As an everyday computer user, I feel that the proposed Microsoft settlement is not enough. The settlement will continue to allow Microsoft to develop a platform and business model prohibits the existence of competition. Without competition, computer hardware and software would simply fail to improve and continue to be insecure and unstable.

Microsoft, despite having 90% of the computer operating system market continues to fail to innovate and significantly improve their products. By allowing Microsoft to continue to have a closed source platform (Windows), Microsoft can continue this trend, ultimately slowing the improvement of computer software. Microsoft's control over the computer software market has grown much too powerful. Competition stands no chance... THIS IS A MONOPOLY. Microsoft is breaking the law, and their profits are a result of their illegally anti-competitive business model. The proposed settlement needs to be improved and changed, or else Microsoft's illegal actions will continue. Count me in on the growing list of individuals whom are not content with the proposed settlement decision.

Thank you,
Zach Borgerding

Subject: Microsoft Settlement

Hello, I'd just like to add my comments to the proposed settlement. As a longtime Macintosh system administrator, I have firsthand experience with the frustration of trying to get my systems to interlock with Microsoft software. Through the use of

proprietary formats and secret APIs, Microsoft has successfully prevented Macintosh users from reading its audio and video formats, opening and editing its document formats, accessing Windows-based network storage, and generally getting anything done without the use of software expensively supplied and infrequently updated by Microsoft itself. Based on my work in the field, I concur wholeheartedly with those who argue that the proposed settlement contains artificial restrictions that will effectively castrate it. I would urge you to at the very least reconsider your definitions of "Windows" and "API" to make them useful and to require Microsoft to publish the format of its MS Office products for all current and future versions of the program.

Regards,
Colin Cannell

Breaking up Microsoft won't do anything. They are a computer company. They are distributed by nature.

Breaking up Microsoft will only force upper management to communicate. Do your research. MS wanted Dos... they had MS Word... MS Word 5.5 for Dos has a lovely little line of code in it that asks, "Am I running on Microsoft Dos?"

If the answer is no, it fails. If one modifies that ONE line of code to ignore the results of that question, the product works fine. How many end-users does that effect? ALL OF THEM! How many end-users know how to even look for that line? Less than 1 percent. Just one example. You want a fast way to out Microsoft's most heinous business habits? Look at the DOJ's history and how many times they have bought their freedom.

Subject: Microsoft Settlement

I do not support the proposed Microsoft settlement. I believe that a company who has shown so much disregard for consumers and competitive business will need a much stricter punishment. Microsoft has shown that they will continue to abuse their monopoly if it exist. A perfect example is windows XP with all its new features. Each new feature of XP drives to put small companies out of business. Look at the media player, cd recording software, internet browser (still). The list goes on. I do support making the API for windows open, and making the MS Office file formats available to the public. I do mean public not for license to competing companies. If i wanted to spend a few nights and write software to read a basic MS Word file i want to be able to do that with out being incorporated, every other popular text format is available for this kind of use.

Under the Tunney Act I wish to comment on the proposed Microsoft settlement. I feel this settlement is extremely favorable to Microsoft and guarantees their continued status as a monopoly. From what I've read, this settlement does nothing to encourage Microsoft to release their proprietary file formats to other developers. Because of Microsoft's market position, their software and data file formats are the de facto standard of data storage and transmission and until they are forced to release the formats of their Office product line to third party competitors they will remain a monopoly. Thank you.

Subject: Microsoft Settlement

I do not feel the proposed settlement is either a: 1) a fair punishment for past misdeeds; or 2) an adequate safeguard against future problems. There are other people who will state this all much more clearly than I can. However, as a computer science graduate student who has studied the technical issues at stake I can assure you that an unfettered Microsoft is a danger not only to other ISVs and HSVs but to the nation and world as a whole. For example, the ever increasing number of exploits and viruses which infect win32 machines is proof that when one platform rules it all there can be no safety.

From a technical standpoint I have seen both in my academic research and my journeys into corporate America just how Microsoft has been stifling innovation, not fostering it as they claim. Sadly the proposed settlement requires them to do nothing of substance. I am not a lawyer and even I can see the loopholes they will slide through. The other problem is that the settlement concentrates on the wrong things. None of the requirements will actually punish anti-competitive behavior. Furthermore the 3 person team responsible for investigating claims of misdeeds is not setup in way that gives me any confidence in their autonomy or strength. Only one of the three will be there without Microsoft's approval. Why does the DOJ refuse to stay involved in the matter like it did for IBM? It is my judgement that the proposed settlement is nothing but a sell-out. I urge you to do your job, not Microsoft's and protect the country and the world from a proven law breaker.

Subject: Microsoft Settlement.

The settlement negotiated with the Department of Justice is inadequate to the task. Please abandon it. The alternative proposal put forth by the 9 states seems much better but is still not enough. Judge Jackson's original proposal seems best. Section J2 of negotiated settlement is particularly troubling. It allows Microsoft to decide if any competitor is a legitimate and viable business. What about the SAMBA project? It seems likely Microsoft would not regard a non-profit as a viable business. H1 seems to regard all middle-ware as products with specific user interfaces. COM would not be such a middle-ware product. This would seem to permit Microsoft to disable any replacement for their COM product.

Yours,
Judd Rogers

From: Blake Ragsdell
To: Microsoft ATR
Date: 1/23/02 8:59am
Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the

operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,
Blake Ragsdell

Subject: Microsoft Settlement

As a computer professional I am quite upset at the proposed Microsoft settlement because it fails to adequately protect the consumers from future Microsoft behavior, nor does it punish Microsoft for their illegal behavior. I am not advocating punishment for the sake of punishment, but as a means of creating more competition in this most vital industry.

Microsoft is without peer in operating systems, consumer applications and back-office server applications. Sadly, we are all too often forced to adopt an "all or none" approach when making software decisions because we fear the brute force Microsoft brings to bear on future competitors. It is far safer for us to pick Microsoft products than those from a competitor because Microsoft has clearly shown a willingness and ability to destroy competitors.

Our company picked the Netscape browser as our corporate standard, yet two years later had to reverse ourselves. This decision was not based on the superiority of Microsoft's Internet Explorer, but on the reality that the Netscape browser was more and more frequently being forced off the desktop of

new PCs. This created an additional burden on us to provide the browser that formerly had been installed by default on every new computer. Microsoft, in effect, made that decision for us.

I urge the US government to take action against Microsoft to restore the possibility of competition. If this is not done now, it will most certainly be necessary in the future.

The proposed settlement is bad for everyone except Microsoft.

RE: Objections to Microsoft Settlement

Dear Sir or Madam:

I am writing to comment on the proposed anti-trust settlement with Microsoft. The proposed terms of the settlement fail to accomplish the intended task of correcting Microsoft's past behavior in the future. The proposed settlement uses such narrow definitions that they are free to continue their activities with new products that internally function differently but have the same market role.

The two most significant of these items concern middleware and APIs. APIs are defined for the settlement as the interface between middleware and the Windows operating system but leave out application APIs such as those for Internet Explorer and Microsoft Office. Because Microsoft bundles OS functionality into these APIs they can hide code that they should be releasing by the spirit of the settlement (but not terms of) there. This also further gives them leverage to bundle and enforce bundling of their products together as they did with IE. This is a thin line between legitimate leveraging and monopolistic behavior but the courts have already determined which it is.

The final definition of middleware used was much more restrictive than that used in the Findings of Fact. There are several faults but the most significant of which is that it uses the title of code to determine whether or not it falls under the power of the settlement, allowing a cosmetic change in the name of code to determine whether or not it falls under the settlements terms.

I know that many others have written far lengthier analysis of the situation but I hope that you will take these comments in the vein of a concerned citizen that has worked in computer technology both for private industry and local government sectors.

Comment on the proposed Microsoft Settlement under the Tunney Act

Being a software developer who has been hurt by Microsoft's illegal monopolist practices in the past and present, I do not think the proposed Microsoft settlement is acceptable.

There are many loopholes that will allow Microsoft to go ahead just as if nothing had happened:

Having to open APIs will not do any good unless API is both

—defined in a much wider range, including but not limited to functions in all important libraries (not just those needed to boot the system), and file formats (most notably the ones used by Microsoft Office. Many non-Microsoft applications need to be able to import and export Microsoft Office files).

—extended to cover patents. For example, Microsoft is currently trying to push ASF as a standard for video files. Since ASF is covered by patents, it is impossible to (legally) create or play back ASF files on non-Microsoft platforms, such as Linux. It is vital that the patents may be used free of charge; if this isn't done, Open Source applications (which are mostly volunteer work) will be shut out.

The limitations on OEM deals are not sufficient either. Almost all larger OEMs have deals with Microsoft that pay Microsoft a fee per shipped computer rather than per shipped computer that is actually shipped with Windows, giving OEMs no incentive whatsoever to even consider alternatives.

Furthermore, the rules must be enforced much better. A committee without any real power is very likely to get ignored by Microsoft.

Their previous conduct shows that they never respected any restrictions imposed upon them unless strictly enforced.

I suggest the committee must

—Be obligated to investigate any violation reports from the public

—Make all their findings public so there is some public control over them to ensure Microsoft does not just buy them out

—Have enough power to make Microsoft take them seriously, such as being able to prevent Microsoft products from being sold as long as they are violating terms AND fining them with fees that will actually hurt a company as large as Microsoft.

Thank you for your attention.

Date: 1/23/02 8:59am

Subject: Microsoft Settlement

Good morning,

I have two comments on the Microsoft Anti-Trust case, and its pending settlement.

The first regards access to the secret inner workings of the Microsoft Operating Systems (OSs) and their associated user interfaces. As part of the settlement, Microsoft should be required to publish documentation for all interfaces between all software components, file formats, and communications protocols. For years, Microsoft has implemented various secret and incompatible interfaces, which prevents development of any competitive products. For example, the market leader WordPerfect was quite effectively driven from the market by Word for Windows' better performance under Windows 95, because the developers of Word had access to complete documentation for the Win9x interfaces, while the WordPerfect team were required to make do with the pittance released to the general public by Microsoft. Internet Explorer was able to push out the market leader Netscape by similar tactics.

Requiring Microsoft to publish all of their interfaces would level the playing ground, and might well eliminate the desire to break up the software giant. Access to the interfaces would allow competitors to write better code, and would benefit end users greatly, as more and better software would become much easier to develop for each OS.

Finally, for my own field, network security, the boon would be great indeed. Microsoft recently announced that they are finally going to start paying some attention to security, but it's too little, too late. Access to Microsoft's interfaces would allow much more thorough probing for security weaknesses and would provide better opportunity for rapid identification and correction of problems.

The second comment is this: Why in the world didn't anyone from the Department of Justice (DOJ) notice Microsoft's greatest concern in the whole Internet Explorer fiasco? Microsoft's spokesman repeatedly said in interviews "you can not tell us what makes up an operating system." In fact, any first-year computer science student can tell you what makes up an operating system. An OS is the interface between applications and hardware. It handles the input and output of various devices. That is all. Internet Explorer is not part of the Operating System. It's an application, like Word, Excel, or my new video game.

This brings me to the crux of Microsoft's fears: Windows is not an operating system, either. Windows is a Graphical User Interface (GUI) laid over an Operating System. Microsoft's desperate prevarication over the "definition of an operating system" came because if anyone had made a cogent argument that the GUI and the OS are separate, Microsoft could have been required in a settlement to separate the GUI and the OS. It is quite conceivable that Microsoft could sell the OS (which Microsoft mis-labels the Kernel) from the GUI, which would permit competitors to sell GUIs that would be 100% compatible with all existing software. I could be running the Windows XP kernel

with a Norton GUI on my system, if Microsoft hadn't been allowed to maintain the fiction that somehow the GUI was an integral part of the OS.

In my perfect world the Microsoft GUI and Microsoft OS would be separated. This isn't likely to happen at this late stage in the game, but I would like someone at DOJ to keep it in mind for the next time Microsoft crosses the line.

Subject: Microsoft Settlement

Dear Sir,

I am strongly opposed to the proposed final judgement in the Microsoft anti-trust trial. I think it does nothing to punish a convicted and stridently unrepentant monopolist, and provides no relief to current and future Microsoft competitors. Suppose some whiz kid comes up with a new "killer app" like Netscape, and starts a company to develop and market the application. If the company is a success, Microsoft can still use many of its monopolistic practices to squash the

upstart, such "integrating" a competing application into the operating system, or adding slightly broken APIs for "security" reasons which can then be kept secret, and so forth.

Due largely to this scenario, I know that many investors are hesitant to fund any company which might compete with Microsoft because there is no potential profit. Any success will be stolen/squashed by Microsoft. In large part due to funding problems, the most energetic competitors to Microsoft are often found in the OpenSource arena. Unfortunately, the proposed final judgement does nothing to aid this vibrant source of competition. In addition, Microsoft has recently become aware of this competition, and is now starting to add restrictive licensing terms to various products and toolkits to try and prevent users and developers from using OpenSource and Microsoft products together. Since Microsoft is a monopolist, this would effectively squash OpenSource competition also. Any final judgement should do much more to open APIs, file format specification, and documentation to private individuals as well as corporations. It should also prohibit any licensing terms restricting a user or developer's right to use or distribute Microsoft and non-Microsoft code together. In addition, all contractual and licensing terms which effectively remove any financial incentive to use competing products should be prohibited, such as terms which force OEMs or enterprises to pay licensing fees based on the number of computers running Windows. In addition, I think it may be necessary to find more creative solutions to Microsoft's conduct, such as forcing Microsoft to license their patents that cover various aspects of Windows to all comers for free, so free alternatives to Windows such as "wine" can flourish. I know that this is taking private intellectual property, but it is a mild punishment for felonious conduct. I think the court should also reconsider more extreme measures, such as dividing the company into multiple competing companies, as was done with Standard Oil and Bell Telephone.

Thank you for your time and consideration,

Carl Staelin

Subject: Microsoft Settlement

I am writing in regard to the settlement proposal for Microsoft. I believe that the settlement does not go far enough to allow Open Source Operating Systems to fairly compete. There are 2 areas that concern me greatly:

1. File formats under this settlement are still not disclosed. This prevents Open Source applications and operating systems from being compatible. Microsoft will still have a stranglehold on the application software market.

2. The APIs are still not opened up far enough to allow other operating systems to either use products like Microsoft Office natively, or to develop competing, compatible products. Please reconsider the scope of the proposed settlement, and provide remedies for these problems.

The proposed settlement to the Microsoft case, while being aimed in the right direction, is too loose and will allow

Microsoft to proceed without changing their actions very much at all. The company has proven time and again that they have no qualms with using every tactic available to them to put competitors out of business, thus furthering their monopoly and preventing the innovations that new companies would bring.

MTC-00015375

From: Justin Hall
To: 'microsoft.atr(a)usdoj.gov'
Date: 1/23/02 9:01am
Subject: Microsoft Settlement

I'd like to add my comments about the proposed settlement in the Microsoft antitrust case.

It doesn't seem to me that the proposed remedy does anything about Microsoft taking retaliatory action against OEM's—on the contrary, it seems that it encourages it. In Section III.A.2, Microsoft is allowed to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. Section III.B. requires Microsoft to license Windows on uniform terms and at published prices to some of the larger OEM's but doesn't do anything to prevent them from taking retaliatory measures against smaller ones. The retaliatory measures are what kept OEM's from being able to place other programs along with Microsoft's on their machines in the first place, and if Microsoft is permitted to continue in these practices, they are still leveraging their monopoly power in a destructive way.

Please reconsider the Proposed Final Judgement. It doesn't do everything that it could and leaves the potential for harm a possibility.

From: Chris Bailey-Kellogg
To: Microsoft ATR
Date: 1/23/02 9:02am
Subject: Microsoft settlement

Greetings:

I am writing to voice my opposition to the proposed Microsoft settlement. This is clearly a bad settlement from the customer's point of view, as it does practically nothing to remedy the anti-competitive behavior that Microsoft has been found to practice (and, in a show of utter contempt, is continuing to practice even now with "features" in XP and so forth). There are already available some well-written analyses of the defects in the settlement (e.g. see <http://www.kegel.com/remedy/>), from a wide variety of viewpoints. I will not repeat them here, but instead request that you add my voice to this crowd of consumers asking our government to stand up for us rather than for monopolistic practices.

Sincerely,
Chris Bailey-Kellogg

Subject: Microsoft Settlement

To whom it may concern,

In regards to the Microsoft settlement, I feel I must disagree with this settlement altogether. I don't think that anything less than a break-up of this company will alleviate the problems that it has created, and begin to restore faith in the market that it can indeed be a competitive arena. In my experience, and through my readings, when Microsoft decides they want to dominate an area, they use business practices that are by definition unfair by setting the prices of their products so low that other companies who cannot rely on sales of other products to make up differences simply can't compete. When this same thing happened with many similar companies, they went through break-ups (Standard Oil, AT&T, etc.). I would politely ask that you consider this solution for Microsoft, or at least that you would make them release the code of their systems to other companies to bid on.

Microsoft uses unfair tactics in their programming, as well. It would seem to me that you would find it of utmost interest if an oil company were to sell gasoline of an extremely low grade to certain stores, while selling the most premium grade gasoline to their own stores. This is how Microsoft programs their system. They document certain things about it, but when it comes to fine tuning an application, they don't give enough information on the internals of the OS to allow those who would write an application to make it run efficiently. This way, when Microsoft decides to attempt to dominate this market, they can write a sleeker, faster, finer tuned application and claim to be the better company for it. When all along, this was their plan.

In summary, I would ask that you consider dividing Microsoft or some other means of making the company compete on a more fair level. If you do not place these type of sanctions on Microsoft, they will continue (as they currently are) their unfair business practices. During this whole case, Microsoft has released numerous new operating

systems, office products, a gaming console, and more. Their latest version of windows (XP) is just another area where Microsoft is using its muscle to overturn more markets (CD writing built into the OS, MS Messenger installed by default, reminds you constantly to sign up for their "passport" program on the web which competes with other programs that do similar things on the Internet).

Thank you for your time,
Chad Rytting

To whom it may concern,

I do not agree with the MicroSoft (hereafter MS) settlement as it stands. I have two changes that should be added.

1.) MS must open their file formats.

Competitors must have access to what have become the de facto data storage formats for word processing, spreadsheets, and databases. In the current business environment, the MS file formats are ubiquitous, and therefore new businesses and businesses buying new software are forced to use MS software to be able to have meaningful, efficient communication with vendors, contractors, suppliers, etc.

2.) The business strategy known as "embrace and extend"—whereby MS uses a standardized, "open" file format and then slowly uses its market share to leverage a change to a similar but incompatible, proprietary file format—must be stopped.

Subject: Microsoft Settlement

To whom it may concern,

I am writing, under provision of the Tunney Act, to voice my objection to the currently Proposed Final Judgement against Microsoft. Because of the many inherent flaws in the current PFJ, this settlement is tantamount to allowing this company (Microsoft) walk away from a finding of fact that they are in violation of the Sherman Antitrust Act with less than the figurative "slap on the wrist".

The current settlement makes absolutely no provision for enforcement or technical review. It leaves enforcement upto the legal system, which is quite ill-prepared to deal with such technical situations. Additionally, though the PFJ requires increased disclosure of technical information, there is no provision for advance notice of these technical requirements. As a result, things like API documentation can be released too late to help an ISV. Also, because of the narrow definitions of "Middleware" and

"API", Section IIID's requirement to release this information about Windows interfaces excludes many important interfaces required for seamless integration of ISV products into the Windows Operating Environment. Another major problem is that there is nothing in the PFJ which requires documentation of file formats. This one area is one in which Microsoft has used to their advantage time and again to lock out the competition. Each version of Microsoft Word (not to mention every other Microsoft Office Application) has has a different file format than the previous versions, all incompatible with each other. This has the effect of forcing individuals and companies to upgrade a major part of their infrastructure just so they read documents sent to them. It becomes a vicious circle which repeats itself each time there is a new release of MS Office.

These are but only a few of the flaws with the current settlement proposal. There are many, many more (see <http://www.kegel.com/remedy/remedy2.html>) In conclusion, I request that this Proposal for Final Judgement be rejected and another, better proposal be drafted with the aid of technically proficient members from the software industry.

Thank you for your time and consideration in this matter.

I am submitting my personal comment regarding the Microsoft settlement. As a common computer user and as a common American citizen my strongest feeling regarding the settlement is pointed at the monopoly factor. If a competitive market can't be up held here in the United States, then where? If this is what we stand for then why, in a most visible display, are we strangling our growth in technologies? It is in these points that we fail, fall behind, and shoot ourselves in the foot? Competition creates better product and technology. Microsoft's product line is an example of how a none competitive arena create

mediocrity. Stricter guidelines and punishment should be assessed to reflect the business it is changing. Not enough is being done to open the arena of a competitive market.

God Bless America.

To whom it may concern;

I have reviewed the proposed settlement, and I find it completely unacceptable.

As a professional computer scientist, I work with software every day. I have seen first-hand the damage Microsoft has had on computing technology. They may say that all they want is the "freedom to innovate", but what they really mean is the "freedom to innovate new ways to making money".

Computing technology would be leaps ahead right now if it weren't for the illegal practices of Microsoft. Any settlement MUST allow true competition, where Microsoft can be relegated to a 40% market share or so. Dependence on Microsoft is bad for many reasons. One, their security is fundamentally flawed in their OS (I have done extensive research). Two, our business economy would crash if Microsoft were to go out of business (over-dependence). Three, their products are just plain inferior and put all software in a bad light (users "expect" programs to crash now!). Please, remedy the situation in a sane manner. Of all the times the government should do something FOR THE PEOPLE, this is it. Do not give in to the Microsoft lobby and believe their lies!

 Sirs,

The proposed judgment against Microsoft totally fails to address their known anti-competitive behavior, and actually helps them extend their monopoly. It ignores the issue of Microsoft's ever-changing (undocumented) file formats, which force end users into an eternal upgrade cycle. This upgrade cycle demonstrably harms consumers! Since Microsoft has been found to have used their monopoly in personal computer operating systems in an abusive manner in a court of law, it would seem that some actual punitive action should be taken. The proposed judgment allows so many loopholes that there is no actual punishment involved! Please, please reconsider your actions!

 Subject: Microsoft Settlement
 To whom it may concern:

Respectfully, I am against the proposed Microsoft settlement, and have several problems with it. My foremost reason is, Microsoft has proven itself time and time again to be an abusive monopoly, doing almost anything to stifle competition and promote their own products. I have a problem with the fact that Microsoft enters into licensing agreements with all of the big computer makers (Compaq, Dell, Gateway) so that the maker cannot sell a computer without also selling a copy of Windows. If I want RedHat Linux on a computer from Dell, they would be forced to also sell me a copy of Windows, even if I don't want it. Because of their strict license, I would not be able to resell this unused copy of Windows. Most of the viruses that you hear about on the news today are as a direct result of security flaws from Microsoft products. Microsoft has consistently tried to hide security information from its users until it can fix its mistakes, but the cover-up almost never works. Hackers will find the security flaws first, and exploit them before the public knows about them. Unfortunately, Microsoft treats security flaws like PR problems. This is dangerous when the general public has little choice but to buy a Microsoft product, so the security flaws are just as ubiquitous. Microsoft often uses its propaganda machine to defame other operating systems. Their leadership has spoken freely against Linux and free software, calling it "viral software" and telling half-truths against it. Microsoft staff members have been found to doctor on-line polls to improve Microsoft's image. Microsoft manufactures "grass-roots campaigns" to support their image. I can imagine the Microsoft PR-machine is flooding you right now with "The settlement is okay." messages. I write you this message with the sincere hope that my letter will cancel out one of those bogus messages.

Thank you for the opportunity to allow me to state my opinion.

 Subject: Microsoft Settlement

Dear Sirs,

I am writing to state my concerns about the proposed settlement, which I believe are insufficient to curb Microsoft's long history of anticompetitive practice and behavior. The findings of fact confirmed Microsoft's monopoly status—findings of extraordinary gravity whose remedial consequences should carry equal weight. The proposed settlement allows far too many loopholes and ways for Microsoft to avoid its full impact, and continue to create its own self-serving definitions for how it should apply (for example, deciding for itself which Windows APIs to open rather than being compelled to open them all). It also allows Microsoft to continue many anticompetitive practices it has employed for years (like retaliating against OEMs shipping a PC with an OS other than Windows); it also appears to lack any real teeth for enforcement, providing only for investigative capacity of a "Technical Committee", but leaving all enforcement to the legal system, where Microsoft has the money and time to stonewall, delay, and avoid justice, which they have already shown their propensity for. If Microsoft in its present 95% market share collapsed like Enron, imagine the catastrophic damage to the US and world economies. Microsoft's anticompetitive practices and monopolistic behavior have illegally crushed competition and stifled innovation, the lifeblood of the American economy. Small businesses (and even large ones) must be given a chance to compete on a level playing field. Microsoft must be stripped of the advantages it gained through its monopolistic practices, and quickly. I believe that the proposed settlement does not go nearly far enough to ensure that this will happen.

 Subject: Microsoft Settlement
 Dear Sirs:

I am writing to give my comments on the Microsoft antitrust settlement. I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial. Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system.

These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation. Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition. The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future. It is my belief that a very strong set of

strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

Sincerely,
Chuck Nixon

Washington DC 20001
RE: US v. Microsoft proposed final order
Dear Judge Kollar-Kotelly,

Introduction

Having examined the proposed consent final judgment for USA versus Microsoft, we offer the following initial comments. We note at the outset that the decision to push for a rapid negotiation appears to have placed the Department of Justice at a disadvantage, given Microsoft's apparently willingness to let this matter drag on for years, through different USDOJ antitrust chiefs, Presidents and judges. The proposal is obviously limited in terms of effectiveness by the desire to obtain a final order that is agreeable to Microsoft.

We are disappointed of course that the court has moved away from a structural remedy, which we believe would require less dependence upon future enforcement efforts and good faith by Microsoft, and which would jump start a more competitive market for applications. Within the limits of a conduct-only remedy, we make the following observations.

On the positive side, we find the proposed final order addresses important areas where Microsoft has abused its monopoly power, particularly in terms of its OEM licensing practices and on the issue of using interoperability as a weapon against consumers of non-Microsoft products. There are, however, important areas where the interoperability remedies should be stronger. For example, there is a need to have broader disclosure of file formats for popular office productivity and multimedia applications. Moreover, where Microsoft appears to be given broad discretion to deploy intellectual property claims to avoid opening up its monopoly operating system where it will be needed the most, in terms of new interfaces and technologies. Moreover, the agreement appears to give Microsoft too many opportunities to undermine the free software movement. We also find the agreement wanting in several other areas. It is astonishing that the agreement fails to provide any penalty for Microsoft's past misdeeds, creating both the sense that Microsoft is escaping punishment because of its extraordinary political and economic power, and undermining the value of antitrust penalties as a deterrent. Second, the agreement does not adequately address the concerns about Microsoft's failure to abide by the spirit or the letter of previous agreements, offering a weak oversight regime that suffers in several specific areas. Indeed, the proposed alternative dispute resolution for compliance with the agreement embraces many of the worst features of such systems, operating in secrecy, lacking independence, and open to undue influence from Microsoft.

OEM Licensing Remedies

We were pleased that the proposed final order provides for non-discriminatory licensing of Windows to OEMs, and that these remedies include multiple boot PCs, substitution of non-Microsoft middleware, changes in the management of visible icons and other issues. These remedies would have been more effective if they would have been extended to Microsoft Office, the other key component of Microsoft's monopoly power in the PC client software market, and if they permitted the removal of Microsoft products. But nonetheless, they are pro-competitive, and do represent real benefits to consumers.

Interoperability Remedies

Microsoft regularly punishes consumers who buy non-Microsoft products, or who fail to upgrade and repurchase newer versions of Microsoft products, by designing Microsoft Windows or Office products to be incompatible or non-interoperable with competitor software, or even older versions of its own software. It is therefore good that the proposed final order would require Microsoft to address a wide range of interoperability remedies, including for example the disclosures of APIs for Windows and Microsoft middleware products, non-discriminatory access to communications protocols used for services, and nondiscriminatory licensing of certain intellectual property rights for Microsoft middleware products. There are, however, many areas where these remedies may be limited by Microsoft, and as is indicated by

the record in this case, Microsoft can and does take advantage of any loopholes in contracts to create barriers to competition and enhance and extend its monopoly power.

Special Concerns for Free Software Movement

The provisions in J.1 and J.2. appear to give Microsoft too much flexibility in withholding information on security grounds, and to provide Microsoft with the power to set unrealistic burdens on a rival's legitimate rights to obtain interoperability data. More generally, the provisions in D. regarding the sharing of technical information permit Microsoft to choose secrecy and limited disclosures over more openness. In particular, these clauses and others in the agreement do not reflect an appreciation for the importance of new software development models, including those "open source" or "free" software development models which are now widely recognized as providing an important safeguard against Microsoft monopoly power, and upon which the Internet depends.

The overall acceptance of Microsoft's limits on the sharing of technical information to the broader public is an important and in our view core flaw in the proposed agreement. The agreement should require that this information be as freely available as possible, with a high burden on Microsoft to justify secrecy. Indeed, there is ample evidence that Microsoft is focused on strategies to cripple the free software movement, which it publicly considers an important competitive threat. This is particularly true for software developed under the GNU Public License (GPL), which is used in GNU/Linux, the most important rival to Microsoft in the server market. Consider, for example, comments earlier this year by Microsoft executive Jim Allchin: <http://news.cnet.com/news/0-1003-200-4833927.html> "Microsoft exec calls open source a threat to innovation," Bloomberg News, February 15, 2001, 11:00 a.m. PT One of Microsoft's high-level executives says that freely distributed software code such as Linux could stifle innovation and that legislators need to understand the threat. The result will be the demise of both intellectual property rights and the incentive to spend on research and development, Microsoft Windows operating-system chief Jim Allchin said this week.

Microsoft has told U.S. lawmakers of its concern while discussing protection of intellectual property rights "Open source is an intellectual-property destroyer," Allchin said. "I can't imagine something that could be worse than this for the software business and the intellectual-property business." In a June 1, 2001 interview with the Chicago Sun Times, Microsoft CEO Steve Ballmer again complained about the GNU/Linux business model, saying "Linux is a cancer that attaches itself in an intellectual property sense to everything it touches. That's the way that the license works," 1 leading to a round of new stories, including for example this account in CNET.Com: <http://www.suntimes.com/output/tech/cst-fin-micro01.html> "Microsoft CEO takes launch break with the Sun-Times," Chicago Sun Times, June 1, 2001. <http://news.cnet.com/>

news/0-1003-200-6291224.html "Why Microsoft is wary of open source: Joe Wilcox and Stephen Shankland in CNET.com, June 18, 2001.

There's more to Microsoft's recent attacks on the open-source movement than mere rhetoric: Linux's popularity could hinder the software giant in its quest to gain control of a server market that's crucial to its long-term goals. Recent public statements by Microsoft executives have cast Linux and the open-source philosophy that underlies it as, at the minimum, bad for competition, and, at worst, a "cancer" to everything it touches. Behind the war of words, analysts say, is evidence that Microsoft is increasingly concerned about Linux and its growing popularity. The Unix-like operating system "has clearly emerged as the spoiler that will prevent Microsoft from achieving a dominant position" in the worldwide server operating-system market, IDC analyst A1 Gillen concludes in a forthcoming report.

... While Linux hasn't displaced Windows, it has made serious inroads. . . . In attacking Linux and open source, Microsoft finds itself competing "not against another company, but against a grassroots movement," said Paul Dain, director of application development at Emeryville, Calif.-based Wirestone, a technology services company.

... Microsoft has also criticized the General Public License (GPL) that governs the heart of Linux. Under this license, changes to the Linux core, or kernel, must also be governed by the GPL. The license means that if a company changes the kernel, it must publish the changes and can't keep them proprietary if it plans to distribute the code externally. Microsoft's open-source attacks come at a time when the company has been putting the pricing squeeze on customers. In early May, Microsoft revamped software licensing, raising upgrades between 33 percent and 107 percent, according to Gartner. A large percentage of Microsoft business customers could in fact be compelled to upgrade to Office XP before Oct. 1 or pay a heftier purchase price later on.

The action "will encourage—'force' may be a more accurate term—customers to upgrade much sooner than they had otherwise planned," Gillen noted in the IDC report. "Once the honeymoon period runs out in October 2001, the only way to 'upgrade' from a product that is not considered to be current technology is to buy a brand-new full license."

This could make open-source Linux's GPL more attractive to some customers feeling trapped by the price hike, Gillen said. "Offering this form of 'upgrade protection' may motivate some users to seriously consider alternatives to Microsoft technology." What is surprising is that the US Department of Justice allowed Microsoft to place so many provisions in the agreement that can be used to undermine the free software movement. Note for example that under J.1 and J.2 of the proposed final order, Microsoft can withhold technical information from third parties on the grounds that Microsoft does not certify the "authenticity and viability of its business," while at the

same time it is describing the licensing system for Linux as a "cancer" that threatens the demise of both the intellectual property rights system and the future of research and development.

The agreement provides Microsoft with a rich set of strategies to undermine the development of free software, which depends upon the free sharing of technical information with the general public, taking advantage of the collective intelligence of users of software, who share ideas on improvements in the code. If Microsoft can tightly control access to technical information under a court approved plan, or charge fees, and use its monopoly power over the client space to migrate users to proprietary interfaces, it will harm the development of key alternatives, and lead to a less contestable and less competitive platform, with more consumer lock-in, and more consumer harm, as Microsoft continues to hike up its prices for its monopoly products. Problems with the term and the enforcement mechanism

Another core concern with the proposed final order concerns the term of the agreement and the enforcement mechanisms. We believe a five-to-seven year term is artificially brief, considering that this case has already been litigated in one form or another since 1994, and the fact that Microsoft's dominance in the client OS market is stronger today than it has ever been, and it has yet to face a significant competitive threat in the client OS market. An artificial end will give Microsoft yet another incentive to delay, meeting each new problem with an endless round of evasions and creative methods of circumventing the pro-competitive aspects of the agreement. Only if Microsoft believes it will have to come to terms with its obligations will it modify its strategy of anticompetitive abuses.

Even within the brief period of the term of the agreement, Microsoft has too much room to co-opt the enforcement effort. Microsoft, despite having been found to be a law breaker by the courts, is given the right to select one member of the three members of the Technical Committee, who in turn gets a voice in selecting the third member. The committee is gagged, and sworn to secrecy, denying the public any information on Microsoft's compliance with the agreement, and will be paid by Microsoft, working inside Microsoft's headquarters. The public won't know if this committee spends its time playing golf with Microsoft executives, or investigating Microsoft's anticompetitive activities. Its ability to interview Microsoft employees will be extremely limited by the provisions that give Microsoft the opportunity to insist on having its lawyers present. One would be hard pressed to imagine an enforcement mechanism that would do less to make Microsoft accountable, which is probably why Microsoft has accepted its terms of reference. In its 1984 agreement with the European Commission, IBM was required to affirmatively resolve compatibility issues raised by its competitors, and the EC staff had annual meetings with IBM to review its progress in resolve disputes. The EC reserved the right to revisit its enforcement action on IBM if it was not satisfied with IBM's conduct.

The court could require that the Department of Justice itself or some truly independent parties appoint the members of the TC, and give the TC real investigative powers, take them off Microsoft's payroll, and give them staff and the authority to inform the public of progress in resolving compliance problems, including for example an annual report that could include information on past complaints, as well as suggestions for modifications of the order that may be warranted by Microsoft's conduct. The TC could be given real enforcement powers, such as the power to levy fines on Microsoft. The level of fines that would serve as a deterrent for cash rich Microsoft would be difficult to fathom, but one might make these fines deter more by directing the money to be paid into trust funds that would fund the development of free software, an endeavor that Microsoft has indicated it strongly opposes as a threat to its own monopoly. This would give Microsoft a much greater incentive to abide by the agreement.

Failure to Address Ill Gotten Gains

Completely missing from the proposed final order is anything that would make Microsoft pay for its past misdeeds, and this is an omission that must be remedied. Microsoft is hardly a first time offender, and has never shown remorse for its conduct, choosing instead to repeatedly attack the motives and character of officers of the government and members of the judiciary. Microsoft has profited richly from the maintenance of its monopoly. On September 30, 2001, Microsoft reported cash and short-term investments of \$36.2 billion, up from \$31.6 billion the previous quarter—an accumulation of more than \$1.5 billion per month. It is astounding that Microsoft would face only a "sin no more" edict from a court, after its long and tortured history of evasion of antitrust enforcement and its extraordinary embrace of anticompetitive practices—practices recognized as illegal by all members of the DC Circuit court. The court has a wide range of options that would address the most egregious of Microsoft's past misdeeds. For example, even if the court decided to forgo the break-up of the Windows and Office parts of the company, it could require more targeted divestitures, such as divestitures of its browser technology and media player technologies, denying Microsoft the fruits of its illegal conduct, and it could require affirmative support for rival middleware products that it illegally acted to sabotage. Instead the proposed order permits Microsoft to consolidate the benefits from past misdeeds, while preparing for a weak oversight body tasked with monitoring future misdeeds only. What kind of a signal does this send to the public and to other large corporate law breakers? That economic crimes pay! Please consider these and other criticisms of the settlement proposal, and avoid if possible yet another weak ending to a Microsoft antitrust case. Better to send this unchastened monopoly juggernaut a sterner message.

Sincerely,
Ralph Nader

Subject: Microsoft Settlement

I believe that this settlement is a bad idea. It seems to me that that this type of remedy falls extremely short for a company that is a known multiple offender and in a prior settlement has been less than compliant. It is overly broad in its language thus leaving much leeway where by Microsoft could obey the letter of the settlement, but blatantly defy the spirit of it. I find this especially dangerous when the resources of Microsoft are considered, and their willingness to skirt the law (as was demonstrated in their last settlement). Additionally I find it disturbing that the settlement differs in many of its definitions from the finding of facts. Overall I find this settlement lacking in its ability to protect the interests of the public. It would be a mistake of the most grievous nature for the Justice Department to accept this agreement.

Sincerely,
Thomas Hall Williamson Jr.

Subject: Microsoft Settlement: Reject it.

To Whom It May concern

I oppose the proposed settlement between Microsoft and the Dept. of Justice. As it currently stands, the settlement lacks sufficient penalties for Microsoft's actions. More importantly, the settlement does not provide for any meaningful rectification of the present situation. In fact, in my opinion, it serves only to solidify Microsoft's dominance of the consumer market and to limit growth, innovation, ease of use, progress, and a host of other benefits to the industry. I am an average computer user. My learning curve with regards to computers has

been severely hampered by Microsoft's poor software and poor support. This in itself is not a crime. What is a crime is that I have been hampered significantly in my efforts to find alternatives to the Microsoft OS, browser, office suite, etc. Microsoft has used its monopolistic hold on the OS market to take over other markets. It is once again attempting to do this now with XP, and is publicly planning to again with .Net. Only a settlement that punishes Microsoft for its past actions and seeks to seriously rectify the damage that has been done to the market is acceptable. As it stands, it is nothing more than a slap on the wrist, nay, a pat on the back.

Please reject the proposed settlement.

Subject: Microsoft Settlement

To the Department of Justice:

I would just like to say that I have read the proposed settlement, and I am not in favor of it in its current state.

The current settlement is riddled with loopholes that Microsoft can exploit and continue practices that prompted the antitrust case in the first place. For a technical analysis of the proposed settlement please visit the following web site: <http://www.kegel.com/remedy/remedy2.html> It was not written by me but represents my views against the proposed settlement. Do not allow Microsoft to hide behind clauses that would protect their APIs from full disclosure. One example: security. True security relies on keys and not the algorithm. Encryption algorithms of today are all publicly known. What makes them secure are the secret key combinations that are used by the end user. Open source software by nature publishes the code/APIs used in the software security. Yet they are secure because the secret key combinations are what really keeps data secure.

This example merely shows that there is no excuse for some of the clauses that prevent Microsoft from distributing all of their APIs. I would like to bring up the issue of file formats. The antitrust case only dealt with the Windows operating system. I would like you to consider that the MS Office document format also enjoys a form of monopoly status. As a computer consultant I believe that Linux is almost capable to replace MS Windows as a desktop operating system. The "almost" is due to the poor ability to interact with other businesses/individuals that use MS Word and other Office document formats. There is no application outside of MS Word that can

read/write MS Word documents as good as MS Word does. When one uses competing software such as WordPerfect, StarOffice, OpenOffice, ClarisWorks, etc. to open and save Word files the document layout will always be different from what was used in MS Word. The same is true for the other Office products (Excel, Access, PowerPoint). If the MS Office file formats were to be completely made public then software developers would be able to write software that can correctly read and write documents created by people using MS Office products. I have been reluctant to replace Windows with Linux on the dozen computers currently being used in a Christian private K-12 school. Although this school has about 120 students, it struggles financially. Having to buy Windows and Office licenses for each new computer is expensive. I would love to switch to the Linux operating system and use StarOffice for word/spreadsheet/presentations documents. However, if I switched presently I would be bombarded by support calls from people unable to read/write MS Office documents correctly. Also, many individuals ask me for recommendations on the purchase of computer systems. I cannot presently recommend Linux and a Linux based office suite for the same reason.

Finally, Microsoft has been found guilty of a crime. It has been upheld in a Court of Appeals. All the current remedies and even the ones I mention above are conduct remedies. Where's the fine? Where's the real punishment Microsoft has destroyed companies and put people out of work. All the proposed conduct remedies are equivalent to a "slap on the wrist". Has Microsoft hurt consumers? Absolutely. The average computer price for a consumer computer system from 1995 to today the price has halved. The reason is due to increased demand and supply. Computer hardware has become a commodity market with many suppliers. However, the price of MS Windows software from 1995 to today has gone up by around 10%. Most of the computer hardware is sold with MS Windows—a monopoly status found in Judge Jackson's Findings of Facts. Why hasn't MS Windows dropped in price as with PC hardware? The answer is simple—no competition. Consumers are being forced to pay a higher price tag for MS Windows because of a lack of competition.

As a voting citizen (Republican) I will not stand by idly and see this case end in a mere "hand slap". You, the DOJ, is supposed to be the public's representative. Every news article I read basically agrees with me and many other computer consultants that the proposed remedy is a joke.

Sincerely,
Marco Panzanella

I am opposed to the currently proposed anti-trust settlement with the Microsoft Corporation because the PFJ contains an overly narrow definition of "Microsoft

Middleware Product" and "API" which means that Section III.D.'s requirement to release information about Windows interfaces would not cover many important interfaces like the Linux SAMBA project. Projects like SAMBA are of critical importance to enable alternative operating systems to survive in a Windows-dominated world.

Dear Sir/Madam,

I disagree with the settlement proposed in the Microsoft anti-trust case. I feel that the lack of serious punishment only encourages the company to continue with its anti-competitive behavior. In addition, there is no means of enforcement spelled out, leaving the company free to find new ways to lock out competitors. If the wheels of justice were swift this would not be an issue, but this is generally not the case—Microsoft has been able to continue with its behavior even during the ongoing legal proceedings against it! I hope you reconsider and attempt to strengthen any settlement with the company.

Sincerely,
Rob Hagopian

Subject: Microsoft Settlement

To whomever this concerns,

I understand that I have the ability to comment on the proposed settlement between the Justice Department and Microsoft. I have been using computers daily since the mid-eighties, when my father brought home an early portable IBM computer. I hope to earn my livelihood by working in the computing industry. Consequently, this issue is centrally relevant to my life. It is widely believed among those familiar with the case that the proposed settlement is completely inadequate. It will do little to punish Microsoft for its plainly illegal conduct in the past, and virtually nothing whatsoever to prevent future violations of antitrust law. As a consumer, it infuriates me to be forced to pay for increasingly expensive software that diminishes in quality with each release. I

applauded the Clinton administration's investigation of Microsoft. Their case was an effort to protect consumers and promote economic growth by restoring fairness and competition to the computer industry.

Now that the DOJ is under new management, it has essentially abandoned its pursuit of Microsoft, suggesting that the DOJ no longer has any concern for either economic growth or the public good. The United States is a successful nation because its free markets encourage firms to compete for customers by producing high-quality, low-cost goods. This system needs to be protected from monopolists who gain so much power that they can destroy the competitive nature of the markets in which they participate. I urge all parties involved to reconsider the proposed settlement. Microsoft deserves more than a slap on the wrist for its destructive abuse of its monopoly power. More importantly, American consumers need to be protected against future abuses.

Thank you for your time,
Stephen C. VanDahm
Spartanburg, SC.

Subject: Microsoft Settlement

If Microsoft has broken the law as the court has found then they should not only be restrained from committing further crimes (a goal that I do not think the proposed settlement will help to achieve to any large extent) but also PUNISHED for the crimes they have already committed (a goal the settlement ignores completely considering the largess Microsoft has amassed as a result of its illegal activities). When an individual is convicted of theft he or she is not simply placed under oversight by a committee and told to do no wrong. They are ordered to pay restitution if applicable and put on probation with possible jail time. I can see no reason why the same logic should not be applied to Microsoft. Perhaps this reflect my naivete but if justice is blind then this seems the only logical recourse. Thank you very much for considering the comments of a legal laymen but computer expert. I make my living using Microsoft products but, as an industry insider, am not at all comfortable with company's illegal behavior. I would love to see Microsoft a competitive good citizen in the IT industry but can't see it happening without Microsoft and its management receiving a cold slap. The settlement, as I see it, is a joke and am afraid that Microsoft will consider it as such.

A settlement that would sting would:

a) Take from Microsoft whatever portion of their cash reserve profits that can be directly

linked to their illegal behavior as well as damages indirectly associated with their market dominance which was gained through "giveaways" that undermined competitors.

b) Put Microsoft on probation under court supervision for 5–10 years. Any infractions would cause a "suspended" sentence applied during the original case to come automatically into effect. (Open Sourcing the MS operating system or breaking up the company should be sufficiently strong)

c) Force Microsoft's top management to leave the company without retaining their stock options.

Thanks so much for your consideration of my comments, William Wise Manager, Information Systems

Date: 1/23/02 9:08 am
Subject: Microsoft Settlement

Dear Mr. Ashcroft:

I would like to take this time to let you know that I am very glad to hear that a settlement has been reached in the Microsoft antitrust case. The lawsuit was a tremendous waste of time and money and punished Microsoft for being a successful company. The role that Microsoft played is one of creating standards in the Computer industry similar to the role played by IBM and Digital in years past. Technology will eventually be the cause of a Microsoft eclipse not their alleged monopolistic practices.

The proposed settlement is really quite reasonable and it sufficiently addresses Microsoft's problematic issues. I'm convinced they will be changing their business practices, especially yielding to drastic licensing concessions, so that fair competition will be restored in the computer industry. They've given up a great deal in this settlement and I ask that you please do your part to ensure that this settlement is upheld.

Sincerely,
Leonard Appel

From: starcomp
To: Microsoft ATR
Date: 1/23/02 9:09 am
Subject: Microsoft Settlement

The proposed settlement is bad. It does not sufficiently reprimand Microsoft for their decades of commercial abuse. Millions every year are brainwashed into believing that anything stamped with Microsoft is a superior product, when it is known that all competing products were not only copied, but that the originals deserve the business for their innovation. However, forcing Microsoft to release their Windows source code may be the wrong path as well. Quite simply, I hope that Microsoft will be broken up into at least 3 separate companies (Operating Systems, Office, all others), with the addition that none can have any business deals with any of the others for at least 25 years. I feel that this will be sufficient time for the digital economy to recover from Microsoft's tyranny. Thank you for your time, and I hope that our government can be counted upon to carry out this case to a fair and just end.

Loyal Citizen

Hello, Today I write you to express my dissatisfaction with the Proposed Final Judgement entered in the U.S. versus Microsoft anti-trust trial. In short, the proposed remedies do very little, if anything, to improve competition in the affected markets or ensure that the defendant cannot return to similar or identical anticompetitive behaviors in the future. From my perspective, the Proposed Final Judgement is so flawed that it cannot usefully be amended to reflect the requirements imposed by the Sherman Act and the Appeals Court ruling. I feel that only by imposing much stronger restrictions on the defendant could a Final Judgement in this case approach an effective response to the abusive practices proven against the defendant in the trial.

Thank you,
Douglas N. Franklin

From: Scott Purl
To: Microsoft ATR
Date: 1/23/02 9:08 am
Subject: Microsoft Settlement

I wish to comment that the proposed Microsoft settlement is entirely too lenient, and that harsher measures are called for. The recent proposal by Microsoft to give software away to schools is an attempt to get market share in an area that can not normally afford the Microsoft product, and that would probably be interested in a free or less-expensive competing product such as Linux.

If the Microsoft products really are superior products, then let us see them sold separately, instead of bundled with the operating system, and see what the invisible hand of the market decides.

Yours,
Scott Purl

To: “microsoft.atr(a)usdoj.gov”
Date: 1/23/02 8:59 am
Subject: Microsoft Settlement

Hello,

I have been an active professional in the computing field for the last 7 years, largely supporting Microsoft products in enterprise environments. During this time, it seems that all major ‘innovations’ by microsoft have actually been the co-opting of others initial work, and then ‘building it in to the operating system’. The web browser is one of these ‘innovations’. Digital media players is another. Web servers is another, and the list could go on and on, but the real point of this is that with Microsoft’s dominant position, they can absorb ANY idea, change it a little, and then build it in to their desktop. This has a rather stifling effect on the ‘little’ guys, and has indeed given impetus to Open Licensing, and Free Software. If Microsoft put the effort into Security, rather than ‘market dominance’, we would all be better off.

The remedy proposed recently does not effectively deal with the reality of the situation. I am opposed to it in it’s current incarnation.

Thank you,
Tom Felts

Dear Sirs,

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of it's competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted. Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

MTC-00015434

From: Robert
To: Microsoft ATR
Date: 1/23/02 9:09 am
Subject: Microsoft Settlement

Dear Sirs:

I am deeply concerned about the lack of teeth in the proposed final judgement of the Microsoft Anti-Trust lawsuit. As a long time software developer (30+ years), I am frightened by the stranglehold that Microsoft has developed on the software industry. Their predatory, anti-competitive, and seemingly lawless practices threaten the vibrancy of the industry that gave them birth.

My concerns are multiple, but all concern the ability of vendors to compete with Microsoft in either the Operating System or Application areas. For years Microsoft has “enhanced” the Windows “Operating System” (OS) by incorporation of application software into the OS. By incorporating application software (browsers, media players, etc.), into the OS, Microsoft has blurred the distinction between the two. In many cases, this has discouraged innovation and research in those application areas. Nothing in the proposed final judgement addresses this practice.

Microsoft has poorly documented the application program interface (API). Those parts of the API that are documented are poorly done, but there are large portions of the API that remain undocumented and fervently protected by Microsoft. This practice prohibits any vendor from developing a product to effectively compete with the Windows product line. There would simply be Windows applications that would not work on the competing product. Nothing in the proposed final judgement addresses this practice.

Microsoft continues to hold forth extraordinary control over OEMs and large corporations in their restrictive license practices. Large corporations are forced into agreements that force them to buy Windows licenses for every computer the corporation owns or operates that CAN run the windows OS rather than those that do. OEMs are restricted from distribtuing open source software with their products. Nothing in the proposed final judgement addresses this practice. The proposed final judgement has virtually no enforcement provisions. While a technical committee will be established under the proposed final judgement to watch Microsoft, the technical committee has no recourse but to raise the flag and hopefully force Microsoft to return to court. This hardly

seems like enforcement. Overall, I have been dismayed by the conduct of the justice department in pursuing a judgement against Microsoft that would benefit the American citizen. Discouraging competition in the OS and application software industry, allowing licensing that smirks of monopolistic power, and not enabling the oversight committee with enforcement hardly seems in the best interest of the American consumer.

Subject: Microsoft Settlement

I believe that the proposed Microsoft settlement is a spectacularly bad idea. In particular, the settlement does not go far enough to make public Microsoft-proprietary software interfaces and formats. If Microsoft continues to hold a monopoly power over its own proprietary software, that monopoly will only increase over time due to the cumulative nature of software development. If the monopoly power is not limited now, it will become even less able to be limited in the future.

As an historian, I've spent a fair amount of time thinking about the development and application of the Sherman Anti-Trust act.

This seems to me to be a perfect time for government intervention.

Subject: Microsoft Settlement

I am against the proposed final judgment in US vs. Microsoft. I feel the damage Microsoft has done to the software and OS marketplace is incalculable, and the proposed settlement does little to correct it. I don't feel the settlement levels the playing field for competing operating systems or office software, and would like to see a much stronger penalty imposed. The proposed settlement does not sufficiently relieve Microsoft of the ability to leverage hardware and computer manufacturers unfairly against competing products, nor does it adequately open the Windows API to programmers.

Subject: Microsoft Settlement

I feel that the proposed settlement is a bad idea. It has too many loopholes, too many easy ways for Microsoft to evade restrictions and penalties. And Microsoft, being Microsoft, WILL take advantage of any opportunities for continued monopolistic behavior. One of the WORST provisions is the one allowing Microsoft to be selective in whom they release code, interface specs, and the like to. They are being allowed to select only those who have a significant business profile, the big Fortune-500 and similar companies. Currently, far more innovative programming is being done in the Open Source area, by garage-shop companies and even by individual volunteer programmers.

This is the area Microsoft most fears—it is impossible for them to crush competitors who are NOT driven by profit, it is impossible to sue thousands of individual—and THIS is the group who can do the most good for a competitive market by being given the information that will allow them to build software to give consumers a choice. I feel that the solution being suggested by the nine states that did not agree with the DOJ

settlement, while perhaps not perfect, is FAR SUPERIOR to the DOJ settlement, and should be taken as the base for the eventual final settlement.

Subject: Microsoft Settlement

As a voting US citizen and as a professional in the computer field, I am voicing my disapproval of the current Microsoft settlement. The proposed settlement is a joke. No real penalty is brought against Microsoft for their monopolistic practices. Microsofts monopoly hurts all computer consumers, including the Federal and State governments. The only way to ensure competition and innovation is to break Microsoft into at least two separate operating system companies (maybe a third for applications). Also, some kind of federal mandate that all government offices use some percentage of open source software such as Linux or FreeBSD. Currently the attitude in federal offices and labs is "Nobody ever got fired for buying Microsoft." You have the

power to level the playing field. Until now the multi-billion dollar cash pile in Redmond has been able to buy "MS Justice", I truly hope that you will not accept the current settlement, it will only hurt American computer users for generations.

Thanks.

Almost Symantec... If you can't beat them or buy them... crush them. Microsoft has deeper pockets than the competition. They don't need to compete. They just buy the competition or sue them so much the competition must spend all their vulture capital on Lawyers instead of R&D. If this is allowed to happen to even one company, it hurts the industry. Unfortunately, the old crones in "power" (congress and senate) don't have a clue about these "new fangled computer thingies." How can one make laws based on something they know little or nothing about?

You want to make new laws to stop Microsoft from doing this stuff in the future? Can you say grandfather clause? The damage is already done. How about laws that SEVERELY PUNISH EVERY individual within ANY company that is caught doing ANYTHING unethical. Oh yea... thats right... then you won't get your new library... just another form of a bribe. Hide behind the truth and call it standard business practice. I can't count the number of times I have heard of unethical business practices Microsoft uses from reputable sources. Yet somehow, the Justice department ALWAYS looks the other way. Hrmmm... Kick backs, bribes... having daddies law-firm purchase judges. Don't pretend "the system" is uncorruptable. Shall I bring up ballot stuffing? Yea... they were caught on that one too... but as usual... Microsoft buys its freedom. At what point does the unethical business practices get deemed too much? How much harm must an industry have done to it before the bribes and kickbacks are no longer effective?

The DOJ broke up AT&T... it didn't help... it slowed them down a few years. Now they have a monopoly on Cable-modem access. Breaking up companies with deep pockets doesn't help. Public funds should go into public research and development... not some proprietary software companies pockets. PUBLIC service... not private service.

What message are we sending future generations? "It's ok to be unethical and irresponsible as long as you have a lot money and can hide behind a corporate name."

The people have cried out time and time again... but the crones ears are deaf. Revolution, not reform.

Date: 1/23/02 9:07am
Subject: Microsoft Settlement
I hope to see a more suitable settlement than the one currently proposed for the Microsoft Monopolies case. Microsoft owns a monopoly for computer desktop operating systems. Steps must be taken to ensure that microsoft does not unfairly leverage this platform to unfairly forward itself in other markets, such as it did with Internet Browsers in the mid 1990s.

OEM Contracts

The only fair way to prevent Microsoft from leveraging this is to firstly look at the contracts and prices it forces OEM computer equipment suppliers such as Dell and Gateway to sign, to ensure that "unfair" clauses such as "No Internet Browser software other than Microsofts shall be shipped with an OEM supplied Microsoft Operating system." This prevented companies from shipping Netscape Navigator as well as Internet Explorer with the machine.

All OEM Equipment Supplier MUST be allowed to buy Microsoft Operating systems at the same price, and be free to offer any other software in addition to that supplied by Microsoft without prejudice against them.

Bundled Software

If Microsoft want to ship a version of a product such as say "Media Player" bundled with the Windows Operating system then opportunity must be given to other competing products to be included on the

Windows CD, or Microsoft must unbundle the product. This ensures that Microsoft and its competitors face the same "barriers to market" as each other.

Hope these two suggestions help, they are simple and straight forward I hope.

This communication is pursuant to the Tunney Act period for public comment, and is authored by Robert Lembree, 29 Milk St., Nashua, NH 03064-1651, (603) 880-6768.
The proposed settlement of the anti-trust case against Microsoft by the United States Government is grossly inadequate and does little more than hand Microsoft a government sponsored marketing opportunity. Rather than punish Microsoft for its illegal activities as a monopoly, it strengthens Microsoft's already dominant market position and therefore runs directly contrary to the intention of the anti-trust finding and prosecution.

It is clear that either Microsoft itself or parties biased in Microsoft's favor were involved in the crafting of the agreement. The agreement is riddled with loopholes that not only preserve Microsoft's dominance, but

also which discourage the development of alternative technologies.

A case in point is that while companies may develop alternate technologies, the APIs and access to critical file formats (such as media formats) prevent these alternate technologies from being compatible in any way with Microsoft's dominant technology. This means that Windows Media format files, which dominate the media available on the Internet because of Microsoft's monopolistic practices, remain off limits to those not using Microsoft's operating systems and/or tools. Microsoft's own licensing prohibits the development of open source tools with their software development kits, and prohibits the development of tools for operating systems other than Windows. The settlement fails to remedy in this case.

This is one of literally a hundred cases in point that I can think of, but I don't want to deluge you. The point that I want to get across is that Microsoft's dominance in the marketplace has caused a stifling effect on innovation because if Microsoft doesn't want competitive solutions, it is simple for it to make meaningful competition impossible through any number of means: * obfuscation in its dominant operating system ("we don't supply APIs for that") * exclusivity deals with content providers ("if you use only MS format files on your website, you get consideration") * failure to support competing operating systems such as Linux or MacOS with key application (non-OS) technologies And there are more.

Any meaningful remedy will undo some of the damaging effects of Microsoft's anti-competitive practices, such as the publication of important APIs, the removal of restriction on using Microsoft's application technologies on non-Microsoft operating systems, and so on.

regards,
robert lembree

MTC-00015455

From: Anthony McDowell
To: Microsoft ATR
Date: 1/23/02 9:14am
Subject: Microsoft Settlement

The currently proposed settlement between Microsoft Corp. and the United States is terrible for consumers and the industry; let me explain why. My name is Anthony McDowell. I am a Computer Engineering student and Army cadet at Mississippi State University. My responsibilities within the Army require that I do extensive work with computers and computer systems. Therefore, I feel particularly compelled to respond to this call for public opinion.

I have been involved in the computer industry since I was about nine years old. In that time, I have seen Microsoft evolve from being a rather equal partner in the global computer industry to one which has abused and created circumstances which were unfortunate for their competitors.

Therefore, I believe that the settlement of Microsoft's anti-trust case, as currently proposed, is not strong enough. Microsoft has demonstrated in the past that it does not take legal rulings to heart. During the ramp-up period prior to Microsoft's release of its WindowsXP operating system, Microsoft intentionally worked to cause any legal ramifications to be delayed long enough to allow the operating system into the market. That move alone has done gone great harm to the industry. The "features" Microsoft has bundled with this operating system release have already shut out a great many competitors and severely inhibited the abilities of others. For example, Microsoft's "Windows Media Player" application has been mutated to a point such that it performs functions previously done by various competitors. Media Player has removed the "need" for products such as RealAudio Player from RealSystems, QuickTime Player from Apple Computers, and WinAmp from Nullsoft/AOL-Netscape-Time Warner. Microsoft's web browser, Internet Explorer has also attempted to purge the market of competitors. By developing Microsoft-specific extensions to the HTML web programming language, Microsoft has attempted to ensure that only their browsers are used to connect to web pages. These Microsoft-specific extension not only perform special functions if viewed in Internet Explorer, they also tend to cause non-Internet Explorer browsers to crash, presenting the facade that these competing products are "buggy" or of lesser quality than the Microsoft Browser.

This kind of Microsoft exclusivity has also been seen migrating into their software

development products such as Microsoft Visual Studio. In Microsoft J++, a component product of Visual Studio used for developing JAVA-based applications, Microsoft has again added Microsoft-specific extensions or functionality which performs reasonably well on a Microsoft platform, but often causes applications to appear buggy or non-functional on competing platforms.

These cases are but a few from Microsoft's extensive and far-reaching dossier of anti-competitive practices. It is by using the practices stated above, circumstances not currently covered by the proposed settlement, that Microsoft will continue to be a monopoly and will continue to control how and when things are done inside the consumer computer market. Under normal circumstances, I would agree that Microsoft is simply being a good competitor by attempting to further their product gains. However, Microsoft holds a trump card which most companies normally don't: they also control the platform which their products are based on. It is like allowing Ford, or Daimler-Chrysler to control how roads are built so that their automobiles run more smoothly on them.

Operating systems are one of the fundamental pieces of software which a computer uses.; no computer will operate without one. As such, I propose the removing of all operating systems from companies currently producing them. This would include Windows (all versions) from Microsoft, MacOS from Apple, and the various Linux/UNIX/Posix compliant operating systems from other smaller companies. Further, I suggest that these companies enter into a government-supervised council which has the sole purpose of developing a platform-independent, consumer-level operating system to be released to the public free of charge. If a computer cannot function without an operating system, then I feel consumers are being placed in "double jeopardy" by being forced to pay twice simply to use the computer. A free operating system such as this would allow a consumer to purchase a computer without the worries of licensing on the most fundamental level. This operating system would be platform independent enough to run on Intel/AMD x86 class microprocessors, the PowerPC class microprocessors used in Apple-branded computers, and others. Consumers would then have the freedom to purchase software products based on their merits, not on their platform requirements. Unfortunately, while most of the nation is aware of the basic facts in this case, only the few who actually work in this industry are entirely aware of its importance and the legal precedent which stands to be made. If Microsoft is allowed to leave this case with such a simple and uncorrecting punishment against them, they will lay the groundwork for other anti-competitive companies to use money and legal tactics in the same fashion. Therefore, I feel compelled to use my knowledge and understanding of this case for the betterment of the public at large. The terms of this agreement are terribly underpowered and unenforceable. As a soldier in the United States Army, I feel particularly afraid that the

United States legal system is going to allow these kinds of companies to control the very computer systems which I must use to help safeguard the lives of my fellow soldiers and the American populace. In conclusion, I would like to re-iterate Microsoft's passion for ignoring legal proceedings. Unless a stronger ruling is issued against Microsoft, nothing will change. Despite the great costs involved a case of this magnitude, Microsoft has continued to prosper and profit financially from their monopoly in this market. Unless something is done with serious ramifications, the results of this case will be business as usual for Microsoft and fewer choices and less computer security for consumers.

Thank You and Best Regards,
Anthony McDowell

Subject: Microsoft Settlement

To whom it may concern.

As a concerned consumer I am deeply troubled by the direction of the proposed settlement in the Microsoft anti-trust trials. Indeed, the way the settlement is worded it only appears to hand Microsoft even more power in the future with regards to their stranglehold on the public's exposure to computers, the Internet and upcoming consumer electronics devices.

We cannot afford as a nation to have one company be the sole interface to how we communicate to each other. Microsoft has demonstrated that it is incapable of playing by the accepted rules of business in the US and should be punished accordingly.

I feel that the settlement proposed by the states in non-agreement with the current settlement does far more to control Microsoft as a company and to help level the field for competitors in the market.

Thank you.

To: Microsoft ATR
Date: 1/23/02 9:15am
Subject: Microsoft Settlement
To Whom It May Concern;

I am writing this letter to express my opinion that the currently proposed Microsoft settlement is completely inadequate in terms of the remedies proposed for Microsoft's blatant, frequent, arrogant,

and ongoing abuse of its monopoly position. I am especially distressed to find that the proposed settlement does absolutely nothing to prevent Microsoft from continuing to deliberately and cynically sabotage its implementation of public-domain communications protocols in order to break compatibility with non-Microsoft products and protocols. This behavior, if left unchecked, will create immeasurably high barriers to entry for any entity wishing to work with or create products for the Internet or the World Wide Web. Current basic Internet protocols are in the public domain, and any entity can create equipment or services for use with the internet. If Microsoft succeeds in their attempted Balkanization of formerly public protocols, all would-be players on the Internet field would have to pay a tithe to Microsoft or face an enormously high barrier to entry, thereby effectively destroying the innovation which so often comes from smaller entities.

