Measure Domain:	Person and Caregiver-Centered Experience and Outcomes (section 1848(s)(1)(B)(iv) of the Act)
High priority measure:	Yes (Patient Reported Outcome)
Collection Type:	MIPS CQMs Specifications

Category	Description
Rationale:	<p>We proposed this measure because neck pain is prevalent, impacts functional ability and productivity, and is costly. Measurement results can be used by clinicians in evaluating whether the patient's functional status has improved with initiation of rehabilitation therapy. The measure was evaluated by the MAP conditionally and it was supported pending NQF endorsement. While we agree with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required in section 1848(q)(2)(D)(v) of the Act. The measure steward indicated that this measure offers ample room for improvement for performance based on testing data. The results from testing were that for 1378 clinics, 24.24 percent were classified as low performers, 60.01 percent as average, and 15.75 percent as high. The measure steward believed and we agree that having only 15.75 percent classified as high leaves more than adequate room for improvement in eligible clinician performance over time. Based on the information provided by the measures steward, we believe this measure is evidence-based and represents an important patient reported outcome.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=89244.</p>
	<p>Comment: One commenter supported new measure Q478: Functional Status Change for Patients with Neck Impairments that will serve as a replacement to measure Q223: Functional Status Change for Patients with General Orthopedic Impairments. The new neck-specific measure was developed in response to feedback that providers and patients desired measures specific to neck impairments and had increasingly found the functional questions in the general orthopedic measures to be less meaningful. The addition of this new neck-specific measure will result in a comprehensive set of measures to support the most common orthopedic-type conditions seen by physical and occupational therapists, physicians, and chiropractors. The commenter supported CMS' recognition of patient reported outcome measures (PROMs) within the Quality Payment Program.</p> <p>The commenter indicated that measure Q478, as submitted to the MUC, contained Exclusions and Exceptions that were not included in the version published in the proposed rule for measures Q217 through Q222 (84 FR 41207 through 41218). As a result, the commenter requested that the following (which is not identical to what was submitted to the MUC) be included in the measure adopted by the final rule in order to provide specific and separate clinically logical reasons for exempting or excluding patient episodes and to bring this measure into alignment with measures Q217 through Q222:</p> <p>DENOMINATOR EXCLUSIONS</p> <ul style="list-style-type: none"> • Documentation stating patient has a diagnosis of a degenerative neurological condition such as ALS, MS, or Parkinson's diagnosed at any time before or during the episode of care. • Patient unable to complete the Neck Functional Status PROM at Initial Evaluation and/or Discharge due to blindness, illiteracy, severe mental incapacity or language incompatibility and an adequate proxy is not available. <p>DENOMINATOR EXCEPTIONS</p> <ul style="list-style-type: none"> • Ongoing care not indicated, patient seen only 1-2 visits (e.g., home program only, referred to another provider or facility, consultation only). • Ongoing care not indicated, patient discharged after only 1-2 visits due to specific medical events, documented in the medical record that make the treatment episode impossible such as the patient becomes hospitalized or scheduled for surgery or hospitalized. • Ongoing care not indicated, patient self-discharged early and seen only 1-2 visits (e.g., financial or insurance reasons, transportation problems, or reason unknown). • Patient refused to participate. <p>Response: We agree with the comment that measure Q478 should be aligned as submitted to the MUC. We are finalizing the Denominator Exclusions as represented on the MUC List to read: Patients with diagnosis of a degenerative neurological condition such as ALS, MS, Parkinson's diagnosed at any time before or during the episode of care; and Ongoing care not indicated, patient seen only 1-2 visits (e.g., home program only, referred to another provider or facility, consultation only), which matches what was indicated on the MUC. We are finalizing the Denominator Exceptions as represented on the MUC List to read: Patient refused to participate at admission and/or discharge. Patient unable to complete the Neck FS PROM at admission or discharge due to cognitive deficit, visual deficit, motor deficit, language barrier, or low reading level, and a suitable proxy/recorder is not available. Patient self-discharged early (e.g., financial or insurance reasons, transportation problems, or reason unknown) - Medical reasons (e.g., scheduled for surgery or hospitalized).</p> <p>After consideration of the comments, we are finalizing the <i>Functional Status Change for Patients with Neck Impairments</i> measure with modifications for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>

TABLE Group AA: New Quality Measure Finalized for the 2023 MIPS Payment Year and Future Years

In addition to the new quality measures in Table Group A, we proposed to add one administrative claims based quality measure for the 2023 MIPS payment year and future years. Quality measures that are specified through the administrative claims collection type do not require separate data submission to CMS. Administrative claims measures are calculated based on data available from MIPS eligible clinicians' billings on Medicare Part B claims. We proposed to add this administrative claims-based measure beginning with the 2023 MIPS payment year to allow for time to further refine the measure analytics prior to implementation within the program.

AA.1. All-Cause Unplanned Admission for Patients with Multiple Chronic Conditions

Category	Description
NQF # / eCQM NQF #:	TBD
Quality #:	TBD
Description:	<p>Risk-adjusted outcome measure that uses the outcome of acute, unplanned admissions (per 100 person-years at risk of admission) to assess care quality. Includes Medicare fee-for-service beneficiaries aged 65 years or older who have two or more of the following nine chronic conditions: (1) acute myocardial infarction, (2) Alzheimer's disease and related disorders or senile dementia, (3) atrial fibrillation, (4) chronic kidney disease, (5) chronic obstructive pulmonary disease or asthma, (6) depression, (7) diabetes, (8) heart failure, and (9) stroke or transient ischemic attack.</p> <p>The measure adjusts for:</p> <ul style="list-style-type: none"> • Demographic variables, clinical comorbidities, and measures of frailty/disability. • Two social risk factors: (1) The Agency for Healthcare Research and Quality Socioeconomic Status Index (AHRQ SES Index) and (2) density of physician specialists. The AHRQ SES Index is a widely used and validated measure of area deprivation derived from the American Community Survey (ACS) census block group-level data and linked to a patient's ZIP code. It summarizes SES measures of employment, income, education, and housing.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	Risk-standardized acute admissions per 100 person-years at risk for admission
Denominator:	<p>Medicare fee-for-service beneficiaries ≥ 65 years of age with ≥ 2 of 9 chronic conditions:</p> <ol style="list-style-type: none"> (1) Acute myocardial infarction, (2) Alzheimer's disease and related disorders or senile dementia (3) Atrial fibrillation (4) Chronic kidney disease (5) Chronic obstructive pulmonary disease or asthma (6) Depression (7) Diabetes (8) Heart failure (9) Stroke or transient ischemic attack
Exclusions:	<p>Denominator Exclusions:</p> <ol style="list-style-type: none"> (1) Patients without continuous enrollment in Medicare Part A or Part B during the measurement period. (2) Patient was in hospice at any time during the year prior to the measurement year or at start of the measurement year. (3) Patient had no Evaluation and Management visit to a MIPS eligible clinician. <p>Numerator Exclusions:</p> <ol style="list-style-type: none"> (1) Planned admissions (2) Other admissions that likely do not reflect the quality of ambulatory chronic disease management and primary care provided by the included eligible clinicians: <ul style="list-style-type: none"> • Complications of procedures or surgeries • Accidents • Injuries • Admissions directly from a skilled nursing facility or acute rehabilitation facility • Admissions that occur within 10 days of discharge from a hospital, skilled nursing facility, or acute rehabilitation facility • Admissions that occur while patients are enrolled in Medicare's hospice benefit
Measure Type:	Outcome
Measure Domain:	Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	Yes (Outcome)
Collection Type:	Administrative Claims
Rationale:	<p>We proposed this risk-adjusted administrative claims measure to assess Medicare aged > 65 patients who have two or more of the following nine chronic conditions: (1) acute myocardial infarction, (2) Alzheimer's disease and related disorders or senile dementia, (3) atrial fibrillation, (4) chronic kidney disease, (5) chronic obstructive pulmonary disease or asthma, (6) depression, (7) diabetes, (8) heart failure, and (9) stroke or transient ischemic attack. More than two-thirds of Medicare beneficiaries have been diagnosed with or treated for two or more chronic conditions. People with multiple chronic conditions (MCCs) are more likely to be admitted to the hospital than those without chronic conditions or with a single chronic condition. Additionally, they are more likely to visit the emergency department, use post-acute care (such as skilled nursing facilities), and require home health assistance based on the CMS Chronic Conditions among Medicare Beneficiaries Chartbook: 2012 Edition (cited in ACO 38 measure information form). This measure promotes improved MCC management and coordinated care by assessing the unplanned hospital admissions for this high-risk population. The measure is specified through the administrative claims collection type that does not require separate data submission to CMS. This administrative claims measure is</p>

Category	Description
	<p>calculated based on data available from MIPS eligible clinicians' billings on Medicare Part B claims as well as hospital inpatient, outpatient, and physician claims for clinical risk adjustment. It uses the outcome of acute, unplanned admissions (per 100 person-years at risk of admission) to assess care quality. This measure is added for the 2023 MIPS payment year to allow time to work through operational factors of implementing the measures.</p>
	<p>Comment: One commenter urged CMS not to finalize the addition of the All-Cause Unplanned Admission for Patients with Multiple Chronic Conditions measure for the MIPS program until it has been reviewed and recommended by both the MAP Coordinating Committee and the NQF. In addition, the commenter indicated that some of the nine chronic conditions included in the measure description--(1) acute myocardial infarction, (2) Alzheimer's disease and related disorders or senile dementia, (3) atrial fibrillation, (4) chronic kidney disease, (5) chronic obstructive pulmonary disease or asthma, (6) depression, (7) diabetes, (8) heart failure, and (9) stroke or transient ischemic attack--are not actually chronic conditions. The commenter noted, for example, that acute myocardial infarction, is, by definition, acute and therefore not chronic.</p> <p>Several other commenters opposed the addition of this measure and the move to adopt global and population health administrative claims measures in MIPS. As discussed in comments related to MVPs, these types of measures do not result in meaningful or actionable feedback for specialists, require a large sample to produce reliable results, and do not provide a complete picture of quality due to the limitations of claims data.</p> <p>Several commenters had concerns with measure attribution at the individual level for this measure, as many unplanned readmissions are outside of the individual clinician's control. Commenters believed this measure is primary-care based, and the attribution methodology holds physicians responsible for care they did not provide. If CMS moves forward with implementation in 2021, commenters requested that CMS ensure this measure is adequately risk-adjusted, reviewed by the MAP, and reviewed for reliability. Also, commenters requested that the results of validity testing be publicly disseminated and reviewed by the NQF prior to implementation. Another commenter stated it may be more appropriate for CMS to pursue more targeted measures that focus on ambulatory-sensitive admissions, in order to hone in on variation in care that can be tied to clinician performance.</p> <p>Several commenters supported the addition of this measure to MIPS.</p> <p>Response: We thank the commenters for their comments. We agree that NQF endorsement of measures is preferred, however, an NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required in section 1848(q)(2)(D)(v) of the Act.</p> <p>Although we acknowledge that acute myocardial infarction is not a chronic condition, this diagnosis has a high correlation with coronary heart disease, which represents a chronic condition. The inclusion of this diagnosis will be reviewed, but maintain that it is appropriate to include. According to the Centers for Disease Control (CDC), coronary heart disease (CHD) is the most common type of heart disease, killing over 370,000 people annually. In addition, the CDC states that every year about 735,000 Americans have a heart attack. Of these, 525,000 are a first heart attack and 210,000 happen in people who have already had a heart attack (https://www.cdc.gov/heartdisease/facts.htm). Given the amount of resources that are allocated to patients with these conditions and the frequency at which heart attacks occur, we believe that it is important to include acute myocardial infarction in this measure in order to address its impact on unplanned hospital admission.</p> <p>We believe that population measures may reduce burden on clinicians and allow for assessment of public health issues on a larger scale. We believe this measure gives valuable data for practices of 16 or more clinicians who meet the case minimum of 200. Reliability is one of the many important and scientific issues that we address and tests during our measure development process regardless of measure type (that is, whether the measures are population-based or provider-specific measures). This requirement ensures a large sample to produce reliable results and a complete picture of quality interactions between eligible clinicians and patients within Medicare Part B Claims data. As such, this perspective assesses the overall effective clinical care of patients with multiple chronic conditions (MCC) within this group of clinician's interaction with patients. The measure would work to promote improvements in MCC management and care coordination by assessing this high-risk population's rate of unplanned hospital admissions. In order to decrease clinician burden, the measure uses administrative claims data, which does not require separate data submission. The measure ensures adequate attribution to those eligible clinicians that are specifically treating multiple chronic conditions by requiring at least two of the nine chronic conditions presence on the claim form to be considered in the denominator sample.</p> <p>One commenter indicated that the measure could result in unintended consequences, including increasing the risk that providers avoid admitting patients with multiple chronic conditions to the hospital for medically necessary care. We believe that eligible clinicians will treat patients ethically, ensure a patient's safety, and support positive patient outcomes. We believe this measure encourages eligible clinicians to actively seek innovation in the treatment of patient with multiple chronic conditions to avoid costly hospital admissions.</p> <p>After consideration of the comments and because we value stakeholder feedback, we are not finalizing the <i>All-Cause Unplanned Admission for Patients with Multiple Chronic Conditions</i> measure as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years. This action will allow additional time for the MAP process to occur and to obtain expert feedback prior to implementation. In addition, this will allow time to take all of the commenters' concerns into consideration in the event we propose this measure in future rulemaking.</p>

TABLE Group B: New Specialty Measures Sets and Modifications to Previously Finalized Specialty Measure Sets Finalized for the 2022 MIPS Payment Year and Future Years

We proposed to add seven new specialty measures sets: Endocrinology, Nutrition/Dietician, Pulmonology, Chiropractic Medicine, Clinical Social Work, Audiology, and Speech Language Pathology. These sets were proposed to be added based in part on the expanded definition of the MIPS eligible clinician for physical therapists, occupational therapists, qualified speech-language pathologists, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals. In addition, we have received stakeholder feedback requesting additional specialty sets for clinician types whom did not have an existing specialty measures set. We solicited comment on applicable measures for a Clinical Social Work specialty set in the event clinical social workers were proposed for inclusion in the definition of a MIPS eligible clinician in future rulemaking. We also proposed to modify the previously finalized specialty measures sets below based upon review of updates made to existing quality measure specifications, proposed the addition of new measures for inclusion in MIPS, and considered the feedback provided by specialty societies. In the first column, existing measures with substantive changes described in Table Group D are noted with an asterisk (*), existing measures with substantive changes for the 2019 MIPS performance period described in Table Group DD are noted with a double asterisk (**), core measures that align with Core Quality Measure Collaborative (CQMC) core measure set(s) are noted with the symbol (§), and high priority measures are noted with an exclamation point (!). In addition, the Indicator column includes a “high priority type” in parentheses after each high priority indicator (!) to fully represent the regulatory definition of high priority measures. In addition, electronic Clinical Quality Measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table B as follows: NQF # / eCQM NQF #.

NOTE:

- In the instance a title and/or measure description had a substantive change finalized in Table Group D, the revised title and/or measure description is reflected in the specialty measure sets located in Table Group B.
- Under Table Group B, we respond to comments that are related to new measures that were proposed for addition to measure sets, and measures that were proposed for removal. Any comments received on previously finalized measures are out of scope and not included in this final rule.
- Measures that were not finalized for removal in this final rule have been added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for their retention is addressed under Table Group C.

The definition of high priority at § 414.1305 includes an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure.

The following specialty measure set was excluded from this group because we did not propose any changes to this specialty measure set: Interventional Radiology. Therefore, we refer readers to the CY 2018 Quality Payment Program final rule for the previously finalized Interventional Radiology specialty measure set (82 FR 54098 through 54099).

B.1. Allergy/Immunology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Allergy/Immunology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.1. Allergy/Immunology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ALLERGY/IMMUNOLOGY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	160	CMS52v8	eCQM Specifications	Process	Effective Clinical Care	HIV/AIDS: Pneumocystis Jiroveci Pneumonia (PCP) Prophylaxis: Percentage of patients aged 6 weeks and older with a diagnosis of HIV/AIDS who were prescribed Pneumocystis jiroveci pneumonia (PCP) prophylaxis	Health Resources and Services Administration	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale. In addition, we proposed to remove this measure from the specialty set because it is not applicable to this specialty as Allergy/Immunology specialists do not diagnose, treat or manage HIV/AIDS patients.
After consideration of the comments, we are finalizing the removal of measures from the <i>Allergy/Immunology Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.								

B.2. Anesthesiology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Anesthesiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.3a. Cardiology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE CARDIOLOGY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
1543	345	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	Rate of Asymptomatic Patients Undergoing Carotid Artery Stenting (CAS) Who Are Stroke Free or Discharged Alive: Percent of asymptomatic patients undergoing CAS who are stroke free while in the hospital or discharged alive following surgery.	Society for Vascular Surgeons	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
0071	442	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Persistence of Beta-Blocker Treatment After a Heart Attack: The percentage of patients 18 years of age and older during the measurement year who were hospitalized and discharged from July 1 of the year prior to the measurement year to June 30 of the measurement year with a diagnosis of acute myocardial infarction (AMI) and who were prescribed persistent beta-blocker treatment for six months after discharge.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.

After consideration of the comments, we are finalizing the removal of measures from the *Cardiology Specialty Measure Set* as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.3b. Electrophysiology Cardiac Specialist

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Electrophysiology Cardiac Specialist measure set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.6. Family Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Family Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

! (Opioid)	N/A	468	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Continuity of Pharmacotherapy for Opioid Use Disorder (OUD): Percentage of adults aged 18 years and older with pharmacotherapy for opioid use disorder (OUD) who have at least 180 days of continuous treatment.	University of Southern California
* ! (Appropriate Use)	N/A	472	CMS249 v2	eCQM Specifications	Process	Efficiency and Cost Reduction	Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture: Percentage of female patients 50 to 64 years of age without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period.	Centers for Medicare & Medicaid Services
*	N/A	475	CMS349 v2	eCQM Specifications	Process	Community /Population Health	HIV Screening: Percentage of patients aged 15-65 at the start of the measurement period who were between 15-65 years old when tested for HIV.	Centers for Disease Control and Prevention

B.6. Family Medicine

MEASURES FINALIZED FOR ADDITION TO THE FAMILY MEDICINE SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* ! (Care Coordination)	2624	182	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Functional Outcome Assessment: Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies on the date of the identified deficiencies.	Centers for Medicare & Medicaid Services	This measure was proposed for inclusion into the Family Medicine specialty set as a replacement for measure Q109: Osteoarthritis (OA): Function and Pain Assessment, which was proposed for removal. Measure Q182 includes the patient population in measure Q109, but is more robust in that it requires more frequent assessment and a plan of care.
<p>Comment: One commenter opposed the addition of the new Adult Immunization Status measure to the Family Medicine set. Detailed comments were included in the comments under this measure in Table A. Generally, the commenter stated that the new measure carries too high of a burden to primary care physicians, and the measure has not yet been tested at the clinician level.</p> <p>Response: We thank the commenter for their comment. We have decided not to finalize the addition of the new Adult Immunization Status measure. We disagree that this measure carries a higher burden as it combines components of previously implemented measures within the Family Medicine set. Please see Table A.3 for the complete rationale.</p> <p>Comment: One commenter opposed the addition of measure Q182: Functional Outcome Assessment to the Family Medicine set because of the frequency requirement of every visit or every 30 days for all patients over age 18. Doing a functional assessment at this frequency for all patients seen by family physicians, particularly healthy patients, is burdensome, wasteful, and detracts from meaningful care needed by patients during a visit. The measure requires a more targeted denominator that will benefit from functional assessment. At the most recent meeting of the CQMC, stakeholders opposed measure Q182 for these reasons.</p> <p>Response: We thank the commenter for their comment, however, the Family Medicine set contains 68 quality measures and eligible clinicians may choose not to submit measure Q182.</p> <p>After consideration of the comments, we are finalizing the measures for addition to the <i>Family Medicine Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>									

B.6. Family Medicine

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE FAMILY MEDICINE SET								
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0653	091	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Acute Otitis Externa (AOE): Topical Therapy: Percentage of patients aged 2 years and older with a diagnosis of AOE who were prescribed topical preparations.	American Academy of Otolaryngology - Head and Neck Surgery	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
N/A	109	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	Osteoarthritis (OA): Function and Pain Assessment: Percentage of patient visits for patients aged 21 years and older with a diagnosis of osteoarthritis (OA) with assessment for function and pain.	American Academy of Orthopedic Surgeons	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
0712e	371	CMS160v8	eCQM Specifications	Process	Effective Clinical Care	Depression Utilization of the PHQ-9 Tool: The percentage of adolescent patients 12 to 17 years of age and adult patients age 18 and older with the diagnosis of major depression or dysthymia who have a completed PHQ-9 during each applicable 4 month period in which there was a qualifying depression encounter.	Minnesota Community Measurement	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
0071	442	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Persistence of Beta-Blocker Treatment After a Heart Attack: The percentage of patients 18 years of age and older during the measurement year who were hospitalized and discharged from July 1 of the year prior to the measurement year to June 30 of the measurement year with a diagnosis of acute myocardial infarction (AMI) and who were prescribed persistent beta-blocker treatment for six months after discharge.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
N/A	474	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Zoster (Shingles) Vaccination: The percentage of patients aged 50 years and older who have had the Shingrix zoster (shingles) vaccination.	PPRNet	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.

After consideration of the comments, we are finalizing the removal of measures from the *Family Medicine Specialty Measure Set* as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.7. Internal Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Internal Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B7. Internal Medicine

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE INTERNAL MEDICINE SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0653	091	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Acute Otitis Externa (AOE): Topical Therapy: Percentage of patients aged 2 years and older with a diagnosis of AOE who were prescribed topical preparations.	American Academy of Otolaryngology - Head and Neck Surgery	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
0712e	371	CMS160v8	eCQM Specifications	Process	Effective Clinical Care	Depression Utilization of the PHQ-9 Tool: The percentage of adolescent patients 12 to 17 years of age and adult patients age 18 and older with the diagnosis of major depression or dysthymia who have a completed PHQ-9 during each applicable 4 month period in which there was a qualifying depression encounter.	Minnesota Community Measurement	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
0071	442	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Persistence of Beta-Blocker Treatment After a Heart Attack: The percentage of patients 18 years of age and older during the measurement year who were hospitalized and discharged from July 1 of the year prior to the measurement year to June 30 of the measurement year with a diagnosis of acute myocardial infarction (AMI) and who were prescribed persistent beta-blocker treatment for six months after discharge.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
N/A	474	N/A	MIPS CQMs Specifications	Process	Community /Population Health	Zoster (Shingles) Vaccination: The percentage of patients aged 50 years and older who have had the Shingrix zoster (shingles) vaccination.	PPRNet	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.

After consideration of the comments, we are finalizing the removal of measures from the *Internal Medicine Specialty Measure Set* as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.8. Emergency Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Emergency Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

American College of Emergency Physicians

B.8. Emergency Medicine

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE EMERGENCY MEDICINE SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0653	091	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Acute Otitis Externa (AOE): Topical Therapy: Percentage of patients aged 2 years and older with a diagnosis of AOE who were prescribed topical preparations.	American Academy of Otolaryngology - Head and Neck Surgery	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
N/A	255	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Rh Immunoglobulin (Rhogam) for Rh-Negative Pregnant Women at Risk of Fetal Blood Exposure: Percentage of Rh-negative pregnant women aged 14-50 years at risk of fetal blood exposure who receive Rh-Immunoglobulin (Rhogam) in the emergency department (ED).	American College of Emergency Physicians	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.

Comment: One commenter opposed the removal of measure Q091 from the Emergency Medicine set. The commenter understood CMS' rationale for removing the measure because it is clinical equivalent to measure Q093: Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use. However, the commenter believed that for emergency physicians, measure Q091 remains the more meaningful measure for emergency medicine physicians.

Response: We thank the commenters for their comment. In the circumstance an eligible clinician does not prescribe an antibiotic, most likely a topical therapy would be prescribed. However, the eligible clinician is able to prescribe both an antibiotic and topical therapy and remain numerator compliant for this measure. Despite their limited utility, about 20-40 percent of patients with AOE receive oral antibiotics, often in addition to topical therapy (Rosenfeld, et al., 2014). We encourage the commenter to collaborate with the measure steward to develop a measure that promotes the use of antibiotic alternatives while decreasing inappropriate antibiotic usage, and submit to the Call for Measures once tested at the clinician level.

After consideration of the comments, we are finalizing the removal of measures from the *Emergency Medicine Specialty Measure Set* as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.9. Obstetrics/Gynecology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Obstetrics/Gynecology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

MEASURES FINALIZED FOR ADDITION TO THE OBSTETRICS/GYNECOLOGY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* ! (Outcome)	N/A	335	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	Maternity Care: Elective Delivery or Early Induction Without Medical Indication at < 39 Weeks (Overuse): Percentage of patients, regardless of age, who gave birth during a 12-month period who delivered a live singleton at < 39 weeks of gestation completed who had elective deliveries or early inductions without medical indication.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Obstetrics/Gynecology specialty set as it is clinically relevant to this clinician type and drives quality of care by assessing the rate of elective deliveries before 39 weeks gestation in the absence of medical indication, following The American College of Obstetrics and Gynecology clinical guidance.
* ! (Care Coordination)	N/A	336	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	Maternity Care: Postpartum Follow-up and Care Coordination: Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care within 8 weeks of giving birth and who received a breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Obstetrics/Gynecology specialty set as it is clinically relevant to this clinician type.
<p>Comment: One commenter noted the inclusion of the proposed Adult Immunization Status measure under the Obstetrics/Gynecology set. The commenter encouraged CMS to also consider adopting the Prenatal Immunization Status measure, which was created specifically for maternal populations and better reflects the Advisory Committee on Immunization Practices (ACIP) recommendations for pregnant women, specifically Tdap and influenza. Like the Adult Immunization Status measure, the Prenatal Immunization Status measure will help to address substantial disparities in prenatal immunization rates. Getting a flu shot reduces a pregnant woman's risk of hospitalization by 40 percent and helps protect the newborn before he/she is old enough to be vaccinated.</p> <p>Response: The Adult Immunization Status measure is not being finalized at this time. We encourage the commenter to collaborate with the measure steward of the Prenatal Immunization Status measure to submit to the Call for Measures for consideration for inclusion in MIPS.</p> <p>After consideration of the comments, we are finalizing the measures for addition to the <i>Obstetrics/Gynecology Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>									

B.9. Obstetrics/Gynecology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE OBSTETRICS/GYNECOLOGY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	428	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Pelvic Organ Prolapse: Preoperative Assessment of Occult Stress Urinary Incontinence: Percentage of patients undergoing appropriate preoperative evaluation of stress urinary incontinence prior to pelvic organ prolapse surgery per American College of Obstetrics and Gynecology (ACOG), American Urogynecologic Society, and American Urological Association guidelines.	American Urogynecologic Society	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
We received no comments on measures proposed for removal impacting this specialty measure set; therefore, we are finalizing the removal of measures from the <i>Obstetrics/Gynecology Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years.								

B.10. Ophthalmology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Ophthalmology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.11. Orthopedic Surgery

MEASURES FINALIZED FOR ADDITION TO THE ORTHOPEDIC SURGERY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* ! (Care Coordination)	2624	182	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Functional Outcome Assessment: Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies on the date of the identified deficiencies.	Centers for Medicare & Medicaid Services	This measure is being proposed for inclusion into the Orthopedic Surgery specialty set as a replacement for measure Q109: Osteoarthritis (OA): Function and Pain Assessment, which is being proposed for removal. Measure Q182 includes the patient population in measure Q109, but is more robust in that it requires more frequent assessment and a plan of care.
* ! (Outcome)	0422	217	N/A	MIPS CQMs Specifications	Patient Reported Outcome	Communication and Care Coordination	Functional Status Change for Patients with Knee Impairments: A patient-reported outcome measure of risk-adjusted change in functional status for patients aged 14 years+ with knee impairments. The change in functional status (FS) is assessed using the Knee FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure)	Focus on Therapeutic Outcomes, Inc.	This measure was proposed for inclusion into the Orthopedic Surgery specialty set as it is clinically relevant and the denominator was expanded to allow for this clinician type.

B.11. Orthopedic Surgery

MEASURES FINALIZED FOR ADDITION TO THE ORTHOPEDIC SURGERY SET

* ! (Outcome)	0425	220	N/A	MIPS CQMs Specifications	Patient Reported Outcome	Communication and Care Coordination	Functional Status Change for Patients with Low Back Impairments: A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with low back impairments. The change in functional status (FS) is assessed using the Low Back FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure)	Focus on Therapeutic Outcomes, Inc.	This measure was proposed for inclusion into the Orthopedic Surgery specialty set as it is clinically relevant and the denominator was expanded to allow for this clinician type.
* ! (Outcome)	0426	221	N/A	MIPS CQMs Specifications	Patient Reported Outcome	Communication and Care Coordination	Functional Status Change for Patients with Shoulder Impairments: A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with shoulder impairments. The change in functional status (FS) is assessed using the Shoulder FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure)	Focus on Therapeutic Outcomes, Inc.	This measure was proposed for inclusion into the Orthopedic Surgery specialty set as it is clinically relevant and the denominator was expanded to allow for this clinician type.

B.11. Orthopedic Surgery

MEASURES FINALIZED FOR ADDITION TO THE ORTHOPEDIC SURGERY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* ! (Outcome)	0427	222	N/A	MIPS CQMs Specifications	Patient Reported Outcome	Communication and Care Coordination	Functional Status Change for Patients with Elbow, Wrist or Hand Impairments: A patient-reported outcome measure of risk-adjusted change in functional status (FS) for patients 14 years+ with elbow, wrist or hand impairments. The change in FS is assessed using the Elbow/Wrist/Hand FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.) The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure)	Focus on Therapeutic Outcomes, Inc.	This measure was proposed for inclusion into the Orthopedic Surgery specialty set as it is clinically relevant and the denominator was expanded to allow for this clinician type.
! (Outcome)	N/A	478	N/A	MIPS CQMs Specifications	Patient Reported Outcome	Person and Caregiver-Centered Experience and Outcomes	Functional Status Change for Patients with Neck Impairments: This is a patient-reported outcome performance measure (PRO-PM) consisting of a patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients aged 14+ with neck impairments. The change in FS is assessed using the Neck FS PROM.* The measure is risk-adjusted to patient characteristics known to be associated with FS outcomes. It is used as a performance measure at the patient, individual clinician, and clinic levels to assess quality. *The Neck FS PROM is an item-response theory-based computer adaptive test (CAT). In addition to the CAT version, which provides for reduced patient response burden, it is available as a 10-item short form (static/paper-pencil).	Focus on Therapeutic Outcomes, Inc.	This measure was proposed as a new measure for the 2020 performance period. We proposed to include this measure in the Orthopedic Surgery specialty set as it is clinically relevant to this clinician type.
<p>Comment: Three commenters requested that CMS add measure Q357: Surgical Site Infection (SSI) to Orthopedic Surgery set. This measure currently is assigned as a quality measure in Plastic Surgery, General Surgery, and Otolaryngology sets. In light of the many surgical procedures performed by orthopedic surgeons, it would be appropriate to add this measure to the Orthopedic Surgery set.</p> <p>Response: We thank the commenters for their comments and would point them to the current posted measure specification as the orthopedic surgeon would not be eligible to submit this measure. The coding contained within the measure's denominator is isolated to general surgery. The measure steward explains that the "risk adjustment is performed with a parsimonious dataset and aims to allow efficient data collection resources and data reporting. Measures have been harmonized when possible." Adding orthopedic surgery procedures to this measure may challenge the inherent risk adjustment. We encourage the commenter to work with the measure steward to include coding within the denominator of measure Q357 that is applicable to the Orthopedic Surgery MIPS eligible clinician, yet maintain the risk adjustment. If measure Q357's denominator is found to support to Orthopedic Surgery, we encourage the commenters to submit their recommendation to the Call for Specialty Measure Set.</p> <p>After consideration of the comments, we are finalizing the measures for addition to the <i>Orthopedic Surgery Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>									

B.11. Orthopedic Surgery

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ORTHOPEDIC SURGERY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

0097	046	N/A	Medicare Part B Claim Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	<p>Medication Reconciliation Post-Discharge: The percentage of discharges from any inpatient facility (e.g. hospital, skilled nursing facility, or rehabilitation facility) for patients 18 years of age and older seen within 30 days following discharge in the office by the physician, prescribing practitioner, registered nurse, or clinical pharmacist providing on-going care for whom the discharge medication list was reconciled with the current medication list in the outpatient medical record. This measure is submitted as three rates stratified by age group:</p> <ul style="list-style-type: none"> • Submission Criteria 1: 18-64 years of age. • Submission Criteria 2: 65 years and older. • Total Rate: All patients 18 years of age and older. 	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
N/A	109	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	<p>Osteoarthritis (OA): Function and Pain Assessment: Percentage of patient visits for patients aged 21 years and older with a diagnosis of osteoarthritis (OA) with assessment for function and pain.</p>	American Academy of Orthopedic Surgeons	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
0420	131	N/A	Medicare Part B Claims Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	<p>Pain Assessment and Follow-Up: Percentage of visits for patients aged 18 years and older with documentation of a pain assessment using a standardized tool(s) on each visit AND documentation of a follow-up plan when pain is present.</p>	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
N/A	179	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Rheumatoid Arthritis (RA): Assessment and Classification of Disease Prognosis: Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have an assessment and classification of disease prognosis at least once within 12 months.</p>	American College of Rheumatology	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.

B.11. Orthopedic Surgery

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ORTHOPEDIC SURGERY SET								
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	352	N/A	MIPS CQMs Specifications	Process	Patient Safety	Total Knee Replacement: Preoperative Antibiotic Infusion with Proximal Tourniquet: Percentage of patients regardless of age undergoing a total knee replacement who had the prophylactic antibiotic completely infused prior to the inflation of the proximal tourniquet	American Association of Hip and Knee Surgeons	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
N/A	353	N/A	MIPS CQMs Specifications	Process	Patient Safety	Total Knee Replacement: Identification of Implanted Prosthesis in Operative Report: Percentage of patients regardless of age undergoing a total knee replacement whose operative report identifies the prosthetic implant specifications including the prosthetic implant manufacturer, the brand name of the prosthetic implant and the size of each prosthetic implant.	American Association of Hip and Knee Surgeons	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
After consideration of the comments, we are finalizing the removal of measures from the <i>Orthopedic Surgery Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.								

B.12. Otolaryngology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Otolaryngology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

After consideration of the comments, we are finalizing the removal of measures from the <i>Otolaryngology Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.								

B.13. Pathology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.13. Pathology

PREVIOUSLY FINALIZED MEASURES IN THE PATHOLOGY SET								
Indicator	NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward
	1854	249	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Barrett's Esophagus: Percentage of esophageal biopsy reports that document the presence of Barrett's mucosa that also include a statement about dysplasia.	College of American Pathologists
	1853	250	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Radical Prostatectomy Pathology Reporting: Percentage of radical prostatectomy pathology reports that include the pT category, the pN category, the Gleason score and a statement about margin status.	College of American Pathologists
! (Care Coordination)	N/A	395	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Lung Cancer Reporting (Biopsy/Cytology Specimens): Pathology reports based on biopsy and/or cytology specimens with a diagnosis of primary non-small cell lung cancer classified into specific histologic type or classified as non-small cell lung cancer not otherwise specified (NSCLC-NOS) with an explanation included in the pathology report.	College of American Pathologists
! (Care Coordination)	N/A	396	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Lung Cancer Reporting (Resection Specimens): Pathology reports based on resection specimens with a diagnosis of primary lung carcinoma that include the pT category, pN category and for non-small cell lung cancer (NSCLC), histologic type.	College of American Pathologists
! (Care Coordination)	N/A	397	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Melanoma Reporting: Pathology reports for primary malignant cutaneous melanoma that include the pT category and a statement on thickness, ulceration and mitotic rate.	College of American Pathologists

B.13. Pathology

MEASURES FINALIZED FOR ADDITION TO THE PATHOLOGY SET

* § ! (Outcome)	0710 / 0710e	370	CMS159 v8	eCQM Specifications, CMS Web Interface Specifications, MIPS CQMs Specifications	Outcome	Effective Clinical Care	Depression Remission at Twelve Months: The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event date.	Minnesota Community Measurement	We proposed to include this measure in the Pediatrics specialty set as the denominator was expanded to include pediatric patients and it drives quality by measuring depression remission.
We received no comments on the measures proposed for addition to this specialty set. Therefore, we are finalizing the measures for addition to the <i>Pediatrics Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years.									

B.14. Pediatrics

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE PEDIATRICS SET								
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0653	091	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Acute Otitis Externa (AOE): Topical Therapy: Percentage of patients aged 2 years and older with a diagnosis of AOE who were prescribed topical preparations.	American Academy of Otolaryngology - Head and Neck Surgery	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
N/A	160	CMS52v8	eCQM Specifications	Process	Effective Clinical Care	HIV/AIDS: Pneumocystis Jiroveci Pneumonia (PCP) Prophylaxis: Percentage of patients aged 6 weeks and older with a diagnosis of HIV/AIDS who were prescribed Pneumocystis jiroveci pneumonia (PCP) prophylaxis.	Health Resources and Services Administration	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
N/A	467	N/A	MIPS CQMs Specifications	Process	Community /Population Health	Developmental Screening in the First Three Years of Life: The percentage of children screened for risk of developmental, behavioral and social delays using a standardized screening tool in the 12 months preceding or on their first, second, or third birthday. This is a composite measure of screening in the first three years of life that includes three, age-specific indicators assessing whether children are screened in the 12 months preceding or on their first, second or third birthday.	Oregon Health & Science University	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
After consideration of the comments, we are finalizing the removal of measures from the <i>Pediatrics Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposal for removal from the MIPS program.								
Please note, that the proposed rule title for this table should had read "Previously Finalized Measures Proposed for Removal from the Pediatrics Set."								

B.15. Physical Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Physical Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.17. Preventive Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Preventive Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

MEASURES FINALIZED FOR ADDITION TO THE PREVENTIVE MEDICINE SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* ! (Care Coordination)	2624	182	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Functional Outcome Assessment: Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies on the date of the identified deficiencies.	Centers for Medicare & Medicaid Services	This measure was proposed for inclusion into the Preventive Medicine specialty set as a replacement for measure Q109: Osteoarthritis (OA): Function and Pain Assessment, which was proposed for removal. Measure Q182 includes the patient population in measure Q109, but is more robust in that it requires more frequent assessment and a plan of care.

We received no comments on the measures proposed for addition to this specialty set. Therefore, we are finalizing the measures for addition to the *Preventive Medicine Specialty Measure Set* as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years.

B.17. Preventive Medicine

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE PREVENTIVE MEDICINE SET								
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	109	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	Osteoarthritis (OA): Function and Pain Assessment: Percentage of patient visits for patients aged 21 years and older with a diagnosis of osteoarthritis (OA) with assessment for function and pain.	American Academy of Orthopedic Surgeons	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
N/A	474	N/A	MIPS CQMs Specifications	Process	Community /Population Health	Zoster (Shingles) Vaccination: The percentage of patients aged 50 years and older who have had the Shingrix zoster (shingles) vaccination.	PPRNet	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
After consideration of the comments, we are finalizing the removal of measures from the <i>Preventive Medicine Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.								
Please note that the proposed rule title for this table should have read “Previously Finalized Measures Proposed for Removal from the Preventive Medicine Set.”								

B.18. Neurology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Neurology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.19. Mental/Behavioral Health

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE MENTAL/BEHAVIORAL HEALTH SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	325	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	Adult Major Depressive Disorder (MDD): Coordination of Care of Patients with Specific Comorbid Conditions: Percentage of medical records of patients aged 18 years and older with a diagnosis of major depressive disorder (MDD) and a specific diagnosed comorbid condition (diabetes, coronary artery disease, ischemic stroke, intracranial hemorrhage, chronic kidney disease [stages 4 or 5], End Stage Renal Disease [ESRD] or congestive heart failure) being treated by another clinician with communication to the clinician treating the comorbid condition.	American Psychiatric Association	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
0712e	371	CMS160v8	eCQM Specifications	Process	Effective Clinical Care	Depression Utilization of the PHQ-9 Tool: The percentage of adolescent patients 12 to 17 years of age and adult patients age 18 and older with the diagnosis of major depression or dysthymia who have a completed PHQ-9 during each applicable 4 month period in which there was a qualifying depression encounter.	Minnesota Community Measurement	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table for rationale.
0711	411	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	Depression Remission at Six Months: The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission six months (+/- 60 days) after an index event date.	Minnesota Community Measurement	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.

After consideration of the comments, we are finalizing the measures for removal from the *Mental/Behavioral Health Specialty Measure Set* as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.20. Diagnostic Radiology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Diagnostic Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

MEASURES FINALIZED FOR ADDITION TO THE GENERAL SURGERY SET									
Indicator	NQF # / eCQM / NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A	354	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	Anastomotic Leak Intervention: Percentage of patients aged 18 years and older who required an anastomotic leak intervention following gastric bypass or colectomy surgery.	American College of Surgeons	We proposed to include this measure in the General Surgery specialty set as it is clinically relevant to this clinician type.
<p>Comment: One commenter generally supported the addition of measure Q354: Anastomotic Leak Intervention to the General Surgery set, as it a foundational conformance measure that identifies adverse events for the specified procedures and provides relevant and actionable data for surgical practice. However, in order to reliably and validly measure anastomotic leak intervention, the commenter said a single source to collect, analyze, and aggregate data is needed.</p> <p>The commenter has found that measuring the same quality measure, with the same measure specification across registries, does not ensure accurate benchmarking due to inconsistencies in program implementation and data interpretation, including the lack of standardized data definitions, lack of standardized risk adjustment/data analytics, inconsistency of data ascertainment methods, and lack of common normalization methods.</p> <p>Response: We thank the commenter for supporting the addition of measure Q354 to the General Surgery set. We require measures to be submitted as specified for MIPS and clinicians should not use specifications from other programs to ensure that performance can be assessed across MIPS eligible clinicians. In addition, Qualified Registries and QCDRs are required to perform data validation execution reports to ensure accurate benchmarking. We believe that the measure specification, which contains specific coding to define the sample population and the measure flow that outlines the systemic approach to align patients into the appropriate numerator options, supports standardized implementation of the measure concept regardless of the data source.</p> <p>After consideration of the comments, we are finalizing the measures for addition to the <i>General Surgery Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>									

B.22. General Surgery

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE GENERAL SURGERY SET								
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0097	046	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	<p>Medication Reconciliation Post-Discharge: The percentage of discharges from any inpatient facility (e.g. hospital, skilled nursing facility, or rehabilitation facility) for patients 18 years of age and older seen within 30 days following discharge in the office by the physician, prescribing practitioner, registered nurse, or clinical pharmacist providing on-going care for whom the discharge medication list was reconciled with the current medication list in the outpatient medical record. This measure is submitted as three rates stratified by age group:</p> <ul style="list-style-type: none"> • Submission Criteria 1: 18-64 years of age. • Submission Criteria 2: 65 years and older. • Total Rate: All patients 18 years of age and older. 	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
After consideration of the comments, we are finalizing the removal of measures from the <i>General Surgery Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.								

B.23. Vascular Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Vascular Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

0131	166	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	Coronary Artery Bypass Graft (CABG): Stroke: Percentage of patients aged 18 years and older undergoing isolated CABG surgery who have a postoperative stroke (i.e., any confirmed neurological deficit of abrupt onset caused by a disturbance in blood supply to the brain) that did not resolve within 24 hours.	Society of Thoracic Surgeons	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
After consideration of the comments, we are finalizing the removal of measures from the <i>Thoracic Surgery Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.								

B.25. Urology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Urology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.25. Urology

! (Outcome)	N/A	476	CMS771 v1	eCQM Specifications	Patient Reported Outcome	Person and Caregiver-Centered Experience and Outcomes	International Prostate Symptom Score (IPSS) or American Urological Association-Symptom Index (AUA-SI) change 6-12 months after diagnosis of Benign Prostatic Hyperplasia: Percentage of patients with an office visit within the measurement period and with a new diagnosis of clinically significant Benign Prostatic Hyperplasia who have International Prostate Symptoms Score (IPSS) or American Urological Association Symptom Index (AUA-SI) documented at time of diagnosis and again 6-12 months later with an improvement of 3 points.	Large Urology Group Practice Association and Oregon Urology Institute	This measure was proposed as a new measure for the 2020 performance period. We proposed to include this measure in the Urology specialty set as it is clinically relevant to this clinician type.
We received no comments on the measures proposed for addition to this specialty set. Therefore, we are finalizing the measures for addition to the <i>Urology Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years.									

B.25. Urology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE UROLOGY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0420	131	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communi- cation and Care Coordinati- on	Pain Assessment and Follow-Up: Percentage of visits for patients aged 18 years and older with documentation of a pain assessment using a standardized tool(s) on each visit AND documentation of a follow-up plan when pain is present.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
N/A	428	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Pelvic Organ Prolapse: Preoperative Assessment of Occult Stress Urinary Incontinence: Percentage of patients undergoing appropriate preoperative evaluation of stress urinary incontinence prior to pelvic organ prolapse surgery per American College of Obstetrics and Gynecology (ACOG), American Urogynecologic Society, and American Urological Association guidelines	American Urogynecol- ogic Society	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.

After consideration of the comments, we are finalizing the removal of measures from the *Urology Specialty Measure Set* as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.26a. Oncology/Hematology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Oncology/Hematology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. The Oncology specialty set has been updated to include Hematology and has been renamed as Oncology/Hematology. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.26a. Oncology/Hematology

MEASURES FINALIZED FOR ADDITION TO THE ONCOLOGY/HEMATOLOGY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A	067	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Hematology: Myelodysplastic Syndrome (MDS) and Acute Leukemias: Baseline Cytogenetic Testing Performed on Bone Marrow: Percentage of patients aged 18 years and older with a diagnosis of myelodysplastic syndrome (MDS) or an acute leukemia who had baseline cytogenetic testing performed on bone marrow.	American Society of Hematology	We proposed to include this measure in the Oncology/Hematology specialty set as this set was updated to include Hematology for the 2020 performance period and this measure is clinically relevant.
	N/A	069	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Hematology: Multiple Myeloma: Treatment with Bisphosphonates: Percentage of patients aged 18 years and older with a diagnosis of multiple myeloma, not in remission, who were prescribed or received intravenous bisphosphonate therapy within the 12-month reporting period.	American Society of Hematology	We proposed to include this measure in the Oncology/Hematology specialty set as this set was updated to include Hematology for the 2020 performance period and this measure is clinically relevant.
	N/A	070	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Hematology: Chronic Lymphocytic Leukemia (CLL): Baseline Flow Cytometry: Percentage of patients aged 18 years and older, seen within a 12-month reporting period, with a diagnosis of chronic lymphocytic leukemia (CLL) made at any time during or prior to the reporting period who had baseline flow cytometry studies performed and documented in the chart.	Physician Consortium for Performance Improvement Foundation (PCPI®)	We proposed to include this measure in the Oncology/Hematology specialty set as this set was updated to include Hematology for the 2020 performance period and this measure is clinically relevant.
<p>Comment: One commenter did not support the addition of measure Q069: Hematology: Multiple Myeloma: Treatment with Bisphosphonates to the Oncology/Hematology set until further review by the measure steward. The commenter stated that the two bisphosphonate drugs listed in the specifications are pamidronate and zoledronate. However, patients are being treated with the drug denosumab and should not be counted as non-concordant for this measure. Not only is denosumab FDA-approved for this indication, it is also considered an alternative to pamidronate and zoledronic acid in the NCCN and ASCO guidelines. Therefore, the commenter recommended that before inclusion of measure Q069 in the Oncology/Hematology measure set, the measure steward should review current guidelines and consider editing the numerator criteria so that a patient receiving pamidronate, zoledronic acid, or denosumab be considered concordant with the measure.</p> <p>One commenter thanked CMS for the proposed additions to the Oncology/Hematology set and encouraged finalization of this measure set.</p> <p>Response: We thank the commenter for their comment and agree that it is important to allow eligible clinicians and patients to utilize shared decision making when determining what treatment to administer as denosumab has been clinically indicated in the treatment of bone problems in patients with multiple myeloma that is not in remission. We have collaborated with the measure steward and agree that in the clinical situation in which denosumab is indicated and administered to the patient that eligible clinicians may submit a medical reason or patient reason exception when clinically applicable and documented in the patient's medical chart.</p> <p>After consideration of the comments, we are finalizing the measures for addition to the <i>Oncology/Hematology Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>									

B.26a. Oncology/Hematology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ONCOLOGY/HEMATOLOGY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
1857	449	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	HER2 Negative or Undocumented Breast Cancer Patients Spared Treatment with HER2-Targeted Therapies: Percentage of female patients (aged 18 years and older) with breast cancer who are human epidermal growth factor receptor 2 (HER2)/neu negative who are not administered HER2-targeted therapies.	American Society of Clinical Oncology	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
N/A	454	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	Percentage of Patients who Died from Cancer with More than One Emergency Department Visit in the Last 30 Days of Life (lower score – better): Percentage of patients who died from cancer with more than one emergency department visit in the last 30 days of life.	American Society of Clinical Oncology	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
0215	456	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Percentage of Patients who Died from Cancer Not Admitted to Hospice (lower score – better): Percentage of patients who died from cancer not admitted to hospice.	American Society of Clinical Oncology	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
N/A	474	N/A	MIPS CQMs Specifications	Process	Community/ Population Health	Zoster (Shingles) Vaccination: The percentage of patients aged 50 years and older who have had the Shingrix zoster (shingles) vaccination.	PPRNet	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.

After consideration of the comments, we are finalizing the measures for removal from the *Oncology/Hematology Specialty Measure Set* as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.26b. Radiation Oncology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Radiation Oncology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

American Society of Clinical Oncology

B.27. Infectious Disease

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Infectious Disease specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.27. Infectious Disease

B.27. Infectious Disease

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE INFECTIOUS DISEASE SET								
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	407	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Appropriate Treatment of Methicillin-Susceptible Staphylococcus Aureus (MSSA) Bacteremia: Percentage of patients with sepsis due to MSSA bacteremia who received beta-lactam antibiotic (e.g. Nafcillin, Oxacillin or Cefazolin) as definitive therapy.	Infectious Diseases Society of America	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
0657	464	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Otitis Media with Effusion: Systemic Antimicrobials - Avoidance of Inappropriate Use: Percentage of patients aged 2 months through 12 years with a diagnosis of OME who were not prescribed systemic antimicrobials.	American Academy of Otolaryngology – Head and Neck Surgery Foundation (AAOHSF)	We agree with specialty society feedback to remove this measure from this specialty set. Most infectious disease physicians consult on patients in the inpatient setting. This measure applies to the outpatient setting and is reported by primary care, pediatricians, or other physicians to assess appropriate testing for children with otitis media with effusion, hence this measure does not support the inpatient setting where the majority of eligible clinicians within this specialty practice. We agree with specialty society feedback that this measure is neither an applicable nor a clinically relevant quality measure to assess the clinical performance of Infectious Disease physicians only working within outpatient settings.
N/A	474	N/A	MIPS CQMs Specifications	Process	Community / Population Health	Zoster (Shingles) Vaccination: The percentage of patients aged 50 years and older who have had the Shingrix zoster (shingles) vaccination.	PPRNet	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
After consideration of the comments, we are finalizing the removal of measures from the <i>Infectious Disease Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.								

B.28. Neurosurgical

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Neurosurgical specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.31. Rheumatology**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE RHEUMATOLOGY SET**

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0420	131	N/A	Medicare Part B Claims Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Pain Assessment and Follow-Up: Percentage of visits for patients aged 18 years and older with documentation of a pain assessment using a standardized tool(s) on each visit AND documentation of a follow-up plan when pain is present.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
N/A	179	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Rheumatoid Arthritis (RA): Assessment and Classification of Disease Prognosis: Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have an assessment and classification of disease prognosis at least once within 12 months.	American College of Rheumatology	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.

After consideration of the comments, we are finalizing the removal of measures from the *Rheumatology Specialty Measure Set* as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

B.32. Dentistry

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Dentistry specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

National Committee for Quality Assurance	We proposed to include this measure into the Physical Therapy/Occupational Therapy specialty set as it is clinically relevant to this clinician type.
! (Outcome)	N/A	478	N/A	MIPS CQMs Specifications	Patient Reported Outcome	Person and Caregiver-Centered Experience and Outcomes	Functional Status Change for Patients with Neck Impairments: This is a patient-reported outcome performance measure (PRO-PM) consisting of a patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients aged 14+ with neck impairments. The change in FS is assessed using the Neck FS PROM.* The measure is risk-adjusted to patient characteristics known to be associated with FS outcomes. It is used as a performance measure at the patient, individual clinician, and clinic levels to assess quality. *The Neck FS PROM is an item-response theory-based computer adaptive test (CAT). In addition to the CAT version, which provides for reduced patient response burden, it is available as a 10-item short form (static/paper-pencil).	Focus on Therapeutic Outcomes, Inc.	This measure was proposed as a new measure for the 2020 performance period. We proposed to include this measure in the Physical Therapy/Occupational Therapy specialty set as it is clinically relevant to this clinician type.
<p>Comment: One commenter was pleased to see the expansion of the Physical Therapy/Occupational Therapy set they had advocated for during the specialty measure set comment process. This updated measure set will allow these types of providers to more easily navigate and choose measures that are appropriate to their practice.</p> <p>Response: We thank the commenter for their support on the expansion of this set.</p> <p>After consideration of the comments, we are finalizing the measures for addition to the <i>Physical Therapy/Occupational Therapy Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>									

B.33. Physical Therapy/Occupational Therapy

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SET
 Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0420	131	N/A	Medicare Part B Claims Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Pain Assessment and Follow-Up: Percentage of visits for patients aged 18 years and older with documentation of a pain assessment using a standardized tool(s) on each visit AND documentation of a follow-up plan when pain is present.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
0428	223	N/A	MIPS CQMs Specifications	Patient Reported Outcome	Communication and Care Coordination	Functional Status Change for Patients with General Orthopedic Impairments: A patient-reported outcome measure of risk-adjusted change in functional status (FS) for patients aged 14 years+ with general orthopedic impairments (neck, cranium, mandible, thoracic spine, ribs or other general orthopedic impairment). The change in FS is assessed using the General Orthopedic FS PROM (patient reported outcome measure) (©Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static survey).	Focus on Therapeutic Outcomes, Inc.	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.

After consideration of the comments, we are finalizing the measures for removal from the *Physical Therapy/Occupational Therapy Specialty Measure Set* as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures were proposed for removal from the MIPS program.

B.34. Geriatrics

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Geriatrics specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

(Care Coordination)	N/A	288	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	Dementia: Education and Support of Caregivers for Patients with Dementia: Percentage of patients with dementia whose caregiver(s) were provided with education on dementia disease management and health behavior changes AND were referred to additional resources for support in the last 12 months	American Psychiatric Association/ American Academy of Neurology
* § ! (Outcome)	0710 / 0710e	370	CMS15 9v8	eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Outcome	Effective Clinical Care	Depression Remission at Twelve Months: The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event date.	Minnesota Community Measurement
! (Opioid)	N/A	408	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Opioid Therapy Follow-up Evaluation: All patients 18 and older prescribed opiates for longer than six weeks duration who had a follow-up evaluation conducted at least every three months during Opioid Therapy documented in the medical record.	American Academy of Neurology
! (Opioid)	N/A	412	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Documentation of Signed Opioid Treatment Agreement: All patients 18 and older prescribed opiates for longer than six weeks duration who signed an opioid treatment agreement at least once during Opioid Therapy documented in the medical record.	American Academy of Neurology
! (Opioid)	N/A	414	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Evaluation or Interview for Risk of Opioid Misuse: All patients 18 and older prescribed opiates for longer than six weeks duration evaluated for risk of opioid misuse using a brief validated instrument (e.g. Opioid Risk Tool, Screener and Opioid Assessment for Patients with Pain, revised (SOAPP-R)) or patient interview documented at least once during Opioid Therapy in the medical record.	American Academy of Neurology
§ ! (Outcome)	0213	455	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	Percentage of Patients who Died from Cancer Admitted to the Intensive Care Unit (ICU) in the Last 30 Days of Life (lower score – better): Percentage of patients who died from cancer admitted to the ICU in the last 30 days of life.	American Society of Clinical Oncology

B. 34. Geriatrics

MEASURES FINALIZED FOR ADDITION TO THE GERIATRICS SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A	048	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older: Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.	National Committee for Quality Assurance	We proposed to include this measure into the Geriatrics specialty set based upon stakeholder feedback requesting inclusion in a specialty set for this clinician type.
! (Patient Safety)	0101	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Falls: Risk Assessment: Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	We proposed to include this measure into the Geriatrics specialty set based upon stakeholder feedback requesting inclusion in a specialty set for this clinician type.
! (Care Coordination)	0101	155	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	Falls: Plan of Care: Percentage of patients aged 65 years and older with a history of falls that had a plan of care for falls documented within 12 months.	National Committee for Quality Assurance	We proposed to include this measure into the Geriatrics specialty set based upon stakeholder feedback requesting inclusion in a specialty set for this clinician type.

B. 34. Geriatrics

MEASURES FINALIZED FOR ADDITION TO THE GERIATRICS SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
! (Outcome)	N/A	476	CMS771v1	eCQM Specifications	Patient Reported Outcome	Person and Caregiver-Centered Experience and Outcomes	International Prostate Symptom Score (IPSS) or American Urological Association-Symptom Index (AUA-SI) change 6-12 months after diagnosis of Benign Prostatic Hyperplasia: Percentage of patients with an office visit within the measurement period and with a new diagnosis of clinically significant Benign Prostatic Hyperplasia who have International Prostate Symptom Score (IPSS) or American Urological Association Symptom Index (AUA-SI) documented at time of diagnosis and again 6-12 months later with an improvement of 3 points.	Large Urology Group Practice Association and Oregon Urology Institute	This measure was proposed as a new measure for the 2020 performance period. We proposed to include this measure in the Geriatrics specialty set as it is clinically relevant to this clinician type.
<p>Comment: One commenter appreciated the finalization of the Geriatrics set for use in the Quality performance category last year. The commenter encouraged CMS to continue to facilitate and sponsor measure development for the multi-morbid patient with functional impairment who is not institutionalized population. The commenter recommended that CMS prioritize measures that specifically address care of the geriatric population.</p> <p>The commenter supported the four measures proposed for addition to the Geriatrics set: Q048: Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older, Q154: Falls: Risk Assessment, Q155: Falls: Plan of Care, and Q476: International Prostate Symptom Score (IPSS) or American Urological Association Symptom Index (AUA-SI) change 6 – 12 months after diagnosis of Benign Prostatic Hyperplasia.</p> <p>Response: We appreciate the comment received supporting the additional measures to the Geriatrics set.</p> <p>After consideration of the comments, we are finalizing the measures for addition to the <i>Geriatrics Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years</p>									

B.34. Geriatrics

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE GERIATRICS SET								
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0097	046	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	<p>Medication Reconciliation Post-Discharge: The percentage of discharges from any inpatient facility (e.g. hospital, skilled nursing facility, or rehabilitation facility) for patients 18 years of age and older seen within 30 days following discharge in the office by the physician, prescribing practitioner, registered nurse, or clinical pharmacist providing ongoing care for whom the discharge medication list was reconciled with the current medication list in the outpatient medical record.</p> <p>This measure is submitted as three rates stratified by age group:</p> <ul style="list-style-type: none"> • Submission Criteria 1: 18-64 years of age. • Submission Criteria 2: 65 years and older. • Total Rate: All patients 18 years of age and older. 	National Committee for Quality Assurance	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
0420	131	N/A	Medicare Part B Claims Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	<p>Pain Assessment and Follow-Up: Percentage of visits for patients aged 18 years and older with documentation of a pain assessment using a standardized tool(s) on each visit AND documentation of a follow-up plan when pain is present.</p>	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
N/A	474	N/A	MIPS CQMs Specifications	Process	Community/Population Health	<p>Zoster (Shingles) Vaccination: The percentage of patients aged 50 years and older who have had the Shingrix zoster (shingles) vaccination.</p>	PPRNet	This measure was proposed for removal beginning with the 2022 MIPS Payment Year. See Table C for rationale.
<p>Comment: One commenter agreed with the removal of Q046 from the Geriatrics set and MIPS altogether. The commenter noted the large caregiver burden associated with this measure may lead to slow or little adoption and the cumbersome specifications will lead to inaccurate data.</p> <p>Response: We thank the commenter for supporting the removal of measure Q046.</p> <p>After consideration of the comments, we are finalizing the measures for removal from the <i>Geriatrics Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures were proposed for removal from the MIPS program.</p>								

B.35. Urgent Care

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Urgent Care specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.35. Urgent Care

PREVIOUSLY FINALIZED MEASURES IN THE URGENT CARE SET								
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward
§ ! (Appropriate Use)	0069 / N/A	065	CMS154 v8	eCQM Specifications, MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	Appropriate Treatment for Children with Upper Respiratory Infection (URI): Percentage of children 3 months - 18 years of age who were diagnosed with upper respiratory infection (URI) and were not dispensed an antibiotic prescription on or three days after the episode.	National Committee for Quality Assurance
§ * ! (Appropriate Use)	N/A	066	CMS146 v8	eCQM Specifications, MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	Appropriate Testing for Children with Pharyngitis: Percentage of children 3-18 years of age who were diagnosed with pharyngitis, ordered an antibiotic and received a group A streptococcus (strep) test for the episode.	National Committee for Quality Assurance
! (Appropriate Use)	0654	093	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use: Percentage of patients aged 2 years and older with a diagnosis of AOE who were not prescribed systemic antimicrobial therapy.	American Academy of Otolaryngology – Head and Neck Surgery Foundation
§ ! (Appropriate Use)	0058	116	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	Avoidance of Antibiotic Treatment in Adults With Acute Bronchitis: The percentage of adults 18–64 years of age with a diagnosis of acute bronchitis who were not prescribed or dispensed an antibiotic prescription.	National Committee for Quality Assurance
! (Patient Safety)	0419 / 0419e	130	CMS68v9	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Patient Safety	Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the MIPS eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration.	Centers for Medicare & Medicaid Services
* ** §	0028 / 0028e	226	CMS138 v8	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Process	Community /Population Health	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received tobacco cessation intervention if identified as a tobacco user. Three rates are reported: a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received tobacco cessation intervention if identified as a tobacco user.	Physician Consortium for Performance Improvement Foundation (PCPI®)

MEASURES FINALIZED FOR ADDITION TO THE ENDOCRINOLOGY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Inclusion
*	0053	418	N/A	Medicare Part B Claims Measure Specifications , MIPS CQMs Specifications	Process	Effective Clinical Care	Osteoporosis Management in Women Who Had a Fracture: The percentage of women age 50-85 who suffered a fracture in the six months prior to the performance period through June 30 of the performance period and who either had a bone mineral density test or received a prescription for a drug to treat osteoporosis in the six months after the fracture.	National Committee for Quality Assurance	We proposed to include this measure in the Endocrinology specialty set based upon stakeholder feedback requesting inclusion in a specialty set for this clinician type.
*	N/A	438	CMS34 7v3	eCQM Specifications , CMS Web Interface Measure Specifications , MIPS CQMs Specifications	Process	Effective Clinical Care	Statin Therapy for the Prevention and Treatment of Cardiovascular Disease: Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period: <ul style="list-style-type: none"> Adults aged ≥ 21 years who were previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD); OR Adults aged ≥ 21 years who have ever had a fasting or direct low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial or pure hypercholesterolemia OR Adults aged 40-75 years with a diagnosis of diabetes with a fasting or direct LDL-C level of 70-189 mg/dL. 	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Endocrinology specialty set based upon stakeholder feedback requesting inclusion in a specialty set for this clinician type.
*	N/A	462	CMS64 5v3	eCQM Specifications	Process	Effective Clinical Care	Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy: Patients determined as having prostate cancer who are currently starting or undergoing androgen deprivation therapy (ADT), for an anticipated period of 12 months or greater and who receive an initial bone density evaluation. The bone density evaluation must be prior to the start of ADT or within 3 months of the start of ADT.	Oregon Urology Institute	We proposed to include this measure in the Endocrinology specialty set based upon stakeholder feedback requesting inclusion in a specialty set for this clinician type.
<p>Comment: One commenter appreciated a proposed specialty measure set for endocrinology and that its recommended measures were included. A second commenter supported the addition of this set and encouraged CMS to continue exploring new measures focused on diabetes and obesity care.</p> <p>Response: We thank the commenters for supporting the new Endocrinology set. We encourage the second commenter to collaborate with measure developers to construct new measures focusing on these areas or find existing quality measures outside of MIPS and submit to the Call for Measures for possible inclusion in future years. After consideration of the comments, we are finalizing the new <i>Endocrinology Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>									

B.38. Nutrition/Dietician

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Nutrition/Dietician specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that were proposed for this new measure set.

