in the proprietary Word, Excel, and Powerpoint formats, I am forced to use Microsoft's product whether I like it or not. When a customer sends me a Purchase Order in Word XP format, I not

only have to use Microsoft Word to open it, I have to buy the new Microsoft Word "XP" version, simply to open the file! And then when I send correspondence to another customer or supplier, they in turn have to buy Word XP in order to open my document. It's a vicious cycle, propagated by one thing— Microsoft's closed, proprietary formats.

I sincerely believe that there is no chance of Microsoft changing their ways unless the API's and proprietary document formats that they rely on to extend and maintain their unfair monopoly are opened up for non-Microsoft use, with a different license than the one offered on MSDN. If Microsoft determines the licensing (as is in your COMPETITIVE IMPACT STATEMENT, they determine how the information can be used. This doesn't help competition with Microsoft, it only helps Microsoft themselves. They may gain additional control through changing their licensing, and nobody can stop them, since we all rely on their droppings of information to survive in the software world. Programmers beg for table scraps of information from MS because we can't get it ourselves. Please promote freer licensing terms and more open spreading of the Microsoft specification sheets so the maximum number of programmers (from ALL Operating Systems) can become compatible with Microsoft's software, thus breaking the reliance on one company for so many electronic transmissions. Please consider forcing open the formats that Microsoft currently holds secret for a reason, or please consider having Microsoft use the most "open" format as their default instead of the most proprietary (ie RTF instead of DOC, etc.) There are perfectly good Open formats that can replace Microsoft's predatory and proprietary closed formats. Please give full communication with other vendor's software a chance by pushing for openness rather than secrecy. I would switch to another operating system if I wasn't forced by my customers and the people I deal with to transmit almost all data in specific, proprietary, closed Microsoft-only formats. Microsoft won by forcing their proprietary formats to be the default in the market, thus killing all non-MS software instantly; give competition an opportunity to "get in the game" by forcing standardization and openness into the industry that made billions on secretive formats and purposeful exclusion of competitors. Computers and the Internet are tools of communication; Microsoft is the greatest hindrance to open communication in the world today. Please help build a strong and OPEN foundation for the world's communications infrastructure for the future.

As long as they have the weight of their Windows monopoly to use as a club, the situation can only get worse. And if you don't act -decisively- now, we may not get another chance. There will be a lot less evidence in the next Microsoft case, since they're shredding all emails now to prevent them being subpoena'd in the future. This is your one chance to right the wrongs of capitalism gone awry. If this case doesn't break Microsoft's legs, in five years from now, they will have trampled all their

competition to death. That sounds harsh, but only because Microsoft constantly claims they are the victim in this case. They're not. I am. The consumer. The programmer who would compete with Microsoft if there was any hope. If you want, I can name names of companies with superior products that are gone solely because of Microsoft's behavior and the results of their freedom to abuse their monopoly. Microsoft is so far ahead of the competition in this "free market race", that the competition Microsoft has already crippled and left crawling, like Apple, Corel, and Netscape, will only catch up if Microsoft's legs are broken in kind. If you have mercy, be certain Microsoft will not. Someone will be broken, you decide if it is Microsoft or another victim.

In the news recently, Microsoft has bought much of Silicon Graphics' Patent Portfolio, specifically the patents for OpenGL, which is in direct competition with Microsoft's own DirectX. By buying the patents of the dying competition (SGI also has no air supply), Microsoft can LEGALLY kill the 3D and gaming capabilities of ALL non-Microsoft Operating Systems. Apple will die. They based their new operating system on heavily on OpenGL. Linux will die. Like Apple, they don't have access to Microsoft's DirectX (obviously), and rely heavily on OpenGL to give their system functionality. Who will buy a computer if their kids can't play games on it, especially when Microsoft owns the Office genre and won't allow anyone else to communicate with their product? There's nothing else left. Microsoft owns it all. They have their fingers in with hardware producers now, who will have to exclude other operating systems from their designs in order to appease Microsoft. This isn't relevant to your case, but it is an example of the complete lack of respect Microsoft has for your verdict. They aren't worried in the least. And their business plans continue unaffected and unharmed. They will buy everything that is competition and bury it specifically to harm others.

I hope that you will consider my points as you decide what to do to bring equity to the PC market.

I'm sorry for being so wordy (and waxing poetic (badly) in a few places), but as a guy who works on computers 12-15 hours a day, Microsoft has honestly lowered my quality of life, and I'd hate to see them get out of yet another trial unscathed. Which, unfortunately, is what looks like is happening. Bill Gates admitted it when he said "We haven't changed our business practices at all."

Think about it. This may be the last Microsoft case that will ever matter.

Best Regards,
Matthew Squires

Honorable Judge Kollar-Kotally,
As an employee in the high tech industry, I am aware that Microsoft has used its operating system monopoly to dominate other software markets as well. In fact, every court has concluded that Microsoft violated antitrust laws in this manner.

The proposed final judgment does nothing to prevent Microsoft from continuing in this behavior and would amount to a government mandate of the monopoly. Furthermore, the many billions of dollars Microsoft earned illegally from its antitrust violations go untouched. Virtually no penalty is applied.

Due to these serious flaws in the proposed U.S. vs. Microsoft settlement, I ask you to reject it.

Sincerely,
Chris Chaves

Washington, DC 20530

Dear Mr Ashcroft:

The recent settlement between the Department of Justice and Microsoft is in the best interest of the American public because it ends an extremely long and cumbersome litigation and it allows Microsoft to continue to innovate and grow.

Under the terms of settlement, Microsoft will not be broken up, which is a good thing, but they will be forced to comply with a number of harsh stipulations. These concessions include disclosing internal interfaces and protocols as well as improve relations with computer makers and software developers. They have also agreed to form 2-person team to monitor Microsoft's compliance with agreement.

These concessions should appease all opposition. I urge you to show the opposition that no more good can be done by continued litigation, and in fact, how it might even hurt the American economy and IT sector in particular.

Thank you for your time.
Sincerely,
K.B. Tam

Dear Mr. Ashcroft,

Although I did not agree with this suit in the first place, it should be obvious to everyone by now it is time to move forward. The government should be extremely satisfied because the terms are extremely tough.

For example, Microsoft has agreed to document and disclose for use by its competitors various interfaces that are internal to Windows' operating system products. This concession represents a first for an antitrust settlement.

As a member of the tech industry for many years, I know what it was like before and after Microsoft arrived on the scene. They have made so many jobs easier and workers more efficient because of their products. Microsoft has become the industry standard and ending this litigation will free them to continue their excellence.

Sincerely
Richard Doll

From: Rob Helmer
To: Microsoft ATR
Date: 1/23/02 12:41am
Subject: Microsoft Settlement Hello,

I would like to let you know that I oppose the Microsoft settlement.

I've worked for numerous technology companies, both as a full-time employee and as a contractor, and I've seen first-hand some of the abuses that Microsoft has caused the computer industry due to it's monopoly power.

I've managed to make a living using non-Microsoft application software, and

interoperating with their applications or creating applications of my own as alternatives to their software.

However, I fear that Microsoft will continue to use their desktop operating system and business application control to push into the server software market and eliminate applications that do not feed Microsoft's revenue stream in some way, just as they have done in the desktop and business software markets. I oppose the proposed settlement on the grounds that it does not do enough to restrict Microsoft from using their monopoly power to push out smaller business from any market that they turn their attention to.

Thank you.

Microsoft Settlement: Any published programs to date of any plan on how to compensate the millions of people openly ripped off has been a sick joke so far from Microsoft.

Suitable Dream Plan: Recall any and all old Microsoft software disc. Microsoft to be forced to reimburse people 75% of the market price that was in place three months after the different programs came on the market. eg. Win 95 sold for \$150.00, so refund would be \$112.50 Please don't forget all of those that did not live or purchase their software in the US. In Canada we paid over \$ 200.00 for that same programe.

Date: 1/23/02 2:04am
Subject: Microsoft Settlement

To whom in may concern,
I am writing this email as in indicator of my dissatisfaction with the proposed remedy against the Microsoft Corporation as stated in the penalty phase of the antitrust trail. The main issue which is not being addressed in the proposed settlement is the restrictions that the Microsoft Corporation is STILL able to put on third party companies when it comes to creating an equal playing field for other third parties and other non-Windows Operating Systems to participate in the software economy. The Microsoft Corporation will still be able to apply predatory licencing practices of its software products making it impossible for third party software developers to enter into the Personal Computer Operating Systems, as well as non PC Operatings Systems and software market.

One of the biggest problems that has not been addressed in the proposed settlement is the keeping of the Microsoft Corporation's Microsoft Office Suite files in a proprietary format. This is a VERY dangerous road to continue to go down. This means that if businesses currently using Microsoft Office get sucked into the next upgrade cycle for Microsoft Office, there is NO way for interoperability of the Microsoft Office file

formats between third party software vendors. This means that any public document written and transferred using Microsoft Office will require the recipient of the document to be using Microsoft Office, or else they will not be able to open the file. This is exactly the type of predatory buisness practices that brought the antitrust suit against Microsoft, and this is one of the issues the proposed remedy does not address. The real solution is the open standardization of the Microsoft Office file formats so all comers can communicate with persons and buisnesses using Microsoft Office, without being forced to use Mircsoft Office or other Microsoft software themselves. Another more important remedy is the forcing of the Microsoft Corporation to license the Microsoft Office suite to third party software vendors so it can be ported to non-Microsoft Operating Systems (ie: Linux and other Open Source Operating Systems) so that everyone is able to communicate using a standardized file format, and no users of non-Microsoft Operatings Systems and Microsoft Software are excluded from communicating with people using Microsoft software.

The second of the largest problems which is not addressed in the proposed remedy is the open publication of the Microsoft Corporation's Microsoft Windows API or Application Programming Interface. The main issue here is that the idea of APIs are very narrow defined in the proposed remedy, and the Microsoft Corpation will continue to be able to change its APIs to suite its own predatory needs, and not the needs of its users, the needs of users of non-Microsoft operatings systems, and the needs of the public as a whole. In addition the proposed remedy makes no mention of the APIs outside of the Windows Operating System for Personal Computers. (ie: it does not address the Microsoft Corporations other Operating Systems such as Windows XP Tablet Edition, Windows CE, PocketPC, or the X-Box Operating Systems). This sets a dangerous presidence as the Microsoft Corpation will be able to continue its predatory buisness practices outside of the Personal Computer Operating Systems market, therefore making any preposed remedy against its Personal Computer Operating System competely useless, as Operating Systems and Software will not be used on machines resemebling Personal Computers in the next decade. The real and only possible remedy to this problem is the open publication and documentation of ALL Application Programming Interfaces for ALL of the Microsoft Operating Systems regardless of platform. This will allow third party software vendors to create programs to interopt with the Windows Operating Systems and its Programs and File Formats (as previously mentioned). As the proposed remedy currently stands, third party software vendors are prevented from making their products work with the Windows Operating Systems, and allows the Microsoft Corpation to continue such predatory buisness pratices as making other Microsoft Software not function properly on non-Microsoft Operating Systems, which completly disregards the purpose of the antitrust trial in the first place.

The third of the largest problems which is not addressed in the proposed remedy is the terms the Microsoft Corporation is able license its software under. Under the proposed remedy the Microsoft Corpation will still be allowed to force large companies, state governments and univerties using its Enterprise Licensing Agreement for the number of computers which COULD run an Microsoft Operating System, even for computers running a NON-Microsoft Operating System. This has already found to be an unlawful practice in the 1994 concnet decree, but the proposed remedy does nothing to address this problem. The forcing of OEMs (Orignal Equipment Manufacturers) by the Microsoft Corporation to only ship personal computers with the Windows Operating System, for fear of retaliation from the Microsoft Corpation. The perposed remedy does nothing to address this issue, and will allow the Microsoft Corpation to continue this practice which has already been found to be illegal. This issue holds true for NON Personal Computer Operating Systems as well. The perposed remedy does nothing to prevent the Microsoft Corporation from offering discounts of the Windows Opearting Systems to OEMs based on criteria such as sales of the Microsoft Office suite which allows the Microsoft Corporation to leverage its monopoly in the Personal Computer market to increase its market share in other areas. The only real solution to this problem is allowing ALL OEMs to ship non-Microsoft Operating Systems along with Microsoft Opeartings on the Personal Computer they will without fear of retaliation from the Microsoft Corporation. This will continue to be a huge issue as OEMs are now faced with such small profit margins (due to the current economic state), and are forced to pay the Microsoft Tax for all machines shipped, without the freedom to ship non-Microsoft Operating Systems. These are extremely important and underlying issues that are NOT addressed as the proposed remedy currently stands. I hope for the sake of our nation's economy and future that these are addressed, or we will all find ourselves in the same position a few years down the road, and things might not be so easy to fix then.

Respectfully,
Nicholas A. Bellinger

Subject: Competition At The Crossroads
The Honorable, Judge Colleen Kollar-Kotelly
Your Honor:

Opportunities to "right" injustice within our increasingly competitive business culture, today, are a greater challenge, indeed more precious than ever and ones that we dare not let slip away.

The precedent that Microsoft has levied so skillfully in decreasing and sometimes even eliminating the ability to compete within the software industry is one that we have an opportunity to change.

This opportunity requires not only ongoing vigilance but firm action in correcting it now. We must not allow it to inadvertently and forever change the way Americans have traditionally and rightfully enjoyed business environments free from monopolistic harassment.

Allowing Microsoft to continue its present and purposeful course of monopolizing the software industry squeezes-off the lifeblood of our competitive freedoms and strikes at the very core of what makes, and has made, America markedly special among democratic nations.

Your Honor, you have an historic opportunity in changing this course. Nothing less than a fair and just settlement in the Microsoft matter is the responsibility that has been entrusted into your hands

As a Boeing 757 Pilot for America West Airlines, the needs of my employment and home-life require the use of both Microsoft and Macintosh operating system software. I see possibilities for a creative operating system environment that must not be snuffed out.

I ask for your fairness, your wisdom and clear judgement to prevail in the very critical decisions you face.

Sincerely,
John M. Spriggs

From: Tony Evans
To: Microsoft ATR
Date: 1/23/02 1:16am
Subject: Microsoft Settlement Comments

If the current proposed settlement in the antitrust case against Microsoft is implemented, it will shake my confidence in the system of justice of the United States of America. Microsoft was found to have broken the law, and that finding was affirmed unanimously on appeal. To allow them to keep the monopoly they have illegally maintained, extended, and abused is bad enough, but to let them continue the abusive practices is over the top.

I have been an observer of Microsoft and user of their products over the past 16 years. A number of their products, both developed by Microsoft and by companies they have since purchased, are important to the functioning of my small business. They have done a lot of good for me and for users of computers generally. They built a monopoly

in large part, fairly and legally. But that extra margin they they gained through nefarious means is the most damaging to consumers because it takes out the marginal players that can make the competitive market work.

The simple fact is that this is a bad settlement. It is a betrayal of the users of software, the software industry, and the American People generally. Microsoft has demonstrated in the past, and in the very language of this settlement that they will abuse the trust that it is based on, and carry on in their illegal ways.

Please do not let this case settle in this manor.

Respectfully, Tony Evans

Sandy, UT 84094
January 22, 2002
Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 205301

Dear Mr. . Ashcroft:

For over three years now, Microsoft has been undergoing antitrust hearings in the federal courts. For a while, it seemed that the only solution that the plaintiffs would accept was the dissolution of Microsoft. Thankfully, the courts determined that such actions were unnecessary, and appointed a mediator to oversee negotiations between the Department of Justice and Microsoft. It was only after six months of continuous negotiation that Microsoft and the Justice Department were able to settle on a broad range of terms and conditions that would not only prohibit further violations on the part of Microsoft, but also restore fair competition to the technology market.

There is no reason to take additional federal action against the Microsoft Corporation. Were the settlement too lenient, as Microsoft's competitors claim, it would have done nothing to prevent future antitrust violations. But the settlement not only stops Microsoft from engaging in monopolistic behavior, it also extends these restrictive conditions to products and procedures not found to be unlawful by the Court of Appeals. Were the settlement any harsher, Microsoft would suffer severe losses that would be reflected in the economy and the technology industry. I believe this settlement is in the best interests not only of Microsoft and its competitors, but also of America as a whole. Microsoft has agreed to a wide range of restrictions and obligations, all of which will restore a competitive balance to the technology market. For example, Microsoft

has agreed to refrain from entering into any contract that would require a third party to distribute or promote Microsoft technology either exclusively or at a fixed percentage. Additional litigation can only mean trouble for the IT industry and the American economy. I urge you and your office to support the settlement and move on.

Sincerely,
David F. Brown

Subject: Microsoft Settlement

I am a software professional of 15 years, having written and supported applications for both Microsoft and competing products.

Dan Kegel would attempt to have loopholes in the Proposed Final Judgment closed as he describes in the following link: <http://www.kegel.com/remedy/remedy2.html>

Admirable as his intent is, I must respectfully disagree with Mr. Kegel that it is possible, much less practical, to close all of the loopholes Microsoft will inevitably find and employ no matter how careful and well-intentioned and regardless of the technical or legal expertise of the person(s) involved in the attempt. As an experienced repeat offender, Microsoft is too adept for any specific prohibitions to achieve much more than changes in labeling, or worse, cosmetic design changes to products that increase not only the development costs for Microsoft, but also for independent developers of software for Microsoft's Windows as well as those who develop compatible alternatives.

Rather than attempt to restrict actions, I propose the following remedial actions be required:

1. A public acknowledgment, specifically including:
 - a. Microsoft's deliberately spreading false information regarding competing products.
 - b. Microsoft's deliberately introducing changes in interfaces for the specific purpose of rendering competing products incompatible.
 - c. Microsoft's effectively prohibiting resellers of Microsoft products from selling competing products.
 - d. A reminder these actions can, and have, been pursued in civil courts—sometimes successfully.
 - e. A general commonsense warning that reliance on any business-critical product for which there is only one source can be detrimental to business continuity and profitability.

Apology optional. This public acknowledgment should include national advertising in the trade magazines most likely to be read by those who authorize purchases of Microsoft products. It should also include national advertising on the major television networks during periods of relatively high viewership ensuring some large minimum number of people have viewed the acknowledgment.

2. A concise mandatory warning label on every Microsoft product that can be read prior to purchase as well as after the product is installed—and made no less accessible or prominent than version and copyright information—preferably in the same manner.

This would include a brief restatement of 1a, 1b, 1c, 1d and 1e. Brevity and simplicity of wording are essential. A lengthy epistle of legalese will be understood only by lawyers.

3. A deadline for implementing 1 and 2 above.

4. The above actions and quarterly reviews for compliance should continue for a period of five years starting from the beginning of compliance. Whomever is responsible for deciding compliance should solicit input from leaders in the industry including, but not limited to, competitors of Microsoft.

No other measures. No fines other than court costs, enforcement costs and the

expense of implementing the above. In my humble opinion, Microsoft's gain by deception has been, and will continue to be, only effective so long as the deception is not well known and well understood by business leaders and the general public.

Also, it is my belief the people actually injured by Microsoft's deceptions are more likely to recover their losses in civil court via class action and individual lawsuits than by the changes likely to result from criminal prosecution. One objective of my recommendations is to lower the bar to civil remedies in the face of the considerable resources Microsoft can afford to unleash on the smallest, but well-founded, complaint.

Another objective is to correct the commonly held, but false, assumption that Microsoft has risen to its leadership position entirely because of the quality of its products—the reason most commonly given for not considering alternatives to Microsoft in my fifteen years of experience in the industry. By warning Microsoft's potential clients as directly as practical, they are less likely to make “no brainer” decisions based on market share instead of merit.

The last objective is ease of enforcement. The advertisements and warnings are present or not. They either acknowledge the required points in the language of a layperson or they do not. Contrast with a prohibition where the spirit, if not the letter, can be violated with impunity if enough cosmetics are applied—if the past is any indication.

Thank-you for your consideration,
Chuck Phillips

It is past time to stop wasting our tax dollars (and time) in going after a company which has created many thousands of jobs both directly and indirectly. Microsoft, its employees, shareholders, and the American taxpayer have been severely injured by the years of anti-business prejudice of the Clinton administration.

Also, this case was a deterrent to investors and entrepreneurs in the high-tech industry. Let consumers decide who wins or loses on Wall Street, rather than judges and bureaucrats. I strongly urge that the Microsoft settlement be recommended by the DOJ to the court.

Dear Microsoft Settlement

U.S. Department of Justice:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry.

It is high time for this trial, and the wasteful spending accompanying it, to be over.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
Vincent Monaco

Subject: MS Settlement

I'm disappointed. Yes I live in Washington State, yes many of my friends and fellow engineers work for Microsoft. For their sake, Washington State sake, and USA economy sake, I should be happy that Bill and Co only got a mild wrist slapping, but I'm not.

Microsoft's business practices are monopolistic, which is surely wrong from a good vs. evil perspective as they put little companies out of business.

What really makes me angry about Microsoft and this ruling is that their monopolistic business practices stifles innovation in the technical arena which I am dependent on for a living. Microsoft is on the verge of taking over access to the web after shutting Netscape nearly out of business. Internet Explorer has been forced onto 90% of the PCs in the land. Now the web-site norm is to support Internet Explorer as a requirement. We're starting to see many web-sites no longer work properly with the underdogs (Netscape, Mozilla, etc.). Just last week my employer installed a Microsoft Proxy Server, which by-the-way, runs just great with Explorer, but when Netscape is used to talk to the Web thru the MS-ProxyServer, you are required to login with a username a password after a 10minute timeout. Is Microsoft shutting out the competition 100%, No, but they are being just annoying enough to persuade the common user to ditch all products other than theirs. Just like MS-Word before it, nobody loses their job making their web-site talk to Internet Explorer and not Konqueror or Mozilla or some other browser. Internet Explorer is not available for open-source OS's such as Linux. Its not even available for Sun Solaris. Thats a problem. Why is Microsoft giving away Internet Explorer for MS-Windows users but not providing Internet Explorer for alternate OS's, either in compiled binary or source code? Simple. This emerging strangle-hold on web-browsing is positioning alternate OS's out of business. Thats bad.

Best Regards,
Kevin M. Hubbard

Subject: Microsoft Settlement
Your Honor,

I have been an electrical engineer for 7 years and have been following this antitrust case since 1995. I have purchased Microsofts new XP Windows because my Windows 98 became so unstable (truly a defective product). XP was \$99, up from \$89 for Windows ME, up from \$79 for Windows 98. I can not believe the software that Microsoft has bundle with the operating system. Windows Media alone competes with dozens of other programs you should have to play

for. Clearly Microsoft has not changed their ways. I urge the court impose strong sanction on Microsoft so that competition is restore in this vast market. Microsoft charges too much for their software, its products are defective, the singularity of operating systems with single office software and browsers running on it poses a huge security risk for the Internet.

Please do the right thing.
Thank you for your time,
Lars Gilstrom 667 College St

From: Bill Longabaugh
To: Microsoft ATR
Date: 1/23/02 1:42am
Subject: Microsoft Settlement

I am writing to comment on the proposed settlement of United States v. Microsoft. In short, the current proposal is severely inadequate to the point of being a travesty. Despite the fact that this is probably the most significant, complex, and troubling antitrust case of our generation, the Justice Department has apparently now decided to abandon the entire effort, and rush out a fatally flawed settlement full of loopholes that Microsoft can use to avoid any meaningful restrictions on its illegal behavior.

The current agreement is flawed, in that it just concentrates on trying to restrict behavior that Microsoft has used in the past to maintain its current monopoly status. However, it even fails to achieve this inadequate goal.

For example, Sections III.D and III.E state that Microsoft must document its APIs "... for the sole purpose of interoperating with a Windows Operating System Product." This completely ignores the usefulness of having APIs documented to allow Windows applications, such as Office, interoperate with a non-Microsoft operating system, such as GNU/Linux. Also, according to Section III.J.1, Microsoft is allowed to not disclose information if it deems that it would "compromise ... security". It is generally recognized within the computing security community that truly secure protocols and algorithms can be publicly distributed and discussed without compromising security. In fact, the public disclosure of this information is a way to allow consumers to determine for themselves if a supposedly secure implementation is truly secure. Thus, this provision merely provides Microsoft with just another loophole that they can use to unilaterally refuse to disclose information about the Windows operating system to independent developers.

Section III.J.2 also contains an egregious error. Since Microsoft has utterly destroyed viable commercial competition, volunteer efforts such as GNU/Linux, the Samba project, and WINE have become the best chance at providing consumer choice in PC software. However, the proposed agreement allows Microsoft to decide who it will share its API disclosures with. Specifically, Section III.J.2 allows Microsoft to decline to provide information to any party that it decides fails to meet ... reasonable, objective standards established by Microsoft for certifying the

authenticity and viability of its business". Given this provision, Microsoft could easily refuse to share crucial API information to private parties who are trying to build open-source alternatives to Microsoft software.

It is also disturbing that after years of legal proceedings, the Justice Department has allowed Microsoft to continue to state in Section VI.U that "... the software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion." I feel that this belief, which Microsoft adamantly refuses to modify, lies at the core of Microsoft's illegal behavior.

Finally, there is no effective enforcement mechanism. In this regard, I quote Professor Lawrence Lessig, who has stated: "... the settlement is fatally flawed. There is no effective enforcement mechanism to assure that Microsoft lives up to the terms of the decree. The "technical committee" does not have the power to interpret the decree. The only entity that can interpret the decree is a federal court." (Quoted from: <http://slashdot.org/article.pl?sid=01/12/21/155221>)

So, the current proposed settlement, which concentrates on past behaviors, is fatally flawed. Any settlement that has any hope of correcting the imbalance in the market needs to go much further. As a minimum:

1) The settlement should require Microsoft to release Windows API and networking protocol information freely and without limitations. All software developers, be they private, commercial, or in the government, should be able to obtain this information. They should be able to use this information to write software that interoperates with Microsoft operating systems, as well as to develop software that allows Microsoft applications to operate with non-Microsoft operating systems. This would permit the volunteer teams working on GNU/Linux, Samba, and WINE to continue their crucial efforts to provide alternatives to Microsoft monopoly products.

2) In a similar fashion, file formats for the Microsoft Office suite of applications need to be made freely available, without limitations, to allow developers to create other products that interoperate with these applications. MS should be required to support those teams trying to insure interoperability.

3) Any Microsoft products that are available on new computers must be offered as extra-cost options on those computers, so that consumers have an option of purchasing computer hardware without an operating system. This allows users of free operating systems such as GNU/Linux to avoid having to buy products they do not want or use.

4) The settlement should also provide for an enforcement mechanism with real teeth, so that issues arising over the agreement can be settled without having to resort to the federal courts.

5) There should be a considerable fine imposed on the company for its illegal behavior.

6) Innovative structural remedies, such as requiring Microsoft to sell off their developer tools business and/or their browser business, should not be off the table. These approaches could significantly help to change the currently unhealthy dynamics in the PC software industry.

In summary, Microsoft has had far too much influence on crafting this settlement. The company has shown that it will take maximum advantage of loopholes in any agreements it makes; the 1994 consent decree was a wretched failure at restricting their illegal behavior. Since then, the federal courts have ruled that Microsoft has indeed violated the Sherman Antitrust Act, and yet the Justice Department has again allowed Microsoft great leeway in crafting a settlement. I would argue that any settlement that Microsoft can freely agree to does not go far enough; the Justice Department should use the leverage it has gained to see that the courts impose an agreement on the company that leaves Microsoft without any wiggle room that allows it to continue its illegal behavior.

The bottom line is this: if this settlement is truly adequate, why have half of the plaintiffs in this antitrust action refused to sign on, and instead have decided to continue pursuing the case? The answer is simply that this poor excuse for a settlement is utterly and completely inadequate.

Sincerely,

William J.R. Longabaugh

Subject: Microsoft Settlement: deep concerns

Dear Sir / Madam,

I'm deeply concerned about the proposed Microsoft Settlement. I just read that despite its numerous legal and syntactic flaws which allow Microsoft too much freedom in interpreting its rules, it's about to get passed.

It's been clear almost from the beginning to many people that the Settlement as proposed by Microsoft is way too weak. And now people tell me that it's probably going to be passed.

Once this happens, then I'll know what to really think of the American "Justice" system.

I'd like you to think again before deciding on this issue.

Yours sincerely,

Andreas Mohr, Open Source programmer

From: Stephen R. Savitzky
To: Microsoft ATR
Date: 1/23/02 3:24am
Subject: Microsoft Settlement

As a computer scientist with thirty years' experience in computer-related industries, I wish to submit my comments under the Tunney Act on the Proposed Final Judgment in United States v. Microsoft.

I agree completely with the problems identified in Dan Kegele's analysis (on the Web at <http://www.kegele.com/remedy/remedy2.html>), namely:

- * The PFJ doesn't take into account Windows-compatible competing operating systems

- * The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

- * The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

- * The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

- * The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

- * The PFJ as currently written appears to lack an effective enforcement mechanism.

The PFJ can be summarized briefly as saying that Microsoft agrees to publish some of its prices and license a few of its API's and protocols (possibly at a high price and for strictly limited purposes) while continuing nearly all of its current exclusionary practices and enjoying carte blanche to extend its monopoly into tablet PC's, palmtops, set-top boxes, game consoles, and in fact into every kind of product except desktop PC's, where it already enjoys a monopoly which the PFJ does little to address.

I would add that Microsoft's biggest competitor is the free, community-developed operating system GNU/Linux, and that many provisions of the PFJ (for example, section I, which provides for the payment of royalties for "any intellectual property rights owned or licensable by Microsoft that are required to exercise any of the options or alternatives expressly provided to them under this Final Judgment") seem expressly designed to prevent the community of individual developers that constitutes Microsoft's only effective competitor from deriving any benefit or protection under the PFJ. Moreover, I.3. explicitly allows Microsoft to refuse to license its technology for use in open-source software—again its only effective competition.

Worse, Sections D and E include the phrase "for the sole purpose of interoperability with a Windows Operating System Product", thus explicitly allowing—indeed, encouraging—Microsoft to prohibit the development of a competing operating system that runs Microsoft applications.

Similarly, more PC's are manufactured and sold by small local and regional "white box" dealers than by large OEMs; these small entities similarly derive no benefit from the PFJ.

Then, too, PC's can be expected to be a rapidly-diminishing portion of Microsoft's operating system market: Microsoft operating

systems are built into pocket-sized organizers (the Pocket PC), game consoles (the Xbox), set-top boxes (WebTV), and new products such as "tablet" computers and "web pads", not to mention servers. The PFJ in its current form explicitly excludes all of these non-PC devices from its proposed remedies.

Finally, a large part of Microsoft's monopoly power is derived from its ability to change file formats and protocols at will. This makes it practically impossible to write software that interoperates with Microsoft applications and operating systems, and allows Microsoft to force users to upgrade continuously in order to maintain access to their own data.

Considering that Microsoft has already been convicted of abusing its monopoly power, and that this conviction has been upheld on appeal, it hardly seems necessary to ask whether it is in the public interest to allow Microsoft to dictate the terms of its own "penalty" in a manner almost completely favorable to itself. However, the Tunney Act asks this question, and it seems safe to answer resoundingly in the negative. I've been struggling to find a pithy analogy for this situation, but I can't. It's almost like the old joke in which a convicted murderer is given his choice of execution methods and chooses to die of old age.

But this is monopoly, not murder, and it isn't funny.

What can be done to fix the PFJ? A few obvious improvements come immediately to mind. These can be briefly summarized as:

- o require Microsoft to publish all of its prices.
- o require Microsoft to publish all of its APIs, protocols, and file formats, and allow them to be used for any purpose including the development of free, competing operating systems.

- o extend these provisions to all Microsoft operating system products, not just those that run on personal computers.

In particular,

1. Extend the "Covered OEMs" of section B to include ALL LICENSEES. Microsoft should publish its prices, period.

2. In section D, replace ". . . disclose to ISVs, IHVs, IAPs, ICPs, and OEMs, for the sole purpose of interoperating with a Windows Operating System Product. . . ." with the phrase ". . . disclose to the public, for any purpose. . . .", hence making all operating system APIs freely available and allowing competing operating systems to run applications originally designed to run on Microsoft operating systems.

3. In section E, replace "make available for use by third parties, for the sole purpose of interoperating with a Windows Operating System Product, on reasonable and non-discriminatory terms (consistent with Section III.I)" with "make available to the public specifications for. . ." and hence require all communication protocols to be open. It is well known in the computer security community that any communication protocol which is not open to public scrutiny represents a grave risk to the public, because anyone who discovers a hidden flaw can exploit it for a long time before the flaw becomes known to others.

4. Insert a section similar to section E which replaces communications protocols

used to interoperate with a Microsoft server operating system with file formats required to interoperate with Microsoft applications.

5. Modify section I.1. to require Microsoft to waive license fees for use in software which is freely given away. Modify section I.3. to allow licensees to freely distribute source code.

6. In VI section O, replace "Personal Computers" with "Computers".

7. Replace VI section Q with a suitable definition of "Computer" as any computing device that is capable of running a Microsoft Operating System Product. In any case, it must include both servers and such consumer products as tablet computers, pocket PC's, and game controllers.

8. In VI section U, define "Microsoft Operating System Product" as any Operating System sold by Microsoft.

I believe that these suggested changes are the minimum required to prevent Microsoft from not only perpetuating its current monopoly on the personal computer, but extending it into other, and indeed larger, areas.

Sincerely,
 Stephen Robert Savitzky

 Subject: Microsoft Settlement

Dear Sirs,

I'd like to voice my opinion on the proposed Microsoft Antitrust settlement as allowed under the Tunney Act.

My main objection to the settlement is that there doesn't seem to be any penalty to Microsoft. As a remedy, it seems worse than the original harm, especially in certain areas dealing with Independent Software Vendors (ISVs) I have been a software engineer with 18 years writing software for Unix and Microsoft OSes. It has been my experience that when using Microsoft's products from version to version, new features for ISV developers are seemingly obfuscated and you need to pay more money to get the fix or documentation. I can relate many horror stories about missed project dates due in main to some undocumented "feature" (read: bug) in a new Windows API.

Because of the narrow wording of the agreement with regard to APIs in particular, it is pretty easy for Microsoft to publically say they are in compliance with the agreement. However, with just a renamed (not a new release) version they can return to their anti-competitive ways. This, in my opinion, does little to reduce my barrier to entry. Indeed, after this goes into effect, I predict Microsoft will release a new application that competes

with mine and works much better with XP than mine does.

Section III.H.3 and Section III.D fail to help ISVs like me to develop and deliver competing middleware products because the required technical documentation might not be delivered on time to be included in the next release of the OS. Again, Microsoft's own middleware developers have the advantage of me with advance knowledge and if I'm not very very good, I will miss the boat and likely the small market window as well.

Because of the hardships placed on me as an independent developer, I have switched completely from Microsoft products to Java and the Linux OS platform. I might like to do both in the future, if as Mr. Ashcroft states, these barriers to entry will be removed by the settlement. I actually think they will be higher in the end, because I might be led down the primrose path to find that I have to work under even worse conditions to perform the same level I used to.

If that were not bad enough, Microsoft seems to be attacking my new source of income by going after Open Source applications and operating systems. This is my biggest grievance for the future. As Dan Kegel says in his paper on the proposed settlement, Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.
<http://www.kegel.com/remedy/remedy2.html#abe> (1)

There are many other points of contention I find in the PFJ, but these are the most relevant to me and my source of income. I think that the point of an anti-trust settlement should be to redress damages done to the plaintiffs not to reward the defendant. This settlement seems to say Microsoft will not be allowed to harm me in the future, but clearly I believe I will be worse off no matter which way I turn. Windows application development will be next to impossible under the restrictions, and Open Source work will be prohibited. It seems my only choice as a software engineer in the coming years will be to submit my resume to Microsoft and hope they hire me, or to flip burgers.

Thank you for taking the time to read my letter and hearing my concerns over this matter.

Sincerely,
 Ed Howland
 St. Louis, Mo

To whom it may concern,

I'm not a CEO or anything like that but I am a college student who believes in a free market but not at the cost of a competitive one where the consumer, who drives the market, becomes the victim of an unregulated

stranglehold upon it. It is vital that competition remains vigorous to produce the best possible product at the lowest possible price. We can not afford to have Microsoft, which I have nothing against personally, control a market which plays such a large part in the everyday functions of business around the globe. thank you for your time.

Subject: Microsoft Settlement

Dear Renata Hesse:

I am writing to strongly protest the Proposed Final Judgement in the Microsoft antitrust suit. As written, it fails to prohibit significantly anti-competitive practices of which Microsoft has been proven guilty.

As an example of how I, as a consumer, am directly harmed by Microsoft's anti-competitive practices, and how these practices are not restrained by the Proposed Final Judgement, I offer the following fact: I do not use Windows. I choose, instead, to use a competing operating system, Linux, that also uses the popular x86 hardware platform on which Microsoft's Windows operating system was found to have a monopoly. I have no interest in purchasing a computer with Windows installed; instead, I would rather purchase a computer with Linux, and only Linux, installed. I do not want to pay for what I will not use. And yet, according to the Proposed Final Judgement, if the OEM with whom I wish to do business tries to sell me such a computer, Microsoft is fully entitled to retaliate against that OEM. Section III.A.2 prohibits retaliation against an OEM for selling computers that (a) have both Windows and another OS installed, or (b) "will boot with more than one Operating System", but does not prohibit retaliation for selling a computer that sells a computer with a single, non-Windows OS installed. Microsoft can raise the prices on every copy of Windows the OEM does install, until the OEM is effectively paying the costs of installing Windows on every machine they sell, whether or not Windows is actually installed! (In effect, this grants Microsoft permission to resume selling the per-processor licenses that were expressly prohibited by the 1994 consent decree in Microsoft's earlier antitrust case.) Far from inhibiting Microsoft's abuse of its monopoly position, the Proposed Final Judgement allows Microsoft to punish OEMs that attempt to provide their customers a choice between Windows and its competitors! Even if an OEM should choose for any reason choose to still offer both Windows computers and non-Windows computers, they would have a financial penalty imposed upon them which they would have no choice but to pass on to the consumer.

With loopholes of this magnitude in the proposed settlement, I do not feel that it adequately represents my interests as a consumer or encourages free market competition.

Sincerely,
Joseph Crowley III

Subject: Microsoft Anti-Trust

Microsoft cannot be allowed to continually stifle competition in the computer arena. They have already done so without much effort simply by releasing new applications as the default in their operating system; thus, squelching the competition to a meager level.

The most notable example of this is Netscape. They continue to destroy creative and exciting enterprises by releasing competing products for free, and as the default with their Windows operating system brand name. Examples of this are Windows Media Player vs Real Networks, or MSN Instant Messenger vs AOL's AIM or AOL's ICQ. Not to mention the obvious and present security concerns regarding Passport and it's licensing agreement.

I've done my best to avoid their monopolistic practices as best I can, I use Linux. I still find myself frustrated with the amount of effort they have put into making life in the IT profession a living nightmare, especially for a Network Admin.

I fear the day they will dominate web services with their .NET strategy, for that will be the end of all competition if adopted.

Fridley, FIN 55421
EMail: rickstockton@acer-access.com

I object to numerous inadequacies in the Revised Proposed Final Judgement, which, among other failures, provides insufficient relief for injuries suffered by computer buyers and the general public at the hands of Microsoft. As per the Tunney Act, I am providing comments regarding provisions which are present in the document, but are either (a) too unclear; (b) too incomplete; (c) riddled with "loopholes" to benefit the guilty defendant (at the expense of the already victimized Plaintiffs and the consumers they represent); or (d) inadequate from a procedural perspective. These provisions are therefore inadequate to prevent Microsoft from abusing its monopoly power again in the future, and/or inadequate to provide a sufficient remedy for Microsoft's past illegal behavior. My comments also deal with inadequacies of omission (areas in which additional provisions are needed, but the Revised Proposed Final Judgement provides nothing).