In closing, I strongly urge that the proposed settlement be amended to provide some real protection to all of us from Microsoft's continued predation. Thank you.

Sincerely,
Bennett C. Baker

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I find numerous problems with the proposed settlement, but, for me, two stand out: the lack of a requirement upon Microsoft to publish its APIs, and the wording in III.J.2 that allows Microsoft to decide with whom it must share technical information.

As Ralph Nader has written elsewhere, "[U]nder J.1 and J.2 of the proposed final order, Microsoft can withhold technical information from third parties on the grounds that Microsoft does not certify the "authenticity and viability of its business," while at the same time it is describing the licensing system for Linux as a "cancer" that threatens the demise of both the intellectual property rights system and the future of research and development." Is it not obvious how Microsoft will respond to requests for technical information from developers of Open Source software?

I urge you to reconsider your position.

Subject: Microsoft Settlement

Hi,

I am a US Citizen and I feel that the proposed settlement of the Microsoft anti-trust case will do nothing to change the monopolistic practices of Microsoft. Any settlement which does not severely restrict Microsoft from simultaneous operation in the OS and Internet, and Applications market will do little to create a fair open computer software arena in which competitors have a chance.

I recently upgraded a computer from Windows 95 to Windows XP. Windows XP is an advertising platform for additional generally unrelated Microsoft products and services.

As a specific example the "Passport" advertisement is a carefully worded almost lie. When you attempt to connect to the internet the XP system prompts you popping up a window saying that you MUST have a passport to browse the internet. This is untrue and the average user will be unable to distinguish between the actual wording that says you MUST have a passport for the use of MICROSOFT services the the wording I used above.

There are numerous other advertising features embedded in XP which present Microsoft products and services as the necessary for use of the OS or Internet. These presentations are unfair and continue to bolster Microsoft's monopolistic position in the software market.

Subject: Microsoft Settlement

I'd like to add my comments on the proposed remedy of the Microsoft antitrust trial.

The best way to restore healthy competition in the software development industry is to force Microsoft to completely release all source code of all their products as "open source" or public domain.

Just like affirmative action policies had to be instituted to compensate decades of discrimination against minorities, a period of compensation needs to be established to restore competition to the software development industry. Although this would be devastating to Microsoft for a period of time they could be allowed to continue to move forward with the other provisions provided in the proposed remedy.

Another area I feel is lacking in the proposed remedy is adequate protection of the small consumer. Microsoft has charged consumers large and small for "upgrades" that were really repairs to faulty code. Microsoft needs to be held accountable for their product defects. The consumer should have access to free and unlimited support. Government oversight of Microsoft's problem tracking needs to be implemented just like there is government oversight of utility services. A utility is a publicly approved monopoly and is allowed to be one because it is heavily regulated. Microsoft has become an un-approved monopoly and will require regulation until the competition has recovered enough for the market to work properly.

Thank you for considering these ideas
Sincerely
David C Anderson

To: Microsoft ATR
Date: 1/23/02 9:16am
Subject: Microsoft Settlement

Dear Sirs;
With all due respect any settlement between Microsoft and The United States is doomed to failure for several reasons. First and foremost, Microsoft has not and will not change what and how they do things, no matter what the judgement is, unless a tremendous amount of force is brought to bear, probably more force than the government apparently is willing to use. They will continue to dump "free" software, which is not truly free but which has the cost bundled with their products, and thereby damage and destroy competitors, much as other countries have tried to dump steel and microchips in our markets.

Microsoft will continue to bundle these "free" items with their operating systems, giving them a tremendous advantage over competitors, even when those same competitors have better products but which are not "free" and are not available by default.

They will continue to modify their operating system so that competing products do not work as well as their own products. There are other issues, but this

should be sufficient. Give up, you have lost, and you and I must learn to live in a Microsoft world with limited choices and limited freedoms.

Sincerely,
James Clements

Subject: Microsoft Settlement

I'm a software developer at a small company in S. E. Ohio who specializes in nursing education software but who also consults for local businesses. The big companies (Microsoft, Sun, etc.) have no idea who we are, and this opinion is unsolicited.

It is my opinion choice and competition needs to be restored to the desktop operating system market. If this is left to normal market forces, it will be 10 years before the situation will change. To accomplish this, I would break up Microsoft into 3-4 identical companies. Give each of the companies—all— of Microsoft's current technologies and divide Microsoft's other assets equally.

In my eyes, the desktop operating system market would then have no majority player. The various MS children would have to compete to sign deals with hardware vendors and service providers, instead of the current situation where Microsoft can demand terms from those organizations. —

I wish to register my opposition to the proposed Microsoft settlement. I object to the proposal for the following reasons:

1) Fundamentally, the settlement would treat the symptoms of the problem, rather than the problem itself. The remedies spelled out in the proposal are overly specific, to the point that Microsoft can still find other means not mentioned to continue abusing its monopoly.

2) For example, one omission for the settlement proposal is competing windows-compatible operating systems, such as WINE on Linux. Microsoft intentionally erects a large Barrier to Entry by using restrictive license terms and intentional incompatibilities, which the settlement would not prohibit.

3) As another example, Microsoft currently uses restrictive licensing terms to keep Open Source applications from running on Windows, and they similarly restrict Windows applications from running on other operating systems. The proposed final judgement would prohibit neither of these licensing terms.

4) Beyond the licensing terms, Microsoft uses continuous intentional incompatibilities from one release to the next to prevent applications from running on competing operating systems. Once again, this behavior would not be restricted.

5) Finally, the proposal as currently written lacks an effective enforcement mechanism. There is no real penalty for disobeying its terms. In conclusion, I would like to assert that the proposed settlement is really not settlement at all. If we allow it, we are conceding to Microsoft, and they win the case. Their abuse of monopoly powers would go on unabated.

As an alternative, I would propose splitting the company up, but not into an operating systems and applications division. Rather, I would suggest splitting it up into two competing Microsofts, each of which inherits all the code of the parent company. They would be forced to develop their code independently, and any standards would have to be publicly announced such that other competitors might write compliant code as well. And best of all, Microsoft would finally have some equal competition.

Thank you for considering my opinion.

Sincerely,
Ross A Knepper

Subject: Microsoft Settlement

I feel that the current proposed settlement for the Microsoft case is too lax and that it requires further strengthening in order to be in full compliance with the law. Microsoft has developed a whole new software development environment called (dot).NET that is not mentioned in the settlement, and that would allow the current settlement to be a setback of miniscule proportions. They have even announced how (dot).NET is the successor to the currently used JVM, and yet the settlement does nothing to make sure (dot).NET will continue to be open. It also does not do enough to make sure that all software vendors can get access to the Windows APIs, nor does it open up access to all APIs that Microsoft currently implements. This would allow Microsoft to shift their focus from the products mentioned in the settlement, to those that are not and continue using restrictive licensing and other unfair anti-competitive practices.

Subject: Microsoft Settlement

Hash: SHA1

Dear Renata B. Hesse,

I'm against an easy settlement against Microsoft. I've been a programmer in the industry for sixteen years and Microsoft has truly made certain aspects of my job difficult.

Time and time again over these years they have abused their position to their profit. Like for example, they published a developer's standard for versioning. Then when they broke that standard, it forced everyone who was developing for their software to buy upgrades to their development tools if you wished to release products for the Microsoft environment. This not only cost companies across the company major money in forced licensing, but also time in retooling their programming departments. Then after the wave of complaints from developers, they had the nerve to do it again and again and again.

They continue to take industry standards and with a well known strategy of theirs, they adopt the standard. Then once they get a majority of users on their side of the fence

using their tools they change the standard. Several times they have attempted to copyright their extensions, so that noone else can interoperate with their software. This causes a wave of programming development throughout the industry for no gain other than increasing Microsoft's dominance. More money and wasted effort on the part of programmers and IT departments throughout the world. With no real benefit to anyone but Microsoft.

A full fifty percent of my time over my career has been spent reworking things that don't need reworking because Microsoft has a plan for industry dominance that forces programmers to rework. During this time, Microsoft has not shown much concern for the user with the frequent reboots required and total lack of security in it's products.

The UNIX tools I used when I started have grown and changed some over the years. But the originals still work, the standards they were built upon still work. I can't find a single Microsoft tool or "standard" I originally used that would still work in a reasonable manner. Microsoft needs swift and harse penalties for it's anti-competitive policies that have caused years of set back in the industry. This productive energy that has been wasted playing their game could have been spent on innovation.

Proposals for the settlement:

(1) I think if anyone thing comes from the judgement, that Microsoft should not be allowed to "Adopt and Extend" any published standard. The adopt part is fine, the extend or change is not. Example: They adopted Kerberose and have created a set of extensions to make their software incompatible. They have copyrighted those extensions.

(2) They should not be allowed to break their own standards for versioning of system libraries. The release of different versions of system libraries with the same version number should be prohibited. This is the dirty trick they used to force upgrades of their compilers and some users.

(3) They should be forced to open their source code to their operating systems (i.e. Windows) to the world. I've written several packages to interoperate with Microsoft products only to notice that their own function in a superior manner. Upon investigation, they were using unpublished back doors. Any software working through the "front door" was penalized in performance and reliability, while their own development departments were using the secret "back door". Published source code would prevent such hamstringing of developers, as any "back door" would be immediately apparent. This would also have the effect of "auditing" their code for security problems and force them to upgrade many security holes. This would actually benefit users greatly in terms of performance, reliability and security. Any anti-competitive pieces of code would be easily identifiable.

(4) I'm highly in favor of splitting the company between an OS company and a tools company. This be the easiest, lowest policing method of insuring many abuses don't occur in the future. If you don't think this is necessary, then put it as a penalty clause for violating any terms of the final

judgement. Then if they go back to their predatory practices, they will be split.

Subject: Microsoft Settlement

Dear Sir;

I co-signed Dan Kegel's open letter, but I would like to express some personal concerns of mine as well.

The PFJ doesn't prevent Microsoft from continuing it's current anti-competitive practices. There is a point at which capitalism can inhibit free enterprise. I believe that Microsoft has reached that point. They have and are currently using their current monopoly—in workstation operating systems—to establish monopolies in other markets (READ internet access, home enterainment systems, etc). They have restrictive licensing on their development environments that prohibits their use to create non-MS Windows software/applications. Finally, the PFJ would allow them to bring lawsuits against excellent software projects, like samba (see <http://www.samba.org/>), which are working towards integration—not market domination.

Thank you for listening to the concerns of a voter.

Sincerely,
Mike Cathey

From: Judson Holt
 To: Microsoft ATR
 Date: 1/23/02 9:17am
 Subject: Microsoft Settlement

I believe the proposed Microsoft settlement is wrong. It does not go far enough to restore competitiveness.

To me, competitiveness means that there must be a way for a third-party software company to come up with an operating system that is completely compatible with the hardware and applications that currently work with Windows. As I understand it, the best way to do this is to require Microsoft to publish its APIs. I have used Microsoft products for a long time. First MS-DOS on an IBM PC, then Windows 3.1, then Windows95, WindowsNT, and now I'm using Windows2000. However, I have been continually frustrated by the additional "features" that have been tacked on with each successive generation of O/S. I would love to be able to buy a "stripped down" Windows with few features, low computing overhead, high stability and high security that is still compatible with all the application software that's already available. I doubt Microsoft will ever consider making this kind of OS. In a truly competitive environment I should be able to buy such an operating system from a third-party vendor, assuming people like me formed a large enough niche market.

Under the Tunney Act, I would like to comment on the proposed Microsoft settlement. I have several problems with the settlement.

(1) The PFJ does not prohibit Microsoft from increasing the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities.

(2) The PFJ contains overly narrow definitions—for example A) it forces Microsoft to publish its secret API's, but defines API so narrowly that Microsoft will be able to avoid disclosure B) it allows users to replace Microsoft middleware with competing middleware but defines "middleware" so narrowly that the next version of Windows may not be covered at all. C) The PFJ does not cover Microsoft .NET—it allows users to replace Microsoft Java with a competing product but Microsoft is phasing Java out in favor of .NET. D) The PFJ requires Microsoft to release the API information but prohibits competitors from using it to develop operating systems that are compatible with Windows (and thus could compete with Windows).

(3) The PFJ does not prohibit Anticompetitive licensing terms currently used by Microsoft. Microsoft's enterprise licensing scheme still has large companies paying per machine that *could* run Windows instead of those that do—this type of licensing is similar to those banned by the 1994 consent decree. Microsoft's licensing also restricts vendors from installing other competing operating systems to operate side-by-side with Windows.

(4) The PFJ as written does not contain an effective enforcement mechanism.

I believe that the PFJ should not be adopted without substantial revision to address these problems.

Sincerely,
 Michael Fredericks 4773 Tapestry Dr

From: Nick Allen
To: "microsoft.atr(a)usdoj.gov"
Date: 1/23/02 9:17am
Subject: Microsoft Settlement
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

From: Scott Russell
To: Microsoft ATR
Date: 1/23/02 9:29am
Subject: Microsoft Settlement
Scott Russell
Orr's Island, ME
Judge Colleen Kollar-Kotelly, and The
Department of Justice

I am an American citizen with over 17 years of experience in software development.

The current Microsoft settlement is inadequate to improve the competitive environment in the software industry. Microsoft holds and has enforced a

monopoly on the desktop computer market, and this settlement does not provide sufficient penalty for these misdeeds. Microsoft has failed to abide by the spirit of previous agreements. Providing an oversight committee, but no provision for the ability to penalize Microsoft represents a weak settlement—one that does not protect the consumer or the non-monopolists in this market. This settlement provides inroads for Microsoft to continue to undermine both the software industry in general, and the Free Software movement in particular. In the past, Microsoft has been found to mislead its customers and vendors, the public, and the courts. Logically, we should consider that it may continue to do so now, and will probably do so again in the future.

Marketing statements notwithstanding, innovation does not come from forcing a stranglehold on the citizens of the world. It emerges from the free exchange of ideas among organizations as peers. There is nothing wrong with pure competition or free capitalism, and I support both. Imposing operating constraints on an organization should only come into affect when the organization steps outside of the standards of Society and Law. The global community, and Americans in particular, expect a degree of ethical behavior on the part of corporations—The Sherman Act was created to provide recourse to address those situations in which an entity steps outside of the boundaries of acceptable behavior.

Microsoft has crossed this well-defined line, and should suffer a tangible penalty for past misdeeds, the disastrous effects of which are ongoing, and will continue for years. A mechanism for preventing and penalizing attempts at future misdeeds must also be part of this remedy. One who violates the law should not be allowed to keep his ill-gotten gains. The court has found that Microsoft has engaged in activity that is in violation of civil law, by maintaining and extending an illegal monopoly. Microsoft committed these illegal acts with the successful intention of taking money from consumers, competitors, and vendors. The current settlement allows them to keep these gains, which would be measured in billions of dollars. Some solid process must be put into place to ensure that this money, if not returned to those it was taken from, will be used to recover from the damage caused by the illegal actions of this monopolist. Negative impacts upon the economy and technology innovation should not be a reason to prevent a harsh judgment in this case. The impact of a tumble in Microsoft's stock price on the world economy will be offset by the rise of independent software vendors, once they are free of the tyranny of a sitting monopolist. Technology will become more valuable, stable, and secure as more worthy organizations begin to set the pace for this field. Allowing a single organization to have such a strong hand in the survival of a market, and the nation's economy in general must be stopped. It's a simple fact—the tech industry would do better and recover faster without Microsoft controlling its interests. Applying reimbursement and punitive damages to Microsoft serves the national interest—not doing so serves only Microsoft's interests.

I wish to give a few guidelines to help define what would constitute a fair remedy:

Prevention of Recurrence—Microsoft must not be allowed to continue to abuse or enforce its monopoly. Reimbursement—Microsoft must not be allowed to retain the profits it has earned as a result of its illegal actions.

Reparations—Microsoft is responsible for the current uncompetitive market in operating systems and related applications. The should be forced to underwrite efforts to restore competition and consumer choice. Damages—Microsoft must pay punitive damages over and above its reimbursement and reparative obligations, both as punishment for wrongdoing, and to deter future monopolists.

The existing settlement serves to grant Microsoft it's monopoly, and will cause additional damage to many, many industries. It will also ensure that there will be more cases of United States Vs Microsoft in the future, costing more money to taxpayers.

Thank you for your time, cott Russell

From: Harry Dellicker
To: Microsoft ATR
Date: 1/23/02 9:20am
Subject: Microsoft Settlement

To whom it may concern,

I am very concerned about the proposed settlement of the Microsoft antitrust case. PLEASE do not let Microsoft "off the hook" with a simple slap of the hand. This company has been playing dirty for years now. I am totally incensed about their tactics used in squashing Netscape. The Netscape browser is a good piece of software (unlike that security nightmare MS calls Internet Explorer). I believe Netscape could have remained a viable company had it not been for the illegal tactics of Microsoft.

Having been emboldened by the weak response of the government, Microsoft's latest bombshell is a new subscription software scheme whereby they will require companies to pay an annual subscription cost of 29% of the original purchase price of their software licenses. If they choose not to participate, future upgrades will not be possible; they will have to buy all NEW licenses any time they want to "upgrade". In the past we have been able to purchase upgrades at a reduced, upgrade price if and when we felt like it. This is extortion, pure and simple. Microsoft thinks they can get away with it simply because they are virtually the only game in town.

Microsoft has also been guilty for years of putting out poor quality software with little concern for security. We all pay for this every time there is another virus attack which takes advantage of yet another Microsoft software coding error. Please, Microsoft needs more accountability; not less. We need a judgment against Microsoft which is truly meaningful.

Sincerely,
Harry Dellicker
Covington, WA

P.S. While I am at it, we also need to change the laws so that companies can sue a software vendor for damages which can be directly attributed to negligence on the part of the software vendor. Only then will these companies start taking security seriously.

Yes, I know about Mr. Gate's new security initiative. I will believe it when I see it. And of course, if and when they have something ready, I'm sure they will be happy to SELL it to us.

MTC-00015490

From: Chris Edwards
To: Microsoft ATR
Date: 1/23/02 9:20am
Subject: Microsoft Settlement

I would like to address the Proposed Final Judgment by saying that I feel that as it currently stands, it would not diminish the barrier to entry for Intel/x86-Compatible PC operating systems to compete with Windows. Much software that I use and maintain for my employment as a systems administrator is Free and Open Source Software which is clearly discriminated against by Microsoft and is not addressed in the Proposed Final Judgment.

I depend on software that must interoperate with Microsoft Windows Operating Systems. The developers of the software cannot fully interoperate with a Windows System unless Security APIs are available. By allowing Microsoft to keep document formats (an API) and Security APIs secret for their systems, competing operating systems, server software, and applications cannot interact effectively with Windows Operating Systems or compete against

Microsoft Products. I find that this is a fatal flaw in the Proposed Final Judgment and allows Microsoft to continue in their arrogant, heavy handed business practices.

In short, I feel that the Final Judgment is a step in the right direction, however, it is nowhere near complete. This judgement, as it currently stands, is not in the public interest.

MTC-00015495

From: Chris Worley
To: Microsoft ATR
Date: 1/23/02 9:21am
Subject: Microsoft Settlement

Sir/Ma'am,
I find the proposed Microsoft antitrust settlement to be just short of an apology to Microsoft.

It will do nothing to stop their anticompetitive behavior. It will do nothing to spur competition in the software industry. It gives Microsoft carte blanche to continue to run roughshod over consumers and competition.

The media has well documented that every key provision in this settlement has an "opt out" loophole that allows Microsoft to continue its anticompetitive behaviors.

The future of high technology is at stake. If you allow Microsoft to remain unchecked, then we are entering a new "dark ages" where a small minority will control the information vital to innovation. The part of the proposal I'm most concerned with is the "security" "opt out" in the "open protocols" section... "Security" has become a buzzword associated with terrorist acts, allowing Microsoft to portray competing vendor's software compatibility with authentication software as an act of treason. It's just not so. "Security through obscurity" has never stopped hackers with ill intent, it only keeps those being attacked "in the dark". It's much like human viri: we want to know what can infect us, how to keep from getting infected, how to detect the infection, and how to stop the infection (even if it can't be stopped). This information is key to our longevity. For example, the recent anthrax terrorist acts have shown that public information is critical to detection and cure, and the lack of information led to unnecessary infection (of postal workers) and panic among the uninfected, and did nothing to stop the perpetrator.

Software viri/worms require the same publicity to protect and inform the population.

I'm afraid Microsoft has negotiated this loophole in the settlement for a reason other than protecting consumers: they're stopping compatible products from competing under the guise of stopping terrorism. For example, a software package called "Samba" competes with Microsoft

NT file servers: file servers compatible with the protocols that provide you with your "network neighborhood". If Microsoft can hide the authentication protocol, then the competing file server software can't compete: if you have to have an NT server to authenticate users, then you might as well

use that server to serve files and not use Samba at all (IT departments, in order to simplify their task, would prefer not to run servers with different OSES). For Samba to compete, it must be able to perform all the necessary protocols for Microsoft's network file services. It's all or nothing; it does consumers and competition no good for only part of the protocol to be published. This is similar to their behavior with API's. By not exposing key OS interfaces, they've been able to create special "hooks" into the OS that only their applications can use, allowing their applications to have features that the competition can't have. It's the same old trick with a new twist, under the guise of "protecting consumers". This settlement is a ruse. It's a trap. And, the DOJ seems overly willing to fall for it, to the detriment of competition and consumers.

Subject: microsoft settlement

Let me begin by saying that I am appalled that any court would seriously consider Microsoft's proposed settlement. There are two main flaws with the "operating systems for schools" proposal. First is the way Microsoft will lie about the amount of money that it donates. Take for example a license for Office XP Professional. The Full Retail Price for this product according to Microsoft is 480 dollars. But the educational price that is paid by schools and students is only \$200. So Microsoft will claim that it is donating software worth 2.5 times as much as it would cost for a school to purchase, thus making the court and the Department of Justice look like fools for believing Microsoft. Again. And this does not take into account the discounts that are available with multiple purchases.

Second is the fact that this "punishment" will enable Microsoft to push its products deeper into the one niche market where there is still a viable competitor, Apple Computers. Apple has consistently courted the educational market better than Microsoft. A "punishment" of the sort outlined by Microsoft would enable them to oust their nearest competitor. Microsoft has broken the law. Microsoft has been found guilty of breaking the law. These are often two different things, so I want to emphasize that point. They are guilty and they have been found by a court of law to be guilty. They must be punished.

One potential way to punish them is to force them to take returns on their operating systems. It is impossible to buy a computer from a major OEM (like Gateway, Dell, Compaq, HP, etc.) without purchasing a copy of Microsoft Windows. And yet I never, not once, use that software. I format the hard drive and install Linux. I do not open the shrinkwrap, I do not accept the license of the Microsoft Operating System and I do not use it. And yet I can not, as it says on the license, return the software. Microsoft will not accept it because I bought the computer from Gateway. Gateway will not accept it because it is Microsoft software. As one part of their

punishment, I would force Microsoft to accept unopened OEM versions of their products.

I am sure you will hear many suggestions for punishing Microsoft, so I will limit my suggestions to the one above. There are many other good suggestions though, and I hope someone at the Justice Department does some justice. It's about time.

To: Microsoft ATR
Date: 1/23/02 9:22am
Subject: Microsoft Settlement

I am writing to express great dismay with the proposed federal settlement of the Microsoft antitrust trial. Past behavior is a good indicator of future intentions, and Microsoft was sanctioned in the past for poor behavior and monopoly abuses. The sanctions did not achieve the goal of preventing the current round of offenses. This latest settlement is even worse. It practically encourages new abuses. The proposed settlement is INADEQUATE and UNJUST.

Without a substantial disincentive to further abuses, a public corporation (chartered to maximize shareholder value and net profits) is inexorably going to be pushed towards leveraging its monopoly or monopolies to prevent competition from eroding revenues. This is very simple. The only way to avoid a repeat performance is to encourage compliance via far-reaching consequences for breach, such as forced publication of APIs and source code for products found to be used to violate antitrust

statutes. It's hard to shoot a man without a bullet; it is difficult to leverage a monopoly without a product to do so. I would like to suggest some alternatives to strengthen the settlement. Internet Explorer was "integrated" in a spurious and demonstrably false fashion; Spyglass Software was thus deprived of millions of dollars in licensing revenue, despite proof that their licensed product (rebadged as Internet Explorer) was separable from the Windows operating system. This demands punitive action: repackaging of IE as a separate product. Also, the abusive licensing practices of Microsoft will not be ended by the proposed settlement. OEMs will be crushed by other avenues if they defy Microsoft, as has been the case in the past. Given the near-total monopoly held by Microsoft in this market, ALL OEM RESTRICTIONS OTHER THAN INTELLECTUAL PROPERTY STIPULATIONS should be held as null and void in future Windows Operating System EULAs. Finally, all APIs for operating system functions that interact with other computers on a network or workgroup should be made public, and that public documentation enforced by law, with penalties for non-compliance including full publication of the relevant source code in the event of a deliberate obfuscation or non-publication. Perhaps then, stiffer competition will push the entirety of computing forward at a faster pace, and if Microsoft truly is worthy of being the largest and most powerful company in the field, we shall witness this as a result of innovation and invention, rather than illegal stifling of competing technologies (often those with the greatest promise for all). I do not begrudge Microsoft their success; I begrudge them breaking the law and receiving a slap on the wrists (AGAIN!) as punishment.

Subject: Microsoft Settlement
To Whom It May Concern:

I have a number of disagreements with the proposed settlement, but one in particular I find unacceptable is the definition of "Timely Manner". In my opinion, delaying the release of what will most likely be critical and complicated API information to competitors until after Microsoft has had the opportunity to expose their product to more than 150,000 potential customers is not being competitive. I believe new API information should be provided to Microsoft's competitors much earlier in the development cycle, and an ongoing flow of information regarding API changes and additions should be established.

Thank you for your attention.

Dear Sirs—

As a former user of the now-defunct Be Operating System(BeOS), I was very unhappy that Microsoft was able to abuse its influence on OEMs to prevent my being able to purchase a computer with BeOS preinstalled. This blatant suppression of competition clearly stifles trade and prevents innovation.

Microsoft should be banned from making *any* deals with OEMs that stipulate behavior not directly related to their software. Given Microsoft's record of attempting to violate or circumvent previous such restrictions, the full text of all Microsoft OEM agreements should be publicly available.

Yours,
Sebastian Banker

I oppose the Microsoft settlement because I believe it does not do enough to prevent Microsoft from using its dominant position in the OS to put competitors out of business. Look at what they tried to do to Kodak recently. Microsoft originally set up XP so that Kodak digital camera software would not run under XP. Only after Kodak threatened suit did Microsoft back down. Kodak is a large company with legal resources at their disposal, so they are able to fight back against this illegal behavior, but smaller companies might not have that option. Microsoft have behaved like gangsters, using extortion and intimidation to destroy business rivals. They cannot be allowed to continue in this

manner, and the settlement does little to rein in their criminal behavior.

I just wanted to write in my support against Microsoft in your case against them. In my opinion the US Government has gone way to soft on Microsoft. As we progress as a country, one of the things we need to do to stay on top it to keep developing our technologies so they are better than any other. Microsoft stands in the way of this by having a monopoly and using that monopoly to stifle competition in any way possible. Many businesses have had to close because of Microsoft's monopoly. Some of these businesses could have come up with advances in the field that make sure the US is still ahead of everyone else but are now unable to do that. On a personal note, I am employed as a Unix Administrator. If Microsoft had their way my job, which I have stuck years of training into to, would be eliminated. I have a wife and 2 young children that depend on me solely for financial support. Why should one company, because of their monopoly, have a say on whether I will have a job in the future?

Please think and decide with common sense on this issue, not political donations and lobbyists. Thank you.

I have been a Computer Programmer for the last 10 years and I do NOT agree with the settlement proposed by the Justice Department. It is too soft on the Microsoft behemoth that they are. Plus, the "punishment" is not immediate, Microsoft gets one year to "modify" their behavior after this is approved. They have had 5 years to "modify" their behavior. Here is how I see it.....

If I were to start burning down our forests...and we have laws protecting our forest. I still burn it anyways. The Justice Dept. comes in and says "Stop!" But I say, I am behaving normally, I should be able to burn all I want. I am going to appeal this law of burning down trees. And while I drag the justice system through the courts for 3+ years, I am still going to burn down the forests. So, after years and years of burning the forest down, and proof that I was acting illegally....I reach an agreement with the Justice Dept. I am no longer allowed to use matches (after one year of reaching the agreement). I pay no fines, I don't have to replant the forest, the lives that were involved with the forest burning....nothing.

Subject: Microsoft Settlement

To Whom it May Concern:

I am a software engineer for the IBM Corporation. In addition to the work I do for IBM, I also work in my free time on several different open source software projects. I am writing you today to comment on the settlement agreement the DOJ has reached with Microsoft.

As you know, IBM is one of the OEMs that uses Microsoft's operating system in the computers we manufacture. IBM is also one of the leading proponents of the Linux operating system, an open source alternative to Microsoft on the x86 hardware platform. My concerns with the Microsoft settlement revolve around three fundamental issues: Microsoft's relationship with OEMs, the availability to ISVs of Microsoft's APIs, and the enforcement of this settlement.

There are alternatives to the Windows operating system, and the settlement needs to take into account the fact that OEMs must have the right to ship computers that do not contain any copy of Windows. Please amend section III.A.2 with this option, so as to prevent Microsoft from including this in their contracts with OEMs.

Microsoft's APIs should be fully standardized, documented, and available to

the public. The ONLY party that benefits from Microsoft's ability to evaluate the "business plan" of companies that seek access to the APIs is Microsoft. It will enable them to control the market for software for years in the future by dragging their feet in evaluating companies, or dismissing requests for access to the APIs for spurious reasons. I do not see this option as punishing Microsoft as much as it benefits consumers, who would finally get the competitive market for software that they so richly deserve. Releasing the APIs to the public would create an intellectual property commons that would spur a new era of development and creativity in the software industry, much as the Internet did, with the consumer as the beneficiary.

I strongly feel that Microsoft should have no say in who oversees it during its punishment. Microsoft, as a repeat offender and unrepented monopolist, has lost that right. I strongly suggest that the court appoint a single "Master" who can manage and assist the court with overseeing Microsoft. Placing control in a single authority, chosen by and responsible to the court, is the only way that we can even remotely ensure that Microsoft complies with the remedies proposed in the settlement.

I thank you very much for your time, and I pray that wisdom and the spirit of justice will guide you into making a decision that properly benefits all of the victims of Microsoft's monopoly.

Sincerely yours,
Josh Wills

Subject: Microsoft Settlement

To whom it may concern,

Following September 11th I have pondered much over my status as an American Citizen. For the sake of brevity, allow me to state that there are many aspects of this country that I truly love, but also many that I find inappropriate. This settlement is one of them. It is repulsive to me that a company, by using backhanded and even immoral means, should be allowed to continue without so much as a slap on the wrist. If justice here fails, then we shall only prove that money buys everything; even justice, and our ideals of truth and freedom are compromised. I for one do not wish to live in the United States of Microsoft, or the United States of any other megacorporation.

The real trial isn't about a browser, or an oversized, gargantuan company. The real trial is about the freedom to innovate and freedom from control. If innovators are restricted to what Microsoft dictates, then we shall have no real innovation. It is my hope that there are better, stronger things in this world than greed. I have seen that in the open source movement, and such things bring peace to my heart. Please don't let greed be rewarded any longer, and let justice be served as it should be: with an open, objective mind and not wallet.

Sincerely,
Jeff Quinn

From: Ryan.Headley@cunamutual.com@inetgw
To: Microsoft ATR
Date: 1/23/02 9:23am
Subject: Microsoft Settlement

To Whom It May Concern:

Microsoft currently has a stranglehold on the current computing market which is limiting the end user's choices. I have been in the computing industry for a mere seven years but in that time I have seen several Operating systems start their decline.

Apple: Once very prominent and competitive, they now have little presence in the world. While this is partly their fault due to their business model, it is at such a point now that should Apple ever decide to change their marketing, they would be completely and utterly "wiped out". Netscape: What was once the most popular browser anywhere is now virtually NON-EXISTANT due to microsofts, "bundling" tactics. Novell: What was one of the worlds most reliable, stable, and popular network operating systems has nearly disappeared in my area. Microsoft has everyone believing that they have a better product. The only reason their product can be considered "better" is because their software will only run on Windows forcing people who may want to use some of their other products into using their less than par OS to run their networks. I've worked with Novell for 5 of those seven years, right along side of windows. The two compliment each

other very well, but from a standpoint of stability and security, Novell was far above and beyond the level that Microsoft is currently at 5 years ago.

Microsoft has proven time and time again, that nothing is their own. Windows was TAKEN from Apple/(Xerox), Active Directory Services was BORROWED from Novell's Directory Services, and C#/ .Net was copied from Sun's Java and J2EE standards.

One has only to look at the source code for Java and C# to see that it is technicalogical PLAGIARISM. We do not stand for PLAGIARISM anywhere else in the business world, why should we on technology?

One has only to setup and administer NDS (Novell Directory Services) and ADS (Active Direcotry Service) to see that what Microsoft has come up with for a network structure as "new technology" has been around since 1995!! And finally, lets be honest with ourselves, if it wasn't for Steve Jobs and Apple, would the world even know what a GUI (grahpical user interface) is? I can tell you, that working in the environment even this short period of time, Micosoft has proven its inferiority to me over and over again. My current environment sees its Windows servers crash 50 to 1 when compared to Netware and that statistic has even a larger gap when compared to our Unix servers.

In conclusion, if Microsoft is allowed to continue down its current path, the Corporate world as well as the common public would not only be subject to inflated prices, but inflated prices for a lesser quality products. The american dream? I don't think so. Perhaps if Microsoft were at least forced to develop their software for multiple platforms (not just MSOffice, but networking solutions as well), there will still be some freedom of choice left over at the end of this road.

From: Derek Williams
To: Microsoft ATR
Date: 1/23/02 9:23am
Subject: Microsoft Settlement

Dear People,

I am extremely disturbed by the proposed settlement in the Microsoft Antitrust Case. I have many concerns about the current and future behavior of Microsoft which I do not believe will be addressed by this settlement.

My primary concern is the monopoly position that Microsoft is seeking to garner in the sphere of network services. This monopoly position is being obtained through the "innovation" of including client services as part of the XP operating system that work only with Microsoft servers and services. The protocols used by Microsoft are proprietary, and predatory in nature and do not seek to allow developers to innovate themselves. This, in addition to Microsoft's extremely poor security and system uptime record, especially recently, should serve to warn us all that our abilities to purchase products, exchange information and to be secure in the knowledge that our personnel records are kept private are all at risk. This goes directly to Antitrust as much as monopolizing rail lines or airline routes, it will impede our economy to a large extent, and allow other nations, who are taking a more reasoned

approach to Microsoft, to prosper while the United States becomes captive to a Microsoft run internet. The proposed settlement will not impede Microsoft's ability to acquire and abuse a monopoly on internet services.

Other systems and protocols have been built, deployed and tested for years. These protocols started with an emphasis on security from their inception, and are currently the favored protocols used by a large percentage of developers. In addition, these systems and protocols continue to be developed in an open standards based fashion which receives inputs from many sources. Many of these systems are already being encouraged by other nations, including the purchasing of non-Microsoft operating systems by universities, corporations, and the governments of these nations. This allows these nations to use the already existing secure and safe protocols that are in place. Allowing Microsoft to continue "innovating" and crushing other technologies by "integrating" these services into the operating system itself (considered poor practice by developers not in the employ of Microsoft) will put the United States at a distinct economic disadvantage. It is interesting to note that many of the secure operating systems are a fraction of the cost of Microsoft operating systems and allow organizations to spend IT resources on additional services and hardware, further improving the technological capacity of the economies in which these operating systems are deployed. Please take a more reasoned and rational approach to the Microsoft Antitrust settlement. Our Nation's economy and Security is at stake, Microsoft's prosperity is not.

Subject: Microsoft Settlement

Why I believe the proposed settlement with Microsoft should not be allowed to go forward: The settlement doesn't force the company to stop doing actions that eight federal judges found illegal. It provides no real penalty for the illegal acts. Telling Microsoft to "play fair" has never worked in the past.

Giving computer makers more freedom —is— a useful result. A few weeks ago I ordered a computer from Dell. I wanted a machine which either ran Linux or Windows 2000. They did sell a Linux box, but not in a useful configuration for my purposes. They had exactly zero Windows 2000 boxes. XP is buggy and not yet supported by my workplace (due to security concerns) but I had to buy XP anyways. I'll need to install an older version of windows on top of that.

But even so, Microsoft must be punished for their illegal actions, otherwise others will feel free to ignore anti-trust laws. I personally would suggest a —large— fine (20+ billion) and that most of that money be used to fund open source software development— Microsoft's largest competitor. I'm certain a non-profit organization could be formed to do just that.

A small wrist slap, and a mumbled promise from Microsoft not to sin again is clearly insufficient.

From: Nathan Neulinger
To: Microsoft ATR
Date: 1/23/02 9:24am
Subject: Microsoft Settlement

My view on the settlement is very simple— microsoft's practices have prevented me as an independent developer from writing software that can either compete or interoperate with servers that they have written. The settlement does nothing to help this, and in fact, seems to legitimize MS's discrimination against non-microsoft products. Any solution/settlement/etc. that provides less than the capability for full interoperability (i.e. FULL documentation of ALL microsoft network protocols) is worthless to me.

I'd also agree with the requirement for full documentation of any microsoft file formats. And please don't fall for the "We're changing the format to XML nonsense", cause microsofts idea of changing the file format's to XML looks something like this:

Old Format:

Beginning of File:
UNDOCUMENTED—BINARY—BLOB
End of File:

New XML Format:

Beginning of File: <OfficeDoc
Version=XP>UNDOCUMENTED—BINARY—
BLOB</OfficeDoc>
End Of File:

Sure, it's completely legal XML, it's also completely worthless since you can't use it.

I am a Systems Administrator for the University of Missouri—Rolla, and while we are a significant microsoft campus, that does

not mean we are happy with the situation. We are CONSTANTLY having to develop nasty workarounds to microsoft interoperability problems because we also have a sizable Unix (HP, Sun, and Linux) infrastructure. I'd hope that whatever solution y'all come up with makes it clear that Microsoft cannot discriminate against free and open-source software just because they are a competitor.

From: Daniel Hauck
To: Microsoft ATR
Date: 1/23/02 9:25am
Subject: my vote

I am not in favor of current actions and reactions. Many times our government has been forced to intervene on the public interest's behalf over that of major corporate interests. It is part of the government's constitutional duty to enforce its own laws on behalf of its people. It is part of the government's constitutional duty to promote the general welfare. Microsoft had been judged already. Through their actions, past, present and PLANNED FUTURE actions, they are breaking current law. As such, I feel they are not only responsible to the public, but responsible criminally and in contempt of court as they have failed to cease many such practices as stated in various summaries. (Imagine a court's reaction if I were guilty of some form of electronic fraud and yet to be sentenced only to find that I continued to operate in the same manner in spite of the fact that I have been found criminally guilty?) Microsoft's impunity speaks volumes suggesting that this giant is out of control and simply requires major reconstruction to prevent it from ever happening. No amount of "oversight" will be effective because they are persistent and consistent when delivering attempts to squeeze through the cracks in various situations—a perfect example was the premature release of WindowsXP series of operating systems. They knew it was a rush to get that genie out of the bottle before judgement or settlements could be made...all this in spite of the fact that WindowsXP persists in containing evidence of NO CHANGE in spite of their being found criminally guilty of antitrust law in the way they have packaged their software. Again, Microsoft's true colors show brighter than their rhetoric. And contrary to some common belief, I do not foresee further drop in the economy because of this. The same arguments were made regarding the great oil company split ups as well as the phone system. The fact is, I have not seen ANY ill effects resulting from this, and on the contrary, have managed to truly serve their purposes.

My vote is for preventative measures that do not require oversight. SPLIT the company up so that they are barred from using its OS monopoly to leverage other markets unfairly.

Thank you,

Subject: Microsoft Settlement

As an Electronic Technician having worked with Microsoft and competing products for over 10 years. And having read the proposed settlement between Microsoft and the DoJ, I formally submit my disapproval of said settlement based on the following information.

1) The proposed settlement is very similar in word and substance to an agreement made by Microsoft and the DoJ in 1995. Had that agreement been successful there should not have been a need for new remedies.

2) the settlement does not require the full disclosure of the API's needed for 3rd party

software companies to create products that can compete on an even footing with microsoft products.

3) the settlement does not require the document formats used to be opened. If there is to truly be competition on the desktop there must be a common language.

I am a windows developer and I would like to submit this letter of disapproval to the suggested remedy. During the web browser wars I saw for myself just how ruthless Microsoft's monopoly power was applied. Microsoft needed to win the browser wars so they forced us to install Internet Explorer on almost every computer we deployed a application to. They used us the developer by unnecessarily linking IE into any development code they possibly could, they also put key developer libraries into the IE distribution. If we tried to deploy any application that we had built with Microsoft tools it required us in some way to install Internet Explorer. Microsoft in the proposed judgment is not being punished in the least for it's predatory behavior against Netscape corporation. The court must do the right thing for the people and impose stricter penalties. Please do the right thing for us the people by not accepting the proposed judgment. All business's today are in a perpetual strangle hold by Microsoft and there are no good alternative solutions. The alternative solutions do not exist because the barrier to entry is to high. Competition will never be restored in the market place unless severe restrictive penalties are imposed on Microsoft.

The economy today is in a horrible state, and I personally believe this is due to Microsoft's dominance of the software market. We are now in a situation where one monopoly company automatically consumes most of customer budgets. Restoring competition in the market place will create incredible growth and with this comes new jobs. As I type this letter I am on a broadband based satellite connect provided by a company partly owned by Microsoft. The company will of course support no other operating systems besides windows. It is my desire not to run Windows and or Internet Explorer please help me to have the ability to choose the environment that I run not be forced into it by a monopoly.

Subject: Microsoft Settlement

Dear Sirs,

I am writing to express my concern that the Proposed Final Judgement in the Microsoft antitrust case does little to punish Microsoft for its illegal behaviour and does not take strong enough action to ensure innovation and competition in software products going forward. Microsoft's illegal behaviour has harmed companies such as Netscape, Real Networks, and computer hardware OEMs. Consumers have been harmed by Microsoft's secret licensing contracts with OEMs that require the OEM to pay for a Microsoft license for every PC they sell—even if the final end user with use a competing OS such as Linux. Microsoft's profits have been enhanced by billions of dollars due to this illegal behaviour, yet the PFJ has no punishments for these actions. The PFJ does not layout a workable and strong mechanism for ensuring that Microsoft with stop their illegal behaviour. The Technical Committee has limited and weak powers to stop anticompetitive behaviour. It is crazy that Microsoft is allowed to appoint one of the three members of the TC. Either the court or the DOJ should appoint all members of the TC.

The PFJ does not adequately address the behaviours that Microsoft engages in to protect its monopoly against open source competitors such as Linux and Samba. By breaking interoperability with these competing products, Microsoft acts to protect its monopoly. Computer users have been greatly harmed and endured large expense (estimated in the billions of dollars) due to security weaknesses in Microsoft products. Microsoft's monopoly has prevented competition in the markets—competition that would likely favor more secure OS products. I see the PFJ as doing nothing to punish Microsoft for its illegal behaviour and letting it off with a mere promise to stop the behaviour in the future. This is not good enough to protect the rights of Americans. The DOJ has in the past reached consent decrees with Microsoft that were supposed to end its illegal behaviour. The decent decrees were all but ignored by Microsoft and led to the current lawsuit. The appearance is that the DOJ is not effectively prosecuting Microsoft.

Sincerely,
Tom Rockwell

I do not feel that the proposed settlement will solve the problem, nor will it prevent Microsoft from continuing to follow monopolistic practices. The settlement is full of "legalese" that has been carefully crafted with definitions and provisions that, on the surface look like they do one thing, but when you look at the real issue, find out that they do something else. Many of the definitions are too narrow to apply to many current Microsoft products, while minor modifications to other products will remove them from the list of items "covered" by the settlement.

This is a bad settlement. 90% of Microsoft's value is due to its continued predatory business model. Distribution of their own software a situation that only applauds their anticompetitive attitudes, and serves to strengthen their position for their next (and even their ongoing) attempts to simply demolish any sort of competition. If Microsoft wants to distribute software, then the schools in question should be allowed to bill Microsoft for all the software they want that is of no financial benefit to Microsoft—for the next decade. Having to buy a few million copies of their competitor's offerings would encourage Microsoft to behave better in the future—but certainly not allowing

them to distribute their own software which costs them nearly nothing in additional expense after it's been initially created. Microsoft should be broken up into multiple companies (or liquidated), and all interfaces between those companies should be made to be public documents for existant software, and also for the next decade. If those companies can survive on their own, then bravo, but Microsoft should not be allowed to enjoy the benefits of the market share they gain through so many examples of theft.

I am in favor of any decision which keeps government out of the affairs of private business. Whether or not Microsoft is a "monopoly" or whether or not it is "unfair" that they have been as successful as they are is irrelevant as far as government goes. Private businesses have a right to operate any way they choose as long as they are not physically hurting people or are deliberately defrauding people. Microsoft has done neither. Instead, what they have done is make a great series of products that has become the worldwide standard. In no way have they "harmed" the industry. Instead, they have singlehandedly brought the computer industry from a tiny niche in the early 80's, to one of the primary economic engines driving the US today. There certainly is no monopoly. A monopoly would imply that it is impossible for a competitor to make an entry into the market. This is clearly not the case. There have been many competitors that have successfully entered the marketplace using Linux and FreeBSD in just the past years.

Microsoft has harmed no one and defrauded no one. Therefore, the US government should stay out of it's and it's competitors private business affairs.

From: Adam Holley
To: Microsoft ATR
Date: 1/23/02 9:18am
Subject: Microsoft Settlement

I feel that the proposed settlement is not sufficient in it's restrictions and is vague enough to allow several loop-holes. For example: In Section III.A.2. A computer that only runs a non-Windows operating system is not included. So, for OEMs that sell computers that only have one non-Windows operating system installed, they could be retaliated against.

There are several areas in Microsoft's EULAs that restrict users so that they may not use any Microsoft product in conjunction with any Publicly Available Software. This can serve no other purpose than to be anti-competitive, because it's restricts use based on competition, yet there is no restriction on Microsoft to remove this type of wording from their EULAs. Thank you for your time.

 Subject: Microsoft Settlement[Revised text]
 Dear Sir or Madame,

I would like to take just a moment to share my views on the current proposed Microsoft anti-trust settlement. It is my opinion that the proposal, as it now stands, is a slap on the wrist—nay, a pat on the head—approach that fails to truly allow competition in those areas where Microsoft has abused its monopolistic powers.

First and foremost, Microsoft must be forced to make its APIs, file formats, and protocols totally and unconditionally open. As it stands, there is far too much ambiguity in the clause pertaining to this—as interpreter of the document, Microsoft can well claim that, say, Linux developers are not to have this information shared with them as they do not represent a commercial product. Likewise, there is too much leniency granted by the exclusion of remote Windows 2000 administration related protocols. Many of these protocols—SMB/CIFS, for example—are used indirectly for Windows 2000 remote administration but are also crucial for creating products that are interoperable with Windows 2000 server. The “Reasonable And Non-Discriminatory” licensing terms hurt Microsoft’s biggest competition—the open-source/free-software movement that has given us Linux, OpenBSD, Mozilla/Netscape, OpenOffice, KOffice, and the like. All standards, API calls, protocols, etc. MUST be open for these valued members of the software community.

Furthermore, the document must be revised to remove the mess of loopholes that exist which allow Microsoft to obey the word of the settlement without conforming to its spirit of non-discriminatory behavior. As it stands, Microsoft can ignore much of the document as it is riddled with technical loopholes. For example, Microsoft is able to force PC makers to associate internet content with Internet Explorer, word processing documents with Microsoft Word, and the like—removing shortcuts doesn’t change the underlying behavior when a user clicks on a text document or an internet link. The three-member enforcement crew has two members picked or approved by Microsoft itself, nullifying any usefulness of the group, especially when coupled with the fact that none of the members are allowed to speak of the atrocities they see committed by Microsoft. For such a daunting task as looking over source code, a far larger group is required, but a team of 15 individuals (three picked by Microsoft, three by the Free Software Foundation, and the other nine picked by corporations such as IBM, Sun, and Oracle) could begin to work at such a job. The group’s [at least] weekly meetings should be transcribed for DoJ review, and any complaint supported by at least five members should be heard by the DoJ. Current litigation is absurd and meaningless, but could be salvaged by revising the terms of the settlement to preserve the spirit but allow less leeway to Microsoft, which has a history of twisting and disobeying court orders. Lastly, Microsoft’s non-operating system

groups must be either internally or externally separated so that they are not allowed “backdoor” entrance to the operating system; the Microsoft Office team should have the same information on operating system-related APIs and protocols as does the competition (e.g., Corel’s WordPerfect Office team, Sun StarOffice team, KDE’s KOffice team).

Thank you for your time.
 Best,
 Imad Hussain

From: The Icewalker
 To: Microsoft ATR
 Date: 1/23/02 10:31am
 Subject: Microsoft Complaints

To Whom It May Concern,
 I’m not even sure where to begin. I’m definitely writing to you because I don’t feel that the back out of the Department of Justice was the best thing to do concerning the Microsoft Antitrust Case. To reach a settlement with a giant is only to invite more trouble. The government has settled before on infractions and “here we are again, back in court, again.”

How have I been hurt by Microsoft's dominance?

Let's see, I definitely feel that my "FREEDOM" to do with my own computer what I wish has been compromised by Microsoft and Windows. I've seen product updates change my personal preferences. I'm sorry, but I don't feel like opening my JPG's in Internet Explorer or MS Photo Editor. If I want to use PhotoShop, then those preferences should stay there, not be hijacked by the OS! I know it's petty, but it's also annoying multiplied by millions. It's also unfair to those other companies that have spent the time, asked the user, and are now out of the loop. Yeah Yeah, I can go change them back, but I shouldn't have to do that over and over and over again all because I'm now required to install the latest version of Internet Explorer so I can use my latest Word Processor. Since when were the two required to need each other? They have separate functions and shouldn't require each other!

Secondly, I'm tired of not having the choice of some other OS or no OS at all when I buy a computer. Let's see, there is Dell, Gateway, Compaq, HP, IBM. Try to buy a home computer without Windows and some other MS Word Processing Package. It's dang near impossible. And when I ask, I get the story, "We can't ship a system without an OS." Well that's crap. It costs money to put the OS on, you'd think they would love to be able not to do that. I've decided to build my own. More people should learn to do it so they wouldn't be so ignorant and blind.

Linux is an alternative. How do I know. I've built my own computer, and I've installed Linux. Hmmmmmm...I have a nice system for a whole lot less money and I got what I WANT! Not what some operating system company wanted for me. It's about Choice and as long as a predator is allowed to prey on the masses, there is no choice.

It's time to put the sleeping giant to bed and allow the people of this country a little bit more freedom of choice. Afterall, if all software comes from Microsoft, that is a bad thing * * * the "all your eggs in one basket" mentality if you ask me!

I pray that somebody in the government wakes up, stop accepting donations, and does what they were elected by the people to do, to serve the people, not the corporate interest! I'm now done with my soapbox lecture!

Sincerely Yours,

James Bruce

Subject: Microsoft Settlement
Renata B. Hesse
Antitrust Division
U.S. Department of Justice
601 D Street NW
Suite 1200
Washington, DC 20530-0001

As an assistant professor in the Computer Science and Engineering division of the University of Michigan's Electrical Engineering and Computer Science

department, I am writing to protest the terms of the proposed anti-trust settlement with Microsoft.

Microsoft has repeatedly and blatantly leveraged their monopoly of the desktop PC operating systems market to gain a competitive advantage in other markets, and has shown no indication of regret for these actions. It is critical that Microsoft be barred from repeating this behavior for competition in the information technology sector to survive. The next few years will be crucial in the deployment of widespread Internet-based services (such as Microsoft's .NET), and the form that these services take will largely determine the level of consumer choice and privacy available in this domain. I am also concerned about Microsoft's role in digital rights management technology (as embodied in their Windows Media Player). The applications of this technology must tread a fine line between copyright protection and fair use. If the technology is in the hands of a single corporation such as Microsoft, it will be too easy for them to ally with other large media conglomerates to force solutions that erode consumers' fair use of digital content. While I believe Microsoft has a right to compete in these areas, they must be forced to do so on an equal footing with other corporations.

I feel that the US DOJ settlement is inadequate in its terms and lacks credible enforcement provisions even for the weak concessions it forces on Microsoft. Again, I encourage you to continue to press for a more thorough and enforceable settlement that will provide consumers with choice and freedom in the years to come.

The proposed settlement with Microsoft is a bad idea.

Brad Midgley
Salt Lake City, UT

MTC-00015550

From: Matt Smolik
To: Microsoft ATR
Date: 1/23/02 9:29am
Subject: Microsoft Settlement

I feel that the proposed settlement with Microsoft is a very bad idea. This amounts to a slap on the wrist, if that, for industry wide antitrust violation. Industry wide antitrust violation that continue to this day, with new violation each week.

It is not as much what Microsoft does, but how they do it. In an effort to "simplify" their OS they purposely deceive the user. Even if Microsoft is forced to stop the binding of their own software with their OS, they still have control over which application will open which type of document. They have always hidden this from the user, and

it is painful to use even if you know where to locate it. This is one way that Microsoft will continue to force their own software over all others.

Additionally on point A (Unbinding Microsoft's Software) this will have little to no effect. If the user is unaware that they may obtain a different web browser then they can not choose to. While working as in Internet Technical Support, I have heard many users claim that Internet Explorer —IS— the Internet. They do not know any better, thus use the software that came on their computer blindly. Moreover, I have informed many users that they do indeed have a choice in browser software (just to name one) but this is to no avail for they do not know how to obtain and/or install new software or do not wish to bother learning. Thus it is too late and the user is lost down the Microsoft path.

I hope that my words have not fallen on deaf Microsoft purchased ears. "I don't mind Microsoft making money. I mind them having a bad operating system."—Linus Torvalds ("The Rebel Code," NY Times, 21 February 1999)

Matthew Smolik

P.S. Since you are probably using Microsoft Outlook to view this, can you name 5 other email programs?

P.P.S It is very unsettling to learn that Microsoft is advertising their monopolistic OS in the United States Post Office.

From: Wallace, William
To: "microsoft.atr(a)usdoj.gov"
Date: 1/23/02 9:29am
Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices. Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

William Wallace.

From: Jim Rule
To: "microsoft.atr(a)usdoj.gov"
Date: 1/23/02 9:31am
Subject: Microsoft settlement

While I feel the government and Microsoft's adversaries went too far by attempting to break up Microsoft for supposed antitrust violations, the resolution through settlement is preferable to continued, costly and time consuming litigation.

I believe the settlement is fair and reasonable, and is a very positive development for the technology industry.

It is really a mystery as to why the settlement does not satisfy certain of Microsoft's adversaries. More than likely, it is because Microsoft was not forced to break up and they will never be happy until it is. This attitude is unfortunate and should not be allowed to distract the settlement process. Therefore, I urge you to settle this matter as quickly as possible so the technology industry can get back to innovating. Thank you.

From: Greg Willden
To: Microsoft ATR
Date: 1/23/02 9:19am
Subject: Microsoft Settlement

I would like to comment on the Microsoft Settlement under the statutes of the Tunney Act.

I think that the settlement is very poor and does not properly address the real issues. There are numerous loopholes in the proposed settlement that will allow Microsoft, who has a history of unethical and illegal actions, to transform this penalty into an advantage for them. In order to restore proper competition I think it necessary for Microsoft to publish the file formats of all their Microsoft Office files. The .doc file format is widely used. If the format were made available then other office productivity suites like WordPerfect, StarOffice, Abiword and OpenOffice could effectively compete with them. Original Equipment Manufacturers (OEMs) must be allowed to sell a computer that can boot up into more than one Operating System. This has been attempted in the past but has been quashed by Microsoft's legal team. It is suspected that Microsoft is forcing the OEMs into single OS boot loader licenses that disallow this behavior.

These are only a few of the things that Microsoft has done to stifle competition and innovation. For all of Microsoft's talk about being able to innovate. They are doing more to hurt it than they are to help it.

The settlement also needs to have some real teeth. The "independent" auditors/monitors of Microsoft's behavior need to have complete independence and freedom to discuss any of their findings with the public and press. Unless they are allowed to do this their voices will be too easily silenced.

Microsoft should also have major fines imposed upon it for future violations of the settlement. Fines substantial enough that it will think twice before violating the public trust. And the monies collected from these fines should go to their competitors. I would recommend projects related to the GNU/Linux Operating System. Microsoft has openly acknowledged that Linux is a real competitor. What better way to ensure compliance than to force Microsoft to donate substantial funds to their competitors.

Microsoft has been shown to practice illegal predatory behavior. Do not cave in to them and give them a settlement with so many loopholes. They will exploit it to the detriment of all.

Subject: Microsoft Settlement

To whom it may concern:

We wish to express our disagreement with the proposed settlement in the Microsoft antitrust case. Weak conduct remedies such as those proposed will do nothing to change Microsoft's anti-competitive and anti-innovative business practices. Equally disturbing is the proposal that Microsoft should be able to choose part of the team responsible for enforcement of the settlement (weak as it may be.) This is equivalent to letting a convicted felon choose one of his friends to be his parole officer.

Very simply, Microsoft broke the law, and must be punished.
sincerely,
Daniel and Andrea Dvorkin

From: Andrew Williams
To: Microsoft ATR
Date: 1/23/02 9:44am
Subject: Microsoft Settlement

To whom it may concern,

I am writing to express my vote against the proposed settlement. I won't list every complaint, since I'm trying to keep this short and I tend to ramble. I'll focus on the numerous loopholes in the settlement, specifically the proposed "limitations" on Microsoft's behavior in regards to two things: unfairly competing with other products (by integration into Windows, using secret APIs, or whatever) and the "disclosure of communications protocols necessary to interoperate with Windows"

Regarding the first, Microsoft can easily choose to "integrate" anything they like, and in theory, have no problems. I do have issues with regards to the "forced usage" that they rely on. Windows XP comes with MSN Messenger, with NO option to uninstall or disable. Why? Do I even have an internet connection at home? Shouldn't I be able to at least uninstall it? The definition of "Operating System" is very loose, and cannot be relied upon to limit their actions. Obviously, they have no intention of stopping their own "absorption" of other products.

As to the second, the "disclosure of communications protocols," the definition of "interoperate" is fairly clear. However, Microsoft could easily choose to have an "open" protocol with their "proprietary" extensions. This would be legal with the current settlement, as the "open" protocol could work. However, I would bet a year's salary that Windows would by default present the options to users to use the "proprietary" extensions, thus making them frustrated when they had to give them up to use the "open" protocol. Users don't want to "lose" features, even if they aren't needed. This is just ONE loophole, and it would result in basically no change from the status quo.

In summary, a more strict punishment MUST be applied. I am tired of others looking at me strangely because I don't have Office. I CHOOSE not to spend hundreds of dollars on an application that I only "need" because others don't know that an alternative exists. If its going to be a "standard" like that, it should come with the OS, just like IE is now "standard." Though I should mention, the numbers are inflated since users of Windows can't NOT use IE. I personally avoid it as much as possible, and it still pops up all the time. I've found Opera, for example, to be faster, more stable, and easier to use, but I have to identify myself as an IE user to load some pages, because Microsoft has made the world think that IE is the only browser. It is this kind of situation that has to stop. A superior product should never die simply because the competitor is funded by a mammoth entity with a load of cash. The

proposed settlement would not fix this problem, and I don't know of a solution myself. I'm a programmer, and I only see good things being ruined by MS. I can say without reservation that this settlement is a wrist-slap, nothing more. Don't let my money (from taxes to fund the trial) go to waste.

Thank you for your time,
Andrew Williams

I think the current proposed settlement is a bad idea. I am not a lawyer, but it is clear that the remedy is not much more than a "slap on the hand".

The Court of Appeals did not turn aside the original judgment, just the proposed split of the company. Any settlement needs to be strong enough to send a message to Microsoft (and any other company contemplating monopolistic business practice), that such practice is not taken lightly.

Gentlemen;
I am writing to briefly express my disapproval of the current outlined settlement with Microsoft in the current antitrust proceedings. The changes proposed are far too limited, and completely ignore the damage already done to the computer hardware and software markets, and the threat to the networked computing market that is presented by the current Microsoft organization and culture.

Please reconsider the idea of structural changes to Microsoft, or at least some form of strict, preemptive oversight; otherwise, we are all in for "Internet: a trademark of Microsoft, Inc".

Thank you for your attention.

From: Jesse Burson
To: Microsoft ATR
Date: 1/23/02 10:02am
Subject: Microsoft Settlement

There are a large number of problems I have with the proposed Microsoft settlement. Here are some letters sent by others with which I agree: Most of all, I agree with the "Open Letter to DOJ Re: Microsoft Settlement" found here:

<http://www.kegel.com/remedy/letter.html>
In addition:

"Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices. Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted. Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed.

Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition."

"I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation. Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function."

"I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded."

MTC-00015568

From: Jesse Sweetland
To: "microsoft.atr(a)usdoj.gov"
Date: 1/23/02 9:20am
Subject: Microsoft Settlement

Dear Sir or Madam,

I am presently very concerned with the proceedings of the Microsoft Anti-trust case. I am not a lawyer, and I don't understand the finer points of the proposed settlements. I feel that the broad wording of the proposed settlement and failure to accurately define terms in a definite, undisputable, and technical sense contribute largely to this. I will therefore avoid a technical criticism and express more plainly my fears concerning Microsoft's monopoly.

I am currently composing this E-mail on a machine with Microsoft Windows 2000, using the Microsoft Outlook portion of the Microsoft Office 2000 product suite. From my computer it will travel upstream to a Microsoft Exchange E-mail server, where it will in turn be transmitted via the World Wide Web and land in your inbox, presumably a part of another Microsoft Product.

Perhaps the E-mail address I am sending to is an alias for a mailing list, and this letter will find its way to a Microsoft Hotmail account, and a user, authorized using his or her Microsoft Passport, may view it. In the not-so-very-future perhaps this will be done using a Microsoft Homestation over the Microsoft Network, using proprietary protocols and encryption schemes.

And while this hypothetical individual is viewing his E-mail, it is entirely possible that he is listening to music purchased via one of Microsoft's partnerships with various music labels, protected against distribution using Microsoft's Digital Rights Management, which, of course, is built into the hardware/firmware of the Microsoft Homestation and Microsoft Windows XP, which, in accordance with future digital rights management legislation (SSSCA), will be the only hardware/software bundle which conforms to the mandatory digital rights management requirements. Microsoft has a foothold in the hardware, operating system, application, media, services, and development arenas. Like any business, when they see an opportunity to expand their business model to increase profit, they do so. Unlike other businesses, they can move in and sell products at a loss to gain market share until the competition is eliminated. Right now the Microsoft XBox sells for a per-unit loss of \$150. This puts them in the same price range as the Sony Playstation 2 and the Nintendo Gamecube. With more advanced hardware and similar development platform as Microsoft Windows, the XBox stands an excellent chance of outselling and stifling the competition in the market. This is Microsoft's first entry into the market, and it will dominate in less than a year.

Right now an individual can sign up for a Microsoft Passport and Microsoft Passport Wallet accounts (indeed they are *strongly* encouraged to do so in Windows XP) and

with a single click authenticate themselves on a number of online sites. While this adds convenience it gives Microsoft a disturbing amount of control and influence online. This, combined with national ID card legislation puts Microsoft in a position to be the first to synchronize its own authentication services with the national registry. No other company has the infrastructure or the capital.

Microsoft is aligning itself with the major powers, namely the government and the entertainment industry. It's breaking into new markets with disturbing power and force. Microsoft already controls the form and function of my daily life in the workplace and on my home PC, but it also stands to control what music I listen to how often, where I may shop, and what kind of digital content I may view. It may track my purchasing habits, my financial transactions, and the places I like to visit on the web. Doesn't having all of this power in one company concern you?

Microsoft has called itself "the Gatekeeper." That's scary enough, isn't it? Especially considering their track record for security and stability. I would feel much safer knowing that Microsoft was divided into two if not more separate companies. Opening APIs and promising to be nice is not enough. Microsoft can and will find a way to abuse the wording of this settlement to the detriment of its competition. Look at its track record of legal battles and you will see that there is not much it can't accomplish. Look at how people are balking at the decision to split up Microsoft. They know that doing so would cause a severe disruption in the industry. It would profoundly affect thousands of businesses. Isn't this evidence enough that they *should* be divided?

Please, reject the proposed settlement in favor of a decision to break up Microsoft.

Thank you.

Subject: Microsoft Settlement

Gentlemen/Ladies,

As a software engineer with 20 years' experience developing software for Unix, Windows, Macintosh, and Linux, I'd like to comment on the Proposed Final Judgment in United States v. Microsoft. According to the Court of Appeals ruling, "a remedies decree in an antitrust case must seek to "unfetter a market from anticompetitive conduct", to "terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future" (section V.D., p. 99). Attorney General John Ashcroft seems to agree; he called the proposed settlement "strong and historic", said that it would end "Microsoft's unlawful conduct," and said "With the proposed settlement being announced today, the Department of Justice has fully and completely addressed the anti-competitive conduct outlined by the Court of Appeals against Microsoft."

