- *Service area population density.* Ground ambulance organizations operate in urban, rural, and super-rural settings. As described in the CAMH report, rural and super-rural organizations tend to be smaller, transport patients at greater distances, are more likely to be government owned, and rely more heavily on volunteer labor. We stated the population density of the area in which a ground ambulance organization is operating is expected to affect costs and revenues in a number of ways. Organizations serving rural and super-rural areas generally are likely to face lower demand for services, and thus, deliver a smaller number of transports. In addition, in rural and super-rural areas the average distance traveled per transport tends to be greater. We further stated that payment rates will also differentially impact revenue by population density because the Medicare AFS accounts for mileage and, in addition, rural and super-rural providers and suppliers receive higher temporary add-on payments.

- *Volume of transports.* If there are economies of scale, organizations providing a larger volume of services typically would face lower per-transport costs. We stated our analysis found the majority of ground ambulance organizations have a low volume of transports, but there are a small number of organizations with a very high volume of transports. Additionally we stated that suppliers providing a large volume of transports are more likely to be for-profit organizations.

- *Ownership.* For-profit (non-government), non-profit (non-government), and government ground ambulance organizations have different business models and mixes of services, leading to different costs. We stated conceptually, for-profit organizations maximize profit and operate only in markets and service lines with positive margins and that non-profit and government ground ambulance

organizations more broadly provide emergency service to communities and may be organized and operated in a way that does not maximize profits. The 2012 GAO report found ground ambulance organizations with more limited government support are more likely to have incentives to keep costs lower. They found that for each 2 percent decline in the average length of government subsidy there was a 2 percent decline in the average cost per transport. As a result, we stated we expect that costs will differ based on ownership.

- *Types of services provided.* One key distinction in the types of services provided is between emergency transports and non-emergency (for example, scheduled or inter-facility) transports. We stated that for-profit suppliers are more likely than others to specialize in non-emergency scheduled transports. We stated that another key distinction is between the level of service provided (for example BLS versus ALS).

- *Staffing.* The level of staff training (for example, EMTs versus paramedics) and the number of staff deployed is driven in part by the type and volume of calls, the availability and proximity of the nearest providers, and resources available in that community. We stated that some suppliers use static staffing models that use set staff schedules, whereas others use a dynamic, or flexible, staffing model that calls upon staff if there is a surge in demand.

- *Use of volunteer labor.* Volunteer labor tends to be more common among small, government-based ambulance suppliers operating in rural and super-rural settings.

- *Response times.* In many cases, response times are related to the population density of the area in which they operate, with rural areas having response times more than double those of urban areas. We stated that rural and super-rural ambulance providers and suppliers generally travel greater distances to get to patients and transport them to a hospital or the nearest appropriate facility. We also stated that variation in response times within urban areas might also occur, for example if there is significant emergency department crowding, or in extreme cases diversion that requires the ambulance to travel further to another hospital or wait with the patient until a bed is available and that this extra time affects the availability of the ambulance and the staff for subsequent trips, potentially increasing response times.

We stated we were not aware of any existing data source that lists all ground

⁹⁷ This report is available at <https://www.gao.gov/assets/650/649018.pdf>.

⁹⁸ This report is available at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AmbulanceFeeSchedule/Downloads/Report-To-Congress-September-2015.pdf>.

ambulance organizations or one that encompasses all the characteristics that impact costs and revenues described above. We stated that Medicare claims and enrollment data is the only source of data for which we were aware that has all the providers and suppliers that bill Medicare in a given year. We stated that several of the organizational characteristics we discuss above (including provider versus supplier status, ownership, service area population density, Medicare billed transport volume, and type of services provided) are available from Medicare data while others, such as the use of volunteer labor, staffing model, and response times are not.

We proposed to stratify the sample based on provider versus supplier status, ownership (for-profit, non-profit, and government), service area population density (transports originating in primarily urban, rural, and super rural zip codes), and Medicare billed transport volume categories. Based on our analysis of the number and distribution of ground ambulance organizations' transports in 2016, we proposed volume categories of 1 to 200, 201 to 800, 801 to 2500, and 2501 or more paid Medicare transports. The volume categories aim to divide ground ambulance organizations into roughly similar-sized groups, while separating ground ambulance organizations with very high volume (that is, greater than 2500 Medicare transports per year) into a separate category. We stated we would expect that these highest-volume ground ambulance organizations may face different costs than lower-volume organizations due to economies of scale.

We proposed to focus on these four characteristics due to data availability, and our analyses that show these to be key defining characteristics of ground ambulance organizations (which are also described in the CAMH report). We stated that service area population density and Medicare billed transport volume have a direct impact on ground ambulance revenue, which is one of the categories of data that we are required to collect by section 1834(l)(17)(A) of the Act. We stated that through Medicare claims and enrollment data, we believe we have enough information to stratify ground ambulance organizations on these four characteristics. This stratification approach results in 36 groupings of ground ambulance suppliers (defined by combinations of the three ownership categories, three service area population density categories, and four Medicare billed transport volume categories) and

the same number of groupings for ambulance providers.

In some of these groupings, there are only a handful of ground ambulance organizations providing ground ambulance services with a specific set of the four characteristics. We stated this could result in situations where few or no ground ambulance organizations with the specific set of characteristics were sampled. To minimize this risk and avoid situations where we are sampling from strata that contain only a few ambulance providers and suppliers in the entire population, we proposed to stratify ground ambulance providers, which account for only 6 percent of ground ambulance organizations combined, based on service area population density only. We proposed to use this characteristic to stratify providers rather than another characteristic because section 1834(l)(17)(A) of the Act specifically requires the Secretary to develop a data collection system to collect information on ground ambulance services furnished in different geographic locations, including rural areas and low population density areas described in section 1834(l)(12) of the Act (super rural areas).

We also proposed to collapse the two highest Medicare ground ambulance transport volume categories (801–2500 and 2501 and more transports) into a single category (801 and more transports) for for-profit ground ambulance suppliers that primarily service super-rural areas due to the small number of ground ambulance organizations in these two volume categories. We stated the proposed sampling rate of 25 percent aims to meet a threshold that will provide an adequate degree of precision for estimates within each strata subgroup (that is, provider versus supplier status, ownership (for-profit, non-profit, and government), service area population density (transports originating in primarily urban, rural, and super rural zip codes), and Medicare billed transport volume categories). The specific threshold is 200 expected responses in each subgroup. This number of expected responses will ensure that small to medium differences in means between groups (that is, affect size) can be detected.

We stated that a 25 percent sampling rate is expected to result in more than 200 responses in each subgroup except for ground ambulance providers (where we expect 153 responses with a 25 percent sampling rate) and that a 25 percent sampling rate will result in more than 200 expected responses for other organizations not represented in

the strata, including organizations providing primarily non-emergency transports and transports to and from dialysis facilities. We stated that we also expect that a 25 percent sampling rate will result in more than 200 responses for organizations that rely primarily on volunteer labor, as well as for those who do not.

We invited comments on all our proposals for sampling including our proposals on eligible organizations, methods for sampling, sampling at the NPI level, sampling of organizations using volunteer labor, sampling files, and sampling rates. We also invited comments on our proposals to collect data from ground ambulance organizations that bill Medicare, and the use of a stratified random sample.

We received comments on our proposals for sampling as described in this section. The following is a summary of the comments we received and our responses.

Comment: Commenters were generally very supportive of our proposals and agreed that the data collection effort must cover ground ambulance organizations of all types (government, for-profit, not-for-profit, provider-based, and volunteer) regardless of size and service area (urban, rural and super rural). They stated that all ground ambulance organizations must be represented in the samples to allow for stakeholders and policy-makers to understand the true cost of providing ambulance services in the geographically diverse areas of the country. Some commenters also believe that this information is important to support the permanent inclusion of the urban, rural, and super-rural add-ons into the AFS payment. Commenters noted that while it may be more difficult for some smaller or rural/super-rural ground ambulance organizations to provide such data, their data are essential for policy-makers to evaluate the ambulance benefit in its entirety.

One commenter stated that, while they believe it is important for organizations that rely on volunteer labor to be included in the sampling, they encourage CMS to consider exempting from sampling ground ambulance organizations with very low volumes of Medicare-billed transports where the payment reduction for not reporting data would be less than the cost of reporting data. One commenter advocated for excluding organizations with workforces consisting of 50 percent or more volunteer labor because of the administrative burden associated with reporting. Another commenter expressed concern that the penalties for not reporting would endanger the

financial health for small, rural ambulance organizations.

Response: We recognize that there may be some ground ambulance organizations that have limited resources that affect their ability to report the required information, and that for these ground ambulance organizations, a 10 percent payment reduction in Medicare payments could result in significant financial hardship. However, we believe that it is critical that ground ambulance organizations of all types submit data so that we can all understand better the costs of furnishing ground ambulance services, including ground ambulance services furnished in very low-volume or in rural and super-rural areas. This is particularly important because several payment policies such as current add-on payments specifically apply to ground ambulance services in rural and super-rural areas, and therefore, we do not agree that small ground ambulance organizations should be excluded from sampling. While some very low volume ground ambulance organizations may conclude that the payment reduction will be less than the estimated costs of collecting and reporting data, we believe it is important to offer all ground ambulance organizations the opportunity to submit data and participate in this important national data collection activity. If we were to systematically exclude any category of ground ambulance organizations, for example organizations with very low volumes of Medicare-billed ground ambulance services, there would be gaps in our understanding of important segments of ground ambulance organizations and their role in the country's emergency response system. We note that section 1834(l)(17)(A)(D)(iii) of the Act authorizes the Secretary to exempt a ground ambulance provider or supplier from the 10 percent payment reduction for an applicable period in the event of significant hardship, such as bankruptcy, which is discussed in detail below in this rule.

Comment: Many commenters stated that they support a stratified sampling approach and believe the proposed approach should allow the end users of the data to ensure a representative sample and facilitate analysis of subgroups of ground ambulance organizations, but would have preferred that CMS first obtain information about organization type, utilization patterns, and other relevant organizational characteristics to support a stratified random sample before collecting cost, revenue and other data. They believed CMS would have been better positioned

to ensure that, when it fields the data collection instrument it is obtaining a representative sample of all types, sizes, and geographic distribution of ground ambulance services if they had first collected organizational data from all ground ambulance organizations. Commenters asked that CMS work closely with stakeholders during the first years of the system to identify and resolve any problems that arise. They also stated that prior research echoed the need for a stratified sample due to variation in the level of transport costs resulting from various business models present in the industry.

Response: As we have stated above, we do not believe that it is necessary to first collect only organizational characteristic data from all ground ambulance organizations prior to collecting cost, revenue and utilization data. We believe that CMS' claims and enrollment data are sufficient for the purposes of selecting stratified samples of ground ambulance organizations.

Comment: Many commenters stated that they agree that selecting 25 percent of ground ambulance services (defined at the National Provider Identifier level) is appropriate for each of the 4 years of the system. They quoted prior research that has indicated that a sample of approximately 15–25 percent of the ambulance industry should be sufficient to ensure cost data are representative of the industry overall and for subgroups of ground ambulance organizations, reliable in establishing ambulance payment rates, and a significant improvement on the data used to establish the current payment rates. They also stated that prior efforts to sample ambulance cost data have generated varying results and in order to generate a representative sample CMS needs a larger sample than has been conducted in the past. They stated that business models of ambulance providers and suppliers vary in terms of their service areas, types of services, and most importantly their volume of transports. To account for this variation, the commenters recommended that the sample should support analysis for 14 different subgroups of ground ambulance organizations: Super-rural (majority of transport pick-ups in super rural zip codes), rural (majority of transport pick-ups in rural zip codes), urban (majority of transport pick-ups in urban zip codes), for-profit, not-for-profit, government entity (not including fire/public safety), volunteer-based, hospital-based, fire/public safety-based, low transport volume (less than 600 transports per year), medium transport volume (600 to 5000 transports per year), high transport volume (more than

5000 transports per year, Advanced Life Support (ALS) transport-focused (greater the 90 percent of transports are ALS), and Basic Life Support (BLS) transport-focused (greater than 90 percent of transports are BLS). These commenters stated that it may be necessary to sample 100 to 200 of each type of providers and suppliers. They stated that they believe that response rates are not likely to be a problem in collecting the data due to the reduction Congress has tied to non-responders.

Response: Our proposal to sample 25 percent of all ground ambulance organizations in each of the 4 years is based on our analysis which shows that this approach will ensure we have enough data for analysis and that the sample is a representative of all ground ambulance organizations in each of the years of data collection. We believe that this approach is consistent with the statutory requirements regarding data collection. As we noted in the proposed rule, we believe those analyzing the data will want to calculate estimates for subgroups of the ground ambulance organizations in the sample, for instance ground ambulance providers operating primarily in super-rural areas that are government owned or for profit ground ambulance providers operating in urban areas. We also noted that we believe that 200 responses per subgroup will be necessary in order to calculate estimates of sufficient precision within different subgroups of ambulance organizations. Furthermore, we noted that a sample of 25 percent of ground ambulance organizations will result in data collected from more than 200 ground ambulance organizations in nearly all of the subgroups that we noted may be of interest to those analyzing the data. Lastly, we said that response rates lower than 25 percent would result in fewer than 200 sampled ground ambulance in additional subgroups of ground ambulance organizations and that estimates from data summarized from fewer than 200 respondents in a particular type or category will be less precise than necessary to determine the adequacy of payments.

Comment: One commenter suggested that CMS select a sample of respondents that is in proportion of their volume of Medicare-billed ambulance services. For example, if 94 percent of Medicare ground ambulance claims are submitted by independent ambulance suppliers, then ideally 94 percent of each year's survey sample would consist of independent ambulance suppliers. Similarly, the 50 percent of organizations that make up only 3 percent of Medicare ground ambulance claims would make up only 3 percent of

the sample. They also suggested that to allow MedPAC to produce the most accurate analysis for their Congressional report by the March 15, 2023, statutory deadline, MedPAC would need to receive data from a robust sample of ambulance organizations by March 2022. Therefore, they believe the first year's survey sample should be large enough to produce statistically reliable results using that year's data alone. In addition, they stated that all high-volume ambulance organizations (for example, the 10 percent of organizations that provide 70 percent of Medicare ground transports) should be surveyed within the first 2 years of data collection with 50 percent of these organizations surveyed in the first year and the other 50 percent surveyed in the second year.

Response: We do not agree that ground ambulance organizations should be sampled solely in proportion to their volume of Medicare ground ambulance service claims. While such an approach would collect information sooner from the small number of ground ambulance organizations that account for the majority of Medicare ground ambulance transports, it would shift the focus of the data collection effort almost entirely towards these large organizations at the expense of including smaller organizations. Our analysis indicates that the top 3 percent of organizations in terms of Medicare ground ambulance transport volume (all with more than 10,000 transports per year) account for 39 percent of total Medicare transports while the bottom 42 percent (all with fewer than 200 transports per year) account for only 2 percent of total Medicare transports. We believe that under our approach, each ground ambulance organization has an equal probability of being included in the sample. We also agree with other commenters that stressed the importance of a broad and inclusive approach to collecting data from all types of ground ambulance organizations, and sampling solely in proportion to volume would dramatically decrease the contributions of some types of ground ambulance organizations to the data collection effort.

We believe that the 25 percent sample proposed and supported by almost all commenters will yield sufficient data for analysis of the data after each year of data collection. While sampling at higher rates for some or all types of ground ambulance organizations in earlier years would result in additional data in the first year, we do not believe that the additional data is necessary to conduct an accurate analysis of the data. We disagree with the recommendation

to sample ground ambulance organizations with the highest Medicare volume at higher rates in the initial years of data collection due to the concerns previously discussed about sampling solely in proportion to volume. We are also concerned that sampling larger ground ambulance organizations more heavily in the first 2 years of data collection will deter smaller ground ambulance from reporting because they will perceive that their data will not be used in the analysis.

After consideration of the comments, we are finalizing our sampling proposals to implement a 25 percent stratified sample in each of the first 4 years of data collection. We are also finalizing our proposal to codify the representative sample requirements at § 414.626(c).

6. Collecting and Reporting of Information Under the Data Collection System

For each data collection year, section 1834(l)(17)(C) of the Act requires ground ambulance organizations identified as part of the representative sample to submit information specified under the system, with respect to a period for the year (referred to as the "data collection period"), in a form and manner and at a time (referred to as the "data reporting period") specified by the Secretary. In this section, we proposed to define the data collection period and the data reporting period. In determining when the data collection and reporting periods should fall, our objectives were to: (1) Allow selected ground ambulance organizations sufficient time to collect and report the required information; and (2) collect the data for analysis in the least burdensome manner.

We considered annual (that is, 12-month) data collection periods and shorter data collection periods (for example, a 6-month period). We proposed a 12-month data collection period because a shorter period could result in biased data due to seasonality in costs, revenue, or utilization among ground ambulance organizations.

As we stated previously, ambulance providers and suppliers constitute a diverse group of organizations with varied annual accounting practices. Accordingly, we proposed to define the data collection period as a continuous 12-month period of time, which is either the calendar year aligning with the data collection year, or when an organization uses another fiscal year for accounting purposes and the organization elects to collect and report data over this period rather than the calendar year, the 12-month period that is their fiscal year

that begins during the data collection year. We proposed this data collection period based on feedback from ground ambulance organizations that stated that they prefer to collect data based on an annual accounting period (either calendar year or fiscal year) already used by the organization, and that requiring all organizations to report on the same 12-month period (for example, calendar year) could involve significant additional burden in terms of data collection and reporting. We believe that providing flexibility in collecting information under the data collection system would reduce the burden on ground ambulance organizations.

Therefore, we proposed that the first data collection period be January 1, 2020 through December 31, 2021, with organizations reporting on a calendar year basis collecting data from January 1, 2020 through December 31, 2021, and organizations reporting on a fiscal year basis collecting data over a continuous 12-month period of time from the start of the fiscal year beginning in calendar year 2020. Upon being notified that they are selected as part of the sample, ground ambulance organizations must notify CMS of their annual accounting period within 30 days according to the instructions in the notification letter, so that CMS is aware of when their data collection and data reporting periods would begin. We proposed that respondents would additionally confirm the data collection period when reporting data via the data collection instrument (section 2, question 5).

We also proposed that ground ambulance organizations would have up to 5 months to report to CMS (data reporting period) the data following the end of its 12-month data collection period. For example, if a ground ambulance organization is selected as part of the representative sample for the CY 2020 data collection year, and notifies CMS that its annual accounting period is based on a calendar year, the data collection period for this ground ambulance organization would begin on January 1, 2020 and end on December 31, 2020, and the data reporting period would be January 1, 2021 through May 31, 2021. A ground ambulance organization selected for CY 2020 that notifies CMS that its annual accounting period is based on a fiscal year basis with a fiscal year beginning on June 1, 2020 would have a data collection period from June 1, 2020 through May 31, 2021 and a data reporting period from June 1, 2021 through October 1, 2021. Since a 5-month reporting period is enough time for entities that file cost reports with Medicare to complete and submit their data, we believe it should

also provide adequate time for ground ambulance organizations to report information under the data collection system to CMS. This will allow providers and suppliers time to validate the information and certify the accuracy of their data required under the data collection before reporting it to CMS.

We proposed to codify the data collection and reporting requirements for selected ground organizations at § 414.626(b). Tables 38 and 39 illustrate various examples of data collection periods and the data reporting periods that were proposed. Please note that an individual

ground ambulance organization would only be selected to participate in one data collection and reporting period, and that the specific data collection and reporting period dates might vary for each organization and be different than the dates noted in Tables 38 and 39.

TABLE 38—EXAMPLE OF A DATA COLLECTION AND REPORTING PERIOD FOR A GROUND AMBULANCE ORGANIZATION WITH A CALENDAR YEAR ACCOUNTING PERIOD

Year	Data collection period	Data reporting period
1	01/01/2020–12/31/2020	01/01/2021–05/31/2021
2	01/01/2021–12/31/2021	01/01/2022–05/31/2022
3	01/01/2022–12/31/2022	01/01/2023–05/31/2023
4	01/01/2023–12/31/2023	01/01/2024–05/31/2024

TABLE 39—EXAMPLE OF A DATA COLLECTION AND REPORTING PERIOD FOR A GROUND AMBULANCE ORGANIZATION WITH AN ACCOUNTING PERIOD NOT BASED ON A CALENDAR YEAR

Year	Data collection period	Data reporting period
1	06/01/2020–05/31/2021	06/01/2021–10/31/2021
2	06/01/2021–05/31/2022	06/01/2022–10/31/2022
3	06/01/2022–05/31/2023	06/01/2023–10/31/2023
4	06/01/2023–05/31/2024	06/01/2024–10/31/2024

We invited comments on our proposal to use a 12-month data collection period. We also invited comments on our proposal to give sampled ground ambulances the flexibility to collect data on either a calendar year basis or on the basis of the ground ambulance organization’s fiscal year. In addition, we invited comments on our proposal to allow a ground ambulance organization 5 months to report the data collected during data collection period to CMS through the data collection system. We stated that any ongoing collection of data after the initial 4-year period would be addressed in future rulemaking.

The following is a summary of the comments we received and our responses.

Comment: One commenter requested that we issue a technical correction to the proposed rule to correct the year for the first data collection period and the reporting calendar year.

Response: We thank the commenter for bringing this error to our attention and note that we inadvertently stated in one place in the proposed rule that the first data collection period would be January 1, 2020 through December 31, 2021 (84 FR 40699). We note that we correctly stated the dates of the first data collection period throughout the remainder of the proposed rule and confirm again here that the correct dates of the first data collection period are January 1, 2020 through December 31, 2020.

Comment: All commenters supported our proposal to allow ground ambulance organizations to report based on either a calendar year or their organization’s fiscal year. We received no comments on the data collection period, and no comments on the proposal to allow a ground ambulance organization 5 months to report the data collected during data collection period.

Response: We appreciate the commenters’ support of these proposals.

Comment: One commenter noted that internal systems of ground ambulance providers and suppliers will have to be changed during 2020 and that parameters will need to be edited in order to obtain quality data in a reasonable time.

Response: While we understand that system changes may be necessary for some ground ambulance organizations who are sampled in the first data collection period, we believe that most ground ambulance organizations will be able to complete the data collection requirements within the specified timeframe.

After consideration of the comments, we are finalizing the data collection period as a continuous 12-month period of time, which is either the calendar year aligning with the data collection year, or the organization’s 12-month fiscal year that begins during the data collection year when an organization uses fiscal year for accounting purposes and elects to collect and report data over this period rather than the calendar

year. We are also finalizing our proposal to allow a ground ambulance organization 5 months to report the data collected during data collection period. We are also finalizing our proposals to codify the data collection and reporting requirements for selected ground ambulance organizations at § 414.626(b).

7. Payment Reduction for Failure To Report

a. General Information and Applicable Period

Section 1834(l)(17)(D)(i) of the Act requires that beginning January 1, 2022, subject to clause (ii), the Secretary reduce the payments made to a ground ambulance organization under section 1834(l)(17) of the Act for the applicable period by 10 percent if the ground ambulance organization is required to submit data under the data collection system with respect to a data collection period and does not sufficiently submit such data. Section 1834(l)(17)(D)(ii) of the Act defines the applicable period as a year specified by the Secretary not more than 2 years after the end of the period for which the Secretary has made a determination that the ground ambulance provider or supplier failed to sufficiently submit information under the data collection system.

As previously discussed, we proposed to define the data collection and data reporting periods based on the ground ambulance organization’s annual accounting period (either calendar year

or fiscal year). The timeline for the determination of the 10 percent reduction to payments would depend on: (1) The 12-month data collection period based on the organization's accounting period; (2) the end of the data reporting period that corresponds with the selected data collection period; and (3) the time it would take CMS to review the data to determine whether it had been sufficiently submitted. We proposed that we would make a determination that the ground ambulance organization is subject to the 10 percent payment reduction no later than the date that is 3 months following the date that the ambulance organization's data reporting period ends. This timeframe will allow CMS to assess whether the required data was sufficiently submitted.

For example, if a ground ambulance organization is selected in the first sampling year and it reports to CMS that its annual accounting period is an October 1 through September 30th fiscal year, then its data collection period would be October 1, 2020 through September 30, 2021, and the data reporting period that would apply to the ground ambulance organization would be from October 1, 2021—February 28 (or 29, if a leap year), 2022. We would make a determination regarding the sufficiency of that ground ambulance organization's reporting no later than June 1, 2022. With this timeframe, we would propose to apply the 10 percent reduction in payments, if applicable, for ambulance services provided by that ground ambulance organization between January 1, 2023 and December 31, 2023, because under section 1834(l)(17)(D)(iii) of the Act, the applicable period must be one year in length. As another example, if a ground ambulance organization's annual accounting period is the calendar year, its data collection period would be January 1, 2020 through December 31, 2020, the data reporting period that would apply to the ground ambulance organization would be from January 1, 2021—May 31, 2021, and we would make a determination regarding the sufficiency of that ambulance organization's reporting no later than August 31, 2021. With this timeframe, we would propose to apply the 10 percent reduction in payments, if applicable, for ambulance services provided between January 1, 2022 and December 31, 2022. The payment reduction would always be applied to ground ambulance transports provided during the calendar year that begins following the date that we determine that the ground ambulance organization is subject to the payment reduction.

We proposed that if we find the data reported is not sufficient, we would notify the ground ambulance organization that it will be subject to the 10 percent payment reduction for ambulance services provided during the next calendar year. We would interpret "sufficient" to mean that the data reported by the ground ambulance organization is accurate and includes all required data requested on the data collection instrument.

We proposed to apply the 10 percent payment reduction for the appropriate calendar year as described above to ambulance fee schedule payments as described in § 414.610. The payment reduction will apply to claims for dates of service during the applicable calendar year and will be applied to the final ambulance fee schedule payment, after all other adjustments have been applied under § 414.610(c). We proposed to codify the payment reduction by adding a new paragraph (c)(9) in § 414.610.

b. Hardship Exemption

Section 1834(l)(17)(A)(D)(iii) of the Act authorizes the Secretary to exempt a ground ambulance provider or supplier from the 10 percent payment reduction for an applicable period in the event of significant hardship, such as a natural disaster, bankruptcy, or other similar situation that the Secretary determines interfered with the ability of the ground ambulance provider or supplier to submit such information in a timely manner for the specified period.

We recognize that there may be some ground ambulance organizations that have limited resources that affect their ability to report the required information, and that for these ground ambulance organizations, a 10 percent payment reduction in Medicare payments could result in significant financial hardship.

An example of this situation could be a ground ambulance organization that is located in a super rural area with such limited resources that it cannot report the required information without significantly increasing the possibility that it would need to file for bankruptcy.

Another example could be a ground ambulance organization that is located in an area that had recently experienced a natural disaster such as widespread flooding that caused the closure of a local emergency room or other facilities. Due to the increased demand for services and rerouting of patients, this ground ambulance organization might be unable to collect and report information in a timely manner.

We proposed that ground ambulance organizations that have experienced these or other similar situations could request a hardship exemption, and we would consider granting an exemption if the ground ambulance organization could demonstrate that the significant hardship interfered with its ability to submit the required data under the data collection system.

To request a hardship exemption, we proposed that a ground ambulance organization submit to CMS a completed request form, which can be found on the Ambulance Services Center website (<https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html>), and that the following information be included:

- Ambulance Provider or Supplier Name;
- NPI Number;
- Ambulance Provider or Supplier Location Address;
- CEO and any other designated personnel contact information, including name, email address, telephone number and mailing address (must include a physical address, a post office box address is not acceptable);
- Reason for requesting a hardship exemption;
- Evidence of the impact of the hardship exemption (such as photographs, newspaper, other media articles, financial data, bankruptcy filing, etc.); and
- Date when the ground ambulance organization would be able to begin submitting information under the data collection system.

We proposed that the completed hardship exemption request form be signed and dated by the Chief Executive Officer (CEO) or designee of the ambulance company, and be submitted as soon as possible, and not later than 90 calendar days after the date that the ground ambulance organization was notified that it will be subject to the 10 percent payment reduction as a result of not sufficiently submitting information under the data collection system. We proposed that the request form be submitted to the Ambulance ODF mailbox at AMBULANCEODF@cms.hhs.gov. Following receipt of the request form, we proposed to provide: (1) A written acknowledgement that the request has been received; and (2) a written response to the CEO and any designated personnel using the contact information provided in the request within 30 days of the date that we received the request. We also proposed to codify the hardship exemption requirement at § 414.626(d).

c. Informal Review

Section 1834(l)(17)(D)(iv) of the Act requires the Secretary to establish a process under which a sampled ground organization may seek an informal review of a determination that it is subject to the 10 percent reduction. To request an informal review, we proposed that a ground ambulance organization must submit the following information:

- Ground Ambulance Organization Name;
- NPI Number;
- CEO and any other designated personnel contact information, including name, email address, telephone number and mailing address (must include a physical address, a post office box address is not acceptable);
- Ground ambulance organization's selected data collection period and data reporting period; and
- A statement of the reasons why the ground ambulance organization does not agree with CMS' determination and any supporting documentation.

We proposed that the informal review request must be signed by the CEO/ designee of the ground ambulance organization and be submitted within 90 calendar days of the date that the ground ambulance organization received notice regarding the 10 percent reduction in payments. We proposed 90 calendar days to submit an informal review request to allow time for the ground ambulance organization to gather the information needed to support the request for informal review. We proposed that the request be submitted to the Ambulance ODF mailbox at AMBULANCEODF@cms.hhs.gov. Following receipt of the request for informal review, we will provide: (1) A written acknowledgement using the contact information provided in the request, to the CEO and any additional designated personnel, notifying them that the ambulance provider or supplier's request has been received; and (2) a written response to the CEO and any designated personnel using the contact information provided in the request within 30 days. We solicited comments on our informal review process. We also proposed to codify the informal review process in § 414.626(e).

We invited comments regarding all the proposals on the payment reduction for failure to report, including the applicable period, hardship exemption, and informal review.

We received comments on the proposals for the hardship exemption and informal review, and no comments on the applicable period. The following

is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposals regarding the hardship exemption and informal review. One commenter noted that the majority of patients in rural/super rural areas are Medicare beneficiaries and that in these areas, the ground ambulance organization may have a small call volume. The commenter stated that the ground ambulance organization may not understand how to complete the survey, and the financial impact of the 10 percent reduction would impact the ground ambulance organization's ability to stay in business. One commenter requested clarification on the length and timing of the 10 percent reduction for failure to report.

Response: We appreciate the support of the commenters. We will provide education and outreach to ground ambulance organizations that are selected to participate in the ground ambulance data collection system and will work directly with the affected organizations to the extent possible. As previously noted, the payment reduction would always be applied to ground ambulance transports provided during the calendar year for a one year period that begins following the date that we determine that the ground ambulance organization is subject to the payment reduction.

Comment: Some commenters supported the proposed process for applying for a hardship exemption. One commenter stated that the form and timeline seem appropriate and sufficient to allow ambulance organizations to seek the exemption. One commenter asked that CMS provide automatic hardship exemptions when a deadline falls during the period of natural disaster, such as a hurricane.

Response: We appreciate the support of the commenters on the proposed process for hardship exemption. While we understand that a natural disaster may affect the ground ambulance organization's ability to collect or submit the required data, we are unable to provide an automatic hardship exemption. Unless the ground ambulance organization applies for the exemption, we would have no way of knowing which ground ambulance organizations are affected or to what extent the disaster has affected them. All ground ambulance organizations that are selected to participate in the data collection system have up to 5 months to report the data collected during the data collection period, and we encourage them not to wait for the deadline to report. We understand it may be difficult to meet a deadline

during a natural disaster and we will work with the affected ground ambulance organization to the extent possible.

Comment: A commenter requested clarification regarding when the hardship exemption form will be available and when the organization can apply for the exemption. Another commenter requested information on how the hardship exemption request will be evaluated.

Response: The hardship exemption request form will be available on our website when this final rule is published. A ground ambulance organization that has been selected to report cost, revenue, utilization, and other information under the ground ambulance data collection system may apply for a hardship exemption during their data collection period if they have experienced a hardship that prevents them from submitting the required information. Again, we remind organizations that they have 5 months to report their data and should try to submit it as soon as possible to avoid this type of situation. All hardship exemption requests will be evaluated based on the information submitted that clearly shows that they are unable to submit the required data due to a significant hardship, such as a natural disaster, bankruptcy, or other similar situation.

Comment: Some commenters supported the informal review process that we proposed to adopt and asked that we permit ground ambulance organizations to address any problems with their submitted data originally during a defined time period and without having to incur a payment reduction. The commenters stated that this correction would be prudent because of the lack of testing of the data collection instrument.

Response: We will work with the affected organization to the extent possible to correct any mistakes or omissions in the data they submitted in order to avoid incurring a payment reduction.

After consideration of the comments, we are finalizing all of our proposals regarding on the payment reduction for failure to report, including the applicable period, hardship exemption, and informal review. We are also finalizing our proposal to codify the payment reduction by adding a new paragraph (c)(9) in § 414.610, our proposal to codify the hardship exemption requirement at § 414.626(d) and our proposal to codify the informal review process at § 414.626(e). In the proposed rule, we inadvertently stated that the informal review process would

be codified at § 414.610(e) (84 FR 40701).

Hardship exemption and informal review requests should be submitted to the Ambulance ODF mailbox at: AMBULANCEODF@cms.hhs.gov. Questions on the ground ambulance data collection system should be sent to AmbulanceDataCollection@cms.hhs.gov.

8. Public Availability

Section 1834(l)(17)(G) of the Act requires that the results of the data collection be posted on the CMS website, as determined appropriate by the Secretary. We proposed to post on our website a report that includes summary statistics, respondent characteristics, and other relevant results in the aggregate so that individual ground ambulance organizations are not identifiable.

We also proposed that the data above will be made available to the public through posting on our website at least every 2 years. The 2-year timeframe would allow CMS time to analyze the data that is being reported, factoring in the various accounting periods of the first group of sampled ground ambulance organizations (which have early accounting periods in the CY 2020 data collection year).

We proposed to post summary results by the last quarter of 2022, because we believe we may have most or all of the data requested by then. We invited comments on our proposals regarding the type of information that should be posted from the data collected and the timeline in which the results of the data collection should be posted on our website.

We invited comments regarding our proposals for public availability of the data.

We received comments on our proposals regarding the type of information that should be posted from the data collected, the timeline in which the results of the data collection should be posted on our website, and the public availability of the data.

The following is a summary of the comments we received and our responses.

Comment: One commenter stated that the report should be more detailed than the proposed summary statistics, respondent characteristics, and other relevant results in the aggregate. One commenter recommended that the data collected through the data collection system be made publicly available in various formats such as Public Use Files (PUF) accessible through the web, or other formats that will facilitate the use of the data for other purposes.

One commenter stated it is important that stakeholders have access to the data collection in a manner that is similar to the publicly available data obtained through traditional Medicare cost reporting. Some commenters encouraged CMS to incorporate the ambulance cost data into the standard Healthcare Cost Report Information System (HCRIS) as an additional subsystem to the ground ambulance data collection system.

One commenter recommended that CMS follow the standard HCRIS file format and schedule for releasing ambulance cost data, including releasing two types of data files. This commenter recommended that the ambulance cost report PUF contain a subset of the data variables reported by ambulance suppliers and providers and may enable users to calculate provider margins and assess ambulance transport volume. The commenter requested data be available in multiple formats and also stated that CMS should follow the standard file formats as it releases these files to reduce the burden on researchers. The commenter also recommended that all ambulance cost report variables be defined with Medicare's Provider Reimbursement Manual. Lastly, the commenter stated that the individual ground ambulance organizations should not be identifiable in the results of the data collection on our website.

Response: We thank the commenters for their recommendations regarding the posting of the results of the data collection on the CMS website. We are exploring several mechanisms for posting of the report to our website. As such, we will consider the use of HCRIS and other PUFs to make the data publicly available. We intend to post as much data as possible, including summary statistics describing the data reported by subgroups of respondents, while protecting the confidentiality of the respondents.

Comment: One commenter stated that the information should be published more frequently than once every 2 years.

Response: We believe that the 2-year timeframe would allow us time to analyze the reported data, factoring in the various accounting periods. We will make the data available more frequently if possible.

Comment: Several commenters supported our proposal to make the data collected through the data collection system publicly available. One commenter stated that the data collected through the data collection system will be exceptionally valuable for agencies, payors, policy makers and other stakeholders and they recommend that

the data be publicly available. One commenter stated that it is important that stakeholders have access to the data to be able to evaluate the adequacy of the payment system, not just MedPAC or other policymakers.

One commenter preferred that these data be shared publicly to provide more transparency in ambulance service rates. One commenter stated that given that this is the early stages of the development of the ambulance data collection system and the lack of testing, CMS might consider restricting access to the data in the first few years to only key stakeholders. This commenter stated that key stakeholders may be able to assist the agency with validating the initial data submitted by ambulance suppliers and providers.

Response: We appreciate the support of the commenters on our public availability proposals. We agree that making the data publically available is the most transparent approach and we anticipate that the data we make publicly available will be meaningful to all interested persons or organizations.

We did not receive any comments regarding our proposal to post summary results by the last quarter of 2022. After consideration of the comments, we are finalizing our proposals for public availability of the data including to post on our website a report that includes summary statistics, respondent characteristics, and other relevant results in the aggregate so that individual ground ambulance organizations are not identifiable. The data above will be made available to the public through posting on our website at least every 2 years and we will post summary results by the last quarter of 2022.

9. Limitations on Review

Section 1834(l)(17)(j) of the Act provides that there shall be no administrative or judicial review under sections 1869 or 1878 of the Act, or otherwise, of the data collection system or identification of respondents. We proposed to codify the limitations on review at § 414.626(g). We did not receive any comments on this proposal and are finalizing it as proposed.

C. Expanded Access to Medicare Intensive Cardiac Rehabilitation (ICR)

Section 51004 of the Bipartisan Budget Act of 2018 (BBA of 2018) (Pub. L. 115–123, enacted February 9, 2018) amended section 1861(eee)(4)(B) of the Act directing CMS to add covered conditions for intensive cardiac rehabilitation (ICR). This final rule expands coverage through revisions to § 410.49(b)(1).

1. Background

Cardiac rehabilitation (CR) was developed in the 1950s from the concept of early mobilization after acute myocardial infarction (heart attack).⁹⁹ The standard of care prior to the widespread adoption of CR was bed-rest and inactivity after acute myocardial infarction.¹⁰⁰ In the 1970s, cardiac rehabilitation developed into highly structured, physician supervised, electrocardiographically-monitored exercise programs. However, the programs consisted almost solely of exercise alone.¹⁰¹ Forman (2000) stated that “over subsequent years the objectives of cardiac rehabilitation broadened beyond exercise into a composite of cardiac risk modification. Lipid, blood pressure, and stress reduction, smoking cessation, diet change, and weight loss were coupled to goals of exercise training.”

ICR, also commonly referred to as a “lifestyle modification” program, typically involves the same elements as traditional CR programs, but are furnished in highly structured environments in which sessions of the various components may be combined for longer periods of CR and also may be more rigorous.

Section 144(a) of the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA) (Pub. L. 110–275, enacted July 15, 2008) amended Title XVIII to add new section 1861(eee) of the Act to provide coverage of CR and ICR under Medicare Part B. The statute specified certain conditions for these services and an effective date of January 1, 2010, for coverage of these services. Conditions of coverage for CR and ICR consistent with the statutory provisions of section 144(a) of the MIPPA were codified in § 410.49 through the CY 2010 PFS final rule with comment period (74 FR 61872–61879 and 62004–62005). These programs were designed to improve the health care of Medicare beneficiaries with cardiovascular disease.

Under § 410.49(b), Medicare Part B covers CR and ICR program services for beneficiaries who have experienced one or more of the following: (1) An acute myocardial infarction within the preceding 12 months; (2) a coronary artery bypass surgery; (3) current stable

angina pectoris; (4) heart valve repair or replacement; (5) percutaneous transluminal coronary angioplasty (PTCA) or coronary stenting; or (6) a heart or heart-lung transplant. For CR only, other cardiac conditions may be added as specified through a national coverage determination (NCD). Effective February 18, 2014, we expanded coverage of CR in NCD 20.10.1, Cardiac Rehabilitation Programs for Chronic Heart Failure (Pub. 100–03 20.10.1), to beneficiaries with stable, chronic heart failure, defined as patients with left ventricular ejection fraction of 35 percent or less and New York Heart Association (NYHA) class II to IV symptoms despite being on optimal heart failure therapy for at least 6 weeks. Stable patients are defined as patients who have not had recent (≤ 6 weeks) or planned (≤ 6 months) major cardiovascular hospitalizations or procedures.

2. Statutory Authority

Section 51004 of the BBA of 2018, entitled “Expanded Access to Medicare Intensive Cardiac Rehabilitation Programs,” amended section 1861(eee)(4)(B) of the Act. The amendment directs us to expand the list of covered conditions for ICR beyond the 6 conditions specified in section 144(a) of the MIPPA and codified in § 410.49(b)(1).

3. Discussion of Statutory Requirements

Section 1861(eee)(4)(B) of the Act requires that, in addition to the 6 conditions specified in section 144(a) of the MIPPA, ICR be covered for beneficiaries with (1) stable, chronic heart failure (defined as patients with left ventricular ejection fraction of 35 percent or less and New York Heart Association (NYHA) class II to IV symptoms despite being on optimal heart failure therapy for at least 6 weeks); or (2) any additional condition for which the Secretary has determined that a cardiac rehabilitation program shall be covered, unless the Secretary determines, using the same process used to determine that the condition is covered for a cardiac rehabilitation program, that such coverage is not supported by the clinical evidence.

The statute explicitly states *cardiac* rehabilitation; therefore, this final rule is specific to CR and ICR for cardiac conditions. As such, this final rule cannot exceed the limits of the statute to apply CR and ICR other conditions (for example, cancer, metabolic syndrome, diabetes, peripheral artery disease, etc.).

4. Proposals for Implementation

We proposed to amend § 410.49(b) to expand the covered conditions for ICR. We proposed to amend § 410.49(b)(vii) to add coverage of ICR for patients with stable, chronic heart failure defined as patients with left ventricular ejection fraction of 35 percent or less and New York Heart Association (NYHA) class II to IV symptoms despite being on optimal heart failure therapy for at least 6 weeks. We also proposed to specify in § 410.49(b)(vii) that coverage for CR was effective February 18, 2014 as per the NCD for Cardiac Rehabilitation for Chronic Heart Failure (Pub. 100–03 20.10.1) which was finalized on February 18, 2014 as discussed above, and that coverage for ICR was effective on enactment of the BBA of 2018 (February 9, 2018).

We also proposed to add new § 410.49(b)(viii) to include coverage of ICR, in addition to CR, for other cardiac conditions as specified through an NCD. Under the existing § 410.49(b)(vii), coverage for CR may be established for other cardiac conditions through an NCD, and this final rule will extend this criterion to ICR, as well unless coverage for ICR is not supported by clinical evidence. As such, NCDs modifying the covered conditions would apply to both CR and ICR so long as clinical evidence supports coverage for CR and coverage for ICR.

It is important to note that conditions that may be considered for expanded coverage are limited to cardiac conditions and may not include other conditions (for example, cancer, metabolic syndrome, diabetes, peripheral artery disease, etc.).

5. Comments

We received public comments on this proposal and some were outside the scope.

Comment: Several commenters supported this proposal. In particular, they supported the alignment of the CR and ICR covered conditions and utilization of the NCD process to expand ICR covered conditions in the future. Many of these commenters suggested that our proposal was consistent with the underlying statute.

Response: We appreciate the commenter’s support to codify in regulations the provisions of section 51004 of the BBA.

Comment: Several commenters submitted comments on this proposal that were outside of the scope of the proposed rule. For example, these comments touched upon authorizing other health care providers to order and supervise CR; extending coverage of CR

⁹⁹ Pashkow, FJ. Issues in Contemporary Cardiac Rehabilitation: A Historical Perspective. *JACC* 1993 Mar 1;21(3):822–34.

¹⁰⁰ Forman DE. Cardiac rehabilitation and secondary prevention programs for elderly cardiac patients. *Clin Geriatr Med*. 2000 Aug;16(3):619–29.

¹⁰¹ Ades PA. A controlled trial of cardiac rehabilitation in the home setting using electrocardiographic and voice transtelephonic monitoring. *Am Heart J*. 2000 Mar;139(3):543–8.

to non-cardiac related conditions; and altering existing NCDs.

Response: We appreciate the commenters' interest in the CR and ICR topics. However, because these comments were outside of the scope of the proposed rule, we are not responding to them in this final rule.

In summary, we are finalizing modifications to § 410.49(b) to implement the coverage changes specific to ICR. This includes expanding coverage of ICR to beneficiaries with chronic heart failure as discussed above and providing for modifications to covered cardiac conditions for ICR, in addition to CR, as specified through an NCD.

D. Medicaid Promoting Interoperability Program Requirements for Eligible Professionals (EPs)

1. Background

Sections 1903(a)(3)(F) and (t) of the Act provide the statutory basis for the incentive payments made to Medicaid EPs and eligible hospitals for the adoption, implementation, upgrade, and meaningful use of Certified EHR Technology (CEHRT). We have implemented these statutory provisions in prior rulemakings to establish the Medicaid Promoting Interoperability Program.

Under sections 1848(o)(2)(A)(iii) and 1903(t)(6)(C)(i)(II) of the Act, and the definition of "meaningful EHR user" in regulations at 42 CFR 495.4, one of the requirements of being a meaningful EHR user is to successfully report the clinical quality measures selected by CMS to CMS or a state, as applicable, in the form and manner specified by CMS or the state, as applicable. Section 1848(o)(2)(B)(iii) of the Act requires that in selecting electronic clinical quality measures (eCQMs) for EPs to report under the Promoting Interoperability Program, and in establishing the form and manner of reporting, the Secretary shall seek to avoid redundant or duplicative reporting otherwise required. We have taken steps to align various quality reporting and payment programs that include the submission of eCQMs.

In the CY 2019 PFS final rule (83 FR 59452, 59703 through 59704), we established for 2019 that Medicaid EPs are required to report on any six eCQMs that are relevant to the EP's scope of practice, regardless of whether they report via attestation or electronically. We also adopted the Merit-based Incentive Payment System (MIPS) requirement that EPs report on at least one outcome measure (or, if an applicable outcome measure is not

available or relevant, one other high priority measure). We explained that if no outcome or high priority measure is relevant to a Medicaid EP's scope of practice, the EP may report on any six eCQMs that are relevant.

2. eCQM Reporting Requirements for EPs Under the Medicaid Promoting Interoperability Program for 2020

We annually review and revise the list of eCQMs for each MIPS performance year to reflect updated clinical standards and guidelines. In section III.I.3.h.(2)(b)(i) of this final rule, we amend the list of available eCQMs for the CY 2020 performance period. To keep eCQM specifications current and minimize complexity, we proposed to align the eCQMs available for Medicaid EPs in 2020 with those available for MIPS eligible clinicians for the CY 2020 performance period. Specifically, we proposed that the eCQMs available for Medicaid EPs in 2020 would consist of the list of quality measures available under the eCQM collection type on the final list of quality measures established under MIPS for the CY 2020 performance period.

In previous years, CMS proposals to align the list of eCQMs for MIPS and the Medicaid Promoting Interoperability Program for EPs received positive comments that indicated that alignment between these two programs would reduce health care provider reporting burden (83 FR 59702). These comments thus suggest that aligning the eCQM lists might encourage EP participation in the Medicaid Promoting Interoperability Program by giving Medicaid EPs that are also MIPS eligible clinicians the ability to report the same eCQMs as they report for MIPS. Not aligning the eCQM lists could lead to increased burden, because EPs might have to report on different eCQMs for the Medicaid Promoting Interoperability Program if they opt to report on newly added eCQMs for MIPS. In addition, we believe that aligning the eCQMs available in each program would help to ensure the most uniform application of up-to-date clinical standards and guidelines possible.

We anticipated that this proposal would reduce burden for Medicaid EPs by aligning the requirements for multiple reporting programs, and that the system changes required for EPs to implement this change would not be significant, particularly in light of our belief that many EPs would report eCQMs to meet the quality performance category of MIPS, and therefore, should be prepared to report on the available eCQMs for 2020. We expected that this proposal would have only a minimal

impact on states, by requiring minor adjustments to state systems for 2020 to maintain current eCQM lists and specifications.

For 2020, we proposed to again require (as we did for 2019) that Medicaid EPs report on any six eCQMs that are relevant to their scope of practice, regardless of whether they report via attestation or electronically. This policy of allowing Medicaid EPs to report on any six measures relevant to their scope of practice would generally align with the MIPS data submission requirement for eligible clinicians using the eCQM collection type for the quality performance category, which is established at § 414.1335(a)(1). MIPS eligible clinicians who elect to submit eCQMs must generally submit data on at least six quality measures, including at least one outcome measure (or, if an applicable outcome measure is not available, one other high priority measure). We refer readers to § 414.1335(a) for the data submission criteria that apply to individual MIPS eligible clinicians and groups that elect to submit data with other collection types.

In addition, as we did for 2019, we proposed that for 2020, EPs in the Medicaid Promoting Interoperability Program would be required to report on at least one outcome measure (or, if an outcome measure is not available or relevant, one other high priority measure). This policy would improve alignment with the requirements for the MIPS quality performance category for eligible clinicians using the eCQM collection type. We also proposed that if no outcome or high priority measures are relevant to a Medicaid EP's scope of practice, the clinician may report on any six eCQMs that are relevant, as was the policy in 2019.

In the CY 2019 PFS final rule (83 FR 59702 and 59704), we established the following three methods to identify which of the available measures are high priority measures for EPs participating in the Medicaid Promoting Interoperability Program in 2019. We proposed to use the same three methods for identifying high priority eCQMs for the Medicaid Promoting Interoperability Program for 2020:

- The same set of measures that are identified as high priority measures for reporting on the quality performance category for eligible clinicians participating in MIPS.
- All e-specified measures from the previous year's core set of quality measures for Medicaid and the Children's Health Insurance Program (CHIP) (Child Core Set) or the core set of health care quality measures for

adults enrolled in Medicaid (Adult Core Set) (hereinafter together referred to as "Core Sets") that are also included on the MIPS list of eQMs.

Sections 1139A and 1139B of the Act require the Secretary to identify and publish core sets of health care quality measures for child Medicaid and CHIP beneficiaries and adult Medicaid beneficiaries. These measure sets are required by statute to be updated annually and are voluntarily reported by states to CMS. These Core Sets are composed of measures that specifically focus on populations served by the Medicaid and CHIP programs and are of particular importance to their care. The MIPS eQCM list includes several, but not all, of the measures in the Core Sets. Because the Core Sets are released at the beginning of each year, it is not possible to update the list of high-priority eQMs with those added to the current year's Core Sets.

The eQMs that would be available for Medicaid EPs to report in 2020, that are both part of the Core Sets and on the MIPS list of eQMs, and that we proposed would be considered high priority measures were: CMS2, "Preventive Care and Screening: Screening for Depression and Follow-Up Plan"; CMS122, "Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)"; CMS125, "Breast Cancer Screening"; CMS128, "Anti-depressant Medication Management"; CMS136, "Follow-Up Care for Children Prescribed ADHD Medication (ADD)"; CMS137, "Initiation and Engagement of Alcohol and Other Drug Dependence Treatment"; CMS153, "Chlamydia Screening for Women"; CMS155, "Weight Assessment and Counseling for Nutrition and Physical Activity for Children and Adolescents"; and CMS165, "Controlling High Blood Pressure."

- Through an amendment to § 495.332(f), we gave each state the flexibility to identify which of the eQMs available for reporting in the Medicaid Promoting Interoperability Program are high priority measures for Medicaid EPs in that state, subject to CMS' review and approval, through the State Medicaid HIT Plan (SMHP). States are thus able to identify high priority measures that align with their state health goals or other programs within the state.

All eQMs identified via any of these three methods are high priority measures for EPs participating in the Medicaid Promoting Interoperability Program for 2019. As noted above, we proposed to use the same three methods for identifying high priority eQMs for the Medicaid Promoting Interoperability

Program for 2020. We invited comments as to whether any of these methods should be altered or removed, or whether any additional methods should be considered for 2021.

We received public comments on aligning the available eQMs for the Medicaid Promoting Interoperability Program with those available under the eQCM collection type for the MIPS CY 2020 performance period, the requirement that Medicaid EPs must submit any six eQMs relevant to an EP's scope of practice, including one outcome measure (or if an outcome measure is not available or relevant, one high priority measure), and the three methods we proposed for identifying high priority measures. The following is a summary of the comments we received and our responses.

Comment: All comments we received on these topics were supportive of our proposals.

Response: We thank commenters for their support.

After considering public comments, we are finalizing these policies as proposed. The eQMs available for Medicaid EPs in 2020 will consist of the list of quality measures available under the eQCM collection type on the final list of quality measures established under MIPS for the CY 2020 performance period. In 2020, Medicaid EPs will be required to report on any six eQMs that are relevant to their scope of practice, regardless of whether they report via attestation or electronically. For a reporting period in CY 2020, Medicaid EPs will be required to report on at least one outcome measure (or, if an outcome measure is not available or relevant, one other high priority measure). If no outcome or high priority measures are relevant to a Medicaid EP's scope of practice, the clinician may report on any six eQMs that are relevant. eQMs identified via any of the three methods discussed above will be high priority measures for EPs participating in the Medicaid Promoting Interoperability Program in 2020.

We also proposed that the 2020 eQCM reporting period for Medicaid EPs who have demonstrated meaningful use in a prior year would be a minimum of any continuous 274-day period within CY 2020. This 274-day eQCM reporting period corresponds to the 9-month period from January 1, 2020 to September 30, 2020. We explained that under our proposal, Medicaid EPs would not be required to use that exact reporting period, but would be able to use any continuous 274-day period within CY 2020. We also explained that Medicaid EPs could also use a longer eQCM reporting period in CY 2020, up

to the full calendar year. We noted that states would be required to allow sufficient time for EPs to attest for program year 2020 beyond January 1, 2021 so that EPs may, should they choose to do so, select EHR and eQCM reporting periods that take place at any time within the 2020 calendar year through December 31, 2020.

We proposed this eQCM reporting period for 2020 to improve state flexibility in the penultimate year of the Medicaid Promoting Interoperability Program, and to facilitate an orderly end of the program in 2021. In the CY 2019 PFS final rule, we established that the eQCM reporting period for Medicaid EPs in 2021 will be a minimum of any continuous 90-day period within CY 2021, and also established that the end date for this period must fall before October 31, 2021, to help ensure that states can issue all Medicaid Promoting Interoperability payments to EPs by the December 31, 2021 statutory deadline (83 FR 59704 through 59706). When proposing that policy, we received comments that asked us to consider an eQCM reporting period shorter than a full year in 2020. Commenters on the CY 2019 PFS proposals stated that a full-year reporting period may create significant backlogs of 2020 and 2021 attestations in 2021 that may create difficulty for states to issue payments by the statutory deadline (83 FR 59705). We continue to believe that a full year reporting period creates more useful data for quality measurement and improvement because it would give states a broader picture of the care rendered by a health care provider and patient outcomes. However, we agree that a full-year eQCM reporting period in 2020 would unnecessarily burden states as they will need to issue incentive payments and implement systems changes for 2021 in a timely manner.

We explained that this proposal would allow states to accept attestations for program year 2020 as early as October 1, 2020 from Medicaid EPs who choose to use an eQCM reporting period early in the year, and thus could give states additional time to prepare for 2021 and the end of the Medicaid Promoting Interoperability Program. We explained that even though states would also still have to allow EPs to submit attestations for 2020 in 2021, we believe that allowing some EPs to attest sooner could accelerate states' pre-payment verification and payment process. We explained that we considered whether to propose a Medicaid EP eQCM reporting period for 2020 from January 1, 2020 through September 30, 2020, with no flexibility for EPs to select an

alternative 274-day eCQM reporting period. We also considered whether to propose a date prior to December 31, 2020 by which all Medicaid EP EHR and eCQM reporting periods for 2020 must end. While either of these alternatives might have further helped to ensure that all states would have additional time to prepare for 2021, we decided not to propose either of them because we wanted to preserve as much flexibility as possible for Medicaid EPs. However, we solicited comment, especially from states and Medicaid EPs, about whether either of these alternatives might be preferable to our proposal.

We noted that states submit their attestation deadlines to CMS each year as part of their SMHPs. We did not believe that this proposal would create any additional burden on EPs or health IT vendors, as CEHRT should be able to report eCQM data with respect to any period of time.

We proposed that, in 2020, the eCQM reporting period for Medicaid EPs demonstrating meaningful use for the first time, which was established in the final rule entitled “Medicare and Medicaid Programs; Electronic Health Record Incentive Program—Stage 3 and Modifications to Meaningful Use in 2015 Through 2017” (80 FR 62762, 62892) (hereinafter known as the “Stage 3 final rule”), would remain any continuous 90-day period within the calendar year, as in previous years.

The following is a summary of the comments we received about the proposed eCQM reporting period for CY 2020, and our responses.

Comment: All commenters supported the principle of our proposal to shorten the eCQM reporting period for CY 2020. Some commenters noted that eCQMs are developed for a full-year reporting period, and that any reporting period shorter than a year (regardless of length) will inherently introduce data quality issues, but agreed that shortening the reporting period in order to facilitate 2020 and 2021 payments was an overriding concern. However, most commenters opposed a 274-day reporting period for CY 2020, and instead urged us to establish a 90-day eCQM reporting period for CY 2020. No commenters supported a fixed reporting period (for example, from January 1, 2020 to September 30, 2020); most commenters objected to a fixed reporting period on the grounds that allowing EPs to select their own reporting period would increase their flexibility to meet the program requirements.

The comments suggesting that we instead establish a 90-day eCQM reporting period for 2020 came from a

variety of stakeholders, including provider organizations, health IT vendors, and state Medicaid agencies. These commenters presented several rationales in support of a 90-day eCQM reporting period. First, many of these commenters noted that we have never used an EHR or eCQM reporting period other than a full year or 90 days for EPs, so establishing a one-time 274-day eCQM reporting period for 2020 would be confusing to EPs. A couple of commenters suggested that a 90-day reporting period was much simpler, but that a reporting period based on the calendar quarter or even a full year would be less confusing for EPs than a 274-day reporting period. Second, one commenter suggested that a 90-day eCQM reporting period might actually produce data that could be more useful for longitudinal analytics than a 274-day reporting period, because a 90-day reporting period would align with the already-established 90-day eCQM reporting period for 2021. Third, some of these commenters asserted that a 90-day eCQM reporting period would reduce the administrative and reporting burden for EPs because it would be aligned with the eCQM reporting period for MIPS eligible clinicians. These commenters thought that there would be a 90-day reporting period for eligible clinicians in MIPS who choose the eCQM collection type.

We also received comments discussing whether CEHRT should be able to report eCQMs for any length of time. One health IT vendor agreed that CEHRT should be able to report eCQMs for any length of time, while another commenter stated that its systems would require additional coding to produce eCQM data for a 274-day reporting period.

Response: After considering these comments, we agree with the commenters that finalizing a 274-day eCQM reporting period only for CY 2020 may cause confusion for Medicaid EPs. The Medicaid Promoting Interoperability Program has always used reporting periods of a full year or 90 days for EPs. We believe that finalizing a 90-day eCQM reporting period for 2020, as recommended by commenters, instead of the 274-day eCQM reporting period we proposed, is more likely to reduce burden on EPs, health IT vendors, states, and other stakeholders, as compared to a full-year period or the 274-day eCQM reporting period we proposed.

A 90-day eCQM reporting period in 2020 will reduce burden on Medicaid EPs because it will provide EPs with additional time during which they can attest (depending on when their state

accepts attestations for 2020). It could reduce burden on states by enabling states to take EP attestations earlier during 2020, which could help states perform the necessary prepayment process and issue incentive payments for 2020 over a longer period of time while they prepare for the final year of the program in 2021. While certain health IT vendors submitted comments that generally confirmed our understanding that CEHRT should be able to run reports for any period of time, as outlined in the proposed rule, one commenter noted that there may be some CEHRT products that would need additional coding for a new reporting period length versus the previously-used 90-day eCQM reporting period. Thus, finalizing a 90-day eCQM reporting period could also reduce burden on at least some health IT vendors. Furthermore, this policy would allow EPs to use the same 90-day period for their Medicaid Promoting Interoperability Program EHR reporting period and eCQM reporting period.

As noted above, we continue to believe that a full year eCQM reporting period would lead to better data quality than a shorter period. We also agree that any eCQM reporting period shorter than a full year is inherently going to introduce data quality issues, whether it is a 274-day or 90-day period. However, we acknowledge that a 90-day eCQM reporting period in 2020 would match the already-established 90-day eCQM reporting period for 2021, and thus might provide better data for comparison than a 274-day period. Ultimately, we concluded that the risk of any possible data quality degradation due to a shorter reporting period might be somewhat mitigated by using a period that can be compared across program years 2020 and 2021. We also concluded that, generally, the potential data quality issues associated with a shorter eCQM reporting period are outweighed by the benefits to all stakeholders of a shorter period for 2020.

While we generally agreed with the commenters recommending we establish a 90-day eCQM reporting period, the comments recommending that we do so specifically in order to align with MIPS reporting were based on a mistaken assumption. We are establishing a full-year reporting period for the MIPS quality performance category, in section III.K.3.c.(1) of this final rule, as we did for 2018 and 2019. While a 90-day eCQM reporting period in 2020 for the Medicaid Promoting Interoperability Program would not be aligned with this MIPS reporting period, we believe that, for the reasons

discussed above and in the proposed rule preamble, a period shorter than a full year would provide helpful flexibility to Medicaid EPs and states, and that these benefits outweigh any potential burdens created by the lack of alignment. No commenters suggested to us that aligning the eCQM reporting period for 2020 with the full year reporting period for MIPS eligible clinicians who use the eCQM collection type outweighed the benefits of the shorter reporting period that we proposed.

After considering the comments, we are finalizing a continuous 90-day eCQM reporting period for all Medicaid EPs in 2020. EPs may select any continuous 90-day period within the calendar year. The reporting period is a minimum, and we encourage EPs to report on a longer period if they are able to do so.

Under this policy, EPs may be able to attest to meaningful use as early as April 1, 2020. We encourage states to begin taking attestations as early as possible in 2020, as that would allow states as much time as possible to process and make 2020 payments before they have to prepare for the 2021 program year. Just as we proposed in connection with the 274-day eCQM reporting period, we expect states to provide EPs the opportunity to use any 90-day period in 2020 under the finalized policy, up to and including a period that ends December 31, 2020. Therefore, states must allow sufficient time for EPs to attest into CY 2021. As noted in the proposed rule and above, states submit their attestation deadlines to CMS for approval each year as part of their SMHPS.

3. Objective 1: Protect Patient Health Information in 2021

In the Stage 3 final rule (80 FR 62762, 62832), we established Meaningful Use Objective 1 as “Protect electronic protected health information (ePHI) created or maintained by the CEHRT through the implementation of appropriate technical, administrative, and physical safeguards.” As specified at § 495.24(d)(1)(i)(B), to meet that objective, EPs must meet the associated measure to conduct or review a security risk analysis in accordance with the requirements under 45 CFR 164.308(a)(1), including addressing the security (including encryption) of data created or maintained by CEHRT in accordance with requirements under 45 CFR 164.312(a)(2)(iv) and 164.306(d)(3), implement security updates as necessary, and correct identified security deficiencies as part of the provider’s risk management process.

In the Stage 3 final rule, we explained that this measure must be completed in the same calendar year as the EHR reporting period. This may occur before, during, or after the EHR reporting period, though if it occurs after the EHR reporting period it must occur before the provider attests to meaningful use of CEHRT or before the end of the calendar year, whichever comes first (80 FR 62831). In practice, this means that EPs do not attest to meaningful use of CEHRT before completing this measure.

As discussed above, states must issue all Medicaid Promoting Interoperability Program incentive payments by the statutory deadline of December 31, 2021. States can establish state-specific deadlines for Medicaid EPs to attest to the state regarding meaningful use of CEHRT in CY 2021. However, due to changes CMS made in prior rulemaking to the Medicaid Promoting Interoperability Program EHR and eCQM reporting periods for 2021, all states must set attestation deadlines on or before October 31, 2021. *See* 42 CFR 495.4 (definition of “EHR reporting period”) and 495.332(f)(3) and (4), and 83 FR 59704 through 59705. Because all EPs are expected to attest to meaningful use of CEHRT before the end of CY 2021, Medicaid EPs would no longer have the option of completing the security risk analysis at the end of the calendar year, and would likely have to complete it well before December 2021. For example, in a state with an attestation deadline of October 1, 2021, a Medicaid EP would have to conduct the security risk analysis by September 30, 2021. Stakeholders have offered us feedback that most security risk analyses are conducted on a clinic or practice level, which may include EPs and non-EPs. As we noted in the Stage 3 final rule, “[a]n organization may conduct one security risk analysis or review which is applicable to all EPs within the organization, provided it is within the same calendar year and prior to any EP attestation for that calendar year. However, each EP is individually responsible for their own attestation and for independently meeting the objective. Therefore, it is incumbent on each individual EP to ensure that any security risk analysis or review conducted for the group is relevant to and fully inclusive of any unique implementation or use of CEHRT relevant to their individual practice” (80 FR 62794).

If an EP or practice typically conducts the security risk analysis at the end of each year, the CY 2021 timeline for attesting to meaningful use of CEHRT may create burden for all Medicaid EPs and for non-EP health care providers

within the same organization as Medicaid EPs, and may not be optimal for protecting information security, because it could disrupt the intervals between security risk analyses. As we explained in the Stage 3 final rule, a security risk analysis is not a discrete item in time, but a comprehensive analysis covering the full period of time for which it is applicable; and the annual review of such an analysis is similarly comprehensive. In other words, the analysis and review, no matter when they are conducted, should *not* be just a “point in time” exercise, and instead should cover a span of the entire year, including a review planning for future system changes within the year or a review of prior system changes within the year (80 FR 62831). However, EPs that typically conduct the security risk analysis in December of each calendar year might conduct one security risk analysis in December 2020, and then have to conduct another one well before December 2021, if the analysis must be completed before the EP attests to meaningful use of CEHRT for CY 2021. We believe that security risk analyses are most effective for data security when conducted on a regular schedule. In addition, practice locations may have ongoing contracts or processes in place to perform a security risk analysis at the same time each year. We do not wish to create burden for EPs and non-EPs related to changing those processes to meet the CY 2021 Medicaid Promoting Interoperability Program attestation timelines.

Therefore, we proposed to allow Medicaid EPs to conduct a security risk analysis at any time during CY 2021, even if the EP conducts the analysis after the EP attests to meaningful use of CEHRT to the state. A Medicaid EP who has not completed a security risk analysis for CY 2021 by the time he or she attests to meaningful use of CEHRT for CY 2021 would be required to attest that he or she will complete the required analysis by December 31, 2021. Under this proposal, states could require Medicaid EPs to submit evidence that the security risk analysis has been completed as promised, even after the incentive payment has been issued. In addition, states could require EPs to attest that if a security risk analysis is not completed by December 31, 2021, they will voluntarily rescind their attestation to meaningful use of CEHRT and return the incentive payment. We explained that if this proposal is finalized, we would work with states to develop post-payment verification and audit processes that meet CMS due diligence requirements,

including those in §§ 495.318 and 495.368, and generally to ensure that incentive payments are made properly. We reminded states that as a condition of receiving enhanced federal financial participation, they are required to demonstrate to the satisfaction of HHS that they are conducting adequate oversight of the program, including routine tracking of meaningful use attestations (*See* § 495.318(b)). We also reminded states that they must submit a description of the methodology used to verify that EPs have meaningfully used CEHRT for CMS approval as part of their SMHP. (*See* § 495.332(c)). In the final rule titled “Medicare and Medicaid Programs; Electronic Health Record Incentive Program” (75 FR 44313), CMS explained that states are expected to “look behind” provider attestations, and that this would require audits both pre- and post-payment (75 FR 44515). These requirements and expectations would not change under this proposal.

The following is a summary of the comments we received on our proposed changes, and our responses.

Comment: The majority of commenters stated their support for our proposal to allow Medicaid EPs to conduct a security risk analysis (SRA) at any time during CY 2021, even if the EP conducts the analysis after the EP attests to meaningful use of CEHRT to the state. These commenters stated that allowing EPs to complete the security risk analysis after their attestation will provide flexibility to EPs while allowing states sufficient time to process incentive payments in the final year of the program.

Response: It is our intention to allow for maximum flexibility for Medicaid EPs to attest before their state’s 2021 deadline, while maintaining their annual SRA schedule.

Comment: A few commenters, including state Medicaid agencies, opposed our proposal to allow EPs to conduct their SRA after the EP attests to meaningful use of CEHRT to the state. These commenters expressed concern about program integrity risk, as well as the burden on state Medicaid agencies to ensure that these EPs are able to demonstrate that they met the program requirements. In addition, the commenters were concerned that the proposed policy might result in a greater number of recouped payments as a result of EPs not actually meeting the requirements.

Response: We believe safeguards are available to mitigate program integrity risk, such as requiring Medicaid EPs to submit evidence of their SRA once it is complete. Because the final incentive payments must be issued by December

31, 2021, we are limited in our ability to provide flexibility to Medicaid EPs given that all states must set attestation deadlines on or before October 31, 2021. Our policy is motivated by a desire to reduce overall burden on Medicaid EPs. We acknowledge there is some potential additional burden associated with increased monitoring by state Medicaid agencies and an increased risk of recoupments from what we believe would likely be a small minority of EPs. However, we believe this additional burden is clearly outweighed by the reduced burden on what we anticipate would be the vast majority of Medicaid EPs that are afforded flexibility to conduct the SRA at any point in the calendar year that aligns with their operational needs. Additionally, as noted above, states are already required to conduct adequate oversight of the Medicaid Promoting Interoperability Program, and we intend to work with states to develop post-payment verification and audit processes that meet CMS due diligence requirements, and generally to ensure that incentive payments are made properly. We have established at § 495.322(b) that 90 percent federal financial participation will be available for state administrative expenditures related to Medicaid Promoting Interoperability Program audits and appeals that are incurred on or before September 30, 2023.

After considering public comments, we are finalizing this policy as proposed, and will allow Medicaid EPs to conduct a security risk analysis at any time during CY 2021, even if the EP conducts the analysis after the EP attests to meaningful use of CEHRT to the state. A Medicaid EP who has not completed a security risk analysis for CY 2021 by the time he or she attests to meaningful use of CEHRT for CY 2021 will be required to attest that he or she will complete the required analysis by December 31, 2021.

4. Clarification

In the CY 2019 PFS final rule (83 FR 59702), in the list of high priority eCQMs that are available for Medicaid EPs to report in 2019 because they are both part of the Core Sets and on the MIPS list of eCQMs, we inadvertently listed “Initiation and Engagement of Alcohol and Other Drug Dependence Treatment” as “CMS4.” It should have read “CMS137, ‘Initiation and Engagement of Alcohol and Other Drug Dependence Treatment.’”

E. Medicare Shared Savings Program

As required under section 1899 of the Act, we established the Medicare Shared Savings Program (Shared

Savings Program) to facilitate coordination and cooperation among health care providers to improve the quality of care for Medicare fee-for-service (FFS) beneficiaries and reduce the rate of growth in expenditures under Medicare Parts A and B. Eligible groups of providers and suppliers, including physicians, hospitals, and other health care providers, may participate in the Shared Savings Program by forming or participating in an Accountable Care Organization (ACO). Please refer to the CY 2020 PFS proposed rule for a summary of policies finalized in prior rules (84 FR 40705).

As a general summary, in the CY 2020 PFS proposed rule, we:

- Discussed aligning the Shared Savings Program quality measure set with proposed changes to the Web Interface measure set under MIPS per previously-finalized policy;
- Proposed a change to the claims-based measures;
- Solicited comment on aligning the Shared Savings Program quality score with the MIPS quality performance category score; and
- Proposed a technical change to correct a cross-reference within a provision of the Shared Savings Program’s regulations on the skilled nursing facility (SNF) 3-day rule waiver, to conform with amendments to § 425.612 that were adopted in the final rule for the Shared Savings Program that appeared in the December 31, 2018 **Federal Register** (Medicare Program; Medicare Shared Savings Program; Accountable Care Organizations—Pathways to Success; final rule) (83 FR 67816) (hereinafter referred to as the “December 2018 final rule”).

1. Quality Measurement

a. Background

Section 1899(b)(3)(C) of the Act states that the Secretary shall establish quality performance standards to assess the quality of care furnished by ACOs and seek to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both. In the final rule establishing the Shared Savings Program that appeared in the November 2, 2011 **Federal Register** (Medicare Program; Medicare Shared Savings Program; Accountable Care Organizations; final rule (76 FR 67802) (hereinafter referred to as the “November 2011 final rule”), we established a quality measure set spanning four domains: patient experience of care, care coordination/patient safety, preventive health, and at-risk population (76 FR 67872 through 67891). Since the Shared Savings

Program was established, we have updated the measures that comprise the quality performance measure set for the Shared Savings Program through the annual rulemaking in the CY 2015, 2016, 2017, and 2019 PFS final rules (79 FR 67907 through 67920, 80 FR 71263 through 71268, 81 FR 80484 through 80489, and 83 FR 59707 through 59715 respectively).

As we stated in the November 2011 final rule (76 FR 67872), our principal goal in selecting quality measures for ACOs has been to identify measures of success in the delivery of high-quality health care at the individual and population levels, with a focus on outcomes. For performance years starting in 2019, 23 quality measures will be used to determine ACO quality performance (83 FR 59707 through 59715). The information used to determine ACO performance on these quality measures will be submitted by the ACO through the CMS Web Interface, calculated by us from administrative claims data, and collected via a patient experience of care survey referred to as the Consumer Assessment of Healthcare Provider and Systems (CAHPS) for ACOs Survey.

Eligible clinicians who are participating in an ACO and who are subject to MIPS (MIPS eligible clinicians) will be scored under the APM scoring standard under MIPS (81 FR 77260). These MIPS eligible clinicians include any eligible clinicians who are participating in an ACO in a track (or payment model within a track, such as Levels A–D of the BASIC Track) of the Shared Savings Program that is not an Advanced APM, as well as those participating in an ACO in a track (or payment model within a track) that is an Advanced APM, but who do not become Qualifying APM Participants (QPs) as specified in § 414.1425, and are not otherwise excluded from MIPS.

b. CMS Web Interface and Claims-Based Measures

Since the Shared Savings Program was first established in 2012, we have updated the quality measure set to reduce reporting burden and focus on more meaningful, outcome-based measures. The most recent updates to the Shared Savings Program quality measure set were made in the CY 2019 PFS final rule (83 FR 59711). In the CY 2019 PFS final rule, we explained that in developing the proposed changes to the quality measure set for 2019, we had considered the agency's efforts to streamline quality measures, reduce regulatory burden and promote innovation as part of the agency's Meaningful Measures initiative (see

CMS Press Release, CMS Administrator Verma Announces New Meaningful Measures Initiative and Addresses Regulatory Reform; Promotes Innovation at LAN Summit, October 30, 2017, available at <https://www.cms.gov/Newsroom/MediaReleaseDatabase/Press-releases/2017-Press-releases-items/2017-10-30.html>). We also noted that under the Meaningful Measures initiative, we have committed to assessing only those core issues that are most vital to providing high-quality care and improving patient outcomes, with the aim of focusing on high-priority measures, reducing unnecessary burden on providers, and putting patients first. The changes made in the CY 2019 PFS final rule reduced the Shared Savings Program quality measure set from 31 to 23 measures. Currently, more than half of the 23 Shared Savings Program quality measures are outcome and high-priority measures, including:

- Patient-experience of care measures collected through the CAHPS for ACOs Survey that strengthen patient and caregiver experience.
- Outcome measures supporting effective communication and care coordination, such as unplanned admission and readmission measures.
- Intermediate outcome measures that address the effective treatment of chronic disease, such as hemoglobin A1c control for patients with diabetes.

As we stated in the CY 2019 PFS final rule (83 FR 59713), we seek to align the Shared Savings Program quality measure set with changes made to the CMS Web Interface measures under the Quality Payment Program. In the 2017 PFS final rule, we stated that we do not believe it is beneficial to propose CMS Web interface measures for ACO quality reporting separately (81 FR 80499). Therefore, to avoid confusion and duplicative rulemaking, we adopted a policy that any future changes to the CMS Web interface measures would be proposed and finalized through rulemaking for the Quality Payment Program, and that such changes would be applicable to ACO quality reporting under the Shared Savings Program. In accordance with the policy adopted in the CY 2017 PFS final rule (81 FR 80501), we did not make any specific proposals related to changes in CMS Web Interface measures reported under the Shared Savings Program in the CY 2020 PFS proposed rule (84 FR 40706). Rather, we referred readers to Appendix 1, Table C (Existing Quality Measures Finalized for Removal Beginning with the 2022 MIPS Payment Year) and Table Group A (New Quality Measures Finalized for Addition Beginning with the 2022 MIPS Payment Year) of the

proposed rule for a complete discussion of the proposed changes to the CMS Web Interface measures for performance year 2020 (2022 MIPS Payment Year). As discussed in section III.I.3.B.1 of this final rule, no changes are being finalized to the CMS Web Interface measures set for performance year 2020. As a result, ACOs will continue to be responsible for reporting the following measure for performance year 2020 for purposes of the Shared Savings Program:

- ACO–14 Preventive Care and Screening Influenza Immunization

As explained in the proposed rule, we will maintain the measure with the “substantive” change described in Appendix 1, Table D–A 81 (Previously Finalized Quality Measures with Substantive Changes Finalized for the 2022 Payment Year and Future Years) of this final rule. As discussed in Table D–A 81 of this final rule, we have reviewed the “substantive” change and we do not believe this change to the measure would require that we revert the measure to pay-for-reporting for the 2020 performance year. We have determined that we can create a historical benchmark using data reported for the measure in past years as updating the numerator instructions that allow the use of the Live Attenuated Influenza Vaccine (LAIV) does not significantly impact ACO–14; but rather, allows for shared decision making between the patient and the eligible clinician over the best method of administration, while aligning with the current performance period's CDC/ACIP guidelines without negatively affecting clinicians providing LAIV.

Additionally, in section III.I.3.B.(1) of the CY 2020 PFS proposed rule, we proposed to add the following measure to the CMS Web Interface for purposes of the Quality Payment Program:

- ACO–47 Adult Immunization

Status: We refer readers to Appendix 1, Table Group A.3 of this final rule for a discussion of comments received on this proposal. Based on the policies being finalized for purposes of MIPS in Appendix 1, Table Group A.3 of this final rule, Shared Savings Program ACOs will not be responsible for reporting the Adult Immunization Status measure (ACO–47) for performance year 2020.

In section III.J.3.c.(1)(d) of the CY 2020 PFS proposed rule, we discussed our determination, based on extensive stakeholder feedback, that the 2018 CMS Web Interface measure numerator guidance for the Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (ACO–17) measure was inconsistent with the intent of the CMS Web Interface version

of this measure as modified in the CY 2018 Quality Payment Program final rule (82 FR 54164) and unduly burdensome on clinicians. We explained that, due to this numerator guidance, we were unable to rely on historical data to benchmark the measure. Therefore, for the 2018 performance year we explained that we were designating the measure pay-for-reporting in accordance with § 425.502(a)(5).

Additionally, in section III.J.3.c.(1)(d) of the CY 2020 PFS proposed rule, we proposed to update the CMS Web Interface measure numerator guidance for purposes of the Quality Payment Program. We noted that to the extent that this change would constitute a change to the Shared Savings Program measure set after the start of the 2019 performance period, we believed that, consistent with section 1871(e)(1)(A)(ii) of the Act, it would be contrary to the public interest not to modify the measure as proposed in Table DD because the guidance was inconsistent with the intent of the CMS Web Interface version of this measure, as modified in the CY 2018 Quality Payment Program final rule, and unduly burdensome on clinicians. We noted that if this modification were finalized as proposed, then consistent with our discussion in the CY 2018 PFS final rule, we expected that we would be able to use historical data reported on the measure to establish an appropriate 2019 benchmark that aligns with the updated specifications (82 FR 53214 and 53215) and the measure would be pay-for-performance for performance years starting in 2019 and all subsequent years.

While we did not make any specific proposals under the Medicare Shared Savings Program related to the Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (ACO-17) measure for performance years starting in 2019, we did receive public comments on the proposed update to the numerator guidance for the Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (ACO-17) measure for performance years starting in 2019. The following is a summary of the comments we received and our response.

Comment: Commenters unanimously supported the proposed update to the numerator guidance for the Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (ACO-17) measure as discussed in Table DD in Appendix 1 of this final rule (Previously Finalized Quality Measures with Substantive Changes

finalized for the 2021 MIPS Payment Year). However, commenters unanimously opposed CMS designating the measure to pay-for-performance for performance years starting in 2019. Several commenters expressed concerns that notice of this change for 2019 is coming late in the performance year, which they stated did not allow sufficient time for vendors and/or ACOs to update workflows and reports before the start of CMS Web Interface reporting and could have a negative impact on performance. As a result of these stated concerns, the commenters opposed reverting this measure to pay-for-performance and suggested it remain pay-for-reporting for 2019. Many commenters suggested that CMS keep the measure as pay-for-reporting for 2018 and 2019 consistent with our policy that newly introduced measures will be pay-for-reporting for 2 years, and another commenter expressed concern with the lack of clarity in the specifications which they stated would support maintaining the measure in a pay-for-reporting status for 2019 and 2020.

Response: We refer readers to Table DD.1 (Previously Finalized Quality Measures with Substantive Changes finalized for the 2021 MIPS Payment Year) for more details on the updated numerator guidance and measure specifications for ACO-17. We note that we did not make a proposal to make ACO-17 pay-for-performance for 2019; rather, we noted in the proposed rule that we were reverting the measure back to the version finalized in the CY 2018 PFS final rule and explained that we would have the data to create a benchmark for performance years starting in 2019, and thus the measure would be pay for performance. At that time, we had concluded that the “substantive” changes to this measure adopted in the CY 2018 PFS final rule would not require CMS to revert the measure to pay-for-reporting because we would still be able to use historical data reported on the measure to establish an appropriate benchmark that aligned specifications (82 FR 53214 and 53215). However, we understand commenters’ concerns about changes to the specifications during the performance period and how these changes could potentially impact workflow.

We have been persuaded by commenters that scoring ACO-17 for performance years starting in 2019 could disadvantage clinicians who had planned to implement the measure with the revised numerator guidance that was in place for 2018. Reverting this measure to the version finalized for 2018 is considered a substantive change,

as reflected in the CY 2018 Quality Payment Program final rule (82 FR 54164). The regulations at § 425.502(a)(5) grant CMS discretion to redesignate a measure as pay for reporting when there is a determination under the Quality Payment Program that the measure has undergone a substantive change. Accordingly, we are exercising that discretion to revert ACO-17 to pay for reporting for performance years starting in 2019. We believe that this will allow time for ACOs (and their vendors) to take the steps necessary to report the measure consistent with the specifications in performance year 2020. Accordingly, we are finalizing that ACO-17 will be pay-for-reporting for performance years starting in 2019, but will revert to pay-for-performance for performance year 2020.

In the CY 2020 PFS proposed rule, we noted that AHRQ, which is the measure steward for ACO-43—Ambulatory Sensitive Condition Acute Composite (AHRQ Prevention Quality Indicator (PQI) #91) (version with additional Risk Adjustment), made an update to the measure that will require a change to the measure specifications for performance year 2020.¹⁰² Currently, ACO-43 assesses the risk adjusted rate of hospital discharges for acute PQI conditions with a principal diagnosis of dehydration, bacterial pneumonia, and urinary tract infection. The updated measure will only include two conditions, bacterial pneumonia and urinary tract infection. This measure is a composite measure and the rate of hospital discharges is approximately equal to the sum of the rates of hospital discharges for each of its components. Therefore, the removal of dehydration will likely decrease the composite rate by approximately the rate of dehydration discharges. Based on this substantive change, we proposed to redesignate ACO-43 as pay-for-reporting for 2020 and 2021 consistent with our policy under § 425.502(a)(4), which provides that a newly introduced measure is set at the level of complete and accurate reporting for the first two reporting periods the measure is required. However, we also considered creating a benchmark using historical data for bacterial pneumonia and urinary tract infection and keeping the measure pay-for-performance. As this is a claims-based measure, we have access to historical data for both bacterial pneumonia and urinary tract infection so we would be able to create a historical benchmark for the revised

¹⁰² https://www.qualityindicators.ahrq.gov/News/Retirement%20Notice_v2019_Indicators.pdf.

measure. However, we also explained our belief that changes to measures can impact how ACOs, their ACO participants, and ACO provider/suppliers allocate their resources and redesign their care process to improve quality of care for their beneficiaries. As a result, we noted that our proposal to revert the measure to pay-for-reporting for 2 years would give ACOs time to refine care processes and educate clinicians while also gaining experience with the refined composite measure and an understanding of performance under revised benchmarks prior to the start of a pay for performance year.

We received public comments on this proposal and the alternative approach considered. The following is a summary of the comments we received and our response.

Comment: Commenters unanimously supported our proposal to revert the revised version of ACO-43—Ambulatory Sensitive Condition Acute

Composite (AHRQ Prevention Quality Indicator (PQI) #91) (version with additional Risk Adjustment) to pay-for-reporting for 2020 and 2021. The commenters agreed with CMS that this will give ACOs time to refine care processes and educate clinicians, while also gaining experience with the revised composite measure. One commenter stated that with only one of the two sub-measures (pneumonia) tested and endorsed at the facility level, it is not known how well the two components together represent the quality of the care provided by ACOs. The commenter suggested that CMS ensure the composite is tested at the ACO level and reviewed by NQF.

Response: We acknowledge the commenter's concern with regard to not knowing how well the revised two component measure will represent the quality of the care provided by the ACO; reverting the measure to pay-for-reporting for 2 years allows us to

review/analyze performance data for the revised measure before incorporating the measure performance into the Shared Savings Program quality score.

After considering the comments received we are finalizing our proposal that ACO-43—Ambulatory Sensitive Condition Acute Composite (AHRQ Prevention Quality Indicator (PQI) #91) (version with additional Risk Adjustment) will be pay-for-reporting for 2020 and 2021 consistent with our policy under § 425.502(a)(4), which provides that a newly introduced measure is set at the level of complete and accurate reporting for the first two reporting periods the measure is required.

Table 40 shows the Shared Savings Program quality measure set for performance year 2020 and subsequent performance years that will result from the finalized policies in section III.I.3.B.(1) of this final rule.

BILLING CODE 4120-01-C

The net result of the final policies in section III.I.3.b.(1) of this final rule will be a set of 23 measures on which ACOs' quality performance will be assessed for performance year 2020 and subsequent performance years. The 4 domains will

include the following numbers of quality measures (See Table 41):

- Patient/Caregiver Experience of Care-10 measures.
- Care Coordination/Patient Safety-4 measures.

- Preventive Health-6 measures.
- At Risk Populations-3 measures.

Table 41 provides a summary of the number of measures by domain and the total points and domain weights that will be used for scoring purposes.

TABLE 41: Number of Measures and Total Points for Each Domain within the Shared Savings Program Quality Performance Standard, Starting with Performance Year 2020

Domain	Number of Individual Measures	Total Measures for Scoring Purposes	Total Possible Points	Domain Weight
Patient/Caregiver Experience	10	10 individual survey module measures	20	25%
Care Coordination/ Patient Safety	4	4 measures	8	25%
Preventive Health	6	6 measures	12	25%
At-Risk Population	3	3 individual measures	6	25%
Total in all Domains	23	23	46	100%

c. Solicitation of Comment on Aligning the Shared Savings Program Quality Score With the MIPS Quality Score

As discussed above, our principal goal in selecting quality measures for the Shared Savings Program has been to identify measures of success in the delivery of high-quality health care at the individual and population levels, with a focus on outcomes. The Shared Savings Program quality measure set currently consists of 23 measures spanning four domains that are submitted by the ACO through the CMS Web Interface, calculated by us for ACOs from administrative claims data, and collected via a patient experience of care survey referred to as the CAHPS for ACOs Survey. The number of measures within the four domains has changed over time to reflect changes in clinical practice, move towards more outcome

and high-priority measures, align with other quality reporting programs, and reduce burden; however, the overall structure of four equally weighted measure domains has remained consistent in determining ACOs' quality performance since the Shared Savings Program was established in 2012. As provided in section 1899(d)(2) of the Act and § 425.502(a) of the Shared Savings Program regulations, ACOs must meet a quality performance standard to qualify to share in savings. Currently, the quality performance standard is based on an ACO's performance year rather than financial track. The quality performance standard is defined at the level of full and complete reporting (pay-for-reporting (P4R)) for the first performance year of an ACO's first agreement period. In the second or subsequent years of the first

agreement period and all years of subsequent agreement periods, quality measures are scored as pay-for-performance (P4P) according to the phase-in schedule for the specific measure and the ACO's performance year in the Shared Savings Program:

- For all performance years, ACOs must completely and accurately report all quality data used to calculate and assess their quality performance.
- CMS designates a performance benchmark and minimum attainment level for each P4P measure and establishes a point scale for the measure. An ACO's quality performance for a measure is evaluated using the appropriate point scale, and these measure specific scores are used to calculate the final quality score for the ACO.
- ACOs must meet minimum attainment (defined as the 30th

percentile benchmark for P4P measures) on at least one measure in each domain to be eligible to share in any savings generated (§ 425.502(d)(2)(iii)(A)).

ACOs are rewarded for their quality performance on a sliding scale on which higher levels of quality performance translate to higher rates of shared savings and, depending on the track under which an ACO is participating, may result in lower rates of shared losses. In addition, ACOs that demonstrate significant quality improvement on measures in a domain are eligible to receive a quality improvement reward (§ 425.502(e)(4)). Specifically, for each domain, ACOs can be awarded up to four additional points for quality performance improvement on the quality measures within the domain. These bonus points are added to the total points that an ACO achieves for the quality measures within that domain, but the total number of points cannot exceed the maximum total points for the domain.

In the CY 2018 Quality Payment Program final rule, we finalized a policy for the 2018 performance period and subsequent performance periods that the quality performance category under the MIPS APM Scoring Standard for MIPS eligible clinicians participating in a Shared Savings Program ACO will be assessed based on measures collected through the CMS Web Interface and the CAHPS for ACOs survey measures (82 FR 53688 through 53706). We assign the same MIPS quality performance category score to each Tax Identification Number (TIN)/National Provider Identifier (NPI) in a Shared Savings Program ACO based on the ACO's total quality score derived from the measures reported via the CMS Web Interface and the CAHPS for ACOs survey. Eligible clinicians in a Shared Savings Program ACO will receive full credit for the improvement activities performance category in 2020 based on their performance of improvement activities required under the Shared Savings Program. In addition, ACO participants report on the Promoting Interoperability performance category at the group or solo practice level for eligible clinicians subject to the Promoting Interoperability performance category. Data for the Promoting Interoperability performance category is reported by ACO participants at the TIN level and is then weighted and aggregated to get a single ACO score for the performance category that applies to all eligible clinicians participating in the ACO. These three categories in the APM scoring standard are weighted as follows: Quality is 50 percent, Improvement Activities is 20 percent; and Promoting Interoperability

is 30 percent. Eligible Clinicians participating in the Shared Savings Program are not assessed under the MIPS cost performance category as these eligible clinicians are already subject to cost and utilization performance assessments as part of the Shared Savings Program. Therefore, the cost performance category is weighted at zero percent.

Eligible clinicians who reassign their billing rights to an ACO Participant TIN in an Advanced APM (Track 2, Track 1+ ACO Model, BASIC Track Level E, and ENHANCED Track (formerly known as Track 3)) and who are included on the Advanced APM Participation List on at least one of three snapshot dates (March 31, June 30, and August 31) during the performance year may become Qualifying APM Participants (QPs) for the year, if they meet payment or patient count thresholds. If these eligible clinicians attain QP status for the performance year via their participation in the Shared Savings Program ACO, they would receive an APM incentive payment and would not be subject to the MIPS reporting requirements or payment adjustment for the related payment year. However, they would be required to report quality for purposes of the Shared Savings Program financial reconciliation.

As we explained in the CY 2020 PFS proposed rule (83 FR 40710), we recognize that ACOs and their participating providers and suppliers have finite resources to dedicate to engaging in efforts to improve quality and reduce costs for their assigned beneficiary population. Although CMS has worked to align policies under the Shared Savings Program with the Quality Payment Program, we recognize that some differences in program methodologies for the Shared Savings Program and MIPS remain and could potentially create conflicts for MIPS eligible clinicians in an ACO who are attempting to strategically transform their respective practices to earn shared savings under the terms of the Shared Savings Program and a positive payment adjustment under MIPS. Currently, under the Shared Savings Program, ACOs in performance years other than the first performance year of their first agreement period are allocated up to two points for quality measures that are pay-for-performance, according to where their performance falls, relative to benchmark deciles. Incomplete reporting of any CMS Web Interface measure will result in zero points for all CMS Web Interface measures and the ACO will fail to meet the quality performance standard for the performance year. Similarly, if a CAHPS

for ACOs Survey is not administered and/or no data is transmitted to CMS, zero points will be earned for all Patient/Caregiver Experience measures and the ACO will fail to meet the quality standard for the performance year. The quality measure set for the Shared Savings Program also includes certain claims-based measures that are not part of the MIPS quality performance category, and we currently calculate performance rates on these claims-based measures for purposes of determining an ACO's overall quality score under the Shared Savings Program.

In contrast, when a group submits measures for the MIPS quality performance category via the CMS Web Interface, each measure is assessed against its benchmark to determine how many points the measure earns. For the 2019 MIPS performance period, a group can receive between 3 and 10 points for each MIPS measure (not including bonus points) that meets the data completeness and case minimum requirements by comparing measure performance to established benchmarks. If a group fails to meet the data completeness requirement on one of the CMS Web Interface measures, it receives zero points for that measure; however, all other CMS Web Interface measures that meet the data completeness requirement are assessed against the measure benchmarks, and the points earned across all measures are included in the quality performance category score. Currently, the only administrative claims-based measure used in MIPS is the All-Cause Readmission measure, which is only calculated for groups with 16 or more eligible clinicians. These differences between the Shared Savings Program quality measure set and the MIPS quality measure set highlight the different quality measurement approaches for which Shared Savings Program ACOs must simultaneously evaluate, prioritize, and target resources that may be better directed toward patient care if the quality measurement approaches under the Shared Savings Program and MIPS were more closely aligned.

As we stated in the proposed rule, we believe that using a single methodology to measure quality performance under both the Shared Savings Program and the MIPS would allow ACOs to better focus on increasing the value of healthcare, improving care, and engaging patients, and reduce burden as ACOs would be able to track to a smaller measure set under a unified scoring methodology. Accordingly, we solicited comment on how to potentially align the Shared Savings Program

quality reporting requirements and scoring methodology more closely with the MIPS quality reporting requirements and scoring methodology.

We received public comments on how to potentially align the Shared Savings Program quality reporting requirements and scoring methodology more closely with the MIPS quality reporting requirements and scoring methodology. The following is a summary of the comments we received and our response.

Comment: Several commenters supported the concept of aligning the Shared Savings Program quality score with the MIPS quality performance category scoring methodology in the interest of reducing program complexity and reporting burden. One commenter suggested that CMS consider alignment opportunities and approaches holistically rather than compartmentalized within programs; as MIPS Value Pathways (MVPs) are also intended to reduce burden and confusion and align metrics, the commenters encouraged CMS to explore opportunities to systematically address changes to both the Shared Savings Program and MIPS in a coordinated fashion. Another commenter was generally supportive of alignment between Medicare programs but expressed concern that ACOs are already navigating a complete overhaul of the program under the new policies established in the December 2018 Pathways to Success final rule (83 FR 67816). The commenter stated that quality reporting and scoring is one of the few areas of consistency in the Shared Savings Program and now is not the time to overhaul these quality requirements in the midst of all the other changes to which ACOs are adjusting.

The majority of commenters were opposed to the approach of aligning the Shared Savings Program quality score with the MIPS quality performance category score. Commenters stated that ACOs are focused on the total population they serve and accountable for total costs of caring for their aligned beneficiary population. The commenters stated that ACOs should have a separate quality measure set and methodology for scoring quality, thus keeping the MIPS quality performance category score separate from the assessment of the quality performance of ACOs under the Shared Savings Program. Several commenters suggested that CMS should test the use of a more limited number of quality measures with low reporting burdens, including eQMs and claims-based measures designed specifically for ACOs, which they believed would be

appropriate for organizations committed to population health and accountable for total cost of care for the patients they serve. Several commenters noted that aligning the Shared Savings Program quality score with the MIPS quality performance category score would increase burden and require resources that would be better directed to improve patient care but did not elaborate on why they believed this approach would be more burdensome. Another commenter stated that while they appreciate the sentiment to keep quality measurement and scoring simple and aligned across programs, the measures used in APMs, such as the Shared Savings Program, should lead and not follow MIPS because the quality measure sets used in MIPS continue to be populated with specialty driven measures, which the commenter believed do not encourage transition to APMs. Another commenter stated that the goals of the two programs may not lend themselves to perfect alignment as the MIPS program is specialty and provider specific, making episodic measures more meaningful, whereas ACOs are responsible for beneficiaries' total cost of care over the course of the entire performance year and it stands to follow that eligible clinicians participating in ACOs should be accountable for total health measures.

Several commenters that opposed the concept of alignment of the Shared Savings Program quality score with the MIPS quality performance category score also stated that a significant restructuring of the Shared Savings Program quality performance requirements would introduce more confusion for ACOs that are transitioning into new pathway tracks, as well as uncertainty, as CMS has also proposed extensive revisions to MIPS as the program transitions to MIPS Value Pathways. Another commenter stated they disagreed with replacing the Shared Savings Program quality score with the MIPS quality performance category score until such a time that CMS can ensure that the measures and patient populations included are aligned across both programs. The commenter stated that MIPS uses a retrospective approach to assign patients to individual clinicians or practices, whereas, the commenter stated, Shared Savings Program uses a prospective approach to assign beneficiaries to ACOs. Because of these differences, the commenter believed replacing the Shared Savings Program quality score with the MIPS quality performance category score would lead

to inconsistent and incorrect comparisons.

Response: As we plan for future updates and changes to the Shared Savings Program quality reporting requirements and scoring methodology, we will consider this feedback in the development of our proposals.

In particular, we requested comments on replacing the Shared Savings Program quality score with the MIPS quality performance category score, for ACOs in Shared Savings Program tracks (or payment models levels within a track) that do not meet the definition of an Advanced APM (currently, Track 1 and BASIC Track Levels A, B, C and D). We explained that allowing for a single quality performance score for both programs would eliminate the need for ACOs to focus their resources for quality improvement on maximizing performance under two separate quality reporting requirements with distinct scoring methodologies. Currently, for ACOs in tracks (or payment models within a track) that do not meet the definition of an Advanced APM, the MIPS quality performance category score is calculated based on the measures reported by the ACO via the CMS Web Interface and the CAHPS for ACO survey measures. For Shared Savings Program quality scoring purposes, we indicated that we could utilize the MIPS quality performance category score, converted to a percentage of points earned out of the total points available, as the ACO's quality score for purposes of financial reconciliation under the Shared Savings Program. Since the release of the proposed rule, we have updated the MIPS Quality performance category scores for 2018, and we note that for performance year 2018, the weighted mean MIPS quality performance category score for ACOs in Shared Savings Program tracks (or payment models within a track) that do not meet the definition of an Advanced APM was 48.16 and the weighted median MIPS quality performance score for these ACOs was 50.00, out of a possible 50 points assigned for the quality performance category.

ACOs in tracks (or payment models within a track) that meet the definition of an Advanced APM whose eligible clinicians are QPs for the year and thus are excluded from the MIPS reporting requirements, do not receive a quality performance category score under MIPS. Instead the quality data the ACO reports to the CMS Web Interface is used along with the ACO's CAHPS data and the administrative claims-based measures calculated by us, solely for the purpose of scoring the quality performance of the

ACO under the Shared Savings Program quality scoring methodology. As an alternative, given that we currently collect the necessary data from these ACOs, we explained that we could also calculate a quality score for these ACOs under the MIPS scoring methodology, and use this score to assess the quality performance of the ACO for purposes of the Shared Savings Program. Using this score would also inform eligible clinicians participating in these ACOs of their MIPS quality score in the event that they lose QP status and are scored under the MIPS APM scoring standard.

Utilizing a MIPS quality performance category score to assess the quality performance for purposes of the Shared Savings Program of ACOs in tracks (or payment models within a track) that qualify as an Advanced APM would not change whether eligible clinicians participating in the ACO obtain QP status and are excluded from MIPS, nor would it change the ACO participant TINs' eligibility to receive Advanced APM incentive payments. Rather, under this approach we would utilize the same scoring methodology to determine quality performance for Shared Savings Program ACOs that are participating in Advanced APMs as would be used to assess the quality performance of ACOs in Shared Savings Program tracks (or payment models within a track) that do not meet the definition of an Advanced APM, creating further alignment of performance results and further synergies between the Shared Savings Program and MIPS.

We welcomed public comments on the approach of using the MIPS quality performance category score to assess quality performance for purposes of the Shared Savings Program quality performance standard for ACOs that are in tracks (or payment models within a track) that qualify as Advanced APMs, and therefore, do not receive a MIPS quality performance category score if their eligible clinicians meet QP or Partial QP thresholds and are excluded from MIPS, as well as potential alternative approaches for scoring Shared Savings Program quality performance in a way that more closely aligns with MIPS. The following is a summary of the comments we received and our response.

Comment: We received few comments specifically on the approach of using the MIPS quality performance category score to assess quality performance for purposes of the Shared Savings Program quality performance standard for ACOs that are in tracks (or payment models within a track) that qualify as Advanced APMs. Some commenters supported the approach, stating that increased

alignment with the MIPS scoring methodology would provide more comparable data and lessen the burden for eligible clinicians. Another commenter supported the approach of using MIPS quality scores as the Shared Savings Program quality performance score, stating that this approach would simplify the process for eligible clinicians participating in the Shared Savings Program, including eligible clinicians participating in Advanced APMs that do not meet the criteria to be a QP and reduce the complexity and burden of reporting.

One commenter did not support the approach of using the MIPS quality performance category score to assess quality performance for purposes of the Shared Savings Program quality performance standard for ACOs that are in tracks (or payment models within a track) that qualify as Advanced APMs because they support the current methodology, which they believed focuses on the total cost of care, not just the physician service component.

Response: As we plan for future updates and changes to the Shared Savings Program quality scoring methodology, we will consider this feedback in the development of our proposals.

In addition, we also solicited comment on simplifying MIPS by implementing a new MIPS Value Pathway framework, which may include implementing a core measure set using administrative claims-based measures that can be broadly applied to communities or populations and developing measure sets around specialty areas or public health conditions to standardize and provide more cohesive reporting and participation. We refer readers to section III.I.3.a.(3) of this final rule for more information on these approaches and a summary of the comments received.

Currently, for ACOs in tracks (or payment models within a track) that do not meet the definition of an Advanced APM, the MIPS quality performance category score is calculated based on the measures reported by the ACO via the CMS Web Interface and the CAHPS for ACO survey measures. In section III.I.3.b.(1)(ii) of the proposed rule, we proposed to add the MIPS All-Cause Unplanned Admission for Patients with Multiple Chronic Conditions (MCC) measure to the MIPS quality performance category. We noted that if this measure were to be added to MIPS quality performance category, implementation of the measure would be delayed until the 2021 performance period for MIPS. We explained that if

the MCC measure were to be included in the MIPS quality performance category, we would also consider including the MIPS claims-based measures (MCC and MIPS All-Cause Readmission measure) in the MIPS APM scoring standard for ACOs in tracks (or payment models within a track) that are not Advanced APMs and in the MIPS quality performance category equivalent score for ACOs in tracks that are Advanced APMs, in order to fully align the quality scoring methodology under the Shared Savings Program with the MIPS scoring methodology to reduce the burden on ACOs and their eligible clinicians of tracking to multiple quality reporting requirements and quality scoring methodologies. We would then use this score for purposes of assessing quality performance under the Shared Savings Program for all ACOs. We noted that these MIPS claims-based measures are similar to those currently used to assess ACO quality under the Shared Savings Program. The MIPS MCC and ACO MCC are similar because they both target patients with multiple chronic conditions but the cohort, outcome, and risk model for the MIPS MCC measure would vary from the ACO MCC measure. The cohort for the ACO MCC includes eight conditions whereas the MIPS MCC measure includes nine conditions, where the additional condition is diabetes. The ACO MCC measure does not adjust for social risk factors whereas the MIPS MCC measure adjusts for two area-level social risk factors: (1) AHRQ socioeconomic status (SES) index; and (2) specialist density. We referred readers to Appendix 1 Table AA (New Quality Measures for Addition for the 2023 Payment Year and Future Years) of the proposed rule for more detailed information on the MIPS MCC measure. Both the MIPS and Shared Savings Program versions of the All-Cause Readmission measure were developed to fully align with the original hospital measure of Hospital-Wide Readmission. The MIPS and Shared Savings Program versions of the All Cause Readmission measure are essentially re-specifications of the same hospital measure and are updated annually to maintain that alignment. Because of this, the measures have a very similar, or identical, definition for included patients, outcome definition, and risk adjustment model. The primary difference between the measures is only the entity that is accountable—either an ACO or a MIPS-eligible clinician—but the specifications are otherwise aligned. We noted that we welcomed comment on potentially including all of the MIPS claims-based measures in the MIPS

quality performance category score (instead of the 3 claims-based measures that are currently included in the Shared Savings Program quality score), and using this score (converted to a percentage of points earned out of the total points available) in place of the current Shared Savings Program quality score to assess quality performance for all ACOs for purposes of the Shared Savings Program. We noted that we would also continue to assess ACOs on the CAHPS for ACOs survey but quality performance would be calculated by MIPS based on the methodology used for scoring the CAHPS for MIPS survey and included in the MIPS quality performance category score. The scoring and benchmarking approach for the CAHPS for MIPS is to assign points based on each summary survey measure (SSM) and then average the points for all the scored SSMs to calculate the overall CAHPS score. In contrast, ACOs currently, receive up to 2 points for each of the 10 SSMs for a total of 20 points.

We received several public comments on potentially including the CMS Web Interface, CAHPS for ACO survey and the two MIPS claims-based measures in the MIPS quality performance category score for ACOs and using this score in place of the current Shared Savings Program quality score to assess quality performance for all ACOs for purposes of the Shared Savings Program. The following is a summary of the comments we received and our response.

Comment: One commenter supported the use of a sparing list of meaningful measures that reduce the burden of reporting and applauded CMS' efforts to seek out opportunities for greater harmonization and streamlining within FFS Medicare and across programs. Another commenter urged CMS to review the measures it includes in the Shared Savings Program measure set, as well as other Medicare Programs and models, because the current measures are not clinically appropriate or applicable to a frail, seriously ill, or home-limited patient population. The commenter stated they were concerned that even though they were delivering high-quality and clinically appropriate care to this medically complex patient population, they are penalized under these initiatives. However, the majority of commenters opposed to this approach. One commenter stated that the All Cause Unplanned Admissions for Patients with Multiple Chronic Conditions would be difficult for ACOs to manage due to all the included conditions. The commenter added that ACOs do not receive enough actionable data in the quality reports provided by CMS to fully understand their

performance on the measure. The commenter suggested providing the number of patients included in the numerator and in the denominator and identifying the actual patients that were included would give providers more actionable information. A few commenters expressed concern that any consideration of aligning the Shared Savings Program quality scoring methodologies with the MIPS quality score when CMS is also beginning significant modifications to the MIPS program introduces a great deal of uncertainty regarding how the quality scoring methodology may also change in the future; therefore, they do not believe the MIPS All-Cause Readmission and MCC claims-based measures would be appropriate for ACOs. Another commenter stated that they do not believe the MIPS administrative claims-based measures are a better alternative to the administrative claims-based measures ACOs are currently subject to. The commenter noted that ACOs are responsible for the total cost of care for their aligned beneficiary populations; therefore, CMS must use a different approach in evaluating the quality of care furnished ACOs as compared to individuals or groups reporting quality measures in MIPS, who are not participating in total cost of care.

Response: As we plan for future updates and changes to the Shared Savings Program quality scoring methodology, we will consider this feedback in the development of our proposals.

In addition, we solicited comment on determining the threshold for minimum attainment in the Shared Savings Program using the MIPS APM quality performance category scoring. As noted previously in this section, ACOs in the first performance year of their first agreement period are considered to have met the quality performance standard, and therefore, to be eligible to share in savings or minimize shared losses, if applicable, when they completely and accurately report all quality measures. ACOs in all other performance years are required to completely and accurately report and meet the minimum attainment level on at least one measure in each domain, to be determined to have met the quality performance standard and to be eligible to share in savings. For these ACOs, minimum attainment is defined as a score that is at or above 30 percent or the 30th percentile of the performance benchmark. The 30th percentile for the Shared Savings Program is the equivalent of the 4th decile performance benchmark under MIPS APM quality performance category scoring. We

indicated that as we look to more closely align with MIPS quality performance category scoring in future years, we were considering how to determine whether ACOs have met the minimum attainment level. For example, minimum attainment could continue to be defined as complete and accurate reporting for ACOs in their first performance year of their first agreement period, while a MIPS quality performance category score that is at or above the 4th decile across all MIPS quality performance category scores would be required for ACOs in all other performance years under the Shared Savings Program. ACOs with quality scores under the 4th decile of all MIPS quality performance category scores would not meet the quality performance standard for the Shared Savings Program and thus would not be eligible to share in savings or would owe the maximum shared losses, if applicable. In addition, ACOs with quality scores under the 4th decile of all MIPS quality performance category scores would be subject to compliance actions and possible termination. We acknowledged that a requirement that ACOs achieve an overall MIPS quality performance category score (or equivalent score) that meets or exceeds the 4th decile across all MIPS quality performance category scores would be a higher standard than the current requirement that ACOs meet the 30th percentile on one measure per Shared Savings Program quality domain; however, section 1899(b)(3)(C) of the Act not only gives us discretion to establish quality performance standards for the Shared Savings Program, but also indicates that we should seek to improve the quality of care furnished by ACOs over time by specifying higher standards. We believe that increasing the minimum attainment level would incentivize improvement in the quality of care provided to the beneficiaries assigned to an ACO. Furthermore, consistent with section 1899(b)(3)(C) of the Act, it is appropriate to require a higher standard of care in order for ACOs to continue to share in any savings they achieve. Given the maturity of the Shared Savings Program, we are also considering setting a higher threshold, such as the median or mean quality performance category score across all MIPS quality category scores, for determining eligibility to share in savings under the Shared Savings Program for all ACOs, other than those ACOs in their first performance year of their first agreement period. We welcomed comment on these potential approaches or other approaches for determining Shared Savings Program

quality minimum attainment using MIPS data.

We also solicited comment on how to potentially utilize the MIPS quality performance category score to adjust shared savings and shared losses under the Shared Savings Program, as applicable. Currently, for all Shared Savings Program ACOs and Track 1+ Model ACOs, the ACO's quality score is multiplied with the maximum sharing rate of the track to determine the final sharing rate, and therefore, the amount of shared savings, if applicable. For some ACOs under two-sided models, specifically ACOs in Track 2 and the ENHANCED track, the ACO's quality score is also used in determining the amount of shared losses owed, if applicable. Under Track 2 and the ENHANCED track, the loss sharing rate is determined as 1 minus the ACO's final sharing rate based on quality performance, up to a maximum of 60 percent or 75 percent, respectively. Under the Track 1+ Model and two-sided models of the BASIC track (Levels C, D and E), the amount of shared losses is determined based on a fixed 30 percent loss sharing rate, regardless of the ACO's quality score. Thus, a higher quality score results in the ACO receiving a higher proportion of shared savings in all Shared Savings Program tracks and the Track 1+ Model, or greater mitigation of shared losses in Track 2 and the ENHANCED track. We stated that we could apply the MIPS quality performance category score to determine ACOs' shared savings and shared losses, if applicable, in the same manner. For instance, as an alternative to the current approach to determining shared savings payments for Shared Savings Program ACOs, we could establish a minimum attainment threshold, such as a score at or above the 4th decile of all MIPS quality performance category scores or the median or mean quality performance category score, that if met would allow ACOs to share in savings based on the full sharing rate of their track. We welcomed comment on these or other potential approaches for utilizing the MIPS quality performance category score or an alternative score in determining shared savings or shared losses under the Shared Savings Program.

In addition, we discussed an option considered under which we would determine the MIPS quality performance category score for all Shared Savings Program ACOs as it is currently calculated for non-ACO group reporters using the CMS Web Interface. That is, ACOs would receive a score for each of the measures they report and

zero points for those measures they do not report. This would be a change from the current methodology under which ACOs must report all Web Interface measures to complete quality reporting. We noted that currently, for ACOs in the first year of their first agreement period, minimum attainment is set at the level of complete and accurate reporting of all measures. If we were to adopt the MIPS quality performance category score as the Shared Savings Program quality score, we would consider no longer imposing a different quality standard for ACOs in the first year of their first participation agreement versus ACOs in later performance years. Given that the Shared Savings Program is evolving and many Medicare quality programs including MIPS are incentivizing performance rather than reporting, we noted that we are considering no longer transitioning from pay-for-reporting to pay-for-performance during an ACO's first agreement period in the Shared Savings Program. We stated that we believe requiring all ACOs regardless of time in the program to be assessed on quality performance would be an appropriate policy since nearly 100 percent of ACOs consistently satisfactorily report all quality measures. We welcomed comment on this alternative for determining the MIPS quality performance category score.

We received public comments on determining the threshold for minimum attainment in the Shared Savings Program using the MIPS APM quality performance category scoring and the approach of scoring ACOs for each measure they report and zero points for those measures they do not report. The following is a summary of the comments we received and our response.