I hope that my comments will assist the DOJ in arriving at a proposal which is more fair, effective and reasonable. I would like your to pay particular note to my Third Objection, which provides a very clear and reasonable argument for requiring Microsoft to offer versions of Windows Operating Systems without unwanted "Microsoft Middleware", at reduced prices, to both OEMs and Retail Customers. Retail customers have been victimized with enormously inflated costs via Microsoft's past abuses, but the current Revised Proposed Final Judgement provides no remedy for them.

If I may answer any questions regarding these comments, please feel free to contact me via EMail.

First Objection from Richard Stockton, regarding "Prohibited Conduct" Part 'A':

The second of 3 numbered items prohibits Microsoft from retaliating against an OEM for "shipping a Personal Computer that (a) includes both a Windows Operating System Product and a non-Microsoft Operating System, or (b) will boot with more than one Operating System;" This provision is worded to ALLOW Microsoft retaliation against any OEM who ships Personal Computers with (c) a single non-Microsoft Operating System; or (d) no OEM-installed Operating System at all. In order to be protected from retaliation, the OEM is therefore required to load up all such Personal Computers with multiple bootable Operating Systems. More disk space is consumed, user documentation is made more complex; support costs are raised; and systems design/integration work by the OEM is vastly increased.

The OEM and their customers are both forced to pay for the installation of at least one, and perhaps two, undesired Operating Systems in every Personal Computer. Thus, this provision serves to PROTECT Microsoft's ill-gotten Operating System monopoly by imposing large, unfair, and totally unwanted costs on the OEMs (and purchasers) of non-Windows computers. In order to provide adequate remedial value to victimized OEMs,

this provision needs to be rewritten to include computers in my categories (c) and (d) (as described in the preceding paragraph).

Second Objection from Richard Stockton, also regarding "Prohibited Conduct" Part 'A': With regard to the requirement for Microsoft providing written notice of reasons and 30 days" notice before terminating a Covered OEM's license, the Proposed Judgement says: "Notwithstanding the foregoing, Microsoft shall have no obligation to provide such a termination notice and opportunity to cure to any Covered OEM that has received two or more such notices during the term of its Windows Operating System Product license."

After Microsoft has issued two termination notices, it appears that a third notice is not required (even if the reasons provided in the first two notices were invalid, unfair, or "cured"). The definition of a "Covered OEM" also includes only the 20 largest distributors of Windows Operating System licenses in the entire world. These are large firms, which are likely to need much more than 30 days notice to revise their product lines or distribution channel relationships. This sentence should be removed (Microsoft should be required to give reasons and reasonable notice for such terminations an unlimited number of times), and the minimum length of time from receipt of the notice of reasons until termination of the agreement should not be less than 90 days.

Third Objection from Richard Stockton, regarding many sections within "Prohibited Conduct") Although the Proposed Final Judgement clearly allows OEM's and End Users to remove and/or replace Microsoft "Middleware" Products, nowhere does it require Microsoft to offer a 'stripped-down' versions of Windows Operating Systems at reduced prices. The 'Competitive Impact Statement' states that the DOJ seriously considered a requirement that Microsoft "manufacture and distribute the Windows Operating System without any Microsoft Middleware or corresponding functionality included", but provides no reason why such a requirement was not included.

Therefore, Windows Operating Systems customers (OEM and retail) will be forced to continue subsidizing the Microsoft tactic of destroying competition with Windows-Subsidized "free" Middleware Products, such as Internet Explorer and Windows Media Player. Microsoft has claimed that the dollar value of Internet Explorer source code is in the billions. What ISV can possibly develop a competitive product when Microsoft remains allowed to "cut of their air supply" by shipping "free" Middleware within overpriced Windows Operating Systems? And, why would an OEM go the trouble and expense of working with an ISV to distribute a competitive "Middleware Product" while the Microsoft Product remains effectively "free"? The Proposed Final Judgement should be changed to specify a reduced price schedule, to benefit all OEMs and Retail customers, for alternate versions of the Windows Operating System which exclude undesired Microsoft "Middleware" Product(s). The current Revised Proposed Final Judgement fails miserably in addressing Microsoft's illegal

use of the Operating System monopoly to subsidize the destruction of competitors in Application Middleware markets by "cutting off their air supply"

Fourth Objection from Richard Stockton, regarding failure to require documentation of file formats.

The Proposed Final Judgement presents the disclosure of "APIs" and "layers of Communications Protocols" as remedial measures, but fails to include any requirement to document file formats. Any ISV which might attempt to compete in the office document generation marketplace (i.e., word processing, spreadsheets, etc.) must be able to import and export "Microsoft office" files. The Court found that Microsoft established and maintained a monopoly in this Application Software market by utilizing its Operating System monopoly to destroy competition from Lotus SmartSuite. Many experts within the computer industry consider Microsoft's ill-gotten Office Suite monopoly to be more dominant than its Operating System monopoly. To provide a remedy for this past abuse, and assist in reconstruction of a competitive marketplace, the content formatting specifications of all such data files must be made available to any ISV who has an interest in developing Software which reads or writes "Microsoft office" data files, "Windows Media Player" data files, and any other data files utilized by future releases of Microsoft "Middleware" and "Office" Products.

Fifth Objection from Richard Stockton, regarding the presence of a "loophole" allowing Microsoft to withhold vital APIs, documentation, and Communications Protocols. The paragraph J-1 within section III provides loopholes which make all preceding and following "requirements" to release APIs and related documentation almost totally ineffective. Nearly every "Middleware" Communications Protocol eycutes within a framework of some authentication and/or authorization criteria, and many Windows APIs implement security features. For example, Windows XP invites its installers to register via Passport. An argument can be made that Passport constitutes a "particular installation or group of installations", and therefore is excluded. The 'Competitive Impact Statement' claims that "this is a narrow exception, limited to specific end-user implementations" but this text does not appear in the the Revised Proposed Final Judgement.

The clause (a) of this sentence/paragraph provides a loophole, in advance, preventing third party access to vast quantities of information which must be available in order to remedy past illegal behavior of the defendant. The entire clause should be removed and replaced by a section which allows Microsoft to request a waiver from the TC for each specific area of "sensitive" security information which Microsoft desires to conceal. Unless granted a waiver from the TC, Microsoft should be required to release all requested information on a timely basis unless directed not to do so by a government agency as per clause (b).

Sixth Objection from Richard Stockton, regarding the presence of two "loopholes" allowing Microsoft to condition the licenses

of APIs, documentation, and Communications Protocols with unreasonable terms.

The paragraph J-2 within section III places expensive, burdensome, and inappropriate requirements on the Software Development entities for whom the Revised Proposed Final Judgement supposedly attempts to provided remedial relief from past Microsoft abuses. As with my Fifth Objection, the 'Competitive Impact Statement', makes a claim that these burdens are limited to only "the narrowest possible scope". But nearly every "Middleware" Communications Protocol executes within a framework of some authentication and/or authorization criteria, and no such "narrowing" text is present in the Revised Proposed Final Judgement.

Background for Loophole #1: The Findings and evidence in the case, as well as other widely distributed Microsoft documents, indicate that Microsoft considers GNU-Linux to be a serious threat (and perhaps the only remaining viable threat) to its Operating System monopoly. Linux is an Open-Source software project, not controlled by any business entity. Similarly, many of the viable competitors to Internet Explorer depend on the Open-Source Mozilla project for some (and in the specific case of Netscape, nearly all) of the code within their Products.

Loophole #1: In spite of this well-understood situation, clause (c) of the Revised Proposed Final Judgement requires such entities to meet ". . . reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business". Since these entities are NOT businesses, it seems very unlikely that they would meet "objective standards established by Microsoft". In addition, it is unsound to allow the GUILTY DEFENDANT to establish the standards by which the already victimized plaintiffs are "judged" to qualify for the remedy. This clause should be replaced by a clause which allows Microsoft to request that the TC disqualify a specific Software Development entity from receiving the information for specific reasons provided by Microsoft.

Loophole #2: An even more serious problem exists within clause (d), requiring that the Software Development entity submits its Software Programs to a Microsoft-approved third party test organization "to test for and ensure verification with Microsoft specifications of use of the API or interface. . . ". As a former professional Software Test Analyst, I can assure you that the amount of testing which can be created to fully verify the functionality of a complex API is nearly unlimited. In the Software business, effective test planning and execution must strike a balance between finding significant errors and completing the testing at within reasonable constraints of time and cost. (A vast majority of leading Professors of Computer Science throughout the World would agree with these statements). Microsoft is given a "loophole" to inflict enormous financial costs (and perhaps delays in Software Release) on competing Software Development entities by requiring an amount of testing which is apparently defined by a Microsoft-approved third party. It appears that such a third party

is invited to create an arbitrarily comprehensive and lengthy test plan per Microsoft specifications, but that all of resulting test costs are borne by the ISV. This clause should be removed and replaced by clause which allows Microsoft to perform such testing at its own expense (not the ISV's).

Seventh Objection from Richard Stockton, regarding Section IV.D.9.

The scope of this confidentiality agreement appears to be in conflict with IV.D.4.a: Since the latter provision invites third parties to submit complaints concerning Microsoft's compliance, this provision should be changed to allow for the TC to respond to the complaining third party.

Eighth Objection from Richard Stockton, regarding provisions in Section IV.D.4 ("Submissions to the TC").

Lettered item "c" fails to provide any mechanism for assuring that the TC's "proposal for cure" of a meritorious complaint is fully (or even partly) followed by Microsoft. This provision should be expanded to (1) require timely and complete compliance by Microsoft with any "proposal for cure" proposed by the TC; and (2) to provide for appropriate punishment, via Court Action, of Microsoft Corporation and/or its Officers for failure to comply with any such "proposal for cure". This leads to my objection to the provision in lettered item "d". The Revised Proposed Final Judgement, after requiring the TC to investigate, analyze, and specify proposals to cure meritorious complaints, specifies that no "work product" may be admitted in any enforcement proceeding before the Court. The TC is required by other Sections to carefully investigate, assess, and resolve any complaints regarding Microsoft behavior. But, the Revised Proposed Final Judgement proposes to remove the possibility of any Court hearing or seeing large amounts of relevant and significant evidence regarding future illegal behavior by Microsoft. By eliminating the use of evidence, testimony, and depositions from the TC in any Court, it appears that the DOJ proposes to put Microsoft (the guilty defendant) beyond the reach of the law.

Ninth Objection from Richard Stockton, regarding the Termination of the Final Judgement. Microsoft has been found guilty (of violating Laws and previous Court Consent Decrees). Many of the abuses which this document is the proposed remedy occurred more than 5 years ago. But Microsoft continues to engage in behavior which appears to violate laws: During the current comment period, in which Microsoft might be expected to be particularly careful to behave as a "good corporate citizen", the Corporation failed to disclose meeting with aides of the Senate Judiciary Committee to discuss terms of the settlement before a December congressional hearing on the case. Even at this sensitive time, Microsoft behaves as if the Tunney Act doesn't apply to them.

This guilty defendant, with well documented patterns of recurring illegal and abusive behavior, does not deserve such generous expiration terms. Expiration of the Final Judgement should be either (a) at least 10 years into the future; or (b) at the pleasure

of the all of the Plaintiffs, in unanimous agreement.

Tenth Objection from Richard Stockton, regarding inclusion of a requirement that Software be "Trademarked" in definitions of "Microsoft Middleware" and "Microsoft Middleware Product". Definitions J.2 ("Microsoft Middleware") and K. ("Microsoft Middleware Product") require that Software Code meet all of the listed conditions in order to be treated as an instance of the defined software classification. The requirements for code to be Trademarked (J.2 and K.2.b.iii) constitute an inappropriate "loophole" for Microsoft to claim that vast amounts of software is neither "Middleware" nor "Middleware Product", and thereby not covered by any terms within the Proposed Final Judgement. Both of these conditions (J.2 and K.2.b.iii) should be removed.

Eleventh Objection from Richard Stockton, regarding the exclusion of "Windows Explorer" and "Network Neighborhood" from the definitions of J. "Microsoft Middleware" and K. "Microsoft Middleware Product".

Assuring ISV access to Microsoft Networking (as provided by "Windows Explorer", "Network Neighborhood", and their descendants) is an important component in providing a remedy for past Microsoft abuses in the Operating System competitive environment. Microsoft is currently in an ill-gotten monopoly position which allows it to destroy any third party software which attempts to take part within a network of Windows PCs and Servers (such as SAMBA), by creating new proprietary protocols. The functionality of Client/Server access (and peer-to-peer access) for file sharing should be included within K.2.a.

Twelfth Objection from Richard Stockton, regarding the definition both M. "Non-Microsoft Middleware" and N. "Non-Microsoft Middleware Product" in terms of exposing functionality via published APIs and porting to non-Microsoft Operating Systems.

The functionality of Microsoft Middleware Products such as Windows Media Player have very little to do with exposing "... a range of functionality to ISVs through published APIs", and there is no justification for requiring Non-Microsoft Products to do so. The definition of "Non-Microsoft Middleware" should be changed to include any Non-Microsoft software which (a) provides similar functionality to any of the Microsoft Middleware Products listed definition K.1; or (b) provides functionality analogous to (but not limited to) the more general list of general software product categories in K.2.a, as modified by my Eleventh Objection (above) to also include networking middleware.

Thirteenth Objection from Richard Stockton, regarding the "million-copies within the previous year" requirement within definition N. "Non-Microsoft Middleware Product". This distribution volume requirement is excessively large, and should be reduced to 100,000 copies distributed within the previous year. Also, since other items (such as definition C. "Covered OEMs") are worldwide, this requirement should be modified to include

software distributions in other countries towards the count of 100,000 copies. Fourteenth Objection from Richard Stockton, regarding the definition of "Windows Operating System Product".

The final sentence in definition U, "The software code that comprises a Windows Operating System Product shall be determined by Microsoft at its sole discretion" should be removed. With this strongly worded "loophole" present, Microsoft will be able to "bundle" code which provides middleware functionality within the 'Operating System', solely for preventing ISV access to necessary API and Communications Protocol documentation. Without this sentence, Microsoft would still be able to "bundle" code of their choice into the Operating System Product, but ISVs would be provided with at least some protection from abuse of this privilege via the complaint submission and resolution procedures (i.e., Microsoft's discretionary choices would be subject to review by the TC and the Court if complaints are submitted).

My opinion may not count in your little consensus here (freedom should not be a popularity contest anyway) as I am from Canada, but I just wanted to point out that you people need to decide whether you want to live in the USA or China. In the USA, as it is supposed to be, achievement and effort are rewarded. In China ambitious people are

“criminals” who have to bribe officials (people like yourselves) to look the other way so they can do business. Monopolies are strictly products of government intervention (ever heard of the post office) not free markets. The department of injustice needs to earn it's official title or get a new address ending in R.O.C.

Subject: Microsoft antitrust settlement is bad for the consumers of the world this web site is also of interest to the trial <http://www.kegel.com/remedy/letter.html>

Now for the start of my statement of Why this is the worst deal for consumers and the competition.

Every deal I have seen as a consumer of Microsoft products since beginning my training as a computer tech has left me with this one nagging feeling stated in the topic. The Deal shows no signs of true punishment, no signs of giving up any of its undue monopoly power that they have.

The recent deal with the Schools “giving the operating systems to the school” putting a price tag of 1 billion dollars is a good example of antitrust actions in full swing, these questions should be asked and not ignored!!

Question #1 How does Microsoft giving the OS to the Schools in the other cases benefit competition which Microsoft has hurt and continues to hurt?

Question #2 How does “close source” operating system make competition possible when you offer your own Database, Spreadsheet, Presentation software, and your own personal closed source Compiler (C# is a compiler that makes binaries, aka products like Office XP Windows XP) for the microsoft operating system?

Question #3 How can any justice department person not take the very restrictive licenses and wording of the End User license agreement and not say they are attacking the competitors. EULA for the Microsoft operating system states plainly this about Java (Sun Microsystems cross platform computer language)

9. NOTE ON JAVA SUPPORT. THE SOFTWARE PRODUCT MAY CONTAIN SUPPORT FOR PROGRAMS WRITTEN IN JAVA. JAVA TECHNOLOGY IS NOT FAULT TOLERANT AND IS NOT DESIGNED, MANUFACTURED, OR INTENDED FOR USE OR RESALE AS ON-LINE CONTROL EQUIPMENT IN HAZARDOUS ENVIRONMENTS REQUIRING FAIL-SAFE PERFORMANCE, SUCH AS IN THE OPERATION OF NUCLEAR FACILITIES, AIRCRAFT NAVIGATION OR COMMUNICATION SYSTEMS, AIR TRAFFIC CONTROL, DIRECT LIFE SUPPORT MACHINES, OR WEAPONS SYSTEMS, IN WHICH THE FAILURE OF JAVA TECHNOLOGY COULD LEAD DIRECTLY TO DEATH, PERSONAL INJURY, OR SEVERE PHYSICAL OR ENVIRONMENTAL DAMAGE.

Sun Microsystems, Inc. has contractually obligated Microsoft to make this disclaimer. then they strike out at the consumer

LIMITED WARRANTY. Microsoft warrants that the SOFTWARE PRODUCT will perform substantially in accordance with the accompanying written materials for a period of ninety (90) days from the date of receipt. If an implied warranty or condition is created by your state/jurisdiction and federal or state/provincial law prohibits disclaimer of it, you also have an implied warranty or condition, BUT ONLY AS TO DEFECTS DISCOVERED DURING THE PERIOD OF THIS LIMITED WARRANTY (NINETY (90) DAYS). AS TO ANY DEFECTS DISCOVERED AFTER THE NINETY (90) DAY PERIOD, THERE IS NO WARRANTY OR CONDITION OF ANY KIND. Some states/jurisdictions do not allow limitations on duration of an implied warranty, so the above limitation may not apply to you.

Any supplements or updates to the SOFTWARE PRODUCT, including without limitation, any (if any) service packs or hot fixes provided to you after the expiration of the ninety (90) day Limited Warranty period are not covered by any warranty or condition, express or implied, or statutory. LIMITATION ON REMEDIES; NO CONSEQUENTIAL OR OTHER DAMAGES. Your exclusive remedy for any breach of this Limited Warranty is as set forth below.

Except for any refund elected by Microsoft, YOU ARE NOT ENTITLED TO ANY DAMAGES, INCLUDING BUT NOT LIMITED TO CONSEQUENTIAL DAMAGES, if the SOFTWARE PRODUCT does not meet Microsoft's Limited Warranty, and, to the maximum extent allowed by applicable law, even if any remedy fails of its essential purpose. The terms “Exclusion of Incidental, Consequential and Certain Other Damages” below are also incorporated into this Limited Warranty. Some states/jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you. This Limited Warranty gives you specific legal rights. You may have others which vary from state/jurisdiction to state/jurisdiction.

YOUR EXCLUSIVE REMEDY. Microsoft's and its suppliers' entire liability and your exclusive remedy shall be, at Microsoft's option from time to time, (a) return of the price paid (if any) for the SOFTWARE PRODUCT, or (b) repair or replacement of, the SOFTWARE PRODUCT that does not meet this Limited Warranty and that is returned to Microsoft with a copy of your receipt. You will receive the remedy elected by Microsoft without charge, except that you are responsible for any expenses you may incur (e.g. cost of shipping the SOFTWARE PRODUCT to Microsoft). This Limited Warranty is void if failure of the SOFTWARE PRODUCT has resulted from accident, abuse, misapplication, abnormal use or a virus.

Any replacement SOFTWARE PRODUCT will be warranted for the remainder of the original warranty period or thirty (30) days, whichever is longer. Outside the United States or Canada, neither these remedies nor any product support services offered by Microsoft are available without proof of

purchase from an authorized international source. To exercise your remedy, contact: Microsoft, Attn. Microsoft Sales Information Center at the address specified above, or the Microsoft subsidiary servicing your country.

DISCLAIMER OF WARRANTIES. The limited warranty that appears above is the only express warranty made to you and is provided in lieu of any other express warranties (if any) created by any documentation or packaging. Except for the limited warranty and to the maximum extent permitted by applicable law, Microsoft and its suppliers provide the SOFTWARE PRODUCT and Support Services (if any) AS IS AND WITH ALL FAULTS, and hereby disclaim all other warranties and conditions, either express, implied or statutory, including, but not limited to, any (if any) implied warranties or conditions of merchantability, of fitness for a particular purpose, of lack of viruses, of accuracy or completeness of responses, of results, and of lack of negligence or lack of workmanlike effort, all with regard to the SOFTWARE PRODUCT, and the provision of or failure to provide Support Services. ALSO, THERE IS NO WARRANTY OR CONDITION OF TITLE, QUIET ENJOYMENT, QUIET POSSESSION, CORRESPONDENCE TO DESCRIPTION OR NON-INFRINGEMENT WITH REGARD TO THE SOFTWARE PRODUCT.

EXCLUSION OF INCIDENTAL, CONSEQUENTIAL AND CERTAIN OTHER DAMAGES.

To the maximum extent permitted by applicable law, in no event shall Microsoft or its suppliers be liable for any special, incidental, indirect, or consequential damages whatsoever (including, but not limited to, damages for loss of profits or confidential or other information, for business interruption, for personal injury, for loss of privacy, for failure to meet any duty including of good faith or of reasonable care, for negligence, and for any other pecuniary or other loss whatsoever) arising out of or in any way related to the use of or inability to use the SOFTWARE PRODUCT, the provision of or failure to provide Support Services, or otherwise under or in connection with any provision of this EULA, even in the event of the fault, tort (including negligence), strict liability, breach of contract or breach of warranty of Microsoft or any supplier, and even if Microsoft or any supplier has been advised of the possibility of such damages.

LIMITATION OF LIABILITY AND REMEDIES. Notwithstanding any damages that you might incur for any reason whatsoever (including, without limitation, all damages referenced above and all direct or general damages), the entire liability of Microsoft and any of its suppliers under any provision of this EULA and your exclusive remedy for all of the foregoing (except for any remedy of repair or replacement elected by Microsoft with respect to any breach of the Limited Warranty) shall be limited to the greater of the amount actually paid by you for the SOFTWARE PRODUCT or U.S.\$5.00. The foregoing limitations, exclusions and disclaimers described above shall apply to the maximum extent permitted by applicable law, even if any remedy fails its essential purpose.

This was just in my windows ME EULA Question #4 Now I may be a lawyer, but this is the Windows 95 / 98 / ME / CE / XP End user license agreements should also be examined for antitrust concerns I liken the wording to Ford not taking any liability in mechanical defects in workmanship for the ford Explorer wilderness series tires that has killed 76 people. So far the windows Operating system has to it's credit Disabling a Navy class destroyer. The destroyer had to be towed to port! Should they not be liable for that in the future?

Question #5 of all the settlement offers i still have to ask myself, Where is the real punishment, the Punishment that does make competition possible? If Microsoft offered to install Imacs in the schools Microsoft wins again Bill gates has invested 100 million dollars into apple computers upon the return of Steve Jobs as then interim president. Microsoft is the only one who makes Macintosh Office 2001 software that is on the shelves as well. These actions as they stand alone may not amount to an antitrust but when you control the compiler, the office software, the database engine, the 3d display patent they recently bought off of SGI, and lock out Corel (Another 100 million dollar Microsoft investment which forced Corel linux off the shelves and forced them to support the Microsoft .net frame work), Netscape (Microsoft gave away their browser and took profits right out of Netscape's browser markets), Java (microsoft developed it's own incompatible version of java middle ware to stop java from gaining ground), borland (who makes a C compiler), and GNU (Who makes a Free C compiler) unless they "get there programs signed device drivers signed" which makes it difficult for competition to thrive and Innovate. The true meaning of the word innovate is what Microsoft is trying to control by giving them what they seek you play into their hands. So when applying the Law of the land I suggest you not forget you are representing the consumers of america as well, not just industries Microsoft has harmed, but We the people. I also hope that you can and do see the potential damage Microsoft has done and will do in the future.

Thank you for your reading!

Sincerely;

Nick Kearney

Date: 1/23/02 4:58am

Subject: Microsoft Settlement

January 23, 2002

Honorable Judge Colleen Kollar-Kotelly

United States District Court for the District of Columbia

333 Constitution Avenue, NW

Washington, DC 20001

Your Honor:

I am a co-founder and the Chief Scientist at a small silicon valley startup company developing software infrastructure for the Internet. I have kept close track of the

progress in the Microsoft antitrust case, and would like to take this opportunity to express my views. I would like to emphasize that these are my own views and do not reflect those of my company or any of its officers.

As an industry participant, I feel that the Microsoft monopoly has had a devastating effect on competition and on innovation. Two aspects of this are especially disturbing to me:

1. By applying pressure on PC hardware vendors through exclusivity contracts, threats of increased pricing for Windows products, and other coercive means, Microsoft has successfully been able to keep vendors from selling dual-boot PCs (i.e., PCs which have multiple operating systems installed, and which provide users an option of which operating system to run when the system first comes up). A case in point is Be, Inc., which was recently acquired by Palm. Be's product was a very simple and fast operating system which did not have very many applications, but which was very quick to boot at power on. Their product was designed to be installed alongside Windows in PCs. When the PC was powered up, the user was to be given a choice of whether to run Windows or Be. Thus, if the user wanted only to quickly check email or browse the web, there would be no need to wait a long time for Windows to boot up. Thanks to Microsoft pressure though, the hardware vendors which had been excited about providing such a choice to users had to back off from making any deals with Be, Inc. No one wants to go crosswise with a monopolist when you depend on them for most of your revenues. The end result was that users cannot enjoy a system that starts up in an instant—the losers were the consumers.

Another case in point is the free operating system Linux. It does not cost PC hardware vendors anything to run this OS on the PCs they sell, beyond the very low cost of installation. Thus, one would expect vendors to have rushed to install Linux in addition to Windows on their PCs (in a dual-boot configuration), as an additional "feature" that would help them differentiate their products. We haven't seen this happen, except with very small PC vendors that sell their PCs at much higher prices. Again, this is either because of direct coercion, or from fear of retaliation from a company on whom the vendors are completely reliant for their continued existence.

2. Perhaps even more damaging, but hidden from public view and not immediately evident, is the effect the monopoly has on innovation and on progress in the technology sector. Investors are fearful of investing in any project that appears to encroach on Microsoft's turf, and as a result much progress and many improvements in computer technology that could have been may never reach us. The resulting damage to the economy, and to the people, far outweighs the direct damage resulting from over-priced Microsoft products.

I urge the court to consider these points when it makes its decision on this very important case. I for one believe that the proposed settlement hammered out between the DOJ and Microsoft has been politically influenced, and is not in the public interest.

It will not help restore competition to the marketplace, and it does not do anything to punish Microsoft for its earlier misdeeds. I urge the court to reject that settlement as inadequate, and opt for a harsher remedy. With respect to point number 1 above, one remedy that I believe would help restore some modicum of competition would be to require Microsoft to adopt uniform and publicly known pricing for its products, to make their vendor contracts public knowledge, and to forbid them from discriminating on pricing or any other basis against hardware vendors that support competing products.

Thank you for your time. I have great trust in the American Legal System, and I'm sure that my trust will again be upheld in this case.

Respectfully yours,

Zubin D. Dittia

From: Allen Ashley
 To: Microsoft ATR
 Date: 1/23/02 6:54am
 Subject: Microsoft Settlement

I oppose the proposed settlement of the Microsoft anticompetitive lawsuit because I believe that settlement provides neither an adequate penalty for previous unlawful actions nor an assurance that such actions will not continue.

Microsoft will always be able to leverage its operating system dominance into an uncompetitive force in the applications software area. An adequate remedy for the illegal historical practices of Microsoft must either remove their dominance in the operating system, or disable their leverage in applications development.

Much of the ease-of-use features of the Microsoft operating systems come not from Microsoft, but from hardware vendors who must write driver software compatible with Microsoft. There is currently no motivation for these vendors to write drivers for alternative, less used operating systems.

Thank you for this opportunity to present my opposition to the proposed settlement.

My name is Allen Ashley (ashley@alumni.caltech.edu)

From: J. Paul Reed
 To: Microsoft ATR
 Date: 1/23/02 5:51am
 Subject: Microsoft Settlement—A step in the wrong direction

You probably have a lot of these, so I won't write much: I just want to say I think the proposed settlement is pathetic. It doesn't protect consumers, it doesn't protect competition in the market, and it allows

Microsoft to continue the shady and underhanded business practices that made them the monopoly a United States court claimed they are.

The technology sector moves quickly; the remedy provided by the settlement is already moot; the "browser wars" that started it all are over. Microsoft has cemented their next foray into new markets with .NET and Windows XP. The only remedy that will even BEGIN to bring competition back to the market is to force Microsoft to open up, COMPLETELY, their source code so competing products may be made compatible with Microsoft-created "standards." Forget trying to break them up (they'll just work together as they always have), and forget trying to have a panel oversee them with sanctions that, if broken, would require the same (useless) sanctions for a longer period of time.

Don't let all your hard work (and our hard-earned tax dollars) to go waste.

Thanks for your consideration.

Later,
 Paul

MTC-00014867

From: kosh
 To: Microsoft ATR
 Date: 1/23/02 5:56am
 Subject: Microsoft Settlement

I disagree with the microsoft settlement that has been proposed since overall I feel it won't do any good long term. I do not think they need to be broken up and financial penalties are not the solution. Short term no solution will really work so what I want is a more permanent solution.

(1) All formats used by microsoft should be completely documented at least 3 months before being used in any application. This includes extensions to the html spec, the word document format, and the smb file sharing format.

(2) They should be required to implement the specificaion(s) in areas where their products work in addition to their own systems. In the case of web browsers they should be required to implement http 1.0/1.1 completely and xhtml 1.0 to the letter of the spec.

For example their support of much of http 1.0 and http 1.1 is shoddy at best and that makes it very hard to work with Internet Explorer as a web browser. All versions of IE so far have a but with the Content-Type header especially when working with the Content-Disposition header however so far as I have been able to find out so far it is the only browser that has this bug. This makes the browser very hard to work with server side. It seems in many cases you can either work with Microsoft IE or you can work with the rest of the world. Unfortunately because of their monopoly that puts developers in a very bad position since if you choose the non microsoft option most people can then no longer use the web application. Lynx, Links, Konqueror, Opera, Mozilla, Netscape 4.x, and Netscape 6.x all get those parts of the specificaion correct.

(3) All API information in their products should be fully documented and available for free by download in an open format like html. Microsoft maintains too much of its monopoly power by using hidden APIs and if they were required to disclose all of that then it would get rid of that advantage.

None of these items would hurt microsoft in the next year or maybe even the next two years however that is not the point of the penalty. The point is to restore the balance of the system and to help consumers. Long term this method will give consumers more choice by restoring competition to the market. In the end that is what I think the real purpose of antitrust is. Not to penalize the violators but to help the consumers by restoring the system.

From: David Laundra
To: Microsoft ATR
Date: 1/23/02 6:03am
Subject: Microsoft Settlement

I have personally observed over the years, how Microsoft has destroyed it's competitors in the computing field. There used to be so many different companies out there; each offering their vision of what makes a good solution to a particular problem. Now, there are only a few foolish enough to take on the Microsoft giant.

Over and over again we have seen MS take notice of a new technology and then either buy it or reverse engineer it and then give it away. In either case the competition is gone and MS strengthens it's stranglehold on the industry.

Do not let them continue without strict oversight. MS has done so much damage already, don't let it continue.

Pellston, MI 49769
January 23, 2002

Microsoft Settlement
U.S. Department of Justice
Dear Microsoft Settlement
U.S. Department of Justice:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into

the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,
David Bachleda

I feel that there should be more careful review and rewording of the settlement. This is not something we want in the long run as is. Microsoft has done a fine job of creating loopholes.

Don't let the world down, work a little longer to reach a better settlement.
Jeff

MTC-00014879

From: Graham Spencer
To: Microsoft ATR
Date: 1/23/02 6:08am
Subject: Microsoft Settlement

The proposed settlement is not tough enough on Microsoft. The settlement has a number of known loopholes which will render it as ineffective as the previous attempts to curb Microsoft's power.

Microsoft has already shown a willingness to use its monopoly power to destroy competing non-profit projects (Linux, Samba, Kerberos, etc.; see <http://news.cnet.com/news/0-1003-200-4833927.html> where a Microsoft executive calls free software an "intellectual property destroyer"), yet the proposed settlement offers no protection for future non-profit software.

At the very least, the settlement should penalize Microsoft for the conduct that the court found illegal.

Please consider a settlement that is less favorable to Microsoft. Thanks for listening.

—g

MTC-00014880

From: Zach Pincus
To: Microsoft ATR
Date: 1/23/02 6:10am
Subject: Microsoft Settlement

I wholeheartedly oppose the Microsoft antitrust settlement proposed by the DOJ and Microsoft.

The problems identified above with the Proposed Final Judgment can be summarized as follows:

*The PFJ doesn't take into account Windows-compatible competing operating systems

*Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even

contributes to this part of the Applications Barrier to Entry.

*The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

*The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

*The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

*The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

*The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

*The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

*The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

*The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

*The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

*The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

*The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

*Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

*Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

*Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running Linux. (Similar licenses to OEMs were once banned by the 1994 consent decree.)

*The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

*Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

*The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

*The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

*The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

*The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

From: Anthony Kilna
To: Microsoft ATR
Date: 1/23/02 6:12am
Subject: Microsoft

It is the opinion of myself and most of my colleagues that the Microsoft settlement as it currently stands is merely a slap on the wrist, and won't get anywhere in terms of actually stopping Microsoft's anti-competitive behavior.

What really needs to happen is the dissolution of the means by which Microsoft leverages its monopolies to elbow their way into other industries. The common Microsoft APIs must be forced to be public (and not through any expensive licensing either, MS's main competitors compete on service, not licensing), and file formats should be forced public (MS has long used file formats to keep a stranglehold on the office applications market). The only way I can see the file formats and APIs being opened in a way reasonable for competitors to use as well as MS itself is a break-up (which will level the playing field and remove the unfair MS advantage that they have been leveraging).

Subject: Microsoft Settlement
Greetings.

I believe the proposed settlement with Microsoft in the recent anti-trust case to be profoundly flawed. Under the guise of punishment, the company will be providing substantial amounts of its software to educational institutions, flooding out whatever is already there or what they would normally have purchased or donated. Given that Microsoft already locks people into an upgrade cycle to maintain "compatibility" with previous applications and files, the settlement will increase the problem by opening additional markets to the company.

To: Microsoft ATR
Date: 1/23/02 6:17am
Subject: Microsoft Settlement

I think settling is a very bad idea. Having once worked for companies that used to compete with Microsoft, it was not economically feasible to compete with a company that can use its monopoly to its advantage.

"Power corrupts. Absolute power is kind of neat"

John Lehman, Secretary of the Navy 1981-1987

MTC-00014887

From: Yves Pelletier
To: Microsoft ATR
Date: 1/23/02 6:17am
Subject: Microsoft Settlement

To whom it may concern:

Even though I am not a US citizen, I feel I must make my opinion known, because the results of this case will have an impact on the way Microsoft conducts its business worldwide.

The current settlement proposal is bad for American businesses and it is bad for the consumers. If applied, it would demonstrate to Microsoft that the antitrust laws that it

broke have no teeth and that it can act as ruthlessly as it pleases against its competitors and even its own customers, with little fear of reprisal. Since it was found guilty of abusing its monopoly position, Microsoft has shown no indication that it had any intention of changing the abusive nature of its core business practices. A much stronger penalty needs to be applied than that which is currently proposed by the DoJ.

Thank you for your attention.

Date: 1/22/02 10:20pm
Subject: Microsoft Settlement

To the reader,

I send this email in opposition to the proposed Microsoft Antitrust settlement.

Our country must consider a more severe remedy to the unreasonable size of the Microsoft monopoly. Imagine if 90% of the milk sold in the United States were sold by only one company. That company would be allowed to dictate not only the price of milk, but the terms under which it was sold! So too it is with Microsoft. Americans pay over \$300 for Microsoft Office with no other option due to Microsoft's proprietary formats. Americans shell out over \$90 for the only consumer targeted operating system.

What does this money buy us? Nothing much. We do not even own the compact discs that the software arrives on. We are forced to agree to the terms of Microsoft's end user licenses that have us agree that their software may not work at all!

How could a company manage such a license unless there were no other choice? While American citizens pay increasingly exorbitant rates for a good that is not even guaranteed to work, Microsoft makes extraordinary profits.

These profits are more than ample to prevent entry into the browser market, or most any other market that Microsoft is interested in. Netscape no more had a chance in survival once the words "Let's kill them" were uttered than I would if the Chicago mafia muttered those words for me. Break the company up into three parts: Microsoft Windows, the operating system branch; Office into another company; and all other assets into a third company.

It is only by breaking up Microsoft into separate parts that the company will be reduced to a size digestible by competition.

Thank you for your time.

James Blackwell

Subject: Microsoft Settlement

What has been done via the settlement is disgusting. Microsoft, obviously, wrote and stands behind these terms, they are not enough. Not even close, the Japanese were not allowed to name the conditions of their surrender. Why should Microsoft?

They should, at the very least, be made to strip the OS of all their hooks, and sell it as such. You really should look more too all of their products as the "rogue" states have done, this is not just as OS monopoly, but an Office Monopoly and if we don't get something done soon, a Media Player Monopoly and a Internet(.Net) Monopoly.

This company is afraid of no-one, and will do whatever it takes to make loopholes.

They have dead people writing letters in their support for crying out loud! They will do anything and must be stopped, cold, NOW!

Thank you from a concerned and scared (and alive) citizen of the United

States,

I feel that the settlement between the 9 states will do nothing but hurt the industry. There are too many loop holes that even I, a college student, can see. MS used their monopolistic powers to gain marketshare and money, both in which this act allows to keep. I urge you not to accept the settlement in its current form! Microsoft can not be allowed to win this one!

MTC-00014892

From: Oliver M. Bolzer
To: Microsoft ATR
Date: 1/23/02 6:23am
Subject: Microsoft Settlement

I oppose the settlement with Microsoft in its current form.

There are many reasons for it, but to just state a few

Steadily increasing prices. Since the settlement-course has come, Microsoft OS prices are climbing steeply. As in many people's eyes there is no alternative, this abuse of monopoly really hurts the world's development. Less children can own a computer. It's wrong that for a \$1000 PC, \$300 is just for the OS.

The settlement is too short-sighted. It only covers current products but does not try to prevent rehashing of anti-competitive movements in next versions of the Microsoft OS. Too narrow definitions of various terms, including API and middleware, handling of Java and more.

The Settlement hinders the development of compatible OSes. The documents Microsoft must make open (not many) can not be used to block the monopoly

no protection against patents. Even if Microsoft complies with settlement and "opens" up the API and other aspects of their products. The use of such information could be protected by dumb software patents (which should not have been granted in the first place) and thus the opening made useless.

intentional incompatibilities are still allowed (like was done with DR-DOS)

OEMs are not liberated. Microsofts monopoly-abusing OEM practices (bundle all PCs with Windows, or we don't sell to you) are still allowed. I really hope that the DoJ doesn't do the biggest mistake in its after-war history.

I think the proposed Microsoft settlement is a joke. Please do not accept any settlement that does not absolutely prevent this ruthless company from engaging in its anticompetitive practices. As a computer user, as a US citizen, and as a voter, I am sick of seeing the government let Microsoft off with a slap on the wrist. They have shown contempt for the rule of law by consistently breaking the provisions of the previous ruling against them, and to accept a nearly identical punishment this time around is simply idiocy.