Yet the Proposed Final Judgment allows many exclusionary practices to continue, and does not take any direct measures to reduce the Applications Barrier to Entry faced by new entrants to the market. The Court of Appeals affirmed that Microsoft has a monopoly on Intel-compatible PC operating systems, and that the company's market position is protected by a substantial barrier to entry (p. 15). Furthermore, the Court of Appeals affirmed that Microsoft is liable under Sherman Act ? 2 for illegally maintaining its monopoly by imposing licensing restrictions on OEMs, IAPs (Internet Access Providers), ISVs (Independent Software Vendors), and Apple Computer, by requiring ISVs to switch to Microsoft's JVM (Java Virtual Machine), by deceiving Java developers, and by forcing Intel to drop support for cross-platform Java tools.

The fruits of Microsoft's statutory violation include a strengthened Applications Barrier to Entry and weakened competition in the Intel-compatible operating system market; thus the Final Judgment must find a direct way of reducing the Applications Barrier to Entry, and of increasing such competition.

The fact that you would consider allowing this proposed farce of a settlement is an

outrage. For goodness sake get a backbone, get off your collective fannies and do the RIGHT thing!

Subject: Microsoft Settlement

To Whom It May Concern:

The Proposed Final Judgment for Microsoft is ludicrously inadequate. Thousands of companies (along with their innovations) have been illegally destroyed by Microsoft's anti-competitive practices in the past, and the PFJ does nothing to remedy this. It also is bereft of foresight and is self-contradictory—the court defined Microsoft-specific file formats (i.e. Word .doc and other office documents) as barriers to entry, and judged Microsoft a monopoly in part because of this, but the PFJ makes no demands that Microsoft release these file formats so as to let others compete. Additionally, the PFJ supposedly applies to "Windows", but

defines Windows absurdly narrowly. For instance, the PFJ definition of Windows does not apply to Windows XP Tablet PC edition, even though Microsoft is making aggressive moves toward replacing the traditional PC with tablet PCs. I could go on and on about Microsoft's anti-competitive licensing practices or their attempts to cripple competing software, but these things are all in the court record. The PFJ doesn't significantly limit these practices. I am writing to you to join in the chorus of people shaming this judgment and demanding a better one. I also think that when considering these comments, you should give more weight to anti-Microsoft comments than to pro-Microsoft ones, considering Microsoft has a PR machine unlike any other, while Microsoft's destroyed competitors obviously have no PR machine.

From: Jack Cox
To: Microsoft ATR
Date: 1/23/02 9:34am
Subject: Microsoft Settlement

To Whom it may concern,

I dislike to proposed and revised proposed Microsoft Settlements for several reasons:

1) The agreement provides too many simple ways that Microsoft can defeat the penalties stipulated in the agreement.

2) The provision allowing Microsoft to not reveal protocols due to security concerns. Every protocol in the system can be covered by this one exclusion. Any protocol can be used to break a Windows system given the correct circumstances.

3) Licenses the protocol specifications in a reasonable and non-discriminatory fashion leaves too much room for MSFT to charge a high figure for the specification, thereby locking out all startup/individual developers from using the specification.

4) None of the licensing provisions cover non-commercial or open-source development initiatives.

Therefore, MSFT could freely not license their protocols to open-source development groups.

These 4 reasons are just the beginning. Given the proven past behavior of Microsoft, and given its current behavior against current competitors (Real Networks, Novell, Sun/Java, and others), the proposed remedies are not heavy enough.

Thanks for listening.

Subject: Microsoft Settlement

The current proposal for the Microsoft settlement will not prevent Microsoft from

staying a monopoly in the computer industry. Microsoft employees are spreading this around as "...a victory over the government." If the government shows they are incapable or unwilling to stop Microsoft's monopoly over the software industry, who else is there to stand in Microsoft's way?

Since the trial has started Microsoft's grip on ISP's and hardware vendors has slowly loosened up for fear of how it would be represented in the case against them. Once Microsoft accepts the current settlement they will go back to their previous methods of forcing the industry to accept their software and force out competitors, but it is not their previous methods the software industry is only worried about. By receiving the current settlement this will show the industry that even the government and its laws cannot stop Microsoft's monopoly. Microsoft will be able to expand their practices beyond strict EULA's, enforcing proprietary "standards" and harassing/buying out small companies. They will be able to stretch more laws, find more loopholes and choose more "un-ethical" business means knowing that the most powerful system that could have stopped them was not powerful enough. Once again I say that the DOJ and US government should be putting a stop to Microsoft's monopoly. By forcing them to release their file formats, protocols or something similar that will allow other companies to compete with them. But the current settlement simply shows that the government no longer has the power to enforce the laws that control our capitalist country.

Subject: Microsoft Settlement

I personally believe that the proposed settlement is inconsistent with the findings of the proceedings. In other words it is a bad idea. I also believe that the comments made by Dan Kegel do a thorough job of detailing why this is so. His comments can be found at <http://www.kegel.com/remedy/letter.html>.

Subject: Microsoft Settlement

To Whom It May Concern:

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The

risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

From: Andrew Reilly
To: Microsoft ATR
Date: 1/23/02 9:34am
Subject: Microsoft Settlement

I have worked in the Internet field since 1992 and found Microsoft on all occasions that I have worked with them, in my personal experience, to be unshamed bullies. I have seen nothing to indicate that this has changed, and believe that the remedies proposed will do nothing to prevent this behaviour in future. I believe that the remedies proposed by the DOJ are completed inadequate, and that the remedies proposed by California, Florida, Iowa, Kansas, Massachusetts, Minnesota, Utah, West Virginia, and the District of Columbia are barely adequate. The dissenting states are closer, but the Judge should strengthen the remedy to ensure beyond a reasonable doubt the safety of innovation and commerce in the United States.

Subject: Microsoft Settlement

Ms. Renata B. Hesse:

I would like to go on record as opposing the proposed Microsoft settlement. I feel that this "remedy" is, in fact, a license for Microsoft to continue monopolizing the market. The settlement has no substantial benefit to consumers, and does nothing to prevent Microsoft from continuing to exploit its current omnipotence in the computer industry. Microsoft has repeatedly demonstrated its arrogant disregard for the laws of the United States, and the introduction of "licensing 6.0" and Windows XP demonstrate that, even at this critical moment, they have no intention of changing their ways. To reiterate: this proposed settlement is far too weak to result in any change in Microsoft's monopolistic behavior. The harmful effects to the rest of the computer industry are incalculable; even free software will be seriously damaged, since the wording of the agreement explicitly excludes free software from even the limited protection afforded to other Microsoft competitors. This effectively frees Microsoft to go after the Linux operating system "hammer and tongs."

Please reject this token "remedy" and seek an agreement that provides real reparations for those harmed, and deterrents to prevent future harm.

Sincerely,
Jennifer Stathakis

From: Scott D. Davilla
To: Microsoft ATR
Date: 1/23/02 9:28am
Subject: Microsoft Settlement

As a OS level programmer, I think a the think the proposed settlement is bad idea because it does nothing to prevent the hidden

OS level APIs that Microsoft uses to enhance their applications like "MSWord" or "Excel". Since Microsoft control both the OS API and the application API, they have access to enhanced API routines that are not published or documented for 3rd party programmers.

It is well known among windows programmers that there is the two ways to program under windows, 1) the documented way and 2) the undocumented way. Much time is spent trying to figure out the undocumented API so that our 3rd party applications can have the same features as Microsoft applications. The only way to level the playing field is to split Microsoft into two logically and physically separate companies. An OS level company and an application level company. There is no communication permitted beyond the documented APIs. The application level company has the same access to the API as everyone else does.

Thanks

Subject: Microsoft settlement

Jan. 23, 2002

To the Dept. of Justice employees working on the Microsoft case: The settlement in the Microsoft case is a joke. Microsoft time and again has used its position to manipulate people, manipulate companies, lie, cheat, ignore computing standards or change them so they only work with their own products, and flaunt the law. Especially when it comes to anti-trust law. They have been convicted of breaking the anti-trust laws, but now the penalty proposed for them is merely a slap on the wrist. It does not go far enough, and will not make Microsoft change its behavior or business practices.

Don't let Microsoft get away with this!

Eric Lorenz

Renata B. Hesse

Antitrust Division

U.S. Department of Justice

I'm sending this e-mail to express my displeasure with the proposed judgment of the Microsoft anti-trust case being pursued by the United States federal government. I believe the judgment phase of this case has consistently underestimated Microsoft's destructive impact on its competitors and the computer industry in general, as well as Microsoft's tendencies to blatantly ignore previous court rulings on similar issues. I truly believe that any judgment short of breaking up Microsoft will be completely and totally ineffective in changing how Microsoft uses its monopoly position to unfairly dominate competitors, OEMs and ISVs.

Thank you for listening,
Robert T Bowers

From: David Dahl
To: Microsoft ATR
Date: 1/23/02 9:37am
Subject: Microsoft Settlement

Dear Sir or Madam:

The Microsoft settlement is, in my opinion, a slap on the wrist. Microsoft's business practices have been underhanded and illegitimate for as long as I can remember, and this warrants stronger measures.

Microsoft has single-handedly set back computing by many years with their buggy, slow, virus-prone, monopoly operating system. In fact, almost every time there is a new virus or worm outbreak, it only infects Microsoft systems, causing billions of dollars in damage and downtime. Microsoft has never paid for this either, and it seems to me the public is not aware of this. I still get hits on my Linux server (which remains uninfected, of course) for the "Code Red" and "Code Blue" viruses, which Microsoft issued a patch for months ago.

Microsoft is trying to spread unwarranted rumors about Open-source software and the GNU Public License, which governs much of the Open-source world. In my opinion, Open-source software is more reliable than anything Microsoft has ever coded, and as a small business owner, I rely on these Open-source tools to compete on even ground. If I had to buy all of my software for development, I would not have a small business because of the costs.

If Microsoft is given a "slap on the wrist", I will really fear for the future of computing, Open-source software, and freedom to choose which software I use to program products for my clients. The proposed settlement will only increase Microsoft's monopoly power, and help crush more of the little guys.

You should not "Settle" with Microsoft, you should THROW THE BOOK AT THEM.

Highest Regards,
David Dahl

Subject: Microsoft Settlement

I disagree with the proposed final judgment of the Microsoft case. The proposed judgment does not adequately protect consumers from Microsoft's monopoly.

The proposed judgment does not require Microsoft to allow OEMs to sell computers with a competing operating system but without Microsoft Windows. This loophole means that OEMs will continue to bundle Microsoft Windows with their products, and consumers who do not wish to buy Microsoft Windows (because they use a competing operating system exclusively) will be forced to purchase Windows.

Therefore, I do not believe the Proposed Final Judgement should be adopted without substantial revision to address this issue and others.

Date: 1/23/02 9:38am
Subject: Microsoft Settlement

Dear Sir,

I am writing in regards to the announced settlement of the Microsoft antitrust lawsuit.

I have read that settlement does not provide for outside non-business entities access to the same provisions as business (for profit) entities. I believe this is incorrect and does not address the core issues of the case. There are many excellent programs and services provided by non-profit groups and/or organizations. Restricting the terms of the settlement to for profit businesses would limit or reduce the ability of the non-profit entities to provide inexpensive services and/or products to low-income or impoverished areas and people. Since Microsoft has billions in the bank, I am sure this does not concern them, but it does concern me.

Thank You

Kevin R. Taute

MTC-00015609

From: Scot Baird
To: Microsoft ATR
Date: 1/23/02 9:37am
Subject: Microsoft Settlement

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. As it stands, it would allow Microsoft to get a larger share of the K-12 education market which it has had a hard time doing. Instead of letting Microsoft provide their software (including operating system) to the education market they should have to provide the actual money and let the education industry decide what to do with it. They can still provide the hardware but cash instead of software would be a fair punishment.

The settlement as written allows and encourages significant anticompetitive practices to continue. The Microsoft settlement should not be adopted without substantial revision to address this problem.

Sincerely,
Scot Baird

MTC-00015610

From: Greg Kettmann
To: Microsoft ATR
Date: 1/23/02 9:37am
Subject: Microsoft Settlement

I would like to see strongly punitive action taken against Microsoft and there has been absolutely no indication the government is willing to do that.

Microsoft claims their right to "innovate" but this is an absurd statement. The result of their efforts is a dramatic reduction in innovation. Take Windows itself and the Graphical User Interface, that was not a Microsoft "innovation" it was stolen technology. This list goes on and on. The Microsoft philosophy of "embrace and extend" is a dangerous thing. They find someone elses innovation that they like. They incorporate it into their own product. Then they subtly change it. Their vast presence assures that their changes will be come the defacto standard and the original, truly innovative, company goes out of business, thus ending any further innovation. This method is being used in the browser

space as well and it's critical that the web be built on open, not proprietary, standards.

The notion the Microsoft be punished by donating 1 billion in used computers and software is ridiculous. "Please don't throw me in the briar patch." They have 31 Billion Dollars of cash on hand. 1 Billion is insignificant to them. Even if 1 Billion mattered the idea of used equipment and their own software truly dilutes the effect. It gives them an opportunity to upgrade their own equipment and to promote their software. If I'm not mistaken Bill Gates himself has donated at least a Billion Dollars to schools already, clearly indicating that this is not a problem to them.

Finally, the API, or Application Programming Interface, of Windows must be truly open, as ordered in a previous trial. A standards body, built up of non-Microsoft professionals skilled in programming, should oversee the API implementations. This should help reduce planned API changes designed to disrupt the competition (As Microsoft did with IBM's OS/2). Furthermore any "undocumented" API's found to be used by Microsoft Products such as Office should be met with a heavy fine. Clearly such ability to use features of the OS unavailable to others gives Microsoft and unfair advantage.

From: Paul Larson
To: Microsoft ATR
Date: 1/23/02 9:38am
Subject: Microsoft Settlement

I believe that the current proposed settlement in the Microsoft Antitrust case would not effectively deal with Microsoft's anticompetitive behaviour. As a software engineer who has worked in the computer field for about 8 years, I have been a first hand witness to Microsoft's behaviour. I have no doubt that Microsoft has set back the computer industry countless years through their anticompetitive practices.

I tend to be of the opinion that splitting Microsoft 3 ways (or possibly more) is the best way to deal with the problem, while still allowing those companies that form from the breakup good, solid business opportunities with competitors on equal footing. Although this would have been a win-win situation for Microsoft, its competitors, and especially the consumers, I have been sorry to hear that it was taken off the table for possibilities.

There are too many problems with this proposed settlement to list hear.

It doesn't punish them really, and in fact gives them better opportunity for worse anticompetitive practices in the future. It's no wonder that Microsoft is eager to accept this settlement. Either we can fix the problem now, and fix it right, or we will continually have to revisit these and more problems with Microsoft in the future. Please, for the sake of consumers and businesses alike, DO NOT accept the current settlement with Microsoft.

Sincerely,
Paul Larson

Subject: Settlement objections

I'm a little confused here with the settlement. The judge ruled that Microsoft acted (and continues to act) in with a monopolistic nature, and none of the remedies proposed seem to punish/temper these behaviors.

First objection has to do with who Microsoft has to disclose the the information to (Section III.D): ISV, IHV, IAP, ICP, and OEM—where does it include the Open Software movement? The Samba project (www.samba.org) is he most successful Open Software compatibility product in the world, and based on the wording— they will not be able to get the necessary information to continue their compatibility.

Section III.H.3:

According to my reading, after 14 days, Microsoft can have the system revert to its pristine, Microsoft designed, interface with a simple query to the user. Does it also provide for a return back if the user uses the system for 14 days, decides to try Microsoft's version—and doesn't like it and wants to return to what they had when they first purchased the machine? Many people like to experiment—but they like to be able to go back to the original if the new doesn't meet their needs.

Section III.J.1:

Security issues. Since Microsoft itself cannot yet determine what parts of the Windows Operating System have security issues (see the latest MAJOR problem with Windows XP), how does this agreement stop Microsoft from making the security claim on almost any part of the Windows product?

Section V.B:

If Microsoft fails to live up to the agreement, the penalty is that they have to live with agreement for another two years? I'm confused—that is considered a penalty? If a felon is paroled, and violates parole, the parole isn't then extended for two more years—the individual goes back to prison. Why is this different?

Sincerely,
Jerrold Heyman

Subject: Microsoft Settlement

Dear Justices—

Previously, I have always been in Microsoft's corner of this debate as I have believed this suit was initially devised and supported by Sun Microsystems. However, after reading Scott Rosenberg's column in Salon.com about how well AMD and Intel have competed, I have changed my mind. It is time to force Microsoft to release the API's of its operating system. While it will complain that the API's constitute its "intellectual property", I have now come to the point where I believe that's bunk. If Microsoft wants to focus its efforts on the best operating system (Windows), then split the company with all the software applications being a new company and let Windows concentrate on systems. However, if you leave the applications and the operating systems together, then I have to agree that Microsoft has a monopoly and the

marketplace will not be adequately served in the future by it remaining intact. Just one person's opinion.

Respectfully,
Bret Cullers

I am against the proposed settlement of the DOJ suit against Microsoft. Although Microsoft claims that they have innovated, those of us more intimately aware of the truth are not fooled. In fact, they have squashed far more innovative competitors with the kind of illegal actions of which they have been found guilty. Even worse, they have lowered accepted standards of reliability greatly, with the result being tremendous loss of productivity internationally as their operating systems crash and are compromised by numerous viruses. Any settlement needs to prevent Microsoft from continuing on this path of anti-competitive behavior. The proposed settlement seems far too weak to accomplish this necessary goal.

Dear Judge:

I am very concerned about the proposed settlement that the Department of Justice has recommended in the Microsoft case. As a long-time industry veteran, it seems to me that MS has long established its reputation as an abusive monopolist—and the courts certainly agreed with this. Why should MS be left virtually scott-free to continue to abuse its defacto monopoly in Operating Systems? If you take a close look at their Passport concept it is very clear that they are planning to expand their monopoly well beyond the desktop but into every corner of the American economic system. While I don't blame them for trying to do this—they're just trying to maximize their millions (or should I say billions)...it is incumbent upon our government to protect its citizens and offer all competitors an open and level playing field. Thank you for your help in this important matter.

Subject: Microsoft Settlement

As a professional in the programming industry, and as a degreed computer scientist, I must comment on the anti-competitive actions of Microsoft. Repeated Microsoft has acted to thwart competition by leveraging its various products in monopolistic ways which violate current laws. This practice has been, at times, creative and most certainly profitable. While this profit-taking, at the expense of the American public, has harmed them financially. The real damage has been committed on a fundamentally scientific level. Research into programming areas incompatible with Microsoft's operating system products is discouraged because of the barriers of entry to introduce products based on such research. Furthermore, Microsoft has proven that software quality is immaterial. Many times, they have release software which is clearly, and embarrassingly, lacking in even the most basic security features. Now that a significant portion of the infrastructure of American society is based upon these products, we are all at risk of the exploitation of these security flaws.

A fair settlement would:

1) repay the American public for their financial harm

2) allow the American public to access, modify and correct this essential part of our infrastructure (Windows operating systems, Windows Explorer and Windows office file formats) by publishing application interfaces (APIs) and source code for these products. Microsoft has worked diligently to assure that we use their products exclusively and have marginalized the profitability of those who compete with them.

Now, we must act to assure that our computing infrastructure is secure, stable and a foundation for our future society.

Sincerely,
Ian Ernst

Subject: Microsoft Settlement

Dear Sir,

I have been following the Microsoft Antitrust lawsuit from almost the beginning, and as a user who is well versed with both Windows as well as Unix systems, I didn't have much of a pre-conceived notion about the entire issue. I must say, however, that as I read through all the evidence presented at the trial (I actively followed the case), it became increasingly obvious to me that Microsoft had stifled innovation and the true entrepreneurial spirit. I was also convinced (by the clinical way in which they have constantly refused to do anything at all to correct their behaviour when it wasn't in their interest) that small companies with good ideas are doomed if a monopoly like Microsoft is allowed to persist. The latest settlement falls so short of curtailing their anti competitive behaviour, that I don't even know where to start. Having worked for long enough in the Silicon valley, I know the kind of thinking and the reasons behind the numerous lawsuits filed there for and against infringements of all kinds, as well as the reason why some of them are routinely flouted. Typically this occurs when the rewards are so much greater than the punishment for not complying with the law. I think in the present case, it is a foregone conclusion that the settlement is at best only a minor irritant, rather than a guide to good behaviour on the part of microsoft. I therefore request you to seriously reconsider the settlement, so that the true nature of innovation might not suffer.

yours sincerely,
S. Vikram.

Subject: Microsoft Settlement
To Whom it May Concern:

I am writing to express my displeasure at the current state of the proposed Microsoft antitrust settlement. I feel that, in its current state, the settlement does not adequately address the problems of Microsoft's anticompetitive behavior. There are so many loopholes that it would be trivial for Microsoft to continue the kinds of activities that got it into this situation in the first place. Please consider this message to be a vote AGAINST the proposed settlement. Specifically, there are problems with the definition of "API" that render most of the propositions dealing with APIs to be useless. Microsoft uses licensing schemes to specifically restrict the use of Open Source systems, which is not addressed in the settlement at all. The problem of Microsoft using OEMs to control the market is addressed, but doesn't cover several avenues of activity that Microsoft could use to continue its behavior. The list goes on.

Thank you for taking the time to read this message.

Date: 1/23/02 9:41am
Subject: Microsoft Settlement

I am writing to give my comments on the Microsoft antitrust settlement. I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation.

Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition. The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of structures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

Thank you for your time.

From: Jon Reades
To: Microsoft ATR
Date: 1/23/02 9:37am
Subject: Microsoft Settlement
To Whom It May Concern,

I am writing to express my concern over the proposed terms of settlement for the Microsoft antitrust trial. Based on my understanding of the proposed terms of settlement, it seems clear to me that

Microsoft will remain to free to both stamp out competition and extend its existing monopoly into new software segments. My objections to the current proposed settlement fall into three broad categories:

1. Disclosure of existing APIs: the API disclosure terms appear to create financial and IP barriers that will prevent developers for what is currently Microsoft's *only* viable competition on the Intel platform (I speak, obviously, of the Linux operating system) from developing applications and products that are able to compete with Microsoft's own. The definition of Middleware and Middleware Product allow Microsoft not only to arbitrarily evade the intent of the disclosure agreement through the use of alternate distribution channels (e.g. downloading) and restrictive EULAs (such as the ones that do not allow Microsoft products to be used either a) on a non-Microsoft platform, or b) in conjunction with open source or shared source software products), but it also neglects to include the key underpinnings of Microsoft's extant monopoly maintained in large part through products such as Office and Outlook.

2. Disclosure of new APIs: the settlement would also do nothing to keep Microsoft from extending its Windows monopoly into new arenas via both its .NET initiative and its handheld and tablet-based computing initiatives. None of these are covered by the terms of the settlement, but it is clear from Microsoft's own marketing that they consider these areas to be crucial to their long term strategy.

If Microsoft comes to dominate the market for Internet-based services then not only will we have an important piece of the public infrastructure that is, again, dominated by a single corporation instead of a large body of competing companies cooperating through the auspices of a standards setting body, but it will be a piece of infrastructure bound to a single platform and operating system that has consistently demonstrated its disregard for both interoperability and security (see: Code Red, I Love You, Nimda ...).

3. Licensing terms: the proposed settlement does nothing to protect anyone other than the largest 20 OEMs from retaliatory methods by Microsoft— schools, state and local governments, mid- to large-size companies, and so on down.

Nothing prevents Microsoft from insisting that these bodies pay for the number of processors that theoretically *could* run Windows, nor from creating pricing schemes that lock out competing operating systems (such as has already been documented by Microsoft's new licensing terms in which the primary means of securing their best pricing schema is to promise never to use another operating system).

In addition, Microsoft would be able to construct pricing mechanisms that, while not directly affecting the pricing of Windows, would create incentives for OEMs to not supply additional OS options to consumers— discounts could be applied on the basis of sales of a different product such as Office (again!) or their Tablet OS.

In short, I strongly urge the U.S. government to return to the negotiating table with a more stringent and coherent set of

demands that will force Microsoft to open their operating system to competitors (who might work for corporations such as Sun or Apple, or who might be involved in the open source movement) in a way that will foster competition *not* through cosmetic changes (adding or removing icons from the desktop, for instance) but through interoperability that enables both non-Microsoft applications to interact effectively (i.e. to have the same access to the API as the MS applications teams) with the Windows OS, and non-Microsoft operating systems to interact effectively with Microsoft applications.

I am not proposing that Microsoft be forced to give away Word, Excel, or Visio (each of which does certain things very well), but I am proposing that they be forced to both a) make available the file formats of these industry-leading applications in a way that would enable competitors to arise, and b) that the APIs be published in a way that would enable competitors to support these applications on their own operating system implementations. Then, Microsoft would be forced to have both its applications and its operating system compete on their own merits (they're faster, more stable, respond more quickly, etc.) rather than on the basis of "Well, we really don't have any other choice since everyone else uses ..." Unless the proposed settlement is significantly strengthened I would predict that in less than ten years we'll be reading about another Microsoft anti-trust trial in the news, but by that time it will be too late to create competition in *any* of the fields that really matter.

Sincerely,
Jon Reades

Date: 1/23/02 9:39am
Subject: Microsoft Settlement

To Whom it may concern:

I do not believe the proposed settlement of the Microsoft antitrust lawsuit will be effective. The main reason I feel this way is because of the restriction the Proposed Final Judgment places on the use of released documentation. What I mean specifically is that if I am trying to write a piece of code to be compatible or to emulate certain Windows functionality I am not allowed to use the information Microsoft releases as part of the settlement. Now how is this helpful to encourage competition? Furthermore it seems to me that it would necessitate a split between developer teams working on Microsoft solutions and the team working on non-Microsoft solutions. In effect this to me seems like retaliation against companies developing for non-Microsoft solutions. Because of this Microsoft will continue it monopolistic behavior.

I am opposed to the proposed DOJ settlement because there appears to be no protection from past Microsoft practices that could harm Linux and other open source projects. I rely on this software for my consulting business and greatly fear that they will become difficult or impossible if Microsoft continues in the business fashion that started the antitrust proceedings.

Thank you for your time.

MTC-00015632

From: Jeff None
To: Microsoft ATR
Date: 1/23/02 9:42am
Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices. Also, Microsoft has used its dominance to interfere with software that has been legally installed on its customer's machines. It was an axiom in the early 1990s that "DOS was not done until Lotus would not run." Microsoft also used its install programs to interfere with other operating system installs on the computer. I have personally experienced this with DR DOS and IBM's OS/2.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%). This must be true for all

Microsoft product lines, before regulation is lifted.

Microsoft needs to be split into at least two separate companies, with all technical communication between the two taking place through publically available documentation, to insure that it no longer takes advantage of undocumented programming features that are not readily available to its competitors. Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition. Microsoft entered into a consent decree with the DOJ in, I believe, 1993, and promptly violated the terms of the decree and suffered no penalty for doing so. It is clear that the company has little regard for legal restrictions upon its behaviour, or for the governmental bodies charged with ensuring that compliance.

Microsoft's abuse of its position has harmed the entire computing industry. Prices are higher and competing alternatives are fewer. I say this as a professional programmer with more than 12 year's industry experience. I do not mind seeing products and companies disappear due to mismanagement and such, but it distresses me when it is due to abusive and illegal practices of a dominant firm.

Thank you for your time.

MTC-00015633

From: Tod Milam
To: Microsoft ATR
Date: 1/23/02 9:43am
Subject: Microsoft Settlement

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement.

I do not believe the measures are strong enough to encourage competition and prevent Microsoft from continuing their anti-competitive practices. One specific example is in section III.2:

"shipping a Personal Computer that (a) includes both a Windows Operating System Product and a non-Microsoft Operating System, or (b) will boot with more than one Operating System; or" where Microsoft is to be prevented from retaliating against OEMs who ship non-Microsoft Operating Systems in addition to Windows Operating Systems.

As written, this does not stop Microsoft from retaliating against an OEM who ships some Personal Computers with Windows Operating Systems and some other Personal Computers with a single non-Microsoft Operating System. The wording is too restrictive. Any OEM who wants to ship a Windows Operating System with any of their Personal Computers to ship it with *all* of their Personal Computers so that they avoid any retaliation by Microsoft. This completely undermines the original intent of the settlement.

There are many more similar items in the settlement, but even one should be enough to stop this from being accepted as the final settlement.

Sincerely,
Tod Milam

Subject: Microsoft Settlement

To whom it may concern,

In regards to the proposed settlement of the US vs. Microsoft antitrust settlement, I believe that it is NOT in the best interest of our nation to go forward with the settlement. I believe that the settlement does nothing to correct the case that was proven against Microsoft. The settlement weakly puts into place safeguards that try to prevent further abuse. These safeguards are so weak and easily manipulated that Microsoft could litigate any possible opposition it wanted into the ground until stopping any infringement was too late. If an oversite committee has any way of enforcing any settlement against Microsoft, it needs real power.

Furthermore, the settlement does nothing to retribute the victims of Microsoft's actions. The net worth of Microsoft, including their 30 someodd billion dollars in liquid funds, is all blood money. This is a company that was built by unlawfully bullying other companies out of a market. Careers and lives were destroyed over the abuses that were upheald against Microsofts, and these wrongs should not go uncorrected any longer. Allowing such restitutions up to the civil courts only allows Microsoft to use their political and financial power, most of which was built upon lies and felonies, to be used to rob the victims once more. I ask for a complete re-evaluation of the proposed settlement. Microsoft must be held accountable for their actions. Microsoft has already violated my trust. Hopefully the Department of Justice and the Supreme Court won't do the same.

From: Immordino, Sam
To: "microsoft.atr(a)usdoj.gov"
Date: 1/23/02 9:43am
Subject: Microsoft Settlement

I feel the current proposed settlement is a bad idea. I have no affiliation with any of the players in the case. As a consumer I have spent many long nights trying to make software such as Quattro Pro, Lotus, and others work in MS Windows. It was blatantly obvious to me that Microsoft was not going out of its way to make sure these competitive programs worked in its OS. The solution to this problem is very simple.

First, Microsoft should not be allowed to incorporate/bundle any software into its OS that is not absolutely necessary to operate the

computer. Any other software packages such as Virus Protection, Firewalls, Browsers, Music Players, etc should be sold separately. Microsoft still gets to innovate and the consumers can choose what they want added to their OS. Second, Microsoft should not be allowed to include any code that either directly or indirectly prevents competitive software from working with their OS. Third, Microsoft should not be allowed to create proprietary file formats for the sole purpose of maintaining their market share; this behavior does not benefit the consumer.

MTC-00015637

From: Steve Anichini
To: Microsoft ATR
Date: 1/23/02 9:43am
Subject: Microsoft Settlement

I've been a professional software engineer for 8 years, and by professional necessity I am very familiar with Microsoft's actions over that period. I feel that when Microsoft relies solely on its technical prowess to compete, it helps the industry. The fact is too often Microsoft falls upon questionable legal and business tactics, and this hurts the industry. I feel the proposed settlement does not go far enough to deal with the latter. Specific issues that have affected me and the companies I've worked for: Microsoft discriminates against ISVs who ship Open Source applications: the following license terms accompany many Microsoft APIs and programming toolkits (for example, the Microsoft Platform SDK, the Microsoft Windows Media Encoder SDK, and the Microsoft X-Box SDK): "... you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. "Publicly Available Software" means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models ... Publicly Available Software includes, without limitation, software licensed or distributed under any of the following licenses or distribution models, or licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (SCSL); ..." This language, whether or not it actually prohibits the use of Open Source software with various Windows components, produces a chilling effect with the various corporate legal departments of companies I've worked for—they don't want to take the risk of a lawsuit and just blanket prohibit using Open Source.

When working for a company that was entering a business relationship directly with

Microsoft, we were told straight out that the product we were developing could not include any Open Source technology and it could not use Sun's Java technology. Microsoft was just one of the many partners we worked with, and Open Source and Java were key elements of the technology we were working with. Removing these elements would have caused great expense to the company without compensation. As a result, the part of the deal which depended on Java (an interactive CD-ROM product) was cancelled. The company in question laid off 95% of its staff soon after.

I think Microsoft should be prohibited from discouraging/prohibiting use of competitor's products with Microsoft's products.

I think that the settlement needs to be expanded to force Microsoft to give up all its Windows APIs and file formats (Word, Excel) to some standardizing body. Patents that these technologies depend upon should be freely licensible. These formats and APIs should become public property—when this happens, competition can emerge for things such as Office on a more level playing field. Microsoft will still remain competitive in such an environment, but this will allow others to use this information to compete with Microsoft and keep it honest.

Steve Anichini

Subject: Microsoft Settlement

The proposed final judgement is too lenient; Microsoft will not be prevented from unfairly using its monopoly position to stifle competition.

For open-source software (free software), the price of distributing that software will be determined by accumulated license fees, which can add up fast. This helps Microsoft by effectively raising the price of competing software.

More of Microsoft's APIs, protocols and file formats should be opened, royalty-free.

You should REJECT the proposed final judgement.

Thank you.

Date: 1/23/02 9:44am
Subject: Microsoft Settlement

To whom it may concern:
The proposed Microsoft settlement is poorly thought out result of years of litigation by the US government, that will do little if anything to modify the company's past flagrant behavior in violation of federal antitrust regulations.

The purpose of antitrust remedies is to allow competition to flourish in a marketplace. Consider three components that comprise significant barriers to effective competition in the US operating system marketplace, which I will discuss below:

1. Compatible file formats.
2. Application availability/compatibility.
3. Network level interoperability.

Compatible file formats

Due to the dual lock Microsoft has on the market for both the operating system and office software, their file formats are used as standards for interchange of data. This is both internal to a company, and for interchange between companies.

Even if a company is willing to change its internal file formats (itself a major expense), it must still be able to communicate and exchange data with other companies. This is a severe lock-in which produces very strong resistance to change.

If Microsoft was required to publish complete and correct file formats for its software products, it would contribute to a significant lowering of the barrier to competition (but not sufficient of itself, see below). This matter is not addressed effectively by anything in the proposed settlement.

Application level compatibility

Consider a company that had sufficient skill available to develop an operating system in competition with Microsoft, perhaps based off of a base set of source code that is commonly available. It develops a set of user

interfaces that, while not identical to the Microsoft equivalents, is close enough to shorten the learning curve for new users.

That in itself is a significant piece of work. However, it is not sufficient because most of the use of an operating system is to run applications that allow users to get their daily work done. Providing a set of run-alike applications is an unreasonable burden on a company attempting to compete on the operating system level.

If the company had enough information to ensure that applications written for another operating system would run on the new operating system, then this would allow users to contemplate switching while still retaining the applications they are familiar with.

Application level interoperability requires compatibility in the application programming interfaces (APIs) provided to application programmers by the operating system. While the proposed settlement does provide for release of some APIs, the wording of the settlement and loopholes provided make it insufficient to ensure complete, correct, and timely publishing of APIs.

Network level interoperability

Few companies will carry out a major migration project at the level of replacing the operating system on every computer used in the company. This makes it very important that a new operating system be able to communicate effectively with any incumbent operating system, on matters such as identification, authentication, and data transfer.

The proposed settlement does require that network protocols be release to allow system interoperability, but with the large loophole that security or copy protection be excluded. Correct security implementations do not depend upon details of the algorithms involved (consider past and upcoming federal encryption standards). Instead security is maintained using one of a number of varieties of secret data, which are individual to a particular system or network, and not provided by Microsoft.

The language of the proposal could allow Microsoft to hold back important parts of their network protocols under the security provision, denying other operating systems access to identification and/or authentication by the protocols in use on a network primarily populated by systems (especially servers) running Microsoft operating systems and network protocols.

The settlement should provide severe restrictions on what type of protocol information Microsoft may not release, and that should not be anything as general as "security information".

In summary, the proposed settlement will do little to restrict Microsoft's behavior, or to encourage effective competition in the US operating system marketplace. Microsoft has repeatedly demonstrated that it will do anything necessary to dominate its marketplace, including violation of US law. If the settlement is not effective, then the company will have little reason to comply with US law in the future, as it will appear that the cost of violating the law does not exceed the benefits of maintaining and extending their monopoly.

Sincerely,
John Schwegler

Subject: Microsoft Settlement

I'd just like to add my voice to those expressing concerns regarding the proposed Microsoft settlement, as per the Tunney Act.

I am against the proposed settlement.

The proposed settlement:

1) does not contain sufficiently defined language to prevent Microsoft from exploiting those definitions ("API", "Microsoft Middleware", etc).

2) does nothing to give redress to Microsoft's current main competitor, namely Linux and other free software, nor does it give appropriate protection or means of recourse to companies built around free software against Microsoft's continuing anti-competitive practices.

3) provides insufficient stimulus for Microsoft to comply with the current, flawed settlement, and in fact gives Microsoft further advantage against competitors even if they don't comply.

For these and a host of other reasons, I encourage the court and the parties involved to rethink the proposed settlement. Microsoft has been found guilty. Justice requires that a fair price be paid.

Subject: Microsoft Settlement

Greetings and Salutations,

I am opposed to the proposed Microsoft settlement for two simple reasons. The first is that it does nothing to rectify the situation. In fact, if Microsoft is required to donate software, the justice department will actually be INCREASING THEIR CLIENT BASE. That is supposed to curb unfair competition?

Secondly, it does nothing to punish them. It INCREASES THEIR CLIENT BASE. That is GREAT news for Microsoft. They will more than make up the cost of giving away their software when they sell the upgrades that the schools will need.

I think that the "Red Hat Proposal" is best. Require Microsoft to furnish hardware to schools, and let Red Hat supply the software (which is open source and therefore FREE anyway). That way schools will be able to upgrade at will to keep up with the times, without worrying about having to pay for the upgrades.

Subject: Microsoft Settlement

Microsoft is still up to its old tricks and doesn't intend on letting any company deliver an innovative competitive product. Take in point the legal action Microsoft has taken against Linux distributor "Lindows".

This product is using an open source operating system that could run some Microsoft applications. Microsoft is arguing based on trade mark infringement and I cant tell for the life of me how they can justify this. I admit that Windows and Lindows rhyme but that's it. If your a user that cant discern the difference between the two you most likely do not use a PC at all. I want more choice! I want more software security! Its up to the Federal Government to make this happen.

Than You

From: Shad Gregory
To: Microsoft ATR
Date: 1/23/02 6:43am
Subject: Microsoft Settlement
To whom it may concern:

I feel that the proposed Microsoft settlement is does not do enough to protect the public interest and competition in the IT market. In particular, I feel that it is critical to force MS to share information concerning the Windows family of operating systems. A fair settlement would induce Microsoft to license it's Windows code to outside companies under fair conditions set by the government. This will allow consumers a wider choice for operating systems as well as acting as a check on Microsoft's attempts to force unfair licensing practices on its customers.

Whatever the remedies proposed, they will be meaningless if the government is not given the ability to punish Microsoft if they do not conform to the settlement. I see little in the settlement in the way of punitive measures.

Thank you for your time,
Shad Gregory

From: Brian Mason
To: Microsoft ATR
Date: 1/23/02 9:44am
Subject: Microsoft Settlement
To Whom it May Concern,

I am truly concerned about the proposed settlement in the current Microsoft anti-trust case. As a professional web developer I deal daily with high tech and the business environment, and am appalled at the lack of choice in the current desktop environment. Not only is the current situation not competitive, but the future of many new niches in the industry are in the sway due to Microsoft's new drive to bundle technology with Windows XP. I have purchased Windows XP, not because I feel it is a good product or because I want to support a company who makes good software, but because of Microsoft's desktop monopoly it is the product I will have to develop for in the future. The range of bundled Microsoft products, and the blatantly misleading and repetitive "suggestions" to sign up for further Microsoft services is absolutely amazing, and honestly leaves me more than a little concerned for the future of choice in personal computing. If given the opportunity Microsoft will leverage their current desktop monopoly to extend their reach into every high tech field they see as being potentially profitable in the future.

The settlement as proposed by the DOJ at this point does nothing to actively stop Microsoft from anti-competitive behavior in the future, and seem to lack any real way to hold Microsoft accountable for their actions. Any ruling must look not only to the past but to the future—Windows XP and beyond. Without very strict and enforceable regulations guiding the behavior of this acknowledged monopolist, the American people will have even less choice than they do now. I appeal to you as an American citizen to allow competition to flourish—please do not allow this settlement to go through.

Sincerely,
Brian Mason

From: Ed Ackerman
To: Microsoft ATR
Date: 1/23/02 9:45am
Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of it's competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

From: Mike S.
To: Microsoft ATR
Date: 1/23/02 9:41am
Subject: Microsoft Settlement

As a user of an alternative operating system I believe I am among those who have the most to lose if Microsoft is allowed to continue their anti-competitive practices.

The settlement, as proposed, is worded in such a way that gives Microsoft many opportunities to circumvent any barriers placed on their business practices. Microsoft has done this once before with the 1995 consent decree and based on their attitude throughout these legal proceedings I have no doubt that they will do it again.

Microsoft must not be allowed to continue using their monopoly power to create pseudo standards based only on the fact that anything they do is rapidly distributed to 95% of the computing populace.

Open Standards must be maintained in order to allow people, like myself and the millions of other non-Windows OS users, to have access to the latest technologies and software applications.

Please do not let Microsoft leave with only their word and a loophole laden document to ensure they will change their ways, doing so would be a travesty of justice in this citizens eyes.

To: Microsoft ATR
Date: 1/23/02 9:46am
Subject: Microsoft Settlement: Too Many Loopholes

Renata B. Hesse
Antitrust Division
U.S. Department of Justice
601 D Street NW
Suite 1200
Washington, DC 20530-0001

Ms. Hesse:

I am a computer programmer with 22 years of experience in the field, using both Microsoft and non-Microsoft products. In the past few months I have read numerous documents and discussions of the proposed settlement of the Microsoft antitrust case. My reaction is simple:

This settlement is too lenient, and is too easy for Microsoft to escape.

My personal focus is standards. Microsoft has a history of "embrace and extend" which renders industry standards useless, and renders any product which actually conforms to the standard similarly useless. In the physical world, people would never buy a product that was nonstandard; would anyone buy a battery that was too short, or a light bulb with a different base? And how often would people change their light sockets? However, with software that is (a) not clearly understood by most people, (b) easily updated yet difficult to revert, and (c) updated "automatically" rather than through user understanding and selection, Microsoft has been able to make it appear that their unilateral changes to the standards constitute a new "de facto" standard *without* sharing that information either before *or* after the fact.

A simple and well-known example: Microsoft made their web browser accept forward slashes mixed with backward slashes in a particular command, where the standard calls for only one or the other. They said this was an enhancement permitting handling of "incorrect" pages; they even made the browser display the original text "corrected" if one asked to view the source. Then the next release of their web development tools used mixed slashes in that command. Of course, the pages produced worked fine with the Microsoft browser, but would fail on any other browser. And when users and developers tried to view the source, IT LOOKED CORRECT due to the browser change, even though it failed to comply with the standard. So not only did they break the rules, they DELIBERATELY CONCEALED that breaking of rules, in a way calculated to make other products seem to be at fault. As

I understand the settlement, all Microsoft has to do to escape its terms is change their nomenclature and/or numbering scheme and announce something as a "new and improved product", and it will be exempt from the restrictions on "existing and previous" products. This is much too weak. They also get to continue weaving applications and operating system together into one big morass, which lowers the quality and generality of both. The industry needs something more like the consent decree placed on IBM years ago, forcing complete separation of the operating system and applications development.

Truly yours,
Harlan Rosenthal

Subject: Microsoft Settlement

The settlement with Microsoft is not only a bad idea, it could possibly make the situation even worse. Letting Microsoft get off the hook by letting them further spread their monopoly (giving away copies to schools) is stupid.

An actual settlement would involve something Microsoft would have to do that would benefit their competitors, not them. Microsoft has and is still acting like a monopoly (just try and get a computer from Dell, Gateways, etc.. without Windows). They have done severe damage to the computer industry and the penalty must in turn, be severe.

Date: 1/23/02 9:45am
Subject: Microsoft Settlement

Dear Sir,

I've made my life writing computer applications for the last twenty-five years, and feel that I have to comment on the proposed settlement between the Department of Justice, several of the states, and Microsoft. It must not stand. I was very encouraged to see Judge Jackson's findings of fact and findings of law. While I wish that he had emphasized the Netscape aspect of the case a little more fully, it was clear that Judge Jackson found that Microsoft had violated the law, repeatedly, and without remorse—to the significant cost of the American people. As you no doubt know, these findings of fact and findings of law are still in place, Microsoft's appeal of these findings has failed utterly.

The proposed settlement before you is, simply, a travesty. It does nothing, or next to nothing, to ameliorate the massive abrogations of the antitrust laws that Microsoft perpetrated over the last few years, since the previous agreement with the Justice Department was made. Microsoft has in the past, and will undoubtedly in the future, bent any agreement to the point where it has no meaning or restraint whatsoever.

Any agreement between the government and Microsoft should be exceptionally clear, forthright, and unambiguous. While many feel that Judge Jackson's proposed remedy of

splitting the company in two was too radical, I disagree. It is unambiguous and clear, and no amount of legal hair-splitting would prevent that agreement from having the desired effect.

This desired effect is to prevent Microsoft from abusing its monopoly in Operating Systems to infiltrate and dominate other markets. This must be done, one way or another.

Please reject the current settlement. Allow the case to go to trial. Let a judge make the final verdict, in the best interests of the people of the United States, and with due respect to her laws.

From: Niall Walsh
To: Microsoft ATR
Date: 1/23/02 9:42am
Subject: Do drug dealers have to give free hits (for a while) to kids as a settlement? So why MS?

It is completely insane to allow any aspect of a settlement against Microsoft to allow them to strengthen their monopoly! Please insist that no aspect of the settlement involves anyone acquiring copies of Microsoft products. If any aspect of the settlement is to have a monetary value it should actually be cash with which the benefactors can choose what to do with it. To allow MS to supply (for example) 20 time limited copies of their software to a school is like accepting a settlement with a drug dealer which says he will give the first 20 hits for free to school kids! The settlement is meant to redress the imbalance created by the abusive monopoly OR punish the abusive monopolists, not to re-enforce their position.
Niall

To whom it may concern,

I feel the proposed antitrust settlement between Microsoft, Inc. and the U.S. Department of Justice is not the right way to go. The last thing we want is to give a company (Microsoft) that has been deemed guilty of anticompetitive practices an even larger stranglehold on the market by contributing software for "free." It doesn't make sense to me to give Microsoft an even larger market share as a punishment for doing unfair things to other companies to gain market share. We should be looking at alternatives. Make Microsoft provide the hardware, and use Linux, a free, stable, secure and public Operating System. Or even make Microsoft purchase Macintoshes instead. No one but Microsoft will benefit from more installed Microsoft software.

Thank you very much for your time.

 Washington, DC 20530-0001

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. We agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html> <<http://www.kegel.com/remedy/remedy2.html>>), namely:

The PFJ doesn't take into account Windows-compatible competing operating systems

Microsoft <<http://www.kegel.com/remedy/remedy2.html#abe>> increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

The PFJ <<http://www.kegel.com/remedy/remedy2.html#def.a>> supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

The PFJ <<http://www.kegel.com/remedy/remedy2.html#def.j>> supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ allows <<http://www.kegel.com/remedy/remedy2.html#def.k>> users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

The PFJ <<http://www.kegel.com/remedy/remedy2.html#def.u>> supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

The <<http://www.kegel.com/remedy/remedy2.html#info.requirements>> PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

The PFJ <<http://www.kegel.com/remedy/remedy2.html#info.timing>> requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

The PFJ <<http://www.kegel.com/remedy/remedy2.html#info.use>> requires Microsoft to release API documentation—but prohibits

competitors from using this documentation to help make their operating systems compatible with Windows.

The PFJ <<http://www.kegel.com/remedy/remedy2.html#info.formats>> does not require Microsoft to release documentation about the format of Microsoft Office documents.

The PFJ <<http://www.kegel.com/remedy/remedy2.html#info.patents>> does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

Microsoft <<http://www.kegel.com/remedy/remedy2.html#isv.oss>> currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

Microsoft <<http://www.kegel.com/remedy/remedy2.html#isv.atl>> currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

Microsoft's <<http://www.kegel.com/remedy/remedy2.html#enterprise>> enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

Microsoft has <<http://www.kegel.com/remedy/remedy2.html#caldera>> in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

The PFJ allows <<http://www.kegel.com/remedy/remedy2.html#oem>> Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The PFJ allows <<http://www.kegel.com/remedy/remedy2.html#oem>> Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

The PFJ <<http://www.kegel.com/remedy/remedy2.html#oem.mda>> allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

The PFJ as <<http://www.kegel.com/remedy/remedy2.html#enforcement>> currently written appears to lack an effective enforcement mechanism. We also agree with the conclusion reached by that document, namely that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would

delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Sincerely,

MTC-00015660

Subject: Opinion on the proposed Microsoft Settlement

Dear Officer of the US Dept. of Justice,

I am a Software Engineer with a Master's in Computer Science. In my opinion the proposed settlement in the Microsoft Antitrust case is grossly inadequate for the seriousness of the situation.

The stranglehold that Microsoft has on the desktop software industry is painfully obvious to me since 1991 when I first started my career. Managers in companies make decisions to buy Microsoft products not because of the technical superiority of Microsoft's products, but because of the fear that any competing products will soon be driven out of the desktop market by Microsoft's strong arm tactics or their outright purchase of the company. Microsoft at best is a company that borrows ideas from competitors like Apple and quickly takes over all market share by price-cutting, give-away policies and packaging the new products with its operating systems.

As a developer of software I have seen many excellent companies become the victim of this anti-competitive behavior. More-over Microsoft uses its vast resources on drowning competitors in legal battles, thus resulting in smaller companies with limited financial resources quickly losing the battle.

In my opinion it does not make sense that the company with the lowest quality operating system has an ever expanding monopoly over the desktop. The average consumer deserves better than frequent system crashes, constant security problems and lack of a viable choice of the desktop. Microsoft's sole concern is its ability to make money and it has no interest in the long term competitive health of the computer industry, or the interests of the common citizen.

The proposed solution does nothing to remedy these problems and introduce realistic competition in the desktop arena, and punish the company that has already been proven guilty of monopolistic behavior. Similar measures introduced in the past had no noticeable improvement in Microsoft's monopolistic behavior, and I don't see any change in Microsoft's aggressive behavior.

The earlier proposed breakup of the company might be the closest we can get to introducing competition and rectifying the errors of the past.

I would urge the US Dept. of Justice to fight for the common man and not for the monopolistic Microsoft.

Neeraj Tulsian

Subject: Microsoft Settlement

I just wanted to drop a note to clarify my disgust with the handling of the MS settlement. Microsoft is guilty of antitrust violations by using their monopoly standing to crush their competition, (see Netscape).

While they continue to talk about how they provide innovation after innovation, what they are really doing is finding innovations that others make and then use their monopoly position to manipulate and squash the creators and then take their ideas as their own. Don't believe me? See Apple.

The settlement is nothing more than a joke. What you are really doing is providing MS with the opportunity to increase their market share in the education sector as well as train tomorrow's adults to use MS products rather than expose them to alternatives.

MS whined about being broken up, saying that it destabilize the market and reduce shareholder value. Bull. I am a MS shareholder. The best example that I can think of that this is bull is the breakup of AT&T. At the time, no one was sure if it was the right thing to do. However, any stock holder that hung on to their shares will tell you that the value of their holdings of AT&T as a monopoly did not compare to the value of their holding of AT&T and the Baby Bells. Furthermore, the breakup did open up competition just as it was intended to.

As a stock holder, I would happily see a break-up of MS. I have complete confidence that the consumer, as well as the stockholders, would be better off.

Subject: Microsoft Settlement

I do not believe that the current settlement between Microsoft and the DOJ effectively addresses the problems with Microsoft's monopoly. While it is true that Microsoft worked hard to achieve what they have, they have begun to, in my opinion, abuse their power and act detrimentally towards the American people, American Business, and the computer industry in general. By bundling services with their OS, I believe that they prohibit other versions of that service to be able to market or sell their product effectively. I know you have heard this before, by other people posting letters, lawyers, etc, but I want you to imagine a world with open competition. Companies would have a greater need to innovate to get users to adopt their products and would make competition a little bit more about the product than about the hooks in the background. Other companies are prevented from effectively doing this with the way things are now. In a world of innovation though, new things, that were never before thought of would come to light, perhaps transforming the landscape again and creating new markets and such.

Microsoft is moving towards a subscription based service because it believes that it's customers have no choice but to accept their product and feels free to move in a direction to charge more money for less innovation. Face it, if you have a monthly cash flow and no competition, why innovate? It would be cheaper not to. My proposed remedies are this:

1. Force microsoft to open up their APIs and major protocols to major competitors so they can learn about the OS and develop products that work well.

2. Force Microsoft to completely open up their Specifications for their office file formats to lets competitors create interoperable software.

3. Force Microsoft to put netscape on the desktop as part of their OS software release.

4. Do not force microsoft to sell a stripped down version of the OS, but instead to make those parts of the OS which are not necessary (such as media player and I.E. uninstallable). I think it would be a bad idea to not have a web browser of some type on the desktop, because installing a web browser via FTP is hard and beyond the abilities of the average user.

5. Create a committee to oversee microsoft in the other parts of the settlement that the DOJ proposes, but empower this committee to impose large fines for non compliance, and enough oversight power to look at whatever needed aspects of the company and the software to do their job properly. This committee should last until microsoft no longer is a monopoly in the OS market.

6. Microsoft should loose the power to bundle their software together for new and emerging industries (such as using the PC for home entertainment). The software to do this should be sold separately on the shelves in another box at its own price. The oversight committee should be charged with identifying these new industries and the oversight to stop the bundling from happening with very large fines as the enforcement mechanism.

I state again that I disagree with the current settlement and that microsoft is a monopoly with so much power that equally strong measures are needed to put this company back in it's place. I work in the computer industry as a technician and can see first hand the damage that microsoft has placed on this industry.

Thank You for Listening
Jason Fox

Subject: Microsoft Settlement

I think the proposed Microsoft(MS) settlement is a bad idea. I do not think that it effectively punish's MS for their actions. I think that MS is taking advantage of the judicial system and the amount of time that it takes to get a court case through the system. When the public was first hearing of the anti-competitive practices that MS was using in the browser war against Netscape, Netscape was the #1 browser.

The judicial process took so long and MS continued in their anti-competitive ways that MS is now the #1 browser. I think MS purposefully dragged out the judicial process in this matter, they knew how long it would take to get the case through court. Due to the highly dynamic and accelerated nature of computer technology, MS would have web browser dominance by time any settlement was reached in court. Once they have browser dominance, what kind of disciplinary action taken against them would matter? They get fined a few hundred million? a few billion? What difference will that make when their browser is on the majority of peoples computers.

Any questions? please feel free to contact me.

Thank You

Subject: Microsoft Settlement

I want to make it known that I strongly disagree with the Microsoft anti-trust settlement. While there are numerous significant reasons that I feel this way, I will just mention one here. The settlement only requires Microsoft to disclose APIs to companies, which includes a minimum income, or something similar. Although I don't remember the details exactly, I do know that this would effectively eliminate the possibility of "free software" projects being able to properly interoperate with Microsoft products. Since Microsoft has stated, both publicly and in private (leaked memos) that they consider "free software" to be it's number one competition, excluding it from the settlement seems ludicrous. There is no reason that the APIs should not be disclosed to everyone, since their only use is to allow other software to properly interact with Microsoft software.

As a student, I cannot afford to buy expensive software. While there are plenty of other software options out there which do not have Microsoft's monopolistic prices attached to them, I am effectively precluded from using these options because of Microsoft's monopoly in many areas. I hope that a better resolution can be reached than the one currently being considered.

Signed,

Rich Kowalczyk

Subject: Microsoft Settlement

To Whom It May Concern,

I am writing this email to lodge my complaint against the currently proposed Microsoft Settlement.

After having read the entire proposed settlement located at <http://www.usdoj.gov/atr/cases/f9400/9495.htm>, I have come to the firm conclusion that the settlement is poorly written. What I have yet to determine is why this judgment has been so poorly written. The amount of problems is abysmal, and finding too little time to elaborate on all of them, I will pick two which I will discuss here.

1. Section III A needs revising to include the prohibition of Microsoft from punishing OEMs who choose to ship computer products which do not use a Microsoft Operating System.

2. The overall settlement should include provisions on Microsoft to release documentation detailing the file formats on files which are used/generated by any Microsoft operating system or application.

Section III A of the settlement

Here the government prohibits Microsoft from retaliating against any computer manufacturer who ships a computer which includes a competing operating system on the computer. However, it never specifies that Microsoft cannot retaliate against a computer manufacturer who ships a computer without a Microsoft operating system.

As a member of the technological community, it is often obvious to me how Microsoft conducts it's business practices. If there is something Microsoft doesn't like, it will use whatever means it can to remove the offending item. We plainly saw this in the case against it's rival in the browser arena, Netscape. Microsoft began to tie their Internet Browser with the operating system, configured it to be the default browser, then made it difficult to remove IE from the desktop. The end result has been that IE now dominates the market.

What are we then to conclude by the lack of restriction on Microsoft, a company which has been found to have engaged in Antitrust practices? Consider a scenario of a computer manufacturer who has a relationship with Microsoft, but chooses to operate a division which distributes PCs without using a Microsoft operating system. I can easily see where such a situation may arise if an OEM chooses to begin a Linux OS division.

Because of the lack of a restriction, Microsoft is left with the ability to exert pressure on the OEM to close down that division, or its business relationship with Microsoft would suffer. The OEM is left with little choice but to stop that division, and the other OS is never given a chance to grow.

Are we then to conclude that the only way an operating system is to grow is along with a dual installed relationship with Microsoft operating systems? Then how does Microsoft NOT influence technology and hurt the consumer? Section III A needs to be amended to include a clause which prohibits Microsoft from retaliating against OEMs who choose to ship computers without a Microsoft operating system.

Releasing Documentation on Microsoft File Formats

Perhaps one of the more egregious tamperings with technology that I find Microsoft capable of is the continual modification of the file formats it uses, making inter operability with other applications and operating systems difficult at best and impossible at worst. Because of the dominance of Microsoft within the operating system market, no other operating system stands a chance if it cannot develop non Microsoft products that work with files generated with Microsoft products. Take for instance Microsoft Word documents. These are normally found with the ".doc" file extension. Microsoft continually modifies the structure of the .doc file format to prevent their editing and use with other pieces of software such as Corel WordPerfect.

Corel was a case study in what happens with a company who chooses to compete against Microsoft in the word processing business. I cannot stress enough the number of times I had difficulties in opening and saving documents generated by Microsoft Word under WordPerfect. From a proprietary standpoint, Word documents deserve no protection on their file structure. The way that Microsoft Word operates is the true intellectual property, the files it save are merely pieces of data created by their users. So why does Microsoft continually change the file format? Simple, it makes competing applications and operating systems look like they do not work, thereby misleading customers that they must use Microsoft or Microsoft certified products.

If any other operating system is going to become competitive, it must be able to handle documents generated by Microsoft applications and operating systems. In order for this to occur, the Department of Justice must order Microsoft to open their file structure formats to the public, as they are modified for use within their own applications and operating systems. The lack of such a statement on the part of the Justice Department, makes the settlement that much weaker. I read newspapers, I follow the news, and I participate in several technology information forums. From discussions which arise from colleagues and friends, it amazes me the number of times I hear the opinion that the Department of Justice is settling with Microsoft with easy terms due to the nature of our economy. I find it ludicrous that the Department of Justice could so easily settle this case because there is a sentiment that somehow rightfully punishing an offender of the Antitrust legislation's would hurt the economy, and therefore we must somehow be lenient on the offender. Yet, it appears this may be actually happening.

I believe part of the economy's problems stem from corporation's abuse of business ethics and how they conduct themselves. Business nowadays is tending towards cut-throat maneuvering, decreasing customer care, and the policy that if you can't make a buck under normal conditions, you should litigate-litigate-litigate until you can put a competitor out of business and bring in fanciful amount of revenues through patent infringements.

Microsoft may not be the only company who conducts cut-throat business tactics, but it is a prime example of how a mega-corporation can influence the progression of technology, which ultimately hurts the growth of business and advancement. This settlement offers us the chance to prohibit Microsoft from further negative influences, but the condition in which the settlement currently is in offers nothing more than the Department of Justice could have had several years ago in an out of court settlement with Microsoft. I distrust Microsoft from being able to behave and act responsibly. I look upon the settlement with cynical eyes and believe that it will do NOTHING to punish Microsoft for crimes which it has been found guilty of in our courts of law. Please consider amending this document so that it may serve the purpose which it was originally intended, as a document which will bind Microsoft

from anti-competitive practices and ensures that other businesses, competitive products, and technology are allowed to flourish.

Subject: Microsoft Settlement

I wish to object to the proposed settlement with Microsoft and the DOJ. I find it hard to understand why the DOJ has determined that Microsoft is a company guilty of maintaining it's monopoly illegally, yet offers a settlement with such restrictive language that Microsoft will be able to use the proposed settlement to further it's monopoly in the future.

By allowing Microsoft to narrowly define what is windows in the settlement, and use the same Win32 API and marketing in every product they make, let's Microsoft dead end this settlements goals. Microsoft will simply launch a new Windows products outside of the definition and sidestep all remedies in this settlement.

Personally, I have found that Microsoft's words and actions have proven that this is an untrustworthy company, and any remedies that rely on Microsoft's willingness to live up to the spirit of the settlement will fail. I tend to favor the original ruling of breaking up Microsoft, however, I do not believe that two companies would actually help. I would like to see Microsoft broken into four or five companies (Microsoft Windows Inc., Microsoft Office Inc., Microsoft Development Products Inc., Microsoft Home & Games Inc., Microsoft Internet Applications Inc.) so that it would be impossible for Microsoft to resort to proven illegal tactics against competitors. I would expect all of the Microsoftlets would be very powerful competitors in their respective marketplaces, increase shareholder value, increase innovation over what I believe is the lowered expectations from Microsoft, and finally provide stable and secure software from the companies.

Thank you for your time, and I hope you consider my opinions.

From: Paul Lorenz
To: Microsoft ATR
Date: 1/23/02 9:48am
Subject: Microsoft Settlement

Attn: Justice Department <quoted from R. Cringley> Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: "... (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, ..." </end quote>

Since many of MicroSofts greatest competitors are Open Source, this effectively bars them from competition. Also why is MicroSoft, which supposed to be penalized, being allowed to decide anything, much less who will be allowed access to it's APIs? They are experts at weaseling out of things, and they will doubtless use any cause, however

flimsy to show a company is not "viable". Any company that is beyond reproach will doubtless not need access.

The settlement is a travesty and helps Microsoft, and does not penalize or address the root cause of the case, that being MicroSoft's monopolistic practices.

A 3 member panel to watch over MicroSoft is also ridiculous. First off, 3 people do not have the resources to watch over the behemoth that is MicroSoft and secondly, why is MicroSoft being allowed to choose it's watchers?

MicroSoft has been found guilty of illegally perpetuating a monopoly. Their monopolization should be hindered, not helped. The Justice department should be ashamed. This settlement has nothing to do with Justice and everything to do with pandering to MicroSoft. This is inexcusable.

From: Fred Lovine
To: Microsoft ATR
Date: 1/23/02 9:47am
Subject: Microsoft Settlement

To whom it may concern,

The proposed settlement is bad idea. A better solution for the businesses, families and individuals of the USA is to break the Microsoft monopoly. Microsoft is an incredibly aggressive company that has regularly engaged in predatory pricing (Internet Explorer is free, which is new technology) and price gouging (Word for Windows 2002 is about \$300, which is old technology and should be part of the operating system by now).

I favor a solution that regulates Microsoft's future conduct as well as punishes Microsoft for past monopolistic and illegal activities. I propose that punitive damage be that the source code of some significant Microsoft product be released to the world under the GNU GPL. Either Windows 98 or Word for Windows 2000. Either product released to the world would allow all a choice between freeware and price gouging. This would further enable people and business to redirect cash that was destined for Microsoft to other parts of the troubled economy.

As for the regulation of Microsoft, I leave that for others to contemplate.

Hello.

I'd like to comment on the proposed settlement for the Microsoft antitrust lawsuit. I do not feel that the proposal is severe enough. Previous penalties placed on

Microsoft have failed largely due to the pace at which technology changes. I fear that the current proposal is doomed to a similar fate.

In short I feel that the punishment should be much more severe. Here are some ideas I have.

1. Force Microsoft to make its Windows API available to other software makers. That means all of the APIs available to all competitors.

2. As a possible addition to #1, split Microsoft Office into a separate company from Microsoft Windows. This will further level the playing field for competing products.

Here is a link to a website that has a lot of opinions by people who have thought a lot more about this than I have. I encourage you to take time to read their comments as well. <http://www.kegel.com/remedy/> Thank you for taking the time to read my comments, and those of others. I hope it will help shape a more appropriate settlement for the consumer.

As a citizen of the United States of America, I am writing to voice my dissatisfaction with the pending Microsoft antitrust settlement. It seems that the particulars of this settlement are concerned more with the political will and clout of the moment rather than the letter of the laws upon which the nation operates. I've always appreciated the fact that ours is a nation of laws, not of men. However, it seems in this instance that influence is being exercised more than good judgment. The settlement as proposed would appear to be a mere slap on the hand for monopolistic actions as well as tacit permission for continued strong-arm tactics by Microsoft, rather than a more adequate punishment which this corporation deserves. I would ask that you consider not accepting the settlement as it stands and instead pursue more stringent restrictions of Microsoft's future activities.

Thank you for your time in this matter.

With regards to the Tunney Act and comments on the proposed Microsoft settlement...