	2152	431	N/A	MIPS CQMs Specifications	Process	Community / Population Health	Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling: Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 24 months AND who received brief counseling if identified as an unhealthy alcohol user.	Physician Consortium for Performance Improvement Foundation (PCPI®)	We proposed to include this measure in the Nutrition/Dietician specialty set as it is clinically relevant to this clinician type.
<p>Comment: Several commenters recommended that CMS adopt four eCQMs as quality measures in MIPS and adopt a specialty measure set for nutrition professionals. These include: NQF #3087/MUC16-294: Completion of a Malnutrition Screening within 24 hours of Admission, NQF #3088/MUC16-296: Completion of a Nutrition Assessment for Patients Identified as At-Risk for Malnutrition within 24 hours of a Malnutrition Screening, NQF #3089/MUC16-372: Nutrition Care Plan for Patients Identified as Malnourished after a Completed Nutrition Assessment, and NQF #3090/MUC16-344: Appropriate Documentation of a Malnutrition Diagnosis. These four measures have been thoroughly evaluated and tested in the hospital setting for inpatients. In addition, one of the commenters has re-specified these four eCQMs for use in the outpatient setting and submitted them for potential use in the MIPS through a qualified clinical data registry for reporting by eligible clinicians in 2020. The commenters recommended CMS include these malnutrition measures in the outpatient setting and to continue exploring new measures focused on diabetes and obesity care.</p> <p>Response: We thank the commenters for their comment and have finalized the Nutrition/Dietician set. The measures recommended for inclusion within this specialty set are not current or proposed quality measures. Specialty sets are comprised of MIPS quality measures only, and we encourage the commenters to work with the measure stewards of the aforementioned eCQMs for submission to the yearly Call for Measures for consideration of inclusion into MIPS. We encourage the final commenter to collaborate with measure developers to construct new measures focusing on these areas or find existing quality measures outside of MIPS and submit to the Call for Measures for possible inclusion in future years.</p> <p>After consideration of the comments, we are finalizing the new <i>Nutrition/Dietician Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>									

B.39. Pulmonology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Pulmonology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. MEASURES FINALIZED FOR ADDITION TO THE CHIROPRACTIC MEDICINE SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Inclusion
<p>Comment: One commenter appreciated the addition of measures Q217: Functional Status Change for Patients with Knee Impairments, Q218: Functional Status Change for Patients with Hip Impairments, Q219: Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments, Q220: Functional Status Change for Patients with Low Back Impairments, and Q221 to the Functional Status Change for Patients with Shoulder Impairments to the Chiropractic Medicine set. The commenter pointed out, however, that many solo practitioners will struggle to make the 20 case minimums for these measures. In addition, the majority of these CQMs require the use of an extraspinal CPT code 98943 which currently is not covered by Medicare. The commenter also stated that FOTO measures have no denominator exclusions.</p> <p>Response: We thank the commenter for supporting the addition of measures Q217 through Q221 to the Chiropractic Medicine set. Measures Q217 through Q221 are MIPS CQMs, meaning that all-payer data can be utilized for determining performance. Therefore, extraspinal CPT code 98943 may be denominator eligible within all-payer data. Additionally, the measures' denominator is not limited to the single extraspinal CPT code 98943 and allows the denominator eligibility to be established by additional CPT codes covered by Medicare. Moreover, we remind the commenter that the current posted FOTO measures do contain denominator exclusions. We also refer the commenter to Tables D.25 through D.29 of this final rule as there are multiple changes being finalized for measures Q217 through Q221 regarding denominator exclusions and denominator exceptions.</p> <p>After consideration of the comments, we are finalizing the new <i>Chiropractic Medicine Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>									

B.41. Clinical Social Work

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, we solicited comment on applicable measures for a Clinical Social Work specialty set, which takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that may be proposed for this new measure set in the event clinical social workers were proposed for inclusion in the definition of a MIPS eligible clinician in future rulemaking.

B.41. Clinical Social Work

MEASURES FINALIZED FOR ADDITION TO THE CLINICAL SOCIAL WORK SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Inclusion
! (Patient Safety)	0419 / 0419e	130	CMS68 v9	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Patient Safety	Documentation of Current Medications in the Medical Record: Percentage of visits for patients aged 18 years and older for which the MIPS eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list must include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Clinical Social Work specialty set as it is clinically relevant to this clinician type.
*	0418 / 0418e	134	CMS2v9	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Process	Community / Population Health	Preventive Care and Screening: Screening for Depression and Follow-Up Plan: Percentage of patients aged 12 years and older screened for depression on the date of the encounter using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the positive screen.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Clinical Social Work specialty set as it is clinically relevant to this clinician type.
* ! (Patient Safety)	NA	181	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	Elder Maltreatment Screen and Follow-Up Plan: Percentage of patients aged 65 years and older with a documented elder maltreatment screen using an Elder Maltreatment Screening Tool on the date of encounter AND a documented follow-up plan on the date of the positive screen.	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Clinical Social Work specialty set as it is clinically relevant to this clinician type.

Minnesota Community Measurement	We proposed to include this measure in the Clinical Social Work specialty set as it is clinically relevant to this clinician type.
* ! (Patient Safety)	1365e	382	CMS17 7v8	eCQM Specifications	Process	Patient Safety	Child and Adolescent Major Depressive Disorder (MDD): Suicide Risk Assessment: Percentage of patient visits for those patients aged 6 through 17 years with a diagnosis of major depressive disorder with an assessment for suicide risk.	Physician Consortium for Performance Improvement Foundation (PCPI®)	We proposed to include this measure in the Clinical Social Work specialty set as it is clinically relevant to this clinician type.
! (Outcome)	1879	383	N/A	MIPS CQMs Specifications	Intermediate Outcome	Patient Safety	Adherence to Antipsychotic Medications for Individuals with Schizophrenia: Percentage of individuals at least 18 years of age as of the beginning of the measurement period with schizophrenia or schizoaffective disorder who had at least two prescriptions filled for any antipsychotic medication and who had a Proportion of Days Covered (PDC) of at least 0.8 for antipsychotic medications during the measurement period (12 consecutive months).	Centers for Medicare & Medicaid Services	We proposed to include this measure in the Clinical Social Work specialty set as it is clinically relevant to this clinician type.

B.41. Clinical Social Work

MEASURES FINALIZED FOR ADDITION TO THE CLINICAL SOCIAL WORK SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Inclusion
	2803	402	NA	MIPS CQMs Specifications	Process	Community / Population Health	Tobacco Use and Help with Quitting Among Adolescents: The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance	We proposed to include this measure in the Clinical Social Work specialty set as it is clinically relevant to this clinician type.
	2152	431	N/A	MIPS CQMs Specifications	Process	Community / Population Health	Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling: Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 24 months AND who received brief counseling if identified as an unhealthy alcohol user.	Physician Consortium for Performance Improvement Foundation (PCPI®)	We proposed to include this measure in the Clinical Social Work specialty set as it is clinically relevant to this clinician type.
<p>Comment: One commenter supported all measures proposed for the Clinical Social Work set. The commenter requested the addition of several other measures for this set: Assessment of Unhealthy Alcohol Use for adolescents 12-20 every year if cessation not achieved, Assessment of Unhealthy Drug Use for adults every two years with follow up plan for cessation if not achieved, and Assessment of Unhealthy Drug Use for adolescents every two years with follow up plan for cessation if not achieved.</p> <p>Another commenter supported the addition of this set and appreciated CMS revisiting the inclusion of clinical social workers (CSWs) as MIPS-eligible clinicians. CSWs are a functional member of the multidisciplinary oncology care team, and oncology CSWs (OCSWs) continue to be frequent contributors of care interventions highlighted in multiple MIPS quality metrics. The commenter suggested that measure Q047: Advance Care Plan be added to this measure set, as counseling patients in this area is not limited to oncology patients.</p> <p>Response: We did not identify the three additional measures recommended for this set as MIPS quality measures and we encourage the commenter to submit them to the next Call for Measures, along with the recommendation to add Q047 to this set. We thank the commenters for supporting the new Clinical Social Work set and encourage them to submit their feedback with rationale during this solicitation process for future consideration in rulemaking. <u>Note:</u> Because measure Q282: Dementia: Functional Status Assessment was not finalized for removal from MIPS, it has been added to the Clinical Social Work. As a result, measures Q182: Functional Outcome Assessment was not finalized for addition to this set as it is duplicative to measure Q282 as outlined in the PFS proposed rule (84 FR 41171).</p> <p>After consideration of the comments, we are finalizing the new <i>Clinical Social Work Measure Set</i> as indicated. Due to the availability of these measures as a new MIPS specialty measure set, we will take this into consideration for future rulemaking regarding whether to add clinical social workers as a MIPS eligible clinician type.</p>									

B.42. Audiology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Audiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that were proposed for this new measure set.

<p>Comment: One commenter supported the addition of two new measures for speech language pathologists: measures Q181: Elder Maltreatment Screen and Follow-Up Plan and Q182: Functional Outcome Assessment. The addition of these measures provides SLPs the opportunity to move closer to meeting the reporting threshold. The commenter requested that additional CPT codes be added to measures Q181 and Q182.</p> <p>Response: We thank the commenter for supporting the addition of measures Q181 and Q182 to the Speech Language Pathology set and encourage them to reach out and collaborate with the measure stewards to refine the denominator eligible CPT coding.</p> <p>After consideration of the comments, we are finalizing the new <i>Speech Language Pathology Specialty Measure Set</i> as indicated for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>									

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

In this final rule, we are removing 42 previously finalized quality measures from the MIPS Program for the 2022 MIPS payment year and future years. These measures are discussed in detail below. Our measure removal criteria was discussed in the CY 2019 final rule (83 FR 59763 through 59765).

Further considerations are given in the evaluation of the measure’s performance data, to determine whether there is or no longer is variation in performance. As discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763), additional criteria that we use for the removal of measures also includes extremely topped out measures, which means measures that are topped-out with an average (mean) performance rate between 98-100 percent. Beginning with the 2020 MIPS performance period/2022 MIPS payment year, we refer readers also to section III.K.3.c.(1)(d)(iv) of this final rule for additional removal criteria finalized for CY 2020.

NOTE: Since publication of the measures in Table C in CY2020 PFS proposed rule, we have determined the following measures will be retained in the 2020 MIPS performance period/2022 MIPS payment year: Q110, Q111, Q146, Q178, Q185, Q225, Q249, Q250, Q264, Q282, Q288, Q395, and Q396. As such, these measures have been removed from Table C and integrated back into the relevant previously finalized measure sets under Table B in this final rule. Our decisions not to finalize these measures for removal in this final rule are detailed in our responses to the public comments for these measures in Table Group C.

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0097	046	N/A	Medicare Part B Claim Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	<p>Medication Reconciliation Post-Discharge: The percentage of discharges from any inpatient facility (e.g. hospital, skilled nursing facility, or rehabilitation facility) for patients 18 years of age and older seen within 30 days following discharge in the office by the physician, prescribing practitioner, registered nurse, or clinical pharmacist providing on-going care for whom the discharge medication list was reconciled with the current medication list in the outpatient medical record. This measure is submitted as three rates stratified by age group:</p> <ul style="list-style-type: none"> • Submission Criteria 1: 18-64 years of age. • Submission Criteria 2: 65 years and older. • Total Rate: All patients 18 years of age and older. 	National Committee for Quality Assurance	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure is duplicative of previously finalized measure Q130: Documentation of Current Medications in the Medical Record that also addresses assessment of current medications at the time of a patient and eligible clinician encounter. This measure is not only duplicative but includes measure logic that has demonstrated to be historically challenging for implementation by eligible clinicians. This measure is a legacy measure from the Physician Quality Reporting Initiative that was implemented initially as a Medicare Part B claims only measure. With the expansion of collection methods being used in the program, unforeseen implementation challenges have arisen. We believe measure Q130 is the best measure to support the quality outcome of current medications being documented in the medical record. In the event that the measure is retained in the MIPS program based on stakeholder comments, we proposed to add this measure to the following specialty sets as it is clinically relevant to these clinician types: Pulmonology and Clinical Social Work.

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0091	051	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Chronic Obstructive Pulmonary Disease (COPD): Spirometry Evaluation: Percentage of patients aged 18 years and older with a diagnosis of COPD who had spirometry results documented.</p>	American Thoracic Society	<p>We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program to ensure measures are not duplicative and present an opportunity to provide a meaningful impact to quality. We prefer the more robust, previously finalized measure Q52: Chronic Obstructive Pulmonary Disease (COPD): Long-Acting Inhaled Bronchodilator Therapy that assesses appropriate management of COPD by prescribing a long-acting inhaled bronchodilator for symptomatic patients based on spirometry test results that demonstrate FEV1/FVC < 70 percent, FEV1 < 60 percent, and patient’s assessed COPD symptoms. Measure Q51 represents the process having the spirometry results reviewed and documented which is essentially a component of measure Q52. Therefore, we prefer to have eligible clinicians report the more robust measure Q52 which address spirometry results to provide the best option in pharmacological treatment. In the event that the measure is retained in the MIPS program based on stakeholder comments, we proposed to add this measure to the following specialty set as it is clinically relevant to this clinician type: Pulmonology.</p>

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	068	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Hematology: Myelodysplastic Syndrome (MDS): Documentation of Iron Stores in Patients Receiving Erythropoietin Therapy: Percentage of patients aged 18 years and older with a diagnosis of myelodysplastic syndrome (MDS) who are receiving erythropoietin therapy with documentation of iron stores within 60 days prior to initiating erythropoietin therapy.</p>	American Society of Hematology	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because we believe that documentation of iron stores would be considered a standard of care during administration of erythropoietin therapy. We believe this measure does not align with the meaningful measure initiative. There is limited adoption of the quality measure and does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The limited adoption over multiple program years suggests this is not an important clinical topic for MIPS eligible clinicians. In the event that the measure is retained in the MIPS program based on stakeholder comments, we proposed to add this measure to the following specialty set as it is clinically relevant to this clinician type: Oncology/ Hematology.
0653	091	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Acute Otitis Externa (AOE): Topical Therapy: Percentage of patients aged 2 years and older with a diagnosis of AOE who were prescribed topical preparations.</p>	American Academy of Otolaryngology-Head and Neck Surgery	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it represents the clinical equivalency of previously finalized measure Q93: Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use. In the circumstance an eligible clinician does not prescribe an antibiotic, most likely a topical therapy would be prescribed. However, the eligible clinician is able to prescribe both an antibiotic and topical and remain numerator compliant for this measure which does not address the overuse of systemic antimicrobial use. Therefore, we believe this measure is not providing a meaningful impact to quality improvement.

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	109	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	Osteoarthritis (OA): Function and Pain Assessment: Percentage of patient visits for patients aged 21 years and older with a diagnosis of osteoarthritis (OA) with assessment for function and pain.	American Academy of Orthopedic Surgeons	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure is duplicative of previously finalized measure Q182: Functional Outcome Assessment that also addresses functional assessment and possibly pain depending on which standardized tool utilized. In the circumstance we do not finalize removal of this measure, we would maintain this measure with the following substantive change(s) based on the measure steward's input: add coding for physical therapists and occupational therapists to the list of denominator eligible encounters as well as add this measure to the Physical Therapy/Occupational Therapy specialty set. The measure steward states and we agree that for individuals with osteoarthritis (OA), physical therapists and occupational therapists provide various interventions with the goals of improving muscle performance, activity and participation, and promoting physical activity. Despite these revisions offered by the measure steward, we believe that it is important to reduce duplicity within the program and prefer the more robust measure Q182 which also supports physical and occupation therapist, more frequent functional assessment, and care plan for identified functional deficiencies.

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0420	131	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	<p>Pain Assessment and Follow-Up: Percentage of visits for patients aged 18 years and older with documentation of a pain assessment using a standardized tool(s) on each visit AND documentation of a follow-up plan when pain is present.</p>	Centers for Medicare & Medicaid Services	<p>We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program due to the controversy surrounding the potential correlation between assessment of pain and increase in prescriptions for opioid medications. After consideration of previous stakeholder feedback, we believe this measure may have the unintended consequence of encouraging excessive prescribing of pharmacologic therapies to assist with pain management. In the circumstance we do not finalize removal of this measure, we would maintain this measure with the following substantive change(s) based on the measure steward's input: expand the denominator to include coding for audiology and speech language pathology MIPS eligible clinicians and remove the denominator exception allowing for patients with severe mental and/or physical incapacities to be excluded from the numerator. The measure steward submitted this substantive change based on a literature search the supports the need for improved pain assessment and follow up in patients with dementia. In addition, we proposed to add this measure to the following specialty measure sets in the event the measure is retained in the MIPS program based on stakeholder comments as it is clinically relevant to these clinician types: Chiropractic Medicine, Clinical Social Work, Audiology and Speech Language Pathology. Despite these revisions offered by the measure steward, we believe that it is important to ensure that the MIPS quality measures support the safety of patients and have a meaningful impact on quality management of pain by all eligible clinicians.</p>

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	160	CMS52v8	eCQM Specifications	Process	Effective Clinical Care	<p>HIV/AIDS: Pneumocystis Jiroveci Pneumonia (PCP) Prophylaxis: Percentage of patients aged 6 weeks and older with a diagnosis of HIV/AIDS who were prescribed Pneumocystis jiroveci pneumonia (PCP) prophylaxis.</p>	Health Resources and Services Administration	<p>We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it does not align with the meaningful measure initiative. There is limited adoption of the quality measure and does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The limited adoption over multiple program years suggests this is not an important clinical topic for MIPS eligible clinicians. In the circumstance we do not finalize removal of this measure, we would maintain this measure with the following substantive change(s) based on the measure steward's input: update the numerator with addition of Pneumocystis Jiroveci Pneumonia (PCP) Prophylaxis and parenteral pentamidine and oral clindamycin with primaquine to Population one. For Population two and three, we would add intravenous pentamidine to the "Pneumocystis Jiroveci Pneumonia (PCP) Prophylaxis" value set. In alignment with these updates, the measure steward has is updating and creating definitions related to CD4 Count Tests to include oral clindamycin and primaquine for population 1 and update logic in all three numerators to allow for 'Medication Active' documentation in addition to 'Medication, Order' documentation for appropriate capture of either an active or ordered medication. Additionally, we would adopt the measure steward's substantive change to remove Leucovoin as a medication option and add oral Clindamycin to align with guideline updates. Additionally, we would update logic for denominator exceptions in population 1 to reflect "3 months or less after". Additionally, if the measure is not finalized for removal from the MIPS program, we proposed to remove the measure from the Allergy/Immunology specialty set since this measure is not applicable to this specialty as Allergy/Immunology specialists do not diagnose, treat or manage HIV/AIDS patients. In addition, if the measure is retained in the MIPS program based on stakeholder comments we proposed to add this measure to the following specialty set as it is clinically relevant to this clinician type: Pulmonology. Despite these revisions, we believe this measure is not providing a meaningful impact to quality improvement due to lack of adoption by eligible clinicians.</p>

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0130	165	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	Coronary Artery Bypass Graft (CABG): Deep Sternal Wound Infection Rate: Percentage of patients aged 18 years and older undergoing isolated CABG surgery who, within 30 days postoperatively, develop deep sternal wound infection involving muscle, bone, and/or mediastinum requiring operative intervention.	Society of Thoracic Surgeons	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it is considered a standard of care that has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this inverse measure is 0.5 percent for the MIPS CQMs specifications collection type. For an inverse measure, a lower calculated performance rate indicates better clinical care or control. As such, the MIPS CQMs specifications collection type is considered extremely topped out. The average performance rate is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/342/2019%20MIPS%20Quality%20Benchmarks.zip .
0131	166	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	Coronary Artery Bypass Graft (CABG): Stroke: Percentage of patients aged 18 years and older undergoing isolated CABG surgery who have a postoperative stroke (i.e., any confirmed neurological deficit of abrupt onset caused by a disturbance in blood supply to the brain) that did not resolve within 24 hours.	Society of Thoracic Surgeons	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it is considered a standard of care that has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying making this measure extremely topped out as discussed in (83 FR 59761 through 59763). The average performance for this inverse measure is 1.3 percent for the MIPS CQMs specifications collection type. For an inverse measure, a lower calculated performance rate indicates better clinical care or control. As such, the MIPS CQMs specifications collection type is considered extremely topped out. The average performance rate is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/342/2019%20MIPS%20Quality%20Benchmarks.zip .
N/A	179	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Rheumatoid Arthritis (RA): Assessment and Classification of Disease Prognosis: Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have an assessment and classification of disease prognosis at least once within 12 months.	American College of Rheumatology	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because previously finalized measure Q177: Rheumatoid Arthritis (RA): Periodic Assessment of Disease Activity assesses the same patient population, but requires more frequent assessment in order to be numerator compliant making it a more robust measure.

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0564 / 0564e	192	CMS132 v8	eCQM Specifications, MIPS CQMs Specifications	Outcome	Patient Safety	<p>Cataracts: Complications within 30 Days Following Cataract Surgery Requiring Additional Surgical Procedures: Percentage of patients aged 18 years and older with a diagnosis of uncomplicated cataract who had cataract surgery and had any of a specified list of surgical procedures in the 30 days following cataract surgery which would indicate the occurrence of any of the following major complications: retained nuclear fragments, endophthalmitis, dislocated or wrong power IOL, retinal detachment, or wound dehiscence.</p>	Physician Consortium for Performance Improvement Foundation (PCPI®)	<p>We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it is considered a standard of care that has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763).</p> <p>The measure steward proposed to update the language to better clarify how the measure is currently implemented. They also requested to update the denominator exclusion data elements/value sets: removing 'Aphakia and Other Disorders of Lens,' 'Cysts of Iris, Ciliary Body and Anterior Chamber,' 'Enophthalmos,' and 'Prior Pars Plana Vitrectomy' and adding 'Glaucoma Associated with Congenital Anomalies, Dystrophies and Systemic Syndromes,' 'Other Endophthalmitis,' and 'Purulent Endophthalmitis'. We do not believe these changes will have an impact on performance rates because the measure is extremely topped out. In addition, the measure steward is updating the measure to specify the complication should be assessed of the operative eye.</p> <p>This is an inverse measure with extremely high performance rate of 0.9 percent for eCQM specifications collection type and 0.2 percent for MIPS CQMs collection type. For an inverse measure, a lower calculated performance rate indicates better clinical care or control. As such, the eCQM and MIPS CQMs specifications collection types are considered extremely topped out. Average performance rates are based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/342/2019%20MIPS%20Quality%20Benchmarks.zip.</p>

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0428	223	N/A	MIPS CQMs Specifications	Patient Reported Outcome	Communication and Care Coordination	<p>Functional Status Change for Patients with General Orthopedic Impairments: A patient-reported outcome measure of risk-adjusted change in functional status (FS) for patients aged 14 years+ with general orthopedic impairments (neck, cranium, mandible, thoracic spine, ribs or other general orthopedic impairment). The change in FS is assessed using the General Orthopedic FS PROM (patient reported outcome measure) (©Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static survey).</p>	Focus on Therapeutic Outcomes, Inc.	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program as the measure steward, Focus on Therapeutic Outcomes, Inc. (FOTO) no longer supports the inclusion of the measure. The patient population within this measure is captured in the FOTO measure A.4: Functional Status Change for Patients with Neck Impairments. In the event we do not finalize A.4: Functional Status Change for Patients with Neck Impairments, we would maintain this measure with the following substantive changes: update the numerator to require meeting or exceeding the risk adjusted prediction of the functional status change to be a Performance Met, move the current denominator exclusions to denominator exceptions, add denominator exclusion for patients with diagnosis of a degenerative neurological condition at any time before or during the episode of care, and add denominator exceptions for ongoing care not indicated: patient self-discharged early, patient discharged after only 1-2 visits due medical events, patient seen only 1-2 visits. In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes.
N/A	255	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Rh Immunoglobulin (Rhogam) for Rh-Negative Pregnant Women at Risk of Fetal Blood Exposure: Percentage of Rh-negative pregnant women aged 14-50 years at risk of fetal blood exposure who receive Rh-Immunoglobulin (Rhogam) in the emergency department (ED).</p>	American College of Emergency Physicians	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure narrows the eligible patient population to the Rh-Negative pregnant women which has not been able to create a benchmark. This is a result of the limited patient population and measure adoption which does not provide a meaningful impact to quality improvement. The limited adoption over multiple program years suggests this is not an important clinical topic for MIPS eligible clinicians. This does not align with the meaningful measure initiative. We encourage measure stewards to develop a measure that expands the patient population to those that had their Rh Status evaluated in the Emergency Department (ED) and received Rh-immunoglobulin (Rhogam) if Rh-negative.

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	262	N/A	MIPS CQMs Specifications	Process	Patient Safety	<p>Image Confirmation of Successful Excision of Image-Localized Breast Lesion: Image confirmation of lesion(s) targeted for image guided excisional biopsy or image guided partial mastectomy in patients with nonpalpable, image-detected breast lesion(s). Lesions may include: microcalcifications, mammographic or sonographic mass or architectural distortion, focal suspicious abnormalities on magnetic resonance imaging (MRI) or other breast imaging amenable to localization such as positron emission tomography (PET) mammography, or a biopsy marker demarcating site of confirmed pathology as established by previous core biopsy.</p>	American Society of Breast Surgeons	<p>We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it is considered a standard of care that has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763).</p> <p>The average performance for this measure is 100 percent for the MIPS CQMs specifications collection type based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/342/2019%20MIPS%20Quality%20Benchmarks.zip.</p>

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	271	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Inflammatory Bowel Disease (IBD): Preventive Care: Corticosteroid Related Iatrogenic Injury – Bone Loss Assessment: Percentage of patients regardless of age with an inflammatory bowel disease encounter who were prescribed prednisone equivalents greater than or equal to 10 mg/day for 60 or greater consecutive days or a single prescription equating to 600 mg prednisone or greater for all fills and were documented for risk of bone loss once during the reporting year or the previous calendar year. Individuals who received an assessment for bone loss during the year prior and current year are considered adequately screened to prevent overuse of X-ray assessment.</p>	American Gastroenterological Association	<p>We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because the substantive changes submitted by the measure steward would require a less meaningful quality action and extend the prednisone usage from 60 to 90 or greater consecutive days. The revised measure's quality action would be simplified to prescribing supplements such as calcium and/or vitamin D optimization. Additionally, the measure steward proposed to replace the term "Loss Assessment" with "Health Optimization" throughout the measure, define the patient population as 18 and over, as well as updating the numerator definition to "Documentation that calcium and/or Vitamin D optimization has been ordered or performed. This includes, but is not limited to, checking serum levels, documenting use of supplements or prescribing supplements" to better align with the measure's intent. The current measure requires a Central Dual-energy X-Ray Absorptiometry (DXA) and documented review of systems and medication history or pharmacologic therapy (other than minerals/vitamins) for osteoporosis prescribed within the past two years. We agree that patients without risk factors would not be appropriate for frequent DXA scans as the current quality measure requires. The measure steward's substantive changes for the measure do not account for patients with high risk factors, which may warrant additional screening and pharmacologic treatment. The measure would be more robust if it was revised to assess based on multiple clinical criteria such as age, risk factors, etc. We encourage the measure steward to submit a new measure that takes into account risk factors and require the appropriate clinical action.</p>

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	325	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	Adult Major Depressive Disorder (MDD): Coordination of Care of Patients with Specific Comorbid Conditions: Percentage of medical records of patients aged 18 years and older with a diagnosis of major depressive disorder (MDD) and a specific diagnosed comorbid condition (diabetes, coronary artery disease, ischemic stroke, intracranial hemorrhage, chronic kidney disease [stages 4 or 5], End Stage Renal Disease [ESRD] or congestive heart failure) being treated by another clinician with communication to the clinician treating the comorbid condition.	American Psychiatric Association	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program as we have reexamined public comments received during last year's rulemaking cycle. Stakeholders commented that it is burdensome for clinicians to retrieve specialists' reports for all patient visits. This insinuates the communication may be happening, but the co-morbid treating physician is not looking for and/or considering the MDD status. Additionally, this measure is duplicative to previously finalized measure Q374: Closing the Referral Loop: Receipt of Specialist Report which specifies numerator compliance as receipt of report from the referring eligible clinician. In the event that the measure is maintained, we proposed to add this measure to the following specialty sets: Clinical Social Work.
1667	328	N/A	MIPS CQMs Specifications	Intermediate Outcome	Effective Clinical Care	Pediatric Kidney Disease: ESRD Patients Receiving Dialysis: Hemoglobin Level < 10 g/dL: Percentage of calendar months within a 12-month period during which patients aged 17 years and younger with a diagnosis of End Stage Renal Disease (ESRD) receiving hemodialysis or peritoneal dialysis have a hemoglobin level < 10 g/dL.	Renal Physicians Association	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the meaningful measure initiative. There is limited patient population and adoption of the quality measure and does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The limited adoption over multiple program years suggests this is not an important clinical topic for MIPS eligible clinicians. There were zero submissions for the 2017 performance period.
N/A	329	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	Adult Kidney Disease: Catheter Use at Initiation of Hemodialysis: Percentage of patients aged 18 years and older with a diagnosis of End Stage Renal Disease (ESRD) who initiate maintenance hemodialysis during the measurement period, whose mode of vascular access is a catheter at the time maintenance hemodialysis is initiated.	Renal Physicians Association	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the meaningful measure initiative. There is limited adoption of the quality measure and does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The limited adoption over multiple program years suggests this is not an important clinical topic for MIPS eligible clinicians. In the event that the measure is retained in the MIPS program based on stakeholder comments, we proposed to add this measure to the following specialty set based on stakeholder feedback: Nephrology.

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	330	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	Adult Kidney Disease: Catheter Use for Greater Than or Equal to 90 Days: Percentage of patients aged 18 years and older with a diagnosis of End Stage Renal Disease (ESRD) receiving maintenance hemodialysis for greater than or equal to 90 days whose mode of vascular access is a catheter.	Renal Physicians Association	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the meaningful measure initiative. There is limited adoption of the quality measure and does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The limited adoption over multiple program years suggests this is not an important clinical topic for MIPS eligible clinicians.
N/A	343	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	Screening Colonoscopy Adenoma Detection Rate: The percentage of patients age 50 years or older with at least one conventional adenoma or colorectal cancer detected during screening colonoscopy.	American Society for Gastrointestinal Endoscopy	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program after review of previous stakeholder feedback, scoring implications, and attribution to the MIPS eligible clinician. The measure does not account for variables which may influence the adenoma detection rate such as geographic location, socioeconomic status of patient population, community compliance of screening, etc. Due to the measure construct, benchmarks calculated from this measure are misrepresented and do not align with the MIPS scoring methodology where 100 percent indicates better clinical care or control. Guidelines and supplemental literature support a performance target for adenoma detection rate of 25 percent for a mixed gender population (20 percent in women and 30 percent in men). In addition, the measure does not account for MIPS eligible clinicians that fail to detect adenomas, but may score higher based on the patient population.
1543	345	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	Rate of Asymptomatic Patients Undergoing Carotid Artery Stenting (CAS) Who Are Stroke Free or Discharged Alive: Percent of asymptomatic patients undergoing CAS who are stroke free while in the hospital or discharged alive following surgery.	Society for Vascular Surgeons	We proposed the removal of this measure (finalized in (81 FR 77558 through 77675) as a quality measure from the MIPS program because it is duplicative in concept and patient population as the previously finalized measure Q344: Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients without Major Complications (Discharged to Home by Post-Operative Day #2). Measure Q344 is a more comprehensive measure accounting for the patient population found within measure Q345 as well as assessing for complications and appropriate length of stay. Based on input from the measure steward, we proposed the substantive change of replacing the "or" with "and" in the title and the numerator statement in the circumstance that this measure is not finalized for removal. Despite these revisions, this measure is still duplicative in nature and less comprehensive as compared to measure Q344.

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
1540	346	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	Rate of Asymptomatic Patients Undergoing Carotid Endarterectomy (CEA) Who Are Stroke Free or Discharged Alive: Percent of asymptomatic patients undergoing CEA who are stroke free or discharged alive following surgery.	Society for Vascular Surgeons	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it is duplicative in concept and patient population as the previously finalized measure Q260: Rate of Carotid Endarterectomy (CEA) for Asymptomatic Patients, without Major Complications (Discharged to Home by Post-Operative Day #2). Measure Q260 is a more comprehensive measure accounting for the patient population found within measure Q346 as well as assessing for complications and appropriate length of stay. Based on input from the measure steward, we proposed the substantive change of replacing the “or” with “and” in the title and the numerator statement in the circumstance that this measure is not finalized for removal. Despite these revisions, this measure is still duplicative in nature and less comprehensive as compared to measure Q260.
1534	347	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	Rate of Endovascular Aneurysm Repair (EVAR) of Small or Moderate Non-Ruptured Infrarenal Abdominal Aortic Aneurysms (AAA) Who Are Discharged Alive: Percent of patients undergoing endovascular repair of small or moderate non-ruptured infrarenal abdominal aortic aneurysms (AAA) who are discharged alive.	Society for Vascular Surgeons	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it is duplicative in concept and patient population as the previously finalized measure Q259: Rate of Endovascular Aneurysm Repair (EVAR) of Small or Moderate Non-Ruptured Infrarenal Abdominal Aortic Aneurysms (AAA) without Major Complications (Discharged to Home by Post-Operative Day #2). Measure Q259 is a more comprehensive measure accounting for the patient population found within measure Q347 as well as assessing for complications and appropriate length of stay.
N/A	352	N/A	MIPS CQMs Specifications	Process	Patient Safety	Total Knee Replacement: Preoperative Antibiotic Infusion with Proximal Tourniquet: Percentage of patients regardless of age undergoing a total knee replacement who had the prophylactic antibiotic completely infused prior to the inflation of the proximal tourniquet.	American Association of Hip and Knee Surgeons	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it is considered a standard of care that has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this measure is 98.8 percent for the MIPS CQMs specifications collection type based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/342/2019%20MIPS%20Quality%20Benchmarks.zip .

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
NA	353	N/A	MIPS CQMs Specifications	Process	Patient Safety	Total Knee Replacement: Identification of Implanted Prosthesis in Operative Report: Percentage of patients regardless of age undergoing a total knee replacement whose operative report identifies the prosthetic implant specifications including the prosthetic implant manufacturer, the brand name of the prosthetic implant and the size of each prosthetic implant.	American Association of Hip and Knee Surgeons	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it is considered a standard of care that has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this measure is 98.6 percent for the MIPS CQMs specifications collection type based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/342/2019%20MIPS%20Quality%20Benchmarks.zip .
N/A	361	N/A	MIPS CQMs Specifications	Structure	Patient Safety	Optimizing Patient Exposure to Ionizing Radiation: Reporting to a Radiation Dose Index Registry: Percentage of total computed tomography (CT) studies performed for all patients, regardless of age, that are submitted to a radiation dose index registry that is capable of collecting at a minimum selected data elements.	American College of Radiology	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this is not furthering quality care, but simply submitting to a radiation dose index and does not deter excessive radiation. Despite this structure measure supporting patient care, it does not measure quality care that directly impacts patients. We believe this measure is not providing a meaningful impact to quality improvement to require radiation reduction.
N/A	362	N/A	MIPS CQMs Specifications	Structure	Communication and Care Coordination	Optimizing Patient Exposure to Ionizing Radiation: Computed Tomography (CT) Images Available for Patient Follow-up and Comparison Purposes: Percentage of final reports for computed tomography (CT) studies performed for all patients, regardless of age, which document that Digital Imaging and Communications in Medicine (DICOM) format image data are available to non-affiliated external healthcare facilities or entities on a secure, media free, reciprocally searchable basis with patient authorization for at least a 12 month period after the study.	American College of Radiology	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this is not furthering quality care, but simply setting up a database. Despite this structure supporting patient care, it does not measure quality care that directly impacts patients. We believe this measure is not providing a meaningful impact to quality improvement.

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0712e	371	CMS160v8	eCQM Specifications	Process	Effective Clinical Care	Depression Utilization of the PHQ-9 Tool: The percentage of adolescent patients 12 to 17 years of age and adult patients age 18 and older with the diagnosis of major depression or dysthymia who have a completed PHQ-9 during each applicable 4 month period in which there was a qualifying depression encounter.	Minnesota Community Measurement	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure only captures the process of depression screening and is duplicative of previously finalized measure Q370: Depression Remission at Twelve Months. Measure Q370 is a more robust outcome measure, requiring depression remission for numerator compliance. The screening element found within this process measure is a part of logic for measure Q370. In the event that the measure is retained in the MIPS program based on stakeholder comments, we proposed to add this measure to the following specialty set as it is clinically relevant to the clinician type: Pediatrics.
N/A	372	CMS82v7	eCQM Specifications	Process	Community/Population Health	Maternal Depression Screening: The percentage of children who turned 6 months of age during the measurement year, who had a face-to-face visit between the clinician and the child during child's first 6 months, and who had a maternal depression screening for the mother at least once between 0 and 6 months of life.	National Committee for Quality Assurance	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because denominator eligibility is determined by the visits to the child's MIPS eligible clinician. The quality action would not be attributed to the child's MIPS eligible clinician, but rather to the obstetrician or primary care provider of the mother. The measure does not account for instances where the mother is not present for the child's visits.
N/A	388	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	Cataract Surgery with Intra-Operative Complications (Unplanned Rupture of Posterior Capsule Requiring Unplanned Vitrectomy): Percentage of patients aged 18 years and older who had cataract surgery performed and had an unplanned rupture of the posterior capsule requiring vitrectomy.	American Academy of Ophthalmology	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it is considered a standard of care that has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this inverse measure is 0.4 percent for the MIPS CQMs specifications collection type. For an inverse measure, a lower calculated performance rate indicates better clinical care or control. As such, the MIPS CQMs specifications collection type is considered extremely topped out. The average performance rate is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/342/2019%20MIPS%20Quality%20Benchmarks.zip .

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	403	N/A	MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	Adult Kidney Disease: Referral to Hospice: Percentage of patients aged 18 years and older with a diagnosis of end-stage renal disease (ESRD) who withdraw from hemodialysis or peritoneal dialysis who are referred to hospice care.	Renal Physicians Association	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the meaningful measure initiative. There is limited adoption of the quality measure and does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The limited adoption over multiple program years suggests this is not an important clinical topic for MIPS eligible clinicians. This concept would be more inclusive and better represented if the denominator was expanded to include patients with multiple chronic conditions.
N/A	407	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	Appropriate Treatment of Methicillin-Susceptible Staphylococcus Aureus (MSSA) Bacteremia: Percentage of patients with sepsis due to MSSA bacteremia who received beta-lactam antibiotic (e.g. Nafcillin, Oxacillin or Cefazolin) as definitive therapy.	Infectious Diseases Society of America	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it is considered a standard of care that has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this measure is 98.7 percent for the MIPS CQMs specifications collection type based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/342/2019%20MIPS%20Quality%20Benchmarks.zip . In the circumstance we do not finalize removal of this measure, we would maintain this measure with the following substantive change(s) based on the measure steward's input: add criteria for denominator eligibility to include Diagnosis for Bacteremia (ICD-10-CM): R78.81 AND Methicillin susceptible Staphylococcus aureus infection as the cause of diseases classified elsewhere (ICD-10-CM): B95.61. Despite these revisions offered by the measures steward, we do not believe this will affect the average performance for this measure.

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0711	411	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	<p>Depression Remission at Six Months: The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission six months (+/- 60 days) after an index event date.</p>	Minnesota Community Measurement	<p>We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this patient population and quality action are duplicative of previously finalized measure Q370: Depression Remission at Twelve Months but vary in timeframe in which depression remission is required. The extended timeframe allows assessment of patient to ensure management and prevention of depression relapse. American Psychiatric Association (2010) states "Continuation therapy is the four-to-nine month period beyond the acute treatment phase during which the patient is treated with antidepressants, psychotherapy, ECT or other somatic therapies to prevent relapse. Relapse is common within the first 6 months following remission from an acute depressive episode; as many as 20-85 percent of patients may relapse." In the circumstance we do not finalize removal of this measure, we would maintain this measure with the following substantive change(s) based on the measure steward's input: update the denominator allowing PHQ-9/PHQ9M to be administered during the index encounter or up to 7 days prior to encounter. In addition, we proposed to add this measure to the following specialty measure sets in the event the measure is retained in the MIPS program based on stakeholder comments within the program as it is clinically relevant to these clinician types: Pediatrics and Clinical Social Work. Despite these revisions offered by the measures steward, we prefer measure Q370 which supports the quality outcome depression remission at 12 months.</p>
1523	417	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	<p>Rate of Open Repair of Small or Moderate Non-Ruptured Infrarenal Abdominal Aortic Aneurysms (AAA) Where Patients Are Discharged Alive: Percentage of patients undergoing open repair of small or moderate non-ruptured infrarenal abdominal aortic aneurysms (AAA) who are discharged alive.</p>	Society for Vascular Surgeons	<p>We proposed the removal of this measure (finalized in (81 FR 77558 through 77675) as a quality measure from the MIPS program because it is duplicative in concept and patient population as the previously finalized measure Q258: Rate of Open Repair of Small or Moderate Non-Ruptured Infrarenal Abdominal Aortic Aneurysms (AAA) without Major Complications (Discharged to Home by Post-Operative Day #7). Measure Q258 is a more comprehensive measure accounting for the patient population found within measure Q417 as well as assessing for complications and appropriate length of stay.</p>

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A	428	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Pelvic Organ Prolapse: Preoperative Assessment of Occult Stress Urinary Incontinence: Percentage of patients undergoing appropriate preoperative evaluation of stress urinary incontinence prior to pelvic organ prolapse surgery per American College of Obstetrics and Gynecology (ACOG), American Urogynecologic Society, and American Urological Association guidelines.</p>	American Urogynecologic Society	<p>We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it is considered a standard of care that has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this measure is 98 percent for the MIPS CQMs specifications collection type based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/342/2019%20MIPS%20Quality%20Benchmarks.zip.</p>
0071	442	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<p>Persistence of Beta-Blocker Treatment After a Heart Attack: The percentage of patients 18 years of age and older during the measurement year who were hospitalized and discharged from July 1 of the year prior to the measurement year to June 30 of the measurement year with a diagnosis of acute myocardial infarction (AMI) and who were prescribed persistent beta-blocker treatment for six months after discharge.</p>	National Committee for Quality Assurance	<p>We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because the patient population is captured within previously finalized measure Q007: Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%). While the quality action requires persistent beta-blocker treatment, the performance period is narrowed to only include the patients hospitalized and discharged for the first 6 months of the performance period. This does not include patient hospitalized and discharged after July 1, thus missing a substantial portion of the patient population. In the circumstance we do not finalize removal of this measure, we would maintain this measure with the following substantive change(s) based on the measure steward's input: update the denominator exclusion adding advance illness and frailty. Despite these revisions offered by the measure steward, we maintain that measure Q007 will capture the patient population sampled within this measure and allows for a 12 month performance period.</p>

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0733	446	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	Operative Mortality Stratified by the Five STS-EACTS Mortality Categories: Percent of patients undergoing index pediatric and/or congenital heart surgery who die, including both 1) all deaths occurring during the hospitalization in which the procedure was performed, even if after 30 days (including patients transferred to other acute care facilities), and 2) those deaths occurring after discharge from the hospital, but within 30 days of the procedure, stratified by the five STS Mortality Levels, a multi-institutional validated complexity stratification tool.	Society of Thoracic Surgeons	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because the denominator has a very limited patient population. We believe this measure does not align with the meaningful measure initiative. The limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The limited adoption over multiple program years suggests this is not an important clinical topic for MIPS eligible clinicians. In the event that the measure is retained in the MIPS program based on stakeholder comments, we proposed to add this measure to the following specialty set as it is clinically relevant to this clinician type: Thoracic Surgery.
1857	449	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	HER2 Negative or Undocumented Breast Cancer Patients Spared Treatment with HER2-Targeted Therapies: Percentage of female patients (aged 18 years and older) with breast cancer who are human epidermal growth factor receptor 2 (HER2)/neu negative who are not administered HER2-targeted therapies.	American Society of Clinical Oncology	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because clinically we believe this to be standard of care. The performance data does not support a meaningful gap. The average performance for this measure is 97.4 percent for the MIPS CQMs specifications collection type based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/342/2019%20MIPS%20Quality%20Benchmarks.zip . In the circumstance we do not finalize removal of this measure, we would maintain this measure with the following substantive change(s) based on the measure steward's input: update the denominator definition to align with current guidelines as referenced in Table D. 68: Trastuzumab Received By Patients With AJCC Stage I (T1c) – III And HER2 Positive Breast Cancer Receiving Adjuvant Chemotherapy of this document.
N/A	454	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	Percentage of Patients who Died from Cancer with More than One Emergency Department Visit in the Last 30 Days of Life (lower score – better): Percentage of patients who died from cancer with more than one emergency department visit in the last 30 days of life.	American Society of Clinical Oncology	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this may be outside of the eligible clinician's control. We believe previously finalized measure Q455: Percentage of Patients who Died from Cancer Admitted to the Intensive Care Unit (ICU) in the Last 30 Days of Life (lower score – better) is a related concept that can be a better indicator of compassionate outcomes to the end of life care for oncology patients.

TABLE C: Previously Finalized Quality Measures Finalized for Removal in the 2022 MIPS Payment Year and Future Years

NQF # / eCQM NQF #	Quality #	CMS e-CQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0215	456	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	Percentage of Patients who Died From Cancer Not Admitted to Hospice (lower score – better): Percentage of patients who died from cancer not admitted to hospice.	American Society of Clinical Oncology	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because the concept would be captured in measure Q457: Percentage of Patients who Died from Cancer Admitted to Hospice for Less than 3 Days (lower score – better) and is the more robust measure as it requires at least 3 days of hospice prior to death.
N/A	467	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Developmental Screening in the First Three Years of Life: The percentage of children screened for risk of developmental, behavioral and social delays using a standardized screening tool in the 12 months preceding or on their first, second, or third birthday. This is a composite measure of screening in the first three years of life that includes three, age-specific indicators assessing whether children are screened in the 12 months preceding or on their first, second or third birthday.	Oregon Health & Science University	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program after review of denominator of this process measure is not able to specifically target a pediatric patients primary clinician for performance of developmental screening. The measure owner submitted a substantive change to revise the denominator eligible coding to include well-child visits. The well-child visit encounters would likely include the attestation of the numerator’s quality action and therefore inflate performance of the measure. While we agree that screening pediatric patients for development milestones is indicative of quality interactions with patients, we believe that the complexity of implementing the change creates a less meaningful assessment of MIPS eligible clinicians.
N/A	474	N/A	MIPS CQMs Specifications	Process	Community/Population Health	Zoster (Shingles) Vaccination: The percentage of patients aged 50 years and older who have had the Shingrix zoster (shingles) vaccination.	PPRNet	We propose the removal of this measure (finalized in 83 FR 60108) as a quality measure from the MIPS program because it is duplicative of measure A.3: Adult Immunization Status proposed in this proposed rule. This new measure, if finalized, is a more robust immunization measure which requires multiple age appropriate preventive immunizations. We are proposing to remove this measure to be consistent with ensuring measures are not duplicative and present an opportunity to provide a meaningful impact to quality.

TABLE C: Summary of Comments and Responses

Comment: One commenter opposed the removal of measure Q046: Medication Reconciliation Post Discharge, stating that the proposed replacement of this measure with measure Q130: Documentation of Current Medications in the Medical Record is not appropriate for patients who are at high risk post discharge.

One commenter opposed the removal of measure Q046 as it is in the current CQMC core set for ACO/Primary Care. At the most recent meeting of the CQMC, the CQMC preferred measure Q046 over measure Q130, stating that both measures are check box and may not show evidence of improved patient outcome. Another commenter requested that measure Q046 not be removed from the MIPS program until the CQMC has completed its maintenance cycle review of this measure expected by the end of 2019.

Several commenters opposed the removal of Q046, stating that measure Q130 does not reference use of the measure by a clinical pharmacist. Removing the measure may preclude pharmacists due to the measure Q130’s use of the term “eligible clinician.” The commenters urged CMS to explore a new measure that focuses on ensuring that the best reconciled medication list is available in all of the patient’s health care locations, including post-discharge.

One commenter preferred NQF #2988’s approach to measure attribution, date of reconciliation, medication assessment process, and inclusion of allergy and adverse drug event documentation requirements.

Response: We appreciate the commenters’ feedback. CMS believes that measures Q046 and Q130 are duplicative in measurement as both measures review current medications, which may represent the reconciliation of medication post discharge, and would represent the same patient population. Due to the overlap, measure Q130

TABLE C: Summary of Comments and Responses

represents a broader population of patients since it is not just focused on patients that have a 30-day inpatient discharge. We agree that it is advantageous for patients to have their medications reviewed post discharge, although we believe the quality action represented in measure Q130 would support the same quality action. In reference to the concern about the preclusion of pharmacists and team-based approach, the quality action of measures Q046 or Q130 does not require the consultation of a pharmacist, although may be appropriate in some instances. We strive to maintain robust measures that meet the meaningful measures initiative and we encourage the commenter to work with measures' developers to submit new, more robust measures through the Call for Measures process that evaluates documentation of medication in the medical record. We attempt to align with CQMC, but believe this measure is duplicative of a more broadly applicable measure. As MIPS moves forward, we will continue to explore ways to align measurement across programs. We reviewed NQF #2988: Medication Reconciliation for Patients Receiving Care at Dialysis Facilities and believe this measure would not be an adequate replacement for measure Q130. This measure is focused on all patients receiving dialysis services whereas measure Q130 is broadly applicable to all patient types in a variety of clinical settings. We believe that this population of patients would be captured within office visits currently found within the denominator of measure Q130. We will take this into consideration for future substantive change proposals to include this additional care setting of dialysis services. Alternatively, we encourage the commenter to submit NQF #2988 or other measures they believe may represent beneficial quality measures within to the Call for Measures once fully tested at the clinician level.

Comment: One commenter supported the removal of measure Q051: Chronic Obstructive Pulmonary Disease (COPD): Spirometry Evaluation, citing CMS' rationale that the measure is duplicative of measure Q052, Chronic Obstructive Pulmonary Disease (COPD): Long-Acting Inhaled Bronchodilator Therapy. Although the commenter preferred both quality measures be retained, the commenter supported CMS' proposal to use measure Q052 to support the use of spirometry to diagnose COPD. Another commenter agreed with the removal of measure Q051 because if a patient has COPD but is asymptomatic at the time, the patient would not be captured in the denominator due to the wording of the specification. The commenter asked if there should be a similar measure that captures patients who are well maintained and asymptomatic, and if EHRs able to this capture this data.

Response: We thank the commenters for supporting the removal of measure Q051 and agreeing that measure Q052 is a more robust measure. We thank the commenter for their concern with certain patient populations not being captured within measure Q052, however, measure Q051 does not require continual spirometry evaluation, but rather documentation of a single spirometry result. Most likely, this would be captured at the time of diagnosis as discussed in the clinical recommendation statement within measure Q051, and the above patient population of concern is not required to have continual evaluation for this measure. We encourage the other commenter to collaborate with the measure steward to revise current MIPS measures for proposed implementation in future years or to develop new robust, meaningful measures to submit to the Call for Measures once fully tested at the clinician level.

Comment: One commenter opposed the removal of measure Q091: Acute Otitis Externa (AOE): Topical Therapy as it is an important measure for otolaryngology, is evidence-based, and is applicable to the practice of many otolaryngologists and other specialties who treat these patients.

Response: We thank the commenter for their comment. We agree that measure Q091 is evidence-based, but it does not address the inappropriate use of antibiotics. In the circumstance an eligible clinician does not prescribe an antibiotic, most likely a topical therapy would be prescribed. However, the eligible clinician is able to prescribe both an antibiotic and topical and remain numerator compliant for this measure. Despite their limited utility, about 20-40 percent of patients with AOE receive oral antibiotics, often in addition to topical therapy (Rosenfeld, et al., 2014).

Comment: Several commenters opposed the removal of rheumatology measures Q109: Osteoarthritis (OA): Function and Pain Assessment and Q178: Rheumatoid Arthritis (RA): Functional Status Assessment. These measures are clinically relevant for rheumatology and the removal of these rheumatology-specific measures dramatically reduces the number of quality measures that are applicable to this specialty. Removing these measures will add unnecessary burden to the commenter's practice and negatively impact its scoring and payment incentive. The rationale for removal of measures Q109 and Q178 is that they are duplicative to measure Q182: Functional Outcome Assessment. The commenter stated that both of these measures should be kept, as they are clinically relevant and important for these rheumatoid arthritis and osteoarthritis as two diseases that affect a large patient population at their practice.

Another commenter opposed the removal of these measures, stating that measure Q182 is a measure used by physical therapists. Another commenter opposed the removal of measure Q109 and preferred this existing measure over measure Q182 because it is more targeted to a population that will benefit from functional assessment.

Response: We thank the commenters for their comments. We believe that duplicative measures are counterintuitive to the meaningful measures initiative that promotes more focused quality measure development towards outcomes that are meaningful to patients, families and their providers. Measures Q109 is a measure that has a focus on functional outcomes for patient populations that are disease specific. Measure Q182 is a disease non-specific, broadly applicable measure and allows eligible clinicians to use an assessment that is validated and meets their individual patient's clinical needs. The measure supports tools that address functional as well as pain aspects for these clinical assessments. The clinical rationale of the measure indicates "The tool should be selected based on purpose of the assessment and type of injury sustained (Leshner, et al, 2017; and Wales, et al., 2016). Utilization of validated pain and function scales help to differentiate treatment approaches in order to improve the patient's ability to function (ICSI, 2012).

We value stakeholder feedback and agree that measure Q178 is clinically relevant for rheumatology and we believe the proposed measure changes ensure that clinicians are utilizing the preferred assessment tools for standardization of performance. According to the American College of Rheumatology's RA treatment guidelines, functional status assessment using a standardized, validated measure should be performed routinely for RA patients, at least once per year, but more frequently if disease is active. As a result, we are not finalizing the removal of measure Q178 from MIPS and will finalize the substantive change for this measure outlined in the 2020 PFS proposed rule (84 FR 41164) shown under Table D.83 of this final rule.

Comment. One commenter urged CMS to defer removal of measures Q110 and Q111 for an additional year until the new Adult Immunization Status measure is proven and determined to be reportable by surgeons and because removal of measure Q110 would impact the surgeon's workflow. Another commenter opposed removal of measure Q110 because there are an estimated 1,100 dialysis patients that die each year of influenza, and most of these deaths can be prevented by influenza immunization. Several commenters stated that CMS should not remove EHR reportable eCQM measures Q110 and Q111 when alternative eCQM measures are not available to be reported.

One commenter agreed with the removal of measures Q110 and Q111.

TABLE C: Summary of Comments and Responses

Response: We thank the commenters for their comments. Per our discussion on the Adult Immunization Status measure under Table A.3, we are retaining measures Q110 and Q111 because the new measure Adult Immunization Status measure is not being finalized for the 2020 MIPS performance period/2022 MIPS payment year due to the imminent changes in clinical guidelines for pneumococcal vaccination and because we believe it is advantageous to evaluate the clinical guidelines and Adult Immunization Status measure for inclusion through future rulemaking. We would encourage the commenter to work with the measure steward to revise the measure to better fit the surgeon's workflow for possible implementation in future years. We agree that the administration of the influenza vaccine is critical for certain patient populations and would note that the Adult Immunization Status measure has an influenza vaccine component. We are finalizing substantive changes for measures Q110 and Q111 as outlined in the 2020 PFS proposed rule (84 FR 41158 and 41159) shown under Tables D.81 and D.82 of this final rule.

Comment: Several commenters opposed the removal of measure Q131: Pain Assessment because physical and occupational therapists cannot prescribe opioids. Therefore, while it might make sense to eliminate this measure for physicians, it makes no sense to eliminate this measure for physical and occupational therapists. Another commenter did not support the removal of Q131, stating that there is no requirement within this measure that opioids must be used to improve a patient's pain level. Another commenter opposed the removal of measure Q131 because it targets two of CMS' highest priority areas— measures based on outcomes and measures targeting opioid use, management, and treatment.

Two additional commenters opposed the removal of measure Q131 as chiropractors are only being reimbursed for manipulation codes for two claims-based quality measures: Q131 and Q182: Functional Outcome Assessment. These current limitations have diminished the number of chiropractors willing to opt-in to MIPS. Chiropractors are not allowed to prescribe opioid medications and chiropractic care is an excellent tool in the fight against opioid abuse.

Another commenter opposed the removal of measure Q131 given that approximately 100 million Americans live with chronic pain. The measure focuses on appropriate follow-up, which is not limited to medication use. A separate measure maintained by the American Academy of Neurology and the American Psychiatric Association specifically addressing pain for patients with dementia could be retired given this measure's proposed expansion to include those who are non-verbal. Another commenter opposed the removal of Q131 as it would negatively impact rheumatology practices and reduce the number of high priority measures available to them. Another commenter stated that speech language pathologists are not authorized under any state law to prescribe medications; therefore, there is no increased risk when they complete the pain assessment.

Response: We thank the commenters for their feedback and concerns cited on removing measure Q131. However, measure Q131 is not limited to clinicians (that is, speech language pathologists) unable to prescribe medications, but is available for a broad range of eligible clinician types. As measure Q131 is unable to be revised at this time, retaining it within MIPS would still allow the measure to be utilized by clinicians who are able to prescribe opioids. We believe that it is important to consider the negative impact our measures may inadvertently have on current health crises, such as the opioid epidemic, and support efforts that ensure positive outcomes in patient care and deter the possibility of overtreatment of pain. We encourage the submission of measures that are structured in a way that manages pain, yet deters opioid use. Regarding the comment addressing the changes to an American Academy of Neurology and American Psychiatric Association maintained measure, we currently do not have a measure that addresses pain in patients with dementia that is being expanded to include non-verbal patients and encourage the commenter to collaborate with the measure stewards to refine the measure for implementation in future years. In an abundance of caution, as the risks outweigh the quality of care assessed from this measure, we are finalizing the removal of measure Q131.

Comment: One commenter opposed the removal of four radiology measures from MIPS: measures Q146, Radiology: Inappropriate Use of "Probably Benign" Assessment Category in Screening Mammograms, Q225, Radiology: Reminder System for Screening Mammograms, Q361, Optimizing Patient Exposure to Ionizing Radiation: Reporting to a Radiation Dose Index Registry, and Q362, Optimizing Patient Exposure to Ionizing Radiation: Computed Tomography (CT) Images Available for Patient Follow-up and Comparison Purposes. Ninety-five percent of radiology measures are topped out and four are proposed for removal in 2020, with two other measures removed in 2019. The commenter also stated that many high-performing measures are still showing a low adoption rate among radiologists, thus a reason for the high performance score may be a result of a small pool of high-performing individuals choosing to report certain measures. This would skew the average score and mask the actual performance gap than if the measure was reported across a larger number of practices, including those with worse performance on the measures in question.

The rationale for removing measures Q361 and Q362 is that the measures are process/structural or not directly related to patient outcome. The commenter stated that is especially problematic for radiology in that the imaging services are typically provided at an early state of the care process, and process measures support care improvement across the care continuum. Additionally, both of those measures were part of the Optimizing Patient Exposure to Ionizing Radiation Physician Quality Reporting System (PQRS) specialty measures group until MIPS began in 2017. The performance data on which these have been assessed is largely based on the limited number of cases (20) to be reported when using a measures group. This skews the actual performance gap toward higher scores from higher performing groups.

The other two measures, Q146 and Q225, proposed for removal are specific to radiologists performing screening mammography. Removal of the two breast imaging measures would leave many groups/eligible clinicians who only have a case mix relative to these mammography measures (typical in community and rural settings) without any practice-relevant measures to report. Additionally, breast cancer screening may be ideal as an initial concept for a radiology MVP.

Response: We thank the commenters for their feedback on measures Q146, Q225, Q361, and Q362. After consideration of the feedback, we are retaining measures Q146 and Q225 to ensure that MIPS eligible clinicians/groups who only have a case mix relative to screening mammography would have applicable measures within the Diagnostic Radiology set. Although we acknowledge that a small sample size of high performing clinicians may lead to an overall high performance rate, CMS believes that retaining the measures Q361 and Q361 in MIPS will not lead to increased adoption given the fact that the measures have been available for multiple years. Therefore, we conclude that eligible clinicians do not believe this measure supports quality outcomes or is meaningful for their scope of practice. CMS encourages the commenter to collaborate with measure stewards to develop an outcome-based measure that assesses the safe practices of radiation exposure by setting an appropriate threshold to determine performance.

We acknowledge that these measures support processes related to outcomes, and we are motivated to implement outcome based measures that support direct patient care. While we recognize that measure stewards may have difficulties in developing outcome based measures, we believe it is important to include measures that support the meaningful measure initiative. The lack of a quality measures does not preclude the creation of clinical processes that drive positive outcomes for patients. Therefore, we are finalizing removal of measures Q361, and Q362 for the 2020 MIPS performance period/2022 MIPS payment year and future years.

Comment: One commenter supported the removal of measure Q160: HIV/AIDS: Pneumocystis Jiroveci Pneumonia (PCP) Prophylaxis from the eCQM measure type.

TABLE C: Summary of Comments and Responses

Response: We thank the commenter for supporting the removal of measure Q160.

Comment: One commenter disagreed with the removal of measure Q165: Coronary Artery Bypass Graft (CABG): Deep Sternal Wound Infection Rate and measure Q166: Risk-Adjusted Operative Mortality for Coronary Artery Bypass Graft (CABG) from the Thoracic Surgery set. The commenter indicated that a high performance rate on a specific measure does not necessarily mean that a measure is not meaningful. Removing these measures may create serious unintended consequences including negative effects on patient care, and could also make it difficult to track performance on these measures over time.

Response: We thank the commenter for their consideration and encourage them to collaborate with measure stewards to develop a quality measure that assess a more comprehensive list of complications for CABG surgery, including, but not limited to, infection, mortality, and re-exploration. A comprehensive composite measure would likely identify a performance gap that allows eligible clinicians to maximize their potential quality performance category score. Additionally, by removing these extremely topped out measures, we are attempting to reduce reporting burden where there is little room for improvement.

Comment: One commenter opposed the removal of measure Q178: Rheumatoid Arthritis (RA): Functional Status Assessment by replacing it with the non-rheumatology-specific measure Q182: Functional Outcome Assessment, as this would remove a specialty-specific measure from the MIPS program. Measure Q178 could also be used in a rheumatology-specific MVP. The commenter indicated that measure Q178 is an important steppingstone for the commenter's work toward developing and implementing rheumatology outcome measures and its work with the NQF to develop a patient-reported functional status outcome measure. Replacing measure Q178 with measure Q182, in effect, removes restrictions around requiring specific tools to meet the measure, thereby lowering performance thresholds for rheumatology providers. Additionally, measure Q182 is more focused on functional status assessments and care plans within physical and occupational therapy.