Comment: One commenter noted that using the MIPS scoring methodology for ACOs would result in a somewhat higher standard than is currently used because ACOs would need to meet a minimum overall threshold rather than a threshold on one measure in each domain to be eligible to share in savings. However, the commenter noted that ACOs would benefit by being able to earn a quality score even if they fail to report one measure. The commenter stated the benefits of this approach outweigh the drawbacks and supported the option of aligning the Shared Savings Program quality scoring methodology with the current methodology used for MIPS. This commenter also stated that under this alternate approach ACOs should be able to proceed directly to pay-for-performance, particularly since failure on one measure would no longer result

in overall failure in quality performance.

The majority of commenters opposed the approach of determining the threshold for minimum attainment in the Shared Savings Program using the MIPS APM quality performance category scoring. Several commenters stated that they did not support the option of using a MIPS quality scoring approach that would hold ACOs to a higher standard to be eligible to share in savings, if earned, by requiring a quality performance score at or above the fourth decile across all MIPS quality performance category scores in order to meet the minimum attainment level. These commenters also stated that they were concerned the MIPS quality scoring methodologies could result in narrow bands for measures with clustered performance, resulting in inequitable scores for very small differences in performance especially when extrapolated from a small sample size. They offered an example under which small differences in measure performance rates might result in measure point changes that could add up quickly and may not reflect substantive differences in actual quality of care. The commenters stated their belief that percentile rankings are more meaningful because they provide the larger context and help appropriately adjust the actual scores. Another commenter stated that if the goal is to align the Shared Savings Program and MIPS quality scoring approaches, then it would make little sense to hold ACOs to a higher attainment standard than other MIPS clinicians; they suggested setting the minimum attainment standard for ACOs at the 3rd decile rather than the 4th decile. Another commenter opposed increasing the minimum attainment standard under the Shared Savings Program stating their belief that the current Shared Savings Program quality scoring methodology is sufficient to incentivize high quality care. The commenter also stated that ACOs enter the program with differing levels of performance on the Shared Savings Program quality measures and different levels of experience documenting quality metrics in a manner required by the program. In addition, the commenter expressed the belief that it takes time to implement new workflows to maximize performance, so increasing the minimum attainment level could act as a deterrent to new entrants joining the program or ACOs remaining in the program and working to improve care. Several commenters expressed concerns about the concept of removing the pay-

for-reporting year currently provided to ACOs in their first year of their first agreement, stating that this change would have significant repercussions for new ACOs. The commenters noted that providing ACOs in their first year with 12 months to assess performance, understand measure specifications, and implement workflow and IT changes necessary to capture data and document quality performance as specified by the measure steward is a vast undertaking requiring significant resources. In addition, the commenters stated this time is crucial to educate clinicians and support staff to incorporate processes to implement the quality measure requirements into their practice and establish buy-in and support among staff.

Response: As we plan for future updates and changes to the Shared Savings Program quality scoring methodology, we will consider this feedback in the development of our proposals.

Lastly, we solicited comment on using the MIPS quality improvement scoring methodology rather than the Shared Savings Program Quality Improvement Reward to reward ACOs for quality improvement. Under the Shared Savings Program, we currently allow ACOs not in their first performance year in the program to earn a Quality Improvement Reward in each of the four quality domains. In contrast, under MIPS, improvement points are generally awarded as part of the MIPS quality performance category score if a MIPS eligible clinician (1) has a quality performance category achievement percent score for the previous performance period and the current performance period; (2) fully participates in the quality performance category for the current performance period; and (3) submits data under the same identifier for the 2 consecutive performance periods. As a result, if we were to adopt an approach under which we use the MIPS quality performance category score for the Shared Savings Program quality score, quality improvement points earned under MIPS would be included in that score, and we would not have a need to add additional points to it. We welcomed public comment on this or other approaches to considering improvement as part of using the MIPS quality performance category or an equivalent score, to determine quality performance under the Shared Savings Program.

We received no public comments on using the MIPS quality improvement scoring methodology rather than the Shared Savings Program Quality

Improvement Reward to reward ACOs for quality improvement.

2. Technical Change To Correct Reference in SNF 3-Day Rule Waiver Provision

In the December 2018 final rule, we made a number of amendments to § 425.612 (83 FR 68080). As part of these amendments, we redesignated paragraphs (a)(1)(v)(A) through (C) of § 425.612 as paragraphs (a)(1)(v)(C) through (E). In making these amendments, we inadvertently omitted a necessary update to a cross-reference to one of these provisions. Accordingly, we propose to remove the phrase “paragraph (a)(1)(v)(B)” from § 425.612(a)(1)(v)(E), and in its place add the phrase “paragraph (a)(1)(v)(D)”.

We received no public comments on this proposal, and are finalizing the technical change as proposed.

F. Open Payments

1. Background

a. Open Payments Policies

The Open Payments program is a statutorily-mandated program that promotes transparency by providing information to the public about the financial relationships between the pharmaceutical and medical device industry, and certain types of health care providers. Section 1128G of the Act requires manufacturers of covered drugs, devices, biologicals, or medical supplies (referred to as “applicable manufacturers”), as well as group purchasing organizations (GPOs), to annually submit information for the preceding calendar year about certain payments or other transfers of value made to “covered recipients,” currently defined as physicians and teaching hospitals.

Payments or other transfers of value that must be reported include such things as research, honoraria, gifts, travel expenses, meals, grants, and other compensation. The type of information required to be reported includes, but is not limited to, the date and amount of the payment or other transfer of value, identifying information about the covered recipient, and details about products associated with the transaction. When a payment or other transfer of value is related to marketing, education, or research specific to a covered drug, device, biological or medical supply, the name of that covered drug, device, biological or medical supply also must be reported. The estimated burden of these reporting requirements, as outlined under OMB control number 0938–1237, is just over

1 million hours over the course of 1 year.

Section 1128G of the Act establishes certain minimum dollar thresholds for required reporting, with two bases for reporting: Individual and aggregate payments; or transfers of value. To determine if small individual payments or other transfers of value made to a covered recipient exceed the aggregate threshold and must be reported, applicable manufacturers and applicable GPOs must aggregate all individual payments made across all payment categories within a given reporting year. The statutory threshold established in 2013 was \$10 for individual payments, and \$100 for aggregated payments, and this amount has increased with the consumer price index each year. For CY 2019, the annual reporting thresholds for individual payments or other transfers of value is \$10.79 and the aggregate amount is \$107.91.

The Open Payments program yields information to the general public that may influence their health care decision-making and choice of providers, as well as information that researchers may use to look into potential correlations between financial relationships and provider behaviors. More than 64 million records have been disclosed under the Open Payments program since August 2013, enabling significant transparency into covered exchanges of value. We have been committed to stakeholder engagement in an effort to limit burden in the Open Payments program reporting processes and improve clarity for the public. Additional background about the program and guidance, including frequently asked questions, about how the program works and what type of information is required to be reported is available at www.cms.gov/OpenPayments.

In the February 8, 2013 **Federal Register** (78 FR 9458), we issued regulations implementing section 1128G of the Act to create the Open Payments program. Section 1128G of the Act requires applicable manufacturers and applicable GPOs to submit information annually about certain payments or other transfers of value made to covered recipients during the course of the preceding calendar year. Additionally, section 1128G of the Act defines covered drugs, devices, biologicals, or medical supplies as those covered under Medicare, a State plan under Medicaid, or the Children’s Health Insurance Program (CHIP) (or a waiver of either such state plan), and requires applicable manufacturers and applicable GPOs to disclose any ownership or investment

interests in such entities held by physicians or physician's immediate family members, as well as information on any payments or other transfers of value provided to such physician owners or investors. Under section 1128G(e)(10)(A) of the Act, the term "payment or other transfer of value" refers to a transfer of anything of value, though some exclusions apply.

In the CY 2015 PFS final rule with comment period (79 FR 67548), we revised the regulations by standardizing reporting in the Open Payments program. Specifically, we: (1) Deleted the definition of "covered device"; (2) removed the special rules for payments or other transfers of value related to continuing education programs; (3) clarified the marketed name reporting requirements for devices and medical supplies; and (4) required stock, stock options, and any other ownership interests to be reported as distinct forms of payment.

In the CY 2017 PFS proposed rule (81 FR 46395), we solicited information from the public on a wide variety of information regarding the Open Payments program. Since the implementation of the program and changes made in the CY 2015 PFS final rule with comment period, various commenters have provided us feedback. Consequently, we identified areas in the rule that might benefit from revision and solicited public comments to inform future rulemaking. We sought comment on whether the nature of payment categories listed at § 403.904(e)(2) are adequately inclusive to facilitate reporting of all payments or transfers of value, as well as ways to streamline or make the reporting process more efficient while facilitating our role in oversight, compliance, and enforcement, along with posing other program-specific questions. A summary of solicited comments was published in the CY 2017 PFS final rule (81 FR 80428–80429).

On October 24, 2018, the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act) (Pub. L. 115–270) was signed into law. Section 6111 of the SUPPORT Act amended the definition of "covered recipient" under section 1128G(e)(6) of the Act with respect to information required to be submitted on or after January 1, 2022, to include physician assistants (PA), nurse practitioners (NP), clinical nurse specialists (CNS), certified registered nurse anesthetists (CRNA), and certified nurse midwives (CNM), in addition to the previously listed covered recipients of physicians and teaching hospitals. In

the CY 2020 PFS proposed rule, we proposed to codify the Open Payments provisions from the SUPPORT Act, proposed to address public comments received from the CY 2017 PFS proposed rule by simplifying the process for reporting data by adjusting the nature of payment categories, and proposed changes to standardize data on reported covered drugs, devices, biologicals, or medical supplies.

b. Legal Authority

Three principal legal authorities from the Social Security Act ground our provisions:

- Sections 1102 and 1871 of the Act, which provide general authority for the Secretary to prescribe regulations for the efficient administration of the Medicare program.
- Section 1861 of the Act, which defines providers and suppliers.
- Section 1128G of the Act, as amended by section 6111 of the SUPPORT Act, which requires applicable manufacturers of drugs, devices, biologicals, or medical supplies covered under Medicare or a State plan under Medicaid or CHIP to report annually to the Secretary certain payments or other transfers of value to physicians and teaching hospitals, and to PAs, NPs, CNSs, CRNAs, and CNMs for information required to be submitted under section 1128G of the Act on or after January 1, 2022.

c. Provisions of the Proposed Regulations and Analysis of and Responses to Public Comments

In the CY 2020 PFS proposed rule, we proposed to revise several Open Payments regulations at 42 CFR part 403. We proposed that the following provisions be effective for data collected beginning in CY 2021 and reported in CY 2022: (1) Expanding the definition of a covered recipient to include the categories specified in the SUPPORT Act; (2) expanding the nature of payment categories; and (3) standardizing data on reported covered drugs, devices, biologicals, or medical supplies. We also proposed a correction to the national drug codes (NDCs) reporting requirements for drugs and biologicals that, once finalized will be effective 60 days following the publication of the final rule. We believe this will give all stakeholders sufficient time to prepare for these requirements.

(1) Expanding the Definition of a Covered Recipient

Section 1128G of the Act requires applicable manufacturers and applicable GPOs to report annually information about certain payments or

other transfers of value made to covered recipients, as well as ownership or investment interests held by physicians or their immediate family members in such entities. (Section 1128G(e)(7) of the Act exempts physicians who are employed by the reporting manufacturer, such that manufacturers do not report payments to their own employees.) As we noted previously, section 6111 of the SUPPORT Act expanded the definition of covered recipients from physicians and teaching hospitals to include PAs, NPs, CNSs, CRNAs, and CNMs; it likewise expanded to these individuals the same exception for manufacturer-employment. The SUPPORT Act requires these changes to be in effect for information required to be submitted on or after January 1, 2022. In short, the statute requires applicable manufacturers to report transfers of value pertaining to these additional provider types in the same way they have been required to report transfers of value to physicians and teaching hospitals. Since the information is reported to CMS in the calendar year following the year in which it was collected, this means that the data would be collected by the industry during CY 2021.

We proposed to revise § 403.902 to align with the statutory requirements in sections 1128G(e)(6)(A) and (B) of the Act. Specifically, we proposed to revise the definition of "covered recipient" in § 403.902 to include PAs, NPs, CNSs, CRNAs, and CNMs. In addition, we proposed at § 403.902 to reference the definitions of these additional provider types as defined in sections 1861(aa)(5)(A), (aa)(5)(B), (bb) (2), and (gg)(2) of the Act.

We also proposed to update certain provisions in part 403, subpart I to include provider and supplier types other than physicians as specified in sections 1128G(e)(6)(A) and (B) of the Act. Specifically, we proposed the following revisions:

- In § 403.902, to add the definitions of "certified nurse midwife," "certified registered nurse anesthetist," "clinical nurse specialist," "non-teaching hospital covered recipient," "nurse practitioner," and "physician assistant."
- In § 403.902, to revise the definition of "covered recipient" by adding physician assistant, nurse practitioner, clinical nurse specialist, certified registered nurse anesthetist, or certified nurse-midwife" after the phrase "Any physician."
- In § 403.904(c)(1), (f)(1)(i)(A), and (h)(7), to replace the term "physician" with the phrase "non-teaching hospital."

- In § 403.904(c)(3), to replace the term “physician” in the title with the phrase “non-teaching hospital,” add the phrase “non-teaching hospital” after “In the case of a,” and remove the phrase “who is a physician” from the text.

- In § 403.904 (c)(3)(ii) and (iii), (f)(1)(i)(A)(1), (f)(1)(i)(A)(3) and (5), and (f)(1)(v), to change the term “physician” to the phrase “non-teaching hospital covered recipient.”

- In § 403.904(h)(13), to remove the phrase “who is a physician” and add the phrase “non-teaching hospital” after “In the case of.”

- In § 403.904(f)(1), to remove the phrase “(either physicians or teaching hospitals).”

- In § 403.908(g)(2)(ii), to change the words “physicians and teaching hospitals” to the term “Covered recipients.”

The following is a summary of the comments we received and our responses.

Comment: Some commenters expressed support for the expansion of the definition of covered recipients.

Response: We thank the commenters for their support.

Comment: Some commenters asked about the definitions of covered recipients. A subset asked how the definition of the new covered recipient categories will be consistent across jurisdictions and recommended partnering with stakeholders to ensure appropriate solutions. Another asked that definitions be consistent throughout CMS guidance documents.

Response: While we appreciate these questions, the definitions for the additional covered recipients are delineated within the SUPPORT Act and will be the same across all jurisdictions or regions. The SUPPORT Act directly references the definitions of the service providers within existing statute (section 1861 of the Act). Since our proposal was designed to implement the provisions of the SUPPORT Act with regard to the definition of covered recipients, we believe providing the definitions within the statute is sufficient, and at § 403.902, we proposed to add these definitions verbatim from the statute. We will continue to work with stakeholders to determine the challenges that the industry may face and to work through the best solutions available to implement a robust program. We are committed to providing sufficient guidance to reporting entities regarding how to properly identify covered recipients when submitting data for the new categories prior to implementing this change. As we update our technical

assistance and guidance, we will continue to provide clarifications requested through our outreach and education. The Open Payments help desk will continue to be available for direct questions. A summary of comments received pertaining to the validation of data on the new covered recipient categories is provided below.

Comment: One commenter asked whether updated templates will be provided for data submission.

Response: We expect to update the submission templates based on changes made in this rule, and they will be made available prior to the start of data collection for CY 2021 data, which will be submitted in CY 2022. While we assume that this question related to the covered recipient provision, the answer holds true for the other Open Payments provisions as well.

Comment: Some commenters suggested that CMS extend Open Payment deadlines. Other commenters requested delays for reporting data, noting that it may not be possible to arrange and capture all the new information about the new covered recipients in CY 2021 by the CY 2022 annual reporting deadline. Another requested extending the time period for review, dispute, and correction.

Response: As mentioned earlier, this rule was designed specifically to implement the provisions of the SUPPORT Act regarding covered recipients in the Open Payments program. Therefore, the effective date(s) we proposed are based on the statute, and we do not have the authority to alter the statutory requirement.

Comment: Some commenters suggested that it would facilitate prompt and complete reporting if CMS would provide technical support for implementation of the new provisions.

Response: We will continue to provide technical support through direct outreach, outreach to associations, the issuance of guidance, informational webinar sessions, and direct assistance via the program help desk. We intend to continue to operate as a responsible business partner in this manner.

Comment: Some commenters raised concerns with ensuring the integrity of the reported data from submission through the review and dispute process, to the subsequent publication of the data given the new covered recipient provider types.

Response: The Open Payments program has a system in place for reporting entities to include unique identifying information about covered recipients, such as an NPI or state license number, when submitting a

record. We understand that accurately identifying mid-level practitioners will entail additional challenges. As we have in the past, we will work with stakeholders to understand the challenges the new covered recipient categories may impose, and collaborate on practical solutions that ensure accuracy and availability of necessary data. We will also provide technical assistance to reporting entities to help them accurately report on the additional covered recipients. The review and dispute process is set forth in regulation at § 403.908(g) and upholds the reporting standards that are in the statute at 42 U.S.C. 1320a–7h (c)(1)(C) and (D). We follow the guidelines in the regulation to ensure timely publication of data, and we do not have the authority to modify a statutory provision. We will provide outreach and technical support through the issuance of guidance, informational webinar sessions, and direct assistance via the program help desk as it has throughout the implementation of the Open Payments program. Furthermore, we annually revise and republish reports with any data that has been updated throughout the year. In addition to our direct outreach to covered recipients, we encourage industry groups to reiterate the opportunities that covered recipients have to review and verify data that have been reported under their name.

Comment: One commenter asked CMS to simplify the two-step registration process for covered recipients. Another commenter suggested that additional disclaimers should be provided with the Open Payments data noting that payments or transfers of value do not necessarily imply wrongdoing. One commenter suggested that CMS require each reporting entity to have a direct point of contact for covered recipients to contact to help resolve disputed claims. Another commenter suggested that NPIs be collected and included in the Open Payments datasets, noting that this would assist in matching and cross-referencing data. Two other commenters recommended expanding the Open Payments program. One suggested it cover all forms of potential conflicts of interest in the medical community; another suggested it cover venture capital companies that purchase physician practices.

Response: While we appreciate these suggestions, they are outside the scope of this rule.

After consideration of these comments, we are finalizing our proposed revisions to §§ 403.902, 403.904, and 403.908.

(2) Nature of Payment Categories

Under current statutory and regulatory requirements, applicable manufacturers and applicable GPOs must characterize the nature of payments made to covered recipients by selecting the “Nature of Payment” category that most closely describes the reported payment. Some of the “Nature of Payment” categories, as specified at § 403.904(e)(2), are specifically required by section 1128G(a)(1)(A)(vi) of the Act, while the statute also allows the Secretary to define any other nature of payment or other transfer of value.

Based upon information we obtained from the public comments solicited in the CY 2017 PFS proposed rule (81 FR 46395), stakeholders have identified debt forgiveness, long term medical supply or device loan, and acquisitions (among others) as useful categories to add to comply with the general reporting requirement under section 1128G(a)(1)(A) of the Act. Therefore, and so as to add clarity to the types of payments or transfers of value made by applicable manufacturers and applicable GPOs to covered recipients, we proposed to revise the “Nature of Payment” categories in § 403.904(e)(2) by consolidating two duplicative categories and by adding the three new categories described below.

First, the categories that we proposed to consolidate include two separate categories for continuing education programs. Section 1128G(a)(1)(A)(vi)(XIII) of the Act requires manufacturers to report direct compensation for serving as faculty or a speaker for medical education programs. The current § 403.904(e)(2)(xiv) and (xv) distinguish between accredited/certified and unaccredited/non-certified continuing education programs. Although we defined separate categories at the inception of the Open Payments program, we no longer believe that the distinction in this category is necessary. In revised § 403.904(e)(2)(xv), we proposed to consolidate these categories and make the regulatory wording match the statutory language “medical education programs,” which we believe would streamline the reporting requirements while not detracting from the underlying context of the data.

In addition, we proposed three additional categories that would operate prospectively and would *not* require the updating of previously reported payments or other transfers of value that may fall within these new categories.

The three new categories are as follows:

- *Debt Forgiveness* (§ 403.904(e)(2)(xi)): This will be used to

categorize transfers of value related to forgiving the debt of a covered recipient, a physician owner, or the immediate family of the physician who holds an ownership or investment interest.

- *Long-Term Medical Supply or Device Loan* (new § 403.904(e)(2)(xiv)): Section 403.904 currently contains an exclusion from reporting for the loan of a covered device, or the provision of a limited quantity of medical supplies for a short-term trial period, not to exceed a loan period of 90 days, or a quantity of 90 days of average use, respectively. This new category will be used to characterize the loans of covered devices or the provision of medical supplies for longer than 90 days. (*Note:* We proposed to combine current paragraphs on continuing education programs § 403.904(e)(2)(xiv) and (xv) to replace paragraph (e)(2)(xv) as noted in the consolidating continuing education programs above.)

- *Acquisitions* (§ 403.904(e)(2)(xviii)): This addition will provide a category for characterizing buyout payments made to covered recipients in relation to the acquisition of a company in which the covered recipient has an ownership interest.

We also proposed to add the definition of “long-term medical supply or device loan” to § 403.902 as “the loan of supplies or a device for 91 days or longer.” For consistency within the definitions section, we proposed to redesignate § 403.904(h)(5), which contains the definition of “short-term medical supply or device loan” to § 403.902. As a result, we proposed a new § 403.904(h)(5) to be “short-term medical supply or device loan.”

We received several comments regarding our proposed revisions to the nature of payment categories. The following is a summary of the comments we received and our responses.

Comment: Some commenters supported the nature of payment changes.

Response: We thank the commenters for their support.

Comment: One commenter disagreed with the consolidation of the faculty or speaker compensation for continuing education programs because they believe that the difference between accredited/certified and unaccredited/non-certified is significant in potential manufacturer influence. Another commenter suggested that honoraria for continuing medical education presenters should be excluded.

Response: By aligning to the terminology provided in the statute, we are streamlining data reporting. We do not believe that the change to “medical education programs”—without

differentiating whether they are accredited/certified—will detract from the context of the data (that is, being paid by a manufacturer to be on the faculty or speak at medical educational programs). Generally speaking, direct or indirect payments or other transfers of value for serving as a faculty or speaker at a medical education program would be reportable under Open Payments unless an exclusion applies.

Comment: Two commenters suggested that clarification be provided on what would be covered in the consolidated nature of payment category “medical education programs” to ensure programs for the expanded group of covered recipients are covered in the same way as physicians.

Response: We consider this term to be broad enough to encompass various types of education programs, regardless of whether separate covered recipient groups may describe them with different names. We will keep this feedback in mind as we develop our operational guidance on the implementation of this provision.

Comment: Some commenters requested additional information and guidance on what types of payments and transfers of value would fall within the nature of payment categories.

Response: As part of the rulemaking process, we provided definitions for the new categories in the proposed rule to be codified at § 403.902. As part of the Open Payments operations, further technical assistance and operational guidance will be provided. We will provide technical support through direct outreach, outreach to associations, the issuance of guidance, informational webinar sessions, as well as direct assistance via the program help desk as we have offered consistently throughout the implementation of the Open Payments program.

Comment: Some commenters recommended revising the definition of the nature of payment category “education” to exclude materials such as medical journal articles.

Response: Although we appreciate this suggestion, it is outside the scope of this rule.

After considering the aforementioned comments discussed here and in the covered recipients provision regarding our proposed changes to the nature of payment provision, we are finalizing the changes proposed in §§ 403.902 and 403.904.

(3) Standardizing Data on Reported Covered Drugs, Devices, Biologicals, or Medical Supplies

When applicable manufacturers or applicable GPOs report payments or

transfers of value related to specific drugs and biologicals, we currently require names and NDCs to be reported to the Open Payments program. Since there was a lack of federally-recognized medical device identifiers (DIs) when we started the Open Payments program, we have not required analogous reporting for the manufacturers of such devices. However, the Food and Drug Administration (FDA) established and continues to implement a system for the use of standardized unique device identifiers (UDIs) for medical devices and has issued regulations at 21 CFR part 801, subpart B, and 21 CFR part 830, requiring, among other things, that a UDI be included on the label of most devices distributed in the United States. (See 78 FR 58785, September 24, 2013.) Based upon the FDA's UDI regulatory requirements and the requirement by the HHS Office of the National Coordinator for Health Information Technology (ONC) that UDIs form part of the Common Clinical Data Set (45 CFR part 170), we believe that the use of UDIs and DIs, a subcomponent of the UDI, have become more standardized. Moreover, the HHS Office of Inspector General (OIG) included a recommendation for Open Payments to require more specific information about devices in an August 2018 report (OEI-03-15-00220).¹⁰³

With the standardization and typical use of UDIs and based upon OIG's recommendation, we proposed that the DI component, the mandatory fixed portion of the UDI assigned to a device, if any, should be incorporated into Open Payments reporting that applicable manufacturers or applicable GPOs provide. We did not propose to require a full UDI. We believe the step that we proposed would substantially aid in enhancing the quality of the Open Payments data because the identifiers could be used to validate submitted device information. This effort will also enhance the usefulness of Open Payments data to the public by providing more precise information about the medical supplies and devices associated with a transaction. Specifically, we proposed to revise § 403.904(c)(8) to require applicable manufacturers and applicable GPOs to provide the DIs (if any) to identify reported devices in a comprehensive fashion meaningful to the users of Open Payments data and reorganize the section accordingly.

We also sought to further clarify the reporting requirements with regard to

drugs and biologicals. Since the outset of the Open Payments program, NDCs have been required for both research and non-research payments. In § 403.904(f)(1)(iv), we require that NDCs be reported for drugs and biologicals used in research. However, in the CY 2015 PFS final rule with comment period (79 FR 67548), the non-research payment NDC requirement was erroneously removed when changes were made to the rule text regarding marketed names. We proposed to correct this error in order to reiterate that NDCs are required for both research and non-research payments and to make the change effective 60 days from publishing the final rule.

We proposed to revise § 403.904(c)(8) to require DIs (if any) to identify reported devices in a comprehensive fashion meaningful to the users of Open Payments data and reorganize the section accordingly. We also proposed to reincorporate language that specifically required reporting of NDCs.

As a result of the changes to § 403.904(c)(8), we also proposed technical changes to § 403.904(f)(1)(iv) and to add mirrored definitions from 21 CFR 801.3 for "device identifier" and "unique device identifier" to § 403.902.

We received comments regarding our proposed revisions to standardize data on reported covered drugs, devices, biologicals, or medical supplies. The following is a summary of the comments we received and our responses.

Comment: Some commenters provided their support for adding DIs to the data being reported. Commenters believe that this will make the data more useful to the public.

Response: We thank the commenters for their support.

Comment: Some commenters suggested removing or delaying the addition of DIs to the data being collected. The commenters raised concerns about scenarios in which multiple DIs could be associated with one transaction or a device may be associated with multiple identifiers. Commenters stated that reporting would be cumbersome to manufacturers and that the subsequent data may be confusing to the public.

Response: We look forward to discussing the details of implementation solutions with stakeholders. As noted in the proposed rule, part of the value of collecting DIs is that we believe such a step would substantially aid in enhancing the quality of the Open Payments data because the DIs can be used to validate submitted device information, such as the marketed or brand name. Our intention is to provide meaningful data to the public; therefore,

we hope stakeholders will continue to contribute to our process as we move to update our data systems. As part of the Open Payments operations technical assistance, we will provide guidance, explanations, and examples of how to report DIs, as well as how to report when there are multiple DIs, to industry on our website and through other outreach efforts. We will also provide technical support through direct outreach, outreach to industry groups, the issuance of guidance, informational webinar sessions, and direct assistance via the program help desk. As noted in the proposed rule, we proposed that this provision be effective for data collected beginning in CY 2021 and reported in CY 2022, and we believe that this will give all stakeholders sufficient time to prepare for these requirements.

Comment: One commenter recommended that the following additional data items be collected from reporting entities and made available: (1) Whether it is a manufacturer or GPO; (2) If it is a manufacturer, what it produces; and (3) If it is a GPO, whether it is a physician owned distributor (POD). Another commenter recommended that CMS assess penalties on PODs that do not comply with the statute by accurately and completely reporting payments or transfers of value to covered recipients. Finally, one commenter suggested that DIs be added to all claims data.

Response: While we appreciate these suggestions, they are outside the scope of this rule.

Comment: One commenter suggested increasing the monetary threshold for reporting.

Response: While we appreciate this suggestion, it is outside the scope of this rule. Additionally, we note that the monetary threshold is set in statute at 42 U.S.C. 1320a-7h(e)(10)(B)(i), and therefore, we do not have the authority to make the suggested change.

After considering the other Open Payments comments and the above comments on standardizing data, we are finalizing the changes proposed in §§ 403.902 and 403.904.

G. Solicitation of Public Comments Regarding Notification of Infusion Therapy Options Available Prior To Furnishing Home Infusion Therapy

Section 5012 of the 21st Century Cures Act (Cures Act) (Pub. L. 114-255; enacted December 13, 2016) created a separate Medicare Part B benefit under section 1861(s)(2)(GG) and section 1861(iii) of the Act to cover home infusion therapy-associated professional services for certain drugs and biologicals administered intravenously

¹⁰³ The HHS OIG report OEI-03-15-00220 is available at <https://oig.hhs.gov/oei/reports/oei-03-15-00220.pdf>.

or subcutaneously through a pump that is an item of durable medical equipment in the beneficiary's home, effective for January 1, 2021. Section 5012 of the Cures Act also added section 1834(u) to the Act, which establishes the payment and related requirements for home infusion therapy under this benefit. Section 1834(u)(6) of the Act requires that, prior to the furnishing of home infusion therapy to an individual, the physician who establishes the plan of care described in section 1861(iii)(1) of the Act shall provide notification (in a form, manner, and frequency determined appropriate by the Secretary) of the options available (such as home, physician's office, hospital outpatient department) for the furnishing of infusion therapy under this part.

We recognize there are several possible forms, manners, and frequencies that physicians may use to notify patients of their infusion therapy treatment options. For example, a physician may verbally discuss the treatment options with the patient during the visit and annotate the treatment decision in the medical record before establishing the infusion plan. Some physicians may also provide options in writing to the patient in the hospital discharge papers or office visit summaries, as well as retain a written patient attestation that all options were provided and considered. The frequency of discussing these options could vary based on a routine scheduled visit or according to the individual's clinical needs.

We solicited comments in the CY 2020 PFS proposed rule (84 FR 40716), as well as the CY 2020 HH PPS proposed rule (84 FR 34694), regarding the appropriate form, manner, and frequency that any physician must use to provide notification of the treatment options available to their patient for the furnishing of infusion therapy (home or otherwise) under Medicare Part B. We also invited comments on any additional interpretations of this notification requirement.

The following is a summary of the comments received on both solicitations.

Comment: Several commenters supported the proposed examples of the physician verbally discussing the infusion therapy options and annotating the resulting decision in the medical record and initial plan of care. Many commenters stated that written materials may be a helpful supplement to a verbal conversation, but written materials should not be the sole means of beneficiary notification. They emphasized that infusion therapy

options should be verbally discussed so the patient, and any family caregiver, may have an opportunity to get immediate answers to questions that may not be addressed in written materials. Many commenters encouraged CMS to consider minimizing the paperwork burden and confusion that written documents or patient attestations could impose on physicians and patients.

Commenters recommended that the conversation should include how the infusion therapy options differ in terms of effectiveness, safety, time, comfort, convenience, location, frequency, and out-of-pocket costs. Some commenters specifically noted that beneficiaries are subject to the standard 20 percent coinsurance with this new Part B benefit; and the ordering physician should be aware of the patient's insurance status, and therefore, assist them in making informed decisions about their care.

Some commenters recommended the policy should allow for other professionals, such as social workers, home health nurses, and other staff to assist the treating physician with this notification in order to remove unnecessary administrative burden for clinicians. Commenters also requested the notification policy include requirements that are simple and easy for physicians to implement, and would retain the current flexibility for physicians to use multiple notification mechanisms as directly suggested by beneficiaries, advocates and stakeholders.

One commenter requested that CMS follow similar procedures for other electronically prompted beneficiary notifications. Another commenter recommended that CMS develop a single standardized format for this notice to avoid benefit denials and delays in therapy. Another commenter suggested that CMS establish a training program for physicians, hospitals and contractors prior to implementation.

One commenter requested that CMS permit sufficient time for physicians to research the available home infusion therapy options. Another commenter requested that CMS create a web page where a beneficiary or referring clinician can research if there is a home infusion therapy supplier in the beneficiary's geographic location that is capable of delivering these services, and that the supplier is enrolled and approved by Medicare.

Two commenters requested that this notification be required only when the drug regimen is available and appropriate for home infusion therapy. They suggested that notification should

not be required if there are certain safety risks associated with infusion therapy in that patient's home or if the home infusion therapy option is not available in the patient's geographic area.

Regarding the frequency of notification, one commenter suggested that only one streamlined notice be required at the start of therapy because many therapies have a duration for the life of the beneficiary. Two commenters specified that notification of options should be discussed and documented in the patient record whenever a new infusion therapy treatment is deemed necessary by the physician and anytime thereafter if there are changes in patient condition or circumstances that would affect the patient's choices.

Response: We appreciate the commenters' support and recommendations and will take the comments into consideration as we continue developing future policy through notice-and-comment rulemaking effective for home infusion therapy services beginning CY 2021 and for subsequent years.

H. Medicare Enrollment of Opioid Treatment Programs and Enhancements to General Enrollment Policies Concerning Improper Prescribing and Patient Harm

1. Enrollment of Opioid Treatment Programs

a. Legislative and Regulatory Background

As previously explained in this final rule, the SUPPORT Act was designed to alleviate the nationwide opioid crisis by: (1) Reducing the abuse and supply of opioids; (2) helping individuals recover from opioid addiction and supporting the families of these persons; and (3) establishing innovative and long-term solutions to the crisis. Section 2005 of the SUPPORT Act attempts to fulfill these objectives, in part, by establishing a new Medicare benefit category for opioid treatment programs (OTPs). Section 2005(d) of the SUPPORT Act amended section 1866(e) of the Act by adding a new paragraph (3) thereto that classified OTPs as Medicare providers (though only for the furnishing of opioid use disorder treatment services). This will enable OTPs that meet all applicable statutory and regulatory requirements to bill and receive payment under the Medicare program for furnishing such services to Medicare beneficiaries.

b. Definition of and Certain Requirements for OTPs

As already mentioned, an OTP is currently defined in 42 CFR 8.2 as a

program or practitioner engaged in opioid treatment of individuals with an opioid agonist treatment medication registered under 21 U.S.C. 823(g)(1). Section 2005(b) of the SUPPORT Act added a new section 1861(jjj)(2) to the Act defining an OTP as an entity that meets, among other things, the definition of an OTP in § 8.2 (or any successor regulation). Section 1861(jjj)(2) of the Act also outlines certain additional requirements that an OTP must meet to qualify as such. These requirements include the following:

(1) Accreditation

Consistent with new section 1861(jjj)(2)(C) of the Act, as added by section 2005(b) of the SUPPORT Act (and also required under 42 CFR 8.11(a)(2)), an OTP must have a current, valid accreditation by an accrediting body or other entity approved by the Substance Abuse and Mental Health Services Administration (SAMHSA), the federal agency that oversees OTPs. A core purpose of OTP accreditation is to ensure that an OTP meets: (1) Certain minimum requirements for furnishing medication-assisted treatment (MAT); and (2) the applicable accreditation standards of SAMHSA-approved accrediting bodies, of which there presently are six. The accreditation process includes, but is not limited to, an accreditation survey, which involves an onsite review and evaluation of an OTP to determine compliance with applicable federal standards.

(2) Certification

A second requirement addressed in section 1861(jjj)(2)(B) of the Act, as added by section 2005(b) of the SUPPORT Act, is also outlined in current regulations referenced in § 8.11(a). Along with accreditation, an OTP must have a current, valid certification by SAMHSA for such a program. The prerequisites for certification (as well as the certification process itself) are addressed in § 8.11 and include, but are not restricted to, the following:

- Current and valid accreditation (as described previously);
- Adherence to the federal opioid treatment standards described in § 8.12; and
- Compliance with all pertinent state laws and regulations, as stated in § 8.11(f)(1).

Under § 8.11(a)(3), certification is generally for a maximum 3-year period, though this may be extended by 1 year if an application for accreditation is pending. SAMHSA may revoke or suspend an OTP's certification if any of

the applicable grounds identified in § 8.14(a) or (b), respectively, exist. According to SAMHSA statistics, there are currently about 1,677 active OTPs; of these, approximately 1,585 have full certifications and 92 have provisional certifications.

(3) OTP Enrollment

Section 2005(b) of the SUPPORT Act, which added a new section 1861(jjj)(2)(A) to the Act, requires that an OTP be enrolled in the Medicare program under section 1866(j) of the Act to: (1) Qualify as an OTP; and (2) bill and receive payment from Medicare for opioid use disorder treatment services. Per section 1861(jjj)(2)(A) of the Act, and as discussed in more detail in this section III.H. of this final rule, we proposed a number of requirements in the CY 2020 PFS proposed rule that OTPs must meet to enroll in Medicare.

c. Current Medicare Enrollment Process

(1) Background

Section 1866(j)(1)(A) of the Act requires the Secretary to establish a process for the enrollment of providers and suppliers in the Medicare program. The overarching purpose of the enrollment process is to help ensure that providers and suppliers that seek to bill the Medicare program for services or items furnished to Medicare beneficiaries are qualified to do so under federal and state laws. The process is, to an extent, a “gatekeeper” that prevents unqualified and potentially fraudulent individuals and entities from being able to enter and inappropriately bill Medicare. CMS and our Medicare Administrative Contractors (MACs; hereafter occasionally referred to as “contractors”) carefully and closely screen and review Medicare enrollment applicants to verify that they meet all applicable legal requirements.

CMS has taken various steps via regulation to outline a process for enrolling providers and suppliers in the Medicare program. For instance, in the April 21, 2006 **Federal Register** (71 FR 20754), we published the “Medicare Program; Requirements for Providers and Suppliers to Establish and Maintain Medicare Enrollment” final rule that set forth certain requirements in 42 CFR part 424, subpart P (currently §§ 424.500 through 424.570) that providers and suppliers must meet to obtain and maintain Medicare billing privileges. We cited therein sections 1102 and 1871 of the Act as general authority for our establishment of these requirements, which were designed for the efficient administration of the Medicare program.

Subsequent to the April 21, 2006 final rule, we published additional provider enrollment regulations. These were intended not only to clarify or strengthen certain components of the enrollment process but also to enable us to take further action against problematic providers and suppliers.

(2) Form CMS–855—Medicare Enrollment Application

Under § 424.510, a provider or supplier must complete, sign, and submit to its assigned MAC the appropriate Form CMS–855 (OMB Control No. 0938–0685) application in order to enroll in the Medicare program and obtain Medicare billing privileges. The Form CMS–855, which can be submitted via paper or electronically through the internet-based Provider Enrollment, Chain, and Ownership System (PECOS) process (SORN: 09–70–0532;¹⁰⁴ Provider Enrollment, Chain, and Ownership System), captures information about the provider or supplier that is needed for CMS or its MACs to determine whether the provider or supplier meets all Medicare requirements. Data collected on the Form CMS–855 is carefully reviewed and verified by CMS or its MACs and includes, but is not limited to:

- General identifying information (for example, legal business name, tax identification number).
- Licensure and/or certification data.
- Any final adverse actions (as that term is defined in § 424.502) of the provider or supplier, such as felony convictions, exclusions by the HHS Office of Inspector General (OIG), or state license suspensions or revocations.
- Practice locations and other applicable addresses of the provider or supplier.
- Information regarding the provider's or supplier's owning and managing individuals and organizations and any final adverse actions those parties may have.

After receiving a provider's or supplier's application for initial enrollment, reviewing and confirming the information thereon, and determining whether the provider or supplier meets all applicable Medicare requirements, CMS or the MAC will either: (1) Approve the application and grant billing privileges to the provider or supplier (or, depending upon the provider or supplier type involved, simply recommend approval of the application and refer it to the state agency or to the CMS regional office, as

¹⁰⁴ <https://www.hhs.gov/foia/privacy/sorns/09700532/index.html>.

applicable); or (2) deny enrollment under § 424.530.

d. OTP Enrollment Provisions

(1) Legal Basis and Necessity

In proposing requirements and procedures with which OTPs must comply to enroll and remain enrolled in Medicare, we relied on the authority granted to us not only under section 1861(j)(2)(A) of the Act but also under several other statutory provisions. First, section 1866(j) of the Act provides specific authority with respect to the enrollment process for providers and suppliers. Second, sections 1102 and 1871 of the Act furnish general authority for the Secretary to prescribe regulations for the efficient administration of the Medicare program.

We believe, and it has been our longstanding experience, that the provider enrollment process is invaluable in helping to ensure that: (1) All potential providers and suppliers are carefully reviewed for compliance with all applicable requirements; (2) problematic providers and suppliers are kept out of Medicare; and (3) beneficiaries are protected from unqualified providers and suppliers. Indeed, without this process, the Medicare program and Medicare beneficiaries could be endangered, and billions of Trust Fund dollars could be paid to unqualified or fraudulent parties.

However, we noted in the proposed rule that our general concerns were not restricted to the mere need and desire to establish provider enrollment requirements for OTPs. While provider enrollment is a crucial component of CMS' overall broader program integrity efforts, it is not the only one. We emphasized that in establishing and implementing an overall Medicare OTP process per the SUPPORT Act and implementing an overall program integrity strategy, our objectives would extend to matters such as: (1) Monitoring OTP billing patterns; (2) ensuring the proper payment of OTP claims; (3) performing OTP audits as required by law; (4) making certain that OTP beneficiaries receive quality care; and (5) taking action (enrollment-related or otherwise) against non-compliant or abusive OTP providers. In other words, it should not be assumed for purposes of the OTP process that the term "program integrity" is limited to the provider enrollment concept, for it applies to many other types of payment safeguards as well.

(2) OTP Enrollment Requirements—Proposed Provisions in the CY 2020 PFS Proposed Rule

We proposed the following OTP enrollment provisions:

(a) Addition of § 424.67 and General OTP Requirement To Enroll

We proposed to establish a new § 424.67 that would include most of our OTP enrollment provisions. In paragraph (a) thereof, we proposed that for a program or eligible professional (as that term is defined in section 1848(k)(3)(B) of the Act) to receive Medicare payment for the provision of opioid use disorder treatment services, the provider must qualify as an OTP (as that term is defined in § 8.2) and enroll in the Medicare program under the provisions of part 424, subpart P, as well as the provisions of § 424.67.

(b) OTPs—Procedures and Compliance

In paragraph (b) of § 424.67, we proposed several specific enrollment requirements that OTPs must meet that either clarify or supplement those contained in subpart P.

(i) OTPs: Form CMS–855B

In § 424.67(b)(1), we proposed that an OTP must complete in full and submit the Form CMS–855B application ("Medicare Enrollment Application: Clinics/Group Practices and Certain Other Suppliers") (OMB Control No.: 0938–0685) and any applicable supplement or attachment thereto (which would be submitted to OMB under control number 0938–0685) to its applicable Medicare contractor. The supplement or attachment would capture certain information that is: (1) Unique to OTPs but not obtained via the Form CMS–855B; and (2) necessary to enable CMS to effectively screen their applications and confirm their qualifications.

As part of this general requirement concerning Form CMS–855 completion, we proposed two subsidiary requirements as part of the aforementioned supplement/attachment.

First, in § 424.67(b)(1)(i), we proposed that the OTP must maintain and submit to CMS (via the applicable supplement/attachment) a list of all physicians and other eligible professionals (as the term "eligible professional" is defined in section 1848(k)(3)(B) of the Act) who are legally authorized to prescribe, order, or dispense controlled substances on behalf of the OTP. The list must include the physician's or other eligible professional's first and last name and middle initial, Social Security Number, National Provider Identifier, and license

number (if applicable). We believed that this requirement would enable us to: (1) Confirm that these individuals are qualified to perform the activities in question; and (2) screen their prescribing practices, the latter being an especially important consideration in light of the nationwide opioid epidemic.

Second, we proposed in § 424.67(b)(1)(ii) that the OTP must certify via the Form CMS–855B and/or the applicable supplement or attachment thereto that the OTP meets and will continue to meet the specific requirements and standards for enrollment described in § 424.67(b) and (d) (discussed below).

(ii) OTPs: Application Fee

Under § 424.514, prospective and revalidating institutional providers that are submitting an enrollment application generally must pay the required application fee. (For CY 2019, the fee amount is \$586.) Section 424.502 defines an institutional provider as any provider or supplier that submits a paper Medicare enrollment application using the Form CMS–855A, Form CMS–855B (not including physician and nonphysician practitioner (NPP) organizations, which are exempt from the fee requirement if they are enrolling as a physician or NPP organization), Form CMS–855S, Form CMS–20134, or an associated internet-based PECOS enrollment application. Since an OTP, as a specialized facility, would be required to complete the Form CMS–855B to enroll in Medicare as an OTP (and would not be enrolling as a physician or non-physician organization), we believed that an OTP would meet the definition of an institutional provider under § 424.502. Therefore, we proposed to clarify in new § 424.67(b)(2) that the OTP must pay an application fee consistent with § 424.514.

(c) OTPs: Categorical Risk Designation

Section 424.518 outlines enrollment screening categories and requirements based on a CMS assessment of the level of risk of fraud, waste, and abuse posed by a particular category of provider or supplier. In general, the higher the level of risk that a certain provider or supplier type poses, the greater the level of scrutiny with which CMS will screen and review providers or suppliers within that category.

There are three categories of screening in § 424.518: High, moderate, and limited, with the "high" category being the strictest level of screening. We proposed to include newly enrolling OTPs within this "high" classification. This means that the OTP would be

subject to the same screening procedures that apply to all other enrolling providers and suppliers (regardless of the risk category into which they fall) as well as the following:

- A site visit.
- Submission of a set of fingerprints for a national background check from all individuals who maintain a 5 percent or greater direct or indirect ownership interest in the provider or supplier.
- A fingerprint-based criminal history record check of the Federal Bureau of Investigation's Integrated Automated Fingerprint Identification System on all individuals who maintain a 5 percent or greater direct or indirect ownership interest in the provider or supplier.

We generally explained that a high categorical risk designation was appropriate because we have no historical information on OTPs (either from an enrollment, billing, or claims payment perspective) upon which we can fairly estimate the degree of risk they may pose.

Given the foregoing, we proposed:

- To state in new § 424.67(b)(3) that newly enrolled OTP providers would be screened at the high categorical risk level in accordance with the requirements of § 424.518(c).
- To add a new paragraph (iv) to § 424.518(c)(1) that would add newly enrolled OTPs to the types of providers and suppliers screened at the high categorical risk level.
- To add a new paragraph (xii) to § 424.518(b)(1) whereby OTPs that are revalidating their current Medicare enrollment (under § 424.515) would be screened at the moderate categorical risk level (which involves a site visit but does not include the fingerprint submission requirement of the high categorical risk level). This would be consistent with our approach towards several other provider and supplier types (for example, home health agencies) that are screened at the high categorical risk level when newly enrolling and at the moderate level when revalidating.
- Consistent with the addition of new § 424.518(b)(1)(xii), we proposed to require that, upon revalidation, the OTP must successfully complete the moderate categorical risk level screening required under § 424.518(b) in order to remain enrolled in Medicare. This provision would be designated as new § 424.67(d)(1)(iii).

(d) OTPs: Certification

Consistent with both section 1861(jjj)(2)(B) of the Act and § 8.11, we proposed in new § 424.67(b)(4)(i) that to enroll in Medicare, an OTP must have in effect a current, valid certification by

SAMHSA for such a program. However, under § 424.67(b)(4)(ii), we proposed that we would not accept a provisional certification under § 8.11(e) in lieu of the certification described in § 8.11(a). We believed that the OTP certification requirement in section 1861(jjj)(2)(B) of the Act refers to full SAMHSA certification rather than provisional certification.

(e) OTPs: Managing Employees

Consistent with sections 1124 and 1124A of the Act, an enrolling provider or supplier must disclose all of its managing employees on the Form CMS-855 application. Thus, we proposed in new § 424.67(b)(5) that all OTP's staff who meet the regulatory definition of managing employee in § 424.502 must be reported on the Form CMS-855 application and/or any applicable supplement. Such individuals would include, but not be limited to, the OTP's medical director and program sponsor (both as described in § 8.2).

(f) Standards Specific to OTPs

In light of the previously mentioned concerns about the nationwide opioid crisis and the need for drugs to be prescribed and, moreover, dispensed, in a careful, reasonable manner, we also proposed certain enrollment standards unique to the services that OTPs provide.

In new § 424.67(b)(6)(i), we proposed that an OTP must not employ or contract with a prescribing or ordering physician or other eligible professional or with any individual legally authorized to dispense narcotics who, within the preceding 10 years, has been convicted (as that term is defined in 42 CFR 1001.2) of a federal or state felony that we deem detrimental to the best interests of the Medicare program and its beneficiaries, based on the same categories of detrimental felonies, as well as case-by-case detrimental determinations, codified at § 424.535(a)(3). This provision would apply irrespective of whether the individual in question is: (1) Currently dispensing narcotics at or on behalf of the OTP; or (2) a W-2 employee of the OTP.

In new § 424.67(b)(6)(ii), we proposed that the OTP must not employ or contract with any personnel (regardless of whether the individual is a W-2 employee of the OTP) who is revoked from Medicare under § 424.535 or any other applicable section in Title 42, or who is on the preclusion list under § 422.222 or § 423.120(c)(6). (See <https://www.cms.gov/Medicare/Provider-Enrollment-and-Certification/MedicareProviderSupEnroll/>

PreclusionList.html for background information on the preclusion list).

In § 424.67(b)(6)(iii), we proposed that the OTP must not employ or contract with any personnel (regardless of whether the individual is a W-2 employee of the OTP) who has a prior adverse action imposed by a state oversight board, including, but not limited to, a reprimand, fine, or restriction, for a case or situation involving patient harm that CMS deems detrimental to the best interests of the Medicare program and its beneficiaries. We would consider the factors specified at § 424.535(a)(22) (discussed in more detail below) in each case of patient harm that potentially applies to this provision.

The overriding rationale for these provisions is our view that OTP personnel who have engaged in problematic behavior present a potential threat to the OTP's patients and to the Trust Funds.

(g) Provider Agreement

As previously mentioned, section 2005(d) of the SUPPORT Act amended section 1866(e) of the Act by adding a new paragraph (3) classifying OTPs as Medicare providers, though only with respect to the furnishing of opioid use disorder treatment services. Under section 1866(a)(1) of the Act, all Medicare providers (as that term is defined in section 1866(e) of the Act) must enter into a provider agreement with the Secretary. (Section 1866(a)(1) of the Act outlines required terms of the provider agreement, such as allowed charges for furnished services.)

Consistent with these requirements, we proposed two new provisions. In new § 424.67(b)(7)(i), we proposed that an OTP must, in accordance with the provisions of 42 CFR part 489, sign (and adhere to the terms of) a provider agreement with CMS in order to participate and enroll in Medicare. In new § 424.67(b)(7)(ii), we proposed that an OTP's appeals under part 498 of a Medicare revocation (under § 424.535) and of a termination of its provider agreement (under § 489.53) must be filed jointly and, as applicable, considered jointly by CMS under part 498.

Regarding this latter provision, we believe that having dual, separate appeals processes for OTPs would impose unnecessary administrative burdens on OTPs and CMS. A single appeals process would, in our view, be more efficient. We did, however, solicit comment on this proposed consolidated appeals process, including suggestions of alternative processes and the

potential operational components thereof.

(h) OTPs: Other Applicable Requirements

To ensure that the OTP meets all other applicable requirements for enrollment, we proposed at § 424.67(b)(8) that the OTP must comply with all other applicable enrollment requirements specified in § 424.67 and in part 424, subpart P.

(i) OTPs: Denial of Enrollment and Appeals Thereof

We proposed to state in new § 424.67(c) that CMS may deny an OTP's enrollment application on either of the following grounds:

- The provider does not have in effect a current, valid certification by SAMHSA as required under § 424.67(b)(4) or fails to meet any other applicable requirement in § 424.67.
- Any of the reasons for denial of a prospective provider's or supplier's enrollment application in § 424.530 applies.

We also proposed that an OTP may appeal the denial of its enrollment application under part 498.

The purposes of these provisions were to, respectively, ensure: (1) The OTP's compliance with § 424.67 and all other applicable enrollment requirements; and (2) that the OTP has the same appeal rights as all other provider and supplier types.

(j) OTPs: Continued Compliance, Standards, and Reasons for Revocation

For reasons identical to those behind our addition of § 424.67(c), we proposed several provisions in new § 424.67(d).

In paragraph (d)(1), we proposed to state that, upon and after enrollment, an OTP:

- Must remain validly certified by SAMHSA as required under § 8.11.
- Remains subject to, and must remain in full compliance with, the provisions of part 424, subpart P, as well as those in § 424.67. This includes, but is not limited to, the provisions of § 424.67(b)(6), the revalidation provisions in § 424.515, and the deactivation and reactivation provisions in § 424.540.

In paragraph (d)(2), we proposed that CMS may revoke an OTP's enrollment if:

- The provider does not have a current, valid certification by SAMHSA or fails to meet any other applicable requirement or standard in § 424.67, including, but not limited to, the OTP standards in §§ 424.67(b)(6) and (d)(1).
- Any of the revocation reasons in § 424.535 applies.

Finally, in new paragraph (d)(3), we proposed that an OTP may appeal the revocation of its enrollment under part 498.

(k) OTPs: Prescribing Individuals

In new § 424.67(e)(1) (and with respect to payment to OTP providers for furnished drugs), we proposed that the prescribing or medication ordering physician's or other eligible professional's National Provider Identifier must be listed on Field 17 (the ordering/referring/other field) of the Form CMS-1500 (Health Insurance Claim Form; 0938-1197) (or the digital equivalent thereof). We believed that this requirement would help us: (1) Ensure that the physician or other eligible professional in question is qualified to prescribe drugs on behalf of the OTP; and (2) monitor the prescribing individual in relation to each claim. This requirement would have to be met in order for an OTP claim for a prescribed drug to be paid. To avoid the impression, however, that this is the only requirement necessary for claim payment, we proposed to further clarify in new paragraph (e)(2) that all other applicable requirements in § 424.67, part 424, and part 8 must also be met.

(l) OTPs: Relationship to 42 CFR Part 8

To help ensure that OTPs understand their continuing need to comply with the provisions in Part 8 (several of which are referenced above) and to clarify that the provisions in § 424.67 are generally restricted to the enrollment process, we proposed to state in new § 424.67(f) that § 424.67 shall not be construed as: (1) Supplanting any of the provisions in part 8; or (2) eliminating an OTP's obligation to maintain compliance with all applicable provisions in part 8.

(m) Effective and Retrospective Date of OTP Billing Privileges

Section 424.520 outlines the effective date of billing privileges for provider and supplier types that are eligible to enroll in Medicare. Paragraph (d) thereof sets forth the applicable effective date for physicians, NPPs, physician and NPP organizations, and ambulance suppliers. This effective date is the later of: (1) The date of filing of a Medicare enrollment application that was subsequently approved by a Medicare contractor; or (2) the date that the supplier first began furnishing services at a new practice location. Similarly, § 424.521(a) states that physicians, NPPs, physician and NPP organizations, and ambulance suppliers may retrospectively bill for services when the supplier has met all program

requirements (including state licensure requirements), and services were provided at the enrolled practice location for up to:

- 30 days prior to their effective date if circumstances precluded enrollment in advance of providing services to Medicare beneficiaries; or
- 90 days prior to their effective date if a Presidentially-declared disaster under the Robert T. Stafford Disaster Relief and Emergency Assistance Act (Pub. L. 100-707, enacted November 23, 1988), 42 U.S.C. 5121-5206 (Stafford Act), precluded enrollment in advance of providing services to Medicare beneficiaries.

To clarify the effective date of billing privileges for OTPs and to account for circumstances that could prevent an OTP's enrollment prior to the furnishing of Medicare services, we proposed to include newly enrolling OTPs within the scope of §§ 424.520(d) and 424.521(a).

We also sought public feedback on additional means of preventing fraud, waste, and abuse in OTP settings; for instance, we noted that we would appreciate suggestions—based on stakeholder experience in the OUD and OTP arenas—from which we could develop further regulatory authority to take action against problematic OTPs.

(3) Summary of the Public Comments on OTP Enrollment Provisions and the CMS Responses

We received comments concerning our proposed OTP enrollment provisions from approximately 15 stakeholders. The comments are summarized below, followed respectively by our responses thereto.

Comment: Several commenters stated that our proposed assignment of newly enrolling OTPs to the high categorical risk level was reasonably prudent due to our: (1) Stated lack of historical information on OTPs; and (2) safety concerns. One commenter added that CMS might wish to reconsider this risk level assignment once sufficient experience with the OTP enrollment process has been attained.

Response: We appreciate the commenters' support. While we cannot commit to any future risk level reclassification for initially enrolling OTPs, we will closely monitor OTP enrollment over the coming years and, if warranted, consider potential regulatory revisions that serve the best interests of the Medicare program and its beneficiaries.

Comment: One commenter stated that there could be heightened risk in OTP facilities compared to other settings, for the services provided involve the

prescribing and dispensing of controlled substances and a complex subset of patients dealing with addiction. However, the commenter cautioned CMS against overly restrictive policies that may hinder patient care or physician practices. Another commenter encouraged CMS to streamline and minimize the cost associated with the OTP enrollment process.

Response: In establishing our OTP enrollment proposals, we strived to protect the Medicare program, the Trust Funds, and beneficiaries while (1) avoiding the imposition of unnecessary and excessively burdensome and costly requirements and (2) ensuring patient access to care as much as possible; that is, our aim was to propose requirements consistent with program and patient safety without needlessly burdening OTPs. We believe this approach will prove successful in appropriately balancing the needs addressed by the commenters.

Comment: Several commenters expressed support for the proposed assignment of enrolled OTPs to the moderate level of categorical screening and the proposed changes to §§ 424.520 and 424.521 regarding retroactive billing.

Response: We appreciate the commenters' support.

Comment: One commenter that is currently enrolling their locations under the "Clinic/Group Practice" category on the Form CMS-855B questioned whether CMS will be creating a new "OTP Provider" category on the form. If so, the commenter asked whether clinics that currently have a Medicare number will have to re-enroll as an OTP.

Response: We are in the process of revising the Form CMS-855B as part of this rule to include a new category for OTPs. Since OTPs are a provider type that is distinct from clinics/group practices, with different requirements and conditions for enrollment, a currently enrolled clinic/group practice will need to separately enroll as an OTP if it wishes to bill for OTP services.

Comment: Several commenters stated that a provisional certification should be sufficient to satisfy the certification requirement at proposed § 424.67(b)(4), at least for the 12-month period before full certification is granted. The commenters stated that: (1) This would expand access to OTP care; (2) provisional certification is indeed a type of SAMHSA certification that has been used for many years to enable new OTPs to treat patients temporarily; and (3) failure to accept provisional certification represents a barrier to

treatment that is inconsistent with congressional intent.

Response: As mentioned previously, section 1861(jjj)(2)(B) of the Act states that an OTP must have in effect a certification by SAMHSA. We interpret this requirement to mean full SAMHSA certification rather than provisional certification because the statute does not specify that provisional certification is acceptable in lieu of full certification. We also note that provisional certification under § 8.11(e) applies to OTPs that do not have a current SAMHSA certification but have applied for accreditation with an accreditation organization. Yet section 1861(jjj)(2)(C) of the Act requires actual accreditation rather than the mere application for accreditation. Therefore, since the latter cannot be accepted for enrollment purposes, we do not believe a provisional certification (which, again, pertains to non-accredited parties) can, either.

Comment: One commenter questioned whether an organization with multiple programs and clinics will be able to apply (via the Form CMS-855B) for a single provider number and bill for services furnished by each program under this number.

Response: Separately certified and accredited OTPs must be separately enrolled. Multiple OTPs cannot be grouped under a single enrollment.

Comment: Several commenters requested verification that OTP enrollment will be done at the provider level under the program's NPI and will not require the enrollment or credentialing of physicians and practitioners employed by the OTP. The commenters stated that if the latter were required: (1) It could pose a significant burden on OTPs; and (2) practitioners who could not become enrolled would lose their employment with the OTP, which could hinder the OTP's ability to furnish care. The commenters also requested clarification as to how such a requirement would impact other practices and settings where the physician or practitioner may work.

Response: The OTP facility itself will be enrolled. The physicians and practitioners will not have to enroll as part of the OTP's enrollment.

Comment: Several comments sought clarification regarding: (1) Whether there is a specific timeframe in which OTPs will have to enroll; and (2) when OTPs can begin submitting applications for enrollment.

Response: OTPs may submit applications immediately, and we encourage them to do so to begin billing on and after the OTP benefit commencement date of January 1, 2020.

Comment: Several commenters stated that SAMHSA's existing certification and accreditation requirements are sufficient to ensure an OTP's quality of service and that no additional conditions for Medicare enrollment should be required. As evidence of such, the commenters cited a statement in the proposed rule that the certification and accreditation requirements are "sufficient to ensure the health and safety of individuals being furnished services by OTPs, as well as the effective and efficient furnishing of such services." Accordingly, the commenters stated that no requirements beyond certification and accreditation should be necessary, especially given that OTPs are already heavily regulated.

Response: We disagree with the commenters. The statement cited by the commenters was never meant to imply that OTP enrollment would or should consist merely of the submission of a copy of the OTP's SAMHSA certification and accreditation, without any need for completion of the Form CMS-855B and CMS' verification of the information thereon. As already mentioned, section 1861(jjj)(2)(A) of the Act requires that an OTP be enrolled in Medicare under section 1866(j) of the Act; moreover, section 1866(j)(1)(A) of the Act requires the Secretary to establish a process for the enrollment of providers and suppliers in the Medicare program. Consistent with (and even prior to) section 1866(j) of the Act, we established a thorough enrollment process designed to ensure that all providers and suppliers meet Medicare requirements. We believe the commenters are, in effect, asking for an exemption from this process for OTPs. CMS cannot consent to this. All providers and suppliers are required to adhere to our enrollment requirements, which have been longstanding, and there is nothing in section 1861(jjj)(2)(A) of the Act to indicate that OTPs were meant to be exempt. We further note that the SAMHSA certification and accreditation processes, while extremely crucial safeguards, do not involve reviews of whether the OTP meets Medicare requirements. However, our existing enrollment process does, which is why the latter is needed.

Comment: Several commenters opposed our assignment of OTPs to the high-risk screening level on several grounds. The commenters stated that CMS should already have sufficient data from state Medicaid agencies regarding OTP risk, meaning that our contention that we lack historical information concerning OTPs is without merit. Commenters also stated that OTPs are

already subject to significant regulation and oversight at the federal, state, and even local levels. Adding another level of supervision via high-risk screening would, they stated, be costly, redundant, and unnecessarily burdensome for OTPs, so much so that it could delay the enrollment of OTPs and thus deny prompt care to patients. The commenters also asserted that a high-risk screening designation creates an unwarranted stigma about OTPs and methadone treatment without factual support.

Response: Notwithstanding the commenters' statements concerning Medicaid, we do not have any historical information on OTPs in the context of Medicare participation. Medicaid and Medicare are two distinct programs with differing requirements. As such, and given the type of services performed at OTPs in light of the opioid epidemic, we believe that a robust scrutiny of newly enrolling OTPs is important. Indeed, we believe that it is important for all newly-recognized Medicare provider and types (due to Medicare's general lack of history associated with them) to be closely reviewed. Nevertheless, we appreciate and understand the commenters' concerns, and we recognize that many SAMHSA-certified OTPs have been in operation well before the enactment of the SUPPORT Act on October 24, 2018. Consequently, we are revising our proposed provisions such that newly enrolling OTPs that have been fully and continuously certified by SAMHSA since October 23, 2018, will be assigned to the moderate risk level of categorical screening. Those that have not been fully and continuously certified by SAMHSA since that date will be subject to the originally proposed high-risk level of categorical screening. (All revalidating OTPs will remain at the moderate level as proposed.)

We believe this approach will help balance the need to reduce the overall burden on the OTP community with the importance of ensuring that newer, more recently established OTPs (that, perhaps, have a shorter history of sustained performance) are appropriately screened. We also emphasize that neither our proposed nor our final risk categories were or are meant to stigmatize the OTP community. Rather, our objective is to ensure that OTPs, like all Medicare-enrolling providers and suppliers, are appropriately screened.

Comment: Several commenters stated that the requirement that OTPs not employ or contract with professionals convicted of a felony within the last 10 years or with a prior adverse action with

the state oversight board is discriminatory. The commenters stated that many individuals working in substance use disorder treatment entered the field because they themselves are in recovery. Commenters stated that individuals should not be discriminated against: (1) For crimes they may have committed while still in an active disease state; or (2) if they have satisfactorily met requirements of the state's recovering professionals program.

Response: We respectfully disagree that this requirement is discriminatory, and it was in no manner intended to be. Our sole concern was to safeguard the Medicare program and its beneficiaries from individuals who could present a threat. We further note that there is precedent for the requirement in question. Under §§ 424.530(a)(3) and 424.535(a)(3), CMS may deny or revoke enrollment if the provider, supplier, or any *owner* or *managing employee* of the provider or supplier was, within the preceding 10 years, convicted of a federal or state felony that CMS determines is detrimental to the best interests of the Medicare program and its beneficiaries. A similar provision at § 424.205(e)(1)(v) exists for the Medicare Diabetes Prevention Program (MDPP) coaches, who are prohibited from furnishing MDPP services if they have been convicted (within the previous 10 years) of one of the federal or state felonies outlined in that provision. Given this, and, more importantly, the very sensitive nature of controlled substances and medication-assisted treatment, we believe that the OTP employment provision in question is appropriate and necessary.

Nonetheless, we stress that this is a discretionary provision, in the sense that the felony in question must be one that CMS determines to be detrimental to the best interests of the Medicare program and its beneficiaries based on our review of the factors in § 424.535(a)(3). We understand the commenters' concerns, and it should not be assumed that every felony conviction and the circumstances surrounding it will meet the standard described in the previous sentence.

Comment: Several commenters stated that our reference in the proposed rule to patient brokers and excessive stays in sober homes represents a poor and possibly discriminatory illustration of an OTP's risk potential.

Response: The statement that the commenter cited was not intended to denigrate OTPs. It was merely an example we have seen of disconcerting provider behavior in the context of drug treatment.

Comment: Regarding the proposed list of prescribing, ordering, or dispensing physicians and other eligible professionals, one commenter stated that the term "eligible professional" (as defined in section 1848(k)(3)(B) of the Act) does not include pharmacists. The commenter stated that some pharmacists may be legally authorized to prescribe, order, or dispense medications. Thus, limiting the list to physicians and other eligible professionals could imply that pharmacists cannot perform these functions. The commenter recommended that CMS modify this requirement to include pharmacists within the category of individuals who should be reported on the aforementioned list.

Response: We agree and will revise § 424.67(b)(1)(i) to include pharmacists within the scope of the list requirement, though this should not be construed as implying that a pharmacist qualifies as an eligible professional under section 1848(k)(3)(B) of the Act.

Comment: One commenter questioned whether per diem nursing staff (such as registered nurses) will need to be listed on the Form CMS-855B OTP supplement.

Response: As the previous commenter noted and as indicated in our response, the individuals listed under § 424.67(b)(1)(i) are physicians, other eligible professionals, and pharmacists. Individuals, such as registered nurses, who do not fall within these categories need not be listed. (The definition of "eligible professionals" in section 1848(k)(3)(B) of the Act, though, does include practitioners described in section 1842(b)(18)(C) of the Act, and the definition of "practitioners" includes nurse practitioners, clinical nurse specialists, and certified registered nurse anesthetists, among other individuals.) However, we note that individuals to whom § 424.67(b)(1)(i) applies can be either employees or contracted personnel so long as they are legally authorized to prescribe, order, or dispense controlled substances on the OTP's behalf. We believe "per diem" staff fall within the classification of contracted personnel, for while they are not employees, they are acting on behalf of the OTP per a contractual arrangement. Therefore, they would have to be listed. We will revise the regulatory text of § 424.67(b)(1)(i) to clarify that the individual need not be a W-2 employee of the OTP.

Comment: One commenter requested clarification regarding whether physicians or other eligible professionals participating in

continuous improvement activities (such as a quality assessment or peer review) without a state or federal government action against them would be denied participation in an OTP or other Medicare program.

Response: Engagement in the continuous improvement activities the commenter describes does not, in and of itself: (1) Constitute grounds for denial or revocation of Medicare enrollment; or (2) invoke the prohibitions in § 424.67(b)(6).

(4) Final OTP Enrollment Provisions

After considering the comments received, we are finalizing our provisions as proposed with several exceptions.

Section 424.67(b)(1)(i) is expanded to apply to all physicians, other eligible professionals, and pharmacists who are legally authorized to prescribe, order, or dispense controlled substances on behalf of the OTP (regardless of whether the individual is a W-2 employee of the OTP).

In § 424.67(b)(3), we are revising this paragraph to state that applicants must successfully complete the assigned categorical risk level screening required under, as applicable, § 424.518(b) and (c). This is intended to accommodate the two aforementioned levels of screening for newly enrolling OTPs.

Proposed § 424.518(b)(1)(xii), which stated that revalidating OTPs would be subject to the moderate risk level of categorical screening, will be re-designated as new § 424.518(b)(1)(xiii). Consistent with our prior discussion on this issue, prospective OTPs that have been fully and continuously certified by SAMHSA since October 23, 2018 will be included in revised § 424.518(b)(1)(xii).

In § 424.518(c)(1)(iv), which outlines providers and suppliers in the high-risk level of categorical screening, we are revising this provision to include prospective (newly enrolling) OTPs that have not been fully and continuously certified by SAMHSA since October 23, 2018.

We did not receive requested public feedback on additional means of preventing OTP fraud, waste, and abuse from which we could consider future regulatory action. However, we always welcome such suggestions.

2. Revision and Addition to Denial and Revocation Reasons in §§ 424.530 and 424.535

a. Improper Prescribing

Under existing § 424.535(a)(14), CMS may revoke a physician's or other eligible professional's enrollment if he or she has a pattern or practice of prescribing Part D drugs that:

- Is abusive and/or represents a threat to the health and safety of Medicare beneficiaries; or
- Fails to meet Medicare requirements.

This revocation reason is designed to address situations where prescribers of Part D drugs engaged in prescribing activities that were or could be harmful to Medicare beneficiaries and the Trust Funds or were otherwise inconsistent with Medicare policies. Since the provision's inception, we have revoked the enrollments of physicians and practitioners who have engaged in a variety of improper prescribing practices. However, given the nationwide opioid epidemic, we remain concerned about such behavior. Therefore, we proposed that § 424.535(a)(14) should no longer be restricted to Part D drugs but must extend to all Medicare drugs, including Part B drugs; specifically, the term "Part D drugs" in the opening paragraph of § 424.535(a)(14) would be changed to "Part B or D drugs." We noted that this proposal would affect prescriptions of any Part B or D drugs, not merely those prescriptions given to beneficiaries using OTPs.

b. Patient Harm

As referenced previously, and due to the importance of ensuring patient safety in all provider and supplier settings (not merely those involving OTPs), we also proposed to add § 424.535(a)(22) as a new revocation reason; this would be coupled with a concomitant new denial reason in § 424.530(a)(15). These two paragraphs would permit us to revoke or deny, as applicable, a physician's or other eligible professional's (as that term is defined in section 1848(k)(3)(B) of the Act) enrollment if he or she has been subject to prior action from a state oversight board, federal or state health care program, Independent Review Organization (IRO) determination(s), or any other equivalent governmental body or program that oversees, regulates, or administers the provision of health care with underlying facts reflecting improper physician or other eligible professional conduct that led to patient harm. In determining whether a revocation or denial on this ground is appropriate, CMS would consider the following factors:

- The nature of the patient harm.
- The nature of the physician's or other eligible professional's conduct.
- The number and type(s) of sanctions or disciplinary actions that have been imposed against the physician or other eligible professional by a state oversight board, IRO, federal

or state health care program, or any other equivalent governmental body or program that oversees, regulates, or administers the provision of health care. Such actions include, but are not limited to in scope or degree:

- ++ License restriction(s) pertaining to certain procedures or practices,
- ++ Required compliance appearances before state oversight board members,
- ++ Required participation in rehabilitation or mental/behavioral health programs,
- ++ Required abstinence from drugs or alcohol and random drug testing,
- ++ License restriction(s) regarding the ability to treat certain types of patients (for example, cannot be alone with members of a different gender after a sexual offense charge),
- ++ Administrative/monetary penalties, or
- ++ Formal reprimand(s).

• If applicable, the nature of the IRO determination(s).

• The number of patients impacted by the physician's or other eligible professional's conduct and the degree of harm thereto or impact upon.

• Any other information that CMS deems relevant to its determination.

As noted in the proposed rule and in previous rulemaking efforts, we remain concerned about instances of physician or other eligible professional misconduct, and we believe our authority under sections 1102, 1866(j)(1)(A), and 1871 of the Act to take action to stem such behavior should be expanded to include the scenarios identified in § 424.530(a)(15) and § 424.535(a)(22). State oversight boards, such as medical boards and other administrative bodies, have found certain physicians and other eligible professionals to have engaged in professional misconduct and/or negligent or abusive behavior involving patient harm. In addition, IRO determinations have offered valuable, independent analyses and findings of provider misconduct that we should have the opportunity to use to promote the best interests of Medicare beneficiaries. We outlined our belief that our proposed revocation and denial authorities would improve overall patient care by preventing certain problematic physicians and other eligible professionals from treating Medicare patients.

We stated in the proposed rule that §§ 424.530(a)(15) and 424.535(a)(22) would apply to physicians and other eligible professionals in OTP and non-OTP settings. In addition, to clarify the scope of the term "state oversight board" in the context of §§ 424.530(a)(15) and 424.535(a)(22), we

proposed to define this term in § 424.502. Specifically, we proposed (for purposes of §§ 424.530(a)(15) and 424.535(a)(22) only) to define “state oversight board” to mean any state administrative body or organization, such as (but not limited to) a medical board, licensing agency, or accreditation body, that directly or indirectly oversees or regulates the provision of health care within the state.

We solicited comment not only on our definition of “state oversight board” but also on our proposed revocation and denial authorities.

c. Summary of the Public Comments on Improper Prescribing and Patient Harm and the CMS Responses

We received comments concerning our improper prescribing and patient harm provisions from approximately 30 stakeholders. The comments are summarized below, followed by our responses.

Comment: Several commenters opposed not only our proposed revision of § 424.535(a)(14) but also the existing version of (a)(14). The commenters expressed concern that some types of prescribers and specialties would be unfairly targeted and prevented from legitimate prescribing. The commenters added that what may be considered excessive prescribing for the general population could be clinically appropriate given a patient’s individual circumstances and conditions (particularly in pain management and palliative care). Other commenters stated that while it is important to monitor highly egregious prescribers, CMS must ensure that physicians who are prescribing appropriately, even at higher doses (beyond certain guidelines or recommended thresholds), are not unnecessarily sanctioned or disciplined. Erroneous sanctions, they claimed, could have negative impacts on patient care, deny access to new and innovate forms of treatment, and spur clinicians to restrict their prescribing practices based on potential revocation concerns.

Response: Since the commencement of our enforcement of existing § 424.535(a)(14), we have not targeted particular physician or practitioner specialties and have been extremely careful in our application of the criteria outlined in this provision. The commenters are correct that certain situations could warrant different levels of prescribing, and the flexibility afforded by the factors in § 424.535(a)(14) has allowed us to thoroughly consider and address such differing scenarios. We stress that this will not change with our expansion of § 424.535(a)(14) to include Part B drugs.

We have received no indication that the application of § 424.535(a)(14) has generally caused physicians and other eligible professionals to significantly reduce their levels of prescribing or caused barriers to Part D drugs. Given this, we do not foresee such problems with the addition of Part B drugs.

Comment: Several commenters stated that § 424.535(a)(14) duplicates current safety mechanisms and revocation reasons, overly burdens prescribers, and effectively represents CMS engaging in second-guessing the clinical determinations of medical professionals.

Response: We respectfully disagree. We currently have no revocation authority other than § 424.535(a)(14) to directly address abusive prescribing practices. In addition, we have applied § 424.535(a)(14) very sparingly and only in demonstrably egregious instances of improper prescribing. Therefore, the only persons who have been burdened are the extremely few who have engaged in such practices, while the overwhelming preponderance of the remaining 2 million Part D prescribers have been unaffected. Also, the fact that only severe cases have triggered § 424.535(a)(14) indicates that CMS gives great deference to the prescribing decisions of the provider community as a whole.

Comment: Many commenters opposed our additions of §§ 424.530(a)(15) and 424.535(a)(22) and urged us to withdraw them. Commenters stated that these provisions are overly vague, do not furnish sufficient guidance to physicians and other eligible professionals as to what the expectations are, and create excessive uncertainty and burden for these individuals. Commenters also stated that § 424.535(a)(22) would unfairly impose harsh and disproportionate sanctions on providers for potentially minor violations. Another commenter expressed particular concern about young and inexperienced physicians who could be punished by CMS for modest transgressions. Additional commenters stated that a Medicare revocation under § 424.535(a)(22) would trigger an automatic Medicaid enrollment termination as well as termination from private payer programs, which could devastate the individual’s medical practice.

Commenters further stated that § 424.535(a)(22) would negatively affect Medicare beneficiaries’ access to health services because: (1) A revoked provider’s patients would have to seek care elsewhere; and (2) the number of available physicians and other eligible professionals (including, perhaps, the group practices with which they are

affiliated) will be unnecessarily reduced, leading to provider shortages. Commenters added that this could be especially problematic in remote and underserved areas and with specialized services. They stated that the patient harm that CMS seeks to deter could actually increase through a restriction of available care.

Response: While we appreciate these comments, we reiterate that the only actions under §§ 424.530(a)(15) and 424.535(a)(22) that could lead to a denial or revocation are those resulting in patient harm. We believe that some commenters assumed that the action itself, regardless of any impact on a patient, would be sufficient for CMS to invoke these provisions. This is incorrect. Patient harm must be a result. Since many determinations by state oversight boards and similar bodies do not involve patient harm, the physicians or other eligible professionals to which such determinations pertain will not be affected by §§ 424.530(a)(15) and 424.535(a)(22) in any way.

Concerning the first set of comments summarized here, we do not believe that §§ 424.530(a)(15) and 424.535(a)(22) are overly vague or lack sufficient guidance. We outline in detail both the types of sanctions or actions that could invoke these provisions as well as the criteria that we will consider in our determinations. Although §§ 424.530(a)(15) and 424.535(a)(22), like several of our other denial and revocation reasons, might appear to some to be more open-ended and less clear-cut than, for example, a revocation based on the provider’s exclusion from Medicare by the Office of Inspector General (OIG)(see § 424.535(a)(2)), this is because of our need for flexibility in addressing various patient harm situations. We believe that §§ 424.530(a)(15) and 424.535(a)(22) appropriately balance (1) the need for clarity concerning the actions that these provisions cover with (2) the importance of having sufficiently extensive criteria to ensure a fair and exhaustive review of the case. With respect to burden, the only physicians and other eligible professionals (out of a Medicare-enrolled or potentially enrolled universe of well over 2 million) who could be impacted by these provisions are those very few who engage in the abusive behavior outlined therein. All other physicians and other eligible professionals will not be burdened.

Regarding the second group of comments, we reiterate that the action must first have resulted in patient harm before CMS will even consider reviewing the case; without patient

harm, the matter is moot from the standpoint of §§ 424.530(a)(15) and 424.535(a)(22). We are also very cognizant of the relative severity of a Medicare revocation and the impact it can have on a physician's or other eligible professional's career, which is why we have historically exercised our authority under § 424.535(a)'s revocation provisions only when the affected party's behavior is such that a revocation (after our thorough review of the case) is genuinely warranted. We intend to apply this principle to situations involving § 424.535(a)(22). Moreover, and of paramount importance, we intend to invoke § 424.535(a)(22) strictly in cases where the behavior in question (such as, but not limited to, sexual misconduct) and the consequent patient harm was significant in nature.

Finally, we do not believe that § 424.535(a)(22) will impair patient access to health care, specialized or otherwise. We have received few reports of access to care issues resulting from previous revocation action on our part under § 424.535(a). Considering, as stated previously, that only a very small number of physicians and other eligible professionals would be affected by § 424.535(a)(22), we do not foresee the latter provision creating barriers to care. Nonetheless, should such issues unexpectedly arise after § 424.535(a)(22)'s implementation, we will, as needed, consider mechanisms for resolving them.

Comment: Several commenters stated that § 424.535(a)(22) would discourage physicians and other eligible professionals from self-reporting to medical boards, for they will be reluctant to disclose behavior (such as drug use and alcoholism) that could result in IRO or state action leading to a Medicare revocation. This, the commenters stated, makes the patient harm provision inconsistent with the nationwide effort to reduce the stigma associated with seeking treatment for substance abuse. The commenters added that § 424.535(a)(22) could also have a negative effect on medical boards' willingness to discipline individuals (or could otherwise affect their decisions) because doing so could invoke § 424.535(a)(22). While remaining opposed to the provision, the commenters urged CMS to, at a minimum, narrow its scope to avoid targeting individuals engaged in mental/behavioral health and/or substance use disorder treatment and monitoring with their state physician health programs.

Response: We appreciate and understand the commenters' concerns. We do not wish to discourage

physicians and other eligible professionals from seeking whatever help they may need. Accordingly, we will remove the following criteria from §§ 424.530(a)(15) and 424.535(a)(22):

- Required participation in rehabilitation or mental/behavioral health programs.
- Required abstinence from drugs or alcohol and random drug testing.

We will also add a new paragraph to §§ 424.530(a)(15) and 424.535(a)(22) that specifically excludes these actions from the provisions' purviews. However, we note that the action or order must be restricted to required participation in a rehabilitation or mental/behavioral health program or abstinence from drugs or alcohol and random drug testing. If the action involves either of these directives as well as an additional sanction that involves patient harm, the latter (but not the rehabilitation, abstinence, or testing portion of the directive) could invoke § 424.530(a)(15) or § 424.535(a)(22).

To illustrate how this change would apply, consider the following examples:

Example 1— In a case involving patient harm, a state oversight board requires Dr. X to enter a rehabilitation program. There are no other sanctions in the state's order. Since the state's action is restricted exclusively to rehabilitation, § 424.530(a)(15) or § 424.535(a)(22) would not apply.

Example 2— In a case not involving patient harm, a state oversight board issues a decision pertaining to Dr. X that: (1) Requires him to enter a rehabilitation program; and (2) imposes a fine on him. Sections 424.530(a)(15) and 424.535(a)(22) would not apply in any event because no patient harm was present.

Example 3— In a case involving patient harm, a state oversight board issues a decision pertaining to Dr. X that: (1) Requires him to enter a rehabilitation program; and (2) restricts his license for a 60-day period due to sexual misconduct. CMS would consider the board decision under §§ 424.530(a)(15) and 424.535(a)(22), as applicable, because of the license restriction based on sexual misconduct.

This change, in our view, will help reassure physicians and other eligible professionals that they can seek the assistance they require without concern that their rehabilitation and treatment efforts would be penalized under §§ 424.530(a)(15) and 424.535(a)(22). It will balance this very important need with our belief that other actions within the state oversight board's directive could warrant consideration under §§ 424.530(a)(15) and 424.535(a)(22).

Comment: Numerous commenters stated that the patient harm provisions fail to focus on identifying and addressing demonstrably problematic providers and suppliers. For this reason

alone, the commenters stated that: (1) The provisions should be withdrawn; and (2) CMS should instead adopt other means of identifying and disciplining such parties. If CMS decides to finalize §§ 424.530(a)(15) and 424.535(a)(22), the commenters urged CMS to take a much more targeted approach by, for instance, restricting the provisions to physicians and other eligible professionals who are identified as outliers (or otherwise higher-risk) through data analytics.

Response: We believe that our previously mentioned restriction of §§ 424.530(a)(15) and 424.535(a)(22) to egregious behavior are consistent with the commenters' recommendation to focus on outlier behavior. The overwhelming preponderance of physicians and other eligible professionals have not had a serious (nor, for that matter, any) state oversight board action. Those who have, we believe, could be considered outliers in terms of the volume and degree of professional misconduct.

Comment: Several commenters requested that CMS furnish evidence showing a correlation between disciplinary actions taken (or not taken) by state oversight boards and fraud, abuse, and/or beneficiary harm in the Medicare program.

Response: It has been our experience throughout the years that instances of problematic Medicare provider behavior detected at the state or federal level can pose, and have posed, threats to the Medicare program, the Trust Funds, and beneficiaries. Indeed, we have come across a number of such cases. In one situation, for example, a physician was placed on probation, fined, and suspended by the state board after multiple accusations by his patients for sexual assault. However, he was permitted to maintain his medical license, during which period he continued to sexually assault additional patients. It was not until multiple years after the initial fine and probation period that the state finally revoked his medical license, and it was only after this license action that CMS was able to revoke the physician's Medicare enrollment. However, with our new patient harm provisions, CMS could have taken immediate action based on the initial probation, fine, and suspension, thus perhaps avoiding the subsequent patient abuse that occurred.

Comment: Several commenters stated that CMS did not articulate clear standards for how it will determine (based on its assessment of the proposed factors) whether there are sufficient grounds to invoke §§ 424.530(a)(15) and 424.535(a)(22). The commenters added that the factor in each provision

concerning CMS' consideration of other relevant information gives CMS overly broad authority in making enrollment decisions.

Response: We disagree that these provisions lack standards indicating how CMS will review cases thereunder. We clearly outline the criteria we will consider in our determinations. If the commenter is suggesting that each factor should contain definitive benchmarks, such as a minimum number of patients who were harmed by the conduct in question, we respectfully do not concur. As we have stated and several commenters have noted, every situation is different. We must have the discretion to fairly and fully consider the specific facts and circumstances involved. To establish firm thresholds could allow an individual who is repeatedly engaging in abusive behavior to avoid a denial or revocation because (using our previous example) he or she did not harm a certain number of patients. Such a result would be inconsistent with our obligation to protect the Medicare program and its beneficiaries.

Nonetheless, we recognize the commenters' concerns regarding the factor involving our consideration of any other information we deem relevant. To provide greater clarity to affected physicians and other eligible professionals concerning the bases of our §§ 424.530(a)(15) and 424.535(a)(22) determinations, we will remove this factor from both provisions. However, we emphasize that this will not affect our continued inclusion of this same factor in several of our existing denial and revocation reasons. Nor are we precluding its use in possible future provisions. It is only due to the unique circumstances and potential fact patterns associated with our patient harm provisions that the criterion in question is being removed.

Comment: One commenter stated that a physician or other eligible professional, as well as his co-workers and fellow providers, might prove reluctant to report his or her medical errors due to fear of a possible enrollment revocation. This commenter stated that this makes the entire health system less safe for Medicare beneficiaries.

Response: We understand the commenter's concern. However, we believe that our restriction of §§ 424.530(a)(15) and 424.535(a)(22) to significant cases of patient harm will avoid the situation the commenter contemplates.

Comment: Several commenters expressed concern that CMS did not formally define or clarify the meaning and scope of the term "patient harm."

The commenters stated that it would be inappropriate for CMS to deny or revoke enrollment without the provider understanding CMS' interpretation of the term. They urged CMS to be much more specific on what would qualify as patient harm and to explain how it would make patient harm determinations.

Response: Concerning the commenters' second request, we previously indicated that in making determinations under the patient harm provisions, we will consider all of the specified factors as well as the totality of the circumstances. This will include a close and thorough analysis of the nature and degree of the patient harm. As for formally and officially defining the latter term in regulation, we believe the meaning of the term "patient harm is self-evident, in that it involves some form of physical and/or psychological injury to the patient.

Comment: Several commenters stated that patient harm and certain types of sanctions could occur through no fault of the provider and/or via an innocent error. Commenters cited instances where misleading or erroneous complaints were from irate or dissatisfied patients and their families or caregivers. To illustrate, an individual might: (1) Disagree with his physician's medically appropriate decision not to prescribe a certain medication; or (2) misunderstand the relative risks and benefits of a treatment as correctly communicated by the physician. The commenters stated that, in proposing its patient harm provisions, CMS overlooked the potential for such situations and the devastating consequences for innocent medical practitioners. One commenter stated that a better barometer of misconduct would be an intent to cause harm.

Response: We recognize the potential for erroneous or unfounded complaints. We believe that many of these will be detected as such and appropriately dismissed at the state oversight board level, in which case §§ 424.530(a)(15) and 424.535(a)(22) would not apply. As for restricting these provisions to instances of intentional patient harm, we disagree. Our overriding concern is with the harm itself, irrespective of whether it stemmed from the provider's willful misconduct, negligence, or other state of mind.

Comment: Several commenters cited our statement in the proposed rule that modest sanctions would not automatically result in a revocation. They stated that the regulatory text does not include this language but only lists the factors that CMS would consider in

its determinations. The commenters stated that an informal preamble statement does not furnish sufficient certainty to providers and creates the potential for arbitrary CMS decisions. The commenters also stated that this preamble language should be codified in the regulatory text. Additional commenters stated that CMS should define or more thoroughly identify what constitutes a modest sanction.

Response: The language to which the commenters refer was simply background information designed to reassure stakeholders that not every case will result in a revocation. Such informal statements are typically not suitable for (and not included in) regulatory text and are more appropriately contained in the preamble. Furthermore, our discussions throughout this final rule should make clear that § 424.535(a)(22) will be applied: (1) With great care and circumspection; (2) in a non-arbitrary manner; (3) infrequently; and (4) only when the conduct and resulting patient harm were significant in nature.

We respectfully decline to formally define or specify what constitutes a modest sanction versus, for instance, a non-modest sanction. The types of possible state oversight board orders and sanctions are many and varied. To identify them and then classify each one as either modest or not would, we believe, give an erroneous impression that certain groups of sanctions related to patient harm would always, would never, or only sometimes result in specific CMS decisions. All cases and actions are different, and, as already stated, we must preserve our flexibility in considering each of them on their own facts and merits.

Comment: Several commenters stated that the list of sanctions that could trigger §§ 424.530(a)(15) and 424.535(a)(22) (for example, license restrictions) are not necessarily indicative of patient harm.

Response: We agree with these commenters, which is why we again reiterate that only those actions involving serious misconduct and patient harm could invoke §§ 424.530(a)(15) and 424.535(a)(22).

Comment: Several commenters stated that CMS does not have the statutory authority for §§ 424.530(a)(15) and 424.535(a)(22). They noted that CMS relies in part on sections 1102 and 1871 of the Act as authority for these new provisions. (Sections 1102 and 1871 of the Act furnish general authority for our establishment of these requirements, which are designed for the efficient administration of the Medicare program.) The commenters stated that

§§ 424.530(a)(15) and 424.535(a)(22) are not necessary to efficiently run the Medicare program; rather, by potentially interrupting care to Medicare beneficiaries, these provisions could lead to a more inefficient Medicare program. Second, the commenters noted that section 1866(j)(1)(A) of the Act requires the Secretary to establish an enrollment process for providers and suppliers. The commenters stated that this statute lists several components (for example, the establishment of temporary enrollment moratoria) that must be part of this process. None of these, however, include the denial and revocation of enrollment and certainly not on the grounds articulated in §§ 424.530(a)(15) and 424.535(a)(22). The commenters further stated that section 1866(j)(2) of the Act, which describes required and optional elements of the provider enrollment screening process, does not address denials and revocations. Accordingly, the commenters asserted that CMS cannot rely upon section 1866(j)(1)(A) (or, for that matter, sections 1102 and 1871) as authority for §§ 424.530(a)(15) and 424.535(a)(22) and must therefore withdraw these two proposed regulatory provisions.

Response: We disagree with the commenters. In previously establishing a significant number of our denial and revocation reasons under §§ 424.530(a) and 424.535(a), we interpreted the term “efficient administration” as giving CMS authority under sections 1102 and 1871 of the Act to take steps to safeguard the integrity of the Medicare program and to protect beneficiaries, an interpretation that we believe also permits us to finalize §§ 424.530(a)(15) and 424.535(a)(22). These regulations are needed to address the numerous enrollment scenarios involving problematic providers that can arise (and have arisen) over the course of our administration of the program.

With respect to section 1866(j)(1)(A) of the Act, we have never viewed the provider enrollment process as being restricted to the steps involved in screening initial applicants. The process consists of much more than that, including, but not limited to, ensuring that an enrolled provider or supplier maintains compliance with all applicable Medicare policies. The same is true concerning section 1866(j)(2) of the Act. Provider enrollment screening continues after a provider or supplier is enrolled in the form of, for example, the revalidation process under § 424.515 (which helps confirm whether an enrolled provider still meets all Medicare requirements) and monthly checks against the OIG’s List of

Excluded Individuals and Entities. It is not limited to the screening of initial applicants. Section 1866(j)(2)(D) of the Act, in other words, discusses both the screening of currently enrolled providers and suppliers and the screening of providers and suppliers as they periodically revalidate their enrollment. In summary, we respectfully do not believe that sections 1866(j)(1)(A) and 1866(j)(2) of the Act become inapplicable once a provider is enrolled.

We also disagree that sections 1102 and 1871 of the Act do not permit CMS to establish revocation authorities, especially regarding patient harm. Were we to accept this contention, enrolled providers and suppliers could engage in egregious behavior without fear of repercussions because CMS would have no authority to remove them from Medicare. We do not believe that Congress, in enacting these statutes, intended such a result.

Comment: Several commenters stated that § 424.535(a)(22) does not include any criteria or process by which CMS would determine when it would revoke enrollment, thus raising the potential for arbitrary decisions. For example, the commenters stated that: (1) Physicians with similar actions taken against them could be treated differently; and (2) state medical statutes and medical board review standards vary considerably. The commenters stated that treating all activities as being similar is inappropriate.

Response: We disagree that § 424.535(a)(22) lacks appropriate criteria. To the contrary, and as stated previously, both §§ 424.530(a)(15) and 424.535(a)(22) list specific factors that CMS must consider in its determinations. The factors account for our recognition that all cases, state oversight boards, and statutes are indeed different while furnishing enough clarity to help ensure that relatively similar cases are handled in as uniform a manner as possible.

Comment: Numerous commenters stated that state oversight boards, not the federal government, are the appropriate entities for monitoring and disciplining physicians and, if warranted, restricting their authority to treat patients. The commenters stated that the proper punishment for physicians who have violated the law is to take action against his or her license; if the state upholds his or her right to practice, he or she should be allowed to remain enrolled in Medicare assuming all other program requirements are met. The commenters added that the patient harm provisions: (1) Represent an unprecedented overreach of the federal

government’s authority; (2) constitute an unwarranted intrusion into matters best left to states; (3) inappropriately substitute CMS’ lack of clinical expertise for the expertise of the state oversight board’s medical professionals; and (4) involve a mere after-the-fact desk review of the state oversight board’s well-informed decisions. Several other commenters stated that our statement in the proposed rule that CMS (rather than state oversight boards) is ultimately responsible for the protection of Medicare beneficiaries is inaccurate; instead, the commenters stated, state oversight boards are responsible for ensuring the health, safety, and welfare of the state’s residents (which include Medicare beneficiaries) through the enforcement of laws governing health care providers.

Response: We certainly recognize and appreciate the very crucial role that state oversight boards perform in protecting the health of patients, enforcing medical laws, and overseeing physician and practitioner care. However, we do not believe these functions are exclusive to states. CMS indeed has oversight responsibility for the Medicare program, and this includes safeguarding the welfare of individuals who receive benefits under this program. State review of licensed physicians and other eligible professionals is a function entirely different from the federal government’s administration of Medicare. Given this, we respectfully submit that CMS is not and should not be prohibited from taking action against a Medicare provider merely because the state oversight board may disagree with such action. That is, while we generally give great deference to state oversight boards and their judgments, there could be instances where CMS, in its oversight of Medicare, feels compelled to review a matter potentially impacting the Trust Funds and those beneficiaries whose health care is covered thereby. This overriding principle, rather than any desire to interfere with or usurp the decisions of state oversight boards, lies behind our patient harm provisions.

Comment: A number of commenters expressed concern that our proposed patient harm provisions were discussed in a section of the proposed rule that also discussed OTP enrollment. The commenters stated that many provider organizations: (1) Were unaware of the provisions’ presence; or (2) might believe that the provisions only applied to OTP physicians or other eligible professionals, rather than to all types of physicians and other eligible professionals or only to high-risk providers. Another commenter stated

that CMS should accordingly withdraw these provisions and re-propose them in a stand-alone rule to ensure an adequate opportunity for notice and comment. An additional commenter requested that CMS delay these provisions until it works with the provider community to help the latter understand the provisions' full implications.

Response: Considering that §§ 424.530(a)(15) and 424.535(a)(22) are enrollment provisions, we maintain that grouping these provisions with those pertaining to OTP enrollment was the most sensible approach. We note that the titles of both the rule and the enrollment subsection clearly indicated that enrollment policies pertaining to patient harm were included therein. We also explicitly stated that the patient harm provisions applied to all types of physicians and other eligible professionals (not merely those associated with OTPs) and gave no indication that the provisions were limited to high-risk providers. Given the number of comments we received on §§ 424.530(a)(15) and 424.535(a)(22), we believe that sufficient public notice was furnished regarding these provisions.

Comment: One commenter stated that the list of possible actions against a physician that potentially fall under §§ 424.530(a)(15) and 424.535(a)(22) is extensive. The commenter questioned how these actions would be used or weighted in CMS' determination.

Response: As previously mentioned, the particular action will be considered through CMS' analysis of the factors in §§ 424.530(a)(15) and 424.535(a)(22).

Comment: Several commenters requested clarification as to whether: (1) CMS or the MAC would make § 424.535(a)(22) revocation determinations; and (2) the affected physician or other eligible professional will be able to review the case. The commenters expressed concern that CMS would take action under the patient harm provisions without reviewing the underlying evidence or analysis regarding the prior action or having sufficient data to make a fair and thorough determination; such information, the commenters stated, would include, but not be limited to, the genesis of the complaint, the veracity of the allegations, and the rationale for (and deliberations involved in) the state's decision or the reasoning behind any settlement. To avoid this prospect, the commenters recommended that some form of due process be considered before enrollment is denied or revoked; this would help ensure that CMS has all the facts and circumstances available. For instance, they noted that state oversight boards permit the physician or

practitioner to offer rebuttal evidence and to respond to the proposed adverse action before the board renders its decision. Stating that CMS did not articulate a clear or adequate appeals process that ensures fairness for the provider, the commenters asserted that CMS should adopt the process outlined in the previous sentence.

Response: CMS, rather than an applicable CMS contractor, will typically make §§ 424.530(a)(15) and 424.535(a)(22) determinations. Yet, we do not exclude the possibility that an applicable CMS contractor could make a denial or revocation determination under §§ 424.530(a)(15) and 424.535(a)(22), respectively.

Appeal rights under part 498 will be provided. However, as with all other revocations under § 424.535, the affected physician or other eligible professional will be unable to review the case during our determination process. The reason for this longstanding policy is that we must be able to take prompt action, using our independent judgment, to halt potential threats to Medicare patients and the Trust Funds. We see no reason to exempt § 424.535(a)(22) situations from this practice. Merely because the grounds for revocation under § 424.535(a)(22) are different from those in other revocation reasons does not require that the affected party be able to formally review, comment on, and contest its potential § 424.535(a)(22) revocation before CMS is able to render a decision; indeed, instances of patient harm can represent a particularly serious danger to Medicare beneficiaries, thus requiring rapid measures on our part. We also reiterate that CMS is a federal agency and, as such, is not bound to utilize the same administrative processes and mechanisms that state oversight boards do.

Insofar as the risk of an insufficient record, CMS in all revocation cases ensures that it has enough information on hand to make a fair and well-informed determination. Such will be so with § 424.535(a)(22), too.

Comment: Several commenters stated that the patient harm provisions partially duplicate CMS' existing revocation authorities, such as, but not limited to: (1) § 424.535(a)(21), which permits revocation if a physician or other eligible professional has a pattern or practice of abusive ordering, certifying, referring, or prescribing that threatens the health and safety of Medicare beneficiaries; and (2) CMS' ability to revoke enrollment if the individual's medical license is revoked. The commenters stated that CMS should

rely on these authorities, which already protect against egregious behavior, rather than finalize the patient harm provisions. The commenters added that if CMS believes it needs additional revocation authority to address specific behaviors, it should articulate those behaviors and propose a revocation reason that is appropriately defined and specifically targeted.

Response: We do not believe that §§ 424.530(a)(15) and 424.535(a)(22) duplicate our existing revocation authorities, for we currently have no provision that directly and specifically addresses and targets demonstrated cases of patient harm. Thus, we believe that §§ 424.530(a)(15) and 424.535(a)(22) are necessary.

Comment: While asserting that CMS should withdraw its patient harm provisions and instead work with industry stakeholders on solutions to its concerns, several commenters recommended that CMS at least consult state licensure boards, medical professional groups, and hospitals before finalizing its criteria. This would help ensure that the latter are applied in a fair and consistent fashion.

Response: We respectfully decline to delay finalization of these provisions. We believe they are needed for the reasons described previously in this rule. Nonetheless, we always welcome feedback from provider organizations and would be pleased, after this rule is published, to hear any remaining concerns they may have.

Comment: Several commenters sought clarification as to whether CMS will only consider those actions that have been fully adjudicated and complete, or also those still in progress. The commenters recommended the former approach.

Response: CMS will be able to take action under § 424.530(a)(15) or § 424.535(a)(22), as applicable, once a state oversight board reports a particular action or order pertaining to patient harm that CMS determines warrants denial or revocation action. However, if the action or order is later overturned, CMS will take reciprocal action, as appropriate, and rescind the denial or revocation.

Comment: Concerning our proposed definition of "state oversight board" in § 424.502, one commenter stated that regulatory boards exist for a variety of health professions and are not limited to medical boards. The commenter indicated that a more inclusive term than "state oversight board" would be, for example, "regulatory board," "state regulatory board," or "state licensing board."

Response: We recognize that different types of regulatory boards exist for multiple health professions. While we appreciate the commenter's suggested edits, we believe that the term "state oversight board" is broad enough to cover the variety of administrative bodies to which the commenter refers.

Comment: A commenter stated that a state-level action or IRO determination that occurred may not have any relation to a physician's or other eligible professional's participation in Medicare.

Response: If we are correctly understanding the commenter's contention, it is indeed possible that the action or IRO determination in question may not have involved the physician's or other eligible professional's treatment of a Medicare patient. However, if the physician or other eligible professional is enrolling or enrolled in Medicare, we believe we have an obligation to consider the potential impact on Medicare beneficiaries of the patient harm that lay behind the state action or IRO determination.

We also received a miscellaneous comment pertaining to the opt-out provisions covered in 42 CFR part 405, subpart D:

Comment: A commenter requested that CMS revise and revoke the requirements in, respectively, § 405.415(h) and (o) that state that private contracts between Medicare patients and physicians who have opted-out of Medicare must be re-signed every 2 years. The commenter stated that patients and physicians should have the flexibility to agree upon any mutually desired contract length. The commenter added that these contracts should be allowed to remain in effect as long as the physician remains opted-out of Medicare. These requested changes, the commenter stated, would reduce physician burden and eliminate confusion regarding the requirements in question.

Response: We appreciate this comment but believe it is outside the scope of this rule.

d. Final Improper Prescribing and Patient Harm Provisions

After reviewing the comments received, we are finalizing our proposed change to § 424.535(a)(14) and our proposed definition of "state oversight board." For §§ 424.530(a)(15) and 424.535(a)(22), we are finalizing these provisions with the following exceptions:

- We are removing the following criteria from these provisions:
 - ++ Required participation in rehabilitation or mental/behavioral health programs.

++ Required abstinence from drugs or alcohol and random drug testing.

- We are adding new paragraphs to these provisions that exclude from consideration those actions and orders restricted to: (1) Required participation in rehabilitation or mental/behavioral health programs; or (2) required abstinence from drugs or alcohol and random drug testing.

- We are also removing the criterion that reads: "Any other information that CMS deems relevant to its determination."

In addition, the introductory amendatory language for the proposed regulatory text for § 424.530(a)(15) stated, in part, that § 424.530(a)(12), (13), and (14) were being reserved. Similar introductory amendatory language for proposed § 424.535(a)(22) stated that § 424.535(a)(17) through (21) were being reserved. These statements are no longer applicable. The provisions in question are not being reserved. Therefore, we are removing these references. The only amendment to § 424.530 is the addition of paragraph (a)(15); the lone amendment to § 424.535 is the addition of paragraph (a)(22).

I. Deferring to State Scope of Practice Requirements

When the Medicare program was signed into law in 1965, most skilled medical professional services in the United States were provided by physicians, with the assistance of nurses. Over the decades, the medical professional field has diversified and allowed for a wider range of certifications and specialties, including the establishment of mid-level practitioners such as nurse practitioners (NPs) and physician assistants (PAs). These practitioners are also known as advanced practice providers (APPs) or nonphysician practitioners (NPPs). Medicare policies and regulations have been updated over recent years to allow APPs or NPPs to provide services in Medicare-certified facilities within the extent of their scope of practice as defined by state law. In recognition of the qualifications of these practitioners, we seek to continue this effort.

1. Ambulatory Surgical Centers

a. Background

Ambulatory surgical centers (ASCs), as defined at 42 CFR 416.2, are distinct entities that operate exclusively for the purpose of providing surgical services to patients not requiring hospitalization, in which the expected duration of services would not exceed 24 hours following admission. The surgical services

performed at ASCs are scheduled, primarily elective, non-life-threatening procedures that can be safely performed in an outpatient setting. Currently, there are approximately 5,800 Medicare certified ASCs in the United States.

Section 1832(a)(2)(F)(i) of the Act specifies that ASCs must meet health, safety, and other requirements specified by the Secretary in order to participate in Medicare. The Secretary is responsible for ensuring that the ASC Conditions for Coverage (CfCs) protect the health and safety of all individuals treated by ASCs, whether they are Medicare beneficiaries or other patients. The ASC regulations were established in the "Medicare Program; Ambulatory Surgical Services" final rule published in the August 5, 1982 **Federal Register** (47 FR 34082), and have since been amended several times.

The regulations for Medicare and Medicaid participating ASCs are set forth at 42 CFR part 416. Section 416.42, "Condition for coverage—Surgical services", states that surgical procedures must be performed in a safe manner by qualified physicians who have been granted clinical privileges by the governing body of the ASC in accordance with approved policies and procedures of the ASC.

Currently, the ASC CfCs have two conditions that include patient assessment requirements for patients having surgery in an ASC, those are anesthetic risk and pre-surgery evaluation, and pre-discharge evaluation. In the November 18, 2008 final rule, "Medicare Program; Changes to the Hospital Outpatient Prospective Payment System and CY 2009 Payment Rates final rule (73 FR 68502), we revised some existing standards and created some new requirements. One of the new conditions added in 2008 was § 416.52, "Conditions for coverage—Patient admission, assessment and discharge". This condition sets standards pertaining to patient pre-surgical assessment, post-surgical assessment, and discharge requirements that must be met before patients leave the ASC. Specifically, the discharge requirements at § 416.52(b)(1) require that a post-surgical assessment be completed by a physician, or other qualified practitioner, or a registered nurse with, at a minimum, post-operative care experience in accordance with applicable state health and safety laws, standards of practice, and ASC policy. The other discharge condition, at § 416.42(a)(2), also finalized in the November 18, 2008 final rule, allows anesthesiologists, in addition to physicians, to evaluate each patient for proper anesthesia recovery. The requirement at

§ 416.42(a)(1) requires a physician to examine the patient immediately before surgery to evaluate the risk of anesthesia and the procedure to be performed.

Through various inquiries from ASCs and communication with CMS by industry associations, we have received many requests to align the anesthetic risk and pre-surgery evaluation standard at § 416.42(a)(1) with the pre-discharge standard at § 416.42(a)(2) by allowing an anesthetist, in addition to a physician, to examine the patient immediately before surgery to evaluate the risk of anesthesia and the risk of the procedure. For those ASCs that utilize non-physician anesthetists, also known as certified registered nurse anesthetists (CRNAs), this revision would allow them to perform the anesthetic risk and evaluation on the patient they are anesthetizing for the procedure to be performed by the physician. CRNAs are advanced practice registered nurses who administer more than 43 million anesthetics to patients each year in the United States. CRNAs are Medicare Part B providers and since 1989, have billed Medicare directly for 100 percent of the PFS amount for services. CRNAs provide anesthesia for a wide variety of surgical cases and in some states are the sole anesthesia providers in most rural hospitals. A study published by Nursing Economic\$ in May/June 2010, found that CRNAs acting as the sole anesthesia provider are the most cost-effective model for anesthesia delivery, and there is no measureable difference in the quality of care between CRNAs and other anesthesia providers or by anesthesia delivery model.¹⁰⁵ We believe this alignment provides for continuity of care for the patient and allows the patient's anesthesia professional to have familiarity with the patient's health characteristics and medical history.

b. Provisions

We proposed to revise § 416.42(a), Surgical services, to allow either a physician or an anesthetist, as defined at § 410.69(b), to examine the patient immediately before surgery to evaluate the risk of anesthesia and the risk of the procedure to be performed. By amending the CfCs to allow an anesthetist or a physician to examine and evaluate the patient before surgery for anesthesia risk and the planned procedure risk, we will be allowing ASC patient evaluations to be more consistent by using the option for the same clinician to complete both pre-

and post-procedure anesthesia evaluations.

This change is a continuation of our efforts to reduce regulatory burden. It will increase supplier flexibility and reduce burden, while allowing qualified clinicians to focus on providing high-quality healthcare to their patients. We also requested comments and suggestions for other ASC requirements that could be revised to allow greater flexibility in the use of NPPs, and reduce burden while maintaining high quality health care.

We received approximately 4,000 public comments on the proposed ASC requirements to allow CRNAs to perform pre-surgical patient evaluations and other potential revisions that could allow greater flexibility in the use of NPPs, and reduce burden while maintaining high quality health care. Commenters included healthcare industry associations, clinician associations, individual ASCs and clinicians, and the vast majority of comments were form letters. The following is a summary of the comments we received and our responses.

Comment: The comments addressing the proposed regulatory change to allow either a physician or an anesthetist to examine the patient immediately before surgery to evaluate the risk of anesthesia and of the procedure to be performed were split between support and opposition. However, the majority of commenters supported the change to allow anesthetists, in addition to physicians, to evaluate patients before surgery for anesthesia risk. The commenters supporting the proposed option for an anesthetist noted the change would reduce burden, reduce healthcare costs, align the pre-surgical anesthetic evaluation with the post-surgical evaluation standard, and better enable the patient's anesthesia professional to have familiarity with the patient's health characteristics and medical history. The commenters noted that in many facilities, CRNAs may be the only anesthesia providers. In addition, the support comments were predominantly silent in addressing the risk evaluation of the planned surgical procedure. The commenters that opposed the addition of an anesthetist stated they believe it would jeopardize the safety of patients, that only physicians possess the medical background to assess the patient in an objective, evidence-based and patient-centric way, and that nurse anesthetist training is limited to anesthesia care delivery, not risk assessment, diagnosis, or medical decision making outside the scope of an anesthetic.

Other commenters agreed with the proposed change to allow an anesthetist to complete the pre-surgical evaluation to align the pre and post-surgical evaluation standards and further suggested modifications to the proposed regulation text to clarify the roles of the anesthetist and the physician in the pre-surgical evaluation standard. They suggested a modification to the text that would clarify the anesthesia provider pre-surgical anesthesia evaluation responsibilities and the pre-surgical evaluation by the physician to determine the patient's capability to undergo the procedure safely.

Response: Based on the comments we received, it seems commenters are addressing two specific, separate patient risk evaluations in the proposed § 416.42(a)(1). The majority of commenters agreed with the proposed change to allow anesthetists the ability to conduct the pre-surgical anesthesia risk evaluation. The commenters who opposed the change stated that the evaluation of the patient's ability to tolerate the overall procedure should remain with the physician, and we also agree. We believe it is beneficial and appropriate to clarify in regulation text the separate evaluations and who must be responsible for them. The commenters supporting the proposed change primarily address the anesthetists' ability to perform the anesthesia risk pre-surgical assessment, aligning with the post-surgical anesthesia evaluation required by regulations that currently allow a physician or an anesthetist as defined at § 410.69(b). Additional evidence regarding anesthesia safety was published in an August 2010 research study in *Health Affairs* that reported findings showing no differences in patient outcomes when anesthesia services are provided by CRNAs, physicians, or CRNAs supervised by physicians.¹⁰⁶ Two additional research articles, studying anesthesia complications and safety, also found no differences in care between nurse anesthetists and physician anesthesiologists.^{107 108}

¹⁰⁵ Paul F. Hogan et. al, "Cost Effectiveness Analysis of Anesthesia Providers." *Nursing Economic\$*. 2010; 28:159-169.

We believe the physician is the appropriate practitioner to perform the clinical assessment for the overall procedure, taking into account underlying patient comorbidities and all aspects of the surgical procedure to be performed to ensure a successful and optimal outcome of the planned procedure in an ASC setting. The physician or anesthesiologist, in tandem with the physician evaluating the procedure to be performed, would be evaluating the risk of anesthesia and the ability for the patient to tolerate the planned level of anesthesia.

Based on comments we received, we are modifying the proposed change at § 416.42(a)(1) to clarify that there are two components to any pre-procedure evaluation and require that, immediately before surgery, a physician must examine the patient to evaluate the risk of the procedure to be performed, and a physician or anesthesiologist must examine the patient to evaluate the risk of anesthesia. A physician may perform both parts of the pre-procedure evaluation. As noted in the proposed rule, we believe this change to the pre-surgical patient anesthetic risk evaluation provides alignment within the regulations, continuity of care for the patient, and better ensures the patient's anesthesia professional's familiarity with the patient's health characteristics and medical history. It will also reduce burden on ASCs by allowing additional members of the medical team to conduct pre-surgical anesthesia evaluations.