Paul Meserve

MTC-00014895

From: Zot O'Connor
To: Microsoft ATR
Date: 1/23/02 6:22am
Subject: Microsoft Settlement

I am opposed to the the Microsoft settlement as proposed for a number of reasons.

The simplest is that it will do nothing to a) Fix the wrongs that Microsoft has committed on the IT industry, and b) prevent them from happening in the future.

Microsoft has little incentive to stop using its monopoly to thwart opposing companies.

This has hurt consumer, and our national interests.

Only recently did Microsoft *claim* to make security important. That means for the last upteen years the majority of our Operating Systems, browsers, works processors and intranet servers were built with people who did not consider security a high priority.

This puts our country at constant risk for cyber warfare.

Had we had a system of competing companies, with people able to choose from several OSes, browsers, and servers then we would have the choice to use competition to make Microsoft Secure.

I do beleive Microsoft should be broken up. If we look at when break ups were done, the companies (e.g. ATT) performed much greater service and actually maintain a sense of internal competition. With Microsoft they have ignored any sense of competition by driving it out.

Currently Microsoft is continuing its poor behavior with XP. Little known to users is

the fact that they have to connect to Microsoft's server and register the product AFTER they have bought and entered their local serial number in. If they don't Microsoft will render their data unreadable.

Now, if there was 3 OSeS on the market, would consumers allow that?

No.

Attorney General John Ashcroft

US Department of Justice

950 Pennsylvania Avenue, NW

Washington, DC 20530-0001

Dear Attorney General Ashcroft:

Pursuant to the recently announced public comment period on the Microsoft settlement, I am writing to express my support for the settlement and to ask that the Justice Department cease the Microsoft litigation.

Please understand that I was opposed to this litigation from the beginning. I strongly feel that Microsoft was targeted solely because of their size and their success. Regardless, I understand Microsoft has made some significant concessions in this agreement, including opening its Windows systems to competition from non-Microsoft Internet providers, like AOL Time Warner. This concession, along with its concession of uniform, United States-negotiated, pricing for all major computer makers, should allow additional competition in the computer market. That is all that should be asked of Microsoft. Please accept the settlement reached with Microsoft and order these companies to get back to business.

Thank you.

Sincerely,

David Dollner

Subject: Microsoft Settlement

Dear Attorney General Ashcroft et al,

Upon reviewing the propose Microsoft dettlement, I feel inclined to inform you that I as a citizen of the United States do not feel it does enough to prevent future anti-competitive behavior.

While I believe competition in the consumer and business software market is vital to our country, I also believe it would be disastrous if we did not have the compatability within the marketplace that the large installed base of Windows-powered computers provides.

I think a just solution would be to require Microsoft corporation to license their source code to competitors so that other companies may produce compatable, yet competitive versions of the ubiquitous operating system.

The results this would yield are two fold. First off, Microsoft would not be able to bury any hidden functionality in their operating system that makes their applications perform better or have a more robust feature set. Secondly, this will not cause the financial harm that a segmented, incompatible software marketplace would cause.

Though Microsoft has done signifigant harm to other companies in their industry, sanctions have to be cautiously weighed to prevent futher harm to competitors, but at the same time prevent harm to the ancillary, non-affiliated companies that depend on Microsoft status quo. There are many software vendors out there that build their software only for the Windows platform because of costs. Why build for other operating systems for the same costs when you can build for a ubiquitous platform like Windows? Other competitive companies could build Windows compatible software to run on other operating systems if they were legally allowed to license the Windows source code to do so.

Thank you,

—Jonathan Paul Niola

Subject: Microsoft Settlement

I think the proposed settlement is a bad idea.

Microsoft uses many exclusionary licensing practices, many of which are not mentioned in the proposed final judgement. For example, Microsoft discriminates against ISVs who ship Open Source applications. Here is a quote directly from one of their EULAs:

“ . . . you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. “Publicly Available Software” means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models . . . ”

Microsoft's only serious, but weak, competitor at the moment is Open Source software. From the EULA above, Microsoft is BLATENTLY excluding Open Source software from participation in their markets. You must not let them get away with this kind of behavior!

Ed Schlunder <eschlund@ajusd.org>

Subject: Microsoft Settlement

The proposed settlement in its current state is bad.

I have read the proposed settlement, and I think it is not good enough. While the settlement does try to protect retaliation vs. OEMs, ISVs and IHVs who support alternatives to Windows, the settlement does not make sure that Microsoft raises no artificial barriers against non Microsoft operating systems which implement the APIs needed to run application programs written for Windows.

Also too many of the important API's would remain documented. Especially since they can easily claim it is for security reasons.

Another problem is the only real possible competition to MS in the server realm (not even talking desktop) is open source software. However by putting unreasonable restrictions on documentation and by patents covering Windows APIs remaining undisclosed the settlement is not helping the only possible competition to Microsoft's monopoly.

Another thing the settlement ignores is Microsoft's lock in by using undocumented file formats. This creates a High Application Barrier to Entry and creates lock-in. (yes many office file formats are documented, but the documentation is poor, inaccurate, and incomplete.)

Thank you,

Robert Dunne

Subject: Microsoft Settlement

To whom it may concern,

I think the proposed settlement is a bad idea. Microsoft stifles innovation, through it's monopolistic practices. Microsoft seeks to obliterate all competitors, at virtually any cost (and they have the financial means to do so). Microsoft uses it's monopolistic position in one area to spread it's same position to other areas (like online banking, internet connectivity, car and home information, management and entertainment systems, special-purpose embedded computers for manufacturing and commerce, hand held telephones, PDA's, and much more). This settlement will not stop Microsoft from

dominating these industries as well. Microsoft is expert at spreading its influence into every nook and cranny where a computer (large and small) is used. Face it, every aspect of our lives has now, or is going to be affected by computers—this means Microsoft software.

There are three important world powers: The United States of America, the Peoples Republic of China, and Microsoft. I don't believe the proposed settlement will be effective at stopping Microsoft's march toward becoming the single most important World Power, and holding all peoples, across all national borders hostage to using its software, and (here's the dangerous part) and IT'S SOFTWARE ALONE!!! I'm counting on the US Department of Justice to help prevent this terrible organization from dominating all industries, and peoples. The proposed settlement just doesn't come close to addressing the single largest threat against freedom—Microsoft. For the good of the United States, and all peoples around the world, please rethink the proposed settlement with Microsoft, and work toward a settlement that actually addresses the Microsoft threat, and the Microsoft problem effectively.

Subject: Microsoft Settlement

As an independant software vendor (ISV) and a computing enthusiast, I do not support the proposed settlement. It is an excellent base, but it has several serious problem which prevent it from being a suitable remedy to the case in its current form. Some of the problems which I feel are the most pressing are outlined below.

No part of the PFJ obligates Microsoft to release any information about file formats, even though undocumented Microsoft file formats form part of the Applications Barrier to Entry (see "Findings of Fact" paragraphs 20 and 39).

ISVs writing competing operating systems as outlined in Findings of Fact (para. 52) sometimes have difficulty understanding various undocumented Windows APIs. The information released under section III.D. of the PFJ would aid those ISVs—except that the PFJ disallows this use of the information. Worse yet, to avoid running afoul of the PFJ, ISVs might need to divide up their engineers into two groups: those who refer to MSDN and work on Windows-only applications; and those who cannot refer to MSDN because they work on applications which also run on non-Microsoft operating systems. This would constitute retaliation against ISVs who support competing operating systems.

To: Microsoft ATR
Date: 1/23/02 6:33am
Subject: Microsoft Settlement

I am writing to express my disapproval of the proposed final judgement against Microsoft in the current antitrust case, because I do not think it goes far enough to prevent Microsoft from abusing its monopoly powers in the future. While a few parts, such as forbidding intimidation of OEMs and ISVs, are necessary in any effective remedy, the rest of the proposed remedy falls short. In particular, it ignores one of the largest barriers to entry, namely Microsoft's proprietary file formats and protocols. Microsoft has and will continue to abuse its monopoly through its file formats and network protocols (files for Microsoft Office and the SMB network protocol in particular). Without full documentation of these formats,

interoperability (and therefore competition) with Microsoft will continue to be practically impossible.

Subject: Microsoft Settlement

To whom it may concern,
The current "Proposed Settlement" for the Microsoft case is insufficient. It will not end in any significant change in the way Microsoft does business. I feel that as long as the company is allowed to bundle their applications with their Operating System they will always be able to maintain their monopoly, and artificially eliminate their competition.

The status quo is a very powerful weapon in the desktop market. It's mainly because most people are too scared, or intimidated to try anything other than what is bundled with their computer. This isn't Microsoft fault, but they have taken advantage of it by bundling applications into their OS. I don't feel this topic has been address properly. The key reason that Netscape failed as a company was because Internet Explorer was given away and was bundled with Windows. If these two factors are not address, then Microsoft will continue to maintain they monopoly. In fact, Windows XP should be examined very closely, it has many applications bundled just as Internet Explorer was bundled with Windows 98. Where these applications are included specifically to stop competing products, not to make Windows look more attractive as a product.

I believe that Microsoft should be forced to realize source code to their OS. Without charge to competing products, including open source offering such as Wine (www.winehq.com). This is important to allow for a stable platform of competition. I realize that this can only be implemented as a punishment. Microsoft should be broken into two companies, one for applications and one for their OS. This is not an extreme solution. This would force Microsoft to improve the quality of their OS. Many people believe that Microsoft produces a quality OS, which is wrong. They produce an OS that is such a security hazard many countries decline to use it. As we have seen with many worms and viruses, a person using Window should be prepared to share all of their information with the rest of the internet. Yet, not other OS has the same problem. This alone should be construed as harm to consumers, and adequate reason for the company to be broken up.

I would be very disappointed to see Microsoft get off without punishment. The current "Proposed Settlement" contains far too many loopholes for Microsoft to continue its bad and harmful behavior.

Sincerely
Daniel Walker

MTC-00014911

From: Ilan Rabinovitch

To: Microsoft ATR
Date: 1/23/02 6:33am
Subject: Microsoft Settlement

Hello,

Please do not accept the Microsoft settlement it is a bad idea and will hurt both the economy and consumers.

The biggest issue I take with the settlement is that it fails to prohibit many of the anticompetitive practices that brought Microsoft into its position as a monopoly. For example the settlement does not resolve issues regarding anticompetitive licensing. Many of Microsoft's end user license agreements make it illegal to use their software work with open source software.

Another issue is that it does not sufficiently limit Microsoft's ability to bully OEMs and ISVs.

Among other things one solution I propose is for Microsoft to open source their browser (Internet Explorer) as well as discontinued versions of their software (DOS, Windows 3.xx, Windows 95, NT 3.51, Windows NT 4, and 98 when it reaches obseletion).

Microsoft should be required to contribute LARGE ammounts of funds to create a educational program that teaches children around the country how to use the products of their competitors. This should start in lower grades such as kindergarden and continue through the end of high school. It should include Apple's Mac OS and OS X operating system as well as Linux (or any form of Unix such as one of the BSDs). In order to make this training program work Microsoft should pay for the retraining of IT professionals in educational institutions so that they know how to work with Unix (linux,bsd, solaris, etc) and other non-windows environments.

Microsoft should be restricted from entering the home entertainment market (TiVo type devices, set top boxes, and their Xbox gaming console). And if they do enter these markets a percentage of their income should be contributed back into research funding for competitors as well as for training/educational programs previously mentioned.

I have only mentioned a few of the issues I have with the current settlement. I urge you to reject the settlement and find a better solution.

Subject: Microsoft Settlement

To Whom it May Concern:

I write to inform you of my strong objection to the proposed Microsoft settlement. The current terms of the settlement, which favor conduct remedies over structural remedies, will not curtail Microsoft's anti-competitive behavior. As past agreements with Microsoft have shown, conduct remedies quickly become ineffective in a fast changing industry and against such a determined and dominant company.

Only a structural separation of the operating systems unit from the rest of the company will take away Microsoft's ability and will to use its monopolistic operating system advantage to the detriment of competitors in all industries and, therefore, the computing world as a whole. The settlement, as it stands, will significantly weaken the U.S. software industry by allowing a single monopolist to continue to stifle innovation on nearly all important computing fronts. At a time when competition from abroad is greater than ever, this is unacceptable.

As a citizen, consumer, and shareholder in the United States, I, therefore, strongly object to the weak terms of the settlement on the grounds that it will significantly hurt our economic system and universally harm U.S. consumers. I am stunned that the government of the United States spent several years winning this complex and important decision, only to concede to Microsoft rather than effecting positive change for consumers and shareholders and I ask you to reconsider. My vote in future elections will only go to those who strive to create a competitive marketplace and this settlement does not do that.

Subject: Microsoft Settlement

The Proposed Final Judgment does not adequately protect the computer industry from predatory practices by Microsoft.

The nature of a monopoly in a core computer software component such as an operating system provides immense leverage for distributing application level software. As a software professional with over 20 years experience in the field, I have consistently seen Microsoft deliver software applications which are tied to the underlying operating system in a way not available to outside applications, and I have consistently seen Microsoft modify it's operating system to render competing applications inoperable. In my opinion, when Microsoft extols the virtues of "innovation", they mean "Microsoft innovation"; innovative products from other companies are met with coordinated technical/marketing campaigns design to crush them. Specific examples are available upon request, although I suspect you have all the evidence you'll ever need already.

The provision of the PFJ to publish Windows APIs is flawed for a number of reasons. Primarily, it does not fully define all of the APIs which will be relevant in the future. Rather, it specifically defines a

narrow set of current Microsoft applications whose APIs must be published. This set is a) not complete, and b) does not address any future Microsoft products. In addition, since timing is a crucial element of a software product's success, the publication of APIs used by products that are already shipping is of minimal value. The real value of published APIs is in revealing the operating system functionality used by the Microsoft products which are currently planned or in development.

The core problem, as I see it, is that Microsoft is a "fox guarding the henhouse". Microsoft has shown neither the inclination or the integrity to segregate their application development from their operating system development. Unless the company is divided into 2 or more independent entities, I am afraid that Microsoft will continue to increasingly dominate the field by leveraging their operating system monopoly.

From: Brian Fahrlander
To: Microsoft ATR
Date: 1/23/02 6:44am
Subject: Microsoft Settlement
There's so much wrong with the settlement I don't know where to begin.

The typical Microsoft business style is based on lies, leveraging their stance against anyone who might make "too much" of a dent in their empire. Case in point: Blue Mountain Greeting Cards, Netscape, and Spyglass software.

And even when there's nothing illegal or unethical involved, they still don't "get it right", and that's intentional. Case in point: TCP/IP is a standard that's been around for decades. There's an RFC on how to do it so that your machines/programs are compatible and everything works. Microsoft coded up (or perhaps stole) a TCP/IP "stack" that works in every way but one, as far as I know:

When another host "pings" a Microsoft machine by explicit IP address, it answers. (If

it didn't, it would be almost useless). When someone sends a "broadcast ping" (which all hosts on a subnet are supposed to answer) it does NOT answer the ping. A little odd, but we can live with it.

If the subnet's giving out IP addresses that can change, called "DHCP", all hosts are supposed to talk for the duration of their "lease" on that address. When the lease expires, and the Microsoft box is supposed to shut up, it still answers. Any machine probing the old address to ensure it doesn't hand out an address that's actually in use (causing nasty problems for the net) will get a response from the Microsoft box, and the old address is marked as "in use". Soon, all the addresses available will be marked "in use" and the entire network crashes.

Now why would they do this? They want to sell NT for servers.

This is key:
"The old, open, Unix/Linux machines don't support Microsoft. And it's ALL the Microsoft machines, so it's not their fault; your Unix servers can't handle these new machines."

Then, instead of paying nothing, the management buys two (not one) NT machines, bringing even more non-standard features that require more payments to Microsoft. It requires two machines, costing about \$4,000 total because NT isn't stable enough to be counted on 24/7.

This is just one of the hundreds of crooked deals and the way they do business.

But you KNOW all of this. What you fear about Microsoft is what it will do to millions of computer users. Fear not: no one gets any real tech support from Microsoft. They do it all in-house and through the net. Home users SHOULD be going to their local reseller anyway. It's time to put some profitability back in it for the little guys. As much as I'd like to setup a computer store, there's no way—there's almost no profit in it at all.

I've been in computers since CP/M was still going strong, about 1978. When Microsoft began to grow it was fun—every day a new thing, tricks to learn and things got done. Now, it's only about money and the *perception* of value. There are still viruses, even after 18 years of development, and they're making new security holes. . . . by policy. . . . every day.

It's got to stop. It has, for me. I sworn off Microsoft one day in 1993 and never went back. But it's still the prevailing monopoly and it's no longer funtional. Point out *real* differences and new features about Word95 that differ from those in Word2k or WordXP. There aren't any. But they keep changing the file format so you'll have to buy the new version just the same.

They're holding back technology; it's time to put Word to bed and put those developers on new projects, but they won't. And while Word remains the (undocumented) standard file format for business, other folks who WILL go where the features are can't get a foothold.

The time for the monopoly is over; let someone who has the true needs of the PEOPLE in mind, not the ever-staggering cash crop. Doesn't it bother you that Microsoft now has enough money that they could literally buy their own "Seventh

Fleet"? Just what do you suppose they'll do with that much money? They sure aren't paying programmers to add features or remove viruses.

. . . and people think they're stable enough to hold private, confidential information like credit cards in .NET? It's time. You're bigger than Microsoft, and now you're the only one.

Subject: Microsoft Settlement

To whom it may concern.
I believe this settlement is not in the public interest.

I believe this settlement does NOTHING to penalize Microsoft for what it has done to companies like Netscape and more importantly I believe that it does NOT prevent them from continuing to dominate and stifle the industry.

Resolving this litigation quickly is not the best way to get the economy going—in fact loosing the Microsoft grip on the industry is the best way to encourage the economy. Once they cannot harm companies more companies will survive and a flourishing fauna and flora will emerge—employing millions of people.

I am myself building a business and I believe it is only time before Microsoft stomps on me like they have done to countless companies—many of whom testified and many more who did not out of fear. They dominate this industry so thoroughly that they impede growth and stifle innovation. They are bad for this industry and they are bad for this country.

The trial has shown they are a monopoly, the trial showed they harmed Netscape—the action you are taking now MUST protect the industry from them, it MUST ensure they

cannot do the same again, it must take steps to ensure a level playing field where they do not have an unfair advantage (being their monopoly). HAVING a monopoly is not illegal, but using it AS THEY HAVE BEEN FOUND TO DO is illegal.

Every court in the land (district up to supreme) has confirmed they did wrong. This settlement is such a poor attempt as redressing the situation, it cannot be considered valid. I do not support it. Having won in all the courts, now the government will lose in the settlement. The industry will continue to suffer and the US economy will suffer along with it. Innovation and growth cannot resume until this monopoly is stopped—and that's YOUR job.

This is an anonymous email because I don't believe my identity will be protected (see the recent incident with the litigation regarding "Lindows" where Lindows.com was forced to provide the details of their customers and petitioners to Microsoft).

Sincerely,
Mark.

Subject: comments on ms antitrust trial
Hi,

I think that the proposed settlement seriously fails in a lot of ways. I think the most significant of these is that there is no requirement to disclose file formats of the office line of products.

Microsoft Office is the de facto standard in office software. Therefore any software which seeks to compete must be able to read the MS Office file format completely and accurately. Because MS do not release details of the office format, anyone seeking to write a competing application must reverse engineer the format of the files. Inevitably it will not be possible to understand the format completely and accurately so other software products will come across as inferior if they fail to translate accurately, thus creating a barrier of entry.

I think the remedies could be more effective if they required Microsoft to disclose full and complete details of the file formats for all products.

Subject: Microsoft Settlement

Hello,
while not being an US citizen I still want to inform you about my "International" point of view. From my perspective its important for the US to give a strong signal to the International community that these kind of practices are not allowed.

Even if it is considered to be good for US business I can only say that it is not good to bet on one horse. By making it difficult for other American companies to compete on the ICT market they can not expand to other countries. In the case that MS is not severely punished for its acts there will be a reaction from the International community against MS sooner or later. This will harm the US is a bigger way because its one company which competes on the International ICT market, by sharing this ICT market over more US companies it will be possible for the US to do more business Internationally with a lot less risk.

However I am not writing this because I think its bad for US business although it is, I am writing this because it should not be allowed for one company to be this powerful. I think there should be real competition if that is inside or outside the US does not matter.

MS now has the power to infiltrate and take over any market they wish and they will do so in the future. The first actions that they want to infiltrate the consumer electronics market have already started (Xbox). If the US wants a healthy economic state they should not allow for a company to be so powerful.

Greetings,
Dion Mes

Hello,
I am an American citizen, currently living and working in Germany. From my vantage, with the information available to me, the current PFJ has a large number of failings.
- The new licensing program which is being offered by Microsoft (see the article at <http://www.cio.com/archive/011502/meter.html>) offers a substantial reduction in fees in return for the agreement not to install any competing software. Surely this cannot be in the spirit of the original judgment in this case!

- Disclosure of SW patents protecting Windows API's is not required. How can a competitor know if his product infringes on a Microsoft patent? Competitors cannot be expected to "give it a whirl" and hope that they aren't prosecuted. Lack of disclosure furthers and supports the Microsoft monopoly.

- Microsoft is allowed to retaliate against OEM's that ship PC's containing a competing OS and not containing Windows. Does this mean that OEM's will have to ship their PC's containing BOTH operating systems? And of course the customer is expected to pay license fees for both OS's—even if he didn't want Windows originally. The result of this will be that OEM's shipping Windows will effectively ship only Windows, thus effectively precluding all competition.

This is only a very short sampling of a long list of shortcomings in the proposed judgement. I sincerely hope that major changes are made before this goes into effect.

To whom it may concern:
 I am personally expressing my opinion about the proposed final judgement in the US v. Microsoft antitrust case.

I find it incredible that anyone could consider it ethical, let alone legal, to allow a convicted criminal enterprise to have a hand in the setting of it's terms of punishment. That is exactly what we have here with the proposed final judgement. Microsoft has been allowed to manipulate the process so much that the judgement ends up allowing Microsoft to further it monopoly. Example: Microsoft alone shall be the judge of what constitutes a "legitimate business model" with regards to licensing of API documents.

There are numerous other "gaping holes" in the proposed judgement that others have expounded on. I am reiterating these concerns to you here. The proposed final judgement, if accepted in it's present form, will give Microsoft an unmitigated license to further it's monopoly and crush or otherwise harm it's competitors.

I hereby express my opposition to the proposed final judgement as currently negotiated between the DOJ and Microsoft.

From: Mace Moneta
 To: Microsoft ATR
 Date: 1/23/02 7:01am
 Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of it's competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties

for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Date: 1/23/02 7:02am
Subject: Microsoft Settlement

Hello,

I am writing this Email, because I believe that Microsoft has been let off the hook in it's current trial with the Dept. of Justice.

After reading much documentation on the subject I can only come to one conclusion, This agreement was thrown together As fast as possible so both sides would be happy and the case would be closed.

However the penalties against Microsoft need to be thought out more, and not just by "Justice Dept. or Politicians"

I would suggest that you setup a panel of Tech. Experts from companies such as the ones that have been at the Mercy of Microsoft "AOL/Redhat/OEM's" and by regular People

in the Tech. Industry such as "Reporters/CEO's/Consumers".

In the end these people will be the ones who have to deal with what you decide here, since you probably won't get another Chance to stop this Monopoly again any time soon.

Remember, Microsoft is great at finding loopholes/clauses in contracts/verdicts etc. that can allow it to continue.

If the remedy in this case, were to benefit the computer Industry as we all hope, Microsoft would have never agreed To it, so something is still very wrong.

Sincerely,
Keith Carver

MTC-00014948

From: Peter Statham
To: Microsoft ATR
Date: 1/23/02 7:05am
Subject: Microsoft

I am a British Citizen and a open source programmer, however Microsoft is a multi-national corporation and the Microsoft trial was important, so I would like to say a few thing regarding it. Microsoft have made life hell for us for years, they have flaunted all important standards such as POSIX (NT's POSIX compliance is not as complete as microsoft says), and ANSI, which make it difficult to write software for Windows and even more difficult to port software to and from other operating systems.

Because Windows is used on 90% of all desktop computers, programmers must write for Windows which enforces the above paragraph.

They have also used threats and bribes to prevent competition from producing programs superior to their own.

Microsoft has also repeatedly stolen ideas from other programmers and companies, this makes Microsoft somewhat hypocritical, Microsoft claim to be all for the American DMCA, yet they steal other people's ideas, their intellectual property, Microsoft call the open source movement (who give full credit to the programmers) a cancer, from this behaviour it would be better to call Microsoft the cancer. Microsoft have held back computer technology 10 years now, they have charged us though the nose for buggy software and then charged us for the bug fix.

Please stop Microsoft, forbid them to make any software releases for 5 years and give us a chance to establish some new standards, but don't let Microsoft off with a slap on the wrist, this is more than a spat between rival companies, the programming community

were hoping that you would prevent Microsoft from ruining PCs anymore than they have done.

Thank you.

MTC-00014955

From: jose chua
To: Microsoft ATR
Date: 1/23/02 7:21am
Subject: Microsoft Settlement
Dear Sir or Madam:

As a software engineer, the proposed settlement will greatly affect my livelihood. As an American citizen, the proposed settlement will greatly affect my way of life, as it sets the tone for doing business in the new millennium. In its current state, the proposed settlement does not adequately address Microsoft's illegal actions.

There are several loopholes. The definition of "Windows Operating System Product" (definition U) excludes other Microsoft Windows Operating Systems such as Windows XP Tablet Edition, Windows CE, and PocketPC. These products are derived or are the progeny of the Windows codebase, and should be included. Also, any future upgrades, service packs and fixes should be part of the definition.

In Section III.A.2., no provision is made for a Personal Computer that ships with a non-Microsoft Operating System but no Windows Operating System. As it stands, protection for OEMs is provided only if an OEM continues to bundle Microsoft products.

In Section III.D., Microsoft is required to provide API documentation to ISVs at the time of the final beta test. This timeframe is not sufficient for ISVs to adapt their products to fit the requirements specified in Section III.H.3., which states that competing middleware can be locked out if it fails to meet requirements seven months before the final beta test.

The proposed settlement is largely insufficient and does not serve the public interest. Please consider this a vote against the proposed settlement.

Sincerely,
Jose B. Chua

Having reviewed the proposed settlement I feel that it is seriously flawed. Having been

a programmer and a systems administrator for several years I have seen Microsoft force companies out of business or to drop business lines due to their practices. I feel that the proposed settlement does not fully address these practices and prevent Microsoft from continuing them.

Specifically there are three area that need to be rigorously addressed.

1. All APIs must be fully documented and published for use without restriction, by anyone include competitors. The definition of an API must be very broadly stated. They should be published before the product is released for public beta testing, or 120 days prior to sale of the product, which ever is earlier. Also, all changes must be published in a timely manner when updates, patches and revisions are released.

2. All file formats must be fully documented and published for use without restriction, by anyone include competitors. The time frames should be the same as above.

3. Licensing and sales incentive practices of Microsoft are anticompetitive and need to be changed. Microsoft should be brought into line with industry standard practices and not allowed to use its market share and power to cripple competition and drain money from consumers and companies.

These terms should remain in effect until Microsoft has less than 49% of market share.

So long as Microsoft can prevent competition by using its dominate market position it will continue to harm the American economy. By not allowing competitors (both commercial and Open Source) to write compatible software, Microsoft will remain a monopoly. This proposed settlement does not address the short or long term changes needed to end the Microsoft Monopoly.

Subject: Microsoft Settlement

Dear Department of Justice:

I think the proposed Microsoft Settlement is an injustice. I believe the company should have separated into two, if not three pieces: Operating Systems, Server Software, and Everything Else (Productivity Software). I think Microsoft's ploy of offering to flood schools with their products is ridiculous. (A decade or so ago Bill Gates was noticed because of his large charitable donation—of outdated software, not money. No one saw the irony in that?)

As a software developer, I feel that Microsoft goes against all the principles of best practice and fair play. The world would be a better place without them.

Dear sir,
I would like to register my vote against the current settlement. I do not it goes far enough in opening up the monopoly. Other companies, need more information from Microsoft. for example, windows developers need to know about the exact details of the windows API, presented in a useful way, so that microsoft is not the only one able to take advantage of the lesser-known features.

I believe the proposed settlement is bad idea.

I think that the best way to restore competition on the desktop would be to force Microsoft to do only two things:

1. Release all documentation relating the formats of their MS Office documents.

2. And probably the most important; have them release all network communication APIs so that other companies can create products able to communicate and interoperate with Microsoft Products.

Also have them document and release any changes at least 3 months ahead of releasing new products or updates.

Thank you.

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices. Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of it's competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Subject: Microsoft Settlement

Greetings—

I oppose the proposed Microsoft Settlement. I think this settlement is a very bad idea. In general, the settlement goes too far to protect Microsoft; it would allow them to effectively protect and extend their monopoly.

In particular, the settlement does not address the single most powerful hold which Microsoft exerts on the market; to wit: document standards.

Additionally, the small provision for publishing interoperability standards is quite weak. I have no doubt that Microsoft will be able to circumvent any such restrictions.

I hope the U.S Department of Justice will reject the proposed settlement. To do otherwise would be disservice to the future of our country.

Respectfully Yours,

From: Robert Grabowsky
To: Microsoft ATR
Date: 1/23/02 7:13am
Subject: Microsoft Settlement

I am a United States citizen with about 16 years experience in the computer industry. I am a computer professional and my livelihood depends on happens in the US vs. Microsoft antitrust case. I have read the proposed settlement, and I am not in favor of it in its current state.

Please consider this a vote against the current settlement, as well as a vote to seek a settlement that is more favorable to Microsoft's competitors, yet unfavorable to Microsoft. I believe the proposal is a dishonest one that sells out the public interest. I will explain why, and offer some guidelines for a fairer remedy.

1. Microsoft's main crime (not bundling, but the prevention of bundling) has had lasting anti-competitive effects that the settlement should address but doesn't. What Microsoft did that seriously disadvantaged the consumer was not so much bundling its own browser with its operating system, but preventing computer resellers (OEMs) from offering consumers a choice by bundling competing browsers such as Netscape Navigator.

2. Microsoft's monopoly profits are the direct result of these and other illegally anti-competitive tactics. The antitrust case established that the absence of competition emboldened Microsoft into charging \$89 for Windows instead of \$49. In other words, consumers paid extra merely because of a monopoly that was being illegally maintained. There is absolutely nothing in the proposed settlement that addresses the issue of these ill-gotten gains, or how these will be reimbursed to the public from whose pockets they came. This simple omission easily amounts to billions of dollars, and by itself makes the settlement a sellout of the public interest, even without an assessment of its other shortcomings.

3. Though it has been established that Microsoft has repeatedly broken the law, the

settlement only defines mechanisms to prevent future wrongdoing. What about punishment for past wrongdoing? Guidelines for a fair remedy:

1. Recurrence: Microsoft must not be able to continue to abuse its monopoly the way it has in the past.

2. Reimbursement: Microsoft has no right to retain the excess profits it has earned as a result of its illegal actions. This money should be repaid to the consumer.

3. Reparations: As Microsoft is responsible for the current uncompetitive market in operating systems and related applications, it must underwrite efforts to restore competition and consumer choice. The rest of the market should not have to pay to recover from Microsoft's abuses.

4. Reference: Microsoft must pay punitive damages over and above its reimbursement and reparations obligations, to serve as a warning to deter future monopolists. The remedy must in no case send out a signal that a large enough violator can get off lightly. Future tax dollars can be saved by discouraging abuses instead of having to prosecute them.

Sincerely,
Bob Grabowsky

Renata B. Hesse
Antitrust Division
US Department of Justice
601 D Street NW
Suite 1200
Washington,DC, 20530-0001

Dear Ms. Hesse:

I am writing to add my voice to the others OPPOSED to the proposed settlement of the

Microsoft antitrust suit. As currently constituted, this settlement fails to establish a basis for competition in the marketplace for PC software. More importantly, elements of the language suggest that the settlement will allow Microsoft to employ several predatory practices to illegally defend its market share—to wit, the apparent limitation of the various “openness” decrees to commercial concerns only.

The Open Source software community has demonstrated startling innovation in the face of past predatory behavior by the defendant in this case, largely through the open standards that have been developed by that community. The consent decree does nothing to restrict Microsoft’s “embrace and extend” strategy, which will cripple innovation in the very sector that our economy depends upon for its success today.

Because of this and other well-documented elements of the proposed settlement which fail to ensure a competitive market, I strongly resist the terms of the current settlement, and implore the Department of Justice to reopen the settlement talks.

In reviewing the findings of the court that have been un-refuted. I don’t think that settling with Microsoft is in the overall best interest to me as a consumer or my company. Microsoft has been found guilty of being a monopoly, and have absolutely no respect for the judicial system in america. They have time and again scoffed at any “terms” that they had to live by. The release of XP with all of its bundling has shown that they have no intention of changing their ways.

Please do not settle with a guilty company that will not change its ways unless changed by force.

The saying goes speak softly but carry a big stick.

If you always speak softly and never use your big stick then what is the point of having it?

Please do not settle with Microsoft. They need to be punished in such a way that they will not continue their behavior.

I am forced to write you this not from outlook on a Windows 2000 machine. This is not my choice but the choice of my company.

My company chose Microsoft products not because they were the best but because they felt they do not have a choice. Please, punish Microsoft now in a way that allows my company to actually believe it is safe to find an alternative email system without fear that they will be crushed by Microsoft.

Many smarter people than me have already written comments on the Proposed Final Judgement I am sure, but I thought I would add my two cents. Microsoft has already been proven to introduce deliberate incompatibilities to maintain their hold on different platforms, as evidenced by the 1996 Caldera vs. Microsoft lawsuit. The proposed remedies are far too weak to prevent Microsoft from doing this in the future. In a sense, the Proposed Final Judgement would rely on the willingness of Microsoft to open up to competition, and their track record seems to indicate that this is unlikely. Many definitions, such as API are worded in such a poor manner as to give Microsoft more of

an advantage legally than they already enjoy. The Proposed Final Judgement should be overhauled (perhaps rewritten from scratch) or rejected. Thank you for your time.

Subject: Microsoft Settlement

Please don’t let Microsoft get away with their crimes once again. The last DOJ anti-trust settlement with them was a wrist slap. That’s what this new one is shaping up to be as well. The settlement is a joke, allowing them to get away with their abusive practices without any real penalties.

As written, the settlement has too many holes in it, which will allow Gates & Company to continue their arrogant practices. The remedies only protect commercial companies. What about Linux? The biggest competitors to Microsoft are not-for-profit organizations, which aren’t covered in the scope of this ludicrous settlement!! Section III(J)(2) pretty much rules out not-for-profit organizations from getting any benefit at all from this settlement, and indeed allows Microsoft to ignore them, not providing them with API’s, documentation or comm protocols.

PLEASE PUNISH MICROSOFT!! You won the trial, for crying out loud. Now you’re going to let them off the hook?

I urge you to throw out this pro-Microsoft settlement, and come up with something that is strong enough to STOP them from behaving the way they do, and something that has some punitive measures in it!!

Subject: Microsoft Settlement

I think the proposed settlement is a bad idea.

Microsoft keeps saying that they have competitors (namely Open Source Linux). But the settlement completely excludes them from using any of the information the settlement forces them to disclose.

Not only will open source projects not fit the guidelines of who Microsoft is forced to disclose the information too. The release of the protocols without the security information makes them completely useless because if you can't authenticate, you can't use the protocols!

Microsoft needs to be forced to open up their protocols and interchange formats to others in order to really level the playing field. The Microsoft Word document is one example. They have such a lock on the market of word processors just because they are the defacto standard. Microsoft uses these formats to force their customers to upgrade office on an almost yearly basis. Most people I talk to upgrade office because they want to be able to read new word/excel documents—not because office provides any new amazing features that they really want. Microsoft uses these formats as extortion to keep businesses and people upgrading their products. I know, because I'm a programmer, that Microsoft could create a new word document format that is still able to be opened with previous word processors. This is exactly how the HTML/XML formats work. But they choose to not do that.

Microsoft also uses changes in their word document format to keep other word processors from ever being able to compete with them. In the industry today, if you can't open a word document, your word processor is useless.

If you were to force Microsoft to open ALL protocols, formats (including word, excel, powerpoint, networking protocols, asf, windows media, etc formats) then you would

go a great distance towards leveling the playing fields.

As a technical expert, looking at the current proposal is just disgusting. It's almost like you let Microsoft write it themselves!

From: Justin Kao
To: Microsoft ATR
Date: 1/23/02 7:19am
Subject: Microsoft Settlement

Hello,

I am writing to state that I feel the current proposed settlement with Microsoft is insufficient.

In particular:

1. Section III.J.2 exempts Microsoft from disclosing information about authentication and authorization to third parties that Microsoft does not judge to be businesses. This leaves out ALL open-source projects such as Apache, Samba, Wine, etc. which are developed by volunteers yet provide the vast majority of the available alternatives to Microsoft software! Essentially then, this settlement allows Microsoft to continue its anti-competitive practices against its largest competitors.

2. The settlement seems to do little with regards to fixing the results of past anti-competitive practices by Microsoft, namely the domination of Microsoft Office, Internet Explorer, Exchange, and other products. In addition to placing restraints on future behavior, the settlement should do something about the current monopoly. A good start would be to require openly documented file formats for Microsoft Office and openly documented protocols for communicating with Microsoft Exchange.

Thank you.

To whom it may concern:

Before the public commentary period expires, I would like to, as a U.S. citizen, state my concern about the Microsoft Proposed Settlement. In your settlement, you leave what appears to be many loopholes that can allow Microsoft to continue to practice anti-competition in its current markets.

Two points I would like to make:

1. You fail to consider—if it is possible—markets that Microsoft has entered that do not include its operating systems divisions. Microsoft has exerted undue influence on markets including peripheral hardware, gaming machines, handheld devices (software), etc. Although you speak about IHVs, I think the hardware aspect of the settlement needs to be fully explained and clarified.

2. The discussion about versioning is ridiculously open to interpretation and further work around by Microsoft. You talk of Major revisions being whole numbered and Minor revision being numbers followed by the decimal. However, did you ever fathom that they could use a different versioning scheme. Windows 2000 ring a bell? Although it has a 5.00 version. What if they move to another scheme? What provisions does this settlement provide to cover this loophole?

Lastly, I would like to thank you for your efforts in inacting these restrictions on Microsoft. I feel that they've gone too long under pretenses of unfair competition.

Subject: Microsoft Settlement

I do not believe the proposed settlement will force Microsoft to turn to anti-competitive practices in order to sell their software. This case has been absolutely infuriating how Microsoft can put the same smokescreen (marketing) in front of the courts as it does to the general public. "Freedom to innovate", how, by limiting consumers so that all paths flow through Microsoft?

Some examples—

OEM deals where Windows must be installed on all new computers, and that no other alternative is allowed.

Consumers cannot request that a different OS (or no OS) be installed, and are automatically charged for the Windows license. How is this not anti-competitive?

Windows XP—which is an operating system that brings MS a giant step closer to having complete integration with MSN, with no other alternatives—can you replace MSN with AOL and get the same integration? No?

Then it should be a separate product NOT integrated with XP. This would give AOL (and any other similar business) a fair chance at attracting customers, where MS would have to market their merits of MSN vs AOL rather than winning by default.

