

alternatives to the proposed action, including the no-action alternative. NRC staff assesses the impacts of the proposed action and its alternatives on public and occupational health, air quality, water resources, waste management, geology and soils, noise, ecology resources, land use, transportation, historical and cultural resources, visual and scenic resources, socioeconomics, accidents and environmental justice. Additionally, the FEIS analyzes and compares the costs and benefits of the proposed action.

Based on the evaluation in the FEIS, NRC environmental review staff has concluded that the proposed action would have small effects on the physical environment and human communities with the exception of: (1) Short-term moderate impacts associated with increases in particulate matter released to the air during the construction phase; (2) short-term moderate impacts related to increased traffic congestion during the construction phase; (3) potential moderate impacts due to transportation accidents; (4) potential moderate impacts from facility operation accidents; (5) moderate impacts associated with a potential operating extension of the DOE depleted uranium tails conversion facility; and (6) moderate employment impacts on the local communities associated with the construction and operation phases.

After weighing the impacts, costs, and benefits of the proposed action and comparing alternatives, NRC staff, in accordance with 10 CFR part 51.91(d), set forth their final recommendation regarding the proposed action. NRC staff recommend that, unless safety issues mandate otherwise, the action called for is the approval of the proposed action (i.e., issue a license).

NRC staff in the Division of Fuel Cycle Safety and Safeguards are currently completing the safety review for USEC's license application and is currently scheduled for completion in June 2006.

Dated at Rockville, Maryland, this 9th day of May 2006.