Another commenter disagreed with CMS' rationale for removing measures Q178 and Q179: Rheumatoid Arthritis (RA): Assessment and Classification of Disease Prognosis, including that other measures are more appropriate and that the rheumatoid arthritis measures are duplicative. If practices begin reporting on other functional assessment measures, the feedback will not be directly relevant to rheumatology practices and patients as the data will include that of other specialties and for other diseases. If CMS is unwilling to retain these measures, the Agency should at least parse out data based on the specialty reporting the measure and associated diagnoses.

Another commenter opposed removal of five measures from MIPS that would be removed from the Rheumatology set given the impact of rheumatoid arthritis has on the Medicare population. The more specialty measures are removed, the less relevant CMS' quality programs are to specialists.

Response: We thank the commenters for their comments opposing the removal of measures Q178 and Q179. Measures Q179 and Q177: Rheumatoid Arthritis (RA) Periodic Assessment of Disease Activity assess the same patient population for disease activity, however, measure Q177 requires this assessment to be completed during at least 50 percent of the eligible encounters for each patient as opposed to only once per performance period, ensuring the assessment is being given on a more consistent basis. Measure Q182 only includes settings without any diagnosis coding within the denominator criteria as this is a broadly applicable measure, relevant to MIPS clinician types beyond physical and occupational therapy.

We value stakeholder feedback and agree that measure Q178 is clinically relevant for rheumatology and we believe the proposed measure changes ensure that clinicians are utilizing the preferred assessment tools for standardization of performance. According to the American College of Rheumatology's RA treatment guidelines, functional status assessment using a standardized, validated measure should be performed routinely for RA patients, at least once per year, but more frequently if disease is active. As a result, we are not finalizing the removal of measure Q178 from MIPS and will finalize the substantive changes for this measure outlined in the 2020 PFS proposed rule (84 FR 41164) shown under Table D.83 of this final rule. We encourage collaboration with the measure steward to refine the measure for MIPS for future program years. We agree that this measure may be applicable to a Rheumatology-specific MVP and encourage the commenter to look for future rulemaking and solicitation for recommendations regarding MVPs.

Comment: One commenter agreed that measure Q179: Rheumatoid Arthritis (RA): Assessment and Classification of Disease Prognosis should be removed from MIPS as it anticipates it will soon be a topped-out measure.

Response: We thank the commenter for supporting the removal of measure Q179.

Comment: One multi-society commenter requested that measure Q185: Colonoscopy Interval for Patients with a History of Adenomatous Polyps – Avoidance of Inappropriate Use remain in MIPS until meaningful alternatives can be developed. The commenter stated that for colonoscopy to be cost-effective, the intervals between examinations must be optimal. The commenter disagreed with benchmarks established by CMS suggesting this measure is topping out, because that does align with the evidence from surveys of practice. The commenter also requested that measure Q185 remain in the MIPS program so that it may be included in MVP for colorectal cancer screening through which it believes more accurate benchmarks for the measure will be developed. The commenter responded that the measure is being proposed for removal from MIPS because the measure was not updated by the measure steward to align with new guidelines and stated that measure Q185 should remain in MIPS until updated guidelines are released and the impact on this measure can be evaluated.

One commenter supported removal of measure Q185. While the measure is currently included in the CQMC Gastroenterology Core Set, the commenter supported removing the measure from this program until the measure steward has updated the specifications to align with recently updated clinical guidelines.

Response: We appreciate the concern cited for measure Q185. We originally proposed this measure to be removed for the 2019 performance period to allow the measure to be updated with new guidelines. After further discussion with the measure steward, they now support continued inclusion of measure Q185 in MIPS, given it is a well-established, valid measure with variability still seen in practice. It is anticipated that new guidelines will be released that may necessitate a future substantive change of the measure.

Comment: One commenter opposed the substantive change to measure Q191: Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery (eCQM: CMS133v8). Within the context of this comment, the commenter opposed the removal of measure Q192: Cataracts: Complications within 30 Days Following Cataract Surgery Requiring Additional Surgical Procedures (eCQM: CMS132v8), including to the changes to 2020 eCQM specifications for measures Q191 and Q192 (see response under Table C for further details on measure Q192). The commenter stated that the proposed change should not be finalized for the registry versions of the measures and should be reversed for the eCQM versions of measures Q191 and Q192, which have already been published. Another commenter opposed the removal of measure Q192 and Q388: Cataract Surgery with Intra-Operative Complications (Unplanned Rupture of Posterior Capsule Requiring Unplanned Vitrectomy) as these are two important patient safety measures. The commenter encouraged CMS to retain measures Q192 and Q388 and consider the application of the flat percentages scoring methodology for these measures.

TABLE C: Summary of Comments and Responses

One multi-organization commenter also opposed the elimination of two cataract surgery outcome measures Q192 and Q388 due to topped out status without accounting for the clinical relevance of these measures. Maintenance of these measures, either through the EHR or registry, allow cataract surgeons real-time awareness of complication rates and provide real opportunities for quality improvement where necessary. The commenter urged CMS to conduct more thorough analyses of factors potentially influencing topped out performance. Another commenter cited concerns with CMS' proposal to eliminate measure Q192 because cataract surgeons frequently state it is the most meaningful measure they report on because it is a true indicator to patients whether the physician provides good quality care.

One commenter supported the removal of measure Q192: Cataracts: Complications within 30 Days Following Cataract Surgery Requiring Additional Surgical Procedures from the eCQM measure type.

Response: We thank the commenter for supporting the removal of measure Q192. As the performance on measures Q192 and Q388 is extremely high and unvarying they do not allow meaningful benchmarks to be established. By removing measures that are extremely topped out, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as these measures' topped out status would limit the score awarded per the 2019 Benchmark File.

Comment: One commenter opposed the removal of four extremely topped out pathology measures from the MIPS program that would impact the number of measures available to report for pathologists: measures Q249: Barrett's Esophagus, Q250: Radical Prostatectomy Pathology Reporting, Q395: Lung Cancer Reporting (Biopsy/Cytology Specimens), and Q396: Lung Cancer Reporting (Resection Specimens). Removal would limit the pathology specialty set to two measures, both of which are skin cancer measures and thus would not be applicable to more than 50 percent of pathologists.

The commenter opposed the removal of the four measures based on its scoring analysis. Extrapolating from the commenter's QCDR, half of the practices who reported as a group did not meet the 20 case minimum for measure Q397 and 92 percent of individuals who reported did not meet the 20 case minimum. Therefore, most pathology practices who are single specialty would not be able to report the two measures left in the Pathology set and have no measures available to report, thus ending up with a negative MIPS payment adjustment. The commenter also requested that CMS apply the Eligible Measure Applicability (EMA) process automatically to practices who are unable to report on a minimum of six measures. In summary, the commenter requested that CMS maintain the current pathology specialty measure set and add the proposed measure Q440, even if CMS finalizes its proposal to increase data completeness to 70 percent.

A second commenter also opposed the removal of the four pathology measures, stating that only about 50 percent of practicing pathologists will be able to be scored on quality. Given that most pathologists are exempted from promoting interoperability and unable to be scored on cost, the rest will receive a neutral payment adjustment since they can only be scored in the improvement activities category.

Response: In the CY 2020 PFS proposed rule (84 FR 40749), we indicated that changes were not made to the Pathology set. In this final rule, we clarified that we in fact did propose changes to the Pathology set, as described in the CY 2020 PFS Proposed Rule (84 FR 41020 through 41022). We thank the commenters for their concerns on the proposed removal of the pathology measures and agree that many eligible clinicians would not meet the case minimum and would therefore be unable to utilize measures Q397 and Q440 leaving them with no applicable quality measures for submission. As a result, we are not finalizing the removal of measures Q249, Q250, Q395, and Q396 for the 2020 MIPS performance period/2022 MIPS payment year and are adding measure Q440 as requested.

Comment: One commenter opposed the proposed removal of measure Q264: Sentinel Lymph Node Biopsy for Invasive Breast Cancer that measures the percentage of clinically node negative breast cancer patients before or after neoadjuvant systemic therapy, who undergo sentinel lymph node (SLN) procedure. The commenter opposed the removal of measures based solely on extremely topped out or topped out status. Assessing value of care for a patient differs from placement of a measure into a payment program. The commenter stated that when CMS removes a valued measure such as Q265 because it is "topped out" the Agency is sending the wrong message to the field. The commenter would rather build on topped out measures so that patients are subjected to all the proper aspects of a care model in support of quality.

Response: We thank the commenter for their comment and upon further consideration have decided to retain measure Q264. This decision was made in order to have a breast specific measure within the General Surgery set for clinicians with this focus. Measure Q264 also shows some variation within the performance data submitted across MIPS eligible clinicians potentially allowing for movement within the performance rate. However, when reviewing the performance data for Q265, there was little to no variance and remained extremely topped out. We believe this measure represents a valuable measure concept and the removal of measure Q265 should not preclude clinicians from completing the quality action, however measures with topped out performance do not allow for the creation of meaningful benchmarks to discern quality among eligible clinicians. We do agree with the commenter that this measure could be built upon to create a measure with a broader focus of a care model. We would encourage the commenter to collaborate with measures stewards to develop a measure and submit to the Call for Measures when tested at the clinician level.

Comment: One commenter recommended that CMS delay removing measure Q271: Inflammatory Bowel Disease (IBD): Preventive Care: Corticosteroid Related Iatrogenic Injury – Bone Loss Assessment from the MIPS program until the CQMC has completed its maintenance cycle review of these measures expected by the end of 2019.

Another commenter recommended that measure Q271 be retained in MIPS as it intends to modify the measure specification rationale, as recommended by CMS, to address the concern that the measure does not account for patients with risk factors. Due to this feedback, the commenter has expanded the rationale section of the measure specification as requested to include guidance on appropriate use of DXA scans for high-risk IBD patients and will submit these changes during the next measure maintenance cycle. As a result, the commenter requested that the measure remain in MIPS until the measure can be updated.

Response: We thank the commenter for their comment and disagree with delaying removal of measure Q271. We have reviewed the revisions proposed by the measure steward for MIPS 2020 implementation. Based on our interpretation, the revised measure's quality action would be simplified to prescribing supplements such as calcium and/or vitamin D optimization. Additionally, the measure steward proposed to replace the term "Loss Assessment" with "Health Optimization" throughout the measure, define the patient population as 18 and over, as well as updating the numerator definition to "Documentation that calcium and/or Vitamin D optimization has been ordered or performed. This includes, but is not limited to, checking serum levels, documenting use of supplements or prescribing supplements" to better align with the measure's intent. The current measure requires a Central Dual-energy X-Ray Absorptiometry (DXA) and documented review of systems and medication history or pharmacologic therapy (other than minerals/vitamins) for osteoporosis prescribed within the past two years. We agree that patients without risk factors would

TABLE C: Summary of Comments and Responses

not be appropriate for frequent DXA scans as the current quality measure requires. The measure steward's substantive changes for the measure do not account for patients with high risk factors, which may warrant additional screening and pharmacologic treatment. The measure would be more robust if it was revised to assess based on multiple clinical criteria such as age, risk factors, etc. as recommended by CMS. We encourage the commenter to collaborate with the measure steward to submit a new measure during the Call for Measures process that is more robust and takes into account risk factors and require the appropriate clinical action. We thank the second commenter for their comment regarding future revisions, however, we would remind them that for the 2020 performance period the measure would not account for all clinical criteria and may not require the most appropriate clinical action. We encourage the commenter to work with measure steward to update all aspects of the measure to reflect applicable clinical quality actions for each patient population and submit to the Call for Measures once it is fully tested at the clinician level.

Comment: One commenter did not support removal of measure Q282: Dementia Functional Status Assessment, stating that the proposed duplicative measure: Q182: Functional Outcome Assessment focuses on use of physical therapy tools and as such is not applicable to this patient population. The commenter evaluated integration of measure Q182 into its QCDR in 2020 and felt given the restrictive slate of available tools, that it could not be broadly used by neurology clinicians. The commenter remains committed to measure harmonization and expanded the denominator to include physical therapy and occupational therapy as a result.

Another commenter opposed removal of measure Q282 because the measure is specific to patients with dementia and captures the percentage of patients for whom an assessment of functional status was performed at least once in the last 12 months. Measure Q182 includes patients aged 18 years and older and requires more frequent assessment and a plan of care. Also, the commenter did not believe that measure Q182 was duplicative to Q282.

Another commenter did support the removal of measure Q282, stating that the proposed duplicative measure Q182 focuses on the use of physical therapy tools and as such is not applicable to this patient population.

Response: We thank the commenter for their concern and would refer them to the measure specification which provides examples of tools for functional outcome assessment, but are not exhaustive and allow eligible clinicians to select any functional normed and validated tool. However, the proposed addition of mental/behavioral health coding to measure Q182 is not being finalized because the testing has not been completed. As a result, we are not finalizing the removal of measure Q282 from MIPS and will finalize the substantive change for this measure outlined in the 2020 PFS proposed rule (84 FR 41171) shown under Table D.79 of this final rule. Additionally, as we are not finalizing measure Q282 for removal, we will no longer be adding measure Q182: Functional Outcome Assessment to the Neurology, Geriatrics, and Mental/Behavioral Health sets as this was only proposed as a replacement measure.

Comment: One commenter did not support the removal of measure Q288: Dementia Education and Support of Caregivers for Patients with Dementia. CMS indicated there is overlap with measure Q286: Dementia: Safety Concern Screening and Follow-up for Patients with Dementia; however, the commenter stated that the measure numerators are substantially different, warranting use of both measures in MIPS. Measure Q286 is intended to ensure appropriate follow-up was taken to remove and address patient concerns that may lead to unintended injury of patients and caregivers. Measure Q288 is intended to address the unique mental health and burdens faced by caregivers for patients with dementia who are more at risk for their own mental health issues as a result of caring for patients.

Response: We thank the commenter for their comment and agree that by removing measure Q288 there may be gap in care for the dementia patient population. The health of a caregiver may directly impact the health of the patient and this may be missed in the quality action within measure Q286. As a result, we are not finalizing the removal of measure Q288 and will finalize the substantive change for this measure outlined in the 2020 PFS proposed rule (84 FR 41171) shown under Table D.80 of this final rule.

Comment: One commenter was concerned by the proposed removal of measure Q325: Adult Major Depressive Disorder (MDD): Coordination of Care of Patients with Specific Comorbid Conditions from the MIPS program and therefore from the Mental/Behavioral Health set. As the steward of this measure, its clinical experts are responsible for the oversight of quality measures and maintain this measure's importance in assuring the delivery of high-quality care for those with MDD and medical comorbidities. The commenter understood the rationale for the measure's proposed removal and will work with its measure development team and clinical experts to determine whether this is a minimal change to the measure's technical specifications, or if this will require a more substantive update.

The commenter disagreed with the assertion that this measure is duplicative to Q374: Closing the Referral Loop: Receipt of Specialist Report. To meet Q374's numerator, a referral must occur. Without a referral, a report is not sent, no matter the reason for the encounter. Further, measure Q374 is strictly applicable to the initial encounter. In contrast, measure Q325 is intended to capture communication regarding patients treated for MDD and a comorbid condition over time.

Response: We thank the commenter for their concern regarding the removal of measure Q325. We believe, based on stakeholder's feedback, as outlined in the removal rationale, that measure Q325 is burdensome to find and review the reports sent by the MDD treating clinician. Therefore, the physician treating the co-morbid condition may not be looking for, aware of, and/or considering the patient's MDD status. Though we agree that this is an important topic, we do not believe that the quality action ensures coordination of care. Measure Q374 does need to have a referral associated with it, but ensures that there is receipt of the report, ensuring that the clinician treating the comorbid condition has received the specialist report. We encourage the commenter to submit a revised measure to the Call for Measures that addresses clinician burden while also ensuring the quality action assesses complete care coordination between clinicians.

Comment: Two commenters requested that CMS maintain four nephrology measures to promote better care coordination and alignment among the providers caring for patients receiving dialysis: measures Q328 Pediatric Kidney Disease: ESRD Patients Receiving Dialysis: Hemoglobin (Hgb) Level < 10 g/dL, Q329 Adult Kidney Disease: Catheter Use at Initiation of Hemodialysis, measure Q330 Adult Kidney Disease: Catheter Use for Greater Than or Equal to 90 Days, and measure Q403: Adult Kidney Disease: Referral to Hospice. To advance the quality of care for patients with kidney disease, it is critical that nephrologists are measured by specific, relevant, and clinically meaningful measures.

Regarding measure Q328, anemia management is a critical component of managing the care for patients with kidney failure. Consistent with the comments submitted on the ESRD QIP on August 30, 2019, the commenter supported using a Hgb < 10 g/dL measure for dialysis facilities and, thus, called on CMS to use a similar measure for nephrologists. Regarding measure Q329, the use of catheters increases the risk of infection, morbidity, mortality, hospitalizations, and readmission. The ESRD QIP contains a similar measure to reduce the use of catheters in dialysis patients. Therefore, to coordinate the care among facilities and nephrologists, it is important to maintain this measure as measure Q330 is designed to be paired with Q329. Regarding measure Q403, a nephrologist is best positioned to work with the patient and through shared decision-making determine whether hospice is an appropriate option. Measure Q403 is also directly linked to the meaningful measure area

TABLE C: Summary of Comments and Responses

of End of Life Care According to Preferences. It seems inappropriate to eliminate measures that more closely align with those used in the ESRD QIP in favor of primary care measures that are not aligned.

Response: We thank the commenters for their comments and agree that care coordination for patients receiving dialysis is important; however, measures Q328, Q329, Q330, and Q403 have limited adoption over multiple programs years, this has not allowed for the creation of benchmarks that provide a meaningful impact to quality improvement. We believe that low reported measures are an indicator of measure concepts that do not provide meaningful measurement to most clinicians. Additionally, measures that do not meet benchmarking criteria do not allow for MIPS eligible clinicians to maximize their potential quality performance score. We continue to work with measure stewards to implement measures applicable to the nephrology specialty and plan to gather stakeholder feedback at the next MAP meeting.

Comment: One multi-society commenter requested that measure Q343: Screening Colonoscopy Adenoma Detection Rate (ADR) remain in MIPS until meaningful alternatives can be developed. The adenoma detection rate is the best-established colorectal neoplasia-related quality indicator available. The measure as specified accounts for a heterogeneous population of patients and purposely excludes patients at higher (prior history of polyps or cancer) risk of adenoma. The commenter failed to see how the current measure cannot be benchmarked, stating that that an adenoma detection rate of 25 percent is considered the floor, not the ceiling, by gastroenterologists. The commenter is also unaware of any studies demonstrating a relationship between adenoma detection rate and patient population. The only measure that may capture missed adenomas is a measure relative to interval cancer rate, which is not feasible to calculate for an individual clinician given the progression from adenomatous polyp to cancer occurs over an estimated 5 to 10 years in average-risk populations, lack of interoperability among electronic medical records, and patient migration. Measure Q343 establishes the framework for the Screening/Surveillance Colonoscopy episode-based cost measure such that, if removed, its absence would have unintended consequences across multiple programs.

Another commenter requested that measure Q343 not be removed from the MIPS program until the CQMC has completed its maintenance cycle review of this measure expected by the end of 2019. Another commenter opposed the removal of measure Q343 given ADR's well-established role in gastroenterology practices' quality improvement programs nationwide and the proposal to introduce MVPs.

Response: We thank the commenters, but disagree as measure Q343 is considered an incidence measure that does not assess the quality of the care provided. In essence, the measure is based on happenstance rather than the eligible clinician providing a thorough examination. The numerator is capturing the rate of adenoma(s) or colorectal cancer. Based on the measure specification's rationale "performance targets for adenoma detection rate of 25 percent for a mixed gender population (20 percent in women and 30 percent in men)." Under the current MIPS scoring methodology, a MIPS eligible clinician with a 90 percent performance rate would score higher than those that fall near the benchmark set by expert consensus. We agree with the comment that an alternative measure that addresses the scoring and benchmarking challenges should be developed. However, we do not agree that measure Q343 should be maintained in the interim.

According to the risk factors outlined by the American Cancer Society, African Americans have the highest colorectal cancer incidence and mortality rates of all racial groups in the US. In addition, dietary factors, such as consumption of highly processed meats will contribute to an increased risk of colorectal cancer. This diet is more prevalent in lower socioeconomic areas which could influence the outcome of the measure. There are other patient factors like education, health literacy, etc. that might also affect things like the adequacy of bowel preparation, which in turn could affect performance. We refer the commenter to review the response for measure Q185 as we are not finalizing the removal of the measure based on further communication with the measure steward. Lastly, in response to the inclusion of this measure within Core Quality Measures Collaborative, we have determined this measure may be appropriate for other programs, but does not align with the scoring logic within MIPS. When this measure was introduced, it was under the legacy program, Physician Quality Reporting System (PQRS). PQRS was a pay-for-reporting program which did not have the same scoring implications as MIPS transitioned to pay-for-performance.

Comment: One commenter supported the removal of two measures impacting the neurosurgical specialty because they are duplicative of other measures in the program. The commenter agreed that measure Q345: Rate of Asymptomatic Patients Undergoing Carotid Artery Stenting (CAS) Who Are Stroke Free or Discharged Alive is duplicative in concept and patient population to measure Q344: Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients without Major Complications (Discharged to Home by Post-Operative Day #2).

The commenter also agreed that measure Q346: Rate of Asymptomatic Patients Undergoing Carotid Endarterectomy (CEA) Who Are Stroke Free or Discharged Alive is duplicative in concept and patient population to measure Q260: Rate of Carotid Endarterectomy (CEA) for Asymptomatic Patients, without Major Complications (Discharged to Home by Post-Operative Day #2). If measures Q345 and Q346 are removed from the Neurosurgical set due to removal from the MIPS program, the commenter requested that measures Q344 and Q260 be added to the Neurosurgical set as their replacements.

Response: We thank the commenter supporting the removal of measures Q345 and Q346. We are unable to include measures Q344 and Q260 in the Neurosurgical set at this time as they were not proposed to be added, but encourage the commenter to submit their recommendations during the Call for Specialty Measure Sets.

Comment: One commenter opposed the removal of measure Q353: Total Knee Replacement: Identification of Implanted Prosthesis in Operative Report, which was proposed for removal because CMS said it is considered standard of care that has limited opportunity to improve clinical outcomes. The commenter encouraged CMS to retain this measure, as it encourages the provision of valuable data in the total knee replacement operative report. Another commenter opposed the removal of measure Q353, stating that this measure includes valuable data on the specific types of implants, which is relevant to tracking patient outcomes. Further, as physicians routinely report registry data, the commenter did not believe reporting of this measure contributes to physician burden.

Response: As the performance on measure Q353 is extremely high and unvarying, it does not allow meaningful benchmarks to be established. By removing measures that are extremely topped out, we are attempting to reduce reporting burden where there is little room for improvement. Additionally, this allows eligible clinicians to maximize their potential quality performance score as this measure's topped out status would limit the score awarded per the 2019 Benchmark File. Removing this measure does not preclude clinicians from documenting this information and using it for their tracking purposes in regard to patient outcomes. However, given the topped out status of this measure, keeping the measure in the program does not align with the Meaningful Measure initiative.

Comment: Several commenters did not support removal of measure Q371: Depression Utilization of the PHQ-9 Tool as removal of measure Q371 would disincentivize providers from collecting PHQ-9 data. Allowing clinicians to continue to report on measure Q371 allows clinicians to integrate patient reported outcome data incrementally, driving improvement over time that might not be demonstrable in first year performance of an outcome measure. It is essential to incentivize use of

TABLE C: Summary of Comments and Responses

measures such as the PHQ-9 on a regular basis. The PHQ-9 also includes a question related to suicidal ideas, which is an important element of assessment, independent of whether an individual meets other criteria for depression, particularly with the continued increase in suicide rates nationally.

Another commenter opposed the removal of measure Q371, available for eCQM reporting, as it is the most popularly reported measure with its customers. The commenter noted that the measure is being removed because a similar registry reportable measure exists as an alternative to this measure. The commenter understood that outcome measures are preferred and would ask that CMS work with measure developers to create an outcome depression measure to replace this popular measure prior to its removal.

Another commenter suggested that measure Q371 be retained in addition to measure Q370. Although measure Q370 would seem to encompass measures Q371 and Q411: Depression Remission at Six Months and make them superfluous, there are significant advantages to retaining all of these measures. Given the current fragmentation of the health care delivery system, it is essential to incentivize use of measures such as the PHQ-9 on a regular basis and measure Q371 accomplishes this goal. Retaining measure Q371 will give clinicians appropriate credit for making the PHQ-9 a routine and integral part of their workflow and will foster enhanced screening for depression and suicidal ideas as well as ongoing assessments of depression severity to guide measurement-based care.

One commenter supported removal of measure Q371 and agreed that measure Q370 is a more robust outcome measure, requiring depression remission for numerator compliance.

Response: We agree that PHQ-9 is clinically useful as a tool to support eligible clinicians with assessment of depression for patients. However, we believe that for MIPS, measure Q371 is duplicative to measure Q370: Depression Remission at Twelve Months. We are actively attempting to reduce measures that are duplicative in measurement to reduce burden and support the meaningful measure initiative. We agree with the commenter that measure Q371 is a more robust measure since performance is met upon the completion of a PHQ-9 and remission of depression at twelve months. Removing measure Q411 does not preclude clinicians from administering the PHQ-9 at any point during the patient's course of treatment and does not discourage clinicians from continuing to check symptoms using the PHQ-9 at six months. According to the clinical recommendation statement found within measure Q411 "all patients should be monitored on a monthly basis for 6 to 12 months after the full resolution of symptoms" regardless of treatment length for ongoing management of depression. This, in addition to relapse being most common in the initial six months after depression remission align with retaining measure Q370 to ensure patients are still in remission at 12 months. Despite the removal of this quality measure, we believe it does not preclude the creation of clinical processes that drive positive outcomes for patients. Additionally, the duplicative measure Q370: Depression Remission at Twelve Months is offered for the eCQM specifications collection type.

We do not believe the removal of measure Q371 will disincentivize or preclude clinicians from completing PHQ-9 since this is an easily performed screening tool for depression. As stated in the clinical recommendation of measure Q371 "Clinicians should establish and maintain follow-up with patients. Appropriate, reliable follow-up is highly correlated with improved response and remission scores. It is also correlated with the improved safety and efficacy of medications and helps prevent relapse."

Comment: One commenter opposed the removal of measure Q372: Maternal Depression Screening, stating that the measure is appropriate for use in episode-based care attributed to obstetrician-gynecologists. One commenter supported the removal of measure Q372 from the eCQM measure type.

Response: We thank the commenter supporting the removal of measure Q372. We disagree with the commenter as the denominator is constructed to assess maternal depression screening during a child's face-to-face visit in the first six months of life. This visit would be provided by the pediatric or family medicine specialty and not attributed to the obstetrician-gynecologists. During this visit the eligible clinician would be providing care for the newborn, not focus on the maternal screening.

Comment: One commenter urged CMS to reconsider the topped-out designation for measure Q407: Appropriate Treatment of Methicillin-Susceptible *Staphylococcus aureus* (MSSA) Bacteremia. Although this measure is considered standard-of-care, the commenter believed that it is inappropriate to consider removing a quality measure that promotes the appropriate use of antibiotics at a time when antimicrobial resistance is a global health emergency. Additionally, 2019 is the first year that this measure has had a benchmark. In the upcoming 2020 MIPS performance year, revisions to the measure were approved to include patients that are diagnosed with *S. aureus* bacteremia rather than only sepsis due to MSSA. This patient population expansion may allow for a more accurate measure of performance for the appropriate treatment of MSSA bacteremia.

Response: We thank the commenter for their comment. Measure Q407 has limited adoption and the benchmark is reflective of the performance of the MIPS eligible clinicians who have chosen to report on the measure. These same MIPS eligible clinicians will likely continue to submit measure Q407 and we do not believe there will be variances in the high performing data submitted if we were to retain measure Q407. Additionally, we believe that low reported measures are an indicator of measure concepts that do not provide meaningful measurement to most clinicians.

Comment: One commenter recommended retaining measure Q411: Depression Remission at Six Months. The rationale for removing this measure quotes the American Psychiatric Association's practice guideline on treatment of patients with MDD in noting that relapse is common in the initial six months after depression remission and in providing a definition of continuation therapy. While these quotations are accurate, they do not support a rationale for removal of this measure. The measure of depression at 12 months (measure Q370) includes individuals who are seen and have a PHQ-9 completed within 30 days (+/-) of the 12-month time point. This may not capture all patients who have been treated for depression (e.g., patients seen by a psychiatrist who have remitted and then returned to their primary care physician for ongoing care).

Another commenter supported the removal of measure Q411 as it found the measure to be invalid.

Response: We thank the commenter for supporting the removal of measure Q411. We thank the other commenter for their concern regarding the removal of measure Q411. Removing measure Q411 does not preclude clinicians from administering the PHQ-9 at any point during the patient's course of treatment and does not discourage clinicians from continuing to check symptoms using the PHQ-9 at six months. According to the clinical recommendation statement found within measure Q411 "all patients should be monitored on a monthly basis for 6 to 12 months after the full resolution of symptoms" regardless of treatment length for ongoing management of depression. This, in addition to relapse being most common in the initial six months after depression remission align with retaining measure Q370 to ensure patients are still in remission at 12 months.

TABLE C: Summary of Comments and Responses

Comment: One commenter disagreed with the removal of measure Q442: Persistence of Beta-Blocker Treatment After a Heart Attack by replacing the measure with Q007: Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%). Measure Q442 assesses whether patients get persistent medication over six months; however, the proposed replacement assesses only if patients get the drug once.

Another commenter opposed not implementing the exclusion for adults 80 and older with frailty for measure Q442 (if retained in MIPS). This exclusion is critical for focusing the measures on the population most likely to benefit from the measured services. Without this exclusion, these measures will be out of alignment with what is required for reporting. Another commenter believed that measure Q442 should not be removed, stating that it is a valid measure and is based on high-quality evidence from multiple specialty organizations, while another commenter requested that the measure be retained until the CQMC has completed its maintenance cycle review of this measure expected by the end of 2019.

Response: We disagree with the commenters as measure Q007 is reflective of beta-blocker use and overlaps with the population of patients captured within the denominator of measure Q442. Measure Q442 focuses the denominator on those patients that have experienced acute myocardial infarction which is narrower than Measure Q007. Additionally, the numerator in measure Q442 requiring six months of medication compliance further narrows the denominator to the first six months of the performance period. The denominator in measure Q007 represents a broader patient population and may be evaluated throughout the entirety of the performance period. Therefore measure Q007 represents a more robust measure that supports the meaningful measure initiative. As we are finalizing removal of this measure, we will not be implementing the substantive change for this measure outlined in 84 FR 41180.

Comment: One commenter opposed the removal of measure Q449: HER2 Negative or Undocumented Breast Cancer Patients Spared Treatment with HER2-Targeted Therapies. This measure would have a substantive change if the measure is not finalized for removal, and the commenter stated that the measure has had substantive changes due to updates in recent guidelines and given that it is not possible to know whether the measure is topped out under these circumstances, the commenter recommended measure Q449 be retained in the MIPS program.

Response: We thank the commenter for their comment, but do not believe that the change in current clinical guidelines will change performance rates in the measure. We believe that eligible clinicians will most likely quickly update their practice in the treatment of breast cancer to support quality outcomes with these patients based on the new clinical guidelines. We encourage the measure steward to collect performance data based on the updated guidelines, in the event it substantiates a performance gap, a new measure could be submitted to the Call for Measures.

Comment: One commenter opposed the removal of measure Q454: Percentage of Patients who Died from Cancer with More than One Emergency Department Visit in the Last 30 Days of Life (lower score – better). The commenter stated that the evidence supports existence of a significant gap and variation in care related to the measure. For patients with cancer at the end of life, the use of unnecessary services such as the emergency department can negatively impact a patient and family's quality of life and satisfaction with end of life care. Emergency department visits in the last 30 days of life are one indicator that supportive care may not be provided effectively to these patients.

Response: We thank the commenter for their comment and agree that end of life care and care coordination for patients with cancer is important to assess, however, we believe that this may be outside of the eligible clinician's control. We believe that measure Q455: Percentage of Patients who Died from Cancer Admitted to the Intensive Care Unit (ICU) in the Last 30 Days of Life (lower score – better) is more indicative of the supportive care provided and its efficacy as admittance to the ICU would be based on clinical factors and not the patient's decision. It is also likely that many of the patients within the eligible population for measure Q455 were admitted to the ICU through the emergency department, meaning this population would be accounted for in multiple measures.

Comment: One commenter opposed the removal of measure Q456: Percentage of Patients who Died from Cancer Not Admitted to Hospice (lower score – better). The commenter stated that although the use of hospice and other palliative care services at the end of life has increased, many patients are enrolled in hospice less than three weeks before their death, which limits the benefit they may gain from these services. There remains significant value and demonstration of quality care in ensuring a low percentage of patients dying from cancer who are not receiving hospice care through this measure. For these reasons, the commenter requested that measure Q456 be retained in the MIPS program.

Response: We thank the commenter for their comment and agree that increasing hospice utilization in cancer patients is important. We believe that measure Q457 is a better indicator of hospice usage as it has a more stringent numerator by assessing the number of patients who spent less than three days in hospice whereas measure Q456 assesses all patients not admitted to hospice, allowing patients admitted to hospice less than three days to be Performance Not Met (representing better clinical quality as this in an inverse measure).

Comment: One commenter recommended that CMS delay removing measure Q467: Developmental Screening in the First Three Years of Life measures from the MIPS program until the CQMC has completed its maintenance cycle review of these measures expected by the end of 2019.

Response: We thank the commenter for their comment and disagree with delaying removal of measure Q467. The measure steward submitted a substantive change that would expand the denominator to include well-child visits. The well-child visit encounters would likely include the attestation of screening for risk of developmental, behavioral, and social delays using a standardized tool, which is the quality action for measure Q467, thereby inflating performance of the measure. This would lead to a less meaningful assessment for MIPS eligible clinicians.

Comment: One commenter supported the removal of measure Q474: Zoster (Shingles) Vaccination as it found the measure to be invalid.

Response: We thank the commenter for supporting the removal of measure Q474.

After consideration of the comments, we are finalizing the removal of these measures as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years with the exception of the following measures, which are being retained: Q110, Q111, Q146, Q178, Q185, Q225, Q249, Q250, Q264, Q282, Q288, Q395, and Q396. Our decisions not to finalize these measures for removal in this final rule are detailed in our responses to the public comments for these measures. We are also finalizing substantive changes for measures Q110, Q111, Q178, Q282, and Q288 (See Tables D.79, D.80, D.81, D.82, and D.83).

TABLE Group D: Previously Finalized Quality Measures with Substantive Changes Finalized for the 2022 MIPS Payment Year and Future Years

NOTE: Electronic Clinical Quality Measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table D as follows: NQF # / eCQM NQF #.

D.1 Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)

Category	Description
NQF # / eCQM NQF #:	0059 / N/A
Quality#:	001
CMS eCQM ID:	CMS122v8
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0 percent during the measurement period.
Substantive Change:	<p>Updated denominator exclusions: For eCQM Specifications collection type: Added the following:</p> <p>(1) Patients 66 years of age and older with advanced illness and frailty.</p> <p>(2) Patients 66 years of age and older who are living in a long-term institutional setting, such as a nursing home, for more than 90 days during the measurement period.</p> <p>For Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs Specifications collection type: Added the following:</p> <p>(1) Patients 66 and older who are living long term in an institution for more than 90 days during the measurement period.</p> <p>(2) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period.</p> <p>(3) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period.</p> <p>(4) Dementia Exclusion Medications: Cholinesterase inhibitors: Donepezil, Galantamine, Rivastigimine Miscellaneous central nervous system agents: Memantine</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	The measure steward believes it is unlikely patients with dementia requiring listed medications or advanced illness and frailty need some services and, in some cases, it might be harmful for patients to receive a particular service when they should prioritize other services. The measure steward also believes that some of the services in this measure are not appropriate for patients 66 years of age and older who are living in a long-term institutional setting. We agree with the measure steward and believe that by removing these patient populations, the burden to submit data is lessened for these MIPS eligible clinicians.
<p>Comment: One commenter supported the proposed changes to measure Q001: Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%). Another commenter reviewed the proposed changes to the CMS Web Interface Measure Specification collection type for measure Q001 and believed there are impacts to the benchmarks and a need to provide pay-for-reporting for 2019 and 2020 MIPS performance periods.</p> <p>Response: We thank the commenter for supporting the revision to measure Q001. Under MIPS, there is no pay-for-reporting option. In these instances, we exclude the measure from MIPS scoring for the CMS Web Interface Measure Specification collection type in accordance with § 414.1380(b)(1)(i)(A)(2)(i) provided it met the data completeness requirement for the impacted performance period. For this substantive change, we disagree with the second commenter that the measure should be excluded from MIPS scoring for the 2019 MIPS performance period as these revisions will be implemented for the 2020 MIPS performance period and do not affect the 2019 MIPS performance period. Additionally, we do not believe that the revisions necessitate an updated benchmark for the MIPS 2020 performance period as the updated denominator exclusions do not significantly change the patient population, but work to create a more relevant patient population for the quality action, which remains unchanged.</p> <p>Comment: One commenter supported the denominator exclusions added for frailty for ACO-27 (measure Q001): Diabetes A1c Poor Control. The commenter also requested that the age restriction is removed from these exclusions, as many of these interventions are not clinically appropriate in those with frailty and limited life expectancy due to advanced illness, regardless of age.</p> <p>Response: We thank the commenter for supporting the revision to measure Q001. We encourage the commenter to reach out to the measure steward and collaborate regarding further refinement of the denominator exclusions.</p> <p>For the eCQM Specifications collection type, we proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement to state:</p> <p>Updated denominator exclusions: For eCQM Specifications collection type: Added the following:</p> <p>(1) Exclude patients 66 and older who are living long term in an institution for more than 90 days during the measurement period.</p> <p>(2) Exclude patients 66 and older with advanced illness and frailty because it is unlikely that patients will benefit from the services being measured.</p>	

Category	Description
	<p>This additional refinement was to ensure clarity in language so that the clinically appropriate patient population is identified for measure Q001 and does not affect the intent of the proposed substantive change.</p> <p>For Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs collection type, we proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement to state:</p> <p>For Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs Specifications collection type: Added the following:</p> <p>(1) Patients age 66 and older in Institutional Special Needs Plans (SNP) or residing in long-term care with a POS code 32, 33, 34, 54 or 56 for more than 90 days during the measurement period</p> <p>This additional refinement was to ensure clarity in language so that the clinically appropriate patient population is identified and to decrease clinician burden by outlining the coding for the denominator exclusion for measure Q001 and does not affect the intent of the proposed substantive change.</p> <p>There were no additional refinements to substantive changes: For Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs Specifications collection type: Added the following:</p> <p>(2) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period.</p> <p>(3) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period.</p> <p>(4) Dementia Exclusion Medications: Cholinesterase inhibitors: Donepezil, Galantamine, Rivastigimine Miscellaneous central nervous system agents: Memantine</p> <p>After consideration of the comments, we are finalizing the changes as indicated to measure Q001 for the 2020 MIPS performance period/2022 MIPS payment year and future years with the refinements noted above.</p>

D.2. Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Nepriylsin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD)

Category	Description
NQF # / eCQM NQF #:	0081 / 0081e
Quality #:	005
CMS eCQM ID:	CMS135v8
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed ACE inhibitor or ARB therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.
Substantive Change:	<p>The measure title is revised to read: Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Nepriylsin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD).</p> <p>The measure description is revised to read: Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed ACE inhibitor or ARB or ARNI therapy either within a 12- month period when seen in the outpatient setting OR at each hospital discharge.</p> <p>Updated denominator: For the MIPS CQMs Specifications collection type for Submission Criteria 1 – “At least on additional patient encounter during performance period”, telehealth encounters will be included as denominator eligible encounters.</p> <p>Updated numerator: Added language for ARNI therapy.</p> <p>Updated definition: Added language for ARNI therapy.</p>
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	No
Measure Type:	Process
Rationale:	This measure already includes ARNI therapy in the specifications and coding as well as a statement about the fact that ARNIs are a numerator compliant clinical action. The measure was proposed to be globally updated to include ARNI therapy language in the title, description, numerator, definition, denominator exception, and rate aggregation to align with the intent of the measure. With the inclusion of ARNI therapy, the intent of this measure is aligned with the most current clinical guidelines for ACE/ARB therapies for patient’s diagnoses with heart failure. Telehealth visits, for the additional denominator eligible encounters, were added for Submission Criteria 1 in the MIPS CQMs Specifications collection type.
	We received no comments on the substantive changes proposed for measure Q005: Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Nepriylsin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD). Therefore, we are finalizing the changes to measure Q005 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.

D.3. Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%)

Category	Description
NQF # / eCOM NQF #:	0070 / 0070e
Quality #:	007
CMS eCOM ID:	CMS145v8
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCOM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have prior MI or a current or prior LVEF < 40 percent who were prescribed beta-blocker therapy.
Substantive Change:	Updated calculation method: For the MIPS CQMs Specifications collection type: To be submitted as a single performance rate. Updated denominator: For the MIPS CQMs Specifications collection type, “At least one additional patient encounter during performance period”, telehealth encounters will be included as denominator eligible encounters.
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the measure performance calculation for the MIPS CQMs Specifications collection type so that it is submitted as a single performance rate as opposed to two performance rates. This change allows for better alignment between the collection types. We also proposed to add telehealth visits for the additional denominator eligible encounters for the MIPS CQMs Specifications collection type. This change is in alignment with the eCOM Specifications collection type. We believe these changes will allow for data congruency between the collection types while also lessening burden for implementation of the measure across these collection types.
We received no comments on the substantive changes proposed for measure Q007: Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%). Therefore, we are finalizing the changes to measure Q007 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.4. Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD)

Category	Description
NQF # / eCOM NQF #:	0083 / 0083e
Quality #:	008
CMS eCOM ID:	CMS144v8
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCOM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed beta-blocker therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.
Substantive Change:	For the eCOM Specifications collection type: The timing for cardiac pacer in situ diagnosis logic has been changed to ‘overlaps after’. Updated denominator: For the MIPS CQMs Specifications collection type: For Submission Criteria 1, “At least one additional patient encounter during performance period”, telehealth encounters will be included as denominator eligible encounters.
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	No
Measure Type:	Process
Rationale:	For the eCOM Specifications collection type: the logic regarding the cardiac pacer in situ diagnosis was proposed to be updated to change the timing to ‘overlaps after’ to ensure it is present at the time of the end of the encounter and for harmonization with CMS145v8. For the MIPS CQMs Specifications collection type: we proposed to add telehealth encounters for the additional patient encounter as denominator eligible encounters for Submission Criteria 1. This change is in alignment with the eCOM Specifications collection type. We believe these changes will allow for data congruency between the collection types while also lessening burden for implementation of the measure across these collection types.
Comment: One commenter supported proposed revisions to measure Q008: Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD) that would add in telehealth encounters to be included as eligible encounters.	
Response: We thank the commenter for supporting the revision to measure Q008.	
After consideration of the comments, we are finalizing the changes to measure Q008 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.5. Anti-Depressant Medication Management

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	009
CMS eCQM ID:	CMS128v8
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 18 years of age and older who were treated with antidepressant medication, had a diagnosis of major depression, and who remained on an antidepressant medication treatment. Two rates are reported. a. Percentage of patients who remained on an antidepressant medication for at least 84 days (12 weeks). b. Percentage of patients who remained on an antidepressant medication for at least 180 days (6 months).
Substantive Change:	Updated guidance: Guidance statement updated to reflect the 105 day negative medication history. Updated denominator: The required visit needs to be in the 60 days before or after the initial patient population antidepressant medication dispensing event. The initial patient population dispensing period will be from May 1st of the year prior to the measurement period to April 30th of the measurement period. Added nursing home encounters to list of qualifying encounters. Updated denominator exclusion: Changed timing to 'overlaps' so that medications that are active in the 105 days prior may count.
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to expand the denominator to include nursing home encounters as this measure is applicable to that setting and this will increase the number of MIPS eligible clinicians who can report on the measure. The required visit for the initial patient population is proposed to be in the 60 days before or after the initial patient population antidepressant medication dispensing event as the intent is for a physician who has influence over the medication choice and follow-up to report the measure. The measure steward feels, and we agree, that associating the visit with the medication dispensing event is more in line with the intent of the measure. The initial patient population dispensing period is also being updated. We proposed to update the denominator exclusion logic so that medications that are active in the 105 days prior will also count as an exclusion. We proposed to update the guidance as well to reflect the change in the denominator exclusion.
We received no comments on the substantive changes proposed for measure Q009: Anti-Depressant Medication Management. Therefore, we are finalizing the changes to measure Q009 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.6. Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care

Category	Description
NQF # / eCQM NQF #:	0089 / 0089e
Quality #:	019
CMS eCQM ID:	CMS142v8
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once within 12 months.
Substantive Change:	Modified collection type: eCQM Specifications, MIPS CQMs Specifications
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to remove the Medicare Part B Claims Measure Specifications collection type as the benchmarking data shows that this measure meets the extremely topped out definition, specifically for the Medicare Part B Claims Measure Specification collection type. However, the benchmarking data continues to show a gap for the eCQM Specifications collection type and the MIPS CQMs Specifications collection type, as such, the measure will be retained for these two collection types.
Comment: One commenter opposed the removal of the Medicare Part B Claims Measure Specifications collection type for measure Q019: Diabetic Retinopathy: Communication with Physician Managing Ongoing Diabetes Care. The commenter encouraged CMS to retain this collection type, because its removal from the measure would adversely impact ophthalmologists, particularly those in small and rural practices that rely on claims reporting because they cannot afford to adopt CEHRT. Removing this collection type would result in an even fewer measures relevant to ophthalmologists' scope of practice.	
A second commenter opposed this change and recommended that CMS retain the measure and increase the data completeness criteria as the Agency discusses as a possible way forward for topped out measures.	
Response: We appreciate the commenter's feedback and disagree that removal of measure Q019 from the Medicare Part B Claims collection type will adversely impact ophthalmologists. Clinicians who elect to participate via Medicare Part B claims collection type, and choose to submit extremely topped out measures, are penalized in their quality score under current methods by receiving a maximum of 7 of 10 points for each topped out measure; therefore clinicians may not have an opportunity to maximize incentive with the submission of topped out measures. CMS encourages the commenter to explore other collection types such as Qualified Registries or QCDRs in order to submit measures to CMS.	
After consideration of the comments, we are finalizing the changes to measure Q019 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.7. Appropriate Testing for Children with Pharyngitis

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	066
CMS eCQM ID:	CMS146v8
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of children 3-18 years of age who were diagnosed with pharyngitis, ordered an antibiotic and received a group A streptococcus (strep) test for the episode.
Substantive Change:	<p>Updated numerator: For the eCQM Specifications collection type: Removed Ambulatory/ED grouping value set, instead using the individual value sets.</p> <p>Updated denominator exclusions: Added exclusion for competing diagnosis at the same encounter as the pharyngitis diagnosis or in the 3 days after the pharyngitis diagnosis.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>For the eCQM Specifications collection type: The Ambulatory/ED grouping value sets were proposed to be removed so that individual value sets will be used in order to increase transparency regarding which encounter value set is being utilized.</p> <p>A denominator exclusion for a competing diagnosis that occurs at the same encounter or 3 days after the pharyngitis diagnosis was proposed to be added to ensure the patient population being assessed is more in alignment with clinical intent of assessing whether or not children diagnosed with pharyngitis were correctly evaluated and subsequently ordered antibiotics.</p>
<p>We received no comments on the substantive changes proposed for measure Q066: Appropriate Testing for Children with Pharyngitis. Therefore, we are finalizing the changes to measure Q066 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>	

D.8. Prevention of Central Venous Catheter (CVC) - Related Bloodstream Infections

Category	Description
NQF # / eCQM NQF #:	2726
Quality #:	076
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, regardless of age, who undergo central venous catheter (CVC) insertion for whom CVC was inserted with all elements of maximal sterile barrier technique, hand hygiene, skin preparation and, if ultrasound is used, sterile ultrasound techniques followed.
Substantive Change:	Updated numerator definition: Added definition for Hand Hygiene: Washing hands with conventional soap and water or with alcohol-based hand rubs (ABHR).
Steward:	American Society of Anesthesiologists
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to add the definition for hand hygiene that is found in the Clinical Recommendation Statement as a numerator definition to make it more prominent and add clarity for measure users.
<p>Comment: One commenter supported the updated definition of Hand Hygiene, which has been added to measure Q076: Prevention of Central Venous Catheter (CVC) – Related Bloodstream Infections through the NQF measure maintenance process.</p> <p>Response: We thank the commenter for supporting the revision to measure Q076, however, we would like to remind the commenter that this revision occurred during MIPS annual quality measure revision process and not the NQF measure maintenance process.</p> <p>After consideration of the comments, we are finalizing the changes to measure Q076 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>	

D.9. Prostate Cancer: Avoidance of Overuse of Bone Scan for staging Low Risk Prostate Cancer Patients

Category	Description
NQF # / eCQM NQF #:	0389 / 0389e
Quality #:	102
CMS eCQM ID:	CMS129v9
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, regardless of age, with a diagnosis of prostate cancer at low (or very low) risk of recurrence receiving interstitial prostate brachytherapy, OR external beam radiotherapy to the prostate, OR radical prostatectomy, OR cryotherapy who did not have a bone scan performed at any time since diagnosis of prostate cancer.
Substantive Change:	<p>The measure description is revised to read: Percentage of patients, regardless of age, with a diagnosis of prostate cancer at low (or very low) risk of recurrence receiving interstitial prostate brachytherapy, OR external beam radiotherapy to the prostate, OR radical prostatectomy who did not have a bone scan performed at any time since diagnosis of prostate cancer.</p> <p>Updated denominator: Removed cryotherapy from denominator statement/header.</p> <p>Updated denominator definition: Removed “Note: Patients with multiple adverse factors may be shifted into the high/very high risk category” from definition of Intermediate Risk.</p> <p>For the eCQM Specifications collection type: removed SNOMED and CPT codes related to cryotherapy from the SNOMED CT extensional OID and CPT extensional OID “Prostate Cancer Treatment” value set.</p>
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to remove cryotherapy from the measure to align with updated clinical guidelines. Current clinical guidelines do not recommend cryotherapy as a routine primary therapy for localized prostate cancer due to the lack of long-term data comparing this to treatments such as radiation or radical prostatectomy. Given that the denominator includes treatments recommended for low/very low-risk prostate cancer patients, the measure steward’s technical expert panel (TEP) agreed cryotherapy should be removed from the denominator. All coding related to cryotherapy is being removed in accordance with the updated guidelines. We proposed to update the denominator definition to align with updated guidelines.
We received no comments on the substantive changes proposed for measure Q102: Prostate Cancer: Avoidance of Overuse of Bone Scan for staging Low Risk Prostate Cancer Patients. Therefore, we are finalizing the changes to measure Q102 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.10. Adult Major Depressive Disorder (MDD): Suicide Risk Assessment

Category	Description
NQF # / eCQM NQF #:	0104e
Quality #:	107
CMS eCQM ID:	CMS161v8
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of major depressive disorder (MDD) with a suicide risk assessment completed during the visit in which a new diagnosis or recurrent episode was identified.
Substantive Change:	<p>Updated denominator: Added telehealth data element to “Major Depressive Disorder Encounter” definition using “Telehealth Services” value set.</p> <p>Updated guidance: Updated to reflect the inclusion of telehealth encounters.</p> <p>Updated definition: The specific type and magnitude of the suicide risk assessment is intended to be at the discretion of the individual clinician and should be specific to the needs of the patient. At a minimum, suicide risk assessment should evaluate:</p> <ol style="list-style-type: none"> (1) Suicidal ideation (2) Patient's intent of initiating a suicide attempt <p>AND, if either is present,</p> <ol style="list-style-type: none"> (3) Patient plans for a suicide attempt (4) Whether the patient has means for completing suicide <p>Low burden tools to track suicidal ideation and behavior such as the Columbia-Suicide Severity Rating Scale (C-SSRS) and the Suicide Assessment Five-Step Evaluation and Triage (SAFE-T) can also be used. Because no validated assessment tool or instrument fully meets the aforementioned requirements for the suicide risk assessment, individual tools or instruments have not been explicitly included in coding.</p>
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>The measure was reviewed by PCPI’s technical expert panel and it was recommended to include telehealth encounters. We proposed to add telehealth data element to “Major Depressive Disorder Encounter” as telehealth encounters are directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured. We proposed to reflect this change in the guidance header for additional clarity.</p> <p>We proposed to add clarifying language in the definition header regarding suicide risk assessments that could be appropriate to meet the measure. It is still intended that the MIPS eligible clinician use their discretion when choosing the specific type and magnitude of the suicide risk assessment, based upon the patient’s specific needs, but the suicide risk assessments should include, at minimum, certain criteria.</p>
<p>Comment: One commenter supported proposed revisions to measure Q107: Adult Major Depressive Disorder (MDD): Suicide Risk Assessment that would add in telehealth encounters to be included as eligible encounters.</p> <p>Response: We thank the commenter for supporting the revision to measure Q107.</p> <p>After consideration of the comments, we are finalizing the changes to measure Q107 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>	

D.11. Breast Cancer Screening

Category	Description
NQF # / eCQM NQF #:	2372 / N/A
Quality #:	112
CMS eCQM ID:	CMS125v8
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of women 51 - 74 years of age who had a mammogram to screen for breast cancer.
Substantive Change:	<p>The measure description is revised to read: Percentage of women 50 - 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.</p> <p>The numerator is revised to read: Women with one or more mammograms 27 months prior to the end of the measurement period.</p> <p>Updated denominator exclusions: For eCQM Specifications collection type:</p> <p>(1) Patients 66 years of age and older with advanced illness and frailty.</p> <p>(2) Patients 66 years of age and older who are living in a long-term institutional setting, such as a nursing home, for more than 90 days during the measurement</p> <p>For Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs Specifications collection type: Added the following:</p> <p>(1) Patients 66 and older who are living long term in an institution for more than 90 days during the measurement period.</p> <p>(2) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period.</p> <p>(3) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period.</p> <p>(4) Dementia Exclusion Medications: Cholinesterase inhibitors: Donepezil, Galantamine, Rivastigimine Miscellaneous central nervous system agents: Memantine</p> <p>Updated numerator guidance: For the Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications collection types: Added "This measure evaluates primary screening. Do not count biopsies, breast ultrasounds, or MRIs because they are not appropriate methods for primary breast cancer screening. Mammography screening is defined as a bilateral screening (both breasts) of breast tissue. If only one breast is present, unilateral screening (one side) must be performed on the remaining breast."</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to add a timing component to the description for better clarity and alignment throughout the measure.</p> <p>The numerator was revised to state the timing in the same manner as the description, however, the timing itself has not been changed only stated differently. The measure steward believes it is unlikely patients with dementia requiring listed medications or advanced illness and frailty need some services and, in some cases, it might even be harmful for patients to receive a particular service when they should prioritize other services. The measure steward also believes that some of the services in this measure are not appropriate for patients 66 years of age and older who are living in a long-term institutional setting. We believe that by removing these patient populations, the burden to submit data is lessened for these MIPS eligible clinicians.</p> <p>We proposed to update the numerator guidance for the Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs Specifications collection types to clarify the intent of the measure.</p> <p>The measure logic for the Medicare Part B Claims Measure Specifications will remain the same from prior years to allow a 27-month look back from the denominator eligible visit.</p>

Category	Description
	<p>Comment: One commenter supported the denominator exclusions added for frailty for ACO-20 (measure Q112): Breast Cancer Screening. The commenter also requested that the age restriction be removed from these exclusions, as many of these interventions are not clinically appropriate in those with frailty and limited life expectancy due to advanced illness, regardless of age. The commenter recommended the following exclusion: Remove age restriction (below 65 years of age) for exclusion in a Long-Term Care Setting.</p> <p>Response: We thank the commenter for supporting the revision of measure Q112. We encourage the commenter to reach out to the measure steward and collaborate regarding further refinement of the denominator exclusions.</p>
	<p>Comment: One commenter reviewed the proposed changes to the CMS Web Interface Measure Specification collection type for measure Q112 and believed there are impacts to the benchmarks and a need to provide pay-for-reporting for the 2019 and 2020 MIPS performance periods.</p> <p>Response: We thank the commenter for their comment. Under MIPS, there is no pay-for-reporting option. In these instances, we exclude the measure from MIPS scoring for the CMS Web Interface Measure Specification collection type in accordance with § 414.1380(b)(1)(i)(A)(2)(i) provided it met the data completeness requirement for the impacted performance period. For these substantive changes, we disagree with the commenter that the measure should be excluded from MIPS scoring for the 2019 MIPS performance period as these revisions will be implemented for the 2020 MIPS performance period and do not affect the 2019 MIPS performance period. Additionally, we do not believe that the revisions necessitate an updated benchmark for the MIPS 2020 performance period as the updated denominator exclusions do not significantly change the patient population, but work to create a more relevant patient population for the quality action, which remains unchanged. All other updates were for language alignment and clarity of intent and therefore would not necessitate exclusion from MIPS scoring.</p>
	<p>For the eCQM Specifications collection type, we proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement to state:</p>
	<p>Updated denominator exclusions: For eCQM Specifications collection type:</p> <ol style="list-style-type: none"> (1) Exclude patients 66 and older who are living long term in an institution for more than 90 days during the measurement period. (2) Exclude patients 66 and older with advanced illness and frailty because it is unlikely that patients will benefit from the services being measured. <p>This additional refinement was to ensure clarity in language so that the clinically appropriate patient population is identified for measure Q112 and does not affect the intent of the proposed substantive change.</p> <p>For Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs collection type, we proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement to state:</p>
	<p>For Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs Specifications collection type: Added the following:</p> <ol style="list-style-type: none"> (1) Patient age 66 or older in Institutional Special Needs Plans (SNP) or residing in long-term care with POS code 32, 33, 34, 54, or 56 for more than 90 days during the measurement period. <p>This additional refinement was to ensure clarity in language so that the clinically appropriate patient population is identified and to decrease clinician burden by outlining the coding for the denominator exclusion for measure Q112 and does not affect the intent of the proposed substantive change.</p> <p>We proposed a substantive change to the numerator; however, during the quality measure annual revision process with the measure steward, there was additional language refinement to state:</p>
	<p>The numerator is revised to read: Women with one or more mammograms during the 27 months prior to the end of the measurement period. This additional refinement does not affect the intent of the proposed substantive change.</p> <p>This additional refinement was to ensure clarity in language for measure Q112 and does not affect the intent of the proposed substantive change.</p>
	<p>There were no additional refinements to substantive changes: The measure description is revised to read: Percentage of women 50 - 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.</p>
	<p>For Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs Specifications collection type: Added the following:</p> <ol style="list-style-type: none"> (2) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period. (3) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period. (4) Dementia Exclusion Medications: Cholinesterase inhibitors: Donepezil, Galantamine, Rivastigimine Miscellaneous central nervous system agents: Memantine
	<p>Updated numerator guidance: For the Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications collection types: Added "This measure evaluates primary screening. Do not count biopsies, breast ultrasounds, or MRIs because they are not appropriate methods for primary breast cancer screening. Mammography screening is defined as a bilateral screening (both breasts) of breast tissue. If only one breast is present, unilateral screening (one side) must be performed on the remaining breast."</p>
	<p>After consideration of the comments, we are finalizing the changes to measure Q112 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years with the refinements noted above.</p>

D.12. Colorectal Cancer Screening

Category	Description
NQF # / eCQM NQF #:	0034 / N/A
Quality #:	113
CMS eCQM ID:	CMS130v8
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 50-75 years of age who had appropriate screening for colorectal cancer.
Substantive Change:	<p>Updated denominator exclusions: For eCQM Specifications collection type: Added the following:</p> <p>(1) Patients aged 66 years and older with advanced illness and frailty.</p> <p>(2) Patients 66 years of age and older who are living in a long-term institutional setting, such as a nursing home, for more than 90 days in the measurement period.</p> <p>For Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs Specifications collection type: Added the following:</p> <p>(1) Patients 66 and older who are living long term in an institution for more than 90 days during the measurement period.</p> <p>(2) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period.</p> <p>(3) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period.</p> <p>(4) Dementia Exclusion Medications: Cholinesterase inhibitors: Donepezil, Galantamine, Rivastigimine Miscellaneous central nervous system agents: Memantine</p> <p>Updated numerator guidance: For Medicare Part B Claims Measure Specification and MIPS CQMs Specifications collection types: Do not count DRE, FOBT tests performed in an office setting or performed on a sample collected via DRE.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to add denominator exclusions for patients aged 66 years and older with advanced illness and frailty, taking certain dementia medications, or who are living in a long-term institutional setting for more than 90 days. The measure steward believes it is unlikely patients with dementia requiring listed medications or advanced illness and frailty need some services and, in some cases, it might even be harmful for patients to receive a particular service when they should prioritize other services. The measure steward believes the measure reflects services that may not be appropriate for patients in long-term institutional settings. We believe that by removing these patient populations, the burden to submit data is lessened for these MIPS eligible clinicians. We also proposed to update guidance for numerator compliance for the Medicare Part B Claims Measure Specification and MIPS CQMs Specifications collection types to align with eCQM Specifications and CMS Web Interface Measure Specifications collection types. The update would not allow fecal occult blood test (FOBT) via tests performed in an office setting or performed on a sample collected via DRE to be numerator compliant. This update aligns with a more effective method as FOBT by stool passed spontaneously (SPS) appears to be statistically superior to FOBT by DRE.</p> <p>As finalized, the substantive changes do not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the minimum reliability requirements, a new benchmark will be generated.</p>

Category	Description
	<p>Comment: One commenter reviewed the proposed changes to the CMS Web Interface Measure Specification collection type for measure Q113 (PREV-6): Colorectal Cancer Screening and believed there are impacts to the benchmarks and a need to provide pay-for-reporting for 2019 and 2020 MIPS performance periods.</p>
	<p>Response: We thank the commenter for their comment. Under MIPS, there is no pay-for-reporting option. In these instances, we exclude the measure from MIPS scoring for the CMS Web Interface Measure Specification collection type in accordance with § 414.1380(b)(1)(i)(A)(2)(i) provided it met the data completeness requirement for the impacted performance period. However, this measure will maintain its current benchmark for the CMS Web Interface Measure Specification collection type for the 2019 performance period. The revisions regarding the updated guidance for DRE of FOBT proposed to Medicare Part B Claims Measure and MIPS CQMs specifications collections types were already present in the CMS Web Interface Measure specification collection type, and the updated denominator exclusions do not significantly change the patient population, but work to create a more relevant patient population for the quality action. Therefore allowing the CMS Web Interface Measure Specification collection type benchmark to remain stable for the 2020 MIPS performance period/2022 MIPS payment year. New benchmarks will be created for the Medicare Part B Claims Measure and MIPS CQMs specifications collections types for the 2020 MIPS performance period, as this revision impacts those collection types.</p>
	<p>Comment: One commenter supported the denominator exclusions added for frailty for ACO-19 (measure Q113): Colorectal Cancer Screening. The commenter also requested that the age restriction is removed from these exclusions, as many of these interventions are not clinically appropriate in those with frailty and limited life expectancy due to advanced illness, regardless of age. The commenter recommended the following exclusion: Remove age restriction (below 65 years of age) for exclusion in a Long-Term Care Setting.</p>
	<p>Response: We thank the commenter for supporting the revision of measure Q113. We encourage the commenter to reach out to the measure steward and collaborate regarding further refinement of the denominator exclusions.</p>
	<p>For the eCQM Specifications collection type, we proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement to state:</p>
	<p>Updated denominator exclusions: For eCQM Specifications collection type: Added the following:</p> <ol style="list-style-type: none"> (1) Exclude patients 66 and older who are living long term in an institution for more than 90 days during the measurement period. (2) Exclude patients 66 and older with advanced illness and frailty because it is unlikely that patients will benefit from the services being measured. <p>This additional refinement was to ensure clarity in language so that the clinically appropriate patient population is identified for measure Q113 and does not affect the intent of the proposed substantive change.</p>
	<p>For Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs Specifications collection type, we proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement to state:</p>
	<p>For Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs Specifications collection type: Added the following:</p> <ol style="list-style-type: none"> (1) Patient age 66 or older in Institutional Special Needs Plans (SNP) or residing in long-term care with POS code 32, 33, 34, 54, or 56 for more than 90 Days during the measurement period. <p>This additional refinement was to ensure clarity in language so that the clinically appropriate patient population is identified and to decrease clinician burden by outlining the coding for the denominator exclusion for measure Q113 and does not affect the intent of the proposed substantive change.</p>
	<p>There were no additional refinements to substantive changes:</p>
	<p>For Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs Specifications collection type: Added the following:</p> <ol style="list-style-type: none"> (2) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period. (3) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period. (4) Dementia Exclusion Medications: Cholinesterase inhibitors: Donepezil, Galantamine, Rivastigimine Miscellaneous central nervous system agents: Memantine
	<p>Updated numerator guidance: For Medicare Part B Claims Measure Specification and MIPS CQMs Specifications collection types: Do not count DRE, FOBT tests performed in an office setting or performed on a sample collected via DRE.</p>
	<p>After consideration of the comments, we are finalizing the changes to measure Q112 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years with the refinements noted above.</p>