2. Hospice

a. Background

Hospice care is a comprehensive, holistic approach to treatment that recognizes the impending death of a terminally ill individual, and warrants a change in the focus from curative care to palliative care for relief of pain and for symptom management. Medicare regulations define "palliative care" as patient and family centered care that optimizes quality of life by anticipating, preventing, and treating suffering. Palliative care throughout the continuum of illness involves addressing physical, intellectual, emotional, social, and spiritual needs and to facilitate patient autonomy, access to information, and choice (42 CFR 418.3). The goal of hospice care is to help terminally ill individuals continue life with minimal disruption to normal activities while remaining primarily in the home environment. A hospice uses an interdisciplinary

approach to deliver medical, nursing, social, psychological, emotional, and spiritual services through a collaboration of professionals and other caregivers, with the goal of making the beneficiary as physically and emotionally comfortable as possible. The hospice interdisciplinary group works with the patient, family, caregivers, and the patient's attending physician (if any) to develop a coordinated, comprehensive care plan; reduce unnecessary diagnostics or ineffective therapies; and maintain ongoing communication with individuals and their families and caregivers about changes in their condition. The care plan will shift over time to meet the changing needs of the patient, family, and caregiver(s) as the patient approaches the end of life.

The regulations for Medicare and Medicaid participating hospices are set forth at 42 CFR part 418. Section 418.3 defines the term "attending physician" as being a doctor of medicine or osteopathy, an NP, or a PA in accordance with the statutory definition of an attending physician at section 1861(dd)(3)(B) of the Act. Section 51006 of the Bipartisan Budget Act of 2018 revised the statute to add PAs to the statutory definition of the hospice attending physician for services furnished on or after January 1, 2019. As a result, PAs were added to the definition of a hospice attending physician as part of the "Medicare Program; FY 2019 Hospice Wage Index and Payment Rate Update and Hospice Quality Reporting Requirements" final rule which was published in the August 6, 2018 **Federal Register** (83 FR 38622, 38634) (hereinafter referred to as the "FY 2019 Hospice final rule".)

The role of the patient's attending physician, if the patient has one, is to provide a longitudinal perspective on the patient's course of illness, care preferences, psychosocial dynamics, and generally assist in assuring continuity of care as the patient moves from the traditional curative care model to hospice's palliative care model. The attending physician is not meant to be a person offered by, selected by, or appointed by the hospice when the patient elects to receive hospice care. Section 418.64(a) of the hospice regulations requires the hospice to provide physician services to meet the patient's hospice-related needs and all other care needs to the extent that those needs are not met by the patient's attending physician. Thus, if a patient does not have an attending physician relationship prior to electing hospice care, or if the patient's attending physician chooses to not participate in

the patient's care after the patient elects to receive hospice care, then the hospice is already well-suited to provide physician care to meet all of the patient's needs as part of the Medicare hospice benefit. If the patient has an attending physician relationship prior to electing hospice care and that attending physician chooses to continue to be involved in the patient's care during the period of time when hospice care is provided, the role of the attending physician is to consult with the hospice interdisciplinary group (also known as the interdisciplinary team) as described in § 418.56, and to furnish care for conditions determined by the hospice interdisciplinary group to be unrelated to the terminal prognosis. The hospice interdisciplinary group must include the following members of the hospice's staff: A physician; a nurse; a social worker; and a counselor. The interdisciplinary group may also include other members based on the specific services that the patient receives, such as hospice aides and speech language pathologists. The hospice interdisciplinary group, as a whole, in consultation with the patient's attending physician (if any), the patient, and the patient's family and caregivers, are responsible for determining the course of the patient's hospice care and establishing the individualized plan of care for the patient that is used to guide the delivery of holistic hospice services and interventions, both medical and non-medical in nature.

b. Provisions

In the role of a consultant to the hospice interdisciplinary group, the hospice patient's chosen attending physician may, at times, write orders for services and medications as they relate to treating conditions determined to be unrelated to the patient's terminal prognosis. The law allows for circumstances in which services needed by a hospice beneficiary would be completely unrelated to the terminal prognosis, but we believe that this situation would be the rare exception rather than the norm. Section 418.56(e) requires hospices to coordinate care with other providers who are also furnishing care to the hospice patient, including the patient's attending physician who is providing care for conditions determined by the hospice interdisciplinary group to be unrelated to the patient's terminal prognosis. As part of this coordination of care, it is possible that hospices may receive orders from the attending physician for drugs that are unrelated to the patient's terminal prognosis.

The FY 2019 Hospice final rule amended the regulatory definition of “attending physician,” as required by the statute, to include “physician assistant.” Following publication of the FY 2019 Hospice final rule, stakeholders raised concerns regarding the requirements of § 418.106(b). As currently written, hospices may not accept orders for drugs from attending physicians who are PAs because § 418.106(b) specifies that hospices may accept drug orders from physicians and NPs only. This regulatory requirement may impede proper care coordination between hospices and attending physicians who are PAs, and we believe that it should be revised.

Therefore, we proposed to revise § 418.106(b)(1) to permit a hospice to accept drug orders from a physician, NP, or PA. We proposed that the PA must be an individual acting within his or her state scope of practice requirements and hospice policy. We also proposed that the PA must be the patient’s attending physician, and that he or she may not have an employment or contractual arrangement with the hospice. The role of physicians and NPs as hospice employees and contractors is clearly defined in the hospice CoPs; however, the CoPs do not address the role of PAs because the statute does not include PA services as being part of the Medicare hospice benefit. Therefore, we believe that it is necessary to limit the hospice CoPs to accepting only those orders from PAs that are generated outside of the hospice’s operations.

To more fully understand the current and future role of NPPs, including PAs, in hospice care and the hospice CoPs, we requested public comment on the following questions:

- What is the role of a NPP in delivering safe and effective hospice care to patients? What duties should they perform? What is their role within the hospice interdisciplinary group and how is it distinct from the role of the physician, nurse, social work, and counseling members of the group?
- Nursing services are a required core service within the Hospice benefit, as provided in section 1861(dd)(B)(i) of the Act, which resulted in the defined role for NPs in the Hospice COPs. Should other NPPs also be considered core services on par with NP services? If not, how should other NPP services be classified?
- In light of diverse existing state supervision requirements, how should NPP services be supervised? Should this responsibility be part of the role of the hospice medical director or other physicians employed by or under contract with the hospice? What

constitutes adequate supervision, particularly when the NPP and supervising physician are located in different offices, such as hospice multiple locations?

- What requirements and timeframes currently exist at the state level for physician co-signatures of NPP orders? Are these existing requirements appropriate for the hospice clinical record? If not, what requirements are appropriate for the hospice clinical record?

- What are the essential personnel requirements for PAs and other NPPs?

We received public comments on the proposed regulatory change to allow hospices to accept medication orders from PAs who are attending physicians as chosen by the patient that do not have an employment or contractual relationship with the hospice. We also received information in response to our solicitation for public comments regarding the current and future role of NPPs, including PAs, in hospice care and the hospice CoPs. The following is a summary of the comments we received and our responses.

Comment: All comments regarding the proposed regulatory change to allow hospices to accept medication orders from PAs who are attending physicians as chosen by the patient that do not have an employment or contractual relationship with the hospice noted support for allowing hospice to accept drug orders from such PAs. Some commenters suggested that hospices should be allowed to accept orders from PAs employed by or under arrangement with the hospice.

Response: We agree with the commenters that this proposed change is appropriate to assure care coordination between attending physicians who are PAs and hospices, and we are finalizing the proposal without change. We do not agree that PAs employed by or under arrangement with the hospice should be included in this rule, as such piecemeal inclusion without complimentary regulations to establish the scope of PA services in hospices may create patient safety and program vulnerabilities. It is clear from the comments that a notable portion of the physician assistant and hospice communities view the role of the physician assistant as an acceptable substitute for hospice physicians, which is not in accordance with current statutory provisions. We believe that this disconnect between public perception of the role of the PA and the requirements of the statute necessitates rulemaking to clearly set forth what is and is not permissible. We will consider this suggestion for future rulemaking.

Comment: A few commenters disagreed with the idea that attending physicians who are physician assistants should be limited to prescribing only those medications or therapies that are not related to the terminal prognosis.

Response: We did not propose, nor are we finalizing, any such limitations. Attending physicians, regardless of their qualifications, are consultants to the hospice interdisciplinary group. It is the hospice interdisciplinary group, comprised of, at minimum, a physician, nurse, social worker, and counselor in accordance with the requirements set forth in section 1861(dd)(2)(B)(i) of the Act, that is responsible for determining the content of the patient’s hospice plan of care and issuing all necessary orders to implement that plan of care. Given that: (1) Each interdisciplinary group contains, at minimum, a physician member employed by or under arrangement with the hospice actively involved in the patient’s care at all times, (2) hospice physician services must be available at all times, and (3) the physician member has the authority to write all orders necessary to implement the plan of care, the need for an attending physician outside of the hospice to write orders related to implementing the hospice plan of care should be rare.

Comment: The majority of the commenters submitted information regarding the current and future role of NPPs, including PAs and advanced practice registered nurses (APRNs), in hospice care and the hospice CoPs.

Response: We thank the commenters for sharing this information, and will take it into consideration when developing all future hospice CoPs related to the role of NPPs.

Comment: One commenter posed the following question: There are a number of PAs in palliative care that are employed or under contract with the parent company that also operates the hospice. Would CMS consider these PAs to be an employee of the hospice if everyone operates under the same tax identification number?

Response: Section 418.3, Definitions, of the hospice CoPs defines an employee as a person who: (1) Works for the hospice and for whom the hospice is required to issue a W-2 form on his or her behalf; (2) if the hospice is a subdivision of an agency or organization, an employee of the agency or organization who is assigned to the hospice; or (3) is a volunteer under the jurisdiction of the hospice. If a PA is assigned by the “parent company” to the hospice, then the PA is considered to be an “employee” of the hospice.

Comment: Some commenters made suggestions related to hospice payment requirements, CMS manuals, and statutory requirements that are not within the scope of our proposal to revise the hospice CoPs or within our regulatory authority.

Response: We have shared these out of scope comments with the appropriate CMS stakeholders.

In accordance with public comments, we are finalizing the change at § 418.106(b)(1) as proposed.

J. Advisory Opinions on the Application of the Physician Self-Referral Law

1. Statutory and Regulatory Background

Section 4314 of the Balanced Budget Act of 1997 (Pub. L. 105–33, enacted August 5, 1997), added section 1877(g)(6) to the Act. Section 1877(g)(6) of the Act requires the Secretary to issue written advisory opinions concerning whether a referral relating to designated health services (other than clinical laboratory services) is prohibited under section 1877 of the Act. On January 9, 1998, the Secretary issued a final rule with comment period in the **Federal Register** to implement and interpret section 1877(g)(6) of the Act (the 1998 advisory opinion rule). (See Medicare Program; Physicians' Referrals; Issuance of Advisory Opinions (63 FR 1646).) The regulations are codified in §§ 411.370 through 411.389 (the physician self-referral advisory opinion regulations).

Section 1877(g)(6)(A) of the Act states that each advisory opinion issued by the Secretary shall be binding as to the Secretary and the party or parties requesting the opinion. Section 1877(g)(6)(B) of the Act requires the Secretary, in issuing advisory opinions regarding the physician self-referral law, to apply the rules in paragraphs (b)(3) and (4) of section 1128D of the Act, to the extent practicable. This paragraph also requires the Secretary to take into account the regulations promulgated under paragraph (b)(5) of section 1128D of the Act.

Section 1128D of the Act was added to the statute by section 205 of the Health Insurance Portability and Accountability Act of 1996 (HIPAA) (Pub. L. 104–191, effective August 21, 1996). Among other things, section 1128D of the Act requires the Secretary, in consultation with the Attorney General, to issue written advisory opinions as to specified matters related to the anti-kickback statute in section 1128B(b) of the Act, the safe harbor provisions in § 1001.952, and other provisions of the Act under the authority of the Office of Inspector

General (OIG). To implement and interpret section 1128D of the Act, OIG issued an interim final rule with comment period in the February 19, 1997 **Federal Register** entitled Medicare and State Health Care Programs: Fraud and Abuse; Issuance of Advisory Opinions by the OIG (62 FR 7350), revised and clarified its regulations in the July 16, 1998 **Federal Register** (68 FR 38311), and updated its regulations in a final rule published in the July 17, 2008 **Federal Register** that solely revised certain procedural requirements for submitting payments for advisory opinion costs (73 FR 40982) (collectively, the OIG advisory opinion rule). The regulations are codified in part 1008 of this title of the Code of Federal Regulations (the OIG advisory opinion regulations).

Section 1128D(b)(3) of the Act prohibits the Secretary from addressing in an advisory opinion whether: (1) Fair market value shall be or was paid or received for any goods, services, or property; or (2) an individual is a *bona fide* employee within the requirements of section 3121(d)(2) of the Internal Revenue Code of 1986. In the 1998 advisory opinion rule, we incorporated these provisions into the physician self-referral law regulations (63 FR 1646). Section 1128D(b)(4)(A) of the Act states that an advisory opinion related to OIG authorities is binding as to the Secretary and the party or parties requesting the opinion. This section is redundant of the provision in section 1877(g)(6)(A) of the Act, and therefore, not incorporated into the physician self-referral law advisory opinion regulations. Section 1128D(b)(4)(B) of the Act provides that the failure of a party to seek an advisory opinion may not be introduced into evidence to prove that the party intended to violate the provisions of sections 1128, 1128A, or 1128B of the Act. We incorporated section 1128D(b)(4)(B) of the Act in the physician self-referral regulations at § 411.388.

As discussed previously, section 1877(g)(6)(B) of the Act requires the Secretary, to the extent practicable, to take into account the regulations issued under the authority of section 1128D(b)(5) of the Act (that is, the OIG advisory opinion regulations). Section 1128D(b)(5)(A) of the Act requires that the OIG advisory opinion regulations must provide for: (1) The procedure to be followed by a party applying for an advisory opinion; (2) the procedure to be followed by the Secretary in responding to a request for an advisory opinion; (3) the interval in which the Secretary will respond; (4) the reasonable fee to be charged to the party

requesting an advisory opinion; and (5) the manner in which advisory opinions will be made available to the public. We interpret the Congress' directive to take into account the OIG regulations to mean that we should use the OIG regulations as our model, but that we are not bound to follow them (63 FR 1647). Nonetheless, in the 1998 advisory opinion rule, we largely adopted OIG's approach to issuing advisory opinions, stating that we intend for physician self-referral law advisory opinions to provide the public with meaningful advice regarding whether, based on specific facts, a physician's referral for a designated health service (other than a clinical laboratory service) is prohibited under section 1877 of the Act (63 FR 1648).

2. Revisions to the 1998 Advisory Opinion Process and Regulations

In the June 25, 2018 **Federal Register**, we published a Request for Information Regarding the Physician Self-Referral Law (83 FR 29524) (June 2018 CMS RFI) that sought recommendations from the public on how to address any undue impact and burden of the physician self-referral statute and regulations. Although we did not specifically request comments on the physician self-referral advisory opinion regulations, we received a number of comments urging that CMS reconsider its approach to advisory opinions and transform the process such that the regulated industry may obtain expeditious guidance on whether a physician's referrals to an entity with which he or she has a financial relationship would be prohibited under section 1877 of the Act. These commenters stated their belief that the current advisory opinion process could be improved. Some commenters also stated that the process is too restrictive, noting that CMS has placed what the commenters see as unreasonable limits on the types of questions that qualify for an advisory opinion (for example, CMS will not issue an advisory opinion where the arrangement at issue is hypothetical and does not issue advisory opinions on general questions of interpretation), and that physician self-referral law advisory opinions apply only to the specific circumstances of the requestor. These commenters asserted that the OIG's advisory opinion process, upon which the physician self-referral law advisory opinion process is modeled, is inappropriate as applied to a payment statute, noting that OIG opines on matters related to a felony criminal statute, whereas the physician self-referral law, by contrast, is a payment rule without a *mens rea* requirement.

Some commenters highlighted the complexity of the physician self-referral regulations, the strict liability nature of the physician self-referral law, and the need for certainty before arrangements are initiated and claims submitted as reasons why an advisory opinion process related to a felony criminal statute is inappropriate for the physician self-referral law. Other commenters asserted that the process is arduous and inefficient. These commenters noted that the advisory opinion process can extend beyond the 90-day timeframe provided for at § 411.380 and asserted that it lags behind the OIG process in terms of efficiency.

In designing its advisory opinion process, OIG stated that it carefully balanced stakeholders' desire for an accessible process and meaningful and informed opinions with its need to closely scrutinize arrangements to insure that requesting parties are not inappropriately granted protection from sanctions. (63 FR 38312 through 38313). We appreciate that there are important differences between the physician self-referral law, a strict liability statute designed to prevent payment for services where referrals are affected by inherent financial conflicts of interest, and the anti-kickback statute, which is a criminal law designed to prosecute intentional acts of fraud and abuse.

More than 20 years have passed since the 1998 advisory opinion regulations were issued. In those 20 years, we issued 31 advisory opinions,¹⁰⁹ 15 of which addressed the 18-month moratorium on physician self-referrals to specialty hospitals in which they have an ownership or investment interest. In light of the comments received on the RFI, we undertook a fresh review of the 1998 advisory opinion process. We agree that it is important to have an accessible process that produces meaningful opinions on the applicability of section 1877 of the Act, especially in light of the perceived complexity of the physician self-referral regulations, including the requirements of the various exceptions and the key terminology applicable to many of the exceptions. We recognize that our current advisory opinion process has not been widely utilized by stakeholders and has resulted in few opinions being issued to date. Accordingly, we reviewed our advisory opinion regulations in an effort to identify

limitations and restrictions that may be unnecessarily serving as an obstacle to a more robust advisory opinion process.

Failure to satisfy the requirements of an exception to the physician self-referral law carries significant consequences, regardless of a party's intent.¹¹⁰ The safe harbors under the anti-kickback statute are voluntary, and the failure of an arrangement to fit squarely within a safe harbor does not *automatically* mean that the arrangement violates the anti-kickback statute. By contrast, the physician self-referral law prohibits a physician's referral if there is a financial relationship that does not satisfy the requirements of one of the enumerated exceptions. In other words, the physician self-referral law is a strict liability law, and parties that act in good faith may nonetheless face significant financial exposure if they misunderstand or misapply the law's exceptions.

Regulated parties' desire for certainty must be balanced with CMS' interest in maintaining the integrity of the advisory opinion process, and ensuring that it is not used to inappropriately shield improper financial arrangements. We believe that the risk of such misuse is acceptably low in this context because the advisory opinion authority at section 1877(g) of the Act is narrowly tailored. CMS can only issue favorable advisory opinions for arrangements that do not violate section 1877 of the Act, for example, because there is no referral for designated health services, there is no financial relationship, or the arrangement satisfies the requirements of an applicable exception. In contrast, OIG has issued favorable advisory opinions for arrangements that do not fit within a safe harbor where it has concluded, based on a totality of the facts and circumstances, that the arrangement poses a sufficiently low risk of fraud and abuse under the anti-kickback statute. CMS cannot similarly extend protection beyond the exceptions, so there is a structural limit on the scope of CMS' authority. Furthermore, a favorable advisory opinion from CMS does not immunize parties from liability under the anti-kickback statute.

We proposed changes that would both clarify the process and remove

limitations and restrictions that might be unnecessarily serving as obstacles to a more robust advisory opinion process.

a. General

Comment: Commenters overwhelmingly supported the proposed modifications to the advisory opinion regulations, and many stated that the modifications, if finalized, would facilitate better understanding of how to comply with the law and help parties to nonabusive arrangements avoid the strict penalties that result from noncompliance. Some commenters stated that the proposed modifications to the advisory opinion process, if finalized, would assist in advancing innovation in care delivery by encouraging greater participation in value-based care and alternative payment arrangements. Several commenters agreed that the advisory opinion process for the physician self-referral law, a strict liability law, should not be identical to the advisory opinion process for the anti-kickback statute, a criminal law. Commenters expressed their hope that CMS would publish more advisory opinions in the future.

Response: We appreciate the commenters' support for our efforts to reform the advisory opinion process. We agree that a well-functioning advisory opinion process could aid in advancing two of the Department's top priorities—reducing regulatory burden on providers and encouraging adoption of alternative payment models and coordinated care arrangements. A faster and more robust advisory opinion process facilitates the shift to value-based care arrangements by providing more guidance for parties trying to understand how the physician self-referral law applies in an evolving and innovative marketplace. This will help to reduce provider burden by providing insight into what does and does not comply with the law, which encourages innovation.

Comment: Several commenters who were generally supportive of the proposed modifications to the advisory opinion process also stated that changes to the 1998 advisory opinion rule should not further develop or create additional abusive self-referring arrangements.

Response: This final rule does not change the number or scope of exceptions from the physician self-referral prohibition. This final rule merely updates the process for issuing advisory opinions on whether certain fact patterns would result in a prohibited referral. Under the advisory opinion process, requestors must provide, among other information, sufficient detail about the arrangement

¹⁰⁹ These advisory opinions are available on CMS' website, at <https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/advisoryopinions.html>. This number does not include advisory opinion requests that were withdrawn.

¹¹⁰ The CMS Voluntary Self-Referral Disclosure Protocol (SRDP) allows providers of services and suppliers to self-disclose actual or potential violations of the physician self-referral statute. Under the SRDP, CMS may reduce the amount due and owing for violations of section 1877 of the Act. Information about the SRDP can be found at <https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/Downloads/CMS-Voluntary-Self-Referral-Disclosure-Protocol.pdf>.

and the named parties to the arrangement in its submission. The advisory opinion process involves communication with the requestor to ensure CMS has a clear understanding of the arrangement under review and the parties involved. We believe that the regulations governing the advisory opinion process contain sufficient guardrails to limit the risk of improper use of the advisory opinion process.

b. Matters Subject to Advisory Opinions (§ 411.370)

Section 1877(g)(6) of the Act requires the Secretary to issue advisory opinions concerning “whether a referral relating to designated health services (other than clinical laboratory services) is prohibited under this section.” In accordance with section 1877(g)(6)(B) of the Act, CMS adopted in regulation rules mirroring the requirements in paragraphs (b)(3) and (4) of section 1128D of the Act, which prohibit OIG from opining on whether an arrangement is fair market value and whether an individual is a *bona fide* employee within the requirements of section 3121(d)(2) of the Internal Revenue Code. In addition to these restrictions on matters that are not subject to advisory opinions, our current regulation at § 411.370(b)(1) states that CMS does not consider, for purposes of an advisory opinion, requests that present a general question of interpretation, pose a hypothetical situation, or involve the activities of third parties. When explaining this regulation, we stated that we interpret section 1877(g)(6) of the Act to allow for opinions on specific referrals involving physicians in specific situations (63 FR 1649). We also noted our reasons for avoiding opinions on generalized arrangements, stating that it would not be possible for an advisory opinion to reliably identify all the possible hypothetical factors that might lead to different results.

(i) Requests That Present a General Question of Interpretation or Pose a Hypothetical Situation

Under our current regulations, we accept requests for advisory opinions that involve existing arrangements, as well as requests that involve arrangements into which the requestor plans to enter. While we did not propose an expansion of the scope of advisory opinion requests, we solicited comments on whether we should do so in the future. We proposed clarifications to § 411.370(b) regarding matters that qualify for advisory opinions and the parties that may request them. Specifically, we proposed to clarify that

the request for an advisory opinion must “relate to” (rather than “involve”) an existing arrangement or one into which the requestor, in good faith, specifically plans to enter. Requestors continue to be obligated to disclose all facts relevant to the arrangement for which an advisory opinion is sought. We also proposed revisions to the regulation text for grammatical purposes.

The following is a summary of the comments we received on the above proposals and our responses.

Comment: Commenters generally supported the clarification that an advisory opinion request must “relate to,” rather than “involve,” an arrangement that is existing or into which the requestor plans to enter, although at least one commenter suggested that CMS not finalize this proposed clarification, based on the perception that it will not serve to decrease the volume of information that requestors will need to provide to CMS.

Response: We are finalizing the proposal to consider questions that “relate to” existing or planned arrangements. The modification is intended to provide further clarity on existing physician self-referral law advisory opinion policy. It is not intended to lessen the volume of information submitted, nor expand the scope of the advisory opinion process, but rather, to more precisely capture the appropriate scope of advisory opinion requests. As discussed further below, we will consider all complete requests that relate to either an existing or planned arrangement (that is, requests that describe a specific arrangement with sufficient detail).

Comment: A number of commenters urged CMS to further expand the matters subject to advisory opinions to include requests that present a general question of interpretation or pose a hypothetical situation. These commenters suggested that this would provide needed clarification for providers, would help reduce confusion around compliance with the physician self-referral law, and would help reduce the administrative burden of compliance, especially for small and rural providers. Several of these commenters wanted the flexibility to request an advisory opinion before spending the significant time and resources required to draft and formalize proposed arrangements. Others cited concerns that if they wait to seek an advisory opinion until after an arrangement is in place, they risk being found to be out of compliance and could face penalties.

Many commenters also acknowledged CMS’ concern that expanding advisory

opinions to cover hypothetical arrangements or general questions of interpretation could significantly increase the volume of advisory opinion requests. However, these commenters suggested that CMS could institute guardrails to ensure only legitimate and complete requests are entering into the process, such as imposing additional fee requirements, or using improved technology and intake processes for requests.

One commenter stated that CMS should not reject an advisory opinion request on the grounds that it poses only a “general question of interpretation,” especially since the requestor has no opportunity to rebut CMS’ determination. This commenter stated that the distinction between planned arrangements and general matters of interpretation is abstract and favors form over substance, and urged that the “general question of interpretation” restriction be deleted. This commenter also stated that the proposed rule’s requirement for requestors to describe arrangements in a sufficient level of detail would provide a meaningful safeguard against misuse of the advisory opinion process.

Response: We continue to believe that the Secretary’s obligation under section 1877(g)(6) of the Act to issue advisory opinions concerning whether a referral relating to designated health services is prohibited under this section limits the subject of advisory opinions to questions about a specific referral made by a physician in a specific financial relationship under specific facts and circumstances. It remains our position that requests regarding hypothetical facts or general questions of interpretation are not appropriate for an advisory opinion. Further, although we proposed a number of changes to improve the advisory opinion process for stakeholders, we believe that expanding the process to include such questions could overwhelm the agency. As such, we are not expanding the scope of the advisory opinion process to include hypothetical arrangements or general questions of interpretation.

However, based on comments received, we have reviewed the regulation’s current terminology of a request “present[ing] a general question of interpretation” or “pos[ing] a hypothetical situation,” and acknowledge that these terms may lack sufficient clarity. Based on the comments received, there appears to be some confusion over how CMS distinguishes a planned arrangement—that is, a specific arrangement that does not yet exist but the requestor in good faith plans to enter—from a hypothetical

fact pattern or question of general interpretation. Therefore, we are removing this terminology at 11.370(b)(1).

We accept and issue advisory opinions that relate to existing arrangements or arrangements into which the requestor intends to enter if it receives a favorable advisory opinion. To issue an advisory opinion, the requestor must provide, among other information, sufficient detail about the arrangement and the parties to the arrangement, including identifying information about one or both of the parties to the arrangement. Thus, the universe of acceptable advisory opinions would not include requests for guidance that interprets the physician self-referral law generally, such as whether generic noncompete provisions take into account the volume or value of a physician's referrals. Nor would the universe include a request to opine, in the abstract, whether a variety of compensation methodologies take into account the volume or value of referrals. Although we do not consider an arrangement to be a per se hypothetical matter simply because the parties have not yet entered into the arrangement, there are some matters that would be inappropriate for advisory opinions. These include requests for an advisory opinion regarding whether a physician's referral is prohibited under section 1877 of the Act where the underlying financial arrangement between the physician and the entity to which he or she refers designated health services is otherwise illegal or impermissible. For example, we would not accept a request for an advisory opinion regarding whether a referral is permissible if the claim for the designated health services could not be billed to the Medicare program for some reason unrelated to the physician self-referral law. We have made modifications to § 411.370(e) to reflect this view.

We also appreciate the compliance burden on physicians and DHS entities subject to the physician self-referral law, as well as the significant consequences of noncompliance, and we acknowledge the desire for more timely guidance. Therefore, we are considering available means to provide general guidance and compliance advice outside of the advisory opinion process. Several commenters suggested that CMS issue more subregulatory guidance to provide greater clarity around the physician self-referral law and regulations. While subregulatory guidance must always be carefully constructed so as not to impose new obligations on regulated parties, CMS will explore opportunities to provide additional, appropriate

guidance through subregulatory means. As we noted in the proposed rule, we respond to questions pertaining to the physician self-referral law through the CMS Physician Self-Referral Call Center email inbox, and frequently assists parties with identifying relevant guidance. The CMS Physician Self-Referral Call Center resource is free to the public, and inquiries may be sent to 1877CallCenter@cms.hhs.gov. For additional information, see <https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/CallCenter.html>. We also respond to frequently asked questions (FAQs) regarding the physician self-referral law from time to time. FAQs issued to date are available on our website at <https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/FAQs.html>.

For these reasons, we are finalizing our proposed changes to § 411.370(b), with the modifications as described above. In response to commenters' desire for greater clarity around the types of requests that CMS will reject, we are also adding a new paragraph § 411.370(e)(1)(v) to clarify that CMS would decline to accept an advisory opinion request that involves a course of conduct that is not legally permissible for reasons other than section 1877 of the Act.

(ii) Acceptance of Requests

Current § 411.370(e) states that CMS does not accept an advisory opinion request or issue an advisory opinion if: (1) The request is not related to a named individual or entity; (2) CMS is aware that the same or substantially the same course of action is under investigation or is or has been the subject of a proceeding involving HHS or another governmental agency; or (3) CMS believes that it cannot make an informed opinion or could only make an informed opinion after extensive investigation, clinical study, testing, or collateral inquiry. We proposed changes to this regulation. First, we proposed to add to the reasons that CMS will not accept an advisory opinion request or issue an advisory opinion. Specifically, we proposed that CMS will not accept an advisory opinion request or not issue an advisory opinion with respect to a request that does not describe the arrangement at issue with a level of detail sufficient for CMS to issue an opinion, and the requestor does not timely respond to CMS requests for additional information. We believe that this is important to the agency's ability to focus its resources on complete requests.

Second, we proposed to amend current § 411.370(e)(2), which states that CMS will not issue an advisory opinion if it is aware that the same, or substantially the same, course of action is under investigation or is or has been the subject of a proceeding involving HHS or other government entities. Although CMS consults with other HHS components and governmental agencies, including OIG and DOJ, on pending advisory opinion requests, we believe the current regulation is too restrictive, and unnecessarily limits CMS' flexibility to issue timely guidance to requestors engaged in or considering legitimate business arrangements. Therefore, we proposed to modify § 411.370(e)(2) to allow CMS more discretion to determine, in consultation with OIG and DOJ, whether acceptance of the advisory opinion request or issuance of the advisory opinion is appropriate. Specifically, we proposed at § 411.370(e)(2) that CMS may elect not to accept an advisory opinion request or issue an advisory opinion if, after consultation with OIG and DOJ, it determines that the course of action described in the request is substantially similar to conduct that is under investigation or the subject of a proceeding involving the Department or other law enforcement agencies, and that issuing an advisory opinion could interfere with the investigation or proceeding. We proposed to retain at renumbered § 411.370(e)(1)(iii) the restriction on accepting requests if CMS is aware that the same course of action is under investigation or is, or has been the subject of a proceeding involving the Department or another governmental agency. We also proposed to clarify that CMS would consult with OIG and DOJ regarding investigations or proceedings involving the same course of conduct described in an advisory opinion request.

We received public comments on these proposals. The following is a summary of the comments we received on the above proposals and our responses.

Comment: Commenters were generally supportive of the requirement that requests must contain a level of detail sufficient to permit CMS to issue an informed opinion, and that it would be appropriate to reject a request if the requestor did not timely respond to CMS' request for additional information. Several commenters opined that this safeguard will protect against inappropriate use of the advisory opinion process.

Response: We agree that this safeguard is necessary to protect the integrity of the advisory opinion process

and to ensure that CMS is focusing its resources on requests that provide sufficient detail to allow CMS to make an informed decision.

Comment: Several commenters agreed with CMS' current policy of rejecting advisory opinion requests where the same course of action described in the request is the subject of an investigation or proceeding.

Response: We are maintaining this current policy set forth at § 411.370(e)(1)(iii).

Comment: Commenters supported the proposed modifications to § 411.370(e) that would give CMS more flexibility with respect to requests involving conduct that is substantially similar to conduct that is under investigation or is the subject of a law enforcement proceeding. Several commenters stated that the current restriction at § 411.370(e)(2) unnecessarily limits CMS' ability to issue timely guidance to requestors engaged in or planning to enter into legitimate business arrangements. Several commenters urged CMS to reject such requests only where the issuance of an advisory opinion could have a direct effect on an investigation or proceeding. Several other commenters, however, suggested that CMS remove the restriction in its entirety, arguing that enforcement actions often involve lengthy investigations and litigation, and parties with substantially similar arrangements could be locked out of the advisory opinion process for long periods of time while these proceedings are ongoing. One commenter considered whether by maintaining the discretion to reject requests involving substantially similar conduct, CMS was unlikely to issue more advisory opinions than it currently issues.

Response: We believe it is important for CMS to retain discretion to reject an advisory opinion request where we determine, after consultation with OIG and DOJ, that issuance of an opinion would interfere with a pending investigation or proceeding. However, we recognize that the exercise of this discretion could result in parties to legitimate arrangements being locked out of the advisory opinion process for lengthy periods of time, and having to make business decisions without the certainty that an advisory opinion can provide. While we will strive to be judicious in our exercise of discretion, we may not be in a position to respond to every request in a timeframe that suits the requestor. In those instances, it is up to regulated parties to decide whether to pursue a particular course of conduct in the absence of an advisory opinion.

For the reasons stated above, we are finalizing our proposed changes to § 411.370(e), and, as described above in section b.(i), adding a new paragraph (e)(1)(v) to clarify that CMS would decline to accept an advisory opinion that involves a course of conduct that is not legally permissible for reasons other than section 1877 of the Act.

c. Timeline for Issuing an Advisory Opinion (§ 411.380)

Section 1877(g)(6) of the Act does not impose any deadlines by which the agency must respond to a physician self-referral law advisory opinion request, but it does require the Secretary to take into account OIG advisory opinion regulations under subsection (b)(5) of section 1128D of the Act. Section 1128D(b)(5)(B)(i) of the Act provides that the Secretary shall be required to issue an advisory opinion no later than 60 days after the request is received. In the 1998 CMS advisory opinions rule, we adopted a 90-day timeframe for most requests. In addition, for requests that we determined, in our discretion, involve complex legal issues or highly complicated fact patterns, we reserved the right to issue an advisory opinion within a reasonable timeframe. We created this timeframe based upon our estimates of the volume and complexity of expected requests, and based upon our then-current staffing situation.

We proposed to modify this time period and establish a 60-day timeframe for issuing advisory opinions. This period would begin on the date that CMS formally accepts a request for an advisory opinion. The 60 days would be tolled during any time periods in which the request is being revised or additional information compiled and presented by the requestor. We are adopting a 60-working day timeframe, and clarifying that day refers to a "working day," where "working days" is defined as days excluding Saturdays, Sundays, and legal holidays.¹¹¹

We also considered whether CMS should provide requestors with the option to request expedited review. We believe that a more efficient and expeditious process could give stakeholders more certainty and encourage innovative care delivery arrangements. We solicited comment on the changes to the timeframe, whether CMS in the final rule should include a

¹¹¹ "Legal holidays" include the days set aside by statute for observing New Year's Day, Martin Luther King Jr.'s Birthday, Washington's Birthday, Memorial Day, Independence Day, Labor Day, Columbus Day, Veterans' Day, Thanksgiving Day, and Christmas Day; and any day declared a holiday by the President or Congress.

provision on expedited review and, if so, the parameters for expedited review.

The following is a summary of the comments we received on these proposals and our responses.

Comment: Commenters supported shortening the current 90-day timeframe to 60 days, although many commenters expressed skepticism that CMS would be able to meet such a deadline absent investment of additional resources or other process changes. One commenter requested more clarity as to when CMS "formally accepts" a request for an advisory opinion, thereby triggering the beginning of the 60-day timeframe.

Response: We are finalizing a 60-working day timeframe for issuance of advisory opinions, which will begin on the date that CMS formally accepts a request for review. We will formally accept a request once the agency determines that (a) the request and any supplemental submissions describe the arrangement at issue with a level of detail sufficient for CMS to issue the opinion, and (b) the grounds for rejection of a request listed at § 411.370(e) do not apply. We believe that the collection of user fees, a policy we proposed and are finalizing in this rule, will enable CMS to process advisory opinion requests in a timely fashion.

Under our current regulation, we reserve the ability to extend this default time period for requests that present complex legal issues of first impression, or highly complicated fact patterns, and to suspend the time period in the circumstances listed at § 411.380(c)(3). While we are maintaining this reservation of discretion, we appreciate commenters' views that requestors want some degree of assurance that their investment of time in the advisory opinion process will result in the timely issuance of an opinion.

Current regulations provide for a 15-working day review period that begins on the date CMS receives a request for an advisory opinion. Under the new timeframe, CMS will maintain this 15-working day review period. During this time, we will review the submission to make a preliminary¹¹² determination as to whether the submission describes the arrangement at issue with a level of detail sufficient for CMS to issue an opinion. For submissions clearly lacking in sufficient detail, we will notify the requestors of the deficiencies and request additional information. Once CMS makes a determination that the submission contains the necessary level

¹¹² CMS may or may not later need to request additional information during the 60-working day review timeframe.

of detail, we will consult with DOJ and OIG to determine whether grounds exist to reject the request. If CMS determines that it can accept the request for review, we will notify requestors that their submission is formally accepted.

Comment: Commenters supported the establishment of an expedited pathway for advisory opinion requests, and several noted that an expedited option would be particularly helpful with respect to transactions with an impending deadline. However, many of these same commenters also noted that the expedited pathway would only be meaningful if CMS had the resources to adhere to it.

Several commenters suggested that CMS establish a process for expedited review for relatively more straightforward requests that lend themselves to a “yes” or “no” answer, such as requests for CMS’ opinion on whether an arrangement is “indistinguishable in all material aspects” from another arrangement upon which CMS has issued a favorable advisory opinion.

Response: We agree with commenters that an expedited review process would be appropriate for requests that seek a determination as to whether an arrangement is “indistinguishable in all material aspects” from another arrangement that has been reviewed and found to comply with the physician self-referral law. Based on these comments, we are finalizing modifications to § 411.380 to provide for expedited review for these types of requests only. Requestors would indicate in their advisory opinion requests that they are seeking expedited review. We will promptly make a determination on eligibility for expedited review, and communicate our decision to a requestor when notifying the requestor that CMS has formally accepted the request. The expedited review period of 30 working days would begin when CMS formally accepts the submission for review. We believe that the collection of user fees, a policy we proposed and are finalizing in this rule, will enable CMS to process advisory opinion requests in a timely fashion.

Comment: Several commenters suggested that in instances where CMS does not issue an advisory opinion within the relevant timeframe, the requestor should be deemed to have received a favorable advisory opinion and should be protected from any sanctions until such time as CMS formally issues an opinion.

Response: The physician self-referral law is a payment rule, and CMS is statutorily prohibited from making payment for DHS furnished pursuant to

a prohibited referral where a financial arrangement exists and no exception applies. Therefore, we do not have the authority to “deem” an individual or entity in compliance with the physician self-referral law if such deeming would effectively override the statutory payment prohibition.

Comment: One commenter requested that CMS clarify the criteria it uses to determine whether a request involves “complex legal issues or fact patterns.”

Response: We appreciate this comment and will consider providing guidance in the future as the agency gains more experience with the modified process.

As a result of the comments, we are finalizing our proposal to issue advisory opinions within 60 working days of the submission being formally accepted. We are also finalizing a 30-working day expedited review pathway for requests that only seek a determination that an arrangement is indistinguishable in all material respects to an arrangement that is the subject of a favorable advisory opinion.

d. Certification Requirement (§ 411.373)

In the 1998 CMS advisory opinions rule, we adopted a requirement identical to OIG’s requirement that a requestor must certify to the truthfulness of its submissions, including its good faith intent to enter into proposed arrangements. CMS finalized regulations that require a requestor to make two certifications as part of its request for an advisory opinion. Under current § 411.373(a), the requestor must certify that, to the best of the requestor’s knowledge, all of the information provided as part of the request is true and correct and constitutes a complete description of the facts regarding which an advisory opinion is being sought. If the request relates to a proposed arrangement, current § 411.373(b) states that the request must also include a certification that the requestor intends in good faith to enter into the arrangement described in the request. A requestor may make this certification contingent upon receiving a favorable advisory opinion from CMS or from both CMS and OIG. Under current § 411.372(b)(8), if the requestor is an individual, the individual must sign the certification; if the requestor is a corporation, the certification must be signed by the Chief Executive Officer, or a comparable officer; if the requestor is a partnership, the certification must be signed by a managing partner; and, if the requestor is a limited liability company, the certification must be signed by a managing member. We proposed to

revise § 411.372(b)(8) to clarify that the certification must be signed by an officer that is authorized to act on behalf of the requestor, but that the signing officer need not be the Chief Executive Officer. We also considered whether it would be appropriate to eliminate the certification requirement in our regulations, given that section 1001 of Title 18 of the United States Code prohibits material false statements in matters within the jurisdiction of a federal agency. We solicited comment on whether the existing certification requirement creates undue burden for requestors, and whether the requirement is necessary given section 1001.

The following is a summary of the comments we received on our proposals and our response.

Comment: Commenters supported the modifications to § 411.372(b)(8) that would allow for any authorized officer of a corporation, in addition to the Chief Executive Officer of a corporation, to sign the certification statement. Most commenters thought the certification requirement was appropriate and not overly burdensome.

Response: Given these comments, we are finalizing the proposed changes in § 411.372(b)(8), and will maintain the certification requirement.

e. Fees for the Cost of Advisory Opinions (§ 411.375)

In the 1998 CMS advisory opinions rule, we established a fee that is charged to requestors to cover the actual costs incurred by CMS in responding to a request for an advisory opinion. Under current § 411.375, there is an initial fee of \$250, and parties are responsible for any additional costs incurred that exceed the initial \$250 payment. A requestor may designate a triggering dollar amount, and CMS will notify the requestor if CMS estimates that the costs of processing the request have reached or are likely to exceed the designated triggering amount. This fee structure was modeled after the OIG regulations that were in effect at that time.

Since CMS issued the 1998 CMS advisory opinions rule, OIG has updated its regulations to eliminate the initial fee, and instead charges requesting parties a consolidated final payment based on costs associated with preparing an opinion (73 FR 15936). In the proposed rule, we stated that we believe it is appropriate to adopt an hourly fee of \$220 for the preparation of an advisory opinion. We said that we believe this amount reflects the costs incurred by the agency in processing an advisory opinion request. We also said that we were considering establishing an expedited pathway for requestors

that seek an advisory opinion within 30 days of the request, and charging \$440 an hour to process the request, reflecting the extra resources necessary to produce an advisory opinion within the abbreviated timeframe. We requested comments on this approach. To ensure that obtaining an advisory opinion is affordable, and to prevent unfair surprises to requestors at the end of the process, we considered promulgating a cap on the amount of fees charged for an advisory opinion. We solicited comments on the amount of the cap. We also requested comments on whether CMS should eliminate the initial \$250 fee.

The following is a summary of the comments we received on our proposals and our responses.

Comment: Many commenters were supportive of a user fee structure to enable the agency to handle a greater volume of advisory opinion requests and issue opinions in a shorter timeframe. Several commenters thought that the \$220 hourly fee was reasonable, and one commenter noted that the \$220 rate would ensure that only legitimate requestors are using the advisory opinion process.

Other commenters recommended alternatives to the proposed \$220 hourly fee. For instance, commenters recommended adopting an hourly fee of \$175 to align with OIG's charges, or adopting a flat "filing fee." One commenter said that physicians should not pay more than the costs CMS incurs in responding to a request for an opinion, and that if CMS is going to adopt an hourly rate of \$220, the agency should justify that amount.

One commenter stated that it would support user fees only to the extent those fees would enable the agency to issue advisory opinions on hypothetical facts, and cut the time the agency takes to issue advisory opinions. Another commenter stated that requestors should not be charged an hourly fee for work done by CMS after the expiration of the relevant time period.

Response: We agree with commenters that moving to an hourly rate structure will enable CMS to more efficiently and timely process requests for advisory opinions. Furthermore, the proposed rate of \$220 is a reasonable rate given the experience and seniority of the staff and attorneys responding to advisory opinion requests. See, for example, USAO ATTORNEY'S FEES MATRIX—2015–2019, available at <https://www.justice.gov/usao-dc/file/796471/download> (reasonable hourly fee for an attorney with less than 2 years of experience practicing law exceeds \$220

per hour for the 2018–2019 time period).

Comment: Commenters largely supported the establishment of a higher hourly rate for expedited review.

Response: Because we are finalizing an expedited review pathway only for certain types of requests that we expect to be more straightforward than other requests (that is, those that seek an opinion on whether an arrangement is "indistinguishable in all material respects" to another arrangement that is the subject of a favorable advisory opinion), we are not finalizing a \$440 hourly rate at this time.

Comment: Several commenters suggested that the agency provide potential requestors with a cost estimate prior to the requestor incurring any costs. Many commenters supported the adoption of a cap, and several commenters recommended that CMS make special accommodations for small and solo practitioners such that they can afford to request advisory opinions. For example, several commenters that supported the imposition of hourly fees urged CMS to consider waiving fees for small groups of up to 15 clinicians, to ensure that smaller practices have access to the advisory opinion process. However, no commenter offered any suggestions on what an appropriate cap might be.

Response: We agree with commenters that in order for the advisory opinion process to be accessible, especially for rural providers and small and solo practitioners, the costs must be predictable and affordable. As we work on operationalizing these reforms to the advisory opinion process, we will consider whether it is feasible to provide requestors with a cost estimate for the review and issuance of an advisory opinion. We will also consider discounting, on a case-by-case basis, the \$220 hourly rate for requestors with demonstrated limited financial resources, such as certain rural providers or small or solo practitioners, or, alternatively, capping the total charges for an advisory opinion.

Comment: Several commenters said they supported the elimination of the initial \$250 fee, and that the elimination of the fee is appropriate if CMS were to finalize its hourly user fee structure.

Response: We agree and will modify § 411.375(a) to eliminate the initial \$250 fee. Accordingly, we are also removing § 411.372(b)(9), which requires each advisory opinion request to include the initial \$250 fee.

Comment: Several commenters suggested that we allow requestors to establish a triggering dollar amount,

similar to the process used under OIG advisory opinion regulations.

Response: Our current regulations at § 411.375(c)(2) allow for requestors to designate a triggering dollar amount as a means of controlling the cost associated with the advisory opinion process. We are maintaining this provision, which will be redesignated as § 411.375(b)(2).

As a result of the comments, we are finalizing, with modification, our proposal on the timeline for issuance of an advisory opinion request, as well as certain modifications to clarify the process for formal acceptance of a submission.

f. Reliance on an Advisory Opinion (§ 411.387)

As we considered improvements to the advisory opinion process, we also considered regulatory changes to clarify current CMS policies and practices, and make our advisory opinions more useful compliance tools for stakeholders. Specifically, we solicited comment on proposals, described in more detail below, to remove some of the regulatory provisions limiting the universe of individuals and entities that can rely on an advisory opinion, and to add language expressing what we believe are permissible uses of an advisory opinion.

Section 1877(g)(6)(A) of the Act states that an advisory opinion shall be binding on the Secretary and on the party or parties requesting an opinion. Consistent with the policy adopted by OIG, CMS took the view that an advisory opinion may legally be relied upon only by the requestors. While section 1877 of the Act is silent on how third parties may use an advisory opinion, in regulation, CMS has precluded legal reliance on the opinion by non-requestor third parties. At the time, we stated that advisory opinions are capable of being misused by persons not a party to the transaction in question in order to inappropriately escape liability (63 FR 1648). While such a preclusion may be appropriate for purposes of an OIG advisory opinion on the application of a criminal statute, we stated in the proposed rule that we believed it may be unduly restrictive in the context of a strict liability payment rule that applies regardless of a party's intent.

We recognize that in practice, parties to an arrangement that is the subject of a favorable advisory opinion will rely on the opinion, even if the parties did not join in the request. If, for instance, CMS determines that an arrangement does not constitute a financial relationship because it satisfies all requirements of an applicable

exceptions to the physician self-referral law, that determination would necessarily apply equally to any individuals and entities that are parties to the specific arrangement, for example, the referring physician and the entity to which he or she refers patients for designated health services. Thus, even if the physician party to the arrangement was not a requestor of the advisory opinion, the physician party is entitled to rely on that advisory opinion. We proposed changes to § 411.387 to reflect this view. Specifically, we proposed at § 411.387(a) that an advisory opinion would be binding on the Secretary and that a favorable advisory opinion would preclude the imposition of sanctions under section 1877(g) of the Act with respect to the party or parties requesting the opinion and any individuals or entities that are parties to the specific arrangement with respect to which the advisory opinion is issued.

We proposed at § 411.387(b) that the Secretary will not pursue sanctions under section 1877(g) of the Act against any individuals or entities that are parties to an arrangement that CMS determines is indistinguishable in all material aspects from an arrangement that was the subject of the advisory opinion. All facts relied on and influencing a legal conclusion in an issued favorable advisory opinion are material; deviation from that set of facts would result in a party not being able to claim the protection proposed in § 411.387(b). A favorable advisory opinion with respect to one arrangement would not legally preclude CMS from pursuing violations against parties to a different arrangement. In practice, the Secretary will not use CMS enforcement resources for purposes of imposing sanctions under section 1877(g) of the Act to investigate the actions of parties to an arrangement that CMS believes is materially indistinguishable from an arrangement that has received a favorable advisory opinion. As discussed above, such a determination would not preclude a finding by DOJ or OIG that the arrangement violates a law other than the physician self-referral law, including but not limited to the anti-kickback statute. If parties to an arrangement are uncertain as to whether CMS would view it as materially indistinguishable from an arrangement that has received a favorable advisory opinion, then those parties can submit an advisory opinion request. We solicited comment on this approach.

Finally, we also proposed at § 411.387(c) to recognize that individuals and entities may reasonably rely on an advisory opinion as non-

binding guidance that illustrates the application of the physician self-referral law and regulations to specific facts and circumstances. We acknowledge that stakeholders already look to advisory opinions issued by CMS to inform their decision-making, and these changes will make clear that CMS acknowledges that such reliance is permissible and reasonable. We requested comments on all aspects of these proposals.

The following is a summary of the comments we received on our proposals and our responses.

Comment: Commenters were supportive of our proposals to remove the restrictions on the individuals and entities that can rely on an advisory opinion. These commenters stated that these modifications will help reduce confusion about compliance with the physician self-referral law, enhance utilization of the advisory opinion process, and maximize the ability of health care entities to innovate and form beneficial business arrangements.

Response: We appreciate the support for these proposals, which we agree will remove unnecessary restrictions on how regulated individuals and entities can use advisory opinions to guide their decisions and aid in compliance activities.

Comment: Several commenters encouraged CMS to continue publishing advisory opinions on its website, with identifiers and any privileged, confidential or proprietary information redacted. At least one commenter suggested that CMS publish an annual reporting summarizing the number of advisory opinions issued and statistics such as the number of advisory opinion requests submitted, the number withdrawn, and information on compliance with regulatory timelines.

Response: We will continue to publish advisory opinions on our website as well as redact information that identifies the requestors and other specific parties. We encourage potential requestors to review the Department's regulations at 45 CFR part 5, which explain how to identify and protect confidential commercial information. We appreciate the suggestion regarding annual statistics on the number of advisory opinion requests received each year, and the disposition of those requests. We are not making any regulatory changes to address this comment, but we will consider publishing such statistics for the next calendar year.

Comment: A few commenters pointed out that accountable care organization (ACO) arrangements can take on a variety of forms, so any single ACO arrangement may be substantially

similar, but not identical to, another ACO arrangement that has been the subject of a favorable advisory opinion. These commenters urged CMS to consider how we might adopt a more flexible approach to enable parties to an ACO to rely on an advisory opinion issued to a substantially similar ACO.

Response: Under the regulations we are adopting in this final rule, at § 411.387(c), ACO participants could rely on an advisory opinion as non-binding guidance, even if their ACO arrangement is substantially similar to but not the same as the arrangement that is the subject of the advisory opinion. If the ACO's participants wanted more certainty as to whether CMS would view the factual differences as material, the ACO participants—subject to the physician self-referral law—could request their own advisory opinion through the expedited pathway. If we determined that the arrangement was materially distinct from others that have been the subject of favorable advisory opinions, the requestors would have the option of requesting a new advisory opinion through the normal process.

Comment: Several commenters suggested that CMS should make clear in its regulations that reasonable reliance on an advisory opinion is sufficient to defeat a claim under the False Claims Act that a physician or entity knowingly submitted a false claim as a result of a violation of the physician self-referral law.

Response: We are not authorized to and do not enforce the False Claims Act, and our authority to issue regulations governing the advisory opinion process does not give us the authority to issue regulations interpreting elements of the False Claims Act. We note that a favorable advisory opinion means that CMS has determined that specific referrals for designated health services referrals under the arrangement in question are not prohibited under section 1877 of the Act (as limited to the individuals or entities requesting the opinion and any individuals or entities that are parties to the specific arrangement with respect to which the favorable advisory opinion is issued so long as the specific arrangement as implemented does not deviate from the material facts upon which the advisory opinion is based).

Comment: A few commenters requested that individuals who join arrangements that are the subject of issued advisory opinions have those advisory opinions apply to them retrospectively.

Response: We appreciate this suggestion, however the applicability of an advisory opinion to an individual

joining the arrangement that is the subject of the issued advisory opinion would be a fact-specific determination.

As a result of the comments, we are finalizing the proposed modifications to § 411.387.

g. Rescission (§ 411.382)

Under current § 411.382, CMS may rescind or revoke an advisory opinion after it is issued if CMS determines that it is in the public interest to do so. To date, CMS has not rescinded an advisory opinion. At the time we finalized this regulation, which is modeled on OIG's rescission authority regulation, we sought comment on whether this approach reasonably balanced the government's need to ensure that advisory opinions are legally correct and the requestor's interest in finality (63 FR 1653). We again requested comment on this issue. Specifically, we solicited comments on whether CMS should retain a more limited right to rescind an advisory opinion; that is, CMS could rescind an advisory opinion only when there is a material regulatory change that impacts the conclusions reached, or when a party has received a negative advisory opinion and wishes to have the agency reconsider the request in light of new facts or law.

The following is a summary of the comments we received and our responses.

Comment: Commenters generally supported limiting the grounds upon which CMS would rescind an advisory opinion. Specifically, most commenters agreed that rescission would be appropriate when there is a material regulatory change that affects the conclusions reached in an issued advisory opinion, or when a party that has received a negative advisory opinion wishes to have the agency reconsider the request in light of new facts or law.

Response: We appreciate the feedback on the advisory opinion rescission policy, and agree that the proposed regulatory modification is warranted to provide regulated individuals and entities with greater clarity regarding when CMS believes a rescission may be appropriate. We are therefore modifying § 411.382(a) to provide that CMS may rescind an advisory opinion if it determines that there is good cause to rescind the opinion. In addition, we are modifying § 411.382(a) to provide that "good cause" exists when (i) there is a material change in the law that affects the conclusions reached in an opinion; or (ii) a party that has received a negative advisory opinion seeks

reconsideration based on new facts or law.

Comment: Many commenters encouraged CMS to provide adequate notice to affected parties and provide adequate time for parties to wind down existing arrangements. Several commenters suggested that CMS allow for a wind-down period. These commenters differed on the appropriate length of a wind-down period. Suggestions included 90 days, 120–180 days, and 3–5 years. Several commenters also suggested that CMS provide for a reasonable period of public notice of no less than 30 days, given the expectation that non-requesting parties will rely on issued advisory opinions. Commenters also requested assurance that CMS would not apply an advisory opinion rescission or revocation in a retrospective manner.

Response: Our current regulations at § 411.382 already provide flexibility for CMS to allow for a reasonable "wind down" period to discontinue activities that are the subject of a rescinded advisory opinion. Because every arrangement is unique, and because the allowance of a wind down period amounts to an exercise of agency enforcement discretion, we do not believe it is appropriate for us to establish a minimum wind-down period in regulations. In the event that CMS does, in the future, rescind an advisory opinion, we will work with affected parties to determine a reasonable and appropriate wind down period.

We appreciate commenters' suggestions regarding public notice of a potential rescission. We agree that providing public notice is appropriate given our expectation that non-requesting parties may be relying on an issued advisory opinion to guide their decisions and conduct. We are therefore finalizing an amendment to § 411.382 that provides for advance notice to both the requestor and the public.

As a result of the comments, we are finalizing changes to § 411.382 that will codify the limited instances that a rescission would be appropriate.

h. Other Modifications to Procedural Requirements

We proposed minor modifications to § 411.372 to improve readability and clarity. We also proposed to eliminate the reference to the provision of stock certificates as part of the advisory opinion request submission, as these are typically electronic and may not necessarily list the name of the owner. We requested comments on these and other updates to the procedure for submitting an advisory opinion request

that will improve the efficiency of the review process.

Comment: At least one commenter stated that our proposed modifications to the advisory opinion process did not address what they view as a disconnect between the OIG's enforcement of the anti-kickback statute and CMS' enforcement of the physician self-referral law. This commenter stated that the lack of a process to obtain joint agency advisory opinions on specific fact scenarios limits the ability of stakeholders to understand how the two agencies may interpret the two laws differently when reviewing the same factual situation. The commenter said it would be optimal if there were a joint process to obtain both agencies' input on hypothetical arrangements or questions of general applicability. They also said such a joint process would further the Administration's goal of reducing regulatory burden on providers.

Response: We appreciate this comment and recognize that the physician self-referral advisory opinion process, standing alone, cannot give a regulated party certainty that its course of conduct is protected from scrutiny under the anti-kickback statute, even if that party has received a favorable advisory opinion from CMS regarding the arrangement in question. Currently, the timelines for issuing advisory opinions differ under the respective CMS and OIG regulations. Therefore, establishing a joint process is not feasible. However, we will consider how we could achieve greater alignment with the OIG process in the future.

Comment: One commenter suggested that the agency explore whether it has legislative authority to issue opinions that offer protection for arrangements even if they may not squarely fit within an exception, but pose no significant risk of harm.

Response: Due to the nature of the physician self-referral law, we do not have the legislative authority to protect referrals of designated health services that are furnished in violation of the law, even if it is the belief of the parties that the referrals are made pursuant to an arrangement that does not pose a significant risk of harm. Section 1877(g)(1) of the Act states that "no payment may be made" for prohibited referrals, and section 1877(g)(6) of the Act limits the scope of our advisory opinion authority to questions of whether or not a referral related to designated health services is prohibited. The commenter's request would require legislative change.

K. CY 2020 Updates to the Quality Payment Program

1. Executive Summary

a. Overview

This section of the final rule sets forth changes to the Quality Payment Program starting January 1, 2020, except as otherwise noted for specific provisions. The 2020 performance period of the Quality Payment Program will build upon the foundation that has been established in the first 3 years of the program, which provides a trajectory for clinicians moving to performance-based payments, and will gradually prepare clinicians for the 2022 MIPS performance period of the program and the 2024 MIPS payment year.

Participation in both tracks of the Quality Payment Program—Advanced Alternative Payment Models (APMs) and Merit-based Incentive Payment System (MIPS)—has increased from 2017 to 2018.¹¹³ The number of QPs—Qualifying APM Participations—nearly doubled from 2017 to 2018, from 99,076 to 183,306 clinicians. In MIPS, 98 percent of eligible clinicians participated in 2018, up from 95 percent in 2017. As the Quality Payment Program continues to mature, CMS recognizes additional long-term improvements will need to occur. We have taken stakeholder input into consideration to ensure that we continue to implement the Quality Payment Program as required while smoothing the transition where possible and offering targeted educational resources for program participants. For example, in an effort to get broad feedback on our MIPS Value Pathways (MVPs) participation framework we held a public webinar specifically focused on the topic, conducted 7 listening sessions with various stakeholder groups throughout the proposed rule comment period, and engaged with clinicians and others through several other public forums. We plan to continue engaging with clinicians and other stakeholders as we move forward developing the MVPs.

While we continue efforts to strengthen the Quality Payment Program, we remain interested in clinician participation and engagement in the program, particularly as initial MVPs are developed for the 2021 MIPS performance period. We have been given flexibility in establishing the cost performance category weight and

performance threshold in the early years of the Quality Payment Program. The Bipartisan Budget Act of 2018 (BBA 2018) (Pub. L. 115–123, enacted February 9, 2018) extended the flexibility and transition years within the Quality Payment Program. Beginning with the 2024 MIPS payment year (2022 performance period), as required by law, the cost performance category under MIPS will be weighted at 30 percent and the performance threshold will be set at the mean or median of the final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. The provisions of this rule are intended to recognize our reduced flexibility beginning with the 2024 MIPS payment year and continue to put clinicians in a position to make the transition as required by statute.

b. Summary of Major Provisions

(1) MIPS Value Pathways

We are committed to the transformation of MIPS, which will allow for: More streamlined and cohesive reporting; enhanced and timely feedback; and the creation of MVPs of integrated measures and activities that are meaningful to all clinicians from specialists to primary care clinicians and to patients. The new MVPs will remove barriers to APM participation and promote value by focusing on quality and cost measure and improvement activities built on foundational global or population quality measures calculated from claims-based quality data and promoting interoperability concepts.

In the CY 2020 PFS proposed rule (84 FR 40735), we proposed to apply a new MVP framework beginning with the 2021 MIPS performance period/2023 MIPS payment year to simplify MIPS, improve value, reduce burden, help patients compare clinician performance, and better inform patient choice in selecting clinicians. As discussed in section III.K.3.a.(2) of this final rule, we are finalizing a modified proposal to define MVPs at § 414.1305 as a subset of measures and activities established through rulemaking.

Additionally, we will work with stakeholders to develop MVPs as a cohesive and meaningful participation experience for clinicians with an aligned set of measures and activities that are more relevant to a clinician's scope of practice, while further reducing reporting burden and easing the transition to APMs. We refer readers to the CY 2020 PFS proposed rule (84 FR 40732 through 40745) for more information on the MVP framework.

(2) Other Major MIPS Provisions

In addition to the MVP framework, we are finalizing two significant proposals for the 2020 MIPS performance period:

- As discussed in section III.K.3.g.(3) of this final rule, we are finalizing the proposal to strengthen the Qualified Clinical Data Registry (QCDR) measure standards for MIPS to require measure testing, harmonization, and clinician feedback to improve the quality of QCDR measures available for clinician reporting. These policies relate to CY 2020 and CY 2021 for QCDRs.

- As discussed in section III.K.3.c.(2)(b)(iii) of this final rule, we are finalizing the proposed episode-based measures in the cost performance category to more accurately reflect the cost of care that specialists provide. Further, we are also finalizing the revised total per capita cost and the Medicare Spending Per Beneficiary (MSPB) measures.

After consideration of public comments, we are not finalizing two significant proposals:

- As discussed in section III.K.3.c.(2)(a) of this final rule, we are not finalizing our proposal to weight the cost performance category at 20 percent for the 2022 MIPS payment year. Instead, we are continuing to weight the cost performance category at 15 percent in light of concerns noted regarding more detailed and actionable performance feedback. Hence, we are also continuing to weight the quality performance category, discussed in section III.K.3.c.(1)(b) of this final rule, at 45 percent. However, we will revisit increasing the weight of the cost performance category in next year's rulemaking to ensure clinicians are prepared for the significant increase in category weight by the 2024 MIPS payment year.

- As discussed in section III.K.3.e.(3) of this final rule, we are not finalizing our proposal to set the additional performance threshold at 80 points for the 2022 MIPS payment year and instead are finalizing the additional performance threshold at 85 points for the 2022 MIPS payment year. We are also finalizing the additional performance threshold at 85 points for the 2023 MIPS payment year.

(3) Major APM Provisions

(a) Aligned Other Payer Medical Home Models

We are finalizing the proposal to add the defined term, Aligned Other Payer Medical Home Model, to § 414.1305. The definition of Aligned Other Payer Medical Home Model includes the same characteristics as the definitions of

¹¹³ Quality Payment Program (QPP) Participation in 2018: Results at a Glance <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/586/2018%20QPP%20Participation%20Results%20Infographic.pdf>.

Medical Home Model and Medicaid Medical Home Model, but it applies to other payer payment arrangements. We believe that structuring this definition in this manner is appropriate because we recognize that other payers could have payment arrangements that may be appropriately considered medical home models under the All-Payer Combination Option.

Neither the current Medical Home Model financial risk and nominal amount standards nor the Medicaid Medical Home Model financial risk and nominal amount standards apply to other payer payment arrangements. Consistent with our decision to finalize our proposal to define the term Aligned Other Payer Medical Home Model, we are finalizing our proposal to amend § 414.1420(d)(2), (d)(4), and (d)(8) to apply the same Medicaid Medical Home Model financial risk and nominal amount standards, including the 50 eligible clinician limit, to Aligned Other Payer Medical Home Models.

(b) Marginal Risk for Other Payer Advanced APMs

We are finalizing our proposal to modify our definition of marginal risk when determining whether a payment arrangement is an Other Payer Advanced APM. We proposed that, in the event that the marginal risk rate varies depending on the amount by which actual expenditures exceed expected expenditures, we will compare the average marginal risk rate across all possible levels of actual expenditures to the marginal risk rate specified in the Other Payer Advance APM financial risk criterion, with exceptions for large losses and small losses, as described in § 414.1420(d). When considering average marginal risk in the context of total risk, we believe that certain risk arrangements can create meaningful and significant risk-based incentives for performance and at the same time ensure that the payment arrangement has strong financial risk components.

(c) Estimated APM Incentive Payments and MIPS Payment Adjustments

As we discuss in section VII.F.10.a. of this final rule, for the 2022 payment year and based on estimated Advanced APM participation during the 2020 QP Performance Period, we estimate that between 210,000 and 270,000 clinicians will become Qualifying APM Participants (QPs). Eligible clinicians who are QPs for the 2022 payment year are excluded from the MIPS reporting requirements and payment adjustment and will receive a lump sum APM Incentive Payment equal to 5 percent of their aggregate payment amounts for

covered professional services for the year prior to the payment year. We estimate that the total lump sum APM Incentive Payments will be approximately \$535–685 million for the 2022 Quality Payment Program payment year.

We estimate that there will be approximately 879,966 MIPS eligible clinicians for the 2020 MIPS performance period in section VII.F.10.b.(1)(b) of this final rule. The final number will depend on several factors, including the number of eligible clinicians excluded from MIPS based on their status as QPs or Partial QPs, the number that report as groups, and the number that elect to opt into MIPS in accordance with § 414.1310(b)(1)(ii). In the 2022 MIPS payment year, MIPS payment adjustments, which only apply to payments for covered professional services furnished by a MIPS eligible clinician, will be applied based on a MIPS eligible clinician's performance on specified measures and activities within four integrated performance categories. We estimate that MIPS payment adjustments will be approximately equally distributed between negative MIPS payment adjustments (\$433 million) and positive MIPS payment adjustments (\$433 million) to MIPS eligible clinicians, as required by the statute to ensure budget neutrality. Up to an additional \$500 million is also available for the 2022 MIPS payment year for additional positive MIPS payment adjustments for exceptional performance for MIPS eligible clinicians whose final score meets or exceeds the additional performance threshold of 85 points that we are finalizing in section III.K.3.e.(3) of this final rule. However, the distribution will change based on the final population of MIPS eligible clinicians for the 2022 MIPS payment year and the distribution of final scores under the program.

2. Definitions

At § 414.1305, we are finalizing definitions of the following terms:

- Aligned Other Payer Medical Home Model.
- Hospital-based MIPS eligible clinician.
- MIPS Value Pathway.

We are also finalizing revisions to the following definition at § 414.1305:

- Rural area.

These terms and definitions are discussed in detail in relevant sections of this final rule.

3. MIPS Program Details

a. Transforming MIPS: MIPS Value Pathways

(1) Overview

In the CY 2020 PFS proposed rule, we proposed an MVP definition that would prepare us to apply a new MVP framework beginning with the 2021 MIPS performance period. This MVP framework would simplify MIPS, improve value, reduce burden, help patients compare clinician performance, and better inform patient choice in selecting clinicians. We refer readers to the CY 2020 PFS proposed rule (84 FR 40732 through 40745) for more information on the MVP framework and the proposed MVP definition.

(2) Implementing MVPs

In the CY 2020 PFS proposed rule (84 FR 40735), we described the MVP framework and proposed to define a MIPS Value Pathway at § 414.1305 as a subset of measures and activities specified by CMS. We noted that MVPs may include, but will not be limited to, administrative claims-based population health, care coordination, patient-reported (which may include patient reported outcomes, or patient experience and satisfaction measures), and/or specialty/condition specific measures. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the MVP framework and proposed definition of an MVP because this could potentially reduce the complexity of the MIPS program and clinician burden. Many commenters agreed with the intent of the MVP framework to simplify MIPS, reduce burden, make the program more meaningful for clinicians and reduce barriers to movement into APMs.

Response: We thank commenters for their support.

Comment: Several commenters stated that the MVP framework was a positive first step and they would like to see further burden reduction beyond clinician measure selection burden, including the elimination of the siloed requirements and scoring approaches for each of the four performance categories. Several commenters suggested streamlined reporting or automatic credit for Promoting Interoperability and Improvement Activities performance categories. Several commenters recommended that participation in a specialty accreditation program earn credit as an improvement activity. Several commenters suggested the use of measures that satisfy the requirements of multiple performance

categories in MVPs. A few commenters provided an example of linking measures: One example was to allow a clinician to report the quality measure, Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%), and the improvement activity, Glycemic Screening Services (IA_PM_19) to receive credit for a quality measure and improvement activity.

Response: We intend to develop MVPs in collaboration with stakeholders that align with guiding principles that include simplification and clinician burden reduction. We intend to work with stakeholders to develop MVPs that account for variation in specialty, size, and composition of clinician practices. We also intend that MVPs would allow for a more cohesive participation experience by connecting activities and measures from the 4 MIPS performance categories that are relevant to a patient population, a specialty or a medical condition, reducing the siloed nature of the current MIPS participation experience. We believe it is important to develop MVPs in unison with stakeholders to create low burden, meaningful MVPs that move clinicians along the value continuum and facilitate movement into APMs. Experience with MVPs that measure quality of care and patient experience of care, cost, continuous practice improvement, and effective management and transfers of health information will help to reduce barriers to APM participation. We would like to work with stakeholders to identify specialty accreditation programs, such as the American College of Surgeons' Commission on Cancer Accreditation program that demonstrate a commitment to quality improvement and alignment with MIPS quality measures. We intend to develop MVPs to connect measures across performance categories as indicated by the commenter's diabetes example above. We note that the MIPS statute requires the use of four performance categories now called Quality, Cost, Improvement Activities, and Promoting Interoperability in determining the MIPS composite performance score. While each performance category has its own requirements and associated list of measures or activities, it is possible that a single measure or activity may meet the respective criteria for inclusion in more than one performance category; however, we do not currently have any multicategory MIPS or QCDR measures available. We would be interested in working with stakeholders to pair the improvement activities and quality and cost measures, while leveraging health

measures and Promoting Interoperability measures that would constitute an MVP. We are interested in the potential use of measures that could satisfy more than one of the four MIPS performance categories within our statutory constraints and welcome additional stakeholder engagement related to how to best structure and develop MVPs that entail low clinician burden. Feedback and suggestions will be considered as we undertake further rulemaking in future years.

Comment: Many commenters indicated conditional support for the MVP framework, with concerns about the timeline and transition to MVPs in CY 2021. Many commenters requested a longer and more gradual timeline for MVP implementation. Several commenters suggested delaying MVP implementation by 1 year to CY 2022, while several others suggested a delay of a few years, with a few specifying a 2-year delay. Many commenters stated concerns that implementation in the 2021 MIPS performance period will not allow enough time to develop MVPs for all specialists, and several commenters indicated concerns about the time needed to educate clinicians on the use of MVPs. Many commenters supported MVPs as a voluntary reporting option in addition to the currently available options for MIPS participation. Several commenters recommended that MVPs be optional during a transition period. Several commenters supported the proposed MVP definition provided that MVPs are implemented as a voluntary gradual or multiyear pilot, allowing development and clinician MVP education time. A few commenters indicated that there is a need for stability in the Quality Payment Program and urged caution with implementation of the MVP framework.

Response: We have not made any proposals regarding whether participation in MVPs will be mandatory or optional. We appreciate that we need to work diligently with stakeholders to develop and propose policies regarding many aspects of implementation of MVPs in the 2021 MIPS performance period, including the extent of first year implementation or the feasibility of an initial pilot. Feedback and suggestions will be considered as we undertake further rulemaking in future years.

Comment: A few commenters did not support implementing the MVP framework stating that the MVPs would create too much change and clinician confusion with a few commenters stating that MVPs would not serve the needs of their specialty (for example, dermatology, nurse practitioners,

physician assistants, occupational therapy, audiology, speech language pathology), indicating insufficient numbers of quality measures for the specialty. A few commenters stated that certain clinician types, for example, nurse practitioners, have only a single Medicare specialty designation but practice in diverse specialty areas and that a limited number of potentially assigned MVPs may leave some clinicians out. A few commenters indicated that specialty clinicians would need either multiple MVPs or an MVP with a wide variety of measures and activities, because of the range of services provided by a specialty. For example, surgeons provide a wide range of procedures from neurosurgery to spine care. A few commenters indicated that clinicians new to MIPS reporting should have a delayed MVP timeline. A few commenters stated that the MVPs, as described, would not be able to meet the stated goals because MVPs may reduce the burden of measure selection, but will not reduce the overall burden of participating in MIPS, which the commenters indicated would require removing separate requirements for scoring and reporting for each of the performance categories. Many commenters did not support transitioning towards MVPs because this would reduce clinician choice in the selection of measures and activities; and may rely on measures and activities, including population health measures, viewed as not relevant to the clinician's clinical practice.

Response: We believe achieving the goals of the MVP framework are worthwhile and understand the need to introduce change that is balanced against the burden required for clinicians to change workflows and participate in the program. A notable change for MIPS eligible clinicians with MVPs is that they would no longer select quality measures or improvement activities from a single inventory. Instead, measures and activities in an MVP would be connected around a clinician specialty or a clinical condition. We welcome ideas from stakeholders for developing MVPs that provide further burden reduction to clinicians. We acknowledge that a single MVP may not fit the needs of all clinician types and all clinicians in the specialty and would like to work with stakeholders to determine, to the extent possible, the number of MVPs needed for specialists and which measures and activities should be included. We would like to engage with clinicians in the field and their societies to develop applicable MVPs and foundational

population health administrative claims measures that are low burden and meaningful. We believe that holding all clinicians accountable for the same population health measures will align incentives, encourage coordination between clinicians and promote meaningful progress on measures. We seek ongoing engagement with stakeholders to identify population health measures that will drive collaborative, high-quality and timely care. We believe that ongoing engagement with stakeholders will lead to improved clinicians' experience with the Quality Payment Program and drive meaningful change in the delivery system. We will consider this feedback on how to best transition to MVPs and how to optimally include MVPs that meet the needs of all clinician specialties.

Comment: Several commenters requested additional information about how equity would be maintained between clinicians reporting on MVPs and those using the currently available MIPS participation options, as well as between clinicians reporting on different MVPs, indicating a concern that one MIPS participation option or MVP should not be 'easier' than others.

Response: We agree that equity is critical to MVP implementation and requested feedback on approaches we should take to create equity across MVPs and across clinician types (84 FR 40742). We intend to work with stakeholders to determine approaches to maintain equity between MVP and the MIPS participation option, as well as clinicians reporting on different MVPs. This feedback will inform our process development as we further develop our MVP framework and unique MVPs and undertake future rulemaking.

Comment: Many commenters expressed concerns related to the population health claims-based performance measures that would be selected for use in MVPs. Many commenters did not support the use of population health claims-based measures in MVPs because of reliability, validity, attribution, lack of risk adjustment, actionability concerns, and/or unintended consequences concerns. Several commenters supported foundational use of population health claims-based measures, with a few commenters supporting use of administrative measures that are consistent with Advanced APM measures stating that administrative measures can assess quality across time and the delivery system without clinician reporting and can be applied to various clinician types including specialties.

Response: We intend to work in close partnership with stakeholders to identify measures and activities to include in MVPs. Our vision for MVPs is to connect the four performance categories while using a foundational layer of population health claims-based measures and interoperability on which to build quality, cost and improvement activity linkages. Please refer to the on line MVP graphic (<https://qpp-cm-prod-content.s3.amazonaws.com/uploads/587/MIPS%20Value%20Pathways%20Diagrams.zip>) that provides an overview of our vision for the MIPS future state. Implementation of a foundational population health core measure set using administrative claims-based quality measures that can be broadly applied to communities or populations can result in MVP measure tracks that provide more uniformity in the program's measures, reduce clinician reporting burden, allow focus on important public health priorities, increase the value of MIPS performance data, and reduce barriers to APM participation. Additionally, we intend to examine these concerns regarding population health measure reliability, validity, attribution and risk adjustment and the technical challenges and address them to the extent feasible by working with the measure stewards and clinician experts. We believe that interoperability is also a foundational element that would apply to all clinicians, regardless of MVP, for whom the Promoting Interoperability performance category is required. We envision an initial uniform set of Promoting Interoperability measures in each MVP and will consider customizing MVP Promoting Interoperability measures in future years. We believe that eligible clinicians could benefit from more targeted approaches that assess the meaningful use of health IT in alignment with clinically relevant MVPs. The integration of population health measures and Promoting Interoperability measures into MVPs provides a degree of standardization across all clinician types and promotes an infrastructure on which to assess and improve value-based care. Measure feedback and suggestions will be considered as we undertake further rulemaking in future years.

Comment: Many commenters indicated that a critical element of specifying the measures and activities within an MVP will be stakeholder engagement. Many commenters urged us to work in tandem with clinicians and specialty societies to develop MVPs. A few other commenters

suggested that specialty societies should develop MVPs. A few commenters urged us to work with multi-stakeholder consensus-based organizations such as the Core Quality Measures Collaborative and to utilize existing specialty measure set development approaches to identify a list of measures for each MVP. A few commenters suggested that we allow stakeholders to comment on the detailed methodologies of a future MVP design and implementation plan as they become more fully developed.

Response: We appreciate the commenters' recommendations on how the measures and activities should be specified in the MVPs and for articulating the critical importance of stakeholder engagement in MVP development. In recognition of our intention to specify MVPs with stakeholder input to the extent possible, we are modifying the proposed definition of MVP at § 414.1305, by replacing the words, "as specified by CMS" with "established through rulemaking".

After consideration of the comments, we are finalizing a modification of our proposal. Specifically, we are finalizing at § 414.1305 that MIPS Value Pathway means a subset of measures and activities established through rulemaking.

(3) Requests for Feedback on MVPs

In the CY 2020 PFS proposed rule (84 FR 40739 through 40745), we requested public comments regarding several issues involving the MVPs. We received 2,100 comments related to implementation of MVPs. While we are not summarizing and responding to comments we received in this final rule, we thank the commenters for their responses and may take them into account as we develop future policies for the MVPs. We also are interested in engaging with stakeholders on additional ways to reduce burden in the MIPS program, in addition to what we have solicited comment on for MVPs. For example, in the context of MVPs, we are interested in solutions to reduce burden across all 4 MIPS categories such as use of standards such as Fast Healthcare Interoperability Resources (FHIR), number of measures across categories, reporting timeframes and data submission methods. We intend to continue a dialogue with stakeholders on these important MVP topics and may consider convening public forum listening sessions, webinars, and office hours or using additional opportunities such as the pre-rulemaking process to further understand what is important to clinicians, patients, and stakeholders

and obtain further input as we develop MVPs.

b. Group Reporting

For previous discussions of the policies for group reporting, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77070 through 77073) and the CY 2018 Quality Payment Program final rule (82 FR 53592 through 53593). In addition, for previous discussions of the policies for group reporting related to the Promoting Interoperability performance category, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77214 through 77216) and the CY 2018 Quality Payment Program final rule (82 FR 53687).

As discussed in the CY 2020 PFS proposed rule (84 FR 40745), it has come to our attention that the regulation text regarding group reporting at § 414.1310(e)(3) through (5) contains duplicative language. Specifically, it is duplicative of the regulation text at § 414.1310(e)(2)(ii) through (iv). To avoid redundancy and potential confusion, we proposed to remove § 414.1310(e)(3) through (5). In addition, we have noticed that previously established policies for group reporting with regard to the Promoting Interoperability performance category (81 FR 77214 through 77216, 82 FR 53687) are not reflected in the regulation text for group reporting at §§ 414.1310(e)(2)(ii) and for virtual groups at § 414.1315(d)(2). In the CY 2017 Quality Payment Program final rule (81 FR 77215), we stated that to report as a group for the Promoting Interoperability performance category, the group will need to aggregate data for all of the individual MIPS eligible clinicians within the group for whom they have data in CEHRT. In an effort to more clearly and concisely capture our existing policy for the Promoting Interoperability performance category, we proposed to revise §§ 414.1310(e)(2)(ii) and 414.1315(d)(2). Specifically, we proposed to revise § 414.1310(e)(2)(ii) to state that individual eligible clinicians that elect to participate in MIPS as a group must aggregate their performance data across the group's TIN, and for the Promoting Interoperability performance category, must aggregate the performance data of all of the MIPS eligible clinicians in the group's TIN for whom the group has data in CEHRT.

Similarly, we proposed to revise § 414.1315(d)(2) to state that solo practitioners and groups of 10 or fewer eligible clinicians that elect to participate in MIPS as a virtual group must aggregate their performance data

across the virtual group's TINs, and for the Promoting Interoperability performance category, must aggregate the performance data of all of the MIPS eligible clinicians in the virtual group's TINs for whom the virtual group has data in CEHRT.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the clarification of the regulation text on group reporting and the need to aggregate the performance data across the group's TIN.

Response: We appreciate the commenters' support.

Comment: One commenter sought clarification regarding whether a virtual group needs to aggregate Promoting Interoperability performance data through reports or if the aggregation can be done manually prior to attestation. A few commenters sought clarification on whether there is a percentage of MIPS eligible clinicians that must have CEHRT for the group to attest due to their belief that the language as stated could be used to allow a group to only implement 2015 CEHRT for certain clinicians instead of across the entire TIN.

Response: If all the clinicians in a group or virtual group share the same CEHRT, the reports from CEHRT will include all of their data. However, if they are using different CEHRT, they will have to run the reports for each iteration of CEHRT and manually perform the aggregation. We did not establish a threshold for the percentage of MIPS eligible clinicians that must be using CEHRT in order for the group to report for MIPS as a group. The group must submit data for all of the MIPS eligible clinicians in the group for whom the group has data in CEHRT.

After consideration of the comments, we are finalizing these proposals, as proposed. Specifically, we are finalizing the proposals to: (1) Remove § 414.1310(e)(3) through (5); (2) revise § 414.1310(e)(2)(ii) to state that individual eligible clinicians that elect to participate in MIPS as a group must aggregate their performance data across the group's TIN, and for the Promoting Interoperability performance category, must aggregate the performance data of all of the MIPS eligible clinicians in the group's TIN for whom the group has data in CEHRT; and (3) revise § 414.1315(d)(2) to state that solo practitioners and groups of 10 or fewer eligible clinicians that elect to participate in MIPS as a virtual group must aggregate their performance data across the virtual group's TINs, and for the Promoting Interoperability

performance category, must aggregate the performance data of all of the MIPS eligible clinicians in the virtual group's TINs for whom the virtual group has data in CEHRT.

c. MIPS Performance Category Measures and Activities

(1) Quality Performance Category

(a) Background

We refer readers to § 414.1330 through § 414.1340 and the CY 2018 Quality Payment Program final rule (82 FR 53626 through 53641) for our previously established policies regarding the quality performance category.

In the CY 2020 PFS proposed rule (84 FR 40745 through 40746), we:

- Proposed to weigh the quality performance category at 40 percent for the 2022 MIPS payment year, 35 percent for the 2023 MIPS payment year, 30 percent for the 2024 MIPS payment year as described in § 414.1330(b)(4), (5), and (6); the associated increases to the weight of the cost performance category are discussed in section III.K.3.c. (2) of this final rule;

- Solicited comment on adding narratives to the CAHPS for MIPS survey and on whether the survey should collect data at the individual eligible clinician level;

- Proposed to increase of the data completeness criteria to 70 percent for the 2022 MIPS payment year as described in § 414.1340(b)(3);

- Proposed to require MIPS quality measure stewards to link their MIPS quality measures to existing and related cost measures and improvement activities, as applicable and feasible;

- Solicited comment as to whether we should consider realigning the MIPS quality measure update cycle with that of the eCQM annual update process;

- Proposed changes to the MIPS quality measure set as described in Appendix 1 of this proposed rule, including: Substantive changes to existing measures, addition of new measures, removal of existing measures, and updates to specialty sets;

- Solicited comment on whether we should increase the data completeness threshold for extremely topped out quality measures that are retained in the program due to limited availability of measures for a specific specialty and potential alternative solutions in addressing extremely topped out measures;

- Proposed to remove MIPS quality measures that do not meet case minimum and reporting volumes required for benchmarking after being in

the program for 2 consecutive CY performance periods;

- Proposed to remove quality measures from the program in instances where the measure steward or owner refuses to enter into a user agreement with CMS; and

- Requested information on a Potential Opioid Overuse Measure.

(b) Contribution to Final Score

Under § 414.1330(b)(2), we state that performance in the quality performance category will comprise 50 percent of a MIPS eligible clinician's final score for the 2020 MIPS payment year, and under § 414.1330(b)(3), we state that performance in the quality performance category will comprise 45 percent of a MIPS eligible clinician's final score for MIPS payment year 2021. Section 1848(q)(5)(E)(i)(I) of the Act, as amended by section 51003(a)(1)(C)(i) of the Bipartisan Budget Act of 2018, provides that 30 percent of the final score shall be based on performance for the quality performance category, but that for each of the 1st through 5th years for which MIPS applies to payments, the quality performance category performance percentage shall be increased so that the total percentage points of the increase equals the total number of percentage points that is based on the cost performance category performance is less than 30 percent for the respective year. As discussed in section III.K.3.c.(2) of this final rule, we proposed to weight the cost performance category at 20 percent for the 2022 MIPS payment year, 25 percent for the 2023 MIPS payment year, and 30 percent for the 2024 MIPS payment year and each subsequent MIPS payment year. Accordingly, we proposed to add § 414.1330(b)(4) to provide that performance in the quality performance category will comprise 40 percent of a MIPS eligible clinician's final score for the 2022 MIPS payment year. In addition, we proposed at § 414.1330(b)(5) to state that the quality performance category comprises 35 percent of a MIPS eligible clinician's final score for the 2023 MIPS payment year. Lastly, we proposed to add § 414.1330(b)(6) to state that the quality performance category comprises 30 percent of a MIPS eligible clinician's final score for the 2024 MIPS payment year and future years. We believe that being transparent in how both the quality and cost performance category weights will be modified over the next few years of the program will allow stakeholders to better plan and anticipate how eligible clinicians and group scores will be calculated in future

years as we incrementally make changes to the final score weights.

We received public comments on our proposals to incrementally reduce the weight of the quality performance category as we gradually increase the weight of the cost performance category. The following is a summary of the comments we received and our responses.

Comment: A few commenters urged CMS to maintain the quality performance category weight at 45 percent for the 2020 MIPS performance period to allow for time to address underlying methodological and attribution issues related to the cost measures.

Response: After consideration of the concerns we have heard on the cost measures within the cost performance category, as discussed in section III.K.3.c.(2) of this final rule, we have decided to retain the quality performance category weight at 45 percent for the 2020 performance period. We will revisit changes to the quality and cost performance category weights through future rulemaking.

Comment: A few commenters supported the proposal to decrease the weight of the quality category to 40 percent for the 2020 MIPS performance period and to 35 percent for the 2021 MIPS performance period.

Response: We appreciate the commenters' support. However, after consideration of the concerns we have heard on the cost performance category, as discussed in section III.K.3.c.(2) of this final rule, particularly the concerns on feedback frequency, we have decided to finalize the quality performance category weight at 45 percent for the 2020 performance period. We will revisit changes to the quality and cost performance category weights through future rulemaking.

Comment: A few commenters opposed the proposal to increase the weight of the cost category to 20 percent during the 2020 performance year. One commenter opposed proposed changes to the quality performance category for the 2020–2022 MIPS performance periods because it sends the wrong message to clinicians and patients.

Response: After consideration of the concerns we have heard on the cost measures within the cost performance category, as discussed in section III.K.3.c.(2) of this final rule particularly on the concerns of feedback frequency, we have decided to retain the quality performance category weight at 45 percent for the 2020 performance period. We do not believe that changes to the quality performance category weight will send the wrong message to

clinicians and patients, as we believe there are benefits to both cost and quality measurement. We will revisit changes to the quality and cost performance category weights through future rulemaking.

As a result of the comments, we are not finalizing our proposals. Therefore, the quality performance category will comprise 45 percent of a MIPS eligible clinician's final score for the 2022 MIPS payment year. We will revisit changes to the quality performance category's weights through future rulemaking and intend on providing additional education and outreach on how eligible clinicians can prepare to meet the incremental shifts in the quality and cost performance category weights.

(c) Quality Data Submission Criteria

(i) Submission Criteria for Groups Electing To Report the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey

We did not propose any changes to the established submission criteria for the CAHPS for MIPS Survey. We refer readers to the CY 2019 PFS final rule (83 FR 59756) for previously finalized policies regarding the CAHPS for MIPS survey. Although we did not make any proposals in regard to the CAHPS for MIPS survey in the CY 2020 PFS proposed rule, we solicited comments on numerous areas on how to expand the survey in future years (84 FR 40746 through 40747). While we are not summarizing and responding to comments we received in this final rule, we thank the commenters for their responses and may take them into account as we develop future policies for the CAHPS for MIPS survey.

(ii) Data Completeness Criteria

We refer readers to the CY 2019 PFS final rule (83 FR 59756 through 59758) where we discuss and codified at § 414.1340 finalized data completeness criteria.

As described in the CY 2018 Quality Payment Program final rule (82 FR 53632 through 53634), we anticipated on proposing increases to the data completeness thresholds for data submitted on quality measures (QCDR measures, MIPS CQMs, eCQMs, and Medicare Part B Claims measures) in future years of the program. For MIPS payment years 2019 and 2020, the data completeness threshold was finalized and retained at 50 percent. We provided an additional year for individual MIPS eligible clinicians and groups to gain experience with MIPS before increasing the data completeness threshold for MIPS payment year 2021, for which the

data completeness threshold was finalized at 60 percent.

As discussed in the CY 2020 PFS proposed rule (84 FR 40747 through 40748), we continue to believe it is important to incorporate higher data completeness thresholds over time to ensure a more accurate assessment of a MIPS eligible clinician's performance

on quality measures. We previously noted concerns raised about the unintended consequences of accelerating the data completeness thresholds too quickly, which may jeopardize a MIPS eligible clinician's ability to participate and perform well under MIPS. We want to ensure that an appropriate yet achievable data

completeness is applied to all eligible clinicians participating in MIPS. Based on our analysis of data completeness rates from data submission for the 2017 performance period of MIPS, as described in Table 42, we believe that it is feasible for eligible clinicians and groups to achieve a higher data completeness threshold.

TABLE 42—CY 2017 DATA COMPLETENESS RATES FOR MIPS INDIVIDUAL ELIGIBLE CLINICIANS, GROUPS, AND SMALL PRACTICES

Average data completeness rate—individual eligible clinician	Average data completeness rate—groups	Average data completeness rate—small practices
76.14	85.27	74.76

With the support of the data in Table 42, and as described in the CY 2020 PFS proposed rule (84 FR 40748), we proposed to amend § 414.1340 to add paragraph (a)(3) to adopt a higher data completeness threshold for the 2020 MIPS performance period, such that MIPS eligible clinicians and groups submitting quality measure data on QCDR measures, MIPS CQMs, and eCQMs must submit data on at least a 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for the 2020 MIPS performance period. While we proposed the update to the data completeness threshold for QCDR measures, MIPS CQMs, and eCQMs, we inadvertently did not include the regulation text for § 414.1340(a)(3) in the CY 2020 PFS proposed rule. Therefore, we have included regulation text for § 414.1340(a)(3) within this final rule to state that at least a 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for the 2022 MIPS payment year. As we observe increased use of electronic methods of reporting, such as EHRs and QCDRs, we believe it is important to continue to increase the data completeness threshold, and are interested in stakeholder feedback on an appropriate incremental approach, and on how this incremental increase should be implemented.

In addition, in the CY 2020 PFS proposed rule (84 FR 40745), we proposed to increase the data completeness criteria for Medicare Part B Claims to 70 percent for the 2020 payment year as described in § 414.1340(b)(3). In Table 36 "Summary of Data Completeness Requirements and Performance Period by Collection type for the 2020 MIPS Performance Period" of the CY 2020 PFS proposed rule (84 FR 40748), the Medicare Part B Claims

collection type is shown to have a performance period of January to December, and that the data completeness is at a 70 percent sample of individual MIPS eligible clinician's or group's Medicare Part B patients for the performance period. While we proposed the update to the data completeness threshold for Medicare Part B Claims, we inadvertently did not include the regulation text for § 414.1340(b)(3) in the CY 2020 PFS proposed rule. Therefore, we have included regulation text for § 414.1340(b)(3) within this final rule to state that at least a 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for the 2022 MIPS payment year.

In crafting our proposal, we also considered other thresholds, such as a higher threshold of 80 percent, but have concerns that requiring every clinician or group to adhere to an increased data completeness threshold that is increased by such a large amount may be considered burdensome to clinicians. We also requested comments on other considerations or possible thresholds we should consider, such as whether we should increase the data completeness threshold to 80 percent to provide for more accurate assessments of quality.

We received public comments on our proposal to increase the data completeness threshold for the quality performance category. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposal to increase the data completeness threshold, stating that the reporting of complete data is an important step in ensuring that performance is assessed accurately and that increasing data completeness will continue to convey the importance of quality reporting on all patients and potentially help establish benchmarks

for new measures. A few commenters supported the increased threshold for data completeness to 70 percent for several reasons, including the ability to improve the data that individual eligible clinicians and groups submit to registries. One commenter indicated that MIPS is currently structured so that practices who choose their measures often times choose those measures that are easy to collect and report as part of their existing clinical workflows. Some commenters expressed appreciation for basing our proposal on data from the field and some noted that many providers are reporting 100 percent of their data at this point. Commenters urged us to continue using a data driven approach to increasing thresholds in the future.

Response: We appreciate the commenters' support and agree that an increase in the data completeness threshold will allow for a more accurate depiction in care and data provided to CMS, whether that is directly or through a third party intermediary. Our intention is to work to ensure that the quality measures used within the MIPS program are relevant and meaningful in a clinician's practice, and appreciate that stakeholders are at ease with incorporating these quality metrics into their existing clinical workflows. In addition, we intend to continue utilizing a data driven approach to increasing the data completeness thresholds in the future.

Comment: A few commenters supported the proposal to increase the data completeness thresholds for four of the six MIPS data collection types from 60 percent to 70 percent of the clinician or group's patients that meet measure denominator criteria, and encouraged CMS to continue using a data-driven approach to increasing thresholds in the future.

Response: We agree the reporting of complete data is essential in ensuring

that MIPS performance is assessed accurately. We plan to continue a data-driven approach to increasing the data completeness threshold in the future.

Comment: Commenters noted to better enable eligible clinicians and groups to meet this higher threshold, CMS should ensure there is a sufficient number of applicable measures to choose from in the program. As CMS increases the data completeness threshold, the agency should also amend the timeline for MIPS CQMs and QCDR measures to be publicly posted.

Response: As noted in section III.K.3.c.(1)(d) of this final rule, as we review the MIPS quality measure inventory for updates, we utilize multiple factors when determining whether a quality measure should be removed or added to the program. As a part of our decision making, we do consider the number applicable measures remaining for clinicians to consider. We will take into consideration the commenters' suggestion of posting measure specifications for both the MIPS quality and QCDR measures earlier than the existing timeframes.

Comment: A few commenters opposed the proposed increase and requested clarifications. One commenter requested clarification as to whether the data used by CMS to support the policy represents all MIPS eligible clinicians across all reporting mechanisms, or represents a subset, such as claims. Another commenter stated their belief that the average rate of reporting is actually less than 70 percent because the statistic does not include data on patients not captured in registries or EHRs (which we understand to refer to data that does not include patients captured through claims data or are not electronically derived). One commenter noted that it was unclear from the data presented in the rule whether the average data completeness rate reflects Medicare only reporting or reporting across all payers.

Response: The data used to support the increase in the data completeness threshold is reflective of all-payer data across all collection types, and is not just reflective of claims. The data completeness threshold under the legacy Physician Quality Reporting System (PQRS) program was at 80 percent, and historical data demonstrated that eligible clinicians had no issue with meeting that threshold. Since MIPS began as a new program in 2017, the data completeness threshold was lowered to allow for time for eligible clinicians and groups to become acclimated to the program. Since we will be entering year 4 of the

program, we believe we have given eligible clinicians and groups sufficient time to become oriented to the program. In addition, as described above, we have come across instances where stakeholders, including third-party intermediaries have sought to use data selection criteria to misrepresent a clinician or group's performance for a performance period, commonly referred to as "cherry-picking," resulting in data that is not true, accurate, or complete. Therefore, we believe it is appropriate to finalize the increase to the data completeness threshold to 70 percent.

Comment: One commenter expressed concern that there is no CMS guidance on how to select the percentage of patients they want to report on, and stated the lack of guidance leads to an inconsistent way of submitting data.

Response: We disagree. The data submission and data completeness requirements at §§ 414.1335 and 414.1340 and the guidance we provide in the 2019 MIPS Quality User Guide on the Quality Payment Program Resource Library (<https://qpp-cm-prod-content.s3.amazonaws.com/uploads/558/2019%20MIPS%20Quality%20User%20Guide.pdf>) provides guidance as to how clinicians can submit in a consistent manner. We do not specify a methodology for how eligible clinicians can select the patients they want to report on because we believe some operational flexibility is appropriate provided the approach adopted is consistent with our regulations and guidance and does not allow "cherry picking" of data.

Comment: Some commenters noted that some measures require a large amount of data collection, and suggested that reporting at this level will force practices—particularly small practices—to invest significant time and money in systems and infrastructures to collect and report data as electronic health records may not capture the necessary data elements or submit the required data.

Response: We are aware that some quality measures require larger volumes of data over others such as those measures that are visit specific or require a follow-up within a specified timeframe. However, the data completeness threshold focuses on the percentage of eligible patients about whom the clinician must report data. With regards to the burden the data completeness threshold may cause for small practices, as indicated in the average data completeness table, we believe small practices are already exceeding the existing data completeness threshold and there will

be no additional burden on the part of small practices.

Comment: A few commenters expressed concern that it is unnecessarily complex and burdensome to increase the data completeness threshold when participants are already facing a switch to MIPS Value Pathways (MVPs).

Response: While we understand that eligible clinicians will eventually transition to MVPs, it is important to note that this transition is not occurring for the 2020 performance period. Therefore, we believe it is important to continue to increase the data completeness threshold over time to ensure a more accurate assessment of a MIPS eligible clinician's performance on quality measures.

After consideration of the comments, we are finalizing our proposal to amend § 414.1340 to add paragraph (a)(3) to adopt a higher data completeness threshold for the 2020 MIPS performance period, such that MIPS eligible clinicians and groups submitting quality measure data on QCDR measures, MIPS CQMs, or eCQMs must submit data on at least a 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for the 2022 MIPS payment year. In addition, we are also finalizing our proposal to amend § 414.1340 to add paragraph (b)(3) for Medicare Part B Claims, to state that, at least a 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for the 2022 MIPS payment year. Through future rulemaking, we intend on increasing the data completeness threshold to ensure a more accurate assessment of a MIPS eligible clinician's performance on quality measures. In addition, we are making a technical edit to § 414.1340(a)(1) to revise "the MIPS payment years 2019" to "MIPS payment year 2019" to state at § 414.1340(a)(1), at least 50 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for the MIPS payment year 2019. Furthermore, we are making an additional technical edit to § 414.1340(a)(2) to revise "the MIPS payment years 2020 and 2021" to "MIPS payment years 2020 and 2021" to state at § 414.1340(a)(2), at least 60 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment years 2020 and 2021.

As discussed in the CY 2020 PFS proposed rule (84 FR 40748), we have received inquiries regarding perceived opportunities to selectively submit

MIPS data that are unrepresentative of a clinician or group's performance, suggesting that certain parties may have misunderstood the intent of our incremental approach to the data completeness thresholds, and may not fully appreciate their current regulatory obligations. As stated in §§ 414.1390(b) and 414.1400(a)(5), all MIPS data submitted by or on behalf of a MIPS eligible clinician, group, or virtual group must be certified as true, accurate and complete. MIPS data that are inaccurate, incomplete, unusable, or otherwise compromised can result in improper payment. Using data selection criteria to misrepresent a clinician or group's performance for a performance period, commonly referred to as

“cherry-picking,” results in data that are not true, accurate, or complete. Accordingly, we proposed to amend § 414.1340 to add a new paragraph (d) to clarify that if quality data are submitted selectively such that the data are unrepresentative of a MIPS eligible clinician or group's performance, any such data would not be true, accurate, or complete for purposes of § 414.1390(b) or § 414.1400(a)(5). We received no comments on this proposal and are finalizing this text as proposed. We believe this clarification will emphasize to all parties that the data submitted on each measure is expected to be representative of the clinician's or group's performance and free of selection bias.

We continue to urge all MIPS eligible clinicians to report on quality measures where they have performed the quality actions with respect to all applicable patients.

We note that we did not propose any changes to § 414.1340(c), which states that groups submitting quality measures data using the CMS Web Interface or a CMS-approved survey vendor to submit the CAHPS for MIPS survey must submit data on the sample of the Medicare Part B patients CMS provides, as applicable. We refer readers to the CY 2019 PFS final rule (83 FR 59756 through 59758) for additional discussion of this requirement. Table 43 describes the data completeness requirements by collection type.

TABLE 43: Summary of Data Completeness Requirements and Performance Period by Collection Type for the 2020 MIPS Performance Period

Collection Type	Performance Period	Data Completeness
Medicare Part B claims measures	Jan 1- Dec 31	70 percent sample of individual MIPS eligible clinician's, or group's Medicare Part B patients for the performance period.
QCDR measures, MIPS CQMs, and eCQMs	Jan 1- Dec 31	70 percent sample of individual MIPS eligible clinician's, or group's patients across all payers for the performance period.
CMS Web Interface measures	Jan 1- Dec 31	Sampling requirements for the group's Medicare Part B patients: populate data fields for the first 248 consecutively ranked and assigned Medicare beneficiaries in the order in which they appear in the group's sample for each module/measure. If the pool of eligible assigned beneficiaries is less than 248, then the group would report on 100 percent of assigned beneficiaries.
CAHPS for MIPS survey measure	Jan 1- Dec 31	Sampling requirements for the group's Medicare Part B patients.

(d) Selection of MIPS Quality Measures
(i) Call for Measures and Measure Selection Process

In the CY 2019 PFS final rule (83 FR 59758 through 59761), we discuss the importance of classifying measures by meaningful measure areas, and updates to the definition of a high priority measure. We refer readers to the CY 2019 PFS final rule for additional details.

Furthermore, in the CY 2018 Quality Payment Program final rule (82 FR 53635 through 53637), we state that quality measure submissions submitted during the timeframe provided by us through the pre-rulemaking process of each year will be considered for inclusion in the annual list of MIPS quality measures for the performance period beginning 2 years after the measure is submitted. This process is consistent with the pre-rulemaking process and the annual Call for

Measures, which is further described through the CMS Pre-Rulemaking website at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Pre-Rulemaking.html>. The annual Call for Measures process allows for eligible clinician organizations and other relevant stakeholder organizations to identify and submit quality measures for consideration. Presumably, stakeholders would not submit measures for consideration unless they believe the measures are applicable to clinicians and can be reliably and validly measured. Through the annual convention of the consensus-based entity, stakeholders are given the opportunity provide input on whether or not they believe measures are applicable to clinicians, feasible, scientifically acceptable, reliable, and valid at the clinician level. We intend to continue to submit future MIPS quality

measures to the consensus-based entity, as appropriate, and consider the recommendations provided as part of the comprehensive assessment of each measure considered for inclusion in MIPS. In addition, we must go through notice and comment rulemaking to consider stakeholder feedback prior to finalizing the annual list of quality measures. Furthermore, as required by statute, new measures must be submitted to an applicable specialty-appropriate, peer-reviewed journal. We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53636) for additional details on the peer-reviewed journal requirement.

In the CY 2018 Quality Payment Program final rule (82 FR 53636), we requested stakeholders apply the following set of considerations when submitting quality measures for possible inclusion in MIPS:

- Measures that are not duplicative of an existing or proposed measure.

- Measures that are beyond the measure concept phase of development, with a strong preference for measures that have completed reliability, feasibility, and validity testing.

- Measures that are outcomes-based rather than process measures.

- Measures that address patient safety and adverse events.

- Measures that identify appropriate use of diagnoses and therapeutics.

- Measures that address the domain of care coordination.

- Measures that address of patient and caregiver experience.

- Measures that address efficiency, cost, and resource use.

- Measures that address significant variation in performance and are not considered topped out.

- Measures that are specified as a collection type other than Medicare Part B Claims. We encourage measure stewards to keep this in mind as they develop and submit measures for consideration.

We also encourage stakeholders to consider electronically specifying their quality measures, as eCQMs, in order to encourage clinicians and groups to move towards the utilization of electronic reporting, as we believe electronic reporting will increase timeliness and efficiency of reporting by replacing manual data entry.

In addition to the aforementioned considerations, when considering quality measures for possible inclusion in MIPS, we proposed that beginning with the 2020 Call for Measures process, MIPS quality measure stewards would be required to link their MIPS quality measures to existing and related cost measures and improvement activities, as applicable and feasible (84 FR 40749). MIPS quality measure stewards will be required to provide a rationale as to how they believe their measure correlates to other performance category measures and activities as a part of the Call for Measures process. We recognize there are instances where costs measures are not available for all clinician specialties or that improvement activities may not be associated with a given quality measure. However, we believe that when possible, it is important to establish a strong linkage between quality, cost, and improvement activities.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposal that measures stewards should link their quality measures with improvement activities and cost measures when possible. Commenters stated that it might be

beneficial for CMS to require the same assessment by an Improvement Activities submitter as the agency would for a new MIPS measure.

Response: We agree that this criteria could be applied to improvement activities as well, and will take it into consideration in future rulemaking.

After consideration of the comments, we are finalizing that beginning with the 2020 Call for Measures process, MIPS quality measure stewards will be required to link their MIPS quality measures to existing and related cost measures and improvement activities, as applicable and feasible. MIPS quality measure stewards will be required to provide a rationale as to how they believe their measure correlates to other performance category measures and activities as a part of the Call for Measures process.

Furthermore, previously finalized MIPS quality measures can be found in the CY 2019 PFS final rule (83 FR 60097 through 60285); CY 2018 Quality Payment Program final rule (82 FR 53966 through 54174); and in the CY 2017 Quality Payment Program final rule (81 FR 77558 through 77816). The new MIPS quality measures proposed for inclusion in MIPS for the 2020 performance period and future years are found in Table Group A of Appendix 1 of this proposed rule.

In addition to the individual MIPS quality measures, we also develop and maintain specialty measure sets to assist MIPS eligible clinicians with choosing quality measures that are most relevant to their scope of practice. In the CY 2020 PFS proposed rule (84 FR 40749), we erroneously indicated that changes were not made to the Pathology, Electro-Physiology Cardiac Specialist, and Interventional Radiology specialty set. We clarify that we requested comments on the Electro-Physiology Cardiac Specialist specialty set (84 FR 40954) and proposed changes to the Pathology specialty set (84 FR 41020 through 41022). Our proposals for modifications to existing specialty sets and new specialty sets are discussed in Table Group B of Appendix 1 of this final rule. Specialty sets may include: New measures, previously finalized measures with modifications, previously finalized measures with no modifications, the removal of certain previously finalized quality measures, or the addition of existing MIPS quality measures. Please note that the specialty and subspecialty sets are not inclusive of every specialty or subspecialty.

On January 18, 2019,¹¹⁴ we announced that we would be accepting recommendations for potential new specialty measure sets or revisions to existing specialty measure sets for Year 4 of MIPS under the Quality Payment Program. These recommendations were based on the MIPS quality measures finalized in the CY 2019 PFS final rule, the 2019 Measures Under Consideration list, and provides recommendations to add or remove the current MIPS quality measures from existing specialty sets, or provides recommendations for the creation of new specialty sets. All specialty set recommendations submitted for consideration were assessed and vetted, and those recommendations that we agree with were proposed in the CY 2020 PFS proposed rule.

In addition, MIPS quality measures with substantive changes can be found in Table Groups D and DD of Appendix 1 of this final rule. As discussed in Table DD of this final rule, we have determined based on extensive stakeholder feedback that the 2018 CMS Web Interface measure numerator guidance for the Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention measure is inconsistent with the intent of the CMS Web Interface version of this measure as modified in the CY 2018 Quality Payment Program final rule (82 FR 54164) and is unduly burdensome on clinicians. Moreover, due to the current guidance, we are unable to rely on historical data to benchmark the measure. Therefore, for the 2018 MIPS performance period and 2020 MIPS payment year, we are excluding the Web Interface version of this measure from MIPS eligible clinicians' quality scores in accordance with § 414.1380(b)(1)(i)(A)(2). Beginning with reporting for the 2019 MIPS performance period and 2021 MIPS payment adjustment, we proposed in Table DD of this final rule to update the CMS Web Interface measure numerator guidance. To the extent that this change constitutes a change to the MIPS scoring or payment methodology for the 2021 MIPS payment adjustment after the start of the 2019 MIPS performance period, we believe that, consistent with section 1871(e)(1)(A)(ii) of the Act, it would be contrary to the public interest not to

¹¹⁴ Listserv messaging was distributed through the Quality Payment Program listserv on January 18th, 2019, titled: "CMS is Soliciting Stakeholder Recommendations for Potential Consideration of New Specialty Measure Sets for the Quality Performance Category and/or Revisions to the Existing Specialty Measure Sets for the Quality Performance Category for the 2020 Program Year of Merit-based Incentive Payment System (MIPS)."

modify the measure in Table DD of this final rule because the current guidance is inconsistent with the intent of the CMS Web Interface version of this measure, as modified in the CY 2018 Quality Payment Program final rule, and unduly burdensome on clinicians. As discussed in Table DD of this final rule, we are finalizing this modification as proposed and expect that we will be able to benchmark and score the CMS Web Interface version of this measure for the 2019 MIPS performance period and 2021 MIPS payment adjustment. Furthermore, we refer readers to section III.E.1.b. of this final rule for a discussion on how the Preventive Care and Screening; Tobacco Use: Screening and Cessation Intervention quality measure will be scored for the Medicare Shared Savings Program.

In addition, also as discussed in section III.E.1.b of this final rule, changes to the CMS Web Interface measures for MIPS that are proposed and finalized through rulemaking would also be applicable to ACO quality reporting under the Medicare Shared Savings Program. As discussed in Table Group A of Appendix 1 of this final rule, we proposed to add 1 new measure to the CMS Web Interface in MIPS. Furthermore, as discussed in Table Group C of Appendix 1 of this final rule, we proposed to remove 1 measure from the CMS Web Interface in MIPS. As discussed in Table Groups A and C of Appendix 1 of this final rule, we are not finalizing our proposed measure additions and removals for the CMS Web Interface in MIPS. Groups reporting CMS Web Interface measures for MIPS will be responsible for reporting the finalized measure set. We refer readers to the Appendix 1 of this final rule for additional details on the proposals related to changes in CMS Web Interface measures.

On an annual basis, we review the established MIPS quality measure inventory to consider updates to the measures. Possible updates to measures may be minor or substantive as described above. We note that the current cycle of measure updates to MIPS quality measures is separate from the eCQM annual update process. An overarching timeline of milestones related to eCQMs available at <https://ecqi.healthit.gov/ecqm-annual-timeline>. We solicited stakeholder comment as to whether we should consider realigning the measure update cycle with that of the eCQM annual update process. While we are not summarizing and responding to comments we received in this final rule, we appreciate the responses and may take them into account as we

develop future policies for the measure update process.

In addition, we referred readers to the CY 2019 PFS final rule (83 FR 59759) for additional details on reporting requirements of eCQM measures. Furthermore, as discussed in section III.D. of this final rule, we proposed to generally align the CY 2020 eCQM reporting requirements for the eligible professionals participating in the Medicaid Promoting Interoperability Program with the MIPS eCQM reporting requirements. We refer readers to section III.D. of this final rule for additional details and criteria on the Medicaid Promoting Interoperability Program proposals.

