

Bay Estuary Program. Regarding the enforcement of the NDZ, the U.S. Coast is responsible for the enforcement and the State of New Jersey has a Memorandum of Understanding, with the Coast Guard, designating the New Jersey State Police as the lead law enforcement agency. The petition submitted to EPA states that the State Police will enforce the boating safety standards and marine sanitation device regulations. ALS raises a question regarding improvements in water quality and whether EPA or NJDEP will attempt to quantify the improvements in water quality as a result if this designation is approved. Certainly, improvements in water quality can be demonstrated through routine ambient

sampling. Since there are several ongoing programs to improve the water quality in the estuary, it is difficult to attribute these improvements to a specific program. Currently, EPA is undertaking a national study to evaluate the efficacy of the NDZ designations and will publish the results when they are available. ALS asked whether EPA is aware of a legislative bill that was introduced by Congressman Saxton that would eliminate NDZ restrictions for vessels that use state of art treatment devices. ALS raised certain concerns about this bill and asked if EPA had comments or concerns. In response, EPA is aware of the legislative bill but chooses not to comment on the bill at this time.

No changes to the determination are necessary based on the comments received.

Barnegat Bay is a shallow, lagoon-type estuary characteristic of a back bay system of a barrier island coastline. Barnegat Bay is bordered by two barrier islands, Island Beach and Long Beach Island. These islands are approximately 64 km in total length, are oriented north-south and separate the bay from the Atlantic Ocean. The NDZ will include Barnegat Bay Complex and its navigable tributaries. The boundary lines have been defined for the Point Pleasant Canal, Barnegat Inlet and Egg Harbor Inlet as lines between the following points:

Point Pleasant Canal	40 04.030 N	40 04.068 N
	74 03.281 W	74 03.278 W
Barnegat Inlet	Inside South Buoy	Inside North Buoy
	39 45.457 N	39 45.525 N
	74 05.519 W	74 05.519 W
Egg Harbor Inlet	39 30.521 N	39 30.476 N
	74 18.389 W	74 17.322 W

Barnegat Bay provides recreational, economic, and aesthetic benefits to the coastal users of New Jersey. The estuary is productive for shellfish harvesting, recreational activities such as fishing, kayaking, swimming and boating. The bay supports hard clam harvest and blue crab landings. NJDEP Bureau of Marine Water Classification and Analysis has divided the State into 36 Shellfish growing water reaches. The bay complex is identified as Reaches 7 through 13 which are as follows:
 Reach 7—Barnegat Bay (Bay Head to Seaweed Point)
 Reach 8—Barnegat Bay (Seaweed Point to Mathis Bridge)
 Reach 9—Toms River
 Reach 10—Barnegat Bay (Mathis Bridge to Forked River)
 Reach 11—Barnegat Bay (Forked River to Main Point)
 Reach 12—Manahawkin/Little Egg Harbor Bay (Main Point to Long Point)
 Reach 13—Long Point to Beach Haven Inlet

Information submitted by the State of New Jersey indicate that there are sixty-six existing pumpout facilities and three pumpout boats available to service vessels throughout the Barnegat Bay Complex. The typical facility is available to the boating community from April through November with hours of operation from 8:00AM until 5:00PM, seven days a week. Seven facilities are available all year. Sixty-three of the existing pumpout facilities are connected to municipal sewage lines.

Sewage from these facilities is routed to the Ocean County Utilities Authority where it undergoes secondary treatment. Three pumpout facilities (Ocean Gate Yacht Basin, Ocean Beach South and Causeway Boat Rental and Marina) store their waste in holding tanks for disposal by a septic waste hauler.

According to the State's petition, the vessel population for the waters of Barnegat Bay Complex is approximately 15,587 vessels which are docked at private residences and 12,900 vessels docked or moored at marinas or yacht clubs. The total vessel population is 28,487. The ratio of boats to pumpout facilities has been based on the total number of vessels which could be expected. With sixty-six shore-side pumpout facilities and two pumpout vessel available to boaters, the ratio of docked or moored boats (including transients) is approximately 420 vessels per pumpout. Standard guidelines refer to acceptable ratios falling in the range of 300 to 600 vessels per pumpout. If the EPA calculation is employed (as listed in the guidance manual entitled, "Protecting Coastal Waters from Vessel and Marina Discharges: A Guide for State and Local Officials—April 1994"), it estimates that twenty-four pumpouts are needed to provide adequate facilities.

Commercial vessels which operate in and around Barnegat Bay are engaged in fishing activities exclusively. Most of the operators will use the pumpout facilities where they dock or obtain fuel.

The larger fishing vessels do not operate in the bay, but dock in the vicinity of Barnegat Light and fish the Atlantic Ocean.

The EPA hereby makes a final affirmative determination that adequate facilities for the safe and sanitary removal and treatment of sewage from all vessels are reasonably available for the Barnegat Bay Complex in Ocean County, New Jersey.