D.13. Diabetes: Eye Exam

Category	Description
NQF # / eCQM NQF #:	0055 / N/A
Quality #:	117
CMS eCQM ID:	CMS131v8
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18 - 75 years of age with diabetes who had a retinal or dilated eye exam by an eye care professional during the measurement period or a negative retinal or dilated eye exam (no evidence of retinopathy) in the 12 months prior to the measurement period.
Substantive Change:	<p>The measure description is revised to read: Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy overlapping the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy overlapping the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period.</p> <p>Updated denominator exclusions: For eCQM Specifications collection type: Added the following: (1) Patients 66 years of age and older with advanced illness and frailty. (2) Patients 66 years of age and older who are living in a long-term institutional setting, such as a nursing home, for more than 90 days in the measurement period.</p> <p>For Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection type: Added the following: (1) Patients 66 and older who are living long term in an institution for more than 90 days during the measurement period. (2) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period. (3) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period. (4) Dementia Exclusion Medications: Cholinesterase inhibitors: Donepezil, Galantamine, Rivastigimine Miscellaneous central nervous system agents: Memantine</p> <p>Updated numerator: Allows use of a diagnosis of retinopathy as a proxy for a positive eye exam. • If the patient has a diagnosis of retinopathy that overlaps the measurement period, the patient will be required to have an eye exam in the measurement period. • If the patient does not have a diagnosis of retinopathy that overlaps the measurement period, the patient will be required to have an eye exam in the 24 months prior to the end of the measurement period.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to update the measure description to better align with changes to logic. We agree with this update as it clarifies the intent of the measure.</p> <p>We proposed to add denominator exclusions for patients aged 66 years and older with advanced illness and frailty, taking certain dementia medications, and for patients who are living in a long-term institutional setting, such as a nursing home. The measure steward believes it is unlikely patients with dementia requiring listed medications or advanced illness and frailty need some services and, in some cases, it might even be harmful for patients to receive a particular service when they should prioritize other services and that services within this measure may not be appropriate for older patients living in a long-term institutional setting for longer than 90 days during the measurement period.</p> <p>In response to reports from EHR vendors that the measure was not reportable due to the results from an eye exam not being in structured data, we proposed to use the diagnosis of retinopathy as a proxy for a positive eye exam. Patients with a diagnosis of retinopathy are required to have an eye exam yearly while patients without that diagnosis are required to have an eye exam once every 24 months. We believe that by removing these two patient populations, the burden to submit data is lessened for these MIPS eligible clinicians.</p>

Category	Description
	<p>Comment: One commenter did not support the substantive changes proposed for measure Q117: Diabetes: Eye Exam and the proposal to update the denominator exclusions and to include those individuals who are 66 and older and who are frail and those who have been living in a long-term institution setting for more than 90 days in the measurement period.</p> <p>To eliminate the frail and those living in assisted living institutions from this measure is inappropriate as these patients could benefit from the type of high-quality health care that quality measurement is intended to support.</p> <p>Additionally, the commenter had concerns with the proposal to update the numerator to allow for patients who do not have a diagnosis of retinopathy to be required to have an eye exam in the 24 months prior to the end of the measurement period. The commenter is concerned that this change does not fully adhere to clinical practice guidelines. The American Diabetes Association Standards of Medical Care recommend, “If there is no evidence of retinopathy for one or more annual eye exam and glycemia is well controlled, then exams every 1–2 years may be considered. If any level of diabetic retinopathy is present, subsequent dilated retinal examinations should be repeated at least annually by an ophthalmologist or optometrist. If retinopathy is progressing or sight-threatening, then examinations will be required more frequently.”</p> <p>Response: We thank the commenter for their concern regarding the proposed denominator exclusions for patients who are frail or living in a long-term institution setting for more than 90 days in the performance period. We understand that there may be patients within the excluded population that could benefit from these services and we are in no way precluding clinicians from performing these services. By excluding these patients, the measure is allowing clinicians to focus on aspects of care that are more immediately necessary and will have a greater impact on the patient’s overall quality of life. These exclusions allow clinicians to exercise shared decision making with the patient or care-taker in determining necessary clinical care. These quality measures are not intended to be used as clinical guidelines. We will continue to work with the measure steward to ensure that we are not excluding a critical patient population. In regards to the comment about eye exam requirements, the measure as currently specified allows for the an eye exam to occur during the current measurement period or the 12 months prior to the current measurement period to be numerator compliant in the instance the patient has a negative retinal or dilated eye exam. Therefore, the timing of the quality action has not changed due to these updates in language and use of a retinopathy diagnosis as a proxy to an eye exam. We encourage the commenter to collaborate with the measure steward on revisions to be proposed for future year implementation.</p> <p>For the eCQM Specifications collection type, we proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement to state:</p> <p>Updated denominator exclusions: For eCQM Specifications collection type: Added the following:</p> <ol style="list-style-type: none"> (1) Exclude patients 66 and older who are living long term in an institution for more than 90 days during the measurement period. (2) Exclude patients 66 and older with advanced illness and frailty because it is unlikely that patients will benefit from the services being measured. This additional refinement was to ensure clarity in language so that the clinically appropriate patient population is identified for measure Q117 and does not affect the intent of the proposed substantive change. <p>For Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection type, we proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement to state:</p> <ol style="list-style-type: none"> (1) Patient age 66 or older in Institutional Special Needs Plans (SNP) or residing in long-term care with POS code 32, 33, 34, 54, or 56 for more than 90 Days during the measurement period. <p>This additional refinement was to ensure clarity in language so that the clinically appropriate patient population is identified and to decrease clinician burden by outlining the coding for the denominator exclusion for measure Q117 and does not affect the intent of the proposed substantive change.</p> <p>We proposed a substantive change to the numerator; however, during the quality measure annual revision process with the measure steward, there was additional language refinement to state:</p> <p>Updated numerator: Patients with an eye screening for diabetic retinal disease. This includes diabetics who had one of the following:</p> <ul style="list-style-type: none"> • Diabetic with a diagnosis of retinopathy that overlaps the measurement period and a retinal or dilated eye exam by an eye care professional in the measurement period • Diabetic with no diagnosis of retinopathy overlapping the measurement period and a retinal or dilated eye exam by an eye care professional in the measurement period or the year prior to the measurement period <p>This additional refinement was to ensure clarity in language so that the clinically appropriate quality action is identified for measure Q117 and does not affect the intent of the proposed substantive change.</p> <p>There were no additional refinements to substantive changes:</p> <p>The measure description is revised to read: Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy overlapping the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy overlapping the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period.</p> <p>For Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection type: Added the following:</p> <ol style="list-style-type: none"> (2) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period. (3) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period. (4) Dementia Exclusion Medications: Cholinesterase inhibitors: Donepezil, Galantamine, Rivastigimine Miscellaneous central nervous system agents: Memantine <p>After consideration of the comments, we are finalizing the changes as indicated to measure Q117 for the 2020 MIPS performance period/2022 MIPS payment year and future years with the refinements noted above.</p>

D.14. Diabetes: Medical Attention for Nephropathy

Category	Description
NQF # / eCQM NQF #:	0062 / N/A
Quality #:	119
CMS eCQM ID:	CMS134v8
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	The percentage of patients 18-75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period.
Substantive Change:	<p>Updated denominator exclusions: For eCQM Specifications collection type: Added the following:</p> <p>(1) Patients 66 years of age and older with advanced illness and frailty.</p> <p>(2) Patients 66 years of age and older who are living in a long-term institutional setting, such as a nursing home, for more than 90 days in the measurement period.</p> <p>For CQMs Specifications collection type: Added the following:</p> <p>(1) Patients 66 and older who are living long term in an institution for more than 90 days during the measurement period.</p> <p>(2) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period.</p> <p>(3) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period.</p> <p>(4) Dementia Exclusion Medications: Cholinesterase inhibitors: Donepezil, Galantamine, Rivastigimine Miscellaneous central nervous system agents: Memantine</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to add denominator exclusions for patients aged 66 years and older with advanced illness and frailty, taking certain dementia medications, and for patients who are living in a long-term institutional setting, such as a nursing home. The measure steward believes it is unlikely patients with dementia requiring listed medications or advanced illness and frailty need some services and, in some cases, it might even be harmful for patients to receive a particular service when they should prioritize other services and that services within this measure may not be appropriate for older patients living in a long-term institutional setting for longer than 90 days during the measurement period. We believe that by removing these patient populations, the burden to submit data is lessened for these MIPS eligible clinicians.</p> <p>For the eCQM Specifications collection type, we proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement to state:</p> <p>Updated denominator exclusions: For eCQM Specifications collection type: Added the following:</p> <p>(1) Exclude patients 66 and older who are living long term in an institution for more than 90 days during the measurement period.</p> <p>(2) Exclude patients 66 and older with advanced illness and frailty because it is unlikely that patients will benefit from the services being measured. This additional refinement was to ensure clarity in language so that the clinically appropriate patient population is identified for measure Q119 and does not affect the intent of the proposed substantive change.</p> <p>For CQMs Specifications collection type, we proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement to state:</p> <p>For CQMs Specifications collection type: Added the following:</p> <p>(1) Patient age 66 or older in Institutional Special Needs Plans (SNP) or residing in long-term care with POS code 32, 33, 34, 54, or 56 for More Than 90 Days during the measurement period.</p> <p>This additional refinement was to ensure clarity in language so that the clinically appropriate patient population is identified and to decrease clinician burden by outlining the coding for the denominator exclusion for measure Q119 and does not affect the intent of the proposed substantive change.</p> <p>There were no additional refinements to substantive changes:</p> <p>For CQMs Specifications collection type: Added the following:</p> <p>(2) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period.</p> <p>(3) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period.</p> <p>(4) Dementia Exclusion Medications: Cholinesterase inhibitors: Donepezil, Galantamine, Rivastigimine Miscellaneous central nervous system agents: Memantine</p> <p>We received no comments on the substantive changes proposed for measure Q119: Diabetes: Medical Attention for Nephropathy. Therefore, we are finalizing the changes to measure Q119 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years with the refinements noted above.</p>

D.15. Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan

Category	Description
NQF # / eCQM NQF #:	0421 / 0421e
Quality #:	128
CMS eCQM ID:	CMS69v8
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a BMI documented during the current encounter or during the previous twelve months AND with a BMI outside of normal parameters, a follow-up plan is documented during the encounter or during the previous twelve months of the current encounter. Normal Parameters: Age 18 years and older BMI ≥ 18.5 and < 25 kg/m ² .
Substantive Change:	Updated denominator exclusions: Added patients in hospice care. Removed “or refuse follow-up” language from denominator exclusion. For the eCQM Specifications collection type: Added a 'union' operator of 'Intervention, Performed' for each 'Intervention, Order' for Above and Below Normal Follow-Up Interventions, and a 'union' operator of 'Intervention, Not Performed' for each 'Intervention, Not Ordered' for Above and Below Normal Follow-up Interventions not done due to a medical reason.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	The measure steward convened an expert work group (EWG) and it was recommended that patients receiving hospice care should be removed from this measure. We agree with the EWG that this patient population should be removed as patients in hospice care would not benefit from this clinical service. Since assessment of BMI is not a valuable clinical assessment for hospice patients we believe that by removing this patient population it will reduce the burden of submission for these MIPS eligible clinicians providing care to these patients. We proposed to remove “or refuse follow-up” from the denominator exclusion for clarity. We proposed to add a union operator to the eCQM Specifications collection type to allow the intervention to be either completed or ordered, creating a new numerator option. We proposed to update the eCQM Specifications collection type by adding a ‘union’ operator to allow intervention to be either completed or ordered for numerator compliance. This allows for better alignment with measure intent.
Comment: One commenter supported the proposed changes to measure Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan.	
Response: We thank the commenter for supporting the revision to measure Q128.	
After consideration of the comments, we are finalizing the changes to measure Q128 as proposed for the 2020 MPS performance period/2022 MIPS payment year and future years.	

D.16. Preventive Care and Screening: Screening for Depression and Follow-Up Plan

Category	Description
NQF # / eCQM NQF #:	0418 / 0418e
Quality #:	134
CMS eCQM ID:	CMS2v9
National Quality Strategy Domain:	Community/ Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 12 years and older screened for depression on the date of the encounter using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the positive screen.
Substantive Change:	<p>The measure description is revised to read: Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.</p> <p>Updated denominator: Added speech language pathology MIPS eligible clinician type. For the Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs Specifications: Added physical therapy MIPS eligible clinician type.</p> <p>Updated denominator exception: Updated language to situations where the patient's cognitive capacity, functional capacity or motivation to improve may impact the accuracy of results of standardized depression assessment.</p> <p>The numerator is revised to read: Patients screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age appropriate standardized tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.</p> <p>For the eCQM Specifications collection type: Updated the "Depression medications – adolescent" and the "Additional evaluation for depression – adolescent" value sets to include additional medications.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to update the measure description for better alignment with the measure intent and clinical practices, therefore the measure, will reflect those changes within the guidance and logic. This change will not affect the denominator population, but may expand the numerator population and provides a better opportunity for compliance.</p> <p>Based upon requests from stakeholders physical therapy evaluation codes were proposed to be add to the denominator eligible encounters to allow for this measure to be used in an additional setting. We agree that this is a clinically relevant measure to the physical therapy setting.</p> <p>We proposed to update the denominator exception for better clarity to allow MIPS eligible clinicians to use cognitive capacity as a denominator exception. The measure steward based this decision on feedback from clinical subject matter experts. We agree that this is not a new denominator exception, but rather clarifies what is deemed a denominator exception for this measure.</p> <p>The eCQM Specifications collection type's adolescent medication value sets was proposed to be updated to include additional medications based upon recommendations from clinical subject matter experts. The additions will provide an opportunity for better compliance by expanding the list of appropriate medication codes while also improving alignment with measure intent.</p>

Category	Description
	<p>Comment: One commenter supported the addition of the physical therapy codes to measure Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan. Another commenter reviewed the proposed changes to the CMS Web Interface Measure Specification collection type for measure Q134 and questioned whether the changes impact the benchmarks but urged CMS to explore and consider whether this measure warrants pay-for-reporting for the 2019 and 2020 MIPS performance period.</p>
	<p>Response: We thank the commenter for supporting the revision to measure Q134. Under MIPS, there is no pay-for-reporting option. In these instances, we remove the benchmark for the CMS Web Interface Measure Specification collection type in accordance with § 414.1380(b)(1)(i)(A)(2)(i) provided it met the data completeness requirement for the impacted performance period. For these substantive changes, we disagree with the second commenter that the measure should be excluded from MIPS scoring for the 2019 MIPS performance period as these revisions will be implemented for the 2020 MIPS performance period and do not affect the 2019 MIPS performance period. Additionally, we do not believe that the revisions necessitate an updated benchmark for the MIPS 2020 performance period as the revision to allow the screening to occur up to 14 days prior to the encounter better aligns with clinical practices and provides a better opportunity for compliance however, the quality action being assessed has not changed. The updated denominator exception offers clarity for implementation and does not introduce a new concept. The additional medications within the value sets allow for better compliance and the inclusion of more clinician types allows for assessment of a more complete patient population; however, they do not significantly change measure Q134 and allow for direct comparison of performance data from prior years.</p>
	<p>Comment: One commenter supported the revised measure descriptor for measure Q134. The commenter understood the numerator includes patients screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age appropriate standardized tool AND if positive, a follow-up plan is documented on the date of the eligible encounter, the commenter requested that CMS consider screenings provided that are not necessarily associated with a face to face encounter. Allowing screenings to be considered by telephone, would allow for more opportunities in the numerator.</p>
	<p>Response: We thank the commenter for supporting the revision to measure Q134. We encourage the commenter to reach out to the measure steward and collaborate regarding further refinement of measure Q134 for proposal for future years.</p>
	<p>We proposed a substantive change to the description; however, during the quality measure annual revision process with the measure steward, there was additional language refinement to state:</p>
	<p>The measure description is revised to read:</p>
	<p>Percentage of patients aged 12 years and older screened for depression on the date of the encounter or 14 days prior to the date of the encounter using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter. This additional refinement ensures alignment in language across all collection types and does not affect the intent of the proposed substantive change.</p>
	<p>There were no additional refinements to substantive changes:</p>
	<p>Updated denominator: Added speech language pathology MIPS eligible clinician type.</p>
	<p>For the Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs Specifications: Added physical therapy MIPS eligible clinician type.</p>
	<p>Updated denominator exception: Updated language to situations where the patient's cognitive capacity, functional capacity or motivation to improve may impact the accuracy of results of standardized depression assessment.</p>
	<p>The numerator is revised to read: Patients screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age appropriate standardized tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.</p>
	<p>For the eCQM Specifications collection type: Updated the “Depression medications – adolescent” and the “Additional evaluation for depression – adolescent” value sets to include additional medications.</p>
	<p>After consideration of the comments, we are finalizing the changes as indicated to measure Q134 for the 2020 MIPS performance period/2022 MIPS payment year and future years with the revisions noted above.</p>

D.17. Oncology: Medical and Radiation – Pain Intensity Quantified

Category	Description
NQF # / eCQM NQF #:	0384/0384e
Quality #:	143
CMS eCQM ID:	CMS157v8
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified.
Substantive Change:	Updated Guidance: For the eCQM Specifications collection type: This measure is an episode-of-care measure; the level of analysis for this measure is every visit for patients with a diagnosis of cancer who are also currently receiving chemotherapy or radiation therapy during the measurement period. For patients receiving radiation therapy, pain intensity should be quantified at each radiation treatment management encounter where the patient and physician have a face-to-face interaction. Due to the nature of some applicable coding related to the radiation therapy (e.g., delivered in multiple fractions), the billing date for certain codes may or may not be the same as the face-to-face encounter date. In this instance, for the reporting purposes of this measure, the billing date should be used to pull the appropriate patients into the initial population. It is expected, though, that the numerator criteria would be performed at the time of the actual face-to-face encounter during the series of treatments. For patients receiving chemotherapy, pain intensity should be quantified at each face-to-face encounter with the physician while the patient is currently receiving chemotherapy. For purposes of identifying eligible encounters, patients "currently receiving chemotherapy" refers to patients administered chemotherapy within 30 days prior to the encounter AND administered chemotherapy within 30 days after the date of the encounter.
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to update the guidance within the eCQM Specifications collection type to address the limitations of the radiation treatment management code 77427 and to provide clarification about the variation in how this code is applied versus how the measure performance is assessed.
We received no comments on the substantive changes proposed for measure Q143: Oncology: Medical and Radiation – Pain Intensity Quantified. Therefore, we are finalizing the changes to measure Q143 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.18. Oncology: Medical and Radiation - Plan of Care for Pain

Category	Description
NQF # / eCQM NQF #:	0383
Quality #:	144
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having moderate to severe pain with a plan of care to address pain documented on or before the date of the second visit with a clinician.
Substantive Change:	<p>Updated the description to read: Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain.</p> <p>Updated the denominator to read: All visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy who report having pain</p> <p>All visits for patients, regardless of age, with a diagnosis of cancer currently receiving radiation therapy who report having pain</p> <p>Updated the numerator to read: Patient visits that included a documented plan of care to address pain</p>
Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We proposed to revert this measure to the 2018 performance period measure specification. The 2019 measure narrows the patient population to those who report moderate to severe pain and require the plan of care before or on the data of the second visit with the clinician. The measure steward has submitted this version to NQF for re-endorsement where the measure steward received feedback to further test the updated analytics. As such, we agree with reverting to the NQF-endorsed measure.</p> <p>As finalized, the substantive changes do not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the minimum reliability requirements, a new benchmark will be generated.</p>
<p>Comment: One commenter supported the substantive change proposed for measure Q144: Oncology: Medical and Radiation – Plan of Care for Moderate to Severe Pain and reverting this measure to the 2018 performance period measure specifications. The commenter stated that the 2019 measure narrowed the patient population to those who report moderate to severe pain and requires the plan of care before or on the data of the second visit with the clinician. The measure steward has submitted this version to NQF for re-endorsement and received feedback to further test the updated analytics. The commenter also recommended that the measure title be changed to “Oncology: Medical and Radiation - Plan of Care for Pain,” in order to align with the proposed reversion to 2018 specifications.</p> <p>Response: We thank the commenter for supporting the revision to measure Q144. We agree that the title should align with the finalized revisions, and have reflected this update.</p> <p>We proposed a substantive change to the denominator; however, during the quality measure annual revision process with the measure steward, there was additional language refinement to state:</p> <p>Updated the denominator to read: All visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain. This additional refinement does not affect the intent of the proposed substantive change.</p> <p>We proposed to revert the measure to the 2018 MIPS version; however, during public comment it was noticed that the title was not updated to align with revisions being made to measure Q144. The title is being updated to state: Oncology: Medical and Radiation - Plan of Care for Pain</p> <p>These additional refinements ensure that the measure was reverted to the 2018 MIPS version of the specification and to be in alignment with the NQF-endorsed measure as proposed.</p> <p>There were no additional refinements to substantive changes:</p> <p>Updated the description to read: Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain.</p> <p>All visits for patients, regardless of age, with a diagnosis of cancer currently receiving radiation therapy who report having pain</p> <p>Updated the numerator to read: Patient visits that included a documented plan of care to address pain</p> <p>After consideration of the comments, we are finalizing the changes to measure Q144 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years with the revisions noted above.</p>	

D.19. Rheumatoid Arthritis (RA): Tuberculosis Screening

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	176
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have documentation of a tuberculosis (TB) screening performed and results interpreted within 12 months prior to receiving a first course of therapy using a biologic disease-modifying anti-rheumatic drug (DMARD).
Substantive Change:	Updated definition: Biologic DMARD Therapy- Includes Abatacept (Orencia), Adalimumab (Humira), Adalimumab-adbm (Cyltezo), Adalimumab-atto (Amjevita), Anakinra (Kineret), Baricitinib (Olmiant), Certolizumab pegol (Cimzia), Etanercept (Enbrel), Etanercept-szss (Erelzi), Golimumab (Simponi), Infliximab (Remicade), Infliximab-abda (Renflexis), Infliximab-dyyb (Inflectra), Infliximab-qbtx (Ixifi), Sarilumab (Kevzara), Tocilizumab (Actemra), Tofacitinib (Xeljanz).
Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to add Baricitinib (olumiant) and remove Rituximab (Rituxan) to the definition of “Biologic DMARD Therapy” as it was approved in 2018 by the FDA for the treatment of rheumatoid arthritis. We agree with the inclusion of Baricitinib in order to capture the relevant patient population. This revision allows eligible clinicians to achieve performance with use of a new pharmacological therapy to treat RA.
We received no comments on the substantive changes proposed for measure Q176: Rheumatoid Arthritis (RA): Tuberculosis Screening. Therefore, we are finalizing the changes to measure Q176 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.20. Rheumatoid Arthritis (RA): Periodic Assessment of Disease Activity

Category	Description
NQF # / eCQM NQF #:	2523
Quality #:	177
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have an assessment of disease activity at $\geq 50\%$ of encounters for RA for each patient during the measurement year.
Substantive Change:	Updated description: Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have an assessment of disease activity using an ACR-preferred RA disease activity assessment tool at $\geq 50\%$ of encounters for RA for each patient during the measurement year. Updated definition: Removed Patient Activity Scale (PAS) from definition of “Assessment of Disease Activity”.
Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	The measure steward recently conducted an assessment of available RA disease activity tools and is updating the list of tools they will endorse. The Patient Activity Scale (PAS) will no longer be an ACR-preferred rheumatoid arthritis disease activity measurement tool and as such, we proposed to remove this scale as an acceptable assessment tool within this measure and update the description to align with this revision.
We received no comments on the substantive changes proposed for measure Q177: Rheumatoid Arthritis (RA): Periodic Assessment of Disease Activity. Therefore, we are finalizing the changes to measure Q177 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.21. Rheumatoid Arthritis (RA): Glucocorticoid Management

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	180
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have been assessed for glucocorticoid use and, for those on prolonged doses of prednisone ≥ 10 mg daily (or equivalent) with improvement or no change in disease activity, documentation of glucocorticoid management plan within 12 months.
Substantive Change:	<p>The measure description is revised to read: Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have been assessed for glucocorticoid use and, for those on prolonged doses of prednisone >5 mg daily (or equivalent) with improvement or no change in disease activity, documentation of glucocorticoid management plan within 12 months.</p> <p>The numerator is revised to read: Patients who have been assessed for glucocorticoid use and for those on prolonged doses of prednisone >5 mg daily (or equivalent) with improvement or no change in disease activity, documentation of a glucocorticoid management plan within 12 months.</p>
Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed that this measure be revised to expand the numerator population being assessed for improvement or no change in disease activity by dropping the prolonged doses of prednisone from ≥ 10 mg daily (or equivalent) to > 5 mg daily (or equivalent). The measure steward conducted literature review that found a nearly 2-fold greater serious infection at 5-10 mg of prednisone in RA. This change takes into consideration the dangers to patients associated with being on 5-10 mg doses of prednisone. We agree with the decision to drop the dosage of prednisone to > 5 mg daily (or equivalent) given it aligns more closely to dosing associated with patient risk and it is important to include these patients in the population being assessed for improvement or no change.
We received no comments on the substantive changes proposed for measure Q180: Rheumatoid Arthritis (RA): Glucocorticoid Management. Therefore, we are finalizing the changes to measure Q180 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.22. Elder Maltreatment Screen and Follow-Up Plan

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	181
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 65 years and older with a documented elder maltreatment screen using an Elder Maltreatment Screening Tool on the date of encounter AND a documented follow-up plan on the date of the positive screen.
Substantive Change:	Updated denominator: Added physical and occupational therapy, ophthalmology, audiology and speech language pathology MIPS eligible clinician types.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed, based upon requests from stakeholders, that coding be added to the denominator eligible encounters to include physical/occupational therapy, ophthalmology, audiology and speech language pathology MIPS eligible clinician types. This expansion of the numerator allows this measure to be used in an additional setting. We agree that this measure is clinically relevant for the physical therapy setting.
<p>Comment: One commenter supported the addition of the physical therapy codes to measure Q181: Elder Maltreatment Screen and Follow-Up Plan.</p> <p>Response: We thank the commenter for supporting the revision to measure Q181. Also, note, we acknowledge eligible clinicians providing occupational therapy services were previously eligible to submit this measure and are not being newly added to measure Q182; however, the coding for occupational therapy has been expanded within the measure.</p> <p>After consideration of the comments, we are finalizing the changes to measure Q181 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>	

D.23. Functional Outcome Assessment

Category	Description
NQF # / eCQM NQF #:	2624
Quality #:	182
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies on the date of the identified deficiencies.
Substantive Change:	Updated denominator: Added mental/behavioral health, audiology, and speech language pathology MIPS eligible clinicians.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed that the denominator be expanded to include coding for more MIPS eligible clinicians. We agree with the decision to expand the MIPS eligible clinician types as it is clinically relevant to this clinician type and allows for the removal of duplicative quality measures promoting functional assessment.
Comment:	One commenter requested that CMS include RA diagnosis codes in measure Q182: Functional Outcome Assessment if measure Q178: Rheumatoid Arthritis (RA): Functional Status Assessment measure was finalized for removal from MIPS, which would allow rheumatologists to be compared to peers who report this measure.
Response:	We thank the commenter for their comment. Measure Q182 only includes settings without any diagnosis coding within the denominator criteria as this is a broadly applicable measure. We encourage the commenter to reach out to the measure steward in order to collaborate on revisions for proposal in future years.
	After consideration of the comments, we are finalizing the changes to measure Q182 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years, with the exception of the inclusion of mental/behavioral health MIPS eligible clinicians in the denominator. The measure steward would like to further discuss this expansion with their expert work group before including these codes to ensure they are appropriate for measure Q182.

D.24. Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery

Category	Description
NQF # / eCQM NQF #:	0565 / 0565e
Quality #:	191
CMS eCQM ID:	CMS133v8
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of uncomplicated cataract who had cataract surgery and no significant ocular conditions impacting the visual outcome of surgery and had best-corrected visual acuity of 20/40 or better (distance or near) achieved within 90 days following the cataract surgery.
Substantive Change:	<p>The measure description is revised to read: Percentage of cataract surgeries for patients aged 18 and older with a diagnosis of uncomplicated cataract and no significant ocular conditions impacting the visual outcome of surgery and had best-corrected visual acuity of 20/40 or better (distance or near) achieved in the operative eye within 90 days following the cataract surgery.</p> <p>The initial population is revised to read: For the eCQM Specifications collection type: All cataract surgeries for patients aged 18 years and older who did not meet any exclusion criteria.</p> <p>The denominator is revised to read: For the MIPS CQMs Specifications collection type: All cataract surgeries for patients aged 18 years and older who did not meet any exclusion criteria.</p> <p>The denominator exclusion is revised to read: Cataract surgeries in patients with significant ocular conditions impacting the visual outcome of surgery.</p> <p>Update denominator exclusions: Removed the following data elements/value sets: 'Chorioretinal Scars,' 'Moderate or Severe Impairment, Better Eye, Profound Impairment, Lesser Eye,' 'Other Corneal Deformities,' 'Other Disorders of Sclera,' 'Other Retinal Disorders,' and 'Profound Impairment, Both Eyes'. Add the following data elements/value sets: 'Cataract, Congenital,' 'Cataract, Mature or Hypermature,' 'Cataract, Posterior Polar,' 'Hypotony of Eye,' 'Macular Scar of Posterior Polar' (new value set), 'Morgagnian Cataract,' 'Posterior Lenticulus,' 'Retrolental Fibroplasias,' 'Traumatic Cataract,' and 'Vascular Disorders of Iris and Ciliary Body'.</p> <p>The numerator is revised to read: Cataract surgeries with best-corrected visual acuity of 20/40 or better (distance or near) achieved in the operative eye within 90 days following cataract surgery.</p>
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We proposed that the measure language be updated to reflect that it is not a patient-based measure, but rather a measure that assesses cataract surgeries. The measure steward believes and we agree this update in language better aligns to the measure intent and implementation and also aligns with the current measure guidance. The measure steward convened an Eye Care technical expert panel (TEP) who also agreed that these language updates would provide more clarity around the intent, and be more explicit. The Eye Care TEP also reviewed and evaluated the denominator exclusions resulting in removal and addition of data elements/value sets outlined above.

Category	Description
	<p>Comment: One commenter opposed the substantive change to measure Q191: Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery (eCQM: CMS133v8). Within the context of this comment, the commenter opposed the removal of measure Q192: Cataracts: Complications within 30 Days Following Cataract Surgery Requiring Additional Surgical Procedures (eCQM: CMS132v8), including to the changes to 2020 eCQM specifications for Q191 and Q192 (see response under Table C for further details on measure Q192).</p> <p>The commenter stated that for the past several years, the guidance language included in these measure specifications directly conflicted with the numerator and denominator specifications, which are used for calculation. The eligible population has been very clearly defined as “All patients aged 18 years and older who had cataract surgery and did not meet any exclusion criteria”, and the numerator was also very clearly specified as “patients who had best-corrected visual acuity of 20/40 or better (distance or near) achieved within 90 days following cataract surgery.” The measure guidance language, however, said that every cataract surgery during the measurement period should be counted. This has been a flaw in the measure specification, and because both instructions cannot be true, the numerator and denominator language are what has been used for implementation over the past several years.</p> <p>For 2020, the measure owner, PCPI, changed the verbiage for these measures from “Percentage of patients aged 18 years and older with a diagnosis of uncomplicated cataract...” to “Percentage of cataract surgeries for patients aged 18 years and older...”. The commenter indicated this change is very concerning because it significantly increases reporting burden for ophthalmologists reporting the measure. The commenter stated that the guidance language that PCPI introduced into the specifications for the 2020 reporting year should be clarified to explain that measure evaluation should be at the patient level.</p> <p>The commenter stated that the proposed change should not be finalized for the MIPS CQM versions of the measures and should be reversed for the eCQM versions of measures Q191 and Q192, which have already been published.</p> <p>Response: We thank the commenter for their comment; however, the language change aligns with the measure intent and implementation, which is episode-based and not patient-based per the measure steward. The measure steward convened an Eye Care technical expert panel (TEP) that agreed these changes would be more explicit regarding the measure intent. We believe an episode-based measure gives a more complete data set as the outcome for the operative eye from every cataract surgery should be analyzed for best-corrected visual acuity.</p> <p>We proposed a substantive change to the description; however, during the quality measure annual revision process with the measure steward, there was additional language refinement to state:</p> <p>The measure description is revised to read: Percentage of cataract surgeries for patients aged 18 years and older with a diagnosis of uncomplicated cataract and no significant ocular conditions impacting the visual outcome of surgery and had best-corrected visual acuity of 20/40 or better (distance or near) achieved in the operative eye within 90 days following the cataract surgery. This additional refinement aligns language throughout the specification and does not affect the intent of the proposed substantive change. Additionally, the denominator exclusion language revision will be finalized for the eCQM Specifications collection type only as the language within the MIPS CQMs Specifications collection type correctly reflects the intent of the denominator exclusion.</p> <p>There were no additional refinements to substantive changes:</p> <p>The initial population is revised to read: For the eCQM Specifications collection type: All cataract surgeries for patients aged 18 years and older who did not meet any exclusion criteria.</p> <p>The denominator is revised to read: For the MIPS CQMs Specifications collection type: All cataract surgeries for patients aged 18 years and older who did not meet any exclusion criteria.</p> <p>The denominator exclusion is revised to read: Cataract surgeries in patients with significant ocular conditions impacting the visual outcome of surgery.</p> <p>Update denominator exclusions: Removed the following data elements/value sets: 'Chorioretinal Scars,' 'Moderate or Severe Impairment, Better Eye, Profound Impairment, Lesser Eye,' 'Other Corneal Deformities,' 'Other Disorders of Sclera,' 'Other Retinal Disorders,' and 'Profound Impairment, Both Eyes'. Add the following data elements/value sets: 'Cataract, Congenital,' 'Cataract, Mature or Hypermature,' 'Cataract, Posterior Polar,' 'Hypotony of Eye,' 'Macular Scar of Posterior Polar' (new value set), 'Morgagnian Cataract,' 'Posterior Lenticonus,' 'Retrolental Fibroplasias,' 'Traumatic Cataract,' and 'Vascular Disorders of Iris and Ciliary Body'.</p> <p>The numerator is revised to read: Cataract surgeries with best-corrected visual acuity of 20/40 or better (distance or near) achieved in the operative eye within 90 days following cataract surgery</p> <p>After consideration of the comments, we are finalizing the changes as indicated to measure Q191 for the 2020 MIPS performance period/2022 MIPS payment year and future years with the revisions noted above.</p>

D.25. Functional Status Change for Patients with Knee Impairments

Category	Description
NQF # / eCQM NQF #:	0422
Quality #:	217
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients aged 14 years+ with knee impairments. The change in functional status (FS) is assessed using the Knee FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	<p>Updated numerator: Changed to define Performance Met as meeting or exceeding the risk adjusted prediction of functional status change. Numerator option “Risk-Adjusted Functional Status Change Residual Score for the knee impairment successfully calculated and the score was less than zero (< 0)” will become Performance Not Met.</p> <p>Updated definitions: Removed: (1) Admission (Option 1 & 2) (2) Admission (Option 3 & 4) (3) Discharge (Option 1 & 2) (4) Discharge (Option 3 & 4) Added: (1) Initial Evaluation: An Initial Evaluation is the first encounter for a functional deficit involving the knee and includes an evaluation (CPT 97161, 97162, 97163, 97165, 97166, 97167, 99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215, 98940, 98941, 98942, or 98943), or an Initial Evaluation Status M-code. A patient presenting with a knee impairment, who has had an interruption of a Treatment Episode for the same functional knee deficit secondary to an appropriate reason like hospitalization or surgical intervention, is an Initial Evaluation. (2) Discharge: Discharge is accompanied by a treatment finalization and evaluation completion M-Code (M1009) identifying the close of a Treatment Episode for the same knee deficit identified at the Initial Evaluation and documented by a Discharge report by the MIPS eligible clinician. An interruption in clinical care for an appropriate reason like hospitalization or surgical intervention requires a discharge from the current Treatment Episode. Updated: Treatment Episode: A Treatment Episode is defined as beginning with an Initial Evaluation for a functional knee deficit, progressing through treatment without interruption (for example a hospitalization or surgical intervention), and ending with Discharge signifying that the treatment has been completed. A patient currently under clinical care for a knee deficit remains in a single Treatment Episode until the Discharge is conducted and documented by the MIPS eligible clinician.</p> <p>Updated denominator: Consolidated all options into one denominator criteria. The denominator is revised to read: All patients 14 years and older with knee impairments who have initiated a Treatment Episode.</p> <p>Updated denominator exclusions: Added the following: (1) Patients with diagnosis of a degenerative neurological condition such as ALS, MS, Parkinson’s diagnosed at any time before or during the episode of care.</p> <p>Updated denominator exceptions: Added the following: (1) Ongoing care not indicated, patient self-discharged early and seen only 1-2 visits (e.g., financial or insurance reasons, transportation problems, or reason unknown). (2) Ongoing care not indicated, patient discharged after only 1-2 visits due to specific medical events, documented in the medical record that make the treatment episode impossible such as the patient becomes hospitalized or scheduled for surgery. (3) Ongoing care not indicated, patient seen only 1-2 visits (e.g., home program only, referred to another provider or facility, consultation only).</p> <p>Moved from denominator exclusion to denominator exception (1) Patient refused to participate.</p> <p>The numerator is revised to read: Patients who were presented with the Knee FS PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient’s Risk-Adjusted Functional Status Change Residual Score.</p>
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	We proposed that the numerator be updated to define Performance Met as meeting or exceeding the risk adjusted prediction of functional status change, making a score of less zero non-compliant and thus a Performance Not Met.

Category	Description
	<p>We agree with this change and believe it creates a more robust outcome measure as it is looking for a meets or exceeds. The denominator exclusions and exceptions are being updated with clinically relevant reasons for exclusion from the denominator or the performance rate. The current denominator exclusions are being moved to denominator exceptions as this aligns better with the measure workflow. In addition, we proposed to consolidate the denominator options 1, 2, 3, and 4 into one denominator criteria for ease of use. The denominator definitions, denominator, and numerator are being updated to align with these changes. We agree with these changes as they make implementation of the measure less burdensome for the clinician.</p> <p>As finalized, the substantive changes do not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the minimum reliability requirements, a new benchmark will be generated.</p>
	<p>We proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state: Documentation stating patient has a diagnosis of a degenerative neurological condition such as ALS, MS, or Parkinson's diagnosed at any time before or during the episode of care. This additional refinement does not affect the intent of the proposed substantive change.</p> <p>There were no additional refinements to substantive changes:</p> <p>Updated numerator: Changed to define Performance Met as meeting or exceeding the risk adjusted prediction of functional status change. Numerator option "Risk-Adjusted Functional Status Change Residual Score for the knee impairment successfully calculated and the score was less than zero (< 0)" will become Performance Not Met.</p> <p>Updated definitions: Removed:</p> <ol style="list-style-type: none"> (1) Admission (Option 1 & 2) (2) Admission (Option 3 & 4) (3) Discharge (Option 1 & 2) (4) Discharge (Option 3 & 4) <p>Added:</p> <ol style="list-style-type: none"> (1) Initial Evaluation: An Initial Evaluation is the first encounter for a functional deficit involving the knee and includes an evaluation (CPT 97161, 97162, 97163, 97165, 97166, 97167, 99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215, 98940, 98941, 98942, or 98943), or an Initial Evaluation Status M-code. A patient presenting with a knee impairment, who has had an interruption of a Treatment Episode for the same functional knee deficit secondary to an appropriate reason like hospitalization or surgical intervention, is an Initial Evaluation. (2) Discharge: Discharge is accompanied by a treatment finalization and evaluation completion M-Code (M1009) identifying the close of a Treatment Episode for the same knee deficit identified at the Initial Evaluation and documented by a Discharge report by the MIPS eligible clinician. An interruption in clinical care for an appropriate reason like hospitalization or surgical intervention requires a discharge from the current Treatment Episode. <p>Updated:</p> <p>Treatment Episode: A Treatment Episode is defined as beginning with an Initial Evaluation for a functional knee deficit, progressing through treatment without interruption (for example a hospitalization or surgical intervention), and ending with Discharge signifying that the treatment has been completed. A patient currently under clinical care for a knee deficit remains in a single Treatment Episode until the Discharge is conducted and documented by the MIPS eligible clinician.</p> <p>Updated denominator: Consolidated all options into one denominator criteria.</p> <p>The denominator is revised to read: All patients 14 years and older with knee impairments who have initiated a Treatment Episode.</p> <p>Updated denominator exceptions: Added the following:</p> <ol style="list-style-type: none"> (1) Ongoing care not indicated, patient self-discharged early and seen only 1-2 visits (e.g., financial or insurance reasons, transportation problems, or reason unknown). (2) Ongoing care not indicated, patient discharged after only 1-2 visits due to specific medical events, documented in the medical record that make the treatment episode impossible such as the patient becomes hospitalized or scheduled for surgery. (3) Ongoing care not indicated, patient seen only 1-2 visits (e.g., home program only, referred to another provider or facility, consultation only). <p>Moved from denominator exclusion to denominator exception</p> <ol style="list-style-type: none"> (1) Patient refused to participate. <p>The numerator is revised to read: Patients who were presented with the Knee FS PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient's Risk-Adjusted Functional Status Change Residual Score.</p> <p>We received no comments on the substantive changes proposed for measure Q217: Functional Status Change for Patients with Knee Impairments. Therefore, we are finalizing the changes to measure Q217 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years with the revisions noted above.</p>

D.26. Functional Status Change for Patients with Hip Impairments

Category	Description
NQF # / eCQM NQF #:	0423
Quality #:	218
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with hip impairments. The change in functional status (FS) is assessed using the Hip FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	<p>Updated numerator: Changed to define Performance Met as meeting or exceeding the risk adjusted prediction of functional status change. Numerator option "Risk-Adjusted Functional Status Change Residual Score for the hip impairment successfully calculated and the score was less than zero (< 0)" will become Performance Not Met.</p> <p>Updated definitions: Removed: (1) Admission (Option 1 & 2) (2) Admission (Option 3 & 4) (3) Discharge (Option 1 & 2) (4) Discharge (Option 3 & 4) Added: (1) Initial Evaluation: An Initial Evaluation is the first encounter for a functional deficit involving the hip and includes an evaluation (CPT 97161, 97162, 97163, 97165, 97166, 97167, 99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215, 98940, 98941, 98942, or 98943), or an Initial Evaluation Status M-code. A patient presenting with a hip impairment, who has had an interruption of a Treatment Episode for the same functional hip deficit secondary to an appropriate reason like hospitalization or surgical intervention, is an Initial Evaluation. (2) Discharge: Discharge is accompanied by a treatment finalization and evaluation completion M-Code (M1010) identifying the close of a Treatment Episode for the same hip deficit identified at Initial Evaluation and documented by a discharge report by the MIPS eligible clinician. An interruption in clinical care for an appropriate reason like hospitalization or surgical intervention requires a discharge from the current Treatment Episode. Updated: Treatment Episode: A Treatment Episode is defined as beginning with an Initial Evaluation for a functional hip deficit, progressing through treatment without interruption (for example, a hospitalization or surgical intervention), and ending with Discharge signifying that the treatment has been completed. A patient currently under clinical care for a hip deficit remains in a single Treatment Episode until the Discharge is conducted and documented by the MIPS eligible clinician.</p> <p>Updated denominator: Consolidated all options into one denominator criteria. The denominator is revised to read: All patients 14 years and older with hip impairments who have initiated a Treatment Episode.</p> <p>Updated denominator exclusions: Added the following: (1) Patients with diagnosis of a degenerative neurological condition such as ALS, MS, Parkinson’s diagnosed at any time before or during the episode of care.</p> <p>Updated denominator exceptions: Added the following: (1) Ongoing care no indicated, patient self-discharged early and seen only 1-2 visits (e.g., financial or insurance reasons, transportation problems, or reason unknown). (2) Ongoing care not indicated, patient discharged after only 1-2 visits due to specific medical events documented in the medical record that make the treatment episode impossible such as the patient becomes hospitalized or scheduled for surgery.). (3) Ongoing care not indicated, patient seen only 1-2 visits (e.g., home program only, referred to another provider or facility, consultation only).</p> <p>Moved from denominator exclusion to denominator exception (1) Patient refused to participate.</p> <p>The numerator is revised to read: Patients who were presented with the Hip FS PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient’s Risk-Adjusted Functional Status Change Residual Score.</p>
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome

Category	Description
Rationale:	<p>We proposed that the numerator be updated to define Performance Met as meeting or exceeding the risk adjusted prediction of functional status change, making a score of less zero non-compliant and thus a Performance Not Met. We agree with this change and believe it creates a more robust outcome measure as it is looking for a meets or exceeds. The denominator exclusions and exceptions are being updated with clinically relevant reasons for exclusion from the denominator or the performance rate. The current denominator exclusions are being moved to denominator exceptions as this aligns better with the measure workflow. In addition, we proposed to consolidate the denominator options 1, 2, 3, and 4 into one denominator criteria for ease of use. The denominator definitions, denominator, and numerator are being updated to align with these changes. We agree with these changes as they make implementation of the measure less burdensome for the clinician.</p> <p>As finalized, the substantive changes do not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the minimum reliability requirements, a new benchmark will be generated.</p>
	<p>We proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state: Documentation stating patient has a diagnosis of a degenerative neurological condition such as ALS, MS, or Parkinson's diagnosed at any time before or during the episode of care. This additional refinement does not affect the intent of the proposed substantive change.</p> <p>There were no additional refinements to substantive changes:</p> <p>Updated numerator: Changed to define Performance Met as meeting or exceeding the risk adjusted prediction of functional status change. Numerator option "Risk-Adjusted Functional Status Change Residual Score for the hip impairment successfully calculated and the score was less than zero (< 0)" will become Performance Not Met.</p> <p>Updated definitions: Removed: (1) Admission (Option 1 & 2) (2) Admission (Option 3 & 4) (3) Discharge (Option 1 & 2) (4) Discharge (Option 3 & 4) Added: (1) Initial Evaluation: An Initial Evaluation is the first encounter for a functional deficit involving the hip and includes an evaluation (CPT 97161, 97162, 97163, 97165, 97166, 97167, 99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215, 98940, 98941, 98942, or 98943), or an Initial Evaluation Status M-code. A patient presenting with a hip impairment, who has had an interruption of a Treatment Episode for the same functional hip deficit secondary to an appropriate reason like hospitalization or surgical intervention, is an Initial Evaluation. (2) Discharge: Discharge is accompanied by a treatment finalization and evaluation completion M-Code (M1010) identifying the close of a Treatment Episode for the same hip deficit identified at Initial Evaluation and documented by a discharge report by the MIPS eligible clinician. An interruption in clinical care for an appropriate reason like hospitalization or surgical intervention requires a discharge from the current Treatment Episode. Updated: Treatment Episode: A Treatment Episode is defined as beginning with an Initial Evaluation for a functional hip deficit, progressing through treatment without interruption (for example, a hospitalization or surgical intervention), and ending with Discharge signifying that the treatment has been completed. A patient currently under clinical care for a hip deficit remains in a single Treatment Episode until the Discharge is conducted and documented by the MIPS eligible clinician.</p> <p>Updated denominator: Consolidated all options into one denominator criteria. The denominator is revised to read: All patients 14 years and older with hip impairments who have initiated a Treatment Episode.</p> <p>Updated denominator exceptions: Added the following: (1) Ongoing care no indicated, patient self-discharged early and seen only 1-2 visits (e.g., financial or insurance reasons, transportation problems, or reason unknown). (2) Ongoing care not indicated, patient discharged after only 1-2 visits due to specific medical events documented in the medical record that make the treatment episode impossible such as the patient becomes hospitalized or scheduled for surgery.). (3) Ongoing care not indicated, patient seen only 1-2 visits (e.g., home program only, referred to another provider or facility, consultation only).</p> <p>Moved from denominator exclusion to denominator exception (1) Patient refused to participate.</p> <p>The numerator is revised to read: Patients who were presented with the Hip FS PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient's Risk-Adjusted Functional Status Change Residual Score.</p> <p>We received no comments on the substantive changes proposed for measure Q218: Functional Status Change for Patients with Hip Impairments. Therefore, we are finalizing the changes to measure Q218 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>

D.27. Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments

Category	Description
NQF # / ECQM NQF #:	0424
Quality #:	219
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with foot, ankle and lower leg impairments. The change in functional status (FS) assessed using the Foot/Ankle FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	<p>Updated numerator: Changed to define Performance Met as meeting or exceeding the risk adjusted prediction of functional status change. Numerator option "Risk-Adjusted Functional Status Change Residual Score for the lower leg, foot, or ankle impairment successfully calculated and the score was less than zero (< 0)" will become Performance Not Met.</p> <p>Updated definitions: Removed: (1) Admission (Option 1 & 2) (2) Admission (Option 3 & 4) (3) Discharge (Option 1 & 2) (4) Discharge (Option 3 & 4) Added: (1) Initial Evaluation: An Initial Evaluation is the first encounter for a functional deficit involving the lower leg, foot or ankle and includes an evaluation (CPT 97161, 97162, 97163, 97165, 97166, 97167, 99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215, 98940, 98941, 98942, or 98943), or an Initial Evaluation Status M-code. A patient presenting with a lower leg, foot or ankle impairment, who has had an interruption of a Treatment Episode for the same functional lower leg, foot or ankle deficit secondary to an appropriate reason like hospitalization or surgical intervention, is an Initial Evaluation. (2) Discharge: Discharge is accompanied by a treatment finalization and evaluation completion M-Code (M1011) identifying the close of a Treatment Episode for the same lower leg, foot or ankle deficit identified at the Initial Evaluation and documented by a discharge report by the MIPS eligible clinician. An interruption in clinical care for an appropriate reason like hospitalization or surgical intervention requires a discharge from the current Treatment Episode. Updated: Treatment Episode: A Treatment Episode is defined as beginning with an Initial Evaluation for a functional lower leg, foot or ankle deficit, progressing through treatment, without interruption (for example, a hospitalization or surgical intervention), and ending with Discharge signifying that the treatment has been completed. A patient currently under clinical care for a foot, ankle or lower leg deficit remains in a single Treatment Episode until the Discharge is conducted and documented by the MIPS eligible clinician.</p> <p>Updated denominator: Consolidated all options into one denominator criteria. The denominator is revised to read: All patients 14 years and older with foot, ankle or lower leg impairments who have initiated a Treatment Episode.</p> <p>Updated denominator exclusions: Added the following: (1) Patients with diagnosis of a degenerative neurological condition such as ALS, MS, Parkinson's diagnosed at any time before or during the episode of care.</p> <p>Updated denominator exceptions: Added the following: (1) Ongoing care not indicated, patient self-discharged early and seen only 1-2 visits (e.g., financial or insurance reasons, transportation problems, or reason unknown). (2) Ongoing care no indicated, patient discharged after only 1-2 visits due to specific medical events, documented in the medical record that make the treatment episode impossible such as the patient becomes hospitalized or scheduled for surgery. (3) Ongoing care not indicated, patient seen only 1-2 visits (e.g., home program only, referred to another provider or facility, consultation only).</p> <p>Moved from denominator exclusion to denominator exception (1) Patient refused to participate.</p> <p>The numerator is revised to read: Patients who were presented with the Foot/Ankle FS PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient's Risk-Adjusted Functional Status Change Residual Score.</p>
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes

Category	Description
Measure Type:	Patient Reported Outcome
Rationale:	<p>We proposed that the numerator be updated to define Performance Met as meeting or exceeding the risk adjusted prediction of functional status change, making a score of less zero non-compliant and thus a Performance Not Met. We agree with this change and believe it creates a more robust outcome measure as it is looking for a meets or exceeds. The denominator exclusions and exceptions are being updated with clinically relevant reasons for exclusion from the denominator or the performance rate. The current denominator exclusions are being moved to denominator exceptions as this aligns better with the measure workflow. In addition, we proposed to consolidate the denominator options 1, 2, 3, and 4 into one denominator criteria for ease of use. The denominator definitions, denominator, and numerator are being updated to align with these changes. We agree with these changes as they make implementation of the measure less burdensome for the clinician.</p> <p>As finalized, the substantive changes do not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the minimum reliability requirements, a new benchmark will be generated.</p>
	<p>We proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state: Documentation stating patient has a diagnosis of a degenerative neurological condition such as ALS, MS, or Parkinson's diagnosed at any time before or during the episode of care. This additional refinement does not affect the intent of the proposed substantive change.</p> <p>There were no additional refinements to substantive changes:</p> <p>Updated numerator: Changed to define Performance Met as meeting or exceeding the risk adjusted prediction of functional status change. Numerator option "Risk-Adjusted Functional Status Change Residual Score for the lower leg, foot, or ankle impairment successfully calculated and the score was less than zero (< 0)" will become Performance Not Met.</p> <p>Updated definitions: Removed:</p> <p>(1) Admission (Option 1 & 2) (2) Admission (Option 3 & 4) (3) Discharge (Option 1 & 2) (4) Discharge (Option 3 & 4)</p> <p>Added:</p> <p>(1) Initial Evaluation: An Initial Evaluation is the first encounter for a functional deficit involving the lower leg, foot or ankle and includes an evaluation (CPT 97161, 97162, 97163, 97165, 97166, 97167, 99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215, 98940, 98941, 98942, or 98943), or an Initial Evaluation Status M-code. A patient presenting with a lower leg, foot or ankle impairment, who has had an interruption of a Treatment Episode for the same functional lower leg, foot or ankle deficit secondary to an appropriate reason like hospitalization or surgical intervention, is an Initial Evaluation.</p> <p>(2) Discharge: Discharge is accompanied by a treatment finalization and evaluation completion M-Code (M1011) identifying the close of a Treatment Episode for the same lower leg, foot or ankle deficit identified at the Initial Evaluation and documented by a discharge report by the MIPS eligible clinician. An interruption in clinical care for an appropriate reason like hospitalization or surgical intervention requires a discharge from the current Treatment Episode.</p> <p>Updated:</p> <p>Treatment Episode: A Treatment Episode is defined as beginning with an Initial Evaluation for a functional lower leg, foot or ankle deficit, progressing through treatment, without interruption (for example, a hospitalization or surgical intervention), and ending with Discharge signifying that the treatment has been completed. A patient currently under clinical care for a foot, ankle or lower leg deficit remains in a single Treatment Episode until the Discharge is conducted and documented by the MIPS eligible clinician.</p> <p>Updated denominator: Consolidated all options into one denominator criteria. The denominator is revised to read: All patients 14 years and older with foot, ankle or lower leg impairments who have initiated a Treatment Episode.</p> <p>Updated denominator exceptions: Added the following:</p> <p>(1) Ongoing care not indicated, patient self-discharged early and seen only 1-2 visits (e.g., financial or insurance reasons, transportation problems, or reason unknown). (2) Ongoing care no indicated, patient discharged after only 1-2 visits due to specific medical events, documented in the medical record that make the treatment episode impossible such as the patient becomes hospitalized or scheduled for surgery. (3) Ongoing care not indicated, patient seen only 1-2 visits (e.g., home program only, referred to another provider or facility, consultation only).</p> <p>Moved from denominator exclusion to denominator exception</p> <p>(1) Patient refused to participate.</p> <p>The numerator is revised to read: Patients who were presented with the Foot/Ankle FS PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient's Risk-Adjusted Functional Status Change Residual Score.</p> <p>We received no comments on the substantive changes proposed for measure Q219: Functional Status Change for Patients with Lower Leg, Foot, or Ankle Impairments. Therefore, we are finalizing the changes to measure Q219 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years with the revisions noted above.</p>

D.28. Functional Status Change for Patients with Low Back Impairments

Category	Description
NQF # / ECQM NQF #:	0425
Quality #:	220
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with low back impairments. The change in functional status (FS) is assessed using the Low Back FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level by to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	<p>Updated numerator: Changed to define Performance Met as meeting or exceeding the risk adjusted prediction of functional status change. Numerator option "Risk-Adjusted Functional Status Change Residual Score for the low back impairment successfully calculated and the score was less than zero (< 0)" will become Performance Not Met.</p> <p>Updated definitions: Removed: (1) Admission (Option 1 & 2) (2) Admission (Option 3 & 4) (3) Discharge (Option 1 & 2) (4) Discharge (Option 3 & 4) Added: (1) Initial Evaluation: An Initial Evaluation is the first encounter for a functional deficit involving the low back and includes an evaluation (CPT 97161, 97162, 97163, 97165, 97166, 97167, 99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215, 98940, 98941, 98942, or 98943), or an Initial Evaluation Status M-code. A patient presenting with a low back impairment, who has had an interruption of a Treatment Episode for the same functional low back deficit secondary to an appropriate reason like hospitalization or surgical intervention, is an Initial Evaluation. (2) Discharge: Discharge is accompanied by a treatment finalization and evaluation completion M-Code (M1012) identifying the close of a Treatment Episode for the same low back deficit identified at Initial Evaluation and documented by a Discharge report by the MIPS eligible clinician. An interruption in clinical care for an appropriate reason like hospitalization or surgical intervention requires a Discharge from the current Treatment Episode. Updated: Treatment Episode: A Treatment Episode is defined as beginning with an Initial Evaluation for a functional low back deficit, progressing through treatment without interruption (for example, a hospitalization or surgical intervention), and ending with Discharge, signifying that the treatment has been completed. A patient currently under clinical care for a low back functional deficit remains in a single Treatment Episode until the Discharge is conducted and documented by the MIPS eligible clinician.</p> <p>Updated denominator: Consolidated all options into one denominator criteria. The denominator is revised to read: All patients 14 years and older with a low back impairment who have initiated a Treatment Episode.</p> <p>Updated denominator exclusions: Added the following: (1) Patients with diagnosis of a degenerative neurological condition such as ALS, MS, Parkinson’s diagnosed at any time before or during the episode of care.</p> <p>Updated denominator exceptions: Added the following: (1) Ongoing care not indicated, patient self-discharged early and seen only 1-2 visits (e.g., financial or insurance reasons, transportation problems, or reason unknown). (2) Ongoing care not indicated, patient discharged after only 1-2 visits due to specific medical events, documented in the medical record that make the treatment episode impossible such as the patient becomes hospitalized or scheduled for surgery. (3) Ongoing care not indicated, patient seen only 1-2 visits (e.g., home program only, referred to another provider or facility, consultation only).</p> <p>Moved from denominator exclusion to denominator exception (1) Patient refused to participate.</p> <p>The numerator is revised to read: Patients who were presented with the Low Back FS PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient’s Risk-Adjusted Functional Status Change Residual Score.</p>
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome

Category	Description
Rationale:	<p>We proposed that the numerator be updated to define Performance Met as meeting or exceeding the risk adjusted prediction of functional status change, making a score of less zero non-compliant and thus a Performance Not Met. We agree with this change and believe it creates a more robust outcome measure as it is looking for a meets or exceeds. The denominator exclusions and exceptions are being updated with clinically relevant reasons for exclusion from the denominator or the performance. The current denominator exclusions are being moved to denominator exceptions as this aligns better with the measure workflow. In addition, we proposed to consolidate the denominator options 1, 2, 3, and 4 into one denominator criteria for ease of use. The denominator definitions, denominator, and numerator are being updated to align with these changes. We agree with these changes as they make implementation of the measure less burdensome for the clinician.</p> <p>As finalized, the substantive changes do not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the minimum reliability requirements, a new benchmark will be generated.</p>
	<p>We proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state: Documentation stating patient has a diagnosis of a degenerative neurological condition such as ALS, MS, or Parkinson's diagnosed at any time before or during the episode of care. This additional refinement does not affect the intent of the proposed substantive change.</p> <p>There were no additional refinements to substantive changes:</p> <p>Updated numerator: Changed to define Performance Met as meeting or exceeding the risk adjusted prediction of functional status change. Numerator option "Risk-Adjusted Functional Status Change Residual Score for the low back impairment successfully calculated and the score was less than zero (< 0)" will become Performance Not Met.</p> <p>Updated definitions: Removed:</p> <p>(1) Admission (Option 1 & 2) (2) Admission (Option 3 & 4) (3) Discharge (Option 1 & 2) (4) Discharge (Option 3 & 4)</p> <p>Added:</p> <p>(1) Initial Evaluation: An Initial Evaluation is the first encounter for a functional deficit involving the low back and includes an evaluation (CPT 97161, 97162, 97163, 97165, 97166, 97167, 99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215, 98940, 98941, 98942, or 98943), or an Initial Evaluation Status M-code. A patient presenting with a low back impairment, who has had an interruption of a Treatment Episode for the same functional low back deficit secondary to an appropriate reason like hospitalization or surgical intervention, is an Initial Evaluation. (2) Discharge: Discharge is accompanied by a treatment finalization and evaluation completion M-Code (M1012) identifying the close of a Treatment Episode for the same low back deficit identified at Initial Evaluation and documented by a Discharge report by the MIPS eligible clinician. An interruption in clinical care for an appropriate reason like hospitalization or surgical intervention requires a Discharge from the current Treatment Episode.</p> <p>Updated:</p> <p>Treatment Episode: A Treatment Episode is defined as beginning with an Initial Evaluation for a functional low back deficit, progressing through treatment without interruption (for example, a hospitalization or surgical intervention), and ending with Discharge, signifying that the treatment has been completed. A patient currently under clinical care for a low back functional deficit remains in a single Treatment Episode until the Discharge is conducted and documented by the MIPS eligible clinician.</p> <p>Updated denominator: Consolidated all options into one denominator criteria. The denominator is revised to read: All patients 14 years and older with a low back impairment who have initiated a Treatment Episode.</p> <p>Updated denominator exceptions: Added the following:</p> <p>(1) Ongoing care not indicated, patient self-discharged early and seen only 1-2 visits (e.g., financial or insurance reasons, transportation problems, or reason unknown). (2) Ongoing care not indicated, patient discharged after only 1-2 visits due to specific medical events, documented in the medical record that make the treatment episode impossible such as the patient becomes hospitalized or scheduled for surgery. (3) Ongoing care not indicated, patient seen only 1-2 visits (e.g., home program only, referred to another provider or facility, consultation only).</p> <p>Moved from denominator exclusion to denominator exception</p> <p>(1) Patient refused to participate.</p> <p>The numerator is revised to read: Patients who were presented with the Low Back FS PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient's Risk-Adjusted Functional Status Change Residual Score.</p> <p>We received no comments on the substantive changes proposed for measure Q220: Functional Status Change for Patients with Low Back Impairments. Therefore, we are finalizing the changes to measure Q220 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years with the revisions noted above.</p>