(ii) Global and Population-Based Measures

Section 1848(q)(2)(C)(iii) of the Act provides that the Secretary may use global measures, such as global outcome measures, and population-based measures for purposes of the quality performance category. We believe the purpose of global and population-based measures is to encourage systemic health care improvement for the populations being served by MIPS eligible clinicians. In addition, as described in the CY 2017 Quality Payment Program final rule (81 FR 77130 through 77136), we believe that all MIPS eligible clinicians, including specialists and subspecialists, have a meaningful responsibility to their communities, which is why we chose to focus on population health and prevention measures for all MIPS eligible clinicians. It is important to note that an individual's health relates directly to population and community health, which is an important consideration for quality measurement in MIPS and in general. Furthermore, we have heard from stakeholders that we should drive quality measurement towards a set of population-based outcome measures to publicly report on quality of care.

In addition, we believe including additional administrative claims based measures in the program will reduce the burden associated with quality reporting. Quality measures that are specified through the administrative claims collection type do not require separate data submission to CMS. Administrative claims measures are calculated based on data available from MIPS eligible clinicians' billings on Medicare Part B claims. For these reasons, as discussed in Table Group AA of Appendix 1 of this final rule, we proposed the inclusion of a population health based quality measure (the All-Cause Unplanned Admission for

Patients with Multiple Chronic Conditions measure) beginning with the 2021 MIPS performance period. We proposed this measure with a delayed implementation until the 2021 performance period of MIPS, to allow for time to work through operational factors of implementing the measure. Factors include allowing for time for the All-Cause Unplanned Admission for Patients with Multiple Chronic Conditions measure to go through the Measures Under Consideration and Measures Application Partnership (MAP) process that is typically applied for all MIPS quality measures. We refer readers to section III.K.3.a. of this final rule for additional information on our interest to include other global and population-based measures in future years of MIPS, which we envision would include the modification of the submission requirements under the quality performance category.

We received public comments on our proposal to include global and population-based measures. The following is a summary of the comments we received and our responses.

Comment: A few commenters opposed the inclusion of population health quality measures in a clinician-focused program based on the belief that they could reduce the opportunity for improvements in patient outcomes, are unable to be tracked in real time, are outside of individual clinician's control, and require a large sample size to produce reliable data.

Response: We disagree. We believe the purpose of global and population-based measures is to encourage systemic health care improvement for the populations being served by MIPS eligible clinicians. In addition, as described in the CY 2017 Quality Payment Program final rule (81 FR 77130 through 77136), we believe that all MIPS eligible clinicians, including specialists and subspecialists, have a meaningful responsibility to their communities, which is why we chose to focus on population health and prevention measures for all MIPS eligible clinicians. We disagree with commenters who believe that population health quality measures reduce the opportunity for improvements in patient outcomes and are unable to be tracked in real time. We believe population health measures increase opportunities to improve patient outcomes on a systemic health level for the populations being served by MIPS eligible clinicians, and that the ability to be tracked in real time is important, but even without real time tracking, we still see a benefit to including these measures in the

program. In addition, while administrative claims based measures may use a large sample size of data, the data collection is less burdensome than what is used for other collection types, since it is done without any submission required by the eligible clinician or group. It is important to note that population and community health may directly influence an individual's health, which is an important consideration for quality measurement in MIPS and in general. In addition, we believe that including additional administrative claims based measures in the program will reduce the burden associated with quality reporting. Quality measures that are specified through the administrative claims collection type do not require separate data submission to CMS. Administrative claims measures are calculated based on data available from MIPS eligible clinicians' billings on Medicare Part B claims. We intend on incrementally including population-based measures into MIPS, and will be looking to evaluate and address stakeholder concerns as a part of the process.

Comment: A few commenters expressed concern about the use of these measures in this clinician-focused program due to their belief of inadequate risk adjustment and lack of consideration of social risk factors and complex patients.

Response: We appreciate the feedback on the role risk adjustment, and complex patients in quality measurement. We continue to evaluate the potential impact of social risk factors on measure performance. One of our core objectives is to improve beneficiary outcomes. We want to ensure that complex patients, as well as those with social risk factors receive excellent care. While we believe the MIPS measures are valid and reliable, we will continue to investigate methods to ensure all clinicians are treated as fairly as possible within the program.

Comment: One commenter opposed the inclusion of the All-Cause Unplanned Admission for Patients with MCCs beginning with the 2021 MIPS performance period with the rationale that because fraud and abuse laws impose restrictions on options for care coordination, it is inappropriate to have a quality measure that presumes effective care coordination.

Response: We believe that the level of care coordination needed to perform well on this quality measure is possible within the existing fraud and abuse framework.

Comment: Several commenters did not support the proposed adoption of the All-Cause Unplanned Admission for

Patients with Multiple Chronic Conditions due to the belief that the measure lacks alignment and reliable attribution. Several commenters expressed concern that the measure does not provide actionable or meaningful feedback to clinicians, such as surgeons and specialists, while holding them accountable for admissions. One commenter recommended that the measure be reviewed by the MAP and NQF.

Response: We appreciate the commenters' concerns regarding the measure's alignment and attribution, and the need for actionable feedback on the measures. We are not finalizing this measure for the 2021 MIPS performance period/2023 MIPS payment year in this final rule, in order to work on addressing the commenters' feedback and to allow for the measure to be reviewed at the NQF's Measure Application Partnership meeting.

After consideration of the comments, we are not finalizing the inclusion of the population health based All-Cause Unplanned Admission for Patients with Multiple Chronic Conditions measure, and will seek to propose it through future rulemaking once we are able to consider feedback from the MAP on this measure.

(iii) Topped Out Measures

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53637 through 53640), where we finalized the 4-year timeline to identify topped out measures, after which we may propose to remove the measures through future rulemaking. We also refer readers to the 2019 MIPS Quality Benchmarks' file that is located on the Quality Payment Program resource library (<https://www.cms.gov/Medicare/Quality-Payment-Program/Resource-Library/Resource-library.html>) to determine which measure benchmarks are topped out for 2019 and would be subject to the scoring cap if they are also identified as topped out in the 2020 MIPS Quality Benchmarks' file. We note that the final determination of which measure benchmarks are subject to the topped out cap would not be available until the 2020 MIPS Quality Benchmarks' file is released in late 2019, but will eventually be posted on the Quality Payment Program Resource Library at <https://qpp.cms.gov/about/resource-library>.

In the CY 2019 PFS final rule (83 FR 59761 through 59763), we finalized that once a measure has reached extremely topped out status (for example, a measure with an average mean performance within the 98th to 100th percentile range), we may propose the

measure for removal in the next rulemaking cycle, regardless of whether or not it is in the midst of the topped out measure lifecycle. However, we would also consider retaining the measure if there are compelling reasons as to why it should not be removed (for example, if the removal would impact the number of measures available to a specialist type or if the measure addressed an area of importance to the Agency). In the CY 2020 PFS proposed rule (84 FR 40750), we erroneously indicated that we were not removing extremely topped out measures from the Pathology specialty set. We clarify that we proposed to remove four extremely topped out measures from and add one measure to the Pathology set in Appendix 1 of the proposed rule (84 FR 41020 through 41022).

Quality measures identified as extremely topped out are considered to have high, unvarying performance where no meaningful room for improvement can be identified, and are only identified as such through data received during the submission period. We have heard from stakeholders that some measures tend to appear topped out or extremely topped out due to clinicians' ability to select measures they expect to perform well on, and because of this, the data we receive is not actually representative of how clinicians perform across the country on these metrics. For this reason, we solicited comment on whether we should increase the data completeness threshold for quality measures that are identified as extremely topped out, but are retained in the program due to the limited availability of quality measures for a specific specialty. In addition, we solicited comment on potential alternative solutions in addressing extremely topped out measures. While we are not summarizing and responding to comments we received in this final rule, we appreciate the responses and may take them into account as we develop future policies for extremely topped out measures.

We encourage stakeholders to continue their measure development efforts in creating new pathology specific quality measures that can demonstrate a meaningful performance gap, thereby offering opportunities for quality improvement. We also continue to encourage pathologists to consider reporting on pathology specific QCDR measures through a CMS-approved QCDR available for the 2020 performance period. A list of CMS-approved QCDRs for the 2020 performance period will be made available on or prior to January 1, 2020, and will be posted on the Quality

Payment Program resource library at <https://qpp.cms.gov/about/resource-library>.

In addition, in the CY 2019 PFS final rule (83 FR 59761 through 59763), we also finalized our policy to exclude QCDR measures from the topped out measure timeline. When a QCDR measure reaches topped out status, as determined during the QCDR measure approval process, it may not be approved as a QCDR measure for the applicable performance period.

(iv) Removal of Quality Measures

In the CY 2017 Quality Payment Program final rule (81 FR 77136 through 77137), we discussed removal criteria for quality measures, including that a quality measure may be considered for removal if the Secretary determines that the measure is no longer meaningful, such as measures that are topped out. Furthermore, if a measure steward is no longer able to maintain the quality measure, it would also be considered for removal. In addition, in the CY 2019 PFS final rule (83 FR 59763 through 59765), we communicated to stakeholders our desire to reduce the number of process measures within the MIPS quality measure set, we believe incrementally removing non-high priority process measures through notice and comment rulemaking is appropriate. We referred readers to the CY 2019 PFS final rule (83 FR 59763 through 59765) for details on the previously established criteria to remove measures.

In addition to previously established measure removal criteria, we have observed instances where MIPS quality measures have had low reporting rates year over year, and have made it difficult for some MIPS quality measures to achieve a benchmark. As a result, these measures have resulted in clinicians receiving no more than 3 points for each measure that is unable to meet benchmarking criteria. For these reasons, we proposed to remove MIPS quality measures that do not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods (84 FR 40751 through 40752). We believe that a time period of 2 consecutive CY performance periods is appropriate, as we anticipate that any newly finalized measure would need more than 1 CY performance period in order to observe measure reporting trends, and believe that 2 consecutive CY performance periods allows for sufficient time to monitor reporting volumes. We will factor in other considerations (such as, but not limited to: The robustness of the

measure; whether it addresses a measurement gap; if the measure is a patient-reported outcome) prior to determining whether to remove the measure. Removing measures with this methodology ensures that the MIPS quality measures available in the program are truly meaningful and measureable areas, where quality improvement is sought and that measures that are low reported for 2 consecutive CY performance periods are removed from the program. We believe low reported measures can point to that the measure concept does not provide meaningful measurement to most clinicians. If the measure has too few reporting clinicians and does not meet the case minimum and reporting volumes, but other considerations favor retaining the measure, we may consider keeping the MIPS quality measure, with the caveat that the measure steward should have a participation plan in place (prior to approval of the measure) to encourage reporting of the measure, such as education and communication or potentially measure specification changes. In addition, we refer readers to Table Group C of Appendix 1 of this final rule for a list of quality measures and rationales for removal. We have continuously communicated to stakeholders our desire to reduce the number of process measures within the MIPS quality measure set. We believe our proposal to remove the quality measures outlined in Table Group C will lead to a more parsimonious inventory of meaningful, robust measures in the program, and that our approach to remove measures should occur through an iterative process that will include an annual review of the quality measures to determine whether they meet our removal criteria.

We received public comments on our proposal to remove MIPS quality measures that do not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposal and expressed appreciation of CMS' move to a parsimonious measure set, with a caution for CMS to ensure each specialty will have enough measures to report in a meaningful manner.

Response: We thank the commenters for their support.

Comment: One commenter stated that eliminating a measure only after 2 years in the program will deter measure stewards from investing in and

developing new measures, maintaining existing measures, and putting forward MVP proposals. The commenter indicated the proposed policy would result in removing measures that developers have spent more than 2 years to develop and test only to have it in the program for a small number of years and encouraged CMS to perform analysis and work with measure stewards to learn the time it takes for measures to achieve acceptable numbers of adoption.

Response: While we understand the time it takes for measure stewards to develop and invest in quality measures, we also want to be mindful of the large volume of measures that accrue in our measure inventory year over year. There have been instances where quality measures have been in the MIPS or legacy PQRS program, where the reporting volumes are quite low, and that has been the basis to which we have established this policy. We believe that lowly-reported quality measures do not add value to a clinician's quality improvement strategy, and that having a large volume of measures can increase burden by providing too much choice. We are open to working with measure stewards to understand the time it takes for measures to achieve increased adoption, and would encourage those measure stewards to submit a participation plan for our consideration for measures that have not reached benchmarking thresholds within the 2-year timeframe.

Comment: A few commenters suggested that CMS should assess each measure on a case-by-case basis rather than creating a blanket policy to remove them.

Response: As noted above, as a part of our measure removal process, we intend to assess each measure on a case-by-case basis and will take into consideration multiple factors, including but not limited to: Whether the measure removal will impact the number of measures available to a given specialty; or whether the measure removal will result in no remaining outcome or high priority measures available to a specialty to meet the quality performance category reporting requirements.

Comment: One commenter noted that data from the first 2 years of MIPS is not representative, as reporting requirements and performance thresholds for the program have changed over time.

Response: We disagree. There has been evidence of quality measures that continue to be low-reported over several years, as we have tracked performance on many of these metrics from the

previous legacy program, PQRS. We do not believe low-reported quality measures provide value in a pay for performance quality program.

Comment: A few commenters expressed concern about the proposal to remove MIPS quality measures that do not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods. Commenters stated that low reporting rates are not always an indication of a low value measure. One commenter noted that some measures may only be reported by a small number of clinicians which represents a significant percentage of those caring for a specific patient population, and urged CMS to evaluate these important factors when assessing topped out status and making measure removal determinations. One commenter opposed this proposal and recommended that CMS allow appropriate time for measures to receive enough data to set benchmarks.

Response: As discussed above, we believe that a time period of 2 consecutive CY performance periods is appropriate, as we anticipate that any newly finalized measure would need more than 1 CY performance period in order to observe measure reporting trends, and believe that 2 consecutive CY performance periods allows for sufficient time to monitor reporting volumes. We will factor in other considerations (such as, but not limited to: The robustness of the measure; whether it addresses a measurement gap; if the measure is a patient-reported outcome) prior to determining whether to remove the measure; the measure's relevance for sub-specialists. Removing measures with this methodology ensures that the MIPS quality measures available in the program are truly meaningful and measureable areas, where quality improvement is sought and that measures that are low reported for 2 consecutive CY performance periods are removed from the program. We believe low reported measures can point to that the measure concept does not provide meaningful measurement to most clinicians. If the measure has too few reporting clinicians and does not meet the case minimum and reporting volumes, but other considerations favor retaining the measure, we may consider keeping the MIPS quality measure.

Comment: Several commenters expressed concern about the number of measures proposed for removal, and recommended we maintain as broad an inventory of measures as possible. Several commenters urged CMS to reconsider the proposed removal of 55 quality measures or over 20 percent of

the quality category measures, particularly those proposed for removal due to topped out status or an ongoing lack of benchmark. Several commenters noted the removal of specific measures could impact the ability of specialists to participate fully and meaningfully in MIPS and could cause them to re-evaluate investment in developing new MIPS measures.

Response: We have continuously communicated to stakeholders our desire to reduce the number of process measures within the MIPS quality measure set. We believe our proposal to remove the quality measures outlined in Table Group C will lead to a more parsimonious inventory of meaningful, robust measures in the program, and that our approach to remove measures should occur through an iterative process that will include an annual review of the quality measures to determine whether they meet our removal criteria. As a part of our measure removal process, we intend to assess each measure on a case-by-case basis and will take into consideration multiple factors, including but not limited to: Whether the measure removal will impact the number of measures available to a given specialty or whether the measure removal will result in no remaining outcome or high priority measures available to a specialty to meet the quality performance category reporting requirements. While we intend on removing some quality measures from the program that no longer add value, as noted above, we are finalizing additional quality measures in the program (two patient-reported outcome measures, and one opioid-related measure, as well as the addition of seven new specialty sets, and continuously intend on evaluating the MIPS quality measure inventory on an annual basis.

Based on these considerations, we have decided not to finalize the removal of certain measures (particularly some of those measures that are available to non-patient facing clinicians), and refer readers to Table Group C for detailed discussion on the measures we are no longer removing. We continuously encourage stakeholders to develop measures to not just address measurement gaps, but to also address and replace specialty specific topped out quality measures as we seek to eventually transition to MVPs.

After consideration of the comments, we are finalizing our proposal to remove MIPS quality measures that do not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY

performance periods. We will factor in other considerations (such as, but not limited to: The robustness of the measure; whether it addresses a measurement gap; if the measure is a patient-reported outcome; consideration of the measure in developing MVPs) prior to determining whether to remove the measure.

We have heard from stakeholders concerns on removing measures and the need for more notice before a measure is removed. Therefore, we are interested in what factors should be considered in delaying the removal of measures. For example, we have not heard concerns from stakeholders that selection bias may be impacting low reporting rates, we are interested if this is something we should consider, and how we could determine when low-reporting is due to selection bias versus instances where the measure is not a meaningful metric to the majority of clinicians who would have reported on the measure otherwise. We solicited comment on whether we should delay the removal of a specific quality measure by a year, for any of the MIPS quality measures identified for removal. We also requested feedback on which quality measure's removal should be delayed for a year, and why. While we are not summarizing and responding to comments we received in this final rule, we thank the commenters for their responses and may take them into account as we develop future policies for consideration to delay measure removals.

Furthermore, when we finalize measures to be a part of the MIPS quality measure inventory for a given MIPS payment year, we generally intend that the measures will be available for reporting by or on behalf of all MIPS eligible clinicians since MIPS is a government quality reporting program. It has come to our attention that certain MIPS measure stewards have limited or prohibited the use of their measures by third party intermediaries such as QCDRs and qualified registries. To the extent that MIPS measure stewards limit the availability of previously finalized measures for MIPS quality reporting, including reporting by third party intermediaries on behalf of MIPS eligible clinicians, these limitations may lead to inadvertent increases in burden both for the MIPS eligible clinicians who rely on third party intermediaries and for third party intermediaries themselves. In addition, these limitations may adversely affect our ability to benchmark the measure or the robustness of the benchmark. For these reasons, we proposed to adopt an additional removal criterion, specifically, that we may consider a

MIPS quality measure for removal if we determine it is not available for MIPS quality reporting by or on behalf of all MIPS eligible clinicians. We solicited comments on this proposal.

We received public comments on whether to adopt an additional removal criterion, specifically, that we may consider a MIPS quality measure for removal if we determine it is not available for MIPS quality reporting by or on behalf of all MIPS eligible clinicians. The following is a summary of the comments we received and our responses.

Comment: Several commenters noted their support for our proposal to consider measures for removal if a measure steward does not make their measure available for reporting by or on behalf of all MIPS eligible clinicians it should be considered for removal.

Response: We thank the commenters for their support.

After consideration of the comments, we are finalizing the proposed measure removal criterion that we may consider a MIPS quality measure for removal if we determine it is not available for MIPS quality reporting by or on behalf of all MIPS eligible clinicians.

(v) Request for Information on Potential Opioid Overuse Measure

To address concerns associated with long-term, high-dose opioids, we developed an electronic clinical quality measure (eCQM) titled: Potential Opioid Overuse. In the CY 2020 PFS proposed rule (84 FR 40752), we solicited stakeholder feedback in several areas related to this measure. While we are not summarizing and responding to comments we received in this final rule, we thank the commenters for their responses and may take them into account as we consider further development of the Potential Opioid Overuse measure.

(2) Cost Performance Category

For a description of the statutory basis and our existing policies for the cost performance category, we refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules, and the CY 2019 PFS final rule (81 FR 77162 through 77177, 82 FR 53641 through 53648, and 83 FR 59765 through 59776, respectively).

In the CY 2020 PFS proposed rule (84 FR 40752 through 40762), we proposed to:

- Weight the cost performance category at 20 percent for MIPS payment year 2022, 25 percent for MIPS payment year 2023, and 30 percent for MIPS payment year 2024 and all subsequent MIPS payment years;

- Change our approach to proposing attribution methodologies for cost measures by including the methodology in the measure specifications;

- Add 10 episode-based measures;
- Modify the total per capita cost and Medicare Spending Per Beneficiary (MSPB) measures; and
- Requested comments on the future inclusion of an additional episode-based measure.

These proposals are discussed in more detail in the following sections of this final rule.

(a) Weight in the Final Score

In the CY 2019 PFS final rule, we established at § 414.1350(d)(3) that the weight of the cost performance category is 15 percent of the final score for the 2021 MIPS payment year (83 FR 59765 through 59766). Section 51003(a)(1)(C) of the Bipartisan Budget Act of 2018 (Pub. L. 115–123, February 9, 2018) (BBA of 2018) amended section 1848(q)(5)(E)(i)(II)(bb) of the Act such that for each of the second, third, fourth, and fifth years for which the MIPS applies to payments, not less than 10 percent and not more than 30 percent of the MIPS final score shall be based on the cost performance category score. Additionally, section 1848(q)(5)(E)(i)(II)(bb) of the Act as amended states that it shall not be construed as preventing the Secretary from adopting a 30 percent weight if the Secretary determines, based on information posted under section 1848(r)(2)(I) of the Act, that sufficient cost measures are ready for adoption for use under the cost performance category for the relevant performance period. In the CY 2019 PFS proposed rule, we solicited comments on how we should weight the cost performance category for the 2022 and 2023 MIPS payment years given the changes within the BBA of 2018 (83 FR 35901). We considered these comments when we developed our proposals for setting the weight of the cost performance category.

In the CY 2020 PFS proposed rule (84 FR 40752), we proposed a steady increase in the weight of the cost performance category from the existing weight of 15 percent for the 2021 MIPS payment year to 30 percent beginning with the 2024 MIPS payment year as required by section

1848(q)(5)(E)(i)(II)(aa) of the Act. We stated that we believe this gradual and predictable increase would allow clinicians to adequately prepare for the 30 percent weight while gaining experience with the new cost measures. We recognized that cost measures are still being developed and that clinicians may not have the same level of

familiarity or understanding of cost measures that they do of comparable quality measures. We also recognized that there may be greater understanding of the measures in the cost performance category as clinicians gain more experience with them.

We proposed at § 414.1350(d)(4) that the cost performance category would make up 20 percent of a MIPS eligible clinician's final score for the 2022 MIPS payment year (84 FR 40752). We stated that we plan to increase the weight of the cost performance category at standard increments of 5 percent each year until MIPS payment year 2024. Therefore, we proposed at § 414.1350(d)(5) to weight the cost performance category at 25 percent for the 2023 MIPS payment year and proposed at § 414.1350(d)(6) to weight the cost performance category at 30 percent for the 2024 MIPS payment year and each subsequent MIPS payment year (84 FR 40752). This would allow us to meet the 30 percent cost performance category weight when required by the statute and give clinicians adequate time to gain experience with the cost measures while they represent a smaller portion of the final score. We stated that we also believe that a predictable increase in the weight of the cost performance category each year would allow clinicians to better prepare for each year going forward. We noted that we considered maintaining the weight of the cost performance category at 15 percent for the 2022 and 2023 MIPS payment years as we recognize that we are still introducing new measures for the cost performance category and clinicians are still gaining familiarity and experience with these new measures. However, recognizing that we are required by the statute to weight the cost performance category at 30 percent beginning with the 2024 MIPS payment year, we are concerned about having to increase the cost performance category's weight significantly for the 2024 MIPS payment year. We invited comments on whether we should consider an alternative weight for the 2022 and/or 2023 MIPS payment years.

The following is a summary of the comments we received and our responses.

Comment: Some commenters supported our proposal to gradually increase the weight of the cost performance category to 20 percent for the 2022 MIPS payment year, 25 percent for the 2023 MIPS payment year, and 30 percent for the 2024 MIPS payment year.

Response: We thank the commenters for their support.

Comment: Some commenters suggested maintaining the cost performance category weight at 15 percent until CMS is able to provide more detailed and actionable performance data to clinicians. Some examples of more detailed feedback include comparison information and data on the MIPS 2019 performance period cost measures or a format similar to the Quality and Resource Use Reports (QRURs) that were made available in connection with the Physician Quality Reporting System (PQRS) and Value Modifier (VM) programs. Some commenters suggested that CMS should wait to increase the weight of the cost performance category until clinicians gain more experience with and are more educated about the proposed and newly developed episode-based measures, and the modified total per capita cost and MSPB measures.

Response: We agree with this concern and believe clinicians need more detailed and timely feedback on both new and existing cost measures in order to improve their performance in the cost performance category. We previously made the QRURs available to clinicians under the Physician Feedback Program, but the statute required those reports to end with 2017. In July of 2019, we provided detailed performance feedback reports to clinicians which included detailed information reflecting performance for the total per capita cost measure and MSPB clinician measure as specified for the 2018 MIPS performance period. We intend to provide similar feedback for all cost measures in July of 2020, reflecting performance from the 2019 MIPS performance period and utilizing the measure specifications applicable for the 2019 MIPS performance period. We are committed to improving the feedback experience, including aiming to provide more granular and real-time data, for clinicians to better understand how they can improve their performance on these measures and in turn reduce the cost of care for Medicare beneficiaries. Once clinicians better understand and are more accustomed to reviewing the performance feedback reports on these episode-based and global cost measures, we would then expect to increase the cost performance category weight. Therefore, we believe it is best to maintain the 15 percent weight for the cost performance category for MIPS payment year 2022 in efforts to allow clinicians to become more familiar with the feedback process and allow us to continue to improve feedback reports.

Comment: Many commenters opposed our proposal to gradually increase the

weight of the cost performance category by 5 percent until MIPS payment year 2024 and utilize the flexibility established by the Bipartisan Budget Act of 2018 to weight the cost performance category between 10 and 30 percent. Some commenters expressed general concern about the quality of measures in the cost performance category including issues with appropriate attribution, reliability, and adjustment for social and complexity risk factors. Other commenters expressed concern about continued change and development in cost measures. A few commenters urged CMS to not increase the cost performance category weight in 2020 in light of the transition period to MVPs.

Response: We understand that for many clinicians, cost measures are more difficult to understand than measures and activities in other performance categories. We believe that we can help to facilitate understanding by providing a more detailed level of feedback on performance on these measures. While we believe it is important to provide more detailed performance feedback to clinicians before increasing the weight of the cost performance category, we do not believe that the introduction of new and revised measures would require us to minimize the weight of the cost performance category. As in all performance categories of MIPS, there are continued opportunities to improve the measures and activities used to assess performance. We do believe that the cost measures that we are using in MIPS represent the best available measures and we take care to consider all of the important issues mentioned by the commenters, including attribution and risk adjustment, as part of the measure development process. Specifically regarding social and complexity risk factors, we continue to investigate ways to best accommodate the issue of social and patient complexity adjustment in measures. Currently, we use the CMS-HCC model to account for patient complexity, and we have also established a complex patient bonus as part of the MIPS final score, which accounts for elements of social complexity. We refer readers to our comment responses in section III.K.3.c.(2)(b)(iii) of this final rule for more detailed explanation of how we continue to address this issue.

We also continue to revise measures to address concerns with attribution methodologies as discussed in section III.K.3.c.(2)(b)(v) of this final rule. In regards to reliability, we believe our current reliability threshold of 0.4 for measures in the cost performance category is both consistent with other CMS quality programs and ensures

moderate reliability but does not substantially limit participation. We further discuss our policies related to reliability for cost measures in section III.K.3.c.(2)(b)(vi) of this final rule. Lastly, we anticipate that we may continue to use many of these proposed and newly developed episode-based measures within MVPs.

Comment: A few commenters recommended maintaining the cost performance category weight at 15 percent until CMS develops more reliable and valid measures. One commenter stated that the cost methodology does not appropriately capture the cost of care for certain specialties particularly those that deliver costly procedures and treat highly complex patients.

Response: We agree that it is important to have measures that are as reliable and valid as possible in the cost performance category. We have focused our efforts on developing episode-based measures, with significant clinical input to ensure that they reflect the services that can most be affected by the clinicians during the episode. We have also, as discussed in section III.K.3.c.(2)(b)(v) of this final rule, refined the existing total per capita cost and Medicare spending per beneficiary in a manner that we believe improves their validity. We will continue to evaluate cost measures that are included in MIPS on an ongoing basis and anticipate that measures could be added, modified, or removed through rulemaking as measure development continues. Additionally, we continue to work to develop new episode-based measures that could be considered for inclusion in the cost performance category in future years. We expect that future measures may apply to a greater range of specialties and clinical areas, including those that deliver costly procedures as suggested by commenters. However, once again, while we believe it is important to provide more detailed performance feedback to clinicians before increasing the weight of the cost performance category, we do not believe that the introduction of new and revised measures would require us to minimize the weight of the cost performance category. Section 1848(r)(2)(D)(i)(I) of the Act requires us to establish care episode groups and patient condition groups, which account for a target of an estimated one half of expenditures under parts A and B with such target increasing over time as appropriate. While we have developed some episode-based measures to target that goal as required, we shall continue our work to develop additional measures focusing on both additional specialty

types, as well as consider the important issue of treating highly complex patients. By continuing to gather detailed clinician and expert input on episode-based measures, such as through clinical subcommittees and technical expert panels convened by the measure development contractor, we hope to identify and mitigate potential unintended consequences each stage of the measure development process.

After consideration of the public comments, we are not finalizing our proposal at § 414.1350(d)(4) that the cost performance category would make up 20 percent of a MIPS eligible clinician's final score for the 2022 MIPS payment year. For the reasons discussed in our responses to comments above, we are instead continuing to weight the cost performance category at 15 percent for the 2022 MIPS payment year and are revising § 414.1350(d)(3) to reflect that the cost performance category will be 15 percent of a MIPS eligible clinician's final score for MIPS payment years 2021 and 2022. We are also not finalizing our proposals at § 414.1350(d)(5) to weight the cost performance category at 25 percent for the 2023 MIPS payment year and at § 414.1350(d)(6) to weight the cost performance category at 30 percent for the 2024 MIPS payment year and each subsequent MIPS payment year. We will consider the state of the performance feedback that we offer clinicians and expect to propose a weight for the cost performance category for the 2023 MIPS payment year in the CY 2021 PFS proposed rule.

In accordance with section 1848(q)(5)(E)(i)(II)(bb) of the Act, we will continue to evaluate whether sufficient cost measures are included under the cost performance category as we move towards the required 30 percent weight in the final score. As described in section III.K.3.c.(2)(b)(iii) of this final rule, we proposed to add 10 episode-based measures to the cost performance category beginning with the 2020 MIPS performance period (84 FR 40754 through 40759). We are continuing our efforts to develop more robust and clinician-focused cost measures. We will also be continuing to work on developing additional episode-based measures that we may consider proposing for the cost performance category in future years to address additional clinical conditions. Introducing more measures over time will allow more clinicians to be measured in this performance category, with an increasing focus on capturing costs for clinically associated services provided by clinicians for specific episodes of care. In section III.K.3.c.(2)(b)(v) of the proposed rule,

we discussed modifications to both the total per capita cost and MSPB measures in an effort to ensure that our existing cost measures hold clinicians appropriately accountable (84 FR 40757 through 40759).

(b) Cost Criteria

(i) Background

Under § 414.1350(a), we specify cost measures for a performance period to assess the performance of MIPS eligible clinicians on the cost performance category. We will continue to evaluate cost measures that are included in MIPS on an ongoing basis and anticipate that measures could be added, modified, or removed through rulemaking as measure development continues. Any substantive changes to a measure would be proposed for adoption in future years through notice and comment rulemaking, following review by the Measure Applications Partnership (MAP). We would take all comments and feedback from both the public comment period and the MAP review process into consideration as part of the ongoing measure evaluation process. In the CY 2020 PFS proposed rule, we proposed to add 10 newly developed episode-based measures to the cost performance category for the CY 2020 performance period and future performance periods, and proposed modifications to both the total per capita cost and MSPB measures (84 FR 40754 through 40759). Additionally, we summarized all new and existing measures that would be included in the cost performance category starting with the CY 2020 performance period (84 FR 40761 through 40762). We stated that some modifications to measures used in the cost performance category might incorporate changes that would not substantively change the measure. Examples of such non-substantive changes may include updated diagnosis or procedure codes or risk adjusters. While we address such changes on a case-by-case basis, we stated that we generally believe these types of maintenance changes are distinct from substantive changes to measures that result in what are considered new or different measures. However, as described in section 3 of the Blueprint for the CMS Measures Management System Version 15 (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf>), if substantive changes to these measures that are owned and developed by CMS become necessary, we expect to follow the pre-rulemaking process for new measures, including

resubmission to the Measures Under Consideration (MUC) list and consideration by the MAP. The MAP provides an additional opportunity for an interdisciplinary group of stakeholders to provide feedback on whether they believe the measures under consideration are applicable to clinicians and complement program-specific statutory and regulatory requirements. Through its Measure Selection Criteria, the MAP focuses on selecting high-quality measures that address the NQF's three aims of better care, healthy people/communities, and affordable care, as well as fill critical measure gaps and increase alignment among programs.

In section III.K.3.c.(2)(b)(v)(A) of the CY 2020 PFS proposed rule, we summarized the timeline for measure development, including stakeholder engagement activities that are undertaken by the measure development contractor, which include a technical expert panel (TEP), clinical subcommittees, field testing, and education and outreach activities (84 FR 40756).

(ii) Attribution

In this section of this final rule, we discuss our approach to the attribution methodology for cost measures along with revisions to our existing cost measures. In the CY 2017 Quality Payment Program final rule (81 FR 77168 through 77169), we adopted an attribution methodology for the total per capita cost measure under which beneficiaries are attributed using a method generally consistent with the method of assignment of beneficiaries used in the Shared Savings Program. We codified this policy under § 414.1350(b)(2) in the CY 2019 PFS final rule (83 FR 59774). In the CY 2017 Quality Payment Program final rule (81 FR 77174 through 77176), we also adopted an attribution methodology for the MSPB measure under which an episode is attributed to the MIPS eligible clinician who submitted the plurality of claims (as measured by allowed charges) for Medicare Part B services rendered during an inpatient hospitalization that is an index admission for the MSPB measure during the applicable performance period. We codified this policy under § 414.1350(b)(3) in the CY 2019 PFS final rule (83 FR 59775).

In the CY 2019 PFS final rule (83 FR 59775), we established at § 414.1350(b)(6) that for acute inpatient medical condition episode-based measures, an episode is attributed to each MIPS eligible clinician who bills inpatient E/M claim lines during a

trigger inpatient hospitalization under a TIN that renders at least 30 percent of the inpatient E/M claim lines in that hospitalization, and at § 414.1350(b)(7) that for procedural episode-based measures, an episode is attributed to each MIPS eligible clinician who renders a trigger service as identified by HCPCS/CPT procedure codes.

As discussed in section III.K.3.c.(2)(b)(v) of the CY 2020 PFS proposed rule, we have reevaluated the total per capita cost and MSPB measures (84 FR 40756 through 40759). In the process of evaluating these measures, the TEP identified areas for potential refinement within the attribution methodology, and the revised measures that we proposed included substantial changes to the attribution methodology. As we explained in section III.K.3.c.(2)(b)(v) of the proposed rule, we believe these new attribution methodologies better establish the relationship between the clinician and the patients. In general, for the cost performance category, we stated in the CY 2020 PFS proposed rule (84 FR 40753 through 40754) that we believe that attribution is a fundamental element of the measures, and we do not believe that a cost measure can be separated from its attribution methodology. Although in prior rulemaking, we have discussed the attribution methodologies for the cost measures in the preamble and included those methodologies in the regulation text, we stated that we intend to take a different approach going forward and address attribution as part of the measure logic and specifications. We stated that for this rulemaking and in future rulemaking, we will include the attribution methodology for each cost performance category measure in the measure specifications, which were available for review and public comment at <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/value-based-programs/macra-mips-and-apms/macra-feedback.html> during the public comment period for the proposed rule, and will be available in final form at <https://qpp.cms.gov/about/resource-library> after this final rule is published. We stated that we believe this approach is preferable because it would reduce complexity for MIPS eligible clinicians and other stakeholders by presenting the attribution methodology with the rest of the cost measure specifications, ensure non-substantive changes can be implemented without undertaking rulemaking, and align with the approach taken for measures in the quality performance category. Therefore,

we proposed to revise § 414.1350(b)(2), (3), (6), and (7) to reflect that these previously finalized attribution methods apply for the 2017 through 2019 performance periods (84 FR 40754). We also proposed to establish at § 414.1350(b)(8) that beginning with the 2020 performance period, each cost measure would be attributed according to the measure specifications for the applicable performance period (84 FR 40754).

In the CY 2017 Quality Payment Program final rule, we established a final policy to attribute cost measures at the TIN/NPI level, regardless of whether a clinician's performance for purposes of MIPS is assessed as an individual (the TIN/NPI level) or as part of a group (the TIN level) (81 FR 77175 through 77176). We codified this policy under § 414.1350(b)(1) in the CY 2019 PFS final rule (83 FR 59774 through 59775). Similar to the attribution methodology for cost measures, we stated in the CY 2020 PFS proposed rule (84 FR 40754) that we also believe that the level of attribution (TIN/NPI or TIN) is best addressed as part of the measure specifications, allowing for different considerations for group and individual attribution based on the underlying measure specification. We stated that for this rulemaking and in future rulemaking, we will include the level of attribution for each cost performance category measure in the measure specifications, which will be publicly available as described in the preceding paragraph. The measure specification documents will provide the methodology for assigning attribution to an individual clinician or a group, which will align with whether the participant is reporting data as an individual clinician or a group under the MIPS program. Therefore, we proposed to revise § 414.1350(b)(1) to reflect that the current policy of attributing cost measures at the TIN/NPI level, regardless of whether a clinician's performance for purposes of MIPS is assessed as an individual or a group, applies for the 2017 through 2019 performance periods (84 FR 40753). We stated that we intend for the new regulation text proposed at § 414.1350(b)(8) also to include the level of attribution (individual clinician or group), so we did not propose additional regulation text. In section III.K.3.c.(2)(b)(vi)(B) of the proposed rule, we proposed to limit the assessment of certain cost measures to MIPS eligible clinicians who report as a group based on our assessment of the reliability of the measure at the group and individual level (84 FR 40760).

Although this is not directly related to attribution, it does limit the assessment of certain measures for MIPS eligible clinicians who report as individuals.

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported our proposal to include the attribution methodology for each cost performance category measure in the measure specifications for this and all future proposed rules.

Response: We thank the commenters for their support.

Comment: One commenter stated that they are concerned with how proposed changes to attribution methodology will be made available to the public. The commenter suggested that this could increase complexity and make it difficult for the public to identify the changes.

Response: We disagree with the commenter and believe this change would reduce complexity for MIPS eligible clinicians and other stakeholders by presenting the attribution methodology comprehensively along with the rest of the cost measure specifications.

After consideration of the public comments, we are finalizing our proposal to revise § 414.1350(b)(2), (3), (6), and (7) to reflect that the previously finalized attribution methods apply for the 2017 through 2019 performance periods. We are also finalizing our proposal to establish at § 414.1350(b)(8) that beginning with the 2020 performance period, each cost measure will be attributed according to the measure specifications for the applicable performance period. Lastly, we are finalizing our proposal to revise § 414.1350(b)(1) to reflect that the current policy of attributing cost measures at the TIN/NPI level, regardless of whether a clinician's performance for purposes of MIPS is assessed as an individual or a group, applies for the 2017 through 2019 performance periods.

(iii) Episode-Based Measures for the 2020 and Future Performance Periods

In this section of the final rule, we discuss our proposal to add 10 newly developed episode-based measures to the cost performance category beginning with the 2020 performance period. We developed episode-based measures to represent the cost to Medicare and beneficiaries for the items and services furnished during an episode of care ("episode"). Episode-based measures are developed to compare clinicians on the basis of the cost of the care clinically related to their initial treatment of a

patient and provided during the episode's timeframe. Specifically, we define cost based on the allowed amounts on Medicare claims, which includes both Medicare payments and beneficiary deductible and coinsurance amounts. We refer our readers to the CY 2019 PFS final rule for more detail on episode-based measures and how they are established (83 FR 59767).

Prior to presenting our cost measures to the MAP for consideration, the measure development contractor has continued to seek extensive stakeholder feedback on the development of episode-based measures, building on the processes outlined in the CY 2018 PFS final rule (82 FR 53644). For more information, we refer readers to the discussion in the CY 2020 PFS proposed rule (84 FR 40754 through 40755). Further detail can also be found in the Measure Development Process document at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/2018-measure-development-process.pdf>, which includes a discussion of the detailed clinical input obtained at each step, and details about the components of episode-based measures.

We provided an initial opportunity for clinicians to review their performance under the new episode-based measures via national field testing conducted in fall of 2018. During field testing, we sought feedback from stakeholders on the draft measure specifications, feedback report format, and supplemental documentation

through an online form, and we received 67 responses, including 25 comment letters. The measure development contractor shared the feedback on the draft measure specifications with the measure-specific workgroups, who considered it in providing input on further refinements after the end of field testing. A field testing feedback summary report, which details post-field testing refinements added based on the input from the measure-workgroups, is publicly available on the MACRA Feedback Page (<https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/value-based-programs/macra-mips-and-apms/macra-feedback.html>).

Similar to previous years, we continued to engage clinicians and stakeholders, conducting extensive outreach activities. These activities included general informational email blasts, targeted email outreach to specialty societies, hosting office hours to gather input on additional opportunities for participation and outreach, and hosting the MACRA Cost Measures Field Testing Webinar to provide information about the measure development process and field test reports and a forum for stakeholder questions to ask questions.

Following the successful field testing and review through the MAP process, we proposed to add the 10 episode-based measures listed in Table 44 as cost measures for the 2020 performance period and future performance periods (84 FR 40754).

The detailed specifications for these 10 episode-based measures are available on the MACRA Feedback page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>). These specifications documents consist of: (1) Methodology for constructing each measure; and (2) measure codes list file with medical codes and clinical logic. First, the methodology document provides an overview of the measure, including a description of the measure numerator and denominator, the patient cohort, and the care settings in which the measure is assessed. In addition, the document includes two one-page, high-level overviews of (1) methodology and (2) clinical logic and service codes, which were added in response to stakeholder feedback regarding provision of documentation with varying levels of detail to ensure the information is accessible to all stakeholders. The methodology document provides detailed descriptions of each logic step involved in constructing the episode groups and calculating the cost measure. Second, the measure codes list file contains the service codes and clinical logic used in the methodology, including the episode triggers, exclusions, episode sub-groups, assigned items and services, and risk adjusters. More information about the attribution methodology for each measure is available in section A.2 of the methodology documentation.

TABLE 44: Episode-Based Measures Proposed for the 2020 Performance Period and Future Performance Periods

Measure Topic	Episode Measure Type
Acute Kidney Injury Requiring New Inpatient Dialysis	Procedural
Elective Primary Hip Arthroplasty	Procedural
Femoral or Inguinal Hernia Repair	Procedural
Hemodialysis Access Creation	Procedural
Inpatient Chronic Obstructive Pulmonary Disease (COPD) Exacerbation	Acute inpatient medical condition
Lower Gastrointestinal Hemorrhage*	Acute inpatient medical condition
Lumbar Spine Fusion for Degenerative Disease, 1-3 Levels	Procedural
Lumpectomy Partial Mastectomy, Simple Mastectomy	Procedural
Non-Emergent Coronary Artery Bypass Graft (CABG)	Procedural
Renal or Ureteral Stone Surgical Treatment	Procedural

*This measure was proposed only for groups. Please reference section III.K.3.c.(2)(b)(vi)(B) of this final rule.

The following is a summary of the comments we received and our responses.

Comment: Some commenters supported our proposal to adopt the 10 episode-based measures under the cost

performance category for the 2020 MIPS performance period and future performance periods.

Response: We appreciate the support of the commenters.

Comment: A few commenters expressed concern regarding the measure development process including the perceived lack of transparency in the process, the measure development timeline, and the reliance on administrative claims data for measure calculations. Some commenters expressed concern that the field-testing process for episode-based measures was inadequate and suggested a delay to allow clinicians more time to better understand the measures before they are used to determine cost performance category scores. One commenter recommended that CMS work with specialty societies throughout the maintenance process to ensure continuous input from the provider community. Another commenter appreciated that CMS provided feedback reports to clinicians who were attributed to episode-based measures during field testing. However, only a few clinicians could access the feedback reports to provide further input.

Response: We aim to be open and transparent in every stage of the measure development process. The measure development process collects input at every step of development, including prioritizing episodes for measure development, for which our measure development contractor convened over 260 clinician experts across 10 Clinical Subcommittees. The measure development contractor subsequently convened 11 workgroups and over 130 clinician experts to obtain detailed clinical input on each aspect of the measures' specifications. For each meeting of these panels, the measure development contractor provided extensive analyses to inform the workgroup members' recommendations. This process, which began in April 2018 and concluded in January 2019, is discussed in detail in CY 2020 PFS proposed rule (84 FR 40754). The measure development process has also been refined based on stakeholder input received. For example, smaller, more focused measure-specific expert workgroups were added to develop the 10 new episode-based measures based on feedback the measure development contractor obtained from members of the first wave of clinical subcommittees. Additionally, as requested by stakeholders, the measure development contractor offered a listen-only observer dial-in line for stakeholders during the Wave 3 measure-specific workgroup meetings convened in August 2019. We recognize stakeholders' requests for an extended development timeline to allow more opportunities for clinicians to

provide input on the measures and will consider this feedback for future waves of measure development.

We are committed to continuing to increase awareness about the measures both during field testing and through other education and outreach activities. During field testing, we provided extensive materials regarding the measures, including measure specifications, an FAQ document, a fact sheet, testing results, and mock reports for clinicians who did not receive a field test report. Additionally, we hosted webinars to provide information on the measures under field testing, one during the field testing period and another after field testing to provide an update on the measure refinements that resulted from field testing feedback. We have also posted additional documentation on the MACRA feedback page such as the measure justification forms, which provide more testing information for the measures. Given the extensive outreach we have conducted, as well as the education materials we have posted for these measures, we believe they are ready for implementation. We will continue to welcome feedback on how the field testing period and the development process can be further refined to increase awareness about the measures.

Section 1848(r)(5) of the Act requires the Secretary, as the Secretary determines appropriate, to use certain claims data to conduct an analysis of resource use. We believe that an advantage of using claims data is that it creates no additional reporting burden for clinicians, which greatly increases the feasibility of calculating and reporting cost measures. We will continue to consider incorporating additional data sources in measure calculations and welcome feedback on potential alternatives.

Comment: Some commenters expressed concern about a lack of alignment between cost and quality measures, stating as an example that the Screening/Surveillance Colonoscopy episode-based measure was finalized as the quality measure, Screening Colonoscopy Adenoma Detection Rate (Measure 343), was removed from the MIPS quality performance category. These commenters expressed concern that this would cause clinicians to focus on costs and not on quality. One commenter recommended that CMS complete an empiric validity test to demonstrate how each of these measures correlates to quality measures reported within MIPS.

Response: As discussed in the CY 2020 PFS proposed rule (84 FR 40732 through 40745), we are focused on

moving the MIPS program forward with an aligned set of measures and activities known as an MVP. In the course of implementing the framework for MVPs, we will consider the relationship between cost and quality. We agree with the importance of cost and quality alignment, and view it as an essential component of episode-based measures. For instance, as part of episode group prioritization for development, the measure development contractor asked clinical subcommittee members to consider the measures' potential for alignment with established quality measures. This includes consideration of whether there is potential for overlap in covering the same patient cohort and the dimensions of care that the quality measure would be capturing in relation to a procedure or condition that the episode-based cost measure could focus on. We are also considering these comments on the quality measures retained and removed within the MIPS program in more detail in section III.K.3.c.(1)(d) of this final rule.

Comment: Some commenters expressed concern that the episode-based measures proposed for inclusion in CY 2020 performance period and future years had not been endorsed by the NQF. One commenter recommended that all measures included in the MIPS program be endorsed by NQF.

Response: We intend to submit the episode-based measures for NQF endorsement in a future endorsement cycle; however, NQF endorsement is not a requirement for implementing cost measures in MIPS. The MAP reviewed the episode-based measures and provided the recommendation of "conditional support for rulemaking" with the condition that the measures be submitted for NQF endorsement. This review provided stakeholders with additional public comment opportunities, which the MAP considered along with submission materials regarding the reliability and validity of the measures. In addition, we provided testing results that examined the measures' scientific acceptability in the measure justification forms, which are available on the MACRA Feedback Page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>). The measures have undergone a comprehensive stakeholder input process and extensive testing, and we believe they are ready for implementation.

Comment: Some commenters suggested the inclusion of social risk factors such as sociodemographic status when risk adjusting the proposed

episode-based measures. Some of these commenters expressed concern that risk adjustment for the episode-based measures uses only variables included in the CMS–HCC risk adjustment model and other clinical characteristics, and they suggest that CMS explore alternative risk adjustment data to include. One commenter recommended that CMS not utilize claims data for risk adjustment.

Response: Each measure's risk adjustment model employs a common starting point of the CMS–HCC model, but the measure-specific expert workgroups considered enhancements to the model through the addition of risk factors specifically adapted for each episode group. The measure development contractor provided empirical analyses stratifying patient (or episode) cohorts of interest to inform the workgroup members' considerations of how particular factors should be accounted for in each measure's risk adjustment model. Workgroup members also considered patient characteristics, factors outside of the influence of the attributed clinicians, or any other measure-specific factors that would help prevent unintended consequences.

We are aware of the concern regarding risk adjustment for social risk factors and are continuing to consider options to account for social risk factors that would allow clinicians to view disparities that would potentially incentivize improvement in care for beneficiaries. We remain concerned about holding clinicians to different standards for the outcomes of their patients with social risk factors because we do not want to mask potential disparities. As part of the standard development and testing process, the measure development contractor conducted analyses to assess the impact of the following social risk factors: Income; education; population; employment; race; sex; and dual-eligibility status, which can be found in the measure justification forms for the episode-based measures available for download from the MACRA Feedback Page. Results of these analyses found very little to no effect on the predictive power of the risk adjustment models used when variables for social risk factors were included in the models, compared to using the current models. More information on these analyses is available in the measure justification forms posted on the MACRA Feedback Page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>). We will continue to monitor the potential effect of social risk

factors on episode-based measures implemented in MIPS on an ongoing basis.

Regarding the use of claims data for risk adjustment, section 1848(r)(5) of the Act requires the Secretary, as the Secretary determines appropriate, to use certain claims data to conduct an analysis of resource use. As we stated in a prior response, we believe that an advantage of using claims data is that it creates no additional reporting burden for clinicians, which greatly increases the feasibility of calculating and reporting cost measures. We will continue to consider incorporating additional data sources in risk adjustment and welcome feedback on potential alternatives.

Comment: Some commenters expressed concerns regarding the perceived issue of double counting costs assigned to the revised total per capita cost and MSPB clinician measures and the episode-based measures. For example, commenters were concerned that costs may be double counted when clinicians are measured by more than one type of measure (that is, being measured by the MSPB clinician measure and an episode-based measure that have different frameworks, benchmarks, and comparison groups).

Response: We understand the concern about double counting of costs to be a concern about the potential for a particularly costly service, episode, or patient to have an outsized effect on a clinician's cost measure performance as services can be included in more than one measure score calculation. We believe that the construction and calculation of the cost measures in fact guards against this possibility.

Any given service and its associated cost is only included once per episode per attributed clinician for a given measure. Each measure then calculates the average observed to expected cost across episodes for an attributed clinician to generate a score for that particular measure. Each cost measure is calculated separately, and then averaged into a single score for the MIPS cost performance category. In the aggregation of a MIPS cost performance category score, the relative impact of a high or low cost service in each cost measure is averaged for a given clinician or clinician group, rather than simply counted twice. That is, calculation of the cost performance category score as an average of individual cost measure scores avoids compounding good or poor results, which would otherwise occur if the score was calculated as a simple addition of cost measure scores. This ensures that clinicians will not be

double-penalized or rewarded for a high or low cost service.

In addition, this approach allows each measure to capture clinician performance within the intent and scope of each individual measure. Episode-based measures only include costs related to the episode for a clinical condition or procedure and are focused on the clinician's specific role; in comparison, population-based measures include all services that are provided to a patient over a given timeframe to focus on a broader range of patient care. Specifically, the MSPB clinician measure assesses the cost performance of clinicians providing care at inpatient hospitals, while the total per capita cost measure focuses on primary care management outside the inpatient setting. By design, some costs for a patient may be included in more than one measure. For example, a patient with a primary care clinician who is providing overall care may be admitted to hospital to undergo a planned surgical procedure, which is performed by a surgeon. The TPCC measure assesses the primary care clinician's overall care for the patient, and the MSPB clinician measure evaluates the surgeon's inpatient care of the patient. By having the primary care clinician's responsibility ongoing before, during, and after the inpatient stay, the TPCC measure captures the nature of primary care. Similarly, by covering the surgeon who performs the procedure in the hospital, the MSPB clinician measure assesses the care before, during, and after the inpatient stay. Holding both the primary care clinician and surgeon responsible for the patient during the inpatient stay helps to align incentives across care settings through the patient care continuum, which encourages care coordination. To do otherwise may leave a gap in accountability, limiting the extent to which cost measures can operate together to encourage care coordination for improved patient outcomes.

Comment: We received one comment stating that they were unable to review the measure specifications at the link provided.

Response: We had posted the measure specifications at the link specified in the proposed rule for the duration of the public comment period, and we have reposted the specifications (updated to reflect the policies we are finalizing in this rule) on the MACRA Feedback page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>). We expect to post the measure specifications in final form in

the Quality Payment Program resource library (<https://qpp.cms.gov/about/resource-library>) by the end of the year.

Comment: A few commenters urged CMS to better educate clinicians to ensure that they understand how to interpret the measure specifications and feedback report data. One commenter urged CMS to ensure that cost measures are actionable by making episode-based cost measure field testing reports available after the testing period concludes. Some commenters urged CMS to provide real time feedback early in the year when new measures are used or calculate data for new measures using historical data for clinicians to better understand their performance and benchmark. A few commenters recommended that feedback reports provide more detailed information including demographic and clinical characteristics for attributed beneficiaries.

Response: We will continue to work to increase familiarity with the measures through education and outreach activities. We produced various education and outreach materials during field testing, including measure specifications, an FAQ, fact sheet, testing results, and mock reports for clinicians who did not receive field test reports with performance feedback. In addition, we hosted a webinar, where we provided an overview of the field test reports and answered questions from stakeholders. Throughout the field testing period, we provided helpdesk support regarding field testing and the reports through the Quality Payment Program Service Center. Lastly, we convened office hours sessions with specialty societies to help coordinate targeted outreach and ensure that we reached clinicians who were most likely to be attributed the measures. We recognize the importance of education and outreach, and expect to continue these types of activities in future field testing periods.

The field test reports from the fall 2018 field testing were available for review through for a period after the field testing period concluded and were removed once the portal was decommissioned. We are exploring alternative venues to facilitate access to the field test reports for future field testing. In this process, we will also consider ways the reports can be made available after the field testing period concludes.

We appreciate the feedback regarding the availability of real time feedback early in the year. We note that the nature of claims-based measures presents additional considerations that affect the availability of real time

feedback. We allow at least a 60-day run out to allow for adjustments to claims and ensure data completeness. This, along with episode length for the cost measures must be accounted for in considerations of providing real time feedback early in the beginning of the performance year. We will continue to explore ways to extend accessibility of materials such as the field test reports, to increase access to information about clinicians' expected performance. We will also continue to consider ways to offer actionable data and feedback on cost measures to clinicians in the future, including the format of reports and the information they contain.

Comment: A few commenters supported the development and inclusion of episode-based measures but expressed concern that measures for their particular specialty or focus area, such as anesthesia, dermatology, chronic conditions and plastic surgery were not yet included. One commenter recommended that all measures to be fully vetted by clinicians to ensure their clinician relevance. A few commenters recommended that CMS accelerate and establish a process for the development of additional episode-based measures in order to ensure fair comparisons and reliability.

Response: We continue to work to develop new episode-based measures that could be considered for inclusion in the cost performance category in future years. We expect that future measures may apply to a greater range of specialties and clinical areas, including areas suggested by commenters. In fact, episode-based measures focusing on chronic conditions and dermatology are currently being developed as part of Wave 3 of measure development. We expect these measures to undergo field testing next year. More information regarding Wave 3 measures is available on the MACRA Feedback Page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>). We anticipate the development of additional waves of episode-based cost measures in the future that will expand the range of specialties and clinical areas included.

Section 1848(r)(2)(D)(i)(I) of the Act requires us to establish care episode groups and patient condition groups, which account for a target of an estimated one half of expenditures under parts A and B with such target increasing over time as appropriate. The measure development process includes a data-driven expert input process that is critical to the development of robust,

meaningful, and actionable episode-based measures, though it presents a trade-off between the number of measures we can develop and the level of clinician and expert input we can involve in this process. We aim to find the right balance to ensure the addition of meaningful episode-based measures, while still undergoing this comprehensive clinician-input driven process. While the development of more episode-based measures does increase the number of clinicians covered by the measures, it does not ensure fair comparisons and greater reliability. To ensure fair comparisons and greater reliability, we pair our extensive stakeholder input process with robust testing to ensure that the measures are clinically relevant and measure clinicians fairly and reliably. Information about measure testing is available in the National Summary Data Report and the measure justification forms, which are available on the MACRA feedback page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>).

Comment: A few commenters generally opposed the inclusion of episode-based measures. Some commenters recommended that CMS not include the proposed and newly developed episode-based measures until they can be further evaluated and better understand the implications on impacted clinicians. For example, CMS should consider whether episode-based measures would create an unfair playing field amongst specialist and subspecialists. One commenter recommended that CMS adopt additional episode-based measures only in efforts to collect data to inform the development of MVPs.

Response: We conducted extensive field testing activities in the Fall of 2018 to provide clinicians with an opportunity to gain experience with and evaluate their performance on the episode-based measures that were field tested. We have also performed testing on the measures, including reliability and validity testing. The details of the testing are available in the measure justification forms and National Summary Data Report posted on the MACRA Feedback Page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>). The measures were also developed with extensive clinician and expert input to inform each aspect of the measure specifications. We believe that

the episode-based measures are ready for use in the program given the testing we have conducted and the extensive involvement of clinician experts in the development of the measures. We will also continue to develop new episode-based measures to cover a wider range of specialties that are not currently measured by the episode-based or population-based measures.

We continue to work to develop new episode-based measures that could be considered for inclusion in the cost performance category in future years and appreciate the input about how to more closely link the development of episode-based measures and MVPs. We do note that while episode-based cost measures may be helpful for understanding the use of MVPs, these measures use Medicare claims data, so it is not necessary to adopt additional measures in order to collect data.

As we develop additional cost measures, we aim to measure as many clinicians as possible in the cost performance category. We recognize that due to the current nature of measurement that some clinicians will be measured on more cost measures than others, while others will not be measured on cost at all. We believe that the principles of fairness espoused by the commenter can be supported by measuring clinicians using the best measures or activities in each performance category. However, we disagree that the episode-based measures would present an unfair playing field between specialists and subspecialists. Clinicians attributed under these measures are compared to peers who are similarly attributed. Clinicians who are not measured on the episode-based measures are potentially measured on the other cost performance category measures and similarly compared to their peers when assessing cost performance. We will continue to evaluate our scoring policies to ensure that scores reflect performance and not the practice specialty or type of a clinician or group.

Comment: Some commenters expressed concern with certain specifications for the Hemodialysis Access Creation episode-based measure. These commenters expressed concern that the surgeon that performs the trigger procedure is not generally responsible for follow-up management but would be held accountable under this measure. They also expressed concern that the measure did not differentiate between patients receiving the procedure for the first time or those who had the procedure previously. They also indicated that patients receiving this procedure were complex

with multiple illnesses and that it would be difficult to differentiate services associated with hemodialysis from other services and to apply risk adjustment to this measure. One commenter suggested a change to the technical specifications of the measure to exclude patients who die within 90 days of the close of the episode. Another commenter recommended that the inclusion and exclusion criteria for this cost measure should include a clean, pre-trigger period of 12 months where the patient is not identified on a claim with a billing code for outpatient dialysis.

Response: The measure was developed with expert clinical input from the workgroup to ensure that only costs of care within the reasonable influence of the attributed clinician for the defined patient population are included. Exclusions identify patient characteristics and factors in the patient's medical history that might adversely affect the patient's treatment during the episode, to an extent that is outside the influence of the managing clinician. As such, we do not believe that it is appropriate to retroactively exclude patients who die within 90 days after the close of the episode if they would otherwise fit in with a homogenous patient cohort captured by the measure. This is consistent with the measure framework for the episode-based measures.

The measure's risk adjustment model includes variables specific to the measure that recommended by the workgroup, in addition to those in the CMS-HCC model, that address issues of patient complexity and comorbidities. The model risk adjusts for the presence of previous procedures to account for patients undergoing multiple vascular access procedures, and adjusts for patients who undergo two-stage procedures.

Lastly, including only pre-dialysis patients with an extended clean period, as suggested, excludes a very large portion of the patient population this measure aims to capture. We are concerned that this change may also incentivize clinicians to wait until a patient is on dialysis before placing a vascular access to avoid being attributed episodes. Delaying the placement of a suitable vascular access could negatively impact patient health outcomes and further increase the number of dialysis patients that begin treatment with a catheter. We are finalizing the Hemodialysis Access Creation measure as proposed.

Comment: One commenter indicated that there are facilities such as academic medical centers and tertiary medical

centers who may have disproportionately complex patients, which may result in higher costs within episodes. Hence, as result of cost measures including transfers and emergent cases, it would be inappropriate to compare the efficiency of these episodes among hospitals who do not have a similar complex patient population.

Response: We recognize that complex patients may be costlier to treat, and the episode-based measures include robust statistical techniques to ensure that differences in the patient population are appropriately accounted for. Through risk adjustment, the measures are adjusted for factors outside of the clinician's control that can influence spending such as the care setting and patient characteristics to achieve a fair comparison of cost across clinicians. Risk adjustment aims to isolate the variation in clinicians' costs to Medicare to those costs that clinicians can reasonably influence. Accounting for these factors is one way to ensure the validity of cost measures and mitigate potential unintended consequences. Additionally, the creation of strictly defined episodes produces more homogeneous populations within each episode group that allows for more accurate comparisons of clinician performance.

Comment: A commenter expressed concern that the measure exclusion list for the Inpatient COPD Exacerbation episode-based measure does not adequately capture patients who have undergone lung surgery/resection and should be excluded from this measure, and provided additional codes for CMS to consider adding to the list of codes used to capture patients who should be excluded due to history of lung resection.

Response: Patients who have undergone lung surgery/resection are excluded in the Inpatient COPD Exacerbation measure; however, we agree that the additional lung resection codes suggested by the commenter would capture an additional group of lung resection patients. The addition of the suggested codes to the exclusions list is in keeping with the clinical input provided by the expert workgroup and would remove approximately 260 episodes, representing less than 0.1 percent of all episodes. As such, we are finalizing the Inpatient COPD Exacerbation measure with the exclusion list expanded to include the recommended lung resection codes, which are listed in the Inpatient COPD Exacerbation measure codes list file available for download on the MACRA Feedback Page (<https://www.cms.gov/>

Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html).

Comment: One commenter expressed concern that the Non-Emergent CABG episode-based measure included the code 33406 (Replacement of the Aortic Valve Using Human Donor Valve on Heart-Lung Machine) as a trigger and not an exclusion. Additionally, the commenter also stated concerns that the stroke service assignment window of <15 days from trigger event was too long and believe <7 days would be more appropriate.

Response: We agree that the suggested exclusion of code 33406 on trigger claims is clinically reasonable and in keeping with the intention of the Non-Emergent CABG measure expert workgroup not to assign procedures or conditions that represent small sub-populations with higher and unpredictable costs. CPT code 33406 indicates a unique type of aortic valve replacement in which the aortic valve is replaced by a human valve. This procedure is typically reserved for either patients with congenital heart disease or younger patients with infection of their native valve and occurs in a very different cohort of patients than the majority of Non-Emergent CABG measure episodes. These patient-level differences likely do influence downstream post-operative recovery and costs. Other similar complicating operative factors are already excluded from the measure.

To clarify, the Non-Emergent CABG episode-based measure does not include any stroke readmissions. The measure assigns inpatient rehabilitation facility (IRF) stays secondary to stroke post-CABG. Only stroke costs in the index hospitalization and subsequent rehabilitation are included in the proposed measure. Given that many post-CABG stays complicated by stroke are longer than 7 days, we do not intend to finalize any updates to the service assignment for the Non-Emergent CABG measure.

We are finalizing the Non-Emergent CABG measure with the removal of CPT code 33406 from the list of episode triggers and addition of the code to the list of exclusions, found in the measure codes list on the MACRA Feedback page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>).

Comment: One commenter expressed concerns that CMS does not include the Acute Kidney Injury (AKI) Requiring New Inpatient Dialysis episode-based

measure for several reasons. The commenter indicated that the patient level variability in acuity/intensity of care required for the Acute Kidney Injury (AKI) Requiring New Inpatient Dialysis episode-based measure, can make this measure a non-meaningful assessment of physician care, and has general concerns with the attribution methodology for this specific episode-based measure.

Response: The Acute Kidney Injury (AKI) Requiring New Inpatient Dialysis measure was developed with expert clinical input to ensure that only costs of care within the reasonable influence of the attributed clinician, including nephrologists, for the defined patient population are included. In addition to risk adjustment variables in the CMS-HCC model that address issues of patient complexity and severity, the measure's risk adjustment model includes variables specific to the measure that were recommended by the workgroup to account for severity, such as variables for length of stays in the hospital or intensive care unit and recent admission to long term care facilities. Certain patient cohorts, such as those with diagnosis of end-stage renal disease (ESRD), post-discharge dialysis for ESRD, and kidney transplants are excluded from the patient population to ensure that the measure captures a homogenous population of patients. Additionally, the workgroup considered how to trigger and attribute episodes to ensure that they were clinically relevant and within a clinician's influence. An acute kidney injury episode is attributed to any clinician who bills a trigger procedure code for dialysis during the inpatient stay or to a nephrologist who bills an inpatient evaluation and management (E/M) service during the inpatient stay with hospital and critical care services accompanied by a diagnosis for acute kidney failure. This attribution methodology operationalizes the workgroup's recommendation for the measure development contractor to attribute Acute Kidney Injury (AKI) Requiring New Inpatient Dialysis episodes to the clinicians that are most likely to treat this patient cohort and to encourage care coordination for clinicians involved in the care continuum of patients included in this measure. We are finalizing the Acute Kidney Injury (AKI) Requiring New Inpatient Dialysis measure as proposed.

Comment: A commenter expressed concerns with the current attribution methodology for episode-based measures. The commenter recommended that CMS include MIPS eligible clinicians who bill plurality of

97000 series codes during an episode. This modification would allow CMS to more accurately capture therapists within applicable episode-based measures.

Response: The episode-based measures include all costs relevant to the episode, including services provided by therapists in the 97000 series codes when appropriate for the treatment of the condition or procedure being measured. The episode-based measures are only attributed to those clinicians who either perform or assist with the procedure in question or are provide guiding care for the acute episode (for example, an orthopedist who performs a hip arthroplasty or a hospitalist that cares for a patient hospitalized for an acute exacerbation of chronic obstructive pulmonary disease). We will continue to consider how therapists that bill plurality of 97000 series codes can be included in existing and future episode-based cost measures.

After consideration of the public comments, we are finalizing our proposal to include the 10 episode-based measures listed in Table 44 in the cost performance category beginning with the 2020 MIPS performance period with the modifications discussed in our responses to comments above.

(iv) Revisions to the Operational List of Care Episode and Patient Condition Groups and Codes

Section 1848(r) of the Act specifies a series of steps and activities for the Secretary to undertake to involve the physician, practitioner, and other stakeholder communities in enhancing the infrastructure for cost measurement, including for purposes of MIPS and APMs. Section 1848(r)(2) of the Act requires the development of care episode and patient condition groups, and classification codes for such groups, and provides for care episode and patient condition groups to account for a target of an estimated one-half of expenditures under Parts A and B (with this target increasing over time as appropriate). Sections 1848(r)(2)(E) through (G) of the Act require the Secretary to post on the CMS website a draft list of care episode and patient condition groups and codes for solicitation of input from stakeholders, and subsequently, post an operational list of such groups and codes. Section 1848(r)(2)(H) of the Act requires that not later than November 1 of each year (beginning with 2018), the Secretary shall, through rulemaking, revise the operational list as the Secretary determines may be appropriate, and that these revisions may be based on experience, new information developed

under section 1848(n)(9)(A) of the Act, and input from physician specialty societies and other stakeholders.

In December 2016, we published the Episode-Based Measure Development for the Quality Payment Program (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/Draft-list-of-episode-groups-and-trigger-codes-December-2016.zip>) and requested input on a draft list of care episode and patient condition groups and codes as required by sections 1848(r)(2)(E) and (F) of the Act. We additionally requested feedback on our overall approach to cost measure development, including several pages of specific questions on the approach for clinicians and stakeholders to provide feedback. We used this feedback to modify our cost measure development and ensure that our approach is continually informed by stakeholder feedback. As required by section 1848(r)(2)(G) of the Act, in January 2018, we posted an operational list of 8 care episode groups and patient condition groups that we refined with extensive stakeholder input, along with the codes and logic used to define these episode groups. This operational list is available at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/2018-Operational-List-of-Care-Episode-and-Patient-Condition-Codes.zip>.

Under section 1848(r)(5)(A)(iii) of the Act, to evaluate the resources used to treat patients with respect to care episode and patient condition groups, the Secretary shall, as the Secretary determines appropriate, conduct an analysis of resource use with respect to care episode and patient condition groups. In accordance with this section, we used the 8 care episode groups and patient condition groups included in the operational list as the basis for the 8 episode-based measures that we developed in 2017 through early 2018 and finalized for use in MIPS in the CY 2019 PFS final rule (83 FR 59767–59773). We did not revise this operational list through rulemaking in 2018 as we did not receive stakeholder feedback requesting updates to how these episode groups are defined and there were no new developments requiring revisions. Under section 1848(r)(2)(H) of the Act, we proposed to revise the operational list beginning with CY 2020 to include 10 new care episode and patient condition groups, based on input from clinician specialty societies and other stakeholders (84 FR 40756). The 10 care episode and patient

condition groups were included in the draft list that we posted in December 2016 and refined based on extensive stakeholder input as described in section III.K.3.c.(2)(b)(v)(A) of this final rule. Our revisions to the operational list beginning with CY 2020 are available on our MACRA feedback page at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>. These care episode and patient condition groups serve as the basis for the 10 new episode-based measures that we proposed for the cost performance category in section III.K.3.c.(2)(b)(iii) of the proposed rule (84 FR 40754 through 40756) and are finalizing in Table 47 in section III.K.3.c.(2)(b)(viii) of this final rule.

While we received many comments on measures that we proposed to include in the cost performance category as discussed in section III.K.3.c.(2)(b)(iii) of this rule, we did not receive any comments specifically on our proposal to revise the operational list. After reviewing and considering the comments on the merits of the proposed measures as discussed in those sections, we are finalizing our proposed revisions to the operational list beginning with CY 2020 to include the 10 new care episode and patient condition groups.

(v) Revised Cost Measures Re-Evaluation Process for the Total Per Capita Cost and Medicare Spending Per Beneficiary Clinician Measures

For the purpose of assessing performance of MIPS eligible clinicians in the cost performance category, we finalized both the total per capita cost and MSPB measures to be included in the MIPS program in CY 2017 Quality Payment Program final rule (81 FR 77166). We proposed to modify both of these measures based on stakeholder input from prior public comment periods and recommendations from the TEP (84 FR 40756). We also proposed to modify the measure title from Medicare Spending Per Beneficiary (MSPB) to Medicare Spending Per Beneficiary clinician (MSPB clinician) to distinguish it from measures with similar names in use in other CMS programs and to improve clarity. We proposed to change the name from MSPB to MSPB clinician at §§ 414.1350(b)(3) and 414.1350(c)(2) (84 FR 40758). The measure development contractor convened the standing TEP and completed field testing to consider potential refinements to these measures, which we summarized in section III.K.3.c.(2)(b)(v)(A) of the proposed rule (84 FR 40756 through 40757).

(A) Total Per Capita Cost Measure

We finalized the total per capita cost measure for use in MIPS as an important measurement of clinician cost performance. Having been used in the Physician VM program, it had been tested and was reliable for Medicare populations and was familiar to the clinician community. When we finalized this measure for use in MIPS, we noted that as with all the cost measures, we will maintain this measure and update its specifications as appropriate (82 FR 53643). We continue to believe that the existing measure is appropriate to use in MIPS and continue to be committed to maintaining the cost measures with consideration of stakeholder input and testing. However, as a part of our routine measure maintenance, we re-evaluated the total per capita cost measure. The re-evaluation was informed by feedback received on this measure through prior public comment periods, as described in the CY 2017 (81 FR 77017 through 77018) and CY 2018 (82 FR 53577 through 53578) Quality Payment Program final rules, as well as feedback that arose in the measure development contractor's discussions with the TEP during the process of re-evaluation. This feedback is summarized below:

- The total per capita cost measure's attribution methodology assigned costs to clinicians over which the clinician has no influence, such as costs occurring before the start of the clinician-patient relationship.
- The attribution methodology did not effectively identify primary care relationships between a patient and a clinician and could potentially attribute beneficiaries to a clinician not responsible for the beneficiaries' primary care.
- The measure did not account for the shared accountability of clinicians and that attributing costs to a single clinician or clinician group could cause fragmentation of care.
- The beneficiary risk factors were determined one year prior to the start of the performance period, which will preclude the risk adjustment methodology from reflecting the more expensive treatment resulting from comorbidities and/or complications that might arise during the performance period.
- The feedback summarized above informed the four modifications that we proposed for the total per capita cost measure.

First, we proposed to change the attribution methodology to more accurately identify a beneficiary's primary care relationships (84 FR

40757). This is done by identifying a combination of services that occur within a short period and indicate the beginning of a relationship. More specifically, a primary care relationship is identified by a candidate event, defined as the occurrence of an E/M service such as an established patient assisted living visit or an outpatient visit (that is, the E/M primary care service), paired with one or more additional services indicative of general primary care (for example, routine chest X-ray, electrocardiogram, or a second E/M service provided at a later date). The candidate event initiates a year-long risk window from the E/M primary care service. The risk window is the period during which a clinician or clinician group could reasonably be held responsible for the beneficiary's treatment costs, and the initiation of the risk window at the onset of the candidate event ensures that costs are attributed only after the start of the clinician-patient relationship. Only the portion of the risk window that overlaps with the performance period, which is divided into 13, 4-week blocks called beneficiary-months, is attributable to a clinician for a given performance period. For example, if the risk window were initiated during one MIPS performance period and ends in the following MIPS performance period, only the beneficiary-months that occur during the earlier MIPS performance period will be attributed to the clinician/clinician group to calculate the measure for that particular MIPS performance period. Dividing the performance period into beneficiary-months allows costs to be assigned to clinicians and clinician groups during the parts of the year they are primarily responsible for the patient's care management.

With this methodology, it is possible for multiple candidate events to occur between a clinician and beneficiary over time, and an additional candidate event occurring during an existing risk window reaffirms and extends the period of the clinician's responsibility. For example, if 2 candidate events for the same clinician and the same beneficiary occur 6 months apart, a separate 12-month risk window initiates from the start of each of these candidate events, and the clinician may be attributed beneficiary-months spanning 18 months and 2 different performance periods. As we described above, for risk windows that span multiple performance periods, only the beneficiary-months contained within a given performance period are used to calculate the measure for that

performance period. Beneficiary-months that overlap between the 2 risk windows are collapsed to ensure that costs are only accounted for once. Furthermore, if different clinician groups initiated these 2 risk windows for the same beneficiary, the risk windows will occur concurrently and will be attributed to their respective TINs. Within an attributed TIN, only the clinician with the TIN/NPI combination performing the highest number of candidate events is attributed the beneficiary-months, since this TIN/NPI combination is deemed to have the most substantive relationship with the beneficiary. Finally, multiple TINs and TIN/NPIs billing under different TINs may be attributed beneficiary-months for the same beneficiary during the performance period. This attribution method allows multiple clinicians to be considered for the provision of ongoing primary care for a patient, which accounts for changes in primary care relationships (for example, for beneficiaries who move during the year) and reflects shared clinical responsibility for a patient's care.

To illustrate how candidate events identify primary care relationships, we provided an example of a clinical scenario in which physicians in the primary care medical practice see a beneficiary as part of the beneficiary's routine health maintenance (84 FR 40757 through 84 FR 40758). A beneficiary is feeling unwell and goes to a medical practice. At the practice, the beneficiary sees a family practice clinician who provides an E/M service (one that has been identified as related to primary care) for routine health maintenance. The clinician prescribes a course of medication as part of the care plan. The beneficiary returns to the same practice 2 months later when she notices new symptoms. At this visit, she sees a different family practice clinician who examines her, adjusts her care plan, and asks her to return in 3 months for a follow-up in case diagnostic testing or a change in medication is required. These two E/M services that occur within proximity (that is, the initial E/M service and the paired event 2 months later—a second E/M service) constitute the candidate event and indicate that a primary care relationship has begun from the time of the first visit to the medical practice. The first E/M service (identified as related to primary care) opens a one-year period (or risk window) from the date of the service. This is illustrated graphically in section 2.0 of the measure specifications available on the MACRA Feedback page (<https://www.cms.gov/Medicare/>

Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html). During the risk window, the attributed clinician/clinician group can be held responsible for the overall costs of care for that beneficiary. The TIN for the medical practice will be attributed the beneficiary and the TIN/NPI within this practice that provides the most primary care E/M services that initiate candidate events will be attributed the beneficiary. Under the current total per capita cost measure, the TIN and TIN/NPI will have been attributed this beneficiary from the beginning of the calendar year and held accountable for services the beneficiary might have received before her first visit to the medical practice.

Second, we proposed to change the attribution methodology to more accurately identify clinicians who provide primary care services, by the addition of service category exclusions and specialty exclusions (84 FR 40758). Specifically, candidate events are excluded if they are performed by clinicians who: (1) Frequently perform non-primary care services (for example, global surgery, chemotherapy, anesthesia, radiation therapy); or (2) are in specialties unlikely to be responsible for providing primary care to a beneficiary (for example, podiatry, dermatology, optometry, ophthalmology). As a result of these exclusions, clinician specialties considered for attribution are only those primarily responsible for providing primary care, such as primary care specialties and internal medicine subspecialties that frequently manage patients with chronic conditions that are in their area(s) of expertise. We did not propose to change the adjustment for specialty; as such, the measure will continue to adjust for specialty to account for variation in cost across clinician specialties and in clinician groups with diverse specialty compositions.

Third, we proposed to change the risk adjustment methodology to determine a beneficiary's risk score for each beneficiary-month using diagnostic data from the year prior to that month rather than calculating one risk score for the entire performance period using diagnostic data from the previous year (84 FR 40758). This methodology will better account for any changes in the health status of the beneficiary for the duration of a primary care relationship and during the performance period. In addition, we proposed to add an institutional risk model to improve risk adjustment for clinicians treating institutionalized beneficiaries.

Fourth, we proposed to change the measure to evaluate beneficiaries' costs on a monthly basis rather than an annual basis (84 FR 40758). Specifically, the performance period during which costs are assessed is divided into 13 beneficiary-months, mentioned earlier, allowing for the measure and the risk adjustment model to reflect changes in patient health characteristics at any point throughout the performance period. In addition, this refinement will avoid measuring annualized costs for beneficiaries whose death date occurs during the performance period, which could potentially disincentivize care for older and sicker patients.

Further detail about these changes to the measure, as well as a comparison to the total per capita cost measure as currently specified, is available in the measure specifications documents available on the MACRA Feedback page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>).

The revised total per capita cost measure underwent MAP review during the 2018–2019 cycle. In December 2018, the MAP Clinician Workgroup gave the preliminary recommendation of “conditional support for rulemaking,” with the condition of NQF endorsement. In January 2019, the MAP Coordinating Committee reversed the Clinician Workgroup's preliminary recommendation and provided a final recommendation of “do not support for rulemaking with potential for mitigation”. More detail on the mitigating factors is available in the MAP's final report at http://www.qualityforum.org/Publications/2019/03/MAP_Clinicians_2019_Considerations_for_Implementing_Measures_Final_Report.aspx.

In the CY 2020 PFS proposed rule (84 FR 40758), we stated that we believe that the revised measure provides a more appropriate and valid attribution approach. We considered the option of proposing to remove the current version of the measure from the program and not proposing to replace it with a revised version. However, because we have developed and implemented only a handful of episode-based measures at this time, a substantial proportion of clinicians would be left with only the MSPB clinician measure for the cost performance category. Because fewer than half of all clinicians in MIPS meet the case minimum for the MSPB clinician measure, and no other measure addresses the costs of primary care, we stated that we believe it is appropriate to use the best version of the total per

capita cost measure available to us. While we recognize and value the MAP's expressed concerns regarding the revised measure specifications, we stated that we believe that we have adequately addressed the mitigating factors through the information we have made publicly available (including testing results in the measure justification forms available at <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/value-based-programs/macra-mips-and-apms/macra-feedback.html>), as well as our discussions with stakeholders at the MAP and through further education and outreach activities. Thus, we proposed to include the total per capita cost measure with these revised specifications in the cost performance category beginning with the CY 2020 performance period (84 FR 40757).

The following is a summary of the comments we received and our responses.

Comment: Some commenters supported the proposed changes to the total per capita cost measure and the proposed changes in attribution, particularly the exclusion of certain clinicians from attribution based on the services provided.

Response: We thank the commenters for their support.

Comment: Many commenters opposed the inclusion of the revised total per capita cost measure, suggesting that broad measures of costs should not be included in a clinician program. Some commenters indicated that the proposed changes would not address their fundamental disagreement, particularly with attribution and reliability, by including the measure. Rather, some commenters believe that condition- or specialty-specific measures more effectively gauge the costs that clinicians are able to influence. Other commenters recommended that only episode-based measures be included in the cost performance category. Some commenters indicated that the MAP had recommended against including the revised total per capita cost measure in the MIPS program because of multiple concerns related to attribution and actionability. Some commenters expressed concern about including a broad measure of costs of care without including a comparable quality measure.

Response: We continue to believe that the total per capita cost measure provides an important measurement of clinician cost performance (82 FR 53644) and that the measure intent to capture broad, overall care plays a significant role in MIPS to complement

the more granular information captured by episode-based measures. By including both episode- and population-based measures in the cost performance category, we are able to capture more aspects of care and ensure that there is continuity in clinician incentives throughout a patient's care trajectory. This measure has an important place in cost measurement given that the episode-based measures will only apply to a subset of clinicians at this time. We recognize the MAP's reservations about this measure; however, as discussed in the CY 2020 PFS proposed rule (84 FR 40758), we believe that we have adequately addressed the mitigating factors outlined by the MAP. The MAP requested greater transparency around the attribution model and testing results, including examining validity and the impact of social risk factors, which we have addressed through the measure justification form we posted made publicly available, as well as our discussions with stakeholders at the MAP and through further education and outreach activities. The measure justification form is available on the MACRA Feedback Page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>). With regard to actionability, this measure has been refined to identify more effectively primary care relationships between clinicians and patients and attribute clinicians who are involved in the ongoing management of a patient's primary care. We believe the proposed revisions make it a more targeted measure focused on costs for primary care and it will provide actionable feedback about primary care clinicians' cost performance.

Comment: Some commenters expressed concerns that the revised total per capita cost measure includes costs that are outside the reasonable control of a provider because the measure captures costs associated with care provided by others and costs they cannot influence, such as drug prices. Some commenters expressed concern that clinicians who manage care would be disadvantaged by this measure.

Response: The revised total per capita cost measure continues to use payment standardized prices to account for differences in Medicare payments for the same service across Medicare suppliers for all services included in the measure, including for Part B drugs. The measure does not include Medicare Part D costs, as these costs are not yet payment-standardized. We are currently considering the feasibility of developing

a payment standardization for Part D costs to account for factors that are outside the control of clinicians. The measure development contractor would seek input from expert panels when considering the inclusion of Part D costs in cost measures, and any additions of Part D costs to measures implemented in MIPS would be addressed through future rulemaking. The total per capita cost measure focuses on primary care by design and includes all costs to provide a broad assessment of a clinician's management of the overall health of a patient, rather than a specific condition. In managing a patient's complete health, clinicians measured under the total per capita cost measure are incentivized to conduct patient follow-up, coordinate care amongst specialists, offer necessary referrals, and actively diagnose patients. Clinicians managing patients' care are the focus of this measure and are compared to their peers performing similar roles.

Comment: Some commenters opposed the revised total per capita cost measure attribution methodology, specifically the process for establishing a primary care relationship between a patient and a clinician and how to define the end of a clinician responsibility for a patient. Some commenters indicated that this could be confusing for clinicians to understand. One commenter suggested that the revised attribution methodology could lead to multiple episodes occurring concurrently for the same clinician and patient. A few commenters expressed concern that the new attribution methodology did not have a method of establishing the end of a primary care relationship and could hold clinicians accountable for care after they were no longer managing care. Some commenters suggested that more than two services should be required to establish a primary care relationship. One commenter expressed concern that the attribution methodology did not account for patients who may reside in multiple localities throughout the year. One commenter expressed concern that that new attribution methodology does not properly reflect primary care relationships and identified cases in which a relationship would be identified through the methodology that were inappropriate, such as a clinician performing a pre-operative clearance. This commenter also identified situations in which a primary care relationship would not be established, such as when a clinician only sees a healthy patient once during the period. One commenter expressed concern that excluding specialists would reduce

alignment between specialists and primary care clinicians.

Response: The triggering methodology for the revised total per capita cost measure aims to effectively identifying a primary care relationship between a clinician and a patient by requiring two claims, a "primary care" E/M code (that is, an outpatient E/M code identified as being for primary care) and an additional "primary care" E/M code or primary care service. Requiring two claims within a defined, relatively short period and using multiple codes indicative of overall health care E/M ensures that clinicians are attributed based on evidence of a sustained relationship rather than a single patient visit. Requiring more than two claims would restrict the clinicians that can be measured and limit the beneficiary cohort to only those with more frequent physician services, who are usually sicker. On the other hand, we do not believe that a single E/M code is sufficient evidence to indicate that a clinician and patient have begun an ongoing relationship. We considered it prudent not to attribute patients to clinicians they have seen only for a single visit to avoid the risk of misattribution. In addition, the exclusion rules that we proposed to add ensure that the measure effectively captures clinicians who provide primary care. We exclude certain specialties that are unlikely to provide primary care from triggering events within a clinician group. We also examine clinician billing patterns to characterize a clinician's role as this may indicate that they are unlikely to be providing primary care; for example, we exclude clinicians who exceed a low threshold of beneficiaries in which they are providing anesthesia, global surgery, therapeutic radiation, and/or chemotherapy. These rules ensure that we properly attribute clinicians with established primary care relationships.

The revised total per capita cost measures the overall cost of care delivered to a beneficiary with a focus on the primary care they receive. Primary care, by its nature, is ongoing and may span a long period so the revised total per capita cost measures clinicians for one year following an attribution event where evidence of a primary care relationship is identified. A longer attribution window allows the cost measure to capture the long-term benefits of ongoing primary care management that might not be fully realized within a short period. For example, preventive care services contribute cost to the measure when initially provided but should lower cost when measured over a sufficiently long

time as they might avoid downstream costs that usually result from lack of preventive care. The clinician may continue to be attributed in a subsequent performance period if they bill new services that constitute a candidate event during an already open period of responsibility. In this construction, if multiple windows of attribution are opened, the attributed beneficiary months across the windows are consolidated into a continuous timeline of care. The clinician's responsibility for the attributed patients ultimately ends one year after the last attributable clinical event occurs. For patients with multiple residences during the year, the proposed revision to attribution would allow clinicians in both locations to be attributed concurrently, which would encourage coordination of care.

Comment: Some commenters supported the change in attribution methodology that would exclude certain clinicians based on their provision of certain services, but expressed concern that physician assistants (PAs) and nurse practitioners (NPs) that work in collaboration with excluded specialties would still be attributed patient costs based on this methodology. Some commenters recommended an expansion of excluded specialties to include hematology, medical oncology, radiation oncology, hospitalists, specialties providing perioperative care and rheumatology. Some commenters recommended that group composition be considered in determining attribution at the TIN level, such as by assessing the number of individual clinicians who might be eligible or by excluding attribution to physician assistants or nurse practitioners in groups that primarily contained other clinicians who did not provide primary care.

Response: We appreciate the support for the revised attribution methodology. We have assessed the frequency of TINs being attributed solely through physician assistants and nurse practitioners, and found that this occurs infrequently. We believe that it is appropriate to attribute clinicians and clinician groups that appear to provide primary care services in the claims data and expect that multi-specialty TINs may include a wide range of specialties. Detailed information on testing results for specialties attributed within TINs can be found in the MACRA Cost Measures Post-Field Testing materials that are publicly available from the Quality Payment Program Webinar Library at <https://qpp.cms.gov/about/webinars>. Hospitalists, medical oncologists, and radiation specialties, as defined by the CMS provider specialty code, are

excluded from the revised total per capita cost measure, as they are not expected to provide primary care services. Other oncology specialties, including hematology oncology, medical oncology, gynecological oncology, and rheumatology are not excluded from the measure as they are likely to provide primary care services in the form of managing a chronic disease.

Comment: Some commenters suggested that the revised total per capita cost measure should also include service-level exclusions.

Response: The measure continues to capture all costs within a defined timeframe. Broad, population-based measures provide an important means of measuring healthcare spending as they capture a wide range of patients and, consequently, allow for more comparability between clinicians who are covered by the same measure. As a broad population-based, measure focused on primary care and clinicians that provide primary care services, the revised total per capita cost measure can produce meaningful results to pinpoint areas at the provider-level for improvements in cost efficiency while ensuring high-quality primary care.

By including all services, the measure is able to fully capture the broad range of services during a defined period and incentivize primary care clinicians to correctly diagnose and appropriately manage diseases, including specialty referrals.

Comment: Many commenters expressed concern that they would be held accountable for the total per capita cost measure without having access to data to improve performance. Some commenters recommended that implementation of the measure be delayed at least a year to allow clinicians to review feedback. A few commenters asked that feedback on the measure be provided earlier and more frequently. One commenter indicated the difficulty for QCDRs in helping clinicians in working in this category without access to cost data on attributed patients. One commenter requested that CMS provide a report with the risk adjustment for all of their attributed patients under this measure.

Response: We will consider these suggestions for future rulemaking. In July 2019, we did provide reports with detailed data on the total per capita cost measure as specified for the 2018 MIPS performance period. We will continue to provide this level of detailed data. We will also continue to consider ways to offer actionable data and feedback on cost measures to clinicians in the future,

including the frequency and format of the performance data provided.

Comment: Some commenters expressed concern that under the revised total per capita cost measure, beneficiary costs are counted multiple times as they may be attributed to multiple clinicians or clinician groups, even if they are not practicing as a team.

Response: While beneficiary costs can be attributed to multiple clinicians or clinician groups, the measure calculation compares each clinician's observed episode costs to the predicted episode costs among their peers for patients with the same observable characteristics, rather than to a pre-defined standard. By comparing clinicians to their peers, who are all attributed in the same way, we can expect this comparison to be fair. This approach reflects the team-based nature of primary care, which has been emphasized in stakeholder feedback, and allows attribution to reflect changes in a beneficiary's primary care provider such as beneficiaries who move during the year. We believe that it is important to measure all clinicians who are responsible for playing a role in a patient's care, particularly as the scoring of the cost category is comparative to peers. Jointly responsible clinicians should each be recognized while collaborating to provide patient care.

Comment: A few commenters expressed concern that clinicians in rural areas would be shown to have poor performance on the measure because of the nature of the area in which they practice. They suggested that smaller referral networks would reduce the opportunity for clinicians to help manage costs. A few commenters recommended that CMS winsorize, or limit extreme values in the measure score distribution, at the 95th percentile rather than the 99th percentile to address this issue. A few commenters recommended that rural clinicians only be compared to one another rather than to clinicians in urban or suburban settings.

Response: The measure development contractor performed detailed testing on the revised total per capita cost measure to ensure that all clinicians are measured accurately and fairly, regardless of size, location, or the population they serve. This testing includes stratifying clinician measure scores by defining characteristics and investigating the clinician score distribution by percentile. Stratification is performed for each of the following characteristics: Urban/rural, census division, census region, risk score, and the number of beneficiary months attributed to the clinician. We analyze

the distribution of measure scores for clinicians defined by these characteristics, as well as for the overall measure to ensure that there is a sufficiently large difference in measure scores among clinicians to determine a meaningful difference in performance. More information on testing for this measure, including how we determine meaningful differences in clinician performance, is available in the measure justification forms available on the MACRA Feedback Page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>).

Winsorizing, or limiting extreme values in the measure score distribution at the 95th percentile, as suggested, would narrow the distribution that determines the most costly clinicians, which would diminish clinicians' ability to distinguish themselves compared to their peers. This portion of the distribution represents an area where the least cost efficient care is realized so it is advantageous to consider it when calculating measure scores. The National Summary Data Report available on the MACRA feedback page shows similar score distributions for urban and rural clinicians, which indicates that they perform similarly under the revised total per capita cost measure. Given the similar performance distribution between rural and urban clinicians, limiting the measure at the 95th percentile would be unlikely to advantage rural clinicians relative to urban clinicians.

Comment: A few commenters expressed concern about the risk adjustment used in the updated total per capita cost measure. A few commenters opposed the method of determining risk in 4-week blocks, believing that it added unnecessary complexity. One commenter expressed concern that HCC risk adjustment does not capture the risks associated with newly onset diseases such as cancer because the adjustment is based on a period prior to the measurement period.

Response: The risk adjustment model for the revised total per capita cost measure accounts for beneficiary-level risk factors that can affect medical costs, regardless of the care provided. The performance period is a 1-year long period that is divided into 13, 4-week blocks called beneficiary-months. Beneficiary-months that occur during a risk window and the measurement period are counted towards a clinician's or clinician group's measure scores. To ensure that the risk adjustment model

measures the influence of health status, as measured by diagnoses, on the treatment provided (costs incurred) rather than capturing the influence of treatment on a beneficiary's health status, the risk adjustment model uses risk factors from the year prior to each beneficiary-month. Dividing the performance period during which costs are assessed into 13 beneficiary-months allows the measure and the risk adjustment model to reflect changes in patient health characteristics that emerge throughout the performance period, including newly onset diseases. This refinement avoids measuring annualized costs for beneficiaries whose death date occurs during the performance period, which otherwise could potentially disincentivize care for more vulnerable patients.

Comment: A few commenters expressed concern that the total per capita cost measure did not properly include risk adjustment for socioeconomic issues, which the commenters suggested were a common reason for higher costs.

Response: Currently, risk adjusters for dual-eligibility and sex are included in the revised total per capita cost measure. As part of the standard development and re-evaluation processes, the measure development contractor conducted analyses to assess the impact of the following social risk factors: Income, education, employment, race, sex, and dual-eligibility status. Discussion of these results can be found in the measure justification form for the revised total per capita cost measure on the MACRA Feedback Page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>). Our analyses indicate that the inclusion of social risk factors in the current risk adjustment model has a minor effect on measure scores. We will continue to monitor the effect of social risk factors on the revised measure on an ongoing basis.

Comment: One commenter expressed concern that clinicians would not be able to track their performance from year to year due to the revisions in the specifications for the total per capita cost measure. This commenter recommended that the performance on the measure from previous years be recalculated.

Response: As the revised total per capita measure continues to measure the overall cost of care delivered to a beneficiary with a focus on the primary care they receive from a clinician, we believe clinicians will be able to compare their performance from year to

year and across iterations of the measure. Clinician performance amongst peers will continue to be measured under the same methodological conditions and assumptions so a clinician's relative performance would be comparable across iterations of the measure. At this time, we do not plan to recalculate performance on the revised measure for years prior to 2020.

Comment: One commenter expressed concern that measuring costs on a monthly basis in the revised total per capita cost measure could result in clinicians with as few as 2 patients meeting the case minimum of 20.

Response: To clarify, the revised total per capita cost measure has a case minimum of 20 beneficiaries. If an ongoing primary care relationship is established between a clinician and patient, the clinician will be attributed beneficiary-months for the patient and for a year. Clinicians will only be scored on the measure if they are attributed beneficiary-months across at least 20 patients.

After consideration of the public comments, we are finalizing our proposal to include the total per capita cost measure with the revised specifications as proposed in the cost performance category beginning with the CY 2020 performance period.

(B) Medicare Spending Per Beneficiary Clinician Measure

Similar to the total per capita cost measure, we finalized the MSPB clinician measure for use in MIPS as an important measurement of clinician cost performance. Having been used in the Physician VM program, it had been tested and was reliable for Medicare populations and was familiar to the clinician community. However, when we finalized this measure for use in MIPS, we noted that as with all the cost measures, we will maintain this measure and update its specifications as appropriate (82 FR 53643). We continue to believe that the existing measure is appropriate to use in MIPS and continue to be committed to maintaining this cost measure with consideration of stakeholder input and testing. Hence, we re-evaluated the MSPB clinician measure as part of our routine measure maintenance. The re-evaluation was informed by feedback received on this measure through prior public comment periods, as described in the CY 2017 Quality Payment Program final rule (81 FR 77017 through 77018) and the CY 2018 Quality Payment Program final rule (82 FR 53577 through 53578), as well as feedback that arose in the measure development contractor's

discussions with the standing TEP during the process of re-evaluation. This feedback is summarized below:

- The attribution methodology did not recognize the team-based nature of inpatient care;
- The attribution based on the plurality of Part B service costs during index admission could potentially attribute episodes to specialties providing expensive services as opposed to those providing the overall care management for the patient; and
- The measure captured costs for services that are unlikely to be influenced by the clinician's care decisions.

The feedback summarized above informed the two modifications that we proposed as part of the re-evaluation of this measure.

First, we proposed to change the attribution methodology to distinguish between medical episodes (where the index admission has a medical MS-DRG) and surgical episodes (where the index admission has a surgical MS-DRG) (84 FR 40759). A medical episode is first attributed to the TIN billing at least 30 percent of the inpatient E/M services on Part B physician/supplier claims during the inpatient stay. The episode is then attributed to any clinician in the TIN who billed at least one inpatient E/M service that was used to determine the episode's attribution to the TIN. A surgical episode is attributed to the surgeon(s) who performed any related surgical procedure during the inpatient stay, as determined by clinical input, as well as to the TIN under which the surgeon(s) billed for the procedure. The list of related surgical procedures MS-DRGs may be found in the measure codes list for the revised measure on the MACRA Feedback page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>). This revised attribution methodology accounts for the team-based nature of care provided when managing medical conditions during an inpatient stay and allows for attribution to multiple clinicians to ensure that all clinicians involved in a beneficiary's care are appropriately attributed.

Second, to account for the more limited influence clinicians' performance has on costs when compared with hospitals, we proposed to add service exclusions to the measure to remove costs that are unlikely to be influenced by the clinician's care decisions (84 FR 40759). Specifically, we proposed to exclude unrelated services specific to groups of MS-DRGs aggregated by major diagnostic

categories (MDCs). Some examples of unrelated services include orthopedic procedures for episodes triggered by MS-DRGs under Disorders of Gastrointestinal System (MDC 06 and MDC 07) or valvular procedures for episodes triggered by MS-DRGs under Disorders of the Pulmonary System (MDC 04).

Further detail about these changes to the measure is included in the measure specifications documents, which are available at the MACRA Feedback page. This includes a comparison of the changes against the MSPB clinician measure as currently specified. A measure justification form containing testing results for this measure with the revisions is available on the MACRA Feedback page at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>. We proposed to include the revised MSPB clinician measure with these specifications in the cost performance category beginning with the CY 2020 performance period (84 FR 40758).

The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposed attribution changes in the MSPB measure, in particular the separate attribution methods developed for medical and surgical episodes.

Response: We thank the commenters for their support for the revised measure.

Comment: Several commenters expressed general opposition to the inclusion of the revised MSPB measure in the MIPS program, noting that the measure was conditionally supported by the MAP pending review by the NQF but that there had been general concerns about the measure's risk adjustment and attribution. Some commenters suggested that only episode-based measures be included in the cost performance category, because they better identified the services that clinicians could influence.

Response: After its review of the proposed revisions to MSPB clinician measure, the MAP finalized a recommendation of "conditional support for rulemaking" with the condition that the revised measure be submitted for NQF endorsement. We plan to submit the revised measure to a future endorsement cycle; however, NQF endorsement is not required for cost measures to be implemented in the program. Following the MAP, the measure development contractor conducted testing of scientific

acceptability, including statistical calibration of the risk adjustment model and reliability testing to assess the measure's attribution methodology. The testing results were made available in the measure justification form available on the MACRA Feedback Page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>). We believe we have addressed the concerns raised by the MAP and that these revisions will ensure that the MSPB clinician measure continues to play an important role in the MIPS cost performance category.

We also continue to believe that the revised MSPB clinician measure provides an important measurement of clinician cost performance (82 FR 53644) complementing the episode-based measures. This measure evaluates the broad care related to an inpatient stay, which is a distinct measure focus from episode-based measures, which are intended to be more granular. By including both population- and episode-based measures in the cost performance category, a broader range of clinician care can be captured.

Comment: Some commenters expressed concerns that the revised MSPB clinician measure includes costs that are outside of the control of a provider because the measure captures costs associated with care provided by others and costs they cannot influence, such as drug prices. One commenter expressed concern that the measure only considered Medicare fee-for-service (FFS) patients, particularly since the health status of patients on Medicare Advantage may differ from those using Medicare FFS.

Response: As a population-based measure, the MSPB clinician measure is intended to reflect the cost to Medicare for a beneficiary's inpatient hospitalization. The measure does not include Medicare Part D costs and Part B drug costs that are included are payment standardized to remove factors outside the influence of clinicians. In addition, the revised measure excludes a list of services determined to be out of the influence of the clinician. The measure development contractor obtained input from the standing TEP and the MSPB Service Assignment Workgroup to identify and remove costs unlikely to be influenced by clinicians managing an acute inpatient stay. The MSPB Service Refinement Workgroup considered empirical analyses to identify service exclusions specific to Major Diagnostic Category (MDC) groupings, determined by the MS-DRG of the index admission. Based on these

analyses, the MSPB Service Refinement Workgroup recommended exclusions for services that were unlikely to be under the influence of the clinician, and these exclusions were applied to revised MSPB clinician measure. Regarding the exclusive focus on FFS patients, the MSPB clinician measure is intended to focus on patients enrolled only in Medicare Parts A and B. While the covariates included in the risk adjustment model for the MSPB clinician measure are derived from the Medicare Advantage risk adjustment model, the risk scores (that is, normalized coefficients for each covariate) are not. MSPB clinician predicts regressions using MSPB episodes for FFS patients so that the expected spending related to certain conditions corresponds to the patient population being measured.

Comment: A few commenters expressed concern about the attribution methodology for the revised MSPB measure. A few commenters expressed concern about using different attribution methods for medical and surgical episodes. One commenter opposed using different attribution methods because surgical care is often provided for a medical condition. One commenter expressed concern that certain specialties of clinician, such as pathology, could be attributed the costs of care inappropriately.

Response: The changes to the attribution method of the revised MSPB clinician measure involves the use of separate attribution methods for medical and surgical episodes to identify the clinician(s) responsible for providing these different types of care and properly capture costs for more or less expensive episodes. The new methodology shifts attribution of episodes towards specialties that are more likely to be involved in managing the course of a patient's care, as we have heard concerns from stakeholders regarding the old methodology potentially attributing clinicians who do not provide the overall care management for a beneficiary. Additionally, the risk adjustment for the revised measure is ran within each MDC, and not between medical and surgical episodes. This allows for more accurate comparisons of predicted episode spending between clinicians treating patients with similar characteristics, rather than all attributed clinicians. Lastly, it is possible for specialties such as pathology to be attributed the revised MSPB clinician measure, as long as the pathologist is involved in the inpatient care of a patient and meets the attribution requirements.

Comment: A few commenters expressed concern with how the MSPB clinician measure performance would be determined by the specialty of the clinician. They indicated that a specialty adjustment had been used on the measure as part of the VM program and expressed concern that the new measure would not include that adjustment. A few commenters expressed concern that specialties practicing in teams may not be attributed properly under the new measure.

Response: To clarify, the MSPB measure currently in use in MIPS and the revised MSPB clinician measure do not include a specialty adjustment. However, the revised MSPB clinician has been refined to ensure effective attribution and compare similar clinicians. This is achieved by distinguishing between medical episodes and surgical episodes and risk adjusting for episodes within each MDC. These refinements allow for more accurate comparisons of predicted episode spending as clinicians are compared to other clinicians treating patients with similar characteristics, rather than being compared to all clinicians.

Comment: One commenter expressed concern that under the revised MSPB clinician measure, costs for patients could be counted for more than one clinician or group and results of the measure could be misleading. One commenter suggested that only certain costs should be included in the MSPB measure, not all costs that occur during the episode.

Response: The revised MSPB clinician measure assesses the cost to Medicare as a result of the services performed by an individual clinician during an MSPB clinician episode, which comprises the period immediately prior to, during, and following a patient's inpatient hospital stay. The measure was refined to exclude a defined list of services that are unlikely to be influenced by the clinician's care decisions and that are considered clinically unrelated to the management of care. The service exclusion rules are defined specific to the MDC of the index admission and were developed with expert clinical input from the MSPB Service Refinement Workgroup. Clinicians can choose how to participate in MIPS and have the option to report as a group or as individuals. Under the revised MSPB clinician measure, an episode can be attributed to multiple clinicians or clinician groups. The measure calculation risk adjusts each clinician's or clinician group's observed costs for

patients with the same observable characteristics among their peers, rather than to a pre-defined standard. Given that the inpatient hospital setting is an important contributor to overall Medicare spending, gauging the efficacy of this spending requires measuring the cost performance of clinicians providing care at hospitals. The MSPB clinician measure provides valuable context for such progress in efficiency by measuring costs of care from a holistic perspective at the beneficiary level. Detailed information on how the MSPB clinician measure is calculated is provided in the measure methodology document available on the MACRA Feedback Page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>).

Comment: A few commenters expressed concern about not receiving detailed feedback on the revised MSPB measure before it was proposed for use in the cost performance category. A few commenters recommended that the measure implementation be delayed by one year to allow more time for clinicians to review data.

Response: In Fall 2018, we conducted extensive field testing for this measure. In addition to field test reports that provided detailed performance feedback to clinicians and clinician groups who met the 35 episode case minimum, we provided public documentation such as measure methodology documents with detailed descriptions of the revisions to the measure, a fact sheet, and an FAQ. We also held public webinars to provide more information about the revised measure methodology. Subsequently, the measure underwent MAP review, which provided stakeholders more opportunities to provide feedback about the measure prior to its proposal for implementation. As such, we believe that the measure is ready for implementation at this time, and that it is not necessary to delay its implementation to a future year.

Comment: A few commenters expressed concern that clinicians in rural areas would be shown to have poor performance on the measure because of the nature of the area in which they practice. They suggested that smaller referral networks would reduce the opportunity for clinicians to help manage costs. A few commenters recommended that CMS Winsorize, or limit extreme values in the MSPB clinician measure score distribution, at the 95th percentile rather than the 99th percentile to address this issue.

Response: The measure development contractor performed detailed testing on

the revised MSPB clinician measure to ensure that all providers are measured accurately and fairly, regardless of size, location, or the population they serve. This testing includes stratifying clinician measure scores by defining characteristics and investigating the clinician score distribution by percentile. Stratification is performed for each of the following characteristics: Urban/rural, census division, census region, risk score, and the number of episodes attributed to the clinician. We analyze the distribution of measure scores for clinicians defined by these characteristics, as well as for the overall measure to ensure that there is a sufficiently large difference in measure scores among clinicians to determine a meaningful difference in performance. Our testing results show similar score distributions for urban and rural clinicians, which indicates that they perform similarly under the revised MSPB clinician measure. More information on testing for this measure, including how we determine meaningful differences in clinician performance, is available in the measure justification form available on the MACRA Feedback Page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>). The revised MSPB clinician measure methodology aims to limit the effects of certain values in the measure score distribution in two ways. First, the expected episode cost is winsorized at the lower bound by assigning the value of expected episode costs at the 0.5th percentile of the distribution for episodes within the same MDC to all expected costs below the 0.5th percentile. Second, after winsorization, the measure excludes episodes with residual values below the 1st percentile and above the 99th percentile. Winsorizing expected episode cost at the 95th percentile would lower expected spending for the most complex patients and make it more difficult for clinicians to perform well. Lowering the threshold at which episodes with high residuals are excluded to the 95th percentile would narrow the distribution by removing more costly clinician episodes, which would diminish clinicians' ability to distinguish themselves compared to their peers. This portion of the distribution represents an area where the least cost-efficient care is realized so it is advantageous to consider it when calculating measure scores. After consideration of the public comments, we are finalizing our proposal to

include the MSPB clinician measure with the revised specifications as proposed in the cost performance category beginning with the CY 2020 performance period.

(vi) Reliability

(A) Reliability for Episode-Based Measures

In the CY 2017 Quality Payment Program final rule (81 FR 77169 through 77170), we finalized a reliability threshold of 0.4 for measures in the cost performance category. In the CY 2019

PFS final rule, we established at § 414.1350(c)(4) and (5) a case minimum of 20 episodes for acute inpatient medical condition episode-based measures and 10 episodes for procedural episode-based measures (83 FR 59773 through 59774). We examined the reliability of the 10 episode-based measures listed in Table 45 at our established case minimums and found that all of these measures meet the reliability threshold of 0.4 for the majority of groups at a case minimum of 10 episodes for procedural episode-

based measures and 20 episodes for acute inpatient medical condition episode-based measures. All of the measures meet this standard at the individual clinician level as well, with the exception of the Lower Gastrointestinal Hemorrhage episode-based measure. In section III.K.3.c.(2)(b)(vi)(B) of the proposed rule, we discuss a proposal to limit our assessment of certain cost measures to groups (identified by a TIN) based on the results of our reliability analysis (84 FR 40760).

TABLE 45: Percent of TINs and TIN/NPIs that Meet 0.4 Reliability Threshold

Measure name	% TINs meeting 0.4 reliability threshold	Mean reliability for TINs	% TIN/NPIs meeting 0.4 reliability threshold	Mean reliability for TIN/NPIs
Acute Kidney Injury Requiring New Inpatient Dialysis	100.0%	0.58	85.3%	0.48
Elective Primary Hip Arthroplasty	100.0%	0.85	100.0%	0.78
Femoral or Inguinal Hernia Repair	100.0%	0.86	100.0%	0.81
Hemodialysis Access Creation	93.1%	0.63	70.1%	0.48
Inpatient Chronic Obstructive Pulmonary Disease (COPD) Exacerbation	100.0%	0.69	68.0%	0.46
Lower Gastrointestinal Hemorrhage*	74.6%	0.51	0.0%	0.20
Lumbar Spine Fusion for Degenerative Disease, 1-3 Levels	100.0%	0.77	100.0%	0.69
Lumpectomy Partial Mastectomy, Simple Mastectomy	100.0%	0.64	100.0%	0.60
Non-Emergent Coronary Artery Bypass Graft (CABG)	100.0%	0.82	100.0%	0.74
Renal or Ureteral Stone Surgical Treatment	100.0%	0.77	100.0%	0.65

*This measure was proposed only for groups. Please reference section III.K.3.c.(2)(b)(vi)(B) of the final rule.

(B) Limiting Assessment of Certain Measures to Groups

We have assessed clinicians and groups on cost measures when they meet the case minimum for a measure. As part of our efforts to ensure reliable measurement, we have examined the reliability of cost measures at the group and individual level, as clinicians are able to participate in MIPS in either way. However, for clinicians who participate in MIPS as individuals, we have found the Lower Gastrointestinal Hemorrhage episode-based measure does not meet the reliability threshold of 0.4 that we established for measures in the cost performance category. While we considered not including the measure in MIPS for this reason, we do find that this measure meets the reliability threshold for those who participate in MIPS as part of a group. Therefore, we proposed to include the measure in the cost performance

category only for MIPS eligible clinicians who report as a group or virtual group (84 FR 40760). We will continue to assess the reliability of cost measures for group and individual participation as the measures are introduced or are revised. If we identify measures that are similarly found to meet our reliability threshold at the group level but not at the individual level, we will again consider limiting the assessment of the measure to groups.

The following is a summary of the comments we received and our responses.

Comment: A few commenters generally agreed that the mean reliability for the Lower Gastrointestinal Hemorrhage episode-based measure at the TIN/NPI level is too low and should be used at the group level. One commenter indicated that the reliability is too low at the individual level and requested more details on the range of

reliability values by practice size. The commenter also requested that CMS consider an exclusion for small practices for whom reliability is lower than the TIN mean of 0.51.

Response: While we have not examined the relationship between practice size and the reliability of the cost measures, we have examined the relationship between case volume and the reliability of cost measures. The measure justification form for this measure, which is available on the MACRA Feedback Page (<https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/MACRA-Feedback.html>), presents reliability at three different case sizes or volume thresholds. To some degree, the size of a practice may correlate with the case size for cost measures, as an individual clinician can only see so many patients.

We believe that establishing case minimums that are based on moderate reliability allows us to measure all clinicians and groups that meet those case minimums. As such, we do not believe that small practices who meet the moderate reliability threshold of 0.4 but are below 0.51 should be excluded. We have established a small practice bonus within the quality performance category to accommodate the issues small practices may face. We will take the recommendation to provide additional reliability figures into consideration when providing future measure testing results and continue to monitor cost performance and reliability for small practices to ensure that the measures continue to accurately and fairly measure their performance.

Comment: A few commenters expressed concerns that the 0.4 threshold is too low to ensure reliability and clinicians should not be held accountable for measures at this level of reliability. A few commenters recommended that CMS adopt a higher reliability such as 0.75 or 0.7. Additionally, a few commenters stated that the established case minimums should be set higher even though this may lead to fewer clinicians being attributed to the measure.