Active Directory—The LDAP protocol is perfectly capable of handling anything AD can handle. But does MS use LDAP (an open standard?) NO. It takes it, modifies it slightly so that all Windows installations MUST use AD and not LDAP. This increases the reliance on Windows OS as well as AD products from Microsoft. 3rd parties have been effectively cut out of providing an alternative to AD. Yes, there is Novell, but Windows will never be as tightly integrated with Novell than it is with AD. So, once you've decided you like the features that AD provides, you have NO CHOICE but to go with an all Microsoft solution. How is this not anti-competitive?

Why must Windows update be run using Internet Explorer, and can never be run by any other browser?

(Since IE is supposed to be JustAnotherBrowser) Why can't we use Netscape, or Opera to do the same thing?

In terms of security, it would be MUCH better if Microsoft was broken up. This would encourage LESS tightly integrated products, which have been the main cause of almost all of the major virus outbreaks and worms in the past year. The excuse Microsoft likes to use is that they are the biggest target, so people who want to cause damage are naturally going to go after them. This argument is flawed since the Apache webserver has nearly DOUBLE the marketshare of IIS (<http://www.netcraft.com/survey/>), and IIS is what has been the main target of those worms. Using MS's logic, if hackers wanted to cause the most harm, they'd target Apache and not IIS. So why have they targetted IIS? Because it is full of security holes, where Apache is not. IIS is the easiest target simply because of that, it is easy to exploit. Apache is an open source product which is open to peer review, where IIS is not. Coincidence?

And now look at their plans with the X-Box—All in one media center for the home, directly tied into MSN.

Passport—one stop personal info database (which has already been hacked into once). Potentially one of the most valuable databases ever created, call controlled by one essentially unregulated, company, Microsoft, who has a horrible security record.

Microsoft is continuing to make the US court system look foolish (at best) by brazenly ignoring warnings, continuing to tighten their stranglehold on the US business place while this case has been ongoing. Is this how the court system is supposed to work? Bend over backwards for companies that break the laws over because it is more convenient? Microsoft is at the forefront of changing this country into an Orwellian society (if you think I am exaggerating, then just look at the key positions Big Brother Microsoft has in the media today, and realize that the direction they are headed is to force all roads to lead to Microsoft.) If you think that they do not have the money and power to do this, then you do not realize the importance of this Anti-trust case.

I think this settlement is a easy (and, pardon my saying so, lame) way for microsoft to buy their way out.

given the quality of their products (windows . . . anything) and the suppressiveness of their licensing schemes, this is neither right, nor fair to anyone.

Date: 1/23/02 7:22am
Subject: Microsoft Settlement

I am writing to express my opinions regarding the proposed judgement against Microsoft, in the ongoing anti-trust case. From what I have seen, the PFJ does not even begin to address the harm already caused, let alone preventing Microsoft from doing any further damage to their competition in the software arena.

I am a computer professional, and I've worked in this field for 8 years. In my career, I have worked extensively with the end-users of computer systems, answering their computer-related questions and helping them to resolve their computer problems. I also hold an M.S. in Information and Communication Sciences. As a result of these things, I have a strong, practical background on which to base my opinions, as well as an understanding of the business theories underlying competition in the technical arena.

In my opinion, the most serious threat to competition is Microsoft's control of their applied programming interfaces (APIs), and their absolute refusal to allow any other operating system to make use of these APIs. The use of these APIs is required for any competing operating system which hopes to be able to run software originally designed for Microsoft operating systems. At present, Microsoft controls the software market

because of the lock-in designed into their products, each product reinforcing their main product: Windows.

For example: a friend sends me a Microsoft Word document. To use this, I not only must have Microsoft Word (the same version), but also a Microsoft operating system on which to run Word. If I choose not to buy any Microsoft operating systems, I am unable to read documents created by Microsoft Word, even if I purchase that program separately! If the APIs required to run Word were publicly available, on the other hand, competitors could produce an emulator which would let me run Word on a different operating system (FreeBSD, for example, or Linux).

The PFJ does not address this need in an adequate fashion. The way in which APIs are defined makes it far too easy for Microsoft to completely ignore this requirement, and continue making it impossible for anyone to run a Microsoft product without the Microsoft operating system. Until the APIs are opened up to competitors, Microsoft will continue to be a monopoly. Once other operating systems can run MS Word, or MS Excel, however, competition will begin to creep into market, and consumers will ultimately benefit. To illustrate this with a similar case: if Intel had been allowed to prevent other chip manufacturers from running programs written for the Intel platform, AMD chips would not exist, and without competition between the two CPU makers, computer speeds would be far lower than they are today. Finally, please note from my email address that I am an AT&T employee. When AT&T was judged a monopoly in 1982, the company was split apart (a far more drastic step than the one proposed in the PFJ against Microsoft). The result of this has been strong competition in the long distance markets, where a monopoly could no longer be sustained by the stable customer base of the local carriers. In the local markets, however, because the decision in 1982 and the Telecom Act of 1996 were either overly lenient or not sufficiently enforced, Verizon, US West (now Qwest) and Bell South have retained effective monopolies in their regions. I believe that the steps taken against Microsoft should be designed to not only remedy the software giant's current monopoly, but also to prevent it from being able to easily re-establish one in the future. By making Microsoft's APIs public-domain property, MS would be forced to focus on providing a good product to win customers rather than relying on lock-in due to their existing position. If any existing Microsoft customer could freely migrate to a new operating system and continue to use their old Microsoft software, it will solve the major problem that many CLECs faced when trying to compete against the Baby Bells.

Thank you for taking the time to read this, and if you have any questions, please let me know.

Chris Pohlabel

From: Greg Baker
To: Microsoft ATR
Date: 1/23/02 7:29am
Subject: Microsoft Settlement

I am a non-current resident of the USA; I may or may not be a member of the "public" under the terms of the act, but I am a consumer of and implementer of Microsoft products.

I do see a problem with (III)D. Notably, Microsoft is only required to disclose APIs and documentation in order to support interoperation, and only to IAP, ICP, ISV etc. organisations.

There are two problems here: —generic systems implementors (who do not sell hardware and do not write their own programs) are "out on a limb". This constitutes a large number of the smaller consulting firms in the USA, in Australia and in most other countries. Such documentation of APIs and protocols is necessary and needed in order to help such companies install and configure ISV products, for example.

—the wording allows Microsoft to place restrictions on how the IAPs, ICPs, ISVs, etc. may use the information. For example, nothing prevents Microsoft from (for example) allowing access to the MSDN only to users who promise total secrecy (or only to those who pay large amounts of money). To continue ad absurdum, Microsoft could choose to make available the APIs to anyone willing to pay the billion-dollar-per-year fees for accessing the appropriate part of MSDN—i.e. exactly the same situation as exists at the moment.

My suggestion to improve (III)D would be "Starting at the earlier of Service Pack 1 for Windows XP or 12 months after the submission of this Final Judgement to the Court, Microsoft shall disclose documentation and APIs used by Microsoft Middleware to interoperate with the Windows Operating System Product. Such information will be made available in a free and unrestricted fashion to any individuals or organisations who request it, explicitly including their right to disclose it to other parties."

This above clause would bring Microsoft's development practices more in line with other software vendor's, such as Apple, IBM, Hewlett-Packard and the open source movements and would help redress the abuses of power that Microsoft have performed in the past.

 Subject: Microsoft Settlement

Dear Sirs,
 I think the Microsoft Settlement is still a very long way away from a truly competitive consumer, customer and citizen oriented market agreement, which we deserve. I am against the Microsoft Settlement, because it is essentially in the long run not consumer friendly. It does not address the basic and principle right of a citizen of the USA: having the ability to choose and also being able to change his choice. The settlement potentially makes Microsoft's control of the market even stronger, which it has gained through different illegal practices over many years. And this is one of the most essential technology fields today, which plays a crucial role in the evolution of the free world, which we are fighting for. The adequation is simple: How many Microsoft based desktops are being used today in comparison to competitors. Are there any real competitors? Is this the freedom of choice, which is so crucial for the functioning of the leading democracy of the world? Also there is a very strong threat, that Microsoft will not only dictate the desktop of USA, but also the server side of the market (ISP, ASP etc.) and the consumer market (PDA, Game consoles). So essentially Microsoft has put itself in the position to potentially dictate all essential aspects of the crucial technologies of our time, through breaking the law of our country. The settlement basically sanctions this. And this scares me being a humble citizen of our country.

Kind regards
 Christoph Henrici

 Date: 1/23/02 7:30am
 Subject: Microsoft Settlement

To Whom it May Concern,
 I feel that the proposed final judgement in the Microsoft anti-trust case is not sufficient to remedy the problem and should be redrafted. I am a software developer, and I am forced to use Microsoft tools and operating systems, as my customers all use this operating system. It is not possible for me to develop for my customers using any tools other than those provided by Microsoft, as they will not function properly on the Windows Operating System.

Steps must be taken to dismantle this monopoly of the operating system, and to make development for the Microsoft Operating Systems possible using tools and operating systems not provided by Microsoft.

There are two methods that I feel may properly remedy this situation. The first is to create an equal playing ground for developers by making the source code for all Microsoft Operating Systems available to developers. Microsoft would no longer be able to take advantage of insider knowledge of the operating systems to unfairly compete with third party products.

The second remedy would be to separate the operating system business units from the application business units. Microsoft continues to build applications that were once independent programs into the operating system, making competition with these programs all but impossible. A very good example is with Internet Explorer, but some highly overlooked examples are Windows Media Player, Notepad, WordPad, Calculator, and all of the tools which come bundled with the operating system. Microsoft can afford to give these products away for free as they are profiting from the sale of the Operating System. Competing software developers do not have this resource. By separating the two business units, Microsoft applications will be forced to compete on a somewhat more even playing ground.

In conclusion, I feel that the proposed final judgement in the Microsoft Anti-Trust case is not sufficient to solve the problem.

Hello,
 I am writing because I am very concerned about the current Microsoft settlement. I find it to be wholly inadequate and does very little to curb Microsoft's continued illegal use of its monopoly power. There are many problems with this settlement. The definition of API is too narrow. Many of the other proposed items are so restricted that they won't even apply to future versions of Windows based on Microsoft's already stated intent.

I urge that this proposed settlement be rejected and something far stronger be put in place.

 Subject: re: Microsoft Settlement
 To Whom it May Concern:

I would like to express my dismay at what seems to be the Department of Justice's lack of seriousness with regard to the prosecution of antitrust laws. As an American citizen, and an independent software developer, my business has been immeasurably hurt by the predatory and illegal practices of Microsoft. If our country is to succeed economically in the 21st century it will be through innovation in Information Technologies.

That economic success and those future innovations are dependant upon a vibrant economy of ideas and products where companies compete on a level playing field and where Microsoft cannot through the force of its market presence suffocate anyone who might threaten their market share or where innovations are stolen and livelihoods destroyed to line the pockets of unrestrained monopolists.

I hope the US Government will "do the right thing" and apply the harshest possible penalties to Microsoft. The future is depending on it.

I would just like to say that I have read about the proposed settlement, and I am not in favor of it in its current state.

Please consider this a vote against the current settlement, as well as a vote to seek a settlement that is more favorable to

Microsoft's competitors, yet unfavorable to Microsoft.

I believe Microsoft has hurt the worlds software market, and should be split into Operating systems, and Middleware (Office, SQL server etc)

I also believe Internet Explorer should be open sourced, As It destroyed Netscape's browser illegally.

I also believe "ALL" the API's and protocols that Microsoft's software uses between its client and server should be documented and published. So other operating system can be clients and servers. i.e. Sun's Solaris, Red Hat Linux.

I also think that the latest version of Java should be bundle with the operating system, As they illegally tried to brake Java as a standard. Also they should be fined in the 10's of billions, and that cash used for a worthy cause. I would love to see that the money was used to find a cure to cancer.

From: Jesse L. Morgan

To: Microsoft ATR

Date: 1/23/02 7:31am

Subject: Microsoft Settlement hello, I am a simple person.

I say this because I'm not a computer expert. I'm a college student. I'm a student who, because of the college

I attend, am forced to use Microsoft products. I personally think that Microsoft is a threat to not only the American people, but the world at large. Their anti-competitive practices has killed more than their share of competitors. When I was in high school, I got my first computer. I also for the first time had access to the internet. I used WordPerfect by Corel (killed by office) to write my first web page, which was written to work well in Netscape (killed by IE). I bring this up because these are two examples of an instance where I personally was affected by Microsoft. Both of these programs had great futures, but Microsoft's greed cut them short.

I've noticed that even the less computer savvy users are starting to notice that Microsoft has gone too far.

however, I noticed most are apathetic towards the thought of doing anything about it. So I've decided to throw in my two cents.

Short of complete dissolution, Microsoft will always be a threat due to the amount of wealth they've amassed. They'll always be able to buy less than honest politicians. They'll outlast or stall past different presidencies until they find one to their liking. I believe that the best alternative is to knock the company down from it's pedestal would be the best course of action. How?

(1). break them into 3 or more smaller companies.

(2). force them to open current and future API's (how the programs talk together)

(3). force them to make current and future formats open.

The third one is most important to me. each version of Word has used a different saving format, making it impossible for competitors to keep up.

To backtrack a little to how Microsoft could hurt the public, Security is one of the first things to come to mind. there are more virii written for Microsoft office than any other single application I can think of.

Microsoft's code is so buggy that even their "upgraded" version of a sound player is a security risk. Even our own government is writing virii (magic lantern) for the windows OS family.

No one is invincible: Microsoft shouldn't be either.

now's your chance to stop them.

Please put them in their place or they WILL replace our government with a digital dictatorship that has more power than any one government. as is, the already set more standards that we realize, and have more economical and political power than any one person will ever will.

Sincerely,

Jesse Morgan

Subject: The MS Settlement Talks

As a member of the Information Technology community, an experienced programmer, a Microsoft-Certified Systems Engineer, and a voter, I ask that you seriously reconsider /any/ deal with Microsoft that does not substantially limit Microsoft's overwhelming influence in the industry. While I can appreciate that Microsoft must seek profit to satisfy its shareholders' interests, I have seen all too many good technologies sit unused because Microsoft employed unreasonable and illegal practices to leverage its current monopoly of the operating system to create new monopolies in other areas (C.f., the Microsoft Office suite, the Browser, etc. . .) and against its competitors (C.f., the former Be, Inc, the former Stac, Inc., the former. . . you get the idea).

Current settlement suggestions are NOT enough. Might I suggest that Microsoft be penalized heavily by forcing them to make good on their school offer, but instead of having them supply the schools with Microsoft software, force them to purchase hardware and use free software, like Red Hat Linux, perhaps even forcing them to purchase a support contract from Red Hat for the schools. That would give there competitors a leg up at Microsoft's expense. Just a thought.

Either way, I know the government is interested in limiting what Microsoft puts into the core operating system. I'd suggest that it concentrate on what Microsoft pulls out of the OS. for instance, adding the browser to the OS for free is fine by me, as long as they don't use it to crush all competition, then pull it back out and charge for it.

Perhaps the government should be permissive with what MS puts into their OS,

but stingy with what it allows them to pull out.

To: Microsoft ATR

Date: 1/23/02 7:33am

Subject: Microsoft Settlement

I am a US citizen and my SSN is 447-74-0714. I would like to register a complaint against the Proposed Final Judgement in that it does not come close to touching the real problem of Microsoft's anticompetitive nature.

For example, the license below does not restrict the user when using the software, but rather limits the rights of the user after the use of the software is complete. Example:

An artist encodes an original piece of music using the encoder. The Artist closes the encoder software. The artist would like to distribute hi/her music to as wide a range of listeners as possible. To do so, he/she packages the music with a player. At this time, the user is no longer using the software, and the data file created using the software is the property of the artist. The artist's right to distribute his own property is limited such that the artist does not have the freedom to bundle legally licensed software with his own property. The Microsoft Windows Media Encoder 7.1 SDK EULA states

. . . you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. "Publicly Available Software" means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models . . . Publicly Available Software includes, without limitation, software licensed or distributed under any of the following licenses or distribution models, or licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (SCSL); . . .

I strongly urge you to reject the Proposed Final Judgement against Microsoft.

Sincerely,

David Mann

Date: 1/23/02 7:36am
Subject: Microsoft Settlement—oppose Dear Sirs,

I strongly disagree with the terms of the Proposed Final Judgment in United States v. Microsoft.

I am profoundly disappointed and disturbed by what can only be characterized as a complete collapse by the government. The proposed terms of the settlement do not serve to unfetter the market from Microsoft's anticompetitive conduct, nor do they terminate their illegal monopoly, nor do they deny to Microsoft the fruits of its statutory violation. And they completely fail to ensure that there remain no practices likely to result in monopolization by Microsoft in the future. Not only does the settlement fail to address the key issues in my opinion, it lacks effective enforcement mechanisms. For this reason, if no other, the settlement should be rejected.

Winfield Hill
36 Hall Road
Stoneham, MA 02180

MTC-00015009

From: Hal Roberts
To: Microsoft ATR
Date: 1/23/02 7:35am
Subject: Microsoft Settlement

I strongly oppose the currently proposed settlement of the Microsoft case.

The shape of our society is increasingly determined by the nature of the technologies we use, and many of the most important technologies are those related to computers and the Internet. The mechanisms for citizens to make decisions about important technologies are through government regulation and through the free market mechanisms of capitalism.

The facts of the Microsoft case have shown that Microsoft has blatantly flouted the law in extending its monopolistic control over

some of the most fundamental technologies of our society. Even more importantly, Microsoft has shown neither an understanding that its behavior is illegal nor an inclination to change its behavior in the future.

Microsoft currently has hugely disproportionate power over the nature of the most important technologies in our society. To allow the current state of affairs to continue is to disarm both the governmental regulatory and the free market controls that citizens wield over their technological lives. This settlement would allow a social pariah more control, in many ways, over our society than our deomcractically elected government.

The proposed settlement would do absolutely nothing to change the current state of affairs, since it has no built in mechanisms to enforce its provisions. Requiring Microsoft to open up its API's is one important step in reigning in its proven abuse of its monopoly.

However, the settlement provides no enforcement mechanisms to require Microsoft to change its behavior. In fact, if Microsoft chooses to ignore the requirements of the settlement, the only remedy will be to take Microsoft back to court. If the current case has shown anything, it has shown that the speed of the legal process makes it almost wholly unsuitable for regulating the technology industry (witness the death of the browser market while the current Microsoft case dragged one). Given that Microsoft (1) has been proven to act illegally in repeated instances, (2) has never admitted any degree of wrongdoing in its illegal acts, and (3) has repeatedly expressed the intent to continue the operation of its business as it sees fit, the most likely result of this settlement is the following. Microsoft will make, at best, nominal but ineffective efforts to follow the settlement provisions. Industry competitors will recognize Microsoft's illegal behavior and, within six months, encourage the government to file suit to require Microsoft to change its behavior. The current Microsoft case will be repeated over the next five years, after which time the government will agree to yet another settlement with unenforceable provisions, which Microsoft will once again blatantly ignore.

Please do not throw away this chance to give the citizens of our country a say the shape of their lives.

Sincerely,
Hal Roberts

MTC-00015012

From: Sam Hill
To: Microsoft ATR
Date: 1/23/02 7:36am
Subject: Microsoft Settlement

To Whom It May Concern:

To date all of the remedies proposed in the anti-trust trial against Microsoft have fallen woefully short in punishing, or preventing further monopolistic behavior by a corporation that has demonstrated itself to be uncaring to the consumers it serves.

I submit that the most reasonable course to take would be trifold.

1) Fines must be levied: This would demonstrate that the DOJ and the American public hold Microsoft accountable for their past actions. As a company with over 30 billion dollars in cash reserves, any amount up to 8 billion dollars would serve to get their attention, while not amounting to a hardship to the company. These fines would be paid out within 5 years, with no provisions to extend the payment period allowed.

2) Open the code: Closed systems become poisoned systems, this is a fundamental truth in biology and applies to other systems as well. For more than a decade Microsoft has had ample opportunity to address fundamental issues with their computer operating system, including stability and security, and they have steadfastly refused to do so. The only way to insure that these, and other issues, are addressed, is to open their system to peer review. Only then will users enjoy stability, security and innovation in their daily computing experience once again.

3) Divorce Microsoft from the punishment phase of the proceedings: That they have been allowed to define and influence them is ludicrous, and has cast aspersions on the entire trial. Does a convicted felon get to tell the bench how s/he will serve their sentence? Get Microsoft and their lobbyists out of the way now and regain some measure of dignity to the proceedings.

The solutions are simple, their implementation complex, but time is of the essence. While the wheels of Justice are slow, the Internet and computer code are not. To allow more time to pass before assessing real punishment against Microsoft only gives the company additional opportunity to thumb it's nose at the proceedings, while fattening it's coffers and spinning the truth. As an American citizen I ask that you take action on my behalf, today.

Sincerely,
Sam Hill

 Date: 1/23/02 7:36am
 Subject: Microsoft Settlement

I strongly believe that the proposed Microsoft settlement is too favorable to the Microsoft Monopoly.

Hello. My name is Robert Brown and I'm a computer software engineer, living in Virginia.

The proposed settlement allows Microsoft to continue to grow their monopoly, at the expense of other companies and fellow hobbyists. Simply put, Microsoft (or any other rich and highly entrenched monopoly) can afford the most & best lawyers to find loopholes for the company to exploit. I acknowledge that eliminating loopholes is a difficult undertaking; however, we citizens rely on the government to do so (no one else can afford to take them on at this point).

I see many weaknesses in the settlement, and I'm not even a lawyer. Many of the weaknesses are described in this document: <http://www.kegel.com/remedy/>

This monopolistic situation stifles innovation and competition, and is a serious threat to the continued growth of the computer industry. I personally believe that the computer industry has a chance to revolutionize society, and to reaffirm American leadership worldwide, as the industrial revolution once did. Please strengthen the settlement, for the sake of other American computer companies, and the American people as well.

From: Cathy Nicoloff
 To: Microsoft ATR
 Date: 1/23/02 7:37am
 Subject: Microsoft Settlement

Dear Sir/Madam,

I would like to enter my opinion into the record as being against the proposed settlement with Microsoft.

Specifically, I am upset to see that the terms of the settlement do not refer to the documentation of Microsoft's endless supply of proprietary file formats such as their Windows Media files,

Outlook mailboxes, Address books, Microsoft Office files, etc. These are a particular barrier to entry for any would-be software vendor, and this potentially knocks out of the market any competing products that would wish to edit/manipulate/import such files.

Also, the sloppy wording of the exemptions to disclosure allowed to Microsoft would mean that they might actually get away with refusing to disclose details about their operating systems and software due to "security reasons". I realize that vagueness might be necessary to cover all unforeseen circumstances a long way in the future, but I believe it is possible to make the entire document more specific and add a provision to allow changes at a later date (presumably after lengthy research and communication with the public).

Sincerely,

Catherine Nicoloff

I have reviewed the proposed Microsoft Settlement and would like to share my opinion regarding this lacking solution. This proposed settlement does not penalize Microsoft for past infringements of the law, and I am NOT in favor of it, in its current state.

Microsoft has been declared guilty of past wrongs, and must now be held accountable in some measure.

The current proposed settlement is unacceptable. Thank you for your time.

Sincerely,
 Larry Johnston

 Subject: Microsoft Settlement

Dear sir,

I disagree with the proposed remedy placed before the public for comment in the Microsoft antitrust trial. I am most bothered by the fact that there is no apparent penalty for the past misdeeds of the corporation, making it appear that there is no deterrent to future misdeeds, especially given that some of these failures came following the failure to abide by previous agreements. Further, the proposed weak oversight of the proposed agreement lacks real teeth, and does not inspire confidence that this mechanism would be effective either. Further, by working in secret, the oversight may be prone to undue influence.

Thank you for the opportunity to comment.

From: Ian Zepp
 To: Microsoft ATR
 Date: 1/23/02 7:40am
 Subject: Microsoft Settlement

The following are my comments to the proposed Microsoft-USDOJ settlement. I am the CEO of a small real-estate development firm, and as a member of the financial sector, find myself using the Microsoft Office suite of programs for most of my daily activities. I would like to switch to using a non-MS office suite, but because of the large numbers of documents that we have saved in Word and Excel formats, I am unable to do so.

Microsoft has made it increasingly difficult over the past few years to use any competitive products, by keeping their document formats secret. For a smaller company this might not be a major grievance, but as Microsoft controls approximately 90% of the desktop market, their actions force me to continue using their products. Were I to switch to a competing product, I would be unable to interact with those who continue to use the Microsoft product.

I sincerely hope that the US Department of Justice reconsiders their proposed settlement.

Respectfully yours,
 Ian Zepp

 Date: 1/23/02 7:40am
 Subject: Microsoft Settlement-NO!

I vote NO! to the proposed Microsoft Settlement.

I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of it's competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

Subject: Microsoft Settlement

To whom it may concern,
The proposed Microsoft settlement is inadequate for any number of reasons. It stops far short of ending the many predatory and monopolistic tactics that have put Microsoft into its current position. One tactic that is particularly galling to me, and that is not addressed by the settlement, is Microsoft's use of language prohibiting ISVs from distributing any "Freely Available" (i.e., Open Source) software along with (i.e., installed on the same machine as) any of several "redistributable components" that are typically installed as a part of Windows. This effectively bars ISVs from installing any Open Source software on any Windows machine they sell, and forces them to keep any value-added software they have developed as closed source.

From the Microsoft Windows Media Encoder 7.1 SDK EULA: . . . you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. "Publicly Available Software" means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models . . . Publicly Available Software includes, without limitation, software licensed or distributed under any of the following licenses or distribution models, or licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (SCSL);

At this point I believe that Microsoft is trying to buy itself out of a financial nightmare of it's own making. As an IT professional and a US citizen it's nearly impossible for me to support a settlement of this nature. Microsoft as a company has essentially slapped around it's competitors and forced the business community into paying them what amounts to a yearly random in the form of it's EULA's and stranglehold on business software "standards." To support this settlement

would be on the order of changing the name of this country to "The United States of Microsoft."

I am against the proposed final judgment in US vs. Microsoft. I feel the damage Microsoft has done to the software and OS marketplace is incalculable, and the proposed settlement does little to correct it. I don't feel the settlement levels the playing field for competing operating systems or office software, and would like to see a much stronger penalty imposed. The proposed settlement does not sufficiently relieve Microsoft of the ability to leverage hardware and computer manufacturers unfairly against competing products, nor does it adequately open the Windows API to programmers.

Sirs,

In Regards to the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Microsoft's business practices have stifled innovation and caused harm to most businesses in the United States through unfair licensing and shoddy workmanship. Unfortunately, businesses (and home users) do not have the opportunity to go somewhere else for their software needs because Microsoft has crushed any competition.

Microsoft has not noticeably changed it's business even after being found guilty of illegal monopoly practices.

I would like to encourage you to allow the best product to win, not the best leveraged product. Do not allow Microsoft to buy out/roll over the US Government. We have a government of the people, by the people, and for the people—not of, by, and for the monopolistic company.

Thank you for your time.
Best Regards,
Dave Homsher, II

Pursuant to the Tunney Act, I wish to submit my comments regarding the Proposed Final Judgement for the Microsoft Settlement.

I do not feel that the Proposed Final Judgement goes far enough, or even truly makes a reasonable attempt at slowing Microsoft's anti-competitive practices, more less stopping them all together. I would like to see a final settlement with Microsoft at least stop their current, ongoing, rampant monopolistic behavior, and ideally punish them for having behaved like that. The current proposed settlement does neither, due to the phrasing of many paragraphs in the settlement giving Microsoft numerous loopholes to escape the already loose restrictions. As it has shown in the past with previous injunctions, Microsoft has the resources and the desire to do just this, and will do it again.

My name is Gary Watson. I wouldn't have known to send this email if I had not been reading slashdot, which I feel is a little irresponsible in a case that primarily involves a matter of public interest, (like an antitrust trial). That being said, I would like to voice my complaint about Microsoft being found guilty of breaking antitrust law and not being punished. Your effectively saying, yup, that's them, they're definately a monopoly, but heck if we know what to do about it. The situation is just as bad as it was before the trial began, or maybe even worse because it gives microsoft an even greater reason to believe that the law will never touch them.

It was at one time suggested that microsoft be cut up into 3 companies, this would do nothing but turn a monopoly into a collective oligopoly, I say that you should cut the company up into no less than 10 seperate competing companies, giving each one the rights to make and produce the windows OS code, each possibly developing a seperate shoot off of windows, and certainly break away all the peripheral arms from the part of the company that does OS design primarily, (ie seperate out the network applications division like IE but which also includes the webservers and the newest .NET component which is slated to kill any chance of competition all over again, the MS office division, the games division, effectively dismantle the marketing division, and let each company take a few members of the marketing team with them as they walk out the door). This would solve the problem, but after this trial I am in doubt if the courts have the resolve to see such an action through.

It appears as though they are completely apathetic to having antitrust laws in the first place.

Dear Government
In regards to the Microsoft's antitrust case, i write you to respect me and every other individual. Microsoft is one of the noblest companies around. They create and create more. There is ZERO reasons why success is bad. Unfortunately, by trying to "break up Microsofts" stanglehold of the marketplace", you will break the backs of citizens like me. In a time of war, especially teenager's like me, need heroes not martyrs. Microsoft is my hero and always will be. All the other companies who cried "abuse" are not for the simple fact of this. Instead of create, the attempt to destroy. Instead of produce, they politic. This is not what we want our businesses to do. In order to have a stable marketplace, we need people to create. By putting the creators out of business, you only hurt us all. I write this in order to plea for a lesser sentence for Mircrosoft. When the government gets to big, the only way to fight it is words. In a world you attempt to create with a heavy hand over Microsoft's ability, you are making a world of looters. Ones who do it legally, ones who work in your Department. Just keep my thoughts in mind.

The PFJ doesn't take into account Windows-compatible competing operating systems

Microsoft increases the Applications Barrier to Entry by using restrictive license

terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with

.NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP

Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertized as being "Windows Powered".

The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

The PFJ as currently written appears to lack an effective enforcement mechanism.

I also agree with the conclusion reached by that document, namely that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

All of this seems to be too little too late. If this was any other Company there would be more to this. I guess that since it is MS and they make more money than GOD this makes it OK.

I look at the AT&T Case and wonder where the Justice has gone! To me, just a poor little guy, it seems that MS has all the balls in their court as they always have had and nothing in the Final Settlement will change this.

At this rate MS will keep doing things their way, which is not legal, and the consumers' don't get what they have been paying for for YEARS. Windows XP is the best example of this. MS pushes this out the door and down the consumers' throats saying that it is the BEST they have ever done. But in fact it is sloppy bug ridden code that should still be in BETA TESTING, not being sold to the public.

Thanks for your time.

Thomas E. Enstall

Subject: I am against the Microsoft Settlement

Hi,

I am very much against this settlement. It doesn't do any good to the public. Any good settlement must contain at least some of the following:

1) Force open the API's of the Operating Systems and Data Formats. This is the crux of their monopoly. If this is not opened up properly, Microsoft will continue doing what they have till now. Don't for a time think they have any morals.

2) Do something about their .net strategy.

They want to be the gateway to the Internet. It will affect everybody, there will be no freedom. In addition look at the following document for an in-depth reason about what is wrong with the settlement.

<http://www.kegel.com/remedy/letter.html>

Well, I don't live in the USA. But still this is a big problem for us in my country. USA tends to force their policies down the throats of people in other countries. It's like misery loves company so the USA tries to send its misery abroad.

Thanks,

—Anand

Washington, DC 20530-0001

I work for Cisco systems within the UK, while not being a US citizen this case has far reaching proportions and will effect the IT industry on a global scale. I would right pages and pages of how I think the current settlement does nothing to re-balance the wrongs of Microsoft, I have included just a few of these detailed briefly below.

Windows Bundling—The Microsoft Tax

I use GNU/Linux a free operating system. The fact that I cannot buy without great difficulty a machine, from one of the main computer dealers, without a copy of windows is disgusting—you try buying a dell desktop machine, a great computer, without a copy of windows, they just will not do it and I will not pay extra for something that I will not use.

Proprietary Formats, Protocols and API

Microsoft's proprietary formats, such as their famous .doc word documents, and SMB file sharing protocol not forgetting their kerberos extensions are affronts on society—they at every single point hold back society technological development and create customer "lockin" by not allowing interoperability. I believe that all formats, protocols and APIs should be open and that closed proprietary ones should be made illegal—there are never any reasons for this other than customer lock in.

Artificially Narrow Restrictions

It is vital when enforcing these that no loopholes are available by artificially narrow restrictions. The open source movement—

including products like OpenOffice, Wine, Samba, Kerberos and Linux—are on the verge of ushering in a new technological era—it is vital that any remedies specifically look after the interests of these projects, that exist for no other reason that public benefit and not corporate greed, and ensure they are capable for getting full unrestricted access and use to these formats, protocols and APIs.

These are my own words, but I would like to add that I strongly agree with everything with the following open letter.

From: Michael Plump
To: Microsoft ATR
Date: 1/23/02 7:47am
Subject: Microsoft Settlement

I would like to register my dissatisfaction with the current form of the Microsoft settlement. I don't feel that the settlement does enough to provide reparations for those companies that were harmed by Microsoft's monopolistic anti-competitive behaviour.

More importantly, I don't believe the settlement does enough to ensure that they will cease their illegal actions. Even after

they were found guilty (and then reaffirmed guilty by the appeals court), they continued to engage in unfair and anti-competitive behaviour.

I believe that this hastily proposed settlement does very little to stop these actions in the future, and also does little in the way of creating means for a competitor to the Windows and Office platforms to emerge. Obtaining a better settlement is in the national interest. Without it, we will be locked into a single company to provide a critical part of our national infrastructure.

Attorney General John Ashcroft
US Department of Justice
950 Pennsylvania Avenue, NW
Washington, DC 20530

Dear Mr. Ashcroft:

I travel internationally quite extensively. But no matter where I go, I am almost assured that I will find the quality and reliability of the Windows operating system. Microsoft is a top-notch company; it is one that should be able to continue with its business without being hindered at every step by an overly complex legal settlement.

The company already has agreed to numerous concessions; it has made changes with regard to intellectual property rights, server inoperability, and a uniform price list. The proposed settlement is absolutely adequate to serve the interests of the computer industry and the buying public. Microsoft has indicated its willingness to engage in a fair, competitive business environment.

I would argue that it is now time for the federal government to also conduct itself in a fair and reasonable manner. No more action should be taken on a federal level to penalize Microsoft. It should be allowed to resume its important work of keeping America as the most technologically advanced nation in the world.

Thank you for your time.

Under the Tunney Act, we wish to comment on the proposed Microsoft settlement. We agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), namely:

The PFJ doesn't take into account Windows-compatible competing operating systems??

Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft .NET with competing middleware.

The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft ?? Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

Microsoft's enterprise license agreements (used by large companies, state governments,

and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The PFJ allows Microsoft to discriminate against small OEMs—including regional “white box” OEMs which are historically the most willing to install competing operating systems—who ship competing software.

The PFJ allows Microsoft to offer discounts on Windows (MD As) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

The PFJ as currently written appears to lack an effective enforcement mechanism. We also agree with the conclusion reached by that document, namely that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Date: 1/23/02 7:48am

Subject: Microsoft Settlement

I am opposed to the proposed remedies in the Microsoft case, as are various States' Attorneys General and millions of users and consumers. The US Court of Appeals agreed "unanimously" that Microsoft had illegally kept its monopoly position, yet the proposed remedies do little to address the past wrongs and nothing to prevent further, similar actions by Microsoft.

Without a Special Master, there will be no enforcement of any remedies laid out, which means that in a few years, DOJ will have to sue Microsoft again. Even if Microsoft's methods are changed, the structure already in place will continue to work in their favour, much as in the AT&T case through 1984.

There is nothing in the settlement proposals addressing the improperly-obtained monies explained in Remedies Brief of Amici Curiae (Civil Action No. 98-1232 (TPJ)), <http://www.econ.yale.edu/nordhaus/homepage/Final%20microsoft%20brief.pdf>. Are criminals not required to return illegal gains?

For these and many other reason, I voice my strongest opposition to the proposed remedies.

Sincerely,

M W Grossmann

Subject: Microsoft Settlement

I would like to add a comment on the Microsoft Settlement. Microsoft has a history of partaking in dubious (and illegal) processes in order to maintain and build it's monopoly and diminish and remove competition. Yet, every single occurrence of such practices being questioned and challenged has led to, at most, a slap on the wrist for Microsoft. And, by the time everyone has finished the debate over whether they had specifically set out to squash competition unfairly, said competition has already disappeared or has been reduced to an ineffectual remnant of itself. In essence, Microsoft's actions are generally successful once they drag out legal proceedings and debate. The challenge that the DOJ settlement faces is not to simply punish Microsoft for its practices—a slap on the wrist, but to chastise them and then force

changes which will rectify what Microsoft's actions have wrought.

I am concerned that the settlement not only lacks any really punishment for Microsoft, but, more importantly, does very little to rectify the damage done by its actions. All that it seems to do is give Microsoft the option of choosing what they wish to disclose to whom so that they can be considered to be playing nice with others. Nothing in the ruling requires them to disclose enough details about their Office suite or OS to truly allow others to build software to interact or compete. Microsoft may have to reveal some information, but they get to choose what and to whom. In fact, the settlement would legalize Microsoft withholding information to some groups—such as any group not considered a business. Then, should anyone complain, they can hold up the settlement, their “punishment and rules of conduct” and point out that they are being such a good little company in following the rules.

I just wanted to express my disappointment with what seems to be an ineffectual settlement. I am not saying that Microsoft necessarily needs to be split up or obliterated. But perhaps something which actually seeks to rectify the problems would be better. . .

From: Michael Poole
To: Microsoft ATR
Date: 1/23/02 7:51am
Subject: Microsoft Settlement

I would like to comment on the proposed Microsoft settlement, and how it fails address the monopoly abuses perpetrated over and over by Microsoft Corporation.

One of Microsoft's oldest tactics in its battle to thwart the government and bleed more money out of consumers is by changing its business just enough for old anti-trust remedies to no longer apply. The proposed settlement has several weaknesses that Microsoft could exploit in this way, many hinging on their (already announced) migration to the .NET platform.

For example, “Microsoft Middleware” is defined to exclude code that Microsoft ships as part of a “Windows Operating System Product” but which would otherwise fulfill the role of a current “Microsoft Middleware” product. Microsoft has announced that the .NET framework will be included in future versions of Windows, and that it is moving its applications to use .NET. The settlement appears to allow Microsoft all its old tricks with .NET.

Further, “Windows Operating System Product” is defined to only apply to code for “Personal Computers,” and specifically includes server product lines, handheld computers, and set-top boxes (areas where Microsoft is currently expanding its reach—for example, my Compaq iPAQ handheld runs Windows CE and cannot interoperate with Linux over USB because Windows CE uses a non-public communications interface; this would not stand if Microsoft were not the dominant desktop OS vendor). The settlement allows Microsoft to define what does and does not constitute a Windows Operating System Product.

There are many other flaws in the proposed settlement which allow Microsoft to aggressively exploit its monopoly position, to the harm of consumers and competitors alike. Others have pointed them out; I will omit them, to keep this letter brief.

Sincerely,
Michael Poole

I am writing to add my statement that I think the proposed Microsoft settlement is an EXTREMELY bad idea. It is quite obvious to me that Microsoft is demonstrating that it is exactly the monopoly that it was proved to be in federal court. I see daily signs of how MS wants to monopolize further areas of current markets and push its products and ideas onto the PC, music, broadband, and gaming markets. I really urge you to consider a severe judgment in this case. I do not want to see a country under the rule of MS and its will.