D.29. Functional Status Change for Patients with Shoulder Impairments

Category	Description
NQF # / ECQM NQF #:	0426
Quality #:	221
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with shoulder impairments. The change in functional status (FS) is assessed using the Shoulder FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	<p>Updated numerator: Changed to define Performance Met as meeting or exceeding the risk adjusted prediction of functional status change. Numerator option "Risk-Adjusted Functional Status Change Residual Score for the shoulder impairment successfully calculated and the score was less than zero (< 0)" will become Performance Not Met.</p> <p>Updated definitions: Removed: (1) Admission (Option 1 & 2) (2) Admission (Option 3 & 4) (3) Discharge (Option 1 & 2) (4) Discharge (Option 3 & 4) Added: (1) Initial Evaluation: An Initial Evaluation is the first encounter for a functional deficit involving the shoulder and includes an evaluation (CPT 97161, 97162, 97163, 97165, 97166, 97167, 99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215, 98940, 98941, 98942, or 98943), or an Initial Evaluation Status M-code. A patient presenting with a shoulder impairment, who has had an interruption of a Treatment Episode for the same functional shoulder deficit secondary to an appropriate reason like hospitalization or surgical intervention, is an Initial Evaluation. (2) Discharge: Discharge is accompanied by a treatment finalization and evaluation completion M-Code (M1013) identifying the close of a Treatment Episode for the same shoulder deficit identified at the Initial Evaluation and documented by a discharge report by the MIPS eligible clinician. An interruption in clinical care for an appropriate reason like hospitalization or surgical intervention requires a discharge from the current Treatment Episode. Updated: Treatment Episode: A Treatment Episode is defined as beginning with an Initial Evaluation for a functional shoulder deficit, progressing through treatment, without interruption (for example, a hospitalization or surgical intervention), and ending with Discharge, signifying that the treatment has been completed. A patient currently under clinical care for a shoulder functional deficit remains in a single Treatment Episode until the Discharge is conducted and documented by the MIPS eligible clinician.</p> <p>Updated denominator: Consolidated all options into one denominator criteria. The denominator is revised to read: All patients 14 years and older with shoulder impairments who have initiated a Treatment Episode.</p> <p>Updated denominator exclusions: Added the following: (1) Patients with diagnosis of a degenerative neurological condition such as ALS, MS, Parkinson’s diagnosed at any time before or during the episode of care.</p> <p>Updated denominator exceptions: Added the following: (1) Ongoing care not indicated, patient self-discharged early and seen only 1-2 visits (e.g., financial or insurance reasons, transportation problems, or reason unknown). (2) Ongoing care not indicated, patient discharged after only 1-2 visits due to specific medical events, documented in the medical record that make the treatment episode impossible such as the patient becomes hospitalized or scheduled for surgery. (3) Ongoing care not indicated, patient seen only 1-2 visits (e.g., home program only, referred to another provider or facility, consultation only).</p> <p>Moved from denominator exclusion to denominator exception (1) Patient refused to participate.</p> <p>The numerator is revised to read: Patients who were presented with the Shoulder FS PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient’s Risk-Adjusted Functional Status Change Residual Score.</p>
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome

Category	Description
Rationale:	<p>We proposed that the numerator be updated to define Performance Met as meeting or exceeding the risk adjusted prediction of functional status change, making a score of less zero non-compliant and thus a Performance Not Met. We agree with this change and believe it creates a more robust outcome measure as it is looking for a meets or exceeds. The denominator exclusions and exceptions are being updated with clinically relevant reasons for exclusion from the denominator or the performance rate. The current denominator exclusions are being moved to denominator exceptions as this aligns better with the measure workflow. In addition, we proposed to consolidate the denominator options 1, 2, 3, and 4 into one denominator criteria for ease of use. The denominator definitions, denominator, and numerator are being updated to align with these changes. We agree with these changes as they make implementation of the measure less burdensome for the clinician.</p> <p>As finalized, the substantive changes do not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the minimum reliability requirements, a new benchmark will be generated.</p>
	<p>We proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state: Documentation stating patient has a diagnosis of a degenerative neurological condition such as ALS, MS, or Parkinson's diagnosed at any time before or during the episode of care. This additional refinement does not affect the intent of the proposed substantive change.</p> <p>There were no additional refinements to substantive changes:</p> <p>Updated numerator: Changed to define Performance Met as meeting or exceeding the risk adjusted prediction of functional status change. Numerator option "Risk-Adjusted Functional Status Change Residual Score for the shoulder impairment successfully calculated and the score was less than zero (< 0)" will become Performance Not Met.</p> <p>Updated definitions: Removed:</p> <p>(1) Admission (Option 1 & 2) (2) Admission (Option 3 & 4) (3) Discharge (Option 1 & 2) (4) Discharge (Option 3 & 4)</p> <p>Added:</p> <p>(1) Initial Evaluation: An Initial Evaluation is the first encounter for a functional deficit involving the shoulder and includes an evaluation (CPT 97161, 97162, 97163, 97165, 97166, 97167, 99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215, 98940, 98941, 98942, or 98943), or an Initial Evaluation Status M-code. A patient presenting with a shoulder impairment, who has had an interruption of a Treatment Episode for the same functional shoulder deficit secondary to an appropriate reason like hospitalization or surgical intervention, is an Initial Evaluation. (2) Discharge: Discharge is accompanied by a treatment finalization and evaluation completion M-Code (M1013) identifying the close of a Treatment Episode for the same shoulder deficit identified at the Initial Evaluation and documented by a discharge report by the MIPS eligible clinician. An interruption in clinical care for an appropriate reason like hospitalization or surgical intervention requires a discharge from the current Treatment Episode.</p> <p>Updated:</p> <p>Treatment Episode: A Treatment Episode is defined as beginning with an Initial Evaluation for a functional shoulder deficit, progressing through treatment, without interruption (for example, a hospitalization or surgical intervention), and ending with Discharge, signifying that the treatment has been completed. (3) Ongoing care not indicated, patient seen only 1-2 visits (e.g., home program only, referred to another provider or facility, consultation only).</p> <p>Moved from denominator exclusion to denominator exception</p> <p>(1) Patient refused to participate.</p> <p>The numerator is revised to read: Patients who were presented with the Shoulder FS PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient's Risk-Adjusted Functional Status Change Residual Score.</p> <p>We received no comments on the substantive changes proposed for measure Q221: Functional Status Change for Patients with Shoulder Impairments. Therefore, we are finalizing the changes to measure Q221 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>

D.30. Functional Status Change for Patients with Elbow, Wrist or Hand Impairments

Category	Description
NQF # / ECQM NQF #:	0427
Quality #:	222
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status (FS) for patients 14 years+ with elbow, wrist or hand impairments. The change in FS is assessed using the Elbow/Wrist/Hand FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.) The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	<p>Updated numerator: Changed to define Performance Met as meeting or exceeding the risk adjusted prediction of functional status change. Numerator option "Risk-Adjusted Functional Status Change Residual Score for the elbow, wrist, or hand impairment successfully calculated and the score was less than zero (< 0)" will become Performance Not Met.</p> <p>Updated definitions: Removed: (1) Admission (Option 1 & 2) (2) Admission (Option 3 & 4) (3) Discharge (Option 1 & 2) (4) Discharge (Option 3 & 4) Added: (1) Initial Evaluation: An Initial Evaluation is the first encounter for a functional deficit involving the elbow, wrist, or hand and includes an evaluation (CPT 97161, 97162, 97163, 97165, 97166, 97167, 99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215, 98940, 98941, 98942, or 98943), or an Initial Evaluation Status M-code. A patient presenting with an elbow, wrist, or hand impairment, who has had an interruption of a Treatment Episode for the same functional knee deficit secondary to an appropriate reason like hospitalization or surgical intervention, is an Initial Evaluation. (2) Discharge: Discharge is accompanied by a treatment finalization and evaluation completion M-Code (M1014) for identifying the close of a Treatment Episode for the same elbow, wrist or hand deficit identified at the Initial Evaluation and documented by a Discharge report by the MIPS eligible clinician. An interruption in clinical care for an appropriate reason like hospitalization or surgical intervention requires a discharge from the current Treatment Episode. Updated: Treatment Episode: A Treatment Episode is defined as beginning with an Initial Evaluation for a functional elbow, wrist or hand deficit, progressing through treatment without interruption (for example, a hospitalization or surgical intervention), and ending with Discharge, signifying that the treatment has been completed. A patient currently under clinical care for an elbow, wrist or hand deficit remains in a single Treatment Episode until the Discharge is conducted and documented by the MIPS eligible clinician.</p> <p>Updated denominator: Consolidated all options into one denominator criteria. The denominator is revised to read: All patients 14 years and older with elbow, wrist or hand impairments who have initiated a Treatment Episode.</p> <p>Updated denominator exclusions: Added the following: (1) Patients with diagnosis of a degenerative neurological condition such as ALS, MS, Parkinson’s diagnosed at any time before or during the episode of care.</p> <p>Updated denominator exceptions: Added the following: (1) Ongoing care not indicated, patient self-discharged early and seen only 1-2 visits (e.g., financial or insurance reasons, transportation problems, or reason unknown). (2) Ongoing care not indicated, patient discharged after only 1-2 visits due to specific medical events, documented in the medical record that make the treatment episode impossible such as the patient becomes hospitalized or scheduled for surgery. (3) Ongoing care not indicated, patient seen only 1-2 visits (e.g., home program only, referred to another provider or facility, consultation only).</p> <p>Moved from denominator exclusion to denominator exception (1) Patient refused to participate.</p> <p>The numerator is revised to read: Patients who were presented with the Elbow/Wrist/Hand FS PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient’s Risk-Adjusted Functional Status Change Residual Score.</p>
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes

Category	Description
Measure Type:	Patient Reported Outcome
Rationale:	<p>We proposed the numerator be updated to define Performance Met as meeting or exceeding the risk adjusted prediction of functional status change, making a score of less zero non-compliant and thus a Performance Not Met. We agree with this change and believe it will create a more robust outcome measure as it is looking for a meets or exceeds. The denominator exclusions and exceptions are being updated with clinically relevant reasons for exclusion from the denominator or the performance rate. The current denominator exclusions are being moved to denominator exceptions as this aligns better with the measure workflow. In addition, we proposed to consolidate the denominator options 1, 2, 3, and 4 into one denominator criteria for ease of use. The denominator definitions, denominator, and numerator are being updated to align with these changes. We agree with these changes as they make implementation of the measure less burdensome for the clinician.</p> <p>As finalized, the substantive changes do not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the minimum reliability requirements, a new benchmark will be generated.</p>
	<p>We proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state: Documentation stating patient has a diagnosis of a degenerative neurological condition such as ALS, MS, or Parkinson's diagnosed at any time before or during the episode of care. This additional refinement does not affect the intent of the proposed substantive change.</p> <p>There were no additional refinements to substantive changes:</p> <p>Updated numerator: Changed to define Performance Met as meeting or exceeding the risk adjusted prediction of functional status change. Numerator option "Risk-Adjusted Functional Status Change Residual Score for the elbow, wrist, or hand impairment successfully calculated and the score was less than zero (< 0)" will become Performance Not Met.</p> <p>Updated definitions: Removed:</p> <p>(1) Admission (Option 1 & 2)</p> <p>(2) Admission (Option 3 & 4)</p> <p>(3) Discharge (Option 1 & 2)</p> <p>(4) Discharge (Option 3 & 4)</p> <p>Added:</p> <p>(1) Initial Evaluation: An Initial Evaluation is the first encounter for a functional deficit involving the elbow, wrist, or hand and includes an evaluation (CPT 97161, 97162, 97163, 97165, 97166, 97167, 99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215, 98940, 98941, 98942, or 98943), or an Initial Evaluation Status M-code. A patient presenting with an elbow, wrist, or hand impairment, who has had an interruption of a Treatment Episode for the same functional knee deficit secondary to an appropriate reason like hospitalization or surgical intervention, is an Initial Evaluation.</p> <p>(2) Discharge: Discharge is accompanied by a treatment finalization and evaluation completion M-Code (M1014) for identifying the close of a Treatment Episode for the same elbow, wrist or hand deficit identified at the Initial Evaluation and documented by a Discharge report by the MIPS eligible clinician. An interruption in clinical care for an appropriate reason like hospitalization or surgical intervention requires a discharge from the current Treatment Episode.</p> <p>Updated:</p> <p>Treatment Episode: A Treatment Episode is defined as beginning with an Initial Evaluation for a functional elbow, wrist or hand deficit, progressing through treatment without interruption (for example, a hospitalization or surgical intervention), and ending with Discharge, signifying that the treatment has been completed. A patient currently under clinical care for an elbow, wrist or hand deficit remains in a single Treatment Episode until the Discharge is conducted and documented by the MIPS eligible clinician.</p> <p>Updated denominator: Consolidated all options into one denominator criteria.</p> <p>The denominator is revised to read: All patients 14 years and older with elbow, wrist or hand impairments who have initiated a Treatment Episode.</p> <p>Updated denominator exceptions: Added the following:</p> <p>(1) Ongoing care not indicated, patient self-discharged early and seen only 1-2 visits (e.g., financial or insurance reasons, transportation problems, or reason unknown).</p> <p>(2) Ongoing care not indicated, patient discharged after only 1-2 visits due to specific medical events, documented in the medical record that make the treatment episode impossible such as the patient becomes hospitalized or scheduled for surgery.</p> <p>(3) Ongoing care not indicated, patient seen only 1-2 visits (e.g., home program only, referred to another provider or facility, consultation only).</p> <p>Moved from denominator exclusion to denominator exception</p> <p>(1) Patient refused to participate.</p> <p>The numerator is revised to read: Patients who were presented with the Elbow/Wrist/Hand FS PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient's Risk-Adjusted Functional Status Change Residual Score.</p> <p>We received no comments on the substantive changes proposed for measure Q222: Functional Status Change for Patients with Elbow, Wrist, or Hand Impairments. Therefore, we are finalizing the changes to measure Q222 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years with the revisions noted above.</p>

D.31. Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention

Category	Description
NQF # / ECQM NQF #:	0028 / 0028e
Quality #:	226
CMS eCQM ID:	CMS138v8
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	<p>Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received tobacco cessation intervention if identified as a tobacco user</p> <p>a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months.</p> <p>b. Percentage of patients aged 18 years and older who were screened for tobacco use and identified as a tobacco user who received tobacco cessation intervention.</p> <p>c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received tobacco cessation intervention if identified as a tobacco user.</p>
Substantive Change:	<p>The measure description is revised to read: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received tobacco cessation intervention if identified as a tobacco user</p> <p>a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months.</p> <p>b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention.</p> <p>c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received tobacco cessation intervention if identified as a tobacco user.</p> <p>Updated denominator: For the Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection types: Added physical therapy MIPS eligible clinician type.</p> <p>Updated Guidance: For the Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs Specifications collection types: Added: (1) The denominator of population criteria 2 is a subset of the resulting numerator for population criteria 1, as population criteria 2 is limited to assessing if patients identified as tobacco users received an appropriate tobacco cessation intervention. For all patients, population criteria 1 and 3 are applicable, but population criteria 2 will only be applicable for those patients who are identified as tobacco users. Therefore, data for every patient that meets the initial population criteria will only be submitted for population 1 and 3, whereas data submitted for population 2 will be for a subset of patients who meet the initial population criteria, as the denominator has been further limited to those who were identified as tobacco users. (2) To satisfy the intent of this measure, a patient must have at least one tobacco use screening during the 24-month period. If a patient has multiple tobacco use screenings during the 24-month period, only the most recent screening, which has a documented status of tobacco user or tobacco non-user, will be used to satisfy the measure requirements.</p> <p>Updated instructions: For the MIPS CQM Specifications collection types: This measure is to be submitted a minimum of once per performance period for patients seen during the performance period. This measure is intended to reflect the quality of services provided for preventive screening for tobacco use. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who provided the measure-specific denominator coding. For this implementation of the measure, the 24 month look back period includes the program year and the year prior. For Quality Payment Program (QPP) 2020, the 24 month period would be from 1/1/2019-12/31/2020.</p> <p>Updated guidance: For the CMS Web Interface Measure Specifications collection types:</p> <ul style="list-style-type: none"> • If there is more than 1 patient query regarding tobacco use, use the most recent query during the 24-month period to determine tobacco status. • “Within 24 months” is defined as the 24-month look-back from the measurement period end date (1/1/2019 - 12/31/2020). • Screening for tobacco use may be completed during a telehealth encounter. • Tobacco cessation intervention can be performed by another healthcare provider; therefore, the tobacco use screening and tobacco cessation intervention do not need to be performed by the same provider or clinician. • Screening for tobacco use and cessation intervention do not have to occur on the same encounter, but both must occur during the 24-month look-back period. • Screening for tobacco use and cessation intervention may be completed during a telehealth encounter. • Tobacco cessation intervention may be completed during a telehealth encounter.
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	No
Measure Type:	Process

Category	Description
Rationale:	<p>We proposed that the measure description be revised to clarify the summarized intent for population criteria 2. Based upon requests from stakeholders, physical therapy evaluation codes was also proposed for addition in the denominator eligible encounters for the Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs Specifications collection types to allow for this measure to be used in an additional setting. We agree that this preventive assessment is a clinically relevant measure for clinicians in the physical therapy setting. We proposed refinements to the guidance for the Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, eCQM Specifications, and MIPS CQMs Specifications collection types in response to stakeholder feedback regarding the timing for which tobacco cessation intervention must occur. In response to our determination and stakeholder feedback for the CMS Web Interface Measure Specifications, Medicare Part B Claims Measure Specifications, and MIPS CQMs Specifications collection types, we proposed to allow a 24-month period to assess for tobacco cessation intervention. These refinements are in alignment with the clinical guidelines and will decrease burden for eligible clinicians performing tobacco screening and tobacco cessation intervention. The timing refinement as proposed would maintain the balance of clinical guideline and measure alignment, and support our effort to reduce burden for measure submission. Additionally, this timing refinement allows the clinician to create personalized, patient-centered care while still maintaining the clinical integrity of the measure and clinical guidelines. The CMS Web Interface Measure Specifications collection type was updated with additional guidance in order to add clarity regarding how this measure is implemented using that collection type. We also proposed updates to the instructions for MIPS CQMs Specifications collection types to further clarify the timing of the tobacco cessation intervention in alignment with the updated numerator guidance. We agree this proposal will maintain clinical intent, provide clarity, reduce clinician burden, and allow for personalized patient care. We also proposed updates to guidance for the Medicare Part B Claims Measure Specifications, eCQM Specifications, and MIPS CQMs Specifications collection types based upon stakeholder feedback requesting clarification regarding interpretation of the three rates included in this measure.</p>

Category	Description
	<p>Comment: Several commenters supported the substantive change for the Web Interface for measure Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention for the 2020 Performance Period as the change adds clarity to the measure. Another commenter supported the addition of the physical therapy codes to the measure.</p>
	<p>One commenter reviewed the proposed changes to the CMS Web Interface Measure Specifications collection type for measure Q226 and believed there are impacts to the benchmarks and a need to provide pay-for-reporting for 2019 and 2020 MIPS performance periods. One commenter indicated that CMS and the measure owner have been unable to provide sufficient clarity about this measure to make the results fair, accurate, or meaningful. There is no consistent guidance on what tobacco is. For some, it includes only cigarettes and cigars. For others, it includes snuff, snus, and other smokeless tobacco products. And, there has been a lack of clarity regard how a person must be referred following a positive initial screen. The commenter recommended that until there is a clearer understanding of PREV-10 requirements, that CMS make this pay-for-reporting measure for 2020 for MSSP and Next Generation ACOs.</p>
	<p>One commenter supported proposed revisions to measure Q226 that would add in telehealth encounters to be included as eligible encounters. One commenter recommended that physical therapists not be included in the denominator for ACO-17 (measure Q226), as this smoking cessation counseling is outside the scope of physical therapy. The commenter urged CMS to carefully study the impact of such changes on performance and benchmarks for this measure. Another commenter supported the proposed change to measures Q226 as it greatly reduce provider burden.</p>
	<p>Response: We thank the commenters for supporting the revision to measure Q226. Under MIPS, there is no pay-for-reporting option. In these instances, we exclude the measure from MIPS scoring for the CMS Web Interface Measure Specifications collection type in accordance with § 414.1380(b)(1)(i)(A)(2)(i) provided it met the data completeness requirement for the impacted performance period. For this substantive change, we disagree with the commenter that the measure should be excluded from MIPS scoring for the 2020 MIPS performance period as these changes align with the measure intent per feedback for the measure steward as the intent “of the measure is to screen patients for any and all types of tobacco use, as the guidelines that exist support intervention for any type of tobacco use, not just limited to smoking. That being said, measures are not guidelines and there is a decision that must be made by measure developers regarding how to construct a measure keeping in mind the evidence and ensuring that the resulting measure is feasible, useable, and positively impacts patient care. Therefore, for purposes of the measure, as long as a provider has documented status for any type of tobacco (that is., smokes or uses smokeless tobacco), that meets the first component of the numerator and contributes to the aim of improving care.” Additionally, the guidance states “If a patient uses any type of tobacco (that is, smokes or uses smokeless tobacco), the expectation is that they should receive tobacco cessation intervention: either counseling and/or pharmacotherapy.” The measure specification also gives a definition for what suffices as “tobacco cessation intervention” and the guidance includes clarity that the tobacco cessation intervention can be performed by another healthcare provider in order to promote a team-based approach to patient care.</p>
	<p>Additionally, we will continue to require this measure for groups, APM Entities, and virtual groups reporting through the CMS Web Interface Measure Specifications collection type. However, due to the mid-year change to the measure specification (as discussed in more detail under section III.E.1.b) for Q226 in program year 2019, we are redesignating the CMS Web Interface Measure Specifications collection type for measure Q226 as “pay-for-reporting” in the Shared Savings Program as provided in § 425.502(a)(5) and we will exclude the measure from MIPS scoring in accordance with § 414.1380(b)(1)(i)(A)(2)(i) provided it met the data completeness requirement and the measure was reported through the CMS Web Interface Measure Specifications collection type. For further discussion on how this measure will be scored under the MIPS Program Quality Performance Category see section III.K.3.c.(1) of this final rule. For further discussion on how this measure will be scored under the Shared Savings Program see section III.E.1.b) of this final rule. Regarding the commenter concerned with the CMS Web Interface Measure Specifications collection type and the eCQM Specifications collection type being out of alignment if this change is finalized, we believe this change brings these two collection types in alignment.</p>
	<p>After consideration of the comments, we are finalizing the changes to measure Q226 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years, except for the expansion of the denominator to include the physical therapy MIPS eligible clinician type for the Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection types. However, because we value stakeholder feedback the measure steward has agreed to collect expert work group feedback regarding the request to expand the denominator to include physical therapy MIPS eligible clinician type prior to implementation.</p>

D.32. Controlling High Blood Pressure

Category	Description
NQF # / ECQM NQF #:	0018 / N/A
Quality #:	236
CMS eCQM ID:	CMS165v8
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18 - 85 years of age who had a diagnosis of hypertension and whose blood pressure was adequately controlled (< 140/90 mmHg) during the measurement period.
Substantive Change:	<p>The measure description is revised to read: Percentage of patients 18-85 years of age who had a diagnosis of hypertension overlapping the measurement period and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period.</p> <p>Updated denominator: For the eCQM Specifications collection type: Removed Blood Pressure Visit grouping value set and added in the individual value sets.</p> <p>Updated denominator exclusions: For eCQM Specifications collection type: Added the following: (1) Patients 66 years of age and older who are living in a long-term institutional setting, such as a nursing home, for more than 90 days in the measurement period. (2) Patients 66 year of age and older with advanced illness and frailty.</p> <p>For Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs Specifications collection type: Updated: (1) Patients 66 and older who are living long term in an institution for more than 90 days during the measurement period. Added: (1) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period. (2) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period. (3) Dementia Exclusion Medications: Cholinesterase inhibitors: Donepezil, Galantamine, Rivastigimine Miscellaneous central nervous system agents: Memantine</p> <p>Updated numerator/guidance: Updated to allow blood pressures taken by a clinician from remote monitoring devices in a medical setting or in an offsite setting (that is, patient's domicile) to count towards the measure with additional clarification regarding usable blood pressure readings: -Not requiring the numerator blood pressure reading to be during a visit or overlap with a diagnosis of hypertension. (Applicable to eCQM only). -If the day of the last blood pressure reading there are multiple blood pressure readings on that day, use the lowest systolic and diastolic on that day. -The blood pressure reading that is being used should not come from an ED or inpatient visit. -Do not include blood pressure readings reported by or taken by the patient.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome

Category	Description
<p>Rationale:</p>	<p>We proposed for the eCQM specifications collection type: In order to increase transparency of which value set is being used for encounters, the “Blood Pressure Visit” grouping value set is being removed so that individual value sets will be used.</p> <p>We proposed to update the allowable denominator exclusions to include patients 66 years of age and older with advanced illness and frailty, patients with dementia taking the listed medications, and patients who are living in a long-term institutional setting, such as a nursing home, for more than 90 days during the measurement period. The measure steward believes and we agree it is unlikely patients with dementia requiring listed medications or advanced illness and frailty need some services and, in some cases, it might be harmful for patients to receive a particular service when they should prioritize other services. Additionally, we believe that some of the services in this measure are not appropriate for patients who are living in a long-term institutional setting for more than 90 days during the measurement period. We believe that by removing these patient populations, the burden to submit data is lessened for these MIPS eligible clinicians.</p> <p>Additionally, we proposed the measure guidance be updated to align with the 2018 measure guideline updates making it so that a visit is no longer required for the numerator blood pressure reading with additional guidance that blood pressure should not be taken during major events as this can artificially elevate blood pressure. In alignment with this, blood pressure readings from an ED or inpatient visit should not be used as a numerator blood pressure reading. The guidance is also being updated to allow blood pressure readings taken by a clinician from remote monitoring devices in a medical setting or in an offsite setting (that is, patient’s domicile) to be numerator compliant. Patient reported blood pressure readings cannot be used for numerator compliance.</p>

Comment: One commenter opposed not implementing the exclusion for adults 80 and older with frailty for measure Q236: Controlling High Blood Pressure. This exclusion is critical for focusing the measures on the population most likely to benefit from the measured services. Without this exclusion, this measure will be out of alignment with what is required for reporting.

One commenter expressed concern with the proposal on measure Q236 to update the denominator exclusions to exclude those who are living in a long-term institution setting, such as a nursing home. Rather than excluding these patients, who could benefit from high quality care, the commenter believed it is critical to ensure these patients receive the care they need.

Response: We thank the commenter for their comment, however this revision was not proposed and would be considered substantive. We believe introducing this concept without collaboration and clarification with the measure steward may create implementation variability for eligible clinicians. Therefore, we would encourage the commenter to work with the measure steward to incorporate this revision for future years. We thank the commenter for their comment expressing concern over the proposed changes to the denominator exclusions. The denominator exclusion for patients living long term in an institution is not new to this measure, but is being updated to require the patient to have spent more than 90 days within an institution, therefore, no longer excluding all patients who have lived in an institute during the measurement period. We disagree with the commenter that the measure should be made pay-for-reporting for the 2019 MIPS performance period as these revisions will be implemented for the 2020 MIPS performance period and do not affect the 2019 MIPS performance period. Additionally, we do not believe that the revisions necessitate an updated benchmark for the MIPS 2020 performance period as the updated denominator exclusions do not significantly change the patient population, but work to create a more relevant patient population for the quality action, which remains unchanged. We do not believe the revisions to the numerator/guidance are significant and will allow for direct comparison of performance data from prior years.

Comment: One commenter supported the denominator exclusions added for frailty for ACO-28 (measure Q236): Hypertension, Controlling High Blood Pressure. The commenter also requested that the age restriction is removed from these exclusions, as many of these interventions are not clinically appropriate in those with frailty and limited life expectancy due to advanced illness, regardless of age. The commenter recommended the following exclusion: Remove age restriction (below 65 years of age) for exclusion in a Long-Term Care Setting.

Response: We thank the commenter for supporting the revision to measure Q236. We encourage the commenter to reach out to the measure steward and collaborate regarding further refinement of the denominator exclusions.

Comment: One commenter reviewed the proposed changes to the CMS Web Interface Measures Specification type for measure Q236 and believed there are impacts to the benchmarks and a need to provide pay-for-reporting for the 2019 and 2020 MIPS performance periods.

Response: We thank the commenter for their comment. Under MIPS, there is no pay-for-reporting option. In these instances, we exclude the measure from MIPS scoring in accordance with § 414.1380(b)(1)(i)(A)(2)(i) provided it met the data completeness requirement for the impacted performance period. For this substantive change, we disagree with the commenter that the measure should be excluded from MIPS scoring for the 2019 MIPS performance period as these revisions will be implemented for the 2020 MIPS performance period and do not affect the 2019 MIPS performance period. Additionally, we do not believe that the revisions necessitate an updated benchmark for the MIPS 2020 performance period as the updated denominator exclusions do not significantly change the patient population, but work to create a more relevant patient population for the quality action, which remains unchanged. We do not believe the revisions to the numerator/guidance are significant and will allow for direct comparison of performance data from prior years.

For the eCQM specifications collection type, we proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state:

- (1) Exclude patients 66 and older who are living long term in an institution for more than 90 days during the measurement period.
- (2) Exclude patients 66 and older with advanced illness and frailty because it is unlikely that patients will benefit from the services being measured. This additional refinement does not affect the intent of the proposed substantive change.

For Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs collection type, we proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement to state:

For Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs Specifications collection type: Added the following:

- (2) Patients age 66 and older in Institutional Special Needs Plans (SNP) or residing in long-term care with a POS code 32, 33, 34, 54 or 56 for more than 90 days during the measurement period

This additional refinement was to ensure clarity in language so that the clinically appropriate patient population is identified and to decrease clinician burden by outlining the coding for the denominator exclusion for measure Q001 and does not affect the intent of the proposed substantive change.

There were no additional refinements to substantive changes:

For Medicare Part B Claims Measure Specifications, CMS Web Interface Measure Specifications, and MIPS CQMs Specifications collection type: Added the following:

- (2) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period.
- (3) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period.
- (4) Dementia Exclusion Medications: Cholinesterase inhibitors: Donepezil, Galantamine, Rivastigimine
Miscellaneous central nervous system agents: Memantine

Category	Description
	<p>The measure description is revised to read: Percentage of patients 18-85 years of age who had a diagnosis of hypertension overlapping the measurement period and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period.</p> <p>Updated denominator: For the eCQM Specifications collection type: Removed Blood Pressure Visit grouping value set and added in the individual value sets.</p> <p>Updated numerator/guidance: Updated to allow blood pressures taken by a clinician from remote monitoring devices in a medical setting or in an offsite setting (that is, patient's domicile) to count towards the measure with additional clarification regarding usable blood pressure readings: -Not requiring the numerator blood pressure reading to be during a visit or overlap with a diagnosis of hypertension. (Applicable to eCQM only). -If the day of the last blood pressure reading there are multiple blood pressure readings on that day, use the lowest systolic and diastolic on that day. -The blood pressure reading that is being used should not come from an ED or inpatient visit. -Do not include blood pressure readings reported by or taken by the patient.</p> <p>After consideration of the comments, we are finalizing the changes as indicated to measure Q236 for the 2020 MIPS performance period/2022 MIPS payment year and future years with the revisions noted above.</p>

D.33. Use of High-Risk Medications in the Elderly

Category	Description
NQF # / ECQM NQF #:	0022 / N/A
Quality #:	238
CMS eCQM ID:	CMS156v8
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 65 years of age and older who were ordered high-risk medications. Two rates are submitted. (1) Percentage of patients who were ordered at least one high-risk medication. (2) Percentage of patients who were ordered at least two of the same high-risk medications.
Substantive Change:	<p>Updated numerator statement for submission criteria 2: Percentage of patients who were ordered at least two of the same high-risk medications on different days.</p> <p>Updated guidance: Added 'on different days' to align with update to numerator submission criteria 2.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	The numerator statement for submission criteria 2 was proposed to be updated to clarify that the assessment is looking for high-risk medications that are prescribed on different days, which is in alignment with the intent of the assessment being captured. This update is also reflected in the guidance.
<p>We proposed a substantive change to the numerator statement for submission criteria 2; however, during the quality measure annual revision process with the measure steward, there was additional refinement. Therefore, we are finalizing the substantive change to state: Updated numerator statement for submission criteria 2: Patients with at least two orders for the same high-risk medication on different days during the measurement period. This additional refinement does not affect the intent of the proposed substantive change. This additional refinement was to ensure clarity in language so that the clinically appropriate quality action is identified for measure Q238 and does not affect the intent of the proposed substantive change.</p> <p>We received no comments on the substantive changes proposed for measure Q238: Use of High-Risk Medications in the Elderly. Therefore, we are finalizing the changes to measure Q238 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years with the revisions noted above.</p>	

D.34. Childhood Immunization Status

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	240
CMS eCQM ID:	CMS117v8
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of children 2 years of age who had four diphtheria, tetanus and acellular pertussis (DTaP); three polio (IPV), one measles, mumps and rubella (MMR); three H influenza type B (HiB); three hepatitis B (Hep B); one chicken pox (VZV); four pneumococcal conjugate (PCV); one hepatitis A (Hep A); two or three rotavirus (RV); and two influenza (flu) vaccines by their second birthday
Substantive Change:	<p>The measure description is revised to read: Percentage of children 2 years of age who had four diphtheria, tetanus and acellular pertussis (DTaP); three polio (IPV), one measles, mumps and rubella (MMR); three or four H influenza type B (HiB); three hepatitis B (Hep B); one chicken pox (VZV); four pneumococcal conjugate (PCV); one hepatitis A (Hep A); two or three rotavirus (RV); and two influenza (flu) vaccines by their second birthday.</p> <p>Updated numerator: Added value set for Hepatitis B carriers to allow Hepatitis B carriers to meet this part of the numerator.</p> <p>Updated definition: Removed 'Three HiB Vaccinations' and added new definition statements 'HiB 3 Dose Immunizations or Procedures,' 'HiB 4 Dose Immunizations or Procedures,' 'HiB 3 or 4 Dose Immunizations,' 'All HiB Vaccinations,' and 'Has Appropriate Number of HiB Immunizations.' Revised logic to include the correct number of HiB doses depending on the manufacturer of the vaccine given to align with current guidelines.</p> <p>Updated the logic for the HiB vaccine to require the correct amount of doses depending on the manufacturer of the vaccine given. Create a 3 dose and a 4 dose HiB vaccine.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed that the numerator be updated to include a value set for Hepatitis B carriers in order to allow this patient population to meet Hep B vaccine numerator compliance piece. We agree that this would suffice for the "had documented history of the illness" piece of numerator compliance.</p> <p>Additionally, we proposed that the measure logic be updated for the HiB vaccine to ensure the correct dosing is administered as instructed by the drug manufacturer's instructions and alignment with the current guidelines. The description is also being updated to align with this. We agree the logic should match the dosing of the vaccine given to ensure that the patient is receiving the correct and full dosage.</p>
We received no comments on the substantive changes proposed for measure Q240: Childhood Immunization Status. Therefore, we are finalizing the changes to measure Q240 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.35. Cardiac Rehabilitation Patient Referral from an Outpatient Setting

Category	Description
NQF # / eCQM NQF #:	0643
Quality #:	243
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients evaluated in an outpatient setting who within the previous 12 months have experienced an acute myocardial infarction (MI), coronary artery bypass graft (CABG) surgery, a percutaneous coronary intervention (PCI), cardiac valve surgery, or cardiac transplantation, or who have chronic stable angina (CSA) and have not already participated in an early outpatient cardiac rehabilitation/secondary prevention (CR) program for the qualifying event/diagnosis who were referred to a CR program.
Substantive Change:	Updated denominator exceptions: Added (1) Documentation of patient reason(s) for not referring to an outpatient CR program (for example, no traditional CR program available to the patient, within 60 min [travel time] from the patient’s home, patient does not have access to an alternative model of CR delivery that meets all criteria for a CR program, patient refused or other patient reasons).
Steward:	American Heart Association
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed a new denominator exception be added to allow for documentation of patient reason(s) for not having a CR referral. The measure stewards believes denominator exceptions are used in select cases to allow for a fairer measurement of quality for those providers with higher risk populations. Exceptions are also used to defer to the clinical judgment of the provider. A MIPS eligible clinician who recommends CR referral to an eligible patient whom then refuses at the time of referral for one or more reasons (for example, lack of transportation, patient preference), will now be able to exclude this patient from the numerator population. In such a case, the MIPS eligible clinician will not be penalized based upon patient reason(s) for not having a CR referral. If the patient has told the physician that he/she does not wish to enroll in a CR program, the MIPS eligible clinician can document in the medical record that he/she has recommended referral but that the patient has refused CR. The measure steward believes this is important because, in this scenario, the MIPS eligible clinician should not be penalized for the lack of a completed CR program referral as long as the CR referral recommendation and the patient refusal are documented. By adding this exception, reasons for patient non-compliance can be better tracked to correspond with implementing practices that may improve compliance and thereby overall clinical care.
<p>We proposed a substantive change to add a denominator exception; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state:</p> <p>Updated denominator exceptions: Documentation of patient reason(s) for not referring to an outpatient CR program. This additional refinement was to simply the concept in order to allow flexibility in application of the denominator exception identified for measure Q243 and does not affect the intent of the proposed substantive change.</p> <p>We received no comments on the substantive changes proposed for measure Q243: Cardiac Rehabilitation Referral from an Outpatient Setting. Therefore, we are finalizing the changes to measure Q243 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years with the revisions noted above.</p>	

D.36. Epilepsy: Counseling for Women of Childbearing Potential with Epilepsy

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	268
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	All female patients of childbearing potential (12 - 44 years old) diagnosed with epilepsy who were counseled or referred for counseling for how epilepsy and its treatment may affect contraception OR pregnancy at least once a year.
Substantive Change:	<p>The measure description is revised to read: Percentage of all patients of childbearing potential (12 years and older) diagnosed with epilepsy who were counseled at least once a year about how epilepsy and its treatment may affect contraception and pregnancy.</p> <p>Updated denominator: All females aged 12 years and older with a diagnosis of epilepsy.</p> <p>Updated numerator: Female patients or caregivers counseled at least once a year about how epilepsy and its treatment may affect contraception and pregnancy</p> <p>Updated denominator exceptions: Removed (1) Documentation of medical reason(s) why counseling was not performed for women of childbearing potential with epilepsy (4340F with 1P)</p> <p>Updated definition of "Counseling" - Counseling must include a discussion of at least two of the following three counseling topics:</p> <ul style="list-style-type: none"> • Need for folic acid supplementation, • Drug to drug interactions with contraception medication, • Potential anti-seizure medications effect(s) on fetal/child development and/or pregnancy.
Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed that the denominator be expanded to include all females aged 12 years and older and that the denominator exception of "Documentation of medical reason(s) why counseling was not performed for women of childbearing potential with epilepsy" be removed as there is no longer an exception for patients with a diagnosis of neurodevelopmental disorder, encephalopathy, hydrocephalus, brain injury, cerebral palsy, severe cognitive impairment, or severe intellectual disability. The description is being updated to reflect the changes made to the denominator. The numerator action was updated to require counseling for both contraception and pregnancy in relation to epilepsy and how its treatment may affect. We agree with this requirement as both clinical aspects are important to the patient. The measure steward has requested, and we agree with, the denominator expansion and the removal of the denominator exception as they believe all women diagnosed with epilepsy at risk for pregnancy and/or pregnancy complications should be counseled.</p> <p>We proposed a substantive change to the denominator; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state:</p> <p>Updated denominator: All females of childbearing potential (12 years and older) with a diagnosis of epilepsy. This additional refinement does not affect the intent of the proposed substantive change. This additional refinement was to ensure clarity in language so that the clinically appropriate patient population is identified for measure Q268 and does not affect the intent of the proposed substantive change.</p> <p>There were no additional refinements to substantive changes:</p> <p>The measure description is revised to read: Percentage of all patients of childbearing potential (12 years and older) diagnosed with epilepsy who were counseled at least once a year about how epilepsy and its treatment may affect contraception and pregnancy.</p> <p>Updated numerator: Female patients or caregivers counseled at least once a year about how epilepsy and its treatment may affect contraception and pregnancy</p> <p>Updated denominator exceptions: Removed (1) Documentation of medical reason(s) why counseling was not performed for women of childbearing potential with epilepsy (4340F with 1P)</p> <p>Updated definition of "Counseling" - Counseling must include a discussion of at least two of the following three counseling topics:</p> <ul style="list-style-type: none"> • Need for folic acid supplementation, • Drug to drug interactions with contraception medication, • Potential anti-seizure medications effect(s) on fetal/child development and/or pregnancy. <p>We received no comments on the substantive changes proposed for measure Q268: Counseling for Women of Childbearing Potential with Epilepsy. Therefore, we are finalizing the changes to measure Q268 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years with the revisions noted above.</p>

D.37. Dementia Associated Behavioral and Psychiatric Symptoms Screening and Management

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	283
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients with dementia for whom there was a documented screening for behavioral and psychiatric symptoms, including depression, and for whom, if symptoms screening was positive, there was also documentation of recommendations for management in the last 12 months.
Substantive Change:	Update denominator: Added physical therapy MIPS eligible clinician type.
Steward:	American Psychiatric Association and American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed that the denominator coding be expanded to include physical therapy as a denominator eligible encounter. We agree with the decision to expand this measure to physical therapy MIPS eligible clinicians as it is clinically relevant to this clinician type.
We received no comments on the substantive changes proposed for measure Q283: Dementia Associated Behavioral and Psychiatric Symptoms Screening and Management. Therefore, we are finalizing the changes to measure Q283 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.38. Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	286
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients with dementia or their caregiver(s) for whom there was a documented safety concerns screening in two domains of risk: 1) dangerousness to self or others and 2) environmental risks; and if safety concerns screening was positive in the last 12 months, there was documentation of mitigation recommendations, including but not limited to referral to other resources.
Substantive Change:	Updated denominator: Added physical therapy MIPS eligible clinician type.
Steward:	American Psychiatric Association and American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed that the denominator coding be expanded to include physical therapy as a denominator eligible encounter. We agree with the decision to expand this measure to physical therapy MIPS eligible clinicians as it is clinically relevant to this clinician type.
We received no comments on the substantive changes proposed for measure Q286: Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia. Therefore, we are finalizing the changes to measure Q286 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.39. Parkinson’s Disease: Psychiatric Symptoms Assessment for Patients with Parkinson’s Disease

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	290
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of all patients with a diagnosis of Parkinson’s Disease [PD] who were assessed for psychiatric symptoms in the past 12 months.
Substantive Change:	Updated numerator options: Performance Met: Psychosis, depression, anxiety, apathy, AND impulse control disorder assessed Performance Not Met: Psychosis, depression, anxiety, apathy, AND impulse control disorder not assessed
Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the numerator options to better align with the intent of the measure, which requires assessment of five individual components of psychiatric symptoms. We agree with the measure steward that this update to the numerator options aligns with the intent of the measure.
We received no comments on the substantive changes proposed for measure Q290: Psychiatric Symptoms Assessment for Patient’s with Parkinson’s Disease. Therefore, we are finalizing the changes to measure Q290 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.40. Initiation and Engagement of Alcohol and Other Drug Dependence Treatment

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	305
CMS eCQM ID:	CMS137v8
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	<p>Percentage of patients 13 years of age and older with a new episode of alcohol or other drug abuse or (AOD) dependence who received the following. Two rates are reported.</p> <ul style="list-style-type: none"> • Percentage of patients who initiated treatment within 14 days of the diagnosis. • Percentage of patients who initiated treatment and who had two or more additional services with an AOD diagnosis within 30 days of the initiation visit.
Substantive Change:	<p>The measure description is revised to read: Percentage of patients 13 years of age and older with a new episode of alcohol or other drug abuse or (AOD) dependence who received the following. Two rates are reported.</p> <p>a. Percentage of patients who initiated treatment including either an intervention or medication for the treatment of AOD abuse or dependence within 14 days of the diagnosis.</p> <p>b. Percentage of patients who engaged in ongoing treatment including two additional interventions or a medication for the treatment of AOD abuse or dependence within 34 days of the initiation visit. For patients who initiated treatment with a medication, at least one of the two engagement events must be a treatment intervention.</p> <p>Updated initial population: Changed intake period for the initial population to January 1 to November 14. Added telehealth services to initial population encounter value sets.</p> <p>Updated numerator: Added telehealth services to the numerator encounter value sets. Added Opiate Antagonists for numerator compliance</p> <p>Numerator 1 is revised to read: Initiation of treatment includes either an intervention or medication for the treatment of AOD abuse or dependence within 14 days of the diagnosis.</p> <p>Numerator 2 is revised to read: Engagement in ongoing treatment includes two additional interventions or a medication for the treatment of AOD abuse or dependence within 34 days of the initiation visit. For patients who initiated treatment with a medication, at least one of the two engagement events must be a treatment intervention (that is, engagement for these members cannot be satisfied with medication treatment alone).</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We proposed that the initial population and numerator value sets be updated to include telehealth services. We agree with including telehealth services as they are appropriate for this measure and patients using these services should be included in the initial population as well as be considered for numerator compliance.</p> <p>Both numerators are being updated to add pharmacotherapy as a numerator compliant clinical quality action. Numerator 2 is also being updated to reflect the change in the time period for follow-up, which is increasing to 34 days from 30 days and to align with pharmacotherapy addition; patients who initiated treatment with a medication need two or more engagement events where only one can be a medication treatment event.</p>
<p>Comment: One commenter supported proposed revisions to measure Q305: Initiation and Engagement of Alcohol and Other Drug Dependence Treatment that would add in telehealth encounters to be included as eligible encounters.</p> <p>Response: We thank the commenter for supporting the revision to measure Q305.</p> <p>After consideration of the comments, we are finalizing the changes to measure Q305 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>	

D.41. Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	317
CMS eCQM ID:	CMS22v8
National Quality Strategy Domain:	Community /Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older seen during the submitting period who were screened for high blood pressure AND a recommended follow-up plan is documented based on the current blood pressure (BP) reading as indicated.
Substantive Change:	<p>Updated numerator: For the eCQM Specifications collection type: Updated logic to allow for the documentation of a reason (finding of elevated blood pressure or hypertension) for scheduling a follow up visit and added value set "Finding of Elevated Blood Pressure or Hypertension". Added Potassium and Sodium codes to the Dietary Recommendation value set.</p> <p>Updated numerator definition: Added potassium and sodium for dietary/lifestyle recommendations.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the logic to allow for the documentation of a reason (finding of elevated blood pressure or hypertension) for scheduling a follow up visit which improves alignment with measure intent. This logic change will include the addition of a new values set "Finding of Elevated Blood Pressure or Hypertension" strengthening alignment with measure intent. We also proposed to add clinically relevant potassium and sodium codes to expand documentation options that align with the measure intent. This will also be reflected in the numerator definition.
<p>Comment: One commenter supported the proposed changes to measure Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-up Document to update the logic to allow for the documentation of a reason for scheduling a follow-up visit.</p> <p>Response: We thank the commenter for supporting the revision to measure Q317.</p> <p>After consideration of the comments, we are finalizing the changes to measure Q317 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years except for the updated numerator definition. This update will be made to the logic of the eCQM Specifications collection type through updates within the Dietary Recommendation value set. The definitions as indicated in the 2020 MIPS specification remain appropriate for purposes of implementation.</p>	

D.42. Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy

Category	Description
NQF # / eCQM NQF #:	1525
Quality #:	326
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with nonvalvular atrial fibrillation (AF) or atrial flutter who were prescribed warfarin OR another FDA-approved oral anticoagulant drug for the prevention of thromboembolism during the measurement period.
Substantive Change:	Updated denominator: Removed emergency medicine setting.
Steward:	American College of Cardiology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed and agree with the measure steward's request to remove the emergency department setting. Chronic anticoagulation therapy would be managed by a clinician providing continuous medical care which would not be applicable to the emergency medicine specialty.
<p>We received no comments on the substantive changes proposed for measure Q326: Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy. Therefore, we are finalizing the changes to measure Q326 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>	

D.43. Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use)

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	332
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of acute bacterial sinusitis that were prescribed amoxicillin, with or without clavulanate, as a first line antibiotic at the time of diagnosis.
Substantive Change:	<p>Updated denominator: Changed requirements for denominator eligibility Patients aged \geq 18 years on date of encounter AND Diagnosis for bacterial and infectious agent OR Sinusitis caused by, or presumed to be caused by, bacterial infection AND Patient encounter WITHOUT Telehealth Modifier AND Antibiotic regimen prescribed</p>
Steward:	American Academy of Otolaryngology – Head and Neck Surgery
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed the measure no longer requires a diagnosis for bacterial and infectious agent to be denominator eligible as long as the sinusitis is caused by, or presumed to be caused by, bacterial infection. We agree that this change will not change the intent of the measure, but could lessen the burden to MIPS eligible clinicians by removing the requirement for a diagnosis.
<p>Comment: One commenter responded to the substantive change proposed for measure Q332: Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use) to make the bacterial/infectious agent codes optional. In 2019, these codes are required.</p> <p>The commenter requested that the substantive change proposed for 2020 be made retroactively to the 2019 measure. The definition of Acute Bacterial Rhinosinusitis (ABRS) in the measure is that it is caused by, or presumed to be caused by, bacterial infection. Providers can diagnosis ABRS based on patient symptomology, thereby presuming it to be caused by a bacterial infection. The provider is prescribing an antibiotic based on that presumption. No culture is necessary. Additionally, requiring the culture results in undue and unnecessary costs for the patient. The commenter indicated the ICD10 codes included in the measure specifications allow for an unspecified diagnosis: J01.00 = acute maxillary sinusitis unspecified; J01.20 = acute ethmoidal sinusitis unspecified. If no culture is done but the provider diagnosis ABRS based on its definition and codes the visit using one of the "unspecified" ICD10 codes, the measure is met, or at least the intent of the measure. The commenter also specified that the measure steward intended the bacterial/infectious agent code to be optional; not required.</p> <p>Response: We thank the commenter for supporting the revision to measure Q332. As this revision was proposed for the 2020 Performance Period only, it cannot be made retroactively to the 2019 measure specification.</p> <p>After consideration of the comments, we are finalizing the "Sinusitis caused by, or presumed to be caused by, bacterial infections" denominator criteria be moved to an "OR" statement with "Diagnosis for bacterial and infectious agent" to measure Q332 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p> <p>We are not finalizing the removal of the denominator criteria "Diagnosis for acute sinusitis" as this is necessary for determining the correct eligible patient population. The finalized denominator criteria will be as follows:</p> <p>Patients aged \geq 18 years on date of encounter AND Diagnosis for acute sinusitis AND Diagnosis for bacterial and infectious agents OR Sinusitis caused by, or presumed to be caused by, bacterial infection AND Patient encounter WITHOUT Telehealth Modifier AND Antibiotic regimen prescribed</p>	

D.44. Maternity Care: Elective Delivery or Early Induction Without Medical Indication at < 39 Weeks (Overuse)

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	335
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, regardless of age, who gave birth during a 12-month period who delivered a live singleton at ≥ 37 and < 39 weeks of gestation completed who had elective deliveries or early inductions without medical indication.
Substantive Change:	<p>The measure title is revised from Elective Delivery or Early Induction Without Medical Indication ≥ 37 and < 39 Weeks (Overuse) to read: Maternity Care: Elective Delivery or Early Induction Without Medical Indication at < 39 Weeks (Overuse).</p> <p>The measure description is revised to read: Percentage of patients, regardless of age, who gave birth during a 12-month period who delivered a live singleton at < 39 weeks of gestation completed who had elective deliveries or early inductions without medical indication.</p> <p>Updated denominator: Changed to include all deliveries at < 39 weeks of gestation.</p> <p>Updated numerator: Numerator options will be updated to reflect the measure now including all deliveries at < 39 weeks gestation.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We proposed the measure population be expanded to include all deliveries at < 39 weeks of gestation. We agree with this change as delivery prior to 39 weeks of gestation increases risk to both the mother and baby. Induction prior to 39 weeks of gestation should only be performed when clinically indicated. It is important to have a complete population to ensure that all instances of early induction are being captured and assessed for proper clinical action.
We received no comments on the substantive changes proposed for measure Q335: Maternity Care: Elective Delivery or Early Induction Without Medical Indication at < 39 Weeks (Overuse). Therefore, we are finalizing the changes to measure Q335 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.45. Maternity Care: Postpartum Follow-up and Care Coordination

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	336
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care within 8 weeks of giving birth who received a breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, and family and contraceptive planning.
Substantive Change:	<p>Updated description to read: Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care within 8 weeks of giving birth and who received a breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update.</p> <p>Updated numerator: Added clinical actions necessary for numerator compliance (1) Tobacco use screening and cessation education (2) Healthy lifestyle behavioral advice to bring the BMI within healthy limits (3) Immunization review and education</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>Three more components have been added to the list of clinical actions needed at a post-partum visit in order to be numerator compliant. The measure steward convened an expert work group (EWG) who, upon literature review, recommended adding these three clinical activities. The description was updated to align with the additional clinical actions. We agree and proposed that that these clinical actions should be included in a post-partum visit as they will positively impact patient health and are clinically valuable in supporting post-partum patients.</p> <p>We proposed a substantive change to the numerator; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the numerator substantive change to state: Updated numerator: Added clinical actions necessary for numerator compliance</p> <p>Updated numerator: (1) Tobacco use screening and cessation education (2) Healthy lifestyle behavioral advice (3) Immunization review and update This additional refinement was to ensure clarity in language so that the intent of the measure is appropriately captured for measure Q336 and does not affect the intent of the proposed substantive change.</p> <p>There were no additional refinements to substantive changes: Updated description to read: Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care within 8 weeks of giving birth and who received a breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update.</p> <p>For clarity of numerator compliance, additional definitions were provided within the Definition Section of the specification for each of the added numerator components.</p> <p>We received no comments on the substantive changes proposed for measure Q336: Maternity Care: Postpartum Follow-Up and Care Coordination. Therefore, we are finalizing the changes to measure Q336 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years with the revisions noted above.</p>

D.46. Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	337
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through yearly negative standard tuberculosis screening tests or are reviewing the patient’s history to determine if they have had appropriate management for a recent or prior positive test.
Substantive Change:	<p>The description is revised to read: Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis screening tests or are reviewing the patient’s history to determine if they have had appropriate management for a recent or prior positive test.</p> <p>The numerator is revised to read: Patients who have a documented negative TB screening or have documentation of the management of a positive TB screening test with no evidence of active tuberculosis, confirmed through use of radiographic imaging (that is, chest x-ray, CT) prior to treatment with a biologic immune response modifier.</p>
Steward:	American Academy of Dermatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	Newly published psoriasis clinical guidelines recommend that tuberculosis (TB) screening tests be completed prior to treatment. Numerator compliance for this measure will now have a timing component associated with the TB screening tests and imaging as they need to be completed prior to treatment with a biologic immune response modifier. We agree and proposed this change as it follows the current clinical guidelines.
<p>Comment: One commenter appreciated the substantive change to measure Q337: Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on A Biological Immune Response Modifier.</p> <p>Response: We thank the commenter for supporting the revision to measure Q337.</p> <p>After consideration of the comments, we are finalizing the changes to measure Q337 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>	

D.47. Pain Brought Under Control Within 48 Hours

Category	Description
NQF # / eCQM NQF #:	0209
Quality #:	342
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Patients aged 18 and older who report being uncomfortable because of pain at the initial assessment (after admission to palliative care services) who report pain was brought to a comfortable level within 48 hours.
Substantive Change:	Updated denominator: Added the outpatient setting.
Steward:	National Hospice and Palliative Care Organization
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We proposed that the denominator coding be expanded to include the outpatient setting as an applicable setting. We received prior stakeholder feedback with this request and agree with the decision to expand this measure to the outpatient MIPS eligible clinicians as it is clinically relevant to this setting.
<p>We received no comments on the substantive changes proposed for measure Q342: Pain Brought Under Control Within 48 Hours. Therefore, we are finalizing the changes to measure Q342 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>	

D.48. Implantable Cardioverter-Defibrillator (ICD) Complications Rate

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	348
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Patients with physician-specific risk-standardized rates of procedural complications following the first time implantation of an ICD.
Substantive Change:	The measure title is revised from HRS-3: Implantable Cardioverter-Defibrillator (ICD) Complications Rate to read: Implantable Cardioverter-Defibrillator (ICD) Complications Rate.
Steward:	American College of Cardiology Foundation
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We proposed to update the title to align with the measure steward changing from The Heart Rhythm Society to American College of Cardiology Foundation.
We received no comments on the substantive changes proposed for measure Q348: Implantable Cardioverter-Defibrillator (ICD) Complications Rate. Therefore, we are finalizing the changes to measure Q348 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.49. Depression Remission at Twelve Months

Category	Description
NQF # / eCQM NQF #:	0710 / 0710e
Quality #:	370
CMS eCQM ID:	CMS159v8
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event date.
Substantive Change:	Updated denominator: Allow PHQ-9/PHQ9M to be administered during the index encounter or up to 7 days prior to encounter.
Steward:	Minnesota Community Measurement
High Priority Measure:	No
Measure Type:	Outcome
Rationale:	The measure steward believes that allowing flexibility for the timeframe in which a PHQ-9/PHQ-9M can be obtained will accommodate pre-visit planning or distribution of a PHQ-9/PHQ-9M tool prior to the encounter (office visit, psychiatry or psychotherapy visit, telephone or online encounter). The intent of this change includes the following principles: (1) The patient must have the corresponding diagnosis at the time of the index encounter. (2) The patient must have completed the PHQ-9/PHQ-9M and have a score greater than 9. (3) That same PHQ-9/PHQ-9M is directly tied to and used during the index encounter. We agree and proposed this change as it will allow for pre-visit planning and administration of the tool while also accounting for clinical workflow. Additionally, this revision may lessen the burden of completing the PHQ-9/PHQ-9M tool during the health visit.
Comment: One commenter reviewed the proposed changes to the CMS Web Interface Measure Specification collection type for measure Q370: Depression Remission at Twelve Months and questioned whether the changes impact the benchmarks, but urged CMS to explore and consider whether the measure warrants pay-for-reporting for the 2019 and 2020 MIPS performance period. One commenter supported the update to the denominator to allow PHQ-9/PHQ9M to be administered during the index encounter or up to 7 days prior to encounter for measure Q370.	
Response: We thank the commenter for their comment. Under MIPS, there is no pay-for-reporting option. In these instances, we exclude the measure from MIPS scoring for the CMS Web Interface Measures Specification collection type in accordance with § 414.1380(b)(1)(i)(A)(2)(i) provided it met the data completeness requirement for the impacted performance period. For this substantive change, we disagree with the commenter that the measure should be excluded from MIPS scoring for the 2019 MIPS performance period as these revisions will be implemented for the 2020 MIPS performance period and do not affect the 2019 MIPS performance period. Additionally, we do not believe that the revisions necessitate an updated benchmark for the MIPS 2020 performance period as the update to allow the screening to occur up to 7 days prior to the encounter better aligns with clinical practices and provides a better opportunity for compliance, however, the quality action being assessed has not changed. We thank the commenter for supporting the revision to measure Q370.	
After consideration of the comments, we are finalizing the changes to measure Q370 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.50. Functional Status Assessments for Congestive Heart Failure

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	377
CMS eCQM ID:	CMS90v9
National Quality Strategy Domain:	Person and Caregiver- Centered Experience and Outcomes
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 18 years of age and older with congestive heart failure who completed initial and follow-up patient-reported functional status assessments.
Substantive Change:	Updated numerator: Added the Minnesota Living with Heart Failure Questionnaire (MLHQF) tool and the Kansas City Cardiomyopathy Questionnaire (KCCQ-12) tool to the list of acceptable FSAs.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	The Minnesota Living with Heart Failure Questionnaire (MLHQF) tool and the Kansas City Cardiomyopathy Questionnaire (KCCQ-12) tool were proposed to be added to the list of numerator compliant tools that may be used to complete the measure's clinical action. The MLHQF tool has previously been approved by the measure steward's expert work group for inclusion in this measure and the KCCQ-12 tool is being included based upon expert feedback and stakeholder requests, as the measure already contains the KCCQ tool. We agree and proposed that both of these tools are relevant and appropriate for inclusion in this measure and, potentially, will capture an increased number of instances that meet numerator requirements.
We received no comments on the substantive changes proposed for measure Q377: Functional Status Assessments for Congestive Heart Failure. Therefore, we are finalizing the changes to measure Q377 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.51. Children Who Have Dental Decay or Cavities

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	378
CMS eCQM ID:	CMS75v8
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of children, age 0-20 years, who have had tooth decay or cavities during the measurement period.
Substantive Change:	The numerator is revised to read: Children who had cavities or decayed teeth overlapping the measurement period.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We proposed to revise the numerator statement to include a timing component for better alignment with numerator logic.
We received no comments on the substantive changes proposed for measure Q378: Children Who Have Dental Decay or Cavities. Therefore, we are finalizing the changes to measure Q378 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.52. Primary Caries Prevention Intervention as Offered by Primary Care Providers, including Dentists

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	379
CMS eCQM ID:	CMS74v9
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of children, age 0-20 years, who received a fluoride varnish application during the measurement period.
Substantive Change:	The numerator is revised to read: Children who receive a fluoride varnish application during the measurement period.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the numerator header to align with the numerator logic.
We received no comments on the substantive changes proposed for measure Q379: Primary Caries Prevention as Offered by Primary Care Providers, including Dentists. Therefore, we are finalizing the changes to measure Q379 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.53. Child and Adolescent Major Depressive Disorder (MDD): Suicide Risk Assessment

Category	Description
NQF # / eCQM NQF #:	1365e
Quality #:	382
CMS eCQM ID:	CMS177v8
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patient visits for those patients aged 6 through 17 years with a diagnosis of major depressive disorder with an assessment for suicide risk.
Substantive Change:	<p>Updated numerator: Added telehealth data element to "Major Depressive Disorder Encounter" definition using "Telehealth Services" value set (OID: 2.16.840.1.113883.3.464.1003.101.12.1031).</p> <p>Updated guidance: A suicide risk assessment should be performed at every visit for major depressive disorder during the measurement period.</p> <p>This measure is an episode-of-care measure; the level of analysis for this measure is every visit for major depressive disorder during the measurement period. For example, at every visit for MDD, the patient should have a suicide risk assessment.</p> <p>Use of a standardized tool(s) or instrument(s) to assess suicide risk will meet numerator performance, so long as the minimum criteria noted above is evaluated. Standardized tools can be mapped to the concept "Intervention, Performed": "Suicide risk assessment (procedure)" included in the numerator logic below, as no individual suicide risk assessment tool or instrument would satisfy the requirements alone.</p> <p>Updated numerator definition: The specific type and magnitude of the suicide risk assessment is intended to be at the discretion of the individual clinician and should be specific to the needs of the patient. At a minimum, suicide risk assessment should evaluate:</p> <ol style="list-style-type: none"> (1) Risk (for example, age, sex, stressors, comorbid conditions, hopelessness, impulsivity) and protective factors (for example, religious belief, concern not to hurt family) that may influence the desire to attempt suicide. (2) Current severity of suicidality. (3) Most severe point of suicidality in episode and lifetime. <p>Low burden tools to track suicidal ideation and behavior such as the Columbia-Suicidal Severity Rating Scale can also be used. Because no validated assessment tool or instrument fully meets the aforementioned requirements for the suicide risk assessment, individual tools or instruments have not been explicitly included in coding.</p>
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	The measure steward's Technical Expert Panel (TEP) recommended adding telehealth services to the numerator eligible encounters. We agree and proposed that performing suicide risk assessments is a clinically relevant action that should be completed by MIPS eligible clinicians providing telehealth services for patients diagnosed with major depressive disorder. It is important for patient safety that this clinical action is being performed on all patients with this diagnosis regardless of setting. The guidance and numerator definition are being updated per TEP recommendations to clarify that while sample assessments are listed, they are not reflected in the coding of this measure because the assessments do not meet all of the requirements for the suicide risk assessment.
<p>Comment: One commenter supported proposed revisions to measure Q382: Child and Adolescent Major Depressive Disorder (MDD): Suicide Risk Assessment that would add in telehealth encounters to be included as eligible encounters.</p> <p>Response: We thank the commenter for supporting the revision to measure Q382.</p> <p>After consideration of the comments, we are finalizing the changes to measure Q382 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>	