I find the proposed settlement disturbing. It seems clear from the evidence that Microsoft has used and continues to use a number of anti-competitive practices to establish an effective monopoly in the software marketplace, and is planning to use tactics that are questionable at best to exact payments from large and small companies for license fees that may or may not actually be due. That plus the impact on our economy of the various viruses that exploit all-too-common security weaknesses in Microsoft products combine to give me a dim view of our future should Microsoft's stranglehold on the PC software market go unbroken. And if they succeed in conquering the broadband media market they are currently targeting, then God help us all. If they manage to do to the Internet what they've done to Netscape, and HTML, and Javascript, and what they tried to do to Java, then it will truly be a Microsoft world.

I for one know where I *don't* want to go tomorrow.

I do not support the proposed settlement because I do not think it provides sufficient punishment to balance Microsoft's offenses, nor sufficient incentive to prevent them from doing the same in the future. Furthermore, the idea of punishing a monopoly by requiring them to extend their monopoly into the US educational system is incomprehensible.

MTC-00015687

From: Robert Thornburg
To: Microsoft ATR
Date: 1/23/02 9:49am
Subject: Microsoft Settlement

I would like to comment, under the Tunney Act, on the Proposed Final Judgement of the Microsoft case.

I do not feel that the proposed settlement is restrictive enough. It allows Microsoft many ways to continue anti-competitive behavior. It does not restrict Microsoft's from anti-competitive any business market other than PC software, and Microsoft has shown a great interest in taking over other markets. The proposed settlement does not have severe enough penalties if Microsoft fails to comply with it.

In order for a settlement to be beneficial to the citizens of the United States (and indeed the rest of the world) it must contain severe penalties for failing to comply with it, as well as restricting Microsoft's anti-competitive behavior much more severely, especially by preventing them from using the same illegal/

unethical actions from their past in new markets.

MTC-00015689

From: Jaime Riney
To: Microsoft ATR
Date: 1/23/02 9:50am
Subject: Microsoft Settlement

Dear Renata B. Hesse

I am writing today to express my concerns over the Microsoft Anti-trust settlement. I currently operate two computers on more or less a continual basis. I have two other computers that are older and have been salvaged from parts. On my primary machine, I have Redhat Linux installed which I myself use almost exclusively; on my secondary machine, I have Microsoft Windows; the two auxiliary computers are used for testing and developing, and are primarily loaded with Linux operating systems. I want to stress the fact that I am not a Microsoft Windows user. I have Windows on one machine out of necessity, for some things are more easily achieved through Windows and it is slightly more user friendly for my wife and guests, however, I am not an advocate of Microsoft and I not wish to finance their organization.

Microsoft claims that they are not a monopoly, yet they own ninety-five plus percent of the home user market. Microsoft claims fair business practices, yet they have been embattled on all sides from corporate interests to end-users. Microsoft claims to offer choices, yet works tirelessly to prevent competition even to the point of advocating laws that would make open-source software illegal.

Everything that Microsoft claims appears to be in opposition to reality. To date I know of only one company that will give you a choice of operating systems that you can receive with your new computer (desktop computers only). Every other company requires the customer to purchase a version of Microsoft Windows on a new computer or laptop. If a customer should require a new computer system, and that user had no intention of using the Windows operating system (as is the case for myself), that user will still be required to purchase a license and pay tribute to Microsoft for the right to

buy a mainstream commercial system, or else piece meal a system and pay significantly higher for a comparable machine. This current situation alone, in my opinion, is intolerable. Microsoft, for years, has bilked the government, corporations, and end-users for an operating system that cannot be definitively proven to be superior in performance and capabilities than a free operating system that has largely been worked in peoples spare time, at least until the adoption of companies like Redhat. The only claim to their success is there abusive and strong-arm tactics that they used in the business world. Namely, exclusive licensing agreements, leveraging huge financial and legal assets against smaller struggling companies, and a sustained, false campaign against a free alternative to their proprietary software that likens advocates of open-source software to criminals. Forgive my digression, but can I sue them for libel? Not likely, their flock of legal dogs would squash me in a heartbeat.

I am in favor of sever punitive damages against Microsoft. I would like to see the company broken up into smaller organizations, and fines assessed that are appropriately punishing to a company with enormous cash assets. In my opinion, Microsoft is the single largest impediment to progress in this country. Microsoft says you can advance technologically, however, you must do it their way or not at all. I think it is time to take that choice away from Microsoft and give it back to people and the industry.

I do not feel that the remedies proposed in your settlement go far enough to punish Microsoft. In fact I am concerned with the idea of recognizing Microsoft as a legal monopoly that is sanctioned and watched over by government. My fear is your solution will give Microsoft a favored status that will actually promote the continued expansion into more and different market shares. Microsoft is a monopoly, the solution is to punish the company and to disable their ability to continue to monopolize markets.

Sincerely

Jamie S. Riney

Microsoft is a monopoly. This is a simple fact. The settlement is a bad idea.

MTC-00015694

From: Milan Hejtmanek
To: Microsoft ATR
Date: 1/23/02 9:50am
Subject: Microsoft Settlement
To Whom It May Concern:

As a university professor who has used personal computers daily for the past fifteen years, I would like to comment on the proposed settlement.

I am not in favor of it in its current state. Please consider this a vote against the current settlement, as well as a vote to seek a settlement that is more favorable to Microsoft's competitors. Over the past decade I have been appalled at the inhibition of competition created by Microsoft's business practices: the decline of Netscape Navigator is one example, the lack of choices in word processing programs is another. In many ways, MS Word is bloated and mediocre—in its ability to handle foreign language scripts, for example—but Microsoft's near-complete dominance of the operating system market has given it too much market leverage in application software for other companies to compete successfully. Who would now dare (or could find the capital?) to start up a company marketing a new word processing program, regardless of its manifest superiority? MS competes only against itself at present.

I urge you to find an effective way to force Microsoft to allow genuine competition.

Thank you.

Sincerely,

Milan G. Hejtmanek

To whom it may concern:

I would like to take advantage of the public comment period and speak my opinions regarding the Microsoft antitrust case. I am sure you have received many of these letters, and are not concerned about hashing over Microsoft's guilt or settlement shortcomings, so I will avoid these topics.

First off, I am a network administrator for an outdoor equipment distributor, and I feel that it is not only my job but also my interest to follow this case and be involved. I have been watching this trial closely since its origin, and would like to think I have an educated view from a business and technical standpoint, though not so much from a legal perspective.

In my five years of network administration experience I have used many of Microsoft's operating systems, programs, and equally as many systems from their competitors. Though I will implement any given system that fits the niche in which it is being used for, be it Microsoft or not, it would greatly please me, the corporation that I work for, and all of my colleagues to see a fair market and competition against Microsoft. Therefore I believe it is in the public interest to resolve this case in an effective manner.

Now I would like to make a few comments about Microsoft's monopoly and the settlement that will be implemented. Microsoft has roughly 95% of the desktop Operating System market; this is their cornerstone, and it is huge. They can control what nearly every computer can and can not do. This is not necessarily illegal, until they abuse it. They abused it to win the web browser battle.

And they did win. It is all but over, granted I don't use IE, but I am a small percentage. I think that it would certainly be appropriate to punish them for this action, but far more important to prevent future abuse. They have already won the browser battle, so putting restrictions on them according to what they have done in the past is not enough. We have to predict what they will do in the future to expand their monopoly illegally. To do this, we have to look at who they will compete against next. I think this would be IBM, Red Hat Linux, and other Unix variants. To ensure fair competition there are two major points that must be addressed in any settlement, in addition to the several others that are being proposed concerning vendors and policies.

First point: In almost every corporate computer network nearly 90% of the desktops run a Windows operating system. This is a monopoly, and Microsoft will make attempts to use this monopoly to expand their server market. To prevent this, all network protocols that a Microsoft desktop operating system (Windows9X, WindowsME, Windows XP, Windows 2000 Professional) uses to communicate with a server must be documented, updated regularly with any changes, and most importantly made available to ANYBODY who wants them. If Microsoft gets to pick and choose who gets access to this documentation, then it will not be effective. I should not be forced to buy a Microsoft server just because I have a network of Microsoft desktops. I should have the freedom of choosing an IBM server, a Sun

server, a Linux server, or even an Apple server. There is a decent amount of freedom of choice in this area now, and that is why action must be taken now to prevent Microsoft from abusing its monopoly of desktops and gaining a monopoly of server operating systems.

Second point: Businesses should have the freedom to use any other desktop operating system along with Microsoft desktop operating systems. You might say that the freedom is there, but I disagree. Microsoft's monopoly in office applications prevents any user who wants to communicate with others from using an operating system that does not have Microsoft Office (anything other than Windows or Macintosh). Microsoft should be forced to document, and disclose to everybody, all file formats used by Microsoft Office. Microsoft would argue that it is not illegal to have proprietary file formats, and this is true, however I think that Microsoft has abused this illegally. Microsoft constantly changed the file format with the intention of breaking any other application that attempts to read them. A perfect example is Corel. Microsoft's constant changing of their file formats, with the intention of breaking Corel Office's compatibility, has severely damaged Corel's business, and, since I am from Utah, my local economy as well. It comes down to one point: Microsoft has a monopoly in Office software, this monopoly removes my ability to choose another desktop operating system, and therefore illegally maintains Microsoft's monopoly of desktop operating systems. In closing, I say that all are surely in agreement that the resolution of this case is of great importance, not just now but for many years to come.

This suggests a careful and deliberate penalty is far more important to the health of the nation than is a hasty one.

To whom it may concern ->
I'm writing to you about the proposed settlement between the Justice Department and Microsoft.

I like many in my field (I'm a programmer/consultant), I do not feel that the settlement,

as proposed, will do much, if anything, to force Microsoft to modify its anticompetitive behavior. There are several outstanding issues that the settlement only (very) narrowly addresses.

If Microsoft has shown anything over the years of interaction w/ the Justice Department is that they will not do anything out of good faith. Any settlements must have clear and succinct behavior modifications in it or it will be meaningless.

From: Dan Moore
To: Microsoft ATR
Date: 1/23/02 9:52 am
Subject: Microsoft Settlement

To whom it may concern,
I wrote once before on the topic of Microsoft's proposed donation to public schools and why I felt that the donation of MS software was detrimental to public education, but I would like to add that the Microsoft Settlement as it now stands does little or nothing to limit Microsoft's potential for future anti-competitive behavior. Rather than re-inventing the wheel, I'd encourage the careful examination of Dan Kegel's open letter to the DOJ which I have signed. Thank you for your time.

-Dan

Below is the text of my letter of 12/14:
(I'd like to add to this letter that my wife and I have been spending money out of our pockets to make copies of reading packets for her students at the local Kinkos. This is due to the dilapidated condition of the photocopier at her school. We've spent \$80 this year on making copies for students. I am currently attending school and working and our resources are limited. My wife is considering cutting things out of her curriculum, because we cannot afford to continue supporting these projects out of our own funds.

The money spent each year on Windows Licenses would easily buy the school a new copy machine, thus relieving us of this burden and allowing my wife to teach her curriculum in the most effective way possible. I believe this misappropriation of public funds to be criminal and call again for public schools to only use software that is freely available.)

To whom it may concern,

I am a computer programmer who has worked as a system administrator and a technical support provider for unix, windows, and macintosh machines. I'm currently working on an electrical engineering degree from the University of Utah. I've been very concerned about the

Microsoft Settlement currently proposed by the Department of Justice. The Microsoft Windows Operating System is uniquely unsuited to the public education sector. I believe this to be true for a number of reasons:

1) There are several very good Operating Systems available free of cost (all of the distributions of both Linux and BSD can be obtained for free, the GNU Hurd will soon be freely available). My wife teaches seventh grade english and I believe it's evident that there are many ways in which the funds allocated for public education could be better spent than on complicated and crippling expensive licenses.

2) Microsoft software makes an effort to hide from the user many of the fundamental processes that a computer routinely performs in day to day operation. The objective of hiding these processes is to make a computer easier to use and probably accounts, in large part, for Microsoft's success in the market, but does not seem suited to educating young people about how computers work. If a person can use a unix clone operating system (such as Linux, BSD, or Hurd) that person can easily adapt to Microsoft software and is often more competent than life long Microsoft users. As the goal is education it seems apparent that unix clones are the better alternative.

3) Most operating systems in use today (including the MS Dos Operating system upon which the windows operating systems are based) are based on Unix. This makes it a very easy jump from Unix to any other Operating System.

4) The freely available software is most often willing to furnish the source code for the Operating Systems and all applications. The educational value of this for Computer Programming students cannot be overstated. For students to be able to examine the source code of professionals will help produce a generation of skilled, creative programmers with very professional coding styles.

5) Microsoft is a for-profit corporation. Adam Smith warned of the dangers of Government Sponsored Monopolies. To place Microsoft Software in schools is a government endorsement of their product. This could certainly be viewed as a sanction. There are many distributions of operating systems furnished entirely by not-for-profit volunteer organizations. (Look at www.debian.org for starters). The use of these non-corporate operating systems would help to protect capitalist ideals of a free market and of no government endorsements of corporations.

Taking into account the considerations that makes Microsoft software unsuitable for public education, I feel strongly that the anti-trust settlement ought to be altered such that Microsoft makes their contribution to public education entirely in computer hardware, and that software better suited to public education be selected by schools to be put on those machines.

From: Greg Lim
To: Microsoft ATR
Date: 1/23/02 9:52 am
Subject: Microsoft Settlement

Greetings to the US D.O.J.

I speak for myself and do not represent anyone, though I believe that my opinion matches that of many of my colleagues. Simply put, the settlement does not go far enough.

1. There appear to be little or no penalties for non-cooperation.

2. Loopholes. Someone check this. I've seen plenty of essays on the settlement listing large numbers of possible loopholes.

3. We need *Full* disclosure of *all* API's with extremely heavy penalties for noncompliance. An API is an interface, which provides for interoperability. Disclosing these puts no penalty on a fairly-behaving Microsoft.

4. File formats need to be documented. A user's data belongs to the user. If a user cannot get a format for the file his/her data is stored in, then he is totally dependant on the program used to operate on the data.

5. Non-Microsoft operating systems, and non-Microsoft licensing schemes are discriminated against. I myself have seen EULA's and used products at work (Visual C++ for example) that only allow the creation of programs that run on Microsoft systems, even though there is *no* technical reason for this. These are just a few of the problems with the settlement. I hope that it will be reviewed more carefully. I personally am not in favor of a breakup yet, but if it does need to happen, it should be:

1. in addition to everything listed in the settlement
2. one of the penalties for non-cooperation.
3. along the lines of:
 - a. development software
 - b. office and other application software

- c. database software
- d. operating systems

Here is a final set of suggestions. Microsoft should be legally blinded as to who it is dealing with.

1. All buyers should be able to get the same pricing. For ex. If Monster OEM can get a product for \$100 in qty's of 100 then Tiny OEM as well as Joe user should be able to as well.

2. Microsoft should not be able to remove first-sale rights though any means. Once an OS licence is sold to an OEM, the OEM can bundle whatever else on the PC he/she wishes. Resale is *always* possible.

3. Microsoft should be prohibited from ever making note of competitors's products, licensing schemes or any other identifying marks in their EULA's and OEM contracts.

From: Tod Schmidt
To: Microsoft ATR
Date: 1/23/02 9:51 am
Subject: Microsoft Settlement

To whom it may concern,
This settlement is a not a good proposal to enhance competition or bring more choice to consumers. It does not address the main issues regarding Microsoft's monopoly. The best way to do this is to require Microsoft to publish it's file formats and proprietary standards to the public. This would allow

people to communicate with Microsoft products using other operating systems, hence allowing a real choice in what to use. This would not hinder Microsoft's ability to compete on its own merits. The operating issue is not as important as the use of the Microsoft Office products and Outlook/Exchange to further its monopoly. Opening these standards would allow a level playing field without undue restrictions on Microsoft and its ability to innovate. This would not require an undue burden of enforcement on the government or Microsoft. I feel this would be an excellent move for consumers and, frankly, Microsoft. I hope these concerns are taken into consideration when reviewing this settlement.

To: Microsoft ATR
Date: 1/23/02 9:53 am
Subject: Microsoft Settlement

I think the proposed settlement is a bad idea. Although it encourages Microsoft to become less monopolistic, Microsoft's history shows that if there is any legal-ish way for it to retain its monopoly, it will. I would like to see a complete separation of the operating system and applications divisions. Such a separation would help to expose collusion between the divisions for what they really are and may eventually lead to a competitive operating system market. If this is not possible, I would still be happy to see restrictions put on Microsoft's business practices that are stronger than those currently proposed.

From: Andrew.M.Park@clev.frb.org@inetgw

To: Microsoft ATR
Date: 1/23/02 9:50am
Subject: Microsoft Settlement

The American consumer and citizen will be cheated out of justice if the proposed Microsoft antitrust suit is allowed to settle in its current form. Microsoft's business practices are truly anti-competitive and the company must be contained, punished, and reformed. Though I should comment on specific portions on the settlement that I don't agree with, I feel that the following points are the most outstanding:

The PFJ doesn't take into account Windows-compatible competing operating systems:

—Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions:

—The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

—The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

—The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

—The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

—The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

—The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

—The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

—The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

—The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft:

—Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

—Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

—Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft:

—Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs:

—The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

—The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

—The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

The PFJ as currently written appears to lack an effective enforcement mechanism.

Thank you for your time. I'm sure you will help protect the rights of American citizens, consumers, and business.

From: jared eisenmann
To: Microsoft ATR
Date: 1/23/02 9:53am
Subject: No on settlement!

I vote NO! to the proposed Microsoft Settlement.

I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices. The idea that a company found to be a monopoly's punishment is to spread their product to even MORE people, is absolutely ludicrous. Punish them by making them even more of a monopoly? I fail to see how giving them a larger market share is a punishment. It is a reward! The opposite would be a punishment, force Microsoft to pay for its competitors (such as Linux or Apple) to put their systems into under-priviledged schools.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of it's competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition. Are we to return to the late 19th century? Will a few men like JP Morgan and Carnegie control our destiny again? I say Nay! Capitalism is based on competition- and monopolies eliminate competition. The settlement with Microsoft is doing nothing to curtail it's monopolistic practices.

From: Chris Sexton
To: Microsoft ATR
Date: 1/23/02 9:53am
Subject: Microsoft Settlement

The proposed final judgement for the MS Antitrust case is lacking in several areas but I would like to point out one of the definitions defined in the PFJ is quite weak.

"Microsoft Middleware" was defined to mean application software that presents a set of APIs which allow users to write new applications without reference to the underlying operating system.

This allows Microsoft to exclude software from being covered by changing product version numbers or changing distribution methods for their software and operating systems. Seems like this is the opposite of what it intended—based on this loose definition, there isnt much of a reason to restrict the deemed "Microsoft middleware". It kind of defeats the purpose, doesnt it?

I seriously believe that the proposed final judgement should be revised in many areas or Microsoft will continue their practices as they do today.

Chris Sexton, Student

From: Doug Kartio
To: Microsoft ATR
Date: 1/23/02 9:54am
Subject: "Microsoft Settlement"

I wish to voice my option that the restrictions placed on Microsoft are not restrictive enough. Microsoft has for the past 20 years has been lying, stealing and steamrolling every good computer innovation that has been in direct or indirect competition with them.

I have watched great products be pushed out of the market, companies put into bankruptcy, and others threatened with legal action even though Microsoft had no legal right to do so, other then to have them stop competing against them.

Microsoft has made many fortunes off the work and sweat of others and is proving to many people that ?CRIME DOES PAY?. For a company that lied and falsified evidence in the previous trial, it is hard to believe that they have not been severally punished for their crimes. Had this been a small ?Mom and Pop? shop they would have been had accountable and have been punished, but since it is one of the world's largest companies, they are getting away with their actions. The laws of the country are in place to protect ALL people/companies regardless of color, race, creed or religion/size or wealth.

Please do what is right and punish Microsoft for the pain and suffering it has caused to the computer and high tech industry. I have been working in this sector for over 14 years and have never seen a more negative impact on this industry then I have with Microsoft.

Microsoft needs to open its system (APIs and code) so that other companies can write code that works properly with windows. Microsoft has places all types of hidden functions and methods that allow Microsoft developed products to work better and faster

then their competitors due to these hidden calls.

Microsoft also needs to be fined in a way that it and all other companies, that may try and monopolize a sector of industry, that crime does NOT pay. This will be largest company fine in history, but for a company that has \$30—\$70 billion dollars in cash in the bank it needs to be. Anything else would like fining a millionaire \$100 for using the carpool lane when he is by himself. Do you really think he cares? Has he learned his lesson? NO! He spends more then that on a drink at the yacht club.

I also personally believe that breaking Microsoft into 3 different groups; one that handles the operating system, one that handles the internet development and another that handles all the desktop publishing and related software is the best way to achieve a truly competitive market within the computer industry. I realize that this options, no longer seems to be on the table, but it is honestly the best way.

Subject: frightened by failure of the proposed Microsoft Settlement to address and deter unlawful activities

As an American citizen and consumer, I am troubled and frightened by the failure of the proposed judgement to address findings in the Microsoft antitrust case. THIS JUDGEMENT FAILS TO IMPOSE ADEQUATE REMEDIES TO THE CASE FINDINGS, and fails to utilize the broader range of remedies that may be legally and prudently availed.

There is NO EVIDENCE THAT THE PROPOSED REMEDIES are adequately punish past illegal or WILL PREVENT FUTURE HARMFUL, ILLEGAL ACTIVITY. It is frightening to consider what lesson might be taken from this failure by other potential monopolists and economic bullies. Is this a country of personal and corporate accountability, or not?

As a user of a broad range of computer software and hardware products, spanning the range of commercially available operating systems, I have found my FREEDOM to choose on the basis of PRICE and PERFORMANCE has been undermined by Microsoft's widespread and apparently instinctive work to the ILLEGALLY SUBVERT COMPETITION.

I request that my government pursue more appropriate and further means of PROTECTING THE AMERICAN PEOPLE AND ECONOMIC SYSTEM FROM MICROSOFT in this matter.

Thany you,
William A. Christens-Barry

Subject: Microsoft Settlement

Your Honor,
I think the proposed settlement is not enough, to quell Microsoft's anti-competitive behavior. They continue to do the same things they were found guilty of, to this day. That says allot about a corporation, and or even an individual. If the company was serious about complying with the court, they would have changed they're behavior, before they are ordered to do so by the court. To me this seems like a big joke to Microsoft, and

I think they need to be punished more, possibly be broken up. I have been in the computer industry for over 10 years, even having worked for Microsoft. It was a fun company to work for, even though I disagree with some of they're ethical things.

From: Chris Zappanti
To: Microsoft ATR
Date: 1/23/02 9:54am
Subject: Microsoft Settlement

I must voice my strong opinion against the current wording of the Microsoft Settlement. Microsoft is convinced it has never done a wrong, is doing no wrong, and will do no wrong in the future. Without a stringent and explicitly worded remedy they'll do exactly what they did before: skirt the issue, push past the spirit of the earlier remedy by parsing every word they can, or flat out ignoring what is not conducive to their behavior in the name of "consumers."

Microsoft, as part of the agreement, should be REQUIRED to admit in print its guilt on conduct where the courts have upheld already. If it brings them lawsuits tough luck—if they had chosen to play openly and fairly in the first place they would not be here.

Don't let them off the hook with a slap!!! Too many of us in this field tire of seeing them run rough-shod over companies who had the potential and/or product to solve a problem much more efficiently than Microsoft did, only to see them get run over when the product began to attract attention.

They're like a drunken babbling fool—a good slap to the head is the only way to get their attention.

From: Henry W. Miller
To: Microsoft ATR
Date: 1/23/02 9:54am
Subject: Microsoft Settlement

The proposed settlement with Microsoft does nothing to solve the issues that have brought this case to court.

Microsoft has been found to have a monopoly on Intel compatible operating systems, and further they have used this monopoly to destroy competitors. There is nothing in the proposed settlement that would prevent Microsoft from destroying another competitor. As such it is not a good settlement. Microsoft appears to be trying to get clauses in the final settlement that would allow them to keep secret anything related to security. This is unnecessary well designed security measures do not lose their value when the attacker knows how they work. Vaults are rated by how long it would take a thief who has access to the design to break in. In computers we have discovered that secret security measures are eventually broken by the computer criminals who then use them against those who trust them. I urge the court to reject the proposed settlement or modify it so that Microsoft will not use their monopoly to harm competitors.

From: Laura Hale
To: "microsoft.atr(a)usdoj.gov"
Date: 1/23/02 9:52am
Subject: Microsoft Settlement

To Whom it Concerns:

I have read the Proposed Final Judgement in the Antitrust case against Microsoft and still have concerns that this settlement will not keep Microsoft from engaging in illegal and anticompetitive practices. The current proposed settlement includes loopholes that will allow Microsoft to continue to retaliate against companies and end users that choose alternative operating systems, and does not put in place an adequate system for investigating future infringements by Microsoft. As someone who has worked with technology, specifically technology in nonprofit organizations, I have seen the unsatisfactory results of years of monopolistic behavior from Microsoft and I cannot, in good conscience, recommend or support it this proposed final judgement.

However, I do believe that the amendments put forth by the nine states Attorneys' General and Corporation Counsel from the District of Columbia who did not agree to the proposed settlement is more comprehensive and will curb Microsoft's illegal monopolistic practices. It addresses some of the larger issues missing in the first proposal by creating a "Special Master" with investigative powers that will be able to react quickly to future infractions, and broadening some of the narrow definitions given for terms like API and Windows. I support the inclusion of policies to require Microsoft to:

1. offer a version of Windows with minimal preinstalled software, allowing consumers to better choose which software components they want installed on their computers when originally purchased;

2. package "middleware" software with Windows XP that will allow software applications to run across different operating systems, which will cut down on the myriad of compatibility issues users currently face.

3. share the programming code of Internet Explorer, the company's Internet browser, with other software developers, preventing Microsoft from monopolizing Internet access; and

4. allow other software developers to port Microsoft's Office software suite for use on non-Windows operating systems, permitting non-Windows users to use Microsoft's other products if they choose.

I whole heartedly urge the Court to find that the U.S. Department of Justice proposed final judgement is not in the best interest of the public and to consider the remedies offered by the Attorneys' General and Corporation Counsel from the District of Columbia.

Sincerely,
Laura Hale

From: Eric Spiegelberg
To: "microsoft.atr(a)usdoj.gov"
Date: 1/23/02 9:58am
Subject: Microsoft Settlement

I think the proposed settlement is an extremely bad idea. The government is clearly bowing to Microsoft special interest groups. The corrective measures are extremely light and will not accomplish any change in anti-competitive behavior. Microsoft has continued to practice anti-competitive behavior even while this case has been before a judicial court. Microsoft has also continued to spread its stranglehold on the technology sector by entering new markets and the continuation of bully tactics. It's a shame that the United States government is afraid to deal with this corporation within the guidelines of the law. I have a BS in Computer Science and work within the software industry. I use Microsoft and non-Microsoft products daily and see this issue clearly without bias. I have formed my opinion after years of industry observation, by being well educated on the subject, and weighing the facts. Obviously Microsoft is buying their way out of the situation and it's unfortunate that most people, including the Justice Department, don't have the technical knowledge to realize what anti-competitive tactics they use to maintain their monopoly.

Sincerely,
Eric Spiegelberg

justice. It does not open up any chance for new operating systems in the market.

MTC-00015728

From: Eric Sheffer
To: Microsoft ATR
Date: 1/23/02 6:55am
Subject: Microsoft Settlement

I am against the Proposed Final Judgement in United States v. Microsoft.

I believe that the Proposed Final Judgement (PFJ) is severely flawed. There are many inconsistencies between definitions outlined in the Court's Finding of Fact and those in the PFJ that introduce loopholes in the remedy which will enable Microsoft to continue the monopolistic and anticompetitive behavior that spurred the suit. If these loopholes are not addressed, then the years of litigation and vast sums expended on behalf of American consumers will be for naught.

Specifically, four definitions outlined in the PFJ need to be altered to close these loopholes. They are:

(1) Definition A: "API"—This PFJ definition of API pertains only to interfaces between Microsoft Middleware and Microsoft Windows, and excludes Windows APIs used by application programs. As written, this definition might omit important APIs such as the Microsoft Installer APIs, or APIs introduced into Windows to specifically support Microsoft application software.

(2) Definition J: "Microsoft Middleware"—The PFJ definition of "Microsoft Middleware" enables Microsoft to exclude any software from being covered by the definition in by changing product version numbers or changing how Microsoft distributes Windows or its middleware. The Court's Finding of Fact definition, which defines middleware as software that itself presents a set of APIs which enable new applications to be written without reference to the underlying operating system, should instead be adopted.

(3) Definition K: "Microsoft Middleware Product"—This PFJ definition specifically excludes several Microsoft products for or on which developers create applications using underlying APIs. Excluded are Microsoft.NET and Microsoft C#, Microsoft Outlook and Microsoft Exchange, and Microsoft Office and its component applications (Microsoft Word, Microsoft Excel, Microsoft PowerPoint and Microsoft Access). These products should be included in the definition because they provide important APIs for application development.

(4) Definition U: "Windows Operating System Product"—This PFJ definition includes Windows 2000 Professional, Windows XP Home, Windows XP Professional and their successors yet excludes the operating system products Windows XP Tablet PC Edition and Windows CE. Many applications are available that will run without modification on both the included and excluded operating system products. This definition should include an operating system that an execute programs written to the Windows API. Without modification to these definitions, I believe this PFJ, if adopted, will provide enough loopholes to enable Microsoft to escape justice.

Thank you for your attention.
Sincerely,
Eric Sheffer

Date: 1/23/02 9:53am
Subject: Microsoft Settlement

To whom it may concern,
As a part of the comment process I would like to register my unhappiness with the current proposed settlement.

Unless Microsoft is required to publish open APIs and file formats, it will continue to enjoy an unchallenged monopoly and benefit from the continuing effects of "lock-in". On the other hand, as Scott Rosenberg pointed out, With Microsoft's APIs and file formats fully standardized, documented and published, other software vendors could compete fairly—which, after all, is what antitrust laws are supposed to promote. We might then be faced with a welcome but long unfamiliar sight: a healthy software market, driven, as today's processor market is, by genuine competition.

I hope that you seriously consider the remedies laid out by GNU and FSF in the following document: <http://www.gnu.org/philosophy/microsoft-antitrust.html>, which I have attached.

Thank you,
Aaron Ross

With the Microsoft antitrust trial moving toward a conclusion, the question of what to demand of Microsoft if it loses is coming to the fore. Ralph Nader is even [when this was written, in March 1999] organizing a conference about the question.

The obvious answers—to restrict contracts between Microsoft and computer manufacturers, or to break up the company—will not make a crucial difference. The former might encourage the availability of computers with the GNU/Linux system preinstalled, but that is happening anyway. The latter would mainly help other proprietary application developers compete, which would only offer users alternative ways to let go of their freedom.

So I propose three remedies that would help enable operating systems such as GNU/Linux compete technically while respecting users' freedom. These three remedies directly address the three biggest obstacles to development of free operating systems, and to giving them the capability of running

programs written for Windows. They also directly address the methods Microsoft has said (in the "Halloween documents") it will use to obstruct free software. It would be most effective to use all three of these remedies together.

Require Microsoft to publish complete documentation of all interfaces between software components, all communications protocols, and all file formats. This would block one of Microsoft's favorite tactics: secret and incompatible interfaces.

To make this requirement really stick, Microsoft should not be allowed to use a nondisclosure agreement with some other organization to excuse implementing a secret interface. The rule must be: if they cannot publish the interface, they cannot release an implementation of it.

It would, however, be acceptable to permit Microsoft to begin implementation of an interface before the publication of the interface specifications, provided that they release the specifications simultaneously with the implementation.

Enforcement of this requirement would not be difficult. If other software developers complain that the published documentation fails to describe some aspect of the interface, or how to do a certain job, the court would direct Microsoft to answer questions about it. Any questions about interfaces (as distinguished from implementation techniques) would have to be answered.

Similar terms were included in an agreement between IBM and the European Community in 1984, settling another antitrust dispute.

Require Microsoft to use its patents for defense only, in the field of software. (If they happen to own patents that apply to other fields, those other fields could be included in this requirement, or they could be exempt.) This would block the other tactic Microsoft mentioned in the Halloween documents: using patents to block development of free software.

We should give Microsoft the option of using either self-defense or mutual defense. Self defense means offering to cross-license all patents at no charge with anyone who wishes to do so. Mutual defense means licensing all patents to a pool which anyone can join—even people who have no patents of their own. The pool would license all members' patents to all members.

It is crucial to address the issue of patents, because it does no good to have Microsoft publish an interface, if they have managed to work some patented wrinkle into it (or into the functionality it gives access to), such that the rest of us are not allowed to implement it.

Require Microsoft not to certify any hardware as working with Microsoft software, unless the hardware's complete specifications have been published, so that any programmer can implement software to support the same hardware.

Secret hardware specifications are not in general Microsoft's doing, but they are a significant obstacle for the development of the free operating systems that can provide competition for Windows. To remove this obstacle would be a great help. If a settlement is negotiated with Microsoft, including this

sort of provision in it is not impossible—it would be a matter of negotiation.

This April, Microsoft's Ballmer announced a possible plan to release source code for some part of Windows. It is not clear whether that would imply making it free software, or which part of Windows it might be. But if Microsoft does make some important part of Windows free software, it could solve these problems as regards that part. (It could also be a contribution to the free software community, if the software in question could be useful for purposes other than running other proprietary Microsoft software.)

However, having the use as free software of a part of Windows is less crucial than being permitted to implement all parts. The remedies proposed above are what we really need. They will clear the way for us to develop a truly superior alternative to Microsoft Windows, in whatever area Microsoft does not make Windows free software.

Subject: Microsoft Settlement

To whom it may concern,
I believe the proposed settlement is inadequate and will not be sufficient to redress the antitrust offences of which Microsoft has been convicted, nor will it deter them from committing future offences. The Department of Justice has had very little success in enforcing its previous consent decree with Microsoft; we have no evidence that this decree will fare better. It's particularly outrageous that the penalty for violating this new decree will be to extend the decree for another two years! A toothless decree extended for two years is still toothless.

Furthermore, the terms of the proposed decree, even if adhered to, simply require Microsoft to act more reasonably in the future. They do nothing to punish it for past misbehavior, and thus there is little deterrent effect. Microsoft must be subjected to significant material penalties to deprive it of the fruits of its illegal actions, or it will (correctly) view those actions as profitable, and repeat them.

My background: I am a computer science researcher. I just graduated from Carnegie Mellon University with a PhD in computer science. My thesis won honours in the 2001 ACM Doctoral Dissertation Awards. I have recently joined IBM's Research Division, but of course I speak only for myself.

To Whom it May Concern;

The Proposed Final Judgment in the Microsoft settlement has many flaws. The three most glaring of these flaws are: (excerpted from Dan Kege's letter at <http://www.kegel.com/remedy/letter.html>)

(1) "Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry."

(2) "The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered."

(3) "The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system."

It would be greatly appreciated if these three points, as well as the other points made by Mr. Kege at <http://www.kegel.com/remedy/letter.html> are taken into further consideration.

As a professional in the computer industry, I have watched for many years how Microsoft's anti-competitive practices have damaged the industry. Microsoft has demonstrated that it will not compete fairly on cost, on packaging/bundling, or on agreements or relationships. This is not an advantage to the end user. Despite the facade of change, the actual rate of change is less, and the small companies or competitors who induce change are bought out or swept away. The only actual competitor appears to be the open-source/Linux environment, and this is because the cost can be ruled out.

Do not hand Microsoft an easy victory, which would be given to them if they only receive a slap on the wrist. They need to be reined in and controlled, much as any other monopoly has been handled in the past.

Thank You,
Paul

From: M A Lytle
To: Microsoft ATR
Date: 1/23/02 9:56am
Subject: Microsoft settlement

To whom it may concern,

As a Information Technology worker with 12 years in the business, I am writing to strongly object to the current proposed Microsoft settlement. In every way possible, this document is crafted to reward Microsoft for unethical behavior and give them the green light to continue business as usual. This settlement is not in the public interest, period.

In how many ways is this settlement flawed? In as many ways as possible, and that is no exaggeration. I have watched the toxic effects of the lack of competition in my own company, where prices for Microsoft's software have risen continuously while computer hardware prices have plummeted in the same time period. I have watched company executives bow down before the monopolistic might of Microsoft to install expensive upgrades to the whole computer complement of the company where I work, only to watch the frustration of new users who have regarded the changes as unnecessary and confusing, and the costs were often absorbed by arguing that we have to "keep up" as though we were in some kind of a race. The combined capital expenditure of all of the major corporations over the last 10 years has amounted to a hidden tax, that has undoubtedly shown up in higher prices for everything we buy, as individuals or companies. And remember that all major software categories were already present since the early to mid 1990's so no new productivity has been achieved since then, only spiraling(upward) software fees. This has happened because no new software firms, with new ideas, can appear and survive in the current business environment, with the present business and legal tactics of Microsoft unabated.

These are just the effects, the things I have seen, in the real world, far removed from the world of the media and the courts, as this trial has laboriously traveled through the legal system, to be apparently dead-ended as irrelevant, now that the national mood is that the powerful are exempt from law or standards of conduct. As I write this you can see I don't believe this, no intelligent person today lacks cynicism about the justice system, but no intelligent person, can afford to give up, either. If we stop caring, we are truly lost.

In summary, I implore you as a citizen to reject this settlement as ineffective, ingenuous, and destructive of the values of competition and openness that once made us great, as a nation. Please restore us to greatness, greatness as defined by fairness for all, not just for the powerful.

Sincerely yours,
Mark A. Lytle

Subject: Microsoft Settlement

Dear Department of Justice,

I'd like to take a minute of your time to voice my opinion in opposition to the current Proposed Final Judgement against the Microsoft Corporation. As an avid user of OpenSource products, I feel that consumers should have a choice when purchasing a new PC as to what kind of software is loaded on that machine. It has come to my attention that your Proposed Final Judgement still allows Microsoft to stangle OEM's in an anticompetitive way. According to Section III.A.2. Microsoft may retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. This provision will allow Microsoft to stifle the coice of the consumer.

Consumers should have the right to either purchase a new computer system without any operating system, or with an operating system that directly competes with Microsoft. It has already been argued in the Central District of California court case, Adobe vs Softman, that that consumers can resell bundled software, no matter what the EULA, or End User License Agreement, stipulates. In the case of Microsoft's software, the operating system is tied to the OEM bios hardware of the PC. Even if a consumer wanted to sell their copy of windows to recoup their loss they would be unable to do so. The link between the OS and the OEM bios would prevent a user from installing the software on any other machine, making it impossible for the consumer have a choice at the time of purchase.

In conclusion, I would ask the Department of Justice to stand back and take a look at this situation again. There are MANY more reasons to dislike the proposed final judgement, more than I care to go into. Please take into consideration the letters and concers of the OpenSource community when making your decision.

Thank You,

Kevin White

I am opposed to the proposed settlement in the Microsoft antitrust trial. Microsoft has been deemed a monopoly and should be treated as such. The proposed settlement will not make a significant difference to the monopolistic power Microsoft has on the industry.

Competition is good for consumers, because when consumers have a choice they can choose the best solution. Companies in competition must compete to survive. A market absent of competition will stagnate and is not conducive to innovation. Significant changes need to be put in place to restore software competition in the personal software computer industry.

Sincerely,
Tony Asleson

From: J. Nathan Matias
To: Microsoft ATR
Date: 1/23/02 9:55am
Subject: Microsoft Settlement

Under the Tunney Act, I would like to comment on the proposed Microsoft settlement.

As a technologist who has to get work done every day and as a person who is trying to escape the grip of Microsoft's monopoly, I have several concerns about the proposed settlement.

First, I find it disturbing that the proposed settlement does not adequately prohibit Microsoft from using monopolistic tactics against Open Source software. Though I do some Open Source programming for corporations, I also spend my personal time writing software for my personal use and the enjoyment of others. Certain Microsoft licensing tactics used in the past could prohibit users from installing my software on their computers or prevent companies from distributing my software on the same media as Microsoft products. This restrictive practice of Microsoft will not be curbed in the proposed settlement.

As a programmer, I am excited about the access to APIs that may result from this settlement, but I find that the definition of API is limited so as to be of little use to me. APIs that are necessary to create a reasonably good application are not included in the definition; these bare patches in the settlement would make my use of Microsoft APIs (as defined in the settlement proposal) nearly impossible.

The proposed settlement rightfully allows users to replace Microsoft's Java software. However, this is a headless arrow, for

Microsoft itself is replacing Java ... with a new technology called .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

This brings me to another point. I find the terms much too specific. This allows Microsoft to continue its long-standing monopolistic tradition of hijacking new technologies when old ones no longer become profitable. It is very likely that within a few years the settlement will no longer apply, since the technology sector innovates so quickly and changes so rapidly. Unfortunately, such progress, which should benefit the average person most of all, would only serve to bring Microsoft out from under the too-specific terms of the proposed settlement.

One place where the settlement proposal is too specific is in the actual Microsoft operating systems that are discussed. Several Windows operating systems, such as Windows CE, the X-Box operating system, Pocket PC, and the Windows XP Tablet PC edition all use the same Windows API, but are not covered in the terms of the proposal. This is a dangerous omission in the proposal, as it would allow Microsoft to refocus on those products not discussed in the settlement, effectively sidestepping the settlement's provisions.

Furthermore, the proposal allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. Why guarantee Microsoft its monopoly by assuming unequivocal 100% monopoly in the proposal? If you want to ensure competition, then make sure Microsoft cannot apply its old tricks towards OEMs who foster competition by selling computers with other OSs.

Another of Microsoft's old tricks is to include intentional incompatibilities in supposedly standards-compliant software to force users to follow the monopoly. The proposal speaks nothing of this practice, which is one which we technologists feel the bite of every day whenever we look at a web site, connect to the network, or write a piece of software.

We technologists also feel the bite of Microsoft when we attempt to write software that is compatible with Microsoft Office and other productivity software. File formats used by Microsoft are highly secret, which enforces that one either pay huge licensing prices or just use a Microsoft solution. These file formats are truly the iron grip through which Microsoft extends and keeps its monopoly. Time and time again I have suggested to people that they use competing office or productivity software, and time and time again the response is that if it doesn't work with Office, then it's too dangerous to use.

Unfortunately, the problem is not on the part of the third-party software; the problem lies with Microsoft's monopolistic manipulation of file formats. Thank you for your time and consideration; I trust that the final result of this whole process will be a technology industry that once again is a garden of innovation and flowering beauty rather than the muddled mess we now have on our hands.

To whom it may concern:

I have read about the proposed settlement, and I am not in favor of it in its current state. The settlement does not address problems with Microsoft's closed file formats, meaning that any business with many documents in these formats have no clear upgrade path or way to escape from Microsoft. Please consider this a vote against the current settlement, as well as a vote to seek a settlement that is more favorable to Microsoft's competitors.

Sincerely,
Matt Graham

Subject: Microsoft Settlement

I think its terrible that a company that so clearly engages in anticompetitive practices is going to get off so easy. If this were happening in any other industry this would have been stopped long ago.

One of the greatest things that attracted me to computers and computer science was that one person or a small group of people could make a huge impact in the industry and on the rest of the world.

Companies like apple and palm practically grew out of garages. Computer Scientist have sometime individually made contributions that shook the world, yet as long as a microsoft is in "power" it seems that it is very difficult for free-thinkers to accomplish anything unless they were playing by MS rules and are using MS tools.

Many other world powers and governments are turning to alternative solutions. And if US does not take a stand on this issue we will soon be left far behind the rest of the world; Using cludgy software because we have little choice.

Regards,
Roman Meytin

From: John Franks
To: Microsoft ATR
Date: 1/23/02 9:56am
Subject: Opposition to Settlement

I wish to record my strong opposition to the proposed settlement of the Microsoft anti-trust case.

While there has been great harm to consumers in general caused by Microsoft practices and the proposed settlement does little or nothing to prevent continuation of these practices, I would like to focus on one single thing.

Microsoft has done nearly irreparable damage to the free exchange of ideas in written form through its monopoly of information formats. There is no need for written documents not to be interchangeable.

Microsoft Word was designed and is maintained in such a way as to make exchange with other programs difficult or impossible. This forces many people to purchase MS Word who do not wish to use it. The same type of monopoly is being pursued in other formats, music and video foremost among them. The monopoly in all these formats is unnatural and created only for financial gain. It could only be created by leveraging the operating system monopoly which Microsoft enjoys. Microsoft has proven its success at creating new format monopolies by bundling software with the operating system which only uses its proprietary formats.

The current proposed settlement does nothing to remedy this.

Sincerely,
John Franks
Professor of Mathematics

From: Richard Sachen, Jr.
To: Microsoft ATR
Date: 1/23/02 9:56am
Subject: Microsoft Settlement

I have read with interest the continuing legal battles over Microsoft's monopoly. While quick resolution has eluded us and the original victim of Microsoft's illegal practices, Netscape, has disappeared as a competitor, the case has made a change in the marketplace. Unlike the early 90s, people with computer related ideas now think of IPOs rather than being bought out by Microsoft.

To the point, I would like to suggest a possible penalty for Microsoft's illegal actions that may have more effect and cost less to enforce than the government's proposed remedy. Since Microsoft has been convicted of abusing their monopoly power, perhaps a suspension of enforcement of their government held monopolies (some or all patents, trademarks, and/or copyrights) for a period of time—say from the release of Windows 95 to 2002, approximately 6 years. By the government simply refusing to uphold Microsoft's monopoly power on patents and copyrights, enforcement costs are zero. The effect of such a move would be to open up competition dramatically.

I am not a lawyer and do not know if this is among the legal remedies available to the court, but removing government enforcement of a monopolist's monopoly power in patents and/or copyrights seems a simple and effective punishment.

Thank you for your consideration,
Richard Sachen

Subject: Microsoft Settlement

To Whom It May Concern:

I am writing to you to let you know that I, as a US citizen, am opposed to the proposed Microsoft settlement in the anti-trust case. I having been working in the computer field for over ten years and I have personally witnessed Microsoft go from being an innovator to a monopoly that actively uses its monopoly power to crush competition and artificially raise its prices. One detail of the settlement which I find absolutely ludicrous is the idea of Microsoft donating PC's to schools with its Windows operating system installed on them. This certainly does not punish Microsoft. If anything, this strengthens Microsofts monopoly of operating systems.

It is my opinion that this settlement is much too lenient on Microsoft. It does not do enough to punish Microsoft, or prevent it from abusing its monopoly power in the future.

Sincerely,
Robert Laskey

Subject: Microsoft Settlement

Dear Sirs,

Please settle this lawsuit as soon as possible. Our country needs to be over such legal turmoil and focus its attention on rebuilding our economy and our national confidence that was so devastated by the events of 9/11 and the crashing of the stock market.

I believe that the fall of the stock market was due to the decision by Judge Jackson against Microsoft. The dates coincide, but in fact his decision stifled innovation and the ability of our greatest inventors to precede with their new ideas.....

As of today, 1/23/02, I just read about a new lawsuit filed by AOL against Microsoft concerning its Netscape browser. I have used Netscape a few times and it is still far inferior to all browsers. Its like the former automobile, the Yugo. I hope no taxpayers money will be wasted on pursuing this new issue which is ludicrous and insensible.

Microsoft is leading the technology race because its products are far superior than anything yet invented. If someone can create a better product, the American people would buy it; as in a few cases they have. But generally most products being sold by other tech companies are inferior clones of already invented products.

I am appalled at the fact that certain companies have used the American legal system to attack and try to destroy a company, Microsoft. They have done this only for the reason that their products are not being bought by the American consumer; for good reason.

350 years ago, Antonius Stradivarius and his student Guisippe Guarnarius figured out how to make a violin that to this day is the violin of choice for every violinist. What would happen if 350 years ago Billy Smith had the savvy lawyers and advisors to convince a government that Stradivarius' product was too good? Civilization would have taken a giant step backward.

Please don't let this happen, especially in this time of turmoil.

Sincerely your,
Phillip Bashor

I am bitterly disappointed because the proposed settlement fails to force Microsoft to abandon its anticompetitive practices. Under the proposed settlement, Microsoft would continue to be allowed to characterize any software module as "part of the operating system", thereby avoiding their obligation to share programming interface specifications with other companies.

The most clear indication of the ineffectiveness of this proposed settlement is the fact that Microsoft is using Windows XP and its .net initiative to attempt to monopolize internet authentication and e-business. These guys (Microsoft) think they are free to continue extending their OS monopoly. Strong provisions are needed in the settlement of the current case to convince them otherwise.

Ronald Kronz

Subject: Microsoft Settlement

To Whom It May Concern,

As a software engineer with over 13 years of experience, I would like to comment on the Proposed Final Judgement (PFJ) in United States v. Microsoft. I believe the PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft. Microsoft currently uses restrictive licensing terms to keep Open Source applications from running on Windows. Open source development is one the most important software development paradigms in the world today. Microsoft should not be allowed to prevent applications from running on Windows simply because they are licensed as Open Source software. Clearly, Microsoft sees Open Source development as a threat and is taking measures to protect their monopoly. Microsoft has taken this approach in the past with Netscape Navigator and Sun Microsystems Java, to name only two. Their actions have been upheld in the courts an monopolistic, yet the PFJ does not go far enough in preventing Microsoft from using the same behaviors in the future.

Therefore, I believe the Proposed Final Judgment is not in the public interest, and should not be adopted without modifications that address this issue.

Sincerely,
Peter B. Cullen

I have kept up to date and informed regarding the Microsoft settlement and the Tunney Act. I would like to express my opinion that Microsoft does appear to act in a non-professional, anti-competitive manner. I feel that the basis for the stronghold of American capitalism is the ability for everyone to improve the status quo and offer a better product or service than the current provisions. Microsoft does not give that ability to its competition, and therefore the laws in place regarding anti-trust and monopolies must be abided by.

Walt Berstler

MTC-00015757

From: Roger Michael Seip
To: Microsoft ATR
Date: 1/23/02 9:59am
Subject: Microsoft Settlement

I am writing to give my comments on the Microsoft antitrust settlement.

I oppose the proposed Microsoft anti-trust settlement. Microsoft's anti-competitive practices are inconsistent with both American free-enterprise and American law. These practices weaken competition and restrain innovation. The resulting less efficient market employees fewer Americans and produces fewer products. The products that are produced are of lesser quality but higher cost than could be produced in a more efficient and competitive market.

The proposed settlement is too weak. The proposed settlement should be discarded; a new settlement, if sought, should punish Microsoft severely enough to dissuade it from engaging in anti-competitive behaviors in the future.

Thank you,

Subject: Microsoft Settlement

The facts:
—Microsoft has been found guilty
—Microsoft demonstrated contempt for the judicial system and law throughout the proceedings
—Microsoft, even though found guilty, continues those actions which brought the lawsuit in the first place
The economic damage:

—Microsoft has intentionally released malfunctioning software (for example, Internet Explorer) that undermines standards, automatically generating more defects in business systems of all industries, which needlessly increased costs across the board.

—Microsoft has prevented the development of competing products by use of "secret" APIs, built in non-interoperability, extensive, organized, racketeering-like FUD (aka, lies, deceit, and false advertising), and vendor intimidation. None of these are consistent with free market principles in any shape or form.

—Microsoft has devoted far more resources to maintenance of its OS monopoly, rather than development on the OS, resulting in two decades of significant productivity loss by each and every user of DOS and Windows operating systems.

The current federal resolution:

—has no economic repercussions whatsoever

—has none if any of the terms and conditions are ignored

I am:

—a Computer Science major (Bachelors)

—worked for three years at Andersen Consulting

—worked for one year with IBM

—worked for one year with Deloitte and Touche

—worked for one year with a startup

(current job)

—have used DOS, Windows 2.0, 3.1, 95,

NT, 98, 2000

—have used Linux, Sun OS, and IBM AIX

—skeptical anyone actually read this.

Subject: Proposed Microsoft Settlement

To whom it may concern:

As a U.S. Citizen, I have a number of problems with the proposed settlement in the Microsoft anti-trust case. Among its more egregious faults, the settlement allows Microsoft to retaliate against any OEM that ships computers with a competing operating

system. This is one of the anticompetitive tactics that Microsoft used to maintain its monopoly in the first place. The fact that it's not only allowed by the proposed settlement, but in fact explicitly provided for, is a fatal flaw in the settlement. For this reason alone (to say nothing of the settlement's many other flaws) the proposed settlement should be scrapped.

Thank you.

Thank you.

Adam Smith

From: Kirk Patton x111
To: Microsoft ATR
Date: 1/23/02 9:59am
Subject: Microsoft Settlement

Hello,

I would like to express my disappointment with the proposed settlement between the US Department of Justice and Microsoft.

I do not believe the settlement will do anything of substance to curb Microsofts illegal behavior. It has no teeth...

Microsoft maintains its monopoly by controlling the file formats of their bussiness applications like MS-Word, MS-Excel... Users are constantly forced to upgrade to newer versions so they can read documents sent by others who have upgraded.

They managed to produce several applications that have enough attractive features that they won a controlling portion of the market. They maintain this control by keeping the file formats secret. No one will switch to a competing product unless that product can read the files generated by the Microsoft products. Since the file formats are kept secrete, this is not possible.

All file formats must be fully documented and freely available.

Currently, the biggest threat to Microsofts current monopoly is the Free Software movement and the operating system Linux. There is no language in the settlement that would compele Microsoft to open its protocols and file formats to anyone working on an "open source" project. To break free of Microsofts control, "All protocols and file formats must be freely available to anyone to use for any reason."

Thanks,

Kirk

From: Jim McCusker
To: Microsoft ATR
Date: 1/23/02 9:58am
Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Subject: a poor settlement
Greetings,

I have read through the microsoft settlement and find it rather unsatisfactory. The completely lack of real punishment is appalling. Microsoft has clearly mislead and cheated the public, and bullied their competitors to the point of financial failure. Yet, the "punishment" seems little more than being told to not do it anymore. Incredibly, even the enforcement methods allowed by the settlement are paltry and weak. I strongly urge you to review and reject the settlement as it now stands.

Thank you,
Jeff Beene

MTC-00015772

From: Denis Dimick
To: Microsoft ATR
Date: 1/23/02 9:59am
Subject: Microsoft Settlement

Under the Tunney Act, I wish to comment on the Microsoft settlement's inadequacy in improving the competitive environment in the software industry.

Microsoft has proven in the past that it will only follow the settlement to the bare min. of what is required by law. Remember a few years back when we did this the first time? Remember all of the loop holes that allowed Microsoft to continue the same activity? Well I do, I also remember that it was the DOJ that helped Microsoft draft that settlement. As a voter, and someone who did vote for the current administration, I was not happy with the last settlement and I'm not very happy with this "settlement".

The court has found that Microsoft broke the law. It is your job to act on these findings in the best interest of the American people. This "settlement" is not in the best interest of the American people, it's in Microsoft's best interest.

Since the events of Sept. 11, 2001 the current administration has had the support of the people. If you remember so did George Bush Sr. after the Gulf War, YET, He lost this support very quickly for making one mistake. This very well could be George Bush Jr.'s mistake.

A case for the break up: Microsoft has spent over 3 billion dollars on Windows 2000, this product was over 5 years late, and shipped with over 65,000 known software defects. Currently Microsoft sells all of its office products tied into its Windows O/S. If you want all of the features, you need to be running Windows. If Microsoft was broken-up you would see the following, Microsoft would come out with its own version of Linux. There is nothing stopping Microsoft from doing this today, other than trying to recover its investment in Windows. Many people would stand in line for many hours, like we saw with Windows 95, to purchase a copy of Microsoft Linux.

This would be a new revenue stream for Microsoft with very little cost or investment. Since Linux is under the GPL, Microsoft would not be able to modify the source code in such a way as to cause the same problems we now are seeing.

Microsoft would be able to modify its current applications to allow them to run

under Linux. This would allow them to sell the same applications, at full price, to Linux users. In less than 10 years the two companies would be bigger than just the one, and the consumers would have a real choice.

So you now have two companies that are able to sell products and continue to compete. AOL/Time Warner have just brought suit against Microsoft based on the current findings of the court. If the DOJ does not act properly on those findings and if AOL/Time Warner ends up being the one to get action based on those findings, how do you think that's going to look to the American people?

The DOJ has continued to "drop the ball" on many issues. We could blame this on many things, past administrations, poor leadership etc. However, if members of the DOJ really felt that things were going the wrong way, I think the DOJ would see many of its staff leaving. Since the American people are not seeing this, one can only assume that the DOJ and its staff don't see anything wrong with its actions.

Maybe it's time change the way things are run at the DOJ? Maybe it's time to stop the "free-ride" George Bush Jr. has had. The days of being able to slip one thru, are over with the Internet, news travels too fast. What worked back in the late 80's and early 90's no longer works. If you try to slip this one thru, it will backfire.

Thank you,
Denis Dimick

MTC-00015773

From: Carlos Benjamin
To: Microsoft ATR
Date: 1/23/02 10:01am
Subject: Microsoft Settlement

Regarding the proposed settlement with Microsoft:

As a computer professional I am concerned that Microsoft will continue to use anti-competitive tactics to stifle genuine innovation in the computer software arena. Their continued leveraging of their Operating System Monopoly on the Intel (and AMD) platform to block competing software from the channel is wrong.

If the DOJ does not force Microsoft's hand in this matter, there will be no profit incentive for creating new applications, Microsoft will win in the marketplace by default and the consumers will be hurt by ever-decreasing options.

An additional argument could be made that a continued Microsoft monopoly will create a security threat to the computing infrastructure that runs the Internet and much of American business. All of the crippling computer virus and worm attacks over the past couple of years have been against Microsoft products. While part of this can be attributed to the size of Microsoft's installed base making for a large target, much of it must lay at the door of Microsoft and their continual creation of exploitable vulnerabilities in their software products. This is a problem not just for users of Microsoft products, but creates problems for

those of us running more secure systems. The Code Red worm attacks and compromises Microsoft IIS servers but affects other servers by diminishing bandwidth, clogging up mail servers with emails trying to replicate itself and by "pestering" servers with port scans and attempts to breach security measures.

Having watched while too many companies have created innovative software applications, competed successfully against inferior Microsoft products that followed and were eventually squashed by Microsoft's ability to brow-beat the OEM's and retailers by leveraging their monopoly position in the OS market, I was happy to see the DOJ take on this monolithic giant on the behalf of consumers. Genuine innovation flourishes in a competitive environment.

Microsoft's continued abuses have created a chilling effect in the marketplace that stops innovators by removing the incentives to create something new. It's like the kid on the beach who stops building sand castles because he knows the bully will come along before he can finish and kick it to pieces.

I urge you to reconsider this settlement and break the stranglehold Microsoft has placed on the industry.

Sincerely,
Carlos Benjamin, Jr.

I would like to co-sign Dan Kegel's open letter. <http://www.kegel.com/remedy/letter.html> That Microsoft can be convicted and get away with controlling the Software world, is demoralizing. In many cases their product is inferior, but their strong arm tactics are superior.

They must increase profits to satisfy stock holders. If they had competition this would be limited. Without competition what upper limit is there to their demands and power?

Mr. Gates is the monopoly of the desktop with no place left to grow. He must use his immense power to take over other industries.

Subject: My Opinion

To whom it may concern,

I would like to make my voice heard in the Microsoft Antitrust case. I have been reading through many articles and essays concerning the proposed solution to the problems that Microsoft has been creating for an entire industry, and I am simply not impressed.

The proposed settlement is not sufficient to change the stranglehold Microsoft has in all of the markets it competes in (Operating Systems, Office software, Media formats, etc.). If you do not halt this now, it will only get worse for all of us.

Thank you for your time,
Jason Staph

To: Microsoft ATR
Date: 1/23/02 10:01am
Subject: Microsoft Settlement

Hello,
I believe that the proposed Microsoft settlement is a very bad idea. Why do I believe this? It is clear that Microsoft commands a huge share of the market, and if they are allowed to continue on under the terms of the settlement, they will continue to use their market dominance to crush (or buy out) any competitive companies that threaten their bottom line. Competition is the American way — it is what allows we Americans to have the right to choose. If a company, such as Microsoft, is allowed to continue to use its unfettered force to eliminate consumer choice, then it will truly be a dark day for America. I believe the proposed Microsoft settlement will allow Microsoft to carry on such anti-competitive practices.

I will not re-outline the details of how the proposed Judgment falls short as they are covered very thoroughly in a document by Dan Kegel entitled, "On the Proposed Final Judgment in United States v. Microsoft", which can be found at: <http://www.kegel.com/remedy/remedy2.html>

Subject: Microsoft Settlement

To Whom It May Concern,
I am writing to express my discontent with the current Microsoft Antitrust settlement. The initial case found Microsoft guilty of predatory practises and to be a monopoly, however the punishment was diluted to no more than a slap on the wrist. It has been proven that Microsoft used its Operating System market share and influence to force out competitors in the internet browser market, and good arguments can be made that they have done the same in office/business applications.

The only way to ensure these practises are not continued is to break up the company into operating system and application daughter companies, with oversight to ensure special treatment is not given to ex-MS companies over their competitors in each market. Barring the dismantling of the illegal monopoly, it is imperative that the operating system APIs become open to all so that competitors in the application markets will be on a level playing field with the Microsoft applications.

Information is power, and third party developers have been specifically kept from full disclosure, thus at a great disadvantage. The monopoly of Microsoft must be ended.

Thank you for your time,
Sincerely,
Barrett Dillow

From: Arthur Knoll
To: Microsoft ATR
Date: 1/23/02 10:01am
Subject: Microsoft Settlement

To Whom It May Concern:
Regarding the Microsoft settlement, I do not believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

I feel the damage Microsoft has done to the software and OS marketplace is incalculable, and the proposed settlement does little to correct it. I do not feel the settlement levels the playing field for competing operating systems or office software, and would like to see a much stronger penalty imposed. The proposed settlement does not sufficiently relieve Microsoft of the ability to leverage hardware and computer manufacturers unfairly against competing products, nor does it adequately open the Windows API to programmers.

The current proposed settlement is unacceptable.

Thank you for your time.

Under the Tunney Act, I wish to comment on the Microsoft settlement's inadequacy in improving the competitive environment in the software industry. Some serious shortcomings relate to:

1) Middleware.—The current language in Section H.3 states "Microsoft Middleware Product would be invoked solely for use in interoperating with a server maintained by Microsoft (outside the context of general Web browsing)" does nothing to limit the company's ability to tie customers and restrict competition in non Web-based networked services under .NET, as they fall "outside the context of general Web browsing". Microsoft has already begun abusing its desktop monopoly to tie customers int .NET revenue streams and set up a new monopoly over the network. Part 2 of the same section states "that designated Non-Microsoft Middleware Product fails to implement a reasonable technical requirement..." essentially gives Microsoft a veto over any competitor's product. They can simply claim it doesn't meet their "technical requirements."

2) Interoperability.—Under the definition of terms, "Communications Protocol" means the set of rules for information exchange to accomplish predefined tasks between a Windows Operating System Product on a client computer and Windows 2000 Server or products marketed as its successors running on a server computer and connected via a local area network or a wide area network." This definition explicitly excludes the SMB/CIFS (Samba) protocol and all of the Microsoft RPC calls needed by any SMB/CIFS server to adequately interoperate with Windows 2000. Microsoft could claim these protocols are used by Windows 2000 server for remote administration and as such would not be required to be disclosed. The Samba team have written this up explicitly here:

http://linuxtoday.com/news—

story.php3?tsn=2001-11-06-005-20-OP-MS

3) General veto on interoperability.— In section J., the document specifically protects Microsoft from having to “document, disclose or license to third parties: (a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria” Since the .NET architecture being bundled into Windows essentially builds “anti-piracy, anti-virus, software licensing, digital rights management, and authentication systems” into all levels of the operating system, ANY API, documentation, or communication layer can fall into this category. This means that Microsoft never has to disclose any API by claiming it’s part of a security or authorization system, giving them a complete veto over ALL disclosure.

4) Veto against Open Source.—Substantial amounts of the software that runs the Internet is “Open Source”, which means it’s developed on a non-commercial basis by nonprofit groups and volunteers. Examples include Apache, GNU/Linux, Samba, etc. Under section J.2.c., Microsoft does not need to make ANY API available to groups that fail to meet “reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business.” This explicitly gives them a veto over sharing any information with open source development projects as they are usually undertaken on a not-for-profit basis (and therefore would not be considered authentic, or viable businesses).

These concerns can be met in the following ways:

1) Middleware: Extend middleware interoperability with a Microsoft server to ALL contexts (both within general Web browsing as well as other networked services such as are those being included under .NET).

2) Interoperability: Require full disclosure of ALL protocols between client and Microsoft server (including remote administration calls)

3) General veto on interoperability: Require Microsoft to disclose APIs relating to “anti-piracy, anti-virus, software licensing, digital rights management, encryption, or authentication systems” to all.

4) Veto against Open Source: Forbid Microsoft from discriminating between for-profit and nonprofit groups in API disclosure.

I agree with what my friend has said. I want to further add that any part of the settlement that involves the public education system should be severely restricted. Microsoft should not be allowed to create a new monopoly in the educational software markets as a result of this settlement. The point of the settlement is to hinder their current monopoly.

Any settlement involving public education should therefore be restricted to Microsoft’s payment of actual money to qualifying educational institutions. There should be no donation of hardware or software, and the money should be given without restrictions, consultation, or even suggestions to the public education bodies involved. The schools should be free to use the money in whatever way they choose—for example, increasing teachers’ salaries, hiring additional teachers, building new facilities, or purchasing whatever computer hardware and software the schools prefer.