From: Morrow, David L
To: “microsoft.atr(a)usdoj.gov”
Date: 1/23/02 7:50am
Subject: Microsoft Settlement

I am very disturbed that the DOJ settlement with Microsoft seems to do nothing to prevent Microsoft from continuing to incorporate into its operating system anything it wants. Microsoft thereby appropriates to itself valuable desktop real estate and denies others an equal chance to compete.

Microsoft also keeps many of its interfaces and formats a secret which also denies others the opportunity to work with its operating system on an equal basis.

The simplest solution would have been to break the company into three parts: operating systems, software applications, internet service.

Date: 1/23/02 7:51am
Subject: Microsoft Settlement

Dear Sir,

To an average software engineer like me, it takes days to figure out how to configure my computer using Microsoft operating system, so probably it is even worse for you or any nonskilled person using a pc. As a result, people follow the easy path of using whatever is already pre installed on their computer. Since ONLY Microsoft defines what is bundled with the OS, people use Microsoft solutions. This gives a Microsoft controlled OS (try to find a PC with Linux+Windows), a Microsoft controlled browser, a Microsoft controlled ISP: aka MSN, and generally the death of all competitors that do not have an alternate source of founding. As long as Microsoft is allowed to use its monopoly on the PC as a launching pad to new markets, there cannot

be any fair competition and people will pay too much for old product.

It is sad to see the US Justice Department allowing a proven guilty Microsoft to run business as usual with the release of Windows XP. Only a solution that creates a stone wall between the successful businesses and the new business of Microsoft would allow competition to flourish. MSN, webTV, Xbox business should belong to different companies without any technical, marketing or shareholder ties.

As far as penalty is concerned, mass replication of software costs zero, the only thing that matters is money or jail or both.

Regards,
Jean-Claude Bourut

Subject: Microsoft Settlement

I have read and listened to the pros/cons of the proposed Microsoft Settlement, and am NOT in favor of it. It must be amended. The settlement does not, in any way, penalize Microsoft for its past transgressions of the law. For many years, OEMs have been under control of this corporation and will continue to be unless a meaningful and just penalty is adjudged. Microsoft has been declared guilty of past wrongs for the second time, and must now be held accountable in some measure. As you can see I believe that the current proposed settlement is unacceptable.

Thank you for your time.

From: Imad
To: Microsoft ATR
Date: 1/23/02 7:53am
Subject: Microsoft Settlement

Dear Sir or Madame,

I would like to take just a moment to share my views on the current proposed Microsoft anti-trust settlement. It is my opinion that the proposal, as it now stands, is a slap—nay, a pat—on the wrist approach that fails to truly allow competition in those areas where Microsoft has abused its monopolistic powers.

First and foremost, Microsoft must be forced to make its APIs, file formats, and protocols totally and unequivocally open. As it stands, there is far too much ambiguity in the clause pertaining to this—as interpreter of the document, Microsoft can well claim that, say, Linux developers are not to have this information shared with them as they do not represent a commercial product. Likewise, there is too much leniency granted by the exclusion of remote Windows 2000 administration related protocols. Many of these protocols—SMB/CIFS, for example—are used indirectly for Windows 2000 remote administration but are also crucial for creating products that are interoperable with Windows 2000 server. The “Reasonable And Non-Discriminatory” licensing terms hurt Microsoft's biggest competition—the open-source/free-software movement that has

given us Linux, OpenBSD, Mozilla/Netscape, OpenOffice, KOffice, and the like. All standards, API calls, protocols, etc. MUST be open for these valued members of the software community.

Furthermore, the document must be revised to remove the mess of loopholes that exist which allow Microsoft to obey the word of the settlement without conforming to its spirit of non-discriminatory behavior. As it stands, Microsoft can ignore much of the document as it is riddled with technical loopholes. For example, Microsoft is able to force PC makers to associate internet content with Internet Explorer, word processing documents with Microsoft Word, and the like—removing shortcuts doesn't change the underlying behavior when a user clicks on a text document or an internet link. The three-member enforcement crew has two members picked or approved by Microsoft itself, nullifying any usefulness of the group, especially when coupled with the fact that none of the members are allowed to speak of the atrocities they see committed by Microsoft. Such litigation is absurd and meaningless, but could be salvaged by revising the terms of the settlement to preserve the spirit but allow less leeway to Microsoft, which has a history of twisting or disobeying court orders.

Lastly, Microsoft's non-operating system groups must be either internally or externally separated so that they are not allowed "backdoor" entrance to the operating system; the Microsoft Office team should have the same information on operating system-related APIs and protocols as does the competition (e.g., Corel's WordPerfect Office team, Sun StarOffice team, KDE's KOffice team).

Thank you for your time. —
Best,
Imad Hussain

Subject: Spank Microsoft. . .

Sir or Madam,

Below you will find email correspondence with Connecticut Attorney General, Richard Blumenthal. He mentioned that I could also state my opinion to this body as well. That opinion follows directly after the "GH wrote:" section below.

Before you get there, however, I would like to make one addition to what I have stated below. I would like to see Microsoft forced into releasing a version of Windows without Internet Explorer welded to the operating system. I mean totally removed, not uninstallable, not leaving "stubs" of functionality hidden, totally removed. Of late, Internet Explorer's inclusion has caused no end of grief as we must constantly patch the browser if we want to remain secure on the Internet. Since there is little technical reason, if any, to bolt the OS and browser together, I feel Internet Explorer's removal would actually lead to more secure systems "out of the box". This holds true for all current desktop and server versions of the Windows product. Simply put, the Internet

Explorer browser, as provided and bolted to Windows, is an insecure addition to an already insecure operating system that satisfies Microsoft's strategic goals while causing more work for systems administrators and exposing millions of consumers world-wide to compromised security.

It is time that Microsoft shoulders the burden for all the ills they have visited upon a thriving Information Technology industry and its consumers.

Thanks for your time,
Geoffrey Harnett
IT Engineer.

Subject: Re: Spank Microsoft. . .
GH wrote:

Sir or Madam,

In no way do I agree with the proposed DOJ settlement with Microsoft. There are simply no teeth and rest assured, any settlement that Bill Gates is comfortable with is flawed. The only options that will prevent Microsoft from further hindering competition and abusing its monopoly are those that will hurt. I feel the measures presented by the hold-out states will be more effective as a punishment and deterrent than what has been decided by the DOJ.

However, I think there should be one more area in which Microsoft should be scrutinized. Its code. Specifically, has Microsoft enhanced Windows and application functionality by unlawfully using GPL'd (or other open source licensed) code without adhering to the particular license mandates and in effect, stealing it? There should be a mechanism that allows open source license holders, via a trusted third party, to inspect Windows code in a safe room for infringement on open source code. If caught violating any licensed code they should be sued for damages, which essentially forces them to release their "enhanced" code under the violated license. I feel that Microsoft's abject dislike of the GPL license can be directly attributed to fear of being caught using code distributed under that license in Windows yet not freely redistributing enhanced code as the license requires.

Microsoft has proven themselves wholly untrustworthy in business and in the courtroom. If they will lie in Federal court without any remorse then they will certainly abuse open source licenses for their gain.

Thanks for your time,
Geoffrey Harnett
IT Engineer
<http://greetings.yahoo.com>
Dear Mr. Harnett:

Thank you for your recent thoughtful correspondence concerning the Microsoft antitrust case.

As you know, on November 6, 2001, the United States Department of Justice and Microsoft filed a proposed settlement. I did not join that settlement because I do not believe it would accomplish the goals we set when we filed the case. Nor would it

accomplish the remedial goals set by the U.S. Court of Appeals: (1) to prohibit the illegal conduct and similar conduct in the future, (2) to spark competition in this industry; and (3) to deprive Microsoft of its illegal gains.

You may also express your opinion to the judge of the federal trial court considering this settlement by filing written comments with the United States Department of Justice by January 28, 2002, as follows:

Mail: Renata B. Hesse
Antitrust Division
U.S. Department of Justice
601 D Street NW
Suite 1200
Washington, DC 20530-0001

[NOTE: Given recent mail delivery interruptions in Washington, DC, and current uncertainties involving the resumption of timely mail service, the Department of Justice strongly encourages that comments be submitted via e-mail or fax.]

E-mail: microsoft.atr@usdoj.gov

In the Subject line of the e-mail, type "Microsoft Settlement."

Fax : 1-202-307-1454 or 1-202-616-9937

Please keep me informed of your opinions on the case.

Thank you again for contacting me. —

Sincerely,
Richard Blumenthal
Attorney General

To whom it may concern.

The proposed settlement by the US government with Microsoft is not in the interests of consumers in the USA. Microsoft has consistently abused its position of dominance in the marketplace and this settlement will do nothing to change this. This settlement is a bad idea and should not go forward.

sincerely
Andrew Jeavons

MTC-00015065

From: peter
To: Microsoft ATR
Date: 1/23/02 7:52am
Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

MTC-00015066

From: peter
To: Microsoft ATR
Date: 1/23/02 7:53am
Subject: Microsoft Settlement

Dear Sirs:

I am writing to give my comments on the Microsoft antitrust settlement. I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation. Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

MTC-00015067

From: Eric Kobrin
To: Microsoft ATR
Date: 1/23/02 7:55am
Subject: Microsoft Settlement

The proposed settlement with Microsoft is ridiculous. Microsoft has shone again and

again that it DOES NOT follow the rules. They always find a loophole. They released their most anti-competitive OS ever, Windows XP, during the antitrust case. Windows XP forces casual users to buy new software—it suggests Microsoft software of course. If you open any older applications, it presents a dialog box telling you that it may be unstable and that they should upgrade. I have never found this statement to be true. I helped a woman who was in fits over those dialog boxes. Power users and computer consultants know to delve deeper. There is a button that disables the messages and lets you use the software you already own; but most casual users are startled by the warning and just stop using their software. During the antitrust case, Microsoft also removed Java from their OS, thus preventing much cross-platform software from flourishing. They are effectively requiring that if you want to develop for Windows, you must develop programs that run ONLY on Windows, using Microsoft tools of course. What company will develop cross-platform software in Java if they know it won't run under XP with out serious user intervention? Companies deciding between Java and C# will be more likely to use C#—creating yet another pice of software that runs only on Windows and reducing the appeal of other operating systems. Microsoft also released a new version of their Internet Explorer web browser that is incompatible with software developed for other browsers or by other companies. Eventually, other companies were able to rewrite their software to be compatible, but not until Microsoft had embedded their own software using the knowledge that other companies would need to learn the new API whereas Microsoft wrote the API. For example, the new Explorer broke compatibility with Apple's cross-platform multi-media standard Quicktime. Of course compatibility with Microsoft's own competing Windows Media player was never broken. Quicktime is a free and open standard that has lost popularity because of this.

Microsoft IS anti-competitive. The courts agree. Competing developers have known this for a decade. They have not obeyed previous anti-trust rulings. They created more anti-competitive software during the current anti-trust case. The pattern will not stop until Microsoft is either broken up or has their charter revoked. If they were broken up, competitors like Apple would not have to compete against Microsoft developing plug-ins for their own software before anyone else can as they did with Windows Media Player in Internet Explorer. My favorite remedy, but an unlikely one considering Microsoft's massive campaign contributions to both parties is for their charter to be revoked. Yes, their charter should be revoked. The source code should be put in the public domain. In that upheaval, dozens inf not hundreds of other companies would be given the chance to flourish. Microsoft is like a giant tree overshadowing hundreds of saplings. Pruning the behemoth (breaking them up) would help a little, but cutting the whole tree down would let everyone compete on an even playing field.

MTC-00015068

From: Munir Nassar
To: Microsoft ATR
Date: 1/22/02 7:26pm
Subject: Microsoft Settlement

I would like to exercise my rights and comment on the proposed settlement in the US vs. Microsoft case. It was proposed by Microsoft that they donate Computer Hardware and software to schools as a punishment for their illegal monopolistic actions. When i was younger a punishment was something that i would remember, usually through pain, either physical or emotional. I, and I would think nobody else, was ever punished by getting gifts. It may seem tempting to take Microsoft up on their offer as it would cost them Millions if not Billions of dollars. But it would also distribute the Windows Operating system to thousands of students expanding Microsoft's monopoly. Additionally the K-12 educational market has always been Apple Computers' best selling market. To accept this judgement would cause great and maybe even irreparable harm to Apple Computers.

A lot of people believe the proposed settlement is a great thing for our school system as it would bring computers into the hands of the students. A distributor or the Linux Operating System has proposed that Microsoft supply the hardware and RedHat supply the operating system as a suitable punishment. The idea has merit but I propose a small change. Have Microsoft supply a computer to every student in every public school in the country, a move that should liven the economy a bit. And give the schools an option on what type of computer this would be and what operating system, be it RedHat, Linux, Debian GNU/Linux, BeOS, OS/2, QNX or MacOS just to name a few.

In the operating system market there are many companies that market an alternative to Microsoft's Windows, but Microsofts' anticompertitive practices have kept these alternatives from the hands of the public. It would be fitting that the punishment allow competitors into the playing field.

In short, I think the proposed settlement is a bad idea and I am strongly against it.

-Munir

Subject: Microsoft Settlement

To Whom It May Concern:

I strongly disagree with the proposed settlement in the Microsoft antitrust trial for reasons outlined below. I strongly encourage you to bring substantially more severe sanctions against the company to curb its anticompetitive practices.

The remedy is insufficient for these reasons:

The proposed remedy doesn't take into account Windows-compatible competing operating systems.

Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the proposed remedy fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

The proposed remedy Contains Misleading and Overly Narrow Definitions and Provisions.

The proposed remedy supposedly makes Microsoft publish its secret APIs, but it defines “API” so narrowly that many important APIs are not covered.

The proposed remedy supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines “Microsoft Middleware” so narrowly that the next version of Windows might not be covered at all.

The proposed remedy allows users to replace Microsoft Java with a competitor's product— but Microsoft is replacing Java with .NET. The proposed remedy should therefore allow users to replace Microsoft.NET with competing middleware.

The proposed remedy supposedly applies to “Windows”, but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being “Windows Powered”.

The proposed remedy fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

The proposed remedy requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

The proposed remedy requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

The proposed remedy does not require Microsoft to release documentation about the

format of Microsoft Office documents. The proposed remedy does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

The proposed remedy Fails to Prohibit Anticompetitive License Terms currently used by Microsoft. Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows. Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems. Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The proposed remedy Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft. Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

The proposed remedy Fails to Prohibit Anticompetitive Practices Towards OEMs

The proposed remedy allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The proposed remedy allows Microsoft to discriminate against small OEMs—including regional “white box” OEMs which are historically the most willing to install competing operating systems—who ship competing software.

The proposed remedy allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

The proposed remedy as currently written lacks an effective enforcement mechanism. As a taxpayer and consumer, I demand the government take immediate action to abandon this settlement and seek strong corrective action against Microsoft that addresses the above issues.

Sincerely,
Al Thompson

Subject: Microsoft Settlement

The proposed settlement sends a very cynical message to the general public: anti-trust enforcement, even for the most egregious of offenders, can be killed by the proper political contributions. The current proposal, does nothing to alter Microsofts future actions or punish its past ones. Microsoft has a history of manufacturing phony grass root efforts. I would imagine that any comments you receive in favor of the settlement are heavily weighted by Microsoft PR firms masquerading as private citizens,

or Microsoft employees sending from a non .microsoft account.

Specifically, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of it's competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

Subject: Microsoft settlement

Please, please, please! find a strong, effective way to enforce the Microsoft settlement. I believe that Microsoft has gone on for far too long in beating down and preventing competitors. The problem I see is that if you do not find a way to enforce it, this settlement will be like the Telecommunications act of 1996. Right now, the incumbent phone companies drag their feet and halfway comply constantly. They get fined, but continue to resist. This resistance and all the obstacles they put in front of competitors has been a large factor in all the DSL companies' bankruptcies. I believe that Microsoft will do the same thing. They will resist fully complying. They will drag their feet and they will try to get away with as much as they can. They are the top dog right now and will resist giving up any of their advantages.

Subject: Microsoft Settlement

Dear Sir or Madam,

I am writing to comment on Microsoft settlement. It is my belief that Microsoft needs to be broken up into two separate companies. They have a 90% market share in the operating system industry, and this will remain after the proposed settlement. Microsoft should be broken into 2 parts, an operating systems company (to produce windows) and a software applications company (to produce MS Office). The software applications company should then be required to release versions of every major program it produces for at least 2 non-Microsoft operating systems. This is the only way to restore competition to the market without severely hurting the computing industry.

Thank you for your consideration,
Mark Wilson

Subject: Microsoft settlement

Like many citizens, I utilize an Intel computer. I use this computer for a variety of purposes, including academic research, personal business and entertainment. Again, like many people, I have followed the proceedings of the Microsoft antitrust trial with interest. Upon reviewing the proposed settlement, I find it inadequate on many counts. It will allow Microsoft to continue its dominance by creating significantly different software (in a manner similar to the migration from Windows 3.1 to Windows 95). Secondly, the definition of API is overly narrow, and third party operating systems are not allowed to utilize these APIs. Finally, this settlement does not address the licensing of other Microsoft applications, which create a de facto barrier to entry by barring their use either with or on third-party operating systems (I am specifically referring to the End User Licensing Agreements of the Microsoft Windows Media Encoder 7.1 SDK and Microsoft Visual C++ applications).

Sincerely,
James Tedrick

From: Steve Goldsby
To: Microsoft ATR
Date: 1/23/02 8:03am
Subject: Microsoft Settlement

I would like to comment on at least one area of the proposed settlement, and how it clearly does very little to restrict Microsoft's monopolistic tendencies. The proposed judgement prohibits certain behaviors by Microsoft towards OEMs, but simultaneously allows the following exclusionary practices: Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal

Computers containing a competing Operating System but no Microsoft operating system.

Section III.B. requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs, including important regional "white box" OEMs, if they offer competing products. Section III.B. also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft Office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software or ARM-compatible operating systems.

By allowing these practices, the Proposed Judgement is encouraging Microsoft to extend its monopoly in Intel-compatible operating systems, and to leverage it into new areas.

Please take action to ensure the ability of other businesses to compete in this space.

Subject: Microsoft Settlement

Dear Sirs/Madams,

I am writing to say that I think that the proposed settlement to the anti-trust case that Microsoft has lost doesn't have enough teeth in it to preclude Microsoft from abusing its Monopoly power. In my own company I see evidence that Microsoft continues to use its dominance in the desktop operating system arena to extend its influence in other areas of computing, in particular in the embedded systems arena.

I think that the best solution would be to break Microsoft into three separate companies, all of which have full rights to all of Microsoft's Intellectual property. Furthermore, I think that the current officers and primary shareholders of Microsoft should be barred from owning shares in more than one of these three companies.

I realize that my solution will probably not be considered, however I don't think that the current proposal has enough teeth to keep Microsoft from repeating its abuse of monopoly power.

From: Beth E. Johnson
To: Microsoft ATR

Date: 1/23/02 8:01am

Subject: Settlement

I am opposed to the current proposed Microsoft settlement. I believe that by the government-sanctioned flood of Microsoft supplied hardware and software into the educational market that the government would be handing Microsoft a significant portion of the educational market for free. I thought that the original action was brought on behalf of *consumers;* consumers like me who bought licenses to use Microsoft products that crash and take my data down with them, that insist on placing themselves on my desktop until I forcibly remove them with a third-party program, who choose to use a better, faster web browser (Opera) but are still forced to let MS Internet Explorer reside on their hard disks because it is required to install security patches and bug repairs to the leaky and fault-ridden products; consumers who run home networks with Linux and Microsoft operating systems to can expect SAMBA connectivity to go down the tubes with every new version of Windows.

My kids already have computers in their school; nice, stable Apples. I wouldn't wish Microsoft computers on any school anywhere. The proposed settlement does nothing for Me and the damage I have suffered. Make Windows Update available without MSIE, open up the APIs so more programs can work with Windows, insist that Windows play nice with other operating systems. That would help me. regards,

Beth Johnson

From: Garrett
To: Microsoft ATR
Date: 1/23/02 8:01am
Subject: Microsoft Settlement

The current proposal for the Microsoft settlement will not prevent Microsoft from staying a monopoly in the computer industry. Microsoft employees are spreading this around as “. . . a victory over the government.” If the government shows they are incapable or unwilling to stop Microsofts monopoly over the software industry, who else is there to stand in Microsofts way?

Since the trial has started Microsofts grip on ISP's and hardware vendors has slowly loosened up for fear of how it would be represented in the case against them. Once Microsoft accepts the current settlement they will go back to their previous methods of forcing the industry to accept their software and force out competitors, but it is not their previous methods the software industry is only worried about. By receiving the current settlement this will show the industry that even the government and it's laws cannot stop Microsoft's monopoly. Microsoft will be able to expand their practices beyond strict EULA's, enforcing proprietary “standards” and harassing/buying out small companies. They will be able to stretch more laws, find more loopholes and choose more “un-ethical” business means knowing that the most powerful system that could have stopped them was not powerful enough.

Once again I say that the DOJ and US government should be putting a stop to Microsofts monopoly. By forcing them to release their file formats, source code, protocols or something similar that will allow other companies to compete with them. But the current settlement simply shows that the government no longer has the power to enforce the laws that control our capitalist country.

Subject: Microsoft settlement

If you're going to read any mail. . . read this one please.

Please * * * allow me to briefly tell you how tired I am of Microsoft and their practices * * *

INNOVATION:

They use the word “innovation” as if they coined it themselves. The Truth of the matter is that they haven't really ever innovated anything. Every big product that they've ever had was either based on an idea concocted from someone else or was material that they forcibly extracted by crushing another company.

SECURITY: ‘Security’ and ‘Microsoft’ are two words not often found in the same sentence. I try to fun as much open-source software as I can because I know that if a bug is found, then an army of programmers around the world will flock to fix it by the next day. Microsoft's idea of security is to bribe the world into not vocalizing bugs that they find with MS software. Do I REALLY need to give examples here? How many billions of dollars did businesses lose and how much information was forcibly removed from MS-run sites in the last two years alone by using Microsoft products such as Passport and Internet Information Server? They try to force their products on the rest of the world by using some pretty nasty tactics; the only problem is that their software is inferior.

COMPETITION:

Microsoft has come out with a very interesting method of competing with other

viable software solutions. Why should they be motivated to make a better product when they could spend their time lobbying congress for favors or forcing subversive contracts on to the OEMs to crush the resistance to the Microsoft machine.

BOTTOM LINES:

They were found guilty. Why haven't they been punished? I was always under the impression that settlements were for people to decide upon BEFORE a verdict was reached and not after a finding of ‘guilty’ was found. Also . . . I like CHOICES ON MY SOFTWARE. MICROSOFT OFFERS NONE. And. . . if I'm going to have software forced on me, I want it to AT LEAST BE GOOD SOFTWARE. Competition is born of companies competing with each other and thus improving. MS has found ways around this process and still comes out on top. If you folks let them get away with this, then I guess I really will never understand our government and how they could let a travesty like this happen. Thank you for your time.

From: John M. Ford
To: Microsoft ATR
Date: 1/23/02 8:03am
Subject: Microsoft Settlement

Dear Sirs:

I am writing to give my comments on the Microsoft antitrust settlement. I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation. Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

Subject: Microsoft Settlement
Renata B. Hesse
Antitrust Division
U.S. Department of Justice
601 D Street NW
Suite 1200
Washington, DC 20530-0001

I wish to comment on the proposed Microsoft settlement, under the Tunney Act. I believe that the proposed settlement contains many narrow definitions and provisions which will allow Microsoft to sidestep the terms of the settlement in the future.

A simple example of this would be the definition of a "Windows Operating System Product". The settlement defines this as simply Windows 2000, Windows XP Home, and Windows XP Professional and their successors. There are no provisions in the settlement which seem to restrict Microsoft from using their monopoly on Intel-compatible PC operating systems to hijack another similar market which isn't covered by the settlement. Microsoft's current entry into the console gaming market via the X-Box is an example of this. Microsoft is willing to lose substantial money on each piece of X-Box hardware for the sole purpose of gaining market share in this similar market.

Once established, Microsoft can use their market dominance, this time including both hardware and software, to push rivals out of the market. After competition has been destroyed, Microsoft can simply add additional hardware to the X-Box, making it a fully-functional PC—a PC who's operating system is not covered by this proposed settlement.

The above scenario may not be likely, but the possibility that it even exists shows that the proposed settlement isn't in the public's best interest. According to the Court of Appeals ruling, "a remedies decree in an antitrust case must seek to "unfetter a market from anticompetitive conduct", to "terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future".

There are many other instances of problems with the proposed settlement, too numerous to mention here. The point that I'd like to make is that I believe the settlement doesn't go far enough to unfetter a market from anticompetitive conduct, terminate the illegal monopoly, deny Microsoft the fruits of its violation, and ensure that there remain no practices likely to result in monopolization in the future.

Thank you for this opportunity to comment on these proceedings.

From: Chris Holdredge
To: Microsoft ATR
Date: 1/23/02 8:04am
Subject: Displeasure with MS proposed settlement

I'm an IT professional writing to my displeasure with the proposed settlement. Been in this business long enough to remember when there were a dozen or more operating systems and hundreds of viable application vendors. Surprisingly, that situation worked quite well, since interchange formats were de-facto standards shared by all. Now you can only expect your work to be usable by others if you use Microsoft's tools, and the latest versions at that, despite the fact that all that ever changes are the number of useless options on the menus, the file formats, and the pricing scheme. Please take serious, concrete action to restore real competition and innovation to the marketplace. Continuing with this slap-on-the-wrist proposal will leave our of our nation's most important industries in the hands of a stagnating, unmotivated, dinosaur.

From: Alan F Larimer Jr
To: Microsoft ATR
Date: 1/23/02 8:04am
Subject: Microsoft Settlement

To Those Reading:

I am very concerned with the proposed settlement. Microsoft "donating" computers running M\$ software is just furthering the monopoly. It does not properly address the reasons for the anticompetitive practices. Address the issue of not releasing Application Program Interface (API)

information. Issue one: Donation of computers. If M\$ wishes to donate computers to the school systems, let them donate the hardware. DO NOT let them place their software on it. That would just be expanding their control anticompetitively. Allow an alternative software company (such as Red Hat, Mandrake, SuSe, etc.) to provide the Operating System. This would encourage young students to look into alternatives.

This would also allow more hardware to be purchased by M\$ since they would not be paying for the software. Issue two: API release. In order for other software companies to develop software for use with M\$ Operating Systems, the API must be released so that these companies can provide stable and reliable applications. This is maybe the cornerstone of the illegal practice in which M\$ partakes.

Releasing the APIs would not only assist other companies in making good, but could also help M\$ to promote the vast resources available with their products.

Allowing M\$ to place its software on the computer without the option for other companies to provide software would be furthering the anticompetitive practices. Forcing them to release APIs now and in the future would take a great bite out of the nature of there illegality. Don't allow M\$ to continue such practices. Stop them now.

Subject: Microsoft Settlement
To whom it may concern:

I do not have the opportunity to follow the trial or read the documents comprehensively because of little time from my project but I feel I must say something.

I find it very curious that the government is considering allowing Microsoft to extend their monopoly (by such things as providing computer related stuff to schools), something that the courts claim to have found them guilty of. Don't you know that Microsoft power comes from having many users?

If you claim that we are in a community with a government we should respect as looking after our interest, please do what would be good for your citizens. I can tell you a story of how I bought my recent laptop in which I payed for a microsoft operating system even though I did not ask or want to keep it. This should be a free country and a free market but yet you know all this and you still consider to increase their influence.

Please RECONSIDER this folly. We think highly of the government and would like to continue doing so.

Sincerely,
Kene Meniru

Subject: Microsoft Settlement

To whom it may concern:

As a computer industry professional, I must express my feelings about the proposed final judgment in the United States v. Microsoft case.

This punishment is almost beneficial to Microsoft as it will increase its share of the education market (thus depriving even more technologies from entering this market).

I suggest the punishment be fair, but strong. This proposal, as most computer professionals and media representatives agree, is a weak and meaningless punishment. It is a "slap on the wrist". As computers become more and more required for a person's survival (work and otherwise), we must not allow such predatory actions (of which the defendant has been shown to be guilty) to take place again.

Sincerely,
A concerned American citizen,

Subject: PFJ

The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

The PFJ as currently written appears to lack an effective enforcement mechanism.

 Subject: Microsoft Settlement

To whom it may concern.
 I am writing to you in order to inform you of my dissatisfaction with the governments settlement in the Microsoft antitrust case.
 Little to nothing is being done to Microsoft in this case, and it is a shame. In my office there are a number of people who have installed windows new operating system, and have nothing but problems with it. They have no other option, because Microsoft goes out of their way to make sure that all software that the average home user will only work on their OS.

The simple way to solve this is to open their source code, so that other people could make an operating system, or other programs that would interface with programs written for windows.

We are a government by the people, for the people, not for the corporations.

Thank you.
 Aaron Hobart.

 Washington, DC 20530

Dear Mr. Ashcroft:
 I am writing you today to express my opinion in regards to the Microsoft antitrust dispute. I support Microsoft in this dispute and feel that this company is being wrongfully punished for being successful.

This continuing legal battle is a waste of precious resources and money. I believe the settlement that was reached in November will serve in the best public interest.

It is my understanding that under this agreement, Microsoft must share more

information with other companies and follow procedures that will make it easier for other companies to compete.

Microsoft has agreed to disclose for use by its competitors various interfaces that are internal to Windows' operating system products. Microsoft has also agreed to make available any protocols implemented in Windows' operating system. Additionally, Microsoft has agreed to design future versions of Windows to make it easier to install non-Microsoft software.

This settlement is a thorough agreement that is sufficient to deal with the issues of this lawsuit.

Please support this settlement. Thank you for your support.

Sincerely,
 Mary Lou H. Nolan

From: Bowers, Eric
 To: "microsoft.atr(a)usdoj.gov"
 Date: 1/23/02 8:06am
 Subject: Microsoft Settlement

To Whom it May Concern;
 I would like to make the following comments regarding the Microsoft settlement.

The PFJ erodes the Applications Barrier to Entry in two ways: First, by forbidding retaliation against OEMs, ISVs, and IHVs who support or develop alternatives to Windows. Secondly, by taking various measures to ensure that Windows allows the use of non-Microsoft middleware. A third option not provided by the PFJ would be to make sure that Microsoft raises no artificial barriers against non-Microsoft operating systems which implement the APIs needed to run application programs written for Windows.

It is my opinion that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

From: Matthew Miller
 To: Microsoft ATR
 Date: 1/23/02 8:09am
 Subject: Microsoft Settlement

I am writing to comment on the proposed Microsoft settlement. The proposed settlement does nothing to punish Microsoft for blatantly unfair business practices and if

they are not punished, they will continue such practices as they have demonstrated with the latest version of Windows (XP). At the bank I work for, we tested Windows XP in our enterprise and determined that we did not want to implement it. We put Windows 98 and Windows 2000 workstation on our network. We occasionally need to change a workstation from Windows 2000 to Windows 98 for software compatibility. If our enterprise license was for either Windows 98 or Windows 2000, we would have to purchase an additional license each time a workstation has their operating system changed. Since we purchase a Windows XP license for every workstation, we can put any Microsoft operating system we want onto the workstation. Thus, we have to purchase a product we DON'T WANT in order to keep within Microsoft's demands.

Microsoft has and continues to engage in an embrace, extend and eliminate form of competition. When a competitor comes up with a good idea, Microsoft will first attempt to purchase the idea from the competitor or purchase the competitor itself. If that is not possible, they will build a competing product, extend the format and/or protocols used and eventually make it proprietary. At this point, given that Microsoft's APIs are not well documented except for inside of Microsoft, another party would have a difficult time building a competing product due to software's "barrier to entry".

Recently, Microsoft blocked nearly all competing web browsers from Microsoft Network web properties. If there wasn't such a public outcry, I believe they would not have corrected this problem. Microsoft will do everything in it's power to create or extend their monopoly in any business line they are involved in.

Please, punish Microsoft for their unfair business practices, don't reward them by what is essentially forcing them entry into a market they have thus far been unable to penetrate. Open their APIs, open their source code, break them up into smaller companies, each with their ENTIRE line of software products. At least this will ensure some sort of competition in the software and operating system market.

Thank you,
 Matthew Miller

MTC-00015112

From: Wes Price
 To: Microsoft ATR
 Date: 1/23/02 8:08am
 Subject: Microsoft Settlement

The current proposed settlement of the Microsoft anti-trust case is woefully inadequate—most of the problems which the settlements purports to address have already been resolved by Microsoft's abuse of its monopolistic influence on the software industry, and it ignores (and may even foster) new problems which have sprung up in their place. As one example, the exclusionary license which is built in to Microsoft's Enterprise Agreement subscription plan will go a long way towards reducing the ability of anyone to compete with Microsoft, making it impossible for anyone to break ranks without costing their company hundreds of thousands of dollars in "discounts"—once a

company subscribes, Microsoft will own their future.

The lack of any penalty for what even the courts agreed was substantial, intentional anticompetitive behavior on Microsoft's part, coupled with the lack of any structural remedy which would inhibit Microsoft from engaging in similar behavior in the future, renders this "solution" practically worthless—Microsoft will continue to crowd out products which are technologically superior for exactly as long as it is allowed full, unfettered access to a computer's operating system *and* web browser *and* office application suite.

I am politically conservative, but I cannot support this administration's disgraceful attempt to conciliate the Microsoft machine at my expense—the administration's gall in claiming that the proposed solution will do anything substantive to change or limit Microsoft's de facto monopoly is only exceeded by Microsoft's gall in continuing to stamp out innovation and competition while on trial for those selfsame actions.

MTC-00015114

From: Nathaniel Woody
To: Microsoft ATR
Date: 1/23/02 8:08am
Subject: Microsoft Settlement

I find the proposed settlement of the Microsoft antitrust case very disconcerting. The most obvious problems that I see are that the disclosure of API's by microsoft(which I believe would be a "good thing") seem to be rather weakly worded. It would appear from the way the settlement is worded that there are several loopholes by which Microsoft would be able to prevent usefull access to the API's that non-microsoft developers would need. The security wording appears very dangerous and appears to allow Microsoft to be able to prevent the distribution of any API's that Microsoft finds most important.

Microsoft has proven in the past a willingness to find and exploit loopholes and this seems to provide a rather easy one. The second serious problem I see is the idea of Microsoft paying the expected fines by providing software to schools. This sounds like a good idea on the face, but I see two major problems.

First distributing software costs Microsoft essentially nothing. T! he only real costs that

could be attributed to this are the production costs of the CD's and manuals. The schools that would receive this were not planning on buying Microsoft products so there can be no argued loss of revenue and so the worth of software license is arguable at best. The second problem is that the education market has always been dominated by Apple, particularly the Macintosh now. This provides an excellent way for Microsoft to attack a competitor to their monopoly while paying off monopoly fines.

This whole idea amounts to paying a fine with software license play money. I believe Ralph Nader's essay does a far better job addressing these problems then I can so I will not talk of these any further.

The final problem that I have with the settlement is that there seems to be far too much reliance on good-will practices from Microsoft to prevent further monopoly problems. I have seen little evidence to suggest that Microsoft takes the attitude that they a! re being watched by someone and so most behave better. Instead there seems to be a regular stream litigation both from and againts Microsoft. I do not see how the proposed settlement would in any meaningful way restrict the actions of Microsoft without an internal attitude change. Evidence that Microsoft wishes to maintain it's monopoly appears in their current lawsuit against LindowsOS. Lindows proposes to be a new OS that is capable of running Microsoft apps as well as linux apps(hence the name!). They are being sued by Microsoft for trademark violation. This despite the the plethora of (non-windows competing) apps that incorporate "win" or "windows" into their name(winzip, winrar,winamp,etc). However, Microsoft instead resorts only to attacking potential competitors.

I hope this statement provides some of the reasons why I am so disappointed in the proposed settlement. This email was written and is sent on behalf of the Chemometrics Research Group at the University of Delaware. I include their names below:

MTC-00015115

From: jrp inthehouse
To: Microsoft ATR
Date: 1/23/02 8:09am
Subject: Microsoft Settlement

Regarding the Microsoft settlement, I do not believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of it's competitors is now also at 40%).

This must be true for all Microsoft product lines, before regulation is lifted.

I am sending this email by Microsoft Hotmail, on a Windows 98 machine, in a fully Windows office. I support the company, but I strongly believe that Microsoft's repeated use and abuse of their overwhelmingly controlling monopoly has hurt my business (MS-DOS, Forcing computer manufacturers to pre-install OS, Internet Explorer, et al), and my future, by the sheer fact that I cannot choose any other OS. My freedom to pick and choose the most competent and advanced Operating System has been taken away from me by the de facto standard that Microsoft employs. All of this has been shown in a court of law. Microsoft has been shown guilty; therefore Microsoft should face the consequences.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Introduction of WinXP (full of bugs and premature to avoid DOJ injunction), the upcoming .NET initiative, and the continual use of economics of scale, to this day hamper competition. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

From: Steven P. Cornett
To: Microsoft ATR
Date: 1/23/02 8:09am
Subject: Microsoft Settlement
Gentlemen:

I am writing you to register my disdain over the proposed settlement of the

Department of Justice anti-trust case against Microsoft. Having followed this issue from the beginning, I believe that Microsoft is the most shameless and unrepentant monopolist since AT&T and Standard Oil, and yet the "settlement," for perhaps "sellout" or "carpet sweeping" would be a better term for it, gives a wink and a nod to them to continue to drive all competition out of every segment of the information industry.

The worst part of this settlement is that your attorney's, while making statements to the press about "seeking relief for unlawful behavior", did nothing of the sort and had to *know* that they did nothing of the sort. This still allows Microsoft to keep its operating systems and office software operations in one company, keeps the API (the system calls needed to interface to Windows) safely in Bill Gates' back pocket, and allows them to expand their monopoly into any segment of the computing industry they do not already have dominance over and to use the strategies they've used to lock in the PC industry.

I'm sure you heard from many, including I suspect many Microsoft sycophants chanting about "freedom to innovate," as well as many others. However, this issue is not about innovation; if this settlement goes through innovation is the *last* thing that will happen in the information industry for a long time to come. Therefore I am asking you to reject this "settlement" and formulate a punishment that fits the crime, and truly gives relief to the industry that has been damaged by the expanding Microsoft monopoly.

Yours Truly
Steven P. Cornett

MTC-00015120

From: Matt Burke
To: Microsoft ATR
Date: 1/23/02 8:08am

Subject: Microsoft Settlement Hello,
I would like to say that I oppose the settlement because it leaves open the possibility for many APIs to remain undocumented, if they are listed as "only the interfaces between Microsoft MiddleWare and Microsoft Windows" (Kegel). This seems like a loop-hole which will continue to prevent people who do not work for or contract with Microsoft from writing software which will tie-in well with the various Windows operating systems.

One example is remote applications. While Unix platforms employ the MIT X-Window system to allow gui applications to be interactively served over a network, the best Windows equivalent, VNC (by AT&T), is hideously slow and useless for serious work. The VNC website attributes blame for this in question 50 of the FAQ (at <http://www.uk.research.att.com/vnc/faq.html#q50>): "Because Windows gives us fewer hints about what it's doing, and because we don't have the source code for Windows in the same way that we do for X, the WinVNC server has to work harder to find out what's changed, and so a really fast machine should make a big speed difference." The Linux version runs at a far higher speed on much slower hardware, due to the full availability of the display API used by Linux.

Please do not approve this settlement, as the most important aspect of it (API openness) is fatally flawed.