D.54. Adult Primary Rhegmatogenous Retinal Detachment Surgery: Visual Acuity Improvement Within 90 Days of Surgery

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	385
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Patients aged 18 years and older who had surgery for primary rhegmatogenous retinal detachment and achieved an improvement in their visual acuity, from their preoperative level, within 90 days of surgery in the operative eye.
Substantive Change:	Updated denominator exclusion: Added an exclusion to remove patients with a pre-operative visual acuity of better than 20/40.
Steward:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We proposed to revise this measure to include a denominator exclusion to account for patients with a pre-operative visual acuity better than 20/40, as these patients would not be expected to show an improvement in visual acuity following surgical intervention. We believe these patients should be excluded based upon expected visual acuity outcomes. As finalized, the substantive changes do not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the minimum reliability requirements, a new benchmark will be generated.
<p>Comment: One commenter supported the substantive change to add the exclusion to measure Q385, Adult Primary Rhegmatogenous Retinal Detachment Surgery: Visual Acuity Improvement Within 90 Days of Surgery, for patients with a pre-operative visual acuity of better than 20/40. This change was suggested by the commenter because, for these patients with good preoperative visual acuity, a successful retinal detachment repair will maintain this, and so thus, there could not be a measurable improvement in visual acuity. Therefore, it is appropriate to exclude these patients from the measure.</p> <p>Response: We thank the commenter for supporting the revision to measure Q385.</p> <p>After consideration of the comments, we are finalizing the changes to measure Q385 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>	

D.55. Follow-up After Hospitalization for Mental Illness (FUH)

Category	Description
NQF # / eCQM NQF #:	0576
Quality #:	391
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication/Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness diagnoses and who had a follow-up visit with a mental health practitioner. Two rates are submitted: <ul style="list-style-type: none"> • The percentage of discharges for which the patient received follow-up within 30 days after discharge. • The percentage of discharges for which the patient received follow-up within 7 days after discharge.
Substantive Change:	Updated denominator: Added self-harm as a denominator eligible diagnosis. The measure description is revised to read: The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses and who had a follow-up visit with a mental health practitioner. Two rates are submitted: <ul style="list-style-type: none"> • The percentage of discharges for which the patient received follow-up within 30 days after discharge. • The percentage of discharges for which the patient received follow-up within 7 days after discharge.
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed the denominator be expanded to include patients diagnosed with self-harm. We agree that this patient population is relevant to this measure and follow-up after hospitalization for patients with a self-harm diagnosis is directly applicable to patient safety.
<p>We received no comments on the substantive changes proposed for measure Q391: Follow-Up After Hospitalization for Mental Illness (FUH). Therefore, we are finalizing the changes to measure Q391 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>	

D.56. Cardiac Tamponade and/or Pericardiocentesis Following Atrial Fibrillation Ablation

Category	Description
NQF # / eCQM NQF #:	2474
Quality #:	392
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Rate of cardiac tamponade and/or pericardiocentesis following atrial fibrillation ablation. This measure is submitted as four rates stratified by age and gender: <ul style="list-style-type: none"> • Submission Age Criteria 1: Females 18-64 years of age • Submission Age Criteria 2: Males 18-64 years of age • Submission Age Criteria 3: Females 65 years of age and older • Submission Age Criteria 4: Males 65 years of age and older
Substantive Change:	The measure title is revised from HRS-12: Cardiac Tamponade and/or Pericardiocentesis Following Atrial Fibrillation to read: Cardiac Tamponade and/or Pericardiocentesis Following Atrial Fibrillation Ablation.
Steward:	American College of Cardiology Foundation
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We proposed to update the title to align with the measure steward changing from The Heart Rhythm Society to American College of Cardiology Foundation.
We received no comments on the substantive changes proposed for measure Q392: Cardiac Tamponade and/or Pericardiocentesis Following Atrial Fibrillation Ablation. Therefore, we are finalizing the changes to measure Q392 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.57. Infection within 180 Days of Cardiac Implantable Electronic Device (CIED) Implantation, Replacement, or Revision

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	393
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Infection rate following CIED device implantation, replacement, or revision.
Substantive Change:	The measure title is revised from HRS-9: Infection within 180 Days of Cardiac Implantable Electronic Device (CIED) Implantation, Replacement, or Revision to read: Infection within 180 Days of Cardiac Implantable Electronic Device (CIED) Implantation, Replacement, or Revision.
Steward:	American College of Cardiology Foundation
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We proposed to update the title to align with the measure steward changing from The Heart Rhythm Society to American College of Cardiology Foundation.
We received no comments on the substantive changes proposed for measure Q393: Infection within 180 Days of Cardiac Electronic Device (CIED) Implantation, Replacement, or Revision. Therefore, we are finalizing the changes to measure Q393 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.58. Immunizations for Adolescents

Category	Description
NQF # / eCQM NQF #:	1407
Quality #:	394
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Community/ Population Health
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of adolescents 13 years of age who had the recommended immunizations by their 13th birthday.
Substantive Change:	Updated denominator exclusions: Added exclusion for encephalopathy due to Tdap vaccine. Updated numerator to specify compliant serogroups: Serogroups A, C, W, Y
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed the denominator exclusion be expanded to include encephalopathy as an eligible reason to exclude the patient from the Tdap vaccine clinical action. Both Adacel® and Boostrix® list progressive or unstable neurologic conditions, which would include encephalopathy, as reasons to defer their administration. The numerator was updated to specify the required serogroup. According to the Centers for Disease Control, all 11 to 12 year olds should be vaccinated with a meningococcal conjugate vaccine (Serogroups A, C, W, Y), with a booster dose given at 16 years old. All teens may also be vaccinated with a serogroup B meningococcal vaccine, preferably at 16 through 18 years old. This measure is assessing a younger patient population. We agree with adding specificity to the numerator to align with the current guidelines.
We received no comments on the substantive changes proposed for measure Q394: Immunization for Adolescents. Therefore, we are finalizing the changes to measure Q394 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.59. Appropriate Follow-up Imaging for Incidental Abdominal Lesions

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	405
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	<p>Percentage of final reports for abdominal imaging studies for patients aged 18 years and older with one or more of the following noted incidentally with follow-up imaging recommended</p> <ul style="list-style-type: none"> • Liver lesion ≤ 0.5 cm. • Cystic kidney lesion < 1.0 cm. • Adrenal lesion ≤ 1.0 cm.
Substantive Change:	<p>Updated measure assessment: The measure analytic is being updated and will no longer be inverse.</p> <p>The measure description is revised to read: Percentage of final reports for abdominal imaging studies for patients aged 18 years and older with one or more of the following noted incidentally with a specific recommendation for no follow-up imaging recommended based on radiological findings:</p> <ul style="list-style-type: none"> • Cystic renal lesion that is simple appearing* (Bosniak I or II) • Adrenal lesion ≤ 1.0 cm • Adrenal lesion > 1.0 cm but ≤ 4.0 cm classified as likely benign by unenhanced CT or washout protocol CT, or MRI with in- and opposed-phase sequences or other equivalent institutional imaging protocols <p>The denominator is revised to read: All final reports for imaging studies for patients aged 18 years and older with one or more of the following incidentally noted:</p> <ul style="list-style-type: none"> • Cystic renal lesion that is simple appearing* (Bosniak I or II) • Adrenal lesion ≤ 1.0 cm • Adrenal lesion > 1.0 cm but ≤ 4.0 cm classified as likely benign by unenhanced CT or washout protocol CT, or MRI with in- and opposed-phase sequences or other equivalent institutional imaging protocols <p>Updated denominator note: For the MIPS CQMs Specifications collection type: Updated to include changes in the denominator and to include:</p> <p>*Other "simple-appearing criteria":</p> <ul style="list-style-type: none"> • Incidental renal mass on non-contrast enhanced abdominal CT that does not contain fat, is homogenous in appearance, $-10-20$ HU or ≥ 70 HU. (ACR, 2017) • Incidental renal mass on contrast-enhanced abdominal CT that does not contain fat, is homogenous in appearance, $-10-20$ HU. (ACR, 2017) <p>Radiologists may choose not to include in the radiology report benign-appearing renal cysts (Bosniak I or II or equivalent*) or cystic lesions that are too small to characterize (TSTC) but likely benign (a lesion is too small to characterize (TSTC) when the lesion size is less than twice reconstructed slice thickness (ACR, 2017).</p> <p>Updated denominator: For the MIPS CQMs Specifications collection type: Updated criteria: Incidental finding: Cystic renal lesion that is simple appearing* (Bosniak I or II), or Adrenal lesion ≤ 1.0 cm or Adrenal lesion > 1.0 cm but ≤ 4.0 cm classified as likely benign by unenhanced CT or washout protocol CT, or MRI with in- and opposed-phase sequences or other equivalent institutional imaging protocols</p> <p>Updated numerator note: For the Medicare Part B Claims Measure Specifications collection type: Updated to include changes in the denominator and to include:</p> <p>*Other "simple-appearing criteria":</p> <ul style="list-style-type: none"> • Incidental renal mass on non-contrast enhanced abdominal CT that does not contain fat, is homogenous in appearance, $-10-20$ HU or ≥ 70 HU. (ACR, 2017) • Incidental renal mass on contrast-enhanced abdominal CT that does not contain fat, is homogenous in appearance, $-10-20$ HU. (ACR, 2017) <p>Radiologists may choose not to include in the radiology report benign-appearing renal cysts (Bosniak I or II or equivalent*) or cystic lesions that are too small to characterize (TSTC) but likely benign (a lesion is too small to characterize (TSTC) when the lesion size is less than twice reconstructed slice thickness (ACR, 2017).</p> <p>Updated numerator instructions: Removed inverse measure instructions. Added: A short note can be made in the final report, such as: "No follow-up imaging is recommended as incidental lesions are likely benign " or "No follow-up imaging is recommended per consensus recommendations based on imaging criteria. Further lab evaluation could be pursued based on clinical findings"</p> <p>Updated denominator exclusion: For the Medicare Part B Claims Measure Specifications collection type: Updated to reflect the changes to what is considered an incidental lesion.</p>

Category	Description
	<p>The numerator is revised to read: Final reports for imaging studies that include a description of incidental cystic renal lesion or adrenal lesion stating follow-up imaging is not recommended.</p> <p>Updated numerator options: Updated to reflect changes to the analytics of the measure and what is considered an incidental lesion.</p> <p>Updated denominator exception: Updated to read: Documentation of medical reason(s) that follow-up imaging is indicated (e.g., patient has lymphadenopathy, signs of metastasis or an active diagnosis or history of cancer, and other medical reason(s)).</p>
Steward:	American College of Radiology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	<p>We proposed to update all aspects of this measure based upon the American College of Radiology’s Technical Expert Panel (TEP) recommendations in order to bring the measure into alignment with current guidelines. The measure analytic is also being updated so that it is no longer an inverse measure. In addition, liver lesions have been removed from the denominator and the denominator exception has been updated to reflect the intent of the measure. We agree with these changes as they will bring the measure in better alignment with current clinical guidelines.</p> <p>As finalized, the substantive changes do not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the minimum reliability requirements, a new benchmark will be generated.</p>
	<p>We proposed a substantive change to the description and denominator; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state:</p> <p>The measure description is revised to read for the MIPS CQMs Specifications and Medicare Part B claims collection type:</p> <p>Percentage of final reports for imaging studies for patients aged 18 years and older with one or more of the following noted incidentally with a specific recommendation for no follow-up imaging recommended based on radiological findings:</p> <ul style="list-style-type: none"> • Cystic renal lesion that is simple appearing* (Bosniak I or II) • Adrenal lesion less than or equal to 1.0 cm • Adrenal lesion greater than 1.0 cm but less than or equal to 4.0 cm classified as likely benign by unenhanced CT or washout protocol CT, or MRI with in- and opposed-phase sequences or other equivalent institutional imaging protocols <p>This additional refinement does not affect the intent of the proposed substantive change and aligns the language throughout the specification. Additionally, during the annual revision process the measure steward replaced all symbols (e.g., <, >, ≤) referencing lesion size with wording for clarification. This additional refinement was to ensure clarity in language so that there is consistency in the language of the specification and does not affect the intent of the proposed substantive change.</p> <p>The denominator is revised to read for the MIPS CQMs and Medicare Part B claims collection types:</p> <p>All final reports for imaging studies for patients aged 18 years and older with one or more of the following incidentally noted:</p> <ul style="list-style-type: none"> • Cystic renal lesion that is simple appearing (<i>Bosniak I or II</i>) or • Adrenal lesion less than or equal to 1.0 cm or • Adrenal lesion greater than 1.0 cm but less than or equal to 4.0 cm classified as likely benign by unenhanced CT or washout protocol CT, or MRI with in- and opposed-phase sequences or other equivalent institutional imaging protocols <p>This additional refinement does not affect the intent of the proposed substantive change and aligns the language throughout the specification. Additionally, during the annual revision process the measure steward replaced all symbols (e.g., <, >, ≤) referencing lesion size with wording for clarification. This additional refinement was to ensure clarity in language so that there is consistency in the language of the specification and does not affect the intent of the proposed substantive change.</p> <p>There were no additional refinements to substantive changes:</p> <p>Updated denominator note: For the MIPS CQMs Specifications collection type: Updated to include changes in the denominator and to include: *Other “simple-appearing criteria”:</p> <ul style="list-style-type: none"> • Incidental renal mass on non-contrast enhanced abdominal CT that does not contain fat, is homogenous in appearance, -10-20 HU or ≥70 HU. (ACR, 2017) • Incidental renal mass on contrast-enhanced abdominal CT that does not contain fat, is homogenous in appearance, -10-20 HU. (ACR, 2017) <p>Radiologists may choose not to include in the radiology report benign-appearing renal cysts (Bosniak I or II or equivalent*) or cystic lesions that are too small to characterize (TSTC) but likely benign (a lesion is too small to characterize (TSTC) when the lesion size is less than twice reconstructed slice thickness (ACR, 2017).</p> <p>Updated denominator: For the MIPS CQMs Specifications collection type: Updated criteria:</p> <p>Incidental finding: Cystic renal lesion that is simple appearing* (Bosniak I or II), or Adrenal lesion ≤ 1.0 cm or Adrenal lesion >1.0 cm but ≤ 4.0 cm classified as likely benign by unenhanced CT or washout protocol CT, or MRI with in- and opposed-phase sequences or other equivalent institutional imaging protocols</p> <p>Updated numerator note: For the Medicare Part B Claims Measure Specifications collection type: Updated to include changes in the denominator and to include:</p> <p>*Other “simple-appearing criteria”:</p>

Category	Description
	<ul style="list-style-type: none"> • Incidental renal mass on non-contrast enhanced abdominal CT that does not contain fat, is homogenous in appearance, -10-20 HU or ≥ 70 HU. (ACR, 2017) • Incidental renal mass on contrast-enhanced abdominal CT that does not contain fat, is homogenous in appearance, -10-20 HU. (ACR, 2017) <p>Radiologists may choose not to include in the radiology report benign-appearing renal cysts (Bosniak I or II or equivalent*) or cystic lesions that are too small to characterize (TSTC) but likely benign (a lesion is too small to characterize (TSTC) when the lesion size is less than twice reconstructed slice thickness (ACR, 2017).</p> <p>Updated numerator instructions: Removed inverse measure instructions. Added: A short note can be made in the final report, such as: "No follow-up imaging is recommended as incidental lesions are likely benign " or "No follow-up imaging is recommended per consensus recommendations based on imaging criteria. Further lab evaluation could be pursued based on clinical findings"</p> <p>Updated denominator exclusion: For the Medicare Part B Claims Measure Specifications collection type: Updated to reflect the changes to what is considered an incidental lesion.</p> <p>We received no comments on the substantive changes proposed for measure Q405: Appropriate Follow-Up Imaging for Incidental Abdominal Lesions. Therefore, we are finalizing the changes to measure Q405 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years with the revisions noted above.</p>

D.60. Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	415
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of emergency department visits for patients aged 18 years and older who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care clinician who have an indication for a head CT.
Substantive Change:	<p>Modified collection type: MIPS CQMs Specifications</p> <p>Update description: Percentage of emergency department visits for patients aged 18 years and older who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who have an indication for a head CT.</p> <p>Update denominator exclusions: Removed pregnancy and revised list of antiplatelets applicable to the exclusion.</p>
Steward:	American College of Emergency Physicians
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale:	<p>We proposed to remove the Medicare Part B Claims Measure Specifications collection type. The benchmarking data shows that this measure is meets the extremely topped out definition for the Medicare Part B Claims Measure Specification collection type. However, the benchmarking data continues to show a gap for the MIPS CQMs Specifications collection type, as such, the measure will be retained for this collection type.</p> <p>Additionally, we proposed the denominator exclusions be updated to remove pregnancy as an eligible exclusion due to the low count of exclusion instances, and the list of antiplatelets was revised based upon an in depth review by the quality measures committee and measure leads and now aligns more closely with the current clinical workflow. The description was updated to align with the measure language throughout the specification.</p>
We received no comments on the substantive changes proposed for measure Q415: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older. Therefore, we are finalizing the changes to measure Q415 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.61. Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 through 17 Years

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	416
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of emergency department visits for patients aged 2 through 17 years who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who are classified as low risk according to the Pediatric Emergency Care Applied Research Network (PECARN) prediction rules for traumatic brain injury.
Substantive Change:	Updated denominator exclusions: Removed thrombocytopenia.
Steward:	American College of Emergency Physicians
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale:	We proposed due to the low count of exclusion instances, to remove thrombocytopenia from the list of eligible denominator exclusions.
We received no comments on the substantive changes proposed for measure Q416: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 through 17 Years. Therefore, we are finalizing the changes to measure Q416 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.62. Osteoporosis Management in Women Who Had a Fracture

Category	Description
NQF # / eCQM NQF #:	0053
Quality #:	418
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	The percentage of women age 50-85 who suffered a fracture in the six months prior to the performance period through June 30 of the performance period and who either had a bone mineral density test or received a prescription for a drug to treat osteoporosis in the six months after the fracture.
Substantive Change:	Updated denominator exclusions: Updated: (1) Patients 66 and older who are living long term in an institution for more than 90 days during the measurement period. Added: (1) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period. (2) Patients 66 years of age and older with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period. (3) Dementia Exclusion Medications: Cholinesterase inhibitors: Donepezil, Galantamine, Rivastigimine Miscellaneous central nervous system agents: Memantine
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed and agree with the measure steward that the denominator exclusions be updated because it is unlikely patients with dementia requiring listed medications or advanced illness and frailty need some services and, in some cases, it might even be harmful for patients to receive a particular service when they should prioritize other services. We are also proposing to update the exclusion for living long term in an institution to include the criteria for more than 90 days during the measurement period. We agree with the measure steward as this would ensure the correct patient population is being removed from the eligible population and will lessen the burden to submit data for these MIPS eligible clinicians.
Comment: One commenter opposed not implementing the exclusion for adults 80 and older with frailty for measure Q418: Osteoporosis Management in Older Women Who Had a Fracture. This exclusion is critical for focusing the measures on the population most likely to benefit from the measured services. Without this exclusion, these measures will be out of alignment with what is required for reporting.	
Response: We thank the commenter for their comment, however this revision was not proposed and would be considered a substantive change. We believe introducing this concept without collaboration and clarification with the measure steward may create implementation variability for eligible clinicians. Therefore, we would encourage the commenter to work with the measure steward to incorporate this revision for future years.	
After consideration of the comments, we are finalizing the changes to measure Q418 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.63. Statin Therapy for the Prevention and Treatment of Cardiovascular Disease

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	438
CMS eCQM ID:	CMS347v3
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period: <ul style="list-style-type: none"> • Adults aged ≥ 21 years who were previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD); OR • Adults aged ≥ 21 years who have ever had a fasting or direct low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial or pure hypercholesterolemia; OR • Adults aged 40-75 years with a diagnosis of diabetes with a fasting or direct LDL-C level of 70-189 mg/dL.
Substantive Change:	Updated denominator exception: Added hospice care.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	The measure steward proposed to add patients receiving hospice care to the eligible denominator exceptions to align with the intent of the measure. We agree with the measure steward that this patient population should be removed as patients in hospice care would not benefit from this clinical service and we believe that by removing this patient population it will reduce the burden of submission for these MIPS eligible clinicians providing care to these patients.
<p>Comment: One commenter reviewed the proposed changes to the CMS Web Interface Measure Specification collection type for measure Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease and believed there are impacts to the benchmarks and a need to provide pay-for-reporting for 2019 and 2020 MIPS performance periods.</p> <p>Response: We thank the commenter for their comment. Under MIPS, there is no pay-for-reporting option. In these instances, we exclude the measure from MIPS scoring for the CMS Web Interface Measures Specification collection type in accordance with § 414.1380(b)(1)(i)(A)(2)(i) provided it met the data completeness requirement for the impacted performance period. For this substantive change, we disagree with the commenter that the measure should be excluded from MIPS scoring for the 2019 MIPS performance period as these revisions will be implemented for the 2020 MIPS performance period and do not affect the 2019 MIPS performance period. Additionally, we do not believe that the revisions necessitate an updated benchmark for the MIPS 2020 performance period as the updated denominator exception for hospice care does not significantly impact measure Q438 and allows for direct comparison of performance data from prior years.</p> <p>Comment: One commenter requested that the denominator exclusions added for measure Q113: Colorectal Cancer Screening, measure Q112: Breast Cancer Screening, measure Q001: Diabetes A1c Poor Control, and measure Q236: Hypertension, Controlling High Blood pressure, also be added to ACO-42 (measure Q438), Statin Therapy for Treatment of Cardiovascular Disease measures. The commenter also requested that the age restriction is removed from these exclusions, as many of these interventions are not clinically appropriate in those with frailty and limited life expectancy due to advanced illness, regardless of age. The commenter recommended the following exclusion: Add Frailty, Dementia, and Advanced Illness in a Long-Term Care Setting.</p> <p>Response: We thank the commenter for their comment and encourage them to reach out to the measure steward and collaborate with them regarding inclusion of these denominator exclusions.</p> <p>After consideration of the comments, we are finalizing the changes to measure Q438 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>	

D.64. Age Appropriate Screening Colonoscopy

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	439
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of patients greater than 85 years of age who received a screening colonoscopy from January 1 to December 31.
Substantive Change:	Updated denominator: Removed exclusion for modifiers 52, 53, 73, and 74.
Steward:	American Gastroenterological Association
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale:	We proposed that the denominator be expanded to include coded colonoscopy procedures that are indicated as incomplete or discontinued with modifiers 52, 53, 73, or 74 as denominator eligible. We agree that these procedures should be included in the denominator as the measure is looking to assess whether a colonoscopy was clinically indicated for the patient. Even if the colonoscopy was indicated as incomplete or discontinued, we would want that instance included in the denominator to determine if there was a valid medical reason for it to be performed.
<p>We received no comments on the substantive changes proposed for measure Q439: Age Appropriate Screening Colonoscopy. Therefore, we are finalizing the changes to measure Q439 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>	

D.65. Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	440
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of biopsies with a diagnosis of cutaneous Basal Cell Carcinoma (BCC) and Squamous Cell Carcinoma (SCC) (including in situ disease) in which the pathologist communicates results to the clinician within 7 days from the time when the tissue specimen was received by the pathologist.
Substantive Change:	<p>The measure title is revised from Basal Cell Carcinoma (BCC)/Squamous Cell Carcinoma (SCC): Biopsy Reporting Time – Pathologist to Clinician to read: Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician.</p> <p>The measure description is revised to read: Percentage of biopsies with a diagnosis of cutaneous Basal Cell Carcinoma (BCC), Squamous Cell Carcinoma (SCC) (including in situ disease), or melanoma in which the pathologist communicates results to the clinician within 7 days from the time when the tissue specimen was received by the pathologist.</p> <p>Updated denominator: Added melanoma diagnosis codes.</p> <p>Updated numerator: Included language to reflect the addition of melanoma to the denominator.</p>
Steward:	American Academy of Dermatology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed that the denominator be expanded to include melanoma diagnosis codes. The measure steward believes this will allow for a broader patient population to reflect communication and care coordination of skin cancers, not just non-melanoma skin cancer. The measure title, description, denominator, and numerator language is being updated to align with the inclusion of a melanoma diagnosis.
<p>Comment: One commenter supported the substantive changes to measure Q440: Basal Cell Carcinoma (BCC)/Squamous Cell Carcinoma (SCC): Biopsy Reporting Time- Pathologist to Clinician impacting the measure title, description, and numerator/denominator as these changes are consistent with recommendations by the measure steward.</p> <p>Another commenter supported the changes to Q440, but stated there is an error in the description. This is the measure as it was approved: "Percentage of biopsies with a diagnosis of cutaneous Basal Cell Carcinoma (BCC), Squamous Cell Carcinoma (SCC), or melanoma (including in situ disease), or melanoma in which the pathologist communicates results to the clinician within 7 days from the time when the tissue specimen was received by the pathologist."</p> <p>Response: We thank the commenters for supporting the revision to measure Q440. We agree that the description needed revised to align with the intent of the measure, and have reflected this update.</p> <p>We proposed a substantive change to the description; however, during public comment it was noticed that the title was not updated to align with revisions being made to measure. Based on this comment, there was additional language refinement to state:</p> <p>The measure description is revised to read: Percentage of biopsies with a diagnosis of cutaneous Basal Cell Carcinoma (BCC) and Squamous Cell Carcinoma (SCC), or melanoma (including in situ disease) in which the pathologist communicates results to the clinician within 7 days from the time when the tissue specimen was received by the pathologist. This additional refinement does not affect the intent of the proposed substantive change. This additional refinement was to ensure clarity and consistency within the measure and does not affect the intent of the proposed substantive change.</p> <p>There were no additional refinements to substantive changes:</p> <p>The measure title is revised from Basal Cell Carcinoma (BCC)/Squamous Cell Carcinoma (SCC): Biopsy Reporting Time – Pathologist to Clinician to read: Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician.</p> <p>Updated denominator: Added melanoma diagnosis codes.</p> <p>Updated numerator: Included language to reflect the addition of melanoma to the denominator.</p> <p>After consideration of the comments, we are finalizing the changes as indicated to measure Q440 for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>	

D.66. Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control)

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	441
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The IVD All-or-None Measure is one outcome measure (optimal control). The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include: <ul style="list-style-type: none"> • Most recent blood pressure (BP) measurement is less than or equal to 140/90 mm Hg -- AND • Most recent tobacco status is Tobacco Free -- AND • Daily Aspirin or Other Antiplatelet Unless Contraindicated -- AND • Statin Use Unless Contraindicated
Substantive Change:	Updated denominator exceptions: Added Procedure-Related BP's not taken during an outpatient visit. Examples of Procedure-related BP Locations: Same Day Surgery, Ambulatory Service Center, G.I. Lab, Dialysis, Infusion Center, Chemotherapy.
Steward:	Wisconsin Collaborative for Healthcare Quality (WCHQ)
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We proposed and agree with the WCHQ Measurement Advisory Committee that procedure-related blood pressures should be excluded from this measure. We agree with the inclusion of the denominator exception as procedure-related blood pressures can be artificially elevated. This change also aligns with other blood pressure related measure exclusions.
We received no comments on the substantive changes proposed for measure Q441: Ischemic Vascular Disease (IVD) All of None Outcome Measure (Optimal Control). Therefore, we are finalizing the changes to measure Q441 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.67. Appropriate Workup Prior to Endometrial Ablation

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	448
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of women, aged 18 years and older, who undergo endometrial sampling or hysteroscopy with biopsy and results documented before undergoing an endometrial ablation.
Substantive Change:	The measure description is revised to read: Percentage of patients, aged 18 years and older, who undergo endometrial sampling or hysteroscopy with biopsy and results are documented before undergoing an endometrial ablation. Updated denominator: Replace the word "women" with "patients". Updated numerator: Replace the word "women" with "patients".
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to update the measure description to read "percentage of patients" in order to be gender inclusive. This change will also be reflected throughout the measure for consistency.
We received no comments on the substantive changes proposed for measure Q448: Appropriate Workup Prior to Endometrial Ablation. Therefore, we are finalizing the changes to measure Q448 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.68. Trastuzumab Received By Patients With AJCC Stage I (T1c) – III And HER2 Positive Breast Cancer Receiving Adjuvant Chemotherapy

Category	Description
NQF # / eCQM NQF #:	1858
Quality #:	450
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of female patients (aged 18 years and older) with AJCC stage I (T1c) – III, human epidermal growth factor receptor 2 (HER2) positive breast cancer receiving adjuvant chemotherapy who are also receiving trastuzumab.
Substantive Change:	<p>Updated denominator definition: Use the 2018 ASCO/CAP guideline definitions to determine HER2 status-</p> <p>HER2 Positive:</p> <ul style="list-style-type: none"> • If result is IHC 3+ based on circumferential membrane staining that is complete, intense and in >10% of the invasive tumor cells • If result is ISH positive based on: <ul style="list-style-type: none"> • Single-probe average HER2 copy number ≥ 6.0 signals/cell • Dual-probe HER2/CEP17 ratio ≥ 2.0 with an average HER2 copy number ≥ 4.0 signals/cell • Dual-probe HER2/CEP17 ratio < 2.0 with an average HER2 copy number = 6.0 signals/cell <p>HER2 Equivocal:</p> <ul style="list-style-type: none"> • If result is IHC 2+ based on circumferential membrane staining that is incomplete and/or weak/moderate and within > 10% of the invasive tumor cells • If result is ISH equivocal based on: <ul style="list-style-type: none"> • Single-probe ISH average HER2 copy number ≥ 4.0 and < 6.0 signals/cell • Dual-probe HER2/CEP17 ratio < 2.0 with an average HER2 copy number ≥ 4.0 and < 6.0 signals/cell <p>HER2 Negative:</p> <ul style="list-style-type: none"> • If result is IHC 1+ based on incomplete membrane staining that is faint/barely perceptible and within > 10% of the invasive tumor cells • If result is IHC 0 based on no staining observed or membrane staining that is incomplete and is faint/barely perceptible and $\leq 10\%$ of the invasive tumor cells • ISH negative based on: <ul style="list-style-type: none"> • Single-probe average HER2 copy number < 4.0 signals/cell • Dual-probe HER2/CEP17 ratio < 2.0 with an average HER2 copy number < 4.0 signals/cell <p>HER2 Indeterminate: Report HER2 test result as indeterminate if technical issues prevent one or both tests (IHC and ISH) from being reported as positive, negative, or equivocal. Conditions may include:</p> <ul style="list-style-type: none"> • Inadequate specimen handling • Artifacts (crush or edge artifacts) that make interpretation difficult • Analytic testing failure.
Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to update the denominator definition so that it aligns with the 2018 ASCO/CAP guidelines.

Category	Description
	<p>We proposed a substantive change to the denominator definition; however, during the quality measure annual revision process with the measure steward, there was additional language refinement to state:</p> <p>Updated denominator definition: Use the 2018 ASCO/CAP guideline definitions to determine HER2 status-</p> <p>HER2 Positive:</p> <ul style="list-style-type: none"> • If result is IHC 3+ based on circumferential membrane staining that is complete, intense and in >10% of the invasive tumor cells • If result is ISH positive based on: <ul style="list-style-type: none"> • Single-probe average HER2 copy number ≥ 6.0 signals/cell • Dual-probe HER2/CEP17 ratio ≥ 2.0 with an average HER2 copy number ≥ 4.0 signals/cell • Dual-probe HER2/CEP17 ratio < 2.0 with an average HER2 copy number = 6.0 signals/cell <p>HER2 Equivocal:</p> <ul style="list-style-type: none"> • If result is IHC 2+ based on circumferential membrane staining that is incomplete and/or weak/moderate and within > 10% of the invasive tumor cells • If result is ISH equivocal based on: <ul style="list-style-type: none"> • Single-probe ISH average HER2 copy number ≥ 4.0 and < 6.0 signals/cell • Dual-probe HER2/CEP17 ratio < 2.0 with an average HER2 copy number ≥ 4.0 and < 6.0 signals/cell <p>HER2 Negative:</p> <ul style="list-style-type: none"> • If result is IHC 1+ based on incomplete membrane staining that is faint/barely perceptible and in > 10% of the invasive tumor cells • If result is IHC 0 based on no staining observed or membrane staining that is incomplete and is faint/barely perceptible and in $\leq 10\%$ of the invasive tumor cells • ISH negative based on: <ul style="list-style-type: none"> • Single-probe average HER2 copy number < 4.0 signals/cell • Dual-probe HER2/CEP17 ratio < 2.0 with an average HER2 copy number < 4.0 signals/cell <p>HER2 Indeterminate: Report HER2 test result as indeterminate if technical issues prevent one or both tests (IHC and ISH) from being reported as positive, negative, or equivocal. Conditions may include:</p> <ul style="list-style-type: none"> • Inadequate specimen handling • Artifacts (crush or edge artifacts) that make interpretation difficult • Analytic testing failure. <p>This additional refinement was to ensure clarity in language for eligible clinicians that chose to implement measure Q450 and does not affect the intent of the proposed substantive change.</p> <p>We received no comments on the substantive changes proposed for measure Q450: Trastuzumab Received By Patients With AJCC Stage I (T1c) – III And HER2 Positive Breast Cancer Receiving Adjuvant Chemotherapy. Therefore, we are finalizing the changes to measure Q450 with the exception of removing duplication of symbols (that is, update \geq to \geq) for the 2020 MIPS performance period/2022 MIPS payment year and future years with the revisions noted above.</p>

D.69. Back Pain After Lumbar Discectomy/Laminectomy

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	459
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The average change (preoperative to three months postoperative) in back pain for patients 18 years of age or older who had a lumbar discectomy / laminotomy procedure.
Substantive Change:	<p>The measure title is revised from Average Change in Back Pain Following Lumbar Discectomy / Laminotomy to read: Back Pain After Lumbar Discectomy/Laminectomy.</p> <p>The measure description is revised to read: For patients 18 years of age or older who had a lumbar discectomy/laminectomy procedure, back pain is rated by the patients as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale at three months (6 to 20 weeks) postoperatively.</p> <p>Updated measure assessment: Changed measure assessment from continuous variable to a proportional measure.</p> <p>Updated denominator: Added discectomy/ laminectomy CPT procedure codes: 63005, 63012, 63017, 63030, 63042 and 63047. Removed diagnosis of disc herniation.</p> <p>Updated denominator exclusions: Added spine related cancer, acute fracture or infection, neuromuscular, idiopathic or congenital scoliosis.</p> <p>Updated numerator: For numerator compliance patients need either a post-op pain assessment (to meet the target portion) or if post-op pain assessment is greater than 3.0, need a pre and post-op assessment to hit the change target of 5.0 points. Patients who are missing an assessment will be considered numerator non-compliant. The measure will now be target-based with performance met being back pain is less than or equal to 3.0 OR a change of 5.0 points or greater on the VAS Pain scale at 3 months postoperatively (6 to 20 weeks).</p> <p>Updated definitions: Added: (1) Back Pain Target #1 - A patient who is assessed postoperatively at three months (6 to 20 weeks) after the procedure who rates their back pain as less than or equal to 3.0. (2) Back Pain Target #2 - A patient who does not meet Back Pain Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively at three months (6 to 20 weeks) after the procedure AND the change is greater than or equal to 5.0 points.</p> <p>Updated numerator note: It is recommended that both a preoperative and postoperative be administered to the patient increasing the chances that one of the numerator targets will be met. The following situations are those in which the numerator target cannot be reached and Performance Not Met G9943 is submitted.</p> <ul style="list-style-type: none"> • VAS Pain Scale is not administered postoperatively at three months (6 to 20 weeks) • Back pain is measured using a different patient reported tool or via telephone screening • Postoperative VAS Pain Scale is administered less than six weeks or more than 20 weeks (3 month window) • Postoperative VAS value is greater than 3.0 and no valid preoperative to measure change • Preoperative VAS Pain Scale (to measure change) is administered beyond the three month timeframe prior to and including the date of procedure (e.g. 6 months before procedure)
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome

Category	Description
Rationale:	<p>We proposed that this measure assessment be updated to a target-based measure and will no longer look at the average change. Multiple aspects of the measure are being updated to reflect this change, including requiring all eligible patients undergoing the procedure to be assessed for numerator compliance. The measure steward chose the targets based on a 2016 study in the Spine Journal Fetke, TF et al "What level of pain are patients happy to live with after surgery for lumbar degenerative disorders?" This study compared the Core Outcomes Measures Index (COMI) and symptom well-being questions to two 0 to 10 graphic ratings scales for back and leg pain. Most spine interventions decrease pain but rarely do they totally eliminate it. Reporting of the percent of patients achieving a pain score equivalent to the "acceptable symptom state" may represent a more stringent target for denoting surgical success in the treatment of painful spinal disorders. For disc herniation, this is less than or equal to 2, and for other degenerative pathologies it is less than or equal to 3. The OR benchmark of change (5.0) derived from MNCM data (3 years); the average change in points of patients that did achieve the target of less than or equal to 3.0. We agree with this change as it allows for benchmarking and does not allow denominator self-selection which could skew the results, as patients who do not complete the required assessments will now be considered numerator non-compliant. The measure steward's measure development workgroup reached a consensus to expand the denominator to more broadly include all patients undergoing discectomy/laminectomy procedures by removing the diagnosis of disc herniation and adding procedure codes. As a part of this decision, it was decided to add a denominator exclusion as the measure steward believes this will help to create a more heterogeneous population. We agree with the expansion of the denominator to capture all patients undergoing discectomy/laminectomy procedures. Additionally, the definitions and the numerator note were proposed to be updated to align with the other changes and to add clarity.</p> <p>As finalized, the substantive changes do not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the minimum reliability requirements, a new benchmark will be generated.</p>
	<p>The measure steward has postponed the inclusion of spine related neuromuscular conditions in order to continue testing and implement this concept consistently through all similar measure concepts within MIPS. As such we will not be finalizing the spine related neuromuscular conditions denominator exclusion. We are finalizing the denominator exclusion to include: Spine related cancer, acute fracture or infection, idiopathic or congenital scoliosis. Additionally, we proposed a substantive change to the definitions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the Back Pain Target #2 substantive change to state: A patient who does not meet Back Pain Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively at three months (6 to 20 weeks) after the procedure AND the improvement is greater than or equal to 5.0 points. This additional refinement does not affect the intent of the proposed substantive change and aligns with the measure language.</p> <p>We received no comments on the substantive changes proposed for measure Q459: Back Pain After Lumbar Discectomy/Laminectomy. Therefore, we are finalizing the changes to measure Q459 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years with the exception of the denominator exclusion.</p>

D.70. Back Pain After Lumbar Fusion

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	460
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The average change (preoperative to one year postoperative) in back pain for patients 18 years of age or older who had a lumbar fusion procedure.
Substantive Change:	<p>The measure title is revised from Average Change in Back Pain Following Lumbar Fusion to read: Back Pain After Lumbar Fusion.</p> <p>The measure description is revised to read: For patients 18 years of age or older who had a lumbar fusion procedure, back pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain* scale at one year (9 to 15 months) postoperatively. * hereafter referred to as VAS Pain</p> <p>Updated measure assessment: Changed measure assessment from continuous variable to a proportional measure.</p> <p>Updated numerator: For numerator compliance patients need either a post-op pain assessment (to meet the target portion) or if post-op greater than 3.0, need a pre and post-op assessment to hit the change target of 5.0 points. Patients who are missing an assessment will be considered numerator non-compliant. The measure will now be target-based with performance met being back pain is less than or equal to 3.0 OR a change of 5.0 points or greater on the VAS Pain scale at one year postoperatively (9 to 15 months).</p> <p>Updated definitions: Added: (1) Back Pain Target #1 – A patient who is assessed postoperatively at one year (9 to 15 months) after the procedure rates their back pain as less than or equal to 3.0. (2) VAS Pain Target #2 – A patient who does not meet Back Pain Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively at one year (9 to 15 months) after the procedure AND the change is greater than or equal to 5.0 points.</p> <p>Updated numerator note: It is recommended that both a preoperative and postoperative be administered to the patient increasing the chances that one of the numerator targets will be met. The following situations are those in which the numerator target cannot be reached and Performance Not Met G9946 is submitted.</p> <ul style="list-style-type: none"> • VAS Pain Scale is not administered postoperatively at one year (9 to 15 months) • Back pain is measured using a different patient reported tool or via telephone screening • Postop VAS Pain Scale is administered less than nine months or more than 15 months (1 year window) • Postoperative VAS value is greater than 3.0 and no valid preop to measure change • Preoperative VAS Pain Scale (to measure change) is administered beyond the three month timeframe prior to and including the date of procedure (e.g. 6 months before procedure)
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	<p>We proposed that this measure assessment be updated to a target-based measure and will no longer look at the average change. Multiple aspects of the measure are being updated to reflect this change, including requiring all eligible patients undergoing the procedure to be assessed for numerator compliance. The measure steward base the target on a 2016 study in the Spine Journal Fetke, TF et al “What level of pain are patients happy to live with after surgery for lumbar degenerative disorders?” This study compared the Core Outcomes Measures Index (COMI) and symptom well-being questions to two 0 to 10 graphic ratings scales for back and leg pain. Most spine interventions decrease pain but rarely do they totally eliminate it. Reporting of the percent of patients achieving a pain score equivalent to the “acceptable symptom state” may represent a more stringent target for denoting surgical success in the treatment of painful spinal disorders. For disc herniation, this is ≤ 2, and for other degenerative pathologies it is less than or equal to 3. The OR benchmark of change (5.0) derived from MNCM data (3 years); the average change in points of patients that did achieve the target of less than or equal to 3.0. We agree with this change as it allows for benchmarking and does not allow denominator self-selection which could skew the results, as patients who do not complete the required assessments will now be considered numerator non-compliant. Additionally, the definitions and the numerator note were proposed to be updated to align with the other changes and to add clarity.</p> <p>As finalized, the substantive changes do not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the minimum reliability requirements, a new benchmark will be generated.</p>

Category	Description
	<p>We proposed a substantive change to the definitions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the Back Pain Target #2 substantive change to state:</p> <p>Updated definitions: Added: (2) Back Pain Target #2: A patient who does not meet Back Pain Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively at one year (9 to 15 months) after the procedure AND the improvement is greater than or equal to 5.0 points. This additional refinement was to ensure clarity in language support understanding in the guidance to implement quality measure Q460 and does not affect the intent of the proposed substantive change.</p> <p>There were no additional refinements to substantive changes: The measure title is revised from Average Change in Back Pain Following Lumbar Fusion to read: Back Pain After Lumbar Fusion.</p> <p>The measure description is revised to read: For patients 18 years of age or older who had a lumbar fusion procedure, back pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain* scale at one year (9 to 15 months) postoperatively. * hereafter referred to as VAS Pain</p> <p>Updated measure assessment: Changed measure assessment from continuous variable to a proportional measure.</p> <p>Updated numerator: For numerator compliance patients need either a post-op pain assessment (to meet the target portion) or if post-op greater than 3.0, need a pre and post-op assessment to hit the change target of 5.0 points. Patients who are missing an assessment will be considered numerator non-compliant. The measure will now be target-based with performance met being back pain is less than or equal to 3.0 OR a change of 5.0 points or greater on the VAS Pain scale at one year postoperatively (9 to 15 months).</p> <p>Updated definitions: Added: (1) Back Pain Target #1 – A patient who is assessed postoperatively at one year (9 to 15 months) after the procedure rates their back pain as less than or equal to 3.0.</p> <p>Updated numerator note: It is recommended that both a preoperative and postoperative be administered to the patient increasing the chances that one of the numerator targets will be met. The following situations are those in which the numerator target cannot be reached and Performance Not Met G9946 is submitted.</p> <ul style="list-style-type: none"> • VAS Pain Scale is not administered postoperatively at one year (9 to 15 months) • Back pain is measured using a different patient reported tool or via telephone screening • Postop VAS Pain Scale is administered less than nine months or more than 15 months (1 year window) • Postoperative VAS value is greater than 3.0 and no valid preop to measure change • Preoperative VAS Pain Scale (to measure change) is administered beyond the three month timeframe prior to and including the date of procedure (e.g. 6 months before procedure) <p>We received no comments on the substantive changes proposed for measure Q460: Back Pain After Lumbar Fusion. Therefore, we are finalizing the changes to measure Q460 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years with the revisions noted above.</p>

D.71. Leg Pain After Lumbar Discectomy/Laminectomy

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	461
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The average change (preoperative to three months postoperative) in leg pain for patients 18 years of age or older who had a lumbar discectomy/laminotomy procedure.
Substantive Change:	<p>The measure title is revised from Average Change in Leg Pain Following Lumbar Discectomy and/or Laminotomy to read: Leg Pain After Lumbar Discectomy/Laminectomy.</p> <p>The measure description is revised to read: For patients 18 years of age or older who had a lumbar discectomy/laminectomy procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the VAS Pain scale at three months (6 to 20 weeks) postoperatively.</p> <p>Updated measure assessment: Changed measure assessment from continuous variable to a proportional measure.</p> <p>Updated denominator: Added the following discectomy/ laminectomy CPT procedure codes: 63005, 63012, 63017, 63030, 63042 and 63047. Removed diagnosis of disc herniation.</p> <p>Updated denominator exclusions: Added spine related cancer, acute fracture or infection, neuromuscular, idiopathic or congenital scoliosis.</p> <p>Updated numerator: For numerator compliance patients need either a post-op pain assessment (to meet the target portion) or if post-op greater than 3.0, need a pre and post-op assessment to hit the change target of 5.0 points. Patients who are missing an assessment will be considered numerator non-compliant. The measure will now be target-based with performance met being leg pain is less than or equal to 3.0 OR a change of 5.0 points or greater on the VAS Pain scale at 3 months postoperatively (6 to 20 weeks).</p> <p>Updated definitions: Added: (1) Leg Pain Target #1 - A patient who is assessed postoperatively at three months (6 to 20 weeks) after the procedure who rates their leg pain as less than or equal to 3.0. (2) Leg Pain Target #2 - A patient who does not meet Leg Pain Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively at three months (6 to 20 weeks) after the procedure AND the change is greater than or equal to 5.0 points.</p> <p>Updated numerator note: It is recommended that both a preoperative and postoperative be administered to the patient increasing the chances that one of the numerator targets will be met. The following situations are those in which the numerator target cannot be reached and Performance Not Met G9949 is submitted.</p> <ul style="list-style-type: none"> • VAS Pain Scale is not administered postoperatively at three months (6 to 20 weeks) • Leg pain is measured using a different patient reported tool or via telephone screening • Postoperative VAS Pain Scale is administered less than six weeks or more than 20 weeks (3 month window) • Postoperative VAS value is greater than 3.0 and no valid preop to measure change • Preoperative VAS Pain Scale (to measure change) is administered beyond the three month timeframe prior to and including the date of procedure (e.g. 6 months before procedure)
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome

Category	Description
Rationale:	<p>We proposed that this measure assessment be updated to a target-based measure and will no longer look at the average change. Multiple aspects of the measure are being updated to reflect this change, including requiring all eligible patients undergoing the procedure to be assessed for numerator compliance. The measure steward based the target on a 2016 study in the Spine Journal Fetke, TF et al "What level of pain are patients happy to live with after surgery for lumbar degenerative disorders?" This study compared the Core Outcomes Measures Index (COMI) and symptom well-being questions to two 0 to 10 graphic ratings scales for back and leg pain. Most spine interventions decrease pain but rarely do they totally eliminate it. Reporting of the percent of patients achieving a pain score equivalent to the "acceptable symptom state" may represent a more stringent target for denoting surgical success in the treatment of painful spinal disorders. For disc herniation, this is less than or equal to 2, and for other degenerative pathologies it is less than or equal to 3. The OR benchmark of change (5.0) derived from MNM data (3 years); the average change in points of patients that did achieve the target of less than or equal to 3.0. We agree with this change as it allows for benchmarking and does not allow denominator self-selection which could skew the results, as patients who do not complete the required assessments will now be considered numerator non-compliant. The measure steward's measure development workgroup reached a consensus to expand the denominator to more broadly include all patients undergoing discectomy/laminectomy procedures by removing the diagnosis of disc herniation and adding procedure codes. As a part of this decision, it was decided to add a denominator exclusion as the measure steward believes this will help to create a more heterogeneous population. We agree with the expansion of the denominator to capture all patients undergoing discectomy/laminectomy procedures. Additionally, the definitions and the numerator note were proposed to be updated to align with the other changes and to add clarity.</p> <p>As finalized, the substantive changes do not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the minimum reliability requirements, a new benchmark will be generated.</p>
	<p>The measure steward has postponed the inclusion of spine related neuromuscular conditions in order to continue testing and implement this concept consistently through all similar measure concepts within MIPS. As such, we will not be finalizing the spine related neuromuscular conditions denominator exclusion. We are finalizing the denominator exclusion to include: Spine related cancer, acute fracture or infection, idiopathic or congenital scoliosis. Additionally, we proposed a substantive change to the definitions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the Leg Pain Target #2 substantive change to state: A patient who does not meet Leg Pain Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively at three months (6 to 20 weeks) after the procedure AND the improvement is greater than or equal to 5.0 points. This additional refinement does not affect the intent of the proposed substantive change and aligns with the measure language.</p> <p>We received no comments on the substantive changes proposed for measure Q461: Leg Pain After Lumbar Discectomy/Laminectomy. Therefore, we are finalizing the changes to measure Q461 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years with the exception of the denominator exclusion.</p>

D.72. Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	462
CMS eCQM ID:	CMS645v3
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Patients determined as having prostate cancer who are currently starting or undergoing androgen deprivation therapy (ADT), for an anticipated period of 12 months or greater (indicated by HCPCS code) and who receive an initial bone density evaluation. The bone density evaluation must be prior to the start of ADT or within 3 months of the start of ADT.
Substantive Change:	The measure description is revised to read: Patients determined as having prostate cancer who are currently starting or undergoing androgen deprivation therapy (ADT), for an anticipated period of 12 months or greater and who receive an initial bone density evaluation. The bone density evaluation must be prior to the start of ADT or within 3 months of the start of ADT.
Steward:	Oregon Urology Institute
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the measure description to align with the removal of the custom HCPCS, J code J1950, which previously denoted the practitioner's intent of androgen deprivation therapy (ADT) for a period of 12 months or greater. The intent of the measure remains intact, but no longer requires the HCPCS to identify the intended patient population.
	We received no comments on the substantive changes proposed for measure Q462: Bone Density for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy. Therefore, we are finalizing the changes to measure Q462 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years

D.73. Functional Status After Lumbar Fusion

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	469
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The average change (preoperative to postoperative) in functional status using the Oswestry Disability Index (ODI version 2.1a) for patients 18 years of age and older who had a lumbar fusion procedure.
Substantive Change:	<p>The measure title is revised from Average Change in Functional Status Following Lumbar Fusion Surgery to read: Functional Status After Lumbar Fusion.</p> <p>The measure description is revised to read: For patients 18 years of age and older who had a lumbar fusion procedure, functional status is rated by the patient as less than or equal to 22 OR a change of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a)* at one year (9 to 15 months) postoperatively.</p> <p>Updated measure assessment: Changed measure assessment from continuous variable to a proportional measure.</p> <p>Updated numerator: For numerator compliance patients need either a post-op pain assessment (to meet the target portion) or if post-op greater than 22, need a pre and post-op assessment to hit the change target of 30 points. Patients who are missing an assessment will be considered numerator non-compliant. The measure will now be target-based with performance met being functional status is less than or equal to 22 OR a change of 30 points or greater on the Oswestry Disability Index (ODI) at one year postoperatively (9 to 15 months).</p> <p>Added numerator definition: Functional Status Target #1 - A patient who is assessed postoperatively at one year (9 to 15 months) after the procedure rates their functional status as less than or equal to 22. Functional Status Target #2 - A patient who does not meet Functional Status Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively at one year (9 to 15 months) after the procedure AND the change is greater than or equal to 30 points.</p> <p>Updated numerator note: It is recommended that both a preoperative and postoperative tool be administered to the patient to increase the chance that one of the numerator targets will be met. The following situations are those in which the numerator target cannot be reached and Performance Not Met M1043 is submitted.</p> <ul style="list-style-type: none"> • ODI is not administered postoperatively at one year (9 to 15 months) • Functional status is measured using a different patient reported functional status tool or ODI version • Postoperative ODI is administered less than 9 months or greater than 15 months (1 year window) • Postoperative ODI is greater than 22 and no valid preoperative ODI to measure change • Preoperative ODI (to measure change) is administered beyond the three month timeframe prior to and including the date of procedure (e.g. 6 months before procedure.) <p>NQF endorsement removed until the measure can be evaluated with the new analytics.</p>
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	<p>We proposed that this measure assessment be updated to a target-based measure and will no longer look at the average change. Multiple aspects of the measure are being updated to reflect this change, including requiring all eligible patients undergoing the procedure to be assessed for numerator compliance. The measure steward based the target on a study Determination of the Oswestry Disability Index score equivalent to a "satisfactory symptom state" in patients undergoing surgery for degenerative disorders of the lumbar spine-a Spine Tango registry-based study. vanHooff, ML et al Spine J. 2016 Oct;16 (10):1221-1230. Patient Acceptable Symptom State (PASS), the highest level of symptom beyond which patients consider themselves well. PASS was compared to post-op ODI to determine an equivalent ODI threshold. ODI score less than or equal to 22 indicates the achievement of an acceptable symptom state and can be used as a criterion for treatment success. [AUC]: 0.89 [sensitivity: 78.3%, specificity: 82.1%] for 1 year follow-up]. The OR benchmark of change (30) derived from MNMCM data (3 years); the average change in points of patients that did achieve the target of less than or equal to 22. We agree with this change as it allows for benchmarking and does not allow denominator self-selection which could skew the results, as patients who do not complete the required assessments will now be considered numerator non-compliant. Additionally, the definitions and the numerator note were proposed to be updated to align with the other changes and to add clarity.</p> <p>As finalized, the substantive changes do not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the minimum reliability requirements, a new benchmark will be generated.</p>
We received no comments on the substantive changes proposed for measure 469: Functional Status After Lumbar Fusion. Therefore, we are finalizing the changes to measure Q469 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years	

D.74. Functional Status After Primary Total Knee Replacement

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	470
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The average change (preoperative to postoperative) in functional status using the Oxford Knee Score (OKS) for patients age 18 and older who had a primary total knee replacement
Substantive Change:	<p>The measure title is revised to read: Functional Status After Primary Total Knee Replacement.</p> <p>The measure description is revised: For patients age 18 and older who had a primary total knee replacement procedure, functional status is rated by the patient as greater than or equal to 37 on the Oxford Knee Score (OKS) at one year (9 to 15 months) postoperatively.</p> <p>Updated measure assessment: Changed measure assessment from continuous variable to a proportional measure.</p> <p>Updated numerator: For numerator compliance patients need a post-op OKS assessment. The measure will now be target-based with performance met being functional status is greater than or equal to 37 on the Oxford Knee Score (OKS) at one year postoperatively (9 to 15 months). Patients who are missing an assessment will be considered numerator non-compliant.</p> <p>Added numerator definition: OKS Target - A patient who is assessed postoperatively at one year (9 to 15 months) after the procedure rates their functional status score as greater than or equal to 37.</p> <p>Updated numerator note: The following situations are those in which the numerator targets cannot be reached and Performance Not Met (M1046) is submitted:</p> <ul style="list-style-type: none"> • Oxford Knee Score (OKS) is not administered postoperatively at one year (9 to 15 Months) • Functional status is measured using a different patient-reported functional status tool or Oxford Knee Score (OKS) version • Postoperative Oxford Knee Score (OKS) is administered less than 9 Months or greater than 15 Months • Postoperative Oxford Knee Score (OKS) score is less than 37 <p>NQF endorsement removed until the measure can be evaluated with the new analytics.</p>
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	<p>We proposed that this measure assessment will be updated to a target-based measure and will no longer look at the average change. Multiple aspects of the measure are being updated to reflect this change, including requiring all eligible patients undergoing the procedure to be assessed for numerator compliance. The measure steward derived the target from a study “Patient acceptable symptom states after total hip or knee replacement at mid-term follow-up” [Kuerentjes JC, Van Tol FR Bone Joint Res 2014; 3:7–13]. Receiver operating characteristic (ROC) curves identified a PASS threshold of 42 for the OHS after THR and 37 for the OKS after TKR. THR patients with an OHS greater than or equal to 42 and TKR patients with an OKS greater than or equal to 37 had a higher NRS for satisfaction and a greater likelihood of being willing to undergo surgery again. The Patient Acceptable Symptom State (PASS), the highest level of symptom beyond which patients consider themselves well. PASS was compared to post-op OKS to determine an equivalent OKS threshold. OKS score greater than or equal to 37 indicates the achievement of an acceptable symptom state and correlates with a higher numeric rating scale for satisfaction [ROC curves PASS threshold of 37 with sensitivity of 76.3% and specificity of 76.5%]. We agree with this change as it allows for benchmarking and does not allow denominator self-selection which could skew the results, as patients who do not complete the required assessments will now be considered numerator non-compliant. Additionally, the definitions and the numerator note were proposed to be updated to align with the other changes and to add clarity.</p> <p>As finalized, the substantive changes do not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the minimum reliability requirements, a new benchmark will be generated.</p>
We received no comments on the substantive changes proposed for measure Q470: Functional Status After Primary Total Knee Replacement. Therefore, we are finalizing the changes to measure Q470 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years	

D.75. Functional Status After Lumbar Discectomy/Laminectomy

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	471
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The average change (preoperative to postoperative) in functional status using the Oswestry Disability Index (ODI version 2.1a) for patients age 18 and older who had lumbar discectomy/laminotomy procedure
Substantive Change:	<p>The measure title is revised from Average Change in Functional Status Following Lumbar Discectomy/Laminotomy Surgery to read: Functional Status After Lumbar Discectomy/Laminectomy.</p> <p>The measure description is revised to read: For patients age 18 and older who had lumbar discectomy/laminectomy procedure, functional status is rated by the patient as less than or equal to 22 OR a change of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) * at three months (6 to 20 weeks) postoperatively.</p> <p>Updated measure assessment: Changed measure assessment from continuous variable to a proportional measure.</p> <p>Updated denominator: Added the following discectomy/ laminectomy CPT procedure codes: 63005, 63012, 63017, 63030, 63042 and 63047.</p> <p>Update denominator exclusions: Added spine related cancer, acute fracture or infection, neuromuscular, idiopathic or congenital scoliosis. Removed diagnosis of disc herniation.</p> <p>Updated numerator: For numerator compliance patients need either a post-op functional assessment (to meet the target portion) or if post-op greater than 22, need a pre and post-op assessment to hit the change target of 30 points. Patients who are missing an assessment will be considered numerator non-compliant. The measure will now be target-based with performance met being functional status is less than or equal to 22 OR a change of 30 points or greater on the Oswestry Disability Index (ODI) at 3 months postoperatively (6 to 20 weeks).</p> <p>Added numerator definition: Functional Status Target #1 - A patient who is assessed postoperatively at three months (6 to 20 weeks) after the procedure rates their functional status as less than or equal to 22. Functional Status Target #2 - A patient who does not meet Functional Status Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively at three months (6 to 20 weeks) after the procedure AND the change is greater than or equal to 30 points.</p> <p>Updated numerator note: It is recommended that both a preoperative and postoperative be administered to the patient increasing chances that one of the numerator targets will be met. The following situations are those in which the numerator target cannot be reached and Performance Not Met M1049 is submitted.</p> <ul style="list-style-type: none"> • ODI is not administered postoperatively at three months (6 to 20 weeks) • Functional status is measured using a different patient reported functional status tool or ODI version • Postoperative ODI is administered less than 6 weeks or greater than 20 weeks (3 month window) • Postoperative ODI is greater than 22 and no valid preoperative ODI to measure change <p>Preoperative ODI (to measure change) is administered beyond the three month timeframe prior to and including the date of procedure (e.g. 6 months before procedure)</p>

D.76. Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	472
CMS eCQM ID:	CMS249v2
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of female patients 50 to 64 years of age without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period.