Thank you for your patient consideration,

I would like to comment on the Microsoft Settlement under the statutes of the Tunney Act.

I think that the settlement is very poor and does not properly address the real issues. There are numerous loopholes in the proposed settlement that will allow Microsoft, who has a history of unethical and illegal actions, to transform this penalty into an advantage for them. In order to restore proper competition I think it necessary for Microsoft to publish the file formats of all their Microsoft Office files. The .doc file format is widely used. If the format were made available then other office productivity suites like WordPerfect,

StarOffice, Abiword and OpenOffice could effectively compete with them. Original Equipment Manufacturers (OEMs) must be allowed to sell a computer that can boot up into more than one Operating System. This has been attempted in the past but has been quashed by Microsoft’s legal team. It is suspected that Microsoft is forcing the OEMs into single OS bootloader licenses that disallow this behavior.

These are only a few of the things that Microsoft has done to stifle competition and innovation. For all of Microsoft’s talk about being able to innovate. They are doing more to hurt it than they are to help it.

The settlement also needs to have some real teeth. The ‘independent’ auditors/monitors of Microsoft’s behavior need to have complete independence and freedom to discuss any of their findings with the public and press. Unless they are allowed to do this their voices will be too easily silenced.

Microsoft should also have major fines imposed upon it for future violations of the settlement. Fines substantial enough that it will think twice before violating the public trust. And the monies collected from these fines should go to their competitors. I would recommend projects related to the GNU/Linux Operating System. Microsoft has openly acknowledged that Linux is a real competitor. What better way to ensure compliance than to force Microsoft to donate substantial funds to their competitors.

Microsoft has been shown to practice illegal predatory behavior. Do not cave in to them and give them a settlement with so many loopholes. They will exploit it to the detriment of all.

Concerning the current United States v. Microsoft antitrust case: I have read over the Stipulation and Revised Proposed Final Judgement of 11/06/2001, and am NOT in favor of it in its current state. The settlement does not, in any way, penalize Microsoft for its past infringements of the law. For many years, OEMs have been under control of this corporation, and simply "formalizing" this law in a document is not enough. Microsoft has been declared guilty of past wrongs, and must now be held accountable in some measure. The current proposed settlement is unacceptable.

I am writing to express my deep concern that the proposed final judgment in the US vs Microsoft case is completely unacceptable. While I personally believe each of the individual remedies needs improvement (see <http://www.kegel.com/remedy/remedy2.html> for example), I have a much greater overarching concern.

When dealing with Microsoft the court has shown a tendency to overlook conduct which at the time of trial appears to then be irrelevant. With the speed at which the technology sector progresses, Microsoft can never be held accountable via legal proceedings when this pattern is followed. By the time the case finally makes it to court, the competition is dead and gone, or the point is now moot for some other reason, and Microsoft walks away with not even a wrist slap. Unless substantive changes are put in place, Microsoft is sure to continue having its way in the market, dragging its feet to court, and getting away with illegal acts year after year. I truly believe that this is not an overstatement, but the very pattern of behavior we will continue to see.

Please do not let the current economic climate dissuade you from doing the right thing. Legal restrictions on practice will not prevent Microsoft from acting illegally again. Only drastic measures which have the effect of structurally, physically, preventing illegal behavior have a chance of preventing further illegal behavior on Microsoft's part. Any lesser remedy is nothing short of government

approval to Microsoft to continue acting illegally. I would be happy to discuss my opinion with you further, at your leisure.

Subject: Microsoft Settlement

The current Microsoft Settlement is a bad idea. Microsoft has been convicted of antitrust behavior. It has already been established that they broke the law. They were supposed to be better corporate citizens after the 1995 settlement, but they continued their anti-competitive actions.

Any fair resolution to this case must address at least these points:

* Oversight to make sure that they don't continue. This oversight must really be able to stop bad behavior.

* Microsoft should publish ALL Application Programming Interfaces to all of its products. This includes standard API calls, file formats and network protocols. And this means ALL API calls, file formats and network protocols. As a programmer I've been blocked by undocumented API features that allow Microsoft's software to do things that I couldn't simply because they wouldn't tell anyone how to do certain things. Basically, all interfaces must be published. They must be available to everyone on a public website, or on a CD for a nominal fee (maximum \$50)

* Microsoft must publicly publish all APIs 3 months before they release any product that uses those APIs. This includes alpha or beta software. If the APIs change then they must publish those changes and can not release any version of the software that uses those changes for 3 months. All API documentation must clearly indicate what the changes were.

* Open Source software developers must not be blocked. Open source software is available for free, usually under the GNU General Public License. Open source projects and programmers must have access to APIs to be able to create competing products. Information must not be denied to such projects simply because the projects do not charge a fee. These are only my top issues. There are many more that must be included to reach a fair settlement for something of the magnitude of Microsoft's crimes.

Thank you.

Subject: Microsoft Settlement
Greetings,

In regards to the proposed settlement, I am opposed to it because it fails to redress past misbehavior by Microsoft.

To be fair, all APIs into the operating system and file formats for any applications with a monopoly market position such as Microsoft Office components, must be made open to all requestors and made available on the WWW with any changes announced in detail at least six months prior to implementation or delivery into the marketplace.

Further, all applications, such as browsers, must be separated from the operating system and able to be removed, or replaced by a competing product, without hindering the operation of the underlying OS.

Finally, consumers who purchase a computer with any Microsoft operating system preinstalled must be able to remove the operating system and receive a refund of that portion of the purchase cost attributable to the expense of the OS.

Thank you for receiving my comments.

From: Michael Patrick Kenny
To: Microsoft ATR
Date: 1/23/02 10:05am
Subject: Please Break Them Up
To Whom It May Concern,

As a concerned citizen and computer user, I found the verdict in the Microsoft anti-trust trial reprehensibly one-sided and a disservice to the Cause of Justice in America.

I urge you to reconsider the verdict. MS having control of the operating system already gives them a monopoly on the desktop. Allowing them to leverage that monopoly to give them unfair advantage in each and every (previously) competitive market on the desktop really stifles innovation, no matter what Bill Gates and Steve Ballmer say.

I actually believe that, in your zeal to protect and preserve entrenched businesses in America you are killing the pioneer spirit of entrepreneurial endeavor, and so the decision to kowtow and cave completely to Judge Penfield's decision, no matter how emotional he became (I believe he was sorely tested) can only be construed as political and Machievellian, in these jaded times.

A breakup of the company is the only viable solution. C'mon, Justice Department, you had the courage to do it in the early 1900's, why can you not see the light now? Please reconsider your terrible and biased decision in the interests of your true constituency, the American people.

Thank You,
Michael Patrick Kenny and family

MTC-00015799

From: Bradley Hawkins
To: Microsoft ATR
Date: 1/23/02 10:05am
Subject: Microsoft Settlement

The proposed settlement is not in the best interest of the public. The three points below would address my concerns with the settlement and Microsoft's monopolist practices:

Opening the Windows API falls short of leveling the field; a just settlement would require that Microsoft's file formats be made public.

Computer users who wish to employ a non-Microsoft operating system nevertheless now must pay for Microsoft software when buying a new computer. Any remedy seeking to prevent an illegal extension of Microsoft's monopoly must prohibit preload agreements, placing Microsoft products as extra-cost options, so that the user who does not wish to purchase Microsoft products is not forced to do so.

To encourage competition, a just settlement would enjoin Microsoft from selling its software to anyone at a lower price than it sells it to anyone else. This means that for the price differential between a new computer with Microsoft software and one without, a computer seller must offer the software without the computer.

MTC-00015801

From: Glen Henshaw
To: Microsoft ATR
Date: 1/23/02 10:05am
Subject: Microsoft Settlement
To Whom It May Concern:

I am writing to express my opposition to the proposed Microsoft settlement. Recent events in the software world have shown that one very effective way to encourage competition is to "open up" an operating system's API (application programmer's interface) so that other developers can create new operating systems which are compatible with the old one. This is the easiest way to give users a choice of systems, since they are not required to change the applications they already use. There are several such projects already in existence: Wine and LindowsOS are among them. The developers of these products have been extremely hampered by the closed nature of the Windows operating system. Forcing Microsoft to publish their complete API would go a long way in encouraging third party Winodws-compatible products, and is one of the only effective ways to mitigate Microsoft's monopoly. This requirement is not part of the current settlement.

The same goes for file formats. It is impossible to produce a product that competes effectivelt with Microsoft Excel without the ability to open Microsoft Excel files—and Microsoft does not document the format of Excel files (or Word files or Access files... the list goes on). Language requiring public documentation of these files should be present in the settlement. Unfortunately, this is also not a requirement of the current settlement. Another major problem with the settlement is the lack of a strong enforcement

mechanism. Microsoft has shown that it is willing to bend—or break—the rules of agreements in the past if it thinks doing so is to its advantage.

This is a company without scruples. A special master must be in place to monitor compliance and to assist the courts in settling disputes. Finally, Microsoft was found guilty of predatory practices against their competitors. They should be required to pay damages to those competitors. Such a requirement is not part of the current settlement. I urge you to reject the current settlement. This is the best chance to rein in Microsoft's abusive practices. The current settlement will not do that.

Sincerely,
Glen Henshaw

Subject: Microsoft antitrust Settlement

To whom it may concern,

I believe it to be sufficiently proven that Microsoft has broken the law. I also believe that no stretch of the imagination is required to believe that Microsoft will break the same laws again. It would be a most egregious mistake to simply dismiss this fact.

I assure you that Microsoft's anticipative, monopolist practices will only continue. This is already evidenced by the recent pricing initiative taken by Microsoft. Apparently they are moving to a model where they can force upgrades at their discretion. This would force nearly *every* business in the *world* to pay several hundred to several million dollars to Microsoft every two years. Actually, at any time MS chooses. This would surely never happen if there were at least one alternative software company. This is elementary economics. Monopolies are *not* good.

The problem is: there is no alternative. No small startup, not even a company like Sun Microsystems, can compete. Because of the propriety file formats MS employs, once a company uses MS Office, they are forced to stay with, or recreate every document they have. That alone, will keep MS in business for quite some time. This is only one example. The list goes on and on. Take .NET, the CIFS protocol, the Kerberos protocol, OEM licensing restrictions, non disclosure of "hidden" APIs.

I urge you, as a taxpaying citizen, to look at this matter very closely. Any reasonable person can see the illegality of these actions. A punishment fitting the crime is absolutely required. Please don't give anyone the impression you were bought off. I assure you, anything less than harsh, will be viewed in exactly this way. thank you for your time,

Nathan Embery

I am a software specialist providing computer support to law firms in the Charleston, SC area. Every day I have to deal with issues of compatibility, security, and the replacement of superior software products with inferior Microsoft products whose pernicious spread has been supported by that company's long history of anti-competitive conduct. Microsoft's actions have caused considerable harm both to the progress of the computer industry as a whole, and to the American economy. They have driven competitors with superior products out of the market, have purposely built incompatibilities into their products to lock out competition, with no regard to useability, and have repeatedly and unashamedly lied to their customers, the industry, and the American government. The current remedies under consideration amount to a slap on the wrist that Microsoft will write off as a cost of doing business. They will in no way cause the corporation to alter their behavior (except, perhaps, to encourage them to become more bold in their actions since they will know no fear of reprisals), and will in no substantial way remedy the damage that Microsoft's actions have done.

With sincere concern, I remain,
William James Stewart

Subject: Microsoft Settlement

Hello, I read these points on the internet and agree these need to be applied to Microsoft.

PFJ Section III: Prohibited Conduct

1. Microsoft will not retaliate against OEMs who support competitors to Windows, Internet Explorer (IE), Microsoft Java (MJ), Windows Media Player (WMP), Windows Messenger (WM), or Outlook Express (OE).

2. Microsoft will publish the wholesale prices it charges the top 20 OEMs (Original Equipment Manufacturers) for Windows.

3. Microsoft will allow OEMs to customize the Windows menus, desktop, and boot sequence, and will allow the use of non-Microsoft bootloaders.

4. Microsoft will publish on MSDN (the Microsoft Developer Network) the APIs used by IE, MJ, WMP, WM, and OE, so that competing web browsers, media players, and email clients can plug in properly to Windows.

5. Microsoft will license on reasonable terms the network protocols needed for non-Microsoft applications or operating systems to connect to Windows servers.

6. Microsoft will not force business partners to refrain from supporting

competitors to Windows, IE, MJ, WMP, WM, or OE.

7. (Roughly same as F above.)

8. Microsoft will let users and OEMs remove icons for IE, MJ, WMP, WM, and OE, and let them designate competing products to be used instead.

9. Microsoft will license on reasonable terms any intellectual property rights needed for other companies to take advantage of the terms of this settlement.

10. This agreement lets Microsoft keep secret anything having to do with security or copy protection.

PFJ Section VI: Definitions

1. "API" (Application Programming Interface) is defined as only the interfaces between Microsoft Middleware and Microsoft Windows, excluding Windows APIs used by other application programs.

2. "Microsoft Middleware Product" is defined as Internet Explorer (IE), Microsoft Java (MJ), Windows Media Player (WMP), Windows Messenger (WM), and Outlook Express (OE).

3. "Windows Operating System Product" is defined as Windows 2000 Professional, Windows XP Home, and Windows XP Professional.

I also think they need to openly publish complete specifications for their Office document formats to allow others to import/export these proprietary formats.

Subject: Microsoft Settlement

I would like to express my disappointment with the proposed settlement. It doesn't seem to go far enough. There is no fundamental change happening as a result of this settlement. For all intents and purposes it would seem that Microsoft can continue to do business the same way it always has. It was apparent from the trial that the past behavior in regards to past court mandated orders did not change. The people at Microsoft were smart enough about their product to simply program a way around any restrictions. It was business as usual. I am a long time Microsoft product systems administrator. I like there products and I have built a career around what the have to offer. I am disturbed however by the complete focus of the management at Microsoft on getting that last 10%. It is a given they own 90% of the market, mostly due to products that fit a particular area, not because of exceptionally better products. You would think that a company that has achieved this kind of dominance would be interested in building a better product with the large resources they have., This does not appear to be the case. Their primary focus is driving out competition and getting the last 10% they don't have. Because of their success there business is forced strategy wise to invest and diversify, hence the drive to fill out the remaining uses of there core products, OS and Applications. They are moving into all of the other areas like music players, computer maintenance software like defragment utilities and such. I would not be surprised to hear they are coming out with their own antiviral software.

It would seem the drive and ambition that got them where they are is still there. Unfortunately when you are as large as they are drive and ambition quickly become threats and coercion to companies that are infinitely smaller. At some point a company must mature and shift gears in how it runs its business and relates to the companies around it. Microsoft hasn't reached this type of maturity yet. They have succeeded in alienating almost everyone in this business. It is my hope that the antitrust case will force this maturity upon them. Sometimes you have to make people change for there own good. Its called intervention in the substance abuse circles.

January 23, 2002

Attorney General John Ashcroft

US Department of Justice, 950 Pennsylvania Avenue, NW

Washington, DC 20530-0001

Dear Mr. Ashcroft:

I am writing to you to let you know that I endorse the Microsoft antitrust settlement agreement. The industry can only benefit from a quick resolution to this case. It is in the best interest of the public that Microsoft and the technology industry are allowed to get back to business as soon as possible.

I know and understand the terms of the settlement agreement to be fair, and I would state that they go beyond what should be expected of Microsoft. I am especially concerned about the proposed remedies that the nine "hold out" states are looking for. The line has to be drawn somewhere with respect to IP rights, innovation and competition.

The restrictions Microsoft has agreed to will ensure there will be fair competition among the various software companies. In the interest of resolving this suit, Microsoft has agreed not to exercise its intellectual property rights; to make its code available to its competitors; and to not retaliate in any way against those who promote software that competes with Windows.

Microsoft's business practices will dramatically change, with the approval of this agreement. The playing field will be leveled to the point of favoring Microsoft's competitors, and they will be given greater opportunity to compete with Microsoft's Windows operating system. Innovation will be negatively impacted if the lawsuit is allowed to continue. The settlement agreement will allow the industry to continue growing in an unfettered, competitive market place that moves too quickly for any legal proceeding. I know there will be no silver bullet in these matters, but with diligence and fairness, the technology industry, specifically the PC industry should be allowed to help the economy prosper through hard work, determination, healthy (tough) competition and the synergy's that standards provide. Perhaps the government should be more involved in the internet standards bodies, where no one knows what decisions are being made that will greatly impact the direction of the Internet and related business. Lastly, I always hear about consumer choice and how important it is, but as a consumer, I do not want to see the other extreme, where I have to choose every little component of my Computer. People who purchase large ticket items want as much out of the box as possible, so in the spirit of "Equal Access" vis a vis AT&T divestiture, I would think that including competitive software (Real Player, AOL client, etc.) within Windows shipped from the hardware manufacturers is a fair remedy, compared to breaking up Windows into multiple components and creating confusion and discordance in the industry.

Many thanks for taking the time to read my comments.

Sincerely,

Robert Cantwell, Jr.

Subject: 'Microsoft Settlement'

Hello,

I am writing to comment on the tentative settlement of the United States vs. Microsoft antitrust lawsuit. I believe the settlement in its current form will do little to remove or even slow down Microsoft's current monopoly over the software market. For years I have seen software from non-Microsoft companies be rendered useless by Microsoft "upgrades". Attempts to integrate non-Microsoft software with Windows and other Microsoft products are usually thwarted by Microsoft using its monopoly power.

In order to allow the software industry to thrive, I humbly ask that you reach a settlement that will stop Microsoft from using its monopoly power to kill any and all competitors.

Sincerely

Chad Phillips

Subject: Microsoft Settlement

I have read the proposed settlement, and do not consider it fair or equitable. It appears to be simple appeasement towards Microsoft, as well as acceptance and formalization of their unethical and monopolistic practices that have driven so many competitors out of the marketplace. Microsoft has been found guilty, and they still their behavior has not changed. They have attempted to sway states' attorneys general with letters apparently sent by the deceased. It has even been reported that they are trying to tilt the comments submitted during this period in their favor. They have demonstrated their lack of moral fortitude time and time again, and this settlement will allow them to walk away with everything they have ever wanted. Please consider this a vote against the current settlement and a vote to seek a new settlement more favorable to freedom and fair competition.

Date: 1/23/02 10:06am
Subject: NO on Microsoft Settlement

I vote NO! to the proposed Microsoft Settlement.

I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundreds, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices. Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

From: Byron Norris
To: Microsoft ATR
Date: 1/23/02 10:08am
Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

I am sending earlier this message in re support of the Netscape suit against predatory Microsoft and Bill Gates business practices.

Burt Schmitz
7479 Bollinger Road
Cupertino, CA 95014-4332
11 November 1999
408-252-4724

Letters to the Editor:

In rebuttal to Luther Gipson's attack (Merc. News, 11 November) on Judge Penfield Jackson's defense of me from the predations of Microsoft, let me point out it isn't Bill Gates or anyone else's wealth; it is the computer-destructive content of Microsoft's ill conceived, poorly-developed, untested foisting of destructive junk software on we computer users. I am not alone; the derisive parodies that float around the E-mail world

ridiculing the Microsoft technology and destructive non-performance are legion.

One year and six months ago [June 1998], after not allowing the outside world into my computer for years, I surrendered. On the advice of a friend, I went Microsoft and his Explorer. Within two weeks my computer internal software had been destroyed by continuous destructive failures. I threw him off my system ... and will not let anything tagged Microsoft or Bill Gates back near my computer ... if I have to defend myself at the door with a shotgun!

Within a month, my friend's recommendation proved totally destructive of HIS computer ... the sequence of disasters eventually resulting in physical destruction of his hard drive. I have a friend in Albuquerque whose computer is continuously down because her system is one of Bill Gates' ersatz-wonderkind; she is not computer-literate, and is continuously being bombed by the Microsoft junk. She doesn't know where to turn; her user group props her up weekly.

An analogy; Bill Gates has, whenever competition has shown a worthwhile innovation, copied it, rushed to market ahead of testing and debugging, much like an auto manufacturer copying and rushing an ill-conceived auto design out to the public before a small town garage can test, perfect, and market its superior innovation.

My son works in a large institution where they once had two computer systems; one Microsoft and one Apple. The people forced to use the Microsoft system hated it, the users of the Apple system loved it ... and it was never down. Bill Gates predatory business practices resulted in elimination of the Apple system. Judge Jackson's decision was relatively mild. Nineteen governors can't be wrong.

Nuff said?

The current settlement is garbage. Do not make the same mistake again and allow Microsoft to escape with barely a hand slap. They have been found guilty of monopolistic business practices and it is imperative to the health and future of this nation's computer industry that they be duly punished. A real punishment, not something as laughable as the "we'll donate a bunch of computers to schools so we can cut into one of our competitor's market shares". As Americans we expect equal treatment before the law and find it appalling when large companies escape/buy their way out of any real punishment. Hold Microsoft accountable for its crime.

From: William Sattler
 To: 'microsoft.atr(a)usdoj.gov'
 Date: 1/23/02 10:08am
 Subject: Microsoft Settlement

I cannot support the current proposed settlement. It has a few large loopholes, and a some smaller ones that will allow Microsoft to continue to abuse its monopoly on personal computer operating systems. Specifically my main complaint is of III.J.1 which will give Microsoft the loophole they need. In fact they have already started to make use of this. Only as recently as January 16th has Microsoft announced their new "Trustworthy Computing" campaign. By integrating unnecessary security in portions of their products that do not require it, they will be able to exempt themselves from the most important parts of the proposed settlement. It is for primarily this reason that I refuse to support the current proposed settlement.

I wish to encourage the courts and involved litigants to find a settlement that will perform as intended. This is an issue far too serious to let such obvious loopholes ruin the works of the Department of Justice that I and many other taxpayers have paid for. Unless changes are made, the Department of Justice will not have met its obligations to the American Citizens.

Renata B. Hesse
 Antitrust Division
 U.S. Department of Justice
 Dear Madam:

As a professional software developer, I find the proposed settlement in the antitrust case between Microsoft Corporation and the Department of Justice to be disturbing in its insufficiency. The most telling detail of the settlement is that it, to my reading, will allow Microsoft to continue using its monopoly position freely in opposition to "open source" software developers—that is, software writers who work in a charitable and nonprofit capacity, leveraging the free-copying capacities of the Internet to benefit anyone who wishes to download and use their programs. On the one hand, "open source" examples such as the Linux operating system have clearly provided U.S. consumers and businesses with a less-expensive, more robust, more efficient system for running personal computers; on the other hand, the proposed antitrust settlement will allow Microsoft to continue holding documentation, protocols, and APIs in secret from "open source" developers, because Microsoft only needs to release them

to "viable businesses", as defined by the Microsoft corporation.

The fact that this issue is important to Microsoft is best highlighted by the fact that Microsoft Windows Division Vice-President Brian Valentine has written, "Linux is the long-term threat against our core business. Never forget that!" (as reported at <http://www.theregister.co.uk/content/archive/22770.html>).

However, Microsoft will be able to continue holding operating protocols in secret from the "open source" Linux developers, because, according to the proposed settlement's Section J: J. No provision of this Final Judgment shall:

2. Prevent Microsoft from conditioning any license of any API, Documentation or Communications Protocol related to anti-piracy systems, anti-virus technologies, license enforcement mechanisms, authentication/authorization security, or third party intellectual property protection mechanisms of any Microsoft product to any person or entity on the requirement that the licensee: (a) has no history of software counterfeiting or piracy or willful violation of intellectual property rights, (b) has a reasonable business need for the API, Documentation or Communications Protocol for a planned or shipping product, (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, (d) agrees to submit, at its own expense, any computer program using such APIs, Documentation or Communication Protocols to third-party verification, approved by Microsoft, to test for and ensure verification and compliance with Microsoft specifications for use of the API or interface, which specifications shall be related to proper operation and integrity of the systems and mechanisms identified in this paragraph."

I hope that you will recognize the importance of extending the protections in Section J to charitable and "open source" developers, in addition to those serving as for-profit businesses.

Sincerely,
 Daniel R. Collins

 Subject: Microsoft Settlement

As a Citizen, an Information Services professional and daily user of Microsoft software, I find that the proposed settlement is little more than a slap on the wrist to Microsoft. Microsoft's continuing aggressive tactics have reduced the options available to me, and has hurt me as a consumer. Substantive action needs to be taken now to prevent Microsoft from reducing choice even further and in market areas not currently in its control.

Microsoft has no incentive by competition to create superior products and Microsoft products are commonly known to fraught with security flaws. Because it maintains a monopoly in operating systems and office

software, Microsoft can impose licensing fees and restrictions that cost consumers more than would be acceptable if these markets were truly open. I do not support a breakup of Microsoft, but the remedies proposed are not in proportion to the harmful acts that Microsoft has committed.

Subject: Microsoft settlement

To Whom It May Concern:

I am a U.S. Citizen and have been a microcomputer enthusiast since the end of the 1970s; since 1991, I have been employed as a writer, editor and industry analyst in the high-tech field.

Over the years, I've observed Microsoft use its market share in computer operating systems as a lever, systematically driving companies that were in its expansionist path out of business. I was encouraged that the Findings of Fact in this most recent Microsoft antitrust case uncovered some of these illegal practices. However, I believe the remedy proposed between the Dept. of Justice and Microsoft is grossly inadequate, and will be ineffectual in preventing the company from continuing its past conduct.

If an effective remedy is not reached in this trial, based on Microsoft's past demonstrated behavior, it will all go back to the courts again in the future. Many more years and taxpayer dollars will need to be spent the next time around to put a more effective remedy into place. In those years, based on Microsoft's past demonstrated behavior, the computer industry will be subject to the company's monopoly hammer. Meanwhile, the potential damage the company can cause by using its operating system monopoly to destroy competition and build monopolies in other markets is immeasurable. I do not own stock or derive an income from computer software companies, whether Microsoft or competitors to Microsoft. I am writing this as a consumer who feels he has been harmed by Microsoft's business practices, and who has grave reservations about the future of consumer choice and the future vitality of the American high-tech economy under an inadequate settlement.

Sincerely,
Brian Washburn

Subject: Microsoft Settlement

Dear Sir or Madam,

I am writing to share my views on the Microsoft Antitrust settlement. The government has rules that they were a monopoly and acted illegally, and the proposed settlement is a joke. First, there is no way to enforce any of the agreements; the penalty for non-compliance is an extended oversight period. This is like giving a convict parole, but if he doesn't meet the conditions (doesn't show up/consorts with known felons/etc) he just gets a longer parole. Second, Microsofts proposal to pay their fine with software to public schools is also ridiculous. They will be giving away a product at minimal cost to them (assuming that these schools would not have been able to afford the Windows software, Microsoft essentially pays for the CD, a cost of about \$5 for an \$800 software package) while getting credit at the monopoly-inflated rates for their donations, while also further increasing their monopoly in one of the few marketplaces they haven't saturated.

I think a more appropriate solution is to open up the API's to developers, the desktop to OEM's and distributors, and have the penalty for non-compliance or further illegal business practices be a breakup of the company.

Subject: Microsoft Settlement
Hello!

As a concerned end-user, I would like to state my belief that the proposed final judgement in United States v. Microsoft is flawed and inadequate in its current form. I am especially distressed that the proposed decision fails to prohibit anti-competitive license terms currently used by Microsoft. The continued prohibition in EULAs and other licenses against open source applications running on Windows platforms, as well as restrictive licensing terms designed to prevent Windows applications from running on competing operating systems is simply unacceptable. For genuine competition to occur, interoperability must be allowed.

Sincerely,
Chad Eby

Subject: Microsoft Settlement

I wish to comment on the proposed Microsoft settlement. I am opposed to the proposed settlement because it fails to effectively prohibit a variety of anticompetitive practices Microsoft has historically employed to propagate its illegal and damaging monopoly, and because it lacks an effective enforcement mechanism. The only effective solution is to break Microsoft into several corporations, separating the OS, internet, desktop, and

entertainment application divisions and prohibiting collaboration among them. This alone would allow fair and effective competition.

From: Sam Denton
To: "microsoft.atr(a)usdoj.gov"
Date: 1/23/02 10:09am
Subject: Microsoft Settlement

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement.

It is my opinion that the Proposed Final Judgment fails to prohibit anticompetitive practices towards OEMs.

Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

Section III.B. requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs, including important regional "white box" OEMs, if they offer competing products.

Section III.B. also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft Office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software or ARM-compatible operating systems.

By allowing these practices, the PFJ is encouraging Microsoft to extend its monopoly in Intel-compatible operating systems, and to leverage it into new areas.

To: Microsoft ATR
Date: 1/23/02 10:10am
Subject: Microsoft Settlement

To Whom It May Concern,

I have cited below numerous problems with the proposed Microsoft settlement below. Please do not allow Microsoft to continue to enjoy an illegal monopoly by slapping them on the wrist like the last US DOJ/Microsoft agreement.

Sincerely,
Adam M. Kornick

Here is a very rough summary which paraphrases provisions III.A through III.J and VI. of the Proposed Final Judgment to give some idea of how the PFJ proposes to answer those questions:

PFJ Section III: Prohibited Conduct: 1. Microsoft will not retaliate against OEMs

who support competitors to Windows, Internet Explorer (IE), Microsoft Java (MJ), Windows Media Player (WMP), Windows Messenger (WM), or Outlook Express (OE). 2. Microsoft will publish the wholesale prices it charges the top 20 OEMs (Original Equipment Manufacturers) for windows. 3. Microsoft will allow OEMs to customize the Windows menus, desktop, and boot sequence, and will allow the use of non-Microsoft bootloaders. 4. Microsoft will publish on MSDN (the Microsoft Developer Network) the APIs used by IE, MJ, WMP, WM, and OE, so that competing web browsers, media players, and email clients can plug in properly to Windows. 5. Microsoft will license on reasonable terms the network protocols needed for non-Microsoft applications or operating systems to connect to Windows servers. 6. Microsoft will not force business partners to refrain from supporting competitors to Windows, IE, MJ, WMP, WM, or OE. 7. (Roughly same as F above.) 8. Microsoft will let users and OEMs remove icons for IE, MJ, WMP, WM, and OE, and let them designate competing products to be used instead. 9. Microsoft will license on reasonable terms any intellectual property rights needed for other companies to take advantage of the terms of this settlement. 10. This agreement lets Microsoft keep secret anything having to do with security or copy protection.

PFJ Section VI: Definitions: 1. "API" (Application Programming Interface) is defined as only the interfaces between Microsoft Middleware and Microsoft Windows, excluding Windows APIs used by other application programs. 2. "Microsoft Middleware Product" is defined as Internet Explorer (IE), Microsoft Java (MJ), Windows Media Player (WMP), Windows Messenger (WM), and Outlook Express (OE). 3. "Windows Operating System Product" is defined as Windows 2000 Professional, Windows XP Home, and Windows XP Professional.

The agreement can be summed up in one breath as follows: Microsoft agrees to compete somewhat less vigorously, and to let competitors interoperate with Windows in exchange for royalty payments.

Considering all of the above, one should read the detailed terms of the Proposed Final Judgment, and ask one final question:

Is the Proposed Final Judgment in the public interest? In the sections below, I'll look in more detail at how the PFJ deals with the above questions. How should terms like "API", "Middleware, and "Windows OS" be defined? The definitions of various terms in Part VI of the PFJ differ from the definitions in the Findings of Fact and in common usage, apparently to Microsoft's benefit. Here are some examples: Definition A: "API" The Findings of Fact (? 2) define "API" to mean the interfaces between application programs and the operating system. However, the PFJ's Definition A defines it to mean only the interfaces between Microsoft Middleware and Microsoft Windows, excluding Windows APIs used by other application programs. For instance, the PFJ's definition of API might omit important APIs such as the Microsoft Installer APIs which are used by installer programs to install software on Windows.

Definition J: "Microsoft Middleware" The Findings of Fact (? 28) define "middleware" to mean application software that itself presents a set of APIs which allow users to write new applications without reference to the underlying operating system. Definition J defines it in a much more restrictive way, and allows Microsoft to exclude any software from being covered by the definition in two ways: 1. By changing product version numbers. For example, if the next version of Internet Explorer were named "7.0.0" instead of "7" or "7.0", it would not be deemed Microsoft Middleware by the PFJ. 2. By changing how Microsoft distributes Windows or its middleware. For example, if Microsoft introduced a version of Windows which was only available via the Windows Update service, then nothing in that version of Windows would be considered Microsoft Middleware, regardless of whether Microsoft added it initially or in a later update. This is analogous to the loophole in the 1995 consent decree that allowed Microsoft to bundle its browser by integrating it into the operating system. Definition K: "Microsoft Middleware Product" Definition K defines "Microsoft Middleware Product" to mean essentially Internet Explorer (IE), Microsoft Java (MJ), Windows Media Player (WMP), Windows Messenger (WM), and Outlook Express (OE). The inclusion of Microsoft Java and not Microsoft.NET is questionable; Microsoft has essentially designated Microsoft.NET and C# as the successors to Java, so on that basis one would expect Microsoft.NET to be included in the definition.

The inclusion of Outlook Express and not Outlook is questionable, as Outlook (different and more powerful than Outlook Express) is a more important product in business, and fits the definition of middleware better than Outlook Express.

The exclusion of Microsoft Office is questionable, as many components of Microsoft Office fit the Finding of Fact's definition of middleware. For instance, there is an active market in software written to run on top of Microsoft Outlook and Microsoft Word, and many applications are developed for Microsoft Access by people who have no knowledge of Windows APIs. Definition U: "Windows Operating System Product" Microsoft's monopoly is on Intel-compatible operating systems. Yet the PFJ in definition U defines a "Windows Operating System Product" to mean only Windows 2000 Professional, Windows XP Home, Windows XP Professional, and their successors. This purposely excludes the Intel-compatible operating systems Windows XP Tablet PC Edition and Windows CE; many applications written to the Win32 APIs can run unchanged on Windows 2000, Windows XP Tablet PC Edition, and Windows CE, and with minor recompilation, can also be run on Pocket PC. Microsoft even proclaims at www.microsoft.com/windowsxp/tablet/taletpcqanda.asp:

"The Tablet PC is the next-generation mobile business PC, and it will be available from leading computer makers in the second half of 2002. The Tablet PC runs the Microsoft Windows XP Tablet PC Edition and features the capabilities of current

business laptops, including attached or detachable keyboards and the ability to run Windows-based applications." and Pocket PC: Powered by Windows Microsoft is clearly pushing Windows XP Tablet PC Edition and Pocket PC in places (e.g. portable computers used by businessmen) currently served by Windows XP Home Edition, and thus appears to be trying to evade the Final Judgment's provisions. This is but one example of how Microsoft can evade the provisions of the Final Judgment by shifting its efforts away from the Operating Systems listed in Definition U and towards Windows XP Tablet Edition, Windows CE, Pocket PC, X-Box, or some other Microsoft Operating System that can run Windows applications. How should the Final Judgment erode the Applications Barrier to Entry? The PFJ tries to erode the Applications Barrier to Entry in two ways:

1. By forbidding retaliation against OEMs, ISVs, and IHVs who support or develop alternatives to Windows.

2. By taking various measures to ensure that Windows allows the use of non-Microsoft middleware.

A third option not provided by the PFJ would be to make sure that Microsoft raises no artificial barriers against non-Microsoft operating systems which implement the APIs needed to run application programs written for Windows. The Findings of Fact (?52) considered the possibility that competing operating systems could implement the Windows APIs and thereby directly run software written for Windows as a way of circumventing the Applications Barrier to Entry. This is in fact the route being taken by the Linux operating system, which includes middleware (named WINE) that can run many Windows programs.

By not providing some aid for ISVs engaged in making Windows-compatible operating systems, the PFJ is missing a key opportunity to encourage competition in the Intel-compatible operating system market. Worse yet, the PFJ itself, in sections III.D. and III.E., restricts information released by those sections to be used "for the sole purpose of interoperating with a Windows Operating System Product". This prohibits ISVs from using the information for the purpose of writing operating systems that interoperate with Windows programs. How should the Final Judgment be enforced? The PFJ as currently written appears to lack an effective enforcement mechanism. It does provide for the creation of a Technical Committee with investigative powers, but appears to leave all actual enforcement to the legal system. What information needs to be released to ISVs to encourage competition, and under what terms?

The PFJ provides for increased disclosure of technical information to ISVs, but these provisions are flawed in several ways:

1. The PFJ fails to require advance notice of technical requirements Section III.H.3. of the PFJ requires vendors of competing middleware to meet "reasonable technical requirements" seven months before new releases of Windows, yet it does not require Microsoft to disclose those requirements in advance. This allows Microsoft to bypass all competing middleware simply by changing

the requirements shortly before the deadline, and not informing ISVs.

2. API documentation is released too late to help ISVs Section III.D. of the PFJ requires Microsoft to release via MSDN or similar means the documentation for the APIs used by Microsoft Middleware Products to interoperate with Windows; release would be required at the time of the final beta test of the covered middleware, and whenever a new version of Windows is sent to 150,000 beta testers. But this information would almost certainly not be released in time for competing middleware vendors to adapt their products to meet the requirements of section III.H.3, which states that competing middleware can be locked out if it fails to meet unspecified technical requirements seven months before the final beta test of a new version of Windows.

3. Many important APIs would remain undocumented The PFJ's overly narrow definitions of "Microsoft Middleware Product" and "API" means that Section III.D.'s requirement to release information about Windows interfaces would not cover many important interfaces.

4. Unreasonable Restrictions are Placed on the Use of the Released Documentation ISVs writing competing operating systems as outlined in Findings of Fact (?52) sometimes have difficulty understanding various undocumented Windows APIs. The information released under section III.D. of the PFJ would aid those ISVs—except that the PFJ disallows this use of the information. Worse yet, to avoid running afoul of the PFJ, ISVs might need to divide up their engineers into two groups: those who refer to MSDN and work on Windows-only applications; and those who cannot refer to MSDN because they work on applications which also run on non-Microsoft operating systems. This would constitute retaliation against ISVs who support competing operating systems.

5. File Formats Remain Undocumented No part of the PFJ obligates Microsoft to release any information about file formats, even though undocumented Microsoft file formats form part of the Applications Barrier to Entry (see "Findings of Fact" ?20 and ? 39).

6. Patents covering the Windows APIs remain undisclosed Section III.I of the PFJ requires Microsoft to offer to license certain intellectual property rights, but it does nothing to require Microsoft to clearly announce which of its many software patents protect the Windows APIs (perhaps in the style proposed by the W3C; see <http://www.w3.org/TR/2001/WD-patent-policy-20010816/#secdisclosure>). This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users, as illustrated by this report from Codeweavers, Inc.: When selecting a method of porting a major application to Linux, one prospect of mine was comparing Wine [a competing implementation of some of the Windows APIs] and a toolkit called 'MainWin'. MainWin is made by Mainsoft, and Mainsoft licenses its software from Microsoft. However, this customer elected to go with the Mainsoft option instead.

I was told that one of the key decision making factors was that Mainsoft

representatives had stated that Microsoft had certain critical patents that Wine was violating. My customer could not risk crossing Microsoft, and declined to use Wine. I didn't even have a chance to determine which patents were supposedly violated; nor to disprove the validity of this claim. The PFJ, by allowing this unclear legal situation to continue, is inhibiting the market acceptance of competing operating systems. Which practices towards OEMs should be prohibited? The PFJ prohibits certain behaviors by Microsoft towards OEMs, but curiously allows the following exclusionary practices:

Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. Section III.B. requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs, including important regional 'white box' OEMs, if they offer competing products.

Section III.B. also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft Office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software or ARM-compatible operating systems.

By allowing these practices, the PFJ is encouraging Microsoft to extend its monopoly in Intel-compatible operating systems, and to leverage it into new areas. Which practices towards ISVs should be prohibited?

Sections III.F. and III.G. of the PFJ prohibit certain exclusionary licensing practices by Microsoft towards ISVs.

However, Microsoft uses other exclusionary licensing practices, none of which are mentioned in the PFJ. Several of Microsoft's products' licenses prohibit the products' use with popular non-Microsoft middleware and operating systems. Two examples are given below.

1. Microsoft discriminates against ISVs who ship Open Source applications The Microsoft Windows Media Encoder 7.1 SDK EULA states ... you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. "Publicly Available Software" means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models ... Publicly Available Software includes, without limitation, software licensed or distributed under any of the following licenses or distribution models, or licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (SCSL);

... Many Windows APIs, including Media Encoder, are shipped by Microsoft as add-on SDKs with associated redistributable components. Applications that wish to use them must include the add-ons, even though they might later become a standard part of Windows. Microsoft often provides those SDKs under End User License Agreements (EULAs) prohibiting their use with Open Source applications. This harms ISVs who choose to distribute their applications under Open Source licenses; they must hope that the enduser has a sufficiently up-to-date version of the addon API installed, which is often not the case.

Applications potentially harmed by this kind of EULA include the competing middleware product Netscape 6 and the competing office suite StarOffice; these EULAs thus can cause support problems for, and discourage the use of, competing middleware and office suites. Additionally, since Open Source applications tend to also run on non-Microsoft operating systems, any resulting loss of market share by Open Source applications indirectly harms competing operating systems.

2. Microsoft discriminates against ISVs who target Windows-compatible competing Operating Systems The Microsoft Platform SDK, together with Microsoft Visual C++, is the primary toolkit used by ISVs to create Windows-compatible applications. The Microsoft Platform SDK EULA says: "Distribution Terms. You may reproduce and distribute ... the Redistributable Components... provided that (a) you distribute the Redistributable Components only in conjunction with and as a part of your Application solely for use with a Microsoft Operating System Product..." This makes it illegal to run many programs built with Visual C++ on Windows-compatible competing operating systems.

By allowing these exclusionary behaviors, the PFJ is contributing to the Applications Barrier to Entry faced by competing operating systems. Which practices towards large users should be prohibited? The PFJ places restrictions on how Microsoft licenses its products to OEMs, but not on how it licenses products to large users such as corporations, universities, or state and local governments, collectively referred to as 'enterprises'. Yet enterprise license agreements often resemble the per-processor licenses which were prohibited by the 1994 consent decree in the earlier US v. Microsoft antitrust case, in that a fee is charged for each desktop or portable computer which could run a Microsoft operating system, regardless of whether any Microsoft software is actually installed on the affected computer. These agreements are anticompetitive because they remove any financial incentive for individuals or departments to run non-Microsoft software. Which practices towards end users should be prohibited? Microsoft has used both restrictive licenses and intentional incompatibilities to discourage users from running Windows applications on Windows-compatible competing operating systems. Two examples are given below.

1. Microsoft uses license terms which prohibit the use of Windows-compatible competing operating systems MSNBC (a

subsidiary of Microsoft) offers software called NewsAlert. Its EULA states "MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of the operating system for which the SOFTWARE PRODUCT was designed [e.g., Microsoft Windows(r) 95; Microsoft Windows NT(r), Microsoft Windows 3.x, Macintosh, etc.] "Only the Windows version appears to be available for download. Users who run competing operating systems (such as Linux) which can run some Windows programs might wish to run the Windows version of NewsAlert, but the EULA prohibits this.

MSNBC has a valid interest in prohibiting use of pirated copies of operating systems, but much narrower language could achieve the same protective effect with less anticompetitive impact. For instance, "MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of Microsoft Windows or compatible operating system."

2. Microsoft created intentional incompatibilities in Windows 3.1 to discourage the use of non-Microsoft operating systems. An episode from the 1996 *Caldera v. Microsoft* antitrust lawsuit illustrates how Microsoft has used technical means anticompetitively. Microsoft's original operating system was called MS-DOS. Programs used the DOS API to call up the services of the operating system. Digital Research offered a competing operating system, DR-DOS, that also implemented the DOS API, and could run programs written for MS-DOS. Windows 3.1 and earlier were not operating systems per se, but rather middleware that used the DOS API to interoperate with the operating system. Microsoft was concerned with the competitive threat posed by DR-DOS, and added code to beta copies of Windows 3.1 so it would display spurious and misleading error messages when run on DR-DOS. Digital Research's successor company, Caldera, brought a private antitrust suit against Microsoft in 1996. (See the original complaint, and Caldera's consolidated response to Microsoft's motions for partial summary judgment.) The judge in the case ruled that "Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft." That case was settled out of court in 1999, and no court has fully explored the alleged conduct. The concern here is that, as competing operating systems emerge which are able to run Windows applications, Microsoft might try to sabotage Windows applications, middleware, and development tools so that they cannot run on non-Microsoft operating systems, just as they did earlier with Windows 3.1.

The PFJ as currently written does nothing to prohibit these kinds of restrictive licenses and intentional incompatibilities, and thus encourages Microsoft to use these techniques to enhance the Applications Barrier to Entry, and harming those consumers who use non-Microsoft operating systems and wish to use Microsoft applications software. Is the Proposed Final Judgment in the public

interest? The problems identified above with the Proposed Final Judgment can be summarized as follows:

- * The PFJ doesn't take into account Windows-compatible competing operating systems
- * Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.
- * The PFJ Contains Misleading and Overly Narrow Definitions and Provisions
- * The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.
- * The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.
- * The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.
- * The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertized as being "Windows Powered".
- * The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.
- * The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.
- * The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.
- * The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.
- * The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.
- * The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft
- * Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.
- * Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.
- * Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system— even for computers running Linux. (Similar licenses to OEMs were once banned by the 1994 consent decree.)

* The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

- * Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.
 - * The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs
 - * The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.
 - * The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.
 - * The PFJ allows Microsoft to offer discounts on Windows (MI)As to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.
 - * The PFJ as currently written appears to lack an effective enforcement mechanism. Considering these problems, one must conclude that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, and would delay the emergence of competing Windows-compatible operating systems. Therefore, the Proposed Final Judgment is not in the public interest, and should not be adopted without addressing these issues.
- Strengthening the PFJ

The above discussion shows that the PFJ does not satisfy the Court of Appeals' mandate. Some of the plaintiff States have proposed an alternate settlement which fixes many of the problems identified above. The States' proposal is quite different from the PFJ as a whole, but it contains many elements which are similar to elements of the PFJ, with small yet crucial changes. In the sections below, I suggest amendments to the PFJ that attempt to resolve some of the demonstrated problems (time pressure has prevented a more complete list of amendments). When discussing amendments, PFJ text is shown indented; removed text in shown in [bracketed strikeout], and new text in bold italics. Correcting the PFJ's definitions Definition U should be amended to read U. "Windows Operating System Product" means [the software code (as opposed to source code) distributed commercially by Microsoft for use with Personal Computers as Windows 2000 Professional, Windows XP Home, Windows XP Professional, and successors to the foregoing, including the Personal Computer versions of the products currently code named "Longhorn" and "Blackcomb" and their successors, including upgrades, bug fixes, service packs, etc. The software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion.] any software or firmware code distributed commercially by Microsoft that is capable of executing any subset of the Win32 APIs, including without exclusion Windows 2000 Professional, Windows XP Home, Windows XP Professional, Windows XP Tablet PC Edition, Windows CE,

PocketPC 2002, and successors to the foregoing, including the products currently code named "Longhorn" and "Blackcomb" and their successors, including upgrades, bug fixes, service packs, etc. Release of information to ISVs TBD Section E should be amended to read ... Microsoft shall disclose to ISVs, IHVs, IAPs, ICPs, and OEMs, [for the sole purpose of interoperating with a Windows Operating System Product,] for the purpose of interoperating with a Windows Operating System Product or with application software written for Windows, via the Microsoft Developer Network ("MSDN") or similar mechanisms, the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product Prohibition of More Practices Toward OEMs TBD

?III. A. 2. of the Proposed Final Judgment should be amended to read

2. shipping a Personal Computer that (a) includes both a Windows Operating System Product and a non-Microsoft Operating System, or (b) will boot with more than one Operating System, or (c) includes a non-Microsoft Operating System but no Windows Operating System Product; or ... Prohibition of More Practices Toward ISVs TBD Prohibition of Certain Practices Toward End Users TBD

Summary

This document is not yet complete, but it does demonstrate that there are so many problems with the PFJ that it is not in the public interest. It also illustrates how one might try to fix some of these problems.

From: Gabriel Gerhardsson
To: Microsoft ATR
Date: 1/23/02 10:06am
Subject: Microsoft Settlement

Hi

I'm not a citizen of the USA. But I feel that in the global society we live in today this settlement affects more than the USA, indeed, I believe it affects the whole world!

I strongly urge you to not accept the settlement in it's current form. It is full of legal "loopholes" and vague language that severely limits the effectiveness in many areas.

E.g. Microsoft should be required to disclose ALL of it's (current and future) APIs (Application Protocol Interfaces) and network protocols. It should be released in a totally open way that doesn't set any limits on who's allowed to view, use and distribute the information. Be that a private person or a company, everyone should have full access to the information.

This is a crucial weakness in the current settlement. I truly hope that you take my views in consideration.

Sincerely

Gabriel Gerhardsson, Sweden

To: Microsoft ATR
Date: 1/23/02 10:11 am
Subject: Microsoft Settlement (Opposition To)

To Whom It May Concern:

I would like to express my opposition to the proposed settlement in the Microsoft antitrust trial. The proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. Microsoft went into this case sure that it could buy its way out. Their cocky behavior preceding, during and after the trial only proved that they did not take the situation seriously. At the time I thought this was an egregious error on their part. Then proposed settlement was released and I, and many like me, were stunned.

Any settlement needs to have provisions to deal effectively with Microsoft's "Embrace and Extend" attitude towards its competition. In order to continue to flourish, the computer world needs more diversity and more interoperability. That second word, "interoperability" is crucial. Microsoft could work with its peers in the industry to make its products work together with new innovations and break-throughs. Instead, Microsoft prefers to crush competitors under the weight of its monopolies in Operating Systems and Office software.

As a developer, I work with Microsoft software consistently and I am aware of the contributions they have made to the industry. That being said, they do not deserve a break on this settlement. Their practices stifle the industry, leave potential innovators afraid to compete, and lock out those Microsoft doesn't favor.

While the Court's desire that a settlement be reached is well-intentioned, this settlement seems content to leave Microsoft as tyrant of the software world. It is unjust and will encourage the sort of behavior that brought this trial about. To encourage another explosion of innovation, Microsoft's monopolistic behavior must be regulated and the company made answerable for its actions.

Sincerely,

Thomas Bellin

Subject: Microsoft Settlement

Any settlement with a company that has :

- *Stolen software from competitors,
- *Denied users the basic freedom to choose which software they are allowed to use,
- *Destroyed competition by implementing a continuous upgrade/change file format practice to eliminate any hopes of compatibility, and

*Used their monopoly position to eliminate market pressures (decreasing costs to consumers through competition) should not get off with a slap on the wrist.

Either their behavior was wrong (which the courts have found) and they should be punished, or drop the case and stop wasting my tax dollars, since the government will probably need them to upgrade future Microsoft products. Any settlement that allows the company to continue with their predatory practices is unacceptable, and as currently proposed, there are no real, enforceable restraints on Microsoft's current and future behavior. Should this settlement

go through, please launch an immediate investigation for fraud and/or undue influence, since someone besides the consumer is benefiting.

Subject: Microsoft Settlement

Sir or Madam,

I would just like to add my voice to those who object to the Microsoft Antitrust Case proposed settlement. This settlement does nothing to punish Microsoft for their anti-competitive practices. Placing a three-man oversight committee on Microsoft's premises (of which one member is selected by Microsoft and the second member is "approved" by Microsoft is in no way "punishment". How can we this committee rightly be called an "oversight committee" when Microsoft is likely to select members who are disposed to their position?)

Where are the penalties levied against Microsoft for ruthlessly bullying their opponents out of the market? Why isn't Microsoft being assessed fines from their ill-gotten gains? How is Microsoft being punished for the practices that have gotten them where they are today? If you do not punish them financially. When a child steals from the cookie jar and you tell the child "That was wrong, don't do it again...and I'll be watching you", but you don't take back the cookie, did the child learn anything? The child has not been punished and will, likely, attempt the same maneuver again as soon as your back is turned.

For a moment, I was encouraged to see that Microsoft is required to be more "open" with their specifications (application program interface (API))—until I read further into the settlement only to see that Microsoft could determine which APIs were critical to their business and should not be released. Have we gotten anywhere with them, then?

Microsoft deserves its bad reputation among computer industry professionals who stand for progress and innovation. Microsoft does not innovate Microsoft stamps out competition by offering their products "bundled" or "integrated" with their operating system and then convincing hardware manufacturers to include their products.

I am writing to express my dissatisfaction with the proposed Microsoft Settlement. I am particularly concerned that while the settlement claims to require the publishing of windows API's, it defines and restricts this in a way that Microsoft can use to avoid complying with the spirit of the settlement. If anyone supposes that Microsoft will comply with the spirit of the settlement, they should examine Microsoft's history regarding previous government settlements, where they have consistently pushed the limits of what they themselves agreed to. In fact, that's mostly why they are back here in court now.

I urge you to change the settlement to be fairer to the customers and competitors of Microsoft. This is likely your only opportunity to do so. The amount of effort that the government must expend to bring cases like this to a successful conclusion is enormous and I'm sure any future DOJ will think twice before taking on the Microsoft monopoly. But since you already have the decree and judgments, lets finish the job and make the settlement one that is good for the free market of America.

Thanks you for letting me express my opinion on this matter.

Subject: Microsoft (Canadian perspicive)

While I am a Canadian citizen, after September 11, I feel closer to the US than I ever have, which is why I am sending you this note. In this time of co-patriotism, we must embrace democracy and we must propound quality and we must disdain selfish interests. There must be a passion to work together as countries, and as people. Working together is not something Microsoft does well. They don't behave well with other companies. You should force them to. Microsoft products are getting worse as time goes on. Right now, for example, the end user has no choice but to use a Microsoft product if they own a PC because there simply isn't another operating system good enough to use other than the Microsoft products. When something goes wrong with a Microsoft product, the consumer has no other choice but to accept it and wait for a patch because they can not return it, and even if they could, they would have nothing to work on in the meantime because the damage is done.

Any other product I buy must work or I can return it for a full refund and buy something else like it. This is not the case with Microsoft. Stiffer penalties against Microsoft might not be enough now that the damage is done.

Maybe Microsoft could provide awards to businesses who want to compete with them?

Maybe the state needs to offer some business incentives to companies who want to compete with Microsoft. They can get the money from Microsoft for that. :)

Subject: Microsoft Settlement
To Whom It May Concern:

I would like to state that I am opposed to the settlement that has been proposed in the Microsoft antitrust trial. I do not feel that the settlement even begins to address illegal behaviors found by the Court, and leaves Microsoft more or less free to continue operating as they always have. Furthermore, I am upset that while Microsoft has been found to be a monopoly—in violation of law—the settlement provides no real punishments. Simply forbidding the repetition of previously committed illegal acts is in no way a punishment for the illegal activity. Without some sort of redress, Microsoft will have been allowed to get away with and profit from their illegal activities.

Subject: Microsoft Settlement

As a software engineer with a degree from MIT and over 20 years experience developing software for Unix, Macintosh, Windows, and Linux, I'd like to comment on the Proposed Final Judgment in United States vs Microsoft. I think the proposed settlement is a bad idea. It does nothing to punish the company for its proven illegal practices, nor does it do anything to effectively prevent the company from continuing those same practices. The company has proven that it has no respect for the legal system, nor acceptable business practices, except what it can buy or subterfuge. The proposed final judgment allows the company's exclusionary tactics to continue, with no direct measures included to overcome the barriers to entry that the company has established.

I am ashamed of a legal system that can be bought or persuaded of anything easily by a company that has proven itself willing and capable of falsifying evidence in a court of law. I personally have been affected by this company's monopolistic practices. No innovation is allowed without the company's consent. I have seen excellent research stamped out or bought by the company and shelved, simply because the monopoly did not see it fit with its business interests.

I and my developers are daily forced to work with arcane and poorly designed APIs (methods of writing software), because the monopoly has forced all others out of the market. If the company absolutely *must* be left with its monopoly, then the remedy absolutely *must* address the issues of permitting software developers to have sufficient leverage to change the system in which they are forced to work. There is no current such system in place. If I want to see a bug fixed in the company's operating

system, I have to pay simply for the privilege of telling them about it, let alone have it fixed.

The company has been trying for years to leverage its monopoly into other spheres of influence. One with which I am intimately familiar is embedded systems, where the company has thus far failed to gain any significant foothold, even in the face of their claimed "innovations" in the field. Why? Because embedded developers have significant choice, and the company has no compelling offering in the face of those choices. Its claims of "innovation" fall flat when there is something to compare to, if there is the choice of an alternative. Any other company would have long since have run out of money, trying to sell an unwanted product into such a space; but this one, primarily because the embedded space is such a big market, will keep trying. Even given this lack of success, the company claims "thousands of registered developers", which, reading between the lines, means someone downloaded their beta evaluation software. I provide this example to show that the company's supposed "innovations" and successes in other markets cannot be taken at face value. Any claims of the company need to be closely examined and objectively proven.

Date: 1/23/02 10:10am
Subject: Microsoft Settlement

It's ironic that Microsoft was praised for being a fierce competitor as the company grew and now they're reviled for the same practices. The difference is that they've now got a monopoly and like it or not those competitive practices are preventing further competition!

The settlement as proposed simply does not prevent Microsoft from preserving their operating system monopoly and thereby leveraging it to sell their other products—the very definition of anti-competitive practice. Nothing short of unconditional licensing of their source code will prevent this, even with an oversight committee.

One of Microsoft's suggestions was to provide computers for education. This is the seed of a good idea that ultimately will grow to be in their favor: an entire generation raised on their operating systems. If they are to give something to education have it be cash. There's plenty of school districts that are in need of far more essential things than computers. If it must be computers, insist that all Microsoft's expense goes for hardware and have a different operating system installed, like Linux. This would certainly increase competition in the long run.

MTC-00015851

From: Johan A. van Zanten
To: Microsoft ATR
Date: 1/23/02 10:12am
Subject: Proposed Settlement Bad Greetings.

I'm submitting my comments per the Tunney Act, regarding the U.S. governments settlement of the Microsoft anti-trust case. I've been a computing professional for over ten years. Back in 1987, Microsoft profited from the sale of decent software (such as Microsoft Word), and consumers of that software generally benefited from Microsoft's existence and business.

Now, with Microsoft's plainly-apparent goal being to establish a monopoly over all computer-related areas of the economy, this is not the case. In many major categories, such as word processors, consumers have fewer practical choices of software now than they did 10 years ago, simply because Microsoft's dominance.

Further, Microsoft modifies their own products in order to force consumers to “upgrade” when such an upgrade does not benefit the consumer. Microsoft is an entirely selfish corporation that is out of control, and the U.S. government is the only entity that can stop it. Microsoft should be broken up in to separate distinct companies that are prohibited from collaborating.

Subject: Microsoft settlement

After having read about the proposed settlement, I felt compelled to add my own opinion to the volume of opinions given under the Tunney act.

The settlement, like it or not, smacks of appeasement. It seems to do little to diminish anti-competitive practices. I'm going to make the leap of faith and assume that this was indeed intended; I'm positive that the Department of Justice has sufficient legal resources to determine the numbers and effects of the loopholes present in the settlement as proposed.

Therefore, I have to wonder, what is the DoJ trying to accomplish. My best guess is that concern over the economic state of the

United States is at the forefront of the DoJ's collective mind, and that the desire is not to quell ANY successful business, on the theory that to diminish the power and market share of a major company would be a blow to Wall Street and the economy.

I would ask that you reconsider. Squelching Microsoft's anti-competitive behaviour is in the best interests of the economy as a whole. Even severely limited in her ability to market and dispense her products, Microsoft will still be a strong force in the computing world. Nothing will change that short of destroying the company completely. Enough people know and trust Microsoft, with her unparalleled ease of use and the widespread familiarity with her OS and applications, that Microsoft will continue to be the number one for years to come. On the other hand, permitting competing products like MacOS, Linux, and the various other OSes and products like AOL's Netscape and the lesser known Mozilla the opportunity to prove themselves to the open market can only help the viability of these other companies, and increase job availability and tax revenues.

I don't propose destroying Microsoft. It's a valuable company that it is in the best interests of the United States to keep strong. But Microsoft will not see its strength diminished by the presence of other competitors.

Thank you for your time.

Paul Meixner

From: Guy Helmer
To: Microsoft ATR
Date: 1/23/02 11:12am
Subject: Microsoft Settlement

Under the Tunney Act, I wish to comment on the Microsoft settlement's inadequacy in improving the competitive environment in the software industry.

I agree with the complaints and proposed resolutions expressed by Zimran Ahmed, which are stated as follows:

1) Middleware

The current language in Section H.3 states “Microsoft Middleware Product would be invoked solely for use in interoperating with a server maintained by Microsoft (outside the context of general Web browsing)” does nothing to limit the company's ability to tie customers and restrict competition in non Web-based networked services under .NET, as they fall “outside the context of general Web browsing”. Microsoft has already begun abusing its desktop monopoly to tie customers int .NET revenue streams and set up a new monopoly over the network.

Part 2 of the same section states “that designated Non-Microsoft Middleware Product fails to implement a reasonable technical requirement...” essentially gives Microsoft a veto over any competitor's product. They can simply claim it doesn't meet their “technical requirements.”

2) Interoperability

Under the definition of terms, “Communications Protocol” means the set of rules for information exchange to accomplish predefined tasks between a Windows Operating System Product on a client

computer and Windows 2000 Server or products marketed as its successors running on a server computer and connected via a local area network or a wide area network." This definition explicitly excludes the SMB/CIFS (Samba) protocol and all of the Microsoft RPC calls needed by any SMB/CIFS server to adequately interoperate with Windows 2000. Microsoft could claim these protocols are used by Windows 2000 server for remote administration and as such would not be required to be disclosed. The Samba team have written this up explicitly here: <http://linuxtoday.com/news-story.php3?tsn=2001-11-06-005-20-OP-MS>

3) General veto on interoperability In section J., the document specifically protects Microsoft from having to "document, disclose or license to third parties: (a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria"

Since the .NET architecture being bundled into Windows essentially builds "anti-piracy, anti-virus, software licensing, digital rights management, and authentication systems" into all levels of the operating system, ANY API, documentation, or communication layer can fall into this category. This means that Microsoft never has to disclose any API by claiming it's part of a security or authorization system, giving them a complete veto over ALL disclosure.

4) Veto against Open Source Substantial amounts of the software that runs the Internet is "Open Source", which means it's developed on a non-commercial basis by nonprofit groups and volunteers. Examples include Apache, GNU/Linux, Samba, etc. Under section J.2.c., Microsoft does not need to make ANY API available to groups that fail to meet "reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business." This explicitly gives them a veto over sharing any information with open source development projects as they are usually undertaken on a not-for-profit basis (and therefore would not be considered authentic, or viable businesses).

These concerns can be met in the following ways:

1) Middleware: Extend middleware interoperability with a Microsoft server to ALL contexts (both within general Web browsing as well as other networked services such as are those being included under .NET).

2) Interoperability: Require full disclosure of ALL protocols between client and Microsoft server (including remote administration calls)

3) General veto on interoperability: Require Microsoft to disclose APIs relating to "anti-piracy, anti-virus, software licensing, digital rights management, encryption, or authentication systems" to all.

4) Veto against Open Source: Forbid Microsoft from discriminating between for-profit and nonprofit groups in API disclosure.

From: Rich
To: Microsoft ATR
Date: 1/23/02 10:03am
Subject: Microsoft Settlement

My comments are brief... The Proposed Final Judgement (PFJ) falls short in many ways but some of the more significant points include...

* The PFJ Contains Misleading and Overly Narrow Definitions and Provisions.

These provisions are so narrowly defined that the impact upon Microsoft is almost nil. For instance, releasing API documentation to ISV producing compatible middleware is not mandated until AFTER the deadline for the ISVs to that their middleware is compatible. Not doesn't this make sense, it is just plain silly and is part of a rather obvious attempt to present the appearance of Microsoft being punished when in reality, they are being given added competitive edge.

* The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

Licensing practices have long been an issue with Microsoft. The PFJ does almost nothing to retrain the predatory practices of Microsoft in their dealing with clients. The same licenses and practices were banned once upon a time by the 1994 consent decree.

* The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

This is such a well documented problem that it is hard to believe that the PFJ does not address it to the satisfaction of anyone but Microsoft.

These incompatibilities have hurt consumers and ISVs and are allowed to continue unabated. Shame on the PFJ for not resolving this issue.

Subject: comment on Microsoft settlement

Speaking as a senior Internet developer, published author on Internet topics, and an Internet entrepreneur, I believe that the proposed settlement is too little, too late. In my business there is virtually no possibility of building desktop software like word processors or web browsers. Investors won't fund it. The reason is that every such effort has failed whenever Microsoft decided to enter the business themselves.

Due to network effects, achieving a larger pool of users is the largest factor in creating useful software and hence selling software profitably. Microsoft's ability to bundle end user software with Windows means that they can create a larger pool of users at will. The only software developers to escape Microsoft do it by luck, when Microsoft actively decides not to take their market. The default in any desktop software market is for Microsoft to have it; there is simply no way

to beat the company's ability to bundle software with the operating system.

This is the definition of a monopoly. There is no possibility of competition, so independent innovation cannot happen.

What independent developers like myself need is for the Justice Department to ensure that we can enter the end user software market. Without intervention by the Justice Department, we cannot. The proposed settlement leaves us locked out of the end user software business.