Thank you,
Matt Burke

MTC-00015121

From: Alan MacDonald

From: Kevin Vargo
To: Microsoft ATR
Date: 1/23/02 8:10am
Subject: Microsoft Settlement
Dear Sir or Madam,

In today's society, technology is becoming more and more pervasive. Entering, and to some degree structuring, all aspects of daily life. As a Computer Science student, and now as a Computer Programmer professionally, I have a great deal of experience with the software/computer industry. I have recently graduated from Case Western Reserve University, and as a recent graduate, you can be assured that I have surveyed the field to find a company for which I would like to work. One which supports growth in the field as well as an acceptable pay range. The single greatest asset to my learning has been the Linux/Open Source movement. While I work for a company that prides itself on it's patents, I fully recognize the gains and pitfalls accompanying both. I feel that puts me in a decent position to make an educated suggestion on the current topic.

It is —integral— to the future of this field that a wise, far-reaching and Non-Political decision is made. For anyone who has any knowledge of the case, Microsofts blatant disregard for any laws or ethics (doctored video tape, etc) would cause any normal case to become speedily resolved. Why is this not the case for Microsoft? Unfortunately, I do not have any idea. This decision could very well change the entire face of the computer industry. Forever. I don't mean 10-years forever. I mean forever. Just as in research into Chemistry or Biology, so is research into Computer Science. The problem, however, is that Computer Science is not as well delineated into industry segments. Development of new methods and new

procedures occurs throughout the industry, regardless of labs and R&D plants.

Stifling such growth is detrimental to the entire technology industry. A monopoly stifles new growth. Microsoft has been found guilty, in a court of law, of maintaining their monopoly on the Operating Systems market. None of this has been disputed. The terms of the settlement, however, do absolutely nothing to change this situation.

Nothing.

There are several points which need to be addressed. The current grip on OEM providers needs to be addressed. To this end, Microsoft's licensing schemes need to be overseen, and further regulated. It is not enough, by virtue of Microsoft's own failure to respect Governmental Authority, to ask them to be nice. This has failed time and again. The choice of relieving a computer, etc, without the operating system of Microsoft needs to be enforced. A consumer purchasing a new system very rarely has the opportunity to do so—and Microsoft leverages their considerable monopoly to ensure that this remains the case. We have all seen the battle played out with various large-scale computer producers.

Microsoft should be forced to compete fairly and ethically with all comers. This should take the form of releasing specifications that are true-to-fact, up-to-date and follow the course of "the truth, the whole truth, and nothing but the truth" in restrictive language so that Microsoft cannot continue to hide functionality or mislead people about the nature of their software. This should be enforced on both the APIs of software for the Operating System, as well as the file formats for such things as Microsoft Word, Money, etc.

In no way does a quick settlement aid any consumers. In no way is a quick settlement a matter which ensures domestic tranquility or national security. However, a well determined and thought out solution which forces a company, proven in court of law to be in breach of Anti-trust law, proven time and again in the judicial world to be unethical and completely disregarding of the authority of the courts (doctored video) which ensures the possibility for continued growth throughout the industry, to the aid and betterment of all consumers is a matter which could result in domestic tranquility and national security. In todays world, economy makes a country. Microsoft controls technology which controls a great deal of manufacture and industry in this country. The effects are far reaching and deep.

Please, I implore you as a consumer in the field, a professional in the field, and as an enthusiast in the field, do not fail to make an appropriately corrective conclusion to this penalty phase. Ensure that Microsoft is legally bound, with heavy penalties that are without gray area, to compete fairly, according to the laws of this nation. To do otherwise would be to fail utterly, and render the courts decision about the illegality of maintaining a monopoly utterly meaningless. That is what is at stake.

Please take the time to consider.
Sincerely,
Kevin Vargo

 Subject: Microsoft Settlement

My biggest problem with the proposed settlement is that it is not strict enough.

Have you read the recent .NET license agreement? It basically says that developers release FULL RIGHTS to Microsoft for ANY code developed using .NET. Basically, it means that microsoft will OWN the internet . . . if they can push people to use .NET's ASP2 functionality. If you're not technically saavy, Windows 2000 and ASP are far slower and less stable than BSD and PHP, but Microsoft has leading share; this smacks of powerful influence. When the influence of a company can be used in such a way as to LAY CLAIM TO ALL CODE, I believe that the company should be regulated as a monopoly.

 To: Microsoft ATR
 Date: 1/23/02 8:12am
 Subject: Microsoft Settlement

Sirs,
 I oppose the proposed settlement because it will not be effective in preventing Microsoft from the behavior deemed illegal by the Court of Appeals. Microsoft will merely stop their current practices and take up new ones which have the same effect.

The only remedies that will be effective are those that prevent Microsoft from engaging in the tactic known as "ace and Extend".[1] I think the remedies proposed by the Free Software Foundation[2] would prevent Microsoft from engaing in "Embrace and Extend" and would enable competitors to compete technically with Microsoft, while not preventing Microsoft from innovating. These remedies are:

1. Require Microsoft to publish complete documentation of all interfaces between software components, all communications protocols, and all file formats.
2. Require Microsoft to use its patents for defense only, in the field of software.
3. Require Microsoft not to certify any hardware as working with Microsoft software, unless the hardware's complete specifications have been published.

Thank you.
 — Vladimir

I am a U.S. citizen.
 [1] Microsoft is well known for its "embrace and extend" strategy, in which it adds elements to popular technologies to bind users to its version of the technologies.

Please may I say that I feel the proposed settlement is very unsatisfactory for the public. Microsoft have recently demonstrated dishonesty and predatory anticompetitive practices in the Corel case. They destroyed competing software completely (all the Corel office products) by shutting down Corel.

By offering to give Microsoft-based computers to schools they are magnifying their existing monopoly grip. School pupils need to learn other operating systems and languages—those such as Java and C++ which are designed from the outset to work with ALL computing environments. If you let schools have Microsoft stuff, its designed to NOT WORK with other platforms. This is pretty useless nowadays as the decent servers are Unix based.

Microsofts monopoly over users desktops has all but strangled innovation in computer science.

They have not done anything innovative since 1992 (and even that was questionable as all the concepts were stolen).

As an American citizen, I urge you to reconsider the all too insufficient remedies proposed in the pending settlement with Microsoft. Microsoft is a dangerous monopoly that has stifled true innovation and competition in the software marketplace for years. Its products enjoy no higher endorsement than volume; they are thoughtless mediocrities designed with barely sufficient functionality in order to quickly capture market share and entrap users in a endless cycle of upgrades. These upgrades supposedly fix problems in software that should not have been present at the time of purchase. To ask that the consumer continue to pay for such repairs borders on fraud.

I ask you to reconsider the settlement to ensure that Microsoft is unable to continue its shameful victimization of the software industry.

Hello,

I would just like to voice my opinion that I feel the proposed Microsoft settlement is not in the best interest of the people and in fact help Microsoft more than encourage it to not practice predatory behavior in the future.

As a systems manager in an educational system the thought of a company taking used computers and software that it makes inflating the value of both and giving it to schools who may need different tools, resources, or money does not seem helpful. Not only does it give Microsoft inroads into a market it has not been able to dominate, but it allows the company to "buy out" of its settlement for pennies on the dollar.

Microsoft has proved that it has no intention of changing its behavior by ignoring previous court orders. The only way to stop this kind of behavior is to completely change its corporate structure, as for how to do this? I don't have a complete answer for this. I would suggest much smaller independent companies being formed from the whole that is Microsoft.

If my views or opinions can be of further assistance to you feel free to contact me. Thank you for giving me the opportunity to voice my feelings in this matter.

Sincerely,
Robert C Compton

From: Ken Beyer
To: Microsoft ATR
Date: 1/23/02 8:12am
Subject: Microsoft Settlement

I am writing this email to voice my opinion under the Tunney Act about the proposed Microsoft Settlement.

I feel the settlement is a disgrace to American business and free competition as a whole, and will result in Microsoft returning to their ways of being monopolistic and to crushing competitive threats and open ideas.

I feel the company should have been penalized harsher and should have been split up, and even some executives should have served some jail time. Microsoft must open it's APIs to all developers well in advance of major releases of their operating systems and development tools. By not doing so, they clearly have an unfair advantage to develop superior products in advance of competitors as well as allowing businesses they so choose to have the same advantages.

The free market, not Microsoft, should be able to decide the fate of emerging technologies.

As I read the settlement (note that I'm not a lawyer, nor do I have 20 hours to wade through 100's of pages of documents), I also feel that there are no provisions in place to closely monitor Microsoft from returning to their ways. I feel that there should be people dedicated to this effort—to watch them like a hawk, so unfair practices don't return.

For what it's worth, I went on an interview at MicroWarehouse, and I asked why they deploy all their server stuff on Microsoft. They said because Microsoft gives them freebies to use, and why should they not take advantage of that rather than go buy stuff from Sun, HP, etc. They said that if they help push Microsoft products, they get the kickbacks. This little tidbit I learned, along with having to buy a PC with Microsoft products bundled on it has very much annoyed me!! Then there's the whole squashing of Netscape, and other strong tactics of buying up competitive threats.

It's quite annoying to see Microsoft basically get off "scott free" with this settlement. But more importantly, I envision that over time the world will continue to be Microsoft dominated and will control innovations through continued strong-arm tactics and illegal/crafty partnerships. America deserves better than that . . . we deserve to have open and fair competition in the software marketplace.

One problem with Microsoft is that they change their document formats and APIs with every release. Rather than requiring them to make a version of Office available for Linux, require them to publish the document formats for Word and Excel, and the networking protocol for SMB, as well as for any open standard they have modified, such as Kerberos. Require that this be done concurrent with, or prior to the product release. This would make it possible for companies and governments to standardize their systems on standards instead of on Microsoft products.

I'm somewhat bewildered with by how the current actions are going to prevent Microsoft from continuing to bully the market, expand its monopoly to new ones, and trample innovation.

Being a programmer, I have to keep an eye on this situation more than most. Some of the arguments that I've read that I agree with restrict the following areas:

—For better or for worse Microsoft's software has become largely dominant. The business market was taken more than most. To free this entrapped market the easiest solution appears to be releasing the source code to Microsoft's file loading and saving routines. Failing this, a full tried-and-true set of documentation would help. Some of this source code would be in the Windows API, which should be considered for opening as well. In either case, updated source code or documentation should also be released in upcoming years to maintain the effectiveness of this measure. Doing this would alleviate issues with Word Processors, Spread Sheets, Presentation, and Audio/Visual Multimedia formats. That's a large effect for seemingly such a small change.

—Although this is less often thought of the network protocols behind Windows and much of Microsoft's software is a barrier at least as large as Microsoft's file formats. The already existant formats are largely conquered by independent and inquiring minds. The one exception that I know of is Microsoft's DirectPlay, part of DirectX. The protocol documentation behind this released to the public as well.

However, that does not protect the future. Microsoft should be barred from writing protocols that are not open and standardized by internation bodies in the future. Making this enactment retroactive (applying to all existant protocols) would also aid our efforts to make the work seamless and give people choice.

—Microsoft should not be able to so easily bundle its products with new computers that are sold. Not only would this give a chance to competing operating systems, it would lower the effectiveness of Microsoft's "bundle to make dominant" strategy with its Windows included products.
 Thank you for your time,
 Paul Varga

I have read over the proposed Microsoft Settlement, and am NOT in favor of it, in its current state. The settlement does not, in any way, penalize Microsoft for its past

infringements of the law. For many years, OEMs have been under control of this corporation, and simply "formalizing" this law in a document is not enough. Microsoft has been declared guilty of past wrongs, and must now be held accountable in some measure. The current proposed settlement is unacceptable. Thank you for your time.

From: Brent Laminack
 To: Microsoft ATR
 Date: 1/23/02 8:17am
 Subject: Microsoft Settlement

Dear Sirs,
 I'm opposed to the Proposed Microsoft Settlement on a number of points. First, let me state that I work part-time as an instructor at the Georgia Institute of Technology's College of Computing. I have twenty years experience in the computer field.

To summarize my objections, the proposed settlement simply doesn't give other software companies enough information to compete. The proposed settlement opens up some "middleware" APIs. This is simply inadequate. In order to be truly effective, the settlement must require Microsoft to open all APIs and file formats for all their products, along with all hardware interface specifications they exchange with hardware manufacturers. Microsoft must also provide these APIs and interfaces to everyone who wants them. The current settlement allows Microsoft to provide these only to companies that they deem to be a viable business. Therein lies the proverbial Catch-22. Without the APIs and hardware interfaces, no other company could ever become a viable business.

One other note, the three-person oversight committee must be made of people selected by Microsoft competitors, not Microsoft. Otherwise Microsoft becomes its own policeman.

In short, I believe the proposed settlement does essentially nothing break up the Microsoft monopoly and relieve the consumer.

Thank you for your consideration,
 Brent Laminack (brent@cc.gatech.edu)

Subject: Microsoft Settlement

Wednesday January 23, 05:36AM

I'm writing this email under the auspice of the Tunney Act, and to give voice to my long standing concern that Microsoft has, and continues to act as a criminal, monopolist empire, and will do so in the future if appropriate action is not taken.

The foundations of Microsoft's corporate structure were laid on the work of countless, unsung programmers it defrauded, scammed, and conned into writing system components for them under contract and then used legal and financial leverage to break these contracts, leaving their developers penniless.

Microsoft has been sued successfully for using the copyrighted code from other systems, so this is not in dispute. By stealing the best that countless fine minds had to offer, by strong-arming PC distributors into exclusionary contracts, and by exploiting prejudice and promoting ignorance, Microsoft built a commercial empire that threatens to cheapen, if not demolish some of the greater technological strides made in the last two decades.

It is my belief, born of years of the observation of trends in the computing industry, that Microsoft is quietly plotting to turn the personal computer, an instrument with the power to change human thought, work, and life for the better, to make mankind smarter as it were, into a sort of complex version of the television. Instead of the information processing power of commercial PC systems belonging to their owners, Microsoft is pre-emptively taking control of the consumer PC and turning it into a sort of super-marketing engine, designed to gather and disseminate ever more personal data, and bombard computer users with ever more sophisticated advertising. Indeed, aspects of this plan can already be seen in the latest editions of Microsoft operating systems. ESPECIALLY their XP operating system, which was rushed in development and released early for no other reason than to evade your court's justice.

These "features" detract from, and degrade computer performance in much the same way that a gasoline company would weaken the performance of your car by bolting heavy billboards to the side of it. Microsoft partnerships with hardware developers like Intel (often thought of as Microsoft's partner in crime by members of the engineering world) only further expedite this process of degrading our valuable technology. The American people should not have to fight this insidious, deliberate trend. Indeed, it shouldn't even be an issue. However, the greed, corruptibility, and maniacal disregard for the public good of a few powerful men has forced us into this position.

It is my understanding that the anti-trust laws that Microsoft has been successfully prosecuted under were written with the primary intent of dissolving the mob-like power of the meatpacking and steel producing conglomerates of the early part of the last century. The context may have changed but the struggle is the same. These laws were not designed to deliver a slap on the wrist to the offenders. They were written to break utterly the stranglehold that these companies had on large segments of the

American working and purchasing population. Please, do not beat the aging sword into a useless flyswatter. I implore your court to render a judgment that cripples Microsoft's power to aggrandize it's own corporate edifice at the expense of the public good. A few suggestions toward achieving this end within the power of your court:

1. That Microsoft be barred from making exclusive license agreements that limit the freedom of PC distributors to sell competing software and operating systems.

2. That Microsoft be barred from "integrating" non-essential software packages such as browsers and email clients into their operating systems. Indeed, it may be most practical to simply wrest the research and development parts of the company that design non-essential software away from the parent, and require that they operate autonomously.

3. That Microsoft be required to release their windows source code, or at least the technical developer's information for it into the public domain. as it stands, the proprietary secrecy that enshrouds their code does not act to protect a highly advanced technology from usurpation. Microsoft's operating systems are actually notorious for being the BOTTOM of the industry's standards. No. The only thing that is protected by the cloak of secrecy that surrounds the cores of their operating systems is Microsoft's power to control of who is, and who is not allowed to develop software for their systems.

4. That Microsoft be required to pay restitution to its defrauded developers, and that a standing judicial panel be formed to arbitrate the thousands of potential claims that this action would engender. Please take these words to heart. There has been rumor that Microsoft is using this same Tunney Act avenue to canvas your court with it's own propaganda. This is sure to confuse, confound, and further weaken any action that might be taken against them. Microsoft is a criminal commercial empire and always has been. Its aim is further concentration of financial capital and computing power into itself, and it has little to no regard for the welfare of the computer-reliant public.

Sincerely,

Daniel L. Swartzendruber

The settlement is a bad idea. A breakup is the only solution to restore competition.

There can be no effective solution that doesn't solve the problem of the operating

systems complexities being withheld from competing companies who create windows software. These competing companies are always at a hopeless disadvantage. They attempt to compete against the hand that can choose to feed them the information they need to compete, or not to feed them the information. What would anyone do in Microsoft's situation? Not give the potential competitor the information they need to successfully compete with Microsoft of course. With their regular abuse of this power which is decidedly in violation of the Sherman Anti Trust Act, Microsoft's software invariably comes out looking superior when in fact, if they had not withheld the information, they would be on equal footing with other companies developing business solutions, and would no longer be able to create the illusion of superior workmanship and innovation. But why would a corporation whose primary concern is the bottom line share that information?

They will not.

To: Microsoft ATR
Date: 1/23/02 8:18am
Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices. Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%).

This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

To: "microsoft.atr(a)usdoj.gov"
Date: 1/23/02 8:09am
Subject: Microsoft Settlement

This proposed settlement seeks to put Microsoft under restrictions for a time period and if they do not follow the restrictions the time period is extended. What is going to make Microsoft stop doing what has been decided to be in violation of the Sherman Antitrust act if they will simply be put under restrictions of the kind that they have not followed before. Also if they don't follow the restrictions in the first time period, what will extending the time period of those restrictions do. They will just be in violation of the restrictions longer. Still nothing will have changed and nothing is stooping Microsoft from using its monopoly in an anti-competitive way.

I would hope the Department of Justice will seek a way to truly make Microsoft realize that they should not do the things that have been decided as wrong. If I had a chance to decide I know that putting a some sort of large fine on them will definitely make Microsoft at least listen, and think of what can be done with that money. It could be given to schools in the form of grants to help them get caught up in technology. I could be donated to universities for advancing research, or even ease the cost of securing our country from terrorists which is on the front of all our minds after the recent events.

Your Honor,
Microsoft Corporation is a successful company, providing to me as an individual consumer an excellent product. I had the personal choice to purchase other products, other software, and other computers; I chose not to. I selected my computer and loaded my software on it.

From my perspective, I have no problem with Microsoft. It does appear as if its competitors do have a problem with Microsoft's success since they originated the action. If these competitors had shown to me that their product was superior to the Microsoft product and a better value, I would have purchased theirs.

However, based upon my personal needs and situation, the Microsoft product satisfied it better and completely.

As an agent of the government and the government itself, the primary responsibility you have is to protect the property of a citizen. Do so in this case, leave Microsoft's property alone, leave Bill Gates, a model for success for generations of people, and his property in tact, and, most importantly, stay away from my property.

Thank you,
Chris Cleary

Subject: Microsoft Settlement

Hello,

I am writing this e-mail to voice my concern with the proposed Microsoft settlement. First of all, too little too late. Microsoft has been abusing its position as a MONOPOLY for YEARS. First it was Apple, then it was Netscape who's next? It is unfortunately not common knowledge that Microsoft integrated their browser in to their OS there by completely by-passing the need for an alternative, and that was only AFTER they gave it away for free (the browser) which they could afford to. Where as Netscape could not.

Next on the long list of issues is Apple, where on earth do you think Windows got its GUI guidelines from? And it continues to do so just look at MacOS X and Windows XP (one was released about one year before the other, it is needless to say which). Look at QuickTime for Windows, look at Java for Windows, look at OpenGL for Windows, all technologies made by third-parties that have been muscled out by Microsoft. But there is little that can be done about some things so far back in computer history. However we can prevent it from happening in the future. Microsoft's monopoly must be terminated, sharply, very near in the future before more technologies are strangled by this giant.

Although I feel that ALL of the propositions to settle the case are INSUFFICIENT I believe at the very least the company should be broken up in to smaller divisions and fined. In particular seperate the browser for the OS and any add on technologies.

Thank you for reading/listening,
N Stefanov

Subject: Microsoft Settlement

I hope that you will reject the toothless settlement of the (current) Microsoft antitrust trial; it sounds good in some ways, but the devil is in the details:

—The disclosure requirements very carefully let Microsoft avoid disclosure to Open Source software writers, who are a major source of alternatives to Microsoft products.

—Concerns have even been raised that the language of the settlement allows Microsoft to evade disclosure of its API (Application Program Interface). Microsoft has in the past modified its API as implemented in win32s.dll with the sole intent of breaking compatibility with OS/2, and it has considerable motivation to make similar changes with the sole goal of breaking compatibility libraries such as WINE, Odin, and competing products such as Lindows.

—The settlement does nothing to prevent Microsoft's "embrace and extend" tactics that allow it to subvert public standards and perceived threats such as Java.

—The settlement does not prevent Microsoft from retaliating against OEMs that wish to offer computers without any operating system so that the purchaser may choose whatever operating system he or she wishes to run.

—The settlement does nothing to allow competing software to use files with proprietary Microsoft formats, such as Microsoft Word (.doc) files.

Microsoft is notorious for blatantly ignoring prior antitrust settlements, and I have no reason to suppose that it will not do the same with this one.

From: Ben Snyder
To: Microsoft ATR
Date: 1/23/02 8:21am
Subject: Microsoft Settlement

The following statements about the Microsoft-DOJ settlement are submitted under the provisions set forth by the Tunney Act.

Section III.D:

According to the settlement, Microsoft must disclose "via the Microsoft Developer Network ("MSDN") or similar mechanisms, the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product."

It should be made known that the least expensive, also the most basic, MSDN subscription is approximately \$200. This may be cost prohibitive to an extremely small software firm, and possibly even more so to

an individual who may desire to develop software for the Windows Operation Systems. If someone were developing software for free distribution, it is doubtful the individual would be able to justify the cost of obtaining the documentation for the APIs.

Section III.J.1:

According to the settlement, Microsoft will not be required to "document, disclose or license to third parties: (a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of a particular installation or group of installations of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria."

Who decides if the APIs in question fall into these categories? If there is no requirement to even document the existence of these APIs, then their existence and purpose may be perceived differently by each individual, and therefore there is no consensus on if the APIs in question fall into the categories listed above.

Overall, it can be said that the settlement overly favors business, even the defendant is given too much favor in some cases. By favoring business rather than the populace, the monopolistic characteristic of difficulty in entering the market still exists, making it difficult for a small firm or individual from competing fairly.

From: Timothy Lawless
To: Microsoft ATR
Date: 1/23/02 8:20am
Subject: Microsoft Settlement

I believe that the proposed settlement to the Microsoft Antitrust case is an incomplete solution that will not resolve the underlying business practices that have choked out competition out of the PC software markets.

Specificly:

I. The definition of the "Windows Operating System Product" is too narrowly defined, and will thus permit microsoft to leverage their past wrongs by slightly changing their Operating System product to fall outside of the definition.

It is proposed that Definition "U." should read: "Windows Operating System Product" means any software or firmware code distributed commercially for given away free of charge by Microsoft that is capable of executing any subset of the Win32 APIs or a derivate thereof, including with out exclusion Windows 2000 Professional, Windows XP Home, Windows XP Professional, Windows XP Tablet PC Edition, Windows CE, Pocket PC 2002, and successors to the forgoing, including the products currently code named "Lorghorn" and "Blackcomb" and their successors, including upgrades, bug fixes, service packs, subscriptions, etc.

II. Section E Permits mircroft to develop propritary APIs for Microsoft products that will enable those products to have an unfair competitive advantage over published, likely less efficient APIs.

It is proposed that Section E be ammended by striking: for the sole purpose of

interoperating with a Windows Operating System Product" and inserting: for the purpose of interoperating with a Windows Operating System Product or with application software written for Windows,

III. Section III, A, 2 of the Proposed final judgement is worded in such a way that will allow Microsoft to use pricing arrangements to force vendors to continue to sell Microsoft loaded hardware, when other competitive operating systems are present. It is proposed the section be amended by adding: or (c) includes a non-Microsoft Operating System but no Microsoft Operating System Product; or

Again, I believe that the settlement is Bad for the Public, Bad for the Competition, and only good for Microsoft. I urge you to throw out the proposed settlement.

You Honor,
The settlement offer by Microsoft (MS) I consider an insult to the court. Per my understanding there's supposed to be a penalty, but in actuality is, in my professional opinion, a huge business opportunity for MS. MS should not give away free CD's for pennies on the dollar only to have a hole new market opened up for them in five years.

A much better solution, as offered by RedHat, is to have MS spend the same amount buying computers for the schools. Then, RedHat will donate not only the Operating System for free, for life. But also

lots of software that can be used in any fashion the schools feel.

This would then create about 70 computers per school rather than the 30 MS solution would.

Sincerely,
Steve Szmidt

Subject: Microsoft Settlement

To Whom It May Concern:
I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct

or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

MTC-00015182

From: Jason Giglio
To: Microsoft ATR
Date: 1/23/02 8:22am
Subject: Microsoft Settlement

Dear Sirs,
As a worker in the computer field, I am in daily contact with many computer software products. Computers continually amaze me at what they are capable of doing. I am lucky, though; I am savvy enough to be able to seek out alternatives to Microsoft products.

There are millions of other people who use computers, but who are not savvy enough to install their own Operating Systems. Those people just use what comes on the computer, and don't see the other options.

This is a direct result of Microsoft abusing their monopoly power in pressuring OEMs to give them exclusive deals, and pressuring OEMs to exclude any other options on the desktop.

This, however, is just the tip of the iceberg. I am continually confronted with minor ways that MS abuses their monopoly power, ways that less computer savvy people never notice.

One example is the Starband Internet service. Microsoft is a large investor in Starband, and the influence shows. It is impossible to use an operating system other than MS Windows on a computer attached to a Starband satellite Internet system. Advocates of alternate operating systems have asked for the specifications to allow a driver to be written for other operating systems, but Starband has refused.

Another example is the MSN Internet service. It can be used on non-Windows platforms, but one cannot send and receive email, due to Microsoft using a proprietary standard for email on their service that only works with Microsoft Outlook. Microsoft also blocks the running of one's own mail server, which would allow one to avoid using the Microsoft servers with their incompatible protocol.

Yet another example is the Microsoft File and Print Sharing protocol. A program has been developed for Linux/UNIX operating systems named Samba. Microsoft has consistently changed subtle parts of their file sharing protocol, in attempts to break any programs that attempt to interoperate with Windows on a non-Windows platform.

We must not allow this monopoly to continue abusing their position of power. An easy settlement of the case, with a mere slap on the wrist of Microsoft, is not enough.

The Proposed Final Judgement fails to address these issues of deliberate incompatibility, it would do nothing to address the important issues that I face every day as a person who has to attempt to design systems to interoperate with Microsoft Systems. The Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Subject: Microsoft Settlement

To whom it may concern,
I feel that the proposed settlements in the Microsoft case are poor. The punishment in this case does not fit the crime, and I would perhaps compare it to a murder trial where the defendant is found guilty but given one year in jail with the possibility of being let out early on good behaviour as the punishment.

The company is too large and too all-encompassing for this matter to be taken lightly. There is no innovation in the desktop marketplace and dare I say in any marketplace in which Microsoft has a interest. To summarize, I feel that harsher penalties should be imposed on Microsoft. These penalties should be well thought out in terms of competition and the market, perhaps by an entity that has been here for some time and has nothing to gain or lose by this. Perhaps the EFF (electronic frontier foundation)?

Thank you for your time.

From: Poriss, Jason S113
To: "microsoft.atr(a)usdoj.gov"
Date: 1/23/02 8:30am
Subject: microsoft settlement

I would like to make a few short comments regarding the proposed Microsoft anti-trust settlement. I feel that Microsoft should not be allowed to include any middleware products, regardless of whether others are allowed to compete. Microsoft, by all means, should be allowed to create programs such as browsers, MP3 audio players, video players, disk defragmenters, etc. However, they should

have exactly the same integration tools available to them as competing companies. In all likelihood the only way to ensure this would be to split the Microsoft OS from the rest of Microsoft, although that apparently is no longer an option.

Let me draw a short picture which illustrates the destructive effect Microsoft has on competition. Several years ago, I bought a Microsoft operating system so that I could use my computer's hardware. Then I bought and installed several programs which allowed me to do tasks I needed to do, for example:

- * Audio Player > WinAmp
- * Disk Defragmenter > Disk Keeper
- * Browser > Netscape Navigator
- * Video Player > QuickTime
- * System tools > Norton Utilities
- * Web Server > Apache

The list goes on and on... today however, I don't need to buy any of the above third party tools, my system looks more like this:

- * Audio Player > Microsoft Media Player
- * Disk Defragmenter > Microsoft Disk

Defragmenter

- * Browser > Microsoft Internet Explorer
- * Video Player > Microsoft Media Player
- * System tools > Microsoft Scan Disk
- * Web Server > Microsoft IIS

This is not a picture of healthy competition.

Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices. Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition. Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

I would like to take this opportunity to address one of the reasons I believe the Proposed Final Judgement is insufficient. Even though the "Findings of Fact" paragraph 20 and 39 indicate that the fact that the file formats used by Microsoft applications are undocumented constitutes a barrier to entry, there is nothing in the PFJ that obligates the documentation of these formats. This leads to a requirement that to communicate within a workplace, if a significant number of people are using Microsoft applications, that everyone must use them, and must therefore use Microsoft operating systems. Microsoft thus uses their monopoly to leverage further application sales. As this is not addressed in the PFJ, the PFJ is therefore insufficient.

The opinions expressed are my own, and not necessarily those of either Lincoln Laboratory or the Massachusetts Institute of Technology.

Hello,
I just want to send an Email saying that I support the settlement between Microsoft and the U.S. government. It is my strong belief that those companies and individuals who are against this wish only to replace Microsoft, not to stimulate innovation. Companies like AOL, SUN Microsystems, and groups such as the Linux community all have a large stake in seeing Microsoft fail. They seek a shift in the balance of power. This is not good for our economy and it is not good for the consumer. Destroying MS only benefits a small group who will be just as bad, or worse, if they were in the same place. I think the right thing to do is to settle this and to move on.

Thanks for your time

Washington, DC 20530-0001

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. In general, I agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), in summary:

1. The PFJ doesn't take into account Windows-compatible competing operating systems
2. The PFJ Contains Misleading and Overly Narrow Definitions and Provisions
3. The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft
4. The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft
5. The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs
6. The PFJ as currently written appears to lack an effective enforcement mechanism.

As a computing professional of 22 years standing, and as an active member of the Internet Engineering Task Force (IETF) and other international standards bodies, I agree in detail with Mr. Kegel's analysis, which I will not reproduce here. To give one personal example, however, let me give a case of point 4 above: the introduction of intentional incompatibilities to delay or derail competitive development efforts. As part of my efforts with the IETF and the Apache Software Foundation, I participated in the standardization of the WebDAV specification—a mechanism to allow documents to be maintained via the World Wide Web—and worked on developing a freely available references implementations for Apache and for the freely available Perl programming language. Note that the release of a freely available reference implementation is a requirement for IETF standards. Before the standard was officially finalized, and thus before completion of the freely available reference software, Microsoft released support for WebDAV with proprietary extensions and incompatibilities as a fully integrated part of their Windows

2000 operating system. The lack of interoperability between this Microsoft version of WebDAV and the standards-based development effectively stopped significant development of the freely available implementations, in this case before the standard was even officially published. At this point I know of no significant implementation of the actual standardized version of WebDAV that might compete against the Microsoft Windows 2000 version. I believe that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices of this type to continue, and would delay the emergence of competing Windows-compatible operating systems. Therefore, the Proposed Final Judgment is not in the public interest, and should not be adopted without addressing these issues. Many thanks for your attention, and for your efforts on this matter.

Sincerely,
Greg Bossert <bossert@fuaim.com>

From: aetius
To: Microsoft ATR
Date: 1/23/02 8:28am
Subject: Microsoft settlement

I take issue with a specific part of the proposed settlement agreement: "No provision of this Final Judgment shall:

1. Require Microsoft to document, disclose or license to third parties: (a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of a particular installation or group of installations of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria; or (b) any API, interface or other information related to any Microsoft product if lawfully directed not to do so by a governmental agency of competent jurisdiction.

2. Prevent Microsoft from conditioning any license of any API, Documentation or Communications Protocol related to anti-piracy systems, anti-virus technologies, license enforcement mechanisms, authentication/authorization security, or third party intellectual property protection mechanisms of any Microsoft product to any person or entity on the requirement that the licensee: (a) has no history of software counterfeiting or piracy or willful violation of intellectual property rights, (b) has a

reasonable business need for the API, Documentation or Communications Protocol for a planned or shipping product, (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, (d) agrees to submit, at its own expense, any computer program using such APIs, Documentation or Communication Protocols to third-party verification, approved by Microsoft, to test for and ensure verification and compliance with Microsoft specifications for use of the API or interface, which specifications shall be related to proper operation and integrity of the systems and mechanisms identified in this paragraph."

Section 1 here is supposed to prevent Microsoft from having to release API documentation that is seen as a security risk. The problem is that almost ALL communications protocols have security provisions as an integral part of the protocol—thus, this section essentially gives Microsoft the green light to block full API disclosure on the grounds that it would violate the security of the protocol. Without full API disclosure, you might as well hang it up, as no competing developers will be able to implement competing products. You can't half-disclose an API; it is an all-or-nothing approach. Half-disclosure, *especially* in relation to security provisions, means only half-functioning "competing" products.

Further, this argument about "protecting security" is at most debatable. It has been repeatedly shown that Microsoft's proprietary protocols have suffered from numerous security breaches and problems. The term most often used for this in the computer security field is "security through obscurity", which is almost universally denigrated as an effective means of securing the product or protocol. There is even a competing argument that full disclosure is a far superior method of ensuring that products and protocols are reasonably secure. Regardless of where you stand on this argument, this section is an easy out that Microsoft can use to continue business as usual.

Section 2(a), (b), and (c) are a license to discriminate against open-source software providers like Red Hat, Inc and the Apache foundation. The term "willful violation of intellectual property rights" is nebulous—what does that mean? Does it include companies that license their software under the GNU Public License, which enforces source code revelation? Microsoft certainly sees Free Software and Open Source software to be "virus-like" and opposed to intellectual property rights. Microsoft also sees Linux and Free/Open Source software as a primary competitor, so this section is allowing Microsoft free reign to operate against it's greatest threat, and continue to exclude Open Source and Free Software developers from any sort of API disclosure or assistance with inter-operation. It is extremely doubtful that Microsoft will see Free Software or Open Source software as having a "reasonable business need" for the API, since most developers in the Free Software/Open Source communities don't have businesses. Links to Microsoft's view of Linux and the Free Software/Open Source community:

<http://www.theregister.co.uk/content/1/12266.html>

<http://content.techweb.com/wire/story/TWB20010110S0006>

<http://www.suntimes.com/output/tech/cst-fin-micro01.html> (use Google cache)

The remedy to this portion of the agreement is simply to enjoin Microsoft to release the API documentation to anyone who asks. Only that will allow the thousands of developers world-wide who participate in Open Source and Free Software development to make their products inter-operable with Microsoft products. If this is not remedied, a huge portion of the competitive market is tacitly eliminated by this agreement. Section 2(d) is ill-defined, and could be abused. The entire agreement seems to be designed around trying to make Microsoft inter-operate with other vendors and not step on them or introduce default competing products/services, or at least that is the way that it sounds. Section 2(d) reduces the effectiveness of all the other provisions because it allows Microsoft to control (through "compatibility testing") what software can and cannot be run on Microsoft operating systems. The argument was probably that this would only cause a delay in the release of the software if it was found to be "incompatible"; however, such "delays" could easily turn into delays that put companies under, or the cost could be so high that companies couldn't afford to pay, and of course private individuals would be completely unable to pay (since they can't even produce an "authentic and viable business need" to run the software, let alone certify it.

Section 2(d) needs to be redefined, especially with relation to competing Free Software and Open Source products, and with relation to Microsoft approval of what software runs on their OS. The third-party stipulation is worthless (and could even be counter-productive) since it must be Microsoft approved, which would engender an environment where the third-party certification authority would bow to Microsoft's demands—they either do what Microsoft wants, or they lose the business, and certification is delayed (along with competing products) while Microsoft finds a certification partner that WILL do what they want. There is no stipulation on what constitutes "approved" by Microsoft.

In summary, this agreement does not achieve what it seeks to accomplish. It allows Microsoft to force commercial ISV's to get their software approved before it can run on Windows, and it blocks the disclosure necessary for Microsoft's primary competition, Free and Open Source software, to continue to compete against and inter-operate with Microsoft products. Please do not allow this agreement to be settled; it would make the entire anti-trust suit a depressing waste of time and money.

I am sending this as a concerned citizen to comment on the proposed Microsoft settlement. I am a professional software developer who has been writing software for the Windows operating system since 1994 and hold a B.S. degree in computer science.

Specifically I am concerned with the portion of the settlement that supposedly makes Microsoft publish its Windows API. I think the idea is great but the settlement defines "API" so narrowly that it would do little good to the development community. Microsoft already makes available portions of its API that allow developers to write software for Windows. The settlement defines API to mean the interface between Microsoft Middleware and Microsoft Windows. This doesn't include all other APIs that Microsoft uses.

I would propose that Microsoft must make available and document all DLL (Dynamic Link Library) entry points that it's software uses in ALL Microsoft products. This can be checked be easily checked by a layman to know if each function is documented, but of course would require a more experienced person to know if they did this correctly. Please consider updating the settlement and keeping Microsoft from continuing to stifle competition and software in general.

Thank you,
Brad Rittenhouse (bradr@sunsmoke.org)

Subject: Microsoft settlement

Hello. Personally, I use both Microsoft Windows 98se and Mandrake Linux. They are both good operating systems. However, any settlement that allows Microsoft to

expand their monopolistic base is a bad settlement. My understanding is that, as part of the settlement, they will donate computers and software (including their operating systems) to schools. By doing so, they are in fact expanding their user base, which would fly in the face of all logic regarding this issue. It doesn't seem like much of a "penalty", does it?

If I am wrong about this, then I apologize for wasting your time in reading this. If I am right, then you need to correct this situation, because they are pulling a fast one on you!

Either way, thank you for your time.

I am writing due to my concern over the very inadequate settlement in the Microsoft case. The negotiated "slap on the wrist" settlement is very inadequate for a monopoly on the scale of Standard Oil and the former Bell system. As an American old enough to remember the telephone monopoly I feel that unfortunately that kind of "draconian" breakup is the only way to "open up" the computer operating system market and break Microsoft's monopoly power.

Subject: Tell Microsoft NO!

Microsoft should not be able to get away with playing unfairly with the industry. At the very least, every single Windows API should be opened, along with every protocol, so that competing companies can build software with the same features and stability as Microsoft can. Currently, Microsoft's claim to superiority in software comes about solely because these APIs and protocols are kept secret, therefore they are the only ones that can benefit from them. All other software manufacturers have to kludge a workaround. This would also allow for competing operating systems—such as WINE and Lindows—to be easily made with full compatibility, finally giving us some competition in the OS market.

Thank you for listening.

If reference to the Microsoft anti trust settlement: Section III(J)(2) limits who can license Microsoft's API documentation and other intellectual property. Only those companies that Microsoft judges as "viable" can license the information. This would exclude smaller companies and non profit organizations, as well as any company that comes up with an original idea that Microsoft doesn't have a strategy to dominate yet.