Response: We appreciate the input on reliability thresholds. We finalized a reliability threshold of 0.4 for measures in the cost performance category in the

CY 2017 Quality Payment Program final rule (81 FR 77169 through 77170) that is consistent with other CMS quality programs. We generally consider reliability levels between 0.4 and 0.7 to indicate “moderate” reliability and levels above 0.7 to indicate “high” reliability. In cases where we have considered high participation in the applicable program to be an important programmatic objective, we have selected the 0.4 moderate reliability standard. We believe this standard ensures moderate reliability but does not substantially limit participation.

All measures proposed, with the exception of the Lower Gastrointestinal Hemorrhage measure that was proposed at the group level only, exceed the threshold at the clinician and clinician group level (84 FR 40759 through 40760). Detailed information about the development and reliability testing of the episode-based measures and revised cost measures is publicly available for download on the MACRA Feedback Page (<https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/value-based-programs/macra-mips-and-apms/macra-feedback.html>).

After consideration of the comments, we are finalizing our proposal to include the Lower Gastrointestinal Hemorrhage episode-based measure in the cost performance category only for

MIPS eligible clinicians who report as a group or a virtual group.

(C) Reliability for Revised Cost Measures

In the CY 2017 Quality Payment Program final rule, we finalized a reliability threshold of 0.4 for measures in the cost performance category (81 FR 77169 through 77170). Additionally, we established a case minimum of 35 episodes for the MSPB clinician measure (81 FR 77171) and a case minimum of 20 beneficiaries for the total per capita cost measure (81 FR 77170). We codified these case minimums at § 414.1350(c)(1) and (2) in the CY 2019 PFS final rule (83 FR 59774). We based these case minimums on our interest in ensuring that the majority of clinicians and groups that were measured met the threshold of 0.4 reliability, which we believed best balanced our interest in ensuring moderate reliability without limiting participation. Given the significant changes to these measures that we proposed in section III.K.3.c.(2)(b)(v) of the proposed rule (84 FR 40757 through 40759), we again examined the reliability of the revised MSPB clinician and total per capita cost measures at these case minimums and found that the measures meet the reliability threshold of 0.4 for the majority of clinicians and groups at the existing case minimums, as shown in Table 46.

TABLE 46—PERCENT OF TINS AND TIN/NPIS THAT MEET 0.4 RELIABILITY THRESHOLD FOR THE REVISED MSPB CLINICIAN AND TOTAL PER CAPITA COST MEASURES

Measure name	% TINS meeting 0.4 reliability threshold	Mean reliability TINS	% TIN/NPIS meeting reliability threshold	Mean reliability TIN/NPIS
Medicare Spending per Beneficiary Clinician	100	0.77	100	0.69
Total Per Capita Cost	100	0.82	100	0.89

Based on this analysis, we did not propose any changes to the case minimums, which we previously finalized as 35 for the MSPB clinician measure, and 20 for the total per capita cost measure.

Comment: A few commenters favored a case minimum of 35 for the revised total per capita cost and MSPB clinician measures to improve reliability and promote consistency within the cost performance category.

Response: We do not believe it is necessary to increase the case minimum for the total per capita cost measure, as the majority of clinicians and clinician groups exceed the reliability threshold of 0.4 at the existing case minimum of 20 beneficiaries. Keeping this case

minimum would balance the goal of increased reliability with the goal of adopting cost measures that are applicable to a larger set of clinicians and clinician groups.

(vii) Request for Comments on Future Potential Episode-Based Measure for Mental Health

We plan to continue to develop episode-based measures and propose to adopt them for the cost performance category in future rulemaking. As a part of these efforts, we seek to expand the range of procedures and conditions covered to ensure that more MIPS eligible clinicians have their cost performance assessed under clinically relevant episode-based measures. In

recognition of the importance of assessing mental health care, we developed an acute inpatient medical condition episode-based measure for the treatment of inpatient psychoses and related conditions through the same process involving extensive expert clinician input as the measures in section III.K.3.c.(2)(b)(vii) of the proposed rule (84 FR 40760). The specifications for the Psychoses/Related Conditions episode-based measure are available at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Value-Based-Programs/MACRA-MIPS-and-APMs/2019-revised-ebcm-measure-specs.zip>. The Psychoses/Related Conditions episode-based measure represents an

opportunity to incentivize improvement in the field of mental health, a CMS priority area. We refer readers to the CY 2020 PFS proposed rule where we summarize the MAP's feedback and recommendations regarding the Psychoses/Related Conditions episode-based measure (84 FR 40760).

In the CY 2020 PFS proposed rule, we solicited comments on the potential use of this new Psychoses/Related

Conditions episode-based measure in the cost performance category in a future MIPS performance period (84 FR 40760). While we are not summarizing and responding to comments we received in this final rule, we thank the commenters for their responses, and we will consider them as we consider the potential inclusion of the Psychoses/Related Conditions episode-based measure in the future.

(viii) Summary of Previously Established and Finalized Measures for the Cost Performance Category for the 2020 and Future Performance Periods

The previously established and finalized measures for the cost performance category for the 2020 and future performance periods are summarized in Table 47.

BILLING CODE 4120-01-P

TABLE 47: Summary Table of Cost Measures for the 2020 Performance Period and Future Performance Periods

Measure Topic	Measure Type	Measure Status
Total Per Capita Cost	Population-Based	Revised and finalized for 2020 performance period and beyond
Medicare Spending Per Beneficiary Clinician	Population-Based	Revised and finalized for 2020 performance period and beyond
Elective Outpatient Percutaneous Coronary Intervention (PCI)	Procedural episode-based	Currently in use for 2019 Performance Period and Beyond
Knee Arthroplasty	Procedural episode-based	Currently in use for 2019 Performance Period and Beyond
Revascularization for Lower Extremity Chronic Critical Limb Ischemia	Procedural episode-based	Currently in use for 2019 Performance Period and Beyond
Routine Cataract Removal with Intraocular Lens (IOL) Implantation	Procedural episode-based	Currently in use for 2019 Performance Period and Beyond
Screening/Surveillance Colonoscopy	Procedural episode-based	Currently in use for 2019 Performance Period and Beyond
Intracranial Hemorrhage or Cerebral Infarction	Acute inpatient medical condition episode-based	Currently in use for 2019 Performance Period and Beyond
Simple Pneumonia with Hospitalization	Acute inpatient medical condition episode-based	Currently in use for 2019 Performance Period and Beyond
ST-Elevation Myocardial Infarction (STEMI) with Percutaneous Coronary Intervention (PCI)	Acute inpatient medical condition episode-based	Currently in use for 2019 Performance Period and Beyond
Acute Kidney Injury Requiring New Inpatient Dialysis	Procedural episode-based	Finalized for 2020 Performance Period and Beyond
Elective Primary Hip Arthroplasty	Procedural episode-based	Finalized for 2020 Performance Period and Beyond
Femoral or Inguinal Hernia Repair	Procedural episode-based	Finalized for 2020 Performance Period and Beyond
Hemodialysis Access Creation	Procedural episode-based	Finalized for 2020 Performance Period and Beyond
Inpatient Chronic Obstructive Pulmonary Disease (COPD) Exacerbation	Acute inpatient medical condition episode-based	Finalized for 2020 Performance Period and Beyond
Lower Gastrointestinal Hemorrhage (<i>at group level only</i>)	Acute inpatient medical condition episode-based	Finalized for 2020 Performance Period and Beyond
Lumbar Spine Fusion for Degenerative Disease, 1-3 Levels	Procedural episode-based	Finalized for 2020 Performance Period and Beyond
Lumpectomy, Partial Mastectomy, Simple Mastectomy	Procedural episode-based	Finalized for 2020 Performance Period and Beyond
Non-Emergent Coronary Artery Bypass Graft (CABG)	Procedural episode-based	Finalized for 2020 Performance Period and Beyond
Renal or Ureteral Stone Surgical Treatment	Procedural episode-based	Finalized for 2020 Performance Period and Beyond

BILLING CODE 4120-01-C

(3) Improvement Activities Performance Category

(a) Background

For previous discussions on the background of the improvement activities performance category, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77178), the CY 2018 Quality Payment Program final rule (82 FR 53648 through 53661), and the CY 2019 PFS final rule (83 FR 59776 through 59777).

In this final rule, we are: (1) Modifying the definition of rural area; (2) updating § 414.1380(b)(3)(ii)(A) and (C) removing the reference to the four listed accreditation organizations to be recognized as patient-centered medical homes and removing the reference to the specific accrediting organization for comparable specialty practices; (3) increasing the group reporting threshold to 50 percent; (4) establishing factors to consider for removal of improvement activities from the Inventory; (5) removing 15, modifying seven, and adding two new improvement activities for the 2020 performance period and future years; and (6) concluding and removing the CMS Study on Factors Associated with Reporting Quality Measures. These are discussed in more detail in this final rule.

(b) Small, Rural, or Health Professional Shortage Areas Practices

For our previously established policies regarding small, rural, or Health Professional Shortage Areas Practices, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77188), CY 2018 Quality Payment Program final rule (82 FR 53581), and § 414.1305. In the CY 2018 Quality Payment Program final rule (82 FR 53581 through 53582), we changed the definition of rural area at § 414.1305 to mean ZIP codes designated as rural, using the most recent Health Resources and Services Administration (HRSA) Area Health Resource File data set available.

It has come to our attention that the rural area definition at § 414.1305 includes the incorrect file name for the rural designation. While we used the correct file, we just referenced it incorrectly. Therefore, in the CY 2020 PFS proposed rule (84 FR 40762), we proposed to update the MIPS rural area definition by correcting the file name. In the CY 2017 Quality Payment Program final rule (81 FR 77188), we incorrectly referenced the file we used for rural designation as “the most recent Health Resources and Services Administration (HRSA) Area Health Resource File data

set available” instead of the correct file entitled “Federal Office of Rural Health Policy (FORHP) eligible ZIP codes” which may currently be found at <https://www.hrsa.gov/rural-health/about-us/definition/datafiles.html>. The HRSA Area Health Resources Files (AHRF) include data on Health Care Professions, Health Facilities, Population Characteristics, Economics, Health Professions Training, Hospital Utilization, Hospital Expenditures, and Environment at the county, state and national levels, from over 50 data sources¹¹⁵ but does not contain specific data on rurality developed by HRSA’s FORHP. To be clear, we have been using the more appropriate FORHP eligible ZIP code file in all previous 3 years of MIPS; we simply inadvertently listed the incorrect file name in the definition. Furthermore, the definition of rural in MIPS is based on the rural definition developed by HRSA’s FORHP which may be found at <https://www.hrsa.gov/rural-health/about-us/definition/index.html>. The FORHP defines all non-Metro counties as rural and uses an additional method of determining rurality called the Rural-Urban Commuting Area (RUCA) codes to designate rural Census Tracts within Metropolitan Counties. The FORHP eligible ZIP codes are available in a file located at <https://www.hrsa.gov/sites/default/files/hrsa/ruralhealth/about-us/definition/forhp-eligible-zips.xlsx>. Therefore, we proposed to modify the definition of rural area at § 414.1305 to mean a ZIP code designated as rural by the Federal Office of Rural Health Policy (FORHP), using the most recent FORHP Eligible ZIP Code file available.

We invited public comment on our proposal as discussed in this final rule. We did not receive any comments on this proposal. Therefore, we are finalizing our proposal, as proposed, to modify the definition of rural area at § 414.1305 to mean a ZIP code designated as rural by the Federal Office of Rural Health Policy (FORHP), using the most recent FORHP Eligible ZIP Code file available.

(c) Patient-Centered Medical Home and Comparable Specialty Practice Accreditation Organizations

In the CY 2017 Quality Payment Program final rule (81 FR 77179 through 77180), we finalized at § 414.1380(b)(3)(ii) an expanded definition of what is acceptable for recognition as a certified-patient-centered medical home or comparable specialty practice. Specifically, we

finalized that one of the criteria, as stated at § 414.1380(b)(3)(ii)(A), is whether the practice has received accreditation from one of four accreditation organizations that are nationally recognized; paragraphs (b)(3)(ii)(A)(1) through (4) list the four organizations with nationally recognized patient-centered medical home accreditation programs: (1) The Accreditation Association for Ambulatory Health Care; (2) the National Committee for Quality Assurance (NCQA) Patient-Centered Medical Home; (3) The Joint Commission Designation; or (4) the Utilization Review Accreditation Commission (URAC) (81 FR 77180). In addition, we finalized another criteria at § 414.1380(b)(3)(ii)(C), which states that the practice is a comparable specialty practice that has received the NCQA Patient-Centered Specialty Recognition (81 FR 77180). Further, we finalized that the criteria for being a nationally recognized accredited patient-centered medical home are that it must be national in scope and must have evidence of being used by a large number of medical organizations as the model for their patient-centered medical home (81 FR 77180).

Since finalizing these criteria, it has come to our attention that we may have inadvertently been excluding other organizations. It was and is not our intention to limit patient-centered medical home or comparable specialty practice accreditation organizations to those listed. We realize that there may be additional accreditation organizations that have nationally recognized programs for accrediting patient-centered medical homes and comparable specialty practices that were not included. Therefore, in the CY 2020 PFS proposed rule (84 FR 40763), we requested comments on our proposal to update § 414.1380(b)(3)(ii)(A) and (C) to remove specific entity names.

The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed removal of specific entity names from § 414.1380(b)(3)(ii)(A) and (C) because it broadened the criteria of a medical home and will be helpful to practices seeking to become accredited patient centered medical homes. One commenter stated that practices with these designations promote innovative delivery system reforms; meet stringent, robust criteria for clinical practice transformation; and are held to a high standard of care for the patients they serve.

¹¹⁵ <https://data.hrsa.gov/topics/health-workforce/ahrh/>.

Response: We appreciate the support. We clarify that we are not broadening or changing our criteria for accreditation organizations. We continue to believe that the criteria established, for what we considered certified at § 414.1380(b)(3)(iv) are appropriate and meet national guidelines. We are merely finalizing the removal of specific entity name examples at § 414.1380(b)(3)(ii)(A) and (C).

Comment: A few commenters did not support removing the names of the approved patient-centered medical home and comparable specialty practice programs that provide clinicians full credit for the MIPS improvement activities performance category. The commenters noted that the evidence-based formal patient-centered medical home criteria help to standardize effective practices and attributes in recognized practices, help payers standardize payments and compare performance without specifying which programs qualify. One commenter noted that without specifying which patient-centered medical home and comparable specialty practice programs qualify for certification, clinicians will lack assurance that participation in a given patient-centered medical home and comparable specialty practice program will earn the full improvement activities 15 points. The commenter recommended specifying and updating a public list of any additional qualified programs to address concern about excluding any programs that have the required national scope without creating uncertainty. One commenter noted that removing the named entities may encourage the development of patient-centered medical home programs with below par standards and recommended that we review any programs that are not reviewed by the four named accreditation organizations to ensure they meet the same high standards for rigor.

Response: We believe that removing specific patient-centered medical home accreditations organizations will level the playing field for any organization that meets the requirements. We refer readers to the Quality Payment Program website improvement activities landing page at <https://qpp.cms.gov/mips/improvement-activities>, where we have provided a few examples of accreditation organizations that are recognized or certified patient-centered medical home and comparable specialty practice programs. We disagree that removing the named entities may encourage the development of patient-centered medical home programs with below par standards as we are not broadening or changing our certification

criteria for accreditation organizations. We are merely finalizing the removal of specific entity name examples at § 414.1380(b)(3)(ii)(A) and (C).

Comment: One commenter requested clarification whether the proposal to regulatory text impacts NCQA recognition for patient-centered medical home and comparable specialty practice programs and subsequently credit for the improvement activities performance category.

Response: We clarify that removing specific entity name examples of accreditation organizations from the regulations text does not speak to an organization's qualifications to provide accreditation for patient-centered medical homes and comparable specialty practices. It was and is not our intention to limit patient-centered medical home or comparable specialty practice accreditation organizations to those listed in the regulations text. We realize that there may be additional accreditation organizations that have nationally recognized programs for accrediting patient-centered medical homes and comparable specialty practices that were not included. This change is an effort to make the regulations text more neutral. We refer readers to the Quality Payment Program website at <https://qpp.cms.gov/mips/improvement-activities> where we have provided a few examples of accreditation organizations that are recognized or certified patient-centered medical home and comparable specialty practice programs.

After consideration of the comments, we are finalizing our proposal, as proposed, to update § 414.1380(b)(3)(ii)(A) and (C) to remove specific entity name examples.

(d) Improvement Activities Data Submission

We proposed changes to the improvement activities data submission for group reporting requirements, as discussed below.

(i) Submission Mechanisms

For our previously established policies regarding improvement activities performance category submission mechanisms, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53650 through 53656), the CY 2019 PFS final rule (83 FR 59777), and § 414.1360(a)(1). We did not propose any changes to these policies.

(ii) Submission Criteria

For our previously established policies regarding improvement activities performance category

submission criteria, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77185), the CY 2018 Quality Payment Program final rule (82 FR 53651 through 53652), the CY 2019 PFS final rule (83 FR 59777 through 59778), and § 414.1380. We did not propose any changes to these policies.

(iii) Group Reporting

In the CY 2020 PFS proposed rule (84 FR 40763 through 40764), we made two proposals with respect to group reporting to: (a) Increase the group reporting threshold from at least one clinician to at least 50 percent of the group beginning with the 2020 performance year, and (b) at least 50 percent of a group's National Provider Identifiers (NPIs) must perform the same activity for the same continuous 90 days in the performance period beginning with the 2020 performance year. These are discussed in more detail below.

As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77181), in response to a public comment, we stated that if at least one clinician within the group is performing the activity for a continuous 90 days in the performance period, the group may report on that activity. In addition, we specified that all MIPS eligible clinicians reporting as a group would receive the same score for the improvement activities performance category if at least one clinician within the group is performing the activity for a continuous 90 days in the performance period (81 FR 77181).

In the CY 2018 Quality Payment Program proposed rule (82 FR 30053), we requested comment for future consideration on issues related to whether we should establish a minimum threshold (for example, 50 percent) of the clinicians (NPIs) that must complete an improvement activity for the entire group (Taxpayer Identification Number (TIN)) to receive credit in the improvement activities performance category in future years. Some commenters expressed concerns that setting a minimum threshold would add complexity or burden for clinicians. Other commenters supported the establishment of a minimum participation threshold in future years, noting that a minimum threshold will ensure scoring is reflective of care delivered by the group as a whole rather than one or a few high-performing clinicians.

We believe that by Year 4 (2020 performance year) of the Quality Payment Program, clinicians should be familiar with the improvement activities performance category. We believe that increasing the minimum threshold for a

group to receive credit for the improvement activities performance category will not present additional complexity and burden for a group. With over 100 improvement activities available for eligible clinicians to choose from in the improvement activities Inventory, which may be found at the Quality Payment Program website <https://qpp.cms.gov/>, that provide a range of options for clinicians seeking to improve clinical practice that are not specific to practice size, specialty, or practice setting. We believe that a group should be able to find applicable and meaningful improvement activities to complete that would apply to at least 50 percent of individual MIPS eligible clinicians in a group.

Therefore, in the CY 2020 PFS proposed rule (84 FR 40763), we proposed to increase the minimum number of clinicians in a group or virtual group who are required to perform an improvement activity to 50 percent for the improvement activities performance category beginning with the 2020 performance year and future years. We note that once finalized the changes to the group threshold will have no impact on the previously finalized policy that eligible clinicians participating in an APM will receive full points for the improvement activities performance category as discussed in the CY 2017 Quality Payment Program final rule (81 FR 77258 through 77260). This is an increase to the previously established requirement finalized in the CY 2017 Quality Payment Program final rule (81 FR 77181) that only one clinician within a TIN needs to attest to the completion of an improvement activity to get credit towards the MIPS final score. We believe a 50 percent threshold is achievable and appropriate because, if a group or virtual group has implemented an improvement activity, the activity should be recognized and adopted throughout much of the practice to improve clinical practice, care delivery, and outcomes. This aligns with our definition of an improvement activity at § 414.1305. In crafting our proposal, we also considered other thresholds, such as a lower threshold of 25 percent. However, we believe that improvement activities should be adopted throughout much of the practice to achieve improved outcomes. We do not believe that 25 percent group participation will reflect improved outcomes. We also considered a higher threshold of 100 percent, but have concerns that requiring every clinician within a group to perform improvement activities may be premature at this time

because increasing the threshold by such a large amount may be considered burdensome to clinicians. However, we believe that 50 percent provides an appropriate balance between requiring at least half of the NPIs reporting as part of a group to participate in the improvement activities performance category and acknowledging the challenges to requiring every NPI in a group to perform the improvement activity for a group to receive credit. We also believe our proposal aligns with the 50 percent threshold for the number of practice sites that must be recognized for a TIN to receive full credit as a patient-centered medical home (82 FR 53655) and is both achievable and appropriate at this time.

Furthermore, we believe that requiring at least 50 percent of a group or TIN to perform an improvement activity for the same continuous 90-day performance period will facilitate improvement in clinical practice within a TIN. As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77186), we considered setting the threshold for the minimum time required for performing an activity to longer periods up to a full calendar year. However, after researching several organizations we stated that we believed a minimum of 90 days is a reasonable amount of time (81 FR 77186). In addition, in response to comments we stated that we believed that each activity can be performed for a full 90 consecutive days by some, if not all, MIPS eligible clinicians, and that there are a sufficient number of improvement activities included that any eligible clinician may select and perform for a continuous 90 days that will allow them to successfully report under this performance category (81 FR 77186).

Therefore, we requested comments on our proposal to revise § 414.1360(a)(2) to state that beginning with the 2020 performance year, each improvement activity for which groups and virtual groups submit a yes response in accordance with paragraph (a)(1) of this section must be performed by at least 50 percent of the NPIs billing under the group's TIN or virtual group's TINs, as applicable; and these NPIs must perform the same activity for the same continuous 90 days in the performance period. To be clear, other submission requirements will remain the same. In other words, each TIN will need to submit an attestation for each improvement activity selected that at least 50 percent of its NPIs performed the same activity for the same continuous 90 days in the performance period. For example, TIN 1234 attests that at least 50 percent of its NPIs

performed the improvement activity entitled: "Participation in a QCDR that promotes use of patient engagement tools" (IA_BE_7) for the same continuous 90-day period. Because IA_BE_7 is medium-weighted, the example TIN will receive 10 points toward the total possible improvement activities score. TIN 1234 also attests that at least 50 percent of its NPIs performed the improvement activity entitled: "Implementation of formal quality improvement methods, practice changes, or other practice improvement processes" (IA_PSPA_19) for the same continuous 90-day period. Because IA_PSPA_19 is medium-weighted, the example TIN will receive another 10 points toward the total possible improvement activities score. We refer readers to the CY 2019 Quality Payment Program final rule (83 FR 59753 through 59754) where we discuss the data submission deadline which was finalized at § 414.1325(e)(1) as follows: For the direct, login and upload, login and attest, and CMS Web Interface submission types, March 31 following the close of the applicable performance period or a later date as specified by CMS.

The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposal to have at least 50 percent of clinicians reporting as a group perform the same activity for the same continuous 90 days in the performance period as they noted that it would promote increased participation in the improvement activities performance category by clinicians in groups. They stated that it would ensure scoring is reflective of care delivered by the group as a whole rather than one or a few high-performing clinicians.

Response: We thank the commenters for their support.

Comment: Several commenters recommended alternative thresholds ranging from 5 to 25 percent, noting concerns that it may be impractical for groups to meet the proposed 50 percent threshold which could then disincentivize performance in the improvement activities performance category. A few commenters requested a more gradual increase to enable groups to amend current efforts to meet the policy requirement. Commenters recommended the development of a pilot program including options to test a gradual increase at a few sites and to test more feasible thresholds. A more reasonable number of eligible clinicians within groups who would be required to participate in an improvement activity because some improvement activities

lend themselves to widespread participation such as being part of a group that provides 24/7 access to care or participation in a Patient Safety Organization. One commenter recommended an alternative threshold that sets a percentage or minimum number of clinicians (such as 30) that does not limit options for large groups. One commenter recommended a percentage between 10 percent and 25 percent because 50 percent is too drastic of an increase and the ambiguity and uncertainty on how to quantify clinician participation at the 50 percent level. One commenter recommended a number between one clinician and 50 percent of clinicians is appropriate believing the correct number needs further study. One commenter stated this is a significant policy change and recommended a more gradual approach to a threshold of 25 percent. One commenter recommended a modification to 20 percent of total NPIs within a TIN believing it is a good sample size and would reduce burden. Another commenter recommended an alternative threshold of 1 percent or 5 clinicians, whichever is greater. One commenter recommended a cap on the number of providers required to attest, such as no more than 25 eligible clinicians from any one TIN. Another commenter recommended lowering the percentage or to provide for reporting to be 'by department' because there may be advantages for reporting at the department level. One commenter recommended delaying implementation of the 50 percent threshold until CY 2021 to give large groups adequate time to implement needed changes. One commenter requested clarification whether the proposal intends that the 50 percent threshold applies to 50 percent of the total NPIs under the TIN. Other commenters recommended an increase to 5 or 10 percent because raising the bar to 50 percent of clinicians in a group would significantly increase burden; making it impossible in some cases for groups to attest to the required number of improvement activities to receive partial or full credit for the performance category; and that there are few clinician leaders in a group who are actively engaged in a particular improvement activity. One commenter noted a 10 percent threshold is a reasonable compromise.

Response: We do not believe that setting thresholds at 5 percent, 10 percent, or 25 percent is appropriate as it does not provide a comprehensive representation of the entire group. We believe that requiring at least 50 percent of the group to perform the same

activity provides an appropriate balance between requiring at least half of the NPIs reporting as part of a group to participate in the improvement activities performance category and acknowledging the challenges to requiring every NPI in a group to perform the improvement activity for a group to receive credit. The common goal of group reporting should be group practice transformation and improved patient outcomes. If each clinician is reporting on a different improvement activity, we do not believe that would meet the common goal of group reporting. Moreover, while we understand that one clinician completing an activity may have benefits, we do not believe that only one clinician completing an activity would create a widespread benefit for an entire group. While in some small groups, one participant may have a greater impact, for larger groups, one participant is a very low bar. We believe a 50 percent threshold is appropriate because it will encourage increased clinician participation, provide for more meaningful clinical practice transformation, and will require a level of clinician participation more appropriate for the group to receive credit. We believe increasing the threshold to at least 50 percent of the clinicians in the group moves the improvement activities performance category towards greater impact and value aligning with the MVP framework. In addition, using a 50 percent threshold for the group is less than what clinicians must do in other performance categories. In the quality performance category, we have established that 100 percent of the group, to the extent the group has patients that are applicable to the measure, must comply with our requirements (81 FR 77072). Additionally, for the cost performance category, we have established a 100 percent threshold to calculate those measures (81 FR 77072).

We believe a 50 percent threshold will increase clinician participation, provide for more meaningful clinical practice transformation, and require a level of clinician participation more appropriate for the MVP goal of greater value and impact. In addition, we believe a 50 percent threshold is achievable and appropriate because, if a group or virtual group has implemented an improvement activity, the activity should be recognized and adopted throughout much of the practice to improve clinical practice, care delivery, and outcomes. Furthermore, we believe that 50 percent provides an appropriate balance between requiring at least half

of the NPIs reporting as part of a group to participate in the improvement activities performance category while acknowledging the challenges to requiring every NPI in a group to perform the improvement activity for a group to receive credit. This aligns with the 50 percent threshold for the number of practice sites that must be recognized for a TIN to receive full credit as a patient-centered medical home (82 FR 53655) and is both achievable and appropriate at this time. We do not believe that increasing the group threshold to 50 percent for improvement activities should hinder participation in other facility initiatives. We anticipate that in future rulemaking, we will continue to increase this threshold. Our future goal would be to have 100 percent of a group performing the same activity during any 90-day period within the same performance year.

We are unclear on why one commenter stated that there is "ambiguity and uncertainty on how to quantify clinician participation at the 50 percent level". If the commenter is requesting clarification on how to count clinicians towards the 50 percent when there is an uneven number of clinicians in the group. In that instance, the group would need to go up to the next whole number to account for 50 percent of the clinicians in the group. For example, if the group consists of 13 members then at least 7 clinicians would need to report the same improvement activity for any continuous 90 days in the performance year for the activity to count towards the improvement activity performance category score. The Inventory provides a detailed description of what is required to complete a particular activity. In addition, we have provided several resources such as a Quick Start Guide and Fact Sheet on the Quality Payment Program website at <https://qpp.cms.gov/about/resource-library>. If clinicians have further questions they may contact the Quality Payment Program service center at QPP@cms.hhs.gov or at 1-866-288-8292. We also believe that we are providing a gradual approach to increasing the group requirements for the improvement activities performance category, as for the first 3 years of MIPS we only required one clinician from a group to perform and report on an improvement activity. As we are preparing to enter Year 4 (CY 2020) of the program we believe we should increase the group reporting threshold for improvement activities to better align with the other performance categories.

We do not believe a pilot is necessary to attain information on whether a

group is capable of completing improvement activities from the Inventory as they are broad and are not specific to practice size, specialty, or practice setting. We understand that there are some improvement activities that might lend themselves to widespread participation. We also believe that groups are able to discern which activities would best meet the needs of their group.

Comment: Many commenters did not support the requirement for 50 percent of clinicians in the group to report on the same activity, rather than any activity, within the same 90-day window for group or virtual group improvement activity reporting, noting that it would be impractical. A few commenters recommended that we modify our proposal to a lower threshold which represents the percentage of clinicians in the group who satisfy any activity rather than the same activity over the same 90-day period. One commenter noted it would be impractical to expect all clinicians in a larger group to perform the same activity over the same 90-day period and recommended no change to the current policy. However, the commenter continued that if the policy is changed, then it should be modified to provide that a certain percentage of clinicians in the group (ideally less than 50 percent) can complete any single activity, rather than the same activity, over the performance year, rather than over the same 90-day period, if the same 90-day period would not apply to all those attesting to the activity. Another commenter recommended modifying the proposal to a certain percentage of clinicians in the group, for example, less than 50 percent, which must complete any single activity, rather than the same activity, over the performance year, rather than over the same 90-day period. One commenter recommended that clinicians within multi-specialty groups and virtual groups should elect the improvement activities that are most relevant to them and complete them in a 90-day window of the calendar year that best works with their patient, surgical, call and delivery schedule. One commenter expressed concerns about the “erosion of flexibility” in the improvement activities performance category. One commenter recommended modifying the proposal to require groups to complete at least 45 consecutive days during each of 2 consecutive performance periods believing this approach would lower burden on clinicians and encourage participation. A few commenters expressed concerns that a 50 percent

threshold may be problematic for groups with a high percentage of clinician volunteers participating in Emergency Response and Preparedness activities such as “Participation in a 60-day or greater effort to support domestic or international humanitarian needs” (IA_ERP_2) that require staggered leaves to continue to provide care to their local patients.

Response: We appreciate feedback that requiring 50 percent of a group to perform the same activity for the same 90-days may present challenges for large or multi-specialty groups. We believe that requiring at least 50 percent of the group to perform the same activity provides an appropriate balance between requiring at least half of the NPIs reporting as part of a group to participate in the improvement activities performance category and acknowledging the challenges to requiring every NPI in a group to perform the improvement activity for a group to receive credit. However, we do not want to inhibit the clinician’s ability to be engaged and fully participate in the selected improvement activity due to scheduling conflicts as noted by commenters. Thus after consideration, we are modifying the proposed policy to balance substantive practice transformation and improved patient outcomes with more flexibility for groups to determine how to implement and perform improvement activities in a way that minimizes disruption to clinical practice, and maintains focus on patient care. Therefore, we are finalizing a modified version of our proposal, such that at least 50 percent of a group’s National Provider Identifiers (NPIs) must perform the same activity for any continuous 90 days in the performance period beginning with the 2020 performance year. Instead of requiring clinicians to perform the same activity for the same continuous 90 days, this will allow clinicians flexibility to choose the most appropriate 90-day period while still increasing the number of clinicians required to report. Under the modified policy, a group could choose to perform an activity for the entire performance year to capture the participation of at least 50 percent of the group’s clinicians. That is, while 50 percent of NPIs in a group must perform the same improvement activity for a continuous 90-day period, they do not need to perform the activity during the same period. For example, some NPIs could perform “Practice Improvements for Bilateral Exchange of Patient Information” (IA_CC_13) during January while others could perform the same activity in June. In that instance, the

group attestation would need to reflect the year-long participation. If the clinicians’ leave times are staggered, we recommend the clinicians choose different continuous 90-day time periods during the performance year to perform the same improvement activity. In this instance, the group would select activities that may span over the entire performance year to cover all clinicians. We are also revising § 414.1360(a)(2) to reflect this modification.

Comment: Many commenters noted their belief that the proposal could force clinicians to participate in an improvement activity that has no relevance in the field in which they are providing care and recommended that eligible clinicians have the freedom to choose the improvement activities they deem most meaningful. Another commenter recommended setting a percent threshold across the group that allows for variability in activity selection to enable clinicians to choose what is most clinically relevant to them. Other commenters expressed concern that the increased threshold disincentivizes specialties from picking improvement activities which are clinically relevant to them such as when cardiologists in a multispecialty group may not make up 50 percent of the NPIs under the same TIN.

Response: The improvement activities Inventory has been developed to be applicable to broad groups of clinicians. Most improvement activities may be applied to general practice or specialty settings, and therefore, are accessible to groups with large portions of specialty clinicians, or multi-specialty practices. For the CY 2020 MIPS performance period, the improvement activities Inventory will have 20 specialty-specific improvement activities and 85 improvement activities that are broadly applicable to both specialists and general practitioners. We believe that at least 50 percent of a group’s eligible clinicians should be able to find applicable improvement activities as we have included broad improvement activities that are not specific to practice size, specialty, or practice setting. For example, the Inventory contains improvement activities that may be applied broadly such as: “Completion of an Accredited Safety or Quality Improvement Program” (IA_PSA_28) and “Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient’s Medical Record” (IA_EPA_1). Regarding the multispecialty group, we believe that specialists should be participating in general improvement activities, as well as activities that are more specialty focused. We are not barring eligible

clinicians from performing additional improvement activities they deem relevant to their specialty; rather, we encourage this to promote practice improvement.

Comment: Many commenters did not support the proposal to increase the threshold to 50 percent of the clinicians in the group to perform the same improvement activity for the same 90-day period because of the interests and burden for multi-specialty groups. Several commenters stated that finding two to four activities that 50 percent of specialists are involved in during the same 90-day period will be difficult, burdensome, onerous to achieve, impractical, and will result in clinicians reporting on a significantly higher number of improvement activities than are required in the improvement activities performance category, and may result in less engagement in improvement activities. A few commenters stated there would be a large administrative burden for multi-specialty groups that are not hospital-based and academic medical groups that consist of multiple specialty and sub-specialties. One commenter noted that the proposal may not be achievable for multi-specialty groups because of scheduling conflicts.

One commenter did not support the proposal because large groups often implement different improvement activities for different types of specialties and the 50 percent threshold would limit the selection of improvement activities to those that could be applied to a broader number of clinicians. The commenter provided an example of a group that develops a program to integrate primary care and mental health services to address "Integration facilitation and promotion of the colocation of mental health and substance use disorder services in primary and/or non-primary clinical care settings" (IA_BMH_6) that may involve primary care clinicians and mental health clinicians; however, if primary care and mental health only make up 40 percent of a group, the improvement activity would not "count" under the proposal.

One commenter noted the proposal would discourage participation by some clinicians, particularly those in large, multi-specialty groups because clinicians participate in numerous improvement activities which can be expensive and the investment should be recognized by providing credit under the MIPS program. The commenter noted that the investment should be recognized by providing credit under the MIPS program. One commenter noted that other members of the group

may not have the time or resources necessary to participate in that activity and that raising the threshold to 50 percent would disincentivize those clinician leaders from participating in the activity, since they would know that there would be no way their group would receive credit.

Another commenter expressed concern about fixing any threshold amount because of varying group composition, size, culture and learning environments; that the improvement activity itself may not be suitable to attaining a fixed threshold; and that applying a fixed threshold will likely increase clinician burden due to the documentation requirement necessary to demonstrate meeting that threshold and recommended if a threshold must be set that consideration be given to something lower than 50 percent, and provided 10 percent as an example.

Response: We appreciate that requiring 50 percent of a group to perform the same activity for the same 90-days may present challenges for large or multi-specialty groups including groups that are not hospital-based and academic groups with multiple specialties and sub-specialties. We refer readers to our modified policy as discussed above, which allows a group more flexibility to complete the activity, such that a group has the entire performance year to ensure that 50 percent of clinicians in the group perform the improvement activity for any continuous 90-days in the performance year. We acknowledge that this policy may cause a minor decrease in flexibility in the improvement activities performance category in regards to the selection of the activity. However, clinicians are able to choose the improvement activity that is most meaningful to their group. Although, we do acknowledge that increasing the group threshold requirement may result in some improvement activities no longer applying for certain practices, the program currently has over 100 improvement activities available and clinicians have flexibility to select ones that are appropriate. In addition, we do not believe that the modified policy will limit the selection of improvement activities to those that could be applied to a broader number of clinicians, as the Inventory was created to be broadly applicable and includes activities that are not specific to practice size, specialty, or practice setting. We encourage practices to perform improvement activities that are relevant to their practice and will demonstrate practice improvements that will be beneficial to their patients. Regarding the comment about a group where only

40 percent of the clinicians were able to participate in the activity; the group would not meet the 50 percent threshold. However, we encourage groups to continue to engage in improvement initiatives that are relevant to their practice. As noted by one commenter, we have a broad Inventory because not every improvement activity will be applicable to every clinician or practice. We appreciate that clinicians take steps to improve their practice and encourage uptake of a range of clinical practice improvements, not all of which will be eligible for credit in the improvement activities performance category, but still result in improved quality of care and improved patient outcomes.

Comment: Many commenters did not support the proposal to increase the threshold to 50 percent and noted that it discourages full participation in the improvement activities performance category as the proposal may increase administrative burden, be impractical, and adds another layer of complexity by altering the policy that clinicians have worked to adhere to. A few commenters did not support the threshold because of the administrative burden of initiating and coordinating widespread adoption of improvement activities and one noted the complexity of tracking adherence in non-employed situations such as with virtual groups and accountable care organizations. Other commenters expressed concerns with the documentation requirements for groups to meet the proposed 50 percent threshold. Another commenter believed that applying a fixed threshold will likely increase clinician burden due to the documentation requirement necessary to demonstrate meeting that threshold and recommended if a threshold must be set that consideration be given to something lower than 50 percent, and provided 10 percent as an example. One commenter noted that a percentage requirement will increase the documentation burden by requiring roll call at meetings and tracking participant's involvement. Another commenter noted that the data collection burden on the group and attestation collection process for the qualified registry or QCDR may be significant. One commenter expressed concern with the increase in the amount of data needed to support that an improvement activity was performed in case of an audit and that duplicative efforts may be needed to provide sufficient evidence in support of larger numbers of clinicians. Other commenters expressed concern that tracking the performance of clinicians

who are part of a TIN structure with a very large number of clinicians, which they stated is typical for academic medical centers, is a monumental task and undermines the purpose of group reporting. One commenter expressed concern that the proposed increase is significant for all groups, regardless of size, and that it increases the burden of documentation and will lead to reduced revenues and additional costs for the eligible clinician or group. One commenter believed the proposal would place further burden upon the dwindling number of independent groups across the country. Another commenter recommended that the proposal should be one of two options, that clinicians could select either: (1) 50 percent of the group performs the same activity; or (2) 75 percent of clinicians in a group could perform multiple activities, each for 90 days.

Response: We do not believe that there will be a significant increase in difficulty in relation to tracking of clinician's participation in a particular improvement activity. We appreciate that there is an increase in administrative tracking of each clinician in a group who performed the improvement activity and the maintenance of maintaining that documentation for audit purposes, but also note that the attestation requirement is the same. We are balancing the increased effort to track clinician performance in a group to meet the 50 percent threshold with the interest in improving quality care and transforming clinical practice; we believe that a 50 percent threshold is an appropriate increase to improve quality care throughout a clinical practice at this time. We also believe that improvement activities are investments in clinical practice and should not be viewed as costs or reduced revenues.

We note that we have not changed our requirements for data submission. It remains as an attestation. We believe more clinicians participating in improvement activities and tracking 50 percent of a group's participation will not significantly increase the effort clinicians will expend to submit attestations to the designated reporting authority. The minor difference from the previous requirement is that the designated reporting authority will be attesting for 50 percent of the group rather than for a single clinician. We do not want to inhibit the clinician's ability to be engaged and fully participate in the selected improvement activity. We believe that our modifications to the proposed policy as discussed previously will enable groups to determine how to implement and perform improvement

activities in a way that minimizes any clinical disruption, and maintains focus on patient care.

As discussed in the CY 2020 PFS proposed rule (84 FR 40902), we believe that given groups' familiarity with the improvement activities in the improvement activities Inventory, we believe that a group would find applicable and meaningful activities to complete that are not specific to practice size, specialty, or practice setting and would apply to at least 50 percent of individual MIPS eligible clinicians in the group. Therefore, an increase in the minimum threshold for a group to receive credit for the improvement activities performance category should not present additional complexity or burden. We also anticipate that the vast majority of clinicians performing improvement activities, to comply with existing MIPS policies, would continue to perform the same activities under the policies established in this final rule because previously finalized improvement activities continue to apply for the current and future years unless otherwise modified per rule-making (82 FR 54175). Further, as discussed in the 2020 PFS proposed rule (84 FR 40870), we stated that because eligible clinicians attest to improvement activities at the group level, there is no impact on reporting burden as a result of this proposal. Most of the improvement activities in the Inventory remain unchanged for the 2020 MIPS performance period. Of the activities that are being removed or modified many were duplicative which means many clinicians or groups would be able to continue the activity, but it would be reported under a different activity in the improvement activities Inventory. We appreciate the 50 percent group threshold option as one of the commenters' suggestions. We do not believe the other suggestion of requiring 75 percent of the group to perform different activities is appropriate. First, a 75 percent group threshold is a steep increase from the current group reporting threshold of one participant. Second, we believe the group should be performing the same activity in order to facilitate improvement. We anticipate that in future rulemaking, we will continue to increase this threshold. Our future goal would be to have 100 percent of a group performing the same activity during any 90-day period within the same performance year.

Comment: One commenter expressed concern for the unintended consequence of driving organizations toward continually attesting to "very basic foundational improvement activities" rather than attempting to

perform more focused, difficult, and risk-attendant levels of improvement.

Response: We do not agree that increasing the group threshold reporting threshold to 50 percent will cause groups to choose basic improvement activities. The improvement activities Inventory was created to be broadly applicable and includes activities that are not specific to practice size, specialty, or practice setting. We believe increasing the threshold to at least 50 percent of the clinicians in the group moves the improvement activities performance category towards greater impact and value aligning with the MVP framework. We believe a 50 percent threshold will increase clinician participation, provide for more meaningful clinical practice transformation, and require a level of clinician participation more appropriate for the MVP goal of greater value and impact. We believe the modified final policy will encourage increased clinician participation, provide for more meaningful clinical practice transformation, and will require a level of clinician participation more appropriate for the group to receive credit. We do not believe that it benefits a large group or the patient if only one clinician is undertaking quality improvement efforts because there is not necessarily widespread implementation of the quality initiative.

Comment: One commenter noted the proposed threshold may isolate individual groups from working across medical departments within healthcare settings and noted its impact on preventing clinicians from full participation in facility initiatives.

Response: We disagree that our policy would isolate individual groups from working across medical departments within healthcare settings. The 50 percent group threshold policy is intended for MIPS eligible clinicians who want credit as a group and is not a limitation on clinicians who may be in a particular TIN from participating in any other improvement-related activities outside of MIPS, including those they may be implemented at a facility. Our policy does not restrict clinicians to only participating in activities that improve clinical practice through MIPS. Clinicians may also perform other improvement activities within MIPS should they so desire (but would not receive credit for performing the improvement activity for the group).

Comment: One commenter noted the proposed increase to 50 percent would be particularly burdensome for small practices and recommended that requiring only one clinician to perform an improvement activity for the group to

receive credit should be sufficient for small practices. Another commenter stated the increase is too steep and will jeopardize the ability of clinicians in rural areas to meet the requirements because they will be unable to locate improvement activities for which half their clinicians in their practice can participate in.

Response: We disagree. We believe that this proposal would be easier for a small group to accomplish than a larger group since there will be less clinicians required to complete the activity. We also refer readers to our modification to the proposal discussed above. Instead of requiring clinicians to perform the same activity for the same continuous 90 days, the modified policy will allow clinicians flexibility to choose the most appropriate 90-day period while still increasing the number of clinicians required to report. We believe the modified final policy will encourage increased clinician participation, provide for more meaningful clinical practice transformation, and will require a level of clinician participation more appropriate for the group to receive credit. We do not believe that it benefits a group or the patient if only one clinician is undertaking quality improvement efforts because there is not necessarily widespread implementation of the quality initiative.

We note that we finalized special scoring for small practices for the improvement activities performance category in the CY 2017 Quality Payment Program final rule (81 FR 77185) at § 414.1360 that for MIPS eligible clinicians and groups that are small practices, practices located in rural areas or geographic HPSAs, or non-patient facing MIPS eligible clinicians or groups, to achieve the highest score, one high-weighted or two medium-weighted improvement activities are required. For these MIPS eligible clinicians and groups, to achieve one-half of the highest score, one medium-weighted improvement activity is required. We finalized that small practices, especially those in rural locations and in health professional shortage areas, are required to report only the maximum of two (2) activities in the improvement activities performance category instead of the four (4) required for larger practices. Finally, as discussed in the CY 2017 Quality Payment Program final rule (81 FR 77012) the Small, Underserved, and Rural Support initiative is available to provide free, customized technical assistance to clinicians in small practices. More information regarding the Small, Underserved, and Rural Support initiative may be found on the

Quality Payment Program website at <https://qpp.cms.gov/about/small-underserved-rural-practices>.

Comment: One commenter expressed concern that imposing a 50 percent threshold would prevent a group from reporting any of the improvement activities at the group level if reporting through a QCDR. The commenter provided an example of a multi-specialty group comprised of optometrists, retinal specialists, and ophthalmologists which only have four out of ten clinicians reporting through a QCDR due to their scope of clinical practice and availability of relevant QCDR measures.

Response: An eligible clinician should perform improvement activities that are relevant and improve clinical practice whether reporting and submitting as a group or individual aside from the chosen reporting method. The Improvement Activities Inventory includes a broad number of improvement activities that are not only relevant to groups but also to individuals. If an improvement activity is more appropriate for an individual clinician, a group should not be considering it. We include improvement activities that are not only relevant to groups but also to individuals. We believe that improvement activities that are relevant to groups, the 50 percent threshold is most appropriate. We clarify that if clinician groups reporting to a QCDR that do not meet the 50 percent threshold could: (1) Work with the QCDR to have their data submitted for the entire group, not just a subset needed to meet the 50 percent threshold; (2) directly attest to the improvement activity as a group; or (3) submit improvement activities as individuals. No matter which submission method the group decides to utilize the clinicians would still be required to utilize the improvement activities Inventory to choose and complete their activities as QCDRs do not own improvement activities.

Comment: One commenter recommended using a threshold of 50 percent of clinicians in a group who could complete a relevant improvement activity, rather than 50 percent of all clinicians who should complete the activity in the group.

Response: We believe, at a minimum, 50 percent of all clinicians in the group should complete the same activity to facilitate practice improvement. We believe it is impractical to determine who "could" complete a particular activity and would add more complexity and burden for a practice to assess and track which clinicians have

the ability to complete a specific improvement activity.

Comment: One commenter expressed concern that this proposal does not align with the APM track of the Quality Payment Program because APMs are not held to a similar threshold that takes into consideration how many clinicians within the APM completed the activity.

Response: The improvement activities performance category scoring methodology under the APM scoring standard is designed to reflect the unique statutory and regulatory reporting and scoring requirements and methodologies specific to APM entities (81 FR 77266). While we generally prefer to align scoring standards within MIPS, perfect alignment between the two scoring standards is not always achievable.

Comment: One commenter did not support the proposed policy change and noted their concern that the policy does not contemplate common management structures of specialty groups and departments. The commenter stated that specialty groups often facilitate quality initiatives, data and training through a select few clinical quality leaders or, for larger groups, quality committees. They noted that management structures of groups are often structured with one or a handful of quality champions who must then communicate with and train members of the group on initiatives, goals and best practices in quality improvement. The commenter also noted that we should take these management structures into account when increasing the group threshold. Another commenter expressed concern that implementing a percentage requirement underestimates the role and impact of a lead quality improvement clinician in a group. One commenter recommended clarification for improvement activities which are completed by an organization rather than by an individual clinician because organization-level participation should be taken into account where appropriate. This commenter provided an example of an organization that implements an antimicrobial stewardship program (ASP) which will have an impact on all clinicians in the organization, but that most clinicians will not directly participate in a tangible manner; the commenter believed that all clinicians in the organization are de facto participants in the ASP. A few commenters recommended a differentiation between improvement activities best suited for individual clinician improvement from those that may be applicable to a group quality champion, champions or committee and

that includes documentation requirements.

Response: When crafting a national policy we do consider impacts on clinicians and groups in various management structures and settings. We provide flexibility and choice for selecting improvement activities that are appropriate for the group that are not dependent on management structures. We do not believe that setting a group threshold underestimates the role and impact of the lead quality improvement clinician. Rather, we believe that it provides a minimum standard of group participation and encourages quality improvement actions by more than just one singular clinician. We encourage 100 percent of the clinicians in a group to participate in the quality improvement action and to complete as many improvement activities beyond the minimum 50 percent required by the MIPS program.

We have not provided individual versus group differentiation in the Inventory in the past as we have kept the Inventory broad, thereby allowing clinicians to choose what activities are most relevant to their practice. We will take this comment into consideration as we craft future policies. We provide several resources that may be utilized for assistance with selection of an improvement activity. First, the improvement activities Inventory provides a detailed description of each activity. In addition, we provide resources on the Quality Payment Program website which is available at <https://qpp.cms.gov/>. Finally, the Small, Underserved, and Rural Support initiative is available to provide free, customized technical assistance to clinicians in small practices. As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77012), the Small, Underserved, and Rural Support initiative is available to provide free, customized technical assistance to clinicians in small practices. More information regarding the Small, Underserved, and Rural Support initiative may be found on the Quality Payment Program website at <https://qpp.cms.gov/about/small-underserved-rural-practices>. In addition, if clinicians have further questions they may contact the Quality Payment Program service center at QPP@cms.hhs.gov or at 1-866-288-8292.

Comment: Several commenters did not support the proposed increase and noted that it does not reflect the realities of clinical practice. These commenters stated that a specific improvement activity might be applicable to only one or two clinicians,

but still have the capacity to vastly improve and impact a large portion of the group's patients. A few commenters requested clarification on how credit would be applied to groups in a scenario when a small subset of a group's clinicians cover extended hours for all of the clinic's patients, but patient access improves for the entire population served. One commenter referenced an example in which a group hires an additional fulltime clinician to extend office hours; the group as a whole invested in a new clinician to increase its availability to its patients and should be recognized as such. Another commenter provided an example in which a clinic extended its hours for all of the clinic's patients, regardless of the percentage of clinicians who work the extended hours, and questioned how a group with 20 clinicians would receive improvement activities credit.

Response: We do understand the realities of clinical practice and believe that improvement activities are broadly applicable. While we understand that one clinician completing an activity may have benefits, we do not believe that only one clinician completing an activity would necessarily create a widespread benefit for an entire group. While in some small groups, one participant may have a greater impact, for larger groups, one participant is a very low bar. We do not agree the commenter's example of hiring an additional full time clinician to extend office hours demonstrates group level improvement. For example, to demonstrate meaningful practice improvement for an improvement activity like "Provide 24/7 access to eligible clinicians or groups who have real-time access to patient's medical record" (IA_EPA_1), under our modified policy discussed above, the group could utilize 5 out of the 20 clinicians for one continuous 90-day performance period and another 5 clinicians for an additional continuous 90-day performance period. In this example, the group could achieve the 90-day threshold while providing increased access to their patients. We encourage individual clinicians to perform improvement activities that impact the entire group.

After consideration of the comments, we are finalizing our proposal with modification, such that instead of requiring that a group must perform the same activity for the same continuous 90 days in the performance period as proposed, we are requiring that a group must perform the same activity during any continuous 90-day period within the same performance year. Therefore,

we are revising § 414.1360(a)(2) to state that beginning with the 2020 performance year, each improvement activity for which groups and virtual groups submit a yes response in accordance with paragraph (a)(1) of this section must be performed by at least 50 percent of the NPIs billing under the group's TIN or virtual group's TINs, as applicable; and the NPIs must perform the same activity during any continuous 90-day period within the same performance year.

(e) Improvement Activities Inventory

In the CY 2020 PFS proposed rule (84 FR 40764 through 40765), in this final rule we are finalizing changes to the improvement activities Inventory: (1) Establishing removal factors to consider when proposing to remove improvement activities from the Inventory; (2) removing 15 improvement activities for the 2020 performance period and future years contingent on our proposed removal factors being finalized; (3) modifying seven existing improvement activities for the 2020 performance period and future years; and (4) adding two new improvement activities for the 2020 performance period and future years. These are discussed in more detail in this final rule.

(i) Factors for Consideration in Removing Improvement Activities

In the CY 2017 Quality Payment Program final rule (82 FR 53660 through 53661), we discussed that in future years, we anticipated developing a process and establishing factors for identifying improvement activities for removal from the improvement activities Inventory through the Annual Call for Activities process. In the CY 2018 Quality Payment Program proposed rule (82 FR 30056), we invited public comments on what criteria should be used to identify improvement activities for removal from the Inventory. A few commenters did not support the idea of establishing removal factors for improvement activities, believing that many groups have made financial investments to perform these improvement activities and that no activities should be removed. Some commenters suggested that we should remove improvement activities that: Have become obsolete, are topped out, do not show demonstrated improvements over time, or are not attested to for three consecutive years. The commenters recommended that their removal should be conducted using an approach similar to what is used for the removal of quality measures. In our responses, we stated

that we appreciate the commenters input. In addition, we understand that many groups may have made financial investments to perform these improvement activities, but believe that over time, certain improvement activities should be considered for removal to ensure the list is robust and relevant. We will fully examine each activity prior to removal. In addition, we stated that commenters would have an opportunity to provide their input during notice-and-comment rulemaking. We agreed with commenters that we should remove improvement activities as needed and should consider the removal criteria already established for quality measures. We continue to believe that having factors to consider in removing improvement activities would provide transparency and alignment with the removal of quality measures. Therefore, we proposed to adopt the following factors for our consideration when proposing the removal of an improvement activity:

- *Factor 1:* Activity is duplicative of another activity;
- *Factor 2:* There is an alternative activity with a stronger relationship to quality care or improvements in clinical practice;
- *Factor 3:* Activity does not align with current clinical guidelines or practice;
- *Factor 4:* Activity does not align with at least one meaningful measures area;
- *Factor 5:* Activity does not align with the quality, cost, or Promoting Interoperability performance categories;
- *Factor 6:* There have been no attestations of the activity for 3 consecutive years; or
- *Factor 7:* Activity is obsolete.

These factors directly reflect those already finalized for quality measures found in the CY 2019 PFS final rule (83 FR 59765). The removal of improvement activities from the Inventory, including discussion of the removal factor(s) considered, will occur through notice-and-comment rulemaking. We note that these removal factors are considerations taken into account when deciding whether or not to remove improvement activities; but they are not firm requirements.

Therefore, we invited public comments on our proposal to implement factors to consider in removing improvement activities from the Inventory. In conjunction with this proposal, we proposed a number of improvement activity removals as discussed in the next section and in Appendix 2 of this final rule. Those removals are contingent upon finalization of these removal factors.

The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the establishment of seven factors for consideration on whether to remove particular improvement activities from improvement activities Inventory because they believed that the criteria are well aligned with the agency's Meaningful Measures framework and would help promote the inclusion of activities that have a meaningful link to better quality of care. One commenter supported the effort to align criteria for improvement activity removal with quality measure removal criteria. One commenter supported the seven factors and particularly the removal of improvement activities that may be duplicative.

Response: We agree and appreciate the commenter's support.

Comment: One commenter supported the proposed removal factor 3. Another commenter stated that they appreciate our efforts to align criteria for improvement activity removal with quality measure removal criteria. The commenter requested clarification of our interpretation of the final criteria and the use of the word "obsolete."

Response: We consider an activity "obsolete" when it is no longer available, and therefore, cannot be completed by eligible clinicians as an improvement activity. For example, in Appendix 2 of this final rule we are finalizing the removal of "TCPI Participation" (IA_CC_4) under removal factor 7. This improvement activity is obsolete because the Transforming Clinical Practice Initiative (TCPI) ended on September 28, 2019 and clinicians are no longer able to attest to this improvement activity.

Comment: A few commenters expressed concerns that we are removing improvement activities from the MIPS program too rapidly and limiting clinician choice. A few commenters expressed concerns that many groups have made financial investments to perform a particular improvement activity and that removal of improvement activities could jeopardize the group's return on that investment while requiring new program costs. One commenter recommended that we be judicious in the removal of improvement activities. One commenter recommended that no activities should be removed from the list unless they are obsolete, such as activities that require participating in a program that no longer exists. One commenter noted that the trend toward measure consolidation and activity removal seen now in both the

improvement activities and the quality performance category will prove limiting to clinicians. This commenter noted that we should ensure that clinicians can continue to tailor improvements to their practice and not unintentionally limit practices by over-pruning the improvement activities and measures of the MIPS program because improvement cannot and should not become a one-size-fits-all process. One commenter did not support removing improvement activities from the improvement activities Inventory stating it is contrary to the intent of the improvement activities performance category and recommended a judicious approach to the removal process and that the improvement activities performance category should support the performance of any improvement activity that improves patient care. This commenter noted that a policy that removes activities from the improvement activities Inventory would stymie this goal, suggesting that groups should only implement temporary rather than long-term changes and that removing activities could harm groups and patients, particularly those in small and rural practices, which often have limited financial and personnel resources.

Response: We do not believe we are removing improvement activities too rapidly. We have been judicious in our proposals to remove activities in line with the removal criteria we have proposed. We agree that practice improvement should not be a one-size-fits-all process. We intend to keep the improvement activities Inventory as broad as appropriate to allow clinicians to apply the improvement activities in a clinically relevant and meaningful manner. We believe to ensure that the improvement activities Inventory stays relevant and robust, it is essential to establish removal criteria. We continue to believe that having factors to consider in removing improvement activities would provide transparency and alignment with the removal of quality measures. We are not suggesting that groups should only implement temporary improvements, to the contrary, we encourage long term improvements in clinical practices. We do not believe that removing activities could harm groups and patients, particularly those in small and rural practices. We encourage clinicians across all practice sizes, including small and rural practices, to continue to perform quality initiatives that facilitate the delivery of high quality care, help transform clinical practice and are in the best interest of patient care the best

interest of patient care. We understand that many groups may have made financial investments to perform these improvement activities, but believe that over time, certain improvement activities should be considered for removal to ensure the list is robust and relevant. We will fully examine each activity prior to removal. In addition, commenters would have an opportunity to provide their input during notice-and-comment rulemaking.

Comment: A few commenters did not support factor 5 that provides for the removal of an activity that does not align with the quality, cost, or Promoting Interoperability performance categories, because the improvement activities performance category should allow for innovation. A few commenters stated that factor 5 could increase the burden on clinicians by limiting improvement activities related to their scope of practice. One commenter noted that the purpose of the improvement activities performance category is to provide credit to clinicians for work towards improving care and that factor 5 would constrain the development and inclusion of potentially innovative activities because they do not align with the other three performance categories. One commenter recommended delaying factor 5 until the MVPs have been finalized, implemented, and assessed.

Response: The improvement activities performance category supports innovation, as well as activities that go beyond the standard of care. We do not believe that aligning the performance categories will limit activities related to a clinician's scope of practice as the activities within the Inventory were created to be broad and are not specific to practice size, specialty, or practice setting. In addition, we do not believe we should delay implementing factor 5 as we believe it is important for improvement activities to align with the other performance categories in order to provide a more cohesive program and must make an effort to move in that direction. As discussed in the CY 2020 PFS proposed rule (84 FR 40732 through 40733), we provided an overview of the MVP framework for future proposals beginning with the 2021 MIPS performance period/2023 MIPS payment year to simplify MIPS, improve value, reduce burden, help patients compare clinician performance, and better inform patient choice in selecting clinicians. We agree that the MIPS program encourages clinicians to pursue measures and activities that improve care. We also believe that it is imperative that we streamline the program through the creation of the MVPs. To have one cohesive program,

we intend to align all of the performance categories to create the MVPs. Therefore, we believe that removal factor 5 should be a consideration when removing improvement activities from the MIPS program to lay the groundwork for MVPs. We refer readers to section III.k.3.a. of this final rule for further discussions on the MVP framework.

Comment: A few commenters expressed concerns with factor 1. One commenter recommended that we be judicious in the removal of improvement activities, particularly if utilizing the proposed "duplicative" criteria. One commenter noted that some improvement activities may appear, similar on the surface, but may be implemented differently in various clinical settings and encouraged us to consider specific ways in which seemingly "duplicative" activities are actually utilized in the various clinical settings. One commenter cautioned removing too many "duplicative" improvement activities from the list without ensuring that the corresponding remaining activity does not require clinicians to perform more work than in the "duplicative" one.

Response: We appreciate the commenters' support. We want to assure stakeholders that we have and will continue to fully examine each activity prior to proposing to remove the improvement activity. As discussed above, the removal of an improvement activity from the Inventory, including discussion of the removal factor(s) considered, will occur through notice-and-comment rulemaking. Therefore, commenters will have an opportunity to provide their input during the notice-and-comment rulemaking process.

After consideration of the comments, we are finalizing our proposal, as proposed, to adopt the seven factors discussed above, for our consideration when proposing the removal of an improvement activity.

(ii) New Improvement Activities and Modifications to and Removal of Existing Improvement Activities

In the CY 2018 Quality Payment Program final rule (82 FR 53660), we finalized that we would add new improvement activities or modifications to existing improvement activities to the improvement activities Inventory through notice-and-comment rulemaking. We refer readers to Table H in the Appendix of the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77199), Tables F and G in the Appendix of the CY 2018 Quality Payment Program final rule (82 FR 54175 through 54229), and Tables X and

G in the Appendix 2 of the CY 2019 PFS final rule (83 FR 60286 through 60303) for our previously finalized improvement activities Inventory. We also refer readers to the Quality Payment Program website at <https://qpp.cms.gov/> for a complete list of the most current list of improvement activities. In this final rule, we are: (1) Removing 15 improvement activities from the Inventory beginning with the 2020 performance period, (2) modifying seven existing improvement activities for 2020 performance period and future years, and (3) adding two new improvement activities for 2020 performance period and future years. We refer readers to Appendix 2 of this final rule for further details. Our improvement activities removals are made in conjunction with our adoption of removal factors.

(f) CMS Study on Factors Associated With Reporting Quality Measures

In this final rule, we are finalizing our proposal to end this study and concurrently, remove the incentive under the improvement activity performance category that this study provided for study participants.

(i) Background

In the CY 2017 Quality Payment Program final rule (81 FR 77195), we created the Study on Improvement Activities and Measurement. In our quest to create a culture of improvement using evidence-based medicine on a consistent basis, we believe fully understanding the strengths and limitations of the current processes of collecting and submitting quality measurement data is crucial to better understand and improve these current processes. We proposed to conduct a study on clinical improvement activities and measurement to examine clinical quality workflows and data capture using a simpler approach to quality measures (81 FR 77195). In the CY 2018 Quality Payment Program final rule (82 FR 53662) and CY 2019 PFS final rule (83 FR 59783), we finalized updates to the study.

Starting in CY 2017, this annual study was slated for a minimum period of 3 years, as stated in CY 2019 PFS final rule (83 FR 59776). Study participants were recruited every study year. The study population started in CY 2017 with a minimum of 42 individuals (81 FR 77195), grew to a minimum of 102 individuals for CY 2018 (82 FR 53662) and 200 individuals for CY 2019 (83 FR 59783). Each year's study population is comprised of the following categories: Urban versus non-urban, groups and individual clinicians; clinicians

reporting quality measures in groups or reporting individually, different practice sizes; and different specialty groups (81 FR 77195). These changes to the study sample size over the years provided data for the study's analysis. The goals of the study are to see whether there will be improved outcomes, reduced burden in reporting, and enhancements in clinical care by selected MIPS eligible clinicians desiring: A more data driven approach to quality measurement, measure selection unconstrained by a CEHRT program or system, improving data quality submitted to CMS, enabling CMS get data more frequently and provide feedback more often (81 FR 77195). To encourage participation by clinicians and counterbalance clinician burden for anticipation of study, participating clinicians were incentivized with full improvement activity credit as finalized in the CY 2017 Quality Payment Program final rule (81 FR 77195 through 77197).

(ii) Study End and Removal

We believe by the end of 2020 we will have reached the minimum sample size and have accrued the minimum data needed for the analysis to achieve the study goals. Therefore, in the CY 2020 PFS proposed rule (84 FR 40765), we proposed to conclude this study at the end of the CY 2019 performance period. In conjunction with our proposal to end the study, we also proposed to remove the study and the incentive provided towards the improvement activity performance category beginning with the 2020 performance period because it would be obsolete (removal factor 7). As a result, the full improvement activity credit given to participants as finalized in the CY 2017 Quality Payment Program final rule (81 FR 77195 through 77197), would no longer be available starting with the 2020 performance period.

The following is a summary of the comments we received and our responses.

Comment: A few commenters encouraged us to continue to seek ways to incentivize clinician organizations and vendors to participate in measure or program development to ensure true quality measurement and improvement. One commenter supported that this study has reached its statutory requirements; recommended that the results and the data be made publicly available once analysis is complete in Spring 2020; and encouraged us to conduct similar studies in future years as the program evolves. One commenter recommended that we should be continuously evaluating measures and improvement activities especially as the

MIPS program progresses and requirements become more stringent.

Response: We refer readers to subsection "(iii) Future Steps" below where we discuss our plans to make the study results and recommendations available to the public. We also plan to continue to pursue ways to improve outcomes, reduce burden in the collection and reporting of clinician quality measures, and enhance clinical care. We continue to utilize the Blueprint for the CMS Measures Management System and stakeholder input to continuously maintain and improve our measures to meet the requirements and standards of MIPS.

After consideration of the comments, we are finalizing our proposal, as proposed, to conclude this study at the end of the CY 2019 performance period and to remove the study and the incentive provided towards the improvement activity performance category beginning with the 2020 performance period under removal factor 7.

(iii) Future Steps

After completing this data collection phase, we next plan to analyze the data gathered (which include lessons learned) and to make recommendations to improve outcomes, reduce burden, and enhance clinical care. We plan to finish the final data analysis by spring 2020. This analysis would contain all the study years. It would show the trends and associations of all the factors we examined. It would also show the lessons learned by study participants over the 3 years of the study. At the conclusion of this study and after analysis of the results, we plan to shift our focus to implementation of recommendations. We intend for this to include feedback to clinicians and stakeholders and educational and outreach work. We plan to undertake education and outreach to the public. We would also include the results in other Quality Payment Program educational materials such as webinars.

(4) Promoting Interoperability

(a) Background

Section 1848(q)(2)(A) of the Act includes the meaningful use of Certified Electronic Health Record Technology (CEHRT) as a performance category under the MIPS. In prior rulemaking, we referred to this performance category as the Advancing Care Information performance category, and it was reported by MIPS eligible clinicians as part of the overall MIPS program. In 2018, we renamed the Advancing Care Information performance category as the

Promoting Interoperability performance category (83 FR 35912). As required by sections 1848(q)(2) and (5) of the Act, the four performance categories of the MIPS shall be used in determining the MIPS final score for each MIPS eligible clinician. In general, MIPS eligible clinicians will be evaluated under all four of the MIPS performance categories, including the Promoting Interoperability performance category.

For the Promoting Interoperability performance category, our proposals included (84 FR 40766 through 84 FR 40784): (1) For the 2023 MIPS payment year, establishing a performance period of a minimum of a continuous 90-day period within CY 2021, up to and including the full calendar year; (2) making the Query of Prescription Drug Monitoring Program (PDMP) measure optional in CY 2020, and in the event we finalize this proposal, making the e-Prescribing measure worth up to 10 points in CY 2020; (3) removing the numerator and denominator for the Query of PDMP measure and instead requiring a "yes/no" response beginning in CY 2019; (4) removing the Verify Opioid Treatment Agreement measure beginning in CY 2020; (5) redistributing the points for the Support Electronic Referral Loops by Sending Health Information measure to the Provide Patients Access to Their Health Information measure if an exclusion is claimed, beginning in CY 2019; (6) revising the description of the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure exclusion to more clearly and precisely capture our intended policy, beginning in CY 2019; (7) continuing the existing policy of reweighting the Promoting Interoperability performance category for certain types of nonphysician practitioner (NPP) MIPS eligible clinicians for the performance period in 2020; and (8) proposals related to hospital-based MIPS eligible clinicians and non-patient facing MIPS eligible clinicians in groups.

(b) Goals of Changes to the Promoting Interoperability Performance Category

As we look toward the future of the Promoting Interoperability performance category, the general goals of the policies that we are adopting in this final rule center on: (1) A priority of stability within the performance category after the recent changes made in the CY 2019 PFS final rule (83 FR 59785 through 59820) while continuing to further interoperability through the use of CEHRT; (2) reducing administrative burden; (3) continued use of 2015 Edition CEHRT; (4) improving patient access to their health

information so they can make fully informed health care decisions; and (5) continued alignment with the Medicare Promoting Interoperability Program for eligible hospitals and CAHs, where appropriate.

(c) Promoting Interoperability Performance Category Performance Period

As finalized in the CY 2019 PFS final rule at § 414.1320(e)(1) (83 FR 59745 through 59747), for purposes of the 2022 MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year. Thus, for the 2022 MIPS payment year, the performance period for the Promoting Interoperability performance category is a minimum of a continuous 90-day period within CY 2020, up to and including the full CY 2020 (January 1, 2020 through December 31, 2020).

For the 2023 MIPS payment year, we proposed to add § 414.1320(f)(1), which would establish a performance period for the Promoting Interoperability performance category of a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year (CY 2021) (84 FR 40766). This proposal aligned with the proposed EHR reporting period in CY 2021 for the Medicare Promoting Interoperability Program for eligible hospitals and CAHs (84 FR 19554 through 19555). We stated that we believe this would be an appropriate performance period because of the maturation needed within the performance category, including the changes to measures and other changes being proposed in this rule. In addition, it would offer stability and continuity for the Promoting Interoperability performance category after the performance category overhaul that was finalized in the CY 2019 PFS final rule (83 FR 59785 through 59820).

We requested public comments on this proposal, and the following is a summary of the comments we received and our responses.

Comment: Many commenters supported the minimum of a continuous 90-day performance period that occurs 2 years prior to the applicable MIPS payment year. Commenters stated that the proposed performance period would allow MIPS eligible clinicians to adequately plan for any system updates and that it reduces administrative and regulatory burden. Several commenters

also expressed their appreciation toward CMS for its efforts, including the proposed 90-day performance period, to help stabilize the Promoting Interoperability performance category.

Response: We agree that keeping the performance period to a minimum of 90 consecutive days affords MIPS eligible clinicians the flexibility they may need to develop and update their evolving EHRs.

Comment: Some commenters suggested that CMS should make the minimum 90-day performance period permanent, as opposed to what CMS has done over the past several years, which is to propose the minimum 90-day performance period each year.

Response: We thank the commenter for the suggestion, and we may take this into consideration for future rulemaking. We are still in the initial years of implementing the Promoting Interoperability performance category after our overhaul and we believe it is important to maintain flexibility as we gain experience so that we can evaluate and determine whether adjustments are needed.

Comment: One commenter asked if the proposed performance period would require reporting on all patients during the 90-day period, or if this is an option being added within the full calendar year.

Response: For the 2023 MIPS payment year, a MIPS eligible clinician would have to select and report data for patients from any continuous 90-day period, at a minimum, within CY 2021. The MIPS eligible clinician may choose to report data from a period longer than 90 consecutive days, up to and including the full CY 2021.

After consideration of the public comments we received, for the 2023 MIPS payment year, we are finalizing the proposal to add § 414.1320(f)(1) and establish a performance period for the Promoting Interoperability performance category of a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year (CY 2021).

(d) Promoting Interoperability Performance Category Measures for MIPS Eligible Clinicians

(i) Changes to Measures for the e-Prescribing Objective

(A) Background

Beginning with the performance period in CY 2019, we adopted two new measures for the e-Prescribing objective that are based on electronic prescriptions for controlled substances:

(1) Query of Prescription Drug Monitoring Program (PDMP) (83 FR 59800 through 59803); and (2) Verify Opioid Treatment Agreement (83 FR 59803 through 59806). During the comment period for the CY 2019 PFS proposed rule (83 FR 35921 through 35925), we received extensive comments from stakeholders regarding the Query of PDMP measure and the Verify Opioid Treatment Agreement measure. While this feedback was the main catalyst for our proposals, we noted in the CY 2020 PFS proposed rule (84 FR 40766 through 40769) that there have also been significant legislative changes that have the potential to positively impact the Promoting Interoperability performance category, specifically the Substance Use–Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act) (Pub. L. 115–271, enacted October 24, 2018). While this legislation was not the main reason for our proposals, we stated that we believe it may significantly affect the maturation, requirements, and use of PDMPs and state networks upon which the Query of PDMP measure is dependent.

(B) Query of Prescription Drug Monitoring Program (PDMP) Measure

As discussed in the CY 2020 PFS proposed rule (84 FR 40766 through 40769), we proposed to make the Query of PDMP measure optional and eligible for 5 bonus points for the e-Prescribing objective in CY 2020. Making the measure optional in CY 2020 would allow time for further integration of PDMPs and EHRs to minimize the burden on MIPS eligible clinicians reporting this measure while still giving clinicians an opportunity to report on and earn points for the measure. We proposed that, in the event we finalize this proposal for the Query of PDMP measure, the e-Prescribing measure would be worth up to 10 points in CY 2020.

In addition, beginning with the CY 2019 performance period, we proposed to remove the numerator and denominator established for the Query of PDMP measure in the CY 2019 PFS final rule (83 FR 59800 through 59803), and instead require a “yes/no” attestation response. A “yes” response would indicate that for at least one Schedule II opioid electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician then used data from CEHRT to conduct a query of a PDMP for prescription drug history, except where prohibited and in accordance with applicable law.

We invited public comments on these proposals, and the following is a summary of the comments we received and our responses.

Comment: A majority of commenters supported the proposed changes to the Query of PDMP measure and agreed with the measure remaining optional in CY 2020. One commenter further recommended that in the future, regardless of whether the measure is optional or required, HHS' Office of the National Coordinator for Health Information Technology (ONC) should consider adopting new certification criteria requiring EHRs to integrate with PDMPs. Commenters also agreed with changing the measure to a "yes/no" attestation response rather than reporting a numerator and denominator. Commenters indicated that these changes would reduce unnecessary burden, as developing custom reports can often be time-consuming and inaccurate.

Response: We believe this proposal would help reduce overall clinician burden by eliminating the need for clinicians to manually track the number of times that they query a PDMP outside of CEHRT functionality. We recognize there is currently limited standardization of interfaces between CEHRT technology and PDMPs, and we will continue to collaborate with ONC to explore how the ONC certification program could support PDMP-EHR integration in the future. We note that PDMP-EHR integration may refer to varying approaches for the access and viewing of PDMP data from an EHR and is used to refer, as well to the incorporation of the PDMP data into the EHR record. For more information on relevant standards we refer readers to the ONC Interoperability Standards Advisory (see <https://www.healthit.gov/isa/allows-a-prescriber-request-a-patients-medication-history-a-state-prescription-drug-monitoring> and <https://www.healthit.gov/isa/allows-exchange-state-prescription-drug-monitoring-program-pdmp-data>).

Comment: One commenter stated that in the CY 2020 PFS proposed rule (84 FR 40771 through 40775) Table 41: Objectives and Measures for the Promoting Interoperability Performance Category in 2020, there is no exclusion information for the Query of PDMP measure and sought clarification on whether the Query of PDMP measure offers any exclusions. More specifically, given that some clinicians do not prescribe Schedule II controlled substances, how should they respond if the measure would require a "yes/no" response?

Response: As stated in the CY 2019 PFS proposed rule period (83 FR 59800 through 59803), we did not provide exclusions for the Query of PDMP measure as it was optional and eligible for bonus points. We still do not believe that exclusions would be necessary for the Query of PDMP measure if it is to remain optional and eligible for bonus points in CY 2020. Eligible clinicians who choose not to report on the optional measure may still earn a score for the Promoting Interoperability performance category.

Comment: One commenter stated that they believe the Query of PDMP measure should not be optional given that they have been able to successfully standardize queries into their patient-centered clinical programs. While they agree that challenges and variations between states are real, their opinion is that it is not insurmountable and that maintaining strong PDMP incentives would help drive much needed improvements.

Response: We appreciate the commenter's effort to operationalize this measure into their workflow; however, the majority of stakeholder feedback that implementing and calculating this measure can impose significant burden on clinicians and should not be a required measure. In addition, we received substantial feedback from commenters, health IT vendors, and specialty societies that the flexibility within the numerator and denominator calculations finalized in the CY 2019 PFS final rule (83 FR 59800 through 59803) presents unintended challenges, such as the significant burden associated with IT system design and development needed to accommodate the measure and any future changes to it.

Comment: One commenter questioned whether the query of the PDMP must be performed by the same eligible clinician or health care professional who prescribes the Schedule II opioid.

Response: We do not require the query of the PDMP be performed by the same eligible clinician who prescribes the Schedule II opioid. We believe that MIPS eligible clinicians should determine what is most appropriate, in accordance with applicable law, for the medical staff involved in performing the queries based on their own standard operating procedures, guidelines, and preferences.

Comment: One commenter shared concerns that a "yes/no" optional measure may diminish overall reporting, thus undermining an essential component in addressing the current opioid epidemic.

Response: We understand such concerns and appreciate the feedback. However, specifically regarding the Query of PDMP measure, we believe it is premature for this activity to be assessed with a numerator/denominator as part of a performance-based measure. At the present time, with limited use of consistent standards-based approaches to supporting the integration between CEHRT and state PDMPs, this contributes to MIPS eligible clinicians having to manually track each individual query. Considering the added burden that doing so creates, we believe a "yes/no" response is more appropriate.

Comment: Some commenters expressed concerns with the PDMP measure due to varying privacy or security protocols in place, as well as other related aspects lacking uniformity in the implementation of independent PDMPs across state lines. Given that there are limited formalized, standard criteria for PDMP functionality, commenters stated that the measure is still not ready for mandatory inclusion in the Promoting Interoperability performance category. Another commenter recommended that the PDMP measure be considered optional for reporting in CY 2021 as well.

Response: We understand that PDMP systems are composed of various processes and components that vary significantly across state lines, and that in any given state the PDMP system may include a variety of state-developed and vendor-based solutions along with the core PDMP database. State laws and policies also differ on data storage, use, access roles, disclosures, and key definitions. The degree of PDMP and health IT access integration (how the provider can access the PDMP) may vary significantly across states, as well as within states by product or health system. Today, it is our understanding that most PDMP systems allow a provider "view only" access to PDMP data rather than allowing for the seamless integration of discrete data from the PDMP system into a patient's record.

The SUPPORT Act includes new requirements and federal funding for PDMP enhancement, integration, and interoperability, and establishes mandatory use of PDMPs by certain Medicaid providers. We are continuously working with various stakeholders and ONC to evaluate the implementation of the SUPPORT Act, as well as its related progress around furthering PDMP-EHR integration.

We proposed to change the measure to optional in CY 2020 to account for readiness concerns such as those raised

by stakeholders. We are dedicated to alleviating the concerns as we work to further develop the measure. We have not made a proposal with regard to the measure's status for CY 2021.

After consideration of the public comments we received, we are finalizing the proposal to make the Query of PDMP measure optional and eligible for 5 bonus points for the Electronic Prescribing objective in CY 2020. Given that we are finalizing this proposal for the Query of PDMP measure, we are also finalizing the proposal that the e-Prescribing measure will be worth up to 10 points in CY 2020. Lastly, we are finalizing the proposal to remove the numerator and denominator previously established for the Query of PDMP measure in the CY 2019 PFS final rule (83 FR 59800 through 59803) and instead require a "yes/no" response beginning with the 2019 performance period.

We will continue to work to improve EHR integration with PDMPs as we believe that making the Query of PDMP measure optional for the long-term would be inconsistent with the recommendations of the President's Opioid Commission (<https://www.whitehouse.gov/wp-content/uploads/2019/05/Opioid-Commission-Report-One-Year-Later-20190507.pdf>). We may propose modifications to this measure in future rulemaking.

(B) Verify Opioid Treatment Agreement Measure

In the CY 2019 PFS final rule (83 FR 59803 through 59806), we finalized the Verify Opioid Treatment Agreement measure as optional in both CYs 2019 and 2020. Since we proposed this measure, we have heard from stakeholders that this measure has presented significant implementation challenges and an increase in burden, and does not further interoperability. Stakeholders have indicated that the measure is vague, burdensome to measure, and does not necessarily offer high clinical value to health care providers or support the clinical goal of supporting OUD treatment. For the reasons discussed in the proposed rule (84 FR 40769), we proposed to remove the Verify Opioid Treatment Agreement measure from the Promoting Interoperability performance category beginning with the performance period in CY 2020.

We invited public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: The majority of commenters were in general agreement with removing the Verify Opioid

Treatment Agreement measure. Several commenters stated that if the measure were to remain, it would result in increased provider burden and decreased interoperability. One commenter supported removing the measure at least until treatment agreement standards themselves are addressed, clarified, and adequately piloted by CMS or ONC. Other commenters further stated their belief that this measure lacks standards defining specific data points and structure to be included in a treatment agreement. One commenter who supported the measure's removal indicated that the decision over whether to use opioid treatment agreements (as part of the physician-patient treatment relationship) should be left solely to the clinical judgment of individual attending physicians.

Response: While we agree that while addressing OUD prevention and treatment is essential, we believe that the Verify Opioid Treatment Agreement measure presents significant implementation challenges, leads to increases in burden, and does not promote interoperability. We appreciate the commenter's suggestion of conducting a pilot of treatment agreement standards and we may consider this in the future. We appreciate the suggestions on how to enhance and improve such a measure as we continue to combat the opioid crisis. We do acknowledge that there is not consensus regarding whether opioid treatment agreements should be required and whether they should be considered a potential component of the physician-patient treatment relationship.

Comment: A few commenters requested that the measure remain optional for CY 2020 instead of being removed. They suggested this would provide the measure extra time for new, clarifying guidance to be formulated in regards to the measure's future expectations. An additional commenter similarly requested confirmation on whether the measure's scoring component would remain a numerator/denominator calculation or if it would be changed to a "yes/no" attestation response.

Response: We appreciate the concerns and suggestions addressed by the commenters who believe the Verify Opioid Treatment Agreement measure should remain optional in CY 2020. However, we disagree that the Verify Opioid Treatment Agreement measure should remain an optional measure with bonus points through CY 2020 given the strong provider community feedback, including reasons noted in this section

such as the lack of standards or concrete program-wide definitions. While a commenter requested changing the measure to a yes/no attestation for CY 2019, we have decided that the measure will remain an optional, numerator/denominator-based measure in CY 2019 only.

Comment: Some commenters agreed that an opioid-specific measure is important in addressing the current epidemic, but stated that the Verify Opioid Treatment Agreement measure should be removed while simultaneously encouraging innovation through a future collaborative measure development process. The commenters indicated that this measure is burdensome and vague, presenting significant implementation challenges as it is easily subject to misinterpretation until clear certification requirements are formally established.

Response: We agree with the commenters who stated that the measure is vague which causes implementation challenges. Additionally, the lack of certification criteria and standards may result in different interpretations by vendors which may limit interoperability. We appreciate the support in the removal of this measure.

After consideration of the public comments we received, we are finalizing the proposal to remove the Verify Opioid Treatment Agreement measure from the Promoting Interoperability performance category beginning with the performance period in CY 2020.

(ii) Health Information Exchange Objective

(A) Modification of the Support Electronic Referral Loops by Sending Health Information Measure

In the CY 2019 PFS final rule (83 FR 59807 through 59808), we renamed the Send a Summary of Care measure to the Support Electronic Referral Loops by Sending Health Information measure. Although an exclusion is available for this measure (83 FR 59808), we acknowledged that we did not address in the CY 2019 PFS proposed rule how the points for the measure would be redistributed in the event that an exclusion is claimed, and stated that we intended to propose a redistribution policy in this year's rulemaking (83 FR 59795). Accordingly, in the CY 2020 PFS proposed rule, we proposed to redistribute the 20 points associated with the Support Electronic Referral Loops by Sending Health Information measure to the Provide Patients

Electronic Access to Their Health Information measure if an exclusion is claimed (84 FR 40770). We further stated in the proposed rule that if exclusions are claimed for both the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure and the Support Electronic Referral Loops by Sending Health Information measure, the combined 40 points associated with both measures would be redistributed to the Provide Patients Electronic Access to Their Health Information measure. Lastly, we proposed that this redistribution policy would be applicable starting with the 2019 performance period/2021 MIPS payment year.

We received public comments on our proposals and the following is a summary of the comments we received and our responses.

Comment: A majority of commenters fully supported our proposals for point redistribution when an exclusion is claimed for one or both of these measures.

Response: We appreciate the overwhelming support and agree that our proposed approach to point redistribution is appropriate.

Comment: One commenter did not fully agree with redistributing all 40 points from both measures to the Provide Patients Electronic Access to Their Health Information measure. The commenter stated that this would place too much weight on a measure that has been required for years.

Response: We believe that many MIPS eligible clinicians may be eligible to claim exclusions for both the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure and the Support Electronic Referral Loops by Sending Health Information measure. With this, we have chosen to redistribute the points to the Provide Patients Electronic Access to their Health Information measure. We believe that the emphasis placed on the Provide Patients Electronic Access to their Health Information measure through the redistribution of points reflects our emphasis on patient engagement in their health care and patient's electronic access of their health information through the use of APIs.

Comment: One commenter did not support this proposal stating that this redistribution pattern could provide an unfair advantage to smaller organizations that claim the exclusion, leading to overall skewed scoring.

Response: We disagree, and believe redistributing the points to the Provide Patients Electronic Access to their

Health Information measure emphasizes improved electronic access to patient health information and allows for health IT solutions that encourage adoption and innovation in the use of CEHRT.

After consideration of the public comments we received, we are finalizing the proposal to redistribute the 20 points associated with the Support Electronic Referral Loops by Sending Health Information measure to the Provide Patients Electronic Access to Their Health Information measure if an exclusion is claimed. Furthermore, if exclusions are claimed for both the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure and the Support Electronic Referral Loops by Sending Health Information measure, the combined 40 points associated with both measures will be redistributed to the Provide Patients Electronic Access to Their Health Information measure. Lastly, we are finalizing the proposal that this redistribution policy is applicable starting with the 2019 performance period/2021 MIPS payment year.

(B) Modification of the Support Electronic Referral Loops by Receiving and Incorporating Health Information Measure

In the CY 2019 PFS final rule (83 FR 59808 through 59812), we replaced the Request/Accept Summary of Care measure and the Clinical Information Reconciliation measure with a new measure called the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure. Additionally, we established the following exclusion for the new measure at that time: Any MIPS eligible clinician who receives fewer than 100 transitions of care or referrals or has fewer than 100 encounters with patients never before encountered during the performance period would be excluded from this measure (83 FR 59812). In the CY 2020 PFS proposed rule (84 FR 40770), we proposed to revise the description of this exclusion to more clearly and precisely capture our intended policy, to read as follows: Any MIPS eligible clinician who receives transitions of care or referrals or has patient encounters in which the MIPS eligible clinician has never before encountered the patient fewer than 100 times during the performance period. We proposed that the revised description of the exclusion would be applicable beginning with the 2019 performance period/2021 MIPS payment year.

We received public comments on our proposal and the following is a

summary of the comments we received and our responses.

Comment: Several commenters supported the proposal to revise the description of the exclusion, stating that the original verbiage was difficult to interpret.

Response: We agree with the commenters that revising the description of this exclusion would help to reduce any potential confusion or misinterpretation.

Comment: Many commenters did not support the proposal to revise the description of the exclusion, stating that it would be more difficult to meet the exclusion criteria than under the previously established language.

Response: We appreciate the commenters' feedback and respectfully disagree. As we noted in the PFS proposed rule (84 FR 40770), the description of the exclusion that we included in the CY 2019 PFS final rule (83 FR 59812) could be construed in a way that would make the exclusion more difficult for a MIPS eligible clinician to meet. Specifically, it could be read to create two different sets of exclusion criteria, which was not our intention. Our proposal simply reflects our intention to retain the same exclusion from the Request/Accept Summary of Care measure.

Comment: Several commenters did not support the proposal to revise the description of the exclusion, stating that eligible clinicians who do not receive a summary of care are unable to report on the measure, thereby receiving a denominator of zero, by no fault of their own.

Response: We appreciate the comments and concerns submitted by the commenters. If a clinician does not receive any summaries of care, the clinician may be eligible to claim the exclusion. If the exclusion is not applicable, the clinician must submit a numerator of at least one to fulfill the measure.

After consideration of the public comments we received, we are finalizing the proposal to revise the description of the exclusion for the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure, as follows: Any MIPS eligible clinician who receives transitions of care or referrals or has patient encounters in which the MIPS eligible clinician has never before encountered the patient fewer than 100 times during the performance period. We are also finalizing the proposal that the revised description of the exclusion will be applicable starting with the 2019 performance period/2021 MIPS payment year.

(iii) Public Health and Clinical Data Exchange—Syndromic Surveillance Reporting

In the CY 2018 Quality Payment Program final rule (82 FR 53674), we established the measure description for the Syndromic Surveillance Reporting measure as follows: “The MIPS eligible clinician is in active engagement with a public health agency to submit syndromic surveillance data from an urgent care setting.” However, in the CY 2019 PFS final rule (83 FR 59798), we inadvertently stated that the measure description was as follows: “The MIPS

eligible clinician is in active engagement with a public health agency to submit syndromic surveillance data from a *non-urgent care setting*” (emphasis added). We did not intend to replace “urgent care” with “non-urgent care” in the measure description, and we regret any confusion our typographical error may have caused. To alleviate any future confusion surrounding the description, we are restating the measure description for the Syndromic Surveillance Reporting measure here and in the table below as follows: “The MIPS eligible clinician is in active engagement with a public

health agency to submit syndromic surveillance data from an urgent care setting”.

For ease of reference, Table 48 lists the objectives and measures for the Promoting Interoperability performance category for the 2020 performance period as revised to reflect the final policies established in this final rule. For more information on the 2015 Edition certification criteria required to meet the objectives and measures, we refer readers to Table 43 in the CY 2019 PFS final rule (83 FR 59817).

N/A (measure is Yes/No)	N/A (measure is Yes/No)	The MIPS eligible clinician 1. Does not diagnose or directly treat any disease or condition associated with a clinical data registry in their jurisdiction during the performance period; OR 2.operates in a jurisdiction for which no clinical data registry is capable of accepting electronic registry transactions in the specific standards required to meet the CEHRT definition at the start of the performance period; OR 3.operates in a jurisdiction where no clinical data registry for which the MIPS eligible clinician is eligible has declared readiness to receive electronic registry transactions as of 6 months prior to the start of the performance period.

BILLING CODE 4120-01-C

(e) Scoring Methodology

(i) Changes to the Scoring Methodology for the 2020 Performance Period

In the CY 2019 PFS final rule (83 FR 59785 through 59796), we finalized a new performance-based scoring methodology for the Promoting

Interoperability performance category beginning with the performance period in 2019. As previously discussed in section III.K.3.c.(4)(d)(i) of this final rule, we are finalizing our proposals for CY 2020 to: (1) Make the Query of PDMP measure optional and eligible for five bonus points in CY 2020; (2) make the e-Prescribing measure worth up to

10 points in CY 2020, and (3) remove the Verify Opioid Treatment Agreement measure beginning in CY 2020. Table 49 reflects the proposals that we are finalizing, although the maximum points available do not include points that would be redistributed in the event that an exclusion is claimed.

TABLE 49: Scoring Methodology for the Performance Period in 2020

Objectives	Measures	Maximum Points
e-Prescribing	e-Prescribing*	10 points
	Query of PDMP	5 points (<i>bonus</i>)
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information*	20 points
	Support Electronic Referral Loops by Receiving and Incorporating Health Information*	20 points
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	40 points
Public Health and Clinical Data Exchange	Report to two different public health agencies or clinical data registries for any of the following: Immunization Registry Reporting* Electronic Case Reporting* Public Health Registry Reporting* Clinical Data Registry Reporting* Syndromic Surveillance Reporting*	10 points

* Exclusion available.

(f) Additional Considerations

(i) Nurse Practitioners, Physician Assistants, Clinical Nurse Specialists, and Certified Registered Nurse Anesthetists

In prior rulemaking (83 FR 59818 through 59819), we discussed our belief that certain types of MIPS eligible clinicians (NPs, PAs, CNSs, and CRNAs) may lack experience with the adoption and use of CEHRT. Because many of these non-physician clinicians were or are not eligible to participate in the Medicare or Medicaid EHR Incentive Program (now known as the Promoting Interoperability Program), we stated that we have little evidence as to whether there are sufficient measures applicable and available to these types of MIPS eligible clinicians under the advancing care information (now known as Promoting Interoperability) performance category. We established a policy at § 414.1380(c)(2)(i)(A)(5) for the performance periods in 2017, 2018, and 2019 under section 1848(q)(5)(F) of the Act to assign a weight of zero to the Promoting Interoperability performance category in the MIPS final score if there are not sufficient measures applicable and available to NPs, PAs, CRNAs, and CNSs. We will assign a weight of zero only in the event that an NP, PA, CRNA, or CNS does not submit any data for any of the measures specified for the Promoting Interoperability performance category, but if they choose to report, they will be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians, and the performance category will be given the weighting prescribed by section 1848(q)(5)(E) of the Act. We

stated our intention to use data from the first performance period (2017) to further evaluate the participation of these MIPS eligible clinicians in the Promoting Interoperability performance category and consider for subsequent years whether the measures specified for this category are applicable and available to these MIPS eligible clinicians.

We have analyzed the data submitted for the 2017 performance period for the Promoting Interoperability performance category, and have discovered that the vast majority of MIPS eligible clinicians submitted data as part of a group. While we are pleased that MIPS eligible clinicians utilized the option to submit data as a group, it does limit our ability to analyze data at the individual NPI level. For example, when a group of MIPS eligible clinicians chooses to report for MIPS as a group, the data submitted are representative of that entire group, as opposed to each individual MIPS eligible clinician in the group submitting data that exclusively reflect his/her own performance. Approximately 4 percent of MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs submitted data individually for MIPS, and more than two-thirds of them did not submit data for the Promoting Interoperability performance category. Additionally, we are challenged because many of the measures that were available for submission for the 2017 performance period are now unavailable, due to our discontinuation of the Promoting Interoperability transition measure set, and the overhaul of the performance category that further reduced the

number of available measures. For these reasons, we were unable to determine, at the time we were developing the CY 2020 PFS proposed rule, whether the measures currently specified for the Promoting Interoperability performance category for the 2020 performance period are applicable and available for NPs, PAs, CRNAs, and CNSs. However, as more data become available, we plan to reevaluate the measures and consider how we could ensure that there are sufficient measures applicable and available for these types of MIPS eligible clinicians.

Therefore, we proposed to continue the existing policy of reweighting the Promoting Interoperability performance category for NPs, PAs, CRNAs, and CNSs for the performance period in 2020, and to revise § 414.1380(c)(2)(i)(A)(5) to reflect this proposal.

We received public comments on our proposals and the following is a summary of the comments we received and our responses.

Comment: The majority of commenters supported our proposal to continue to reweight the Promoting Interoperability performance category for NPs, PAs, CRNAs, and CNSs for the performance period in 2020.

Response: We agree that reweighting the Promoting Interoperability performance category for NPs, PAs, CRNAs, and CNSs for CY 2020 is appropriate. We hope that in the future more of these clinician types will be utilizing CEHRT and will be able to submit data for this performance category.

After consideration of the comments, we are finalizing our proposal to

continue the existing policy of reweighting the Promoting Interoperability performance category for NPs, PAs, CRNAs, and CNSs for the performance period in 2020, and to revise § 414.1380(c)(2)(i)(A)(5) to reflect this policy.

(ii) Physical Therapists, Occupational Therapists, Qualified Speech-Language Pathologist, Qualified Audiologists, Clinical Psychologists, and Registered Dietitians or Nutrition Professionals

In the CY 2019 PFS final rule (83 FR 59819 through 59820), we adopted a policy at § 414.1380(c)(2)(i)(A)(4) to apply the same automatic reweighting policy we adopted for NPs, PAs, CNSs, and CRNAs for the performance periods in 2017 through 2019 to these new types of MIPS eligible clinicians (physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals) for the performance period in 2019. Because many of these clinician types were or are not eligible to participate in the Medicare or Medicaid Promoting Interoperability Programs, we have little evidence as to whether there are sufficient measures applicable and available to them under the Promoting Interoperability performance category.

For the reasons discussed in section III.K.3.c.(4)(f)(i) of the CY 2020 PFS proposed rule (84 FR 40776), for the performance period in 2020, we proposed to continue the existing policy of reweighting the Promoting Interoperability performance category for physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals, and to revise § 414.1380(c)(2)(i)(A)(4) to reflect this proposal. We invited comments on this proposal.

We received public comments on our proposals. The following is a summary of the comments we received and our responses.

Comment: Most commenters supported CMS' reweighting of the Promoting Interoperability performance category for physical therapists, occupational therapists, qualified speech-language pathologists, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals.

Response: We appreciate the support for our proposal.

Comment: Several commenters expressed their concerns about there not being appropriate measures in place to accommodate the practices of NPPs.

Response: Currently, the data from physical therapists, occupational therapists, qualified speech-language pathologists, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals is too limited to support the addition of measures that are tailored to the specific practices of NPPs. However, we encourage stakeholders to submit their ideas and suggestions to us during our annual call for measures.

Comment: One commenter suggested adding chiropractic clinicians to the automatic reweighting of the Promoting Interoperability performance category that is currently available for physical therapists, occupational therapists, and qualified speech-language pathologists, until additional meaningful measures are available.

Response: We thank the commenter for the suggestion. However, chiropractors were eligible professionals under section 1848(o)(5)(C) of the Act, and thus were eligible to participate in the Medicare EHR Incentive Program, unlike the types of NPPs mentioned by the commenter. The same rationale for reweighting the Promoting Interoperability performance category does not apply to chiropractors.

After consideration of the comments, we are finalizing the proposal to continue the existing policy of reweighting the Promoting Interoperability performance category for physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals, and to revise § 414.1380(c)(2)(i)(A)(4) to reflect this policy.

(iii) Hospital-Based MIPS Eligible Clinicians in Groups

We define a hospital-based MIPS eligible clinician under § 414.1305 as a MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in sites of services identified by the Place of Service (POS) codes used in the HIPAA standard transaction as an inpatient hospital (POS 21), on campus outpatient hospital (POS 22), off campus outpatient hospital (POS 19), or emergency room (POS 23) setting, based on claims for the MIPS determination period (81 FR 77238 through 77240, 82 FR 53686 through 53687, 83 FR 59727 through 59730). We established under § 414.1380(c)(2)(i)(C)(6) that a MIPS eligible clinician who is a hospital-based MIPS eligible clinician as defined in § 414.1305 will be assigned a zero percent weight for the Promoting Interoperability performance category,

and the points associated with the Promoting Interoperability performance category will be redistributed to another performance category or categories (81 FR 77238 through 77240, 82 FR 53684, 83 FR 59871). However, if a hospital-based MIPS eligible clinician chooses to report on the Promoting Interoperability performance category measures, they will be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians, and the performance category will be given the weighting prescribed by section 1848(q)(5)(E) of the Act regardless of their Promoting Interoperability performance category score. We stated that this policy includes MIPS eligible clinicians choosing to report as part of a group or part of a virtual group (82 FR 53687).

Under § 414.1310(e)(2)(ii), individual eligible clinicians that elect to participate in MIPS as a group must aggregate their performance data across the group's TIN (81 FR 77058). For groups reporting on the Promoting Interoperability performance category, we stated that group data should be aggregated for all MIPS eligible clinicians within the group (81 FR 77214 through 77216, 82 FR 53687). We stated that this includes those MIPS eligible clinicians who may qualify for a zero percent weighting of the Promoting Interoperability performance category due to circumstances such as a significant hardship or other type of exception, hospital-based or ASC-based status, or certain types of NPPs (82 FR 53687). We established at § 414.1380(c)(2)(iii) that for MIPS eligible clinicians submitting data as a group or virtual group, in order for the Promoting Interoperability performance category to be reweighted, all of the MIPS eligible clinicians in the group or virtual group must qualify for reweighting (82 FR 53687, 83 FR 59871). We have heard from several stakeholders that our policy for groups that include hospital-based MIPS eligible clinicians sets a threshold that is too restrictive for a variety of reasons. Some stated that due to high turnover rates for hospital medicine groups, many such groups rely on locum tenens clinicians who may practice in multiple settings. They stated that if a hospital medicine group includes only one MIPS eligible clinician who does not meet the definition of a hospital-based MIPS eligible clinician, it could prevent the group from qualifying for reweighting because not all of the MIPS eligible clinicians in the group would be considered hospital-based. A few acknowledged that while hardship

exceptions are available for MIPS eligible clinicians who lack control over CEHRT because they use the hospital's CEHRT, it is an administrative burden to have to submit a hardship exception application, especially if the clinician has a locum tenens relationship.

In the CY 2020 PFS proposed rule (84 FR 40776 through 40777), we stated our belief that hospital medicine groups may face unique circumstances due to the nature of their practice area and the staffing practices described by stakeholders. Thus, we proposed to revise the definition of a hospital-based MIPS eligible clinician under § 414.1305 to include groups and virtual groups. We proposed that, beginning with the 2022 MIPS payment year, a hospital-based MIPS eligible clinician under § 414.1305 means an individual MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in sites of service identified by the POS codes used in the HIPAA standard transaction as an inpatient hospital, on-campus outpatient hospital, off campus outpatient hospital, or emergency room setting based on claims for the MIPS determination period, and a group or virtual group provided that more than 75 percent of the NPIs billing under the group's TIN or virtual group's TINs, as applicable, meet the definition of a hospital-based individual MIPS eligible clinician during the MIPS determination period.

We stated that we believe that a threshold of more than 75 percent is appropriate because it is consistent with the thresholds for groups in the definitions of facility-based MIPS eligible clinician and non-patient facing MIPS eligible clinician under § 414.1305. We proposed to revise § 414.1380(c)(2)(iii) to specify that for the Promoting Interoperability performance category to be reweighted for a MIPS eligible clinician who elects to participate in MIPS as part of a group or virtual group, all of the MIPS eligible clinicians in the group or virtual group must qualify for reweighting, or the group or virtual group must meet the proposed revised definition of a hospital-based MIPS eligible clinician (or the definition of a non-patient facing MIPS eligible clinician in § 414.1305, as proposed in section III.K.3.c.(4)(f)(iv) of the proposed rule (84 FR 40777)).

The following is a summary of the public comments we received and our responses.

Comment: Commenters appreciated our proposal to lower the percentage of MIPS eligible clinicians that need to be considered hospital-based for a group or virtual group to be considered hospital-

based. Commenters stated that a threshold of 100 percent was very difficult to achieve and a threshold of more than 75 percent is much more achievable. Some commenters stated that a threshold of more than 75 percent is reasonable and aligns with the threshold that CMS uses in the facility-based measurement approach in the MIPS cost and quality performance categories. Others believed that the proposed change will increase flexibility for clinicians practicing in a hospital setting. Another commenter stated that the revised definition better reflects the realities of practice. One commenter appreciated the recognition that the previous definition of a hospital-based groups was confusing and difficult for clinicians to meet and thanked CMS for our responsiveness to stakeholder concerns. Several commenters stated that the "all or nothing rule" (requiring 100 percent of the MIPS eligible clinicians in the group or virtual group to qualify for reweighting) was unfair and penalizes hospital-based clinicians who work in multi-specialty groups.

Response: We appreciate the support for our proposal and agree that a threshold of more than 75 percent would account for the unique circumstances faced by hospital-based groups such as locum tenens arrangements and high turnover rates.

Comment: One commenter urged CMS to consider reweighting a group if more than 75 percent of the group qualifies for reweighting for any reason.

Response: We appreciate this suggestion, but we believe that hospital medicine groups may face unique circumstances due to the nature of their practice area that clinicians who practice in non-hospital settings would not experience, and thus we decline to adopt the commenter's suggestion.

After consideration of the public comments, we are finalizing the proposal to revise the definition of a hospital-based MIPS eligible clinician under § 414.1305 to include groups and virtual groups. We are finalizing the proposal that, beginning with the 2022 MIPS payment year, a hospital-based MIPS eligible clinician under § 414.1305 means an individual MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in sites of service identified by the POS codes used in the HIPAA standard transaction as an inpatient hospital, on-campus outpatient hospital, off campus outpatient hospital, or emergency room setting based on claims for the MIPS determination period, and a group or virtual group provided that more than 75 percent of the NPIs billing

under the group's TIN or virtual group's TINs, as applicable, meet the definition of a hospital-based individual MIPS eligible clinician during the MIPS determination period. We are also finalizing the proposal to revise § 414.1380(c)(2)(iii) to specify that for the Promoting Interoperability performance category to be reweighted for a MIPS eligible clinician who elects to participate in MIPS as part of a group or virtual group, all of the MIPS eligible clinicians in the group or virtual group must qualify for reweighting, or the group or virtual group must meet the definition of a hospital-based MIPS eligible clinician or a non-patient facing MIPS eligible clinician as defined in § 414.1305.

(iv) Non-Patient Facing MIPS Eligible Clinicians in Groups

We define a non-patient facing MIPS eligible clinician under § 414.1305 as an individual MIPS eligible clinician who bills 100 or fewer patient facing encounters (including Medicare telehealth services defined in section 1834(m) of the Act), as described in paragraph (3) of this definition, during the MIPS determination period, and a group or virtual group provided that more than 75 percent of the NPIs billing under the group's TIN or virtual group's TINs, as applicable, meet the definition of a non-patient facing individual MIPS eligible clinician. We established under § 414.1380(c)(2)(i)(C)(5) that a MIPS eligible clinician who is a non-patient facing MIPS eligible clinician as defined in § 414.1305 will be assigned a zero percent weight for the Promoting Interoperability performance category, and the points associated with the Promoting Interoperability performance category will be redistributed to another performance category or categories (81 FR 77240 through 77243, 82 FR 53680–53682, 83 FR 59871). However, if a non-patient facing MIPS eligible clinician chooses to report on the Promoting Interoperability performance category measures, they will be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians, and the performance category will be given the weighting prescribed by section 1848(q)(5)(E) of the Act regardless of their Promoting Interoperability performance category score. We stated that this policy includes MIPS eligible clinicians choosing to report as part of a group or part of a virtual group (82 FR 53687).

As noted in the CY 2020 PFS proposed rule (84 FR 40777), in connection with our discussion of hospital-based MIPS eligible clinicians in groups, under § 414.1380(c)(2)(iii), for

MIPS eligible clinicians submitting data as a group or virtual group, in order for the Promoting Interoperability performance category to be reweighted, all of the MIPS eligible clinicians in the group or virtual group must qualify for reweighting. We proposed (84 FR 40777) to revise § 414.1380(c)(2)(iii) to account for groups and virtual groups that meet the revised definition of a hospital-based MIPS eligible clinician under § 414.1305, which would only require the group or virtual group to meet a threshold of more than 75 percent instead of a threshold of all of the MIPS eligible clinicians in the group or virtual group. In an effort to more clearly and concisely capture our existing policy for non-patient facing MIPS eligible clinicians, we proposed to revise § 414.1380(c)(2)(iii) to also account for a group or virtual group that meets the definition of a non-patient facing MIPS eligible clinician under § 414.1305, such that the group or virtual group only has to meet a threshold of more than 75 percent.

The following is a summary of the comments we received and our responses.

Comment: Commenters supported a definition of a non-patient facing group as one in which more than 75 percent of the group's members qualify as non-patient facing and eligible for Promoting Interoperability performance category reweighting. One commenter noted that the clarification is helpful for physician groups that have a small number of patient facing clinicians embedded in a much larger group of non-patient facing clinicians.

Response: We believe that our proposed revision to the regulation text would help to alleviate confusion surrounding our policy for groups and virtual groups that include non-patient facing MIPS eligible clinicians.

Comment: One commenter suggested that CMS should make it easier for groups to evaluate whether they may qualify as hospital-based or non-patient facing by enhancing the Quality Payment Program Participation Status Tool on the Quality Payment Program website to show eligibility and special statuses for TINs, in addition to NPIs.

Response: We appreciate this suggestion and have added the ability to check eligibility for all clinicians associated with a practice as a feature of our Quality Payment Program Participation Status Tool.

After consideration of the public comments that we received, we are finalizing our proposal to revise § 414.1380(c)(2)(iii) to also account for a group or virtual group that meets the definition of a non-patient facing MIPS

eligible clinician under § 414.1305, such that the group or virtual group only has to meet a threshold of more than 75 percent of the NPIs billing under the group's TIN or virtual group's TINs, as applicable, meet the definition of a non-patient facing individual MIPS eligible clinician.

(g) Future Direction of the Promoting Interoperability Performance Category

In the CY 2020 PFS proposed rule (84 FR 40777 through 40784), we included Requests for Information regarding several issues involving the Promoting Interoperability performance category. While we are not summarizing and responding to comments we received in this final rule, we thank the commenters for their responses and we may take them into account as we develop future policies for the Promoting Interoperability performance category.

(5) APM Scoring Standard for MIPS Eligible Clinicians Participating in MIPS APMs

(a) Overview

As codified at § 414.1370(a), the APM scoring standard is the MIPS scoring methodology applicable for MIPS eligible clinicians identified on the Participation List for the performance period of an APM Entity participating in a MIPS APM.

As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77246), the APM scoring standard is designed to reduce reporting burden for these clinicians by reducing the need for duplicative data submission to MIPS and their respective APMs, and to avoid potentially conflicting incentives between those APMs and MIPS.

We established at § 414.1370(c) that the MIPS performance period under § 414.1320 applies for the APM scoring standard. We finalized under § 414.1370(f) that the MIPS final score calculated for the APM Entity is applied to each MIPS eligible clinician in the APM Entity, and the MIPS payment adjustment is applied at the TIN/NPI level for each MIPS eligible clinician in the APM Entity group. Under § 414.1370(f)(2), if the APM Entity group is excluded from MIPS, all eligible clinicians within that APM Entity group are also excluded from MIPS.

As finalized at § 414.1370(h)(1) through (4), the performance category weights used to calculate the MIPS final score for an APM Entity group for the APM scoring standard performance period are: Quality at 50 percent; cost at 0 percent; improvement activities at 20 percent; and Promoting Interoperability at 30 percent.

(b) MIPS APM Criteria

We established at § 414.1370(b) that for an APM to be considered a MIPS APM, it must satisfy the following criteria: (1) APM Entities must participate in the APM under an agreement with CMS or by law or regulation; (2) the APM must require that APM Entities include at least one MIPS eligible clinician on a Participation List; (3) the APM must base payment on quality measures and cost/utilization; and (4) the APM must be neither a new APM for which the first performance period begins after the first day of the MIPS performance year nor an APM in the final year of operation for which the APM scoring standard is impracticable. In the CY 2019 PFS final rule (59820 through 59821), we clarified that we consider whether each distinct track of an APM meets the criteria to be a MIPS APM and that it is possible for an APM to have tracks that are MIPS APMs and tracks that are not MIPS APMs. We also clarified that we consider the first performance year for an APM to begin as of the first date for which eligible clinicians and APM entities participating in the model must report on quality measures under the terms of the APM.

Based on the MIPS APM criteria, we expect that the following 10 APMs will satisfy the requirements to be MIPS APMs for the 2020 MIPS performance period:

- Comprehensive ESRD Care Model (all Tracks).
- Comprehensive Primary Care Plus Model (all Tracks).
- Next Generation ACO Model.
- Oncology Care Model (all Tracks).
- Medicare Shared Savings Program (all Tracks).
- Medicare ACO Track 1+ Model.
- Bundled Payments for Care Improvement Advanced.
- Maryland Total Cost of Care Model (Maryland Primary Care Program).
- Vermont All-Payer ACO Model (Vermont Medicare ACO Initiative).
- Independence At Home Model.

Final CMS determinations of MIPS APMs for the 2020 MIPS performance period will be announced via the Quality Payment Program website at <https://qpp.cms.gov/>. Further, we make these determinations based on the established MIPS APM criteria as specified in § 414.1370(b).

(c) Calculating MIPS APM Performance Category Scores

(i) Quality Performance Category

As noted, the APM scoring standard is designed to reduce reporting burden

for MIPS eligible clinicians participating in MIPS APMs by reducing the need for duplicative data submission to MIPS and their respective APMs, and to avoid potentially conflicting incentives between those APMs and MIPS. As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77246), due to operational constraints, we did not require MIPS eligible clinicians participating in MIPS APMs other than the Shared Savings Program and the Next Generation ACO Model to submit data on quality measures for purposes of MIPS for the 2017 MIPS performance period. As discussed in the CY 2018 Quality Payment Program final rule (82 FR 53695), we designed a means of overcoming these operational constraints and required MIPS eligible clinicians participating in such MIPS APMs to submit data on APM quality measures for purposes of MIPS beginning with the 2018 MIPS performance period. We also finalized a policy to reweight the quality performance category to zero percent in cases where an APM has no measures available to score for the quality performance category for a MIPS performance period, such as where none of the APM's measures would be available for calculating a quality performance category score by the close of the MIPS submission period because measures were removed from the APM measure set due to changes in clinical practice guidelines. Although we anticipated different scenarios where quality would need to be reweighted, we did not anticipate at that time that the quality performance category would need to be reweighted regularly.