Subject: Microsoft Settlement

I would like to comment on the Proposed Final Judgment against Microsoft for it's anti-competitive practices and illegal monopoly. According to the Court of Appeals, "a remedies decree in an antitrust case must seek to "unfetter a market from anticompetitive conduct", to "terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future" (section V.D., p. 99). I do not believe the PFJ serve this purpose. As such, I would like to voice my opposition to the PFJ. Specifically, I do not believe the PFJ provides enough protection to Independent Software Vendors (ISV) who attempt to provide compatible operating systems with Microsoft products. Just like the consent decree of 1995, the PFJ provides too many loop holes allowing Microsoft to continue in their anti-competitive practices. For a more detailed analysis refer to these essays:

Date: 1/23/02 10:14am

Subject: Microsoft Settlement

To Whom It May Concern:

Regarding the Microsoft settlement, I don't believe that the current proposal provides

adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundreds, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices. Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

The United States is a successful nation because its free markets encourage firms to compete for customers by producing high-quality, low-cost goods. This system needs to be protected from monopolists who gain so much power that they can destroy the competitive nature of the markets in which they participate.

Thank you for your time.

Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still

Subject: Microsoft Settlement

To whom it may concern,
I am against the proposed settlement for two reasons.

1. The way the settlement currently reads: Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. AND Section III.B. requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs, including important regional "white box" OEMs, if they offer competing products.

The company that builds my computers should be allowed to install any operating system that the customer wants.

2. No part of the PFJ obligates Microsoft to release any information about file formats, even though undocumented Microsoft file formats form part of the Applications Barrier to Entry.

I've noticed an anticompetitive practice in use by Microsoft that the Courts seem to have overlooked. Please consider the following:

A friend of mine recently purchased a new computer with Windows preinstalled. I suggested that she should try the Linux operating system. She was open to the idea, and her only reservation was being able to go back to Windows, should she not like Linux. "Well that's easy enough," I said, "you just take your Windows original CD and reinstall it." "My what?" came her reply. It turns out that she had a —license— to run Windows, and it was preloaded on her computer, but there was no original media from which to (re)install it.

Without the ability to (easily and legally) reinstall Windows, Linux was a one-way trip. She wasn't about to take that chance. For a user who's curious about alternate operating systems but already comfortable with Windows, that's a formidable deterrent. The practice of preloading Windows but not

including original media forms an effective barrier, preventing users from trying alternate operating systems.

I hope this is considered when revising and expanding the Proposed Final Judgement to a version that more accurately addresses Microsoft's anticompetitive practices.

Thanks for your time!

Subject: Comments on the Microsoft antitrust settlement

Sir,

Under the Tunney act I would like to submit my comments on the proposed Microsoft settlement for antitrust suits currently sub judice.

In my view the proposed settlement is a very bad solution for consumers. Penalizing an alleged monopolist by providing government-approved mechanisms to expand their monopoly is clearly not a penalty. Further, the proposed cash inflow of \$1 billion by Microsoft is a deceptive figure. Software, by its nature, has a very low marginal cost per unit manufactured, and for Microsoft, the marginal cost of deploying "\$500 million" worth of software is probably in the range of \$250,000-\$500,000. This cash penalty is a mere pittance when compared to the billions of dollars Microsoft is holding in

its war chests—much of which has been accumulated by the price-fixing and monopolistic distribution and licensing practices which the current trial seeks to stop.

The argument that the license costs for software in this penalty are accurate since otherwise "these schools would have had to purchase these licenses anyways" is also flawed. Even if the schools would have had to purchase licenses for software on their computers, it is not clear that they would have had to buy the licenses from Microsoft. Linux and alternative free software solutions have no per-seat license costs, and MacOS is an example of an alternative software which requires licenses. For Microsoft to claim to provide free software is tantamount to their attempting to lock competitors out of this market by giving away free goods. This in itself is a form of monopoly extension. By leveraging their existing monopoly on operating systems and browsers in the workplace, they are giving away their software free in schools in order to expand their monopoly into this area as well.

If this sort of settlement is really on the cards, let Microsoft donate \$1 billion of hardware and cash. Allow the beneficiaries to individually select the software that they wish to deploy on these machines.

The tobacco settlement was not paid in cigarettes!

Date: 1/23/02 10:13am
Subject: Microsoft Settlement

As a citizen of the United States I am very disappointed with the remedy that had been proposed for the Microsoft settlement. The settlement is intended to accomplish two goals, punishing Microsoft for its behavior and assisting those who might benefit from the proposal. Unfortunately, the settlement, as proposed, accomplishes neither goal.

First, the proposal helps Microsoft more than punishing it. Microsoft has sufficient cash on hand to not have to accrue any debt to fulfill the spirit of the proposal, which was to cost Microsoft \$1 billion in cash. However, even this was not accomplished as Microsoft was attributing the retail price of their own software toward the fulfillment of the settlement fund requirements. This is at pennies on the dollar given that they can duplicate the software on CD's at the cost of less than \$1 per CD for a software package that can cost \$200. In addition, their software would have been forced onto a market which currently is not deeply penetrated by Microsoft. Second, those who are supposed to benefit from this settlement, the schools, won't. The costs are for the initial purchase of software and for a few years of licensing. Afterwards, the software must be relicensed, said cost to be expended by the schools.

Given that they would have had to switch their processes over to the Microsoft software and become reliant on that software, relicensing would have been necessary or additional expenditure would be necessary to switch away from Microsoft. Most business today stay with Microsoft, in spite of the fees, because the short term cost of switching away is not palatable.

I strongly recommend rethinking the proposal such that those who are to be punished, be punished. Those who need help, should be helped. But please don't confuse politics with justice. They are rarely to be found in happy union.

Subject: Microsoft Settlement

Dear sirs,

Unfortunately I'm not blessed with the time to fully analyze the court proceedings involving the Microsoft Settlement. That's not my job, it's yours and I have to place my trust in you, that you are doing your job in the best interest of the population of the United States as a whole. The research that I have had time to make, as well as information I have received from other sources I trust point me to believe that, in this case, my trust has been misplaced.

The danger of Microsoft's monopolies, in my opinion, do not stem from any individuals personal monetary gain. It stems from the destructive impact that Microsofts anti competitive practice has on the advancement of computer science as a whole. Microsoft has done some great things and in many ways has advanced the usability of computing, but it's practices have inhibited and often destroyed the advances of many. Microsoft may be a large "one" that contributes much but the advances and knowledge Microsoft has actively destroyed in the open source, academic and competitive consumer markets are incalculable. You can not calculate the future impact of what has been quashed.

Due to the existing reality of Microsofts practices damaging research in competitive computer solutions, impacting both the financial and scientific advancement of the United States as a whole I must complain that the restrictions/practices proposed in the Microsoft Settlement are in no manner sufficient to the task set before them. The provisions for enforcement of the flimsy restrictions to be placed on Microsoft are as inadequate as the restrictions themselves..

In my mind the goal of this settlement is not to harm Microsoft, but to protect the United States and the field of Computer Science from the damage Microsoft inflicts by attempting to further itself at the cost of others. "United We Stand" is our creed and yet we are letting the one defy the will of the many. I encourage you to think of the United States as a whole and to act in its best interest for the future and not the now. A single strong company is an attractive and palpable entity but we must be forward thinking as to how, we the people, are best served for now and the future.

Sincerely,
Jeremy Walker

Subject: Microsoft Settlement

The current settlement with Microsoft is unacceptable for many reasons. I have three particular concerns:

(1) that the proposed settlement doesn't force Microsoft to release any of its file formats; (2) the proposed settlement doesn't force Microsoft to disclose which of it's patents protect the Windows API; and (3) that the proposed settlement allows Microsoft to continue its anticompetitive licensing terms against Open Source apps on Windows; and to continue to retaliate against OEMs who ship competing Operating Systems.

Comment on (1): I consult for a small (Wall Street) financial trading company. We use Linux and OpenBSD for many of our servers (and have used many varieties of UNIX for many years); while our traders and office personnel tend to use Microsoft Office and NT/2000 for their workstations. As Microsoft began its transition from NT to 2000, and now XP, we have been hampered numerous times by problems caused by Microsoft deliberately breaking compatibility in its Office Suite programs and its OSs between these versions.

Worse yet, Microsoft claims its formats are compatible between versions. They're not. A Powerpoint97 document can be opened in Powerpoint 2000, and all the text and pages are readable—but the formatting is not accurately reproduced.

As far as I could see, these compatibility problems were not caused because Microsoft was adding new functionality to its Office Suite programs or to its OS—rather, they just were attempts to force us to upgrade all our systems to Microsoft's latest software.

For most of our needs, a simple (and —accurate—) file converter from Office97 apps to Office2000/OfficeXP apps would suffice. But there isn't such a thing. We don't need the new functionality of these later suites — and we don't want them. But at the moment, we are being forced into a needlessly complex and expensive upgrade of our entire network in order to keep our files compatible with other companies.

Forcing Microsoft to release all its file formats would break this cycle. While some of the Office file formats are well known—Excel and Word, for example—the file format for Powerpoint (PPT) is completely undocumented. Most of our problems are with this format. Needless to say, since Microsoft only releases the specifications of this format to "approved" developers, it's unlikely that any company (or private developer) will offer a converter program to change Office XP presentations back to Office 97.

Comment on (2): We would consider purchasing only Office XP, and not convert to Windows XP — but the tight coupling between Microsoft's OS and these applications make it impossible. While I've looked at open source projects such as WINE

(and commercial ventures such as CodeWeavers)—which try to let users run binary Windows apps on nonWindows OS (by emulating the Windows API calls)—our company has not used them, since we've heard from MainWin developers that these open source projects "infringe" on Microsoft's patents on the Windows API. Since Microsoft is not forced to release patent information—how can these projects know if they're in jeopardy or not?

Comment on (3): Most consumers buy computers pre-installed with software; and don't add much software on their own. As long as they —only— have the choice of pre-installed Microsoft OS and Microsoft Apps—or nothing—I think Microsoft's stranglehold on the industry will continue. This block could easily change, if OEMs offered other OS and applications pre-installed on their computers. Since Linux and the BSDs charge —no— licensing fees for their OSs and applications, consumers would get the benefit of cheaper pre-installed computers, to boot. But since under the proposed settlement, Microsoft is allowed to continue penalizing OEMs who offer non-Microsoft OS computers, OEMs have a strong disincentive to offer other platforms to consumers—and Microsoft's dominance will like continue.

Thank you for your time; but the proposed settlement is (in my view) completely unacceptable.

To whom it may concern:

As a long time Apple supporter, I've been fond of watching Microsoft play catch up in the usability department. The only problem is that when Microsoft embraces a standard (say kerberos in W2K), they then extend it with proprietary add-ons that only work with other Microsoft products. Other companies aren't even given the ability to use these so-called features. For end-users, it might not seem like a big deal, but when personal information is being cataloged at Microsoft without my knowledge or consent, that is a bad thing.

Subject: Microsoft Settlement
To: Renata B. Hesse
Antitrust Division
U.S. Department of Justice
601 D Street NW
Suite 1200
Washington, DC 20530-0001

Dear Ms. Hesse, As per the Tunney Act, I am submitting my comments regarding the Microsoft Antitrust trial. After having read the proposed settlement, I am extremely concerned that it is not strong enough, and that it will be ineffective in countering the harmful business practices in which Microsoft engages. My largest concerns are with the overly narrow definition of APIs, middleware, and Windows. Important APIs have been overlooked in the narrow definition, such as that used by Microsoft Installer. Middleware such as Microsoft's new .NET initiative (and other future projects) are not covered. Variants of Windows ("Windows powered") such as Windows CE, Tablet Edition, and the X-Box are not covered. I hope that you will take a close look at the problems with the proposed settlement, and make needed changes to it. If you do not, Microsoft will continue to work in essentially the same fashion.

Thank you,

Subject: Microsoft Settlement

I oppose the proposed settlement in the Microsoft antitrust trial. The current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct

or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,
Oscar Merida

The Proposed Final Judgment (PFJ) against Microsoft is unsatisfactory. An excellent argument explaining why the PFJ is unsatisfactory is available here [<http://www.kegel.com/remedy/letter.html>]

In particular the following points make the PFJ undesirable

Failure to prohibit anticompetitive license terms

Failure to prohibit anticompetitive practices towards OEMs

Microsoft's anticompetitive behavior needs to be stopped. Strong measures should be taken to ensure that they will not engage in these business practices again. The PFJ is not enough to ensure compliance.

MTC-00015882

From: Niedermeyer, Franz
To: "microsoft.atr(a)usdoj.gov"
Date: 1/23/02 10:15am
Subject: Microsoft Settlement
To Whom It May Concern,

I am writing in opposition to the proposed settlement in the Microsoft antitrust case.

The settlement as written will not serve to curtail Microsoft's future anticompetitive behavior, and does even less (if anything) to punish Microsoft for its many past violations of antitrust law.

This proposed settlement will serve to encourage Microsoft to continue the illegally leveraged destruction of competition in new industry segments, as well as providing an incentive for other industries to engage in this type of behavior. I feel strongly that the computer industry would look vastly different and much improved today without the past decade of Microsoft's increasingly apparent anticompetitive actions. Americans would have a much larger variety of secure and useful software to choose from. All would be able to share information without the proprietary interfaces that effect a loss of control and ownership of one's own data.

Finally, I believe that as Microsoft grows through anticompetitive behavior, the risks to Americans of corporate failure in a firm of such unnatural size could readily cause serious harm to our economy and technological infrastructure.

Thank you,
Franz Niedermeyer

Subject: Microsoft Settlement
CC: laird@3path.com@inetgw

As an engineer involved in the industry professionally for over a decade, I am very concerned about the proposed settlement between the DoJ and Microsoft. I believe that given Microsoft's historic disregard for legal constraints on its behavior, and even simple inability to acknowledge the illegality of its actions, that the proposed settlement will not result in any meaningful change in their anti-

competitive conduct. In addition, the settlement does not appear to penalize Microsoft for their past illegal actions.

The prohibited conduct under the agreement does not address the core of the illegal actions. Now that Microsoft has eliminated any significant competition in both the x86-based desktop operating system market and the web browser market, it's of little value to free OEM's from the illegal license terms and pricing models that allowed Microsoft to eliminate that competition.

The agreement needs to penalize Microsoft for those past actions, but be forward looking to prevent similar illegal actions suppressing future illegal actions. The agreement doesn't prevent Microsoft from using exactly the same tactics to suppress future competition in future markets. For example, the Open Source movement is emerging as significant competition in some application markets (web servers, databases), and as an alternative desktop operating system (Linux and WINE). Microsoft is already using their control over licensing terms for operating system to prohibit the distribution of add-in components (SDK's) with open source software in an attempt to hinder this software model. Microsoft even makes it illegal to use their C++ compiler to develop software for non-Windows operating systems, and licenses some software only for running under Windows, prohibiting the application's use under any competing operating system that has the ability to run Windows applications. The agreement does nothing to protect the web server or database markets, or the open source software movement, from continued (illegal, IMO) suppression. And the agreement does nothing to protect the ability of competitors to implement the Windows API's and allow users to run Windows software on competing operating systems.

The agreement does not penalize Microsoft for past illegal actions. The agreement only addresses future actions, and does not assess a penalty. The wording of the agreement is so vague, with so many exceptions, that that it is wide open to abuse. And given that Microsoft historically has taken advantage of even the appearance of slight ambiguity extremely aggressively, it's hard to believe that they would not use the vagueness and exceptions to render the restrictions meaningless. For example, they can avoid the restrictions on their actions for a "Windows Operating System Product" by renaming it slightly. For example, if Microsoft shifts its efforts to "Windows XP Tablet PC Edition" (which will run Windows applications on desktop PC's with keyboards) then the restrictions become moot. As another example, the requirement that Microsoft publish all API's has the exception that any API can be hidden by Microsoft if the claim that the API relates to security; this is trivial to argue if Microsoft incorporates basic security mechanisms into any API that they wish to keep secret for other reasons.

The term of the agreement, and the lack of enforcement mechanisms, renders it meaningless. Since the agreement is of such limited duration, and violating it has no impact other than a short extension, it will

have no significant effect on Microsoft's behavior, and even if it does for the duration of the agreement, that period is too short a time for competitors to come into place and achieve meaningful market presence.

Finally, I believe that leaving Microsoft structurally unchanged, with an oversight committee, cannot result in a fundamental shift in Microsoft's hostile attitude towards fair competition in the marketplace because it cannot have the visibility into the wide range of Microsoft's activities, nor does it have enforcement mechanisms sufficient to compel Microsoft to comply with its rulings; quite simply, given the scale and profitability of Microsoft's business, minor changes in contractual wording aren't going to meaningfully change the company's direction.

I believe that the only mechanism that can change Microsoft's behavior is to make a separation of the company in which the self-interest of the resulting companies leads to increased competition. The fundamental issue is that there is only a single company that controls the operating system required all participants in the PC industry, and that company does not believe that it has to compete fairly in new markets. Given that Microsoft has consistently rejected attempts to moderate its behavior, I believe that the only remaining options are either to create multiple competing companies in the operating system business, or to strengthen the agreement sufficiently to force Microsoft to behave legally.

STRENGTHENING THE AGREEMENT

I believe that the central need here is to make the Windows API's a completely public document that all participants (Microsoft's operating system team, competing operating system vendors, Microsoft's applications teams, competing application vendors) have equal access to, and against which compliance is independently assured. The documentation of the API, and validation of compliance to it, should be managed by an independent third-party. The agreement would need to draw a clear line between operating system, middleware and applications, and restrict communications between the layers to confirm to publicly documented API's.

Similarly, communication between the operating systems, middleware and applications teams within Microsoft must be restricted so that internal teams are treated on an equal footing with external competitors. For example, whenever the MS Office team needs to discuss an API enhancement with the Windows XP team, it must also discuss that API requirement with the WINE team or any other competing Windows API implementor. For simplicity, it may be better for all API-related communications to be coordinated by an independent third party (e.g. the organization administering the Windows API, for example) to which all participants have equal access. Integration between layers would only be allowed through publicly documented API's, validated by the independent third party—there would be no "private" communication channels between the layers.

The agreement would apply to any version of any operating system shipped by Microsoft, under any name.

The agreement would have no termination. Violation of the agreement could be penalized by up to 10% of Microsoft's revenue for the duration of the time during which Microsoft is found not to be in compliance.

The agreement would guarantee the right to produce and distribute competing implementations of the Windows API's. Microsoft would be prohibited from implemented code in operating system (e.g. Windows XP), operating system add-in components (e.g. Windows Media Player) or their applications (e.g. MS Office) that attempts to determine whether it is running over a Microsoft or a competing implementation of the API, would have no dependencies on implementation details of Microsoft's implementations of the API's, and would make a good faith effort to ensure that such add-ons and applications would operate properly over any implementations of those API's. Microsoft would waive all intellectual property rights that would otherwise affect the ability of third parties to implement the API's.

MULTIPLE WINDOWS COMPANIES

In this option, I would propose forming three companies, all with equal rights to all current Microsoft intellectual property (patents, source

Date: 1/23/02 10:15am
Subject: Microsoft Settlement

The main purpose of the suit against Microsoft seemed, to me, to be about bundling. Yet, the settlement reached does nothing about this, Microsoft's most powerful method to crush competition. WindowsXP has more bundled software than any other Windows release. They make their instant messenger seem like it is part of the operating system. Their browser already feels that it is. Windows has the OS market, there's little chance that that will change, but by bundling every possible internet related application into the operating system, they stamp out any competition. The applications force themselves on the user, and if you sign up for one, you've magically got accounts everywhere. Internet related applications was quite possibly the only software market aside from games that Microsoft didn't already dominate, and now they dominate that as well. The real solution, it seemed to me, would have been to break the company into three different companies and make for some real competition out there. Let one part make the operating system, one make the business applications, and one deal with MSN and it's related internet applications. While I could see including IE with the system so that people could go out and find other software, it's the bundling of everything at once that seals the doom of everything without an MS logo. I was hoping for some drastic and harsh treatment of a company that tries in everyway to squash its competition, including underhanded and illegal means,

and I just don't think this settlement goes far enough.

Subject: Microsoft Settlement

I am writing to comment on the proposed Microsoft settlement. I believe that the settlement is inadequate on a number of issues:

1. It doesn't take into account Windows-compatible operating systems.
 2. It contains misleading and overly-narrow provisions and definitions.
 3. It fails to prohibit anti-competitive license terms currently in use by Microsoft.
 4. It fails to prohibit intentional incompatibilities historically used by Microsoft.
 5. It fails to prohibit anti-competitive practices towards OEMs. Because of these inadequacies, the proposed Final Judgement as written allows and encourages significant anti-competitive practices to continue, delays the emergence of competing Windows-compatible operating systems, and is thus not in the public interest. It should not be adopted without substantial revision to address these problems.
- Thank you.

This short note is to inform you that I believe that the proposed final judgement in the US DOJ v Microsoft case is a bad idea. Among its many problems, the PFJ fails to punish Microsoft for its actions, it lacks an effective mechanism of enforcement, and due to imprecise or excessively narrow wording it actively encourages Microsoft to further its monopolistic practices.

Subject: Microsoft Settlement

I would like to register my objection to the proposed settlement in the United States vs. Microsoft case.

The biggest problem I see is that the settlement is not a structural remedy. Oversight remedies have been tried against Microsoft in the past, and they have coded arounded them, lobbied over them, and legally maneuvered past them every time. The only thing that hasn't been tried yet, and that has a hope of working, is to break them up.

Breaking Microsoft up into OS/ Applications/Other divisions wouldn't break their monopoly, but it would make it more difficult for them to use their OS monopoly to create new monopolies in other areas, which they are doing with Windows XP even as I type this.

Date: 1/23/02 10:16am
Subject: Microsoft Settlement

Dear sirs:

I am writing this to express my opposition to the proposed settlement to the Microsoft antitrust suit.

As a computer professional, this issue is one that is very important to me both personally and professionally. It is my opinion that the proposed settlement does not do enough to thwart Microsoft's unfair business practices or to ensure fair competition in the marketplace. As the situation exists now, Microsoft has been utilizing their monopoly in operating systems to unfairly gain control of other markets, such as Internet browsing, instant messaging, and digital audio. This is the situation that a reasonable settlement must address, and I do not believe the current proposed settlement has any real power to restrict Microsoft's illegal actions in this area. In order to be effective, a solution must prevent Microsoft from tying (or "bundling") unrelated software into their operating systems; this is the only way to ensure that all competing products, including Microsoft's, have an opportunity are evaluated fairly by a competitive market on the merits of the products themselves. The current settlement has no real power to do this, and thus will be ineffective in correcting Microsoft's illegal practices.

I am not opposed to Microsoft; anybody who wishes to use Microsoft products should have the free choice to do so, as is proper in a free nation. However, the problem is that people who choose to use non-Microsoft products are severely limited in their options because Microsoft uses illegal tactics to stifle competition. The day that one person can run a fully function system using Microsoft technology, and another person can run an equally functional system using no Microsoft technology at all, will be the day that this suit is settled adequately—not before.

Sincerely,
Brandon R. Butler

From: Randy Smothers
To: Microsoft ATR
Date: 1/23/02 10:22am
Subject: Microsoft Settlement

I have been a information systems developer, software programmer and software user for more than 25 years. Based on my experience and my reading of the "Proposed Final Judgement" (PFJ) in United States vs. Microsoft, I am concerned that the PFJ is significantly flawed and insufficient to correct existing monopolistic practices on the part of Microsoft, let alone deter the continuation of such practices in the future.

In particular, I am concerned that the PFJ does not correctly define the terms "API" and "Microsoft Middleware" and therefore fails to implement protections against Microsoft's continued use of the Windows APIs to maintain or even increase the "Applications Barrier to Entry" cited by the Trial and Appeals courts.

Through arbitrary, capricious and often unannounced changes in the Windos APIs and by withholding the full documentation of many Windows APIs and any documentation at all of others, Microsoft has long been able to suppress efforts by other software developers to create applications software that is competitive with software offered by Microsoft in terms of features and/or performance.

Similarly, by not having to clearly and publicly identify the patents applicable to its Windows APIs, Microsoft is able to use vague threats of "patent infringement" to inhibit the development and adoption of competing applications.

Having been successful at ensuring the Windows operating system is ubiquitously present in homes, educational institutions, businesses and government offices throughout the USA and much of the rest of the world, Microsoft has shown no reluctance to use that presence to monopolistic advantage whenever it has decided to offer its own product in any area of computing applications. Absent meaningful provisions forcing Microsoft to provide equal and fair access to the Windows APIs, the Proposed Final Judgement fails to adequately address the issue of Microsoft's enhanced Applications Barrier to Entry and as a result also fails to serve the interests of the public through enhancement of the competitive environment for software in the Intel-based computer industry.

LET S STOP THE LITIGATION AND RESUME BUSINESS THE GOVERNMENT WAS WRONG TO BRING THIS CASE TO COURT IN THE FIRST PLACE.

MTC-00015901

From: W.A. Collier
To: Microsoft ATR
Date: 1/23/02 10:18am
Subject: Microsoft Settlement

Dear Judge,

The proposed settlement is a bad one; please reject it and have the Doj and the states go back and draft something that will address the facts found in the District court case.

A unanimous US Court of Appeals agreed that Microsoft had illegally kept its monopoly position by preying on other software developers and computer manufacturers. The bottom line is that Microsoft operated illegally, and any settlement or resolution of this case should make sure the company cannot continue its anticompetitive behavior. Unfortunately the proposed solution does not do this. In many ways, it actually reinforces Microsoft's monopoly, and does nothing to restrain Microsoft from acting illegally again in future markets.

Indeed, Microsoft has already shown they intend to continue to piggyback off their illegally obtained operating system monopoly to crush more markets. As an example, look at the "give away" of millions of dollars of development effort in their Media Player, which is unnecessarily "integrated" into WindowsXP—and is targeted at the RealPlayer product line, in order to crush it, in the same way they did the Netscape Browser. Microsoft, unlike its competitors, simply rolls the development cost into their illegally obtained monopoly operating system, and undercuts the competition unfairly. Yet the proposed settlement does not address preventing this sort of monopolistic behavior at all. Remember, developing a media player, a browser and other software costs money, and Microsoft leverages their monopoly to mask these costs while smashing competition unfairly. The Circuit court in its 7-0 decision, and lower courts found this "bundling" illegal and

monopolistic, yet the settlement does not address this in any sort of meaningful fashion: it allows Microsoft to tightly integrate and bundle its media player, its web browser, and myriad other applications into the Windows Operating System, instead of competing freely against external applications.

Also, the proposed settlement contains no provisions to remedy the unlawful monopolization of the operating system; nothing that will produce competition. Remember that the Circuit court ordered that a remedy must "unfetter the market from anticompetitive conduct... [and] .. terminate the illegal monopoly". the proposed settlement does nothing of the sort. Its attempt to open the "API" (programming interface) of the Windows operating system will merely reinforce the monopoly, not terminate it as the court called for. Also opening the API is not enough: Microsoft plans only to open a mere a subset. Complete and full disclosure of ALL the source-code is the only "opening" that would suffice to terminate the Microsoft monopoly.

Finally, the proposed settlement does nothing at all to address the issue of effective remedy along side enforcement. the proposed penalties are ludicrous—an extension of terms that they have already violated is hardly a punishment. Fiduciary penalties must be applied, as well as structural ones. Also, the solutions proposed for "competition" are heavily dependent upon Original Equipment Manufacturers for implementation—the same OEMs who are partners and part of Microsoft's business plans (Such as Dell and Compaq).

In sum, this settlement is wholly inadequate, and should be rejected and the DOJ and the States should be directed to follow the rulings of the Circuit Court and lower courts when crafting a settlement, instead of ignoring the findings of fact and law, and currying favor with an unrepentant lawbreaking monopolist.

Subject: Microsoft Settlement

I wish to comment on the proposed Microsoft Settlement.

Microsoft should not receive just a slap on the wrist. This company made billions of dollars through illegal acts. Unless the penalties are greater than their illegally gotten profits, large monopolistic corporations will see the courts and the antitrust laws as just another tool to earn money.

If the final outcome of the settlement allows Microsoft to retain even a single dollar earned through illegal activities, then the court system could be seen as partnering with the monopoly in order to allow these activities to remain profitable. Don't put on a show, don't claim false or hollow victories. Send a message, teach a lesson, punish the guilty.

Subject: Microsoft Settlement
Renta B. Hesse,

Since the beginning of this most recent case against Microsofts antitrust actions, I have watched and read with interest reports and documents which have been made available to the public. I have read the findings of fact, and the various proposed final judgements, in addition to the many other documents which have been published or released by the courts. I have considered these documents against my own personal and professional experiences with Microsoft and the rest of the technical sector. It is, after consideration of all of the above, my decided and educated opinion that of all of the PFJ's offered to the court, none of them will entirely do justice to the crimes that Microsoft has committed. Nor will any of the PFJ's remedy the situation by creating a fair and level playing field for real competition against Microsoft.

Having said that, of the options being presented to the court, the PFJ being presented by the nine dissenting states seems the best place to start. Also deserving consideration is how to protect competitors who implement software applications and operating systems which are compatible with Microsofts current and previous offerings. This point is keenly important as Microsoft has a proven track record of protecting its monopoly through aggressive actions designed specifically to root out and destroy the marketplace in which potential competitors do business. I feel this matter needs specific consideration so as to allow competition to develop and thrive without reducing potential competitors to welfare recipients dependent on entitlements granted to them by the court.

The effect of this decision and final judgement should not be to give competition a one time "shot in the arm" but to create a lasting and level playing field which would allow competition to come about naturally and to prevent Microsoft from taking predatory and unlawful actions to protect their monopoly and destroy competition before it takes root.

Thank you for your time.

From: Grozdits Gregory G 1stLt AFRL/IFGD
To: "microsoft.atr(a)usdoj.gov"
Date: 1/23/02 10:18am
Subject: concern with the current motion of the suit

Good day,

First let me point out that these comments are, of course, in no way an official representation of Department of the Air Force doctrine or opinion. With the frequent travel involved in my career, this is the first time I've had internet access and time to write about my thoughts.

Every time I've read recent comments about the DOJ's case against MicroSoft I've been disheartened. Most of what I have to say, I hope, will be said by others with better

experience in the law and more concern for economics.

My experience with Microsoft has led me to believe that Microsoft employees are highly intelligent, extremely motivated and very foresighted. They design a decent product, but the company itself has become so overpowering that it is hurting the US and her technological development.

One example of their malfeasance is their listing of the Dynamic Linked Libraries required for internet connections in their list of files to be removed when uninstalling Internet Explorer. I was very dismayed when the whole system that I wrote, while trying to use only Java to keep the software platform independent, broke simply because I removed Internet Explorer at the request of my Security Officer.

Developing code for a client/server project that was to be independent of Operating System, and which I tried to steer clear of OS specific calls, you can imagine my frustration. On the other hand, it was a brilliant business move.

We all know the effects that Microsoft had on Netscape and Corel's WordPerfect. Still among the die-hard researchers that I work with at various institutions from MIT to Sandia, most have a copy of Word-Perfect that we use for serious correspondence (using LaTeX for photographic ready work), only using a copy of MS Word to read the documents that are sent out by various agencies. I wish that all of them had time to share their feeling on the innovation stifled by the Microsoft corporation. A second example I have is of a friend doing what I thought to be quality speech recognition research. MS approached him to back his research, with the condition that he couldn't publish without their approval. Though it would have been interesting to speak with a lawyer about their offer; that offer was immediately untenable.

I apologize that I did not have time to argue more cogently, but my life is kept quite busy these days. My summary is that I have seen MS move to stifle competition in a way that I hope to practice as a member of the military against those who would stand against my country. However, I can't imagine that such use of force is fair or just in the world of business. We keep America safe because it allows those with new ideas to grow. I've heard of a few problems that hurts those I work with:

A simulator that veers uncontrollably because MS NT crashes the idea to hand Marine's Windows CE forward fire control units that have frequent fatal execution faults when interfacing with the man-pack radios, because MS wouldn't provide the code for their OS and the current DoD mandate is to use as much commercial off the shelf software as possible I believe that our country have been held back by the practices of MS. The technology that I've seen as a member of the Air Force Research Laboratory has some amazing applications, but most of those that run on MS are effete in some way because of their OS. Other OS's have a plethora of capabilities, but since the procurement process dictates using COTS and "Current civilian practices," we have weakened our defense. That's why we have

the DOJ and it's anti-trust division. I wish you the best in your arduous task. In my opinion, MS needs to be reined in. Less of a monopoly on software would make a market that had more innovation and I see benefit in that because it helps me do my job.

Thank you for your time,

Lt. Greg Grozdits

Platform Connectivity Branch DSN: 785-4947 x3402 Information Directorate A/C EC-135E 60-0372 Air Force Research Laboratory

Subject: Microsoft Settlement

Hi,

I am writing to tell you that I disagree with the Microsoft settlement terms.

I believe that the Proposed Final Judgement in United States vs. Microsoft is shortsighted and overly broad in many of the limitations set for Microsoft. Microsoft has been known for it's "Embrace and Extend" philosophy and some of the clauses in the judgement will allow them to do that again.

The proposed judgement applies to "Windows", however it does not define products that Microsoft is developing that may extend their monopoly such as Windows CE, Pocket PC, or their X-Box platform.

Also the settlement states that it requires API documentation however competitors are not allowed to use it to help make their operating systems compatible with Windows.

These clauses just show how loopholes have been created within the settlement that allows Microsoft to escape its grasps with technicalities. To level the playing field with their competitors, Microsoft should be required to publish a complete documentation of all their Windows (*and related products) API's. This does not allow people to steal their technology but to *interface* into it so they can develop products for Windows. What is going to stop them from having API's that have been performance-crippled and API's that only they use which aren't?

Another suggestion mentioned by the GNU organization is allowing them to only use patents for defense. Even if they are allowed to release specifications on their products, what is going to keep them from going after companies for developing things remotely like their products. Right now Embrace & Extend has kept them ahead but if they are not allowed to use this tactic against competitors, what's going to stop them from suing them?

One last comment... It seems that section III(J)(2) contains statements that are pinned against not-for-profit organizations. According to that section it isn't necessary for them to describe, license, document API's and protocols affecting authentication or authorization to companies that don't meet Microsoft's standards as a business. I don't understand how Microsoft is able to

determine that criteria... It appears that their own standards of running a business counter that of the U.S. government's.

They seem to constantly be saying that Linux is a threat to them as well as Open Source projects in general, this allows them to not give their API's for authentication away to a competitor.

This mail may not mean much but hopefully someone will understand just as Judge Thomas Penfield Jackson did, that Microsoft interested in their own best interests, not the public's. The company has been permitted to stifle innovation and contribute to competitors demise.

Thank you for your time.

Sincerely,

Ed Saipetch

Subject: Microsoft Settlement.

As a computer user and owner of a small business, I believe Microsoft should not be allowed to supply software to public schools as a means of settlement. This would obviously proliferate their monopoly, and further stifle competition in the computer OS market.

There monopoly causes problems for my business and me personally. Because of the Microsoft monopoly, there is a lack of consideration for other operating software and platforms. Security holes, breaches of computers can all be attributed to the proliferation of Microsofts operating system.

If a software monopoly can thrive in a digital age, then there will be more digital attacks. Because of Microsofts monopoly, a single computer user can literally shut down the entire internet with viruses aimed at one operating system.

Their gateways within the Internet specifically the Microsoft exchange hinders sending email attachments. Further more, they have been able to proliferate their Operating System by NOT shutting down software piracy. If the company was willing to stop piracy as they say, then there OS would not be able to become a the monopoly they seek.

Piracy will only become an issue once they have 100% market share and control of all gateways and access to the internet not allowing others access. Once 100% market saturation occurs, they can shift to a business model that requires users to pay for their own data by locking out users who do not wish to subscribe and upgrade to their Operating System.

If the Justice Department is informed as they think, then the break up of Microsoft as Jackson had determined is the right solution.

To: Microsoft ATR

Date: 1/23/02 10:18am

Subject: Microsoft Settlement

Dear Sirs,

This message is intended to convey my concerns with the proposed settlement between the US and Microsoft. As a

computer professional of 30 years experience I am simply appalled by this proposed agreement. I have watched Microsoft stomp on their competition with abandon through that period and to see a party found guilty by the courts of the United States be allowed to essentially walk free is disheartening.

I find the proposed settlement to be an inadequate penalty for the depths of injustice foisted on the American populace by Microsoft as proven by the findings of fact during the trial. First, the monetary penalties for a company are minimal and frankly non-existent.

Second, the restraint of their use of their monopoly power is inadequate, you might as well have told them to "go and sin again".

Third, there is no provision to restrain Microsoft from targeting the Open Source Software community for elimination using the same techniques used against Novell, Netscape and others. There are MANY other concerns but I'm sure most have been brought to light by others.

In my opinion, this proposed agreement is bad law, bad for the American consumer and pretty well written by Microsoft to their own ends.

Best Regards,

Please revise the proposed Microsoft settlement to be harder on Microsoft. As it stands, this settlement will not succeed in bringing equity to the marketplace.

Microsoft does not deserve any special leniency. Please consider this email as a strong vote against Microsoft. They have flaunted the law long enough. Don't let them get away with their behavior any longer.

P.S. Microsoft has faked grassroots movements in the past in order to sway opinion to serve their cause, please seriously consider this possibility when reading the letters you receive.

MTC-00015913

From: Mark Hessman
To: Microsoft ATR
Date: 1/23/02 10:27am
Subject: Microsoft Settlement

I am strongly against the proposed settlement. I have witnessed Microsoft's anticompetitive tendencies firsthand (they blatantly absorbed business and technical ideas from a project my former company—now defunct—demo'ed to them in hopes of enlisting their support) and I suspect that the settlement will actually help them rather than hurt them. For one thing, the language that forces Microsoft to share their APIs and the Windows-desktop real estate includes qualifiers limiting this provision to companies of a certain size, or with a viable business model—language that Microsoft is probably gleeful about, as it gives them license to ignore the grassroots, open-source projects that are currently the only real challenge to its PC monopolies.

The civil suit remedy—Microsoft donating millions in computers and software to US schools—represents, if anything, a Br'er Rabbit ("oh please don't throw me in the briar patch") type of "remedy". The education market is one which Microsoft has had the most difficulties in establishing its monopoly; it's also one of the most potentially promising, as kids who learn to use computers via Microsoft products will be a major source of revenue for Microsoft in the future and the present (as their parents, and later they, buy home machines that they're comfortable using). Further, copies of existing software cost Microsoft close to nothing, so this doesn't even function as a fine.

Also, the remedy says nothing restricting Microsoft's practices in markets other than the OS and the browser. Windows XP finds Microsoft tying more products to the operating system and actively discouraging the use of competitors (permitting the "ripping" of music to data files at high fidelity only if the destination format is Microsoft's own). And finally, the three-member panel tasked to confirm that Microsoft is complying with the remedy has very little power. If Microsoft is not complying, there's nothing they can do.

I remember when Microsoft was one company among many, when Windows was one of several graphical user environments on the market and Office was one of several office suites. The pace of innovation then—only a decade ago—was far faster than it is now, despite the fact that raw computer power has been increasing equally fast (or even faster) recently. There has been some truly innovative work being done on the fringes of the industry (look at BeOS for example)—and the reason that these ideas remain on the fringes is Microsoft.

Subject: Microsoft Settlement

I wish to take advantage of the Tunney Act provision for public comment regarding the Microsoft case.

I am a systems programmer/analyst in Kansas City, Missouri, working with Java, Oracle, and a wide range of open source database products in a variety of UNIX environments, ranging from GNU/Linux to Solaris to BSD and Mac OS X. Since I work in a midwestern market significantly dominated by Microsoft technologies, I am regularly impacted by Microsoft, their products, and their business practices. Based on my experience in the Microsoft-dominated Kansas City market, it is my position that the proposed final judgment falls far short of a remedy to the Microsoft antitrust problem. For many reasons, it is important that Microsoft's behavior be controlled more adequately than is provided in the proposed final judgment. Microsoft must not be allowed to engage in anticompetitive licensing practices with enterprise customers.

—Microsoft must not be allowed to engage in anticompetitive licensing practices with US governmental agencies or other non-profit organizations.

—Microsoft must not be allowed to engage in anticompetitive licensing practices with individual consumers.

—Microsoft must be required to publish the specifications of any new non-standard networking protocols they plan to incorporate into their operating systems.

—Microsoft must be required to publish the specifications of their common file formats. i.e. Word, Excel, etc.

—Microsoft must be required to comply with published standards for file formats such as HTML when labeling files as files of that standard file type.

—Microsoft must be forbidden from "bundling" into their operating systems any functionality currently provided by third-party software packages. i.e. digital photography, security, streaming media, etc.

—Microsoft must not be allowed to use any antitrust remedy to strengthen their monopolistic position. For example, the free distribution of their product, or of hardware intended to use their product, should not be part of any final settlement.

—License agreements between Microsoft and end users which serve anticompetitive purposes must be terminated and replaced with more appropriate licenses.

—No US government agency should accept advertising or "free" giveaway displays unless the interests of competing parties are available and displayed in an equitable manner. For example, the current XP displays in US Post Offices are outrageous, and should be removed.

Thank-you for your consideration of this matter.

The Microsoft Settlement is a travesty! To allow a corporation that has so quintessentially used abusive and illegal practices in the software market would be a sin. The Product that Microsoft has provided in its nearly death grip hold on the market share for home Operating Systems is disgustingly buggy and broken. If a sufficient penalty is not placed on Microsoft than alternative Operating Systems that are more secure such as Linux will not be allowed to flourish.

Subject: Microsoft Settlement

The proposed judgment in the Microsoft antitrust case is flawed. Microsoft has been found guilty of using anti-competitive behaviors to advance its monopoly and should be dealt with appropriately. The settlement as proposed does not deal with Microsoft's past behavior and will not curtail future aggressive monopolistic behavior.

Though I believe the settlement is flawed in other areas, I will focus my comments on the requirements that Microsoft document its middleware. My main argument with this requirement is that file formats used by Microsoft remain undocumented. Microsoft has a monopoly in operating systems and office suites. By forcing Microsoft to document file formats, there will be more competition in the marketplace. There exist products which compete with Microsoft Office, these include Sun's StarOffice, AbiWord, and Gnome's Gnumeric. These products can not truly compete until they are able to exchange documents with Microsoft applications. As the judgment stands Microsoft can modify file formats with every version release (as they have in the past) forcing competitors to continuously play the catch-up game.

Now is the time to level the playing field. The court has the ability to force Microsoft to make reparations for its past monopolistic behavior. The nine state's Attorneys General have done a disservice to the people of America, and the software companies that have been harmed by Microsoft's behavior in the past and those that will be harmed by Microsoft's behavior in the future. Please revise the settlement to truly change Microsoft's aggressive monopolistic practices.

Thank you,
d.

From: Jon C
To: Microsoft ATR
Date: 1/23/02 10:19am
Subject: Microsoft Settlement

I feel that the Proposed Final Judgement is not restrictive enough. There are too many loop holes that fail to prohibit Anticompetitive practices against OEMs, large user groups (Enterprises), and Windows-compatible competing operating

systems. As one small example of the many missing pieces I propose an amendment:

III. A. 2. shipping a Personal Computer that (a) includes both a Windows Operating System Product and a non-Microsoft Operating System, or (b) will boot with more than one Operating System, OR (C) INCLUDES A NON-MICROSOFT OPERATING SYSTEM BUT NO WINDOWS OPERATING SYSTEM PRODUCT; or The amendment in all CAPS would prohibit anticompetitive practices against OEMs who distribute non-Microsoft operating systems.

The Proposed Final Judgement is merely a slap on the wrist to Microsoft and allows them many avenues to continue their illegal Anticompetitive practices. Microsoft is now a convicted Monopolist and strict rules must be placed on them to prohibit any further Monopolistic/Anticompetitive practices.

Thank you,
Jonathan Covin

Subject: Microsoft Settlement

My name is Chris Sexton. I am a US resident. I am not employed by Microsoft or any of its competition. I want to independantly add my voice on the Microsoft Antitrust settlement decision. I think that the court decision should comprise a suitable punishment for Microsoft's demonstrated past and continuing behaviour, and serve as an effective deterrent against continued anti-trust abuses by the company. It should be harsh, reflective of the abandonment of law that Microsoft has demonstrated.

According to the Court of Appeals ruling, "a remedies decree in an antitrust case must seek to "unfetter a market from anticompetitive conduct", to "terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future" (section V.D., p. 99). I believe in free and fair trade. If Microsoft truly had a superior product offering that they offered to the public via competition alone, I would hope for market domination.

Yet Microsoft has not only ignored the rules of fair trade, when they are asked to provide a settlement on the issue, they offer up a farce that extends their monopoly, while preying on the idea that they are enabling and assisting the disenfranchised. Suddenly the government is a bad guy when they deny Microsoft their custom, swanky "briar patch". Though I am often critical and even cynical when it comes to the government, I am hopeful that the court will see fit to come down hard on Microsoft. The implications of the computer and the internet have already changed our lives, and will do so in increasingly bigger ways in the future. To allow one company to control this through its illegal behaviour is simply not acceptable.

The computer industry is one which changes daily-innovations and new technology are ever forthcoming at a rate which is nearly incomprehensible compared

to a legal proceeding. Microsoft would further line its coffers with its unlawful practices while delaying the outcome of this case, no matter what.

There are many problems with the Proposed Final Judgement in its current form. In regards to competition, the document is lacking in many fundamental areas. These areas are nothing unique to the Microsoft situation, it is the way the rest of the computer industry operates and interacts. Some of these problems are:

1. The PFJ fails to require advance notice of technical requirements. Section III.H.3. of the PFJ requires vendors of competing middleware to meet "reasonable technical requirements" seven months before new releases of Windows, yet it does not require Microsoft to disclose those requirements in advance. This allows Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs. The PFJ needs to require Microsoft to release this information well in advance. Again, this is nothing new to the computer industry, but based on Microsoft's past and continuing behaviour, they need to be required by law to make this happen.

2. API documentation is released too late to help ISVs. Section III.D. of the PFJ requires Microsoft to release via MSDN or similar means the documentation for the APIs used by Microsoft Middleware Products to interoperate with Windows; release would be required at the time of the final beta test of the covered middleware, and whenever a new version of Windows is sent to 150,000 beta testers. But this information would almost certainly not be released in time for competing middleware vendors to adapt their products to meet the requirements of section III.H.3, which states that competing middleware can be locked out if it fails to meet unspecified technical requirements seven months before the final beta test of a new version of Windows.

3. Many important APIs would remain undocumented. The PFJ's overly narrow definitions of "Microsoft Middleware Product" and "API" means that Section III.D.'s requirement to release information about Windows interfaces would not cover many important interfaces. Microsoft needs to be forced to document fully all aspects of all API's necessary for vendors to create effective products for the Windows platform.

4. Unreasonable Restrictions are Placed on the Use of the Released Documentation.

ISVs writing competing operating systems as outlined in Findings of Fact (52) sometimes have difficulty understanding various undocumented Windows APIs. The information released under section III.D. of the PFJ would aid those ISVs—except that the PFJ disallows this use of the information. Worse yet, to avoid running afoul of the PFJ, ISVs might need to divide up their engineers into two groups: those who refer to MSDN and work on Windows-only applications; and those who cannot refer to MSDN because they work on applications which also run on non-Microsoft operating systems. This would constitute retaliation against ISVs who support competing operating systems.

5. File Formats Remain Undocumented. No part of the PFJ obligates Microsoft to release

any information about file formats, even though undocumented Microsoft file formats form part of the Applications Barrier to Entry (see "Findings of Fact" 20 and 39). This is a critical piece of one of the technical barriers that Microsoft has erected against competition. File formats lie very near the heart of OS operations, and interaction with the kernel and OS structure. This documentation is critical to developers hoping to create software that is innovative and effective.

6. Patents covering the Windows APIs remain undisclosed. Section III.I of the PFJ requires Microsoft to offer to license certain intellectual property rights, but it does nothing to require Microsoft to clearly announce which of its many software patents protect the Windows APIs (perhaps in the style proposed by the W3C; see <http://www.w3.org/TR/2001/WD-patent-policy-20010816/#sec-disclosure>). This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users and developers. While it would seem to hurt Microsoft, in fact, it keeps the Microsoft monopoly intact through Fear, Uncertainty and Doubt. The PFJ, by allowing this unclear legal situation to continue, is inhibiting the market acceptance of competing operating systems.

Microsoft has an army of lawyers that will seek to narrowly define every aspect of any proposed judgement in such a way that it becomes academic for Microsoft to step around the bounds of the settlement. They have demonstrated this behaviour before. I ask that the court educate itself on the terms and definitions, and strive to discourage loopholes based on interpretation of the language. Any settlement needs to have binding power that goes beyond the current Microsoft product offering, and address the behaviour of the company.

Thomas Reilly, the Attorney General for Massachusetts, said this: "The case against Microsoft is the most important antitrust action of our generation and one that will determine the future of the new economy. Because of its landmark importance, this case should not end without a remedy that restores competition."

Please make a judgement that is effective and enforceable. The computer and the internet have fundamentally changed our lives. To allow one company, through unlawful activities, dictate where this technology will take us, is simply not acceptable. These directions need to be decided by market forces. Please take heed of the many pitfalls that Microsoft will place for its competition, and the desire of this company to avoid any sort of compliance with existing laws.

Subject: Microsoft Settlement

I have read about the proposed settlement with Microsoft, and I do not think that it will be effective in protecting the public against future anti-competitive behavior by Microsoft.

I hold a bachelor's degree in Computer Science and Engineering from MIT, and have 20 years of experience as a software engineer. I'd like to comment on just two of problems I see in the PFJ. I'm aware of many more problems than these, but since this is not my primary line of work, I can only afford the time to respond to these items. I don't claim that these are the two most important problems—they are just two which have affected me professionally in the past. I trust that you'll receive comments from other people on the other issues.

The PFJ should require Microsoft to disclose file formats. A huge barrier to the acceptance of GNU/Linux based systems as competitors to Windows on the desktop has been the lack of a word processor compatible with Microsoft Word. In a related area, Microsoft should be required to disclose network protocols. One can see how documented protocols directly aid competition by noting that the SMB file sharing protocol was documented (at least to some extent) by Microsoft, and there is now a thriving market for file servers that can be used by Windows systems but that are implemented on other platforms. These file servers offer different features from any Microsoft product, and the market has shown that there is a demand for them.

To make this sort of requirement meaningful, there must be a way to penalize Microsoft if it can be shown that essential documentation is missing, camouflaged or delayed.

Another issue is that Microsoft should never be allowed to specify in an End User License Agreement that a program can only be used on a Microsoft operating system. In addition, Microsoft should not be allowed to restrict a third party who uses Microsoft program development tools from being able to distribute the resulting executables to users of other operating systems. In practice, this means that if Microsoft allows a third party user of one of its development tools to redistribute a DLL at all, then that user should be allowed to redistribute the DLL to anyone.

Subject: Microsoft (fwd)

To whom it may concern,

Based on the information I have read regarding the Microsoft antitrust trial, I believe that the current proposed remedy negotiated by the Justice Department is nothing short of a givaway.

I am not familiar with the political motives behind the settlement, however it appeared to change 180 degrees overnight. First, the department of justice went aggressively against Microsoft for its anticompetitive practices, then changed suddenly to take the break up remedy off the table and propose the current settlement. The settlement now before the court is nothing more than a slap on the wrist. This toothless settlement will do nothing to stop Microsoft from changing its behavior, as it is filled with too many loopholes and grey areas granting Microsoft too much power.

I find it ironic that Microsoft can constantly sing the praises of innovation and competition in its public and political relations, while at the same time, they unfairly leverage their operating system in an effort to extend marketshare. We've seen this behavior crush competition such as Netscape, Novell, Word Perfect, etc. Microsoft must be stopped before other markets fall prey to .NET and newly released Windows XP. I for one, want to use an operating system, or browser based on its technical merit, not the companies ability to abuse its market power.

I am fully behind the work in the ongoing trial against Microsoft. I feel that a break-up of the company would be a fair and just remedy which would restore competition to the marketplace. I have seen settlements with Microsoft in the past that led to little or no change in its corporate behavior. I kindly ask that if a settlement is reached, it be one that can guarantee a stop to Microsofts abuse of its monopoly position.

In sending this e-mail, I ask that it be kept anonymous.

Thanks in advance,
Jeremy Garff

From: Joseph F. Lingeitch
To: Microsoft ATR
Date: 1/23/02 10:20am
Subject: Microsoft Settlement

I am writing to comment on the proposed judgment against Microsoft for their illegal conduct in abusing their monopoly in desktop operating systems. In summary, I think the penalties are excessively light and furthermore they do nothing to punish Microsoft for it's illegal behavior or correct the damages that have occurred. The settlement is unacceptable because it is far too lenient on Microsoft.

My main frustration with Microsoft (I own Windows 95 and MS Office 97 software) is

their unwillingness to accurately document the details of their file formats for their office products and network protocols for sharing files. Their reason for doing so is to strengthen their monopoly status and prohibit competitors from producing products that challenge Microsoft market share.

The power of network computers is in their ability to exchange meaningful information in a heterogeneous environment. Microsoft does not make sufficient allowances in its software for intercommunication between computers other than those running Microsoft Operating system. Examples of the close protocols with inhibit this connectivity are the closed Microsoft Word file formats and the Microsoft's poorly documented NetBui protocol implementation. I urge you to strengthen the penalties against Microsoft to be commensurate with their violation of the law and to open up the desktop operating system market to competition. We would all benefit from the increased competition.

From: Ralph Stevens
To: Microsoft ATR
Date: 1/23/02 10:20am
Subject: Microsoft Settlement
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I believe that the proposed settlement as written does not fully redress the actions committed by Microsoft in the past. The proposed settlement does not adequately address their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their illegal acts and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an settlement just for sake of reaching a settlement. The settlement much provide for redress of past abuses, and incentive to prevent future abuses. A wrong that is not corrected is compounded.

Subject: Microsoft Settlement

I am concerned that the remediation proposed by the Justice Department does not go far enough to end the monopoly Microsoft enjoys in the software industry. Microsoft has a tendency to take an open protocol, such as Kerberos, and "extend" it in such a way as to make competing products unable to use the now closed protocol. For reference, this article appeared on Slasdot.org on March 2, 2000: <http://slashdot.org/article.pl?sid=00/03/02/0958226>

This is a classic case of Microsoft "racing, extending, & extinguishing" and open protocol to destroy competition. If Microsoft's API (or Application Programming Interface) were made public, this would go a long way toward ending their strangle hold on the market place. We would then have an opportunity for a truly competitive product to challenge Microsoft's dominance.

Competition in the marketplace drives innovation. Microsoft's "release often, patch often" business model would surely fail in the face of competition from nimble companies releasing superior, more secure products. The American consumer wins.

Date: 1/23/02 10:21am
Subject: Microsoft Settlement

I feel that the DoJ settlement with Microsoft is a bad idea. They have proven that they will not abide by restrictions placed on them (look at prior court cases). There needs to be a non-Microsoft enforcement mechanism in place for whatever is reached. We need to make sure that it has teeth. A company with \$40 billion in the bank will not take small fines seriously.

I find section III.J of the settlement particularly onerous. This leaves loopholes that Microsoft will use to make sure that their APIs are still unknown. To correct this problem, Microsoft should be required to document all APIs that interact with any external software in a timely manner prior to Microsoft's release of them. This should go further to the office market where Microsoft has effectively used obfuscated file formats to stop compatibility with 3rd party software.

We have let Microsoft crush the competition and we are now paying the price. If you want to use most computer programs, there is only a windows version. If you want to write some type of document, most people will only accept an office document. The current remedies do nothing to help stem this tide. As the government you are obliged to help right this. What we currently have negotiated does not.

Subject: Microsoft Settlement

Hi,
I would like to go on the record as opposing the Proposed Final Judgement in the US v Microsoft case.

I don't think that the Proposed Final Judgement will do anything to foster competition in the marketplace as there are too many loopholes (specifically, the "security exemption" in disclosing APIs—this is not specifically defined, and is therefore open to lengthy court cases for interpretation). Put this together with the fact that the proposed remedies will expire in 5 years (with a possible 2 year extension), and it would be easy for Microsoft to simply wait out the term of punishment and then continue it's illegal and anticompetitive practices. (And with \$36 billion in the bank, Microsoft definitely has the cash to survive that long). Once again, I would like to voice my strong opposition to this Proposed Final Judgement.

Thank you,
Jon

Subject: Microsoft Settlement

To whom it may concern:
I am taking this time to do what I believe is my duty in this matter by voicing my opinion on the matter of the Microsoft antitrust case. It is absolutely unthinkable that an entity with a record of anticompetitive behavior as Microsoft has should be allowed to essentially walk free to continue to play dictator to the computing world. MS must be punished for their actions, and the current settlement is not the way to do it. If MS is allowed to go through with their "generous" offer of donating 1 billion in hardware and software to US schools, they will, in fact, be playing the government and the citizens of the US as fools. Such an action would make hardly a dent in their armor. Yet it would make that armor even stronger by giving them a foothold in the one market that they have yet to dominate. Apple computer, one of MS' chief rivals, has long kept itself afloat by holding on to a tenuous lead in the education market. Allowing Microsoft to be punished by giving to US schools would, in effect, give them dominance in that market as well.

So, you see, this so called punishment, is actually a thinly-veiled attempt by MS to further their monopoly. They must not be allowed to do this. We rely on our government to protect us from those who would oppress us. Do not fail us here.

Sincerely,
Richard Dwight Porcher, III

Subject: Settlement

Dear Sirs;
I would like to briefly state my opinion about the Microsoft Anti-Trust settlement.

The remedies that have been proposed will have no effect on the behavior of this company. The history of their disregard for

previous consent orders and decrees should make that clear. It should also be clear that they are using their monopoly position on desktop operating systems to aggressively pursue similar total dominance of other markets such as multimedia transmitted over the Internet ("Windows Media Player"), security infrastructures ("Passport") and so on.

It may make sense for their to be only one maker of desktop operating systems. If so, then that company should be effectively analyzed and regulated to ensure the needs of its customers (consumers and businesses) are being properly served, possibly in a manner like for public utilities. Judge Jackson's Findings of Fact and the ridiculous behavior of Microsoft in the trial (ie the videotape debacle, Gates' deposition) should make it clear that this is a company that needs to be aggressively reined in.

Sincerely,
John Holland

The lawsuit should never have been brought in the first place. It is only another scheme to pump funds to trail lawyers who will then payoff the cooperating AG's with campaign contributions. The only reason the settlement isn't acceptable to the AG's is that it will help the schools more than it will meet their original plan. If this sounds cynical—it is!

Regarding the case of the 9 States settlement with Microsoft I believe this is fair and needs to be settled. This entire fiasco over the last several years has cost the taxpayers far too much. It's time to settle and put those who think litigation is the American way in their place. Litigation only helps the lawyers and parasites who want to get a free ride. Prolonged litigation doesn't help the American economy or taxpayer. It's time to resolve and put this to an end.

Subject: Microsoft Settlement

The Microsoft settlement seems extremeley watered down to me. I have been using computers for nearly two decades now and never remember one companies products showing up on a OEM computer as much as Microsoft's. I would have liked to see the original settlement with the breakup of Microsoft into two separate companies take place.

Some not an intire list of grievences I have as a computer programer:

Not every win32 in documented. Microsoft programmers have access to system call the rest of the world doesn't have.

Registered File Types. On a brand new computer the mp3 extension is registered

with the Windows Media Player. Try explaining how to use some other product to listen to mp3s to a novice computer user.

Contracts Microsoft can force on OEM computer retailers. Some won't even sell Lynux on a computer because of this, let along another OS.

Ask a novice computer user to list any known OSs, or office suites. My guess is 90% won't even know that a choice exists. Let along ask them to open a file from a competing company.

Our country has been made great by competition, but also by having the government step in and restore balance when our choices have been taken away.

Thanks for reading,
Jeff Born

The settlement does not open up competition—it still allows Microsoft? to bully & exclude others from developing software that would give us—the consumer—choices. A mild example is their recent activity concerning a Linux (an operating system) application that would allow Linux users to run Windows? products within a Linux environment. The app is called Lindows and Microsoft's? reasoning is that the consumer would be "confused" between Windows? and Lindows! They have demanded & gotten the email list (including the messages—not just the addresses!) of anyone that wrote Lindows expressing an interest in the product! This is a mild example of the type of behavior Microsoft? is known for within the industry (intimidation via legal suits etc. that many small companies simply cannot afford to fight!) & was supposedly being stopped. Please modify the settlement to make it clear to Microsoft? that competition is acceptable but being a bully is NOT!

Date: 1/23/02 10:23am
Subject: Microsoft antitrust case

To Whom It May Concern,

As a U.S. citizen and IT professional, I need to object in the strongest fashion to the proposed settlement with Microsoft. The company is a monopolist which shows no intention of ceasing its illegal behaviour, and the settlement does little to prevent Microsoft from engaging in this behaviour. If this settlement is allowed, it will just be a matter of time before Microsoft is brought up on antitrust charges again, forcing the U.S. to waste more of its taxpayers' money and time. Microsoft needs to be forced to comply with standards and cease monopolistic behaviour since they have no intention of voluntarily doing so. The settlement does not adequately address this aim.

Thank you for your time,
Michael Dunlap

I am addressing the people who find fault with Microsoft. If it were not for Bill Gates and his company Microsoft I would never have purchased a computer in the first place. Because of his genius and foresight to make the computer easy to use and understand I am now learning more and using the computer everyday. I plan to take a course at my local High School and try to get a job paying more than the minimum wage. I thought the American Way was to let the average citizen develop a product find a way to sell it and make a profit. I see the phone companies doing it the cable company has total control over us and PA and no-one is even bothering to look into their business. For instance a Walgreen just opened right down the street from and Eckerd Drug and that is called the American Way.

Stop Netscape and whoever else has a problem with Microsoft& Bill Gates moving ahead with his genius programs and ability to hire the right people to help the average person get ahead. Shame on those that would stop the American Dream.

MTC-00015955

From: Derek Martin
To: Microsoft ATR
Date: 1/23/02 10:23am
Subject: Microsoft Settlement

To whom it may concern,

The proposed settlement between the Department of Justice and Microsoft is not a good thing.

My name is Derek Martin. I am an electrical engineering Ph.D. student who will shortly be joining the corporate work force for an American semiconductor company. I use computers regularly (including Microsoft products and competitors, including but not limited to free software). I currently enjoy the environment of (some, though I would like to see more) competition among software vendors/design philosophies/market philosophies, etc.

The proposed settlement does not do enough to ensure that this type of competition can continue. Microsoft just has too much market share and unfortunately continues to unfairly leverage this fact to push out potential competition, by moving standards and computer usage paradigms away from situations that allow competition. Many people such as myself agree that the world is better off with Microsoft products AND Apple products AND Linux AND Solaris AND Internet Explorer AND Netscape AND Office AND Free Office equivalents than it will be if Microsoft gets their way and we have only Windows+Office+Internet Explorer with whatever other so-called "innovations" they want to force onto our computer and charge us lucratively for.

There is competition, now. I can use Linux (for now, until Microsoft "innovates" some new proprietary thing that I would *need* their software for, with competition being pushed out by designed incompatibilities with other Microsoft products). I could buy an Apple system (for now, until the chip makers decide not to produce PowerPC chips anymore because Microsoft has efficiently dominated the market, and decides to exhort computer makers to only sell their products on other platforms). These alternatives will soon disappear, in my opinion, if Microsofts previous actions which were found to violate Antitrust law, are effectively *encouraged* by applying weak, outdated, and otherwise ineffective remedies, as the current settlement proposal would do.

Regards,
Derek Martin

I am writing as a consumer taxpayer student and proud user of multiple Microsoft products. While I find many problems in the proposed settlement especially the creation of the independent Technical Committee (TC) and the dangerously high amount of power and resources given to it and the incentives given by the settlement to Microsoft s competitors to delay progress and innovation by filing multiple complaints and thus delay product launches I nevertheless support this settlement as the lesser of two evils the greater evil being continued harassment of Microsoft and the American consumer through further baseless and meritless litigation. Of course the preferred course of action is for the dropping of all action against Microsoft and the dismissal of any verdicts against it. Thank you very much.

MTC-00015959

From: Roger Cordes

Subject: Microsoft Settlement

As a shareholder of Microsoft corporation, I am conflicted in this anti-trust matter; however, I can not, in good conscience, allow my worries over stock prices to overshadow my sense of business ethics. Microsoft has proven, time and time again, that they will stoop to any business practice without regard to class, morality, or even law. They have stolen (if it were not for Apple Computer, Microsoft would have absolutely no product whatsoever), they have cheated (an online poll at ZDNet concerning consumer satisfaction with Microsoft products was shown to have skewed results, due to a suspiciously enormous number of votes coming in from Microsoft employees), and worst of all, they have boxed out the free market of the personal computer industry.

Article IV of the U.S. v. Microsoft: Court's Findings of Fact (<http://www.usdoj.gov/atr/cases/f3800/msjudge.htm>), concerning cross-platform Middleware architectures and Microsoft's utter distaste for any such business practice, is of particular interest to me. Microsoft has proceeded to seek out any and all sources of cross-platform product, then "made them an offer they couldn't refuse." Microsoft warned middleware manufacturers that if they did not abandon their cross-platform ways, Microsoft would be forced to punish them. Microsoft showed great interest in becoming the only platform available; this is just the type of behavior we needed this anti-trust case for.

Microsoft has clouded the minds of countless millions who have been duped into thinking that there is no viable alternative to Windows. And in the current market, that may be the case. However, we the people, of the United States, have at our fingertips the opportunity to change this. Let us not miss this chance.