Category	Description
Substantive Change:	<p>Updated guidance: There are two ways that a patient can be excluded from the measure: 1. The patient has a specific number of "combination" risk factors (the number of risk factors varies by age). 2. The patient has one or more of the "independent" risk factors, including a 10-year probability of major osteoporotic fracture of 8.4 percent or higher as determined by the FRAX.</p> <p>Denominator exclusions statement: Exclude patients with a combination of risk factors (as determined by age) or one of the independent risk factors Ages: 50-54 (>=4 combination risk factors) or 1 independent risk factor Ages: 55-59 (>=3 combination risk factors) or 1 independent risk factor Ages: 60-64 (>=2 combination risk factors) or 1 independent risk factor</p> <p>COMBINATION RISK FACTORS [The following risk factors are all combination risk factors; they are grouped by when they occur in relation to the measurement period]: The following risk factors may occur any time in the patient's history but must be active during the measurement period: White (race) BMI <= 20 kg/m2 (must be the first BMI of the measurement period) Smoker (current during the measurement period) Alcohol consumption (> two units per day (one unit is 12 oz. of beer, 4 oz. of wine, or 1 oz. of liquor)) The following risk factor may occur any time in the patient's history and must not start during the measurement period: Osteopenia The following risk factors may occur at any time in the patient's history or during the measurement period: Rheumatoid arthritis Hyperthyroidism Malabsorption Syndromes: celiac disease, inflammatory bowel disease, ulcerative colitis, Crohn's disease, cystic fibrosis, malabsorption Chronic liver disease Chronic malnutrition The following risk factors may occur any time in the patient's history and do not need to be active at the start of the measurement period: Documentation of history of hip fracture in parent Osteoporotic fracture Glucocorticoids (>= 5 mg/per day) [cumulative medication duration >= 90 days]</p> <p>INDEPENDENT RISK FACTORS (The following risk factors are all independent risk factors; they are grouped by when they occur in relation to the measurement period):</p> <p>The following risk factors may occur at any time in the patient's history and must not start during the measurement period: Osteoporosis</p> <p>The following risk factors may occur at any time in the patient's history prior to the start of the measurement period, but do not need to be active during the measurement period: Gastric bypass FRAX[R] ten-year probability of all major osteoporosis related fracture >= 8.4 percent Aromatase inhibitors</p> <p>The following risk factors may occur at any time in the patient's history or during the measurement period: Type I Diabetes End stage renal disease Osteogenesis imperfecta Ankylosing spondylitis Psoriatic arthritis Ehlers-Danlos syndrome Cushing's syndrome Hyperparathyroidism Marfan syndrome Lupus</p> <p>Updated denominator exclusions: Changed FRAX[R] ten-year probability of all major osteoporosis related fracture result from 9.3% to 8.4%.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process

Category	Description
Rationale:	We proposed that the denominator exclusion for the Fracture Risk Assessment Tool FRAX® ten-year probability of all major osteoporosis related fracture result be changed from 9.3% to 8.4% to align with the US Preventive Services Task Force (USPSTF) recommendations. We agree with this change as it keeps the measure in alignment with the current clinical guidelines. The guidance is being updated for better alignment with the measure and to align with the updated denominator exclusion.
We received no comments on the substantive changes proposed for measure Q472: Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture. Therefore, we are finalizing the changes to measure Q472 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.77. Leg Pain After Lumbar Fusion

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	473
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The average change (preoperative to one year postoperative) in leg pain for patients 18 years of age or older who had a lumbar fusion procedure
Substantive Change:	<p>The measure title is revised from Average Change in Leg Pain Following Lumbar Fusion Surgery to read: Leg Pain After Lumbar Fusion.</p> <p>The measure description is revised to read: For patients 18 years of age or older who had a lumbar fusion procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain* scale at one year (9 to 15 months) postoperatively.</p> <p>Updated measure assessment: Changed measure assessment from continuous variable to a proportional measure.</p> <p>Updated numerator: For numerator compliance Patients need either a post-op pain assessment (to meet the target portion) or if post-op greater than 3.0, need a pre and post-op assessment to hit the change target of 5.0 points. Patients who are missing an assessment will be considered numerator non-compliant.</p> <p>The measure will now be target-based with performance met being leg pain is less than or equal to 3.0 OR an improvement of 5.0 points or greater on the VAS Pain scale at one year postoperatively (9 to 15 months).</p>
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	<p>We proposed that this measure assessment be updated to a target-based measure and will no longer look at the average change. Multiple aspects of the measure are being updated to reflect this change, including requiring all eligible patients undergoing the procedure to be assessed for numerator compliance. The measure steward based the target score on a 2016 study in the Spine Journal Fetke, TF et al "What level of pain are patients happy to live with after surgery for lumbar degenerative disorders?" This study compared the Core Outcomes Measures Index (COMI) and symptom well-being questions to two 0 to 10 graphic ratings scales for back and leg pain. Most spine interventions decrease pain but rarely do they totally eliminate it. Reporting of the percent of patients achieving a pain score equivalent to the "acceptable symptom state" may represent a more stringent target for denoting surgical success in the treatment of painful spinal disorders. For disc herniation, this is less than or equal to 2, and for other degenerative pathologies it is less than or equal to 3. The OR benchmark of improvement (5.0) derived from MNCM data (3 years); the average change in points of patients that did achieve the target of less than or equal to 3.0. We agree with this change as it allows for benchmarking and does not allow denominator self-selection which could skew the results, as patients who do not complete the required assessments will now be considered numerator non-compliant.</p> <p>As finalized, the substantive changes do not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the minimum reliability requirements, a new benchmark will be generated.</p>

Category	Description
	<p>Comment: One commenter requested that omitted text for measure Q473: Average Change in Leg Pain Following Lumbar Fusion Surgery be added to this measure. This text was included in the final measure specification but omitted from the 2020 PFS proposed rule (84 FR 41272). The substantive change in the proposed rule is correct with the additional language below to be added.</p> <p>Updated definitions: Added: (1) Leg Pain Target #1 A patient who is assessed postoperatively at one year (9 to 15 months) after the procedure rates their leg pain as less than or equal to 3.0. (2) Leg Pain Target #2 A patient who does not meet Leg Pain Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively at one year (9 to 15 months) after the procedure AND the change is greater than or equal to 5.0 points.</p> <p>Updated numerator note: It is recommended that both a preoperative and postoperative be administered to the patient increasing the chances that one of the numerator targets will be met. The following situations are those in which the numerator target cannot be reached and Performance Not Met M1052 is submitted.</p> <p>VAS Pain Scale is not administered postoperatively at one year (9 to 15 months) Leg pain is measured using a different patient reported tool or via telephone screening Postop VAS Pain Scale is administered less than nine months or more than 15 months (1 year window) Postoperative VAS value is greater than 3.0 and no valid preop to measure change Preoperative VAS Pain Scale (to measure change) is administered beyond the three month timeframe prior to and including the date of procedure (e.g. 6 months before procedure)</p> <p>Response: We thank the commenter for their consideration and agree this additional detail will aid in the clarification of implementation. We do encourage measure stewards to submit these substantive changes during the Call for Substantive Changes, which typically occurs at the beginning of each year.</p> <p>We proposed a substantive change to the Description; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state:</p> <p>The measure description is revised to read: For patients 18 years of age or older who had a lumbar fusion procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain* scale at one year (9 to 15 months) postoperatively. * hereafter referred to as VAS Pain.</p> <p>This additional refinement was to ensure clarity in language so that the quality action is defined for measure Q473 and does not affect the intent of the proposed substantive change.</p> <p>There were no additional refinements to substantive changes: The measure title is revised from Average Change in Leg Pain Following Lumbar Fusion Surgery to read: Leg Pain After Lumbar Fusion. Updated measure assessment: Changed measure assessment from continuous variable to a proportional measure. Updated numerator: For numerator compliance Patients need either a post-op pain assessment (to meet the target portion) or if post-op greater than 3.0, need a pre and post-op assessment to hit the change target of 5.0 points. Patients who are missing an assessment will be considered numerator non-compliant. The measure will now be target-based with performance met being leg pain is less than or equal to 3.0 OR an improvement of 5.0 points or greater on the VAS Pain scale at one year postoperatively (9 to 15 months).</p> <p>After consideration of the comments, we are finalizing the changes to measure Q473 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years with the revisions noted above.</p>

D.78. HIV Screening

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	475
CMS eCQM ID:	CMS349v2
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 15-65 years of age who have been tested for HIV within that age range.
Substantive Change:	The measure description is revised to read: Percentage of patients aged 15-65 at the start of the measurement period who were between 15-65 years old when tested for HIV. The numerator is revised to read: Patients with documentation of an HIV test performed on or after their 15th birthday and before their 66th birthday.
Steward:	Centers for Disease Control and Prevention
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to update the measure description to better align the measure specification. We agree with this update as it clarifies the intent of the measure. We proposed that the numerator be revised to add clarity and to align the wording with logic used. Neither the intent of the measure nor the numerator action will be changed.
We received no comments on the substantive changes proposed for measure Q475: HIV Screening. Therefore, we are finalizing the changes to measure Q475 as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.	

D.79. Dementia: Functional Status Assessment

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	282
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients with dementia for whom an assessment of functional status was performed at least once in the last 12 months.
Substantive Change:	Updated denominator: Added physical therapy MIPS eligible clinician type.
Steward:	American Psychiatric Association and American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	Based upon requests from measure steward physical therapy evaluation codes were proposed to be add to the denominator eligible encounters to allow for this measure to be used in an additional setting. We agree that this is a clinically relevant measure to the physical therapy setting.
After consideration of the comments received on this measure under Table C, we are finalizing the changes to measure Q282 as proposed (see 84 FR 41171) for the 2019 MIPS performance period/2021 MIPS payment year and future years because we did not finalize removal of this measure.	

D.80. Dementia: Education and Support of Caregivers for Patients with Dementia

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	288
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients with dementia whose caregiver(s) were provided with education on dementia disease management and health behavior changes AND were referred to additional resources for support in the last 12 months.
Substantive Change:	Updated denominator: Added physical therapy MIPS eligible clinician type.
Steward:	American Psychiatric Association and American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	Based upon requests from measure steward physical therapy evaluation codes were proposed to be add to the denominator eligible encounters to allow for this measure to be used in an additional setting. We agree that this is a clinically relevant measure to the physical therapy setting.
After consideration of the comments received on this measure under Table C, we are finalizing the changes to measure Q288 as proposed (see 84 FR 41171) for the 2019 MIPS performance period/2021 MIPS payment year and future years because we did not finalize removal of this measure.	

D.81. Preventive Care and Screening: Influenza Immunization

Category	Description
NQF # / eCQM NQF #:	0041 / 0041e
Quality #:	110
CMS eCQM ID:	CMS147v9
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.
Substantive Change:	Updated numerator instructions: Due to the changing nature of the CDC/ACIP recommendations regarding the live attenuated influenza vaccine (LAIV) for a particular flu season, this measure will not include the administration of this specific formulation of the flu vaccination. Given the variance of the timeframes for the annual update cycles, program implementation, and publication of revised recommendations from the CDC/ACIP, it has been determined that the coding for this measure will specifically exclude this formulation, so as not to inappropriately include this form of the vaccine for flu seasons when CDC/ACIP explicitly advise against it. However, it is recommended that all eligible professionals or eligible clinicians review the guidelines for each flu season to determine appropriateness of the LAIV and other formulations of the flu vaccine. If the LAIV is recommended for administration for a particular flu season, an eligible professional or clinician may consider one of the following options: 1) satisfy the numerator by reporting previous receipt, 2) report a denominator exception, either as a patient reason (e.g., for patient preference) or a system reason (e.g., the institution only carries LAIV).
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	No
Measure Type:	Process
Rationale:	We agree with the update to the numerator instructions as it would allow for shared decision making between the patient and the eligible clinician, as well as align with the current performance period's CDC/ACIP guidelines without negatively affecting clinicians providing LAIV.
After consideration of the comments received on this measure under Table C, we are finalizing the changes to measure Q110 as proposed (see 84 FR 41158) for the 2019 MIPS performance period/2021 MIPS payment year and future years because we did not finalize removal of this measure.	

D.82. Pneumococcal Vaccination Status for Older Adults

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	111
CMS eCQM ID:	CMS127v8
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine.
Substantive Change:	Updated denominator: Added the skilled nursing facility and domiciliary settings.
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed that the denominator coding be expanded to include the skilled nursing facility and domiciliary settings as applicable settings. We agree with the measure steward's decision to expand this measure to include these MIPS eligible clinicians as it is clinically relevant to this setting.
After consideration of the comments received on this measure under Table C, we are finalizing the changes to measure Q111 as proposed (see 84 FR 41159) for the 2019 MIPS performance period/2021 MIPS payment year and future years because we did not finalize removal of this measure.	

D.83. Rheumatoid Arthritis (RA): Functional Status Assessment

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	178
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) for whom a functional status assessment was performed at least once within 12 months.
Substantive Change:	<p>Numerator statement revised to read: Patients for whom a standardized functional status assessment using an ACR-preferred, patient-reported functional status assessment tool was performed at least once within 12 months.</p> <p>Updated definition: Functional Status Assessment: This measure assesses if physicians are using a standardized descriptive or numeric scale, standardized questionnaire, or notation of tool to assessment of the impact of RA on patient activities of daily living. Examples of tools used to assess functional status include but are not limited to: Health Assessment Questionnaire (HAQ), Modified HAQ, HAQ-2, and American College of Rheumatology's Classification of Functional Status in Rheumatoid Arthritis. Functional status should be assessed using a measurement tool assigned preferred status by the ACR. The instruments listed are the ACR-preferred tools that fulfill the measure requirements: PROMIS Physical Function 10-item (PROMIS PF10a), Health Assessment Questionnaire-II (HAQ-II), and Multi-Dimensional Health Assessment Questionnaire (MD-HAQ).</p>
Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>The measure steward proposed to update the measure to require the use of ACR-preferred functional status assessment tools for numerator compliance. According to the ACR's RA treatment guidelines, functional status assessment using a standardized, validated measure should be performed routinely for RA patients, at least once per year, but more frequently if disease is active. We agree that it is important to utilize the proper assessment to ensure that the patient is being accurately assessed which will aid in clinical decisions regarding ongoing care.</p>
Comment:	<p>One commenter stated that the requested changes to be made to measure Q178 are incorrectly captured. It appears the language in the change request document was copied and pasted without regard to formatting, which provided a visualization of deletions and additions. The requested changes should appear as follows:</p> <ul style="list-style-type: none"> o New numerator statement: Patients for whom a functional status assessment using an ACR-preferred, patient-reported functional status assessment tool was performed at least once within 12 months o New numerator definition: Functional Status Assessment – This measure assesses if physicians are using a standardized tool to assess the impact of RA on patient activities of daily living. Functional status should be assessed using a measurement tool assigned preferred status by the ACR. The instruments listed are the ACR-preferred tools that fulfill the measure requirements: <ul style="list-style-type: none"> § PROMIS Physical Function 10-item (PROMIS PF10a) § Health Assessment Questionnaire-II (HAQ-II) § Multi-Dimensional Health Assessment Questionnaire (MD-HAQ) <p>Response: We appreciate the comment clarifying the substantive changes for measure Q178 and agree that these refinements to language add clarity.</p> <p>We proposed a substantive change to the numerator statement and definition; however, during the quality measure annual revision process with the measure steward, there was additional language refinement to state:</p> <p>Numerator statement is revised to read: Patients for whom a functional status assessment using an ACR-preferred, patient-reported functional status assessment tool was performed at least once within 12 months.</p> <p>Updated definition: Functional Status Assessment – This measure assesses if physicians are using a standardized tool to assess the impact of RA on patient activities of daily living. Functional status should be assessed using a measurement tool assigned preferred status by the ACR. The instruments listed are the ACR-preferred tools that fulfill the measure requirements:</p> <ul style="list-style-type: none"> - PROMIS Physical Function 10-item (PROMIS PF10a) - Health Assessment Questionnaire-II (HAQ-II) - Multi-Dimensional Health Assessment Questionnaire (MD-HAQ) <p>These additional refinements were to ensure clarity in numerator assessment and how numerator compliance can be met for measure Q178 and does not affect the intent of the proposed substantive change.</p> <p>After consideration of the comments received on this measure under Table C, we are finalizing the changes to measure Q178 as proposed (see 84 FR 41164) for the 2019 MIPS performance period/2021 MIPS payment year and future years because we did not finalize removal of this measure.</p>

TABLE Group DD: Previously Finalized Quality Measures with Substantive Changes Finalized for the 2021 MIPS Payment Year and Future Years

NOTE: Electronic Clinical Quality Measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table DD as follows: NQF # / eCQM NQF #.

DD.1. Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention

Category	Description
NQF # / ECQM NQF #:	0028 / 0028e
Quality #:	226
CMS eCQM ID:	CMS138v8
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	<p>Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received tobacco cessation intervention if identified as a tobacco user</p> <p>a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months.</p> <p>b. Percentage of patients aged 18 years and older who were screened for tobacco use and identified as a tobacco user who received tobacco cessation intervention.</p> <p>c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received tobacco cessation intervention if identified as a tobacco user.</p>
Substantive Change:	Updated numerator guidance: for the 2019 performance period: For the CMS Web Interface Measure Specification collection type: Removed “and the cessation intervention must occur during or after the most recent tobacco user status is documented” language from the guidance.
Steward:	Physician Consortium for Performance Improvement Foundation (PCPI®)
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed to update the numerator guidance in the CMS Web Interface Measure Specifications collection type for the 2019 performance period to remove the guidance given regarding the timing of the tobacco cessation intervention as this does not align with the intent of the measure. The refinements are in alignment with the clinical guidelines and will decrease burden for eligible clinicians performing tobacco screening and tobacco cessation intervention. The timing refinement proposed would maintain the balance of clinical guideline and measure alignment and support our effort to reduce burden for measure submission. Additionally, this timing refinement would allow the clinician to create personalized, patient-centered care while still maintaining the clinical integrity of the measure and clinical guidelines. To the extent this proposed change constituted a change in methodology after the start of the 2019 MIPS performance period, we stated that we believe that consistent with section 1871(e)(1)(A)(ii) of the Social Security Act, it would be contrary to the public interest not to modify the measure because the current guidance is inconsistent with the intent of the CMS Web Interface version of this measure and unduly burdensome for clinicians. The proposal was to update the CMS Web Interface Measure Specifications collection type numerator guidance previously stated in the current posted 2019 measure specification for PREV-10 (NQF #0028): Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention, available at https://qpp.cms.gov/about/resource-library, in response to extensive stakeholder feedback regarding the timeframe during which the tobacco cessation intervention must occur. Specifically, stakeholders expressed concern that this additional language would not be comparable to the historic benchmark as it changed how the quality action of tobacco cessation intervention was abstracted in terms of numerator compliance. Additionally, stakeholders voiced concern regarding how this change would fit into the current clinical workflow as patients are asked about tobacco use on most if not all encounters, but clinicians do not feel it is necessary to provide tobacco cessation intervention at all encounters especially if it was already completed earlier in the year. Based on this feedback and our review, we explained that we had determined that the previously stated guidance is inconsistent with the intent of the CMS Web Interface Measure Specifications collection type version of this measure and unduly burdensome for clinicians. In response to our determination and stakeholder feedback, we proposed to update the CMS Web Interface Measure Specifications collection type numerator guidance to clarify that screening for tobacco use and tobacco cessation intervention do not have to occur on the same encounter, but must occur during the 24-month look-back period. We agree this proposal would maintain clinical intent, provide clarity, reduce clinician burden, and allow for personalized care.</p>

Category	Description
	<p>Comment: Two commenters supported the substantive change to the Web Interface for measure Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention as corrected for the 2019 Performance Period. However, one commenter stated that if CMS is not fully confident that the logic and data collected in previous years for this metric matches the proposed logic and data to be collected, this metric should be Reporting Only in 2019, or at the very least, have the decile benchmarks revert back to 30, 40, 50, 60, 70, 80, and 90.</p>
	<p>With respect to ACO-17, Smoking Cessation (MIPS measure Q226), one commenter applauded CMS for making this measure pay-for-reporting in 2018 as it had requested. The commenter reiterated that this measure should be made pay-for-reporting in 2019 as well given the impact of measure specification changes and resulting effect on the benchmarks for this measure. The commenter urged CMS to finalize changes to the measure specification numerator requirements which better reflect clinical guidelines.</p>
	<p>Another commenter indicated that the revisions to measure Q226 were proposed to take effect starting in the 2019 reporting year for the CMS Web Interface Specifications collection type but apply starting in the 2020 reporting year for the eCQM Specifications collection type. Because of this difference, healthcare organizations that report using both collection types, such as organizations where some providers report as part of an APM and other providers report as individual eligible clinicians, would need to monitor and track two different versions of the measure for the 2019 reporting year. The commenter requested that the measure modifications for all collection types take effect starting in 2020 to improve measure alignment.</p>
	<p>Another commenter concurred with CMS that the numerator definition needs to be updated to “clarify that screening for tobacco use and tobacco cessation intervention do not have to occur in the same encounter, but must occur during the 24-month look-back period”, but the denominator population (population ‘2’) CMS uses for this measure differs widely from the benchmarked measure definition (the total population). Specifically, the benchmarked denominator includes patients who were not tobacco users, while the new measure (with updated numerator specifications) does not include those patients, thus changing the population and performance rate to a substantial degree. Therefore, the commenter stated that CMS should acknowledge that this is a material change and should classify this measure as pay-for-reporting for ACO and MIPS group submissions until an appropriate benchmark can be established.</p>
	<p>Response: We thank the commenters for supporting the revision to measure Q226. We appreciate the commenters concerns that the measure should be calculated as pay-for-reporting for the 2019 MIPS performance period. The revision to the CMS Web Interface Measure Specifications collection type aligns with the intent of the measure and brings it into alignment with the other collection types. However, due to the mid-year change to the measure specification (as discussed in more detail under section III.E.1.b) we intend to redesignate the CMS Web Interface Measure Specifications collection type for measure Q226 as pay-for-reporting in the Shared Savings Program for performance years starting in 2019 as provided in § 425.502(a)(5). Additionally, we will exclude the measure from MIPS scoring for the 2019 MIPS performance period in accordance with § 414.1380(b)(1)(i)(A)(2)(i) provided it met the data completeness requirement and the measure was reported through the CMS Web Interface Measure Specifications collection type. Regarding the commenter concerned with the CMS Web Interface Measure Specifications collection type and the eCQM Specifications collection type being out of alignment if this change is finalized, we believe this change brings these two collection types in alignment. The guidance regarding multiple screenings within a performance period “If a patient has multiple tobacco use screenings during the 24-month period, only the most recent screening, which has a documented status of tobacco user or tobacco non-user, will be used to satisfy the measure requirements” will remain within the specification of both collection types. The change to the CMS Web Interface Measure Specifications collection type only impacts the timing of the quality action and not the denominator eligible encounter.</p>
	<p>This measure underwent a substantive change in 2018 MIPS which revised this measure to have three performance rates rather than one performance rate. At that time, a new benchmark was created since the second performance rate was utilized for benchmark: b. Percentage of patients aged 18 years and older who identified as a tobacco user who received tobacco cessation intervention. Therefore, the benchmark was more focused on the population of patients screened as tobacco users that were provided cessation. The performance rate being utilized for benchmark has not changed between the 2018 and 2019 performance period.</p>
	<p>After consideration of the comments, we are finalizing the changes to measure Q226 as proposed for the 2019 MIPS performance period/2021 MIPS payment year and future years. We will continue to require this measure for groups, APM Entities, and virtual groups reporting through the CMS Web Interface Measure Specifications collection type. However, we are redesignating it as “pay-for-reporting” in the Shared Savings Program for performance years starting in 2019 as provided in § 425.502(a)(5), and we will exclude the measure from MIPS scoring for the 2019 MIPS performance period in accordance with § 414.1380(b)(1)(i)(A)(2)(i) provided it met the data completeness requirement and the measure was reported through the CMS Web Interface Measure Specifications collection type. For further discussion on how this measure will be scored under the Shared Savings Program see section III.E.1.b of this final rule. For further discussion on how this measure will be scored under the MIPS Program Quality Performance Category see section III.K.3.c.(1) of this final rule.</p>

Appendix 2: Improvement Activities

NOTE: In this final rule, for the CY 2020 performance period and future years, we are finalizing our proposals to: (1) add two new improvement activities; (2) modify seven existing improvement activities; and (3) remove 15 improvement activities from the Inventory. These are discussed in greater detail below.

Table A: New Improvement Activities for the MIPS CY 2020 Performance Period and Future Years

Proposed Improvement Activity	
Proposed Activity ID:	IA_BE_XX
Proposed Subcategory:	Beneficiary Engagement
Proposed Activity Title:	Drug Cost Transparency
Proposed Activity Description:	To receive credit for this improvement activity, MIPS eligible clinicians must attest that their practice provides counseling to patients and/or their caregivers about the costs of drugs and the patients’ out-of-pocket costs for the drugs. If appropriate, the clinician must also explore with their patients the availability of alternative drugs and patients’ eligibility for patient assistance programs that provide free medications to people who cannot afford to buy their medicine. One source of information for pricing of pharmaceuticals could be a real-time benefit tool (RTBT), which provides to the prescriber, real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary. (CMS finalized in the Modernizing Part D and Medicare Advantage to Lower Drug Prices and Reduce Out of Pocket Expenses final rule (84 FR 23832, 23883) that beginning January 1, 2021 Medicare Part D plans will be required to implement one or more RTBT(s). ¹)
Proposed Weighting:	High
Rationale:	The costs of prescription drugs is a driving cost of overall health care spending in the United States and of out-of-pocket health care expenses for patients. As we consider broader efforts to increase transparency for patients, payers, provider organizations, and clinicians, as well as begin to drive down drug prices, this activity serves as a mechanism for drug price transparency at the clinician-patient level and may protect patients from unforeseen costs. By discussing drug pricing with patients, clinicians may better prescribe medications patients can afford, which could have the effect of increasing patient medication compliance and adherence. Thus, we believe this activity has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, per the improvement activity definition which has been codified at § 414.1305. This activity is weighted as high due to difficulties clinicians may have in identifying drug costs and out-of-pocket costs of drugs for individual patients as costs and reimbursement amounts vary by drug and payer, as well as challenges with identifying the appropriateness of patient assistance programs. ^{2,3} As stated previously, we have given certain improvement activities high-weighting due to the intensity of the activity (81 FR 77194). To summarize, we believe that an activity that requires significant investment of time and resources should be high-weighted.
Comments:	Several commenters supported the inclusion of this improvement activity. One commenter stated that many practices provide this type of financial counseling without reimbursement, and this improvement activity would be a way of recognizing eligible clinicians and practices for these services. One commenter stated that in addition to drug costs, the improvement activity should include a screening tool to identify additional barriers to medication adherence for patients. Another commenter stated their support for this activity in that discussing drug costs can help increase patient access to these therapies.

Response:	We appreciate the commenters' support. This improvement activity is meant to incentivize clinicians to provide counseling about drug costs so patients and their caregivers are aware of out-of-pocket costs. We disagree that the improvement activity should include a screening tool to identify additional barriers to medication adherence for patients; it is limited to drug costs in an effort to prioritize drug cost transparency.
Final Action:	After consideration of the public comments received, we are finalizing this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_BE_25
Subcategory:	Beneficiary Engagement
Activity Title:	Drug Cost Transparency
Activity Description:	To receive credit for this improvement activity, MIPS eligible clinicians must attest that their practice provides counseling to patients and/or their caregivers about the costs of drugs and the patients' out-of-pocket costs for the drugs. If appropriate, the clinician must also explore with their patients the availability of alternative drugs and patients' eligibility for patient assistance programs that provide free medications to people who cannot afford to buy their medicine. One source of information for pricing of pharmaceuticals could be a real-time benefit tool (RTBT), which provides to the prescriber, real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary. (CMS finalized in the Modernizing Part D and Medicare Advantage to Lower Drug Prices and Reduce Out of Pocket Expenses final rule (84 FR 23832, 23883) that beginning January 1, 2021 Medicare Part D plans will be required to implement one or more RTBT(s). ¹)
Weighting:	High
Proposed Improvement Activity	
Proposed Activity ID:	IA_CC_XX
Proposed Subcategory:	Care Coordination
Proposed Activity Title:	Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes.
Proposed Activity Description:	To receive credit for this improvement activity, a MIPS eligible clinician must attest that they reported MACRA patient relationship codes (PRC) using the applicable HCPCS modifiers on 50 percent or more of their Medicare claims for a minimum of a continuous 90-day period within the performance period. Reporting the PRC modifiers enables the identification of a clinician's relationship with, and responsibility for, a patient at the time of furnishing an item or service. See the CY 2018 PFS final rule (82 FR 53232 through 53234) for more details on these codes.
Proposed Weighting:	High
Rationale:	The patient relationship categories and codes define and distinguish the relationship and responsibilities of a clinician with a patient at the point of furnishing an item or service. These codes provide insight into clinician interactions with patients and identify the clinician's relationship to and responsibility for the patient at the time of furnishing an item or service. These codes were developed, as required under section 1848(r)(3) of the Act, to facilitate the attribution of patients and episodes to one or more clinicians. Beginning in 2018, clinicians started voluntarily reporting the patient relationship codes using the applicable HCPCS modifiers (82 FR 53232 through 53234). To properly report the code modifiers, clinicians must add one of the modifiers to each claim line. We proposed that, for the CY 2020 performance period and beyond, clinicians who choose to report the modifiers on 50 percent or more of their Medicare claims for a minimum of a continuous 90-day period within the performance period would earn one (1) high-weighted improvement activity. We believe reporting these modifiers would provide the minimum sample of data necessary to access the modifiers' ability to capture the clinician's relationship with the patient and whether the clinician is appropriately reporting the modifiers. This improvement activity is weighted as high

	<p>due to the intensity of the activity. We believe reporting the modifiers to each claim line for 50 percent or more of Medicare claims continuously for 90 days requires significant investment of time and resources and should be weighted high.</p> <p>For the initial and current period of voluntary reporting the PRC modifiers, where clinicians gain familiarity, data collected will be used to provide aggregate feedback on the performance of clinicians in using the codes within different clinical scenarios and specialties. Data collected from this activity will be used to test the reliability and validity of the modifiers in measuring the clinician's relationship to and responsibility for the Medicare patient before we consider whether to propose in future rulemaking to require the reporting of the PRC modifiers on claims. In the event that we do decide to require such reporting, we would likely propose to remove this improvement activity from MIPS.</p>
Comments:	<p>Several commenters supported the inclusion of this improvement activity. Commenters stated that this would provide us with a better understanding of the types of relationships clinicians have with their patients without imposing a regulatory burden. One commenter stated that increasing the number of eligible clinicians who report patient relationship codes will help to facilitate the creation of meaningful cost measures and alternative payment models. A commenter stated that this improvement activity will be useful for clinicians that are part of large care coordination teams treating patients with complex chronic disease. An additional commenter supported weighting this improvement activity as High due to the significant investment of time and resources required.</p> <p>A commenter suggested that we amend claim forms to allow for more space for PRC modifiers, and recommended considering using HCPCS codes instead of HCPCS modifiers.</p>
Response:	<p>We appreciate the commenters' support. We anticipate this improvement activity will provide clinicians and us with a better understanding of a clinician's relationship with, and responsibility for, a patient at the time of furnishing an item or service.</p> <p>We intend to keep improving clinician and patient relationships by consulting with stakeholders and experts, and through testing and research, to use the proper reporting mechanism for clinician-patient relationships.</p> <p>Before implementing the PRC, we sought stakeholder input which included consulting the American Medical Association's (AMA) Current Procedural Terminology (CPT) Editorial Panel, which is responsible for maintaining the CPT code set. They recommended CPT Modifiers as the best way to operationalize the reporting of patient relationship codes.⁴ We also received public comments indicating that CPT Modifiers would be the best way to operationalize the reporting of patient relationship codes.⁵ We plan to continue to improve the reporting of the Patient Relationship Categories and Codes through testing and feedback from stakeholders before possibly incorporating it into cost measures. Depending on the recommendations from the testing, we will consider improving the reporting of the PRC which may include modifying the claim forms through reporting patient relationship through CPT codes. Changes or updates to the improvement activity would be through the notice and comment rulemaking process.</p>
Final Action:	After consideration of the public comments received, we are finalizing this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_CC_18
Subcategory:	Care Coordination
Activity Title:	Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes.
Activity Description:	To receive credit for this improvement activity, a MIPS eligible clinician must attest that they reported MACRA patient relationship codes (PRC) using the applicable HCPCS modifiers on 50 percent or more of their Medicare claims for a minimum of a

	continuous 90-day period within the performance period. Reporting the PRC modifiers enables the identification of a clinician's relationship with, and responsibility for, a patient at the time of furnishing an item or service. See the CY 2018 PFS final rule (82 FR 53232 through 53234) for more details on these codes.
Weighting:	High

TABLE B: Changes to Previously Adopted Improvement Activities for the MIPS CY 2020 Performance Period and Future Years

Current Improvement Activity	
Current Activity ID:	IA_PSPA_28
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Completion of an Accredited Safety or Quality Improvement Program
Current Activity Description:	<p>Completion of an accredited performance improvement continuing medical education program that addresses performance or quality improvement according to the following criteria:</p> <ul style="list-style-type: none"> • The activity must address a quality or safety gap that is supported by a needs assessment or problem analysis, or must support the completion of such a needs assessment as part of the activity; • The activity must have specific, measurable aim(s) for improvement; • The activity must include interventions intended to result in improvement; • The activity must include data collection and analysis of performance data to assess the impact of the interventions; and • The accredited program must define meaningful clinician participation in their activity, describe the mechanism for identifying clinicians who meet the requirements, and provide participant completion information.
Current Weighting:	Medium
Proposed Change and Rationale:	<p>Addition of “An example of an activity that could satisfy this improvement activity is completion of an accredited continuing medical education program related to opioid analgesic risk and evaluation strategy (REMS) to address pain control (that is, acute and chronic pain)” as an example of an accredited continuing medical education (CME) program that could meet this improvement activity. Due to the importance of safe prescribing to prevent opioid misuse and opioid use disorder, CME programs related to opioid analgesic REMS may be especially useful to MIPS eligible clinicians in their attempts to prevent opioid misuse among their patients and combat the opioid epidemic.</p>
Proposed Revised Activity Description:	<p>Completion of an accredited performance improvement continuing medical education (CME) program that addresses performance or quality improvement according to the following criteria:</p> <ul style="list-style-type: none"> • The activity must address a quality or safety gap that is supported by a needs assessment or problem analysis, or must support the completion of such a needs assessment as part of the activity; • The activity must have specific, measurable aim(s) for improvement; • The activity must include interventions intended to result in improvement; • The activity must include data collection and analysis of performance data to assess the impact of the interventions; and • The accredited program must define meaningful clinician participation in their activity, describe the mechanism for identifying clinicians who meet the requirements, and provide participant completion information. <p>An example of an activity that could satisfy this improvement activity is completion of an accredited continuing medical education program related to opioid analgesic risk and evaluation strategy (REMS) to address pain control (that is, acute and chronic pain).</p>
Comments:	<p>Several commenters supported the modification of this improvement activity. Two commenters stated that the addition of opioid analgesic REMS is especially important due to the current public health challenges in addressing opioid misuse.</p>
Response:	<p>We appreciate the commenters’ support. The modification to this improvement activity provides an additional example that clinicians can use to meet this activity that may improve safe prescribing to prevention opioid misuse and opioid use disorder.</p>
Final Action:	<p>After consideration of the public comments received, we are finalizing changes to this improvement activity as proposed.</p>
Finalized Improvement Activity	
Activity ID:	IA_PSPA_28

Subcategory:	Patient Safety and Practice Assessment
Activity Title:	Completion of an Accredited Safety or Quality Improvement Program
Activity Description:	<p>Completion of an accredited performance improvement continuing medical education (CME) program that addresses performance or quality improvement according to the following criteria:</p> <ul style="list-style-type: none"> • The activity must address a quality or safety gap that is supported by a needs assessment or problem analysis, or must support the completion of such a needs assessment as part of the activity; • The activity must have specific, measurable aim(s) for improvement; • The activity must include interventions intended to result in improvement; • The activity must include data collection and analysis of performance data to assess the impact of the interventions; and • The accredited program must define meaningful clinician participation in their activity, describe the mechanism for identifying clinicians who meet the requirements, and provide participant completion information. <p>An example of an activity that could satisfy this improvement activity is completion of an accredited continuing medical education program related to opioid analgesic risk and evaluation strategy (REMS) to address pain control (that is, acute and chronic pain).</p>
Weighting:	Medium
Current Improvement Activity	
Current Activity ID:	IA_PM_2
Current Subcategory:	Population Management
Current Activity Title:	Anticoagulant Management Improvements
Current Activity Description:	<p>Individual MIPS eligible clinicians and groups who prescribe oral Vitamin K antagonist therapy (warfarin) must attest that, for 60 percent of practice patients in the transition year and 75 percent of practice patients in Quality Payment Program Year 2 and future years, their ambulatory care patients receiving warfarin are being managed by one or more of the following improvement activities:</p> <ul style="list-style-type: none"> • Patients are being managed by an anticoagulant management service, that involves systematic and coordinated care, incorporating comprehensive patient education, systematic prothrombin time (PT-INR) testing, tracking, follow-up, and patient communication of results and dosing decisions; • Patients are being managed according to validated electronic decision support and clinical management tools that involve systematic and coordinated care, incorporating comprehensive patient education, systematic PT-INR testing, tracking, follow-up, and patient communication of results and dosing decisions; • For rural or remote patients, patients are managed using remote monitoring or telehealth options that involve systematic and coordinated care, incorporating comprehensive patient education, systematic PT-INR testing, tracking, follow-up; and patient communication of results and dosing decisions; and/or • For patients who demonstrate motivation, competency, and adherence, patients are managed using either a patient self-testing (PST) or patient-self-management (PSM) program.
Current Weighting:	High

Proposed Change and Rationale:	<p>Addition of “anti-coagulation medications (oral Vitamin K antagonist therapy, including warfarin or other coagulation cascade inhibitors)” and “Participation in a systematic anticoagulation program (coagulation clinic, patient self-reporting program, or patient self-management program).”</p> <p>This language was consolidated from IA_PM_1, which was proposed for removal in Table C. We believe IA_PM_1 is duplicative in content to, but less robust than IA_PM_2, with overall fewer examples of actions that can be undertaken to satisfy the intent of the improvement activity. However, IA_PM_1 contained more detail about the type of anti-coagulation medication that could be prescribed to satisfy this activity and an additional example of an action that can be undertaken to satisfy the intent of IA_PM_2, participation in systematic anticoagulation program; so these elements of IA_PM_1 were added to IA_PM_2.</p> <p>Removal of “, for 60 percent of practice patients in the transition year ... in Quality Payment Program Year 2 and future years.” These time references to transition year and Quality Payment Program Year 2 are now irrelevant because they are in the past.</p> <p>We note that this proposed change was made in conjunction with finalization of the removal of IA_PM_1 as discussed in Table C. We refer readers to Table C where we are finalizing the removal of IA_PM_1.</p>
Proposed Revised Activity Description:	<p>Individual MIPS eligible clinicians and groups who prescribe anti-coagulation medications (including, but not limited to oral Vitamin K antagonist therapy, including warfarin or other coagulation cascade inhibitors) must attest that for 75 percent of their ambulatory care patients receiving these medications are being managed with support from one or more of the following improvement activities:</p> <ul style="list-style-type: none"> • Participation in a systematic anticoagulation program (coagulation clinic, patient self-reporting program, or patient self-management program); • Patients are being managed by an anticoagulant management service, that involves systematic and coordinated care, incorporating comprehensive patient education, systematic prothrombin time (PT-INR) testing, tracking, follow-up, and patient communication of results and dosing decisions; • Patients are being managed according to validated electronic decision support and clinical management tools that involve systematic and coordinated care, incorporating comprehensive patient education, systematic PT-INR testing, tracking, follow-up, and patient communication of results and dosing decisions; • For rural or remote patients, patients are managed using remote monitoring or telehealth options that involve systematic and coordinated care, incorporating comprehensive patient education, systematic PT-INR testing, tracking, follow-up, and patient communication of results and dosing decisions; or • For patients who demonstrate motivation, competency, and adherence, patients are managed using either a patient self-testing (PST) or patient-self-management (PSM) program.
Comments:	Several commenters supported the modification of this improvement activity.
Response:	We appreciate the commenters’ support. The modifications to this improvement activity allows clinicians to attest to one consolidated improvement activity with five relevant examples. Additionally, the removal of reference to the transition year and Quality Payment Program Year 2 will minimize confusion as those time periods are now in the past.
Final Action:	After consideration of the public comments received, we are finalizing changes to this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_PM_2
Subcategory:	Population Management
Activity Title:	Anticoagulant Management Improvements

Activity Description:	Individual MIPS eligible clinicians and groups who prescribe anti-coagulation medications (including, but not limited to oral Vitamin K antagonist therapy, including warfarin or other coagulation cascade inhibitors) must attest that for 75 percent of their ambulatory care patients receiving these medications are being managed with support from one or more of the following improvement activities: <ul style="list-style-type: none"> • Participation in a systematic anticoagulation program (coagulation clinic, patient self-reporting program, or patient self-management program); • Patients are being managed by an anticoagulant management service, that involves systematic and coordinated care, incorporating comprehensive patient education, systematic prothrombin time (PT-INR) testing, tracking, follow-up, and patient communication of results and dosing decisions; • Patients are being managed according to validated electronic decision support and clinical management tools that involve systematic and coordinated care, incorporating comprehensive patient education, systematic PT-INR testing, tracking, follow-up, and patient communication of results and dosing decisions; • For rural or remote patients, patients are managed using remote monitoring or telehealth options that involve systematic and coordinated care, incorporating comprehensive patient education, systematic PT-INR testing, tracking, follow-up, and patient communication of results and dosing decisions; or • For patients who demonstrate motivation, competency, and adherence, patients are managed using either a patient self-testing (PST) or patient-self-management (PSM) program.
Weighting:	High
Current Improvement Activity	
Current Activity ID:	IA_EPA_4
Current Subcategory:	Expanded Practice Access
Current Activity Title:	Additional improvements in access as a result of QIN/QIO TA
Current Activity Description:	As a result of Quality Innovation Network-Quality Improvement Organization technical assistance, performance of additional activities that improve access to services (for example, investment of on-site diabetes educator).
Current Weighting:	Medium
Proposed Change and Rationale:	Addition of “or improve care coordination”. We proposed to consolidate this language from activity IA_CC_3, which was proposed for removal in Table C. IA_CC_3 is duplicative to IA_EPA_4 in content related to Quality Innovation Network-Quality Improvement Organization technical assistance, but referred to improving care coordination. We believe the Quality Innovation Network-Quality Improvement Organization technical assistance can support both access to services and care coordination ¹ and, furthermore, that care coordination and access to services are inherently related and can logically be combined into one improvement activity. We note that this proposed change was made in conjunction with the removal of IA_CC_3 as discussed in Table C. We refer readers to Table C where we are finalizing the removal of IA_CC_3.
Proposed Revised Activity Description:	As a result of Quality Innovation Network-Quality Improvement Organization technical assistance, performance of additional activities that improve access to services or improve care coordination (for example, investment of on-site diabetes educator).
Comments:	Several commenters supported the modification of this improvement activity.
Response:	We appreciate the commenters’ support. The modification to this improvement activity allows clinicians to attest to one consolidated improvement activity related to QIN/QIO technical assistance. This modification makes it clear that QIN/QIO activities supports both care coordination and access to services.
Final Action:	After consideration of the public comments received, we are finalizing changes to this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_EPA_4
Subcategory:	Expanded Practice Access

Activity Title:	Additional improvements in access as a result of QIN/QIO TA
Activity Description:	As a result of Quality Innovation Network-Quality Improvement Organization technical assistance, performance of additional activities that improve access to services or improve care coordination (for example, investment of on-site diabetes educator).
Weighting:	Medium
Current Improvement Activity	
Current Activity ID:	IA PSPA 19
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Implementation of formal quality improvement methods, practice changes, or other practice improvement processes
Current Activity Description:	Adopt a formal model for quality improvement and create a culture in which all staff actively participates in improvement activities that could include one or more of the following such as: <ul style="list-style-type: none"> • Multi-Source Feedback; • Train all staff in quality improvement methods; • Integrate practice change/quality improvement into staff duties; • Engage all staff in identifying and testing practices changes; • Designate regular team meetings to review data and plan improvement cycles; • Promote transparency and accelerate improvement by sharing practice level and panel level quality of care, patient experience and utilization data with staff; and/or • Promote transparency and engage patients and families by sharing practice level quality of care, patient experience and utilization data with patients and families, including activities in which clinicians act upon patient experience data.
Current Weighting:	Medium
Change and Rationale:	Addition of “Bridges to Excellence or American Board of Medical Specialties (ABMS) Multi-Specialty Portfolio Program”. This language was added to consolidate it from IA_PSPA_14, which was proposed for removal in Table C. We believe IA_PSPA_14 is duplicative in content, but less robust than IA_PSPA_19 related to adopting a model for quality improvement. However, IA_PSPA_14 contains a unique relevant example that we wish to preserve under IA_PSPA_19. We note that this proposed change was made in conjunction with the removal of IA_PSPA_14 as discussed in Table C. We refer readers to Table C where we are finalizing the removal of IA_PSPA_14.
Proposed Revised Activity Description:	Adopt a formal model for quality improvement and create a culture in which all staff actively participates in improvement activities that could include one or more of the following, such as: <ul style="list-style-type: none"> • Participation in multisource feedback;² • Train all staff in quality improvement methods; • Integrate practice change/quality improvement into staff duties; • Engage all staff in identifying and testing practices changes; • Designate regular team meetings to review data and plan improvement cycles; • Promote transparency and accelerate improvement by sharing practice level and panel level quality of care, patient experience and utilization data with staff; • Promote transparency and engage patients and families by sharing practice level quality of care, patient experience and utilization data with patients and families, including activities in which clinicians act upon patient experience data; • Participation in Bridges to Excellence;³ • Participation in American Board of Medical Specialties (ABMS) Multi-Specialty Portfolio Program.⁴
Comments:	Several commenters supported the modification of this improvement activity.
Response:	We appreciate the commenters’ support. The modifications to this improvement activity allows clinicians to attest to one consolidated improvement activity related to formal quality improvement models with nine relevant examples.
Final Action:	After consideration of the public comments received, we are finalizing changes to this improvement activity as proposed.
Finalized Improvement Activity	

Activity ID:	IA_PSPA_19
Subcategory:	Patient Safety and Practice Assessment
Activity Title:	Implementation of formal quality improvement methods, practice changes, or other practice improvement processes
Activity Description:	<p>Adopt a formal model for quality improvement and create a culture in which all staff actively participates in improvement activities that could include one or more of the following, such as:</p> <ul style="list-style-type: none"> • Participation in multisource feedback;² • Train all staff in quality improvement methods; • Integrate practice change/quality improvement into staff duties; • Engage all staff in identifying and testing practices changes; • Designate regular team meetings to review data and plan improvement cycles; • Promote transparency and accelerate improvement by sharing practice level and panel level quality of care, patient experience and utilization data with staff; • Promote transparency and engage patients and families by sharing practice level quality of care, patient experience and utilization data with patients and families, including activities in which clinicians act upon patient experience data; • Participation in Bridges to Excellence;³ • Participation in American Board of Medical Specialties (ABMS) Multi-Specialty Portfolio Program.⁴
Weighting:	Medium
Current Improvement Activity	
Current Activity ID:	IA_BE_7
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Participation in a QCDR, that promotes use of patient engagement tools.
Current Activity Description:	Participation in a QCDR, that promotes use of patient engagement tools.
Current Weighting:	Medium
Proposed Change and Rationale:	<p>We proposed the addition of activity description language from four other improvement activities related to participation in QCDR; IA_BE_11 Participation in a QCDR, that promotes use of processes and tools that engage patients for adherence to treatment plan; IA_BE_2 Use of QCDR to support clinical decision making; IA_BE_9 Use of QCDR patient experience data to inform and advance improvements in beneficiary engagement; and IA_BE_10 Participation in a QCDR, that promotes implementation of patient self-action plans.</p> <p>The activity description will include the current (IA_BE_7) activity description with the addition of “Participation in a Qualified Clinical Data Registry and” ..., including:</p> <ul style="list-style-type: none"> • “The use of processes and tools that engage patients for adherence to treatment plans” (from IA_BE_11); • “Activities that promote implementation of shared clinical decision making capabilities” (from IA_BE_2); • “Use of QCDR patient experience data to inform and advance improvements in beneficiary engagement” (from IA_BE_9); • “Activities that promote implementation of patient self-action plans” (from IA_BE_10). <p>This language was proposed to consolidate activity description language from improvement activities was proposed for removal in Table C (IA_BE_11, IA_BE_2, IA_BE_9, and IA_BE_10). The activities proposed for removal are duplicative to IA_BE_7.</p> <p>We also proposed to remove the language “use of...tools” to better capture the content of the consolidated improvement activity regarding promoting patient engagement more broadly.</p>

	We note that this proposed change was made in conjunction with and is contingent upon finalization of the removal of IA_BE_11, IA_BE_2, IA_BE_9, and IA_BE_10 as discussed in Table C. We refer readers to Table C where we are finalizing the removal of IA_BE_11, IA_BE_2, IA_BE_9, and IA_BE_10.
Proposed Revised Activity Description:	Participation in a Qualified Clinical Data Registry (QCDR), that promotes patient engagement, including: <ul style="list-style-type: none"> • Use of processes and tools that engage patients for adherence to treatment plans; • Implementation of patient self-action plans; • Implementation of shared clinical decision making capabilities; or • Use of QCDR patient experience data to inform and advance improvements in beneficiary engagement.
Comments:	Several commenters supported the modification of this improvement activity. One commenter recommended increasing the weighting for this improvement activity to High. Another commenter also recommended that this improvement activity be modified to include participation in nationally validated and risk-adjusted clinical data registries.
Response:	We appreciate the commenters' support. The modifications to this improvement activity allow clinicians to attest to one consolidated improvement activity related to participation in a QCDR with four relevant examples of activities related to patient engagement. The modifications do not increase the effort required, and therefore, we do not believe the weighting of the improvement activity should be increased. We refer readers to section III.I.3.h.(4)(d)(i)(C) of CY 2019 PFS final rule (83 FR 59776 through 59777) where we discussed that high weighting should be used for activities that directly address areas with the greatest impact on beneficiary care, safety, health, and well-being and/or is of high intensity, requiring significant investment of time and resources. This improvement activity promotes use of QCDRs. If clinicians would like to receive credit for alternative data registries, we suggest considering attesting to another appropriate improvement activity, such as IA_PSPA_14, Participation in Quality Improvement Initiatives or IA_PSPA_19, Implementation of formal quality improvement methods, practice changes, or other practice improvement processes.
Final Action:	After consideration of the public comments received, we are finalizing changes to this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_BE_7
Subcategory:	Beneficiary Engagement
Activity Title:	Participation in a QCDR, that promotes use of patient engagement tools.
Activity Description:	Participation in a Qualified Clinical Data Registry (QCDR), that promotes patient engagement, including: <ul style="list-style-type: none"> • Use of processes and tools that engage patients for adherence to treatment plans; • Implementation of patient self-action plans; • Implementation of shared clinical decision making capabilities; or • Use of QCDR patient experience data to inform and advance improvements in beneficiary engagement.
Weighting:	Medium
Current Improvement Activity	
Current Activity ID:	IA_PSPA_7
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Use of QCDR data for ongoing practice assessment and improvements
Current Activity Description:	Use of QCDR data, for ongoing practice assessment and improvements in patient safety.
Current Weighting:	Medium
Proposed Change and Rationale:	We proposed the addition of activity description language from four other improvement activities related to participation in QCDR; IA_CC_6 Use of QCDR to promote standard practices, tools and processes in practice for improvement in care coordination; IA_AHE_4 Leveraging a QCDR for use of standard questionnaires;

	<p>IA_AHE_2 Leveraging a QCDR to standardize processes for screening; and IA_PM_10 Use of QCDR data for quality improvement such as comparative analysis reports across patient populations.</p> <p>The activity description will include the current (IA_PSPA_7) activity description with the addition of “Participation in a Qualified Clinical Data Registry and”... including:</p> <ul style="list-style-type: none"> • “Performance of activities that promote use of standard practices, tools and processes for quality improvement (for example, documented preventative screening and vaccinations that can be shared across MIPS eligible clinician or groups)” (from IA_CC_6); • “Use of standard questionnaires for assessing improvements in health disparities related to functional health status (for example, use of Seattle Angina Questionnaire, MD Anderson Symptom Inventory, and/or SF-12/VR-12 functional health status assessment)” (from IA_AHE_4); • “Use of standardized processes for screening for social determinants of health such as food security, employment and housing” from (from IA_AHE_2); • “Use of supporting QCDR modules that can be incorporated into the certified EHR technology” (This language adapted from IA_AHE_2 and updated to replace “tools” with “QCDR modules” to add additional specificity to the action that can be taken in the QCDR to promote ongoing practice assessment and patient safety.); or • “Use of QCDR data for quality improvement (such as) comparative analysis across specific patient populations for adverse outcomes after an outpatient surgical procedure and corrective steps to address adverse outcomes” (from IA_PM_10). <p>This language was proposed to consolidate improvement activity description language from activities (IA_CC_6, IA_AHE_4, IA_AHE_2, and IA_PM_10) proposed for removal in Table C. The activities we are duplicative to IA_PSPA_7.</p> <p>We note that this proposed change was made in conjunction with and is contingent upon finalization of the removal of IA_CC_6, IA_AHE_4, IA_AHE_2, and IA_PM_10 as discussed in Table C. We refer readers to Table C where we are finalizing the removal of IA_CC_6, IA_AHE_4, IA_AHE_2, and IA_PM_10.</p>
Proposed Revised Activity Description:	<p>Participation in a Qualified Clinical Data Registry (QCDR) and use of QCDR data for ongoing practice assessment and improvements in patient safety, including:</p> <ul style="list-style-type: none"> • Performance of activities that promote use of standard practices, tools and processes for quality improvement (for example, documented preventative screening and vaccinations that can be shared across MIPS eligible clinician or groups); • Use of standard questionnaires for assessing improvements in health disparities related to functional health status (for example, use of Seattle Angina Questionnaire⁵, MD Anderson Symptom Inventory⁶, and/or SF-12/VR-12 functional health status assessment⁷); • Use of standardized processes for screening for social determinants of health such as food security, employment, and housing; • Use of supporting QCDR modules that can be incorporated into the certified EHR technology; or • Use of QCDR data for quality improvement such as comparative analysis across specific patient populations for adverse outcomes after an outpatient surgical procedure and corrective steps to address adverse outcomes.
Comments:	<p>Several commenters supported the modification of this improvement activity. One commenter recommended increasing the weighting for this improvement activity to High. A commenter also recommended that this improvement activity be modified to include participation in nationally validated and risk-adjusted clinical data registries.</p>
Response:	<p>We appreciate the commenters’ support. The modifications to this improvement activity allows clinicians to attest to one consolidated improvement activity related to participation in a QCDR with five relevant examples of activities related to ongoing practice assessment and improvements in patient safety. The modifications do not</p>

	increase the effort required, and therefore, we do not believe the weighting of the improvement activity should be increased. We refer readers to section III.I.3.h.(4)(d)(i)(C) of CY 2019 PFS final rule (83 FR 59776 through 59777) where we discussed that high weighting should be used for activities that directly address areas with the greatest impact on beneficiary care, safety, health, and well-being and/or is of high intensity, requiring significant investment of time and resources. This improvement activity promotes use of QCDRs. If clinicians would like to receive credit for alternative data registries, we suggest considering attesting to another appropriate improvement activity, such as IA_PSPA_14, Participation in Quality Improvement Initiatives or IA_PSPA_19, Implementation of formal quality improvement methods, practice changes, or other practice improvement processes.
Final Action:	After consideration of the public comments received, we are finalizing changes to this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_PSPA_7
Subcategory:	Patient Safety and Practice Assessment
Activity Title:	Use of QCDR data for ongoing practice assessment and improvements
Activity Description:	Participation in a Qualified Clinical Data Registry (QCDR) and use of QCDR data for ongoing practice assessment and improvements in patient safety, including: <ul style="list-style-type: none"> • Performance of activities that promote use of standard practices, tools and processes for quality improvement (for example, documented preventative screening and vaccinations that can be shared across MIPS eligible clinician or groups); • Use of standard questionnaires for assessing improvements in health disparities related to functional health status (for example, use of Seattle Angina Questionnaire⁵, MD Anderson Symptom Inventory⁶, and/or SF-12/VR-12 functional health status assessment⁷; • Use of standardized processes for screening for social determinants of health such as food security, employment, and housing; • Use of supporting QCDR modules that can be incorporated into the certified EHR technology; or • Use of QCDR data for quality improvement such as comparative analysis across specific patient populations for adverse outcomes after an outpatient surgical procedure and corrective steps to address adverse outcomes.
Weighting:	Medium
Current Improvement Activity	
Current Activity ID:	IA_BMH_10
Current Subcategory:	Behavioral and Mental Health
Current Activity Title:	Completion of Collaborative Care Management Training Program
Current Activity Description:	To receive credit for this activity, MIPS eligible clinicians must complete a collaborative care management training program, such as the American Psychiatric Association (APA) Collaborative Care Model training program available as part of the Centers for Medicare & Medicaid Services (CMS) Transforming Clinical Practice Initiative (TCPI), available to the public, in order to implement a collaborative care management approach that provides comprehensive training in the integration of behavioral health into the primary care practice.
Current Weighting:	Medium
Proposed Change and Rationale:	We proposed the removal of the reference to the CMS Transforming Clinical Practice Initiative (TCPI) in the activity description. This initiative ended on September 28, 2019, ⁹ and therefore, is no longer be applicable to this improvement activity description. The example training program referenced, the APA Collaborative Care Model, continues to be available to the public. The revised activity description only proposes to remove reference to TCPI.
Proposed Revised Activity Description:	To receive credit for this activity, MIPS eligible clinicians must complete a collaborative care management training program, such as the American Psychiatric Association (APA) Collaborative Care Model training program available to the public ⁸ ,

	in order to implement a collaborative care management approach that provides comprehensive training in the integration of behavioral health into the primary care practice.
Comments:	Several commenters supported the modification of this improvement activity.
Response:	We appreciate the commenters' support. The removal of reference to the TCPI in this improvement activity description will minimize confusion as that initiative ended on September 28, 2019.
Final Action:	After consideration of the public comments received, we are finalizing changes to this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_BMH_10
Subcategory:	Behavioral and Mental Health
Activity Title:	Completion of Collaborative Care Management Training Program
Activity Description:	To receive credit for this activity, MIPS eligible clinicians must complete a collaborative care management training program, such as the American Psychiatric Association (APA) Collaborative Care Model training program available to the public ⁸ , in order to implement a collaborative care management approach that provides comprehensive training in the integration of behavioral health into the primary care practice.

TABLE C: Improvement Activities for Removal for the MIPS CY 2020 MIPS Performance Period and Future Years

We note that in the CY 2020 PFS proposed rule [84 FR 40765], we inadvertently referenced 14 improvement activities proposed for removal even though there were 15 improvement activities proposed for removal in Table C. We are correcting that typographical error here. In this final rule, we are finalizing our proposals as proposed to remove 15 previously finalized improvement activities from the MIPS Program for the MIPS CY 2020 performance period and future years. These improvement activities are discussed in detail below. Improvement activity removal factors are discussed in section III.K.3.c.(3) of this final rule.

Current Improvement Activity	
Current Activity ID:	IA_PM_1
Current Subcategory:	Population Management
Current Activity Title:	Participation in Systematic Anticoagulation Program
Current Activity Description:	Participation in a systematic anticoagulation program (coagulation clinic, patient self-reporting program, or patient self-management program) for 60 percent of practice patients in the transition year and 75 percent of practice patients in Quality Payment Program Year 2 and future years, who receive anti-coagulation medications (warfarin or other coagulation cascade inhibitors).
Current Weighting:	High
Removal Rationale:	We proposed the removal of this activity under removal factor 1, improvement activity is “duplicative.” We believe it is duplicative, because it is similar to, but only represents a partial component of IA_PM_2. We proposed consolidating the unique language from IA_PM_1 into IA_PM_2 per the change in Table B. The revised IA_PM_2 adds additional detail from IA_PM_1. We note that this proposed removal was made in conjunction with our decision to modify IA_PM_2 in Table B, as well as our proposals to adopt removal factors in section III.K.3.c.(3) of this final rule.
Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice.
Response:	We appreciate the commenters’ support. We appreciate the commenters’ support. We are removing this improvement activity because we believe it is “duplicative” of IA_PM_2. While we understand the concern that removal of improvement activities may limit clinician options, we do not believe removing this activity will limit options as it has the same components as IA_PM_2, which we are retaining.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	N/A – Removed
Current Improvement Activity	
Current Activity ID:	IA_CC_3
Current Subcategory:	Care Coordination
Current Activity Title:	Implementation of additional activity as a result of TA for improving care coordination
Current Activity Description:	Implementation of at least one additional recommended activity from the Quality Innovation Network-Quality Improvement Organization after technical assistance has been provided related to improving care coordination.
Current Weighting:	Medium
Removal Rationale:	We proposed the removal of IA_CC_3 under removal factor 1, improvement activity is “duplicative.” We believe it is duplicative, because it is similar to, but only represents a partial component of IA_EPA_4. We proposed consolidating the unique language from IA_CC_3 into IA_EPA_4 per the change in Table B. The modified language to IA_EPA_4 adds the outcome of “improve care coordination” from the removed activity to make IA_EPA_4 more robust. We note that this proposed removal was made in conjunction with our proposal to modify IA_EPA_4 in Table B, as well as our proposals to adopt removal factors in section III.K.3.c.(3) of this final rule.

Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice.
Response:	We appreciate the commenters' support. We appreciate the commenters' support. We are removing this improvement activity because we believe it is "duplicative" of IA_EPA_4. While we understand the concern that removal of improvement activities may limit clinician options, we do not believe removing this activity will limit options as it has the same components as IA_EPA_4, which we are retaining.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	N/A – Removed
Current Improvement Activity	
Current Activity ID:	IA_PSPA_14
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Participation in Quality Improvement Initiatives
Current Activity Description:	Participation in other quality improvement programs such as Bridges to Excellence or American Board of Medical Specialties (ABMS) Multi-Specialty Portfolio Program.
Current Weighting:	Medium
Removal Rationale:	We proposed the removal of this IA_PSPA_14 under removal factor 1, improvement activity is "duplicative." We believe it is duplicative, because it is similar to, but only represents a partial component of the activities included in IA_PSPA_19. We proposed consolidating the unique language in IA_PSPA_14 with IA_PSPA_19 per the change in Table B. The modified language to IA_PSPA_19 adds the examples "Bridges to Excellence" and "American Board of Medical Specialties (ABMS) Multi-Specialty Portfolio Program" as additional actions that an eligible clinician or group can take to participate in a quality improvement program. We note that this proposed removal was made in conjunction with our proposal to modify IA_PSPA_19 in Table B, as well as our proposals to adopt removal factors in section III.K.3.c.(3) of the CY 2020 PFS proposed rule (84 FR 40765). Therefore, this removal is contingent upon finalization of both referenced proposals. We refer readers to Table B of this final rule where we are finalizing our proposal to modify IA_PSPA_19 and to section III.K.3.c.(3) of this final rule where we are finalizing our proposal to adopt removal factors.
Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice.
Response:	We appreciate the commenters' support. We appreciate the commenters' support. We are removing this improvement activity because we believe it is "duplicative" of IA_PSPA_19. While we understand the concern that removal of improvement activities may limit clinician options, we do not believe removing this activity will limit options as it has the same components as IA_PSPA_19, which we are retaining.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	N/A – Removed
Current Improvement Activity	
Current Activity ID:	IA_PSPA_5
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Annual Registration in the Prescription Drug Monitoring Program
Current Activity Description:	Annual registration by eligible clinician or group in the prescription drug monitoring program of the state where they practice. Activities that simply involve registration are not sufficient. MIPS eligible clinicians and groups must participate for a minimum of 6 months.