After several years of implementation of the APM scoring standard, we have found that for participants in certain MIPS APMs (as defined in § 414.1305), it often is not operationally possible to collect and score performance data on APM quality measures for purposes of MIPS because these APMs run on episodic or yearly timelines that do not always align with the MIPS performance periods and deadlines for data submission, scoring, and performance feedback. In addition, although we anticipated different scenarios where quality would need to be reweighted, we do not believe the quality performance category should be reweighted regularly.

To achieve the aims of the APM scoring standard, we believe it is necessary to consider new approaches to quality performance category scoring.

(A) Allowing MIPS Eligible Clinicians Participating in MIPS APMs To Report on MIPS Quality Measures

We proposed to allow MIPS eligible clinicians participating in MIPS APMs to report on MIPS quality measures in a manner similar to our established policy for the Promoting Interoperability performance category under the APM scoring standard for purposes of the MIPS quality performance category beginning with the 2020 MIPS performance period.

Similar to our approach for the Promoting Interoperability performance category, we would allow MIPS eligible clinicians in MIPS APMs to receive a score for the quality performance category either through individual or TIN-level reporting based on the generally applicable MIPS reporting and scoring rules for the quality performance category. Under such an approach, we would attribute one quality score to each MIPS eligible clinician in an APM Entity by looking at both individual and TIN-level data submitted for the eligible clinician and using the highest reported score, excepting scores reported by a virtual group. Thus, we would use the highest individual or TIN-level score attributable to each MIPS eligible clinician in an APM Entity in order to determine the APM Entity score based on the average of the highest scores for each MIPS eligible clinician in the APM Entity.

As with Promoting Interoperability performance category scoring, each MIPS eligible clinician in the APM Entity group would receive one score, weighted equally with that of the other MIPS eligible clinicians in the APM Entity group, and we would calculate one quality performance category score for the entire APM Entity group. If a MIPS eligible clinician has no quality performance category score—if the individual's TIN did not report and the individual did not report—that MIPS eligible clinician would contribute a score of zero to the aggregate APM Entity group score.

We would use scores reported by an individual MIPS eligible clinician or a TIN reporting as a group; we would not accept virtual group level reporting because a virtual group level score is too far removed from the eligible clinician's performance on quality measures for purposes of the APM scoring standard.

We requested comment on our proposal.

We received several public comments on our proposal to use the highest TIN or individual score attributable to each MIPS eligible clinician, excepting

virtual group level reporting, for purposes of the MIPS quality performance category beginning with the 2020 MIPS performance period. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposal to allow for MIPS quality measure reporting to be used in calculating a MIPS APM Entity score.

Response: We appreciate the commenters' support. We agree that this new approach will provide the best opportunity to score many MIPS eligible clinicians on quality performance.

Comment: Some commenters supported our proposal to allow scoring at the individual or group level to be rolled up to the APM Entity level, thereby allowing individuals in multi-specialty APMs to focus and be scored on measures most applicable to their practices.

Response: We thank commenters for their support. We agree that this approach would provide value by allowing individuals to be scored based on measures that are the most clinically relevant.

Comment: Some commenters expressed concerns about the additional reporting burden required to report on quality to both MIPS and their respective APMs. Some suggested that CMS make MIPS reporting optional for each APM Entity and create a quality category score only in situations where the APM Entity has elected to report.

Response: We acknowledge this proposed change in policy may introduce additional burden for some MIPS APM participants. We anticipate, however, this effect being limited to instances where participants' TINs do not already report separately to MIPS. We believe any potential burden will be further mitigated by our proposal to allow APM Entity-level quality reporting for MIPS, as discussed in section III.J.3.c.(5)(i)(C) of this final rule.

We remind commenters that we are required by section 1848(q)(5)(E)(i)(I) of the Act, to calculate a MIPS quality performance category score for MIPS eligible clinicians. As such, we cannot make MIPS reporting a wholly voluntary activity through regulatory action. Further, under a scenario in which no MIPS quality reporting was performed under any of the means available, section 1848(q)(5)(B)(i) of the Act requires the assignment of the lowest possible quality score.

After consideration of the comments, we are finalizing the proposal as proposed to require MIPS quality reporting by MIPS eligible clinicians in

MIPS APMs at either the APM Entity, TIN, or individual level.

(B) APM Quality Reporting Credit

We proposed to apply a minimum score of 50 percent, or an “APM Quality Reporting Credit,” under the MIPS quality performance category for certain APM entities participating in MIPS APMs where the APM quality data cannot be used for MIPS purposes as outlined below. Several provisions of the statute address the possibility of considerable overlap between the requirements of MIPS and those of an APM. Most notably, section 1848(q)(1)(C)(ii) of the Act excludes QPs and partial QPs who do not elect to participate in MIPS from the definition of a MIPS eligible clinician. In addition, under section 1848(q)(5)(C)(ii) of the Act, a MIPS eligible clinician’s participation in an APM (as defined in section 1833(z)(3)(C) of the Act) earns such MIPS eligible clinician a minimum score of one-half of the highest potential score for the improvement activities performance category.

In particular, we believe that section 1848(q)(5)(C)(ii) of the Act reflects an understanding that APM participation requires significant investment in improving clinical practice, which may be duplicative with the requirements under the improvement activities performance category. We believe that MIPS APMs require an equal or greater investment in quality, which, due to operational constraints, cannot always be reflected in a MIPS quality performance category score. Accordingly, we proposed to apply a similar approach to quality performance category scoring under the APM scoring standard. We proposed that APM Entity groups participating in certain MIPS APMs receive a minimum score of one-half of the highest potential score for the quality performance category, beginning with the 2020 MIPS performance period. To clarify, our proposal was intended to apply specifically to those MIPS APMs that do not utilize MIPS measures and data collection types.

To the extent possible, we would calculate the final score by adding to the credit any additional MIPS quality score received on behalf of the individual NPI or the TIN. For the purposes of final scoring this credit would be added to any MIPS quality measure scores we receive. All quality category scores would be capped at 100 percent. For example, if the additional MIPS quality score were 40 percent, that would be added to the 50 percent credit for a total of 90 percent; if the quality score were 70 percent, that would be added to the 50 percent credit and because the result

is 120 percent, the cap would be applied for a final score of 100 percent.

We received public comments on our proposal to calculate the quality performance category score for APM Entity groups participating in MIPS APMs where APM quality data cannot be used for MIPS purposes, to add to the applicable APM Entity level quality performance score a 50 percent quality reporting credit, for a total score of up to 100 percent. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our policy to provide a 50 percent quality reporting credit for those APM Entity groups that are participating in MIPS APMs that are already required to report quality measures for purposes of their APM, but for which the reported quality data cannot be used for MIPS purposes, to mitigate the duplicative reporting now required for MIPS quality scoring.

Response: We thank commenters for their support of our proposal.

Comment: A few commenters supported the use of an APM quality reporting credit, but urged CMS to make the credit 100 percent of the quality performance category.

Response: We appreciate the support for our proposed policy, but we do not believe that providing a quality reporting credit of 100 percent for the quality performance category would satisfy the statutory requirements at section 1848(q)(5)(E)(i)(I) of the Act that we measure “performance” on quality measures under the quality performance category. Furthermore, we do not believe that simply participating in a MIPS APM is a sufficient demonstration of performance on quality measures to warrant a score of 100 percent; rather, we interpret the statutory requirement at section 1848(q)(5)(D) of the Act to mean that we are to assess performance on quality measures not only for the sake of generating a score, but for the purpose of measuring year over year improvement, and rewarding those efforts as well. Therefore, we proposed to use a 50 percent quality reporting credit in combination with an achievement score in calculating an APM Entity’s quality performance category score for APM Entity groups participating in MIPS APMs where quality data cannot be used for MIPS purposes.

Comment: Some commenters recommended that CMS increase the quality reporting credit to the minimum number of points required to ensure APM Entities receive a neutral payment adjustment under the APM scoring standard.

Response: We considered several different approaches for setting the APM Quality Reporting Credit, including an approach where the credit would be equal to the minimum number of points needed in the quality performance category which, when added to the automatic credit applied for the improvement activities performance category, would guarantee MIPS APM participants a MIPS score equal to or greater than the performance threshold for a given Quality Payment Program performance year. Upon further consideration, we found that such an approach would give MIPS APM participants a competitive advantage within MIPS as the performance threshold increased, but would function more as a safety net against a downward MIPS adjustment than as a reward for quality measure reporting that they had already done.

We believe that the APM Quality Reporting Credit of one-half of the performance category score better reflects the intent of rewarding a specific performance activity, reporting, than an approach where the primary purpose is to guarantee a specific outcome within the MIPS program.

Comment: Some commenters disagreed with our proposal to assign an APM Quality Reporting Credit for certain MIPS APM participants, as it would have the effect of raising the performance threshold and making it more difficult for other MIPS eligible clinicians to receive a top score.

Response: While we do anticipate that this APM Quality Reporting Credit may have an effect on APM Entities’ quality performance category scores, our data suggest that the totality of our APM scoring standard policies should produce APM Entity quality performance category scores that are roughly equal to, or perhaps slightly lower than they would have been under the APM scoring standard rules if we had been able to implement them as finalized. We believe that the proposed approach would reward MIPS APM participants for the quality reporting they undertake within their APMs, which we had intended to but cannot use for purposes of MIPS, without unduly advantaging them relative to the MIPS performance threshold. With this in mind, we do not anticipate any negative impacts on other MIPS eligible clinicians as a result of this policy.

We are finalizing the policy to assign an APM Quality Reporting Credit of one-half of the quality performance category score under the APM scoring standard for APM Entity groups participating in MIPS APMs where

quality data cannot be used for MIPS purposes.

(aa) Exceptions From APM Quality Reporting Credit

Under this policy, we would not apply the APM Quality Reporting Credit to the APM Entity group's quality performance score for those APM Entities reporting only through a MIPS quality reporting data submission types according to the requirements of their APM, such as the Medicare Shared Savings Program, which requires participating ACOs to report through the CMS Web Interface and the CAHPS for ACOs survey measures. In these cases, no burden of duplicative reporting would exist, and there would not be any additional unscored quality measures for which to give credit.

In the case where an APM Entity group is in an APM that requires reporting through a MIPS quality reporting data submission type under the terms of participation in the APM, should the APM Entity group fail to report on required quality measures, the individual eligible clinicians and TINs that make up that APM Entity group would still have the opportunity to report quality measures to MIPS for purposes of calculating a MIPS quality performance category score as finalized for all MIPS APMs in accordance with § 414.1370(g)(1)(ii). However, as in these cases no burden of duplicative reporting would exist, they would not receive the APM Quality Reporting credit.

We did not receive any comments on this proposal, and we are finalizing as proposed.

(C) Additional Reporting Option for APM Entities

We recognize that some APM Entities may have a particular interest in ensuring that MIPS eligible clinicians in the APM Entity group perform well in MIPS, or in reducing the overall burden of joining the APM Entity. Likewise, we recognize that some MIPS APMs, such as the CMS Web Interface reporters, already require reporting on MIPS quality measures as part of participation in the APM. Therefore, we proposed that, in instances where an APM Entity has reported quality measures to MIPS through a MIPS submission type and using MIPS data collection type on behalf of the APM Entity group, we would use that quality data to calculate an APM Entity group level score for the quality performance category. We believe this approach best ensures that all participants in an APM Entity group receive the same final MIPS score while reducing reporting burden to the greatest extent possible. We received no

public comments on our proposal that in instances where an APM Entity reports quality measures to MIPS through a MIPS submission type and using MIPS data collection type on behalf of the APM Entity group, we will use that quality data to calculate an APM Entity group level score for the quality performance category. We are finalizing the policy as proposed.

(D) Bonus Points and Caps for the Quality Performance Category

In the 2018 Quality Payment Program final rule (82 FR 53568, 53700), we finalized our policies to include bonus points in the performance category score calculation when scoring quality at the APM Entity group level. Because these adjustments would, under the policies we are finalizing in section III.J.3.d.(1)(b) of this final rule, already be factored in when calculating an individual or TIN-level quality performance category score before the quality scores are rolled-up and averaged to create the APM Entity group level score, we proposed not to continue to calculate these adjustments at the APM Entity group level in the case where an APM Entity group's quality performance score is reported by its composite individuals or TINs. However, in the case of an APM Entity group that chooses to or is required by its APM to report on MIPS quality measures at the APM Entity group level, we proposed to continue to apply any bonuses or adjustments that are available to MIPS groups for the measures reported by the APM Entity and to calculate the applicability of these adjustments at the APM Entity group level.

The following is a summary of the comments we received and our responses.

Comment: A commenter supported this policy, as it eliminates possible duplicative awards of bonus points.

Response: We appreciate the commenter's support.

We are finalizing this policy as proposed.

(E) Special Circumstances

In prior rulemaking, with regard to the quality performance category, we did not include MIPS eligible clinicians who are subject to the APM scoring standard in the automatic extreme and uncontrollable circumstances policy or the application-based extreme and uncontrollable circumstances policy that we established for other MIPS eligible clinicians (82 FR 53780–53783, 53895–53900; 83 FR 59874–59875). However, in the CY 2020 PFS proposed rule (84 FR 40786), we proposed to

allow MIPS eligible clinicians participating in MIPS APMs to report on MIPS quality measures and be scored for the MIPS quality performance category based on the generally applicable MIPS reporting and scoring rules for the quality performance category. We also had proposed that the same extreme and uncontrollable circumstances policies that apply to other MIPS eligible clinicians with regard to the quality performance category also should apply to MIPS eligible clinicians participating in MIPS APMs who would report on MIPS quality measures as proposed. Therefore, beginning with the 2020 MIPS performance period/2022 MIPS payment year and only with regard to the quality performance category, we proposed to apply the application-based extreme and uncontrollable circumstances policy (82 FR 53780–53783) and the automatic extreme and uncontrollable circumstances policy (83 FR 59874–59875) that we previously established for other MIPS eligible clinicians and codified at § 414.1380(c)(2)(i)(A)(6) and (8), respectively, to MIPS eligible clinicians participating in MIPS APMs who are subject to the APM scoring standard and would report on MIPS quality measures as proposed in section III.J.3.c.(5)(c)(i) of the CY 2020 PFS proposed rule. We also proposed to limit the application of these policies to the quality performance category because the policy we then proposed and now are finalizing pertains to reporting on MIPS quality measures.

Under the previously established policies, MIPS eligible clinicians who are subject to extreme and uncontrollable circumstances may receive a zero percent weighting for the quality performance category in the final score (82 FR 53780–53783, 83 FR 59874–59875). Similar to the policy for MIPS eligible clinicians who qualify for a zero percent weighting of the Promoting Interoperability performance category (82 FR 53701 through 53702), we proposed that if a MIPS eligible clinician who qualifies for a zero percent weighting of the quality performance category in the final score is part of a TIN reporting at the TIN level that includes one or more MIPS eligible clinicians who do not qualify for a zero percent weighting, we would not apply the zero percent weighting to the qualifying MIPS eligible clinician. The TIN would still report on behalf of the entire group, although the TIN would not need to report data for the qualifying MIPS eligible clinician. All MIPS eligible clinicians in the TIN who

are participants in the MIPS APM would count towards the TIN's weight when calculating the aggregated APM Entity score for the quality performance category.

However, in this circumstance, if the MIPS eligible clinician is a solo practitioner and qualified for a zero percent weighting, or if the MIPS eligible clinician's TIN did not report at the group level and the MIPS eligible clinician is individually eligible for a zero percent weighting, or if all MIPS eligible clinicians in a TIN qualified for the zero percent weighting, neither the TIN nor the individual would be required to report on the quality performance category and would be assigned a weight of zero when calculating the APM Entity's quality performance category score.

If quality performance data were reported by or on behalf of one or more TIN/NPIs in an APM Entity group, a quality performance category score would be calculated for, and would be applied to, all MIPS eligible clinicians in the APM Entity group. If all MIPS eligible clinicians in all TINs of an APM Entity group qualify for a zero percent weighting of the quality performance category, the quality performance category would be weighted at zero percent of the MIPS final score.

We solicited comments from the public in this discussion of how best to address the technical infeasibility of scoring quality for many of our MIPS APMs, and whether the above described policy or some other approach may be an appropriate path forward for the APM entity group scoring standard in CY 2020.

Comment: Several commenters supported the greater uniformity within MIPS through this policy.

Response: We appreciate the commenters' support.

After consideration of public comments, we are finalizing the policy as proposed.

(F) Request for Comment on APM Scoring Beyond 2020

We also solicited comments on potential policies to potentially be included in future years' rulemaking to further address the changing statutory incentives for APM participation in coming years. We want the design of the APM scoring standard to continue to encourage appropriate shifts of MIPS eligible clinicians into MIPS APMs and Advanced APMs while ensuring fair treatment for all MIPS eligible clinicians.

We noted in the CY 2020 PFS proposed rule (84 FR 40787) and reiterate now that the QP threshold will

be increasing in future years, potentially resulting in larger proportions of Advanced APM participants being subject to MIPS under the APM scoring standard. At the same time the MIPS performance threshold will be increasing annually, gradually reducing the impact of the APM scoring standard on participants' ability to achieve a neutral or positive payment adjustment under MIPS.

We received public comments with general support for finding new ways to continue to reward APM participation without giving APM participants an undue advantage within MIPS, without specific support for or opposition to any potential approach discussed below. We continue to seek input from the stakeholder community as we continue to consider these and other policies that may be included in future rulemaking.

(aa) Sunsetting the APM Quality Reporting Credit for APM Entities

One approach we indicated we may consider beginning in the 2021 performance year would be to apply the APM Quality Reporting Credit described above, if finalized, to specific APM Entities for a maximum number of MIPS performance years; this may be set for all APMs or tied to the end of each APM's initial agreement period.

We discussed our belief that this approach would create an incentive for new APM Entity groups to continue to form and join new MIPS APMs while maintaining the incentive for APM Entity groups and MIPS eligible clinicians to continue to strive to achieve QP status.

(bb) Sunsetting the APM Quality Reporting Credit for Non-Advanced APMs

Similar to the first approach, we may consider an approach whereby we would implement the above approach to quality scoring and then phase out the APM Quality Reporting Credit for MIPS APMs that are not also Advanced APM.

We would have the option to implement this change by removing the APM Reporting Credit for non-Advanced MIPS APMs entirely at the end of a set number of years for all non-Advanced APMs (for example, 2 years).

Alternately, we could tie this sunsetting of the APM Quality Reporting Credit for a non-Advanced APM to the initial agreement period of each APM, creating a well-timed incentive for movement into APM tracks that are Advanced APMs after the initial agreement period after the start of the APM. This approach also would complement the shift we are seeing within APMs, such as the Shared

Savings Program, to require APM participants to move into two-sided risk tracks and Advanced APMs within 2 to 5 years of joining the model or program.

(cc) Sunsetting the APM Quality Reporting Credit for APM Entities in One-Sided Risk Tracks

One possible way of acknowledging the uncertainty involved with joining an APM without extending the APM Reporting Credit to all APM participants would be to retain the APM Quality Reporting Credit for all two-sided risk APM tracks but to remove this credit for participants in all one-sided risk tracks except for those APM Entities in the first 2 years—or first agreement period—of a MIPS APM.

We believe this approach would help ease the transition from MIPS to APM participation and ultimately into Advanced APM participation. However, this approach would continue to provide the APM Quality Reporting Credit for participants in two-sided risk APMs who have not reached the QP threshold. In this way, we could create an incentive for APM participants to move towards Advanced APMs, even in situations where it is unlikely the participant would be able to reach the QP threshold.

(dd) Retain Different APM Quality Reporting Credits for Advanced APMs and MIPS APMs

Another available option would be to apply an APM Reporting Credit, as described above to all MIPS APM participants but base the available credit on the level of risk taken on in the MIPS APM. For example, the maximum 50 percent credit may continue to be available to APM Entities in MIPS APMs that are Advanced APMs while the value of the credit may be limited to 25 percent for participants in MIPS APMs that are one-sided risk tracks, or otherwise not Advanced APMs. We solicited comments on how we might best divide these tracks and address the advent of two-sided risk MIPS APMs that do not meet the nominal amount and financial risk standards in order to be considered an Advanced APM, and what an appropriate reporting credit would be for these tracks.

(ee) Other Options

We solicited comments and suggestions on other ways in which we could modify the APM scoring standard to continue to encourage MIPS eligible clinicians to join APMs, with an emphasis on encouraging movement toward participation in two-sided risk APMs that may qualify as Advanced APMs.

(d) Excluding Virtual Groups From APM Entity Group Scoring

Due to concerns that virtual groups could be used to calculate APM Entity group scores, we have excluded virtual group MIPS scores when calculating APM Entity group scores. Previously, we have effectuated this exclusion through the use and application of terms defined in § 414.1305, specifically, “APM Entity,” “APM Entity group,” “group,” and “virtual group.” To improve clarity around the exclusion of virtual group scores in calculating APM Entity group scores, we proposed to effectuate this exclusion more explicitly, by amending § 414.1370(e)(2) to state that the score calculated for an APM Entity group, and subsequently the APM Entity, for purposes of the APM scoring standard does not include MIPS scores for virtual groups.

We did not receive any comments on this proposal. We are finalizing this policy as proposed.

(e) MIPS APM Performance Feedback

As we discussed in the CY 2017 and 2018 Quality Payment Program final rules (81 FR 77270, and 82 FR 53704 through 53705, respectively), MIPS eligible clinicians who are scored under the APM scoring standard will receive performance feedback under section 1848(q)(12) of the Act.

Regarding access to performance feedback, while split-TIN APM Entities and their participants can only access their performance feedback at the APM Entity group or individual MIPS eligible clinician level, MIPS eligible clinicians participating in the Shared Savings Program, which is a full-TIN APM, were able to access their performance feedback at the ACO participant TIN level for the 2017 performance period. However, due to confusion caused by the policy in cases, where not all eligible clinicians in a Shared Savings Program participant TIN received the APM Entity score, for example eligible clinicians that terminate before the first snapshot, we intend to better align treatment of Shared Savings Program ACOs and their participant TINs with other APM Entities and, where appropriate, with other MIPS groups. We will continue to allow ACO participant TIN level access to the APM Entity group level final score and performance feedback, as well as provide the APM Entity group level final score and performance feedback to individual MIPS eligible clinicians who bill through the TINs identified on the ACO's ACO participant list. However, we will also provide TIN level performance feedback to ACO

participant TINs that will include the information that is available to all TINs participating in MIPS, including the applicable final scores for MIPS eligible clinicians billing under the TIN, regardless of their MIPS APM participation status.

(f) Regulation Text

Due to a clerical error, the regulation text corresponding with the proposals discussed in section III.J.3.c.(5) of this final rule was omitted from the publication of the proposed rule. The proposals were discussed at length in the preamble where we solicited public comment. This preamble text included a detailed explanation of the proposed changes to the regulation text. The preamble text also cross-referenced the missing regulation text, such as page 84 FR 40786, such that the intent to codify the proposals would have been apparent to readers. We received several detailed public comments on our proposals. These comments indicate that readers accurately understood the proposed policy and our intent to codify it, and as discussed in section III.J.3.c.(5) of this final rule, were generally supportive of the proposal. As such, we are finalizing the proposed policies, as explained above, including amending § 414.1370(g)(1) accordingly.

d. MIPS Final Score Methodology**(1) Performance Category Scores****(a) Background**

For the 2022 MIPS payment year, we intend to continue to build on the scoring methodology we finalized for prior years, which allows for accountability and alignment across the performance categories and minimizes burden on MIPS eligible clinicians. The rationale for our scoring methodology continues to be grounded in the understanding that the MIPS scoring system has many components and various moving parts. As we transform MIPS through the MVP framework as discussed in section III.K.3.a. of this final rule, we may propose modifications to our scoring methodology in future rulemaking as we continue to develop a methodology that emphasizes simplicity and that is understandable for MIPS eligible clinicians.

In the CY 2020 PFS proposed rule (84 FR 40788 through 40792), we proposed policies to help eligible clinicians as they participate in the 2020 performance period/2022 MIPS payment year, and as we move beyond the transition years of the program.

(b) Scoring the Quality Performance Category for the Following Collection Types: Medicare Part B Claims Measures, eCQMs, MIPS CQMs, QCQR Measures, CMS Web Interface Measures, the CAHPS for MIPS Survey Measure and Administrative Claims Measures

We refer readers to § 414.1380(b)(1) for our policies regarding quality measure benchmarks, calculating total measure achievement and measure bonus points, calculating the quality performance category percent score, including achievement and improvement points, and the small practice bonus.

As we move towards the transformation of the program through the MVP Framework discussed in section III.K.3.a. of this final rule, we anticipate we will revisit and remove many of our scoring policies such as the 3-point floor, bonus points, and assigning points for measures that cannot be scored against a benchmark through future rulemaking. As we proposed to transform the MIPS program through the MVP framework, our goal was to incorporate ways to address these issues without developing special scoring policies. We refer readers to the 2020 PFS proposed rule (84 FR 40741 through 40742) for further discussion on scoring of MVPs.

In section III.K.3.d.(1) of this final rule, we discuss the limited proposals for our scoring policies as we anticipate future changes as we work to transform MIPS through the MVP framework. In the CY 2020 PFS proposed rule (84 FR 40788 through 40792), we proposed to: (1) Maintain the 3-point floor for measures that can be scored for performance; (2) develop benchmarks based on flat percentages in specific cases where we determine the measure's otherwise applicable benchmark could potentially incentivize inappropriate treatment; (3) continue the scoring policies for measures that do not meet the case-minimum requirement, do not have a benchmark, or do not meet the data-completeness criteria; (4) maintain the cap on measure bonus points for high-priority measures and end-to-end reporting; and (5) continue the improvement scoring policy. In addition, we requested comment on future approaches to scoring the CAHPS for MIPS survey measure if new questions are added to the survey.

(i) Assigning Quality Measure Achievement Points

We refer readers to § 414.1380(b)(1) for more on our policies for scoring performance on quality measures.

(A) Scoring Measures Based on Achievement

We established at § 414.1380(b)(1)(i) a global 3-point floor for each scored quality measure, as well as for the hospital readmission measure (if applicable). MIPS eligible clinicians receive between 3 and 10 measure achievement points for each submitted measure that can be reliably scored against a benchmark, which requires meeting the case minimum and data completeness requirements. In the CY 2017 Quality Payment Program final rule (81 FR 77282), we established that measures with a benchmark based on the performance period (rather than on the baseline period) would continue to receive between 3 and 10 measure achievement points for performance periods after the first transition year. For measures with benchmarks based on the baseline period, we stated that the 3-point floor was for the transition year and that we would revisit the 3-point floor in future years.

For the 2022 MIPS payment year, we proposed to again apply a 3-point floor for each measure that can be reliably scored against a benchmark based on the baseline period. As we move towards the MVP framework discussed in section III.K.3.a. of this final rule, we anticipate we will revisit and possibly remove the 3-point floor in future years. As a result, we will wait until there is further policy development under the MVP framework before proposing to remove the 3-point floor. Accordingly, we proposed to amend § 414.1380(b)(1)(i) to remove the years 2019, 2020, and 2021 and adding in its place the years 2019 through 2022 to provide that for the 2019 through 2022

MIPS payment years, MIPS eligible clinicians receive between 3 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340. The number of measure achievement points received for each measure is determined based on the applicable benchmark decile category and the percentile distribution. MIPS eligible clinicians receive zero measure achievement points for each measure required under § 414.1335 on which no data is submitted in accordance with § 414.1325. MIPS eligible clinicians that submit data in accordance with § 414.1325 on a greater number of measures than required under § 414.1335 are scored only on the required measures with the greatest number of measure achievement points. Beginning with the 2021 MIPS payment year, MIPS eligible clinicians that submit data in accordance with § 414.1325 on a single measure via multiple collection types are scored only on the data submission with the greatest number of measure achievement points.

We received public comments on our proposal to again apply a 3-point floor for each measure that can be reliably scored against a benchmark based on the baseline period. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported CMS' proposal to maintain

the 3-point floor for each measure that can be reliably scored against a benchmark based on the baseline period for the 2022 MIPS payment year because they believe the consistency makes it easier for clinicians to understand MIPS scoring complexities, improves workflow processes, offers a reasonable backstop for unpredictable performance, encourages program participation, and is critical for small and rural practices that have less resources and require more time to advance quality initiatives.

Response: We thank commenters for their support. As stated in the 2020 PFS proposed rule (84 FR 40788), as we move towards implementation of the MVP framework, we anticipate we will revisit the 3-point floor in future years since this scoring policy was intended to be temporary.

After consideration of the comments, we are finalizing our proposal for the MIPS 2022 payment year to again apply a 3-point floor for each measure that can be reliably scored against a benchmark based on the baseline period. We will amend § 414.1380(b)(1)(i) as proposed.

(B) Scoring Measures That Do Not Meet Case Minimum, Data Completeness, and Benchmark Requirements

We refer readers to § 414.1380(b)(1)(i)(A) and (B) for more on our scoring policies for a measure that is submitted but is unable to be scored because it does not meet the required case minimum, does not have a benchmark, or does not meet the data completeness requirement. A summary of the policies for the CY 2020 MIPS performance period is provided in Table 50.

TABLE 50: Quality Performance Category: Scoring Policies for the CY 2020 MIPS Performance Period*

Measure type	Description	Scoring rules
Class 1	For the 2020 MIPS performance period: Measures that can be scored based on performance. Measures that are submitted or calculated that meet all the following criteria: (1) Has a benchmark; (2) Has at least 20 cases; and (3) Meets the data completeness standard (generally 70 percent for 2020.)**	For the 2020 MIPS performance period: 3 to 10 points based on performance compared to the benchmark.
Class 2	For the 2020 MIPS performance period: Measures that are submitted and meet data completeness, but do not have either of the following: (1) A benchmark (2) At least 20 cases.	For the 2020 MIPS performance period: 3 points.
Class 3	For the 2020 MIPS performance period: Measures that are submitted, but do not meet data completeness threshold, even if they have a measure benchmark and/or meet the case minimum.	Beginning with the 2020 MIPS performance period: MIPS eligible clinicians other than small practices will receive zero measure achievement points. Small practices will continue to receive 3 points.

*The Class 2 and 3 measure scoring policies are not applicable to CMS Web Interface measures or administrative claims-based measures.

**We refer readers to section III.K.3.c.(1)(c) of this final rule for our policy to increase data completeness.

For the 2022 MIPS payment year, we proposed to again apply the special scoring policies for measures that meet the data completeness requirement but do not have a benchmark or meet the case minimum requirement.

Accordingly, we proposed to amend § 414.1380(b)(1)(i)(A)(1) to remove the years 2019, 2020, and 2021 and add in its place the years 2019 through 2022 to provide that except as provided in paragraph (b)(1)(i)(A)(2) (which relates to CMS Web Interface measures and administrative claims-based measures), for the 2019 through 2022 MIPS payment years, MIPS eligible clinicians receive 3 measure achievement points for each submitted measure that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement.

We received public comments on our proposal to again apply the special scoring policies for measures that meet the data completeness requirement, but do not have a benchmark or meet the case minimum requirement. The following is a summary of the comments we received and our responses.

Comment: One commenter supported our proposal to retain the 3-point floor for small practices who submit data, but do not meet the data completeness threshold.

Response: We appreciate the commenter's support. However, we stress that these policies are not meant to be permanent, and as clinicians continue to gain experience with the program, we will revisit the appropriateness of these policies in future rulemaking.

Comment: A few commenters recommended incentivizing clinicians to report on new measures and measures without benchmarks by eliminating the scoring cap for measures with no benchmarks and providing clear and prospective benchmarks for new measures so that benchmarking data can be gathered and used since providers have little control over CMS-established benchmarks. A few commenters noted that low reporting rates are not an indication of low value or non-meaningful measures and as scoring is designed now, clinicians must choose between submitting data on a less relevant measure, with the potential to

earn 10 points, or receiving the capped 3 points for submitting a relevant measure with no benchmark. A few commenters recommended that CMS include a bonus for submitting on new measures to incentivize the use and increase data collection.

Response: We recognize stakeholders' concerns regarding the assignment of 3 points to measures without a benchmark. We will take them into consideration in the future. As stated in the CY 2018 PFS final rule (82 FR 53729), we selected the 3-point cap because we did not want to provide more credit for reporting a measure that cannot be reliably scored against a benchmark than for measures for which we can measure performance against a benchmark. We remind commenters that we only apply the 3-point cap if we cannot create a benchmark for a measure. For many new measures, we do anticipate that a benchmark will be able to be created which will allow for up to 10 points. As we stated in the proposed rule (84 FR 40788), we envision that the progression of the MIPS program under the MVP framework will allow us to remove

some of the scoring complexity associated with the MIPS program. We anticipate that removing caps and bonuses could be part of this framework. As the program implementation continues, we want to ensure that our policies align with our goal of improving quality and decreasing burden. As such, we do not believe that eliminating or altering the finalized cap on the points available under the quality performance category for the 2022 MIPS payment year would support that goal.

After consideration of the comments, we are finalizing our proposal for the MIPS 2022 payment year to again apply the special scoring policies for measures that meet the data completeness requirement but do not have a benchmark or meet the case minimum requirement. We will amend § 414.1380(b)(1)(i)(A)(1) as proposed.

(C) Modifying Benchmarks To Avoid the Potential for Inappropriate Treatment

We established at § 414.1380(b)(1)(ii) that benchmarks will be based on collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period. We also established at § 414.1380(b)(1)(i) that the number of measure achievement points received for each such measure is determined based on the applicable benchmark decile category and the percentile distribution.

We believe all the measures in the MIPS program are of high standard as they have undergone extensive review prior to their inclusion in the program. MIPS measures go through the rulemaking process, and QCDR measures have an approval process before they are included in MIPS. We also believe our benchmarking generally provides an objective way to compare performance differences across different types of quality measures. However, we have heard concerns from stakeholders that for a few measures, the benchmark methodology may incentivize the inappropriate treatment of certain patients, in order for a clinician to achieve a score in the highest decile. Our scoring system already provides some protection from inappropriate treatment because all clinicians in the top 10 percent of the distribution receive the same 10-point score, thus a clinician with performance in the 90th percentile has no incentive to go higher. However, for certain measures with benchmarks set at very high or maximum performance in the top decile, we are concerned that these levels may not be representative and

may not provide the most appropriate incentives for clinicians. Specifically, there are some measures that may have the potential to encourage clinicians to alter the clinical interaction with patients inappropriately, regardless of the individual patient's circumstances, in order to achieve that top decile performance level, for example, intermediate outcome measures that may encourage clinicians to over treat patients in order to achieve the highest performance level. Patient safety is our primary concern; therefore, we proposed to establish benchmarks based on flat percentages in specific cases where we determine the measure's otherwise applicable benchmark can potentially incentivize treatment that can be inappropriate for a particular patient type (84 FR 40789 through 40790). Rather than develop benchmarks based on the distribution of scores we will base them on flat percentages such that any performance rate at or above 90 percent will be in the top decile and any performance rate above 80 percent will be in the second highest decile, and this will continue for the remaining deciles. We believe the measures that will fall under this methodology are high-priority or outcome measures for clinicians to focus on. However, we want to ensure that benchmarks are set to incentivize the most appropriate behavior, and ensure that our method for scoring against a benchmark accurately reflects performance and does not result in clinicians receiving low scores, despite adherence to the most appropriate treatment.

For the measures identified, we proposed to use a flat percentage, similar to how the Shared Savings Program uses flat percentages to set benchmarks for measures with high performance. We selected this methodology for the following reasons: First, it is a straight-forward and simple methodology that currently exists for some MIPS measures that are collected through the CMS Web Interface. Second, because we are applying this methodology to measures with very high performance, we believe this approach is consistent with the Shared Savings Program approach established at § 425.502(b)(2)(ii) of using flat percentages to set benchmarks when many reporters demonstrate high achievement on a measure. The Shared Savings Program uses this method to avoid penalizing high ACO performance; however, in this case, we will be applying the flat percentages to ensure that the benchmark does not result in inappropriate and potentially

harmful patient treatment. We believe this adjustment will provide additional protection to patients and reduce the potential incentive for inappropriate treatment of patients.

We proposed that to determine whether a measure benchmark may not provide the most appropriate incentives for treatment, thus creating the potential for inappropriate treatment based on the patient's circumstances, CMS medical officers will assess if there are patients for whom it would be inappropriate to achieve the outcome targeted by the measure benchmark. This assessment will include reviews of factors such as whether the measure specifications allow for clinical judgment to adjust for inappropriate outcomes, if the benchmarks for any of the impacted measure's collection types could put these patients at risk by setting a potentially harmful standard for top decile performance, or whether the measure is topped out. The intent of the assessment is to have CMS medical officers determine whether certain measure benchmarks may have unintended consequences that put patients at risk and the measure benchmark should therefore move to a flat percentage. The assessment will take into account all available information, including from the medical literature, published practice guidelines, and feedback from clinicians, groups, specialty societies, and the measure steward. Before applying the flat percentage benchmarking methodology to any recommended measure, we will propose the modified benchmark for the applicable MIPS payment year through rulemaking. This policy will be effective beginning with the CY 2020 MIPS performance period (and thus the 2022 MIPS payment adjustment year). We also solicited comment on future actions we should take to help us in determining which measures to apply the flat percentage benchmarking to; for example, convening a technical expert panel.

We have identified two measures for which we believe we need to apply benchmarks based on flat percentages to avoid potential inappropriate treatment—MIPS #1 (NQF 0059): Diabetes: Hemoglobin A1c (HbA1c) Poor Control >9% and MIPS #236 (NQF 0018): Controlling High Blood Pressure. Although there are protections built into both of these measures, such as the use of less stringent requirements than current clinical guidelines, they lack comprehensive denominator exclusions and risk-adjustment or risk-stratification, which can lead to the possible over treatment of patients in order to meet numerator compliance.

Overtreatment could lead to instances where the patient's blood sugar or blood pressure is lowered to a level that meets the measure standard but is too low for their optimum health given other coexisting medical conditions.

Because the factors for determining if a measure benchmark has the potential to cause inappropriate treatment may include both measure and benchmark considerations, we are concerned that all the benchmarks associated with the different collection types of a measure could be affected. Therefore, we proposed to use the flat percentage benchmarks as an alternative to our standard method of calculating benchmarks by a percentile distribution of measure performance rates under for all collection types where the top decile for any measure benchmark is higher than 90 percent under the performance-based benchmarking methodology at § 414.1380(b)(1)(ii) (84 FR 40790). We are limiting the application of the flat percentage methodology to all collection types where the top decile for any measure benchmark is higher than 90 percent so that our flat percentage methodology will actually reduce or remove the incentive for inappropriate care. If the top decile was originally below 90 percent, using the flat percentages would actually raise the level up to 90 percent, and therefore, provide a stronger incentive to provide inappropriate care in order to get the top score. We also solicited comment on whether we should use a criteria different than applying it to collection types where the top decile would be higher than 90 percent if the benchmark was based on a distribution. For the two measures we proposed to modify, we will not know which benchmarks and their associated collection types are impacted until we run our analysis; however, based on the benchmarks for the 2019 MIPS performance period, we anticipate using the modified benchmarks for the Medicare Part B claims and the MIPS CQM collection types.

We considered whether we should rerun the benchmarks excluding those in the top decile but are concerned that the approach will add complexity to the program overall. We solicited comment on whether we should consider different methodologies for the modified benchmarks such as excluding the top decile or increasing the required data completeness for the measure to a very high level (for example, 95 to 100 percent) and use performance period benchmarks rather than historical benchmarks.

We proposed to add paragraph § 414.1380(b)(1)(ii)(C) to state that

beginning with the 2022 MIPS payment year, for each measure that has a benchmark that CMS determines has the potential to result in inappropriate treatment, we will set benchmarks using a flat percentage for all collection types where the top decile is higher than 90 percent under the methodology at § 414.1380(b)(1)(ii). We also proposed to revise the text at § 414.1380(b)(1)(ii) to provide exceptions and to clarify the requirement that benchmarks will be based on performance by collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period.

We received public comments on our proposals to set benchmarks using a flat percentage for all collection types where the top decile is higher than 90 percent under the methodology if there are patients for whom it would be inappropriate to achieve the outcome targeted by the measure, and our proposal to apply the flat percentages to the following two measures: MIPS #1 (NQF 0059): Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9) and MIPS #236 (NQF #0018), Controlling High Blood Pressure. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposal to set benchmarks using a flat percentage for all collection types where the top decile is higher than 90 percent under the methodology if there are patients for whom it would be inappropriate to achieve the outcome targeted by the measure. One commenter supported our proposal to apply the flat percentages to the following measure: MIPS #236 (NQF #0018), Controlling High Blood Pressure, to avoid inappropriate treatment. This commenter expressed concern that a one-size-fits-all blood pressure goal of < 140/90 mm Hg may erroneously suggest to patients and their clinicians that their treatment is adequate if they reach this goal. Another commenter supported our proposal to propose any specific measures to which they would apply this methodology through formal rulemaking to allow for stakeholder input.

Response: We appreciate the commenters' support. We believe identifying these measures through rulemaking provides a transparent process for the public to provide feedback.

Comment: One commenter suggested that CMS apply flat percentage benchmarks to otherwise "topped out" patient safety measures that should

remain in the program due to their importance to patient safety.

Response: We intend to apply this policy to all measures with potential for inappropriate treatment based on the patient's circumstances. We believe it is important that we take a performance based approach to scoring, such that our benchmarks are based on a distribution of scores. We do not believe it would be appropriate to apply this standard broadly to a measure without this analysis. We recommend that stakeholders contact us through our service center if they have identified a measure that they believe would meet the requirements to apply flat percentage benchmarks so that we may consider it for future rulemaking. We may consider in future years revisiting flat percentage benchmarks as we transform MIPS through the implementation of the MVP framework discussed in section III.K.3.a. of this final rule. We also note that the measures that we selected to apply the flat percentage benchmarks to are not topped out for any of the collection types.

Comment: Several commenters recommended different methodologies that CMS could consider for the modified benchmarks. Several commenters encouraged CMS to use an approach where certain thresholds are determined based on expert opinion but interim values are informed by actual performance. Recognizing that this would be a more complex approach, these commenters believed that the thresholds should always be determined in part by data driven aspects such as peer performance and clinical evidence, in addition to manually fixed thresholds to ensure clinical relevance and fairness of measure benchmarks.

A few commenters encouraged CMS to use other methods of setting benchmarks, such as adding exclusions or risk stratifications to all measures, or reducing all benchmarks for all measures, including all collection types, by a certain percentage, an equivalent number of points. One commenter suggested that CMS consider developing benchmarks based on actual performance, with a cap based on rates for the highest performers and partial credit for achieving progress toward the target.

Response: We agree with commenters that using a data driven approach to benchmarks is preferred. While we received some information about the different methods, we do not believe we have sufficient information to conduct the analysis suggested for the measures we proposed to operationalize the alternatives for the 2020 MIPS

performance period. However, we are interested in working with stakeholders to better understand these alternative methods and would consider revising this policy through future rulemaking. Additionally, we plan to continue working with measure stewards to ensure the measures include appropriate exclusions or risk stratifications.

Comment: Several commenters did not support our proposal to set benchmarks using a flat percentage for all collection types where the top decile is higher than 90 percent under the methodology if there are patients for whom it would be inappropriate to achieve the outcome targeted by the measure. While commenters recognized the need for a specialized approach, they expressed concerns regarding the consequences of this approach. Specifically, one commenter expressed concern that the measures proposed for the application of the flat percentages are claims based measures and MIPS CQMs, and that the application of the flat benchmark may unfairly lower the bar for clinicians utilizing the claims-based and MIPS CQM versions of the measures, without providing the same adjustment to all collection types. Another commenter expressed concern that the approach would lead to inconsistent evaluation of clinicians, as clinicians would be compared to their peers on some measures, but compared on flat thresholds on other measures that are unrelated to peer performance.

Response: We recognize that not applying the same benchmarking methodology to all collection types may create some inconsistent evaluation between collection types for a single measure. On the other hand, we know there are differences in performance by data collection type, and we are concerned that if we apply this method to all collection types without regard to the collection type distribution, then we would harm those with top performance for certain collection types. Given this tension, we believe it is better to limit the benchmark proposal to those collection types where the top decile is 90 percent or higher. We also intend to apply this policy in very limited circumstances where there is a concern with incentives for inappropriate treatment. At this time, we are proceeding cautiously with this approach by limiting application of this policy to two measures and two collections types. We may revisit this policy through future rulemaking.

Comment: A few commenters did not support our proposal to apply the flat percentages to the following measures: MIPS #1 (NQF 0059): Diabetes:

Hemoglobin A1c (HbA1c) Poor Control (>9) and MIPS #236 (NQF #0018), Controlling High Blood Pressure. These commenters expressed concern that the approach would not address the issue of potential inappropriate care, inappropriate treatment is rare for these measures, and our approach could potentially discourage appropriate care. A few commenters suggested that addressing exclusions for these measures might solve the issue of potential inappropriate care. However, another commenter cautioned against an approach based on exclusions. This commenter expressed concern that exclusions would not address every possible circumstance for each measure, and that expanding exclusions may have the inverse consequence of having systems focus on documentation improvements instead of clinical quality improvements.

Response: For these two measures, we have heard concern from stakeholders that clinicians may feel pressure to meet the measures standards at a high level, which could result in inappropriate treatments in patients for whom the specified level of control of blood pressure or blood sugar may be different from the precise measure specifications. As long as the percent of these patients (those who may be at risk because they fall in this category) is less than 10 percent of the practice's eligible cases, our flat benchmark approach can completely remove any potential incentive to over-treat. While this approach would allow the same score (10 points) for any clinician who chose to lower their performance down to 90 percent from a higher level, we believe that the clinicians for whom this would be possible are already high performing clinicians who would not knowingly undertreat their patients. Regarding commenters' concerns around exclusions, the measure steward for these two measures has advised CMS of additional denominator exclusions for the 2022 MIPS payment year and future years. We refer readers to Appendix 1, Table Group D (Previously Finalized Quality Measures with Substantive Changes Finalized for the 2022 MIPS Payment Year and Future Years) for additional details regarding these changes to the measures. We plan to continue working with measure stewards to ensure the measures include appropriate exclusions or risk stratifications. Additionally, we will work with stakeholders to better understand alternative methods and we may revisit this policy through future rulemaking.

Comment: One commenter recommended that when CMS

determines a collection type for a measure where the top decile is higher than 90 percent under the methodology if there are patients for whom it would be inappropriate to achieve the outcome targeted by the measure, then CMS should either remove the measure from that specific collection type or modify the measure so that inappropriate actions do not count positively, or remove and replace the measure.

Response: As noted in the CY 2020 Quality Payment Program proposed rule (84 FR 40751) and referred to in section III.K.3.c.(1)(d)(iv) of this final rule, we have established a robust set of removal criteria for quality measures. We will continue to work with quality measure stewards on future modifications of the measures and may consider removing or replacing any measures through notice and comment rulemaking as appropriate. At this time, we believe that the flat percentage benchmarks will allow the measure to stay in the program without incentivizing inappropriate care. We did not propose that we would substantively change the measures from their original state, as would be done if we were to no longer count patients that meet the requirements of the numerator when performance is high, as suggested by the commenter. However, we may consider this approach and consider removal of collection types through future rulemaking. We encourage stakeholders to develop meaningful measures that promote the quality outcomes and interactions for patients, additional viable quality measures, and robust performance data.

After consideration of public comments, we are finalizing a policy to use the flat percentage benchmarks as an alternative to our standard method of calculating benchmarks by a percentile distribution of measure performance rates for all collection types where the top decile for any measure benchmark is higher than 90 percent and when CMS medical officers assess that there are patients for whom it would be inappropriate to achieve the outcome targeted by the measure benchmark. We will revise the text at § 414.1380(b)(1)(ii) as proposed and add paragraph § 414.1380(b)(1)(ii)(C) to state that beginning with the 2022 MIPS payment year, for each measure that has a benchmark that CMS determines has the potential to result in inappropriate treatment, we will set benchmarks using a flat percentage for all collection types where the top decile is higher than 90 percent under the methodology at § 414.1380(b)(1)(ii). We are also finalizing our proposal to apply the flat percentages to the following two

measures: MIPS #1 (NQF 0059): Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%) and MIPS #236 (NQF #0018): Controlling High Blood Pressure.

(ii) Request for Feedback on Additional Policies for Scoring the CAHPS for MIPS Survey Measure

We refer readers to § 414.1380(b)(1)(vii)(B) for more on our policy on reducing the total available measure achievement points for the quality performance category by 10 points for groups that submit 5 or fewer quality measures and register for the CAHPS for MIPS survey, but do not meet the minimum beneficiary sampling requirements.

In the CY 2020 PFS proposed rule (84 FR 40791), we did not propose any changes to the scoring of the CAHPS for MIPS survey measure. However, to the extent consistent with our authority to collect such information under section 1848(q) of the Act, we considered expanding the information collected in the CAHPS for MIPS survey measure, described in section III.K.3.c.(1) of this final rule, and solicited comment on scoring. One consideration is adding narrative questions to the CAHPS for MIPS survey measure, which would invite patients to respond to a series of questions in free text, such as responding to open ended questions and describing their experience with care in their own words. We believe narratives from patients about their health care experiences would be helpful to other patients when selecting a clinician and can provide a valuable complement to standardized survey scores, both to help clinicians understand what they can do to improve care and to engage and inform patients about differences among their experiences of care. On the other hand, there may be concerns about the accuracy and usefulness of narrative information reported by patients. For more information on the rationale for adding narrative questions, we refer readers to the CY 2020 PFS proposed rule (84 FR 40746 through 40747). In addition, we are interested in learning from organizations with experience scoring narrative information, including methodologies. We will work with stakeholders on user testing before proposing any such methodology in future rulemaking. We also considered adding an additional CAHPS for MIPS survey question allowing patients to provide a score for their overall experience and satisfaction rating with a recent health care encounter, to capture the patient “voice” and provide patients with information useful to making a decision on clinicians, as

detailed in the CY 2020 PFS proposed rule (84 FR 40744). We received feedback regarding how to score this measure and on new questions that could potentially be added to the calculation for a score for the CAHPS for MIPS survey measure. We will consider the feedback received for future notice and comment rulemaking.

(iii) Scoring for MIPS Eligible Clinicians That Do Not Meet Quality Performance Category Criteria

In the CY 2019 PFS final rule (83 FR 35950), we finalized our proposal to modify our validation process to provide that it only applies to MIPS CQMs and the claims collection type, regardless of the submitter type chosen.

In the CY 2020 PFS proposed rule (84 FR 40791), we did not propose any changes to this policy. However, we refer readers to section III.K.3.d.(2)(b)(ii)(A) of this final rule for discussion on the rare circumstances when we are unable to calculate a quality performance category score for a MIPS eligible clinician because they do not have applicable or available quality measures. If we are unable to score the quality performance category for a MIPS eligible clinician, then we will reweigh the clinician’s quality performance category score according to the reweighting policies described in sections III.K.3.d.(2)(b)(iii) of this final rule.

(iv) Incentives To Report High-Priority Measures

We refer readers to § 414.1380(b)(1)(v)(A) for more on the cap on high-priority measure bonus points for the first 3 years of MIPS at 10 percent of the denominator (total possible measure achievement points the MIPS eligible clinician could receive in the quality performance category) of the quality performance category.

In the CY 2019 PFS final rule (83 FR 59851), we finalized technical updates to § 414.1380(b)(1) to more clearly and concisely capture previously established policies in the section. During this effort we inadvertently added that a high priority measure must have a benchmark. This was not intended to be a policy change. We are clarifying that in order for a measure to qualify for high priority bonus points it must meet case minimum and data completeness and not have a zero percent performance. The measure does not need to have a benchmark. Accordingly, we proposed to revise § 414.1380(b)(1)(v)(A)(1)(i) to provide that each high priority measure must meet the case minimum requirement at paragraph (b)(1)(iii) of this section, meet the data completeness

requirement at § 414.1340, and have a performance rate that is greater than zero (84 FR 40791).

We also removed high priority bonus points for CMS Web interface reporters in the CY 2019 PFS final rule (83 FR 59850 through 59851). We refer readers to the CY 2019 PFS final rule for further discussion on this policy.

In the CY 2020 PFS proposed rule (84 FR 40791), we proposed to maintain the cap on measure points for reporting high priority measures for the 2022 MIPS payment year. Accordingly, we proposed to revise § 414.1380(b)(1)(v)(A)(1)(ii) to remove the years 2019, 2020, and 2021 and adding in its place the years 2019 through 2022 to provide that for the 2019 through 2022 MIPS payment years, the total measure bonus points for high priority measures cannot exceed 10 percent of the total available measure achievement points.

We received public comments on our proposal to clarify that a measure does not need to have a benchmark in order to qualify for high priority bonus points and our proposal to maintain the cap on measure points for reporting high priority measures for the 2022 MIPS payment year. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the high priority bonus and CMS’ proposal to maintain the cap on measure points for reporting high priority measures for the 2022 MIPS payment year. One commenter cited an example cap at 10 percent of the total available measure achievement points through 2022 and expressed its belief that these points are helpful to the reporting of outcome and high priority measures and also that the consistency of scoring policy assists with provider understanding and approval of the program. A few commenters recommended that CMS continue to incentivize reporting by awarding MIPS bonus points or cross-category credit.

One commenter recommended further incentivizing bonus points for high priority measures because in some cases MIPS CQMs score higher than QCDR measures without the bonus points.

Response: We appreciate the recommendations. We agree that continuing the scoring policy provides consistency and will take the recommendations into consideration in the future rulemaking as we move toward the implementation of the MVP framework. We believe that our current policy of capping the high-priority measure bonus at 10 percent of the denominator prevents incentivizing the reporting of additional measures over a

focus on performance in relevant clinical areas, and mask poor performance with higher bonus points.

After consideration of the comments, we are finalizing our proposal to clarify that a measure does not need to have a benchmark in order to qualify for high priority bonus points and our proposal to maintain the cap on measure points for reporting high priority measures for the 2022 MIPS payment year. We will revise § 414.1380(b)(1)(v)(A)(i) and (b)(1)(v)(A)(ii) as proposed.

(v) Incentives To Use CEHRT To Support Quality Performance Category Submissions

We refer readers to § 414.1380(b)(1)(v)(B) for more on our policy assigning one bonus point for each quality measure submitted with end-to-end electronic reporting, under certain criteria.

In the CY 2020 PFS proposed rule (84 FR 40791), we proposed to continue to assign and maintain the cap on measure bonus points for end-to-end electronic reporting for the 2022 MIPS payment year. We believe with the framework for transforming MIPS through the MVPs discussed in the 2020 PFS proposed rule (84 FR 40739), we can find ways in future years to incorporate eCQM measures without needing to incentivize end-to-end reporting with bonus points. As a result, we will wait until there is further policy development under the framework before proposing to remove our policy of assigning bonus points for end-to-end electronic reporting. Accordingly, we proposed to revise § 414.1380(b)(1)(v)(B)(1)(i) to remove the years 2019, 2020, and 2021 and add in its place the years 2019 through 2022 to provide that for the 2019 through 2022 MIPS payment years, the total measure bonus points for measures submitted with end-to-end electronic reporting cannot exceed 10 percent of the total available measure achievement points.

We received public comments on our proposal to continue to assign and maintain the cap on measure bonus points for end-to-end electronic reporting for the 2022 MIPS payment year. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposal to continue the end-to-end electronic reporting bonus points for providers utilizing electronic tools for MIPS reporting.

Response: We appreciate the commenters' support.

Comment: A few commenters opposed the proposal to maintain the 10 percent cap on end-to-end electronic reporting points. Some commenters

suggested that the MIPS scoring methodology should award credit across multiple MIPS performance categories and that continuing the cap on the bonus in the quality performance category would be counter to incentives to build capacity for digital data. A few commenters suggested that bonus points should be awarded in the PI performance category in addition to bonus points in the quality performance category.

Response: We appreciate commenters' concerns and will take their recommendations into consideration for the future. As we stated in the proposed rule (84 FR 40791), we envision that the progression of the MIPS program under the MVP framework will allow us to remove some of the scoring complexity associated with the MIPS program. We anticipate that removing bonuses would be part of this framework. As such, we do not believe that eliminating or altering the cap on the bonus points available under the quality performance category for the 2022 MIPS payment year would support that goal. We also understand the interest in being as flexible as possible in awarding clinicians for supporting the goals of the program such as reporting through end-to-end CEHRT. We will continue to consider the best ways to support this goal in future rulemaking.

After consideration of the comments, we are finalizing our proposal to continue to assign and maintain the cap on measure bonus points for end-to-end electronic reporting for the 2022 MIPS payment year. We will revise § 414.1380(b)(1)(v)(B)(1)(i) as proposed.

(vi) Improvement Scoring for the MIPS Quality Performance Category Percent Score

We refer readers to § 414.1380(b)(1)(vi)(C)(4) for more on our policy stating that for the 2020 and 2021 MIPS payment year, we will assume a quality performance category achievement percent score of 30 percent if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year.

In the CY 2020 PFS proposed rule (84 FR 40791 through 40792), we proposed to continue our previously established policy for the 2022 MIPS payment year and to revise § 414.1380(b)(1)(vi)(C)(4) to remove the phrase "2020 and 2021 MIPS payment year" and adding in its place the phrase "2019 through 2022 MIPS payment years" to provide that for the 2020 through 2022 MIPS payment years, we will assume a quality performance category achievement percent score of 30 percent if a MIPS

eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year. However, we misstated the replacement phrase, and clarify here that we will revise § 414.1380(b)(1)(vi)(C)(4) to remove the phrase "2020 and 2021 MIPS payment year" and add in its place the phrase "2020 through 2022 MIPS payment years". Specifically, for the 2022 MIPS payment year, we will compare the MIPS eligible clinician's quality performance category achievement percent score for the 2020 MIPS performance period to an assumed quality performance category achievement percent score of 30 percent if the MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent for the 2019 MIPS performance period.

The following is a summary of the comments we received and our responses.

Comment: One commenter supported CMS' proposal to assume the quality performance category achievement score equals 30 percent if MIPS eligible clinicians earned a quality performance category score less than or equal to 30 percent in the previous year.

Response: We thank the commenter for their support.

After consideration of the comments, we are finalizing our proposal to continue assume a quality performance category achievement percent score of 30 percent if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year. Consistent with our proposal, we will revise § 414.1380(b)(1)(vi)(C)(4) to remove the phrase "2020 and 2021 MIPS payment year" and add in its place the phrase "2020 through 2022 MIPS payment years".

(c) Facility-Based Measurement Scoring Option for the Quality and Cost Performance Categories for the 2022 MIPS Payment Year

(i) Background

For our previously established policies regarding the facility-based measurement scoring option, we refer readers to both the CY 2018 Quality Payment Program final rule (82 FR 53752 through 53767) and the CY 2019 PFS final rule (83 FR 59856 through 59867). In the CY 2019 PFS proposed rule (83 FR 35962 through 35963), we requested comments on a number of issues and topics related to whether we should expand the facility-based scoring option to other facilities and programs in future years, particularly the use of end-stage renal disease (ESRD) and post-

acute care (PAC) settings as the basis for facility-based measurement and scoring. We appreciate the many comments we received in response to this request. We did not propose an expansion to other facility types as part of this rule but may consider addressing this issue in future rulemaking.

(ii) Facility-Based Measurement Eligibility

In the CY 2019 PFS final rule (83 FR 59856 through 59860), we established the policies that determine eligibility for scoring for facility-based measurement as an individual and as a group. In the CY 2019 PFS final rule, we established at § 414.1380(e)(2)(i)(C) that a MIPS eligible clinician is facility-based if the clinician can be attributed, under the methodology specified in § 414.1380(e)(5), to a facility with a value-based purchasing score for the applicable period. While we did not propose any changes to the eligibility of facility-based measurement for individuals or groups, we proposed to amend § 414.1380(e)(2)(i)(C) to improve clarity (84 FR 40792). Specifically, we proposed to amend § 414.1380(e)(2)(i)(C) to state that a MIPS eligible clinician is facility-based if the clinician can be assigned, under the methodology specified in § 414.1380(e)(5), to a facility with a value-based purchasing score for the applicable period. We hope to avoid any ambiguity as we have used the term “attribute” and “attribution” in two ways. We have used the term to refer to the use of the facility’s performance in

place of the clinician’s own performance (83 FR 59857). We have also used the term at § 414.1380(e)(2)(i)(C) to reference our method of connecting clinicians to a facility and indicate that the facility score will be the clinician’s score. We believe these are related but distinct concepts; therefore, we proposed to revise § 414.1380(e)(2)(i)(C) to use the term “assign” instead of “attribute.” We believe this change in language more clearly describes how a clinician receives a score under facility-based measurement while avoiding making any changes to our methods in determining eligibility for facility-based measurement or their score. This does not constitute a change in policy.

We received public comments on our proposal to amend § 414.1380(e)(2)(i)(C) to state that a MIPS eligible clinician is facility-based if the clinician can be assigned, under the methodology specified in § 414.1380(e)(5), to a facility with a value-based purchasing score for the applicable period. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported our technical proposal which clarifies that a MIPS eligible clinician is facility-based if the clinician can be assigned to a facility, as opposed to saying attributed.

Response: We thank the commenter for their support.

After consideration of the public comments, we are finalizing our proposal to amend § 414.1380(e)(2)(i)(C) to state that a MIPS eligible clinician is

facility-based if the clinician can be assigned, under the methodology specified in § 414.1380(e)(5), to a facility with a value-based purchasing score for the applicable period.

(iii) Facility-Based Measures for CY 2020 MIPS Performance Period/2022 MIPS Payment Year

For informational purposes, we are providing in Table 51 a list of the measures included in the FY 2021 Hospital VBP Program measure set that will be used in determining the quality and cost performance category scores for the CY 2020 MIPS performance period/2022 MIPS payment year. The FY 2021 Hospital VBP Program has adopted 12 measures covering 4 domains (83 FR 20412 through 20413). The performance period for measures in the Hospital VBP Program varies depending on the measure, and some measures include multi-year performance periods. These measures are determined through separate rulemaking; the applicable rulemaking is usually the Hospital Inpatient Prospective Payment Systems (IPPS) for Acute Care Hospitals and the Long-Term Care Hospital (LTCH) Prospective Payment System (PPS) rule. We are using these measures, benchmarks, and performance periods for the purposes of facility-based measurement in accordance with § 414.1380(e)(1). The measures for FY 2021 Hospital VBP Program were summarized in the FY 2019 IPPS/LTCH PPS proposed rule (83 FR 41454 through 41455).

TABLE 51: FY 2021 Hospital VBP Program Measures

Short Name	Domain/Measure Name	NQF #	Performance Period
Person and Community Engagement Domain			
HCAHPS	Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) (including Care Transition Measure)	0166 (0228)	January 1, 2019-December 31, 2019
Clinical Outcomes Domain			
MORT-30-AMI	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Acute Myocardial Infarction (AMI) Hospitalization	0230	July 1, 2016-June 30, 2019
MORT-30-HF	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Heart Failure (HF) Hospitalization	0229	July 1, 2016-June 30, 2019
MORT-30-PN (updated cohort)	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Pneumonia Hospitalization.	0468	September 1, 2017-June 30, 2019
MORT-30-COPD	Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Chronic Obstructive Pulmonary Disease (COPD) Hospitalization.	1893	July 1, 2016-June 30, 2019
THA/TKA	Hospital-Level Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA)	1550	April 1, 2016-March 31, 2019
Safety Domain			
CAUTI	National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure.	0138	January 1, 2019-December 31, 2019
CLABSI	National Healthcare Safety Network (NHSN) Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure	0139	January 1, 2019-December 31, 2019
Colon and Abdominal Hysterectomy SSI	American College of Surgeons—Centers for Disease Control and Prevention (ACS—CDC) Harmonized Procedure Specific Surgical Site Infection (SSI) Outcome Measure.	0753	January 1, 2019-December 31, 2019
MRSA Bacteremia	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset Methicillin-resistant <i>Staphylococcus aureus</i> (MRSA) Bacteremia Outcome Measure	1716	January 1, 2019-December 31, 2019
CDI	National Healthcare Safety Network (NHSN) Facility-wide Inpatient Hospital-onset <i>Clostridium difficile</i> Infection (CDI) Outcome Measure	1717	January 1, 2019-December 31, 2019
Efficiency and Cost Reduction Domain			
MSPB	Payment-Standardized Medicare Spending Per Beneficiary (MSPB)	2158	January 1, 2019-December 31, 2019

(d) Scoring the Improvement Activities Performance Category

For our previously established policies regarding scoring the improvement activities performance category, we refer readers to § 414.1380(b)(3), the CY 2018 Quality Payment Program final rule (82 FR 53767 through 53769), and the CY 2019 PFS final rule (83 FR 59867 through 59868). We also refer readers to § 414.1355 and the CY 2017 Quality Payment Program final rule (81 FR 77177 through 77199), the CY 2018 Quality Payment Program final rule (82 FR 53648 through 53662), and the CY 2019 PFS final rule (83 FR 59776 through 59785) for our previously established policies regarding the improvement activities performance category generally and section

III.K.3.c.(3) of this final rule, where we discuss our final policies for the improvement activities performance category.

(e) Scoring the Promoting Interoperability Performance Category

We refer readers to section III.K.3.c.(4) of this final rule, where we discuss our final policies for the Promoting Interoperability performance category.

For our previously established policies regarding scoring the Promoting Interoperability performance category, we refer readers to § 414.1380(b)(4), the CY 2017 Quality Payment Program final rule (81 FR 77216–77227), the CY 2018 Quality Payment Program final rule (82 FR 53663 through 53670), and the CY 2019 PFS final rule (83 FR 59785 through 59796). We also refer readers to

§ 414.1375 and the CY 2017 Quality Payment Program final rule (81 FR 77199 through 77245), the CY 2018 Quality Payment Program final rule (82 FR 53663 through 53688), and the CY 2019 PFS final rule (83 FR 59785 through 59820) for our previously established policies regarding the Promoting Interoperability (formerly the advancing care information) performance category generally.

(2) Calculating the Final Score

For a description of the statutory basis and our policies for calculating the final score for MIPS eligible clinicians, we refer readers to § 414.1380(c) and the discussion in the CY 2017 Quality Payment Program final rule (81 FR 77319 through 77329), CY 2018 Quality Payment Program final rule (82 FR

53769 through 53785), and CY 2019 PFS final rule (83 FR 59868 through 59878). In the CY 2020 PFS proposed rule (84 FR 40793 through 40800), we proposed to continue the complex patient bonus for the 2022 MIPS payment year and proposed performance category reweighting policies for the 2022, 2023, and 2024 MIPS payment years. These proposals are discussed in more detail in this section of the final rule.

(a) Complex Patient Bonus for the 2022 MIPS Payment Year

In the CY 2019 PFS final rule (83 FR 59869 through 59870), under the authority in section 1848(q)(1)(G) of the Act, we finalized at § 414.1380(c)(3) to maintain the complex patient bonus, which we previously finalized in the CY 2018 Quality Payment Program final rule (82 FR 53771 through 53776), of up to five points to be added to the final score for the 2021 MIPS payment year. The complex patient bonus was developed as a short-term solution to address the impact patient complexity may have on MIPS scoring that we would revisit on an annual basis while we continue to work with stakeholders on methods to account for patient risk factors. Our overall goal for the complex patient bonus was twofold: (1) To protect access to care for complex patients and provide them with excellent care; and (2) to avoid placing MIPS eligible clinicians who care for complex patients at a potential disadvantage while we review the completed studies and research to address the underlying issues. For a detailed description of the complex patient bonus finalized for prior MIPS payment years, please refer to the CY 2018 Quality Payment Program final rule (82 FR 53771 through 53776) and CY 2019 PFS final rule (83 FR 59869 through 59870).

For the 2020 MIPS performance period/2022 MIPS payment year, we proposed (84 FR 40793) to continue the complex patient bonus as finalized for the 2019 MIPS performance period/2021 MIPS payment year and to revise § 414.1380(c)(3) to reflect this policy. In the CY 2020 PFS proposed rule (84 FR 40794), we noted that although we intended to maintain the complex patient bonus as a short-term solution, we did not believe we had sufficient information available to develop a long-term solution to account for patient risk factors in MIPS such that we would be able to include a different approach in the proposed rule. Section 1848(q)(1)(G) of the Act requires us to consider risk factors in our scoring methodology for MIPS. Specifically, it provides that the Secretary, on an ongoing basis, shall, as

the Secretary determines appropriate and based on individuals' health status and other risk factors, assess appropriate adjustments to quality measures, cost measures, and other measures used under MIPS and assess and implement appropriate adjustments to payment adjustments, final scores, scores for performance categories, or scores for measures or activities under MIPS. In doing so, the Secretary is required to take into account the relevant studies conducted by the Office of the Assistant Secretary for Planning and Evaluation (ASPE) under section 2(d) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185, enacted October 6, 2014) and, as appropriate, other information, including information collected before completion of such studies and recommendations. ASPE completed its first report¹¹⁶ in December 2016, which examined the effect of individuals' socioeconomic status on quality, resource use, and other measures under the Medicare program, and included analyses of the effects of Medicare's current value-based payment programs on providers serving socially at-risk beneficiaries and simulations of potential policy options to address these issues. In the CY 2020 PFS proposed rule (84 FR 40794), we noted the second ASPE report is expected in October 2019. At the time of publication of this final rule, the report has not been released. When the report becomes available, we intend to consider its recommendations for future rulemaking. At the time of publication of the CY 2020 PFS proposed rule, we did not believe additional data sources were available that would be feasible to use as the basis for a different approach to account for patient risk factors in MIPS. We plan to continue working with ASPE, the public, and other key stakeholders on this important issue to identify policy solutions that achieve the goals of attaining health equity for all beneficiaries and minimizing unintended consequences.

In the CY 2020 PFS proposed rule (84 FR 40794), we considered whether the data still support the complex patient bonus at the final score level. We replicated analyses similar to the ones presented in Table 27 of the CY 2018 Quality Payment Program final rule (82 FR 53776). These analyses used the data

¹¹⁶ U.S. Department of Health and Human Services, Office of the Assistant Secretary for Planning and Evaluation, Report to Congress: Social Risk Factors and Performance Under Medicare's Value-Based Purchasing Programs (2016). Available at <https://aspe.hhs.gov/pdf-report/report-congress-social-risk-factors-and-performance-under-medicare-value-based-purchasing-programs>.

submitted for the Quality Payment Program for the 2017 MIPS performance period and assessed eligibility and final scores based on the proposals we made for the 2020 MIPS performance period/2022 MIPS payment year using the methodology described in the Regulatory Impact Analysis in section VI. of the CY 2020 PFS proposed rule (84 FR 40898 through 40900).

Overall, the analysis of preliminary data referenced in the CY 2020 PFS proposed rule (84 FR 40793 through 40795) shows a consistent relationship between the dual eligible ratio quartiles and the average MIPS final scores only for individuals, where the average MIPS final score decreases as the quartile increases. We saw slight differences in the average HCC risk score and dual eligible ratio quartiles for groups, but virtually no difference for average HCC risk score for individuals. However, we had only 1 year of data and we noted more recent data may bring different results. In addition, at the time of publication of the proposed rule, we were awaiting a second report from ASPE in October 2019 that we expected would provide more direction for our approach to accounting for risk factors in MIPS. We were concerned that without the information from ASPE and without observing a clear trend that would require a change in our methodology, making any changes beyond our proposal to continue this policy would be premature.

We received public comments on our proposal to continue the complex patient bonus for one additional year. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposal to continue the complex patient bonus for the 2022 MIPS payment year. One commenter urged CMS to exercise caution in updating the complex patient bonus based on MIPS final scores from the 2017 MIPS performance period because these scores did not include cost measures and do not fully capture scoring variation based on clinical or social risk factors. The commenter also indicated that additional policy changes could impact MIPS final scores.

Response: We agree that scoring changes over the different MIPS payment years could impact MIPS final scores. We clarify that our analysis in the CY 2020 PFS proposed rule (84 FR 40793 through 40795) used data submitted for the 2017 performance period but estimated eligibility and final scores for the 2020 performance period by proxying a score using the methods described in the CY 2020 PFS proposed

rule (84 FR 40894 through 40901) to supplement the gap in data needed to estimate scores for the 2020 performance period. The additional data sources included the following cost measures: Total per capita cost measure performance based on the proposed revised measure using claims data from October 2016 through September 2017; and the proposed revised MSPB clinician measure and the 10 proposed episode-based measures based on claims data from January through December of 2017 (84 FR 40898). Therefore, the

estimates did include the cost measures that would apply for the 2020 performance period. The methodology in the Regulatory Impact Analysis of the CY 2020 PFS proposed rule (84 FR 40894 through 40901) also included the complex patient bonus from the 2018 performance period (84 FR 40899); however, we did not include that bonus in the final score used for this analysis because we wanted to assess the difference in final scores prior to the application of the complex patient bonus. This is consistent with our

original analysis when we proposed the complex patient bonus in the CY 2018 Quality Payment Program proposed rule (82 FR 30136).

We have updated this analysis with the most recent data in Table 52. Specifically, as described in section VII.F.10 of this final rule, we used data submitted for the 2018 MIPS performance period as an input to estimate the 2020 MIPS performance period final scores.

TABLE 52: MIPS Simulated Average Final Score * BY HCC and Dual Eligible Ratio Quartiles for Individuals with 6+ Measures and Groups**

	Individuals with 6+ Measures	Group
HCC Quartile		
Quartile 1 – Lowest Average HCC	74.21	76.10
Quartile 2	73.87	79.48
Quartile 3	74.24	77.83
Quartile 4 – Highest Average HCC	74.80	73.31
Dual Eligible Ratio		
Quartile 1- Low Proportion of Dual	74.99	76.64
Quartile 2	73.24	79.18
Quartile 3	74.43	76.86
Quartile 4 – Highest Proportion of Dual Status	73.61	74.35

* Estimated final score prior to the application of the complex patient bonus using the methodology described in section VII.F.10 of this final rule.

** We restricted our analysis to individuals who reported 6 or more measures because we wanted to look at differences in performance for those who reported the 6 measures which are generally required under MIPS if there are six measures that apply to the MIPS eligible clinician, rather than differences in scores due to MIPS eligible clinicians not fully reporting for MIPS.

The updated analysis reinforces findings from the analysis in the CY 2020 PFS proposed rule (84 FR 40795), again failing to find a consistent linear relationship between HCC quartiles and MIPS final scores, or dual eligible ratio quartiles and MIPS final scores. In the earlier analysis a consistent linear relationship was still found for MIPS final scores for individual reporters and dual eligible ratio quartiles. In the updated analysis, we did not observe a consistent linear relationship for any reporting type or complexity measure. For example, for groups, we estimate mean MIPS final scores to be higher for groups in the second quartile of dual eligible ratio or HCC quartile, than for groups in the first, lowest quartile. For individuals, mean MIPS final scores are estimated to be slightly higher for those with the highest average HCC, than for those with the lowest average HCC. It appears that other, unmeasured factors

in addition to HCC and dual eligible ratio may be impacting MIPS scores in the 2018 data. We do see differences from the top and bottom quartile in three of the four comparisons (individual-dual eligible quartiles, and in both group reporting comparisons), so we are intending to finalize as proposed. However, given the inconsistent findings, we intend to revisit the size and structure of the complex patient bonus through future rulemaking.

Comment: A few commenters pointed out perceived limitations in the use of the HCC risk score in calculating the complex patient bonus; specifically, they believed it does not fully capture factors that increase risk or complexity for many specialties. One commenter suggested that CMS identify new data sets and strategies to better represent clinical and social complexity. One commenter suggested that CMS use

geographic location as a proxy for social risk because geographic location is often associated with available resources and access to medical care.

Response: We thank the commenters for their suggestions and will take them into consideration as we consider options for updating the complex patient bonus in future years. We hope to be able to reference the ASPE report findings in future rulemaking. The complex patient bonus was intended to be a temporary solution while more permanent solutions were identified. We understand that both HCC risk scores and dual eligibility have some limitations as proxies for social risk factors. However, we are not aware of data sources for indicators such as income and education that are readily available for all Medicare beneficiaries that would be more complete indices of a patient’s complexity. Therefore, we have decided to pair the HCC risk score

with the proportion of dual eligible patients to create a more complete complex patient indicator than can be captured using HCC risk scores alone. We will evaluate additional options in future years based on any updated data or additional information to better account for social risk factors while minimizing unintended consequences and consider these as we move forward.

After consideration of public comments, we are finalizing our proposal for the 2020 MIPS performance period/2022 MIPS payment year, to continue the complex patient bonus as finalized for the 2019 MIPS performance period/2021 MIPS payment year, as well as our proposed revisions to § 414.1380(c)(3).

(b) Final Score Performance Category Weights

(i) General Weights

Section 1848(q)(5)(E)(i) of the Act specifies weights for the performance categories included in the MIPS final score: In general, 30 percent for the quality performance category; 30 percent for the cost performance category; 25 percent for the Promoting Interoperability performance category; and 15 percent for the improvement activities performance category. For more of the statutory background and descriptions of our current policies, we refer readers to the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77320 through 77329 and 82 FR 53779 through 53785, respectively), as well as the CY 2019 PFS final rule (83 FR 59870 through 59878). As finalized in section III.K.3.c.(2)(a) of this final rule, the cost performance category will make up 15 percent of a MIPS eligible clinician's final score for the 2022 MIPS payment year. As finalized in section III.K.3.c.(1)(b) of this final rule, the quality performance category will thus make up 45 percent of a MIPS eligible clinician's final score the 2022 MIPS payment year. As described in sections III.K.3.c.(2)(a) and III.K.3.c.(1)(b) of this final rule, we are not finalizing weights for the cost and quality performance categories for the 2023 and 2024 MIPS payment years. Table 53 summarizes the finalized weights for each performance category.

TABLE 53—WEIGHTS BY MIPS PERFORMANCE CATEGORY FOR THE 2022 MIPS PAYMENT YEAR

Performance category	2022 MIPS payment year (percent)
Quality	45

TABLE 53—WEIGHTS BY MIPS PERFORMANCE CATEGORY FOR THE 2022 MIPS PAYMENT YEAR—Continued

Performance category	2022 MIPS payment year (percent)
Cost	15
Improvement Activities	15
Promoting Interoperability	25

(ii) Flexibility for Weighting Performance Categories

Under section 1848(q)(5)(F) of the Act, if there are not sufficient measures and activities applicable and available to each type of MIPS eligible clinician involved, the Secretary shall assign different scoring weights (including a weight of zero) for each performance category based on the extent to which the category is applicable to the type of MIPS eligible clinician involved and for each measure and activity for each performance category based on the extent to which the measure or activity is applicable and available to the type of MIPS eligible clinician involved. Under section 1848(q)(5)(B)(i) of the Act, in the case of a MIPS eligible clinician who fails to report on an applicable measure or activity that is required to be reported by the clinician, the clinician must be treated as achieving the lowest potential score applicable to such measure or activity. In this scenario of failing to report, the MIPS eligible clinician generally would receive a score of zero for the measure or activity, which would contribute to the final score for that MIPS eligible clinician. Under certain circumstances, however, a MIPS eligible clinician who fails to report could be eligible for an assigned scoring weight of zero percent and a redistribution of the performance category weights. For a description of our existing policies for reweighting performance categories, please refer to § 414.1380(c)(2) and the CY 2019 PFS final rule (83 FR 59871 through 59876).

(A) Reweighting Performance Categories Due to Data That Are Inaccurate, Unusable, or Otherwise Compromised

In the proposed rule (84 FR 40796 through 40797), we discussed our belief that measures and activities may not be available to a MIPS eligible clinician for the quality, cost, and improvement activities performance categories under section 1848(q)(5)(F) of the Act when data related to the measures and activities are inaccurate, unusable or otherwise compromised due to circumstances that are outside of the control of the MIPS eligible clinician or

its agents. In addition, we discussed our belief that data that are inaccurate, unusable or otherwise compromised due to circumstances that are outside of the control of the MIPS eligible clinician or its agents could constitute a significant hardship for purposes of the Promoting Interoperability performance category under section 1848(o)(2)(D) of the Act. We proposed a new policy to allow reweighting for any performance category if, based on information we learn prior to the beginning of a MIPS payment year, we determine data for that performance category are inaccurate, unusable or otherwise compromised due to circumstances outside of the control of the MIPS eligible clinician or its agents. For more information on our reasons for this proposal, please refer to the proposed rule (84 FR 40796 through 40797).

For purposes of this reweighting policy, we proposed that reweighting would take into account both what control the clinician had directly over the circumstances and what control the clinician had indirectly through its agents. We intended the term agent to include any individual or entity, including a third party intermediary as described in § 414.1400, acting on behalf of or under the instruction of the MIPS eligible clinician. We solicited comments on this approach and possible alternatives for balancing efforts to allow reweighting in circumstances in which clinicians are not culpable for compromised data while maintaining financial incentives for clinicians, third party intermediaries and other parties to prevent and correct compromised data.

We proposed that our determination of whether reweighting will be applied under this policy could take into account any information known to the agency and we would consider the information we obtain on a case-by-case basis for reweighting. We anticipated considering information provided to us through routine communication channels for the Quality Payment Program by any submitter type as defined under § 414.1305, as well as other relevant information sources of which we are aware. We requested that third party intermediaries, to the extent feasible, inform MIPS eligible clinicians if the third party intermediary believes their data may have been compromised. To the extent third party intermediaries believe that MIPS data may be compromised, we encouraged them to provide us with a list of or other identifying information for all MIPS eligible clinicians who may have been affected by such issues, so that we may evaluate the circumstances in a timely

manner. We also encouraged MIPS eligible clinicians to contact us and self-identify if they believe they have compromised data; they should not rely solely on a third party intermediary to do so. We recognized that there may be scenarios when a MIPS eligible clinician or one or more of its agents becomes aware of potential data issues prior to submission of data. We solicited comment on whether and how our proposed reweighting policy should apply to these circumstances. We noted that compromised data are not true, accurate or complete for purposes of § 414.1390(b) or § 414.1400(a)(5) and knowing submission of compromised data may result in remedial action against the submitter. We noted that a MIPS eligible clinician should not submit data and should not allow the submission of his or her data if the MIPS eligible clinician knows that the data are inaccurate, unusable, or otherwise compromised.

We proposed to determine whether the requirements for reweighting are met by assessing if: (1) The MIPS eligible clinician's data are inaccurate, unusable, or otherwise compromised; and (2) the data are compromised due to circumstances outside of the control of the MIPS eligible clinician or agent. We would make the determination of whether the clinician's data are inaccurate, unusable or otherwise compromised based on documentation of the issue and its demonstrated effect on data of the particular MIPS eligible clinician. As noted above, we proposed to limit this policy to cases where data are compromised outside the control of the clinician or its agent because we do not want to create incentives for clinicians or third party intermediaries to knowingly submit compromised data and want to encourage clinicians and their agents to take reasonable efforts to correct data that they believe maybe not compromised. Factors relevant to whether the circumstances were outside the control of the clinician and its agents include: whether the affected MIPS eligible clinician or its agents knew or had reason to know of the issue; whether the affected MIPS eligible clinician or its agents attempted to correct the issue; and whether the issue caused the data submitted to be inaccurate or unusable for MIPS purposes. We solicited feedback on these factors and whether there are additional factors we should consider to determine if there should be reweighting based on compromised data. If we determine that a MIPS eligible clinician's data were compromised and the conditions for reweighting are met,

we proposed to notify the clinician of this determination through the performance feedback that we provide under section 1848(q)(12) of the Act if feasible, or through routine communication channels for the Quality Payment Program. We emphasized that the proposed reweighting policy is solely intended to mitigate the potential adverse financial impact of compromised data on the MIPS eligible clinician; a determination under this policy that data are compromised due to circumstances outside of the control of the MIPS eligible clinician and its agent, and therefore, that reweighting will occur for that clinician does not indicate and should not be interpreted to suggest that a third party intermediary or other individual or entity could not be held liable for the compromised data.

We proposed to apply reweighting only in cases when we learn of the compromised data before the beginning of the associated MIPS payment year because we want to encourage MIPS eligible clinicians and their agents to inform us of these concerns in a timely basis so we can update our data sets timely, while minimizing the impacts to other stakeholders who utilize MIPS data. For example, the Physician Compare website utilizes MIPS data to provide information to patients, consumers and other stakeholders when selecting a clinician or group. We noted our concern that without the appropriate incentive to notify us in a timely manner, clinicians and their agents may delay disclosures that data may be compromised and with these delays the MIPS data could be in an increased state of flux which will reduce the usefulness of the data to stakeholders. We were interested in feedback on whether there are other factors we should consider when adopting a timeline for reweighting due to compromised data and whether the period should be broader. We solicited comment on whether we should restrict our reweighting due to compromised data to instances when we learn the relevant information prior to the beginning of the MIPS payment year and whether there are other incentives for MIPS eligible clinicians to alert us to concerns about compromised data. We emphasized that if we determine a MIPS eligible clinician has submitted compromised data for a performance category during the associated payment year or at a later point, the MIPS eligible clinician would not qualify for reweighting under this proposal. Instead, for the performance categories with compromised data, the clinician's performance category score would be

zero and the scoring weight for the category would not be redistributed.

In summary, under the authority in sections 1848(q)(5)(F) and 1848(o)(2)(D) of the Act, we proposed at § 414.1380(c)(2)(i)(A)(9), and (c)(2)(i)(C)(10), beginning with the 2018 MIPS performance period and 2020 MIPS payment year, to reweight the performance categories for a MIPS eligible clinician who we determine has data for a performance category that are inaccurate, unusable or otherwise compromised due to circumstances outside of the control of the clinician or its agents if we learn the relevant information prior to the beginning of the associated MIPS payment year. In addition, we proposed to amend § 414.1380(c)(2)(i)(C) to ensure that the reweighting proposed at § 414.1380(c)(2)(i)(C)(10), would not be voided by the submission of data for the Promoting Interoperability performance category as is the case with other significant hardship exceptions. We solicited comment on this proposal and alternatives to potentially mitigate the impact on MIPS eligible clinicians who through no fault of their own have data in a performance category that are inaccurate, unusable or are otherwise compromised.

We received public comments on our proposal and alternatives to potentially mitigate the impact on MIPS eligible clinicians who through no fault of their own have data in a performance category that are inaccurate, unusable or are otherwise compromised. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposal to reweight MIPS eligible clinicians impacted by data that are inaccurate, unusable, or otherwise compromised. Commenters indicated that in instances when data are inaccurate, unusable, or otherwise compromised outside of the control of the MIPS eligible clinician, relief for the clinician is appropriate.

Response: We appreciate the commenters' support of our proposal.

Comment: One commenter supported our policy to apply reweighting beginning with the 2018 MIPS performance period and the 2020 MIPS payment year so that MIPS eligible clinicians impacted by circumstances during that year can be provided with relief.

Response: We appreciate the commenter's support. We believe it is important to apply this policy beginning with the 2018 performance period/2020 MIPS payment year in case any circumstances have occurred that impact this payment year that have been

recently discovered. MIPS eligible clinicians and third party intermediaries can alert CMS through the help desk at QPP@cms.hhs.gov regarding any data that they believe may be inaccurate, unusable or otherwise compromised.

Comment: One commenter supported our proposal that submission of data for the Promoting Interoperability performance category would not nullify reweighting under the proposed policy.

Response: We appreciate the commenter's support.

Comment: One commenter supported the proposal because the commenter believed it would promote competition among EHR vendors by removing a significant obstacle to switching vendors during performance periods.

Response: We thank the commenter for their support. However, we note that our goal for this proposal was to mitigate for MIPS eligible clinicians the potential adverse scoring impact of data that are inaccurate, unusable, or otherwise compromised, and we did not intend for the proposal to impact competition among vendors.

Comment: A few commenters provided suggestions for the types of circumstances where they believe actions by their third party intermediary could lead to data being inaccurate, unusable, or otherwise compromised outside of the control of the clinician or its agents. These include instances when the third party intermediary goes out of business, makes a data submission error, or experiences a loss of data (examples may include storage malfunction; or the vendor not capturing data appropriately, resulting in incorrect measure data).

Response: We believe that, depending on the specific circumstances and timing, these circumstances could be covered under this policy. We encourage MIPS eligible clinicians and their agents experiencing these types of circumstances to communicate with us as early as possible to provide details about the circumstances surrounding these events. We also note that, depending on the specific circumstances, we may determine that the conduct of the third party intermediary warrants taking remedial action or terminating the third party intermediary in accordance with § 414.1400(f).

Comment: One commenter expressed the belief that we should include circumstances under this policy where a third party intermediary experiences a cyberattack causing any of the following: loss of data, loss of access to data, inability to analyze data, inability to package data, inability to transmit data to CMS, or any other significant

obstacle to data collection or submission. The commenter also suggested this policy should include circumstances when a third party intermediary experiences an extreme and uncontrollable event, such as a natural disaster.

Response: We believe that our policy could apply in cases when a MIPS eligible clinician or their agent is impacted by a cyberattack that causes the eligible clinician's data to be inaccurate, unusable, or otherwise unusable. We clarify that this could apply even in cases where data are not able to be submitted as a result of the attack. We note that eligibility for reweighting would depend on the specific circumstances and timing, including the safeguards that were in place to prevent such attacks. We further emphasize that there is an expectation that third party intermediary take reasonable steps to prevent these attacks from occurring, and that, depending on the circumstances, CMS may determine that the conduct of the third party intermediary warrants taking remedial action or terminating the third party intermediary in accordance with § 414.1400(f). Finally, we agree with the commenter that our policy could apply in cases when a third intermediary experiences a natural disaster that causes the MIPS eligible clinician's data to be inaccurate, unusable, or otherwise unusable.

Comment: One commenter urged us to consider applying the proposed policy to scenarios where hospital-based clinicians are impacted by changes in hospital contracts that occur midway through the year. One example provided was when a hospital contract with a group ends, and the group may only have incomplete data from that hospital and may not be able to fully or accurately report. Another example provided was where a group begins a new contract with a hospital late in the year and may not be able to receive enough data from the new or prior hospital to fully and accurately report for MIPS.

Response: We believe that our policy could apply in cases where a clinician's data are rendered inaccurate, unusable, or otherwise compromised due to changes in hospital contracts that are outside the control of the clinician or its agents; however, in the examples provided it is not clear that the data issues associated with the contract changes would meet these criteria. In cases where MIPS eligible clinicians undergo transitions in hospital contracts, we encourage MIPS eligible clinicians to work with their contracting

hospital to obtain data, including in cases where the MIPS eligible clinician may terminate a contract or may initiate a new contract.

Comment: One commenter suggested that we ensure that the requirements for MIPS eligible clinicians to alert us of relevant information are not unduly burdensome. For instance, the commenter proposed that each MIPS eligible clinician associated with a single third party intermediary that has compromised its users' data should not be required to submit evidence to CMS that their data were impacted.

Response: We intend for our reweighting determinations to take into account information that we learn of from a variety of channels, including through various communication channels and through third party intermediaries. To the extent possible, when we learn of data that have been compromised and receive sufficient information to determine the conditions for reweighting have been met for a MIPS eligible clinician, we intend to provide reweighting without requiring any action on the part of the MIPS eligible clinician. However, there may be some circumstances under which we will be unable to reach a conclusion regarding reweighting unless the MIPS eligible clinician provides us with information. For example, if we become aware that a third party intermediary has a data integrity issue that has resulted in compromised data for some but not all of its customers, MIPS eligible clinicians could help us reach a determination regarding potential reweighting by providing us with information, such as their clinician identifiers (for example, TIN/NPI or other identifiers) and submission type, through the Quality Payment Program help desk.

Comment: A few commenters urged us to notify MIPS eligible clinicians as early as possible if the agency receives reports suggesting they may have compromised data and provide them with information to understand how they can correct the problem going forward. Commenters also suggested that we work with impacted MIPS eligible clinicians to identify alternative reporting options, if feasible.

Response: When we learn of circumstances that suggest MIPS data are inaccurate, unusable or otherwise compromised, we will aim to provide information to the MIPS eligible clinicians whose data may have been compromised on an ongoing and timely basis. In cases where the data concern is associated with a third party intermediary and the issue is identified prior to the data submission deadline,

we agree that it would be ideal for MIPS eligible clinicians to identify alternate arrangements if any that may allow them to submit uncompromised data. For example, in scenarios where the underlying source data are uncompromised a MIPS eligible clinician may be able to identify a new third party intermediary that may be able to utilize their source data.

Comment: One commenter indicated that we should not apply reweighting in cases when a MIPS eligible clinician knowingly submitted data that are inaccurate, unusable, or otherwise compromised.

Response: A MIPS eligible clinician who has submitted compromised data would receive a score of zero for the performance category. Eligible clinicians who unknowingly submitted compromised data, or were not able to submit data due to their data being compromised may be able to receive reweighting if the circumstances were outside their control. However, an eligible clinician who knowingly submits compromised data would not be eligible for reweighting because the submission of compromised data was within the clinician's control. In addition, we note that compromised data are not true, accurate, or complete for purposes of § 414.1390(b) or § 414.1400(a)(5), and knowing submission of compromised data may result in remedial action against the submitter.

Comment: One commenter requested clarification as to how we would determine what constitutes compromised data and whether the circumstances were outside the control of the MIPS eligible clinician.

Response: We appreciate the request for clarification. We intend to make this determination on a case-by-case basis based on information known to the agency.

Comment: One commenter suggested that we stipulate that we will not hold third party intermediaries who inform CMS of relevant circumstances liable under current fraud, waste, and abuse laws and regulations or current laws and regulations governing the certification of their products. The commenter pointed to policies elsewhere in HHS under which parties can limit their liability by self-disclosing prior misconduct as a potential guide for policy in MIPS. The commenter suggested a framework under which a health IT developer or third-party intermediary would not face liability in connection with compromised data if it discloses the issue to CMS and eligible clinicians in good faith.

Response: We intended for this policy to provide flexibility for MIPS eligible clinicians whose data are inaccurate, unusable, or otherwise compromised due to circumstances outside the control of clinicians and their agents. We did not develop this policy to hold harmless third party intermediaries or other agents for any role they play in data inaccuracies. CMS does not have authority to waive liability as it relates to fraud, waste, and abuse laws or to alter the certification requirements of health information technology. Furthermore, we plan to share information as appropriate with law enforcement and with ONC to the extent we learn of concerns involving CEHRT, as defined at § 414.1305. We also note that third party intermediaries that submit data that are inaccurate, unusable or otherwise compromised may be subject to remedial action or termination in accordance with § 414.1400(f).

Comment: One commenter suggested that CMS apply this policy when MIPS eligible clinicians or third party intermediaries become aware of relevant information prior to the end of the MIPS data submission period, because doing so would encourage MIPS eligible clinicians, health IT vendors, and third party intermediaries to inform CMS of relevant information in a timely manner. One commenter suggested that CMS consider the timing of the discovery of the compromised data when making a determination of whether to apply reweighting.

Response: We agree that MIPS eligible clinicians and third party intermediaries should alert CMS of relevant information in a timely manner. If a MIPS eligible clinician with compromised data requests reweighting under this policy, we would consider both the timing of when the clinician learned the data were compromised and the state of the data to determine whether reweighting is appropriate. We believe there may be some circumstances where a MIPS eligible clinician learns that their data is inaccurate, unusable, or otherwise compromised before the end of the data submission period and the source data is unaffected. In these instances, we believe the MIPS eligible clinician should explore alternatives and if possible submit data that are uncompromised.

Comment: One commenter supported our proposal to limit the policy to information we learn of prior to the beginning of the applicable MIPS payment year.

Response: We thank the commenter for their support of our proposal.

Comment: One commenter requested that we ensure the terms "any individual or entity" within the definition of "agent" for purposes of this policy include practice staff, billing vendors, practice vendors, consultants, chart abstractors, and the like because these entities are often the root cause of data errors or incomplete reporting.

Response: We proposed that the term agent include any individual or entity, including a third party intermediary as described in § 414.1400, acting on behalf of or under the instruction of the MIPS eligible clinician (84 FR 40796). In reviewing individual circumstances to determine if reweighting is warranted, we will consider the specific circumstances that led to data being inaccurate, unusable, or otherwise compromised and will consider whether individuals or entities involved in the data errors were working in a capacity within the control of the clinician and whether quality control processes should have been in place to prevent errors.

Comment: One commenter requested that we extend the policy into the payment year for instances when the MIPS eligible clinician learns about the data issue after receiving payment adjustments.

Response: We continue to believe it is appropriate to apply reweighting only in cases when we learn of the compromised data before the beginning of the associated MIPS payment year because we want to encourage MIPS eligible clinicians and their agents to inform us of these concerns in a timely manner so we can update our data sets timely, while minimizing the impacts to other stakeholders who utilize MIPS data.

After consideration of the comments we received, we are finalizing our proposal at § 414.1380(c)(2)(i)(A)(9) and (c)(2)(i)(C)(10) to, beginning with the 2018 MIPS performance period and 2020 MIPS payment year, reweight the performance categories for a MIPS eligible clinician we determine has data for a performance category that are inaccurate, unusable or otherwise compromised due to circumstances outside of the control of the clinician or its agents if we learn the relevant information prior to the beginning of the associated MIPS payment year. In addition, we are finalizing our proposed amendment to § 414.1380(c)(2)(i)(C) to ensure that the reweighting at § 414.1380(c)(2)(i)(C)(10) will not be voided by the submission of data for the Promoting Interoperability performance category.

We note that we previously finalized at § 414.1380(c) that if a MIPS eligible

clinician is scored on fewer than two performance categories, he or she will receive a final score equal to the performance threshold (81 FR 77326 through 77328 and 82 FR 53778 through 53779). Therefore, if a MIPS eligible clinician is scored on fewer than two performance categories as a result of reweighting due to compromised data, he or she would receive a final score equal to the performance threshold.

(iii) Redistributing Performance Category Weights

In the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77325 through 77329 and 82 FR 53783 through 53785, 53895 through 53900), in the CY 2019 PFS final rule (83 FR 59876 through 59878), and at § 414.1380(c)(2)(ii), we established policies for redistributing the weights of performance categories for the 2019, 2020, and 2021 MIPS payment years in the event that a scoring weight different from the generally applicable weight is assigned to a category or categories. Under these policies, we generally redistribute the weight of a performance category or categories to the quality performance category because of the experience MIPS eligible clinicians have had reporting on quality measures under other CMS programs.

In the CY 2020 PFS proposed rule (84 FR 40798), we discussed our belief that it would not be appropriate to redistribute weight from the other performance categories to the cost performance category for the 2022 MIPS payment year, except in scenarios in which the only other scored performance category is the improvement activities performance category. We noted that we had proposed substantial changes to the MSPB and total per capital cost measures, as well as adding 10 new episode-based measures (84 FR 40753 through 40762). We stated that we believed it is appropriate to provide MIPS eligible clinicians additional time to adjust to these changes prior to redistributing weight to the cost performance category. Under the proposals we made in the proposed

rule, as described in more detail below, we would begin to redistribute more weight to the cost performance category beginning with the 2023 MIPS payment year, because MIPS eligible clinicians will have had more experience being scored on cost measures at that point, and will have had time to adjust to the changes to existing measures and new episode-based measures that we proposed.

Beginning with the 2022 MIPS payment year, we proposed to not redistribute performance category weights to the improvement activities performance category in any scenario (84 FR 40798). For the improvement activities performance category, we are only assessing whether a MIPS eligible clinician completed certain activities (83 FR 59876 through 59878). Because MIPS eligible clinicians will have had several years of experience reporting under MIPS, we stated that we believe it is important to prioritize performance on measures that show a variation in performance, rather than the activities under the improvement activities performance category, which are based on attestation of completion. Therefore, we stated that we believe it is no longer appropriate to increase the weight of the improvement activities performance category above 15 percent under our redistribution policies. We noted that in situations where the weights of both the quality and Promoting Interoperability performance categories are redistributed, cost would be weighted at 85 percent and improvement activities would be weighted at 15 percent. We stated that we believe this would help to reduce incentives to not report measures for the quality performance category in circumstances when a clinician may be able to report but chooses not to do so. For example, when a clinician may be able to report on quality measures, but chooses not to report because they are located in an area affected by extreme and uncontrollable circumstances as identified by CMS and qualify for reweighting under § 414.1380(c)(2)(i)(A)(8).

For the 2022 MIPS payment year, we proposed at § 414.1380(c)(2)(ii)(D) similar redistribution policies to our policies finalized for the 2021 MIPS payment year (83 FR 59876 through 59878), with minor modifications, as shown in Table 54 (84 FR 40798). First, we adjusted our redistribution policies to account for a cost performance category weight of 20 percent for the 2022 MIPS payment year. We also proposed, in scenarios when the cost performance category weight is redistributed while the Promoting Interoperability performance category weight is not, to redistribute a portion of the cost performance category weight to the Promoting Interoperability performance category, as well as to the quality performance category. We stated that we believe this is appropriate given our current focus on working with the Office of the National Coordinator for Health IT (ONC) on implementation of the interoperability provisions of the 21st Century Cures Act (the Cures Act) (Pub. L. 115–233, enacted December 13, 2016) to ensure seamless but secure exchange of health information for clinicians and patients. While we have previously redistributed all of the cost performance category weight to the quality performance category (83 FR 59876 through 59878), we proposed to redistribute 15 percent to the quality performance category and 5 percent to the Promoting Interoperability performance category for the 2022 MIPS payment year (*see* Table 54). This proposed change would emphasize the importance of interoperability without overwhelming the contribution of the quality performance category to the final score. We also proposed to weight the improvement activities performance category at 15 percent and to weight the Promoting Interoperability performance category at 85 percent for the 2022 MIPS payment year when the quality and cost performance categories are each weighted at zero percent, to align with our focus on interoperability and pursuant to our proposal of not redistributing weight to the improvement activities performance category (84 FR 40798).

TABLE 54: Performance Category Redistribution Policies Proposed for the 2022 MIPS Payment Year

Reweighting Scenario	Quality	Cost	Improvement Activities	Promoting Interoperability
No Reweighting Needed				
- Scores for all four performance categories	40%	20%	15%	25%
Reweight One Performance Category				
-No Cost	55%	0%	15%	30%
-No Promoting Interoperability	65%	20%	15%	0%
-No Quality	0%	20%	15%	65%
-No Improvement Activities	55%	20%	0%	25%
Reweight Two Performance Categories				
-No Cost and no Promoting Interoperability	85%	0%	15%	0%
-No Cost and no Quality	0%	0%	15%	85%
-No Cost and no Improvement Activities	70%	0%	0%	30%
-No Promoting Interoperability and no Quality	0%	85%	15%	0%
-No Promoting Interoperability and no Improvement Activities	80%	20%	0%	0%
-No Quality and no Improvement Activities	0%	20%	0%	80%

We received public comments on our proposed redistribution policies for the 2022 MIPS payment year. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported our proposal to generally not redistribute weight to the cost performance category for the 2022 MIPS payment year.

Response: We appreciate the commenters' support. We are finalizing this policy with a minor modification, which is discussed in more detail below, to decrease the amount of weight redistributed to the cost performance category when the cost and improvement activities performance categories are the only performance categories scored.

Comment: Several commenters expressed concern with our proposal to no longer redistribute weight to the improvement activities performance category and in particular expressed concern when only cost and improvement activities performance categories are scored because cost would be 85 percent of the final score. Commenters also stated that it will not necessarily be a rare occurrence for a MIPS eligible clinician to be scored on only cost and improvement activities, and expressed concerns with the attribution methodologies used in cost measures. A few commenters expressed concerns about redistributing to the cost category due to issues with cost measures, such as attribution, reliability, and actionability.

Commenters further noted that cost measures are fairly new and even those with which they have had experience (TPCC and MSPB) were having major updates to their specifications. One commenter did not agree with our assertion that this policy would reduce incentives to not report measures for the quality performance category, but did not provide further details. One commenter stated that the Quality Payment Program should focus on performance categories that support quality improvement, such as the improvement activities performance category, rather than on the cost performance category, because quality improvement is so important for patient care.

Response: We agree with commenters that the improvement activities performance category reflects important aspects of quality improvement and performance. However, we do have concerns with redistributing a substantial portion of the performance category weights to the improvement activities performance category due to a lack of variability in performance for this category, and we continue to believe that we should not redistribute weight to the improvement activities performance category. However, we agree with commenters that a weight of 85 percent for the cost performance category is not appropriate for the 2022 MIPS payment year. As noted in section III.K.3.c.(2)(b) of this final rule, opportunities to improve performance in the cost performance category are

somewhat dependent on the performance feedback on cost measures we are able to provide. As we have provided detailed feedback on the cost measures for the first time during the 2019 performance period and expect to provide detailed feedback on new and revised cost measures for the first time during the 2020 performance period, we believe that we should not weight the cost performance category so heavily for the 2022 MIPS payment year. We believe that weighting the cost and improvement activities performance categories each at 50 percent would appropriately balance our concerns with redistributing weight to the improvement activities performance category and the concerns raised by commenters with a weight of 85 percent for the cost performance category.

Comment: One commenter stated that our current reweighting policies put undue emphasis on the quality performance category, and suggested that CMS redistribute weight evenly to the quality and improvement activities performance categories, especially for non-patient facing clinicians who may lack applicable measures and are spending valuable time performing quality improvement activities for the improvement activities performance category.

Response: Under our existing policies, we have generally redistributed weight to the quality performance category. The quality performance category is a critical component of value-based care, and therefore, we believe performance

on quality measures is important. In addition, there is variation in performance for the quality performance category, but for the improvement activities we are only assessing whether the MIPS eligible clinician completed activities. Finally, we believe that redistributing weight to the quality performance category would encourage MIPS eligible clinicians to report on quality measures as a zero score for this performance category would have more significant impact. However, over time, we want to redistribute more weight to the cost and Promoting Interoperability performance categories, and less to the quality performance category, to have better alignment between the cost and quality performance categories and due to our focus on interoperability. In general, we want to avoid redistributing weight to the improvement activities performance category because we

believe other performance categories can better identify variation in performance.

Comment: One commenter stated that it is appropriate to delay the redistribution of more weight to the Promoting Interoperability performance category while ONC and other stakeholders work to make functional interoperability a reality.

Response: We thank the commenter for sharing their concern, but we continue to believe it is appropriate to increase the amount of weight redistributed to the Promoting Interoperability performance category in order to align with our focus on interoperability.

After consideration of the comments we received, we are finalizing our redistribution policies for the 2022 MIPS payment year at § 414.1380(c)(2)(ii)(D) as proposed with

a few modifications. In sections III.K.3.c.(1)(b) and III.K.3.c.(2)(a) of this final rule, we are finalizing different generally applicable weights for the quality and cost performance categories, respectively, than what we proposed. For the 2022 MIPS payment year, we are finalizing a quality performance category weight of 45 percent (instead of 40 percent as proposed) and a cost performance category weight of 15 percent (instead of 20 percent as proposed). Accordingly, we are modifying the numerical amounts of weight that we will redistribute to account for these different weights for quality and cost, as shown in Table 55. In addition, in the scenario when only the improvement activities and cost performance categories are scored, we will provide a weight of 50 percent for each performance category, as shown in Table 55.

TABLE 55: Performance Category Redistribution Policies Finalized for the 2022 MIPS Payment Year

Reweighting Scenario	Quality	Cost	Improvement Activities	Promoting Interoperability
No Reweighting Needed				
- Scores for all four performance categories	45%	15%	15%	25%
Reweight One Performance Category				
-No Cost	55%	0%	15%	30%
-No Promoting Interoperability	70%	15%	15%	0%
-No Quality	0%	15%	15%	70%
-No Improvement Activities	60%	15%	0%	25%
Reweight Two Performance Categories				
-No Cost and no Promoting Interoperability	85%	0%	15%	0%
-No Cost and no Quality	0%	0%	15%	85%
-No Cost and no Improvement Activities	70%	0%	0%	30%
-No Promoting Interoperability and no Quality	0%	50%	50%	0%
-No Promoting Interoperability and no Improvement Activities	85%	15%	0%	0%
-No Quality and no Improvement Activities	0%	15%	0%	85%

In the CY 2020 PFS proposed rule, we proposed weights for the cost performance category of 25 and 30 percent for the 2023 and 2024 MIPS payment years, respectively (84 FR 40752 through 84 FR 40753). Because MIPS eligible clinicians will have had more experience being scored on cost measures, we stated that we believe it would be appropriate to begin redistributing even more of the performance category weights to the cost performance category beginning with the 2023 MIPS payment year.

While we proposed to redistribute weight to the cost performance category for the 2022 MIPS payment year in scenarios in which only the cost and improvement activities performance categories are scored, we stated that we believe that we should redistribute weight to the cost performance category in other scenarios beginning with the 2023 MIPS payment year. We stated that in general, we would redistribute performance category weights so that the quality and cost performance categories are almost equal. For

simplicity, we would redistribute the weight in 5-point increments. If the redistributed weight cannot be equally divided between quality and cost in 5-point increments, we would redistribute slightly more weight to quality than cost. We stated that we believe that redistributing weight equally to quality and cost is consistent with our goal of greater alignment between the quality and cost performance categories (84 FR 40797 through 40798). We stated that we would also continue to redistribute weight to the Promoting Interoperability

performance category, but we would ensure that if the quality and cost performance categories are scored, they would have a higher weight than the Promoting Interoperability performance category. For example, beginning with the 2024 MIPS payment year, if the improvement activities performance

category is the only performance category to be reweighted to zero percent, quality and cost would be 40 and 35 percent, respectively, and we would not increase the weight of the Promoting Interoperability performance category (weighted at 25 percent) so that it would not exceed the weight of the

quality or cost performance categories. Our proposed redistribution policies for the 2023 and 2024 MIPS payment years, which we proposed to codify at § 414.1380(c)(2)(ii)(E) and (F), are presented in Tables 56 and 57.

TABLE 56: Performance Category Redistribution Policies Proposed for the 2023 MIPS Payment Year

Reweighting Scenario	Quality	Cost	Improvement Activities	Promoting Interoperability
No Reweighting Needed				
- Scores for all four performance categories	35%	25%	15%	25%
Reweight One Performance Category				
-No Cost	55%	0%	15%	30%
-No Promoting Interoperability	50%	35%	15%	0%
-No Quality	0%	40%	15%	45%
-No Improvement Activities	45%	30%	0%	25%
Reweight Two Performance Categories				
-No Cost and no Promoting Interoperability	85%	0%	15%	0%
-No Cost and no Quality	0%	0%	15%	85%
-No Cost and no Improvement Activities	65%	0%	0%	35%
-No Promoting Interoperability and no Quality	0%	85%	15%	0%
-No Promoting Interoperability and no Improvement Activities	55%	45%	0%	0%
-No Quality and no Improvement Activities	0%	45%	0%	55%

TABLE 57: Performance Category Redistribution Policies Proposed for the 2024 MIPS Payment Year

Reweighting Scenario	Quality	Cost	Improvement Activities	Promoting Interoperability
No Reweighting Needed				
- Scores for all four performance categories	30%	30%	15%	25%
Reweight One Performance Category				
-No Cost	55%	0%	15%	30%
-No Promoting Interoperability	45%	40%	15%	0%
-No Quality	0%	45%	15%	40%
-No Improvement Activities	40%	35%	0%	25%
Reweight Two Performance Categories				
-No Cost and no Promoting Interoperability	85%	0%	15%	0%
-No Cost and no Quality	0%	0%	15%	85%
-No Cost and no Improvement Activities	60%	0%	0%	40%
-No Promoting Interoperability and no Quality	0%	85%	15%	0%
-No Promoting Interoperability and no Improvement Activities	50%	50%	0%	0%
-No Quality and no Improvement Activities	0%	60%	0%	40%

We received public comments on our proposed redistribution policies for the 2023 and 2024 MIPS payment years. The following is a summary of the comments we received and our responses.

Comment: Several commenters did not support our proposal to begin to redistribute weight to the cost performance category in any scenario. Commenters indicated that, as CMS adds more measures to the cost performance category, more measures will be in their first or second year of use. Furthermore, one commenter expressed concern that cost measures exclude Part D costs. Another commenter believed other performance categories have a stronger focus on care quality because they measure aspects of care improvement rather than resource use. Another commenter believed that MIPS eligible clinicians who receive reweighting for the promoting interoperability performance category are often in small and/or rural practices with limited resources, and increasing the weight of the cost performance category would place them at a greater disadvantage.

Response: As described in sections III.K.3.c.(1)(b) and III.K.3.c.(2)(a) of this final rule, we are not finalizing weights for the cost and quality performance categories for the 2023 and 2024 MIPS payment years. Instead, we have decided to maintain the weight of the cost performance category at 15 percent for the 2022 MIPS payment year and address its weight for the 2023 and 2024 MIPS payment years in future rulemaking. As a result, we have decided not to finalize redistribution policies for the 2023 and 2024 MIPS payment years because we have not established the generally applicable weights for these years. However, we will take these comments into consideration in future rulemaking.

After consideration of public comments, we are no longer finalizing performance category weights for the 2023 and 2024 MIPS payment years. Therefore, we are no longer finalizing weights for the cost and quality performance categories for the 2023 and 2024 MIPS payment years.

e. MIPS Payment Adjustments

(1) Background

For our previously established policies regarding the final score used in MIPS payment adjustment calculations, we refer readers to the CY 2019 PFS final rule (83 FR 59878 through 59894), CY 2018 Quality Payment Program final rule (82 FR 53785 through 53799) and CY 2017 Quality Payment Program final rule (81 FR 77329 through 77343).

In the CY 2020 PFS proposed rule (84 FR 40800 through 40804), we proposed to: (1) Set the performance threshold for the 2022 and 2023 MIPS payment years and (2) set the additional performance threshold for exceptional performance for the 2022 and 2023 MIPS payment years.