From: Howard Abbey
To: Microsoft ATR
Date: 1/23/02 10:23am
Subject: Microsoft Settlement

Hello,

I believe the proposed settlement between the U.S. government and Microsoft is inadequate, inappropriate, and unacceptable.

If particular, I take issue with the settlement's failure to stop Microsoft from using many of the anti-competitive licenses (such as the Enterprise licenses). These effectively restrict companies from using both Microsoft and competing operating systems.

I also take great issue with the fact that the settlement does not cover the monopoly over document formats that Microsoft currently enjoys. The Word file format, and all other formats of programs where Microsoft has greater than 90% market share, should be released to the public in a timely manner. As a consumer, I have tried to choose products that best fit my requirements. However, when dealing with others during my current job search, I am required to give resumes in Word format. Because of the ever changing and highly secretive format, I am forced to abandon my chosen software on my own system, and use Microsoft Word at the local library. If the Word format was public and an open standard, the software I use could support it, and this would be remedied.

This agreement is not in the public interest, and should be discarded or reworked.

Thanks for counting my opinion,
Howard Abbey

My comments will be brief. I strongly support the current settlement with Microsoft and urge Judge Kotely to bring a close to this litigation. The settlement is in the public interest which may be thought of as action that will bring about a greater public good for society. In my view the settlement achieves this noble goal. To drag the settlement out longer cannot help our economy or serve to advance innovation particularly during a time of international crisis and economic recession. If the settlement is not brought to a close the only winners will be attorneys and a few states that want more money more concessions and whose preference appears to be to punish Microsoft beyond what anyone could rationally perceive as fair. Judge Kotely has a fair settlement to approve. I hope to see this chapter in American history brought to a close and let the courts and nation move on to the more important and threatening affairs that we currently face. There can be little doubt that nation faces far more threatening matters than Microsoft.

Subject: Microsoft Settlement

Renata B. Hesse
Antitrust Division
U.S. Department of Justice
I am writing to express my concern for the Department of Justice proposed settlement with Microsoft corporation. I believe the settlement contains overly narrow definitions of Microsoft products in terms of their restrictions. It leaves out programs like Microsoft Outlook that are ingrained in many corporations. The definitions of API and Middleware leave lots of wriggle room for Microsoft in terms of what they must make available to competitors. I realize it is difficult to pin these things down in the ever changing world of software but I think that more must be done to put some teeth into these rules.

Microsoft has shown a history of not fully documenting API's making it more difficult

for programmers to write software and system managers to maintain it. An effort should be made to ensure there is documentation released for products in a timely manner.

Microsoft's new primary goal of security is a good one. However, if they use it to try to exclude software from third parties they will be locking down their hold on the desktop even further. I definitely do not want to discourage an effort to make systems more secure but Microsoft must still make an effort to share information so that creating drivers for hardware and writing software that runs well with Windows is not so difficult. I believe it is in Microsoft's best interest to pursue the above issues and I hope there would not have to be much enforcement of the settlement. They have achieved a position through illegal business practices that warrants steps be taken to prevent them from further damaging other businesses.

Thank you,

To whom it may concern:
It appears that the Proposed Final Judgment allows significant anticompetitive practices to continue, and would delay the emergence of competing Windows-compatible operating systems. My opinion is that the Proposed Final Judgment is not in the public interest, and should not be adopted as it presently stands.

1. The PFJ doesn't consider the issue of Windows-compatible competing operating systems.
2. The PFJ contains misleading and narrow definitions and provisions.
3. The PFJ fails to prohibit anticompetitive license terms currently used by Microsoft.

4. The PFJ as written seems to lack an effective enforcement mechanism. You need to toughen it up quite a bit. Examine any proposals from Microsoft with an eye toward how their proposal would restrict the effect of the judgment to smaller contexts and fewer products, and then adjust the language to broaden the effect to more (and future) products and larger contexts.

Dear Sir or Madam:

I'm writing to express my disagreement with the terms of the antitrust settlement with Microsoft. The issue for me is that the settlement, while superficially inflicting a penalty on Microsoft, does nothing to change the firm's behavior from this point onward. In fact, donations of software to schools only help Microsoft to cement its dominance of the desktop operating system market.

Rather than focusing on financial penalties for Microsoft's past activities, the settlement should require the firm to either adopt open standards or publish detailed specifications of its own standards so that any skilled individual can understand them. This would allow interoperability between Microsoft's Windows and Office software and competing products, such as UNIX-based operating systems and Sun's StarOffice. Creating interoperability is a necessary condition for restoring competition in the software industry.

Thank you for your attention to this matter.
Sincerely,
David Geffen

We believe that the government and all the state attorney generals should stop any further action against this great American company. Microsoft is too important a company for the economic health of the entire country the inordinate amount of time and money required to defend itself could have been better used for the development of even better products that benefit the national economy in general and the consumer and the stockholders in particular. Antitrust laws were not enacted to protect other companies let them compete in the free economic arena by offering products whose quality would make them acceptable to the consumer. If they lost in that arena it was because the consumer preferred Microsoft products not theirs! The USA DOJ should not come to the defense of any sore loser who comes to them crying uncle Sam!

Under the Tunney Act I wish to submit my comments in regards to the currently purposed Microsoft settlement.
 There are many problems with this settlement and I cannot possibly discuss them all with any proper length. I would like to focus on one particular item.

The currently proposed settlement with Microsoft does not prevent Microsoft from continuing the practice of intentional incompatibilities. Microsoft has historically used this practice to protect and extend its monopoly. This behavior was set forth in the 1996 Caldera vs Microsoft lawsuit where the judge ruled in the case that "Caldera had presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft."

Microsoft continues this practice today by making changes to its SMB/CIFS networking protocols to prevent any non-Microsoft OS to be able to interoperate with Windows 2000. In fact, section III(J)(2) of the proposed final settlement actually seems to give Microsoft the continued right to hide and modify these communication protocols.

The proposed final settlement does nothing to prohibit Microsoft from continuing this practice of constantly creating incompatibilities to enhance the Application Barrier of Entry.

To whom it may concern—
 The proposed Microsoft settlement is unacceptable in its current form.

The settlement does not adequately penalize Microsoft for its past infringements of the law. For many years OEMs have been under control of Microsoft, and simply "formalizing" this law in a document is not enough. Microsoft has been declared guilty of past wrongs, and must now be held accountable.

Thank you for your time.

I am not a Microsoft stockholder and do not even use Internet Explorer very often but I support the Dept. of Justice settlement. The anti-trust suit against Microsoft was a politically motivated abuse of the law by Microsoft's competitors who attempted to use the DOJ to win what they could not win in the marketplace.

The proposed settlement preserves Microsoft's ability to continue to innovate. Microsoft has been largely responsible for making the world of computers accessible to the average person and should be encouraged instead of being persecuted by the US government. The nine States that are resisting this settlement including Massachusetts are performing a legalized extortion and deserve to be condemned.

Sincerely

Anthony Conte

Subject: Microsoft Settlement

Greetings and thank you for reading my comments.

As a citizen who has been burned again and again by Microsoft's anti-competitive practices, I feel the Proposed Final Judgement is inadequate in addressing Microsoft's egregious behavior.

Both in my former capacity as a local government computer systems manager and as an individual citizen, I have been forced to spend taxpayer money and my own money to buy Windows licenses when Windows was not even a product my department or I required or wanted. I have seen applications which used to function on competing operating systems, such as Microsoft Office on OS/2, drop support. I have seen important applications software such as Internet Explorer weaseled into dominance by Microsoft using their desktop OS monopoly, and then be deliberately withheld from a competing OS like Linux, even though it is made available for non-threatening Solaris, which is so very compatible with Linux that many Linux applications run unmodified on it. I have seen all competition systematically wiped out of local government by steadily expanding license agreements, as Microsoft positioned its products to be completely interdependent and completely incompatible with its competitors. These competitors range from former heavyweights like Novell, WordPerfect, Borland, and briefly, Netscape, to longtime educational giants like Apple Computer, which pioneered personal computing. All have been swept aside not by better products, but by Microsoft's clever—but illegal—business practices.

I believe that Microsoft will find ways to weasel out of the Proposed Final Judgement which has been drafted, in part due to its specificity. It must be generalized to describe Microsoft's practice of proprietization which Microsoft calls "Embrace and Extend."

Public standards are the root of the Internet itself; it would not have been possible for the Internet to exist, sharing data amongst thousands of different types of computers,

from digital telephones to mainframes and supercomputers, without the system of public "RFC" standards. Microsoft's "Embrace and Extend" policy is simply to make their software compatible with these RFCs, and other standards developed publically (often at public expense), and then introduce specific incompatibilities to make non-Microsoft software fail, often at the same time that new features are added to the Microsoft software that require the tainted upgrade. To meet this challenge, you must force the "interface"—any interface—which Microsoft defines or employs, now or in future, to be public domain, published and available for use without limitation. This must include all file formats, APIs, communication protocols, and interpreter specifications.

These interfaces are the very essence of compatibility: For competition to exist in the applications area, competitors must be able to read Microsoft files to be able to offer products that can be used concurrently with Microsoft products, and they must be able to take advantage of the same Windows services (API) that Microsoft itself uses in its products.

For competition to exist in the operating systems area, competitors must be able to replicate the functionality of the Windows API reliably so that products written for Windows may operate elsewhere. Finally, for competition to continue in the Internet realm, the protocols and interpreters that are used by Microsoft products must be available to those who would create applications and services that talk to these Microsoft applications.

Since Microsoft has already decimated the innovative space that was the web browser market, the Web itself is already changing to conform to just one browser; Microsoft's. Many sites no longer function in other browsers, which face the Sisyphean task of duplicating Microsoft's ever-changing Javascript interpreter without its (ever-changing) specifications. Where do you think the Internet will be in a decade, if Microsoft's interfaces remain undisclosed, or even partially proprietary? I can tell you: all the hot new services of the future will operate using proprietary Microsoft protocols, and anyone who wants to compete in the online services market will have to accept Microsoft's license terms and write systems that only run where Microsoft wants them to run, because the potential customers will all be locked into a system of Microsoft products.

Microsoft has made its interfaces de-facto standards, and you must now make sure that they face that fact by converting them into complete and public standards.

Thank you,

Jacob Rose

A voting citizen from Fairfax, Virginia, 22033, U.S.A.

Dear Sirs

I find it difficult to discuss the settlement when I never agreed with the merits of the lawsuit. It troubles me that we are able through mechanisms beyond my control to tear down a company that has done no wrong except outperform all others. Whenever I think of Americans trying to rip down Microsoft I am reminded of the novel Atlas Shrugged. Where would our business and manufacturing efforts be if Microsoft pulled a John Galt or a (?) Reardon and just left the face of the earth? And we were all so worried about Y2K at least then Microsoft was there to help us. Imagine every server and pc running a Windows variant not having a bit of manufacturers support tomorrow? Yet as troublesome of a picture that lends many of us are trying to do just that. In summation short of the suit never seeing the courthouse steps any action against Microsoft is too much!

Thank you for your time.

 Subject: Microsoft Settlement

To Whom it May Concern:

I almost decided not to submit my comments regarding this antitrust suit, since I've practically given up hope that Microsoft might actually become a positive corporate member of the United States, and I personally feel powerless to change their behavior. I've been working in the computer industry for about 8 years. Before I was computer literate, I actually started out very pro-Microsoft. I've been watching this case very closely.

I have come to realize that Microsoft is currently a huge liability to the future of our country. I've concluded that they have and will continue to erode the spirit, which founded America as a land of opportunity. They have abused the system, and have made it extremely difficult for individuals to live in a Microsoft free environment. Every day it takes more effort to keep Microsoft out of my home life. Be assured that they will continue to dominate other markets even as they continue to delay these proceedings. .Net platform, X-Box, Passport, IE, and other Microsoft initiatives will convince illiterate consumers that Microsoft has their best interest at heart. After all, they are selfless enough to donate \$1 billion dollars to the education market!

I strongly urge you to reject the proposed settlement, the language of which comes from Microsoft's own lawyers. This settlement will only justify Microsoft's

actions when it attempts to force the open source movement to its death, since the settlement allows Microsoft to determine the meaning of "viable business". This settlement only strengthens Microsoft's "delay and deny" tactics, since the oversight committee has only the illusion of actual power to keep Microsoft from continuing its illegal practices. Who would have thought that one word "bundling," would have been the undoing of the last antitrust settlement?

In conclusion, did you ever hear the story about the scorpion that asked the frog for a ride across the water? When the frog asked why the scorpion had stung it, midway across the river, the scorpion replied, "It's in my nature."

It's also in Microsoft's nature to abuse the spirit of our legal system for it's own purposes. They have shown many times that they cannot be trusted, and will continue to abuse it's monopoly. Microsoft knows that we will not hurt them. Many believe that hurting Microsoft will hurt our economy, security, and stability of our country. This only reinforces the urgency to foster alternative solutions, so that our country does not experience a "single point of failure," as well as enhancing consumer choice.

I strongly urge you to objectively reject the proposed antitrust settlement, with all of your heart and mind.

Sincerely,
Sean Corliss

Sr. Support Analyst/Web developer

Subject: Microsoft Settlement

Dear Sirs and Madams,

I very strongly believe the proposed settlement in the Microsoft antitrust case is a travesty of justice: When was the last time you heard the loser in a case (which is essentially a criminal trial) call the outcome fair? Below I will add some factual basis for my opinions.

1. I have an acquaintance who was an officer at IBM when the Internet Explorer web browser first was released "for free". (He is now a vice president at IBM.) When he joined management at IBM, he was given some antitrust schooling, and part of their advice was "if you ever give anything away for free, plan on spending the rest of your life in jail". At that time, IBM had only about 60% market share, or a much smaller market share than Microsoft has. The clear presumption is that when a market leader gives things away for free that directly compete with a competitor's product, they are trying to destroy the competitor. You should be starting criminal antitrust proceedings against Microsoft management, not letting the company off of the hook.

2. The fact that the Internet Explorer web browser is tightly integrated into their operating system product makes all computers using Windows and Internet Explorer more vulnerable to remote exploits ("cracking"), even when the web browser is not in use. This is well known in the computer security community, and it is well known than with this degree of integration

there is no way whatsoever of making such computers even approximately or reasonably secure. By permitting "tight integration" of their web browser into their operating system, you leave the world naked to computer hackers, crackers and terrorists. These matters are not talked about in public, but every computer connected to the internet and using the Microsoft Windows operating system products with tightly integrated Internet Explorer web browser intact is naked to the world and it is not possible, even in principle, to make them secure against remote exploit. (We have been fortunate so far that no really low level exploits have been developed and/or deployed against the Windows/IE vulnerabilities, as this would probably be the death of the internet.)

3. Integration of the web browser into the operating system is largely irrelevant from the perspective of providing customer service and features which customers desire. There are well known ways of providing "facile interoperability" which do not go as far as direct tight integration. I have indicated above that the mere presence of a web browser *within* the operating system raises well known inherent security risks. (You not only have the web browser as a pathway into the very heart of the machine itself, but its incorporation in the heart of the machine means you are necessarily precluded from taking other protective measures any reasonably prudent operating system designer would include in his design This means that there are necessarily going to be ways to take control of a Windows/IE machine which is connected to the internet without sending an email and without the user visiting a hostile site, etc.). Web browsers are notorious for the new exploits always being discovered for them, and this means the consequences of visiting a hostile website on the internet can be far more serious for a Windows/IE user. Tight integration also increases the possible seriousness of the consequences of computer viruses, worms, trojans and other hostile agents.

4. The conclusion is that the tightly integrated web browser's sole function is to destroy competition, since it is not necessary for providing customers features and services which might be desirable, it incorporates many features which are hazardous to the customer's interests and the computer using community as a whole, and since it violates good design principles and derogates security simply by its existence.

5. In addition to the tight integration of web browsers into the operating systems issue (which was the pre-eminent issue of the trial, as I understand it), the general lack of documentation and the widespread existence of undocumented features in the operating system products is a substantial barrier to competition raised by Microsoft, which was found to be a monopoly. Even if the Internet Web browser were to be removed from its position of tight integration into the various Windows operating systems, a competing browser (Netscape, for instance) would never be able to obtain competitive "facile interoperability" with other software on the computer if that facile interoperability depends in large part on otherwise

undocumented features of the operating system. No product, however well designed and implemented, will be able to offer the same level of ease of use and performance if there are significant undocumented features of the operating system such as there are today.

The essence of the antitrust laws is to preserve competition, and nothing in the proposed settlement does this.

Respectfully submitted,
Prof. Steve Maxson

Subject: Microsoft Settlement

I'm writing to express my concern and alarm at the terms of the proposed Microsoft settlement. As a computer software professional, a PC owner, and a software and operating systems consumer, I believe that the Microsoft monopoly has done a great deal to harm consumers. I feel that the remedies proposed by the settlement will fall far short of punishing the company for its actions, and fails to deny the company the benefits of its illegal behavior.

Furthermore, the proposed remedy fails to address Microsoft's continued use of onerous and restrictive licensing terms. Most importantly, it fails to adequately define the many of the terms and provisions, to the extent that the company will easily be able to avoid many of the most effective consequences of the settlement.

It is not in the public interest to adopt this settlement until these any other problems are resolved.

Subject: Microsoft Settlement

To whom it may concern:

I am a partner and senior developer in a small startup company that is developing a web application technology for multiple platforms. We are one of many small businesses that are working hard to develop retail software products that will provide the industry with much needed software innovation. At the moment, we have spent hundreds of thousands of our personal dollars to fund the development of a technology that will run on multiple operating systems using Sun's Java technology. As part of our plan, we are

targeting a release to the Microsoft Windows family of operating systems.

With the release of Microsoft .NET, and the refusal of Microsoft to ally with Sun Microsystems in support of its Java product, the Java application support in Windows XP is sketchy at best. Microsoft has made it necessary for our customers on Windows to download a Java Plugin from Sun Microsystems for our software to run on that system. Due to the application barrier to entry that Microsoft uses, there is much industry doubt as to the stability and reliability of the Sun Java Plugin for Windows XP.

This doubt, generated by Microsoft's clear domination of the operating systems market, absolutely hinders my company's abilities to market our technology to Windows users, effectively cutting us out of the Windows desktop market before we have even had a chance to get started.

Microsoft's answer to this is to tell us to develop our technology with Microsoft's .NET tools, which are only supported on Windows platforms. By doing this, our product would no longer interoperate with other operating systems and web browsers such as Netscape Navigator, again, considerably hurting our entry into especially the web hosting market which primarily uses Linux and Apache servers.

Microsoft has basically stated that we either comply and conform only to their own development technologies, or lose the Windows server and desktop markets completely, effectively putting us out of business.

I disagree with the current proposed settlement, because I feel that it does not provide an adequate "leash" on Microsoft. I believe that companies with alternative development technologies such as Sun Microsystems or Borland be given the same level of development support from Microsoft as its own development tools, such as .NET, are afforded. Only by doing so will be guaranteed of a safe market entry with our own Java based products.

Thank you!

Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of it's competitors is now also at or above 30%). This must be true for all Microsoft product lines, before regulation is lifted. Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition. Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

Subject: Microsoft Settlement

I am writing to speak out AGAINST the proposed Microsoft settlement.

I am a professional computer system administrator so I am familiar with computers and the computer industry. I see the adverse effects of Microsoft's monopoly practices on the industry.

I have read the proposed settlement and I am convinced it does not serve the interests of the American public, is harmful to the American economy, and does not promote justice given the facts of the trial. Another high-tech industry—computer processor chip manufacturing—currently enjoys heated competition between rival companies competing on equal footing. As a result consumers have enjoyed rapid innovation and lower prices. This competition, and the benefits for consumers, does not exist in the computer operating system market. As a result consumers wait longer for innovation and pay higher prices.

The DC Circuit ruled that a remedy must "unfetter [the] market from anticompetitive conduct" and . . . "terminate the illegal monopoly," but the DOJ deal does nothing to restore competition with Windows. Nor does the settlement contain provisions directed towards new markets where Microsoft is using the same bundling and restrictive practices to preserve and extend its monopoly.

Companies that attempt to offer competing products are not given a chance to fairly compete. The failure of these companies results in lost jobs, lost revenue, and lost activity in the U.S. economy. Fair competition is the essence of the free enterprise system. Economic history has

shown time and again that the absence of fair competition is bad for the economy as a whole.

As a point of justice, a criminal should not be allowed to keep his ill-gotten gain. The appeals court has verified that Microsoft's activities are illegal. There is nothing in the proposed settlement that addresses the issue of these ill-gotten gains, or how these will be reimbursed to the public from whose pockets they came. This simple omission easily amounts to billions of dollars, and by itself makes the settlement a sellout of the public interest, even without an assessment of its other shortcomings.

A better remedy is needed. A more effective remedy would be one that required Microsoft to standardize and publicize the entire set of Windows APIs and the file formats of its Office applications with the express goal of allowing competitors to build Windows software applications, and operating systems, that compete with Microsoft on a level field.

The outcome of this case will have a huge effect on the American economy for years to come. The proposed settlement will allow Microsoft to continue with most of their illegal practices, harming consumers and the national economy along the way. A stronger remedy will allow competition, and give consumers free choice and better prices. Therefore, a stronger remedy than the proposed settlement is needed.

Thank you for the chance to comment.

From: Richard Bullington-McGuire
To: Microsoft ATR
Date: 1/23/02 10:29am
Subject: I oppose the Proposed Final Judgement

The Proposed Final Judgement in United States v. Microsoft does not offer adequate relief to the plaintiff and the American people. Its definitions of how Microsoft must share API information with its competitors are too narrowly tailored.

It fails to consider Windows-compatible operating systems, and allows Microsoft to stifle the development of Open Source software by imposing restrictive licensing terms on its APIs and software development kits. The definition of Windows is too

restrictive—it should extend to all Microsoft Win32 API implementations, including Windows CE and the Xbox. The settlement should address more of the issues raised in the findings of fact, including disclosure of file formats that form part of the Applications Barrier to Entry (See “Findings of Fact”, ?20 and ?39).

A summary of the major defects in the settlement (and some proposed amendments) may be found here:

<http://www.kegel.com/remedy/remedy2.html>

Overall, the settlement is not in the public interest and I urge the court to reject the Proposed Final Judgement.

Subject: Microsoft Settlement

I am a Computer Security engineer with 8 years of experience in various computing fields. I would like to comment on the Proposed Final Judgement (PFJ) Section III “Prohibited Conduct” Paragraph E regarding the licensing of “Communications Protocols”.

This paragraph’s intention appears to counter the practices of “embrace and extend” in which Microsoft perverts an industry standard protocol by adding proprietary and undisclosed extensions.

The settlement terms are too vague and too lenient. Specifically: “Microsoft shall make available for use by third parties, for the sole purpose of interoperating with a Windows Operating System Product...any Communications Protocol that is...used to interoperate natively (i.e., without the addition of software code to the client operating system product) with a Microsoft server operating system product. “ This language allows Microsoft to hold back key protocols from initial product distribution and then provide them as “Service Packs”, updates, or new products bypassing the intent of the above paragraph. More disturbing is the separations of “client” and “server” made in the above language. Not all protocols have a client and server paradigm, yet they remain important. Peer-to-Peer protocols are an excellent example of a fundamental protocol not covered by the above PFJ language.

My proposed revision to Section III.E is: “Starting nine months after the submission of this proposed Final Judgment to the Court, Microsoft shall make available for use by third parties, for the sole purpose of interoperating with a Windows Operating System Product, on reasonable and non-discriminatory terms (consistent with Section III.I), all Communications Protocols utilized to transmit data to or from a Microsoft product.

Subject: Remedies flawed

To whom it may concern;

I believe the remedies are flawed for two reasons:

1) They do not adequately ensure that Microsoft will follow industry standards. As shown in the Findings of Fact, Microsoft has repeatedly subverted standards to their benefit with significant damage to their competitors.

2) They do not adequately penalize Microsoft for their actions over the past 15 years. I recognize that given the temporal nature of software it is very difficult to determine actual damage to competitors and their shareholders, but am convinced that Microsoft will only change their actions if it affects their bottom line. I would have expected some attempt to determine actual damages and punitive damages. Somehow Microsoft needs to come out of this suit less well off than if they hadn’t done the anti-competitive actions in the first place.

Subject: Microsoft Settlement

I am writing to express my reservations regarding the proposed Microsoft settlement. Specifically, I am afraid that the proposed settlement would not significantly change Microsoft’s ability to maintain and abuse a monopoly position.

I would propose that the single best remedy to allow a level playing field in the computer software industry would be to require Microsoft to publish complete specs of any interface, communication protocol, or file format used by Microsoft software that is not a format already considered an “open” format as documented in an RFC.

I am concerned that the language in the proposed settlement at this time would discriminate against non-profit groups, and open source in general.

Subject: Microsoft Settlement

Dear Sirs !

I am a student of Computer Science, and a programmer. I write to you in order to point out several gross problems with the proposed settlement for the Microsoft case.

According to the Court of Appeals “a remedies decree in an antitrust case must seek to ‘unfetter a market from anticompetitive conduct’, to “terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure

that there remain no practices likely to result in monopolization in the future” (section V.D., p. 99).” The proposed settlement does none of this, if anything it further strengthens Microsoft monopoly, and does not in any significant way hinder them from continuing their illegal business-practices. Nor does it significantly lower the barriers to entry.

I urge you to reconsider this ineffective remedy.

Sincerely,
Eivind Kjo-rstad

MTC-00016057

From: Young, Paul

To: “microsoft.atr(a)usdoj.gov”

Date: 1/23/02 10:29am

Subject: Microsoft Settlement

The following is my complaint against the Microsoft Settlement:

Failure to address Ill Gotten Gains

Completely missing from the proposed final order is anything that would make Microsoft pay for its past misdeeds, and this is an omission that must be remedied.

Microsoft is hardly a first time offender, and has never shown remorse for its conduct, choosing instead to repeatedly attack the motives and character of officers of the government and members of the judiciary.

Microsoft has profited richly from the maintenance of its monopoly. On September 30, 2001, Microsoft reported cash and short-term investments of \$36.2 billion, up from \$31.6 billion the previous quarter—an accumulation of more than \$1.5 billion per month.

It is astounding that Microsoft would face only a “sin no more” edict from a court, after its long and tortured history of evasion of antitrust enforcement and its extraordinary embrace of anticompetitive practices—practices recognized as illegal by all members of the DC Circuit court. The court has a wide range of options that would address the most egregious of Microsoft’s past misdeeds. For example, even if the court decided to forgo the break-up of the Windows and Office parts of the company, it could require more targeted divestitures, such as divestitures of its browser technology and media player technologies, denying Microsoft the fruits of its illegal conduct, and it could require affirmative support for rival middleware products that it illegally acted to sabotage. Instead the proposed order permits Microsoft to consolidate the benefits from past misdeeds, while preparing for a weak oversight body tasked with monitoring future misdeeds only. What kind of a signal does this send to the public and to other large corporate law breakers? That economic crimes pay!

Please consider these and other criticisms of the settlement proposal, and avoid if possible yet another weak ending to a Microsoft antitrust case. Better to send this unchastened monopoly juggernaut a sterner message.

From: Lee Kennedy
 To: Microsoft ATR
 Date: 1/23/02 10:28am
 Subject: Microsoft Settlement

I am very concerned over the Proposed Final Judgement (PFJ) in the Microsoft case. The judgement as it stands neither prevents previous anti-competitive behavior that Microsoft has engaged in, nor adequately prevents them from using large loopholes to justify behavior that is supposedly prevented. The specific problems are too numerous to fully detail here, but I will outline several as an example:

1) The PSJ includes terms to increase Microsoft's disclosure of technical information to Independent Software Vendors. However there are a number of obvious shortcomings in the terms:

a) Microsoft is not required to give any advance notice of technical requirements. Middleware vendors are required to meet reasonable technical requirements by a set deadline, but nothing prevents Microsoft from making last minute changes to the technical requirements and claiming that vendors have not met the requirements.

b) Microsoft is required to release documentation for APIs, but not before competing middleware vendors are required to meet the unspecified technical requirements. Vendors need access to the documented APIs in time to use them effectively before the deadline.

c) The definitions of MS Middleware Product and API are so narrow that many crucial elements of the Windows interface could be excluded from release, effectively negating the use of the APIs that are released.

d) The restrictions on how the published APIs can be used specifically prevents many of the uses that fight against the MS monopoly. The APIs can only be used to write Windows-only software, not software for Windows-compatible or non-Windows operating system. This actually allows MS to —increase— the leverage of their OS monopoly on vendors creating applications.

e) There are no requirements for MS to release information about the file formats being used. The proprietary formats, which are changed frequently for little end-user benefit (i.e. Microsoft Word), are a significant barrier to entry for applications. This has not been addressed at all.

2) The PFJ also does not protect against a number of anti-competitive tactics MS has used in the past which directly hurt end users. Specifically:

a) MS uses license terms on software that explicitly prohibit the use of the software on non-Windows operating systems. This license specifically prohibits the use of competing windows-compatible operating systems.

This clearly creates a barrier to entry for competing operating systems that is based on the MS Windows OS monopoly.

b) MS has in the past used incompatibilities that are built-in to products specifically to disrupt the use of competing products (the DR-DOS case). This type of behavior allows MS to create further artificial

barriers for competing windows-compatible operating systems and further extend its monopoly.

This behavior is not addressed at all in the PFJ.

These are only a few of the long list of flaws that I see in the PFJ, but should be sufficient to demonstrate that the PFJ as it stands is simply NOT ACCEPTABLE to either redress the wrongs that have been done in the past or to prevent their reoccurrence in the future. Though I am not a US citizen the world-wide effect of the MS monopoly makes this case of international importance, and I hope that my condemnation of this PFJ will be given due consideration.

Thank you,
 Lee Kennedy

From: Alan Grover
 To: Microsoft ATR
 Date: 1/23/02 10:27am
 Subject: Microsoft Settlement
 23 January 2002

Sirs,

Under the Tunney Act, I'd like to comment on the proposed Microsoft settlement. I have been developing software for more than 20 years for many operating systems. I personally have experienced the difficulties resulting from Microsoft's monopoly and anti-competitive behaviors, restricting my ability to compete in the market place.

I object to the proposed Microsoft settlement. The clear finding of fact (Microsoft is a monopoly) is not addressed by the settlement. It allows Microsoft, as an entity, to continue unchanged, with minor modifications to its behavior, and does not address the barrier-to-entry.

In my opinion, it is laughable that the settlement applies only to Windows 2000 Professional, Windows XP Home, and Windows XP Professional. As we saw in the previous consent decree, Microsoft merely moves on to the next generation of a product/operating-system to evade the restrictions. Microsoft can, and will, avoid the entire settlement by merely producing the next version of their operating system and renaming it. The finding of the monopoly was based on Microsoft's operating system running on Intel hardware, and is thus not addressed.

The manipulation of definitions similarly allows Microsoft to avoid meaningful restrictions on API's (limiting it to a few specific application-support layers, instead of applying to all interfaces between programs and the operating system). Further, even the limited definition allows Microsoft to exclude significant middleware such as Outlook (as opposed to the more limited, consumer oriented, Outlook Express). As well, the new .NET platform, claimed to be central to Microsoft's future direction by Microsoft, is not included in the settlement.

The settlement does not appear to address monopolistic practices expressed in several Microsoft EULA's (end user license agreements) that attempt to lock-out open-source or other free software. Various leaked

memos have Microsoft identifying open-source, et. al., as a competitive solution that they wish to combat.

Along the same lines, the Microsoft development system (Microsoft Platform SDK), used to write programs, attempts to stifle competition by preventing the resulting programs from being distributed for use with any other operating system (by means of placing a license restriction on "components" which are required to run the programs).

Finally, the settlement provides an (absence of) enforcement mechanism that overwhelmingly favors Microsoft. There is no actual enforcement specified in the settlement, leaving it to the legal system which will allow Microsoft to use its huge financial and monopolistic advantage to discourage and intimidate any who attempt to bring suit.

The Proposed Final Judgment should not be adopted. A judgment, in the public interest (as required), should be written, adopted, and enforced. Many others have proposed such judgments.

For reference, please see <http://www.kegel.com/remedy/remedy2.html> with further information on many of these points.

From: Paul Gutwin
 To: Microsoft ATR
 Date: 1/23/02 10:27am
 Subject: Microsoft Settlement

There are several things wrong with the Microsoft settlement. As an engineer/programmer with 20 years experience, I believe the restricted definitions of "API", "Microsoft Middleware" and "Windows Operating System" effectively give Microsoft the legal authority to continue the anticompetitive behavior they were found guilty of. Specifically, the definition of API allows Microsoft to add highly valuable access to the Windows Operating System without disclosing this to its competitors in the vast markets not included in the "Microsoft Middleware" definition.

Microsoft in effect sacrifices a few highly mature markets (those defined as Microsoft Middleware), for the freedom to continue its anticompetitive behavior in all other markets. This is, at best, a pyrrhic victory for the US Government.

From: MARTIN JONES
To: Microsoft ATR
Date: 1/23/02 10:29am
Subject: Microsoft Settlement

Dear Sirs and Madams:

I wish to comment on the proposed settlement between the Justice Department and Microsoft.

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition. The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function. It will do little to punish Microsoft for its plainly illegal conduct in the past, and virtually nothing whatsoever to prevent future violations of antitrust law.

Thank you,
Martin K. Jones

Subject: Microsoft Settlement

I think the proposed MS settlement is bad for a number of reasons, but one in particular is the restrictive of the EULA and how that is being treated by the settlement. Under the current EULA, Microsoft APIs are prohibited for use in open source software. Since open source software can run on a number of platforms, including Linux, Microsoft would be afraid of losing market share for Windows. However, since the EULA prohibits this, they are stifling competition by putting up a barrier of entry in the market and not allowing open source projects to use Microsoft APIs. Two such products that would greatly benefit are Star Office and Netscape Navigator, both of which run on a variety of platforms but are stifled in the Windows market because they do not integrate as tightly with Windows as MS Office and Internet Explorer. The proposed settlement does not address this issue, and therefore does not knock down barriers of entry into the Microsoft monopoly.

As an open source developer, this concerns me greatly. And this is only one of a large number of problems with the proposed remedies. Microsoft is getting off way too easy, please reconsider.

I believe that the current proposed final judgement in the Microsoft Anti-trust case, as it stands, is a bad idea. The current proposal allows Microsoft to continue in its anti-competitive practices.. Microsoft has a history of anti-competitive practices as shown in the 1996 Caldera V. Microsoft case where a judge found that "Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft." (UNITED STATES DISTRICT COURT DISTRICT OF UTAH—CENTRAL DIVISION Case No. 2:96-CV-645 B) If the current proposal passes, the people of this nation will have been done a disservice by their legal system.

Thank you,
Matthew Messenger

To: "microsoft.atr(a)usdoj.gov"
Date: 1/23/02 10:28am
Subject: Microsoft Settlement

The Microsoft "settlement" is a bad deal, not just for the United States, but the entire world, as the Windows operating system has become a forcibly imposed international standard. And not because it is the best operating system, but because Microsoft has engaged in criminal behavior—and done so repeatedly.

Why are we settling for anything less than punishing this criminal behavior? The current settlement allows Microsoft to basically go about business as usual, while their way of doing business has been shown to be unethical and illegal.

Patent cross-licensing agreements would go a long way towards leveling the playing field and encouraging innovation and price competition that would benefit consumers in the U.S. and around the world.

Force Microsoft to provide the Windows APIs, immediately and without foot-dragging or deception. The oversight required will be worth the cost.

Subject: Microsoft Settlement
Dear Sirs;

I would like to briefly state my opinion about the Microsoft Anti-Trust settlement.

The remedies that have been proposed will have no effect on the behavior of this company. The history of their disregard for previous consent orders and decrees should make that clear. It should also be clear that they are using their monopoly position on desktop operating systems to aggressively pursue similar total dominance of other markets such as multimedia transmitted over the Internet ("Windows Media Player"), security infrastructures ("Passport") and so on.

It may make sense for their to be only one maker of desktop operating systems. If so, then that company should be—effectively—analyzed and regulated to ensure the needs of its customers (consumers and businesses) are being properly served, possibly in a manner like for public utilities. Judge Jackson's Findings of Fact and the ridiculous behavior of Microsoft in the trial (ie the videotape debacle, Gates' deposition) should make it clear that this is a company that needs to be aggressively reined in.

Sincerely,
John Holland

Judge K:

I am a lawyer by training and profession. As I have read the findings of the courts in the Microsoft trials ? and then the PFJ offered by the DoJ ? it strikes me that they are not talking about the same case or the same company.

The fact that multiple courts have found Microsoft guilty makes it very hard to understand the DoJ's essentially hands-off attitude. I understand that this is a Republican administration, but in this case they have simply gone way too far in one direction while forgetting the rule of law in the other.

I look forward to your ruling in this important matter.

Date: 1/23/02 10:29am
Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Subject: Microsoft Settlement
Dear Sir/Madam

I object to the proposed final judgment in the Microsoft antitrust case. It appears to me to do little to remove the applications barrier to entry that is the heart of the Microsoft monopoly. I strongly object to the term "for the sole purpose of interacting with a Windows Operating System product" in the proposed final judgment. This allows Microsoft to maintain its monopoly to the detriment of anyone wishing to use a program written for Windows regardless of whether they wish to use the Windows OS itself. The problem is the APPLICATION barrier to entry, not the OS barrier to entry.

The final judgment should require Microsoft to publish, not license or disclose under NDA, its file formats and communications protocols. Let Microsoft earn its dominance by its programs, not by the elaborate strategy of vendor lock in and commercial intimidation that it uses now.

Date: 1/23/02 10:30am
Subject: Microsoft Settlement

I personally believe the proposed settlement in the Microsoft anti-trust case is a bad idea and will cause more harm that good. As a software developer and security consultant my primary complaints are:

- There are no provisions to create competition in the OS market to break up Microsoft's illegal monopoly. By allowing firms better access to the Windows API's, all that's being done is the Windows monopoly is being reinforced!
- There are no provisions to prevent Microsoft from extending its Windows monopoly into new markets.
- It does nothing to prevent the practices Microsoft was found to have illegally used to maintain it's illegal Windows monopoly.

Thank you for your time,

Date: 1/23/02 10:29am
Subject: Microsoft Settlement

As a software engineer with 17 years' experience developing software for Unix, Windows, Macintosh, and Linux, I'd like to comment on the Proposed Final Judgment in United States v. Microsoft.

* The PFJ doesn't take into account Windows-compatible competing operating systems

* The PFJ Contains Misleading and Overly Narrow Definitions and Provisions
-The definition of API fails to meet the definition actually used in the industry by being overly restrictive and limited.

-The definition of "Windows Operating System Product" fails to mention all of the "Operating Systems" listed by Microsoft on their website

* Windows XP
Windows XP Professional
Windows XP Home
* Windows 2000
Windows 2000 Professional
Windows 2000 Server
Windows 2000 Advanced Server
Windows 2000 Datacenter Server
* Windows Embedded
Windows Embedded
Windows CE .NET
Windows XP Embedded
Windows XP Tablet PC Edition

Considering these problems, one must conclude that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, and would delay the emergence of competing Windows-compatible operating systems. Therefore, the Proposed Final Judgment is not in the public interest, and should not be adopted without addressing these issues.

From my perspective, Microsoft has willfully engaged in monopolistic practices and must be punished. The proposed settlement will do little if nothing to stem this behavior. There are many problems. To point out one, Microsoft should have no voice in choosing the panel that will be charged with oversight to ensure that Microsoft complies with the rulings.

MTC-00016077

From: Tom Daniels
To: Microsoft ATR
Date: 1/23/02 10:29am
Subject: Disagreement with Microsoft Settlement

I hereby register my complete disagreement with the proposed Microsoft settlement as allowed for in the Tunney Act.

As Dan Kegel and many others have pointed out, the settlement defines many aspects of the Microsoft remedies so specifically that it will be trivial for Microsoft to evade them. The needed remedies should be broad and have oversight mechanisms that allow for "special case" exceptions after the fact. The barriers to entry should be lowered by requiring all API's to be well documented

and said documentation released for no charge in a non-Microsoft controlled format. All file formats used by Microsoft should be opened in the same manner. All patents covering API's should be spelled out by Microsoft and those not explicitly described and linked to an API should not be litigable by Microsoft. Microsoft should be required to SELL their operating systems and other software instead of licensing it. OEM's should have equal access to Windows regardless of size of the OEM. OEM's should be allowed to bundle any software with their goods without the control of Microsoft whether the computer includes Windows or not.

Microsoft should have been broken into many more than 2 independent entities, but it's too late for that!

From: Bryan Carpenter
To: Microsoft ATR
Date: 1/23/02 10:30am
Subject: Microsoft Settlement

I am writing even though I have repetitive stress injuries to my shoulders and wrists that make it somewhat painful for me to do so. I feel that Microsoft's free-market-stifling behavior over a significant number of years has had a disastrous effect on the ability of innovative Americans to access the American dream which is supposed to allow an individual to create a better way of doing something, expose his or her creation to consumers, price it at a level that gives it a competitive advantage, and make a good living from the effort. I am a software developer, and my wife is a law student who in her mid-forties is working on her second career after being a mostly-full-time mom for 15 years. Both of us have significant difficulties almost daily with the Microsoft software that we need to use to accomplish our daily work. The reason we have these difficulties is simply that Microsoft doesn't care enough to get things really right. They don't have to. So users go on year after year getting by with poorly-written software while Microsoft moves on to the next field that they want to concentrate on monopolizing. How does this relate to the proposed settlement?

The reason why we have to keep using MS software even though it is often maddening is because MS has effectively squashed the ability of new innovators to have a chance to build their success by creating a better product and exposing real users to its advantages.

I am a rabid advocate of free-market economics, but just as a professional football game would turn to mush and be uninteresting in the absence of rules and referees, a free-market economy also needs rules and referees. Microsoft is the equivalent of a football player who uses illegal tactics to seriously injure, maim, and kill opposing players while the refs only call him for occasional minor penalties and never really give him a reason to change his approach to the game.

Although there are many problems with the proposed Microsoft settlement, I would

like to concentrate on the continued ability of Microsoft to retaliate and/or apply leverage to the OEM's that are dependent on MS for the operating system that they realistically have to have in order to sell the bulk of their computers. MS should not be able to exert any leverage over these OEM's to keep them from adding non-MS features and/or products to the computers they sell. Sections III.A.2 and III.B of the proposed settlement have significant deficiencies that allow MS to continue to strongarm the OEM's that buy from them and therefore prevent innovation that has the potential to weaken their monopoly.

I strongly advocate that my Federal government do more than slap Microsoft on the wrist at this critical juncture. This is really the last opportunity to keep MS from becoming the sole dictator of the majority of American's opportunities to innovate and succeed in the computer/Internet field.

Sincerely,
Bryan Carpenter

The proposed settlement is a terrible idea.

MTC-00016082

From: Matthew Gessner
To: Microsoft ATR
Date: 1/23/02 10:30am
Subject: Microsoft Settlement

Greetings,

I'm writing to express my feelings on the proposed Microsoft Settlement. Personally, I

think that ANY settlement that does not involve the breakup of Microsoft, in whole or in part, will not be a just settlement for consumers, corporations, or the various governments involved. Failing to act against Microsoft at this time puts peoples' jobs and lives at risk. My reasons are below: Microsoft has used its monopoly power to push dangerous software on millions of unknowing users. The most recent of these incidents centers on Microsoft Windows XP, which, as touted by Microsoft, is the most secure version of Windows. However, it came to light only a few months after its release that Windows XP had a security hole in it so large as to allow anyone on the internet to take over a Windows XP machine connected to the internet.

How can anyone NOT see that this company simply does NOT care about the products it sells (oh, the exception might be a few quality games)? They're aren't motivated to do a better job (to use their word, "innovate"—WHAT A JOKE!) because their is simply too little competition. The evidence has been entered in court: when Microsoft senses a product that might compete with theirs, they either a) buy the company producing the product or b) steal key technologies by reverse-engineering the code or c) perform some other possibly unrelated action to undermine the desirability by cutting their own price on a product. Their monopoly power and wealth allow them to undercut other companies' efforts (I won't use the term "competition" because Microsoft sadly has very little).

Additionally, consider how long before Microsoft has products that are placed into important, everyday use besides the typical PC. With the poor quality of software they produce (which again, is a function of little competition), what are the consequences if Microsoft manages to use its market pressure to put a product in something like a health appliance or an aircraft? I'm not saying they have plans to do that, but Microsoft seems to have a pretty insatiable appetite when it comes to new market opportunities. They've already entered the embedded systems market (systems used typically in control applications, like process control, telecommunications, etc), and that frightens me a great deal. In summary, Microsoft has continually expressed its lack of respect for consumers by producing poor quality software, and its lack of respect for the law by continual violations of its past agreements. Microsoft needs to be broken into little, manageable pieces, none of which would be large enough to pose a serious concern to the public. THEN they can see how their "practice" of their so-called "innovation" will take them.

Thank you for your time reading this email.

Regards,
Matthew Gessner to put the company

MTC-00016083

From: frank delin
To: Microsoft ATR
Date: 1/23/02 10:30am
Subject: Microsoft Settlement

The loophole that troubles me most in the proposed remedy in this case is the lack of

any language which prohibits Microsoft from intentionally creating incompatibilities in their software that make it difficult if not impossible to compete with a similar Microsoft product. This practice began as early as the DR-DOS detection routines in early versions of Microsoft's Windows OS and has appeared as recently as minor, nonfunctional changes in Microsoft's networking protocols that disabled compatibility with the Samba interplatform file sharing system. As an individual who works in the industry I am confounded on an almost daily basis by the inane changes that I must acquiesce to in order to make my products compatible with Microsoft software such as Internet Explorer's less than standard take on concepts such as HTML and javascript.

I am hopeful that a new remedy might take practices, such as those I have outlined, into account to allow for a more competitive environment for us all.

From: John Jacobsen
To: Microsoft ATR
Date: 1/23/02 10:30am
Subject: Microsoft Settlement

I feel that the Proposed Final Judgement in United States v. Microsoft—though a step in the right direction—is deficient in one major area: Many important API's and file formats would remain undocumented! This is important as a Senior Software Engineer with over 12 years of experience. I have been developing applications on many platforms and a common thread in the development process is understanding exactly what you are trying to make your program "talk" to. If Microsoft is allowed to continue to keep proprietary standards and API's for their operating system and middleware products, it will be increasingly difficult for software development companies and independent developers alike to compete with the monopoly that Microsoft has created.

The only true way to solve this problem is to make Microsoft document ALL of the API's and file formats that the Windows operating system and middleware products use.

Thank you in advance for your consideration in this matter
John Jacobsen

MTC-00016086

From: Jo.Fenstad@corusgroup.com@inetgw
To: Microsoft ATR
Date: 1/23/02 10:27am
Subject: Microsoft Settlement—bad for US businesses
Dear DOJ

I work for a company in the UK, but my story concerns US businesses as well, the problems related to Microsoft reach—as the Internet—beyond borders.

1) Only Internet Explorer is available from my PC desktop.

2) Company IT policy expressively forbids users (i.e. ordinary employees) from adding any software products to our PC, hereunder browsers.

3) My company will only install new software if a "similar" product is not initially available on the PC, and even then only after a series of written "formalia".

4) Effectively this means that there is no way I (as a user) can choose to employ products that compete with Microsofts, hereunder Netscape. The proposed settlement with MS will not act to improve this situation.

5) When buying av PC for home use, I could choose between all kinds of PC producers, several kinds of hard drives, several kinds of monitors (standard and LCD) and I could adjust the price by including and excluding different choises. All in the same shop! That's competition! But only one OS vendor was available, and I could not get any lower price by choosing not to buy any of this vendors products. Remarkably, MS software was more tightly "bonded" to my PC than any piece of the PC hardware ... The proposed settlement with MS will not act to improve this situation.

6) Apparently, large corporate customers have more of a choise than any individual user. However, the proposed settlement will allow MS to present even these customers with a contract that dictates payment of fees and punitive damages (disguised as "increased" subscription fares) to MS if customers at some point decide to test alternatives to any individual Microsoft product. The only way out of the racket is to drop all Microsoft products simultaneously. Even the mightiest corporations will not dare to do this. Any software start-up, offering even the best product, the lowest prices and full MS compatibility, will not be able to reach their customers under such conditions, unless MS buys them first. Obviously, the proposed settlement make a mockery out of the Sherman Act.

best wishes for your work on this case
J. F.

Subject: Microsoft Settlement
Greetings,

In accordance with "The Tunney Act", I would like to comment on the current Proposed Final Judgement in the US vs Microsoft Anti-Trust case.

1) Microsoft is not being punished for it's anti-trust violations. There must be a fine, and it must be in the \$B range. The fine should also have no purpose other than be contributed to the general revenue fund. There must also be progressive fines for future violations.

2) Applications barriers for competing software companies must be stricken down with strong language that is not limited to certain Microsoft operating systems, as in the PFJ. It must encompass all of Microsoft, it's subsidiaries, current and future versions of Microsoft operating systems.

3) All Microsoft API's and middleware should become an open standard, with specific requirements to publish these standards before releasing new products.

From: Kelsey Edwards
To: Microsoft ATR
Date: 1/23/02 10:31am
Subject: Microsoft Settlement
Men and women of the Department of Justice,

You have requested public comment before closing the Microsoft Antitrust case.

First, to prosecute any person, or company in this case, under a law with no defined standards, under which a person's actions may be declared illegal although they were not prohibited before he performed them, is a terrible blow to the justice and protection of individual rights upon which our nation and legal system were founded. Disgruntled competitors can not be allowed to declare the actions of a more successful company illegal simply because it was successful and they were not. Laws under which such post de facto prosecution can take place are more reminiscent of a Fascist regime than a free democratic republic.

Second, I would like to ask you to consider whom you are trying to protect. If, in your eyes, prosecuting Microsoft is an attempt to protect the average consumer, then I must disagree, both with the means and the end. Any average consumer that buys a Microsoft product does so voluntarily. For myself, I

choose to use Windows as opposed to, say, Linux, but I choose to use Lotus instead of Microsoft's Word. Microsoft has no power to physically compel a person to buy its product instead of a competitor's. In actuality, the only institution with the power of physical enforcement is the government, and it is through that means that Microsoft's less capable competitors wish to shackle them. The government has no right to interfere with free trade.

The last thing I would like you to consider is the broadest scope and ramifications of your actions. At a time when we are suffering a recession and commentators frequently ask if industry will be able to recover, you propose to punish the most successful corporation in the nation. What will that do to the economy? Further, what message does that send to other large corporations, such as General Electric, and AT&T (which has already been prosecuted)? It warns them not to be too successful, not to make too much money, not to boost the economy too much, not to do their jobs too well, because a less successful competitor might cry "monopoly" out of contempt for his own incompetence. And how do such businesses know how much is too much? Under such arbitrary laws as antitrust, they can't. The Microsoft case should be dismissed. The antitrust laws are unconstitutional. The consumers deal with the company voluntarily. Economic success should not be punished, but rewarded. Microsoft produces life-enriching products that people want to buy and supports the nation's economy. It deserves not a lawsuit, but a commendation

Thank you,
Kelsey Edwards

From: Steve Dockter
To: Microsoft ATR
Date: 1/23/02 10:30am
Subject: Microsoft Settlement

Dear Sir or Madam,

I understand that I have the ability to comment on the proposed settlement between the Justice Department and Microsoft. I have read about the proposed settlement, and I am NOT in favor of it in its current state. Please consider this a vote AGAINST the current settlement, as well as a vote to seek a settlement that is more favorable to Microsoft's competitors.

The proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that

I can see will curtail them. The proposed settlement does not sufficiently relieve Microsoft of the ability to leverage hardware and computer manufacturers unfairly against competing products, nor does it adequately open the Windows API to programmers. The DOJ and US government can put a stop to the Microsoft monopoly by forcing them to release their file formats, source code, protocols, or something similar that will allow other companies to compete with them. The market must be able to return to a state of competition.

Thank you for your time,
Steve Dockter

To: Microsoft ATR
Date: 1/23/02 10:31am
Subject: Microsoft Settlement

I am a Systems Administrator at a local ISP outside Baton Rouge, LA. I have been in IT professionally for 3-plus years, using a mix of Windows, NT, Solaris, and Linux. I must object, under the provisions of the Tunney Act, to the proposed settlement offer extended toward Microsoft. The original "suit against Microsoft" was all about Netscape's Navigator web browser. Microsoft banned PC vendors from installing Netscape onto new PC's and placed their own Internet Explorer (ie) logo on the desktop. As a subtle maneuver directed at people new to the computer market, "shortcuts" from non-Microsoft products placed on the computer's desktop bear a small white arrow, indicating their role as an artificial pointer to some add-on product. Microsoft's ie and Outlook shortcuts were engineered to not bear the little white arrow, making them appear built-in and native to the OS. Right-clicking a third-party shortcut gives you the shortcut's properties: where it leads to, what sort of screen environment it runs in. Right-clicking a Microsoft shortcut gives you the application's properties: connection type, advanced settings, email accounts, home page. These may appear small thing, but they present a profound psychological influence on new computer users that is not beyond the intentions of Microsoft.

Microsoft has made their Office product's file formats a moving target for competing developers for years. This would not have been such an issue, had their not been prepackaged bundling of Office onto retail PC packages, built-in compatibility with the Wordpad application provided free with Windows, and so on. Working in an all-Solaris department, I once received memos and timesheets in digital formats from my HR and Payroll departments as .doc and .xls documents. Without Microsoft's Word and Excel products (I probably just violated a trademark by typing that...), I could not open my company's own communication. Had they been web-based or in plain text or in some easily translatable format that other applications could open, I would not have had the problem. It's not about whether I get Granny's letter or pictures, it's about whether I bundled or purchased Office to open the file formats that were included with her

machine. If she were sending me encrypted pictures of her nuclear sub, I'd understand, but this is common "plain text" messaging. It shouldn't be any more difficult or expensive to read than the text on a pager.

MSNBC offers versions of its news-update application for Windows and Macintosh, but the End User License Agreement (EULA) states that the applications MUST be run on a version of the Windows operating system. As an internet systems admin, I face the routine task of cleansing my server logs from intrusion and denial-of-service (DoS) attacks. Nearly 100% of these attacks are searches for "winnt/cmd.exe" or "winnt/root.exe", leftover from the CodeRed and Nibda worms. Their IIS product (web server) has been inherently vulnerable and insecure since day one, and there have been only an endless stream of patches and quick fixes to deal with it. Producing a product that is secured by default has not been a priority. The inclusion of automatic application execution, ActiveX controls, and Visual Basic scripting in their Outlook mail program has only served to exacerbate the problems by enlarging the base from which these worms can operate. Granted, my apache (www.apache.org) web server, open sourced and developed with security in mind, has never suffered from these attacks directly, but my drives fill up with log files recording each ill-gotten request they must answer. I'm certain you've heard most of this before, but I had to make my voice heard. Credit <http://slashdot.org> for reminding me that the Tunney Act comment period was expiring. I will be a co-signer of Dan Kegel's open petition, hosted online at <http://www.kegel.com/remedy/letter.html>, to see this proposed settlement redeveloped with some actual teeth to solve the problems that were originally brought to court in the first place... like smaller firms coming up with better ideas, being barred from inclusion in retail PC's until they're starved and bought out, then having their ideas "innovated" into Windows as Windows-only software products.

To Whom it May Concern,

I disagree with the definition given for API by Definition A. As a software Developer, I believe ALL Windows APIs should be disclosed, thus all operating system interfaces for application programs should be made public. Thus the current PFJ definition for API is not sufficient, since the interfaces between Microsoft Middleware and Microsoft Windows are possibly only a subset of all Windows APIs.

If all operating system interfaces were made public and documented this would take the edge away from Microsoft, but also allow all developers, not just Microsoft engineers with special knowledge of system APIs, to create programs that use the

Windows OS more efficiently, thus giving the end users a better product experience.

From: Douglas Barnes
To: Microsoft ATR
Date: 1/23/02 10:13am
Subject: Microsoft Settlement

I first started programming computers in 1979, and I have been involved with the computer industry in one way or another for most of my career. I have used and programmed for Microsoft products since the early releases of DOS. I've also used and programmed for a wide range of other operating systems, and I worked as a developer of Unix-based operating systems for IBM and Tandem (now Compaq). In addition, I have co-founded a number of companies here in the California Bay Area, including C2Net Software, which is now part of Red Hat. I recently changed careers and I am now working as a litigation paralegal and preparing to go to law school. The trial court has ruled that Microsoft committed serious violations of anti-trust law, and this decision has been upheld in its initial appeal. Moreover, nobody disputes that previous attempts to restrain Microsoft failed utterly. Clearly it is necessary to go beyond the type of remedy used previously in order to prevent Microsoft from continuing its anti-competitive behavior. The executives at Microsoft are extremely clever people, and their cleverness is hardly confined to solving technical problems—they have proven exceptionally adept at wriggling out of legal restrictions as well.

Given Microsoft's history and the rapidly changing nature of technology, it is very doubtful that you can craft a remedy that will have any effect absent close supervision by persons committed to the intent of the remedy. In addition, the current proposed remedy—even ignoring issues of enforcement and supervision—is full of loopholes that

Microsoft can (and certainly will) drive a truck through.

I am attaching the draft of an essay by Dan Kegel that I have reviewed and strongly agree with. It is somewhat technical and dense, but this is a technology company that you're attempting to restrain. In my opinion, he does an excellent job of showing that the proposed remedy doesn't even accomplish what it sets out to accomplish. Please reconsider the current settlement. It is abundantly clear that if you do not fashion a better remedy than the current proposal, Microsoft will continue to break the law with impunity.

Sincerely,
Douglas Barnes

Introduction
As a software engineer with 20 years' experience developing software for Unix, Windows, Macintosh, and Linux, I'd like to comment on the Proposed Final Judgment in United States v. Microsoft.

According to the Court of Appeals ruling, "a remedies decree in an antitrust case must seek to 'unfetter a market from anticompetitive conduct', to "terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future" (section V.D., p. 99) .

Attorney General John Ashcroft seems to agree; he called the proposed settlement "strong and historic", said that it would end "Microsoft's unlawful conduct," and said "With the proposed settlement being announced today, the Department of Justice

has fully and completely addressed the anti-competitive conduct outlined by the Court of Appeals against Microsoft." Yet the Proposed Final Judgment allows many exclusionary practices to continue, and does not take any direct measures to reduce the Applications Barrier to Entry faced by new entrants to the market.

The Court of Appeals affirmed that Microsoft has a monopoly on Intel-compatible PC operating systems, and that the company's market position is protected by a substantial barrier to entry (p. 15). Furthermore, the Court of Appeals affirmed that Microsoft is liable under Sherman Act ? 2 for illegally maintaining its monopoly by imposing licensing restrictions on OEMs, IAPs (Internet Access Providers), ISVs (Independent Software Vendors), and Apple Computer, by requiring ISVs to switch to Microsoft's JVM (Java Virtual Machine), by deceiving Java developers, and by forcing Intel to drop support for cross-platform Java tools.

The fruits of Microsoft's statutory violation include a strengthened Applications Barrier to Entry and weakened competition in the Intel-compatible operating system market; thus the Final Judgment must find a direct way of reducing the Applications Barrier to Entry, and of increasing such competition.

In the following sections I outline the basic intent of the proposed final judgment, point out areas where the intent and the implementation appear to fall short, and propose amendments to the Proposed Final Judgment (or PFJ) to address these concerns. Please note that this document is still evolving. Feedback is welcome; to comment on this document, please join the mailing list at groups.yahoo.com/group/ms-remedy, or email me directly at dank-ms@kegel.com. Understanding the Proposed Final Judgment In crafting the Final Judgment, the judge will face the following questions:

- a.. How should terms like "API", "Middleware", and "Windows OS" be defined?
- b.. How should the Final Judgment erode the Applications Barrier to Entry?
- c.. How should the Final Judgment be enforced?
- d.. What information needs to be released to ISVs to encourage competition, and under what terms?
- e.. Which practices towards OEMs should be prohibited?
- f.. Which practices towards ISVs should be prohibited?
- g.. Which practices towards large users should be prohibited?
- h.. Which practices towards end users should be prohibited? Here is a very rough summary which paraphrases provisions III.A through III.J and VI. of the Proposed Final Judgement to give some idea of how the PFJ proposes to answer those questions: PFJ Section III: Prohibited Conduct
 - 1.. Microsoft will not retaliate against OEMs who support competitors to Windows, Internet Explorer (IE), Microsoft Java (MJ), Windows Media Player (WMP), Windows Messenger (WM), or Outlook Express (OE).
 - 2.. Microsoft will publish the wholesale prices it charges the top 20 OEMs (Original Equipment Manufacturers) for Windows.

3.. Microsoft will allow OEMs to customize the Windows menus, desktop, and boot sequence, and will allow the use of non-Microsoft bootloaders.

4.. Microsoft will publish on MSDN (the Microsoft Developer Network) the APIs used by IE, MJ, WMP, WM, and OE, so that competing web browsers, media players, and email clients can plug in properly to Windows.

5.. Microsoft will license on reasonable terms the network protocols needed for non-Microsoft applications or operating systems to connect to Windows servers.

6.. Microsoft will not force business partners to refrain from supporting competitors to Windows, IE, MJ, WMP, WM, or OE.

7.. (Roughly same as F above.)

8.. Microsoft will let users and OEMs remove icons for IE, MJ, WMP, WM, and OE, and let them designate competing products to be used instead.

9.. Microsoft will license on reasonable terms any intellectual property rights needed for other companies to take advantage of the terms of this settlement.

10.. This agreement lets Microsoft keep secret anything having to do with security or copy protection. PFJ Section VI: Definitions

1.. "API" (Application Programming Interface) is defined as only the interfaces between Microsoft Middleware and Microsoft Windows, excluding Windows APIs used by other application programs.

2.. "Microsoft Middleware Product" is defined as Internet Explorer (IE), Microsoft Java (MJ), Windows Media Player (WMP), Windows Messenger (WM), and Outlook Express (OE).

3.. "Windows Operating System Product" is defined as Windows 2000 Professional, Windows XP Home, and Windows XP Professional. The agreement can be summed up in one breath as follows: Microsoft agrees to compete somewhat less vigorously, and to let competitors interoperate with Windows in exchange for royalty payments. Considering all of the above, one should read the detailed terms of the Proposed Final Judgment, and ask one final question:

a.. Is the Proposed Final Judgment in the public interest? In the sections below, I'll look in more detail at how the PFJ deals with the above questions. How should terms like "API", "Middleware, and "Windows OS" be defined? The definitions of various terms in Part VI of the PFJ differ from the definitions in the Findings of Fact and in common usage, apparently to Microsoft's benefit. Here are some examples: Definition A: "API"

The Findings of Fact (? 2) define "API" to mean the interfaces between application programs and the operating system. However, the PFJ's Definition A defines it to mean only the interfaces between Microsoft Middleware and Microsoft Windows, excluding Windows APIs used by other application programs. For instance, the PFJ's definition of API might omit important APIs such as the Microsoft Installer APIs which are used by installer programs to install software on Windows.

Definition J: "Microsoft Middleware"

The Findings of Fact (? 28) define "middleware" to mean application software that itself presents a set of APIs which allow

users to write new applications without reference to the underlying operating system. Definition J defines it in a much more restrictive way, and allows Microsoft to exclude any software from being covered by the definition in two ways:

1.. By changing product version numbers. For example, if the next version of Internet Explorer were named "7.0.0" instead of "7" or "7.0", it would not be deemed Microsoft Middleware by the PFJ.

2.. By changing how Microsoft distributes Windows or its middleware. For example, if Microsoft introduced a version of Windows which was only available via the Windows Update service, then nothing in that version of Windows would be considered Microsoft Middleware, regardless of whether Microsoft added it initially or in a later update. This is analogous to the loophole in the 1995 consent decree that allowed Microsoft to bundle its browser by integrating it into the operating system. Definition K: "Microsoft Middleware Product" Definition K defines "Microsoft Middleware Product" to mean essentially Internet Explorer (IE), Microsoft Java (MJ), Windows Media Player (WMP), Windows Messenger (WM), and Outlook Express (OE).

The inclusion of Microsoft Java and not Microsoft.NET is questionable; Microsoft has essentially designated Microsoft.NET and C# as the successors to Java, so on that basis one would expect Microsoft.NET to be included in the definition. The inclusion of Outlook Express and not Outlook is questionable, as Outlook (different and more powerful than Outlook Express) is a more important product in business, and fits the definition of middleware better than Outlook Express.

The exclusion of Microsoft Office is questionable, as many components of Microsoft Office fit the Finding of Fact's definition of middleware. For instance, there is an active market in software written to run on top of Microsoft Outlook and Microsoft Word, and many applications are developed for Microsoft Access by people who have no knowledge of Windows APIs.

Definition U: "Windows Operating System Product"

Microsoft's monopoly is on Intel-compatible operating systems. Yet the PFJ in definition U defines a "Windows Operating System Product" to mean only Windows 2000 Professional, Windows XP Home, windows XP Professional, and their successors. This purposely excludes the Intel-compatible operating systems Windows XP Tablet PC Edition and Windows CE; many applications written to the Win32 APIs can run unchanged on Windows 2000, Windows XP Tablet PC Edition, and Windows CE, and with minor recompilation, can also be run on Pocket PC. Microsoft even proclaims at www.microsoft.com/windowsxp/tabletpc/tabletpcanda.asp: "The Tablet PC is the next-generation mobile business PC, and it will be available from leading computer makers in the second half of 2002. The Tablet PC runs the Microsoft Windows XP Tablet PC Edition and features the capabilities of current business laptops, including attached or detachable keyboards and the ability to run Windows-based applications." and

Pocket PC: Powered by Windows

Microsoft is clearly pushing Windows XP Tablet PC Edition and Pocket PC in places (e.g. portable computers used by businessmen) currently served by Windows XP Home Edition, and thus appears to be trying to evade the Final Judgment's provisions. This is but one example of how Microsoft can evade the provisions of the Final Judgment by shifting its efforts away from the Operating Systems listed in Definition U and towards Windows XP Tablet Edition, Windows CE, Pocket PC, X-Box, or some other Microsoft Operating System that can run Windows applications.