Current Weighting:	Medium
Removal Rationale:	We proposed the removal of this activity under removal factor 1, improvement activity is “duplicative.” We believe it is duplicative, because it is similar in content but less robust than the currently adopted IA_PSPA_6. IA_PSPA_6 requires consultation of and specific thresholds of use for a prescription drug monitoring program instead of simply registering in a prescription drug monitoring program as described in IA_PSPA_5. Because of this, we believe IA_PSPA_6 already captures the essence of IA_PSPA_5 and directly falls into that improvement activity. We note that this proposed removal was made in conjunction with our proposal to adopt removal factors in section III.K.3.c.(3) of this final rule.
Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice.
Response:	We appreciate the commenters’ support. We are removing this improvement activity because we believe it is “duplicative” of IA_PSPA_6. We understand the concern that removal of improvement activities may limit clinician options but clinicians may attest to IA_PSPA_6, as well as other medium-weight IAs. As explained in section III.I.3.h.(4)(d)(i)(C) of CY 2019 PFS final rule (83 FR 59780 through 59781) the weighting of “medium” is in accordance with our policy, as high weighting should be used for activities that directly address areas with the greatest impact on beneficiary care, safety, health, and well-being and/or is of high intensity, requiring significant investment of time and resources.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	N/A – Removed
Current Improvement Activity	
Current Activity ID:	IA_PSPA_24
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Initiate CDC Training on Antibiotic Stewardship
Current Activity Description:	Completion of greater than 50 percent of the modules of the Centers for Disease Control and Prevention antibiotic stewardship course. Note: This activity may be selected once every 4 years, to avoid duplicative information given that some of the modules may change on a year by year basis, but over 4 years there would be a reasonable expectation for the set of modules to have undergone substantive change, for the improvement activities performance category score.
Current Weighting:	Medium
Removal Rationale:	We proposed the removal of this activity under removal factor 1, improvement activity is “duplicative.” We believe it is duplicative, because it is less robust than IA_PSPA_23. IA_PSPA_23 requires completion of all modules of a Centers for Disease Control and Prevention antibiotic stewardship course, instead of 50 percent of modules of a Centers for Disease Control and Prevention antibiotic stewardship course. Because of this, we believe IA_PSPA_23 already captures the essence of IA_PSPA_24 and directly fall into that improvement activity. We note that this proposal was made in conjunction with our proposal to adopt removal factors in section III.K.3.c.(3) of the CY 2020 PFS proposed rule (84 FR 40765). Therefore, this removal is contingent upon finalization of this referenced proposal. We refer readers to section III.K.3.c.(3) of this final rule where we are finalizing our proposal to adopt removal factors.
Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice.
Response:	We appreciate the commenters’ support. We are removing this improvement activity because we believe it is “duplicative” of IA_PSPA_23. We understand the concern that

	removal of improvement activities may limit clinician options but clinicians may attest to other medium-weight IAs. As explained in section III.I.3.h.(4)(d)(i)(C) of the CY 2019 PFS final rule (83 FR 59780 through 59781) the weighting of “medium” is in accordance with our policy, as high weighting should be used for activities that directly address areas with the greatest impact on beneficiary care, safety, health, and well-being and/or is of high intensity, requiring significant investment of time and resources.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	N/A – Removed
Current Improvement Activity	
Current Activity ID:	IA_BMH_3
Current Subcategory:	Behavioral and Mental Health
Current Activity Title:	Unhealthy alcohol use
Current Activity Description:	Unhealthy alcohol use: Regular engagement of MIPS eligible clinicians or groups in integrated prevention and treatment interventions, including screening and brief counseling (refer to NQF #2152) for patients with co-occurring conditions of behavioral or mental health conditions.
Current Weighting:	Medium
Removal Rationale:	We proposed removal of this activity under removal factor 1, improvement activity is “duplicative.” We believe it is duplicative, because it is similar to the currently adopted IA_BMH_9. We believe IA_BMH_9 is more robust because it requires a threshold of patients for which this unhealthy alcohol use screening must be completed, whereas IA_BMH_3 simply requires engagement, screening and counseling without such a threshold. Because of this, we believe IA_BMH_9 already captures the essence of IA_BMH_3 and directly fall into that improvement activity. We note that this proposal was made in conjunction with our proposal to adopt removal factors in section III.K.3.c.(3) of the CY 2020 PFS proposed rule (84 FR 40765). Therefore, this removal is contingent upon finalization of this referenced proposal. We refer readers to section III.K.3.c.(3) in this final rule where we are finalizing our proposals to adopt removal factors.
Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice.
Response:	We appreciate the commenters’ support. We are removing this improvement activity because we believe it is “duplicative” of IA_BMH_9. We understand the concern that removal of improvement activities may limit clinician options but clinicians may attest to other medium-weight IAs. As explained in section III.I.3.h.(4)(d)(i)(C) of CY 2019 PFS final rule (83 FR 59780 through 59781) the weighting of “medium” is in accordance with our policy, as high weighting should be used for activities that directly address areas with the greatest impact on beneficiary care, safety, health, and well-being and/or is of high intensity, requiring significant investment of time and resources.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	N/A – Removed
Current Improvement Activity	
Current Activity ID:	IA_BE_11
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Participation in a QCDR, that promotes use of processes and tools that engage patients for adherence to treatment plan
Current Activity Description:	Participation in a QCDR, that promotes use of processes and tools that engage patients for adherence to treatment plan.
Current Weighting:	Medium

Removal Rationale:	We proposed removal of this activity under removal factor 1, improvement activity is “duplicative.” We believe it is duplicative, because it is similar to, but only represents a partial component of IA_BE_7. In Table B, we proposed changes to IA_BE_7 that add “...the use of processes and tools that engage patients for adherence to treatment plan” to make IA_BE_7 more robust and offer an additional example. Because of this, we believe the changes to IA_BE_7 capture the essence of IA_BE_11. We note that this proposed removal was made in conjunction with our proposal to modify IA_BE_7 in Table B, as well as our proposals to adopt removal factors in section III.K.3.c.(3) of the CY 2020 PFS proposed rule (84 FR 40765). Therefore, this removal is contingent upon finalization of both referenced proposals. We refer readers to Table B of this final rule where we are finalizing our proposal to modify IA_BE_7 and to section III.K.3.c.(3) of this final rule where we are finalizing our proposal to adopt removal factors.
Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice. One commenter did not oppose this removal, but expressed concern that removal of multiple QCDR-related improvement activities could lower participation in QCDRs.
Response:	We appreciate the commenters’ support. We appreciate the commenters’ support. We are removing this improvement activity because we believe it is “duplicative” of IA_BE_7. While we understand the concern that removal of improvement activities may limit clinician options, we do not believe removing this activity will limit options as it has the same components as IA_BE_7, which we are retaining. We do not believe removal of this improvement activity would lower participation in QCDRs, because there are still four other QCDR-related improvement activities in the Inventory.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.

Response:	We appreciate the commenters’ support. We appreciate the commenters’ support. We are removing this improvement activity because we believe it is “duplicative” of IA_PSPA_7. While we understand the concern that removal of improvement activities may limit clinician options, we do not believe removing this activity will limit options as it has the same components as IA_PSPA_7, which we are retaining. We do not believe removal of this improvement activity would lower participation in QCDRs, because there are still four other QCDR-related improvement activities in the Inventory.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	N/A – Removed
Current Improvement Activity	
Current Activity ID:	IA_CC_4
Current Subcategory:	Care Coordination
Current Activity Title:	TCPI Participation
Current Activity Description:	Participation in CMS Transforming Clinical Practice Initiative
Current Weighting:	Medium
Removal Rationale:	We proposed the removal of this activity under removal factor 7, improvement activity is obsolete. The Transforming Clinical Practice Initiative ended on September 28, 2019 ¹ and therefore, clinicians are no longer be able to attest to this improvement activity. We note that this proposed removal was made in conjunction with our proposal to adopt removal factors in section III.K.3.c.(3) of the CY 2020 PFS proposed rule (84 FR 40765). Therefore, this removal is contingent upon finalization of this proposal. We refer readers to section III.K.3.c.(3) of this final rule where we are finalizing our proposal to adopt removal factors.
Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice.
Response:	We appreciate the commenters’ support. Since it is no longer feasible for clinicians to attest to this improvement activity due to the TCPI ending on September 28, 2019, we do not believe removal of this improvement activity would limit clinician options.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.

Finalized Improvement Activity	
Activity ID:	N/A – Removed

1/ Transforming Clinical Practice Initiative. Available at <https://innovation.cms.gov/initiatives/Transforming-Clinical-Practices/>.

Appendix 2: Improvement Activities

NOTE: In this final rule, for the CY 2020 performance period and future years, we are finalizing our proposals to: (1) add two new improvement activities; (2) modify seven existing improvement activities; and (3) remove 15 improvement activities from the Inventory. These are discussed in greater detail below.

Table A: New Improvement Activities for the MIPS CY 2020 Performance Period and Future Years

Proposed Improvement Activity	
Proposed Activity ID:	IA_BE_XX
Proposed Subcategory:	Beneficiary Engagement
Proposed Activity Title:	Drug Cost Transparency
Proposed Activity Description:	To receive credit for this improvement activity, MIPS eligible clinicians must attest that their practice provides counseling to patients and/or their caregivers about the costs of drugs and the patients' out-of-pocket costs for the drugs. If appropriate, the clinician must also explore with their patients the availability of alternative drugs and patients' eligibility for patient assistance programs that provide free medications to people who cannot afford to buy their medicine. One source of information for pricing of pharmaceuticals could be a real-time benefit tool (RTBT), which provides to the prescriber, real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary. (CMS finalized in the Modernizing Part D and Medicare Advantage to Lower Drug Prices and Reduce Out of Pocket Expenses final rule (84 FR 23832, 23883) that beginning January 1, 2021 Medicare Part D plans will be required to implement one or more RTBT(s). ¹)
Proposed Weighting:	High
Rationale:	The costs of prescription drugs is a driving cost of overall health care spending in the United States and of out-of-pocket health care expenses for patients. As we consider broader efforts to increase transparency for patients, payers, provider organizations, and clinicians, as well as begin to drive down drug prices, this activity serves as a mechanism for drug price transparency at the clinician-patient level and may protect patients from unforeseen costs. By discussing drug pricing with patients, clinicians may better prescribe medications patients can afford, which could have the effect of increasing patient medication compliance and adherence. Thus, we believe this activity has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, per the improvement activity definition which has been codified at § 414.1305. This activity is weighted as high due to difficulties clinicians may have in identifying drug costs and out-of-pocket costs of drugs for individual patients as costs and reimbursement amounts vary by drug and payer, as well as challenges with identifying the appropriateness of patient assistance programs. ^{2,3} As stated previously, we have given certain improvement activities high-weighting due to the intensity of the activity (81 FR 77194). To summarize, we believe that an activity that requires significant investment of time and resources should be high-weighted.
Comments:	Several commenters supported the inclusion of this improvement activity. One commenter stated that many practices provide this type of financial counseling without reimbursement, and this improvement activity would be a way of recognizing eligible clinicians and practices for these services. One commenter stated that in addition to drug costs, the improvement activity should include a screening tool to identify additional barriers to medication adherence for patients. Another commenter stated their support for this activity in that discussing drug costs can help increase patient access to these therapies.

Response:	We appreciate the commenters' support. This improvement activity is meant to incentivize clinicians to provide counseling about drug costs so patients and their caregivers are aware of out-of-pocket costs. We disagree that the improvement activity should include a screening tool to identify additional barriers to medication adherence for patients; it is limited to drug costs in an effort to prioritize drug cost transparency.
Final Action:	After consideration of the public comments received, we are finalizing this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_BE_25
Subcategory:	Beneficiary Engagement
Activity Title:	Drug Cost Transparency
Activity Description:	To receive credit for this improvement activity, MIPS eligible clinicians must attest that their practice provides counseling to patients and/or their caregivers about the costs of drugs and the patients' out-of-pocket costs for the drugs. If appropriate, the clinician must also explore with their patients the availability of alternative drugs and patients' eligibility for patient assistance programs that provide free medications to people who cannot afford to buy their medicine. One source of information for pricing of pharmaceuticals could be a real-time benefit tool (RTBT), which provides to the prescriber, real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary. (CMS finalized in the Modernizing Part D and Medicare Advantage to Lower Drug Prices and Reduce Out of Pocket Expenses final rule (84 FR 23832, 23883) that beginning January 1, 2021 Medicare Part D plans will be required to implement one or more RTBT(s). ¹)
Weighting:	High
Proposed Improvement Activity	
Proposed Activity ID:	IA_CC_XX
Proposed Subcategory:	Care Coordination
Proposed Activity Title:	Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes.
Proposed Activity Description:	To receive credit for this improvement activity, a MIPS eligible clinician must attest that they reported MACRA patient relationship codes (PRC) using the applicable HCPCS modifiers on 50 percent or more of their Medicare claims for a minimum of a continuous 90-day period within the performance period. Reporting the PRC modifiers enables the identification of a clinician's relationship with, and responsibility for, a patient at the time of furnishing an item or service. See the CY 2018 PFS final rule (82 FR 53232 through 53234) for more details on these codes.
Proposed Weighting:	High
Rationale:	The patient relationship categories and codes define and distinguish the relationship and responsibilities of a clinician with a patient at the point of furnishing an item or service. These codes provide insight into clinician interactions with patients and identify the clinician's relationship to and responsibility for the patient at the time of furnishing an item or service. These codes were developed, as required under section 1848(r)(3) of the Act, to facilitate the attribution of patients and episodes to one or more clinicians. Beginning in 2018, clinicians started voluntarily reporting the patient relationship codes using the applicable HCPCS modifiers (82 FR 53232 through 53234). To properly report the code modifiers, clinicians must add one of the modifiers to each claim line. We proposed that, for the CY 2020 performance period and beyond, clinicians who choose to report the modifiers on 50 percent or more of their Medicare claims for a minimum of a continuous 90-day period within the performance period would earn one (1) high-weighted improvement activity. We believe reporting these modifiers would provide the minimum sample of data necessary to access the modifiers' ability to capture the clinician's relationship with the patient and whether the clinician is appropriately reporting the modifiers. This improvement activity is weighted as high

	<p>due to the intensity of the activity. We believe reporting the modifiers to each claim line for 50 percent or more of Medicare claims continuously for 90 days requires significant investment of time and resources and should be weighted high.</p> <p>For the initial and current period of voluntary reporting the PRC modifiers, where clinicians gain familiarity, data collected will be used to provide aggregate feedback on the performance of clinicians in using the codes within different clinical scenarios and specialties. Data collected from this activity will be used to test the reliability and validity of the modifiers in measuring the clinician's relationship to and responsibility for the Medicare patient before we consider whether to propose in future rulemaking to require the reporting of the PRC modifiers on claims. In the event that we do decide to require such reporting, we would likely propose to remove this improvement activity from MIPS.</p>
Comments:	<p>Several commenters supported the inclusion of this improvement activity. Commenters stated that this would provide us with a better understanding of the types of relationships clinicians have with their patients without imposing a regulatory burden. One commenter stated that increasing the number of eligible clinicians who report patient relationship codes will help to facilitate the creation of meaningful cost measures and alternative payment models. A commenter stated that this improvement activity will be useful for clinicians that are part of large care coordination teams treating patients with complex chronic disease. An additional commenter supported weighting this improvement activity as High due to the significant investment of time and resources required.</p> <p>A commenter suggested that we amend claim forms to allow for more space for PRC modifiers, and recommended considering using HCPCS codes instead of HCPCS modifiers.</p>
Response:	<p>We appreciate the commenters' support. We anticipate this improvement activity will provide clinicians and us with a better understanding of a clinician's relationship with, and responsibility for, a patient at the time of furnishing an item or service.</p> <p>We intend to keep improving clinician and patient relationships by consulting with stakeholders and experts, and through testing and research, to use the proper reporting mechanism for clinician-patient relationships.</p> <p>Before implementing the PRC, we sought stakeholder input which included consulting the American Medical Association's (AMA) Current Procedural Terminology (CPT) Editorial Panel, which is responsible for maintaining the CPT code set. They recommended CPT Modifiers as the best way to operationalize the reporting of patient relationship codes.⁴ We also received public comments indicating that CPT Modifiers would be the best way to operationalize the reporting of patient relationship codes.⁵ We plan to continue to improve the reporting of the Patient Relationship Categories and Codes through testing and feedback from stakeholders before possibly incorporating it into cost measures. Depending on the recommendations from the testing, we will consider improving the reporting of the PRC which may include modifying the claim forms through reporting patient relationship through CPT codes. Changes or updates to the improvement activity would be through the notice and comment rulemaking process.</p>
Final Action:	After consideration of the public comments received, we are finalizing this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_CC_18
Subcategory:	Care Coordination
Activity Title:	Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes.
Activity Description:	To receive credit for this improvement activity, a MIPS eligible clinician must attest that they reported MACRA patient relationship codes (PRC) using the applicable HCPCS modifiers on 50 percent or more of their Medicare claims for a minimum of a

	continuous 90-day period within the performance period. Reporting the PRC modifiers enables the identification of a clinician’s relationship with, and responsibility for, a patient at the time of furnishing an item or service. See the CY 2018 PFS final rule (82 FR 53232 through 53234) for more details on these codes.
Weighting:	High

TABLE B: Changes to Previously Adopted Improvement Activities for the MIPS CY 2020 Performance Period and Future Years

Current Improvement Activity	
Current Activity ID:	IA_PSPA_28
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Completion of an Accredited Safety or Quality Improvement Program
Current Activity Description:	<p>Completion of an accredited performance improvement continuing medical education program that addresses performance or quality improvement according to the following criteria:</p> <ul style="list-style-type: none"> • The activity must address a quality or safety gap that is supported by a needs assessment or problem analysis, or must support the completion of such a needs assessment as part of the activity; • The activity must have specific, measurable aim(s) for improvement; • The activity must include interventions intended to result in improvement; • The activity must include data collection and analysis of performance data to assess the impact of the interventions; and • The accredited program must define meaningful clinician participation in their activity, describe the mechanism for identifying clinicians who meet the requirements, and provide participant completion information.
Current Weighting:	Medium
Proposed Change and Rationale:	Addition of “An example of an activity that could satisfy this improvement activity is completion of an accredited continuing medical education program related to opioid analgesic risk and evaluation strategy (REMS) to address pain control (that is, acute and chronic pain)” as an example of an accredited continuing medical education (CME) program that could meet this improvement activity. Due to the importance of safe prescribing to prevent opioid misuse and opioid use disorder, CME programs related to opioid analgesic REMS may be especially useful to MIPS eligible clinicians in their attempts to prevent opioid misuse among their patients and combat the opioid epidemic.
Proposed Revised Activity Description:	<p>Completion of an accredited performance improvement continuing medical education (CME) program that addresses performance or quality improvement according to the following criteria:</p> <ul style="list-style-type: none"> • The activity must address a quality or safety gap that is supported by a needs assessment or problem analysis, or must support the completion of such a needs assessment as part of the activity; • The activity must have specific, measurable aim(s) for improvement; • The activity must include interventions intended to result in improvement; • The activity must include data collection and analysis of performance data to assess the impact of the interventions; and • The accredited program must define meaningful clinician participation in their activity, describe the mechanism for identifying clinicians who meet the requirements, and provide participant completion information. <p>An example of an activity that could satisfy this improvement activity is completion of an accredited continuing medical education program related to opioid analgesic risk and evaluation strategy (REMS) to address pain control (that is, acute and chronic pain).</p>
Comments:	Several commenters supported the modification of this improvement activity. Two commenters stated that the addition of opioid analgesic REMS is especially important due to the current public health challenges in addressing opioid misuse.
Response:	We appreciate the commenters’ support. The modification to this improvement activity provides an additional example that clinicians can use to meet this activity that may improve safe prescribing to prevention opioid misuse and opioid use disorder.
Final Action:	After consideration of the public comments received, we are finalizing changes to this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_PSPA_28

Subcategory:	Patient Safety and Practice Assessment
Activity Title:	Completion of an Accredited Safety or Quality Improvement Program
Activity Description:	<p>Completion of an accredited performance improvement continuing medical education (CME) program that addresses performance or quality improvement according to the following criteria:</p> <ul style="list-style-type: none"> • The activity must address a quality or safety gap that is supported by a needs assessment or problem analysis, or must support the completion of such a needs assessment as part of the activity; • The activity must have specific, measurable aim(s) for improvement; • The activity must include interventions intended to result in improvement; • The activity must include data collection and analysis of performance data to assess the impact of the interventions; and • The accredited program must define meaningful clinician participation in their activity, describe the mechanism for identifying clinicians who meet the requirements, and provide participant completion information. <p>An example of an activity that could satisfy this improvement activity is completion of an accredited continuing medical education program related to opioid analgesic risk and evaluation strategy (REMS) to address pain control (that is, acute and chronic pain).</p>
Weighting:	Medium
Current Improvement Activity	
Current Activity ID:	IA_PM_2
Current Subcategory:	Population Management
Current Activity Title:	Anticoagulant Management Improvements
Current Activity Description:	<p>Individual MIPS eligible clinicians and groups who prescribe oral Vitamin K antagonist therapy (warfarin) must attest that, for 60 percent of practice patients in the transition year and 75 percent of practice patients in Quality Payment Program Year 2 and future years, their ambulatory care patients receiving warfarin are being managed by one or more of the following improvement activities:</p> <ul style="list-style-type: none"> • Patients are being managed by an anticoagulant management service, that involves systematic and coordinated care, incorporating comprehensive patient education, systematic prothrombin time (PT-INR) testing, tracking, follow-up, and patient communication of results and dosing decisions; • Patients are being managed according to validated electronic decision support and clinical management tools that involve systematic and coordinated care, incorporating comprehensive patient education, systematic PT-INR testing, tracking, follow-up, and patient communication of results and dosing decisions; • For rural or remote patients, patients are managed using remote monitoring or telehealth options that involve systematic and coordinated care, incorporating comprehensive patient education, systematic PT-INR testing, tracking, follow-up; and patient communication of results and dosing decisions; and/or • For patients who demonstrate motivation, competency, and adherence, patients are managed using either a patient self-testing (PST) or patient-self-management (PSM) program.
Current Weighting:	High

Proposed Change and Rationale:	<p>Addition of “anti-coagulation medications (oral Vitamin K antagonist therapy, including warfarin or other coagulation cascade inhibitors)” and “Participation in a systematic anticoagulation program (coagulation clinic, patient self-reporting program, or patient self-management program).”</p> <p>This language was consolidated from IA_PM_1, which was proposed for removal in Table C. We believe IA_PM_1 is duplicative in content to, but less robust than IA_PM_2, with overall fewer examples of actions that can be undertaken to satisfy the intent of the improvement activity. However, IA_PM_1 contained more detail about the type of anti-coagulation medication that could be prescribed to satisfy this activity and an additional example of an action that can be undertaken to satisfy the intent of IA_PM_2, participation in systematic anticoagulation program; so these elements of IA_PM_1 were added to IA_PM_2.</p> <p>Removal of “, for 60 percent of practice patients in the transition year ... in Quality Payment Program Year 2 and future years.” These time references to transition year and Quality Payment Program Year 2 are now irrelevant because they are in the past.</p> <p>We note that this proposed change was made in conjunction with finalization of the removal of IA_PM_1 as discussed in Table C. We refer readers to Table C where we are finalizing the removal of IA_PM_1.</p>
Proposed Revised Activity Description:	<p>Individual MIPS eligible clinicians and groups who prescribe anti-coagulation medications (including, but not limited to oral Vitamin K antagonist therapy, including warfarin or other coagulation cascade inhibitors) must attest that for 75 percent of their ambulatory care patients receiving these medications are being managed with support from one or more of the following improvement activities:</p> <ul style="list-style-type: none"> • Participation in a systematic anticoagulation program (coagulation clinic, patient self-reporting program, or patient self-management program); • Patients are being managed by an anticoagulant management service, that involves systematic and coordinated care, incorporating comprehensive patient education, systematic prothrombin time (PT-INR) testing, tracking, follow-up, and patient communication of results and dosing decisions; • Patients are being managed according to validated electronic decision support and clinical management tools that involve systematic and coordinated care, incorporating comprehensive patient education, systematic PT-INR testing, tracking, follow-up, and patient communication of results and dosing decisions; • For rural or remote patients, patients are managed using remote monitoring or telehealth options that involve systematic and coordinated care, incorporating comprehensive patient education, systematic PT-INR testing, tracking, follow-up, and patient communication of results and dosing decisions; or • For patients who demonstrate motivation, competency, and adherence, patients are managed using either a patient self-testing (PST) or patient-self-management (PSM) program.
Comments:	Several commenters supported the modification of this improvement activity.
Response:	We appreciate the commenters’ support. The modifications to this improvement activity allows clinicians to attest to one consolidated improvement activity with five relevant examples. Additionally, the removal of reference to the transition year and Quality Payment Program Year 2 will minimize confusion as those time periods are now in the past.
Final Action:	After consideration of the public comments received, we are finalizing changes to this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_PM_2
Subcategory:	Population Management
Activity Title:	Anticoagulant Management Improvements

Activity Description:	Individual MIPS eligible clinicians and groups who prescribe anti-coagulation medications (including, but not limited to oral Vitamin K antagonist therapy, including warfarin or other coagulation cascade inhibitors) must attest that for 75 percent of their ambulatory care patients receiving these medications are being managed with support from one or more of the following improvement activities: <ul style="list-style-type: none"> • Participation in a systematic anticoagulation program (coagulation clinic, patient self-reporting program, or patient self-management program); • Patients are being managed by an anticoagulant management service, that involves systematic and coordinated care, incorporating comprehensive patient education, systematic prothrombin time (PT-INR) testing, tracking, follow-up, and patient communication of results and dosing decisions; • Patients are being managed according to validated electronic decision support and clinical management tools that involve systematic and coordinated care, incorporating comprehensive patient education, systematic PT-INR testing, tracking, follow-up, and patient communication of results and dosing decisions; • For rural or remote patients, patients are managed using remote monitoring or telehealth options that involve systematic and coordinated care, incorporating comprehensive patient education, systematic PT-INR testing, tracking, follow-up, and patient communication of results and dosing decisions; or • For patients who demonstrate motivation, competency, and adherence, patients are managed using either a patient self-testing (PST) or patient-self-management (PSM) program.
Weighting:	High
Current Improvement Activity	
Current Activity ID:	IA_EPA_4
Current Subcategory:	Expanded Practice Access
Current Activity Title:	Additional improvements in access as a result of QIN/QIO TA
Current Activity Description:	As a result of Quality Innovation Network-Quality Improvement Organization technical assistance, performance of additional activities that improve access to services (for example, investment of on-site diabetes educator).
Current Weighting:	Medium
Proposed Change and Rationale:	Addition of “or improve care coordination”. We proposed to consolidate this language from activity IA_CC_3, which was proposed for removal in Table C. IA_CC_3 is duplicative to IA_EPA_4 in content related to Quality Innovation Network-Quality Improvement Organization technical assistance, but referred to improving care coordination. We believe the Quality Innovation Network-Quality Improvement Organization technical assistance can support both access to services and care coordination ¹ and, furthermore, that care coordination and access to services are inherently related and can logically be combined into one improvement activity. We note that this proposed change was made in conjunction with the removal of IA_CC_3 as discussed in Table C. We refer readers to Table C where we are finalizing the removal of IA_CC_3.
Proposed Revised Activity Description:	As a result of Quality Innovation Network-Quality Improvement Organization technical assistance, performance of additional activities that improve access to services or improve care coordination (for example, investment of on-site diabetes educator).
Comments:	Several commenters supported the modification of this improvement activity.
Response:	We appreciate the commenters’ support. The modification to this improvement activity allows clinicians to attest to one consolidated improvement activity related to QIN/QIO technical assistance. This modification makes it clear that QIN/QIO activities supports both care coordination and access to services.
Final Action:	After consideration of the public comments received, we are finalizing changes to this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_EPA_4
Subcategory:	Expanded Practice Access

Activity Title:	Additional improvements in access as a result of QIN/QIO TA
Activity Description:	As a result of Quality Innovation Network-Quality Improvement Organization technical assistance, performance of additional activities that improve access to services or improve care coordination (for example, investment of on-site diabetes educator).
Weighting:	Medium
Current Improvement Activity	
Current Activity ID:	IA PSPA 19
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Implementation of formal quality improvement methods, practice changes, or other practice improvement processes
Current Activity Description:	Adopt a formal model for quality improvement and create a culture in which all staff actively participates in improvement activities that could include one or more of the following such as: <ul style="list-style-type: none"> • Multi-Source Feedback; • Train all staff in quality improvement methods; • Integrate practice change/quality improvement into staff duties; • Engage all staff in identifying and testing practices changes; • Designate regular team meetings to review data and plan improvement cycles; • Promote transparency and accelerate improvement by sharing practice level and panel level quality of care, patient experience and utilization data with staff; and/or • Promote transparency and engage patients and families by sharing practice level quality of care, patient experience and utilization data with patients and families, including activities in which clinicians act upon patient experience data.
Current Weighting:	Medium
Change and Rationale:	Addition of “Bridges to Excellence or American Board of Medical Specialties (ABMS) Multi-Specialty Portfolio Program”. This language was added to consolidate it from IA_PSPA_14, which was proposed for removal in Table C. We believe IA_PSPA_14 is duplicative in content, but less robust than IA_PSPA_19 related to adopting a model for quality improvement. However, IA_PSPA_14 contains a unique relevant example that we wish to preserve under IA_PSPA_19. We note that this proposed change was made in conjunction with the removal of IA_PSPA_14 as discussed in Table C. We refer readers to Table C where we are finalizing the removal of IA_PSPA_14.
Proposed Revised Activity Description:	Adopt a formal model for quality improvement and create a culture in which all staff actively participates in improvement activities that could include one or more of the following, such as: <ul style="list-style-type: none"> • Participation in multisource feedback;² • Train all staff in quality improvement methods; • Integrate practice change/quality improvement into staff duties; • Engage all staff in identifying and testing practices changes; • Designate regular team meetings to review data and plan improvement cycles; • Promote transparency and accelerate improvement by sharing practice level and panel level quality of care, patient experience and utilization data with staff; • Promote transparency and engage patients and families by sharing practice level quality of care, patient experience and utilization data with patients and families, including activities in which clinicians act upon patient experience data; • Participation in Bridges to Excellence;³ • Participation in American Board of Medical Specialties (ABMS) Multi-Specialty Portfolio Program.⁴
Comments:	Several commenters supported the modification of this improvement activity.
Response:	We appreciate the commenters’ support. The modifications to this improvement activity allows clinicians to attest to one consolidated improvement activity related to formal quality improvement models with nine relevant examples.
Final Action:	After consideration of the public comments received, we are finalizing changes to this improvement activity as proposed.
Finalized Improvement Activity	

Activity ID:	IA_PSPA_19
Subcategory:	Patient Safety and Practice Assessment
Activity Title:	Implementation of formal quality improvement methods, practice changes, or other practice improvement processes
Activity Description:	<p>Adopt a formal model for quality improvement and create a culture in which all staff actively participates in improvement activities that could include one or more of the following, such as:</p> <ul style="list-style-type: none"> • Participation in multisource feedback;² • Train all staff in quality improvement methods; • Integrate practice change/quality improvement into staff duties; • Engage all staff in identifying and testing practices changes; • Designate regular team meetings to review data and plan improvement cycles; • Promote transparency and accelerate improvement by sharing practice level and panel level quality of care, patient experience and utilization data with staff; • Promote transparency and engage patients and families by sharing practice level quality of care, patient experience and utilization data with patients and families, including activities in which clinicians act upon patient experience data; • Participation in Bridges to Excellence;³ • Participation in American Board of Medical Specialties (ABMS) Multi-Specialty Portfolio Program.⁴
Weighting:	Medium
Current Improvement Activity	
Current Activity ID:	IA_BE_7
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Participation in a QCDR, that promotes use of patient engagement tools.
Current Activity Description:	Participation in a QCDR, that promotes use of patient engagement tools.
Current Weighting:	Medium
Proposed Change and Rationale:	<p>We proposed the addition of activity description language from four other improvement activities related to participation in QCDR; IA_BE_11 Participation in a QCDR, that promotes use of processes and tools that engage patients for adherence to treatment plan; IA_BE_2 Use of QCDR to support clinical decision making; IA_BE_9 Use of QCDR patient experience data to inform and advance improvements in beneficiary engagement; and IA_BE_10 Participation in a QCDR, that promotes implementation of patient self-action plans.</p> <p>The activity description will include the current (IA_BE_7) activity description with the addition of “Participation in a Qualified Clinical Data Registry and” ..., including:</p> <ul style="list-style-type: none"> • “The use of processes and tools that engage patients for adherence to treatment plans” (from IA_BE_11); • “Activities that promote implementation of shared clinical decision making capabilities” (from IA_BE_2); • “Use of QCDR patient experience data to inform and advance improvements in beneficiary engagement” (from IA_BE_9); • “Activities that promote implementation of patient self-action plans” (from IA_BE_10). <p>This language was proposed to consolidate activity description language from improvement activities was proposed for removal in Table C (IA_BE_11, IA_BE_2, IA_BE_9, and IA_BE_10). The activities proposed for removal are duplicative to IA_BE_7.</p> <p>We also proposed to remove the language “use of...tools” to better capture the content of the consolidated improvement activity regarding promoting patient engagement more broadly.</p>

	We note that this proposed change was made in conjunction with and is contingent upon finalization of the removal of IA_BE_11, IA_BE_2, IA_BE_9, and IA_BE_10 as discussed in Table C. We refer readers to Table C where we are finalizing the removal of IA_BE_11, IA_BE_2, IA_BE_9, and IA_BE_10.
Proposed Revised Activity Description:	Participation in a Qualified Clinical Data Registry (QCDR), that promotes patient engagement, including: <ul style="list-style-type: none"> • Use of processes and tools that engage patients for adherence to treatment plans; • Implementation of patient self-action plans; • Implementation of shared clinical decision making capabilities; or • Use of QCDR patient experience data to inform and advance improvements in beneficiary engagement.
Comments:	Several commenters supported the modification of this improvement activity. One commenter recommended increasing the weighting for this improvement activity to High. Another commenter also recommended that this improvement activity be modified to include participation in nationally validated and risk-adjusted clinical data registries.
Response:	We appreciate the commenters' support. The modifications to this improvement activity allow clinicians to attest to one consolidated improvement activity related to participation in a QCDR with four relevant examples of activities related to patient engagement. The modifications do not increase the effort required, and therefore, we do not believe the weighting of the improvement activity should be increased. We refer readers to section III.I.3.h.(4)(d)(i)(C) of CY 2019 PFS final rule (83 FR 59776 through 59777) where we discussed that high weighting should be used for activities that directly address areas with the greatest impact on beneficiary care, safety, health, and well-being and/or is of high intensity, requiring significant investment of time and resources. This improvement activity promotes use of QCDRs. If clinicians would like to receive credit for alternative data registries, we suggest considering attesting to another appropriate improvement activity, such as IA_PSPA_14, Participation in Quality Improvement Initiatives or IA_PSPA_19, Implementation of formal quality improvement methods, practice changes, or other practice improvement processes.
Final Action:	After consideration of the public comments received, we are finalizing changes to this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_BE_7
Subcategory:	Beneficiary Engagement
Activity Title:	Participation in a QCDR, that promotes use of patient engagement tools.
Activity Description:	Participation in a Qualified Clinical Data Registry (QCDR), that promotes patient engagement, including: <ul style="list-style-type: none"> • Use of processes and tools that engage patients for adherence to treatment plans; • Implementation of patient self-action plans; • Implementation of shared clinical decision making capabilities; or • Use of QCDR patient experience data to inform and advance improvements in beneficiary engagement.
Weighting:	Medium
Current Improvement Activity	
Current Activity ID:	IA_PSPA_7
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Use of QCDR data for ongoing practice assessment and improvements
Current Activity Description:	Use of QCDR data, for ongoing practice assessment and improvements in patient safety.
Current Weighting:	Medium
Proposed Change and Rationale:	We proposed the addition of activity description language from four other improvement activities related to participation in QCDR; IA_CC_6 Use of QCDR to promote standard practices, tools and processes in practice for improvement in care coordination; IA_AHE_4 Leveraging a QCDR for use of standard questionnaires;

	<p>IA_AHE_2 Leveraging a QCDR to standardize processes for screening; and IA_PM_10 Use of QCDR data for quality improvement such as comparative analysis reports across patient populations.</p> <p>The activity description will include the current (IA_PSPA_7) activity description with the addition of “Participation in a Qualified Clinical Data Registry and”... including:</p> <ul style="list-style-type: none"> • “Performance of activities that promote use of standard practices, tools and processes for quality improvement (for example, documented preventative screening and vaccinations that can be shared across MIPS eligible clinician or groups)” (from IA_CC_6); • “Use of standard questionnaires for assessing improvements in health disparities related to functional health status (for example, use of Seattle Angina Questionnaire, MD Anderson Symptom Inventory, and/or SF-12/VR-12 functional health status assessment)” (from IA_AHE_4); • “Use of standardized processes for screening for social determinants of health such as food security, employment and housing” from (from IA_AHE_2); • “Use of supporting QCDR modules that can be incorporated into the certified EHR technology” (This language adapted from IA_AHE_2 and updated to replace “tools” with “QCDR modules” to add additional specificity to the action that can be taken in the QCDR to promote ongoing practice assessment and patient safety.); or • “Use of QCDR data for quality improvement (such as) comparative analysis across specific patient populations for adverse outcomes after an outpatient surgical procedure and corrective steps to address adverse outcomes” (from IA_PM_10). <p>This language was proposed to consolidate improvement activity description language from activities (IA_CC_6, IA_AHE_4, IA_AHE_2, and IA_PM_10) proposed for removal in Table C. The activities we are duplicative to IA_PSPA_7.</p> <p>We note that this proposed change was made in conjunction with and is contingent upon finalization of the removal of IA_CC_6, IA_AHE_4, IA_AHE_2, and IA_PM_10 as discussed in Table C. We refer readers to Table C where we are finalizing the removal of IA_CC_6, IA_AHE_4, IA_AHE_2, and IA_PM_10.</p>
Proposed Revised Activity Description:	<p>Participation in a Qualified Clinical Data Registry (QCDR) and use of QCDR data for ongoing practice assessment and improvements in patient safety, including:</p> <ul style="list-style-type: none"> • Performance of activities that promote use of standard practices, tools and processes for quality improvement (for example, documented preventative screening and vaccinations that can be shared across MIPS eligible clinician or groups); • Use of standard questionnaires for assessing improvements in health disparities related to functional health status (for example, use of Seattle Angina Questionnaire⁵, MD Anderson Symptom Inventory⁶, and/or SF-12/VR-12 functional health status assessment⁷); • Use of standardized processes for screening for social determinants of health such as food security, employment, and housing; • Use of supporting QCDR modules that can be incorporated into the certified EHR technology; or • Use of QCDR data for quality improvement such as comparative analysis across specific patient populations for adverse outcomes after an outpatient surgical procedure and corrective steps to address adverse outcomes.
Comments:	<p>Several commenters supported the modification of this improvement activity. One commenter recommended increasing the weighting for this improvement activity to High. A commenter also recommended that this improvement activity be modified to include participation in nationally validated and risk-adjusted clinical data registries.</p>
Response:	<p>We appreciate the commenters’ support. The modifications to this improvement activity allows clinicians to attest to one consolidated improvement activity related to participation in a QCDR with five relevant examples of activities related to ongoing practice assessment and improvements in patient safety. The modifications do not</p>

	increase the effort required, and therefore, we do not believe the weighting of the improvement activity should be increased. We refer readers to section III.I.3.h.(4)(d)(i)(C) of CY 2019 PFS final rule (83 FR 59776 through 59777) where we discussed that high weighting should be used for activities that directly address areas with the greatest impact on beneficiary care, safety, health, and well-being and/or is of high intensity, requiring significant investment of time and resources. This improvement activity promotes use of QCDRs. If clinicians would like to receive credit for alternative data registries, we suggest considering attesting to another appropriate improvement activity, such as IA_PSPA_14, Participation in Quality Improvement Initiatives or IA_PSPA_19, Implementation of formal quality improvement methods, practice changes, or other practice improvement processes.
Final Action:	After consideration of the public comments received, we are finalizing changes to this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_PSPA_7
Subcategory:	Patient Safety and Practice Assessment
Activity Title:	Use of QCDR data for ongoing practice assessment and improvements
Activity Description:	Participation in a Qualified Clinical Data Registry (QCDR) and use of QCDR data for ongoing practice assessment and improvements in patient safety, including: <ul style="list-style-type: none"> • Performance of activities that promote use of standard practices, tools and processes for quality improvement (for example, documented preventative screening and vaccinations that can be shared across MIPS eligible clinician or groups); • Use of standard questionnaires for assessing improvements in health disparities related to functional health status (for example, use of Seattle Angina Questionnaire⁵, MD Anderson Symptom Inventory⁶, and/or SF-12/VR-12 functional health status assessment⁷; • Use of standardized processes for screening for social determinants of health such as food security, employment, and housing; • Use of supporting QCDR modules that can be incorporated into the certified EHR technology; or • Use of QCDR data for quality improvement such as comparative analysis across specific patient populations for adverse outcomes after an outpatient surgical procedure and corrective steps to address adverse outcomes.
Weighting:	Medium
Current Improvement Activity	
Current Activity ID:	IA_BMH_10
Current Subcategory:	Behavioral and Mental Health
Current Activity Title:	Completion of Collaborative Care Management Training Program
Current Activity Description:	To receive credit for this activity, MIPS eligible clinicians must complete a collaborative care management training program, such as the American Psychiatric Association (APA) Collaborative Care Model training program available as part of the Centers for Medicare & Medicaid Services (CMS) Transforming Clinical Practice Initiative (TCPI), available to the public, in order to implement a collaborative care management approach that provides comprehensive training in the integration of behavioral health into the primary care practice.
Current Weighting:	Medium
Proposed Change and Rationale:	We proposed the removal of the reference to the CMS Transforming Clinical Practice Initiative (TCPI) in the activity description. This initiative ended on September 28, 2019, ⁹ and therefore, is no longer be applicable to this improvement activity description. The example training program referenced, the APA Collaborative Care Model, continues to be available to the public. The revised activity description only proposes to remove reference to TCPI.
Proposed Revised Activity Description:	To receive credit for this activity, MIPS eligible clinicians must complete a collaborative care management training program, such as the American Psychiatric Association (APA) Collaborative Care Model training program available to the public ⁸ ,

	in order to implement a collaborative care management approach that provides comprehensive training in the integration of behavioral health into the primary care practice.
Comments:	Several commenters supported the modification of this improvement activity.
Response:	We appreciate the commenters' support. The removal of reference to the TCPI in this improvement activity description will minimize confusion as that initiative ended on September 28, 2019.
Final Action:	After consideration of the public comments received, we are finalizing changes to this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	IA_BMH_10
Subcategory:	Behavioral and Mental Health
Activity Title:	Completion of Collaborative Care Management Training Program
Activity Description:	To receive credit for this activity, MIPS eligible clinicians must complete a collaborative care management training program, such as the American Psychiatric Association (APA) Collaborative Care Model training program available to the public ⁸ , in order to implement a collaborative care management approach that provides comprehensive training in the integration of behavioral health into the primary care practice.

TABLE C: Improvement Activities for Removal for the MIPS CY 2020 MIPS Performance Period and Future Years

We note that in the CY 2020 PFS proposed rule [84 FR 40765], we inadvertently referenced 14 improvement activities proposed for removal even though there were 15 improvement activities proposed for removal in Table C. We are correcting that typographical error here. In this final rule, we are finalizing our proposals as proposed to remove 15 previously finalized improvement activities from the MIPS Program for the MIPS CY 2020 performance period and future years. These improvement activities are discussed in detail below. Improvement activity removal factors are discussed in section III.K.3.c.(3) of this final rule.

Current Improvement Activity	
Current Activity ID:	IA_PM_1
Current Subcategory:	Population Management
Current Activity Title:	Participation in Systematic Anticoagulation Program
Current Activity Description:	Participation in a systematic anticoagulation program (coagulation clinic, patient self-reporting program, or patient self-management program) for 60 percent of practice patients in the transition year and 75 percent of practice patients in Quality Payment Program Year 2 and future years, who receive anti-coagulation medications (warfarin or other coagulation cascade inhibitors).
Current Weighting:	High
Removal Rationale:	We proposed the removal of this activity under removal factor 1, improvement activity is “duplicative.” We believe it is duplicative, because it is similar to, but only represents a partial component of IA_PM_2. We proposed consolidating the unique language from IA_PM_1 into IA_PM_2 per the change in Table B. The revised IA_PM_2 adds additional detail from IA_PM_1. We note that this proposed removal was made in conjunction with our decision to modify IA_PM_2 in Table B, as well as our proposals to adopt removal factors in section III.K.3.c.(3) of this final rule.
Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice.
Response:	We appreciate the commenters’ support. We appreciate the commenters’ support. We are removing this improvement activity because we believe it is “duplicative” of IA_PM_2. While we understand the concern that removal of improvement activities may limit clinician options, we do not believe removing this activity will limit options as it has the same components as IA_PM_2, which we are retaining.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	N/A – Removed
Current Improvement Activity	
Current Activity ID:	IA_CC_3
Current Subcategory:	Care Coordination
Current Activity Title:	Implementation of additional activity as a result of TA for improving care coordination
Current Activity Description:	Implementation of at least one additional recommended activity from the Quality Innovation Network-Quality Improvement Organization after technical assistance has been provided related to improving care coordination.
Current Weighting:	Medium
Removal Rationale:	We proposed the removal of IA_CC_3 under removal factor 1, improvement activity is “duplicative.” We believe it is duplicative, because it is similar to, but only represents a partial component of IA_EPA_4. We proposed consolidating the unique language from IA_CC_3 into IA_EPA_4 per the change in Table B. The modified language to IA_EPA_4 adds the outcome of “improve care coordination” from the removed activity to make IA_EPA_4 more robust. We note that this proposed removal was made in conjunction with our proposal to modify IA_EPA_4 in Table B, as well as our proposals to adopt removal factors in section III.K.3.c.(3) of this final rule.

Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice.
Response:	We appreciate the commenters' support. We appreciate the commenters' support. We are removing this improvement activity because we believe it is "duplicative" of IA_EPA_4. While we understand the concern that removal of improvement activities may limit clinician options, we do not believe removing this activity will limit options as it has the same components as IA_EPA_4, which we are retaining.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	N/A – Removed
Current Improvement Activity	
Current Activity ID:	IA_PSPA_14
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Participation in Quality Improvement Initiatives
Current Activity Description:	Participation in other quality improvement programs such as Bridges to Excellence or American Board of Medical Specialties (ABMS) Multi-Specialty Portfolio Program.
Current Weighting:	Medium
Removal Rationale:	We proposed the removal of this IA_PSPA_14 under removal factor 1, improvement activity is "duplicative." We believe it is duplicative, because it is similar to, but only represents a partial component of the activities included in IA_PSPA_19. We proposed consolidating the unique language in IA_PSPA_14 with IA_PSPA_19 per the change in Table B. The modified language to IA_PSPA_19 adds the examples "Bridges to Excellence" and "American Board of Medical Specialties (ABMS) Multi-Specialty Portfolio Program" as additional actions that an eligible clinician or group can take to participate in a quality improvement program. We note that this proposed removal was made in conjunction with our proposal to modify IA_PSPA_19 in Table B, as well as our proposals to adopt removal factors in section III.K.3.c.(3) of the CY 2020 PFS proposed rule (84 FR 40765). Therefore, this removal is contingent upon finalization of both referenced proposals. We refer readers to Table B of this final rule where we are finalizing our proposal to modify IA_PSPA_19 and to section III.K.3.c.(3) of this final rule where we are finalizing our proposal to adopt removal factors.
Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice.
Response:	We appreciate the commenters' support. We appreciate the commenters' support. We are removing this improvement activity because we believe it is "duplicative" of IA_PSPA_19. While we understand the concern that removal of improvement activities may limit clinician options, we do not believe removing this activity will limit options as it has the same components as IA_PSPA_19, which we are retaining.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	N/A – Removed
Current Improvement Activity	
Current Activity ID:	IA_PSPA_5
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Annual Registration in the Prescription Drug Monitoring Program
Current Activity Description:	Annual registration by eligible clinician or group in the prescription drug monitoring program of the state where they practice. Activities that simply involve registration are not sufficient. MIPS eligible clinicians and groups must participate for a minimum of 6 months.

Current Weighting:	Medium
Removal Rationale:	We proposed the removal of this activity under removal factor 1, improvement activity is “duplicative.” We believe it is duplicative, because it is similar in content but less robust than the currently adopted IA_PSPA_6. IA_PSPA_6 requires consultation of and specific thresholds of use for a prescription drug monitoring program instead of simply registering in a prescription drug monitoring program as described in IA_PSPA_5. Because of this, we believe IA_PSPA_6 already captures the essence of IA_PSPA_5 and directly falls into that improvement activity. We note that this proposed removal was made in conjunction with our proposal to adopt removal factors in section III.K.3.c.(3) of this final rule.
Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice.
Response:	We appreciate the commenters’ support. We are removing this improvement activity because we believe it is “duplicative” of IA_PSPA_6. We understand the concern that removal of improvement activities may limit clinician options but clinicians may attest to IA_PSPA_6, as well as other medium-weight IAs. As explained in section III.I.3.h.(4)(d)(i)(C) of CY 2019 PFS final rule (83 FR 59780 through 59781) the weighting of “medium” is in accordance with our policy, as high weighting should be used for activities that directly address areas with the greatest impact on beneficiary care, safety, health, and well-being and/or is of high intensity, requiring significant investment of time and resources.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	N/A – Removed
Current Improvement Activity	
Current Activity ID:	IA_PSPA_24
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Initiate CDC Training on Antibiotic Stewardship
Current Activity Description:	Completion of greater than 50 percent of the modules of the Centers for Disease Control and Prevention antibiotic stewardship course. Note: This activity may be selected once every 4 years, to avoid duplicative information given that some of the modules may change on a year by year basis, but over 4 years there would be a reasonable expectation for the set of modules to have undergone substantive change, for the improvement activities performance category score.
Current Weighting:	Medium
Removal Rationale:	We proposed the removal of this activity under removal factor 1, improvement activity is “duplicative.” We believe it is duplicative, because it is less robust than IA_PSPA_23. IA_PSPA_23 requires completion of all modules of a Centers for Disease Control and Prevention antibiotic stewardship course, instead of 50 percent of modules of a Centers for Disease Control and Prevention antibiotic stewardship course. Because of this, we believe IA_PSPA_23 already captures the essence of IA_PSPA_24 and directly fall into that improvement activity. We note that this proposal was made in conjunction with our proposal to adopt removal factors in section III.K.3.c.(3) of the CY 2020 PFS proposed rule (84 FR 40765). Therefore, this removal is contingent upon finalization of this referenced proposal. We refer readers to section III.K.3.c.(3) of this final rule where we are finalizing our proposal to adopt removal factors.
Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice.
Response:	We appreciate the commenters’ support. We are removing this improvement activity because we believe it is “duplicative” of IA_PSPA_23. We understand the concern that

	removal of improvement activities may limit clinician options but clinicians may attest to other medium-weight IAs. As explained in section III.I.3.h.(4)(d)(i)(C) of the CY 2019 PFS final rule (83 FR 59780 through 59781) the weighting of “medium” is in accordance with our policy, as high weighting should be used for activities that directly address areas with the greatest impact on beneficiary care, safety, health, and well-being and/or is of high intensity, requiring significant investment of time and resources.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	N/A – Removed
Current Improvement Activity	
Current Activity ID:	IA_BMH_3
Current Subcategory:	Behavioral and Mental Health
Current Activity Title:	Unhealthy alcohol use
Current Activity Description:	Unhealthy alcohol use: Regular engagement of MIPS eligible clinicians or groups in integrated prevention and treatment interventions, including screening and brief counseling (refer to NQF #2152) for patients with co-occurring conditions of behavioral or mental health conditions.
Current Weighting:	Medium
Removal Rationale:	We proposed removal of this activity under removal factor 1, improvement activity is “duplicative.” We believe it is duplicative, because it is similar to the currently adopted IA_BMH_9. We believe IA_BMH_9 is more robust because it requires a threshold of patients for which this unhealthy alcohol use screening must be completed, whereas IA_BMH_3 simply requires engagement, screening and counseling without such a threshold. Because of this, we believe IA_BMH_9 already captures the essence of IA_BMH_3 and directly fall into that improvement activity. We note that this proposal was made in conjunction with our proposal to adopt removal factors in section III.K.3.c.(3) of the CY 2020 PFS proposed rule (84 FR 40765). Therefore, this removal is contingent upon finalization of this referenced proposal. We refer readers to section III.K.3.c.(3) in this final rule where we are finalizing our proposals to adopt removal factors.
Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice.
Response:	We appreciate the commenters’ support. We are removing this improvement activity because we believe it is “duplicative” of IA_BMH_9. We understand the concern that removal of improvement activities may limit clinician options but clinicians may attest to other medium-weight IAs. As explained in section III.I.3.h.(4)(d)(i)(C) of CY 2019 PFS final rule (83 FR 59780 through 59781) the weighting of “medium” is in accordance with our policy, as high weighting should be used for activities that directly address areas with the greatest impact on beneficiary care, safety, health, and well-being and/or is of high intensity, requiring significant investment of time and resources.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	N/A – Removed
Current Improvement Activity	
Current Activity ID:	IA_BE_11
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Participation in a QCDR, that promotes use of processes and tools that engage patients for adherence to treatment plan
Current Activity Description:	Participation in a QCDR, that promotes use of processes and tools that engage patients for adherence to treatment plan.
Current Weighting:	Medium

Removal Rationale:	We proposed removal of this activity under removal factor 1, improvement activity is “duplicative.” We believe it is duplicative, because it is similar to, but only represents a partial component of IA_BE_7. In Table B, we proposed changes to IA_BE_7 that add “...the use of processes and tools that engage patients for adherence to treatment plan” to make IA_BE_7 more robust and offer an additional example. Because of this, we believe the changes to IA_BE_7 capture the essence of IA_BE_11. We note that this proposed removal was made in conjunction with our proposal to modify IA_BE_7 in Table B, as well as our proposals to adopt removal factors in section III.K.3.c.(3) of the CY 2020 PFS proposed rule (84 FR 40765). Therefore, this removal is contingent upon finalization of both referenced proposals. We refer readers to Table B of this final rule where we are finalizing our proposal to modify IA_BE_7 and to section III.K.3.c.(3) of this final rule where we are finalizing our proposal to adopt removal factors.
Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice. One commenter did not oppose this removal, but expressed concern that removal of multiple QCDR-related improvement activities could lower participation in QCDRs.
Response:	We appreciate the commenters’ support. We appreciate the commenters’ support. We are removing this improvement activity because we believe it is “duplicative” of IA_BE_7. While we understand the concern that removal of improvement activities may limit clinician options, we do not believe removing this activity will limit options as it has the same components as IA_BE_7, which we are retaining. We do not believe removal of this improvement activity would lower participation in QCDRs, because there are still four other QCDR-related improvement activities in the Inventory.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	N/A – Removed
Current Improvement Activity	
Current Activity ID:	IA_BE_2
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Use of QCDR to support clinical decision making
Current Activity Description:	Participation in a QCDR, demonstrating performance of activities that promote implementation of shared clinical decision making capabilities.
Current Weighting:	Medium
Removal Rationale:	We proposed the removal of this activity under removal factor 1, improvement activity is “duplicative.” We believe it is duplicative, because it is similar to, but only represents a partial component of IA_BE_7. In Table B, we are proposed changes to IA_BE_7 that add “activities that promote implementation of shared clinical decision making capabilities” to make IA_BE_7 more robust and offer an additional example. Because of this, we believe the changes to IA_BE_7 capture the essence of IA_BE_2. We note that this proposed removal was made in conjunction with our proposal to modify IA_BE_7 in Table B, as well as our proposals to adopt removal factors in section III.K.3.c.(3) of the CY 2020 PFS proposed rule (84 FR 40765). Therefore, this removal is contingent upon finalization of both referenced proposals. We refer readers to Table B of this final rule where we are finalizing our proposal to modify IA_BE_7 and to section III.K.3.c.(3) of this final rule where we are finalizing our proposal to adopt removal factors.
Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice. One commenter did not oppose this removal, but expressed concern that removal of multiple QCDR-related improvement activities could lower participation in QCDRs.

Response:	We appreciate the commenters' support. We appreciate the commenters' support. We are removing this improvement activity because we believe it is "duplicative" of IA_BE_7. While we understand the concern that removal of improvement activities may limit clinician options, we do not believe removing this activity will limit options as it has the same components as IA_BE_7, which we are retaining. We do not believe removal of this improvement activity would lower participation in QCDRs, because there are still four other QCDR-related improvement activities in the Inventory.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	N/A – Removed
Current Improvement Activity	
Current Activity ID:	IA BE 9
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Use of QCDR patient experience data to inform and advance improvements in beneficiary
Current Activity Description:	Use of QCDR patient experience data to inform and advance improvements in beneficiary engagement.
Current Weighting:	Medium
Removal Rationale:	We proposed the removal of this activity under removal factor 1, improvement activity is "duplicative." We believe it is duplicative, because it is similar to, but only represents a partial component of IA_BE_7. In Table B, we proposed changes to IA_BE_7 that add "use of QCDR patient experience data to inform and advance improvements in beneficiary engagement" to make IA_BE_7 more robust and offer an additional example. Because of this, we believe the changes to IA_BE_7 capture the essence of IA_BE_9. We note that this proposed removal was made in conjunction with our proposal to modify IA_BE_7 in Table B, as well as our proposals to adopt removal factors in section III.K.3.c.(3) of the CY 2020 PFS proposed rule (84 FR 40765). Therefore, this removal is contingent upon finalization of both referenced proposals. We refer readers to sections Table B of this final rule where we are finalizing our proposal to modify IA_BE_7 and to section III.K.3.c.(3) of this final rule where we are finalizing our proposal to adopt removal factors.
Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice. One commenter did not oppose this removal, but expressed concern that removal of multiple QCDR-related improvement activities could lower participation in QCDRs.
Response:	We appreciate the commenters' support. We appreciate the commenters' support. We are removing this improvement activity because we believe it is "duplicative" of IA_BE_7. While we understand the concern that removal of improvement activities may limit clinician options, we do not believe removing this activity will limit options as it has the same components as IA_BE_7, which we are retaining. We do not believe removal of this improvement activity would lower participation in QCDRs, because there are still four other QCDR-related improvement activities in the Inventory.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	N/A – Removed
Current Improvement Activity	
Current Activity ID:	IA BE 10
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Participation in a QCDR, that promotes implementation of patient self-action plans.
Current Activity Description:	Participation in a QCDR, that promotes implementation of patient self-action plans.

Current Weighting:	Medium
Removal Rationale:	We proposed the removal of this activity under removal factor 1, improvement activity is “duplicative.” We believe it is duplicative, because it is similar to, but only represents a partial component of IA_BE_7. In Table B, we proposed changes to IA_BE_7 to add “[activities that] promote implementation of patient self-action plans” to make IA_BE_7 more robust and offer an additional example. Because of this, we believe the changes to IA_BE_7 capture the essence of IA_BE_10. We note that this proposed removal was made in conjunction with our proposal to modify IA_BE_7 in Table B, as well as our proposals to adopt removal factors in section III.K.3.c.(3) of the CY 2020 PFS proposed rule (84 FR 40765). Therefore, this removal is contingent upon finalization of both referenced proposals. We refer readers to Table B of this final rule where we are finalizing our proposal to modify IA_BE_7 and to section III.K.3.c.(3) of this final rule where we are finalizing our proposal to adopt removal factors.
Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice. One commenter did not oppose this removal, but expressed concern that removal of multiple QCDR-related improvement activities could lower participation in QCDRs.
Response:	We appreciate the commenters’ support. We appreciate the commenters’ support. We are removing this improvement activity because we believe it is “duplicative” of IA_BE_7. While we understand the concern that removal of improvement activities may limit clinician options, we do not believe removing this activity will limit options as it has the same components as IA_BE_7, which we are retaining. We do not believe removal of this improvement activity would lower participation in QCDRs, because there are still four other QCDR-related improvement activities in the Inventory.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.
Finalized Improvement Activity	
Activity ID:	N/A – Removed
Current Improvement Activity	
Current Activity ID:	IA_CC_6
Current Subcategory:	Care Coordination
Current Activity Title:	Use of QCDR to promote standard practices, tools and processes in practice for improvement in care coordination
Current Activity Description:	Participation in a Qualified Clinical Data Registry, demonstrating performance of activities that promote use of standard practices, tools and processes for quality improvement (for example, documented preventative screening and vaccinations that can be shared across MIPS eligible clinician or groups).
Current Weighting:	Medium
Removal Rationale:	We proposed the removal of this activity under removal factor 1, improvement activity is “duplicative.” We believe it is duplicative, because it is similar to, but only represents a partial component of IA_PSPA_7. In Table B, we proposed changes to IA_PSPA_7 to add “performance of activities that promote use of standard practices, tools and processes for quality improvement (for example, documented preventative screening and vaccinations that can be shared across MIPS eligible clinician or groups);” to make IA_PSPA_7 more robust and offer additional examples. Because of this, we believe the changes to IA_PSPA_7 capture the essence of IA_CC_6. We note that this proposed removal was made in conjunction with our proposal to modify IA_PSPA_7 in Table B, as well as our proposals to adopt removal factors in section III.K.3.c.(3) of the CY 2020 PFS proposed rule (84 FR 40765). Therefore, this removal is contingent upon finalization of both referenced proposals. We refer readers to Table B of this final rule where we are finalizing our proposal to modify IA_PSPA_7 and to section III.K.3.c.(3) of this final rule where we are finalizing our proposal adopt removal factors.

Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice. One commenter did not oppose this removal, but expressed concern that removal of multiple QCDR-related improvement activities could lower participation in QCDRs.
Response:	We appreciate the commenters' support. We appreciate the commenters' support. We are removing this improvement activity because we believe it is "duplicative" of IA_PSPA_7. While we understand the concern that removal of improvement activities may limit clinician options, we do not believe removing this activity will limit options as it has the same components as IA_PSPA_7, which we are retaining. We do not believe removal of this improvement activity would lower participation in QCDRs, because there are still four other QCDR-related improvement activities in the Inventory.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.

Current Improvement Activity	
Current Activity ID:	IA_AHE_4
Current Subcategory:	Achieving Health Equity
Current Activity Title:	Leveraging a QCDR for use of standard questionnaires
Current Activity Description:	Participation in a QCDR, demonstrating performance of activities for use of standard questionnaires for assessing improvements in health disparities related to functional health status (for example, use of Seattle Angina Questionnaire, MD Anderson Symptom Inventory, and/or SF-12/VR-12 functional health status assessment).
Current Weighting:	Medium
Removal Rationale:	We proposed the removal of this activity under removal factor 1, improvement activity is "duplicative." We believe it is duplicative, because it is similar to, but only represents a partial component of IA_PSPA_7. In Table B, we proposed changes to IA_PSPA_7 to add "use of standard questionnaires for assessing improvements in health disparities related to functional health status (for example, use of Seattle Angina Questionnaire, MD Anderson Symptom Inventory, and/or SF-12/VR-12 functional health status assessment);" to make IA_PSPA_7 more robust and offer additional examples. Because of this, we believe the changes to IA_PSPA_7 capture the essence of IA_AHE_4. We note that this proposed removal was made in conjunction with our proposal to modify IA_PSPA_7 in Table B, as well as our proposals to adopt removal factors in section III.K.3.c.(3) of the CY 2020 PFS proposed rule (84 FR 40765). Therefore, this removal is contingent upon finalization of both referenced proposals. We refer readers to Table B of this final rule where we are finalizing our proposal to modify IA_PSPA_7 and to section III.K.3.c.(3) of this final rule where we are finalizing our proposal to adopt removal factors.

Current Improvement Activity	
Current Activity ID:	IA_PM_10
Current Subcategory:	Population Management
Current Activity Title:	Use of QCDR data for quality improvement such as comparative analysis reports across patient populations
Current Activity Description:	Participation in a QCDR, clinical data registries, or other registries run by other government agencies such as FDA, or private entities such as a hospital or medical or surgical society. Activity must include use of QCDR data for quality improvement (for example, comparative analysis across specific patient populations for adverse outcomes after an outpatient surgical procedure and corrective steps to address adverse outcome).
Current Weighting:	Medium

Removal Rationale:	We proposed the removal of this activity under removal factor 1, improvement activity is “duplicative.” We believe it is duplicative, because it is similar to, but only represents a partial component of IA_PSPA_7. In Table B, we proposed changes to IA_PSPA_7 to add “use of QCDR data for quality improvement such as comparative analysis reports across patient populations for adverse outcomes after an outpatient surgical procedure and corrective steps to address adverse outcomes” to make IA_PSPA_7 more robust and offer additional examples. Because of this, we believe the changes to IA_PSPA_7 capture the essence of IA_PM_10. We note that this proposed removal was made in conjunction with our proposal to modify IA_PSPA_7 in Table B, as well as our proposals to adopt removal factors in section III.K.3.c.(3) of the CY 2020 PFS proposed rule (84 FR 40765). Finalized Improvement Activity	
Activity ID:	N/A – Removed
Current Improvement Activity	
Current Activity ID:	IA_CC_4
Current Subcategory:	Care Coordination
Current Activity Title:	TCPI Participation
Current Activity Description:	Participation in CMS Transforming Clinical Practice Initiative
Current Weighting:	Medium
Removal Rationale:	We proposed the removal of this activity under removal factor 7, improvement activity is obsolete. The Transforming Clinical Practice Initiative ended on September 28, 2019 ¹ and therefore, clinicians are no longer be able to attest to this improvement activity. We note that this proposed removal was made in conjunction with our proposal to adopt removal factors in section III.K.3.c.(3) of the CY 2020 PFS proposed rule (84 FR 40765). Therefore, this removal is contingent upon finalization of this proposal. We refer readers to section III.K.3.c.(3) of this final rule where we are finalizing our proposal to adopt removal factors.
Comments:	Several commenters supported the removal of this improvement activity. Additional commenters expressed concern that the removal of improvement activities would limit clinician options to choose appropriate improvement activities with similar levels of effort for their practice.
Response:	We appreciate the commenters’ support. Since it is no longer feasible for clinicians to attest to this improvement activity due to the TCPI ending on September 28, 2019, we do not believe removal of this improvement activity would limit clinician options.
Final Action:	After consideration of the public comments received, we are finalizing the removal of this improvement activity as proposed.