(2) Establishing the Performance Threshold

Under section 1848(q)(6)(D)(i) of the Act, for each year of MIPS, the Secretary shall compute a performance threshold with respect to which the final scores of MIPS eligible clinicians are compared for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act for a year. The performance threshold for a year must be either the mean or median (as selected by the Secretary, and which may be reassessed every 3 years) of the final scores for all MIPS eligible clinicians for a prior period specified by the Secretary.

Section 1848(q)(6)(D)(iii) of the Act includes a special rule for the initial 2 years of MIPS, which requires the

Secretary, prior to the performance period for such years, to establish a performance threshold for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act and an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors under section 1848(q)(6)(C) of the Act, each of which shall be based on a period prior to the performance period and take into account data available for performance on measures and activities that may be used under the performance categories and other factors determined appropriate by the Secretary. Section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 amended section 1848(q)(6)(D)(iii) of the Act to extend the special rule to apply for the initial 5 years of MIPS instead of only the initial 2 years of MIPS.

In addition, section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 added a new clause (iv) to section 1848(q)(6)(D) of the Act, which includes an additional special rule for the third, fourth, and fifth years of MIPS (the 2021 through 2023 MIPS payment years). This additional special rule provides, for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act, in addition to the requirements specified in section 1848(q)(6)(D)(iii) of the Act, the Secretary shall increase the performance threshold for each of the third, fourth, and fifth years to ensure a gradual and incremental transition to the performance threshold described in section 1848(q)(6)(D)(i) of the Act (as estimated by the Secretary) with respect to the sixth year (the 2024 MIPS payment year) to which the MIPS applies. The performance thresholds for the first 3 years of MIPS are presented in Table 58.

TABLE 58—PERFORMANCE THRESHOLDS FOR THE 2019 MIPS PAYMENT YEAR, 2020 MIPS PAYMENT YEAR, AND 2021 MIPS PAYMENT YEAR

	2019 MIPS payment year (points)	2020 MIPS payment year (points)	2021 MIPS payment year (points)
Performance Threshold	3	15	30

To determine a performance threshold to propose for the fourth year of MIPS (2020 MIPS performance period/2022 MIPS payment year) and the fifth year of MIPS (2021 MIPS performance period/2023 MIPS payment year), in the CY 2020 PFS proposed rule (84 FR 40801), we again relied upon the special rule in section 1848(q)(6)(D)(iii) of the

Act, as amended by 51003(a)(1)(D) of the Bipartisan Budget Act of 2018.

As required by section 1848(q)(6)(D)(iii) of the Act, we considered data available from a prior period with respect to performance on measures and activities that may be used under the MIPS performance categories. In accordance with clause

(iv) of section 1848(q)(6)(D) of the Act, we also considered which data could be used to estimate the performance threshold for the 2024 MIPS payment year to ensure a gradual and incremental transition from the performance threshold we would establish for the 2022 MIPS payment year. In accordance with section

1848(q)(6)(D)(i) of the Act, the performance threshold for the 2024 MIPS payment year will be either the mean or median of the final scores for all MIPS eligible clinicians for a prior period specified by the Secretary.

As noted in the CY 2020 PFS proposed rule (84 FR 40801), to estimate the performance threshold for the 2024 MIPS payment year, we considered the actual MIPS final scores for MIPS eligible clinicians for the 2019 MIPS payment year and the estimated MIPS final scores for the 2020 MIPS payment year and 2021 MIPS payment year. We analyzed the actual final scores for the first year of MIPS (the 2019 MIPS payment year) and found the mean final score was 74.01 points and the median final score was 88.97 points, as described in the CY 2019 PFS final rule (83 FR 59881). In the Regulatory Impact Analysis of the CY 2019 PFS final rule, we used data submitted for the first year of MIPS (2017 MIPS performance period/2019 MIPS payment year) and applied the scoring and eligibility policies for the third year of MIPS (2019 MIPS performance period/2021 MIPS payment year) to estimate the potential final scores for the 2021 MIPS payment year. The estimated mean final score for the 2021 MIPS payment year was 69.53 points and the median final score was 78.72 points (83 FR 60048). We also estimated mean and median final scores for the 2020 MIPS payment year of 80.3 points and 90.91 points, respectively, based on information in the Regulatory Impact Analysis in the CY 2018 Quality Payment Program final rule (82 FR 53926 through 53950). Specifically, we used 2015 and 2016 PQRS data, 2014 and 2015 CAHPS for PQRS data, 2014 and 2015 VM data, 2015 and 2016 Medicare and Medicaid EHR Incentive Program data, the data prepared to support the 2017 performance period initial determination of clinician and special status eligibility, the initial QP determination file for the 2019 MIPS payment year, the 2017 MIPS measure benchmarks, and other available data to model the final scores for clinicians estimated to be MIPS eligible in the 2020 MIPS payment year (82 FR 53930). In the CY 2020 PFS proposed rule, we considered using the actual final scores for the 2020 MIPS payment year; however, the data used to calculate the final scores was submitted through the

first quarter of 2019, and final scores for MIPS eligible clinicians were not available in time for us to use in our analyses for purposes of the proposed rule; we stated our intention to include those results in the final rule if available (84 FR 40801). We believed the data points based on actual data from the 2017 MIPS performance period/2019 MIPS payment year were appropriate to use in our analysis in projecting the estimated performance threshold for the 2024 MIPS payment year. However, we also noted that after we analyze the actual final scores for the 2020 MIPS payment year, if we see the mean or median final scores significantly increasing or decreasing, we will consider modifying our estimation of the performance threshold for the 2024 MIPS payment year accordingly. Table 51 of the CY 2020 PFS proposed rule summarized the different estimated performance thresholds for the 2024 MIPS payment year (84 FR 40802).

In the CY 2020 PFS proposed rule, we chose the mean final score of 74.01 points for the 2019 MIPS payment year as our estimate of the performance threshold for the 2024 MIPS payment year because it represents a mean based on actual data; is more representative of clinician performance because all final scores are considered in the calculation; is more achievable for clinicians, particularly for those that are new to MIPS; and is a value that falls generally in the middle of potential values for the performance threshold referenced in Table 51 in the CY 2020 PFS proposed rule (84 FR 40802). In the CY 2019 PFS proposed rule (83 FR 35972), we had requested comment on our approach to estimating the performance threshold for the 2024 MIPS payment year, which was based on the estimated mean final score for the 2019 MIPS payment year, and whether we should use the median instead of the mean. A summary of comments was included in CY 2020 PFS proposed rule (84 FR 40802).

We noted that estimating the performance threshold for the 2024 MIPS payment year based on the mean final score for the 2019 MIPS payment year is only an estimation that we are providing in accordance with section 1848(q)(6)(D)(iv) of the Act. We proposed to use data from the 2019 MIPS payment year because it was the only MIPS final score data available and

usable in time for the publication of the CY 2020 PFS proposed rule (84 FR 40802).

We anticipated that the mean and median data points for the 2020 MIPS payment year would be available for consideration prior to publication of the final rule and solicited comment on whether and how we should use this information to update our estimates.

Since the publication of the CY 2020 PFS proposed rule, we now have the actual final score data for the 2020 MIPS payment year with which to estimate the mean and median. We note these values are estimates and that the mean and median may change as we finish the targeted review process for the 2020 MIPS payment year. In addition, we anticipate that the scores of some MIPS eligible clinicians may change as a result of the policy that we are finalizing in section III.K.3.d.(2)(b)(ii)(A) of this final rule to reweight the performance categories for a MIPS eligible clinician due to compromised data. We estimate the mean of the actual final scores for the 2020 MIPS payment year at 86.91 points and the median at 99.63 points although, again, the values may change after the completion of targeted reviews and due to the reweighting policy for data that are inaccurate, unusable, or otherwise compromised. We noted in the CY 2020 PFS proposed rule (84 FR 40802) some policies which could increase final scores. For example, beginning with the 2020 MIPS payment year, we increased the low-volume threshold compared to the 2019 MIPS payment year. We also added incentives for improvement scoring for the quality performance category and bonuses for complex patients and small practices.

We refer readers to Table 59 for potential values for estimating the performance threshold for the 2024 MIPS payment year based on the mean or median final score from prior periods. We have updated this table from the CY 2020 PFS proposed rule (84 FR 40802) to include the actual final score data for the 2020 MIPS payment year. We have also updated this table to include an estimate of the mean and median for the 2022 MIPS payment year from our Regulatory Impact Analysis in section VII.F.10. of this final rule as this estimate incorporates the newly available data for the 2020 MIPS payment year.

TABLE 59—POTENTIAL VALUES FOR ESTIMATED PERFORMANCE THRESHOLD FOR THE 2024 MIPS PAYMENT YEAR BASED ON THE MEAN OR MEDIAN FINAL SCORE FOR THE 2019 MIPS PAYMENT YEAR, 2020 MIPS PAYMENT YEAR, 2021 MIPS PAYMENT YEAR, AND 2022 MIPS PAYMENT YEAR

	2019 MIPS payment year* (points)	2020 MIPS payment year** (points)	2021 MIPS payment year*** (points)	2022 MIPS payment year*** (points)
Mean Final Score	74.01	86.91	69.53	76.67
Median Final Score	88.97	99.63	78.72	83.57

* Mean and median final scores based on actual final scores for the 2019 MIPS payment year as published in CY 2019 PFS final rule RIA (83 FR 60048).

** Mean and median final scores based on actual final scores for the 2020 MIPS payment year. Mean and median may change after the completion of targeted reviews and due to the reweighting policy for data that are inaccurate, unusable, or otherwise compromised.

*** Mean and median final scores based on estimated final scores for the 2021 MIPS payment year as published in CY 2019 PFS final rule RIA (83 FR 60048) and the 2022 MIPS payment year as estimated in section VII. of this final rule.

We noted in the CY 2020 PFS proposed rule (84 FR 40801 through 40802) that we would analyze the actual final scores for the 2020 MIPS payment year, and because the data is now available and usable, we have updated our analyses. As illustrated in Table 59, we found the mean and median final scores for the 2020 MIPS payment year are higher than the values for the 2019 MIPS payment year and higher than our original estimate from the CY 2020 PFS proposed rule which had an estimated mean of 80.30 and median of 90.91 (84 FR 40802); however, we also estimated the final scores for the 2021 MIPS payment year will be lower than the values for both the 2019 and 2020 MIPS payment years.

In the CY 2020 PFS proposed rule (84 FR 40802), we noted that using final scores from the early years of MIPS has numerous limitations and may not be similar to the distribution of final scores for the 2024 MIPS payment year. Recognizing the limitations of data for the 2019 MIPS payment year and the 2020 MIPS payment year, we requested comments in the CY 2020 PFS proposed rule on whether we should update or modify our estimates (84 FR 40802).

We proposed a performance threshold of 45 points for the 2022 MIPS payment year and a performance threshold of 60 points for the 2023 MIPS payment year to be codified at § 414.1405(b)(7) and (8), respectively. A performance threshold of 45 points for the 2022 MIPS payment year and 60 points for the 2023 MIPS payment year would be an increase that is consistent with the increase in the performance threshold from the 2020 MIPS payment year (15 points) to the 2021 MIPS payment year (30 points), and we believe it would allow for a consistent increase over time that provides a gradual and incremental transition to the performance threshold we will establish for the 2024 MIPS payment year, which we estimated in

the CY 2020 PFS proposed rule (84 FR 40802) to be 74.01 points.

In the CY 2020 PFS proposed rule (84 FR 40802), we provided the example that if in future rulemaking we were to set the performance threshold for the 2024 MIPS payment year at 75 points (which is close to the mean final score for the 2019 MIPS payment year), this would represent an increase in the performance threshold of approximately 45 points from the 2021 MIPS payment year (that is, the difference from the Year 3 performance threshold of 30 points to a Year 6 performance threshold of 75 points). We stated that we believe an increase of approximately 15 points each year, from Year 3 through Year 6 of the MIPS program, would provide for a gradual and incremental transition toward a performance threshold that must be set at the mean or median final score for a prior period in Year 6 of the MIPS program (84 FR 40802).

We stated that we also believe this increase of 15 points per year could incentivize higher performance by MIPS eligible clinicians and that a performance threshold of 45 points for the 2022 MIPS payment year, and a performance threshold of 60 points for the 2023 MIPS payment year, represent a meaningful increase compared to 30 points for the 2021 MIPS payment year, while maintaining flexibility for MIPS eligible clinicians in the pathways available to achieve this performance threshold (84 FR 40802). In the CY 2020 PFS proposed rule (84 FR 40807 through 40809), we provided examples of the ways clinicians can meet or exceed the proposed performance threshold for the 2022 MIPS payment year.

We recognized that some MIPS eligible clinicians may not exceed the proposed performance thresholds either due to poor performance or by failing to report on an applicable measure or activity that is required (84 FR 40803).

We also recognized the unique challenges for small practices and rural clinicians that could prevent them from meeting or exceeding the proposed performance thresholds and sought feedback in the proposed rule on the participation of small and rural practices in MVPs (84 FR 40740).

We invited public comment on our proposals to set the performance threshold for the 2022 MIPS payment year at 45 points and to set the performance threshold for the 2023 MIPS payment year at 60 points. We also solicited comment on whether we should adopt a different performance threshold in this final rule if we determine that the actual mean or median final scores for the 2020 MIPS payment year are higher or lower than our estimated performance threshold for the 2024 MIPS payment year of 74.01 points. We anticipated the data will change over time and that the distribution of final scores will differ from one year to the next. We also solicited comment on whether the increase should be more gradual for the 2022 MIPS payment year, which would mean a lower performance threshold (for example, 35 instead of 45 points), or whether the increase should be steeper (for example, 50 points). We also solicited comment on alternative numerical values for the performance threshold for the 2022 MIPS payment year. For the 2023 MIPS payment year, we alternatively considered whether the performance threshold should be set at a lower or higher number, for example, 55 points or 65 points, and also solicited comment on alternative numerical values for the performance threshold for the 2023 MIPS payment year.

We received public comments on our proposals to set the performance threshold at 45 points for the 2022 MIPS payment year and at 60 points for the 2023 MIPS payment year. We also received public comments on whether the performance threshold for the 2022

MIPS payment year and the 2023 MIPS payment year should be higher or lower; whether we should adopt alternative numerical values for the performance threshold for the 2022 MIPS payment year and the 2023 MIPS payment year; and whether we should adopt a different performance threshold in this final rule if we determine that the actual mean or median final scores for the 2020 MIPS payment year are higher or lower than the 74.01 points estimated for the 2024 MIPS payment year.

The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposed performance thresholds. Several commenters believed that the higher performance thresholds are a reasonable and gradual increase; would encourage participation; motivate clinicians to improve health care quality; hold clinicians accountable for quality and cost; ensure the incentives are conveyed to those clinicians who are attaining the thresholds needed to continually provide high quality health care for all patients; and would benefit clinicians in the transition to value-based payment. One commenter indicated that the proposal should give more genuinely high-quality clinicians meaningful bonuses, which in the past have been small due to MIPS policies and budget neutrality requirements.

Response: We agree that MIPS should incentivize clinicians to perform at a high level and support their transition to value-based care and believe that raising the performance threshold helps accomplish that goal. In addition, as discussed in section III.K.3.e.(3) of this final rule, we are raising the additional performance threshold to recognize and incentivize clinicians that provide high value care.

Comment: A few commenters did not support the proposed performance threshold of 45 points for the 2022 MIPS payment year believing that current policies and clinician participation levels make it impossible for high performing clinicians to achieve the advertised positive adjustment and receive a meaningful incentive for participation in MIPS. One commenter also expressed concerns that MIPS reporting requires investments in technology, staffing, as well as adjustments to workflows to meet quality measure requirements throughout the year and that practices committed to quality care and performing at exceptional levels receive adjustments of less than two percent for reaching the highest levels of MIPS scoring. Another commenter stated that

the proposed performance thresholds and the low-volume threshold lead to an unsustainable distribution of scores.

Response: We recognize that, due to statutory requirements of budget neutrality and the application of a scaling factor, high performers may receive payment adjustments that are different than the applicable percent for the year provided in the statute (for example, 9 percent for the 2022 MIPS payment year). While a higher performance threshold may enlarge the estimated decrease in aggregate allowed charges resulting from the application of negative MIPS payment adjustment factors, and therefore, may increase the scaling factor, we believe the proposed performance thresholds of 45 points for the 2022 MIPS payment year and 60 points for the 2023 MIPS payment year would encourage movement toward value-based care with a focus on the delivery of high quality care for Medicare beneficiaries and provide a gradual and incremental transition to the estimated performance threshold for the 2024 MIPS payment year, as required by the statute. We also believe that the additional performance threshold for exceptional performance discussed later in section III.K.3.e.(3) of this final rule provides an additional financial incentive for high performers and will continue to incentivize their exceptional performance.

Comment: A few commenters did not support adopting a different performance threshold than the proposed performance thresholds of 45 points and 60 points, for the 2022 and 2023 MIPS payment years, respectively, if the actual mean or median final scores for the 2020 MIPS payment year are higher than the estimated performance threshold of 74.01 points for the 2024 MIPS payment year. One commenter recommended that the performance threshold should not increase even if the actual scores for the 2018 MIPS performance period are higher than expected. One commenter recommended lowering the performance threshold, or, alternatively, not increasing it and cited concern for small practices.

Response: We thank the commenters for their suggestions. Since the publication of the CY 2020 PFS proposed rule, the actual final score data for the 2020 MIPS payment year have become available and usable. For the 2020 MIPS payment year, the calculated mean and median of the actual final scores are 86.91 points and 99.63 points, respectively (although the mean and median may change after the completion of targeted reviews and due to the reweighting policy for data that

are inaccurate, unusable, or otherwise compromised). Those mean and median final scores are higher than our estimates of 80.30 for the mean and 90.91 for the median that we included in Table 51 of the CY 2020 PFS proposed rule (84 FR 40802). We noted in the CY 2020 PFS proposed rule (84 FR 40801) that after we analyze the actual final scores for the 2020 MIPS payment year, if the mean or median final scores are significantly higher or lower, we will consider modifying our estimation of the performance threshold for the 2024 MIPS payment year. In considering whether to modify our estimate of the performance threshold for the 2024 MIPS payment year, we took into account how the actual mean and median final scores for the 2019 and 2020 MIPS payment years align with the projected mean and median final scores for 2021 and 2022 MIPS payment years and considered the differences in the eligibility and scoring policies for the different MIPS payment years.

We note that our original estimates for the 2020 MIPS payment year were lower than the actual values for the 2020 MIPS payment year. The difference in actual versus estimated values for the 2020 MIPS payment year may be partially due to the data sources available for estimates at that time. The estimates for the 2020 MIPS payment year were created using data from legacy programs, such as the Physician Quality Reporting System (PQRS) and the Value Modifier and the models applied participation assumptions (82 FR 53926 through 53948). In contrast, the estimated final scores for the 2021 and 2022 MIPS payment years incorporate data that were submitted for MIPS. These estimates also have limitations and assumptions; however, we believe that using MIPS submission data provides a better approximation of potential MIPS participation and performance. Specifically, for the 2021 MIPS payment year, we estimated final scores using primarily data submitted for MIPS for the 2017 MIPS performance period, including data submitted for the quality, improvement activities, and Promoting Interoperability (which was called advancing care information for the 2017 MIPS performance period) performance categories. For the 2022 MIPS payment year, we updated the analysis to include information submitted for the 2018 MIPS performance period. In addition to using MIPS submission data, we integrated additional data sources: CAHPS for MIPS and CAHPS for ACOs, the total per capita cost measure, Medicare

Spending Per Beneficiary (MSPB) clinician measure, the episode-based measures and other data sets. For a complete description of the data sources and our methodology to estimate the 2021 MIPS payment year final scores, please refer to the Regulatory Impact Analysis in the CY 2019 PFS final rule (83 FR 60046 through 83 FR 60059). For a complete description of the data sources and methodology for the projected 2022 MIPS payment year final scores, please refer to the Regulatory Impact Analysis in section VII. of this final rule.

When we compare the actual mean and median scores from the 2019 and 2020 MIPS payment years to the projected mean and median scores for the 2021 and 2022 MIPS payment years (see Table 59), we see that the 2020 MIPS payment year mean final score of 86.91 is higher than the projected mean final scores for the 2021 and 2022 MIPS payment years (69.53 and 76.67, respectively). In contrast, the mean result for the 2019 MIPS payment year (74.01) falls between the projected means for the 2021 and 2022 MIPS payment years (69.53 and 76.67, respectively). The median actual values for both the 2019 and 2020 MIPS payment years are higher than the projected median values for the 2021 and 2022 MIPS payment years.

In addition to comparing the actual and estimated mean and median final scores across different payment years, we also considered the policy differences across the different MIPS payment years. We stated in the CY 2020 PFS proposed rule (84 FR 40802) that we understood using final scores from the early years of MIPS had numerous limitations. We also noted that the distribution of final scores for the 2024 MIPS year may be different from the early years due to eligibility and scoring policy changes. For example, beginning with the 2020 MIPS payment year, we increased the low-volume threshold compared to the 2019 MIPS payment year. We also added incentives for improvement scoring for the quality performance category and bonuses for complex patients and small practices, which could increase scores. Starting with the 2021 MIPS payment year, we modified our eligibility to include new clinician types and an opt-in policy, revised the small practice bonus, significantly revised the Promoting Interoperability performance category scoring methodology, and added a topped-out cap for certain topped out quality measures. In addition, the performance category weights changed each payment year which limits the comparability of the

actual mean or median final scores from either the 2019 or 2020 MIPS payment year to future payment year performance.

Given these concerns, and based on feedback from commenters, we have decided to take a conservative approach for estimating the 2024 MIPS payment year performance threshold. We believe the policy changes across MIPS payment years, in conjunction with the projected decrease in mean and median final scores from the 2020 MIPS payment year, justifies using the mean from the 2019 MIPS payment year (74.01 points) as the estimated performance threshold for the 2024 MIPS payment year. Despite differences in policies for the 2019 MIPS payment year compared to later MIPS payment years, this value is the lowest of all the actual mean final scores and falls between the projected mean final scores for the 2021 and 2022 MIPS payment year. If we increase our estimated performance threshold for the 2024 MIPS payment year based on the actual scores for the 2020 MIPS payment year (and accordingly increase the performance threshold for 2022 and 2023 MIPS payment years), then we may be forcing a transition that may not be gradual and incremental. As discussed further in our responses to comments, we are finalizing the performance thresholds for the 2022 and 2023 MIPS payment years as proposed, but we may revisit the performance threshold for the 2023 MIPS payment year in future rulemaking if we receive additional data that changes our estimate of the performance threshold for the 2024 MIPS payment year.

Comment: A few commenters expressed concerns with the use of data from the 2017 MIPS performance period and 2019 MIPS payment year to set the performance threshold at 45 points stating that data from the 2017 MIPS performance period is not an accurate representation of current actual performance because of policy changes to the MIPS program; is based on one year of data that is not indicative of performance in the future; and that the threshold is too high for small practices. Commenters recommended that CMS instead focus on ensuring stability and participation in MIPS.

Response: We appreciate the need to ensure relevant data are used to develop performance thresholds. As discussed in the previous response, we also agree that there are limitations with using final scores from the early years of MIPS (including the 2017 MIPS performance period which is associated with the 2019 MIPS payment year). We have considered all available data and found

that the mean of 74.01 points for the 2019 MIPS payment year is the lowest of the two actual mean scores available and is close to our projections for mean final scores for the 2021 and 2022 MIPS payment years illustrated in Table 59. Therefore, we believe that 74.01 points is an appropriate estimate for a performance threshold for the 2024 MIPS payment year. We also believe the proposed performance thresholds of 45 points and 60 points for the 2022 and 2023 MIPS payment years, respectively, are appropriate because they would represent a gradual and incremental transition to the estimated performance threshold for the 2024 MIPS payment year, as required by the statute. We may revisit the performance threshold for the 2023 MIPS payment year in future rulemaking if we determine there is additional data to suggest our estimate should be modified.

We acknowledge the concerns regarding the potential burden on small practices. There are special policies available for small practices such as the small practice bonus and special scoring for the improvement activities performance category, and the availability of customized technical assistance through the Small, Underserved, and Rural Support Initiative to assist clinicians in small practices. Finally, we note that we expect a majority of clinicians in all practice sizes will receive a positive payment adjustment if they participate in MIPS. As shown in Table 123 within the Quality Payment Program section of the Regulatory Impact Analysis in section VII. of this final rule, 92.5 percent of clinicians who participate in MIPS receive a neutral or positive payment adjustment.

Comment: A few commenters suggested that the performance threshold remain at 30 points to allow clinicians to adjust to changes with program requirements. Some commenters recommended that CMS rework incentives for participation instead of increasing the performance threshold and the possibility of a negative payment adjustment. Several commenters recommended a smaller increase in the performance threshold for the 2022 MIPS payment year. One commenter suggested an increase from 30 points to 35 points because this increase would be consistent with the size of the proposed increase in the additional performance threshold for exceptional performance. One commenter stated a lower performance threshold of score of 35 points would reduce the magnitude of payment adjustments and the consequences of penalties or bonuses. One commenter

recommended that the performance threshold for the 2022 MIPS payment year should increase to 40 points and that the increase for the 2023 MIPS payment year should be delayed, but did not provide reasons for that recommendation.

Response: We thank the commenters for their suggestions. However, we do not believe that keeping the performance threshold at 30 points or increasing the performance threshold by 5 or 10 points would as effectively incentivize the delivery of high quality care for the 2022 MIPS payment year. We also do not believe it would provide as much of a gradual and incremental transition to the estimated performance threshold for the 2024 MIPS payment year, which we have estimated in the proposed rule at 74.01 points and still believe is an appropriate estimate after consideration of available data referenced in Table 59. We note that 74.01 points is the lowest of the two actual mean scores available and is close to our projections for mean final scores for the 2021 and 2022 MIPS payment years. We believe our proposal is an appropriate increase of 15 points from the performance threshold of 30 points for the 2021 MIPS payment year that would encourage an increased focus on the delivery of high-quality care to be successful in MIPS and receive a neutral or positive payment adjustment. In addition, we note that the gap from 30 points to approximately 75 points is much larger than any potential increase to the additional performance threshold. We also believe that delaying an increase for the 2023 MIPS payment year does not support our efforts to help eligible clinicians plan for future performance requirements under MIPS. We also believe that it is beneficial for planning purposes that we finalize the performance threshold for the 2023 MIPS payment year; however, we may revisit the performance threshold for the 2023 MIPS payment year in future rulemaking if we receive additional data that would cause us to reconsider our estimate of the performance threshold for the 2024 MIPS payment year.

Comment: One commenter stated the performance threshold should increase to 50 points for the 2022 MIPS payment year based on the increased mean score for the 2020 MIPS payment year which was mentioned in a webinar.

Response: We believe that an increase of 15 points from the performance threshold of 30 points for the 2021 MIPS payment year is an appropriate increase to incentivize high clinician performance. As discussed earlier, we believe a conservative approach is

warranted for estimating the performance threshold for the 2024 MIPS payment year. Even though the actual mean score for the 2020 MIPS payment year is higher than we estimated, we do not believe that a higher actual mean score for the 2020 MIPS payment year warrants an increase to our proposed performance threshold for the 2022 MIPS payment year because we project the mean final scores for the 2021 MIPS payment year and the 2022 MIPS payment year to be lower than the mean final score for the 2020 MIPS payment. We also believe an increase to 50 points is too steep and that a performance threshold at 45 points for the 2022 MIPS payment year allows for a gradual and incremental transition to our estimated performance threshold for the 2024 MIPS payment year of 74.01 points.

Comment: Several commenters did not support our proposal of 45 points for the performance threshold for the 2022 MIPS payment year and stated that small and rural practices would be at a disadvantage to participate in MIPS compared to the larger groups. Some commenters recommended more bonus opportunities and developing a separate performance threshold for small and rural practices. One commenter stated that the increase in the performance threshold might lead to practice consolidation for small practices.

Response: We acknowledge the concerns of commenters regarding the potential impact on small practices. As discussed in a prior response, we have established special policies available for small practices to support their efforts to be successful in MIPS.

We also believe that different performance criteria for certain types of clinicians or practices may create more confusion and burden than a cohesive set of criteria; moreover, we are statutorily required to establish a single performance threshold for all MIPS eligible clinicians. We do not have data that would support the theory that increasing the performance threshold leads to the consolidation of small practices.

Comment: A few commenters did not support the increase in the performance threshold for the 2022 and 2023 MIPS payment years and stated it would have a negative impact on specialists. Some commenters noted this increase would make it difficult for pathologists, audiologists, physical therapists, ambulatory surgical center (ASC)-based and hospital-based MIPS eligible clinicians to meet the threshold due to a lack of quality measures for these practices. One commenter stated audiologists should be exempt from

negative payment adjustments. One commenter expressed concern that quality measurement reporting requirements could result in lower scores for some specialties. One commenter recommended an analysis of the distribution of overall scores by specialty and sub-specialty is needed to help address disadvantages and possible upcoming negative adjustments.

Response: We appreciate the unique challenges faced by MIPS eligible clinicians that are in specialty practices, including pathologists, audiologists, physical therapists, and ASC-based and hospital-based MIPS clinicians. We believe that there are multiple pathways for clinicians, including specialty practices, to meet or exceed the performance threshold and be successful in MIPS and refer to the examples discussed at section III.K.3.e.(4) of this final rule. We also note that there are policies that adjust the quality performance category scores to account for the number of available quality measures, such as data validation process discussed in the CY 2017 Quality Payment Program final rule (81 FR 77290 through 77291) and the CY 2019 PFS final rule (83 FR 35950), and to assess if clinicians have fewer than 6 measures available and applicable for the quality performance category.

Comment: Several commenters expressed concerns with increasing the proposed thresholds while proposing significant changes to the cost and Promoting Interoperability performance categories believing that clinicians would not have enough time to adjust to the changes and this could result in lower scores.

Response: We acknowledge the concerns submitted by the commenters. We recognize that some requirements and scoring policies in the MIPS program have changed from year to year, including from the 2021 MIPS payment year to the 2022 MIPS payment year, but we believe the proposed performance threshold of 45 points for the 2022 MIPS payment year and 60 points for the 2023 MIPS payment year are appropriate increases that encourage increased participation and engagement in the MIPS program and that incentivize clinicians to transition to value-based care. We also note that we have modified the weight of the cost performance category in response to comments; specifically, we maintain the weight of the cost performance category at 15 percent for 2022 MIPS payment year to allow clinicians to become more familiar with the performance feedback process and allow us to continue to improve feedback reports. We do not

believe the policy changes to the Promoting Interoperability performance category referenced in section III.K.3.c.(4) of this final rule would require additional time for clinicians to adjust in order to avoid a negative payment adjustment. We also believe there are multiple pathways to meeting or exceeding a performance threshold of 45 points and refer readers to examples discussed at section III.K.3.e.(4) of this final rule.

After consideration of public comments, we are finalizing our proposal to set the performance threshold at 45 points for the 2022 MIPS payment year and at 60 points for the 2023 MIPS payment year. We are codifying the performance threshold for the 2022 MIPS payment year at § 414.1405(b)(7) and codifying the performance threshold for the 2023 MIPS payment year at § 414.1405(b)(8).

(3) Additional Performance Threshold for Exceptional Performance

Section 1848(q)(6)(D)(ii) of the Act requires the Secretary to compute, for each year of the MIPS, an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors for exceptional performance under section 1848(q)(6)(C) of the Act. For each such year, the Secretary shall apply either of the following methods for computing the additional performance threshold:

- (1) The threshold shall be the score that is equal to the 25th percentile of the range of possible final scores above the performance threshold determined under section 1848(q)(6)(D)(i) of the Act;
- (2) the threshold shall be the score that is equal to the 25th percentile of the actual final scores for MIPS eligible clinicians with final scores at or above the performance threshold for the prior period described in section 1848(q)(6)(D)(i) of the Act.

Under section 1848(q)(6)(C) of the Act, a MIPS eligible clinician with a final score at or above the additional performance threshold will receive an additional MIPS payment adjustment factor and may share in the \$500 million of funding available for the year under section 1848(q)(6)(F)(iv) of the Act.

As we discussed in the CY 2020 PFS proposed rule (84 FR 40800 through 40803), we relied on the special rule under section 1848(q)(6)(D)(iii) of the Act to propose a performance threshold of 45 points for the 2022 MIPS payment year and to propose a performance threshold of 60 points for the 2023 MIPS payment year. The special rule under section 1848(q)(6)(D)(iii) of the Act also applies for purposes of establishing an additional performance threshold for a

year, for the initial 5 years of MIPS. For the 2022 MIPS payment year and the 2023 MIPS payment year, we proposed again to rely on the discretion afforded by the special rule and to decouple the additional performance threshold from the performance threshold.

For illustrative purposes, we considered what the numerical values would be for the additional performance threshold under one of the methods described in section 1848(q)(6)(D)(ii) of the Act: The 25th percentile of the range of possible final scores above the performance threshold. With a proposed performance threshold of 45 points, the range of total possible points above the performance threshold is 45.01 to 100 points and the 25th percentile of that range is 58.75, which is just more than one-half of the possible 100 points in the MIPS final score. We stated that we do not believe it would be appropriate to lower the additional performance threshold to 58.75 points because it is below the mean and median final scores for each of the prior performance periods that are referenced in Table 51 of the CY 2020 PFS proposed rule (84 FR 40802). Similarly, with a proposed performance threshold for the 2023 MIPS payment year of 60 points, the range of possible points above the performance threshold is 60.01 to 100 points and the 25th percentile of that range is 69.99 points. We stated that we do not believe it would be appropriate to lower the additional performance threshold to 69.99 points because it is below or close to the mean and median final scores for each of the prior performance periods that are referenced in Table 51 of the CY 2020 PFS proposed rule (84 FR 40802).

We relied on the special rule under section 1848(q)(6)(D)(iii) of the Act and proposed at § 414.1405(d)(6) to set the additional performance threshold for the 2022 MIPS payment year at 80 points and proposed at § 414.1405(d)(7) to set the additional performance threshold for the 2023 MIPS payment year at 85 points. These values are higher than the 25th percentile of the range of the possible final scores above the proposed performance threshold for the 2022 and 2023 MIPS payment years.

We originally proposed 80 points for the additional performance threshold for the 2021 MIPS payment year in the CY 2019 PFS proposed rule (83 FR 35973) although we finalized 75 points in the CY 2019 PFS final rule (83 FR 59886). In the CY 2019 PFS final rule, we noted the impact that policy changes for the 2021 MIPS payment year could have on final scores as clinicians are becoming familiar with these changes and noted our belief that 75 points was

appropriate for Year 3 of MIPS (83 FR 59883 through 59886). We also signaled our intent to increase the additional performance threshold in future rulemaking (83 FR 59886).

We stated that we believe that 80 points and 85 points are minimal and incremental increases over the additional performance threshold of 75 points for the 2021 MIPS payment year (84 FR 40803). We stated that we also believe it is appropriate to raise the bar on what is rewarded as exceptional performance for the 2022 and 2023 MIPS payment years and that increasing the additional performance threshold each year will encourage clinicians to increase their focus on value-based care and enhance the delivery of high quality care for Medicare beneficiaries (84 FR 40803).

An additional performance threshold of 80 points and 85 points would each require a MIPS eligible clinician to participate and perform well in multiple performance categories. Generally, under the performance category weights for the 2022 MIPS payment year proposed in the CY 2020 PFS proposed rule (84 FR 40795), a MIPS eligible clinician who is scored on all four performance categories could receive a maximum of 40 points towards the final score for the quality performance category or a maximum score of 65 points for participating in the quality performance category and Promoting Interoperability performance category, which are both below the proposed 80-point and 85-point additional performance thresholds. In addition, 80 points and 85 points are at a high enough level that MIPS eligible clinicians must submit data for the quality performance category to achieve this target. We stated that we believe setting the additional performance threshold at 80 points and 85 points could increase the incentive for exceptional performance while keeping the focus on quality performance (84 FR 40802).

We noted that under section 1848(q)(6)(F)(iv) of the Act, funding is available for additional MIPS payment adjustment factors under section 1848(q)(6)(C) of the Act only through the 2024 MIPS payment year, which is the sixth year of the MIPS program (84 FR 40804). We stated that we believe it is appropriate to further incentivize clinicians whose performance meets or exceeds the additional performance threshold for the fourth and fifth years of the MIPS program (84 FR 40804). We recognized that setting a higher additional performance threshold may result in fewer clinicians receiving additional MIPS payment adjustments

(84 FR 40804). We also noted that a higher additional performance threshold could increase the maximum additional MIPS payment adjustment that a MIPS eligible clinician potentially receives if the funds available (up to \$500 million for each year) are distributed over fewer clinicians that have final scores at or above the higher additional performance threshold (84 FR 40804).

We invited public comment on our proposals to set the additional performance threshold at 80 points for the 2022 MIPS payment year and at 85 points for the 2023 MIPS payment year. Alternatively, for the 2022 MIPS payment year, we considered whether the additional performance threshold should remain at 75 points or be set at a higher number, for example, 85 points, and also solicited comment on alternative numerical values for the additional performance threshold for the 2022 MIPS payment year. We referred readers to the RIA in the CY 2020 PFS proposed rule (84 FR 40911) for the estimated maximum payment adjustments when the additional performance threshold is set at 80 points and at 85 points, respectively, for the 2022 MIPS payment year.

Alternatively, for the 2023 MIPS payment year, we also considered whether the additional performance threshold should remain at 80 points as proposed for the 2022 MIPS payment year or whether a different numerical value should be adopted for the 2023 MIPS payment year, and also solicited comment on alternative numerical values for the additional performance threshold for the 2023 MIPS payment year. Additionally, in the event that we adopt different numerical values for the performance threshold in the final rule than proposed in the CY 2020 PFS proposed rule (84 FR 40800 through 40803), we solicited comment on whether we should adopt different numerical values for the additional performance threshold and how we should set those values. We also solicited comment on how the distribution of the additional MIPS payment adjustments across MIPS eligible clinicians may impact exceptional performance by clinicians participating in MIPS. For example, the distribution of the additional MIPS payment adjustments could result in a higher additional MIPS payment adjustment available to fewer clinicians or could result in a lower additional MIPS payment adjustment available to a larger number of clinicians. We also reminded readers that we anticipate the data will change over time and that the distribution of final scores will differ from one year to the next.

We received public comments on our proposals to set the additional performance threshold at 80 points for the 2022 MIPS payment year and at 85 points for the 2023 MIPS payment year. We also received public comments on alternative numerical values for the additional performance threshold for the 2022 MIPS payment year.

We also received public comments on alternative numerical values for the additional performance threshold for the 2023 MIPS payment year, whether we should adopt different numerical values for the additional performance threshold and how we should set those values, and how the distribution of the additional MIPS payment adjustments across MIPS eligible clinicians may impact exceptional performance by clinicians participating in MIPS.

The following is a summary of the comments we received and our responses.

Comment: One commenter did not support the proposed additional performance threshold for the 2022 MIPS payment year and stated the additional performance threshold should be 85 points based on the increased mean score for 2020 MIPS payment year. Another commenter expressed concerns that clinicians who have invested in their practices to meet quality measure requirements and are performing at exceptional levels receive low payment adjustments of less than 2 percent for reaching the highest levels of MIPS scoring.

Response: We appreciate the investments made by clinicians to make improvements in their clinical practice and their efforts to transition to value-based care in the Medicare program. We note that a higher additional performance threshold could increase the maximum additional payment adjustment that a MIPS eligible clinician could potentially receive if the funds available (up to \$500 million for the year) are distributed over fewer clinicians that score at or above the higher additional performance threshold. We appreciate the commenter's suggestion of 85 points for the additional performance threshold for the 2022 MIPS payment year.

We believe it is important to incentivize exceptional performance in MIPS and will increase the additional performance threshold from our proposal for the 2022 MIPS payment year of 80 points to 85 points. This adjustment would raise the bar on exceptional performance and provide an appropriate financial incentive for high performers.

As discussed in section VII.F.10 of the Regulatory Impact Analysis in this final

rule, we estimate that the number of MIPS eligible clinicians receiving an additional payment adjustment with the additional performance threshold at 80 points and 85 points is 533,069 and 390,354 MIPS eligible clinicians, respectively. We found that increasing the additional performance threshold to 85 points rather than 80 points leads to a decrease in the number of MIPS eligible clinicians that would receive an additional payment adjustment by 142,715 clinicians. The estimated 390,354 MIPS eligible clinicians expected to receive the additional payment adjustment when the additional performance threshold is set at 85 points is about 44 percent of the MIPS eligible population compared to 61 percent of the MIPS eligible population when the additional performance threshold is set at 80 points. We also estimate that the maximum payment adjustment (for a MIPS eligible clinician with a final score of 100 points) would increase from 4.5 to 6.2 percent. However, this projection is only an estimate and may change based on the distribution of actual final scores for clinicians with final scores at or higher than the additional performance threshold and the associated Medicare payments. Given this analysis, we believe that increasing the additional performance threshold to 85 points for the 2022 MIPS payment year would provide an appropriate incentive for exceptional clinician performance.

We also note that the funding for the additional payment adjustment ends with the 2024 MIPS payment year and believe the additional performance threshold should be set at a number that encourages the transition to value-based care.

For the reasons discussed above, we believe 85 points is appropriate for the additional performance threshold for the 2022 MIPS payment year; therefore, we will finalize 85 points for the additional performance threshold for exceptional performance for both the 2022 and 2023 MIPS payment years.

Comment: A few commenters supported the proposed additional performance threshold for exceptional performance because they would reasonably raise the bar on what is rewarded as exceptional performance; ensure that clinicians continue to be held accountable for quality and cost; incentivize individuals and groups to continuously improve performance; and motivate health care providers to continually provide high quality health care for all patients. A few commenters supported our proposals believing that high-quality clinicians should receive

larger bonuses for meeting the additional performance threshold.

Response: We agree with commenters that increasing the additional performance threshold incentivizes individuals and groups to continuously improve performance and motivates health care providers to continually provide high quality health care for all patients. However, we also note that we received comments expressing concern that the MIPS payment adjustments would not provide for appropriate financial incentives for exceptional performers in MIPS.

We have considered the totality of the comments and more recent data discussed in the Regulatory Impact Analysis at section VII. of this final rule estimating the number of eligible clinicians receiving an additional payment adjustment and the potential increase in the additional payment adjustment with the additional performance threshold set at 80 points and 85 points and we believe it is appropriate to finalize a higher additional performance threshold for the 2022 MIPS payment year that further incentivizes continued care improvement by high performing clinicians that have invested in quality care and are exceptional performers in MIPS. Given this, we believe that an increase of 10 points from the additional performance threshold of 75 points for the 2021 MIPS payment year is a reasonable increase for the 2022 MIPS payment year and would provide an appropriate financial incentive for clinicians to deliver exceptional performance in MIPS.

Comment: Several commenters did not support the proposal to set the additional performance threshold at 80 points for the 2022 MIPS payment year. A few commenters stated it should remain at 75 points for the 2022 MIPS payment year and to 80 points for the 2023 MIPS payment year believing that clinicians should have more time to implement quality improvement projects. A few commenters stated the additional performance threshold should not exceed the 75-point threshold until more insight is gained by practice size. One commenter indicated that the proposed additional performance thresholds are too high and would have a negative impact on small practices. A few commenters did not support the proposals for the additional performance threshold and noted changes to the improvement activities and Promoting Interoperability performance categories would impede the ability to achieve high scores. One commenter recommended the additional performance threshold

remain at 75 points for the 2022 MIPS payment year should the proposal to increase the percentage of clinicians who must perform an improvement activity for the group to receive credit for the improvement activities performance category be finalized.

Response: We believe that an increase for the additional performance threshold is appropriate for the 2022 MIPS payment year and the 2023 MIPS payment year to encourage high performance across all clinician practices and to support their transition to value-based care. We believe that keeping the additional performance threshold at 75 points for the 2022 MIPS payment year and increasing it to 80 points for the 2023 MIPS payment year does not appropriately raise the bar on exceptional performance. We also note that clinicians could still meet or exceed the performance threshold and receive a neutral or positive payment adjustment to be successful in the MIPS program. We recognize the unique challenges for eligible clinicians in small practices participating in MIPS and believe that special policies provide some relief for small practices seeking to perform well as referenced in earlier in this section of the final rule. We also believe that increasing the additional performance threshold aligns with policy changes for the 2022 MIPS payment year for the Promoting Interoperability performance category discussed at section III.K.3.c.(4) of this final rule and the changes to the group submission requirement for the improvement activities performance category discussed at section III.K.3.c.(3)(d) of this final rule that appropriately raise the bar on clinician performance for 2022 MIPS payment year and further support the transition toward value-based care.

Comment: A few commenters did not support the increase in the additional performance threshold for the 2022 and 2023 MIPS payment years believing it would have a negative impact on specialists. A few commenters stated achieving a score above 80 points would be difficult for some specialties and sub-specialties with a low number of quality measures, such as pathology. One commenter stated it is increasingly difficult for some specialties to meet some of the metrics, such as the Promoting Interoperability measures, and that exceptional performance should not imply a competition across specialties but be based on truly meaningful measures. One commenter stated an increase would make it difficult for hospital-based MIPS clinicians to meet the threshold due to a lack of quality measures. One commenter recommended an analysis of

the distribution of overall scores by specialty and sub-specialty to address disadvantages and possible negative adjustments.

Response: We acknowledge that the number of quality measures available to clinicians can vary by specialty and practice, including pathology and for hospital-based clinicians. We believe our quality performance category scoring validation policy accounts for certain instances where clinicians have fewer than 6 measures available. We also believe these adjustments allow us to develop a fair comparison across different MIPS eligible clinicians and would not preclude clinicians in specialty practices from reaching the additional performance threshold. We agree that performance measurement should be based on meaningful measures and that our policies account for when measures are not available or applicable. We are also looking at ways to implement MVPs in a way to make the program more meaningful for clinicians.

Comment: Some commenters stated the additional performance threshold should increase based on performance results from the previous year rather than an arbitrary change.

Response: We disagree with the characterization that the additional performance threshold is set arbitrarily. In the proposed rule (84 FR 40803), for illustrative purposes, we considered what the numerical values would be for the additional performance threshold under one of the methods described in section 1848(q)(6)(D)(ii) of the Act: the 25th percentile of the range of possible final scores above the performance threshold. With a proposed performance threshold of 45 points, the range of total possible points above the performance threshold is 45.01 to 100 points and the 25th percentile of that range is 58.75, which is just more than one-half of the possible 100 points in the MIPS final score. Similarly, with a proposed performance threshold for the 2023 MIPS payment year of 60 points, the range of possible points above the performance threshold is 60.01 to 100 points and the 25th percentile of that range is 69.99 points. We still do not believe it would be appropriate to lower the additional performance threshold to 69.99 points or 58.75 points because these numbers are below or close to the mean and median final scores for each of the prior performance periods that are referenced in Table 59.

After consideration of public comments, we are not finalizing our proposal to set the additional performance threshold at 80 points for the 2022 MIPS payment year, and

instead, are finalizing the additional performance threshold at 85 points for the 2022 MIPS payment year. We are finalizing the additional performance threshold at 85 points for the 2023 MIPS payment year as proposed. We are codifying the additional performance threshold for the 2022 MIPS payment year and for the 2023 MIPS payment year at § 414.1405(d)(6).

(4) Example of Adjustment Factors

In the CY 2020 PFS proposed rule (84 FR 40804 through 40809), we provided a figure and several tables as illustrative examples of how various final scores would be converted to a MIPS payment adjustment factor, and potentially an additional MIPS payment adjustment factor, using the statutory formula and based on our proposed policies for the 2022 MIPS payment year. We are updating the figure and tables based on our finalized policies in this final rule.

Figure 1 provides an example of how various final scores will be converted to a MIPS payment adjustment factor, and potentially an additional MIPS payment adjustment factor, using the statutory formula and based on the policies for the 2022 MIPS payment year in this final rule. In Figure 1, the performance threshold is 45 points. The applicable percentage is 9 percent for the 2022 MIPS payment year. The MIPS payment adjustment factor is determined on a linear sliding scale from zero to 100, with zero being the lowest possible score which receives the negative applicable percentage (negative 9 percent for the 2022 MIPS payment year) and results in the lowest payment adjustment, and 100 being the highest

possible score which receives the highest positive applicable percentage and results in the highest payment adjustment. However, there are two modifications to this linear sliding scale. First, there is an exception for a final score between zero and one-fourth of the performance threshold (zero and 11.25 points based on the performance threshold of 45 points for the 2022 MIPS payment year). All MIPS eligible clinicians with a final score in this range will receive the lowest negative applicable percentage (negative 9 percent for the 2022 MIPS payment year). Second, the linear sliding scale line for the positive MIPS payment adjustment factor is adjusted by the scaling factor, which cannot be higher than 3.0.

If the scaling factor is greater than zero and less than or equal to 1.0, then the MIPS payment adjustment factor for a final score of 100 will be less than or equal to 9 percent. If the scaling factor is above 1.0, but less than or equal to 3.0, then the MIPS payment adjustment factor for a final score of 100 will be higher than 9 percent.

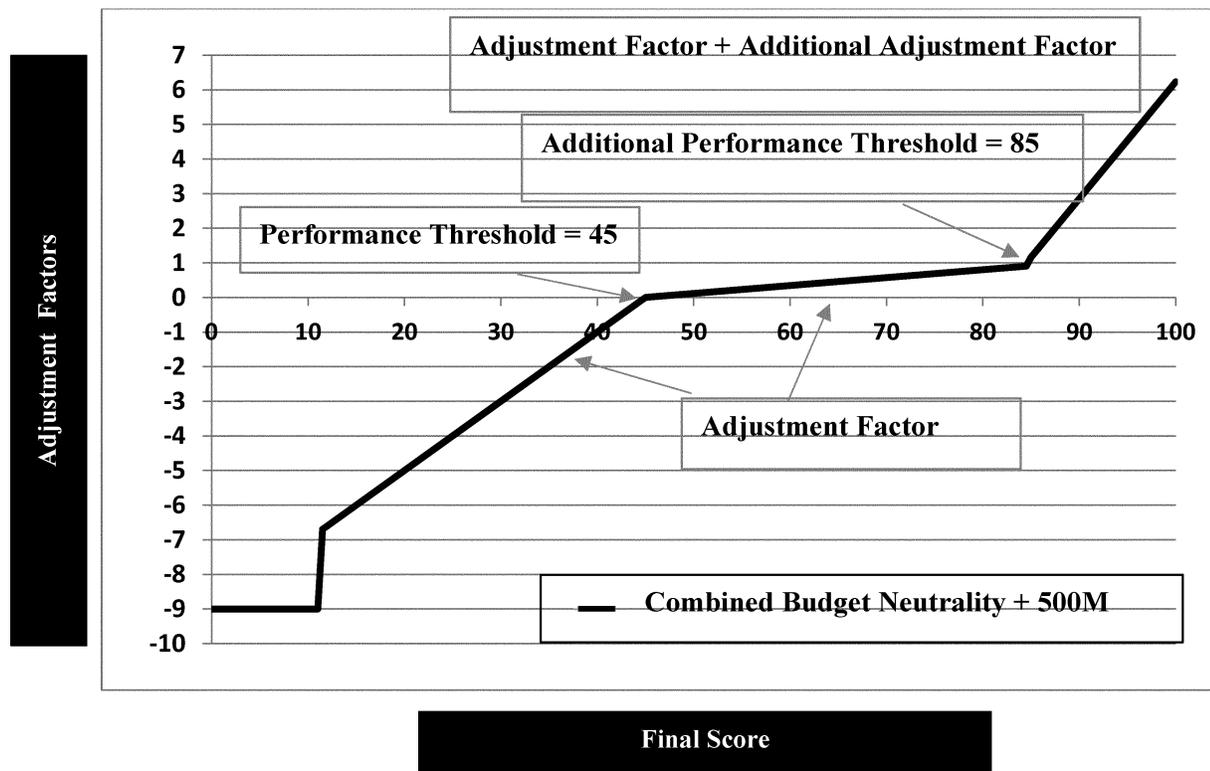

Only those MIPS eligible clinicians with a final score equal to 45 points (which is the performance threshold in this example) will receive a neutral MIPS payment adjustment. Because the performance threshold is 45 points, we anticipate that more clinicians will receive a positive adjustment than a negative adjustment and that the scaling factor will be less than 1 and the MIPS payment adjustment factor for each MIPS eligible clinician with a final score of 100 points will be less than 9 percent.

Figure 1 illustrates an example of the slope of the line for the linear adjustments for the 2022 MIPS payment year, but it can change considerably as new information becomes available. In this example, the scaling factor for the MIPS payment adjustment factor is 0.1401. In this example, MIPS eligible clinicians with a final score equal to 100 will have a MIPS payment adjustment factor of 1.261 percent (9 percent \times 0.1401). (Note that this is prior to adding the additional payment adjustment for exceptional performance, which is explained below.)

The additional performance threshold for the 2022 MIPS payment year is 85 points. An additional MIPS payment adjustment factor of 0.5 percent starts at the additional performance threshold and increases on a linear sliding scale up to 10 percent. This linear sliding scale line is also multiplied by a scaling factor that is greater than zero and less than or equal to 1.0. The scaling factor will be determined so that the estimated aggregate increase in payments associated with the application of the additional MIPS payment adjustment factors is equal to \$500 million. In Figure 1, the example scaling factor for the additional MIPS payment adjustment factor is 0.499. Therefore, MIPS eligible clinicians with a final score of 100 will have an additional MIPS payment adjustment factor of 4.99 percent (10 percent \times 0.499). The total adjustment for a MIPS eligible clinician with a final score equal to 100 would be $1 + 0.0126 + 0.0499 = 1.0625$, for a total positive MIPS payment adjustment of 6.25 percent.

BILLING CODE 4120-01-P

FIGURE 1: Illustrative Example of MIPS Payment Adjustment Factors Based on Final Scores and Performance Threshold and Additional Performance Threshold for the 2022 MIPS Payment Year

Note: The adjustment factor for final score values above the performance threshold is illustrative. For MIPS eligible clinicians with a final score of 100, the adjustment factor would be 9 percent times a scaling factor greater than zero and less than or equal to 3.0. The scaling factor is intended to ensure budget neutrality, but cannot be higher than 3.0. MIPS eligible clinicians with a final score of at least 85 points would also receive an additional adjustment factor for exceptional performance. The additional adjustment factor is also illustrative. The additional adjustment factor starts at 0.5 percent and cannot exceed 10 percent and is also multiplied by a scaling factor that is greater than zero and less than or equal to 1. MIPS eligible clinicians at or above the additional performance threshold will receive the amount of the adjustment factor plus the additional adjustment factor. This example is illustrative as the actual payment adjustments may vary based on the distribution of final scores for MIPS eligible clinicians.

The final MIPS payment adjustments will be determined by the distribution of final scores across MIPS eligible clinicians and the performance threshold. More MIPS eligible clinicians above the performance threshold means the scaling factors will decrease because more MIPS eligible clinicians receive a positive MIPS payment adjustment

factor. More MIPS eligible clinicians below the performance threshold means the scaling factors will increase because more MIPS eligible clinicians will receive a negative MIPS payment adjustment factor and relatively fewer MIPS eligible clinicians will receive a positive MIPS payment adjustment factor.

Table 60 illustrates the changes in payment adjustments based on the final policies for the 2020 and 2021 MIPS payment years, and the policies for the 2022 and 2023 MIPS payment years discussed in this final rule, as well as the statutorily-required increase in the applicable percent as required by section 1848(q)(6)(B) of the Act.

TABLE 60: Illustration of Point System and Associated Adjustments Comparison between the 2020 MIPS Payment Year, the 2021 MIPS Payment Year, and the Policies for the 2022 MIPS Payment Year and the 2023 MIPS Payment Year

2020 MIPS payment year		2021 MIPS payment year		2022 MIPS payment year		2023 MIPS payment year	
Final Score Points	MIPS Adjustment						
0.0-3.75	Negative 5%	0.0-7.5	Negative 7%	0.0-11.25	Negative 9%	0.0-15.0	Negative 9%
3.76-14.99	Negative MIPS payment adjustment greater than negative 5% and less than 0% on a linear sliding scale	7.51-29.99	Negative MIPS payment adjustment greater than negative 7% and less than 0% on a linear sliding scale	11.26-44.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale	15.01-59.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale
15.0	0% adjustment	30.0	0% adjustment	45.0	0% adjustment	60.0	0% adjustment
15.01-69.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 5% for scores from 15.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality	30.01-74.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 7% for scores from 30.00 to 100.00. This sliding scale is multiplied by a scaling factor not greater than 1.0 in order to proportionately distribute the available funds for exceptional performance.

We have provided updated examples below with the policies finalized for the 2022 MIPS payment year to demonstrate scenarios in which MIPS eligible clinicians can achieve a final score above the proposed performance threshold of 45 points based on our final policies.

Example 1: MIPS Eligible Clinician in Small Practice Submits 5 Quality Measures and 1 Improvement Activity

In the example illustrated in Table 61, a MIPS eligible clinician in a small practice reporting individually exceeds the performance threshold by performing at the median level for 5

quality measures via Part B claims collection type and one medium-weight improvement activity. The practice does not submit data for the Promoting Interoperability performance category, but does submit a significant hardship exception application which is approved; therefore, the weight for the Promoting Interoperability performance

category is redistributed to the quality performance category under the proposed reweighting policies finalized in section III.K.3.d.(2)(b)(iii) of this proposed rule. We also assumed the small practice has a cost performance category percent score of 50 percent. Finally, we assumed a complex patient bonus of 3 points which represents the average HCC risk score for the beneficiaries seen by the MIPS eligible clinician, as well as the proportion of Medicare beneficiaries that are dual eligible. There are special scoring rules for the improvement activities performance category which affect MIPS eligible clinicians in a small practice.

- Six measure achievement points for each of the 5 quality measures submitted at the median level of performance. We refer readers to § 414.1380(b)(1)(i) for further discussion of the quality performance category

scoring policy. Because the measures are submitted via Part B claims, they do not qualify for the end-to-end electronic reporting bonus, nor do the measures submitted qualify for the high-priority bonus. The small practice bonus of 6 measure bonus points apply because at least 1 measure was submitted. Because the MIPS eligible clinician does not meet full participation requirements, the MIPS eligible clinician does not qualify for improvement scoring. We refer readers to § 414.1380(b)(1)(vi) for the full participation requirements for improvement scoring. Therefore, the quality performance category is (30 measure achievement points + 6 measure bonus points)/60 total available measure points + zero improvement percent score which is 60 percent.

- The Promoting Interoperability performance category weight is redistributed to the quality performance

category so that the quality performance category score is worth 70 percent of the final score. We refer readers to section III.K.3.d.(2)(b)(iii) of this final rule for a discussion of this policy.

- MIPS eligible clinicians in small practices qualify for special scoring for improvement activities so a medium weighted activity is worth 20 points out of a total 40 possible points for the improvement activities performance category. We refer readers to § 414.1380(b)(3) for further detail on scoring policies for small practices for the improvement activities performance category.

- This MIPS eligible clinician exceeds the performance threshold of 45 points (but does not exceed the additional performance threshold). This score is summarized in Table 61.

TABLE 61: Scoring Example 1, MIPS Eligible Clinician in a Small Practice

[A] Performance Category	[B] Performance Score	[C] Category Weight	[D] Earned Points ([B]*[C]*100)
Quality	60%	70%	42
Cost	50%	15%	7.5
Improvement Activities	20 out of 40 points - 50%	15%	7.5
Promoting Interoperability	N/A	0% (redistributed to quality)	0
Subtotal (Before Bonuses)			57
Complex Patient Bonus			3
Final Score (not to exceed 100)			60

Example 2: Group Submission Not in a Small Practice

In the example illustrated in Table 62, a MIPS eligible clinician in a medium size practice participating in MIPS as a group receives performance category scores of 80 percent for the quality performance category, 60 percent for the cost performance category, 90 percent

for the Promoting Interoperability performance category, and 100 percent for improvement activities performance category. There are many paths for a practice to receive an 80 percent score in the quality performance category, so for simplicity we are assuming the score has been calculated at this amount. Again, for simplicity, we assume a complex patient bonus of 3 points. The

final score is calculated to be 85.5 points, and both the performance threshold of 45 points and the additional performance threshold of 85 points are exceeded. In this example, the group practice exceeds the additional performance threshold and will receive the additional MIPS payment adjustment.

TABLE 62: Scoring Example 2, MIPS Eligible Clinician in a Medium Practice

[A] Performance Category	[B] Performance Score	[C] Category Weight	[D] Earned Points ([B]*[C]*100)
Quality	80%	45%	36
Cost	60%	15%	9
Improvement Activities	40 out of 40 points - 100%	15%	15
Promoting Interoperability	90%	25%	22.5
Subtotal (Before Bonuses)			82.5
Complex Patient Bonus			3
Final Score (not to exceed 100)			85.5

Example 3: Non-Patient Facing MIPS Eligible Clinician

In the example illustrated in Table 63, an individual MIPS eligible clinician that is non-patient facing and not in a small practice receives performance category scores of 50 percent for the quality performance category, 50 percent for the cost performance category, and 50 percent for 1 medium-weighted improvement activity. Again,

there are many paths for a practice to receive a 50 percent score in the quality performance category, so for simplicity we are assuming the score has been calculated. Because the MIPS eligible clinician is non-patient facing, they qualify for special scoring for improvement activities and receive 20 points (out of 40 possible points) for the medium weighted activity. Also, this individual did not submit Promoting Interoperability measures and qualifies

for the automatic redistribution of the Promoting Interoperability performance category weight to the quality performance category. Again, for simplicity, we assume a complex patient bonus of 3 points.

In this example, the final score is 53 points and the performance threshold of 45 points is exceeded while the additional performance threshold of 85 points is not.

TABLE 63: Scoring Example 3, Non-Patient Facing MIPS Eligible Clinician

[A] Performance Category	[B] Performance Score	[C] Category Weight	[D] Earned Points ([B]*[C]*100)
Quality	50%	70%	35
Cost	50%	15%	7.5
Improvement Activities	20 out of 40 points for 1 medium weight activity - 50%	15%	7.5
Promoting Interoperability	0%	0% (redistributed to quality)	0
Subtotal (Before Bonuses)			50
Complex Patient Bonus			3
Final Score (not to exceed 100)			53

BILLING CODE 4120-01-C

We note that these examples are not intended to be exhaustive of the types of participants in MIPS nor the opportunities for reaching and exceeding the performance threshold.

f. Targeted Review and Data Validation and Auditing

For previous discussions of our policies for targeted review, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77353 through 77358).

In the CY 2020 PFS proposed rule (84 FR 40809 through 40810), we proposed to: (1) identify who is eligible to request a targeted review; (2) revise the timeline for submitting a targeted review request; (3) add criteria for denial of a targeted review request; (4) update requirements for requesting additional information; (5) state who will be notified of targeted review decisions and require retention of documentation submitted; and (6) codify the policy on scoring recalculations. These proposals are discussed in more detail in this section of the final rule.

(1) Targeted Review**(a) Who Is Eligible To Request Targeted Review**

In the CY 2017 Quality Payment Program final rule, we established at § 414.1385(a) that MIPS eligible clinicians and groups may submit a targeted review request and that these submissions could be with or without the assistance of a third party intermediary (81 FR 77353). As we stated in the CY 2020 PFS proposed rule (84 FR 40809), in our efforts to minimize burden on MIPS eligible

clinicians and groups, we believe it is important to allow designated support staff and third party intermediaries to submit targeted review requests on their behalf. To expressly acknowledge the role of designated support staff and third party intermediaries in the targeted review process, we proposed to revise § 414.1385(a)(1) to state that a MIPS eligible clinician or group (including their designated support staff), or a third party intermediary as defined at § 414.1305, may submit a request for a targeted review. MIPS eligible clinicians and groups (including their designated support staff) can request a targeted review by logging into the Quality Payment Program website at *qpp.cms.gov*, and after reviewing their performance feedback for the relevant performance period and MIPS payment year, they can submit a request for targeted review. An authorized third party intermediary as defined at § 414.1305, such as a qualified registry, health IT vendor, or QCDR, that does not have access to their clients' performance feedback still would be able to request a targeted review on behalf of their clients. Third party intermediaries do not have access to the performance feedback of MIPS eligible clinicians and groups; therefore, we will share an URL link to the Targeted Review Request Form with these designated entities. In the CY 2017 Quality Payment Program final rule, we established at § 414.1385(a)(2) that we will respond to each request for targeted review timely submitted and determine whether a targeted review is warranted (81 FR 77353). We proposed to redesignate this provision as § 414.1385(a)(4).

The following is a summary of the comments we received on the proposals regarding who is eligible to request targeted review and our responses.

Comment: Several commenters supported the proposal for a MIPS eligible clinician, group (including their designated support staff), or a third-party intermediary to have the ability to submit a request for a targeted review because of the belief that the policy takes into account resources of small and mid-sized groups and reduces administrative burden on physician practices. Commenters also supported the proposal because they believed third party intermediaries may potentially have more of a working knowledge of measure scoring and streamlining review requests, which may expedite review and approval of a targeted review request.

Response: We agree that the proposal allowing for a MIPS eligible clinician, group (including their designated

support staff), or a third-party intermediary to submit a request for a targeted review takes into account the resources of small and mid-sized groups. We recognize the benefit of allowing those working with clinicians, such as support staff and third party intermediaries, to submit a targeted review request therefore reducing burden for MIPS eligible clinicians and groups and improving the efficiency of the targeted review process.

After consideration of the public comments received, we are finalizing our proposal, as proposed, to revise § 414.1385(a)(1) to state that a MIPS eligible clinician or group (including their designated support staff), or a third party intermediary as defined at § 414.1305, may submit a request for a targeted review. We received no comments on our proposal to redesignate as § 414.1385(a)(4) the provision previously designated as § 414.1385(a)(2), which states that we will respond to each request for targeted review timely submitted and determine whether a targeted review is warranted and are finalizing the redesignation as proposed.

(b) Timeline for Targeted Review Requests

In the CY 2017 Quality Payment Program final rule (81 FR 77358), we finalized at § 414.1385(a)(1) that MIPS eligible clinicians and groups have a 60-day period to submit a request for targeted review, which begins on the day we make available the MIPS payment adjustment factor, and if applicable the additional MIPS payment adjustment factor (collectively referred to as the MIPS payment adjustment factors), for the MIPS payment year and ends on September 30 of the year prior to the MIPS payment year or a later date specified by CMS. During the first year of targeted review for MIPS, we allowed MIPS eligible clinicians and groups 90 days, with an additional 14-day extension, to submit a targeted review request. In response to user feedback, in December 2018, we made available revised performance feedback to MIPS eligible clinicians and groups who had filed a targeted review request. As we stated in the CY 2020 PFS proposed rule (84 FR 40809), we believe it is important to ensure MIPS eligible clinicians and groups have an opportunity to review their revised performance feedback prior to the application of the MIPS payment adjustment factors. We stated that we anticipate that by limiting the targeted review period to 60 days, we would be able to make available the revised performance feedback during October of the year prior to the MIPS

payment year, which would be approximately 2 months earlier than what we were able to do for the first year of targeted review. Therefore, we proposed to revise § 414.1385(a)(2) to state that all requests for targeted review must be submitted during the targeted review request submission period, which is a 60-day period that begins on the day CMS makes available the MIPS payment adjustment factors for the MIPS payment year, and to state that the targeted review request submission period may be extended as specified by CMS. We proposed this change would apply beginning with the 2019 performance period.

The following is a summary of the comments we received on the proposals regarding the timeline for targeted review requests and our responses.

Comment: A few commenters supported the proposal to change the timeline for submitting a targeted review request to 60 days because of their belief that it is a reasonable amount of time, may allow for a consistent period of time to submit questions, and may give CMS flexibility if feedback reports are delayed.

Response: We agree that the proposal to limit the period for submitting a targeted review request to 60 days is reasonable and adequate.

Comment: A few commenters expressed concern with the proposal to change the timeline for submitting a targeted review request to 60 days because they indicated it may limit an eligible clinician's time to review their performance feedback report, particularly eligible clinicians who may have been assessed inaccurately. One commenter expressed concern and recommended increased transparency related to the timeline for targeted review requests for eligible clinicians, groups (and their support staff), and third-party intermediaries. One commenter expressed concern over the proposal and recommended adding a targeted review category specific to vendor issues that would apply to eligible clinicians who experienced a data submission issue caused by a third-party intermediary. One commenter expressed concern and recommended adding an exception to the targeted review timeline for eligible clinicians and groups who have received an automatic extreme and uncontrollable circumstances exception.

Response: We believe that a 60-day submission period for targeted review requests is sufficient, as we have seen that eligible clinicians or groups who have identified errors typically submit targeted review requests at the start of the targeted review request submission

period, with a significant decrease in targeted review requests towards the end of the period. The release of the MIPS payment adjustment factors and performance feedback reports at the start of the targeted review request submission period would allow ample time for eligible clinicians, groups (and their support staff), and third-party intermediaries to properly submit an informed targeted review request. We believe that our proposal to limit the targeted review request submission period to 60 days would provide transparency related to the timeline for targeted review requests. We appreciate the recommendation of adding a targeted review category specific to third party intermediary issues. However, we continue to believe that MIPS eligible clinicians and groups are ultimately responsible for the data that is submitted by their third party intermediary and should hold their third party intermediary accountable for accurate reporting. In addition, in section III.K.3.d.(2)(b)(ii)(A) of this final rule, we are establishing a policy to reweight the performance categories for a MIPS eligible clinician who we determine has data that are inaccurate, unusable or otherwise compromised due to circumstances outside of the control of the clinician or its agents, which could address some of the commenter's concerns about vendor issues. We appreciate the feedback concerning extreme and uncontrollable circumstances. We will continue to reweight the performance categories for MIPS eligible clinicians who qualify for the automatic extreme and uncontrollable circumstances policy, without the submission of a targeted review request, and we do not believe an exception to the targeted review timeline is warranted.

Comment: One commenter recommended aligning the MIPS and APM timelines in order for MIPS targeted reviews to be completed prior to the release of the APM results because they believe it may allow for corrections to reflect the final ACO Quality Scores and Shared Savings rates.

Response: We currently send unofficial reports to eligible clinicians that do reflect a change in ACOs, as a result of a targeted review or other changes. Due to ACO scoring update parameters, unfortunately, the APM and MIPS programmatic timing of report releases and the end of targeted review cannot be aligned.

After consideration of the public comments received, we are finalizing our proposal, as proposed, to revise § 414.1385(a)(2) to state that all requests

for targeted review must be submitted during the targeted review request submission period, which is a 60-day period that begins on the day we make available the MIPS payment adjustment factors for the MIPS payment year, and to state that the targeted review request submission period may be extended as specified by CMS. We are finalizing our proposal, as proposed, that this change will apply beginning with the 2019 performance period.

(c) Denial of Targeted Review Requests

Each targeted review request is carefully reviewed based upon the information provided at the time the request is submitted. During the first year of targeted review, CMS received many targeted review requests that were duplicative. We continue to seek opportunities to limit burden and improve the efficiency of our processes. Therefore, we proposed (84 FR 40810) to revise § 414.1385(a)(3) to state that a request for a targeted review may be denied if: The request is duplicative of another request for targeted review; the request is not submitted during the targeted review request submission period; or the request is outside of the scope of targeted review, which is limited to the calculation of the MIPS payment adjustment factors applicable to the MIPS eligible clinician or group for a year. We stated that notification would be provided to the individual or entity that submitted the targeted review request as follows:

- If the targeted review request is denied; in this case, there will be no change to the MIPS final score or associated MIPS payment adjustment factors for the MIPS eligible clinician or group.
- If the targeted review request is approved; in this case, the MIPS final score and associated MIPS payment adjustment factors may be revised, if applicable, for the MIPS eligible clinician or group.

The following is a summary of the comments we received on the proposals regarding the denial of targeted review requests and our responses.

Comment: One commenter suggested that CMS should not deny both requests for targeted review if duplicate requests are received because they indicated it may be punitive to eligible clinicians who are attempting to fix issues in their performance feedback, MIPS final scores, and/or payment adjustment determination.

Response: We agree and will only deny the duplicate request for a targeted review, not the initial request. If there is a change to an eligible clinician or groups performance feedback, MIPS

final scores, and/or payment adjustment determination, that targeted review would not be considered a duplicate but viewed as additional information around that initial targeted review request.

Comment: One commenter expressed concern with the proposal to add criteria for denial of a targeted review request and recommended instituting a process for reviewing targeted review requests that have been denied because of their belief that such a review process may promote integrity within MIPS.

Response: We believe that establishing the reasons for which a targeted review request may be denied creates transparency with the targeted review process and MIPS, and improves the efficiency of our processes. However, we believe that further review of requests that have been denied may be counterproductive to the efficiency of our processes. We note that section 1848(q)(13)(A) of the Act describes the review process as “targeted” and “informal,” and on that basis, we do not believe that further review of requests that have been denied is warranted (81 FR 77353).

After consideration of the public comments received, we are finalizing our proposal, as proposed, to revise § 414.1385(a)(3) to state that a request for a targeted review may be denied if: The request is duplicative of another request for targeted review; the request is not submitted during the targeted review request submission period; or the request is outside of the scope of targeted review, which is limited to the calculation of the MIPS payment adjustment factors applicable to the MIPS eligible clinician or group for a year.

(d) Request for Additional Information

In the CY 2017 Quality Payment Program final rule (81 FR 77358), we finalized at § 414.1385(a)(3) that the MIPS eligible clinician or group may include additional information in support of their request for targeted review at the time the request is submitted, and if CMS requests additional information from the MIPS eligible clinician or group, it must be provided and received by CMS within 30 days of the request, and that non-responsiveness to the request for additional information may result in the closure of the targeted review request, although the MIPS eligible clinician or group may submit another request for targeted review before the deadline. Supporting documentation is a critical component of evaluating and processing a targeted review request. We may need to request supporting documentation, as

each targeted review request is reviewed individually and by category. Therefore, we proposed (84 FR 40810) to add § 414.1385(a)(5) to state that a request for a targeted review may include additional information in support of the request at the time it is submitted. If CMS requests additional information from the MIPS eligible clinician or group that is the subject of a request for a targeted review, it must be provided and received by CMS within 30 days of CMS' request. Non-responsiveness to CMS' request for additional information may result in a final decision based on the information available, although another request for a targeted review may be submitted before the end of the targeted review request submission period. Documentation can include, but is not limited to:

- Supporting extracts from the MIPS eligible clinician or group's EHR.
- Copies of performance data provided to a third party intermediary by the MIPS eligible clinician or group.
- Copies of performance data submitted to CMS.
- Quality Payment Program Service Center ticket numbers.
- Signed contracts or agreements between a MIPS eligible clinician/group and a third party intermediary.

The following is a summary of the comments we received on the proposals regarding requests for additional information and our responses.

Comment: Commenters expressed concern regarding the proposal to update requirements for requesting additional information as part of targeted review, specifically recommending a one-time extension of the 30-day timeframe for eligible clinicians and groups to submit additional information. A commenter shared their belief that quality data held by a third party intermediary may not be accessible within the 30-day timeframe.

Response: We agree that in certain circumstances, an extension to the 30-day timeframe may be warranted. We will consider granting an extension on a case-by-case basis, but the request for an extension should be submitted before the end of the 30-day period.

After consideration of the public comments received, we are finalizing our proposal, with modification, to add § 414.1385(a)(5) to state that a request for a targeted review may include additional information in support of the request at the time it is submitted. If we request additional information from the MIPS eligible clinician or group that is the subject of a request for a targeted review, it must be provided and received by CMS within 30 days of CMS' request. Non-responsiveness to

our request for additional information may result in a final decision based on the information available, although another non-duplicative request for a targeted review may be submitted before the end of the targeted review request submission period. The modification to the regulation text is intended to clarify that if another request for targeted review is submitted, it cannot be duplicative of a prior request.

(e) Notification of Targeted Review Decisions

In the CY 2017 Quality Payment Program final rule (81 FR 77358), we finalized at § 414.1385(a)(4) that decisions based on the targeted review are final, and there is no further review or appeal. We proposed (84 FR 40810) to renumber this paragraph as § 414.1385(a)(7) and to add text to § 414.1385(a)(7) to state that CMS will notify the individual or entity that submitted the request for a targeted review of the final decision. To align with policies finalized at § 414.1400(g) regarding the auditing of entities submitting MIPS data, we also proposed to add § 414.1385(a)(8) to state that documentation submitted for a targeted review must be retained by the submitter for 6 years from the end of the MIPS performance period.

The following is a summary of the comments we received on the proposals regarding the notification of targeted review decisions and our responses.

Comment: One commenter did not support our existing policy that targeted review decisions are final and no appeal or further review may be requested. They recommended that the targeted review process should expand beyond a one-level process, allow for live technical assistance, and include detailed feedback on the results, particularly on why eligible clinicians or groups may have a particular score. They noted that these changes to the process may help identify areas for improvement and may decrease errors over time.

Response: As mentioned in a prior response, we believe that further review of targeted review decisions may be counterproductive to the efficiency of our processes. We again note that section 1848(q)(13)(A) of the Act describes the review process as "targeted" and "informal," and on that basis, we do not believe that a second level of review process is warranted. At this time, we cannot operationalize live technical assistance on performance feedback or scores due to time required for researching individual data, program limitations and the volume of targeted review requests received. We currently

hold webinars for stakeholder engagement and that may highlight areas of improvement and possibly decrease errors over time.

Comment: One commenter supported the proposal to require retention of documentation submitted for targeted review for 6 years because they believed that it may ensure accuracy of targeted reviews.

Response: We agree that the proposal to require retention of documentation submitted for targeted review for 6 years is beneficial and maintains integrity within the targeted review process.

After consideration of the public comments received, we are finalizing our proposal, as proposed, to add § 414.1385(a)(8) to state that documentation submitted for a targeted review must be retained by the submitter for 6 years from the end of the MIPS performance period. We did not receive comments on our proposal to renumber as § 414.1385(a)(7), the provision at § 414.1385(a)(4), which states that decisions based on the targeted review are final, and there is no further review or appeal and we are finalizing this renumbering as proposed.

(f) Scoring Recalculations

In the CY 2017 Quality Payment Program final rule (81 FR 77353), we stated that if a request for targeted review is approved, the outcome of such review may vary. We stated, for example, we may determine that the clinician should have been excluded from MIPS, re-distribute the weights of certain performance categories within the final score (for example, if a performance category should have been weighted at zero), or recalculate a performance category score in accordance with the scoring methodology for the affected category, if technically feasible (81 FR 77353). Therefore, we proposed (84 FR 40810) to add § 414.1385(a)(6) to state that if a request for a targeted review is approved, CMS may recalculate, to the extent feasible and applicable, the scores of a MIPS eligible clinician or group with regard to the measures, activities, performance categories, and final score, as well as the MIPS payment adjustment factors.

The following is a summary of the comments we received on the proposals regarding scoring recalculations and our responses.

Comment: A commenter recommended that once a targeted review is approved and if the score of an eligible clinician or group with regard to measures, activities, performance categories, and final score, as well as payment adjustment is

changed, a written alert should be issued to the eligible clinician or group that provides additional details explaining the change.

Response: After we notify the submitter of a targeted review request of our final decision, the MIPS eligible clinician or group that is the subject of the request should review their performance feedback regarding updated performance category or final score results. We will consider an automated notification of performance feedback changes with basic explanation in future years.

We are finalizing our proposal, as proposed, to add § 414.1385(a)(6) to state that if a request for a targeted review is approved, we may recalculate, to the extent feasible and applicable, the scores of a MIPS eligible clinician or group with regard to the measures, activities, performance categories, and final score, as well as the MIPS payment adjustment factors.

(2) Data Validation and Auditing

For previous discussions of our policies for data validation and auditing at § 414.1390, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77358 through 77362). Among other requirements, § 414.1390(b) establishes that all MIPS eligible clinicians and groups that submit data and information to CMS for purposes of MIPS must certify to the best of their knowledge that the data submitted is true, accurate and complete. MIPS data that are inaccurate, incomplete, unusable or otherwise compromised can result in improper payment. Despite these existing obligations, we have received inquiries regarding perceived opportunities to selectively submit data that are unrepresentative of the MIPS performance of the clinician or group. Using data selection criteria to misrepresent a clinician or group's performance for an applicable performance period, commonly referred to as "cherry-picking," results in data submissions that are not true, accurate or complete. A clinician or group cannot certify that data submitted to CMS are true, accurate and complete to the best of its knowledge if they know the data submitted is not representative of the clinician's or group's overall performance for a performance period. Accordingly, a clinician or group that submits a certification under § 414.1390(b) in connection with the submission of data they know is cherry-picked has submitted a false certification in violation of existing regulatory requirements. If we believe cherry-picking of data may be occurring,

we may subject the MIPS eligible clinician or group to auditing in accordance with § 414.1390(a) and in the case of improper payment a reopening and revision of the MIPS payment adjustment in accordance with § 414.1390(c).

The following is a summary of the comments we received on data validation and auditing and our responses.

Comment: One commenter recommended that CMS publish aggregate findings of previous audits with regard to suspected instances of cherry-picked data.

Response: We appreciate the feedback and will consider publishing the aggregate findings of previous audits surrounding cherry-picked data in connection with future educational efforts.

Comment: A commenter requested clarification that if a clinician who submits data on a single patient in order to receive the minimum point threshold for a quality measure, CMS would not conclude the clinician was cherry-picking data.

Response: We are clarifying that existing policy takes into consideration that MIPS eligible clinicians may submit data in accordance with CMS data submission requirements on a single measure. We believe that even in the context of submitting data on a single patient in order to receive the minimum point threshold, the patient selected should be representative. In other instances where cherry-picking is suspected, we will determine whether a clinician is using selection criteria inappropriately to create an unrepresentative submission for MIPS performance on a case-by-case basis. For additional policies on MIPS final score methodologies, we refer readers to section III.K.3.d of this final rule.

Comment: A few commenters supported the statement that if CMS believes the cherry-picking of data may be occurring, a MIPS eligible clinician or group may be audited and in the case of improper payment, MIPS payment adjustment may be reopened and revised.

Response: We appreciate the commenters support and agree that if the cherry-picking of data is suspected that a MIPS eligible clinician or group may be audited and in the case of improper payment, a MIPS payment adjustment may be reopened and revised.

g. Third Party Intermediaries

We refer readers to §§ 414.1305 and 414.1400, the CY 2017 Quality Payment Program final rule (81 FR 77362 through

77390), the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819), and the CY 2019 PFS final rule (83 FR 59894 through 59910) for our previously established policies regarding third party intermediaries.

In the CY 2020 PFS proposed rule (84 FR 40811 through 40821), we proposed to make several changes. We proposed to establish new requirements for MIPS performance categories that must be supported by QCDRs, qualified registries, and Health IT vendors. We proposed to modify the criteria for approval as a third party intermediary, and establish new requirements to promote continuity of service to clinicians and groups that use third party intermediaries for their MIPS submissions. With respect to QCDRs, we also proposed requirements to: Engage in activities that will foster improvement in the quality of care; and enhance performance feedback requirements. These QCDR proposals would also affect the self-nomination process. We also proposed to update considerations for QCDR measures. With respect to qualified registries, we also proposed to require enhanced performance feedback requirements. Finally, we clarified the remedial action and termination provisions applicable to all third party intermediaries.

Because we believe that third party intermediaries, such as QCDRs, represent a useful path to fulfilling MIPS requirements while reducing the reporting burden for clinicians, we believe the policies discussed in this section justify the Collection of Information and Regulatory Impact Analysis burden estimates discussed in sections VI. and VII. of this final rule, respectively, for additional information on the costs and benefits.

(1) Requirements for MIPS Performance Categories That Must Be Supported by Third Party Intermediaries

We refer readers to § 414.1400(a)(2) and the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364) and as further revised in the CY 2019 PFS final rule at § 414.1400(a)(2) (83 FR 60088) for our current policy regarding the types of MIPS data third-party intermediaries may submit. In summary, the current policy is that QCDRs, qualified registries, and health IT vendors may submit data for any of the following MIPS performance categories: Quality (except for data on the CAHPS for MIPS survey); improvement activities; and Promoting Interoperability. Through education and outreach, we have become aware of stakeholders' desires to have a more cohesive participation experience across

all performance categories under MIPS. Specifically, we have heard of instances where clinicians would like to use their QCDR or qualified registry for reporting the improvement activities and promoting interoperability performance categories, but their particular third party intermediary does not support all categories, only quality. Based on this feedback and additional data regarding QCDRs and qualified registries respectively, which are discussed further below, we believe it is reasonable to strengthen our policies at § 414.1400(a)(2), and require QCDRs and qualified registries to support three performance categories: Quality; improvement activities; and Promoting Interoperability. Accordingly, we proposed to amend § 414.1400(a)(2) to state that beginning with the 2023 MIPS payment year (2021 performance period) and for all future years, for the MIPS performance categories identified in the regulation, QCDRs and qualified registries must be able to submit data for each category, and Health IT vendors must be able to submit data for at least one category (84 FR 40811). We solicited feedback on the benefits and burdens of this proposal, including whether the requirement to support all three identified categories of MIPS performance data should extend to health IT vendors.

As discussed in the CY 2020 PFS proposed rule, however, we recognized the need to create an exception such that third party intermediaries would not be required to submit data for the Promoting Interoperability performance category if it only represents MIPS eligible clinicians, groups and virtual groups that are eligible for reweighting under the Promoting Interoperability performance category. For example, as discussed in the CY 2019 PFS final rule (83 FR 59819 through 59820), physical therapists generally are eligible for reweighting of the Promoting Interoperability performance category to zero percent of the final score; therefore, under this exception, a QCDR or qualified registry that represents only physical therapists that reweighted the Promoting Interoperability performance category to zero percent of the final score, would not be required to support the Promoting Interoperability performance category. Therefore, we proposed to revise § 414.1400(a)(2)(iii) to state that for the Promoting Interoperability performance category, the requirement applies if the eligible clinician, group, or virtual group is using CEHRT; however, a third party could be excepted from this requirement if its MIPS eligible clinicians, groups or

virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4) or (5) or § 414.1380(c)(2)(i)(C)(1)–(7) or § 414.1380(c)(2)(i)(C)(9) (84 FR 40811). We refer readers to section III.K.3.c.(4) of this final rule for additional information on the clinician types that are eligible for reweighting the Promoting Interoperability performance category. We noted that we anticipate using the self-nomination vetting process to assess whether the QCDR or qualified registry is subject to our requirement to support reporting the Promoting Interoperability performance category. We solicited comments on this proposal, including the scope of the exception from the Promoting Interoperability reporting requirement for certain types of QCDRs and qualified registries. Specifically, we solicited comment on whether we should more narrowly tailor, or conversely broaden, the proposed exceptions for when QCDRs and qualified registries must support the Promoting Interoperability performance category.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters expressed their agreement with the proposal to require QCDRs and qualified registries to support the reporting of data for the quality, Promoting Interoperability, and the improvement activities performance categories, as well as the exemption for third party intermediaries who only serve specialties that are exempt from the Promoting Interoperability performance category.

Response: We thank commenters for their support. We direct readers to the QCDR and qualified registry sections below III.K.3.g.(3) and III.K.3.g.(4) for detailed comment and responses regarding these proposals.

Comment: Several commenters expressed their belief that the scope of proposals in the proposed rule negatively impacts QCDRs and Qualified Registries in general to the point where some third-party intermediaries may end their participation in MIPS. They believe the proposals shift costs and burden of administering the MIPS program onto physicians via their specialty societies that create measures and have QCDRs and require QCDRs to perform services that were not part of the original quality program.

Response: The intent of our proposals is to ensure that the QCDRs and qualified registries that are approved in the program are of the highest quality, and can be used as reliable resources to

support quality reporting on behalf of eligible clinicians and groups. We understand that an increase in requirements may cause increased burden to QCDRs and qualified registries, but believe that high-performing third party intermediaries are capable of meeting these requirements. Through the legacy PQRS program and the first few years of MIPS, we have witnessed instances of third party intermediaries, specifically QCDRs and qualified registries leaving the program mid-performance period, creating additional burden to the clinicians who were depending on them for reporting purposes. There have also been instances where QCDRs and qualified registries were unable to support measures, after indicating they could, or having errors related to data submissions. We believe these type of issues also contribute to clinician burden and are addressed through our additional policies as described in this section of the final rule. We refer readers to the Collection of Information and Regulatory Impact Analysis burden estimates discussed in sections VI. and VII. of this final rule, respectively, for additional information on the costs and benefits related to our finalized policies.

Comment: Many commenters opposed the proposal to require QCDRs to support the reporting of data for the quality, Promoting Interoperability, and improvement activities performance categories, specifically citing the requirements to audit and validate Promoting Interoperability data and improvement activities. Several of the commenters stated their opinion that this would represent a significant additional burden, in part due to what they believe to be large increase in the data that would need to be collected without adding any distinct benefit to MIPS eligible clinicians and groups who already have other methods available for reporting MIPS data, and that some QCDRs may incur additional costs from EHR vendors who may charge fees for providing additional necessary reports. One commenter also cited their belief that the QCDRs/registries currently supporting the Promoting Interoperability performance category use a health information exchange (<https://www.healthit.gov/topic/health-it-and-health-information-exchange-basics/what-hie>) and that vendors operating in areas that do not have a health information exchange would not be able to report on these measures. A few commenters cited their opinion that if the proposal is finalized, the resulting burden may result in many QCDRs electing to reevaluate their decisions to

seek approval to submit MIPS data. A few commenters also stated their opinion that if the proposal is finalized, they would need CMS to provide additional guidance and descriptions of what data would be necessary to validate that an individual MIPS eligible clinician or group could appropriately attest to a specific improvement activity.

Response: We thank the commenters for their suggestions. However, in this case, a majority of existing qualified registries and QCDRs already support all three performance categories which require data submission. We do acknowledge that a small minority of qualified registries and QCDRs may not be able to comply with this requirement, and as a result may elect not to continue in the Quality Payment Program. While we do not yet have data to share for how clinicians participated in 2019 (year 3), we do want to indicate that we have observed from 2017 (year 1) to 2018 (year 2) approximately 24 percent increasing to 36 percent of clinicians have used their QCDR/qualified registry for submitting for all 3 performance categories. We believe when this policy becomes finalized, more MIPS eligible clinicians may want to use this method as a burden reduction on data submission. We also believe the added benefit this policy provides to clinicians who want to use a qualified registry or QCDR to support data submission for the three performance categories outweighs the small number of qualified registries and QCDRs that are not able to comply, and that is why we are taking this step to finalize this policy.

As described in the CY 2017 Quality Payment Program final rule (81 FR 77366 and 81 FR 77384), QCDRs and qualified registries must audit a subset of data prior to submission for all performance categories that the QCDR or qualified registry is submitting data on, that is, quality, improvement activities, and promoting interoperability (previously known as advancing care information). We understand that this policy will require the minority of existing QCDRs and qualified registries who do not support all three performance categories to take on additional efforts and resources to support the remaining performance categories in order to retain their approval. Although some EHR vendors may charge for reports, we believe that the costs will be minimal because CEHRT includes the capability to calculate the Promoting Interoperability measures and the reports that must be generated. In addition, the use of health information exchanges (<https://www.healthit.gov/topic/health-it-and-health-information-exchange-basics/>

what-hie) is an option for transmitting data; their use is not a requirement.

However, we believe that this policy allows for QCDRs and qualified registries to become one-stop-shops for reporting, and will thereby reduce reporting burden for eligible clinicians and groups. Under our current data validation processes, as described in the CY 2017 Quality Payment Program final rule (81 FR 77368 through 77369) and (81 FR 77384 through 77385), QCDRs and qualified registries are required to provide information on their sampling methodology. For example, it is encouraged that 3 percent of TIN/NPIs submitted be sampled with a minimum sample of 10 TIN/NPIs or a maximum sample of 50 TIN/NPIs. For each TIN/NPI sampled, it is encouraged that 25 percent of the TIN/NPI's patients (with a minimum sample of 5 patients (with a maximum sample of 50 patients)). We would expect that this review of patient medical records would be done to validate that the pertinent quality actions were done for measures and activities done by the clinician and group. In addition, validation guidance clarifications can be found within the improvement activities validation document at the *MIPS Data Validation Document* link.

Comment: A few commenters asserted that CMS should remunerate QCDRs for the associated cost of performing pre-submission audits of the 3 performance categories.

Response: We disagree that we should have to remunerate QCDRs for the cost associated with validating QCDR data prior to submission for the three performance categories, as we believe validation is a part of the duties of a QCDR.

Comment: A few commenters stated that if the proposal is finalized, it should not be finalized for the 2020 self-nomination process as it does not give QCDRs or clinicians enough time to incorporate it into their processes and workflows.

Response: We clarify that this policy will not be required by QCDRs or qualified registries for the 2020 self-nomination process. As stated in the CY 2020 PFS proposed rule (84 FR 40811), we proposed that beginning with the 2021 performance period and for future years, to require QCDRs to support three performance categories: Quality, improvement activities; and Promoting Interoperability. This policy would take effect beginning with the 2023 MIPS payment year or the 2021 performance period. Specifically, the 2021 self-nomination period which begins on July 1, 2020 and ends on September 1, 2020, which gives QCDRs sufficient time to

incorporate this reporting into their workflows. As mentioned above, based on our review, a majority of QCDRs and qualified registries already support all three performance categories, and therefore, they should already have it incorporated into their processes and workflows. To clarify, this policy requires that QCDRs and qualified registries support all three performance categories, but does not require that an eligible clinician or group to report all three performance categories through a QCDR or qualified registry. We note in this final rule that the 2021 performance period corresponds to the 2023 MIPS payment years and are updating our policies to reflect this terminology for consistency.

Comment: One commenter stated that the proposals to require QCDRs and qualified registries to support the reporting of the quality, Promoting Interoperability, and improvement activities performance categories does not appropriately account for use cases in which a health IT vendor acts as both an EHR and a QCDR/qualified registry. The commenter asked CMS to exempt organizations that are EHRs that also have met the requirements to be considered a QCDR/Qualified Registries from the requirement for QCDRs/Qualified Registries to support all three performance categories if the vendor offers the ability to support the reporting of the remaining performance categories through their EHR. The commenter further believed that a health IT vendor who supports all performance categories, regardless of whether it is accomplished via EHR or qualified registry/QCDR, will suffice in terms of supporting clinicians who participate in MIPS. One commenter expressed the belief that health IT vendors should be held to the same standards as QCDRs and qualified registries, particularly considering that EHRs contain much of the data needed to report on any of the three categories, and as such, CEHRT should be able to support and report on all three performance categories.

Response: We believe that a qualified registry or QCDR should support all three performance categories, regardless of the other types of services they may provide. Health IT vendors and other organizations who act as an EHR in addition to being a QCDR or qualified registry would not be exempt from this requirement. The intent of requiring QCDRs and qualified registries to support all three performance categories is to reduce reporting burden on behalf of the clinician who may have previously been forced to use multiple submission types to report to CMS for

purposes of MIPS. In addition, we appreciate the commenter's feedback that health IT vendors should be held to the same standards as QCDRs and qualified registries, and may consider this feedback in future rulemaking. We also believe it is important for all approved QCDRs and qualified registries to be able to submit MIPS data in all MIPS performance categories as needed by their MIPS eligible clinicians, groups, and virtual groups. Our policy goal is to reduce burden on clinicians and groups by ensuring they can use a single third party intermediary to submit all data on quality, improvement activities, and promoting interoperability. Creating an exception if multiple intermediaries are owned by the same organization would be inconsistent with this goal. For example, some organizations could require an eligible clinician or group to pay two separate fees, one to use its QCDR or qualified registry, and another to use its EHR. We would like to streamline services in order to give eligible clinicians and groups a less burdensome reporting experience. We note that we will be monitoring changes in this space.

Comment: A few commenters stated that the proposed exemption for qualified registries and QCDRs whose participants receive an exemption under the special status categories for the Promoting Interoperability performance category is unclear. Specifically, a commenter stated that CMS does not provide an indication as to the percentage of participants that would have to be exempt for the qualified registry or QCDR to not have to accept and submit Promoting Interoperability data, while another commenter sought clarity as to which specific specialties would be subject to the exemption.

Response: QCDRs and qualified registries are expected to support data submission in the MIPS performance category for Promoting Interoperability for each of its MIPS eligible clinicians, groups or virtual groups to which this performance category applies. However, a third party could be exempted from this requirement if all of the third party intermediary's MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4) or (5) or § 414.1380(c)(2)(i)(C)(1)(7) or § 414.1380(c)(2)(i)(C)(9) (84 FR 40811). Accordingly, a third party intermediary may not be required to submit data for the Promoting Interoperability performance category if it only represents MIPS eligible clinicians, groups, and virtual groups that are eligible for reweighting under the

Promoting Interoperability performance category. For example, as discussed in the CY 2019 PFS final rule (83 FR 59819 through 59820), physical therapists generally are eligible for reweighting of the Promoting Interoperability performance category to zero percent of the final score; therefore, under this exception, a QCDR or qualified registry that represents only physical therapists that reweighted the Promoting Interoperability performance category to zero percent of the final score, would not be required to support the Promoting Interoperability performance category. Similarly, a QCDR or qualified registry may not be required to support the Promoting Interoperability performance category if it supported only following clinician types: Occupational therapists; qualified speech-language pathologists; qualified audiologists; clinical psychologists; and registered dietitians or nutrition professionals, as described in § 414.1380(c)(2)(i)(A)(4). In contrast, a QCDR or qualified registry cannot be exempted from this requirement and must be able to submit data for the Promoting Interoperability performance category so long as it supports any clinician, group or virtual group that uses CEHRT and is not identified as eligible for reweighting of the Promoting Interoperability performance category. We refer readers to section III.K.3.c.(4) of this final rule for additional details on the Promoting Interoperability performance category.

After consideration of the comments, we are finalizing our proposals with technical modifications for clarity and consistency with the existing provisions of § 414.1400. Specifically, we are finalizing changes to § 414.1400(a)(2) to state that beginning with the 2023 MIPS payment year, QCDRs and qualified registries must be able to submit data for all of the MIPS performance categories identified in the regulation, and Health IT vendors must be able to submit data for at least one such category. We are also finalizing our proposal to amend § 414.1400(a)(2)(iii), as proposed, to state that for the Promoting Interoperability, if the eligible clinician, group, or virtual group is using CEHRT; however, a third party intermediary may be exempted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4) or (5) or § 414.1380(c)(2)(i)(C)(1) through (7) or § 414.1380(c)(2)(i)(C)(9).

(2) Approval Criteria for Third Party Intermediaries

We refer readers to § 414.1400(a)(4) and the CY 2019 PFS final rule (83 FR

59894 through 59895, 60088) for previously finalized policies related to the approval criteria for third party intermediaries.

Based on experience with third party intermediaries thus far, in the CY 2020 PFS proposed rule (84 FR 40811), we proposed to adopt two additional criteria for approval at § 414.1400(a)(4) to ensure continuity of services to MIPS eligible clinicians, groups, and virtual groups that utilize the services of third party intermediaries. Specifically, we have experienced instances where a third party intermediary withdraws mid-performance period, which impacts the clinician or group's ability to participate in the MIPS program, through no fault of their own. We proposed two changes to help prevent these disruptions (84 FR 40811 through 40812). First, we proposed at § 414.1400(a)(4) to add a new paragraph (v) to establish that a condition of approval for a third party intermediary is for the entity to agree to provide services for the entire performance period and applicable data submission period (84 FR 40812). In addition, we proposed at § 414.1400(a)(4) to add a new paragraph (vi) to establish that a condition of approval is for a third party intermediary to agree that prior to discontinuing services to any MIPS eligible clinician, group or virtual group during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, or virtual group to an alternate data submission mechanism or third party intermediary according to a CMS approved transition plan (84 FR 40812). We believe it is important to condition the approval of a third party intermediary on the entity agreeing to follow this process so that in the case a third-party intermediary fails to meet its obligation under the proposed § 414.1400(a)(4)(v) to provide services for the entire performance period and corresponding data submission period, the third party intermediary and the clinicians, groups, and virtual groups it serves have common expectations of the support the third party intermediary will provide to its users in connection with its withdrawal (84 FR 40812). We believe these proposed conditions of approval will help ensure that entities seeking to become approved as third party intermediaries are aware of the expectations to provide continuous service for the duration of the entire performance period and corresponding data submission period, will help reduce the extent to which the clinicians, groups, and virtual groups are inadvertently impacted by a third

party intermediary withdrawing from the program, and will help clinicians, groups, and virtual groups avoid additional reporting burden that may result from withdrawals mid-performance period (84 FR 40812). We note that we proposed, if CMS determines that a third party intermediary has ceased to meet either of these proposed criteria for approval, CMS may take remedial action or terminate the third party intermediary in accordance with § 414.1400(f) (84 FR 40812). We also refer readers to sections III.K.3.g.(3) and III.K.3.g.(4) of this final rule where we discuss these topics for QCDRs and qualified registries specifically.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposal to require third party intermediaries to attest that they will provide services for the entire performance period and to agree to provide a transition plan to an alternate data submission mechanism or third-party intermediary prior to discontinuing services.

Response: We thank the commenters for their support.

Comment: One commenter stated that the requirement to provide transition plans for participants in the case of service discontinuation should not be approved as it would be extremely burdensome for a third party intermediary to have to do individual transition plans given that the decision in this circumstance lies with the clinicians and their practices to make such a transition. In place of the requirement, the commenter recommended that a “CMS-approved transition advisory plan” be developed due to its belief that additional requirements are unnecessary, without proven benefit, and would not lead to any earlier identification of quality issues. The same commenter encouraged CMS to remain sensitive to and flexible in dealing with any extenuating circumstances outside the registry’s direct control that could lead to or cause an interruption in MIPS reporting services.

Response: We thank the commenter for their suggestions. We clarify that in instances where a clinician or group is leaving a third party intermediary on its own volition, a transition plan, while encouraged, is not required from a QCDR or a qualified registry. Our proposal addresses the opposite scenario—if QCDRs and qualified registries discontinue services to their MIPS eligible clinician, group or virtual

group during a performance period. We believe it is important for a third party intermediary to agree that prior to discontinuing services, the third party intermediary must support the transition of such MIPS eligible clinician, group, or virtual group to an alternate submitter type (and as needed alternate collection type) or third party intermediary according to a CMS approved transition plan. We have experienced scenarios where QCDRs and qualified registries have withdrawn from participation in the middle of the performance period, which causes inadvertent burden on eligible clinicians and groups who have to then scramble to find alternative methods of submitting their data to us in order to satisfy the reporting requirements for a given performance year. Eligible clinicians and groups that use qualified registries or QCDRs, utilize them as a way to mitigate reporting burden. We disagree that requiring a transition plan is unnecessary and without benefit; QCDRs and qualified registries should explain their mitigation strategy in informing their clients on alternative methods of reporting. We appreciate the commenter’s recommendation that we develop a “CMS-approved transition advisory plan”, but disagree that it is appropriate. The strategy utilized in transitioning clients off a QCDR or qualified registry’s platform should be left to the QCDR or qualified registry to determine, based on their size, volume of clinicians and groups, the timing to which they will completely discontinue service as a QCDR or registry, and other factors that may be unique to a given QCDR/qualified registries specific business relationship with a clinician. We believe it is important for each transition plan to take into consideration the above mentioned factors, which is why we believe it is appropriate to provide flexibility to the third party intermediaries to craft a transition plan for our review and approval. While we understand that sometimes issues arise outside of the registry’s direct control, impacting a registry’s ability to provide services, we believe that a transition plan should be required regardless of the reason that the third party intermediary is discontinuing services.

After consideration of the comments, we are finalizing at § 414.1400(a)(4), as proposed, to add a new paragraph (v) to establish that a condition of approval for a third party intermediary is for the entity to agree to provide services for the entire performance period and applicable data submission period. Also, we are finalizing at

§ 414.1400(a)(4) to add paragraph (vi) with modification. Instead of requiring the third party intermediary to support the transition of such MIPS eligible clinician, group, or virtual group to an alternate data submission mechanism or third party intermediary, we are finalizing that the third party intermediary must support the transition of such MIPS eligible clinician, group, or virtual group to an alternate submitter type, or for any measures on which data has been collected, alternate collection type or third party intermediary according to a CMS approved transition plan. This modification to the specific submission terms in this policy is to be consistent with the terminology used in §§ 414.1325 and 414.1335 (83 FR 59749 through 59754). As such, we are finalizing at § 414.1400(a)(4) to add a new paragraph (vi) to establish that a condition of approval is for the third party intermediary to agree that prior to discontinuing services to any MIPS eligible clinician, group or virtual group during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, or virtual group to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved transition plan.

Third party intermediaries are not required to support the transition of MIPS eligible clinicians, groups, or virtual groups to an alternate collection type for measures on which no data has been collected. We note that for QCDR measures, supporting the transition to an alternate collection type may not be feasible in every case. If we determine that a third party intermediary has ceased to meet either of these criteria for approval, we may take remedial action or terminate the third party intermediary in accordance with § 414.1400(f).

(3) Qualified Clinical Data Registries (QCDRs)

In the CY 2020 PFS proposed rule (84 FR 40812 through 40814), we proposed: (a) QCDR approval criteria; and (b) various policies related to QCDR measures. These proposed policies would also affect the QCDR self-nomination process.

(a) QCDR Approval Criteria

We generally refer readers to section 1848(m)(3)(E) of the Act, as added by section 601(b)(1)(B) of the American Taxpayer Relief Act of 2012, which requires the Secretary to establish requirements for an entity to be

considered a Qualified Clinical Data Registry (QCDR) and a process to determine whether or not an entity meets such requirements. We refer readers to section 1848(m)(3)(E)(i), (v) of the Act, the CY 2019 PFS final rule (83 FR 60088), and § 414.1400(a)(4) through (b) for previously finalized policies about third party intermediaries and QCDR approval criteria. In the CY 2020 PFS proposed rule (84 FR 40812 through 40814), we proposed to add to those policies to require QCDRs to: (a) Support all three performance categories where data submission is required; (b) engage in activities that will foster improvement in the quality of care; and (c) enhance performance feedback requirements.

(i) Requirement for QCDRs To Support All Three Performance Categories Where Data Submission Is Required

In the CY 2020 PFS proposed rule (84 FR 40811), we proposed to require QCDRs and qualified registries to support three performance categories: Quality, improvement activities, and Promoting Interoperability. In this section, we discuss QCDRs specifically. As previously stated in the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364), section 1848(q)(1)(E) of the Act encourages the use of QCDRs in carrying out MIPS. Although section 1848(q)(5)(B)(ii)(I) of the Act specifically requires the Secretary to encourage MIPS eligible clinicians to use QCDRs to report on applicable measures for the quality performance category, and section 1848(q)(12)(A)(ii) of the Act requires the Secretary to encourage the provision of performance feedback through QCDRs, the statute does not specifically address use of QCDRs for the other MIPS performance categories (81 FR 77363). Although we previously could have limited the use of QCDRs to assessing only the quality performance category under MIPS and providing performance feedback, we believed (and still believe) it would be less burdensome for MIPS eligible clinicians if we expand QCDRs' capabilities (81 FR 77363). By allowing QCDRs to report on quality measures, improvement activities, and Promoting Interoperability measures, we alleviate the need for individual MIPS eligible clinicians and groups to use a separate mechanism to report data for these performance categories (81 FR 77363). It is important to note that QCDRs do not need to submit data for the cost performance category since these measures are administrative claims-based measures (81 FR 77363).

As noted above, based on previously finalized policies in the CY 2017

Quality Payment Program final rule (81 FR 77363 through 77364) and as further revised in the CY 2019 PFS final rule at § 414.1400(a)(2) (83 FR 60088), the current policy is that QCDRs, qualified registries, and health IT vendors may submit data for any of the following MIPS performance categories: Quality (except for data on the CAHPS for MIPS survey); improvement activities; and Promoting Interoperability.

Through education and outreach, we have become aware of stakeholders' desires to have a more cohesive participation experience across all performance categories under MIPS. Specifically, we have heard of instances where clinicians would like to use their QCDR for reporting the improvement activities and promoting interoperability performance categories, but their particular QCDR does not support all categories, only quality. This results in the clinician needing to enter into a business relationship with another third party to complete their MIPS reporting or leverage a different submitter type or submission type, which can create additional burden to the clinician. We believe that requiring QCDRs to be able to support these performance categories will be a step towards addressing stakeholders concerns on having a more cohesive participation experience across all performance categories under MIPS. In addition, we believe this proposal will help to reduce the reporting burden MIPS eligible clinicians and groups face when having to utilize multiple submission mechanisms to meet the reporting requirements of the various performance categories. Furthermore, as we move to a more cohesive participation experience under the MIPS Value Pathways (MVP), as discussed in the CY 2020 PFS proposed rule (84 FR 40732 through 40745), we believe this proposal will assist clinicians in that transition. We also refer readers to section III.K.3.a. of this final rule where the MIPS MVP is discussed.

Based on our review of existing 2019 QCDRs through the 2019 QCDR Qualified Posting, approximately 92 QCDRs, or about 72 percent of the QCDRs currently participating in the program, are supporting all three performance categories. When the CY 2020 PFS proposed rule was published the 2019 QCDR Qualified Posting was available at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/347/2019%20QCDR%20Qualified%20Posting_Final_v3.xlsx (84 FR 40813). Since the publication of that proposed rule, the link has since been updated and is now available in the Quality Payment Program Resource

Library at <https://qpp.cms.gov/about/resource-library> by searching for the "2019 QCDR Qualified Posting." In addition, in our review of prior data through previous qualified postings for the 2017 and 2018 performance periods, we have observed that a majority of the QCDRs participating in the program supported the three performance categories that require data submission. In 2017, 73 percent (approximately 83 QCDRs) and in 2018, 73 percent (approximately 110 QCDRs) have supported all three performance categories. While we do not yet have data to share for how clinicians participated in 2019 (year 3), we do want to indicate that we have observed from 2017 (year 1) to 2018 (year 2) approximately 24 percent increasing to 36 percent of clinicians have used their QCDR/qualified registry for submitting for all 3 performance categories. We believe when this policy becomes finalized, more MIPS eligible clinicians may want to use this method as a burden reduction on data submission. Based on this data, we believe it is reasonable to want to continue to strengthen our policies at § 414.1400(a)(2) by requiring that QCDRs have the capacity to support the reporting requirements of the quality, improvement activities, and promoting interoperability performance categories.

Therefore, beginning with the 2021 performance period and for future years, we proposed to require QCDRs to support three performance categories: Quality, improvement activities, and Promoting Interoperability (84 FR 40813). We note that the 2021 performance period corresponds to the 2023 MIPS payment years and are updating our policies here in this final rule to reflect this terminology for consistency. Additionally, for reasons, as discussed above, we proposed to amend § 414.1400(a)(2) to state, beginning with the 2023 MIPS payment year (2021 performance period) and for all future years, for the following MIPS performance categories, QCDRs must be able to submit data for all categories, and Health IT vendors must be able to submit data for at least one category: Quality (except for data on the CAHPS for MIPS survey); improvement activities; and Promoting Interoperability with an exception. As discussed in the CY 2020 PFS proposed rule (84 FR 40811), we proposed that based on the amendment to § 414.1400(a)(2)(iii), for the Promoting Interoperability performance category, the requirement applies if the eligible clinician, group, or virtual group is using CEHRT; however, a third party

could be excepted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4), (c)(2)(i)(A)(5), (c)(2)(i)(C)(1) through (c)(2)(i)(C)(7), or (c)(2)(i)(C)(9) (84 FR 40813). As part of this proposal, we would require QCDRs to attest to the ability to submit data for these performance categories, as applicable, at time of self-nomination.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters agreed with the proposal to require QCDRs to support the reporting of data for the quality, Promoting Interoperability, and the improvement activities performance categories, as well as the exemption for QCDRs who serve specialties that are exempt from the Promoting Interoperability performance category. Some commenters noted their QCDRs are already submitting data on all three performance categories, while other QCDRs report measures in the Quality Category and attest to improvement activities.

Response: We thank commenters for their support.

Comment: One commenter noted that the proposal should not be considered until after the 21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program Rule (21st Century Cure Act) final rule is published and the updated standards are implemented.

Response: We understand the interest in coordinating with the updates to standards that may be included in the 21st Century Cures Act final rule, however we do not believe that the proposals under the 21st Century Cures Act will have a significant impact on the ability of QCDRs to report measures for the Promoting Interoperability category. We note this requirement was proposed with a delayed implementation, beginning with the 2023 MIPS payment year (2021 performance period), which should accommodate timing for any updates to standards. When the 21st Century Cures Act final rule is published we will determine if additional modifications are necessary and may address in future rule making.

Comment: One commenter requested CMS provide additional clarification regarding the number of measures from each performance category that will be required for approval.

Response: As described in the CY 2017 Quality Payment Program final rule (81 FR 77368), QCDRs and qualified registries are required to support the minimum number of

measures to meet the reporting requirements of the Quality performance category. Through the finalization of the policy to require QCDRs and qualified registries to support all three performance categories in this final rule, we encourage third parties to support the minimum number of measures and activities to support the Promoting Interoperability performance category as discussed in § 414.1375 (83 FR 59798 through 59817) and Improvement Activities performance category as discussed in the CY 2017 Quality Payment Program final rule (81 FR 77185, in order to offer a complete reporting experience to eligible clinicians and groups.

Comment: One commenter questioned whether the QCDR will be required to audit data submitted for all performance categories. One commenter stated their belief that if the proposal is finalized, CMS should define more clearly how improvement activities should be documented to help standardize auditing by third party intermediaries and alleviate any additional burden associated with the requirement.