How should the Final Judgment erode the Applications Barrier to Entry? The PFJ tries to erode the Applications Barrier to Entry in two ways:

1.. By forbidding retaliation against OEMs, ISVs, and IHVs who support or develop alternatives to Windows.

2.. By taking various measures to ensure that Windows allows the use of non-Microsoft middleware.

A third option not provided by the PFJ would be to make sure that Microsoft raises no artificial barriers against non-Microsoft operating systems which implement the APIs needed to run application programs written for Windows. The Findings of Fact (?52) considered the possibility that competing operating systems could implement the Windows APIs and thereby directly run software written for Windows as a way of circumventing the Applications Barrier to Entry. This is in fact the route being taken by the Linux operating system, which includes middleware (named WINE) that can run many Windows programs.

By not providing some aid for ISVs engaged in making Windows-compatible operating systems, the PFJ is missing a key opportunity to encourage competition in the Intel-compatible operating system market. Worse yet, the PFJ itself, in sections III.D. and III.E., restricts information released by those sections to be used "for the sole purpose of interoperating with a Windows Operating System Product". This prohibits ISVs from using the information for the purpose of writing operating systems that interoperate with Windows programs.

How should the Final Judgment be enforced?

The PFJ as currently written appears to lack an effective enforcement mechanism. It does provide for the creation of a Technical Committee with investigative powers, but appears to leave all actual enforcement to the legal system.

What information needs to be released to ISVs to encourage competition, and under what terms?

The PFJ provides for increased disclosure of technical information to ISVs, but these provisions are flawed in several ways:

1. The PFJ fails to require advance notice of technical requirements

Section III.H.3. of the PFJ requires vendors of competing middleware to meet "reasonable technical requirements" seven months before new releases of Windows, yet it does not require Microsoft to disclose those requirements in advance. This allows Microsoft to bypass all competing

middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

2. API documentation is released too late to help ISVs

Section III.D. of the PFJ requires Microsoft to release via MSDN or similar means the documentation for the APIs used by Microsoft Middleware Products to interoperate with Windows; release would be required at the time of the final beta test of the covered middleware, and whenever a new version of Windows is sent to 150,000 beta testers. But this information would almost certainly not be released in time for competing middleware vendors to adapt their products to meet the requirements of section III.H.3, which states that competing middleware can be locked out if it fails to meet unspecified technical requirements seven months before the final beta test of a new version of Windows.

3. Many important APIs would remain undocumented

The PFJ's overly narrow definitions of "Microsoft Middleware Product" and "API" means that Section III.D.'s requirement to release information about Windows interfaces would not cover many important interfaces.

4. Unreasonable Restrictions are Placed on the Use of the Released Documentation

ISVs writing competing operating systems as outlined in Findings of Fact (?52) sometimes have difficulty understanding various undocumented Windows APIs. The information released under section III.D. of the PFJ would aid those ISVs—except that the PFJ disallows this use of the information. Worse yet, to avoid running afoul of the PFJ, ISVs might need to divide up their engineers into two groups: those who refer to MSDN and work on Windows-only applications; and those who cannot refer to MSDN because they work on applications which also run on non-Microsoft operating systems. This would constitute retaliation against ISVs who support competing operating systems.

5. File Formats Remain Undocumented

No part of the PFJ obligates Microsoft to release any information about file formats, even though undocumented Microsoft file formats form part of the Applications Barrier to Entry (see "Findings of Fact" ?20 and ? 39).

6. Patents covering the Windows APIs remain undisclosed

Section III.I of the PFJ requires Microsoft to offer to license certain intellectual property rights, but it does nothing to require Microsoft to clearly announce which of its many software patents protect the Windows APIs (perhaps in the style proposed by the W3C; see <http://www.w3.org/TR/2001/WD-patent-policy-20010816/#sec-disclosure>). This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users, as illustrated by this report from Codeweavers, Inc.:

When selecting a method of porting a major application to Linux, one prospect of mine was comparing Wine [a competing implementation of some of the Windows APIs] and a toolkit called 'MainWin'.

MainWin is made by Mainssoft, and Mainssoft licenses its software from Microsoft.

However, this customer elected to go with the Mainssoft option instead. I was told that one of the key decision making factors was that Mainssoft representatives had stated that Microsoft had certain critical patents that Wine was violating. My customer could not risk crossing Microsoft, and declined to use Wine. I didn't even have a chance to determine which patents were supposedly violated; nor to disprove the validity of this claim.

The PFJ, by allowing this unclear legal situation to continue, is inhibiting the market acceptance of competing operating systems.

Which practices towards OEMs should be prohibited?

The PFJ prohibits certain behaviors by Microsoft towards OEMs, but curiously allows the following exclusionary practices:

Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. Section III.B. requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs, including important regional "white box" OEMs, if they offer competing products.

Section III.B. also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft Office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software or ARM-compatible operating systems.

By allowing these practices, the PFJ is encouraging Microsoft to extend its monopoly in Intel-compatible operating systems, and to leverage it into new areas. Which practices towards ISVs should be prohibited? Sections III.F. and III.G. of the PFJ prohibit certain exclusionary licensing practices by Microsoft towards ISVs.

However, Microsoft uses other exclusionary licensing practices, none of which are mentioned in the PFJ. Several of Microsoft's products' licenses prohibit the products' use with popular non-Microsoft middleware and operating systems. Two examples are given below.

1. Microsoft discriminates against ISVs who ship Open Source applications The Microsoft Windows Media Encoder 7.1 SDK EULA states

... you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. "Publicly Available Software" means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models ... Publicly Available Software includes, without limitation, software licensed or distributed under any of the following licenses or distribution models, or

licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (SCSL); ... Many Windows APIs, including Media Encoder, are shipped by Microsoft as add-on SDKs with associated redistributable components. Applications that wish to use them must include the add-ons, even though they might later become a standard part of Windows. Microsoft often provides those SDKs under End User License Agreements (EULAs) prohibiting their use with Open Source applications. This harms ISVs who choose to distribute their applications under Open Source licenses; they must hope that the enduser has a sufficiently up-to-date version of the addon API installed, which is often not the case. Applications potentially harmed by this kind of EULA include the competing middleware product Netscape 6 and the competing office suite StarOffice; these EULAs thus can cause support problems for, and discourage the use of, competing middleware and office suites. Additionally, since Open Source applications tend to also run on non-Microsoft operating systems, any resulting loss of market share by Open Source applications indirectly harms competing operating systems.

2. Microsoft discriminates against ISVs who target Windows-compatible competing Operating Systems

The Microsoft Platform SDK, together with Microsoft Visual C++, is the primary toolkit used by ISVs to create Windows-compatible applications. The Microsoft Platform SDK EULA says: "Distribution Terms. You may reproduce and distribute ... the Redistributable Components... provided that (a) you distribute the Redistributable Components only in conjunction with and as a part of your Application solely for use with a Microsoft Operating System Product..." This makes it illegal to run many programs built with Visual C++ on Windows-compatible competing operating systems.

By allowing these exclusionary behaviors, the PFJ is contributing to the Applications Barrier to Entry faced by competing operating systems. Which practices towards large users should be prohibited? The PFJ places restrictions on how Microsoft licenses its products to OEMs, but not on how it licenses products to large users such as corporations, universities, or state and local governments, collectively referred to as 'enterprises'. Yet enterprise license agreements often resemble the per-processor licenses which were prohibited by the 1994 consent decree in the earlier US v.

Microsoft antitrust case, in that a fee is charged for each desktop or portable computer which could run a Microsoft operating system, regardless of whether any Microsoft software is actually installed on the affected computer. These agreements are anticompetitive because they remove any financial incentive for individuals or departments to run non-Microsoft software. Which practices towards end users should be prohibited? Microsoft has used both restrictive licenses and intentional incompatibilities to discourage users from

running Windows applications on Windows-compatible competing operating systems. Two examples are given below.

1. Microsoft uses license terms which prohibit the use of Windows-compatible competing operating systems

MSNBC (a subsidiary of Microsoft) offers software called NewsAlert. Its EULA states "MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of the operating system for which the SOFTWARE PRODUCT was designed [e.g., Microsoft Windows(r) 95; Microsoft Windows NT(r), Microsoft Windows 3.x, Macintosh, etc.]. ..."

Only the Windows version appears to be available for download. Users who run competing operating systems (such as Linux) which can run some Windows programs might wish to run the Windows version of NewsAlert, but the EULA prohibits this. MSNBC has a valid interest in prohibiting use of pirated copies of operating systems, but much narrower language could achieve the same protective effect with less anticompetitive impact. For instance, "MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of Microsoft Windows or compatible operating system."

2. Microsoft created intentional incompatibilities in Windows 3.1 to discourage the use of non-Microsoft operating systems

An episode from the 1996 *Caldera v. Microsoft* antitrust lawsuit illustrates how Microsoft has used technical means anticompetitively.

Microsoft's original operating system was called MS-DOS. Programs used the DOS API to call up the services of the operating system. Digital Research offered a competing operating system, DR-DOS, that also implemented the DOS API, and could run programs written for MS-DOS. Windows 3.1 and earlier were not operating systems per se, but rather middleware that used the DOS API to interoperate with the operating system. Microsoft was concerned with the competitive threat posed by DR-DOS, and added code to beta copies of Windows 3.1 so it would display spurious and misleading error messages when run on DR-DOS. Digital Research's successor company, Caldera, brought a private antitrust suit against Microsoft in 1996. (See the original complaint, and Caldera's consolidated response to Microsoft's motions for partial summary judgment.) The judge in the case ruled that

"Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft." That case was settled out of court in 1999, and no court has fully explored the alleged conduct.

The concern here is that, as competing operating systems emerge which are able to run Windows applications, Microsoft might try to sabotage Windows applications, middleware, and development tools so that they cannot run on non-Microsoft operating systems, just as they did earlier with Windows 3.1.

The PFJ as currently written does nothing to prohibit these kinds of restrictive licenses and intentional incompatibilities, and thus encourages Microsoft to use these techniques to enhance the Applications Barrier to Entry, and harming those consumers who use non-Microsoft operating systems and wish to use Microsoft applications software.

Is the Proposed Final Judgment in the public interest?

The problems identified above with the Proposed Final Judgment can be summarized as follows:

a.. The PFJ doesn't take into account Windows-compatible competing operating systems

a.. Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

b.. The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

a.. The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

b.. The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

c.. The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

d.. The PFJ supposedly applies to "windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertized as being "Windows Powered".

e.. The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

f.. The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

g.. The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

h.. The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

i.. The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

c.. The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

a.. Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

b.. Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

c.. Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running Linux. (Similar licenses to OEMs were once banned by the 1994 consent decree.)

d.. The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

a.. Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

e.. The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

a.. The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

b.. The PFJ allows Microsoft to discriminate against small OEMs -including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

c.. The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

f.. The PFJ as currently written appears to lack an effective enforcement mechanism. Considering these problems, one must conclude that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, and would delay the emergence of competing Windows-compatible operating systems. Therefore, the Proposed Final Judgment is not in the public interest, and should not be adopted without addressing these issues.

Strengthening the PFJ

The above discussion shows that the PFJ does not satisfy the Court of Appeals' mandate. Some of the plaintiff States have proposed an alternate settlement which fixes many of the problems identified above. The States' proposal is quite different from the PFJ as a whole, but it contains many elements which are similar to elements of the PFJ, with small yet crucial changes. In the sections below, I suggest amendments to the PFJ that attempt to resolve some of the demonstrated problems (time pressure has prevented a more complete list of amendments). When discussing amendments, PFJ text is shown indented; removed text in shown in [bracketed strikeout], and new text in bold italics.

Correcting the PFJ's definitions

Definition U should be amended to read

U. "Windows Operating System Product" means (the software code (as opposed to source code) distributed commercially by Microsoft for use with Personal Computers as

Windows 2000 Professional, Windows XP Home, Windows XP Professional, and successors to the foregoing, including the Personal Computer versions of the products currently code named "Longhorn" and "Blackcomb" and their successors, including upgrades, bug fixes, service packs, etc. The software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion.] any software or firmware code distributed commercially by Microsoft that is capable of executing any subset of the Win32 APIs, including without exclusion Windows 2000 Professional, Windows XP Home, Windows XP Professional; Windows XP Tablet PC Edition, Windows CE, PocketPC 2002, and successors to the foregoing, including the products currently code named "Longhorn" and "Blackcomb" and their successors, including upgrades, bug fixes, service packs, etc. Release of information to ISVs TBD Section E should be amended to read

... Microsoft shall disclose to ISVs, IHVs, IAPs, ICPs, and OEMs, [for the sole purpose of interoperating with a Windows Operating System Product.] for the purpose of interoperating with a Windows Operating System Product or with application software written for Windows, via the Microsoft Developer Network ("MSDN") or similar mechanisms, the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product. ...

Prohibition of More Practices Toward OEMs TBD

1. III. A. 2. of the Proposed Final Judgment should be amended to read

2. shipping a Personal Computer that (a) includes both a Windows Operating System Product and a non-Microsoft Operating System, or (b) will boot with more than one Operating System, or (c) includes a non-Microsoft Operating System but no Windows Operating System Product; or ... Prohibition of More Practices Toward ISVs TBD Prohibition of Certain Practices Toward End Users TBD

Summary

This document is not yet complete, but it does demonstrate that there are so many problems with the PFJ that it is not in the public interest. It also illustrates how one might try to fix some of these problems.

Return to "On the Remedy Phase of the Microsoft Antitrust Trial"

MTC-00016096

From: Thomas Keitel
To: Microsoft ATR
Date: 1/23/02 10:31am
Subject: Microsoft Settlement

Dear Sirs,

I feel that the settlement between the United States and Microsoft should not go forward. Microsoft is a company that leverages it's incredible bulk and power upon fledging industries and companies and has no peer and no challenger other than the United States government. I have seen many of my personal choices as a consumer limited

due to Microsoft's "Embrace and Extend" farce of a philosophy. The protocols are open, yet there is no competition. Does this not make anyone with the ability to remedy the problem concerned?

Why can you not buy an Intel PC compatible product with an operating system other than Microsoft Windows preinstalled? Simply, because Microsoft has closed those doors to the competition illegally leveraging it's market position to strong arm PC manufacturers.

Kind Regards,
Thomas Keitel

Subject: Microsoft Settlement

To whom it may concern:

I have been working in the software industry for three years as a Java software developer, and have been writing software for around seven years. I have been using Microsoft products (often by choice, often only by sheer necessity because of the de facto standard it has become), from DOS 4.0 in 1989, through Windows 2000. For as long as I've been using Microsoft products, Microsoft has shown its flagrant disrespect for the competitive marketplace, from snuffing out competitors to its DOS and Windows operating systems (e.g. Dr. DOS, OS/2), by engaging in predatory, secret, non-disclosable OEM deals to prevent OEMs from shipping alternative products, by engaging in "embrace-and-extinguish" practices to consume and later kill emerging threatening technologies (e.g. Java), and by intentionally introducing incompatibilities in its products which either make it difficult for competing third party applications to run, make it difficult for its protocols and formats to be reversed engineered for the sake of compatibility, or keep consumers upgrading needlessly. In parallel, Microsoft has shown a likewise lack of concern for the multitudinous security problems that have plagued its products, only recently claiming to be sincerely interested in security now that viruses and worms based on insecure but ubiquitous Microsoft products are flooding the net. Just recently the FBI became worried enough about a security flaw in Microsoft Windows XP, that it issued an alert. Microsoft's pitch of web services is even more worrisome, in that Microsoft may end up holding the personal information of millions of users who patronize web sites which are based on Microsoft PassPort and HailStorm.

In light of Microsoft's behavior I think that the Proposed Final Judgement is not sufficient. It is too weak, and too ambiguous and leaves Microsoft plenty of room to exploit loopholes (details at: <http://www.kegel.com/remedy/letter.html>). It is nothing more than a slap on the hand. The software industry has seen a steady stifling of innovation, whereas before Microsoft's dominance it was diverse and fertile. We cannot bring back all the technologies, companies, or bright ideas Microsoft suppressed, but we can do the right thing in evening the playing field again, by rejecting

the Proposed Final Judgement, and revising it to close many loopholes, clear up ambiguities, and once again make the marketplace competitive.

To: Microsoft ATR
Date: 1/23/02 10:21am
Subject: Microsoft Settlement

I am writing to voice my opposition to the proposed settlement and my support of the "hold out states". The settlement would be a reward for Microsoft, not a remedy, by imposing "the Microsoft way" on America's children. Education is one arena where Microsoft does not dominate, but this settlement would expand their monopoly power into a market where it did not previously exist. This is bad for all of Microsoft's competitors, such as Apple and RedHat, and the court should not be in the business of putting Microsoft's competitors out of business. Please to not sacrifice our children to the evil empire.

To whom it may concern,

I disagree with the proposed remedy of the Microsoft Anti-trust trial. This remedy would seem to extend, not limit, Microsoft's Monopolistic power. Any remedy should inately *decrease* their Monopolistic power. Maybe an alternative would be to make Microsoft fund billions of dollars worth of *competitors* softare, such as Apple, Linux, and StarOffice. That would be a remedy which would increase competition at least. Or even better, would be to break Microsoft into two companies: Operating Systems and Applications. The Operating System business would then be enjoined from entering into any other business ventures outside of the Operating System arena. thank you,

Subject: Re: Tunney Act comments
Dept of Justice:

I wanted to make a comment on the proposed "final settlement" of the Microsoft Antitrust Trial. I am a Unix system administrator, and have been involved in the computer industry for the last 6 years. In saying that, I also feel I am no more nor less qualified to make comment on this settlement than any other citizen. I see several problems with the settlement, but the most troubling are the extremely narrow definitions that have been agreed to when defining what pieces of Microsoft's software, code, and product line will be affected. I think it will be all too easy for them to change a version number here, a name there, and continue to monopolize the market as they have always done, and will continue to do unless the DOJ steps in and applies real restrictions to them.

Thank You for your time and consideration.

From: nosettlement@
mem.mailshell.com@inetgw
To: Microsoft ATR
Date: 1/23/02 10:33am
Subject: Microsoft Settlement

The proposed settlement is an extremely bad idea for a multitude of reasons. Section III(J)(2) contains some very strong language against not-for-profits. These include Apache, Perl, PHP, Sendmail, Samba and the like. All could be excluded because the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: "... (C) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, ..."

Section III(D), concerning middleware, again allows Microsoft to exclude Open Source vendors entirely and the US government. There are a large number of other failures in the proposed settlement. I oppose it strongly.

From: Aaron Manela
To: Microsoft ATR
Date: 1/23/02 10:33am
Subject: Microsoft Settlement

To Whom it May Concern,
In accordance with the Tunney act I wish to complain that the proposed settlement in the Microsoft case is not in the public interest, or even in the economic interest of this nation.

I work in the IT industry, and I know from personal experience that Microsoft's anti-competitive behavior has cost businesses across this nation huge sums of money.

The proposed settlement lacks effective enforcement. It fails to enforce anticompetitive licensing terms, intentional incompatibilities in the Windows OS's, discriminatory behavior against OEMs and open source software.

It fails to prevent predatory monopoly practices in the future.

The Proposed Final Judgement also uses definitions of the Windows "API" that leave out many Microsoft Windows products which are part of the Microsoft Monopoly.

Microsoft should be broken up into at least two entities, one for the OS and one for the applications. Anything short of this will simply allow Microsoft to continue its business as usual policies.

Thank You,

Subject: Microsoft Settlement

To whom it may concern:
I am against the proposed final judgment in US vs. Microsoft. I feel the damage Microsoft has done to the software and OS marketplace is incalculable, and the proposed settlement does little to correct it. I don't feel the settlement levels the playing field for competing operating systems or office software, and would like to see a much stronger penalty imposed. The proposed settlement does not sufficiently relieve Microsoft of the ability to leverage hardware and computer manufacturers unfairly against competing products, nor does it adequately open the Windows API to programmers.

Don Davis / Tel: 937.235.0096

MTC-00016108

From: C. Schmidt
To: Microsoft ATR
Date: 1/23/02 10:33am
Subject: Microsoft Settlement

To whom it may concern (anyone who wants a tested reliable product):

I do not believe that allowing Microsoft to "donate" \$1 billion worth of computers and software is a fair punishment. Apple Computer, for example, dominates the education market. Allowing Microsoft to enter this education market without competition, but as a "punishment", is ludicrous. This costs Microsoft nothing, and only serves to strengthen their grip. The problem here is you have an entire country (globe?) now conforming to one standard (Wintel). You cannot change this. However, crippling someone who does not play fair by threatening the weak, is an option. You have to hit them where it hurts—TAKE THEIR CASH. In light of the recent filing by AOL/TimeWarner, I hope Microsoft is punished for the illegal strategies it used to push Netscape (a superior product at the time) out of the market.

C. Schmidt

MTC-00016109

From: Khalid Qureshi
To: Microsoft ATR
Date: 1/23/02 10:33am
Subject: Microsoft Settlement

Dear DOJ-
I am opposed to the current Microsoft settlement as it does nothing to change the way that Microsoft illegally oppresses innovation through it's predatory practices.

The problem is not totally that Microsoft is quite large and it's software is well distributed, but that they use their size and market penetration to enforce practices designed to hurt competitors. There was ample evidence of these practices in the Anti-Trust trial, in which Microsoft was found guilty of being a monopoly and using unfair tactics to assure that it remained so.

For example, the open-source SAMBA project implements a network interface allowing non-Microsoft operating systems to connect to computers running Microsoft Windows operating systems for the purpose

of moving files, distributing email, and sharing printers, among other things. This project has led to increased adoption of non-Microsoft operating systems within corporations. This is a threat to Microsoft, so they are changing the protocol WITHOUT providing any details on how the protocols will change.

Add to this the new draconian licensing scheme which requires companies to upgrade software or face harsh penalties by Microsoft, as you can see that Microsoft is using its size to push all non-Microsoft products out of the market place. This is the problem with Microsoft, and one that the USDOJ has chosen not to address.

These tactics continue even as we speak because the USDOJ caved into pressure to basically drop the case. I am ashamed of the DOJ for the way that they "settled". Many economists, lawyers, computer industry specialists, and computer users have poured over the document and found that the "settlement" amounts to this:

Promise to be nice for at least five years, and if not, then we will send someone to look after you, and this person will not have access to any of your code and will thus be unable to gauge the impact of your business decisions. Effectively, we will do nothing but have a symbolic post to address your practices.

It was a great Christmas present to Microsoft, but a signal to the Computer Industry that the Government is not willing to enforce any real remedy. That is why nine states (I am ashamed to say that my state, OHIO, did not participate) did not join the "settlement", and scores of companies (most recently Netscape/AOL) have brought suits against Microsoft. The Government has shown incredible cowardice, and people are dissatisfied and will not take that cowardice for for a true settlement.

Please implement a fair remedy for the good of the computer industry. I use Linux, and I love it because it provides what I need, including interoperability with Microsoft products. At work, I am forced to use Microsoft because of the licensing structure and the closed (i.e. Word *.doc and Powerpoint *.ppt) formats. Open these formats, and at least the engineering staff would jump at the chance to switch from the bug-ridden Microsoft Windows systems to a more robust and cheaper alternative ... like Linux. This cannot happen unless Microsoft is made to open the only thing that keeps them a monopoly—not good products, but closed formats pushing others out of the way.

Thank you for your time,
Khalid Qureshi

From: Rob
To: Microsoft ATR

Date: 1/23/02 10:33am
Subject: Microsoft Settlement
Hash: SHA1

This Proposed settlement is not in the best interests of the public nor business at large.

—The PFJ doesn't take into account Windows-compatible competing operating systems

Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

—The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered. The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

—The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft
Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.) I also agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>).

To: Microsoft ATR
Date: 1/23/02 10:34am
Subject: Microsoft Settlement

To Whom it Concerns,

I have read the proposed settlement in the Microsoft antitrust trial and am opposed to it. The settlement does not remedy the actions currently being committed by Microsoft, nor does it inhibit its ability to commit similar actions in the future. Many of the provisions are vaguely worded and do

little to reduce Microsoft's status as a monopoly.

For instance, provision C.3 states that Microsoft may restrict any OEM licensee from automatically launching at boot time any product that has a user interface of similar size and shape to a user interface provided by a Microsoft Middleware Product. This provision does not prevent Microsoft from producing a product that matches the size and shape of any other vendor's product, thereby excluding its inclusion as an automatically launched product by an OEM. Skinning technology such as that used in Microsoft Media Player would suit this purpose well for Microsoft. I have the utmost concerns, however, with section J.1. This section prohibits a Final Judgement from requiring Microsoft to document, disclose or license to third parties portions of APIs or Documentation or portions or layers of Communications Protocols that would "compromise security of a particular installation or group of installations of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems..." This provision allows Microsoft to prevent product interoperability with any third party vendor's product which provides security, digital rights management, anti-virus, encryption, communication or authentication services. In short, Microsoft is under no obligation to provide documentation for APIs required for any other product to share files, play digital media, communicate, authenticate or interoperate with any future Microsoft Operating System, Application or Middleware.

Please consider this my vote against the proposed Microsoft antitrust settlement and my vote for a stronger, more specific settlement that opens Microsoft to competitors and eliminates its monopoly status.

Subject: Microsoft Settlement

To whom it may concern:

I am writing to give my comments on the Microsoft antitrust settlement. I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation. Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

Subject: Microsoft Settlement
To Whom it May Concern:

I would like to submit these comments on the Proposed Final Judgement in United States v. Microsoft.

As a long-time computer user, I operated a Bulletin Board System (BBS) for several years in the mid-80's and currently maintain a couple of websites. I use computers daily, and have extensive experience with a variety of platforms and software systems.

I am astounded that after found guilty of what Attorney General Ashcroft says is "Microsoft's unlawful conduct," in operating a monopoly, the remedy solution in the Proposed Final Judgment (PFJ) fails to BEGIN to address serious issues and practices. After reading Dan Kegel's (and many others in a wide range of media) points about some of the failures in the PFJ, even if 1/3 of these concerns are legitimate I am astounded at how weak this "remedy" is worded. There are holes in here Microsoft can drive a tractor trailer through. The wording doesn't include Windows XP??? Obviously, this was composed by someone sympathetic to Microsoft or by someone who doesn't have a clue. The lack of punishment here is laughable and only adds to the appearance that the legal process is corrupt. On behalf of the American legal system, I suggest you address these problems, or you set the example that breaking U.S. laws results in no punishment- not a good example for our youth, Microsoft, or future monopolistic companies.

Thanks for your consideration of my brief comments.

MTC-00016123

From: Josh Staiger
To: Microsoft ATR
Date: 1/23/02 10:36am
Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,
Josh Staiger

From: Whitehead, Myron MD
To: "microsoft.atr(a)usdoj.gov"
Date: 1/23/02 10:29am
Subject: Microsoft Settlement Comment

Hello,
I just wanted to take this opportunity to express my opinion regarding the proposed Microsoft antitrust settlement. In my opinion, the proposed settlement falls well short of what is needed. In fact, in many ways, it may actually facilitate Microsoft's monopoly position by integrating Microsoft software products into the educational system even earlier and more than they currently are. We need competition and choice in the operating system marketplace; Microsoft has been shown to use unfair practices and a substantial part of their current success is reasonably attributed to those unfair practices. The proposed settlement is, at best, an annoyance for Microsoft, and, at worst, an ally in sustaining their stranglehold on the operating system market.

Sincerely,
Myron E. Whitehead

MTC-00016125

From: Jason Pellerin
To: Microsoft ATR
Date: 1/23/02 10:35am
Subject: Microsoft Settlement

The proposed final judgement is nothing more than a rehash of the 1995 consent decree. It fails in numerous ways:

<http://www.kegel.com/remedy/remedy2.html>

to restrict Microsoft's abuse of its monopoly. It should also be remembered that it was Microsoft's failure to comply with the 1995 consent decree and the conduct remedies therein, that caused the US to begin the current case. A structural remedy is required in this case:

Microsoft must not be encouraged to obey the law, it must be rendered incapable of breaking it.

The proposed final judgement is not in the public interest.

Sincerely,
Jason Pellerin

Subject: Microsoft Settlement

Having considered the Proposed Final Judgement (PFJ) in the Microsoft antitrust case, and speaking as a computer industry professional who has been actively engaged in the technology since before the rise of Microsoft, I would like to offer the following comments:

The PFJ does—not— address key issues of the monopolization violations affirmed by a unanimous 7-0 Court of Appeals in June 2001. It is my understanding that Microsoft's violations of antitrust law are beyond question and that legal action taken at this point should be intended to curtail any effort by Microsoft to continue with these activities. Thus, as an industry professional, I oppose the proposed settlement.

Despite the rejection by the Court of Appeals of Microsoft's petition for rehearing on how Microsoft unlawfully maintained its monopoly with contractual tying and middleware bundling, the proposed Department of Justice (DOJ) settlement does nothing to address this issue.

The settlement makes no effort to restore competition in the Operating System (OS) market that Microsoft monopolized unlawfully. Recommendations from the DC Circuit ruled that a remedy must "unfetter the market from anticompetitive conduct" and "terminate the illegal monopoly." Proposed solutions included source code licensing and provisions to allow OEMs (Original Equipment Manufacturers) to make changes to the OS itself, yet the settlement does nothing to address the issue.

The current version of Windows XP engages in the same predatory practices that are harmful to competition as earlier versions were to Netscape. There is no indication that, despite having engaged in unlawful behavior, Microsoft has changed their practices to compete in the market lawfully. There is no protection against favorable pricing deals to OEMs that support Microsoft policies or the "commingling of code" that the Court of Appeals claims violated the Sherman Act.

The settlement gives Microsoft the ability to stifle competitors' legitimate access to interoperability data by allowing Microsoft too much flexibility to withhold information for security reasons. This could have disasterous consequences for the burgeoning open source software movement in general, and Microsoft's most likely competitive rival, the Linux OS, in particular.

Microsoft also has, under the terms of the settlement, participation in the Technical Committee overseeing compliance with the settlement. A committee which works within Microsoft's headquarters, is paid by Microsoft, and which cannot tell the public how well Microsoft is complying with the settlement!

In short, Microsoft has repeatedly demonstrated a tendency to employ creative means of circumventing or delaying legal action, and yet this PFJ is riddled with opportunities for Microsoft to continue to abuse its monopoly and further impede competition in the IT industry. It does little or nothing to address Microsoft's unlawful practices, ill-gotten gains, or restrict continued similar behavior.

Subject: Microsoft Settlement

Dear Sirs,
I disagree strongly with the proposed settlement of the Microsoft case. It is a travesty that they, a corporate entity, is allowed to effectively kill other corporate entities, be found guilty and just play legal and political hardball to get off without any realistic punishment or even serious oversight.

It is as if a murderer was given a slap on the wrist and a reloaded gun at his trial. The Department of Justice has a responsibility to enforce *all* of the laws that it was created to enforce, not the ones that are politically expedient.

Subject: Microsoft Settlement

I find the proposed antitrust settlement with Microsoft tries but fails to demand that Microsoft do more to open up its APIs to competitors. The fine print makes it clear that Microsoft could pretty much continue with business as usual.

A more effective remedy would be one that required Microsoft to standardize and publicize the entire set of Windows APIs and the file formats of its Office applications (another key to Microsoft's monopoly "lock-in")—with the express goal of allowing competitors to build Windows software applications, and operating systems, that compete with Microsoft on a level field.

Please consider this when making your decision.

Thanks,
Scott Coughlin

I feel that the proposed Microsoft settlement falls short in many ways. Firstly, I agree with Dan Kegel's comments in his open letter, which I am sure you have and which is available at: <http://www.kegel.com/remedy/letter.html>

I do not see such a provision in the revised proposed Final Judgment, but I would also like to say that any offer by Microsoft to "give" Microsoft products to schools is in fact a transparent attempt by Microsoft to preserve and extend their software monopoly rather than an effective remedy for their past and current monopolistic practices.

Subject: Microsoft settlement

Simply put, the purported settlement in the Microsoft vs DOJ is bad.

Since Microsoft has been convicted of violating the anti-trust act, it needs to be actually punished for doing so. The purported settlement can barely be considered a slap on the wrist, let alone a punishment. Furthermore, I can see very little in the proposed settlement that will actually rectify Microsoft's predatory business practices.

I'm advocating that Microsoft be run out of business, but neither should they profit from a "punishment". Punishment should be just that, something that is unpleasant and perhaps painful.

Subject: Microsoft Settlement

To Whom It May Concern:

I am against the proposed settlement. The Proposed Final Judgement is not in the public interest. Simplistic restrictions that fail to perceive or deal with the infrastructural nature of Microsoft's products are ineffective.

We are in a situation where Microsoft's products are a monopoly because the products have become a national infrastructure. The ubiquitous nature of the Microsoft operating system makes its use similar to the requirements to drive on roads or speak on a telephone in order to engage in effective commerce. Obviously roads are good; a common language is good. However, abusive monopolistic control of roads or control of language is bad.

Think back to the days when our country built paved roads. If one company had dominated that process, owned all the roads and controlled access to them, controlled the business allowed to operate next to them, that situation would be comparable to the software world with Microsoft today. That road-owning company would have controlled which gas stations were allowed, what they were allowed to charge for gas, etc. The road company could license roadside lots only to stores that sold products approved by the road company.

Microsoft has built a railroad or a toll road system. It is ubiquitous and they control the access. Because of the monopoly nature of Microsoft's products, people cannot engage in effective commerce without using the "roads" Microsoft has built.

A piecemeal approach does not correct the problem. Any approach that focuses on one product or practice is comparable to focusing on the national road company at one intersection. Perhaps you force a reduction in tolls along one stretch of highway. The road company raises tolls elsewhere. You force the road company to allow stores nationwide to sell coffee. The road company starts giving away coffee with each toll paid.

The judge didn't think of forbidding the road company from giving away coffee and, if she had, the road company would've done something slightly different but equally effective. As long as the road company is not restricted to roads, there are too many options, too many ways to attack and respond, for overly-specific restrictions to be effective.

The problem is that the road company does not focus solely on roads. In real life, the building of roads is considered important enough that, although companies are paid to build them, no company owns them. With only a small percentage of exceptions, the

people, represented by their governments, own the roads.

Consider another example that is appropriate here only because Microsoft is in a monopoly situation. Most people in this country use English to communicate. They depend upon the language. They invent new words or use words in new contexts as needs arise. However free they are to invent new words or use other languages, they must rely on using basic English when engaging in commerce.

Because of its monopoly, Microsoft's operating system software is comparable to the English language in this context. To the extent that people use computers to communicate, whether via email to their mother or via inventory software to communicate how many widgets are in stock to their purchasing department, that usage is similar to using English to communicate the same information via telephone or in person. They rely on the constructs built from language—human or machine - to communicate.

Imagine if one company owned the English language and could place enormous restrictions upon its use. The thought seems ridiculous but the similarities are strong.

Railroads, roads and English comprise an infrastructure whose use is, by virtue of a monopoly, a requirement for commerce in the USA. Microsoft's monopoly software comprises a national infrastructure, one that is written in computer languages and is used by people to communicate.

Simplistic restrictions that fail to perceive or deal with the infrastructural nature of Microsoft's products are ineffective. Road companies shouldn't control every roadside business. No company should have any control over language used for commerce. Microsoft should not be able to place restrictions on the use of their products.

Specifically: Microsoft's Windows Media Encoder 7.1 SDK EULA prohibits distribution with Open Source software; yet it is Open Source software that offers the best alternatives to Microsoft Software. The DOJ proposal does nothing to correct this. In all instances, Open Source and any other product offering an alternative to Microsoft's software must be allowed to interoperate with Microsoft's. People must be allowed to mix and match Microsoft's software with other software in any and all fashions, unrestrained by Microsoft's ideas about what is appropriate. Period, for all products in all situations, until a period of time after the monopoly has ended.

The proposed settlement fails to require advance notice of technical requirements. API documentation is released too late to help ISV's. Many important API's would remain undocumented. Unreasonable restrictions are placed on the released documentation. File formats remain undocumented. Patents covering the Windows API remain undisclosed. Innovative competition undoubtedly will come from smaller companies and yet smaller OEM's aren't given the same protections as the top 20 OEM's.

Microsoft discriminates against ISV's who target Windows-compatible operating systems. Microsoft uses license terms which

prohibit the use of their products with Windows-compatible operating systems. Microsoft created intentional incompatibilities in Windows 3.1 to discourage the use of non-Microsoft operating systems.

The Proposal Final Judgement is not in the public interest.

Sincerely,
Jeff Caldwell

Subject: Microsoft Settlement

I don't really know that much about the current state of the DOJ's case against Microsoft, but as the UNIX System Administrator at a small liberal arts college in St. Peter, MN, I know that Microsoft has certainly made my life difficult on multiple occasions. It is next to impossible to inventory licenses for 3000+ Windows machines, and all it takes is one disgruntled person on our campus to make a call to the Business Software Alliance, a Microsoft backed organization, and we get slapped with an audit (which we have to pay for, no less!).

Also, Microsoft's refusal to publish thorough APIs for things such as their implementation of the SMB protocol prevent other operating systems from being fully integrated with the "Microsoft" part of our network. SAMBA, the open-source implementation of the SMB protocol works great for most things, but Microsoft keeps changing something with each new release of Windows that breaks SAMBA. A month or two after later, the SAMBA team usually has reverse engineered Microsoft's changes so everything works great again, but 2 months is not a trivial wait! If Microsoft was forced to publish good APIs for their products and protocols, I have no doubt that free, open source, GPL software such as SAMBA could and would provide a much higher and more immediate level of compatibility with MS products.

Same story with Microsoft's line of Office products. Compatibility providing products for Linux such as AbiWord and StarOffice generally have no trouble reading MS-Word formatted documents, as long as the MS-Word document was created with an older version of MS-Office.

Microsoft intentionally obfuscates the way MS-Office writes documents so that competing products will not be able to properly render MS-Word documents. Again, reverse engineering of Microsoft's products eventually leads to compatibility with open source and free products, but the wait can be prohibitive. If Microsoft would simply publish their APIs, products like StarOffice could be re-written to be compatible *while* MS-Office is being written, not *after* it has been released.

Thanks for your time, I hope my input will be useful during this comment period provided by the Tunney Act. Also, please make sure that you can verify the source of comments. I wouldn't put an attempt to fake support past certain groups.

Subject: Microsoft Settlement
To The Justice Department,

I would like to express my concern that Microsoft is essentially receiving a slap on the wrist for illegal deeds performed that are more ominous than those done by Standard Oil a hundred years ago. I do hope that Microsoft is both punished and must pay retribution to the level of their crimes.

In reading the Proposed Final Judgment, I find that it abounds with narrow definitions and gaping loopholes. Here I present some of the points which stuck out to me:

The settlement still does not solve the problem of people and small businesses being forced to purchase Microsoft Windows along with a new computer even though I and others will never use it. Their EULA forbids me from upgrading my computer by taking the operating system from the old machine and installing it on the new machine. The settlement specifically allows Microsoft give OEM discounts based on the quantity of other Microsoft products that they offer. So, for a computer manufacturer, it makes sense to only offer only Windows. On a similar note, Microsoft's enterprise license system bills by the number of computer which could run Windows, not by the number of systems that actually do run Windows. So, to use the enterprise scheme, you still have to pay for a Windows license on any Linux or x86-Solaris machine. This was banned once in 1994 by the consent decree, but it is no longer enforced. What other consent decrees has Microsoft violated? The settlement does not apply to any Pocket PC, Ultimate TV, or X-Box operating system although all claim to be "powered by Windows", use the same 32bit API, and can share many files. The X-Box for instance is a PC with the same DirectX Graphic, Sounds, and general Windows APIs and Microsoft has even advertised it as being very easy to program since it is just like Windows. But, it is not covered under the settlement.

The definition is paraphrased as application software that itself presents a set of APIs which allow users to write new applications without reference to the underlying operating system. Microsoft Java is middleware, but Microsoft.NET and C# are advertised as the next generation Java—yet they are not middleware. Outlook Express is middleware, but a program which does the exact same thing and has a larger API interface, Outlook, is not middleware. And what about Office? For me to run some software, I am required to have a certain DLL included with Office but not Windows. A DLL by definition is middleware, yet Office's DLLs do not apply. Why are some obvious products excluded from being middleware?

For there to truly be competition, Microsoft needs to publish and release the file formats of Office. Office has a near monopoly on any written document, however it runs only on Microsoft's operating systems (x86 Windows and Pocket PC Windows). Microsoft bundles Windows and Office for many OEMs. For any company to enter the business OS space, they need to offer a Office+OS bundles when Microsoft can extend and expand Office to run only on Windows at anytime (like Windows 3.1 on DR-DOS). However, if Office's file formats were public, other companies could make a compatible version of Office and offer a non-Microsoft groupware+OS solution.

In the arena of 3D graphics, Microsoft's DirectX does have some good competition, OpenGL. However, just this month (Jan-2002), Microsoft purchased all of the patents on OpenGL. Will Microsoft now crush this competitor by suing them out of existence? Microsoft has used threat of patent violation lawsuit in the past to drive competition out of business or to force others to not even create their product.

But, what patents does Microsoft own and to what products does think they apply to? The settlement should address patent-product disclosure. Enforcement does not exist in the document. A technical committee can supervise and recommend, to what end? Another five year trial? Penalties, restriction, and yes, even criminal incarceration is needed to prod this company into following the law and their own agreements.

In closing, I am sure others put similar complaints more elegantly, but I am sorely disappointed in the proposed settlement. As a Software Engineer, I can see myself how to get around many of restrictions that will be imposed. Might I suggest, in addition to the restrictive with "letter of law" of which the document is comprised, the proposal should add a plain English "spirit of law" section stating what this document is trying to accomplish. That way, the common person will know when Microsoft violates us again.

 Subject: Microsoft Settlement

To whom it may concern,
 I am writing to express my deep concern regarding the Proposed Final Judgment in the US v Microsoft antitrust case. I've been a professional software engineer since 1995 and have experience developing software on a variety of operating systems, including Windows. In my qualified opinion, Microsoft's current status as a monopoly has caused unimaginable harm to the advancement and innovation of software technology. In my unqualified opinion, I think this monopoly has caused unimaginable harm to the economy of this country, and the entire world. Microsoft was indeed found guilty in this case, therefore, the monopoly must be brought to an end.

If the PFJ is anything but the most absolutely watertight, loophole-free document, Microsoft's infinite riches will pay for the most brilliant legal minds to help them wiggle out of any restriction it seeks to impose. And given Microsoft's behavior during the trial, we all know that they will do this without shame. I'm very concerned that the current PFJ will fail to prevent this from happening. Rather than detailing my specific concerns, I instead refer you to this webpage which serves as an adequate proxy to my concerns. <http://www.kegel.com/remedy/letter.html>

 Subject: Microsoft Settlement

To Whom It May Concern:
 I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for

settlement's sake. A wrong that is not corrected is compounded.

Sincerely,
 J. Mark

MTC-00016145

From: John Robert Arras
 To: Microsoft ATR
 Date: 1/23/02 10:39am
 Subject: Microsoft Settlement

Dear Sir or Madam,
 I am writing to you about the proposed Microsoft antitrust settlement. I do not believe the company should be broken up, but certain steps should be taken to make sure that neither Microsoft (nor any other company) can hold people hostage to their whims, and they should not be able to prevent other people from expressing their thoughts or writing their own software. Microsoft should be able to add whatever it wants into its operating system, and it should not have to disclose source code to anyone.

However, it should be forced to sell its OS at one price to anyone who wants it, and once functionality is in the OS, it must not be removed or downgraded. Microsoft should also be able to sell "server" Oses for more money if they have more functionality, but

again the software should be available to anyone who wants it at a single price.

The following two things are more general thoughts that apply to Microsoft, but which can be abused by anyone. Their existence can allow any software maker to exert too much control.

Another danger is the movement from single-time payments for software to software rentals or "software as a service". Companies, including Microsoft, should not be able to declare that their software is only available for rental because that gives them too much power over customers. They can shut off the software at any time. This is too much power for something as essential as an OS, Microsoft should be forced to sell the software at a reasonable price. (No more than several times the yearly rental rate.)

Another weapon that Microsoft might be able to use is the software patent. If software patents continue to exist and if Microsoft gets their other avenues of control shut off, they may be able to use patents to prevent people from writing software. If Microsoft can get enough patents on core ideas, they can prevent smaller companies from making competing software products. This is a problem with the whole software patent system in that it is not possible to make nontrivial software without violating some patents. Thus, a small company that wants to make software cannot stop Microsoft from stealing their ideas because Microsoft can hold patents on so many core technologies that they can just shut down the little company. Using software patents, a small company can make Microsoft stop making a single product, but Microsoft can make a small company stop producing its only product.

The only way software patents help the little guy is if the little guy isn't making software. If he is merely getting patents and then never doing the actual work of making software (since software patents are just vague descriptions of software without the actual work and details (source code) necessary to allow someone to implement the algorithms) then he can drain money from companies doing the actual work. However, this isn't the same thing as making software.

It is my hope that implementing some or all of these ideas will keep Microsoft from controlling too much of the software industry.

Sincerely,
 John Arras

From: Brian Moore
 To: Microsoft ATR
 Date: 1/23/02 10:39am
 Subject: Microsoft Settlement

Hi,

The proposed settlement to the Microsoft antitrust case will do little (and very possibly nothing) to prevent Microsoft from behaving exactly as it has in the past. The proposal as it stands will not seriously effect Microsoft's ability to use it's functional monopoly through the Windows operating system to give it illegal advantages in the wider software market. Microsoft as a company has consistently demonstrated the will and ability to twist fair business practices to give

themselves unfair (and sometimes illegal) advantages in almost every major category of software. Doing anything less than splitting them into independent companies will leave them room to twist the terms of the settlement proposal to their advantage in the same way they have twisted many other market factors.

There are rumors that both Sun and Microsoft have "encouraged" large numbers of people to contribute to the comment process. You probably have no way to verify this, so it probably doesn't matter a whit, but I want to state for the record that I have no association with either company and am submitting this comment solely as a result of having read many troubling news items in the past few months that compel me to involve myself in one tiny way in the legal process.

Thanks,

Date: 1/23/02 10:36am
Subject: Microsoft Settlement

Greeting's...

As a knowledgeable and respected administrator of Microsoft goods and services, I have seen/experienced first hand some of the rather questionable business practices employed by Microsoft over the years. Until recently, I have frequently supported and recommended Microsoft as a quality product distributed at a reasonable price, regardless. Lately though, their Development, Licensing and Upgrade policies have thoroughly convinced myself of the criminal nature of the tactics and devices used to stifle competition, increase revenue, and punish current users for not lock stepping directly into the Microsoft doctrine...

Once a company "owns" a market, as Microsoft currently does (Isn't it almost 94% of PC software used world wide ?), they have no real options for gaining new business/income other than re-tapping their current customer base, and eliminating ANY competition. This basically means "Extortion". No that's not too harsh a word.

For Instance...

Business was given a choice on the WindowsXP release... Upgrade to our new (Un-Proven, barely released) software now, for a significant price...Or Upgrade later at an increased price. Either way, Microsoft was going to make billions for the release of software which in my mind, and many others, was not worth the price. Features vs Upgrade cost were not economically feasible nor warranted. Typical "End-Users" were

sold basically "Windows Dressings" (Forgive the Pun) complete with built in monitoring tools and services which allow Microsoft to collect un-precedented amounts of information on it's customer base with no solid guarantees on it's usage...(I read the agreement)

It's become apparent since the findings of wrongdoing by Microsoft, that they are trying to lobby a settlement that is not a punishment. All that I've heard/read so far would indicate an almost favorable reaction by Microsoft, in that goods and services and visibility would actually expand to Microsoft's eventual benefit. This should not be allowed to happen, and I urgently request strong action which will induce Microsoft into changing its "own" policies regarding the intentional domination of competing technologies.

Just think....94% of the worlds drivers all owning the same car, and only one company makes any of the parts....

Subject: Microsoft Settlement

To whom it may concern,
The proposed settlement between the Department of Justice and the Microsoft Corporation is, by far, letting Microsoft go with a slap on the wrist. More drastic action must be taken to help ensure that Microsoft cannot dominate the computer software industry in an anti-competetive way. Where as many of Microsoft's competetive practices are indeed done in legitimate ways (such as hiring programmers and other people responsible for making competing products away from their employers), other practices are not. Because the DOJ has not actively kept Microsoft in check during the anti-trust suit, Microsoft has increased their market share of personal computers running Microsoft software. Whether major business restrictions or other such actions are imposed, Microsoft must be stopped before they control the computer software industry in an anti-competitive way.

Christopher M. Smith

MTC-00016150

From: John Seals
To: "microsoft.atr(a)usdoj.gov"
Date: 1/23/02 10:37am
Subject: Microsoft Settlement

Greetings:

I just wanted to add my voice to the rising number of complaints against the proposed settlement the Department of Justice has tentatively reached with the Microsoft Corporation.

Keeping Microsoft in its current state will slow the pace of technology growth, and thereby the US economy if something isn't done. I can't understand how it was deemed necessary to break up the Phone Company monopoly but not the Operating System Monopoly.

This settlement will go a long way in smothering the free market in the Information Technology sector. Microsoft has demonstrated again and again predatory business practices aimed solely at keeping their software and operating systems at the top of the sales charts, but often at the bottom of the performance charts.

I strongly ask that this settlement be re-evaluated and that the Department of Justice consider splitting up this giant Monopoly and letting the free market choose the best product available.

Sincerely,
John Seals

Sirs,

I feel that the proposed settlement is not well defined. There are too many parts of it which can be interpreted in different ways. It seems to me that Microsoft can interpret in a pretty broad way. I don't think there is very much limiting about the document. I request that you reconsider this settlement.

Paul Hein

Subject: Microsoft Settlement

I strongly oppose the "Proposed Final Judgment" in the Microsoft antitrust case. There are many, many things wrong with it ranging from poor definitions of technical terms which significantly weaken the impact of the remedy, to virtually no specification of how the remedies should be enforced, the result of which is that the entire remedy is rendered moot and next year we the people will be back in court spending hard earned tax dollars to confront Microsoft's well funded Legal Team (funded by moneys derived from an illegal monopoly). With over twenty years of personal experience developing innovative software products, both in California's Silicon Valley and on Massachusetts' Route 128, two of the countries most innovative regions, I fear that this Proposed Final Judgment will result in the end of an era of software innovation. Microsoft's well documented and now legally recognized stifling of competition and thereby innovation will spell the demise of one of the shining stars of our economy. Too much power has been concentrated in this one franchise to detriment of our entire nation.

I will be cosigning the excellent review offered by Dan Keigel at <http://www.keigel.com/remedy/letter.html> which does an excellent job detailing many of the

weaknesses of the current proposal. Please, I cannot stress enough, this judgment is flawed and the impact of passing it will have a monumental result on one of our nation's most valuable treasures, our ability to innovate, do not allow this judgment to proceed in its current form!

Sincerely,
John Langley

Subject: microsoft settlement is wrong

Dear Sir or Madam:

The proposed settlement put forth by the Department of Justice is not nearly enough to remedy the damage done to the computer/software industry. Microsoft exists as it is today for no reason other than the extensive manipulation it has wreaked on the industry. In order to provide an environment where innovation can flourish and where users have a choice of software, microsoft must be severely penalized. Even as the government's case against Microsoft is proceeding, the company thumbs its nose at justice by releasing even more software that will further cement their stranglehold on the market and is clearly aimed at extending their grip to other sectors. Please do what is necessary to stop Microsoft from stealing any more of my freedom.

Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing

its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,
Jeremy Gebben

From: Mark Halegua
To: Microsoft ATR
Date: 1/23/02 10:39am
Subject: Microsoft Settlement

To Whom It May Concern:

After reading the settlement of the MS vs DOJ case I feel compelled to respond. The settlement is way too soft and favors Microsoft, essentially rewarding them for anti-competitive behavior. It allows MS to control hardware vendors in the same ways as before, it allows MS to continue to hold captive users by controlling the hardware vendors, and gives them too much control over the committee which supposedly oversees their activities.

MS should have NO people on the committee they suggest or desire. All oversight committee members should in fact be selected by non-MS (perhaps all should be selected by anti-MS) computer industry experts, including the academic, legal, and open source community.

MS must make ALL API information available immediately upon creation. MS should not have even one (1) day of advantage on API calls. Dessemination of API calls should be through the internet on their own web pages (in easy to reach, not hidden or layered areas) and on public web pages, i.e., Freshmeat.com, IDG.net, and other open news web pages. Further, all industry news (i.e., Computerworld, Infoworld, PC Magazine, etc.) outlets and their associated internet outlets must also receive this information.

MS must NOT be allowed ANY time advantage regarding the API calls. A mechanism must be set up whereby a user purchasing a system with Microsoft Windows Operating Systems may return the Operating System to either Microsoft or the hardware vendor and receive, within 60 days of said return and request of payment, payment equivalent to the payment made to MS for the OS. The EULA currently states a user may do this, but no mechanism exists and MS and the hardware vendors do NOT make refunds for the OS.

The situation exists that a computer user wants to use an Operating System (OS) not made by Microsoft, but wants a computer from a vendor where the computer only ships with a Microsoft OS. The user is forced to pay for the OS, even though the user will delete the MS OS and install another OS (i.e., Linux, Unix, FreeBSD, etc.). The End User License Agreement (EULA) states the user may request a refund for the OS if not used, but neither MS nor the hardware manufacturers abide by the EULA. Setting up a mechanism where they are forced to do so, and abide by the EULA.

MS must also be disallowed from in ANY way modifying pricing of product to different vendors. Pricing must be uniform, as this is a method of controlling vendors. The current settlement agreement leaves too much leeway in pricing and thereby still allows MS to use pricing as a weapon against vendors who may want more control over how they install MS products on their systems.

There is so much more wrong with the settlement I wonder if the DOJ didn't make a backdoor deal with MS for items and issues the government doesn't want the public to know about, like government backdoor access to the OS for law enforcement and other items. The settlement as currently proposed punishes MS for anti-trust violations not at all, and Microsoft's behavior over the last 10 years has harmed the industry and the public. Contrary to their claims of innovation, MS innovates not at all, they copy other company's innovations, and generally copies them poorly. They have cornered the desktop OS market (over 90 percent) and the desktop office suite market (over 80 percent), they have cornered these markets using illegal and anti-trust violation, and the settlement does little to correct these issue and nothing to punish MS.

To whom it may concern,

I am writing to express my concern that the settlement between Microsoft and the DOJ is not in the public interest. Particular disturbing is the clause which requires Microsoft to open it's APIs in exchange for a license "on reasonable terms." What are the implications of this clause for the free software movement? There is a large "grassroots" organization of computer programmers who invest their own time (for NO pay) in order to make powerful software available for FREE to businesses like IBM, Sun and Oracle. These free software products need to be provided the specifications and information to interoperate with Windows and other Microsoft products, in order to provide for the possibility of successful free software products with Windows.

Thank you for your time,
Saul Farber

Regarding the Proposed Final Judgement (PF) in the Microsoft anti-trust case, I must say that I find many aspects of it disturbing and insufficiently stringent in terms of holding Microsoft accountable for illegal practices. To pick just one, not requiring Microsoft to pay significant fines for years of "ill-gotten" gains is astounding. When a company is found guilty of abusing its monopolistic power to become even more rich and powerful, they should be heavily fined. Time and again, monetary penalties have been used to good effect to demonstrate to wrong-doers that their actions will not be brooked and this is an excellent time to do just that.

The current Microsoft Settlement proposal is a bad idea. I strongly urge the court to not accept this settlement proposal. The settlement agreed to between Microsoft and the Federal Government is a ruse. It amounts to nothing more than a skillful manipulation of the justice system by Microsoft to turn a potential punishment in a reward. By providing this so-called billion dollar donation of equipment and software (mostly software) to schools, Microsoft is doing two things:

1. Ensuring their monopoly continues and even grows by locking the educational market, previously a bastion of diversity between Apple and Microsoft, onto their products.

2. Escaping punishment by providing billions of dollars in software licenses, a product which has market value, but is of absolutely no actual cost to Microsoft.

 Subject: Microsoft Settlement

To whom it may concern; pl oppose the proposed Microsoft Settlement, as it is currently written. I believe that the proposed settlement is weak in both its punitive and preventative content. The most serious problem that I see with the proposed settlement is that it does not seem to provide any relief for competitive operating systems and applications that seek to be (somewhat) compatible with Microsoft Windows. Indeed, it appears that Microsoft will be able to continue its use of legal and licensing policies to erect barriers to free competitors, such as Linux, Samba and WINE.

I urge you to modify the proposed settlement to include specific prohibitions against any Microsoft practices that erect artificial barriers to entry for competitive operating systems and applications that seek to be compatible with Microsoft Windows.

These prohibitions should, at the least, bar Microsoft from:

- 1) Creating and/or enforcing end user license agreements (EULAs) that prohibit

users from running the licensed software on non-Microsoft operating systems and Windows compatibility applications. I think computer users in the United States should be allowed to run Microsoft Outlook, Internet Explorer or even Excel under Linux and WINE if they want.

2) Prohibiting the use of Microsoft's public API documentation by competitors to enhance the Windows compatibility of their products. This is needed to support both competition in the office productivity software space as well as the operating system space. What's the point of providing documentation to developers, if then they are not allowed to use the information provided? In closing, I hope that my comments have helped convince you that, without modification, the proposed settlement with Microsoft does not adequately protect the US consumers who have been harmed by the company's past anti-competitive actions.

Thank you.

Subject: Microsoft Settlement

Hello,

I wish to voice my opinion about the Microsoft (herein referred to as MS) settlement. However, a summary of my thoughts would be "the USA justice system has no teeth". I must expound, but I shall keep it concise.

The beginning of this trial saw MS accused of unfair trade practices. The middle saw MS guilty of monopolistic practices. At this point, one may point to the fact that monopolistic practices are illegal. To do so would be to rein down justice from the Department of Justice (DOJ). Many companies and involved employees found this reassuring. An illegal practice was found to be harmful to competition and to US citizens. Justice was going to be done.

The debate of the possible remedies was understandably long. MS is a very large company. Any impact on them might be too sweeping to remedy the main problem—unfair trade practices. The past has shown many drastic remedies. AT&T was broken up. IBM was forced to do business in a fundamentally different manner. The past showed that justice was not only brought upon the small companies. No one company was above the law. No one company could be side step the remedy and continue with their unfair trade practices. Competing companies, involved employees, and the

faceless citizen were all thought of as the victims. The victims were given justice. Moreover, each company survived the remedy regardless of their turmoil. A remedy was not a poison pill.

However, I feel that justice will not be done, the wronged will not be righted, and MS will not change in any manner. The current proposed remedy is much too light on MS and doesn't even start to address the concerns of the competition nor those affected. Indeed, the remedy is full of loop holes. Moreover, it does not restrict MS's ability to continue its unfair trade practices in the future. One can easily expect MS to illegally leverage its way into other competing markets with the exact same business strategy. Nothing will change, but there's everything to lose.

I am aware that my opinion is not very forthcoming with facts and the such. Though I can be more articulate and supportive in my statement, I find that there is enough legal and technical opinions from the States who oppose the current proposed remedy. They make very good arguments. I sympathise with them. Regardless, my main objection to this remedy is that there is no perception of how this will stop MS from continuing to act illegally or how this will compensate the wronged. Both are quite flimsy at best. I support a hefty cash fine on MS in the tune of billions. Similarly, I support restricting MS's business actions with a government body who can unilaterally impose fines on MS or cancel any and all MS trade contracts with any company. Lastly, I support opening up competition for offending MS products by fragmenting MS into at least 3 different and independent entities. These products would include but would not be exclusive to: MS Windows 2000, MS Windows XP, MS!

Windows CE (aka: Pocket PC), and MS Windows 9x (including MS Windows Whistler). These remedies are quite harsh, but I find that MS's conduct and attitude in this trial was equally but conversely light. Justice must be done. The DOJ must restore confidence in the justice department. The wronged must feel righted. US citizens cannot be oppressed in such a manner as to stifle innovation and competition.

Subject: Microsoft Settlement
To Whom It May Concern,

I feel that the current settlements proposed to remedy the Microsoft Anti-trust settlement are not going far enough. What essentially is happening is that they are not even receiving a slap on the wrist for criminal action.

For Microsoft to make suggestions to settle the case would not be prudent. Microsoft has shown from its past actions that it cannot be trusted.

Microsoft has ZERO accountability in their guarantee of software quality. This would not be as great of an issue if their software was not in virtually every home and office desktop. Unfortunately, their stronghold on

computers available for us to purchase at the local store virtually forces us to buy their products. If MS Windows crashes, and am lose irreplaceable work worth money, can't Microsoft be liable for these damages? If virtually everybody drove Ford cars with Firestone tires, and those cars crashed at a rate of twice a day, I am sure that Ford and/or Firestone would be held accountable. To make matters worse, it seems as if a substantial part of their revenue comes from the "support" of their products. I am not asking for Microsoft to open their source code, or anything of the like. None of that will not so us any good. Plenty of good software is already written by non-Microsoft companies and individuals. I am asking that Microsoft be watched, or even regulated as any large company/utility is. I am asking that there be a Federal Department overseeing single companies with more than 50% market share of any single software arena. This can range from Operating Systems, to Office Productivity suites. If the same company has the greatest market share in more than one category, then they should be watched on both fronts by separate entities.

Please ensure that a settlement not only punishes Microsoft for their anti-competitive behavior, but also prevents FUTURE anti-competitive infractions. Microsoft can be seen rearing a bad seed: they will continually test their limits with authorities, and if their acts go unpunished by those in charge, they will continue to act the way they have, only this time they will push their limits even more. Please keep in mind, Microsoft did not become #1 because of their "quality software." they became #1 by ignorance, intimidation, and brute force. America's technological future is at stake.

Sincerely,
Bob Alvarez

From: Patrick Earnest
To: Microsoft ATR
Date: 1/23/02 10:40am
Subject: Microsoft Settlement
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a

“punishment” instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

A better settlement would include one of the following:

1) Microsoft having to open up all its APIs to anyone who may request them, with a severe penalty for nondisclosure.

2) A breakup of Microsoft

3) Being forced to give all versions of MS Windows prior to a settlement into the public domain.

4) A fine in the area of \$30 billion dollars.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Subject: Microsoft Settlement

To whom it may concern:

Providing *choice* in operating systems and productivity applications (such as Word and Excel) is the only way to truly free the public from Microsoft's monopolistic stranglehold. There are applications available for Windows as well as other operating systems which would suit most users' needs quite well. Unfortunately, Microsoft's market share is so great, many computer users feel that sending Word or Excel documents is a “standard” form of communication. Some projects have attempted to decode the secret formats of these files, but none have done so perfectly, and Microsoft tends to change them every few releases to ensure that this moving target is never hit. As long as these documents remain unreadable to other applications, users wishing to communicate with others (especially when in a supplier or vendor mode) are forced to use Microsoft

products. They often, in turn, rely on these same mechanism for communicating with others. This effectively creates a word processor market, for example, open only to applications which can perfectly read and write the Microsoft Word file format. Of course, there is only one such application available.

To provide true freedom of choice for Americans, Microsoft-software-generated files must conform to an open standard, allowing other software to correctly read and write in the same format used by the Microsoft products. This is certainly feasible today; the recommended format would be XML, which is easily read on any computing platform. Therefore, I would recommend an addition to the section entitled “III. Prohibited Conduct”:

To provide interoperability with non-Microsoft applications, Microsoft shall not use proprietary or closed formats for documents generated by its word processors, spreadsheets, and presentation applications (like PowerPoint). Rather, standard formats, agreed upon by an independent standards body, of which Microsoft will be a part, shall be used for the persistence or transmission of any of these documents.

Thank you.

This message is my personal comment on the proposed Microsoft settlement. Very briefly, I believe this settlement is NOT in the public interest, and can only serve to

strengthen rather than weaken, Microsoft's monopolies.

Not only will it be ineffective in remedying the harm done by Microsoft's business practices in the past, but it will likely assist Microsoft in the future as it seeks to increase its market share. Microsoft's licensing practices, in particular the way hardware vendors are required to bundle Microsoft software with new PCs, as well as limited in their practical ability to sell hardware unbundled, tend to artificially inflate hardware costs. Purchasers of hardware must pay for Microsoft Windows whether they plan to use it or not.

Further, the provisions of the proposed settlement that give commercial ventures preference over non-commercial ones is a clear threat to Microsoft's most recent—and most threatening—competitor: the open source software community.

The public interest can not be served by allowing any corporation to control what software or hardware products I use as long as I respect that corporation's intellectual property rights; neither is the public interest served by allowing Microsoft to not only avoid any negative consequences from its actions but to reward it by allowing it to draft its own settlement.

In large part, I agree with Dan Kegel's assessment and his suggestions for improvement, as expressed in his open letter (see <http://www.kegel.com/remedy/letter.html>).

I am a US citizen, as well as an independent writer covering technology and computing. My column on open source software appears monthly in Computer Power User (CPU) Magazine.