Section III(D) limits who can get information needed to write software that interfaces directly with Windows and hardware. The Department of Defense, NASA, FBI, and our nation laboratories do not have any rights to the windows documentation needed to interface with Windows. Please reconsider these and other sections of the settlement. Thank you for your time. Daniel Utecht Kennedy Space Center, FL

Greetings,

In accordance with "The Tunney Act", I would like to comment that I think the current Proposed Final Judgement misses the mark in several key areas:

1) Microsoft is not being punished for it's past violations. There is only one way to punish a monopoly: Money. There must be a fine, and it must be huge. This fine should also have no directed purpose other than be contributed to the general revenue fund. There must also be progressive fines for future violations.

2) Applications barriers for competing software companies must be stricken down with strong language that is not limited to certain Microsoft operating systems, and in the PFJ.

3) And finally, if Microsoft has become a monopoly through being a de facto standard, then let the standards be published. All API's and middleware should become an open standard, with specific requirements to publish these standards before releasing new products.

Mr. Paul Vinson (Rep)

To: Microsoft ATR
Date: 1/23/02 8:32am
Subject: Microsoft Settlement

I think the Microsoft settlement proposed leaves far too many holes for them to continue monopolistic behavior and should be replaced by something far more drastic. A settlement needs to be forward looking and address their use of a desktop monopoly to get into other markets. TV, home computing and the like, games, and so on should be things they have to hit the same barriers as everyone else. Likewise they should not be permitted to give shortcuts to their Internet services to the detriment of all other such services just by making windows default to MSN.

Allowing that sort of thing is ridiculous.

Subject: No to Microsoft anti-trust Proposed Final Judgement

I would like to register my disapproval for the Proposed Final Judgement against Microsoft. As a computer scientist and software developer, I have for years seen Microsoft's dominance and monopoly power as an impediment to the furthering of my trade. Their anti-competitive practices have made it impossible to buy a computer

without Windows (as I attempted to do last year from Dell) or MS Office (of which I already own several legal copies, but was forced to purchase again with my new Dell laptop). These kinds of licencing hurt individual computer purchasers, and will continue to do so under the proposed settlement.

Additionally, their Windows monopoly has successfully prevented other competing operating systems (OS/2, BeOS to name a few) from gaining any reasonable market share. Because of the wording of the judgement, the next version of Windows may well not fall under its terms and Microsoft will be able to continue to abuse their monopoly power with impunity. Please refuse to accept the Proposed Final Judgement and look for a more strict solution that might actually change Microsoft's business practices.

Sincerely,
Douglas Rohrer

Subject: Microsoft Settlement

To whom it may concern:

I am writing to give my comments on the Microsoft antitrust settlement. I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial. Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation. Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future. It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

Thank you.

Subject: Microsoft Settlement

As a technician involved with personal computers almost since their conception, I have seen many excesses committed by Microsoft. In today's world, the "theft" of code involved in DOS 1.0 would probably have resulted in criminal charges.

Microsoft is often portrayed as "BORG" from the Star Trek TV series. This is not far from true. For example when MS decided to add internet connection sharing to their product did they develop it? No, they "innovated" by finding the small company with the most compatible product (I believe their were five products on the market) and bought them. The other four companies (I believe) are gone now as are their competing products.

Microsoft *MUST* be reigned in. Oversight of purchases (done with money that should have gone to investors in the form of dividends) should be in place to insure that they do not continue to stifle true innovation by buying and incorporating technologies to the detriment of other companies and ultimately the buying public which is robbed of choice.

To: Microsoft ATR
Date: 1/23/02 8:34am
Subject: Microsoft Settlement

hello,

I am writing to express my view of the proposed Microsoft settlement. in essence, I think it is useless. the main problem I see is that it aims to allow other *commercial* companies to see microsoft's source code, etc. however, it has now become clear that microsoft's greatest enemy is not a particular

company—it is Linux, a free, open-source operating system for PC-based computers. Linux is not maintained by simply one company or individual, but rather by a group of many individuals all over the world, donating their time for the greater good. However, they don't do it for profit, so in the wording of the proposed settlement, wouldn't get to benefit from seeing microsoft's source code, etc.

there are surely many other problems with this settlement (like the fact that MS has a word in saying which company has a business model that's good enough to warrant seeing their source—it's like asking a killer what he thinks should be his verdict, and listening to him!). however, I just wanted to point out that microsoft probably doesn't care all that much if competitors see its source code, as long as those competitors are already way behind them. they probably care about Linux more than anything, and with the settlement, Linux is case aside.

From: John Anderson
 To: Microsoft ATR
 Date: 1/23/02 8:34am
 Subject: Microsoft Settlement

Good morning. I am writing to express my concern over the proposed Microsoft settlement. My primary concern is that the remedy proposed does nothing to actually penalize Microsoft for past monopolistic behavior, and does little to prevent the same kinds of abuses from occurring in the future.

For a company that has over \$35 billion dollars in cash, a “donation” of Microsoft licenses and obsolesced hardware in the amount of \$1 billion is hardly a drop in the bucket. Microsoft knows that by utilizing this settlement, they can extend their monopoly into one of the few remaining areas over which they have no monopoly power. . . the secondary education system. This is a gross abuse of the proposed settlement as it only allows Microsoft to continue their previous monopolistic behaviors, albeit with a court sanction.

I appreciate you taking the time to read my comments. I urge the court to reject the proposed settlement, as it will not discourage future monopolistic behavior.

From: Jack Wallen
 To: Microsoft ATR
 Date: 1/23/02 8:34am
 Subject: Microsoft Settlement
 To whom it may concern,

I am writing to express my dismay at what could possibly be the single biggest injustice in the history of the United States consumers. I react in this way partially because of the state of the US economy. . . although there are many reasons.

My foremost issue is that of the state of not-for-profit in this issue. As it stands, in such passages as Section III(J)(2) of the Proposed Final Judgement, not-for-profit organizations have no rights. This is an outrage! Would you allow your church to fall under such state that it has no right to be considered when, say, a large corporation decided it wanted to take over the land where the church stood? Imagine if your church had no say in the issue—it didn't even exist? And that is basically where the not-for-profit organizations (such as the Apache group, the Sendmail group, etc) stand. The biggest “competitors” to Microsoft have no rights.

As far as I remember that was a basic foundation of this country—and it is being stripped away because Microsoft has its finger so tightly wound around politics that most all are afraid to de-sanctify this juggernaut.

I ask that you rethink this and give the not-for-profit organization their rights. America is a competitive country and it simply isn't right to remove that competitive nature so one company can go on to destroy all the competition. In a dog-eat-dog world only the strongest survive but we all know we are talking dollars here—not strength—and with Microsoft basically owning the American dollar no one has a chance.

Thank you very much.

From: Vincent Penquerc'h
 To: Microsoft ATR
 Date: 1/23/02 8:35am
 Subject: Microsoft settlement

Dear Sirs,
 I have to voice my opinion against the proposed settlement. Having read different comments on the proposed settlement, and being myself a computer engineer (I in fact have been into computers for more than a decade), here are a few comments on the

problems this settlement do not address. The main focus of the original trial was the inclusion of Internet Explorer in Windows 95. After pretending the two could not be separated, they did separate those. Now, however, the new Windows XP includes Internet Explorer, an affront to the DOJ and the American Government. This clearly shows the little respect Microsoft has for American Justice.

One of the companies that has suffered the most from this is Netscape Communications, which was offering a competing innovative browser. AOL, which now owns Netscape Communications, is now in a position to compete with Microsoft over the web services business and Internet services in general. This prompted Microsoft to use this tactic again with Windows XP. Not surprisingly, many AOL users have had difficulties connecting to AOL with Windows XP. Every company that gets in a position to compete with Microsoft is victim of the dominant position of chairman Bill Gates' firm to leverage the power of holding and misusing their monopoly on the operating system market. The current proposed settlement does nothing to ensure such a power can not be misused against AOL. Being a computer engineer, I see some of the provisions in the proposed settlement as ludicrous in a technical point of view. The provision of disclosing APIs does absolutely nothing to help Microsoft's own software to take advantage of assumptions about its internal working. Such assumptions, which are not part of all of an API, are very important to the building of a stable and efficient system. Only a full source code disclosure and analysis can help overcome this problem.

Last, Microsoft has shown several times that it can and will simulate popular support. The last occurrence of this is a poll on ZDNet about the popularity of several web services solutions, including Microsoft's .Net and Sun Microsystem's Java. Microsoft even already used this strategem in this very trial.

For all these reasons, I believe that:
 —The proposed settlement is utterly inefficient.
 —The reactions in favor of Microsoft should be seen in light of their history of “popular support”.
 —Microsoft's monopoly is a major threat to the American software industry, as every day that passes raises the bar a competitor has to reach to have a chance.

Competition is what has made America what it is. Countries with only one dominating player, as in the communist block, have failed to achieve what America did. In a time of recession, it is even more urgent to restore competition in the software market.

Best regards,
 Vincent Penquerc'h

From: Jonathan B Volmer
 To: Microsoft ATR
 Date: 1/23/02 8:34am
 Subject: Microsoft Settlement

In regards to the Microsoft antitrust case:

In short, I'm against it. It doesn't go far enough.

The longer version:

Microsoft is a highly successful company, and has achieved a large part of that success through making a good product and a well thought out marketing strategy. However, they have contaminated that time-honored and purely capitalist strategy with predatory tactics. Their focus on secrecy has led us to exceptionally insecure systems, and their focus on maintaining their monopoly has led them to restricting OEMs from shipping with competitor's products, and their focus on increasing their capital has led them to seek out and destroy new, competing technology before it enters the marketplace.

This goes against both the spirit of capitalism and the letter of the law. The filing of lawsuits has not changed their practices, they continue as before, and will continue as before after this settlement is enacted. Please reconsider, and increase the restrictions placed on Microsoft. Their practices decrease competition, with is the driving force of our innovation.

Subject: Microsoft Settlement

The proposed settlement is a terrible idea and it may actually EARN Microsoft money instead of penalizing them for violating antitrust law. by allowing them to give \$200 Million in hardware and \$800 Million (presumably calculated at full retail price, not volume discount price) what you are doing is giving them a \$1 Billion tax deduction in exchange for about a (and I am being generous to Microsoft here) \$250 Million cost.

This settlement would also give Microsoft an in in the educational market where they have traditionally not done well along with mind share with our children. All in all, this seems like a money-making venture for Microsoft, as opposed to a penalty for violating Federal Law.

There was a counter-proposal from Red Hat Software for Microsoft to provide \$1 Billion in hardware, and Red Hat would provide equivalent (though Linux based) software for free. this solution has the distinct advantage of actually costing Microsoft \$1 Billion (although they still get the tax break) while not giving them a leg up in a new market. This settlement would also mean 5 times as many computers would get to the schools, a significant improvement I think.

However, I prefer Option 3. Make Microsoft give \$1 Billion (I would prefer \$4 Billion) in cash to these schools, to spend as they see fit, with the condition that not \$1 can be spent on Microsoft products. Because while I earn my living using computers, they are not very useful to a child who cannot read because his school does not have the resources to teach him how.

Sincerely,
Mark Salisbury —

Subject: Microsoft Settlement

I would like to voice my displeasure at the current proposed settlement of the Microsoft Antitrust case. Microsoft has in the past flouted consent decrees that have been handed down and its likely they will flout the proposed final judgement that is currently before the court. The barrier to entry into Microsoft markets needs to be lowered (esp. in operating systems and office

suites). There are many artificial barriers that Microsoft has created to raise the barrier of entry into their markets which allow them an unfair advantage over their competitors. One of the barriers is non documented file formats for things such as MS Office files. Another example is non documented MS APIs which if documented would allow other operating systems to run programs written for Windows. There are many more examples but I will leave the two previous anti-competitive behaviors (which I consider the two most egregious). Those two tactics along with many other strong arm tactics has made Microsoft dominating operating system and office suite producer not because they've competed successfully but rather because they have engaged in activities which lock any potential competitors out. The proposed final judgement does nothing to address these problems. I hope you will consider my comments when making your final judgement. Thank you for your time and attention in this matter!

Sincerely,
Jason Oppel

From: Jared Burns
To: Microsoft ATR
Date: 1/23/02 8:34am
Subject: Microsoft Settlement

I would like to add my voice to those raised against the proposed Microsoft settlement. If the proposed settlement is granted to Microsoft, it will be a crushing blow to the computer industry. Microsoft has been found guilty of breaking the law. They must not only be stopped from continuing to break the law (something the proposed settlement attempts but does not ensure), they must be subject to just punishment. I agree with Ralph Nader's open letter (found here: <http://www.cptech.org/at/ms/rnj12kollarkotelynov501.html>) 100%. It is my desire that a new penalty be composed based on Mr. Nader's observations.

Thank you,
Jared Burns

From: Bert Collins
To: Microsoft ATR
Date: 1/23/02 8:36am
Subject: Microsoft Settlement

The proposed settlement is flawed and should be rejected. It allows Microsoft to continue its anti-competitive practices based on its linking of operating system and application software. The appropriate solution is the breakup of Microsoft into two companies proposed by Judge Jackson. If that is not possible, the the stat attorneys general's remedies should be considered.

Thank you

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I feel that the proposed settlement is seriously flawed on a number of grounds, including the fact that Microsoft discriminates against ISVs who ship Open Source applications. The proposed settlement does not address this problem.

To demonstrate my point, read the Microsoft Windows Media Encoder 7.1 SDK EULA, which states:

. . . you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. "Publicly Available Software" means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models . . . Publicly Available Software includes, without limitation, software licensed or distributed under any of the following licenses or distribution models, or licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (SCSL); . . .

Many Windows APIs, including Media Encoder, are shipped by Microsoft as add-on SDKs with associated redistributable components. Applications that wish to use them must include the add-ons, even though they might later become a standard part of Windows. Microsoft often provides those SDKs under End User License Agreements (EULAs) prohibiting their use with Open Source applications. This harms ISVs who choose to distribute their applications under Open Source licenses; they must hope that the enduser has a sufficiently up-to-date version of the addon API installed, which is often not the case. Applications potentially harmed by this kind of EULA include the competing middleware product Netscape 6 and the competing office suite StarOffice; these EULAs thus can cause support problems for, and discourage the use of,

competing middleware and office suites. Additionally, since Open Source applications tend to also run on non-Microsoft operating systems, any resulting loss of market share by Open Source applications indirectly harms competing operating systems. Please take this into consideration when finalizing the settlement.

Sincerely,
Jason Morningstar

To the DOJ:

I am writing to you so that I may express my disappointment with the Microsoft case so far. Despite being convicted as a monopolist and submitting remedies that were denied by the courts, Microsoft continues to dodge any attempt to truly sanction and penalize the company for their business practices. I stongly encourage the DOJ to make sure that Microsoft doesn't walk away with a mere slap on the wrist. Microsoft is a very powerful company that influences senators (e.g Senator Byrd from West Virginia stopped depositions during a congressional comitee hearing so that only the Pro-Microsoft side could read their comments and be captured by the media. All of the remaining depositions were entered into the record, but never presented, nor heard live by the media. Let's show the world that

Microsoft can't buy favor and influence in the DOJ!

Thank you for your attention,
Alexander Bruno

Section III.E / III.I.1-5

I believe that this is an excellent first step to the opening of the protocols used by Windows (eg SMB/etc). The difficulty lies in that their are very few operating systems competing for the desktop these days. One that is the freely available Linux system. It would seem to me that the restrictions to be provided by Microsoft would limit the availability of details that would allow the Samba group to develop their freely available software after getting this information. Microsoft has such market clout now that its protocols are the standards. Further it tends to embrace and extend any current standard to its own desire, hindering efforts at interoperability between other operating systems and its own. Perhaps a more far reaching idea would be that Microsoft open all of its document formatting standards (eg Microsoft Office) which should help ensure the development of a host of competing products in the industry.

It is my personal belief that these "Microsoft Standards" (if you will) should be fully open and available to the community at large. I believe this would only help to spur competition in the industry that is currently lacking.

Subject: Microsoft Settlement

To whom it may concern:

It is my belief that the current proposed settlement between the DOJ and Microsoft is hardly a penalty consistent with the crime (past and present). This "slap on the hand" will only embolden Microsoft since it represents a surrender by the only entity capable of stopping it's illegal activity. Of particular concern is the exclusion of Open Source projects and non-commercial not-for-profit entities Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: ". . . (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, . . ."

Section III(D) takes this disturbing trend even further. It deals with disclosure of

information regarding the APIs for incorporating non-Microsoft "middleware." In this section, Microsoft discloses to Independent Software Vendors (ISVs), Independent Hardware Vendors (IHVs), Internet Access Providers (IAPs), Internet Content Providers (ICPs), and Original Equipment Manufacturers (OEMs) the information needed to inter-operate with Windows at this level. Yet, when we look in the footnotes at the legal definitions for these outfits, we find the definitions specify commercial concerns only. Given the actions of Microsoft in the past that mandated this trial, and the fact that they continue to maintain that they DID NOTHING WRONG, do you believe that they will not use to the full extent the opening given to them (above) against their last competitor (The Open Source Community)?

I believe that the correct solution is to break up Microsoft into Operating-System and Application divisions. This would "open the playing field" for competition in applications, and encourage Microsoft to develop applications for other platforms. I believe that Microsoft would benefit from being split up. But unlike the current proposed solution, we (the general public) would benefit as well.

Thank you very much,
Scott Nichols

Subject: Microsoft Settlement

I am writing to comment on the proposed Microsoft settlement, which I feel is wholly inadequate and needs to be revised. I've been an IT professional for five years now, both working with desktop computer systems and programming for them, so I'm aware both of the technical issues surrounding the Windows APIs and the effects they have on software produced for the desktop. In order to truly allow competition in the software market, Windows API specifications need to be provided to the software development community in an unrestricted and timely fashion, and the proposed settlement does not allow for this. Under the proposed settlement, Microsoft is required neither to completely document its APIs, or to release them soon enough that software developers can compete in meaningful ways. What's worse, the restrictions placed on the use of the documentation released are ridiculous, and would require other software vendors to go to extreme and inappropriate lengths to avoid violating those restrictions if they wish to use the information provided by Microsoft under the settlement. Just who is being punished here, anyway? When one also considers the fact that disclosure of the Office file formats—one of the real keys to Microsoft's domination of the desktop market—is not included in the settlement, it becomes clear that the proposed solution is not sufficient either to reign in Microsoft or to effectively encourage competition in the software development industry. I urge you to rethink and rewrite it, and give some of us in the industry a real chance to make some changes in its dynamics. A pro forma

resolution like the current draft is useless at best, and at worst an insult.

Sincerely,
Andrew
Seidl

From: Robert Freeborn
To: Microsoft ATR
Date: 1/23/02 8:42am
Subject: Microsoft Settlement

The PFJ doesn't take into account Windows-compatible competing operating systems Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry. The PFJ Contains Misleading and Overly Narrow Definitions and Provisions The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered. The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware. The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs. The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible. The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows. The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users. The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows. Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft

operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.) The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft. Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems. The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software. The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas. The PFJ as currently written appears to lack an effective enforcement mechanism.

Thanks,
Robert Freeborn

Sir or Madam,

I have recently spent a great deal of time reading and attempting to understand the specifics of the proposed

Microsoft Settlement (<http://www.usdoj.gov/atr/cases/ms-settle.htm>). I have also considered how Microsoft's actions have affected me as a consumer, as well as both a software developer and a systems administrator for a multi-million dollar company. In all instances, I have experienced many situations in which I feel that, due to the many ways in which Microsoft has blatantly abused its market position, my options have been unreasonably restricted

and my expenditures unreasonably increased. As such, I'd like to state formally that I do not believe the proposed Microsoft Settlement is sufficient or in the best interests of the affected consumers, be they business or personal consumers.

Please consider this statement as a clear message that I oppose the settlement as it currently stands, and would expect to continue to oppose it without rather drastic changes. Thanks for your time and consideration,

Date: 1/23/02 8:32am
Subject: Microsoft Settlement Objection
Dear Antitrust Department,

It has come to my attention that pursuant to the Tunney Act, there is a period of public input into the settlement Microsoft has proposed. I am writing to state that I believe this settlement has multiple failings of justice.

My first objection is the fact that Microsoft is effectively being handed the right to print the currency this settlement would be paid with. Microsoft would be handing out licenses to use copies of its products for the bulk of the settlement. It will no doubt count the licenses against the settlement at full retail sales price of their software. This is akin to me jutting down "\$800" on a cocktail napkin, handing it to the judge and saying I've paid my debt to society. Microsoft must bear some burden from the settlement, permitting them to "give their software to schools" only burdens them for a trivial cost of media and printing. I believe a cash settlement would be more appropriate in this regard, as it is a true penalty, however I believe strongly that injunctive relief is the only means appropriate to resolve this case.

The second objection to this settlement is the fact that Microsoft furthers market dominance through this settlement, in fact, through to further generations of Americans. This smacks in the face of the reason this lawsuit was filed. It's like the tobacco industry promising cigarettes to children in schools to make up for secondhand smoke deaths. (I admit, Microsoft has not killed anyone to my knowledge, however I've become frustrated with their products nonetheless. It's almost as bad.) I must object to this marketing ploy.

The settlement also fails to address the problems of Microsoft's customer base at large. I believe a fair settlement should include refunds for the Internet Explorer portion of Windows that many Americans were forced to buy. Microsoft's claim that Explorer is integral to the operating system is a lie; if it were they would not offer Macintosh or Unix versions of this product. Microsoft should also be forced to pay the competitors who were denied these customers by Microsoft's actions.

Finally, Microsoft must be barred from further anticompetitive actions in the future. They must be compelled to provide an

Internet Explorer removal option in Windows. They should be barred from including Internet Explorer as a part of the operating system unless it is to be installed separately. Microsoft should be forced to reduce the price of the monopoly Windows operating system to reflect the amount of money paid for Internet Explorer—OR they should be forced to offer one version with and one version without the browser at different prices if they so desire. They should also be barred from using Office as their distribution mechanism as Microsoft has made great effort to prevent competitors from making compatible products—another antitrust issue entirely. To prevent the "Those restrictions were 95, we now make XP" shell game Microsoft has played, the restrictions must apply to every flagship Windows operating system made herein. Of course, there should be a "sunset period" on these restrictions for the time when the market has recovered from the anticompetitive activities.

In closing, I would like to state that this settlement is of great importance to America and the world at large. I urge care in the consideration of this matter. Thank you.

Respectfully Submitted,
Jonathan Fether

Subject: Microsoft Settlement

I urge the Department of Justice to reconsider the settlement of the antitrust case against Microsoft. The currently proposed settlement will not adequately punish Microsoft for the anticompetitive actions it has engaged in in the past, nor will it prevent similar or new abuses in the future.

Specifically, the language of the settlement defines significant terms in a way that would allow Microsoft to make simple alterations in the way they provide software, such that they could conform to the letter of the settlement, while still engaging in monopolistic activities.

I urge the DOJ to carefully reconsider the settlement, and to resume the course it had pursued before: the breakup of the Microsoft corporation. At very least, impose significant fines (on the order of 40% of annual revenue) on the company and devote this money to programs to provide adequate competition to Microsoft.

Thank you,

From: Frank Jaffe
To: "microsoft.atr(a)usdoj.gov"
Date: 1/23/02 8:38am
Subject: Microsoft Settlement To Renata B. Hesse,

I am writing today to indicate my personal opposition to the Proposed Final Judgement of the Anti-trust case with Microsoft, exercising my rights as a private citizen under the Tunney Act. It is my understanding, that: "a remedies decree in an

antitrust case must seek to "unfetter a market from anticompetitive conduct," to "terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future." Microsoft, 253 F.3d at 103 (quoting *Ford Motor Co. v. United States*, 405 U.S. 562, 577 (1972) and *nited States v. United Shoe Mach. Corp.*, 391 U.S. 244, 250 (1968)) (citation omitted).

The above paragraph outlines four specific requirements for the remedies:

1. unfetter a market from anticompetitive conduct
2. terminate the illegal monopoly
3. deny the defendant the fruits of its statutory violation, and
4. ensure that there remain no practices likely to result in monopolization in the future

I believe that the wording and scope of the Proposed Final Judgement fail to achieve any of these four objectives. Specifically, while I understand that the antitrust case can only address the matters which were brought before the court, the settlement, in my opinion, fails to provide an adequate remedy for Microsofts abuses in numerous ways, including:

1. There is no remedy for consumers who have been harmed by Microsofts anticompetitive practices nor is Microsoft required to give back the unfair economic gains achieved by its illegal practices
2. The proposed remedies do not adequately address the damages done to the industry by Microsoft's practices
3. The proposed remedy does not adequately prevent continuing and future misbehavior by Microsoft, and
4. The proposed remedy does not address any of the innumerable additional anticompetitive practices Microsoft has undertaken during the course of the original trial period.

I am sure that expert legal commentators will be able to provide a much more in-depth analysis of the ways in which the Proposed Final Judgement fails to achieve the above objectives. I would like to focus primarily on objective four from the quote above.

Today, as I use my Microsoft Windows 2000 PC, I observe the following behaviors which I believe consitute anticompetitive practices and illegal bundling (binding) of products, none of which appear to be adequately addressed via the proposed settlement

1. Installing a browser also forces the installation of an email package (outlook express)
2. Upgrading a browser places additional Microsoft icons on my desktop
3. Using an email package launches and additional, unrelated program (using outlook express now requires microsoft messenger be running). Microsoft Messenger is also referred to as the MSN Messenger Service, tying the use of the Messenger to the Microsoft Network.
4. Using an email package requires obtaining an email address from Microsoft (since outlook express now requires microsoft messenger, and microsoft messenger requires a passport account which results in a hotmail email account)

5. Logging into certain Microsoft owned websites requires use of a Microsoft passport
6. Windows Update function only updates device drivers and Microsoft provided software, and often "recommends" installation of additional Microsoft components.

7. Installing an operating system (Microsoft windows) forces installation of additional components exclusively from Microsoft, such as Windows Media Player. There appears to be no legitimate argument for installing non-critical multimedia components as part of an operating system or upgrade installation, yet Windows Media Player is installed, and no other parties products are offered/included/ or installed in addition or instead.

8. Microsoft has released Windows XP which contains numerous additional examples of exclusive, anticompetitive bundling of services, along with a major push for the Microsoft .NET framework which provides further opportunities for Microsoft to lock in consumers.

9. Microsoft has eliminated or reduced support and ease-of-use for certain competitive functionality such as Java

10. While virtually every other aspect of computing continues to see rapid declines in price, Microsoft has increased the price, and reduced in certain key ways (such as dual processor support) the value of Windows XP as compared to previous releases. The outrageous pricing they have applied to upgrades to Windows XP, particularly from Windows NT and 2000 products, is a clear indication to me of their further abuse of their monopoly to price their products anticompetitively.

And the above list is only the items I am aware of or have encountered today, as an end-user of a Microsoft Product.

It seems to me, based upon Microsofts continuing egregious behavior, and the terms of the proposed remedies, that these remedies completely fail to achieve every single one the four required objectives outlined above. Therefore, as I previously stated, I oppose the settlement as outlined in the Proposed Final Judgement.

Thank you for your consideration.

Subject: Microsoft Settlement

I am writing to express my disapproval of the Microsoft settlement terms. The terms of this settlement seem to be too much in favor of Microsoft who, after all, was found guilty of misusing an ill gotten monopoly. Surely being found guilty of a crime of this magnitude deserves something more than a slap on the wrist, which this settlement appears to be for a company as large and as entrenched as Microsoft is. While I don't seek to punish Microsoft unnecessarily, I do believe that is in the best interest for consumers that the Microsoft stranglehold on the consumer PC be stopped, and not

allowed to spread to other areas of the computer business, including:

- Commercial Desktop
- Hardware
- Server class systems
- Gaming
- Cable Boxes
- Internet Content
- Internet Access
- etc.

Please don't allow this inexplicably light outcome for a company that has been shown to have so many monopolistic tendencies.

Respectfully,
Nathan Baxley

U.S. Citizen from Texas, working in Italy
Dear sirs,
I am writing this comment in accordance with the Tunney Act on the antitrust case against the Microsoft Corporation. Specifically, I am writing to express my disgust at the way the case has been handled since the change of administrations after the last U.S. presidential election.

I am quite unhappy that a convicted monopolist company that does business in my technical field has profited itself at the expense of other legitimate companies by aggressively excluding them from the "free" market. Multiple times I have watched economically healthy companies with innovative new products be completely squelched or forced to merge with other near-monopolist companies because Microsoft has taken their innovation, "incorporated" it into their operating system, and used their position in the desktop market to exclude the original innovative company from any share of the market. Furthermore, once Microsoft has accomplished this, they then claim that the innovation is now completely integrated into the operating system and to remove it would be catastrophic to their millions of customers.

While Microsoft spokespersons have repeatedly claimed that their company drives innovation, the reality I have seen on the technical side of the issue is that it is patently obvious that they would prefer to take others' innovations instead. This has a chilling effect on smaller software developers around the world, the sum total of whom innovate far more often than Microsoft and most other large companies. Allowing Microsoft to retain in toto the fruits of their monopolistic practices sends a message to other companies that their innovations will be stifled, and sends a message to large companies that they can freely trample the rights of others. I encourage you to revisit the penalty settlement and ensure that more stringent measures are taken.

Sincerely yours,
Charles B. Callaway, Ph.D.

I have read through the proposed settlement in this case and believe that the "remedy" offered will generally have no affect on Microsoft's business practices. If this court approves the settlement, it tacitly ignores 20 years of Microsoft acting in bad faith while laboring under previous conduct oriented settlements and court orders. A structural remedy is the only realistic solution for correcting Microsoft's pattern of anti-competitive behavior.

Subject: Microsoft Settlement
To Whom It May Concern,
I have been a software engineer for 6 years. I have been an avid computer user for about 20 years. I have used Microsoft's MS-DOS and Windows operating systems extensively during that time. And over that period of time, Microsoft has done many things that I consider unethical, whether they were all illegal or not.

Microsoft needs to be restrained since its anti-competitive practices have hampered the progress of computer technology. This is clear when looking at the fact that Microsoft operating systems have always lagged behind other operating systems in reliability, usability, and technical capability—and yet Microsoft operating systems have always dominated the business and consumer markets.

The primary specific acts which I find deplorable are Microsoft's attempts to

undermine competing technologies such as Java by duping developers into creating Windows-specific Java applications (through embrace-and-extend tactics), the use of monopoly power to manipulate OEMs, and propoganda letter compaigns in which they attempt to put words in the mouths of ordinary citizens in order to influence the outcome of this very antitrust suit.

The most recent formulation of the Microsoft settlement that I have seen does not restrain Microsoft in any substantial way. This will likely be true of any settlement that Microsoft agrees to. Microsoft is not interested in conforming with the law or with ethical standards or with furthering the common good. They exist only to exist. In addition, I agree with the main points of the open letter to the DOJ on this matter located at: <http://www.kegel.com/remedy/letter.html> and will be adding my name in support of it.

Date: 1/23/02 8:41am
Subject: Microsoft Settlement
To Whom It May Concern:

I wish to register my dissatisfaction in, and my objection to the tentative settlement reached between Microsoft and the US Department of Justice in the United States vs. Microsoft Corporation antitrust lawsuit. I am a computer scientist with over 20 years experience in the computer industry.

I find that the Proposed Final Judgement (PFJ) lacks sufficient provisions to prevent Microsoft from continuing its anticompetitive practices. Any successful Final Judgement must depend on very carefully crafted definitions of the industry specific terms used in the Final Judgement. The PFJ contains definitions of terms that differ in subtle but substantial ways from the Finding of Fact and in common usage; these definitions are apparently in Microsoft's favor.

While agreeing to the PFJ will cause Microsoft to slightly change its behaviour, there is sufficient "wiggle room" left by the definitions used in the PFJ to allow Microsoft to continue its anticompetitive practices while claiming that it is meeting the letter of the law.

There are other areas in which the PFJ inadequately addresses the grievances against Microsoft, for example:

1) it fails to cause Microsoft to adequately remove the so-called "Application Barriers to Entry" sited in the complaint,

2) it fails to adequately protect Independent Software Vendors (ISV) by requiring full disclosure of information that will allow ISVs to product competitive products,

3) it fails to adequately protect Original Equipment Manufacturers (OEMs) from retaliation if they choose to ship computer systems with non-Microsoft operating systems or applications.

Several alternative proposals have been created that adequately address many of the problems with the PFJ. I am certain that at least some of these alternatives have been brought to your attention. Please do not continue with the PFJ as it currently stands, but rather adopt the provisions of one or more of the alternate proposals (e.g. <http://www.kegel.com/remedy/letter.html>), which I believe better serves the public's interest in this matter.

Thank you for your consideration,
Michael Clark

To: Microsoft ATR
Date: 1/23/02 8:41am
Subject: Microsoft Settlement

I must say that I am deeply troubled by the proposed settlement the US Dept of Justice has proposed in respect to the current anti-trust case against Microsoft. The continued allowance of comingling of software with the Microsoft operating system causes me great concern. It has been impossible since the introduction of Windows 95 OEM SR2 to uninstall Internet Explorer from with Operating System. And now with the introduction of Windows XP, we see the forced installation of things such as Internet Explorer, MSN Messenger, and Outlook Express. The options AUTOMATICALLY get installed without the consumer having a choice in the matter at all. If Microsoft wishes to provide a SECOND CD with this software on it as an optional install then we may be able to see true competition restored, because then OEM manufacturers would

have the option to include CDs with AOL Instant Messenger, Netscape 6, Opera, Eudora and many other competing Internet products.

A true settlement that would be in the best interest of the American consumer would STRONGLY limit Microsoft's ability to comingle software in their operating system and would allow other software manufacturers to easily bundle their products with the Windows Operating System. To really level the playing field, I would strongly urge the Dept of Justice to demand that the Internet Explorer browser be taken away completely from Microsoft and made available as open source so that it can easily be ported to other operating systems. Sure, IE is available for the Macintosh platform as well as Windows, but key features such as VBScript are only made available in the Windows version. When we sites are coded in these IE proprietary features, people are forced to use a Microsoft operating system to view the pages and help extend Microsoft's monopoly power even further.

To remove IE from Microsoft and to allow it be ported to operating systems such as Macintosh, Linux, BSD, UNIX, BeOS, EPOC, PalmOS and all the other operating systems out there would help alleviate the current monopoly position of Microsoft.

Another major issue is the lack of full documentation of all the Microsoft programming APIs. Without full disclosure of ALL APIs for programming Windows software, Microsoft will ALWAYS have an advantage in writing software for their own operating system. Allowing Microsoft to have the inside track on its own APIs will allow them to build software will ALWAYS surpass its competitors in features.

And lastly, Microsoft licenses prohibit the use of Microsoft products against the company itself. The license to FrontPage 2002 (Microsoft's web development package) prohibits the owner of the product from being able to use the software to create a site that may make negative comments against Microsoft. Is this not a violation of my first amendment rights to free speech? Sure, I have a choice to buy another web development package, but if we allow comingling to continue, some day FrontPage could be part of the operating system and then it would be forbidden to use the operating systems itself to make negative remarks about the company.

Thank you for taking the time to read this. I feel the current settlement proposal is weak and would just allow Microsoft to maintain its monopoly power in the US.

From: Brian Kreulen
To: Microsoft ATR
Date: 1/23/02 8:41am
Subject: Microsoft Settlement

Dear Renata B. Hesse,

My name is Brian Kreulen, and though I live in France, I am an American citizen who feels very strongly about the current anti-trust trial against Microsoft. Under the

Tunney Act, I wish to comment on the Microsoft settlement's inadequacy in improving the competitive environment in the software industry. Some serious shortcomings relate to:

(1) Middleware

The current language in Section H.3 states "Microsoft Middleware Product would be invoked solely for use in interoperating with a server maintained by Microsoft (outside the context of general Web browsing)" does nothing to limit the company's ability to tie customers and restrict competition in non Web-based networked services under .NET, as they fall "outside the context of general Web browsing". Microsoft has already begun abusing its desktop monopoly to tie customers into .NET revenue streams and set up a new monopoly over the network.

Part 2 of the same section states "that designated Non-Microsoft Middleware Product fails to implement a reasonable technical requirement. . . ." essentially gives Microsoft a veto over any competitor's product. They can simply claim it doesn't meet their "technical requirements."

(2) Interoperability

Under the definition of terms, "Communications Protocol" means the set of rules for information exchange to accomplish predefined tasks between a Windows Operating System Product on a client computer and Windows 2000 Server or products marketed as its successors running on a server computer and connected via a local area network or a wide area network." This definition explicitly excludes the SMB/CIFS (Samba) protocol and all of the Microsoft RPC calls needed by any SMB/CIFS server to adequately interoperate with Windows 2000. Microsoft could claim these protocols are used by Windows 2000 server for remote administration and as such would not be required to be disclosed. The Samba team have written this up explicitly here: <http://linuxtoday.com/news-story.php3?tsn=2001-11-06-005-20-OP-MS>

(3) General veto on interoperability

In section J., the document specifically protects Microsoft from having to "document, disclose or license to third parties: (a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria"

Since the .NET architecture being bundled into Windows essentially builds "anti-piracy, anti-virus, software licensing, digital rights management, and authentication systems" into all levels of the operating system, ANY API, documentation, or communication layer can fall into this category. This means that Microsoft never has to disclose any API by claiming it's part of a security or authorization system, giving them a complete veto over ALL disclosure.

(4) Veto against Open Source

Substantial amounts of the software that runs the Internet is "Open Source", which means it's developed on a non-commercial

basis by nonprofit groups and volunteers. Examples include Apache, GNU/Linux, Samba, etc. Under section J.2.c., Microsoft does not need to make ANY API available to groups that fail to meet "reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business." This explicitly gives them a veto over sharing any information with open source development projects as they are usually undertaken on a not-for-profit basis (and therefore would not be considered authentic, or viable businesses). These concerns can be met in the following ways:

(1) Middleware: Extend middleware interoperability with a Microsoft server to ALL contexts (both within general Web browsing as well as other networked services such as are those being included under .NET).

(2) Interoperability: Require full disclosure of ALL protocols between client and Microsoft server (including remote administration calls)

(3) General veto on interoperability: Require Microsoft to disclose APIs relating to "anti-piracy, anti-virus, software licensing, digital rights management, encryption, or authentication systems" to all.

(4) Veto against Open Source: Forbid Microsoft from discriminating between for-profit and nonprofit groups in API disclosure. Thank you for taking the time to read through my concerns, and I hope you will see the need for change in the current proposal.

From: Joe Stevens
To: Microsoft ATR
Date: 1/23/02 8:52am
Subject: Microsoft Settlement

Just want to add my two cents to this Microsoft settlement. Having worked with graphics on computers since long before personal computers and Windows was around, I have seen a lot of good (and bad) programs come and go. And eventually they all went away as Microsoft used it's ever growing influence to force change out of the marketplace. I think they have used unethical and illegal practices to put competition out of business, leaving us with mediocre, insecure, OSs and programs. I think a remedy should be found that prevents them from continuing their practice, and in some way makes whole those who lost their businesses, companies, and livelihood from MS business practices.

Joe Stevens

photoart@delanet.com
Guidelines for a fair remedy:

Any remedy in a case that has been so clear-cut in its findings must be more assertive in its defence of consumer interests. Regardless of specifics, such a remedy must address the following:

1. Recurrence: Microsoft must not be able to continue to abuse its monopoly the way it has in the past.

2. Reimbursement: Microsoft has no right to retain the excess profits it has earned as a result of its illegal actions. This money should be repaid to the consumer.

3. Reparations: As Microsoft is responsible for the current uncompetitive market in operating systems and related applications, it must underwrite efforts to restore competition and consumer choice. The rest of the market should not have to pay to recover from Microsoft's abuses.

4. Reference: Microsoft must pay punitive damages over and above its reimbursement and reparations obligations, to serve as a warning to deter future monopolists. The remedy must in no case send out a signal that a large enough violator can get off lightly. Future tax dollars can be saved by discouraging abuses instead of having to prosecute them.

The DoJ is supposed to be acting on behalf of the consumer, and they must pursue a remedy that addresses all the above issues. For example, a remedy that required Microsoft, among other things, to only sell through channels that offer at least one other operating system, could address the reparations issue and break the structural forces perpetuating their monopoly (If an OEM requires training to support another operating system, Microsoft may be forced to subsidise such training).

The proposed settlement goes partway towards addressing the issue of recurrence, but does so only half-heartedly because it creates significant exceptions and loopholes for Microsoft to take advantage of. It completely ignores the other three issues. An impression is created that the DoJ is more sensitive to Microsoft's interests than to the interests of consumers who have been systematically robbed of both their choices and their money.

Therefore this proposed settlement must be rejected as not being in the public interest.

Ganesh Prasad

Well, Microsoft now appears to be exacting its revenge, leaning this time on the same letter of the old law to not only get a better deal, but literally to disenfranchise many of the people and organizations who feel they have been damaged by Microsoft's actions. If this deal goes through as it is written, Microsoft will emerge from the case not just unscathed, but stronger than before.

Here is what I mean. The remedies in the Proposed Final Judgement specifically protect companies in commerce—organizations in business for profit. On the surface, that makes sense because Microsoft was found guilty of monopolistic activities against "competing" commercial software vendors like Netscape, and other commercial vendors—computer vendors like Compaq, for example. The Department of Justice is used to working in this kind of economic world, and has done a fair job of crafting a remedy that will rein in Microsoft without causing undue harm to the rest of the commercial portion of the industry. But Microsoft's greatest single threat on the operating system front comes from Linux—a non-commercial product—and it faces a growing threat on the

applications front from Open Source and freeware applications.

The biggest competitor to Microsoft Internet Information Server is Apache, which comes from the Apache Foundation, a not-for-profit. Apache practically rules the Net, along with Sendmail, and Perl, both of which also come from non-profits. Yet not-for-profit organizations have no rights at all under the proposed settlement. It is as though they don't even exist.

Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: ". . . (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, . . . "

So much for SAMBA and other Open Source projects that use Microsoft calls. The settlement gives Microsoft the right to effectively kill these products.

Section III(D) takes this disturbing trend even further. It deals with disclosure of information regarding the APIs for incorporating non-Microsoft "middleware." In this section, Microsoft discloses to Independent Software Vendors (ISVs), Independent Hardware Vendors (IHWs), Internet Access Providers (IAPs), Internet Content Providers (ICPs), and Original Equipment Manufacturers (OEMs) the information needed to inter-operate with Windows at this level. Yet, when we look in the footnotes at the legal definitions for these outfits, we find the definitions specify commercial concerns only.

But wait, there's more! Under this deal, the government is shut out, too. NASA, the national laboratories, the military, the National Institute of Standards and Technology—even the Department of Justice itself—have no rights. It is a good thing Afghanistan is such a low-tech adversary and that B-52s don't run Windows.

I know, I know. The government buys commercial software and uses contractors who make profits. Open Source software is sold for profit by outfits like Red Hat. It is easy to argue that I am being a bit shrill here. But I know the way Microsoft thinks. They probably saw this one coming months ago and have been falling all over themselves hoping to get it through. If this language gets through, MICROSOFT WILL FIND A WAY TO TAKE ADVANTAGE OF IT.

Subject: Microsoft Settlement

Please take the time to examine all the details and facts in this case. Clearly, the timeliness of the result on the Windows 9x operating system is poor but it will direct the future of operating system development going forward for MS and those still trying to compete.

I can see that the MS model established for operating systems clearly has put the

Windows platform on top. There is nothing wrong with a company pursuing excellence in its" products and providing exemplary customer service to back them. This strategy has vaulted many firms to success in the past. But using strong arm tactics or any practice that breaks from ethical business operations should be discouraged at all levels.

After examining the evidence provided and staying abreast of current information in the technical field of computer technology, it appears to me that something should be done that will allow MS to write software and provide services but at the same time encourages others to develop along-side them. I am not in a position to make decisions that will impact this case but you can. I greatly appreciate your open mind and thorough approach to examining the facts concerning this and all cases before you. The people of the United States are depending on your completeness. Make the right decision and Americans will be proud and strong. Otherwise, we will become captives.

Regards,
Joe Anding

To: Microsoft ATR
Date: 1/23/02 8:42am
Subject: Microsoft Settlement-NO!

I vote NO! to the proposed Microsoft Settlement.

I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of it's competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted. Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

Dear Sir or Madam,
I have read the proposed Microsoft Settlement, and am NOT in favor of it, in its current state. The settlement does not, in any way, penalize Microsoft for its past infringements of the law.

For many years, OEMs have been under control of this corporation, and simply "formalizing" this law in a document is not enough. Microsoft has been declared guilty of past wrongs, and must now be held accountable in some measure.

The current proposed settlement is unacceptable.

Thank you for your time.

Subject: Microsoft Settlement

Sir or Madam,
I am writing this email in order to register my dissatisfaction with the proposed settlement in the U.S. vs Microsoft case. I work with Microsoft products on a daily basis, and am generally happy with their products, but the court has found that they have abused their monopoly position, and must be punished for their actions in order for competition to flourish. The settlement in its proposed state will not hamper Microsoft's business actions, and will not foster competition in the computer industry. Microsoft has hampered innovation since becoming a Monopoly, and our economy would be doing much better if there was competition, and Microsoft's illegal business practices were stopped. A review period and a promise to be a "good monopolistic company" did not work with the previous settlement with the U.S.D.O.J. and will not work in this situation. Without harsh penalties for repeated offenses, Microsoft will continue to hamper innovation in the computer industry.

Thank you for your time,

Subject: Microsoft Settlement

I am writing as a concerned citizen of the United States, and as a computer professional, to inform you of my opinion that the pending Microsoft Settlement is a bad idea. It does nothing to ensure that Microsoft will stop bullying OEM computer manufacturers into selling their computers with Windows as the only possible operating system, and forcing the end users to pay the price of that operating system. It also avoids forcing Microsoft to open up many key APIs for competing application developers to program against. This gives Microsoft a hand up in developing applications for the operating system (thus using their operating system monopoly to expand their application monopoly).

What I would suggest is that Microsoft's APIs be forced open—completely. If any changes are made to their APIs, they must be published. Also, contracts with OEMs stating that any computers sold must have a valid Windows licence should be banned so that OEMs will be free to sell their computers

with the operating systems of their customer's choice.

Thank you for taking the time to read this.

From: Marvel, Michael
To: "microsoft.atr(a)usdoj.gov"
Date: 1/23/02 8:42am
Subject: Microsoft Settlement

I'd like to comment on the proposed settlement between DoJ and Microsoft. I believe that Microsoft is abusing it's Monopolistic position in the marketplace. That is not going to change with a simple settlement. It is going to take some serious action on the governments part to correct Microsoft's business practices.

Microsoft is fond of saying that any action against them will stifle innovation, however, Microsoft uses it's Monopoly powers to stifle any innovation that could compete with it.

They also use this power to create unfair and controlling license agreements. They also add things like the Activation program in Windows XP. This program says that if I upgrade my computer significantly, as many computer professionals are prone to do, I have to call Microsoft and ask them to continue to use the software I purchased with my hard earned dollars.

It appears to me that the government is looking for an easy way out of this. But it is the governments job to do what is right for the people, not big business. What is right for the people in this case is to make Microsoft play on a fair playing field. They should not be able to use heavy handed tactics that they use now.

Thank you for your time.

This is my vote AGAINST the proposed settlement. It doesn't sufficiently remedy Microsoft's anticompetitive behavior. A healthy environment for innovation requires diversity in the marketplace—US consumers deserve the power of choice this diversity would provide.

From: John Christie
To: Microsoft ATR
Date: 1/23/02 8:45am
Subject: Microsoft Settlement
To Whom It May Concern,

The proposed settlement with Microsoft is a bad idea. At no time in history has the DOJ so clearly shirked its duty as in this case of a world power monopolist who repeatedly, and without remorse or conscience, egregiously extends that monopoly illegally.

I was prompted to write today as I overheard others arguing the case. While I was listening I noticed that those who are in favor of harsh penalties to Microsoft seemed to have a hard time coming up with specifics on what the monopoly has really cost America. The only rebuttals seem to be, "It cost competition in the marketplace, which would surely have made things better somehow." Unfortunately, that somehow is poorly defined. But, it needn't be that way.

Imagine there was competition in the software marketplace. . . Now, think of all of the little things every day that you put up with in Microsoft products that you do not like but feel that you have to live with—every time something have happened and you said, "what are you going to do?" That file is incompatible? my computer crashed! What, another virus! Why is this so slow! Why isn't there an easier solution? You want how much to update Windows! What do you mean I don't own the software!

The list of things that bother Americans day to day here is probably rather extensive. If there were real competition how long do you believe that these problems would last. Or, consider a corollary, imagine if Ford had a world wide monopoly in the automobile market from very close to its inception, and that it was free to extend and maintain that monopoly any way it wished. Does anyone really believe that we would have moved much beyond the Model T?

In addition, there are some real costs that one can assign to this monopoly. Every time you hear on CNN of a Microsoft security hole that cost America 10's of millions of dollars, you can blame the monopoly. Every time there is a virus that chews up millions of hours of labor and internet bandwidth, feel free to blame the monopoly. Every notice about a cost to America for some computing defect that is extremely widespread should cause every American to raise a finger and

point it at Microsoft. Would we be putting up with any of this if it were not a monopoly? Would we feel technologically helpless if it were not an illegally enforced and extended monopoly?

Microsoft made over 2 billion dollars last quarter. With that money they could have afforded to clean up all of the security and virus messes they made over the three months. But, they have no accountability on top of being a monopoly. Imagine Ford saying to America, "if you have a problem with the Firestone tires just go get different ones, we can't be responsible for these kinds of things."

Microsoft's monopoly has provided political power as well as commercial. Please enforce the Sherman Act to the fullest against this company. There will be no joy in Mudville until that occurs.

John Christie

Hello. I am against the Proposed Final Judgement against Microsoft. While there appears to be numerous flaws in the overall Judgement, I am particularly concerned that there are no provisions to either require Microsoft to document their file formats (like .doc, .xls, and .wmp) or require them to use open standards based formats (like XML).

As a person who regularly communicates with Microsoft customers, this is the most frustrating aspect of the Monopoly. . . Their proprietary formats essentially close off conversations and information from Non-Microsoft users.

Subject: Microsoft Settlement

Dear Sirs,

I would like to express my objections to the currently proposed settlement with Microsoft.

I believe the settlement is ineffective, and of little worth.

Some examples are:

Section III.A.2 which allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. I prefer to buy computers without Microsoft products on them and don't think I should be penalized for this.

Section III.b which requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs.

I prefer to deal with smaller OEMs, and support small businesses. A small OEM owned by a friend was told by Microsoft that if they wanted to license Windows at the lowest (and therefore competitive) price, they must sell Windows on every Personal Computer they sold, and could not sell any other operating system. This OEM has since gone out of business.

These are just two from a large list of complaints. Please re-consider this settlement!

Thank you,
Chris Beachy

For decades Microsoft has used its power over OEMs to force substandard products into the marketplace and assure their dominance. It has been proven that Microsoft abuses its monopoly power to crush potential competitors.

What is needed is a remedy that addresses this behavior of Microsoft's and stops it. We definitely should not reward Microsoft or look the other way.

Subject: Microsoft Settlement

Since Microsoft has been found by the court to have a monopoly and to have illegally used its monopoly status, a finding which has been upheld on appeal, I feel it would be remiss not to have a final judgement that sanctions Microsoft for this behavior and applies real restrictions against its conducting similar behavior in the future. As has been shown in Microsoft's responses to previous judgements against it (the 1994 consent decree in particular), Microsoft can't be trusted to abide by any agreements it enters into without intensive oversight. Indeed, Microsoft's behavior since the findings of fact in this case were handed down clearly show its intent to ignore the court's decisions.

I think a proper final judgement would require Microsoft to publish the complete specifications to all the APIs (application programming interfaces) to all its products and the complete specifications to all its heretofore proprietary data formats, and would enjoin Microsoft from making any changes to those formats without publishing those changes in the same manner. This would not require Microsoft to release its "crown jewels," the source code of its products, but would give other vendors a much better chance of competing with Microsoft on a level playing field.

Subject: Microsoft Settlement

The fact that Microsoft should be allowed to continue to utilize proprietary and undocumented file formats in its programs is the major issue I have with the proposed settlement. Were the file formats open and "honest", other organizations (companies, or even clubs, hobbyists, and schools) would be able to build new and potentially groundbreaking products building off an existing base, and give other companies a chance to interoperate with Microsoft's.

As things stand, the massive market share held by Microsoft in the OS arena represents a gigantic barrier to entry preventing any other new business-related software from gaining a foothold in the market, which is rotten for consumer choice, and rotten for innovation.

Dear Ms. Hesse:

I am writing to express my concern about the clear inadequacy of the proposed final judgment in the Microsoft case. As a software engineer and consultant, I would like to offer my customers the widest possible choice of compatible operating systems and file formats on which to run our tools, but the restrictive licensing of the Microsoft Platform SDK, whose EULA asserts:

"Distribution Terms. You may reproduce and distribute . . . the Redistributable Components. . . provided that (a) you distribute the Redistributable Components only in conjunction with and as a part of your Application solely for use with a Microsoft Operating System Product. . . " makes this impossible. Equally serious, the file format of Microsoft Word, with which our requirements management tool interoperates, is closed and proprietary, which prevents us from building a cross-platform integration with Word files for open-source operating systems even if the EULA permitted it.

There are many other necessary elements missing from the proposed final judgment: the summary at <URL: <http://www.kegel.com/remedy/remedy2.html#isv.oss> > is quite good. I urge you to immediately reconsider the settlement.

Very truly yours,
 Joshua W. Burton

 Subject: Microsoft Settlement

To whom it may concern:

I am writing to comment upon the proposed final settlement to the Microsoft antitrust trial. I understand that under the Tunney Act, the court is required to consider public commentary before ruling on the settlement.

I do not believe the proposed settlement is sufficient to prevent Microsoft from continuing its illegal practices. The settlement, to my reading, does not prevent Microsoft from pursuing de facto dominance in areas unrelated to the computer software and enterprise desktop industry. One particularly troubling instance of this is Microsoft's push to encourage record companies to use Microsoft's proprietary Windows Media format. Already, Universal has released CDs with the digital music encoded in Windows Media format, thus making them unusable to people without the Windows Operating System. This behavior is of the sort that the Sherman Antitrust Act was designed to prevent, yet the settlement in this case does not explicitly forbid it.

Please rectify this and any other shortcomings in the settlement or even better, prosecute Microsoft fully for their continued violations of antitrust law.

Sincerely,
 Brent Neal

I sincerely believe that this settlement is not in the best interest of the American people for there is a lack of means of enforcement. Microsoft had already been tried and found guilty of unlawful monopolistic actions even though there were restrictions set on their behaviour. Microsoft believes that they are above the law, that they can just buy their way and once they are found guilty after years and years of trial the settlement is one they can very easily break, just like the last one. We need a punishment that can and will be enforced.

From: Shawn Hooton
To: Microsoft ATR
Date: 1/23/02 8:44am
Subject: Microsoft Settlement

Dear Sirs:

I am writing to give my comments on the Microsoft antitrust settlement. I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation.

Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

MTC-00015319

From: Vernon.Nemitz@JTAX.com@inetgw
To: Microsoft ATR
Date: 1/23/02 8:49am
Subject: Microsoft Settlement

Hello.

Over the years I have observed Microsoft's strategy to become what it is today.

One part of that strategy is to "borrow" ideas from others, modify them very slightly, and then claim legal ownership. For example, the basic ideas for the "windowing" environment, in which a person interacts with a computer, seems to have originated at Xerox, were copied by Apple, and copied again by Microsoft. Today one about-to-be competitor is nearly ready to release a "windowing" environment called "Lindow", but Microsoft is interfering by claiming it owns the concept, and has filed a lawsuit. (Neither does it own the word "Windows", because there are plenty of companies that include it in their name, and which have been in business much longer

than Microsoft. See <http://www.andersenwindows.com> for example) Which is more obscene: Microsoft's actions, or the Justice Department's failure to make Microsoft stop?

As another example of the preceding, there were rumors circulating that part of the "increased stability" of Microsoft Windows Operating System came from copying code written for the Linux Operating System. The legalese surrounding Linux require that such code be made public. Meanwhile, Bill Gates was making speeches to the effect that such legalese stifled innovation. If the rumors are true, then the implication is that Bill Gates' definition of "innovation" is that of copying the work of others, and then claiming ownership, as already described.

Where in the proposed settlement is anything to prevent such "innovation"? Another part of Microsoft's strategy is to modify its Operating System. Advertised as "adding improvements", it is only partly true. As a programmer I know full well that the Operating System is what loads and executes the ordinary software "application" that the average person might want to interact with, such as a word-processor, game, e-mailer, etcetera. In almost every case, an "application" program must work with the Operating System, or it will not work at all.

Well, since Microsoft sells both Operating System and application software, it is very easy for Microsoft to plan ahead by "modifying" its Operating System to cause competitor applications to no longer work right. Meanwhile, simply by not telling the competition that a modification is in the works, it can equivalently modify its own application software, so that it will continue to work right. Then, when the "new and improved" Operating System is released, Microsoft can also release "improved" application software, that works with the new Operating System, while all the competitors have to play catch-up, to fix the glitches deliberately introduced by Microsoft.

That is the nutshell-description of what happened to Netscape, Word Perfect, Lotus, Ashton-Tate, Borland, Corel, and other large software houses, because they were never allowed a chance to be "in" on forthcoming changes to Microsoft's latest-and-greatest Operating System (regardless of version). The preceding is how Microsoft came to monopolize the desktop computer. The courts have judged that Microsoft does indeed have monopoly status and power. But the proposed settlement does nothing to prevent Microsoft from continuing to implement its overall strategy, which is the basis behind that status and power.

If you would please recall that the intent of the Sherman Anti-Trust Act is to increase competition in the marketplace, and ask yourself if the proposed settlement in the Microsoft case acts to fulfill that intent, then perhaps you would conclude, as I conclude, that the proposed settlement is worthless—except to Microsoft.

Subject: Microsoft Settlement

This settlement is bad for me both as a consumer and as a computer professional. It has been clear for years (to people in the computer industry) that Microsoft has had monopoly power and has repeatedly used it to bend others to their will. In addition, when the company that holds the monopoly also happens to have a history of some of the buggiest, least secure software ever produced, this is surely a bad thing for our country and our economy.

Sincerely,
Robert Chastain

MTC-00015323

From: Sweeney Jr., John E.
To: "microsoft.atr(a)usdoj.gov"
Date: 1/23/02 8:50am
Subject: Microsoft Settlement

To whom it may concern:
I am writing this letter so that my comments on the Proposed Final Judgement in the Microsoft anti-trust case will be recorded in the public record under the Tunney Act. I am originally submitting this letter as email, with a print copy to follow.

As a consumer of computing products, and a worker in the I.T. industry, I have paid close attention to this case, as I am one of millions of consumers that have been harmed by Microsoft's business practices. After watching several years of legal maneuvering, I am extremely disappointed with the terms of the settlement that has been reached. My reasons are as follows:

The PFJ does not address Microsoft's long-standing strategy to maintain and enhance its monopoly position by imposing restrictive

licensing and pricing practices on OEMs who sell Windows-equipped computers. For instance, Microsoft gives discounts on bulk Windows licenses to OEMs based on sales of unrelated Microsoft products, such as Office. They also can penalize OEMs who sell computers pre-installed with competing operating systems, and their licensing terms prevent sales of computers equipped to dual-boot both Windows and a competing system. This hinders consumers who may choose other products, both by reducing the market availability of those products, and substantially increasing the cost to acquire them. The PFJ does not address Microsoft's long-standing strategy to maintain and enhance its monopoly position by breaking compatibility with competing products. It makes gestures in that direction, by supposedly requiring Microsoft to publish its secret Windows APIs, but then it narrowly defines API, and provides several loopholes so that many important ones need not be disclosed, hindering competitors from being able to design competing, yet compatible products. Furthermore, the disclosure of Windows APIs isn't required until AFTER the deadline for ISVs to demonstrate that competing middleware is compatible. It also doesn't require Microsoft to disclose which APIs are covered by patents it holds, leaving Windows-compatible systems in and uncertain state of legality, which could deter otherwise interested consumers from using them, while if such disclosure were required competing systems could be designed which don't infringe on those patents. Finally, the PFJ does not require Microsoft to release documentation on the format of various output files it's programs create (such as the Word .doc file format, or Excel .xls file format), making it difficult for competitors to design compatible products, and when they do, making it easy for Microsoft to once again subtly change the format so that the competing product doesn't work correctly, and consumers are forced into another costly upgrade cycle.

In addition to these deficiencies, the PFJ as it is currently written does not even appear to be enforceable. There is no mechanism to insure that Microsoft will be forced to comply with its provisions and no penalty for disregarding them (although why it would wish to, since the PFJ allows the company to continue abusing the computing public for its own financial gain with almost no real hindrances, is anyone's guess)

I urge the judge to deny this PFJ and order the DOJ to either propose a new settlement (with some teeth, this time), and quickly, or to continue with the trial. While the object is not to punish Microsoft unnecessarily, the fact remains that the company is guilty of illegal maintenance of a monopoly, and the Final Judgement in this case should end Microsoft's ability to maintain it further. As the PFJ is currently written, it does nothing of the sort

From: steven@localhost.localdomain@inetgw
To: Microsoft ATR
Date: 1/23/02 8:52am
Subject: Microsoft Settlement

I wish to register my emphatic disagreement with the proposed settlement. From my reading, the settlement does nothing to restore a competitive environment, does nothing to punish Microsoft for past misconduct, and provides no assurances that Microsoft's behaviour will be constrained in the future. There is far too much history of evasion for me [or any rational person] to accept this settlement as effective.

Thanks for your consideration

From: Eric Merritt
To: Microsoft ATR
Date: 1/23/02 8:53am
Subject: Microsoft Settlement

Dear Sirs,
I have a few issues with the Microsoft Antitrust resolution and I am taking this opportunity to voice them.

Section III.H.3. of the PFJ requires vendors of competing middleware to meet "reasonable technical requirements" seven months before new releases of Windows, yet it does not require Microsoft to disclose those requirements in advance. This allows Microsoft to bypass all competing middleware simply by changing the

requirements shortly before the deadline, and not informing ISVs. In this case, this section is no solution at all. It is simply a way for Microsoft to justify its anticompetitive practices by saying it is conforming to the PFJ.

Section III.D. of the PFJ requires Microsoft to release via MSDN or similar means the documentation for the APIs used by Microsoft Middleware Products to interoperate with Windows; release would be required at the time of the final beta test of the covered middleware, and whenever a new version of Windows is sent to 150,000 beta testers. But this information would almost certainly not be released in time for competing middleware vendors to adapt their products to meet the requirements of section III.H.3, which states that competing middleware can be locked out if it fails to meet unspecified technical requirements seven months before the final beta test of a new version of Windows. Once again the same issues as above. The PFJ's overly narrow definitions of "Microsoft Middleware Product" and "API" means that Section III.D.'s requirement to release information about Windows interfaces would not cover many important interfaces.

ISVs writing competing operating systems as outlined in Findings of Fact (52) sometimes have difficulty understanding various undocumented Windows APIs. The information released under section III.D. of the PFJ would aid those ISVs—except that the PFJ disallows this use of the information. Worse yet, to avoid running afoul of the PFJ, ISVs might need to divide up their engineers into two groups: those who refer to MSDN and work on Windows-only applications; and those who cannot refer to MSDN because they work on applications which also run on non-Microsoft operating systems. This would constitute retaliation against ISVs who support competing operating systems.

No part of the PFJ obligates Microsoft to release any information about file formats, even though undocumented Microsoft file formats form part of the Applications Barrier to Entry (see "Findings of Fact" 20 and 39).

Section III.I of the PFJ requires Microsoft to offer to license certain intellectual property rights, but it does nothing to require Microsoft to clearly announce which of its many software patents protect the Windows APIs (perhaps in the style proposed by the W3C; see <http://www.w3.org/TR/2001/WD-patent-policy-20010816/#sec-disclosure>). This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users, as illustrated by this report from Codeweavers, Inc.:

When selecting a method of porting a major application to Linux, one prospect of mine was comparing Wine [a competing implementation of some of the Windows APIs] and a toolkit called "MainWin". MainWin is made by Mainsoft, and Mainsoft licenses its software from Microsoft. However, this customer elected to go with the Mainsoft option instead. I was told that one of the key decision making factors was that Mainsoft representatives had stated that Microsoft had certain critical patents that

Wine was violating. My customer could not risk crossing Microsoft, and declined to use Wine. I didn't even have a chance to determine which patents were supposedly violated; nor to disprove the validity of this claim. The PFJ, by allowing this unclear legal situation to continue, is inhibiting the market acceptance of competing operating systems.

The PFJ prohibits certain behaviors by Microsoft towards OEMs, but curiously allows the following exclusionary practices:

Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. Section III.B. requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs, including important regional "white box" OEMs, if they offer competing products.

Section III.B. also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft Office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software or ARM-compatible operating systems.

By allowing these practices, the PFJ is encouraging Microsoft to extend its monopoly in Intel-compatible operating systems, and to leverage it into new areas. Sections III.F. and III.G. of the PFJ prohibit certain exclusionary licensing practices by Microsoft towards ISVs.

However, Microsoft uses other exclusionary licensing practices, none of which are mentioned in the PFJ. Several of Microsoft's products" licenses prohibit the products" use with popular non-Microsoft middleware and operating systems. Two examples are given below.

The Microsoft Windows Media Encoder 7.1 SDK EULA states . . . you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. "Publicly Available Software" means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models . . . Publicly Available Software includes, without limitation, software licensed or distributed under any of the following licenses or distribution models, or licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (SCSL); . . . Many Windows APIs, including Media Encoder, are shipped by Microsoft as add-on SDKs with associated redistributable components. Applications that wish to use them must include the add-ons, even though they might later become a standard part of Windows. Microsoft often provides those

SDKs under End User License Agreements (EULAs) prohibiting their use with Open Source applications. This harms ISVs who choose to distribute their applications under Open Source licenses; they must hope that the enduser has a sufficiently up-to-date version of the add-on API installed, which is often not the case. Applications potentially harmed by this kind of EULA include the competing middleware product Netscape 6 and the competing office suite StarOffice; these EULAs thus can cause support problems for, and discourage the use of, competing middleware and office suites. Additionally, since Open Source applications tend to also run on non-Microsoft operating systems, any resulting loss of market share by Open Source applications indirectly harms competing operating systems.

The Microsoft Platform SDK, together with Microsoft Visual C++, is the primary toolkit used by ISVs to create Windows-compatible applications. The Microsoft Platform SDK EULA says: "Distribution Terms. You may reproduce and distribute . . . the Redistributable Components. . . provided that (a) you distribute the Redistributable Components only in conjunction with and as a part of your Application solely for use with a Microsoft Operating System Product. . . ." This makes it illegal to run many programs built with Visual C++ on Windows-compatible competing operating systems.

By allowing these exclusionary behaviors, the PFJ is contributing to the Applications Barrier to Entry faced by competing operating systems.

The PFJ places restrictions on how Microsoft licenses its products to OEMs, but not on how it licenses products to large users such as corporations, universities, or state and local governments, collectively referred to as "enterprises". Yet enterprise license agreements often resemble the per-processor licenses which were prohibited by the 1994 consent decree in the earlier US v. Microsoft antitrust case, in that a fee is charged for each desktop or portable computer which could run a Microsoft operating system, regardless of whether any Microsoft software is actually installed on the affected computer. These agreements are anticompetitive because they remove any financial incentive for individuals or departments to run non-Microsoft software.

MSNBC (a subsidiary of Microsoft) offers software called NewsAlert. Its EULA states "MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of the operating system for which the SOFTWARE PRODUCT was designed [e.g., Microsoft Windows(r) 95; Microsoft Windows NT(r), Microsoft Windows 3.x, Macintosh, etc.]. . . ." Only the Windows version appears to be available for download. Users who run competing operating systems (such as Linux) which can run some Windows programs might wish to run the Windows version of NewsAlert, but the EULA prohibits this.

MSNBC has a valid interest in prohibiting use of pirated copies of operating systems, but much narrower language could achieve the same protective effect with less anticompetitive impact. For instance,

"MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of Microsoft Windows or compatible operating system."

An episode from the 1996 *Caldera v. Microsoft* antitrust lawsuit illustrates how Microsoft has used technical means anticompetitively.

Microsoft's original operating system was called MS-DOS. Programs used the DOS API to call up the services of the operating system. Digital Research offered a competing operating system, DR-DOS, that also implemented the DOS API, and could run programs written for MS-DOS. Windows 3.1 and earlier were not operating systems per se, but rather middleware that used the DOS API to interoperate with the operating system. Microsoft was concerned with the competitive threat posed by DR-DOS, and added code to beta copies of Windows 3.1 so it would display spurious and misleading error messages when run on DR-DOS. Digital Research's successor company, Caldera, brought a private antitrust suit against Microsoft in 1996. (See the original complaint, and Caldera's consolidated response to Microsoft's motions for partial summary judgment.) The judge in the case ruled that "Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft." That case was settled out of court in 1999, and no court has fully explored the alleged conduct. The concern here is that, as competing operating systems emerge which are able to run Windows applications, Microsoft might try to sabotage Windows applications, middleware, and development tools so that they cannot run on non-Microsoft operating systems, just as they did earlier with Windows 3.1.

The PFJ as currently written does nothing to prohibit these kinds of restrictive licenses and intentional incompatibilities, and thus encourages Microsoft to use these techniques to enhance the Applications Barrier to Entry, and harming those consumers who use non-Microsoft operating systems and wish to use Microsoft applications software.

Please do not allow this PFJ as it is currently worded

Subject: Microsoft Settlement

As a programmer since 1992 and a web developer since 1995, I want to add my voice to the list of folks who feel Microsoft has continually abused its monopolistic position in the software industry. I feel the current settlement gives Microsoft too many opportunities to undermine the free software movement. Free software is a learning tool for current and future programmers as well as a venue for sharing knowledge resources.

It's also important that there be other sources for software, as Microsoft has continually shown that user security is a low priority to them. This is witnessed by all the virus alerts last year due to "Sircam", "Code Red", "I Love You" and many other viruses and trojan attacks that targeted the large

security leaks in Microsoft Outlook and the Windows operating system.

It also amazes me that no penalties have been levied against Microsoft considering their many past abuses and the financial resources that they have.

It appears that they have violated the spirit of many previous agreements and as there is no penalty for these violations, what is there to send a message about possible future violations. What is to keep them from future abuses and monopolistic behaviour? Why would they even care about this settlement if it has no "teeth"?

As Thomas F. Reilly, attorney general of the Commonwealth of Massachusetts said, "The Microsoft case always has been about simple, American principles: opportunity, competition, and fair play. Our economy is built on those principles. The future of high technology demands that we fight for them."

Because of the importance of this, the case should not end without a remedy that restores competition.

Subject: Microsoft Settlement

To whom it may concern:

Since the start of this case Microsoft has not changed it's business practices and several new complaints have been made against this defendant. From the standpoint of a consumer, Microsoft has always dominated the marketplace for PC operating systems as well as many markets for other software products. The claim by Microsoft that some of the proposed remedies would stifle innovation is in my opinion false. As a computer technician, I work with Microsoft products on a daily basis and can assure you that Microsoft is not the innovator it claims to be. Had this defendant not abused it's position in the marketplace, the market itself would of forced actual innovation, as well as fair competition resulting in a greater number of products, and competitors in the marketplace.

Subject: disagree with Microsoft settlement

To Whom it May Concern, I must disagree with the Dept of Justice settlement in the Microsoft anti-trust case. While I don't feel the agreement appropriately addresses the issue of Microsoft's misconduct, my primary objection is that the agreement lets Microsoft pay their penalty "in kind" by donating software and technical support. Since Microsoft themselves establish the price tag for what the software and support are worth, the agreement basically just says Microsoft has to pay a fine and get to determine how much that fine will be. They have the money; if they want to pay off their debt by helping schools, make them do it with cash. The agreement as it stands is simply a concession

to Microsoft on the order of just putting a black star in the book next to their name. If they are indeed guilty of the unfair practices they've been charged with, that's not enough.

Hello,

I find the current settlement with Microsoft to be very light considering their crimes. A fair settlement would force Microsoft to break-up into an OS company and a software company. Also, a government body must be formed to oversee all API releases and the settlement itself must force MS to releave everything about its OS in regards to APIs for the next 5 to 10 years.

The newly formed second company must release all of its Office file formats to the point where a third-party can create, edit, and read these formats just as well as the current Microsoft can. Again, a government accounting body should oversee this for at least the next 5 to 10 years.

Subject: Problems with the Proposed Final Judgement [Submitted by email to microsoft.atr@usdoj.gov]

22 January 2002
Renata B Hesse
Antitrust Division
U.S. Department of Justice
601 D Street NW
Suite 1200
Washington, DC 20530-0001

I appreciate the chance to write to you regarding the proposed final judgment in *US v. Microsoft*, currently before the public for comment. There are many serious problems with the proposed final judgment, which by itself is insufficient to "terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future" (p.99 of the Court of Appeals ruling). To save space, I shall focus on only one issue here, the disclosure of undocumented interfaces to promote competition on the desktop.

The parties have agreed that Microsoft must disclose the details of their application programming interfaces (API) so that software authors can write new "middleware" that works correctly alongside

Microsoft software on the desktop. However, Section III.D of the proposed judgment places arbitrary and undue restrictions on the recipients of this information. For example, they must be commercial concerns, and specific kinds of commercial concerns at that: ISVs, IHVs, IAPs, ICPs, or OEMs. They would be unable to use the APIs to reduce Microsoft's monopoly power in innovative ways that exceed the extremely limited technical scope of the Judgment (for example, by promoting the ability of endusers to run Microsoft applications atop non-Microsoft operating systems).

To constitute an effective remedy to monopoly, a better settlement would require Microsoft to simply open the Windows APIs (though not their proprietary source code that implements those interfaces) as well as their application file formats (though not their proprietary source code that reads and writes those formats) for the unrestricted inspection of the public at large.

Opening up more APIs to the public would have been the least unpleasant and most direct means to open up the Windows desktop for competition, by lowering the artificial barriers to entry for competing middleware applications and operating systems (including those written by individuals, not-for-profits, and for-profit companies not currently covered by Section III.D).

Thank you for your time.

From: Anthony, Jude J (N-SAIC)
To: 'microsoft.atr(a)usdoj.gov'
Date: 1/23/02 8:54am
Subject: Microsoft Settlement

To Whom It May Concern: This message is my comment to the United States v. Microsoft case, which the court is required to consider under the Tunney Act. I find the Proposed Final Judgement (henceforth the judgement) in the United States v. Microsoft case to be unacceptable. I believe the judgement is too narrow, as it addresses only particular versions of Microsoft's operating systems. I further find that the judgement does not include any means of enforcement.

While I find many other provisions of the judgement to be unsatisfactory, I wish to specifically protest Section III.A.2, which allow Microsoft to retaliate against OEMs that ship PCs with an operating system other than Microsoft's, and Section III.B, which allows Microsoft to discount products to OEMs based on their volume sales of other products. I find Section III.A.2 to be anticompetitive, and Section III.B monopolistic. Both these provisions are offensive when Microsoft's past behavior, and the finding of fact that Microsoft is a monopoly, are taken into account.

Thank You,
Jude Anthony

From: Fader
To: Microsoft ATR
Date: 1/23/02 8:36am
Subject: Microsoft Settlement

To whom it may concern: I am writing in regards to the proposed settlement in the

Microsoft antitrust trial. I am a recently graduated computer programmer, working in Beckley, WV.

I do not feel that the proposed settlement truly addresses the anticompetitive actions that Microsoft has taken. Speaking for myself, at the moment, I know better than to even try to write a new, unique piece of software. If I write a program that competes with a Microsoft product, they will drive me out of business by integrating their product into their operating system, something I cannot do without access to their source code. If I write a program that adds new functionality, they will quickly write a knockoff version of my product and again integrate it with their operating system. This is not mere paranoia, and this behavior has not stopped since the trial. Ask Kodak, who invested a great deal of time and money into creating digital camera software to work with Windows. They worked closely with Microsoft, and were quite happy—until Windows XP came out, and Microsoft had included a product that mirrored what Kodak had written integrated with the operating system. This is just one example out of many. This trial has implications far beyond Microsoft and Netscape. I know many developers who feel the same way that I do. We are afraid to innovate, because our hard work will be stolen or driven into the ground.

Thank you, and I hope you will do the right thing and reexamine this settlement.

Sincerely,
Ronald McCollam II

From: Barry A. Warsaw
To: Microsoft ATR
Date: 1/23/02 8:54am
Subject: Microsoft Settlement

The proposed Microsoft settlement with the US Department of Justice is a bad settlement, and would hurt consumers and the software industry. It would reduce the amount of choice that consumers have and actually increase and extend the monopoly held by Microsoft. As one example of the problems, the Proposed Final Judgement (PFJ) does not prohibit discriminatory practices in Microsoft licenses. Microsoft's End User License Agreement (EULA) prohibits uses of add-on software and services on competing, Microsoft-compatible operating systems. Such systems (e.g. Macintosh and Linux) are technically able to operate in a compatibility mode that allows software such as Microsoft Office, to run on non-Microsoft operating systems, however the standard license agreements on Office prohibit this. This is only one of the scores of problems with the PFJ. I urge you to reject the PFJ and to re-negotiate settlement terms that actually address the known monopolistic practices of Microsoft.

Sincerely,
Barry A. Warsaw

Dear Sirs,

I ask you to please not accept the current Microsoft settlement. In its current state, it does nothing to keep Microsoft from keeping its monopoly.

The only way to create fair competition is to force Microsoft to open their file formats, protocols and APIs. This would not force them to open up their source code. It would allow others to write competing software that fully integrates with Microsoft products.

Thank you,
Nathan Lenz

MTC-00015338

From: Jim Gruen
To: Microsoft ATR
Date: 1/23/02 8:55am
Subject: Microsoft Settlement

Dear U.S. Department of Justice,

As a student of computer science with 15 years of experience in the computing field, I felt that I should notify you of my concern with the proposed government settlement with the Microsoft Corporation. As highlighted by Dan Kegel's comments (<http://www.kegel.com/remedy/letter.html>), the proposed settlement will achieve little to restore a healthy and competitive environment in the computing field. Microsoft is not bad because it is a large corporation, but rather because of the startling effects, both economic and social, of its anticompetitive measures. Microsoft Corporation, as proven in the antitrust trial, has taken extreme steps to squelch any competition. This in turn has extended a more fearful consequence: Microsoft's brute dominance over the computing field has taken away much of that field's glamour, deterring many intelligent people from pursuing the study of computing. This indeed has resulted in the stifling of the computing technology of our country. If much stronger action is not taken against the Microsoft Corporation, there can be little hope for our country's technological environment.

MTC-00015340

From: Hill-Popper, Carl R.
To: Microsoft ATR
Date: 1/23/02 8:55am
Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides

adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition. Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time,
Carl Hill-Popper