Response: Under our current data validation processes, as described in the CY 2017 Quality Payment Program final rule (81 FR 77368 through 77369) and (81 FR 77384 through 77385), QCDRs and qualified registries are required to provide information on their sampling methodology. For example, it is encouraged that 3 percent of TIN/NPIs submitted be sampled with a minimum sample of 10 TIN/NPIs or a maximum sample of 50 TIN/NPIs. For each TIN/NPI sampled, it is encouraged that 25 percent of the TIN/NPI's patients (with a minimum sample of 5 patients (with a maximum sample of 50 patients)). We would expect that this review of patient medical records would be done to validate that the pertinent quality actions were done for measures and activities done by the clinician and group. In addition, validation guidance clarifications can be found within the improvement activities validation document at the MIPS Data Validation Document link. With regards to auditing whether improvement activities have been completed by a clinician or group, it is important for a third party intermediary to validate that an action has been done through review of medical records or other forms of documentation that will indicate that the quality action and/or improvement activity has been completed.

After consideration of the comments, we are finalizing our proposals with technical modifications for clarity and consistency with the existing provisions of § 414.1400. As discussed in section

III.K.3.g.(1) of this final rule, we are amending § 414.1400(a)(2) to state that beginning with the 2023 MIPS payment year, QCDRs and qualified registries must be able to submit data for all of the MIPS performance categories identified in the regulation, and Health IT vendors must be able to submit data for at least one such category. We are also finalizing our proposal to amend § 414.1400(a)(2)(iii), as proposed, to state that for the Promoting Interoperability, if the eligible clinician, group, or virtual group is using CEHRT; however, a third party intermediary may be excepted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4) or (5) or § 414.1380(c)(2)(i)(C)(1) through (7) or § 414.1380(c)(2)(i)(C)(9). We refer readers to section III.I.3.d.(2) of this final rule where reweighting policies are discussed. We are also finalizing that QCDRs are required to attest to the ability to submit data for these performance categories, as applicable, at time of self-nomination.

(ii) Requirement for QCDRs To Engage in Activities That Will Foster Improvement in the Quality of Care

We generally refer readers to section 1848(m)(3)(E)(i) and (v) of the Act, which requires the Secretary to establish requirements for an entity to be considered a qualified clinical data registry and a process to determine whether or not an entity meets such requirements. Section 1848(m)(3)(E)(ii)(IV) of the Act provides that in establishing such requirements, the Secretary must consider whether an entity, among other things, supports quality improvement initiatives for participants.

As detailed at § 414.1305(1) a QCDR means: For the 2019, 2020 and 2021 MIPS payment year, a CMS-approved entity that has self-nominated and successfully completed a qualification process to determine whether the entity may collect medical or clinical data for the purpose of patient and disease tracking to foster improvement in the quality of care provided to patients.

Although "improvement in the quality of care" is broadly included under paragraph (2) of the definition of a QCDR at § 414.1305 in the 2019 PFS final rule (83 FR 59897), we want to further clarify how a QCDR can be successful in fostering improvement in the quality of care provided to patients by clinicians and groups. We understand putting parameters around exactly what improvement in the quality of care may be can be difficult due to the varying nature of QCDRs

organizational structures. For example, we have QCDRs that are founded by both large and small specialty societies, and healthcare systems where the volumes of services, available resources, and volume of members may vary. However, we believe QCDRs should enhance education and outreach to clinicians and groups to improve patient care.

The definition of qualified clinical data registry (QCDR) at § 414.1305(2) currently states that beginning with the 2022 MIPS payment year, an entity that demonstrates clinical expertise in medicine and quality measurement development experience and collects medical or clinical data on behalf of a MIPS eligible clinician for the purpose of patient and disease tracking to foster improvement in the quality of care provided to patients. In the CY 2020 PFS proposed rule (84 FR 40813), we proposed policies with regards to “foster improvement in the quality of care”.

Therefore, we proposed to add § 414.1400(b)(2)(iii) that beginning with the 2023 MIPS payment year, the QCDRs must foster services to clinicians and groups to improve the quality of care provided to patients by providing educational services in quality improvement and leading quality improvement initiatives (84 FR 40813). Quality improvement services may be broad, and do not necessarily have to be specific towards an individual clinical process. An example of a broad quality improvement service would be for the QCDR to provide reports and educating clinicians on areas of improvement for patient populations by clinical condition for specific clinical care criteria. Furthermore, an example of an individual clinical process specific quality improvement service would be if the QCDR supports a metric that measures blood pressure management, the QCDR could use that data to identify best practices used by high performers and broadly educate other clinicians and groups on how they can improve the quality of care they provide. We believe educational services in quality improvement for eligible clinicians and groups would encourage meaningful and actionable feedback for clinicians to make improvements in patient care. To be clear, these QCDR quality improvement services would be separate and apart from any activities that are reported on under the improvement activities performance category. We believe improvement activities can be distinguished from quality improvement services, because they are actions taken by MIPS eligible clinicians under the improvement

activities performance category. Improvement activities means an activity that relevant MIPS eligible clinician, organizations and other relevant stakeholders identify as improving clinical practice or care delivery and that the Secretary determines, when effectively executed, is likely to result in improved outcomes (§ 414.1305). Quality improvement services, on the other hand, would be actions taken by the QCDR. While these QCDR quality improvement services could potentially overlap with an improvement activity, requirements for the improvement activities performance category would still apply to MIPS eligible clinicians and groups.

We proposed to require QCDRs to describe the quality improvement services they intend to support in their self-nomination for CMS review and approval. We intend on including the QCDR's approved quality improvement services in the qualified posting for each approved QCDR (84 FR 40813).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters agreed with the proposal to require QCDRs to engage in activities that improve quality of care and further cited their appreciation for the flexibility provided by CMS to meet the requirement. A few commenters suggested that CMS should provide a minimum threshold such as sharing links to the quality improvement education website or a QCDR platform with trending performance graphs. One commenter expressed its concern the terminology being used due to its opinion that improvement activities conducted by the MIPS eligible clinician and improvement services provided by the QCDR can be confusing.

Response: We thank commenters for their support, and while we agree this proposal is important to engage QCDRs in activities that will foster improvement in the quality of care; after reviewing public comments received, we are not finalizing this proposal. However, since this policy is important to the quality of care, as well as, CMS, we want to prepare QCDRs for this policy to be considered for future rulemaking and would encourage QCDRs to start planning for this possibility. While we did not state a minimum threshold of the type of service that needs to be provided as part of our proposal, as described in the CY 2020 PFS proposed rule (84 FR 40813), we provided examples of services, such as enhanced education and outreach, or providing reports and educating

clinicians on areas of improvement for patient populations by clinical condition for specific clinical care criteria. We appreciate the commenters' suggestions for providing a minimum threshold, and may consider this feedback for future rulemaking. As part of future rulemaking we may also consider requirements that would require that the QCDRs describe the activities they are proposing to support as a part of their self-nomination application, as well as the ability of the QCDR to provide this service to all the clinicians and groups it supports for a given performance period. We appreciate the concern with potential confusion between quality improvement services and improvement activities, in any future rulemaking we would be sure to clearly communicate that they are different as a part of our subregulatory guidance to educate stakeholders.

Comment: Several commenters disagreed with the proposal to require QCDRs to engage in activities that improve quality of care citing concerns that the policy is vague, unclear, and could be used in an arbitrary fashion to possibly compare or rank QCDRs. A few commenters stated that additional details are necessary regarding what activities would meet this requirement, with a few commenters expressing that in place of finalizing this proposal, CMS should search for additional alternatives or publish a separate request for information followed by rulemaking that describes this proposal in more detail so that the public can provide a more thoughtful response.

Response: We thank the commenters' for their suggestions and agree that clarity is an important part of rulemaking. We agree with commenters that there needs to be more specificity in this proposal, and therefore, are not finalizing this requirement for this rule. Additionally, even though we are not finalizing this proposal, we continue to believe this policy is important, especially in the regard that QCDR applicants can innovate ideas for quality improvement services as they self-nominate, based on their capabilities and the needs of their clinicians and groups.

We did not intend on the policy to be vague, unclear, or arbitrary but intended to provide flexibility to the QCDR as to the type of improvement service they may offer; the services offered would not be used to rank the QCDRs in any way but to serve as a helpful resource for clinicians and groups. To that end, we did not want to standardize the type of quality improvement services a QCDR should offer, and so we intentionally crafted a policy that was not overly

specific. With the understanding that QCDRs differ in size, we wanted to leave the type of service available up to the QCDR to determine what is feasible and appropriate for the clinicians and groups they support. An example of a broad quality improvement service would be for the QCDR to provide reports and educating clinicians on areas of improvement for patient populations by clinical condition for specific clinical care criteria. Furthermore, an example of an individual clinical process specific quality improvement service would be if the QCDR supports a metric that measures blood pressure management, the QCDR could use that data to identify best practices used by high performers and broadly educate other clinicians and groups on how they can improve the quality of care they provide. Our intention was not to compare QCDRs to one another, but to expand the quality improvement initiatives a QCDR could support and offer. This policy was meant to require QCDRs to describe the activities they would plan to support as a part of their self-nomination application. We will take these comments into consideration for future rulemaking.

Comment: One commenter stated their belief that if this proposal is finalized, implementation should be delayed to give QCDRs the time to develop the necessary processes and identify the resources required to develop these types of services. Several commenters stated that this would require budgeting, planning and coordinating across staff or departmental areas that may not already be in place. Others stated that it would be too difficult or infeasible for QCDRs to change their business models to adopt.

Response: As discussed in the CY 2020 PFS proposed rule (84 FR 40813), this policy was proposed with a delayed implementation beginning with the 2023 MIPS payment year (for the 2021 performance period). We understand that there may be time needed to prepare for this requirement, including time to budget, plan, coordinate from a staffing perspective, and possibly prepare for from a business perspective. Taking these public comments into account we are not finalizing this proposal in this rule. We will take these comments into consideration for future rulemaking.

Comment: Several commenters stated this policy may be unnecessary considering the reports and activities QCDRs already conduct aimed at improving quality.

Response: As stated above, we are not finalizing this policy at this time. However, we do want to clarify that while some of the activities currently being done by QCDRs could fulfill the proposal for fostering quality improvement, not all QCDRs are consistently providing these reports to their participating clinicians. We intended to provide flexibility to the QCDR as to the type of improvement service they may offer. We will consider this feedback as we develop a potential proposal for future rulemaking.

Comment: Several commenters stated that this policy would expand responsibilities of QCDRs beyond their initially intended functions. Other commenters stated that this would create undue burden especially for small QCDRs.

Response: As stated above, we are not finalizing this policy at this time. However, we believe that there are many existing QCDRs that already provide quality improvement services, even outside of the Quality Payment Program. Our vision for QCDRs requires the need for involvement by the QCDRs to potentially providing additional services that what was initially required under the legacy PQRS program or under the first few years of MIPS. We do not believe that such a policy would create undue burden on smaller QCDRs. We will take this feedback into consideration when developing a potential proposal for future rulemaking.

After consideration of the comments, we are not finalizing our proposals. Specifically, we are not finalizing at § 414.1400(b)(2)(iii) that beginning with the 2023 MIPS payment year, the QCDRs must foster services to clinicians and groups to improve the quality of care provided to patients by providing educational services in quality improvement and leading quality improvement initiatives. We are also not finalizing the proposed requirement that QCDRs describe the quality improvement services they intend to support in their self-nomination for CMS review and approval. While we are not including the QCDR's approved quality improvement services in the qualified posting for each approved QCDR, we will consider proposing this requirement in subsequent future rulemaking, and would encourage QCDRs to prepare as such.

(iii) Enhanced Performance Feedback Requirement

Section 1848(q)(12)(A)(ii) of the Act requires the Secretary to encourage the provision of performance feedback through QCDRs. In addition, in

establishing the requirements, the Secretary must consider, among other things, whether an entity provides timely performance reports to participants at the individual participant level (section 1848(m)(3)(E)(ii)(III) of the Act). Currently, CMS requires QCDRs to provide timely performance feedback at least 4 times a year on all of the MIPS performance categories that the QCDR reports to CMS (82 FR 53812). Based on our experiences thus far under the Quality Payment Program, we agree that providing feedback at least 4 times a year is appropriate. However, in the future CMS would like to see, and therefore, encourages QCDRs, to provide timely feedback on a more frequent basis more than 4 times a year. Receipt of more frequent feedback will help clinicians and groups make more timely changes to their practice to ensure the highest quality of care is being provided to patients. We see value in providing more timely feedback to meet the objectives¹¹⁷ of the Quality Payment Program in improving the care received by Medicare beneficiaries, lowering the costs to the Medicare program through improvement of care and health, and advance the use of healthcare information between allied providers and patients. We also believe there is value in this performance feedback, and therefore, encourage QCDRs to work with their clinicians to get the data in earlier in the reporting period so the QCDR can give meaningful, timely feedback.

In the QCDR performance feedback currently being provided to clinicians and groups, we have heard from stakeholders that that not all QCDRs provide feedback the same way. We have heard through stakeholder comments that some QCDR feedback contains information needed to improve quality, whereas other QCDR feedback does not supply such information due to the data collection timeline. Additionally, we believe that clinicians would benefit from feedback on how they compare to other clinicians who have submitted data on a given measure (MIPS quality measure or QCDR measure) within the QCDR they are reporting through, so they can identify areas of measurement in which improvement is needed, and furthermore, they can see how they compare to their peers based within a QCDR, since the feedback provided by the QCDR would be limited to those who reported on a given measure using that specific QCDR.

¹¹⁷ Quality Payment Program Overview. <https://qpp.cms.gov/about/qpp-overview>.

Therefore, we proposed a change so that QCDRs structure feedback in a similar manner (84 FR 40814). We proposed a new paragraph at § 414.1400(b)(2)(iv), beginning with the 2023 MIPS payment year, to require that QCDRs provide performance feedback to their clinicians and groups at least 4 times a year, and provide specific feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure within the QCDR (84 FR 40814). (*Note:* Since we are not finalizing § 414.1400(b)(2)(iii) (see section III.K.3.g.(3)(a)(ii) of this final rule), the previously proposed § 414.1400(b)(2)(iv) will now become § 414.1400(b)(2)(iii).) Exceptions to this requirement may occur if the QCDR does not receive the data from their clinician until the end of the performance period. We also solicited comment on other exceptions that may be necessary under this requirement.

We also understand that QCDRs can only provide feedback on data they have collected on their clinicians and groups, and realize the comparison would be limited to that data and not reflect the larger sample of those that have submitted on the measure for MIPS, which the QCDR does not have access to. We believe QCDR internal comparisons can still help MIPS eligible clinicians identify areas where further improvement is needed. The ability for MIPS eligible clinicians to be able to know in real time how they are performing against their peers, within a QCDR, provides immediate actionable feedback. We believe this provides value gained for clinicians as the majority of QCDRs are specialty specific or regional based, therefore the clinician can gain peer comparisons that are specific to their peer cohort, which can be specialty specific or locality based. Furthermore, we also proposed to strengthen the QCDR self-nomination process at § 414.1400(b)(1) to add that beginning with the 2023 MIPS payment year, QCDRs are required to attest during the self-nomination process that they can provide performance feedback at least 4 times a year (as specified at § 414.1400(b)(2)(iii)) (84 FR 40814). We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters agreed with the proposal for QCDRs to provide enhanced performance feedback at least 4 times a year including comparisons to other clinicians who reported the same measure, at minimum. Commenters expressed their belief that the feedback and comparison is very beneficial to

their participants and helps them identify potential areas for performance improvement as compared to their peers.

Response: We thank commenters for their support.

Comment: A few of the commenters stated their opinion that CMS should finalize exceptions for occasions when the QCDR does not receive data from the clinician until the end of the performance period.

Response: As proposed in the CY 2020 PFS proposed rule (84 FR 40814), we also stated that exceptions to this requirement may occur if the QCDR does not receive the data from their clinician until the end of the performance period. We would depend on the QCDRs to let us know as soon as possible when there are issues that arise that would cause a delay in providing performance feedback.

Comment: Another commenter stated its opinion that while it agrees with the intent of providing enhanced feedback at least 4 times per year, without requiring data be submitted regularly and consistently across all collection types, improvement in individual patient and population health outcomes may not be experienced as originally intended in the MACRA legislation.

Response: We appreciate the feedback on requiring data to be submitted regularly and consistently across all collection types, but believe that improvements in individual patients and population health outcomes can still be experienced in smaller cohorts on a QCDR by QCDR basis.

After consideration of the comments, we are finalizing our proposal with technical modifications to update the numbering, § 414.1400(b)(2)(iv) will now become § 414.1400(b)(2)(iii) because we did not finalize the requirement for QCDRs to engage in activities that would foster improvement in the quality of care proposal at § 414.1400(b)(2)(iii) per section III.K.3.g.(3)(a)(ii) of this final rule. Specifically, we are finalizing at § 414.1400(b)(2)(iii), beginning with the 2023 MIPS payment year, to require that QCDRs provide performance feedback to their clinicians and groups at least 4 times a year, and provide specific feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure within the QCDR. Exceptions to this requirement may occur if the QCDR does not receive the data from their clinician until the end of the performance period. In addition, we are also finalizing our proposal as proposed, to strengthen the QCDR self-nomination process at § 414.1400(b)(1) to add that

beginning with the 2023 MIPS payment year, QCDRs are required to attest during the self-nomination process that they can provide performance feedback at least 4 times a year (as specified at § 414.1400(b)(2)(iii)) (84 FR 40814).

In addition, the current performance period begins January 1 and ends on December 31st, and the corresponding data submission deadline is typically March 31st as described at § 414.1325(e)(1). As discussed above, we have heard from QCDR stakeholders that in some instances clinicians wait until the end of the performance period to submit data to the third party intermediary, who are then unable to provide meaningful feedback to their clinicians 4 times a year. Therefore, in the CY 2020 PFS proposed rule (84 FR 40814), we sought comment for future notice-and-comment rulemaking on whether we should require MIPS eligible clinicians, groups, and virtual groups who utilize a QCDR to submit data throughout the performance period, and prior to the close of the performance period (that is, December 31st). We also sought comment for future notice-and-comment rulemaking, on whether clinicians and groups can start submitting their data starting April 1 to ensure that the QCDR is providing feedback and the clinician or group during the performance period (84 FR 40814). This would allow QCDRs some time to provide enhanced and actionable feedback to MIPS eligible clinicians prior to the data submission deadline.

While we are not summarizing and responding to these comments we received in this final rule, we thank the commenters for their responses and will take them into consideration as we develop future policies for QCDRs.

(b) QCDR Measures

We refer readers to § 414.1400(b)(1), the CY 2018 Quality Payment Program final rule (82 FR 53814) and the CY 2019 PFS final rule (83 FR 59898 through 59900) for our previously established policies for the QCDR measure self-nomination process. In the CY 2020 PFS proposed rule (84 FR 40814 through 40819), we proposed policies related to: (a) Considerations for QCDR measure approval; (b) requirements for QCDR measure approval; (c) considerations for QCDR measure rejections; (d) the approval process; and (e) QCDR measures that have failed to reach benchmarking thresholds. These are discussed in detail below.

(c) QCDR Measure Requirements

In this final rule, we are clarifying that the newly finalized QCDR measure considerations and requirements for approval apply to all QCDR measures, regardless of whether they have been approved for previous performance periods or are new QCDR measures for the 2021 performance period and future years. We will not be grandfathering in previously approved QCDR measures.

(i) QCDR Measure Considerations and Requirements for Approval or Rejection

Through education and outreach, we have heard stakeholders' concerns about the complexity of reporting when there is a large inventory of QCDR measures to choose from, and believe our proposals will help to ensure that the measures made available in MIPS are meaningful to a clinician's scope of practice. In the CY 2020 PFS proposed rule (84 FR 40814), we proposed to codify established QCDR measure considerations and proposed, beginning with the CY 2021 performance period, a number of QCDR measure specific requirements, that would generally align with MIPS measure policies, which can be found in the CY 2018 Quality Payment Program final rule (82 FR 53636), and as described in the CY 2020 PFS proposed rule (84 FR 40745 through 40752), as well as section III.K.3.c.(1) of this final rule.

(A) QCDR Measure Considerations**(aa) Previously Finalized QCDR Measure Considerations**

We generally refer readers to the § 414.1400(b)(3), CY 2017 Quality Payment Program final rule (81 FR 77374 through 77375) and the CY 2019 PFS final rule (83 FR 59900 through 59902) for previously finalized standards and criteria used for selecting and approving QCDR measures. QCDR measures are reviewed for inclusion on an annual basis during the QCDR measure review process that occurs once the self-nomination period closes (82 FR 53810). All previously approved QCDR measures and new QCDR measures are currently reviewed on an annual basis to determine whether they are appropriate for the program (82 FR 53811). The QCDR measure review process occurs after the self-nomination period closes on September 1st. QCDR measures are not finalized or removed through notice and comment rulemaking; instead, they are currently approved or not approved through a subregulatory processes (82 FR 53639).

In the CY 2019 PFS final rule (83 FR 59902), we finalized our proposal to apply the following criteria beginning

with the 2021 MIPS payment year when considering QCDR measures for possible inclusion in MIPS:

- Measures that are beyond the measure concept phase of development.
- Preference given to measures that are outcome-based rather than clinical process measures.
- Measures that address patient safety and adverse events.
- Measures that identify appropriate use of diagnosis and therapeutics.
- Measures that address the domain for care coordination.
- Measures that address the domain for patient and caregiver experience.
- Measures that address efficiency, cost and resource use.
- Measures that address significant variation in performance.

In the CY 2020 PFS proposed rule (84 FR 40815), we proposed to codify a number of those previously finalized QCDR measure considerations that we had finalized in the CY 2019 PFS final rule (83 FR 59902). We also proposed to amend § 414.1400 by adding § 414.1400(b)(3)(iv) to include the following previously finalized QCDR measure considerations for approval (84 FR 40815):

- Preference for measures that are outcome-based rather than clinical process measures.
- Measures that address patient safety and adverse events.
- Measures that identify appropriate use of diagnosis and therapeutics.
- Measures that address the domain of care coordination.
- Measures that address the domain for patient and caregiver experience.
- Measures that address efficiency, cost, and resource use.

More information on QCDR measure approval criteria can be found in the QCDR/qualified registry Self-Nomination Tool-Kit in the Quality Payment Program Resource Library.

We refer readers to the CY 2020 PFS proposed rule (84 FR 40815) and section III.K.3.g.(3)(c)(i)(B) of this final rule where we discuss changes to the following previously finalized considerations into requirements:

- Measures that are beyond the measure concept phase of development.
- Measures that address significant variation in performance.

We did not receive public comments on this proposal.

Therefore, we are finalizing our proposal as proposed by adding § 414.1400(b)(3)(iv) to include the following QCDR measure considerations for approval:

- Preference for measures that are outcome-based rather than clinical process measures.

• Measures that address patient safety and adverse events.

• Measures that identify appropriate use of diagnosis and therapeutics.

• Measures that address the domain of care coordination.

• Measures that address the domain for patient and caregiver experience.

• Measures that address efficiency, cost, and resource use.

We refer readers to section III.K.3.g.(3)(c)(i)(B)(aa) of this final rule, for a discussion regarding the following previously finalized considerations into requirements (84 FR 40815):

- Measures that are beyond the measure concept phase of development.
- Measures that address significant variation in performance.

(bb) New QCDR Measure Considerations for Approval**(AA) QCDR Measure Availability**

In the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), we finalized a policy beginning with the 2018 performance period, that allowed QCDRs to seek permission from another QCDR to use an existing and approved QCDR measure. If a QCDR would like to report on an existing QCDR measure that is owned by another QCDR, they must have permission from the QCDR that owns the measure that they can use the measure for the performance period. Permission must be granted at the time of self-nomination, so that the QCDR that is using the QCDR measure can include written proof of permission for CMS review and approval. We also finalized in the CY 2018 Quality Payment Program final rule (82 FR 53814) that once QCDR measures are approved, we will assign QCDR measure IDs, and the same measure IDs must be used by the other QCDRs that have permission to also report on the measure.

We generally encourage QCDR measure owners to permit other QCDRs to report their measures on behalf of MIPS eligible clinicians for purposes of MIPS. To the extent that QCDR measure owners limit the availability of their measures, such limitations may adversely affect a QCDR's ability to benchmark the measure, the robustness of the benchmark, or the comparability of MIPS eligible clinicians' performance results on the measure. For these reasons, we proposed to amend § 414.1400 to add paragraph (b)(3)(iv)(H) to state that CMS may consider the extent to which a QCDR measure is available to MIPS eligible clinicians reporting through QCDRs other than the QCDR measure owner for purposes of MIPS (84 FR 40815). If CMS determines

that a QCDR measure is not available to MIPS eligible clinicians, groups, and virtual groups reporting through other QCDRs, CMS may not approve the measure.

We received public comments on this proposal. The following is a summary of the comments we received and our responses. We also acknowledge that we received several comments that were out of scope for this final rule, and therefore, are not addressing in this rule, but thank commenters for this feedback.

Comment: A few commenters supported the proposal to consider QCDR measure availability as part of the QCDR measure approval process due to their beliefs that it would encourage harmonization and collaboration among QCDRs while reducing duplication resulting from the unwillingness of some QCDRs to share measures.

Response: We thank commenters for their support.

Comment: Several commenters stated that CMS should provide an opportunity for QCDR measure owners to respond to allegations of unavailability before this is allowed to be a consideration in the measure approval process.

Response: We agree that QCDR measure owners should be given a chance to respond to instances where there is alleged blocking of the use of a QCDR measure. Therefore, we request that QCDRs keep documentation as to why a QCDR measure licensing agreement could not be reached, and on a case by case basis we will review the information on why the QCDR measure was not made available to another QCDR. We would expect that QCDR measure owners would be able to provide evidence to support their claim, should it be requested, as to why a given QCDR should not be allowed to use their QCDR measure.

Comment: Many commenters disagreed with the proposal to consider the extent to which a QCDR measure is available to other QCDRs as part of the measure approval process citing concerns regarding inappropriate or inconsistent implementation, incorrect understanding of measure specifications, and lack of standardized data methods resulting in inaccurate benchmarking by the borrowing QCDR. Another commenter stated they would consider the sharing of measures if the other QCDR adhered to certain standards and terms set out by the QCDR measure owner.

Response: We thank the commenters for raising these concerns. To respond, we first clarify that the intent of this proposal was to ensure that all QCDR measures that are considered for a given

performance period, are readily available for other QCDRs to license. In practice, this would mean that should the borrowing QCDR meet the terms of a QCDR measure owner's license agreement, the borrowing QCDR should be able to report on the measure. We do not dictate what is to be included in a QCDR measure licensing agreement, or if fees and to what amount are tied to QCDR measure licensure, and ultimately defer to the QCDR measure owner, borrower, and their respective legal teams to come to an agreement. We would expect that if QCDRs decide to require a QCDR measure licensure agreement for its QCDR measures, it would include the QCDR measure owner's terms of use. The terms may include implementation criteria to ensure that the measure is programmed and collected in a way that is consistent with what the QCDR measure owner intends, thereby avoiding concerns with inappropriate or inconsistent implementation. In the CY 2019 PFS final rule (83 FR 59895 through 59897), we finalized changes to the definition of a QCDR at § 414.1305 that beginning with the 2022 MIPS payment year, that a QCDR is an entity with clinical expertise in medicine and in quality measurement development that collects medical or clinical data on behalf of a MIPS eligible clinician for the purpose of patient and disease tracking to foster improvement in the quality of care provided to patients. We believe that QCDRs that are approved based on the revised QCDR definition for the 2022 MIPS payment year and future years, will be able to understand measure specifications since they are required to have measure development expertise and thereby understand measure specifications in order to be approved as a QCDR. Furthermore, as a part of the QCDR measure license user agreement, QCDR measure owners could include the data standardization methods they wish to be used to ensure consistent data collection, to ensure that borrowing QCDRs are utilizing the same standards consistently. We believe approved QCDRs should be able to comprehend and adhere to a preferred standardized data methodology, should the QCDR measure owner have one. In addition, QCDRs that are approved for the 2020 performance period and future years, should be able to utilize standardized data methodologies based on their measure experience. For QCDR measure owners that implement QCDR measure licensing agreements which include terms of use, they may come to find instances where a borrowing QCDR does not meet their terms prior to granting

permission to borrowing the measure. We would expect QCDR measure owners to be able to provide evidence to justify instances where their measure was made available but ultimately could not be borrowed by another QCDR, for CMS' consideration on a case-by-case basis. Our intention with this policy is to move away from having duplicative measures in the program, simply because QCDRs are unwilling to license their QCDR measures to one another. Continuously retaining duplicative QCDR measures in the program because QCDRs are unwilling to license measures to one another is counterintuitive to the Meaningful Measure Initiative, and leads to measure bloat. In instances where CMS finds that QCDRs are blocking the use of their QCDR measure from other QCDRs without any evidence that proves the borrowing QCDR is unable to meet the QCDR measure owner's terms, we will likely approve another similar QCDR measure over this one. All factors will be considered prior to CMS determining which QCDR measure will continue on in the program.

Comment: Some commenters were concerned with the dilution of important feedback that is needed to drive key improvements in care.

Response: We disagree that allowing other QCDRs to borrow a QCDR's measure will lead to the dilution of important feedback that is needed to drive key improvements in care. Having a larger cohort of MIPS eligible clinicians reporting on a given QCDR measure will provide for more meaningful data that will give MIPS eligible clinicians and groups a better idea of how they compare to their peers. Therefore, the data will provide a more accurate picture of where there are areas of improvement in order to drive quality in the care provided.

Comment: Several commenters expressed other concerns with the proposal including their beliefs that: The term "available" is not well defined and that CMS should elaborate on what criteria it would use to determine whether a measure is truly unavailable for reporting through other QCDRs. One commenter requested that CMS provide scenarios of what the proposal was trying to address.

Response: We thank the commenters for raising these concerns. To clarify, a QCDR measure is available when the QCDR measure owner is willing to allow other QCDRs to borrow their QCDR measure with the appropriate permissions and/or licensing. We leave measure license user agreements, expectations, and terms between the measure owner and borrower. We are

trying to address scenarios in which a QCDR measure is approved, but the QCDR measure owner does not allow any outside QCDRs to use their QCDR measure. We wish to place higher priority on measures that can be used by all clinicians participating in the program.

Comment: Some commenters stated that withholding measure approval based on lack of availability would potentially deprive clinicians of an otherwise valid and useful measure to report on.

Response: We understand the commenters concern, but want to ensure that duplicative measures are not approved because QCDRs are unwilling to license QCDR measures to one another. If a QCDR measure is not approved, it does not mean it cannot be collected on by the QCDR for purposes of quality improvement, rather the measure would not be available for MIPS eligible clinicians to use for participating under MIPS and any data collected on that measure would not be applicable for MIPS.

After consideration of the comments, we are finalizing our proposal as proposed to amend § 414.1400 to add paragraph (b)(3)(iv)(H) to state that CMS may consider the extent to which a QCDR measure is available to MIPS eligible clinicians reporting through QCDRs other than the QCDR measure owner for purposes of MIPS. If CMS determines that a QCDR measure is not available to MIPS eligible clinicians, groups, and virtual groups reporting through other QCDRs, we may not approve the measure.

(BB) QCDR Measure Addresses a Measurement Gap

As a part of the QCDR measure development process, QCDRs should conduct an environmental scan of existing QCDR measures; MIPS quality measures; quality measures retired from the legacy program, PQRS; and review the most recent CMS Quality Measure Development Plan Annual Report, which is currently available for 2019 at <https://www.cms.gov/Medicare/Quality-Payment-Program/Measure-Development/2019-Quality-MDP-Annual-Report-and-Appendices.zip> and the Blueprint for the CMS Measures Management System: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf> for guidance in areas where CMS has identified gaps in quality measurement to reduce the possibility of duplicative measure development. In the CY 2020 PFS proposed rule (84 FR 40815), we

proposed to amend § 414.1400 to add § 414.1400(b)(3)(iv)(I) to state that we would give greater consideration to measures for which QCDRs: (a) Conducted an environmental scan of existing QCDR measures; MIPS quality measures; quality measures retired from the legacy Physician Quality Reporting System (PQRS) program; and (b) utilized the CMS Quality Measure Development Plan Annual Report and the Blueprint for the CMS Measures Management System to identify measurement gaps prior to measure development (84 FR 40815).

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: One commenter requested clarification on whether a performance gap needs to be demonstrated by data collection via a registry over a specified period of time (for example, 2 years), or if a health care survey would sufficiently demonstrate evidence of a performance gap. The commenter also questioned what constitutes “significant variation” to ensure proposed measures meet CMS’ expectations.

Response: In the proposed rule, we proposed that we would give greater consideration to measures for which QCDRs: (a) Conducted an environmental scan of existing QCDR measures; MIPS quality measures; quality measures retired from the legacy Physician Quality Reporting System (PQRS) program; and (b) utilized the CMS Quality Measure Development Plan Annual Report and the Blueprint for the CMS Measures Management System to identify measurement gaps prior to measure development (84 FR 40815). The Blueprint for the CMS Measures Management System <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf> defines a performance gap as when there is known variation in performance. A measure that is considered to have a performance gap would not be considered topped out, as described in the CY 2017 Quality Payment Program final rule (81 FR 77282 through 77283). The performance gap may be identified by data submitted to the registry on the given measure, or through current clinical study citations (within the past 5 years), a health care survey would not provide sufficient evidence of a performance gap.

After consideration of the comments, we are finalizing our proposal as proposed, to amend § 414.1400 to add § 414.1400(b)(3)(iv)(I) to state that we would give greater consideration to measures for which QCDRs: (a)

Conducted an environmental scan of existing QCDR measures; MIPS quality measures; quality measures retired from the legacy Physician Quality Reporting System (PQRS) program; and (b) utilized the CMS Quality Measure Development Plan Annual Report and the Blueprint for the CMS Measures Management System to identify measurement gaps prior to measure development.

(CC) QCDRs Measures Meeting Benchmarking Thresholds

Over the first 2 years of MIPS, we have observed instances where QCDR measures have been approved for continued use in the program, but have had low reporting volumes, below the case minimum and reporting volume thresholds required for a measure to be benchmarked within the program. As described in the CY 2017 Quality Payment Program final rule (81 FR 77277 through 77282), for benchmarks to be developed, a measure must have a minimum of 20 individual clinicians or groups who reported the measure to meet the data completeness requirement and the minimum case size criteria. QCDRs should be aware of which measures are considered low-reported, since measures that do not meet benchmarking thresholds result in a 3-point floor, as described in the CY 2017 Quality Payment Program final rule (81 FR 77282). QCDR measures are reviewed and approved on an annual basis, and as a part of the review process, we review: The benchmarking file from the previous year (for example, the 2019 Quality Benchmark file, found on the Quality Payment Program Resource Library, which is available at <https://qpp.cms.gov/about/resource-library>); production submission data submitted from the previous year’s data submission period; and data provided to us by the QCDRs themselves. Note to readers when the CY 2020 PFS proposed rule was published the 2019 Quality Benchmark file could be found at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/342/2019%20MIPS%20Quality%20Benchmarks.zip> however after publishing that rule, the link has since been updated and can now be found at the link above (<https://qpp.cms.gov/about/resource-library>) by searching for “2019 Quality Benchmark file.”

In the CY 2020 PFS proposed rule (84 FR 40816), as discussed in our QCDR measure rejection considerations, we proposed that a QCDR measure that does not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance may not continue to be

approved in the future if our proposal is finalized as proposed. We noted that this factor is parallel to what was proposed for MIPS quality measures in section III.K.3.c.(1) of the proposed rule (84 FR 40816), which is being finalized in section III.K.3.c.(1) of this final rule, and is important when considering the volume of QCDR measures that are currently in the program that have had low reporting rates year-over-year. We proposed to amend § 414.1400 to add paragraph (b)(3)(iv)(I) to state that, beginning with the 2020 performance period, we place greater preference on QCDR measures that meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods (84 FR 40816). Those that do not, may not continue to be approved. We refer readers to section III.K.3.g.(3)(c)(ii) in the proposed rule (84 FR 40816) and section III.K.3.g.(3)(c)(ii) of this final rule, for a discussion on how QCDRs may create participation plans for existing approved QCDR measures that have failed to reach benchmarking thresholds, in order to be reconsidered for future use. We also refer readers to § 414.1330 for additional information.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A few commenters disagreed with the proposal to potentially reject QCDR measures that do not meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods due to their beliefs that the policy of awarding fewer points for reporting non-benchmarked measures is enough to discourage use of these measures without further negatively impacting clinicians who have few other measures to report.

Response: While the quality scoring policy referenced by the commenters that provides a 3-point floor for measures that are submitted, but is unable to be scored because it does not meet the required case minimum, does not have a benchmark, or does not meet the data completeness requirement could have an impact on reduced reporting volumes, we believe this 2-year lifecycle and participation plan will more directly address the issue of low reported measures. We refer readers to section III.K.3.d.(1) and § 414.1380(b)(1)(i)(A) and (B) which provides details on the MIPS performance category scores.

Comment: A few commenters disagreed with the proposal due to their

beliefs that it would reduce the number of available measures to a point that it would be a hardship for certain specialties to participate in MIPS; and eliminating a measure after 2 years in the program would deter QCDRs from investing in and developing new measures, maintaining existing measures, and putting forward MVP proposals. A few commenters expressed their opinion that prior to rejecting a QCDR measure that is not meeting thresholds, CMS should work with QCDR measure stewards to understand why a measure is not meeting thresholds and the importance of these measures to clinicians in specialized fields or clinicians treating less common diseases or conditions.

Response: While we appreciate the commenters concerns, we believe that maintaining low-reported measures in the program over multiple years, is counterintuitive to the Meaningful Measurement Initiative and indicative of metrics that are not of interest to the majority of clinicians within a given specialty. We believe that removing low-reported measures should not deter QCDRs in investing and developing new measures, maintaining existing measures, or putting forward MVP proposals. We believe that tracking measure reporting volumes over the years will allow QCDRs to determine whether the metric is meaningful to their eligible clinicians and group and allow for them to make revisions to existing measures or develop new measures accordingly. In addition, we are aware of instances in which measures may be low-reported due to being highly sub-specialized. Because of that, we proposed a potential mitigation strategy for QCDR measures with low-reporting volumes that do not meet benchmarking thresholds. As described in the CY 2020 PFS proposed rule (84 FR 40819), in instances where a QCDR believes a low-reported QCDR measure that did not meet benchmarking thresholds is still important and relevant to a specialist's practice, the QCDR may develop and submit a QCDR measure participation plan for our consideration. The QCDR measure participation plan must include the QCDR's detailed plans and changes to encourage eligible clinicians and groups to submit data on the low-reported QCDR measure for purposes of the MIPS program. As examples, a QCDR measure participation plan could include one or more of the following: Development of an education and communication plan; update the QCDR measure's specification with changes to encourage broader participation, which would

require review and approval by us; or require reporting on the QCDR measure as a condition of reporting through the QCDR. Prior to measures being eliminated from the program for a given specialty, we do conduct a review of remaining MIPS quality measures and QCDR measures to determine if there is a sufficient number of measures left. Once a participation plan is implemented, we plan to monitor the QCDR measure to determine if there is an increase in reporting volumes. We understand that the measure development process is time-consuming and costly, however. If a QCDR measure is removed because of low-reporting volumes, but a QCDR continues to collect data on the measure outside of the MIPS program, the measure could be reconsidered for the program in the future. As we develop MVPs, we will consider how each policy interacts and make any appropriate adjustments in future rulemaking.

Comment: A few commenters opposed the proposal due to their beliefs that: The 2-year period is not long enough for some measures to achieve acceptable numbers of adoption or for EHR vendors to complete data integration to support QCDR measures and that failure to achieve benchmark status does not necessarily indicate that a measure is not meaningful. In regards to the time necessary for EHR vendors to support QCDR measures, one commenter noted this process can take up to 18 months from the time a vendor learns of a new or revised set of QCDR measures until the development life cycle is complete.

Response: The 2-year timeframe was decided upon after review and consideration of benchmarking trends as indicated in the quality measure benchmark files, for the appropriate amount of time a measure typically needs to reach benchmarking thresholds. While we appreciate the commenters concerns, to clarify, EHR vendors would only be able to report on QCDR measures if they self-nominate to be a QCDR, and meet the QCDR definition, as described at § 414.1400(b)(2)(ii) in the CY 2019 PFS final rule (83 FR 59895 through 59896). Since QCDRs will be required to test their measures prior to self-nominating them, as reflected at § 414.1400(b)(3)(v)(C), it is assumed that the QCDR would have considered the time it takes for data integration from an EHR prior to testing the measure to ensure that measure is feasible. If a QCDR cannot timely complete the data integration process for a QCDR measure, it should delay self-nominating that QCDR measure until it is

implementable. We note that QCDR measures should not be submitted for consideration until they are fully developed and tested, including the ability to be supported by EHR vendors. In addition, we believe this issue is mitigated, as described in the CY 2020 PFS proposed rule (84 FR 40817) and in this final rule, by our requirement to add paragraph (b)(3)(v)(D) that QCDRs are required to collect data on a QCDR measure, appropriate to the measure type, prior to submitting the QCDR measure for CMS consideration during the self-nomination period. The data collected must demonstrate whether the QCDR measure is valid and reflects an important clinical concept(s) that clinicians wish to be measured on. By collecting data on the QCDR measure prior to self-nomination, QCDRs would be able to demonstrate whether the measure is implementable and data collection on the metric is possible.

As described in the CY 2020 PFS proposed rule (84 FR 40819), in instances where a QCDR believes a low-reported QCDR measure, that did not meet benchmarking thresholds within the 2-year timeframe, is still important and relevant to a specialist's practice, the QCDR may develop and submit a QCDR measure participation plan for our consideration. As discussed in section III.K.3.g.(3)(c)(iii) of this final rule, the QCDR measure participation plan must include the QCDR's detailed plans and changes to encourage eligible clinicians and groups to submit data on the low-reported QCDR measure for purposes of the MIPS program.

Comment: A few commenters stated their opinion that CMS should delay implementation of the proposal due to their belief that it would be inappropriate to finalize a requirement after the deadline for 2020 QCDR self-nominations has passed, as well as not allowing QCDRs enough time to reevaluate their measure submission strategies.

Response: We disagree with the commenters suggestion that we delay this policy based on the passed deadline for 2020 QCDR self-nominations. We believe that enacting this policy for the 2020 performance period allows us to ensure that the QCDR measures available for the performance period are meaningful and believe that the participation plan policy, as discussed in section III.K.3.g.(3)(c)(iii) of this final rule provides additional flexibility for low-reported QCDR measures that are currently under review for the 2020 performance period. If the QCDR measure is identified as an existing measure that is continuously low-reported, the QCDR has a chance to

develop and submit a participation plan as a part of the QCDR measure reconsideration process.

Comment: One commenter requested additional clarity on the proposal to reject QCDR measures that do not meet case minimum and reporting volumes required for benchmarking after being in the program for two consecutive CY performance periods. The commenter requested clarification as to whether a measure would be rejected if it failed to meet benchmarking thresholds via one collection type but met thresholds via another.

Response: To clarify, QCDR measures are available through only a single collection type, a QCDR, and therefore, for purposes of the MIPS program a QCDR would only be submitting data on a QCDR measure only through a QCDR for purposes of MIPS reporting. However, if a QCDR has additional information or performance rate related information to share, utilizing data collected outside of the MIPS program, they may do so in the development of a participation plan as discussed above.

After consideration of the comments, we are finalizing § 414.1400 to add paragraph (b)(3)(iv)(J), as proposed, to state that, beginning with the 2020 performance period, we place greater preference on QCDR measures that meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods. Those that do not meet this requirement, may not continue to be approved. We refer readers to section III.K.3.g.(3)(c)(ii) in the final rule, for discussion on how QCDRs may create participation plans for existing approved QCDR measures that have failed to reach benchmarking thresholds, in order to be reconsidered for future use.

(B) QCDR Measure Requirements

(aa) Previously Finalized Requirements Considerations Codified as Requirements

In the CY 2020 PFS proposed rule (84 FR 40815), we proposed to change two previously finalized measure considerations into requirements and codify those requirements. In the CY 2019 PFS final rule, we previously finalized that we would apply certain criteria beginning with the 2021 MIPS payment year when considering QCDR measures for possible inclusion in MIPS (83 FR 59902). We refer readers to section III.K.3.g.(3)(c)(i)(A) of this final rule where we discuss our proposal to codify the majority as measure considerations (84 FR 40816). However, for two of those previously finalized

considerations, in the CY 2020 PFS proposed rule, we proposed them as requirements (84 FR 40816):

- Measures that are beyond the measure concept phase of development.
- Measures that address significant variation in performance.

We believe the previously finalized consideration that measures are beyond the measure concept phase of development should be a requirement because measures that do not surpass the measure concept phase will not be able to complete another QCDR measure requirement, measure testing. In addition, we believe the previously finalized consideration that measures address significant variation in performance should be a requirement because QCDR measures that do not demonstrate performance variation will likely be identified as topped out and will not be approved.

Therefore, beginning with the 2020 performance period, we proposed to change both of those considerations into requirements and proposed to amend § 414.1400 by adding § 414.1400(b)(3)(v) to include the following (84 FR 40816):

- Measures that are beyond the measure concept phase of development.
- Measures that address significant variation in performance.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A few commenters agreed with the proposed requirements for a QCDR measure to be beyond the concept phase of development and address a significant variation in performance during the approval process.

Response: We thank the commenters for their support.

After consideration of the comments, we are finalizing our proposal as proposed, beginning with the 2020 performance period, to change both of the below listed considerations into requirements and add § 414.1400(b)(3)(v) to include the following for QCDR measure requirements for approval:

- Measures that are beyond the measure concept phase of development.
- Measures that address significant variation in performance.

(bb) Linking QCDR Measures to Cost Measures, Improvement Activities, and MIPS Value Pathways (MVP)

To prepare QCDR measures for self-nomination, we believe there should be consideration of how these QCDR measures relate to similar topics covered through the other performance categories. We believe (as noted in the

CY 2020 PFS proposed rule (84 FR 40816)) that to transform the MIPS program to one of value, MIPS measures and QCDR measures, should have an associated cost measure, improvement activity, and eventually a corresponding MVP. This would strengthen the QCDR measure's relevance in the program. We believe that evaluating the strength of these linkages may decrease the frequency of receiving extraneous QCDR measures that are not relevant or meaningful within the framework of the MIPS program.

Therefore, in the CY 2020 PFS proposed rule, beginning with the 2021 performance period and future years, we proposed that QCDRs must identify a linkage between their QCDR measures to the following, at the time of self-nomination: (a) Cost measure (as found in the CY 2020 PFS proposed rule (84 FR 40752 through 40762)); (b) Improvement Activity (as found in Appendix 2: Improvement Activities Tables of the CY 2020 PFS proposed rule (84 FR 41275 through 41283)); or (c) CMS developed MVPs (as described in Table 34 of the CY 2020 PFS proposed rule (84 FR 40737 through 40738)). Under the pathway framework for example, a surgery specific QCDR should be able to correlate their surgery-related QCDR measure to an MVP, such as the Major Surgery pathway.

We understand that not all measures may have a direct link. In cases where a QCDR measure does not have a clear link to a cost measure, improvement activity, or an MVP, we would consider exceptions if the potential QCDR measure otherwise meets the QCDR measure requirements defined above.

However, we believe that when possible, it is important to establish a strong linkage between quality, cost, and improvement activities. Therefore, we also proposed to amend § 414.1400 to add paragraph (b)(3)(iv)(G) to require, beginning with the 2021 performance period, that QCDRs link their QCDR measures to the following at the time of self-nomination: (a) Cost measure; (b) improvement activity; and (c) an MVP (84 FR 40816). If the potential QCDR measure otherwise meets the QCDR measure requirements but does not have a clear link to a cost measure, improvement activity, or an MVP, we would consider exceptions for measures that otherwise meet the QCDR measure requirements and considerations as discussed above.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters agreed with the proposal to require that QCDR

measures be linked to cost measures, improvement activities, and MVPs. Several commenters supported an exception in cases where a QCDR measure lacks a clear link to either a cost measure, improvement activity, or MVP.

Response: We thank commenters for their support.

Comment: One commenter cited its belief that the proposal is not consistent with the regulatory language in that, the proposal states the linkage must be made to at least one of the categories while the regulatory language states the linkage must be made to all three. Another commenter stated that it is unclear whether the QCDR measure should be linked to at least one or all three of the performance categories. A few commenters sought clarification on the proposal to require QCDR measures be linked to cost measures, Improvement Activities, and MVPs, specifically whether QCDRs must link their measures to a cost measure, improvement activity, or a CMS-developed MVP, or all three; and how QCDRs will be required to identify linkages.

Response: In the CY 2020 PFS proposed rule (84 FR 40816), we stated that “we believe that to transform the MIPS program to one of value, MIPS measures and QCDR measures, should have an associated cost measure, improvement activity, and eventually a corresponding MVP.” In addition, we also stated, “therefore, we also propose to amend § 414.1400 to add paragraph (b)(3)(iv)(G) to require, beginning with the 2021 performance period, that QCDRs link their QCDR measures as feasible to the following at the time of self-nomination: (a) Cost measure; (b) improvement activity; and (c) an MVP” (84 FR 40816). However, we also proposed (84 FR 40816) that beginning with the 2021 performance period and future years, QCDRs must identify a linkage between their QCDR measures to the following, at the time of self-nomination: (a) Cost measure (as found in the CY 2020 PFS proposed rule (84 FR 40752 through 40762)); (b) Improvement Activity (as found in Appendix 2: Improvement Activities Tables of the CY 2020 PFS proposed rule (84 FR 41275 through 41283)); or (c) CMS developed MVPs. We apologize for the confusion. We intended for the proposal to consistently use the term “or,” meaning that QCDRs would be required to link their measure to at least one performance category as feasible. Therefore, we are clarifying our requirement here in this final rule that QCDRs would not be required to link to all three performance categories at this

time; but should try to link their measure to the performance categories as feasible.

Comment: A few commenters expressed concerns with the proposal to require QCDR measures to be linked with cost measures, improvement activities, and MIPS Value Pathways, noting that some specialties are not currently included in the cost category and/or MIPS Value Pathways and therefore, urged CMS to account for these types of clinicians by building flexibility into QCDR measure requirements. Other commenters noted linking to cost measures, improvement activities, and MIPS Value Pathways should be optional and not required.

Response: We appreciate the concerns raised by these commenters. We refer readers to our clarification above—QCDRs would be required to link their measure to at least one, not all three, performance category as feasible. In cases where a QCDR measure does not have a clear link to a cost measure, improvement activity, or MVP, we proposed that we would consider exceptions if the potential QCDR measure otherwise met the QCDR measure requirements and considerations such as addressing a measurement gap. As stated in our proposal in the CY 2020 PFS proposed rule (84 FR 40926), in cases where a QCDR measure does not have a clear link to a cost measure, improvement activity, or MVP, we would consider exceptions if the potential QCDR measure otherwise met the QCDR measure requirements and considerations. If a QCDR measure cannot be linked to a cost measure because the specialty isn't reflected in the cost measures, then the QCDR would indicate there are no cost measures to link in their QCDR measure submission for us to note as a part of our review.

Comment: Several commenters stated that the method for linking QCDR measures is unclear as is the information required to explain the link. One commenter requested CMS provide additional education and guidance to QCDRs to assist them in adequately meeting the new requirement.

Response: As QCDRs consider which QCDR measures they want to submit for consideration, they should work to identify relationships that can link their QCDR measure to measures and activities in other performance categories. For example, a link can be established if the associated measures and activities address the same clinical condition or disease. We will require the QCDR to provide a narrative with their QCDR measure specification that

identifies the other measures and activities that relate, and explain why they believe there is a link. We agree that additional education and guidance would be beneficial. We plan to provide education to QCDRs to ensure that they adequately understand this requirement.

Comment: Several commenters disagreed with the proposal to require QCDR measures be linked to cost measures, improvement activities, and MIPS Value Pathways, citing their beliefs that: CMS should not implement any changes related to MIPS Value Pathways until the Agency has received and considered all comments related to the proposal and conducted outreach and meetings prior to the publication of next year's proposed rule (or alternatively a separate request for information (RFI) soliciting feedback). These commenters also expressed concern that continued development of new episode-based cost measures and MVPs may mean applicable measures and MVPs are not available at the time of self-nomination. One commenter noted that the effective date of this proposal is too soon and should be deferred until the MVP framework is established and measure developers have the necessary time to adapt to the new requirements and establish new measures to align with this new focus.

Response: This policy was proposed with a delayed implementation, to take into effect for the 2021 performance period, in order for QCDRs to get acclimated with developing linkages between QCDR measures and measures and activities found within other performance categories, as a way to prepare for MVPs. In the time between the proposed and final rule, we have conducted stakeholder outreach through listening sessions and public facing webinars, while also reviewing comments received as it related to MVPs. We believe the 2021 performance period is an appropriate timeframe because it coincides with the timing, since the MVP framework is being finalized in this final rule, in which the first set of MVPs will be developed for 2021. Furthermore, we note that this policy establishes linkages as feasible, therefore while it's preferable, it is not mandatory to link a QCDR measure to a future MVP. If an MVP is not available at the time of self-nomination, a QCDR should try to link their QCDR measure to a relevant cost measure and improvement activity as feasible.

After consideration of the comments, we are finalizing our proposal with clarification that QCDRs are required to link their measure to at least one performance category as feasible. Therefore, we are amending § 414.1400

to reflect this clarification and add paragraph (b)(3)(iv)(G) to require, beginning with the 2021 performance period, that QCDRs link their QCDR measures as feasible to at least one of the following at the time of self-nomination: (a) Cost measure; (b) improvement activity; or (c) an MVP. In cases where a QCDR measure does not have a clear link to a cost measure, improvement activity, or an MVP, we would consider exceptions if the potential QCDR measure otherwise meets the QCDR measure requirements and considerations as discussed above.

(cc) Completion of QCDR Measure Testing

We refer readers to the CY 2019 PFS final rule, where we gave notice to the public that we were considering proposing to require reliability and feasibility testing as an added criteria in order for a QCDR measure to be considered for MIPS in future rulemaking (83 FR 59901 through 59902). After consideration of the previous public comments received, and our priority to ensure that all measures available in MIPS are reliable and valid thereby reducing reporting burden on eligible clinicians and groups, we moved forward with a proposal in the CY 2020 PFS proposed rule (84 FR 40816).

Beginning with the 2021 performance period and future years, we proposed, that for a QCDR measure to be considered for use in the program, all QCDR measures submitted at the time of self-nomination must be fully developed with completed testing results at the clinician level, as defined by the CMS Blueprint for the CMS Measures Management System (available at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf>), and as used in the testing of MIPS quality measures prior to the submission of those measures to the Call for Measures (84 FR 40816 through 40817). We believe that full development and testing with completed testing results at the clinician level helps to demonstrate whether the QCDR measure is ready for implementation at the time of self-nomination. We intend to include only measures that are valid, reliable, and feasible for use by clinicians and will be consistent with the criteria that is expected of MIPS quality measures. As a result, we also proposed to amend § 414.1400 to add paragraph (b)(3)(v)(C) to reflect this proposal (84 FR 40817). At § 414.1400(b)(3)(v)(C), we proposed beginning with the 2021 performance period, all QCDR measures must be

fully developed and tested, with complete testing results at the clinician level, prior to submitting the QCDR measure at the time of self-nomination (84 FR 40817).

We noted that the testing process for quality measures is dependent on the measure type (for example, a measure that is specified as an eCQM measure has additional steps it must undergo when compared to other measure types). The National Quality Forum (NQF) has developed guides for measure testing criteria and standards which further illustrate these differences based on measure type. Additionally, the costs associated with testing vary based on the complexity of the measure and the developing organization. The Journal of the American Medical Association states that the costs associated with quality measures are generally unknown or unreported.¹¹⁸ While we understand the proposed policy will result in additional costs for QCDRs to develop measures, given the uncertainty regarding the number and types of measures that will be proposed in future performance periods coupled with the lack of available cost data on measure development and testing, we are unable to determine the financial impact of this proposal on QCDRs beyond the likelihood of it being more than trivial. Likewise, we understand that some QCDRs already perform measure testing prior to submission for approval while others do not. This variability makes it difficult to estimate the incremental impact of this regulation. Please refer to section VII., the Regulatory Impact Analysis, of this final rule for additional details.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters agreed with the proposal to require measure testing prior to a QCDR measure being submitted for approval.

Response: We thank commenters for their support.

Comment: A few commenters requested clarification on the level of testing for which CMS is asking and whether it is full NQF-level specification and endorsement or a feasibility and validity test within the QCDR due to their opinion that NQF-level specification testing is both burdensome and expensive.

¹¹⁸ Schuster, Onorato, and Meltzer. "Measuring the Cost of Quality Measurement: A Missing Link in Quality Strategy", Journal of the American Medical Association. 2017; 318(13):1219-1220. <https://jamanetwork.com/journals/jama/fullarticle/2653111?resultClick=1>.

Response: As stated in the CY 2020 PFS proposed rule (84 FR 40816 through 40817), we proposed that all QCDR measures submitted at the time of self-nomination must be fully developed with completed testing results at the clinician level, as defined by the CMS Blueprint for the CMS Measures Management System (available at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf>), and as used in the testing of MIPS quality measures prior to the submission of those measures to the Call for Measures. As a reminder, we do not currently require QCDR measures to be NQF endorsed in order to be approved for use in the program. We believe in utilizing the existing NQF testing standard without variation, to avoid inconsistencies that may result from substandard results. We understand that measure testing requires an additional level of effort, cost, and time, but believe that measure testing ensures that measures are reliable, valid, and feasible. By completing this testing, QCDRs will avoid instances of discovering mid-year that their measure is not feasible or collectible, and will avoid adding to clinician reporting burden.

Comment: A commenter cited their opinion that should the proposal be finalized, CMS should provide leniency on following the CMS Blueprint for the CMS Measures Management System due to its belief that it was developed for use by measure contractors who presumably have dedicated resources, both in staffing and funding, to do the sole work of measure development, testing and maintenance; and that the measure development timeline and requirements as laid out in the Blueprint are aggressive, particularly for organizations dependent on limited funds and expert volunteers to complete the work.

Response: We disagree on providing leniency on testing requirements, as we expect to uphold the testing requirements that are utilized for MIPS quality measures through the CMS Blueprint for Measures Management System, and that the standard is upheld consistently for all QCDR measures and MIPS quality measures within the program. We believe QCDRs should research testing requirements for planning purposes from a timing and budget perspective. We will not consider measures that have incomplete testing results or those that do not meet the testing standards. Further the process outlined in the CMS Blueprint for the CMS Measures Management System is very thorough and following the Blueprint will substantially increase

the scientific acceptability of the measure, and likelihood of the measure receiving endorsement. We note that while the Blueprint is required for CMS measure development contractors, it is a resource that can be used by any measure developer. We do recognize that resource availability in measure testing may vary, however, we reiterate the importance of following the Blueprint to produce a sound measure. Additionally, CMS provides support through webinars, resources, etc. through the Measure Management System: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/MMS-Content-Page.html> For Measure Management System webinar sign-up we direct readers to email MMSsupport@battelle.org.

Comment: Many commenters disagreed with the proposal to require QCDR measures to have completed testing prior to nomination due to their beliefs that: It would delay the creation and submission of new measures by a number of months or even years; the process would be cost prohibitive for many QCDRs, especially those administered by non-profit medical societies; may result in some QCDRs electing to cease measure development or no longer participating in the MIPS program; could lead to increased licensing fees or participation fees for clinicians; and it removes the ability for clinicians to report on measures that are not in the CMS measure inventory.

Response: While we understand the increased time and cost burdens associated with measure testing, we believe the benefits of completed measure testing far outweigh the burdens of it. We want all measures available in the MIPS program to be reliable, feasible, valid, and implementable within the program. We want to avoid scenarios that would arise by allowing measures that do not meet these standards which then may lead to issues with the measure mid-performance period. We do not believe it is appropriate to have untested measures within the MIPS program since clinician's performance on measures have impacts on their payments. Furthermore, as we have signaled through previous rulemaking cycles (83 FR 59901 through 59902), we have intended to raise the bar for QCDR measures that are available for reporting within the MIPS program. We disagree that measure testing removes the ability for clinicians to report on measures that are not within the CMS inventory. To clarify, QCDRs can collect data on measures for purposes of quality improvement outside of the program,

without reporting the data to CMS for purposes of MIPS.

Comment: Some commenters stated that this policy is contrary to Congress' initial intent for QCDRs to serve as testbeds for more robust and creative measures.

Response: We disagree with the commenter that this policy is contrary to Congress' intent for QCDRs as there is no reference in section 1848(q) of the Act to QCDRs serving as "testbeds" for more robust and creative measures.

Comment: A few commenters suggested testing measures during a trial period during which performance would not be counted against clinicians, and they may be offered some small incentive to report on the measures so that the developer can continue to refine them; or using interim testing results which could be collected while the measure is in use. One commenter expressed its belief that the proposal is unreasonable for smaller specialties or specialties where clinicians are more likely in small/solo practices due to the difficulty in operationalizing new measures and providing test data; and that the limited ability to use the Bonnie eCQM test deck also contributes to requiring large facilities with significant resources. This commenter also stated their belief that testing methodologies employed by academic medical centers could lack applicability and could cause measures commonly used by small/solo practitioners to fail external validity testing.

Response: We thank the commenters for their suggestions. We believe there is value and importance in ensuring the scientific rigor of measures through measure testing; and therefore, we will not accept trial testing in place of fully completed testing data at the clinician level. We understand there may be limitations with small specialties and the lack of resources to test measures, but believe it is important to only include measures that are valid, reliable, and feasible in the program. We want to ensure that the testing methodology used by all, including academic medical centers, in a consistent manner to ensure that results meet testing standards. In response to commenters on the limited ability to use the Bonnie eCQM test deck, we clarify that testing verifies the behavior of the eCQM logic. Bonnie tests the measure logic against the constructed patient test deck and evaluates whether the logic aligns with the intent of the measure. This is an element of the testing and is not full validity, reliability and feasibility testing. Bonnie is open source and free to use, so it is an available option for testing measure logic. We refer readers

to <https://bonnie.healthit.gov/> for additional information on Bonnie.

Comment: A few commenters expressed their opinion that since QCDRs may have access to real-world EHR data, it should be recognized by CMS as a means to achieve the goals of measure testing without having to test measures according to the methods outlined by NQF and the CMS measures blueprint. Finally, one commenter suggested that in place of this proposal, the proposal to require collection of 12 months of data prior to nominating a new QCDR measure could be used in its place.

Response: We disagree that having real-world access to EHR data is comparable to that of measure testing data or that requiring collection of 12 months of data on a QCDR measure could replace measure testing. Regardless of the QCDR measure's data source, all QCDR measures should be fully tested to ensure the measure is valid, reliable, and implementable at the clinician level. We clarify that the requirement to collect data on a QCDR measure prior to self-nominating is separate and apart from the requirement to fully test the measure. Data collection is meaningful because it demonstrates whether a measure is implementable and if there is interest by the clinician community on reporting on that metric.

Comment: One commenter stated that if the proposal is finalized, CMS should provide additional flexibility to their proposed timeframes for measures dealing with less common medical problems as it is often not feasible to measure rare surgical outcome events during the course of 1 year in a way that is statistically appropriate or reliable.

Response: We clarify that all QCDR measures, regardless of whether they have been approved for previous performance periods or are new QCDR measures will be expected to meet these new QCDR measures requirements and considerations to be approved for the 2021 performance period and future years. We will not be grandfathering in previously approved QCDR measures. To further clarify, we have not proposed timeframes for measure testing. As described in the CY 2020 PFS proposed rule (84 FR 40817), the testing process for quality measures is dependent on the measure type, for example, a measure that is specified as an eCQM measure has additional steps that it undergoes when compared to other measure types. We defer to QCDR measure owners as the experts in their specialty. We refer QCDRs to the Blueprint for the CMS Measures Management System ([https://www.cms.gov/Medicare/Quality-](https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf)

Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf) for measure testing criteria and standards to determine timeframes that are appropriate for individual QCDR measure testing to ensure consistent and reliable standards are used. If a QCDR believes that they need more than 1 year is needed to ensure a measure is statistically appropriate, reliable, and to complete measure testing at the clinician level, then they should delay self-nominating the QCDR measure until testing is completed. Furthermore, we refer readers to the CY 2020 PFS proposed rule (84 FR 40818), where we proposed, and are finalizing in section III.K.3.g.(3)(c)(i) of this final rule, to reject QCDR measures that focus in on rare events or "never events" in the measurement period, and provided fires in the operating room as an example of a rare event.

After consideration of the comments, we are finalizing our proposals as proposed. Specifically, we are finalizing § 414.1400(b)(3)(v)(C), to state that beginning with the 2021 performance period, all QCDR measures must be fully developed and tested, with complete testing results at the clinician level, prior to submitting the QCDR measure at the time of self-nomination. We are also finalizing our proposal that all QCDR measures submitted at the time of self-nomination must be fully developed with completed testing results at the clinician level, as defined by the CMS Blueprint for the CMS Measures Management System (available at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf>), and as used in the testing of MIPS quality measures prior to the submission of those measures to the Call for Measures.

(dd) Collection of Data on QCDR Measures

We have observed several instances in which QCDRs have attempted to use the MIPS Program to "test" out measure concepts without concrete evidence that there is a measurement performance gap. We want to discourage that and ensure QCDR measures used for the MIPS Program are valid and reliable. In addition, through reviews of QCDR measure submissions, where reporting data was provided by the QCDR or through submission data from the 2017 performance period, we have identified some current QCDR measures in the program that have continuously low reporting rates, which affects the ability to meet benchmarking criteria. The data submitted is insufficient in meeting the

case minimum and volume thresholds required for benchmarking.

Therefore, in the CY 2020 PFS proposed rule, we proposed to require QCDRs to collect data on the potential QCDR measure (84 FR 40817). For a QCDR measure to be considered for use in the program, beginning with the 2021 performance period and future years, we proposed to amend § 414.1400 to add paragraph (b)(3)(v)(D) that QCDRs are required to collect data on a QCDR measure, appropriate to the measure type, prior to submitting the QCDR measure for CMS consideration during the self-nomination period (84 FR 40817). The data collected must demonstrate whether the QCDR measure is valid and reflects an important clinical concept(s) that clinicians wish to be measured on. By collecting data on the QCDR measure prior to self-nomination, QCDRs would be able to demonstrate whether the measure is implementable and data collection on the metric is possible. In addition, the data collected on the QCDR measure prior to self-nomination, could be used to demonstrate that there is a performance gap and need for measurement. We suggest QCDRs to collect data on as many months as possible, but encourage QCDRs to collect data for 12 months prior to submitting the QCDR measure for our consideration at the time of self-nomination, since quality reporting requires 12 months of data, as described in § 414.1335, as this will also likely increase the chance that the measure will be able to be benchmarked.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: One commenter agreed with the proposal to require collection of data prior to submitting a QCDR measure for approval.

Response: We thank the commenter for their support.

Comment: One commenter advised CMS to delay implementation of this requirement for an additional year due to their belief that in order to meet this standard in 2021, QCDRs would need to begin immediately in 2020 to work on collection of this data, which may not be feasible given that budgets and timelines have already been planned for the year.

Response: We thank the commenter for their suggestion but disagree that there needs to be a delay in the implementation of this policy. We believe that implementing this requirement beginning with the 2021 performance period would allow for sufficient time needed for planning and

budgeting. We believe that this requirement to collect data on the measure prior to submitting it to CMS coincides with the need for data collection as a part of the measure testing process, and therefore, would believe that if a QCDR measure has completed testing as outlined in the CMS Blueprint <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf>, the QCDR would also be able to collect data on the measure to meet this requirement.

Comment: Several commenters disagreed with the proposal to require collection of data on QCDR measures prior to nomination due to their beliefs that it would unnecessarily delay the creation and submission of new measures, further challenging participation of specialists who have very few measures to report; would create additional burden and may cause some QCDRs to end participation in MIPS; and would require financial resources most specialty societies do not have. One commenter expressed its opinion that collection of data should not be a determinant of clinical importance as public comments may reveal importance and given that similar measures may be approved, clinicians may elect to report to one even when both are clinically important.

Response: We thank the commenters for raising these concerns. We believe that the benefits of this policy outweigh the burdens. While we understand that data collection may not be a determinant of clinical importance of a measure, data collection is important because it demonstrates whether a measure is implementable and if there is interest by the clinician community on reporting on that metric. We expect there to be a need for some data collection for testing purposes, as described in section III.K.3.g.(3)(c)(i)(B) of this final rule, and therefore, would believe that if a QCDR measure has completed testing as outlined in the CMS Blueprint, the QCDR measure would also be able to meet this requirement.

Comment: One commenter suggested that in place of the proposal, QCDR measures could be approved under a testing/provisional status during which CMS would allow credit, such as a base 3–5 points or fully meeting improvement activity requirements.

Response: We disagree with the commenter's suggestion of giving QCDR measures provisional approval prior to meeting this requirement. We want all measures available in the MIPS program to be reliable, feasible, and valid, and implementable within the program. We

do not believe QCDRs should be using the MIPS program as a test-bed for measure development, particularly since this is a pay-for-performance program and clinician's performance on measures have impacts on their payments.

Comment: One commenter stated that CMS should not penalize a QCDR for providing data for a period of less than 12 months for QCDR measures as collecting data for a 12-month period may be difficult given that the timelines of the MIPS submission cycle during the months of January–March, the requirement for QCDRs to be operational on January 1, and the self-nomination deadlines September 1; around which the QCDR's measure development and update processes have been established.

Response: To clarify, as described in the CY 2020 PFS proposed rule (84 FR 40817), we suggest QCDRs to collect data on as many months as possible, but encourage QCDRs to collect data for 12 months prior to submitting the QCDR measure for our consideration at the time of self-nomination. While we encourage 12 months of data, we do understand there may be instances where less than 12 months of data may be available, depending on the data available as a result of measure testing or the availability of the QCDR measure during past performance periods in MIPS.

After consideration of the comments, we are finalizing our proposals as proposed. Specifically, we are requiring QCDRs to collect data on potential QCDR measures. Beginning with the 2021 performance period and future years, for a QCDR measure to be considered for use in the program, we are adding § 414.1400 (b)(3)(v)(D) to state that QCDRs are required to collect data on a QCDR measure, appropriate to the measure type, prior to submitting the QCDR measure for CMS consideration during the self-nomination period. The data collected must demonstrate whether the QCDR measure is valid and reflects an important clinical concept(s) that clinicians wish to be measured on.

(ee) Duplicative QCDR Measures

As first discussed by commenters in the CY 2018 Quality Payment Program final rule (82 FR 53814), the topic of “shared” measures was discussed and how would CMS intend to harmonize. In the CY 2019 PFS proposed rule (83 FR 35983), and further discussed in CY 2019 PFS final rule (83 FR 59901), we shared that we believe duplicative measures are counterintuitive to the Meaningful Measures initiative that

promotes more focused quality measure development towards outcomes that are meaningful to patients, families and their providers. Therefore, it is our intent to move toward measure harmonization, which supports our efforts to increase measure alignment and eliminate redundancy both within the MIPS measure set and across our programs (83 FR 59901). Taking the previous feedback into consideration, we moved forward with a proposal in the CY 2020 PFS proposed rule (84 FR 40817).

In the CY 2020 PFS proposed rule (84 FR 40817), we proposed, beginning with the 2020 performance period, that after the self-nomination period closes each year, we will review newly self-nominated and previously approved QCDR measures based on considerations as described in the CY 2019 PFS final rule (83 FR 59900 through 59902). In instances in which multiple, similar QCDR measures exist that warrant approval, we may provisionally approve the individual QCDR measures for 1 year with the condition that QCDRs address certain areas of duplication with other approved QCDR measures in order to be considered for the program in subsequent years. The QCDR could do so by harmonizing its measure with, or significantly differentiating its measure from, other similar QCDR measures. QCDR measure harmonization may require two or more QCDRs to work collaboratively to develop one cohesive QCDR measure that is representative of their similar yet, individual measures. In other words, we would not approve duplicative QCDR measures (which will be identified as a part of our scan of previously approved measures, and new QCDR measure submissions) if QCDRs choose not to address the areas of duplication with other approved QCDR measures identified by us during the previous year's QCDR measure review period. We believe this policy would help to reduce the number of duplicative QCDR measures that are submitted as a part of the self-nomination process. Adding a structured timeframe provides transparency to QCDRs who will know what next steps to expect if they do not address the identified areas of duplication as requested. Therefore, we proposed to amend § 414.1400 to add paragraph (b)(3)(v)(E) to state beginning with the 2022 MIPS payment year (2020 performance period), CMS may provisionally approve the individual QCDR measures for 1 year with the condition that QCDRs address certain areas of duplication with other

approved QCDR measures in order to be considered for the program in subsequent years (84 FR 40818). If the QCDR measures are not harmonized, CMS may reject the duplicative QCDR measure(s) as discussed in the CY 2020 PFS proposed rule (84 FR 40818).

We received public comments on these proposals. We acknowledge that we received several comments that were out of scope for this final rule, which we are not addressing in this rule, but thank commenters for the feedback. The following is a summary of the in-scope comments we received and our responses.

Comment: One commenter expressed its opinion that allowing duplicative measure concepts to go forward in the MIPS program fosters confusion among clinicians and competition among QCDRs, rather than collaboration; and that organizations will not be able to continue to invest in advancing meaningful quality measures if their measure concepts are able to be appropriated with superficial changes and then supported by CMS.

Response: We agree with the commenter's concerns on duplicative measures creating confusion for clinicians. However, we note that we have continuously encouraged QCDRs to collaborate to develop cohesive, robust QCDR measures through the use of QCDR measure informal group discussions, reminders on monthly support calls and at QCDR measure preview calls. We have come across instances where QCDRs have refused to collaborate with one another, exacerbating the issue of competition rather than mitigating it.

To clarify, as a part of the QCDR measure review process, we review all new QCDR measures submitted at the time of self-nomination and compare the new measures to previously approved QCDR measures. In instances where there are no significant differences, for example, in patient population or quality action, and the specification of the new measure is duplicate of an existing measure, we would reject the new measure and recommend the QCDR to seek permission to use the existing approved QCDR measure. In instances where there is overlap, and both measures cover a similar clinical concept, but with differing quality actions or patient populations, we will request measure harmonization. In instances where QCDRs cannot or refuse to collaborate to harmonize their measures, we will select and approve the most robust QCDR measure and reject any duplicative ones.

Comment: Some commenters requested additional clarification and guidance should the proposal be finalized. Some commenters stated that CMS should provide clear guidance when and how measures should be harmonized in order to ensure that contractor decisions are as uniform as possible. Other commenters requested timelines for making changes or harmonizing measures, what safeguards will be implemented to ensure harmonization will only occur when clinically appropriate; and accountability of QCDRs that do not have appropriate experience or expertise in the field of medicine covered by the measure.

Response: We agree that clear guidance should be communicated to QCDRs who have been identified to collaborate on harmonization efforts. After the close of the self-nomination period, we will review QCDR self-nomination applications. As a part of this measure review process, we will identify similar QCDR measures for harmonization and then notify the relevant QCDRs through the Self-Nomination Portal that their QCDR measures have been identified for measure harmonization. In this communication, we will include our reasons as to why we believe harmonization is appropriate, including where we believe duplication exists, points of contact from the other identified QCDRs, and information regarding provisional approval for the given year. As proposed in the CY 2020 PFS proposed rule (84 FR 40818), we specified that we may provisionally approve the individual QCDR measures for 1 year with the condition that QCDRs address certain areas of duplication with other approved QCDR measures within that year, prior to the next self-nomination period. With regards to ensuring that harmonization will only occur when clinically appropriate, we do review clinical appropriateness when requesting harmonization; however, we rely on the QCDRs to indicate, as a part of their QCDR measure reconsideration, when and why they believe harmonization is not appropriate. The additional information provided may be used to reconsider whether the QCDR measure should be harmonized or not.

Comment: Several commenters cited their belief that CMS should grant 2 years of provisional approval instead of 1.

Response: We disagree that a 2-year provisional approval cycle should be granted in these scenarios, as we believe it is important not to prolong measure harmonization. We understand that

measure harmonization takes time for there to be agreement amongst the QCDRs and their technical expert panels. However, we believe it is counterintuitive to the Meaningful Measure Initiative to prolong retaining duplicative measures in the program.

Comment: A few commenters stated their concerns over the process CMS will utilize to determine which QCDR measures are duplicative. Some commenters stated that CMS clarify the criteria for determinations that QCDR measures are duplicative. A few commenters encouraged CMS to: Consider the level of rigor in evidence or testing process between QCDRs; make determinations based on a comparison of the technical specifications; consider that an existing measure with baseline performance should not be rejected in favor of a new measure without prior data collection or baseline performance; consider a QCDR's relevant expertise or experience in the specialty or treatment area covered by a particular measure should be given. One commenter stated that if CMS identifies a measure that needs to be harmonized, CMS should provide the clinical rationale for harmonization. Another commenter stated that CMS and their contractors should consult with clinicians and measurement staff in the specialty societies regarding clinical aspects of measurement.

Response: We thank the commenters for raising these concerns. As a part of the review process, QCDR measure specifications are comparatively reviewed for similarities and differences when they address the same clinical topic. QCDR measures are considered duplicative if there are no differences between the measure specifications from a comparative perspective. To clarify, in instances where a new QCDR measure is duplicative of an existing QCDR measure, we would reject the new duplicative QCDR measure and tell the QCDR to request permission to use the existing QCDR measure. We would request measure harmonization in instances where QCDR measures are identified as similar. QCDR measures are reviewed to identify similarities and differences in areas that include (but are not limited to): Clinical concept being measured, quality action (for example, screening versus screening and follow-up), patient population, clinical setting (place of service), and the clinician type eligible to report on the measure. We thank the commenters for their suggestions of what CMS should consider, but note that for the 2020 performance period and in previous years, we have not previously required measure testing, and it would, therefore,

be difficult to evaluate all QCDR measures with this criteria, if it is not consistently required. With regards to the suggestion that an existing measure with baseline performance should not be rejected in favor of a new measure without prior data collection or baseline performance, we believe that the data collection requirement for QCDR measures, beginning with the 2021 performance period will mitigate this concern. However, this would not be the only reason we would select an existing measure over a new QCDR measure. While some consideration would be given to an existing measure, there have been instances where a similar measure with a more vigorous (or robust) quality action had been submitted for consideration. In instances where we are able to identify strong qualities in both similar measures, we ask for measure harmonization. In instances, where one measure completely overlaps another's clinical concept but includes a more robust quality action, our preference would be to select the more robust QCDR measure (regardless of a given QCDR measure's history within the program). We expect QCDRs to be nimble and innovative and work collaboratively and independently to develop inventive measures that go beyond standard-of-care, process measures. A QCDR's relevant expertise in the specialty is given some consideration, but would not be the deciding factor as several QCDRs may have overlapping expertise. In instances in which a QCDR has simply duplicated another existing approved QCDR measure without modification, we would not approve the newly duplicated QCDR measure. Furthermore, we appreciate the commenter's suggestion that we consult with clinicians and measurement staff in the specialty societies regarding clinical aspects of measurement. We want to note that QCDR measures are reviewed by staff and contractors who have various clinical backgrounds and experience with quality measures, including input from physicians on CMS staff and on our contracting team. There may be instances where the QCDR is affiliated with a specialty society, but this is not always the case. We would expect that QCDRs would develop QCDR measures reflective of their area of clinical experience and strength, and continuously engage in discussions with the QCDRs regarding the clinical aspects of their QCDR measures through QCDR measure preview calls and QCDR measure reconsideration calls. It is at these meetings where QCDRs are given the

opportunity to present and rationalize the need for quality metrics around the topic at hand. We disagree that specialty societies should be involved in evaluating QCDR measures for which they are not the owners of, while we understand they may be experts in their respected field, we believe conflicts of interest may arise when the specialty society themselves have their own QCDR and are then allowed to evaluate QCDR measures from another QCDR of the same specialty.

Comment: A few commenters stated that CMS should not encourage harmonization in cases where one QCDR is effectively trying to use another QCDR's measure without license or compensation.

Response: In instances in which a QCDR has simply duplicated another existing approved QCDR measure without modification, we would not request harmonization or approve the newly duplicated QCDR measure. The QCDR will be requested to seek permission from the QCDR who owns the previously approved QCDR measure. Ultimately, any concerns with infringement of intellectual property of QCDR measures between QCDRs will be left between the QCDRs to mitigate and resolve.

Comment: A few commenters disagreed with CMS' encouragement of harmonization due to their belief that the process of achieving harmonization is difficult "when one QCDR may own the changes and carry them out while another QCDR may act as the measure steward." One commenter asserted that harmonization places undue burden to reporting clinicians and eliminates the flexibility that had been originally built into QCDR measure reporting.

Response: We thank the commenter for raising these concerns. In our view, QCDR measures that are not harmonized place undue burden on reporting clinicians and eliminates flexibility. The brunt of the responsibility falls to QCDRs to resolve duplication and harmonization efforts to submit a consolidated QCDR measure. We believe measure harmonization is consistent with the Meaningful Measure Initiative. The purpose of measure harmonization is to reduce and consolidate the number of duplicative or similar measures within the program, which would result in a larger cohort of clinicians reporting on a consolidated measure. We believe this would improve the likelihood that newly harmonized measures will be able to reach benchmarking thresholds. We expect that if QCDRs are unable to determine roles and responsibilities as it pertains to measure harmonization

efforts, they would inform CMS; we would use such information to help determine whether the most robust measure should instead just be selected.

After consideration of the comments, we are finalizing our proposals as proposed. Specifically, beginning with the 2020 performance period, we are finalizing that after the self-nomination period closes each year, we will review newly self-nominated and previously approved QCDR measures based on considerations as described in the CY 2019 PFS final rule (83 FR 59900 through 59902). We are also finalizing our proposal to amend § 414.1400 to add paragraph (b)(3)(v)(E) to state that beginning with the 2022 MIPS payment year, CMS may provisionally approve the individual QCDR measures for 1 year with the condition that QCDRs address certain areas of duplication with other approved QCDR measures in order to be considered for the program in subsequent years. If the QCDR measures are not harmonized, CMS may reject the duplicative QCDR measure(s) as discussed in section III.K.3.g.(3)(c)(i)(C) of this final rule.

(C) QCDR Measure Rejections

In the CY 2020 PFS proposed rule (84 FR 40818), we proposed QCDR measure rejection criteria that generally align with finalized removal criteria for MIPS quality measures in the CY 2019 PFS final rule (83 FR 59763 through 59765). Utilizing these considerations would help to ensure that QCDR measures available in the program are truly meaningful and measurable areas where quality improvement is sought. As part of the proposal (84 FR 40818), all previously approved QCDR measures and new QCDR measures would be reviewed on an annual basis (as a part of the QCDR measure review process that occurs after the self-nomination period closes on September 1st) to determine whether they are appropriate for the program.

We proposed to amend § 414.1400 to add paragraph (b)(3)(vii) to state that beginning with the 2020 performance period, QCDR measure rejection criteria, include, but are not limited to, the following factors (84 FR 40818):

- QCDR measures that are duplicative or identical to other QCDR measures or MIPS quality measures that are currently in the program.
- QCDR measures that are duplicative or identical to MIPS quality measures that have been removed from MIPS through rulemaking.
- QCDR measures that are duplicative or identical to quality measures used under the legacy Physician Quality

Reporting System (PQRS) program, which have been retired.

- QCDR measures that meet the “topped out” definition as described at § 414.1305 and in the CY 2017 Quality Payment Program final rule (81 FR 77282 through 77283). If a QCDR measure is topped out and rejected, it may be reconsidered for the program in future years if the QCDR can provide evidence through additional data and/or recent literature that a performance gap exists and show that the measure is no longer topped out during the next QCDR measure self-nomination process.

- QCDR measures that are process-based, with considerations to whether the removal of the process measure impacts the number of measures available for a specific specialty.

- Whether the QCDR measure has potential unintended consequences to a patient’s care. For example, the measure disqualifies a patient from receiving oxygen therapy or other comfort measures.

- Considerations and evaluation of the measure’s performance data, to determine whether performance variance exists.

- Whether the previously identified areas of duplication have been addressed as requested. (We refer readers to our proposal discussed in section III.K.3.g.(3)(c)(i)(B) of the CY 2020 PFS proposed rule (84 FR 40816).)

- QCDR measures that split a single clinical practice or action into several QCDR measures. For example, splitting a measure into multiple measures based on a particular body extremity:

Improvement in toe pain—the 5th toe, and a separate measure for the 2nd toe.

- QCDR measures that are “check-box” with no actionable quality action. For example, a QCDR measure that measures that a survey has been distributed to patients.

- QCDR measures that do not meet the case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive years (we also refer readers to our proposal in section III.K.3.g.(3)(c)(ii) of the proposed rule (84 FR 40818).

- Whether the existing approved QCDR measure is no longer considered robust, in instances where new QCDR measures are considered to have a more vigorous quality action, where CMS preference is to include the new QCDR measure rather than requesting QCDR measure harmonization.

- QCDR measures with clinician attribution issues, where the quality action is not under the direct control of the reporting clinician. (That is, the quality aspect being measured cannot be

attributed to the clinician or is not under the direct control of the reporting clinician).

- QCDR measures that focus on rare events or “never events” in the measurement period. An example of a “never event” would be a fire in the operating room.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters agreed with the proposed QCDR measure rejection criteria, specifically noting that the criteria make QCDRs a more comprehensive solution for providers and allow them to better leverage the data they are collecting.

Response: We thank commenters for their support.

Comment: A few commenters urged CMS to consider the limited number of measures available to non-patient facing clinicians when evaluating process-based measures.

Response: As a part of our QCDR measure considerations, we will take into consideration the availability of measures for a given specialty, particularly those for non-patient facing clinicians. While our general preference is to have more outcome measures in the program, we do understand a need for process measures, particularly for non-patient facing clinicians. Non-patient facing clinicians are limited in the availability of outcome measures that are available and measurable within their practice. Therefore, in instances where the outcome related metrics are limited or topping out, we encourage non-patient facing specialties to develop measures that address a high priority area (such as patient experience or care coordination) when it is not feasible to develop outcome measures.

Comment: One commenter disagreed with what they believe is the routine removal of QCDR process measures without regard to their relationship to outcome, impact on safety, demonstrated gap in practice, or the duration of time before an outcome measure exists or before outcome data are available. The commenter further noted that process measures should not be rejected if QCDR data proves that they improve outcomes and they are not topped out, as process measures require considerable work, are not “check box” measures, are difficult to perform, and target a demonstrated gap in practice.

Response: While our general preference is to have more outcome measures in the program, we do understand a need for process measures, particularly for non-patient facing clinicians. We would encourage

specialties to develop measures that address a high priority area when it is not feasible to develop outcome measures. In addition, we will take into consideration performance gap information that is provided by a QCDR that demonstrates a process measure is not topped out. As a part of the QCDR measure review process, we do take into consideration any concerns with safety, any gap information a QCDR can provide to demonstrate one exists. We note that while we generally prefer outcome measures, and would like to move away from process measures in the program, we understand the time it takes to develop outcome measures. We consider “check box” measures, as measures that we have observed to be low-bar process measures that require a limited quality action that top out fairly quickly within the MIPS program and in our legacy PQRS program. If QCDRs are able to demonstrate a gap in practice for their process measure that information will be considered as a part of the QCDR measure approval process. In instances where QCDRs may disagree with their QCDR measure rejection, they may request a reconsideration call to discuss their position with CMS.

Comment: One commenter disagreed with the following rejection criteria: “QCDR measures with clinician attribution issues, where the quality action is not under the direct control of the reporting clinician. (That is, the quality aspect being measured cannot be attributed to the clinician or is not under the direct control of the reporting clinician)”. The commenter believed that it is often the case that a quality action is not in a clinician’s direct control, but that does mean the clinician should not take responsibility for ensuring high quality of care; another words in instances when the measure is not directly attributable to the clinician, the clinician should not be held responsible for the quality of care. The commenter further cited their belief that this criterion is contrary to CMS’ overarching goal of promoting and rewarding coordinated care.

Response: We understand the importance of care coordination, but we also believe it is important that clinicians and groups are not inadvertently penalized for actions that are outside of their control. We understand that clinicians may not always have direct control of the quality action taking place, and that there are instances where care utilizes a team-based approach. We have discussed our concerns regarding attribution and holding an individual clinician responsible for the results of a team-based approach with QCDRs during

some of their QCDR measure reconsideration calls, and they have clarified that in some specialties, this is the approach they choose to use to provide high quality care. Many patient outcomes are multi-factorial and can be influenced by the actions of multiple clinicians, even if none of them control it directly. After the QCDR measure self-nomination period, as part of our measure review process, we review clinician attribution criteria. As part of the QCDR measure nomination, for measures that do not have a clear clinician attribution, we encourage QCDRs to submit a short explanation. We continue to be open to having discussions with QCDRs as they develop QCDR measures to understand the way in which they have attributed a measure. We do note that we will expect that QCDRs will provide evidence that shows that their attribution methodologies are valid, and will note that we will ultimately decide the QCDR measures approval status on a case-by-case basis.

Comment: One commenter expressed concern that the term “robust” is not clearly defined as part of the rejection criteria: “whether the existing approved QCDR measure is no longer considered robust, in instances where new QCDR measures are considered to have a more vigorous quality action, where CMS preference is to include the new QCDR measure rather than requesting QCDR measure harmonization”.

Response: A robust measure refers to measures with the most vigorous quality action or guidance or as a descriptor to describe strong, vigorous, or thoroughly vetted components of a measure. We also refer readers to the CMS Blueprint where we have similarly defined “robust”: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/Downloads/Blueprint.pdf>.

Comment: A few commenters disagreed with the policy for rejecting topped-out QCDR measures due to their beliefs that CMS is limiting the number of specialty-specific measures available in the MIPS program by not providing QCDRs a grace period to phase out measures; and that CMS should allow QCDR measure developers to re-tool measures removed from the program into specialty or procedure-specific measures. One commenter expressed its belief that allowing QCDR measures to be phased out over more than a 1-year period will give measure owners time to appropriately phase out the measure, and determine what subsequent action to take, such as retiring the measure, modifying the measure to make it more robust, or creating a complementary

measure. Another commenter requested that CMS publicly report measure data stratified by specialty, as well as practice size and type, prior to removing a measure due to it being topped out.

Response: We thank the commenter for their input but note that we do not see the need for a grace period to phase out QCDR measures. It is not consistent with the Meaningful Measures Initiative to retain topped out QCDR measures in the program when there are other relevant measures available for a given specialty. As a part of the review process, consideration is given to the number of measures remaining for a given specialty, whether there are additional specialty related measures in other QCDRs, and considerations to the MIPS quality measures inventory prior to rejecting a QCDR measure. In addition, QCDRs are expected to be nimble and innovative to work collaboratively and independently to develop inventive measures, which go beyond standard-of-care, process measures, that are often considered low-bar. We anticipate that QCDRs monitor the progress of their QCDR measures throughout the performance period, as well as year-over-year, and through their innovation, will work to submit new QCDR measures in future self-nomination periods. As a part of our QCDR measure removal process, we do give consideration to the availability of other specialty-specific measures, particularly outcome or high priority measures, available in the MIPS program prior to flagging any given measure for removal. In addition, performance data provided in the QCDR measure self-nomination demonstrating that a performance gap still exists will be taken into consideration prior to a final decision.

Comment: One commenter stated its opinion that a topped out measure should not be retired without having an alternative measure in place.

Response: As a part of the measure removal process, we typically evaluate the availability of measures to a given specialty as a part of the removal process. QCDRs are expected to be innovative in their development, and we believe since they can support QCDR and MIPS quality measures, there should be a sufficient number of measures left for a given specialty.

After consideration of the comments, we are finalizing our proposals as proposed. Specifically, we are finalizing that all previously approved QCDR measures and new QCDR measures would be reviewed on an annual basis (as a part of the QCDR measure review process that occurs after the self-nomination period closes on September

1st) to determine whether they are appropriate for the program. We are also amending § 414.1400 to add paragraph (b)(3)(vii) to state that beginning with the 2020 performance period, we will reject QCDR measures with consideration of, but not limited to, the following factors:

- QCDR measures that are duplicative or identical to other QCDR measures or MIPS quality measures that are currently in the program.

- QCDR measures that are duplicative or identical to MIPS quality measures that have been removed from MIPS through rulemaking.

- QCDR measures that are duplicative or identical to quality measures used under the legacy Physician Quality Reporting System (PQRS) program, which have been retired.

- QCDR measures that meet the “topped out” definition as described at § 414.1305 and in the CY 2017 Quality Payment Program final rule (81 FR 77282 through 77283). If a QCDR measure is topped out and rejected, it may be reconsidered for the program in future years if the QCDR can provide evidence through additional data and/or recent literature that a performance gap exists and show that the measure is no longer topped out during the next QCDR measure self-nomination process.

- QCDR measures that are process-based, with considerations to whether the removal of the process measure impacts the number of measures available for a specific specialty.

- Whether the QCDR measure has potential unintended consequences to a patient’s care. For example, the measure disqualifies a patient from receiving oxygen therapy or other comfort measures.

- Considerations and evaluation of the measure’s performance data, to determine whether performance variance exists.

- Whether the previously identified areas of duplication have been addressed as requested. (We refer readers to our proposal discussed in section III.K.3.g.(3)(c)(i)(B) of this final rule.)

- QCDR measures that split a single clinical practice or action into several QCDR measures. For example, splitting a measure into multiple measures based on a particular body extremity: Improvement in toe pain- the 5th toe,

and a separate measure for the 2nd toe.

- QCDR measures that are “checkbox” with no actionable quality action. For example, a QCDR measure that measures that a survey has been distributed to patients.

- QCDR measures that do not meet the case minimum and reporting

volumes required for benchmarking after being in the program for 2 consecutive years (we also refer readers to our proposal in section III.K.3.g.(3)(c)(ii) of this final rule).

- Whether the existing approved QCDR measure is no longer considered robust, in instances where new QCDR measures are considered to have a more vigorous quality action, where CMS preference is to include the new QCDR measure rather than requesting QCDR measure harmonization.

- QCDR measures with clinician attribution issues, where the quality action is not under the direct control of the reporting clinician. (That is, the quality aspect being measured cannot be attributed to the clinician or is not under the direct control of the reporting clinician).

- QCDR measures that focus on rare events or “never events” in the measurement period. An example of a “never event” would be a fire in the operating room.

(ii) QCDR Measure Review Process

(A) Current QCDR Measure Approval Process

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77374 through 77375), the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), and the CY 2019 PFS final rule (83 FR 59900 through 59906), and § 414.1400(b)(3) for our previously established policies for the QCDR measure self-nomination process. QCDR measures are reviewed for inclusion on an annual basis during the QCDR measure review process that occurs once the self-nomination period closes (82 FR 53810). All previously approved QCDR measures and new QCDR measures are currently reviewed on an annual basis to determine whether they are appropriate for the program (82 FR 53811). The QCDR measure review process occurs after the self-nomination period closes on September 1st. QCDR measures are not finalized or removed through notice and comment rulemaking; instead, they are currently approved or not approved through a subregulatory processes (82 FR 53639). While we would continue to review measures on an annual basis, in the CY 2020 PFS proposed rule, we proposed the addition of a multi-year approval process (84 FR 40818).

(B) Multi-Year QCDR Measure Approval

Previously in the CY 2018 Quality Payment Program final rule (82 FR 53808), we discussed our concerns with multi-year approval for QCDR measures and sought comment from stakeholders

as to how to mitigate our concerns. Based on the evolution of public comments in the CY 2019 PFS final rule (83 FR 59898 through 59901) and ongoing engagement with QCDRs, we are made a proposal in the CY 2020 PFS proposed rule (84 FR 40818).

Currently, our QCDR measure approvals are on a year-to-year basis (82 FR 53811), from September to December once self-nomination occurs. In addition to that process, to help reduce yearly self-nomination burden and address stakeholder feedback (83 FR 59898 through 59901), in the CY 2020 PFS proposed rule (84 FR 40818), we proposed to amend § 414.1400 to add paragraph (b)(3)(vi) to implement, beginning with the 2021 performance period, 2-year QCDR measure approvals (at our discretion) for QCDR measures that attain approval status by meeting the QCDR measure considerations and requirements described above.

However, as proposed, upon annual review, we may revoke the second year's approval if a QCDR measure approved for 2 years is (84 FR 40818 through 40819):

- Topped out (we refer readers to § 414.1305, in the CY 2017 Quality Payment Program final rule (81 FR 77282 through 77283));
- Duplicative of a more robust measure (this proposal aligns with our proposal at section III.K.3.g.(3)(c) in the proposed rule (84 FR 40814 through 40819);
- Reflects an outdated clinical guideline;
- Requires measure harmonization (this proposal aligns with our proposal at section III.K.3.g.(3)(c)(i)(B) in the proposed rule (84 FR 40816)); or
- The QCDR self-nominating the QCDR measure is no longer in good standing, as described in the CY 2018 Quality Payment Program final rule (82 FR 53808).

We believe that this policy should be an incentive for QCDRs who have remained in good standing in the program. Additionally, for QCDRs not in good standing, we want to make clear that we would not remove a measure mid-year; rather, the measure's 2-year approval would be revoked during annual review after 1 year and the QCDR's measures would no longer qualify for multi-year approval in the future. For example, if QCDR ABC is placed on probation in July, all of the QCDR's measures still would be available for reporting for that performance period (until December 31st); however, if any of QCDR ABC's QCDR measures were previously approved for 2 years, the approval would be revoked for the second year.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters agreed with the proposal to approve QCDR measures for multiple years due to their beliefs that approving measures for multiple years and posting updated specifications by November 1 would: Allow individuals and groups a better opportunity to meet the proposed 70 percent data completeness threshold; allow sufficient time for measure implementation, data collection for the next year's self-nomination, and improvement opportunities for practices; provide stability to MIPS; reduce burden; and allow for additional resources to be utilized for development of new measures.

Response: We thank commenters for their support.

Comment: A few commenters stated that QCDR measures should be approved for 2 years without being subject to CMS discretion as long as the measure satisfies QCDR measure requirements.

Response: We believe a 2-year approval should be left to our discretion, because many considerations must be given: QCDR's ability to comply with program requirements, considerations to other QCDR measures with more robust quality actions, future changes to program requirements, and in consideration of future transitions to MVPs.

After consideration of the comments, we are finalizing our proposals as proposed. Specifically, we are amending § 414.1400 to add paragraph (b)(3)(vi) to implement, beginning with the 2021 performance period, 2-year QCDR measure approvals (at our discretion) for QCDR measures that attain approval status by meeting the QCDR measure considerations and requirements described above. However, upon annual review, we may revoke the second year's approval if a QCDR measure approved for 2 years is:

- Topped out (we refer readers to § 414.1305, in the CY 2017 Quality Payment Program final rule (81 FR 77282 through 77283));
- Duplicative of a more robust measure (this proposal aligns with our proposal at section III.K.3.g.(3)(c) in this final rule);
- Reflects an outdated clinical guideline;
- Requires measure harmonization (this proposal aligns with our proposal at section III.K.3.g.(3)(c)(i)(B) in this final rule); or
- The QCDR self-nominating the QCDR measure is no longer in good

standing, as described in the CY 2018 Quality Payment Program final rule (82 FR 53808).

(iii) Participation Plan for Existing QCDR Measures That Have Failed To Reach Benchmarking Thresholds

We refer readers to the CY 2020 PFS proposed rule for discussion of the consideration of QCDR measures that fail to meet benchmarking thresholds after being in the program for 2 consecutive CY performance may not continue to be approved in the future (84 FR 40814 through 40818).

However, we understand that there are instances where measures that are low-reported may still be considered important to a respective specialty. Therefore, in the CY 2020 PFS proposed rule (84 FR 40819), beginning with the 2020 performance period, we proposed to amend § 414.1400 to add paragraph (b)(3)(iv)(j)(1) to state that in instances where a QCDR believes the low-reported QCDR measure that did not meet benchmarking thresholds is still important and relevant to a specialist's practice, that the QCDR may develop and submit a QCDR measure participation plan for our consideration (84 FR 40819). This QCDR measure participation plan must include the QCDR's detailed plans and changes to encourage eligible clinicians and groups to submit data on the low-reported QCDR measure for purposes of the MIPS program. As examples, a QCDR measure participation plan could include one or more of the following:

- Development of an education and communication plan.
- Update the QCDR measure's specification with changes to encourage broader participation, which would require review and approval by us.
- Require reporting on the QCDR measure as a condition of reporting through the QCDR.

To be clear, implementation of a participation plan would not guarantee that a QCDR measure would be approved for a future performance period, as we consider many factors in whether to approve QCDR measures. At the following annual review of QCDR measures, we would analyze the measure's data submissions to determine whether the QCDR measure participation plan was effective (meaning, reporting volume increased, thereby increasing the likelihood of the QCDR measure being benchmarked). If the data does not show an increase in reporting volume, we may not approve the QCDR measure for the subsequent year.

We received public comments on this proposal. The following is a summary of

the comments we received and our responses.

Comment: A few commenters agreed with the proposal to allow QCDRs to submit measure participation plans for QCDR measures that have failed to meet benchmarking thresholds and urge CMS to leave open a mechanism for the retention of measures that are important to small segments of reporting clinicians, even if those measures fail to reach a benchmark, as this is very critical to ensuring that important measures are not removed from the program due to scoring methodologies and preferences, and to encourage reporting on high value measures.

Response: We thank the commenters for their support.

Comment: One commenter requested that CMS specify in the final rule when notice of low reporting volume will be given so that QCDRs may have ample time to develop and implement the participation plan.

Response: QCDRs should be monitoring the reporting of their QCDR measures throughout the year and should be able to identify when their measures are low-reported. In addition, existing QCDR measures who have reached benchmarking thresholds would be included in the Quality benchmarking file that is posted annually in the Quality Payment Program Resource Library.

After consideration of the comments, we are finalizing our proposals as proposed. Specifically, beginning with the 2020 performance period, we are amending § 414.1400 to add paragraph (b)(3)(iv)(j)(1) to state in instances where a QCDR believes the low-reported QCDR measure that did not meet benchmarking thresholds is still important and relevant to a specialist's practice, that the QCDR may develop and submit a QCDR measure participation plan for our consideration. This QCDR measure participation plan must include the QCDR's detailed plans and changes to encourage eligible clinicians and groups to submit data on the low-reported QCDR measure for purposes of the MIPS program.

(4) Qualified Registries

We refer readers to §§ 414.1305 and 414.1400, the CY 2018 Quality Payment Program final rule (82 FR 53815 through 53818) and the CY 2019 PFS final rule proposed rule (83 FR 59906) for our previously finalized policies regarding qualified registries. In the CY 2020 PFS proposed rule (84 FR 40819), we proposed to update qualified registry required services. These proposed policies would also affect the qualified registry self-nomination process.

(a) Qualified Registry Required Services
(i) Requirement for Qualified Registries To Support All Three Performance Categories Where Data Submission Is Required

We refer readers to section 1848(k)(4) of the Act for statutory authority. We also refer readers to section III.K.3.g.(1) in this final rule, where we discuss our proposal to require QCDRs and qualified registries to support three performance categories: Quality, improvement activities, and Promoting Interoperability (84 FR 40811). In addition, we refer readers to section III.K.3.g.(3)(a)(i) of this final rule where we discuss a parallel requirement for QCDRs (84 FR 40812 through 40813). In this section, we discuss qualified registries specifically. Based on previously finalized policies the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364) and as further revised in the CY 2019 PFS final rule at (83 FR 60088) and § 414.1400(a)(2), the current policy is that QCDRs, qualified registries, and health IT vendors may submit data for any of the following MIPS performance categories: Quality (except for data on the CAHPS for MIPS survey); improvement activities; and Promoting Interoperability.

We want to continue to strengthen our policies at § 414.1400(a)(2). Based on our review of existing 2019 qualified registries, approximately 95 qualified registries, or about 70 percent of the qualified registries currently participating in the program are supporting all three performance categories. While we do not yet have data to share for how clinicians participated in 2019 (year 3), we do want to indicate that we have observed from 2017 (year 1) to 2018 (year 2) approximately 24 percent increasing to 36 percent of clinicians have used their QCDR/qualified registry for submitting for all 3 performance categories. We believe when this policy becomes finalized, more MIPS eligible clinicians may want to use this method as a burden reduction on data submission. When the CY 2020 PFS proposed rule was published the 2019 Qualified Registries Qualified Posting was available at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/348/2019%20Qualified%20Registry%20Posting_Final_v1.0.xlsx (84 FR 40819). Since the publication of that proposed rule, the link has since been updated and is now available on the Quality Payment Program resource library at <https://qpp.cms.gov/about/resource-library> by searching "2019 Qualified Registries Qualified Posting."

We believe it is reasonable that all qualified registries have the capacity to support the improvement activities and promoting interoperability performance categories.

We believe that requiring qualified registries to be able to support these performance categories will be a step towards addressing stakeholders concerns on having a more cohesive participation experience across all performance categories under MIPS. In addition, we believe this proposal will help to reduce the reporting burden MIPS eligible clinicians and groups face when having to utilize multiple submission mechanisms to meet the reporting requirements of the various performance categories. Furthermore, as we move to a more cohesive participation experience under the MVPs, as discussed in the CY 2020 PFS proposed rule (84 FR 40732 through 40745), we believe this proposal will assist clinicians in that transition. We also refer readers to section III.K.3.a. of this final rule where the MIPS MVP is discussed.

Therefore, as discussed in the CY 2020 PFS proposed rule (84 FR 40819), beginning with the 2023 MIPS payment year (2021 performance period) and for future years, we proposed at § 414.1400(a)(2) to require qualified registries to support all three performance categories: Quality (except for data on the CAHPS for MIPS survey); improvement activities; and Promoting Interoperability with an exception. As discussed in the CY 2020 PFS proposed rule (84 FR 40819), we proposed that based on the amendment to § 414.1400(a)(2)(iii), to state that for the Promoting Interoperability performance category, the requirement applies if the eligible clinician, group, or virtual group is using CEHRT; however, a third party could be excepted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4), (c)(2)(i)(A)(5), (c)(2)(i)(C)(1) through (c)(2)(i)(C)(7), or (c)(2)(i)(C)(9). As part of this proposal, we will (84 FR 40819 through 40821) require qualified registries to attest to the ability to submit data for these performance categories, as applicable, at time of self-nomination. We also proposed this same requirement for QCDRs in section III.K.3.g.(3) of the CY 2020 PFS proposed rule (84 FR 40813) and refer readers to section III.K.3.g.(3) of this final rule for a discussion.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters agreed with the proposal to require qualified registries to support the reporting of data for the quality, Promoting Interoperability, and improvement activities performance categories, as well as the exemption for qualified registries who serve specialties that are exempt from the Promoting Interoperability performance category.

Response: We thank the commenters for their support.

Comment: A few commenters noted that the proposal should not be considered until after the final 21st Century Cures rules are published and the updated standards are implemented.

Response: We understand the interest in coordinating with the updates to standards that may be included in the 21st Century Cures Act final rule, however we do not believe that the proposals under the 21st Century Cures Act will have a significant impact on the ability of qualified registries to report measures for the Promoting Interoperability category. We note this requirement was proposed with a delayed implementation, beginning with the 2023 MIPS payment year (2021 performance period), which should accommodate timing for any updates to standards. When the 21st Century Cures Act final rule is published we will determine if additional modifications are necessary and may address in future rule making.

Comment: One commenter cited its opinion that if the proposal is finalized, the resulting burden may result in many qualified registries electing to reevaluate their decisions to seek approval to submit MIPS data.

Response: While we understand that this requirement may add burden to qualified registries, we want to note a majority of existing qualified registries already support all three performance categories. In addition, we believe it is important that qualified registries act as one-stop-shops for reporting to reduce the reporting burden on eligible clinicians and groups.

Comment: Multiple commenters also stated their opinion that if the proposal to require qualified registries to support the three performance categories is finalized, they would need CMS to provide additional guidance and descriptions of what data would be necessary to validate that an individual MIPS eligible clinician or group could appropriately attest to a specific activity.

Response: Under our current data validation processes, as described in the CY 2017 Quality Payment Program final rule (81 FR 77368 through 77369) and (81 FR 77384 through 77385), QCDRs

and qualified registries are required to provide information on their sampling methodology. For example, it is encouraged that 3 percent of TIN/NPIs submitted be sampled with a minimum sample of 10 TIN/NPIs or a maximum sample of 50 TIN/NPIs. For each TIN/NPI sampled, it is encouraged that 25 percent of the TIN/NPI's patients (with a minimum sample of 5 patients (with a maximum sample of 50 patients)). We would expect that this review of patient medical records would be done to validate that the pertinent quality actions were done for measures and activities done by the clinician and group. In addition, validation guidance clarifications can be found within the improvement activities validation document at the *MIPS Data Validation Document* link. Third party intermediaries should utilize existing validation procedures to audit data submitted. With regards to auditing whether improvement activities have been completed by a clinician or group, a third party vendor can validate that an action has been done through review of medical records or other forms of documentation that will indicate that the quality action and/or improvement activity has been completed.

Comment: One commenter requested that CMS provide a mechanism for exempting MIPS qualified registries approved for the 2019 MIPS performance period if they submit a rationale for not supporting all three performance categories.

Response: We clarify that this requirement to support all three performance categories will take into effect starting with the 2021 performance period. Qualified registries will be required to support the quality and improvement activity performance categories. A third party intermediary may not be required to submit data for the Promoting Interoperability performance category if it only represents MIPS eligible clinicians, groups, and virtual groups that are eligible for reweighting under the Promoting Interoperability performance category. For example, as discussed in the CY 2019 PFS final rule (83 FR 59819 through 59820), physical therapists generally are eligible for reweighting of the Promoting Interoperability performance category to zero percent of the final score; therefore, under this exception, a QCDR or qualified registry that represents only physical therapists that reweighted the Promoting Interoperability performance category to zero percent of the final score, would not be required to support the Promoting Interoperability performance category. In addition, QCDRs or

qualified registries that supported one of the following clinician types (and no others): Occupational therapists; qualified speech-language pathologists; qualified audiologists; clinical psychologists; and registered dietitians or nutrition professionals, as described in § 414.1380(c)(2)(i)(A)(4) would be excepted from supporting the Promoting Interoperability performance category. In contrast, a QCDR or qualified registry cannot be excepted from this requirement and must be able to submit data for the Promoting Interoperability performance category so long as it supports any clinician, group or virtual group that uses CEHRT and is not identified as eligible for reweighting of the Promoting Interoperability performance category.

After consideration of the comments, we are finalizing our proposals with technical modifications for clarity and consistency with the existing provisions of § 414.1400. As discussed in section III.K.3.g.(1), above in this final rule, we are amending § 414.1400(a)(2) to state that beginning with the 2023 MIPS payment year, QCDRs and qualified registries must be able to submit data for all of the MIPS performance categories identified in the regulation, and Health IT vendors must be able to submit data for at least one such category. We are also finalizing our proposal to amend § 414.1400(a)(2)(iii), as proposed, to state that for the Promoting Interoperability, if the eligible clinician, group, or virtual group is using CEHRT; however, a third party intermediary may be excepted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4) or (5) or § 414.1380(c)(2)(i)(C)(1) through (7) or § 414.1380(c)(2)(i)(C)(9)). We will require qualified registries to attest to the ability to submit data for these performance categories, as applicable, at time of self-nomination (84 FR 40819 through 40821).

(ii) Enhanced Performance Feedback Requirement

Section 1848(q)(12)(A)(ii) of the Act requires the Secretary to encourage the provision of performance feedback through qualified registries. In addition, in establishing the requirements, the Secretary must consider, among other things, whether an entity “provides timely performance reports to participants at the individual participant level”. Currently, CMS requires qualified registries to provide feedback on all of the MIPS performance categories at least 4 times per year (81 FR 77367 through 77386). While based on our experiences thus far during the

initial years of the Quality Payment Program, we agree that providing feedback at least 4 times a year is appropriate. However, in the future CMS would like to see, and therefore, encourages qualified registries, to provide timely feedback on a more frequent basis more than 4 times a year. Receipt of more frequent feedback will help clinicians and groups make more timely changes to their practice to ensure the highest quality of care is being provided to patients. We see value in providing more timely feedback to meet the objectives¹¹⁹ of the Quality Payment Program in improving the care received by Medicare beneficiaries, lowering the costs to the Medicare program through improvement of care and health, and advance the use of healthcare information between allied providers and patients. We also believe there is value in this performance feedback, and therefore, encourage qualified registries to work with their clinicians to get the data in earlier in the reporting period so the qualified registry give that meaningful timely feedback.

Surrounding the qualified registry performance feedback provided to clinicians and groups, we have heard from stakeholders that not all qualified registries provide feedback the same way. We have heard through stakeholder comments some qualified registries feedback contains information needed to improve quality, whereas other qualified registries feedback does not supply such information due to the data collection timeline. Additionally, we believe that clinicians would benefit from feedback on how they compare to other clinicians who have submitted data on a given MIPS quality measure within the qualified registry they are reporting through, so they can identify areas of measurement in which improvement is needed, and furthermore they can see how they compare to their peers based within a qualified registry, since the feedback provided by the qualified registry would be limited to those who reported on a given measure using that specific qualified registry.

As a result, we proposed to add a new paragraph at § 414.1400(c)(2) to require (i) and (ii) (84 FR 40820). We simply proposed to revise the current § 414.1400(c)(2) to reclassify at paragraph (c)(2)(i) that beginning with the 2022 MIPS payment year, the qualified registry must have at least 25 participants by January 1 of the year prior to the applicable performance period (84 FR 40820). Additionally, we

proposed to add a new paragraph, § 414.1400(c)(2)(ii), beginning with the 2023 MIPS payment year, to require that qualified registries provide the following as a part of the performance feedback given at least 4 times a year, and provide specific feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure within the qualified registry (84 FR 40820). We understand that there would be instances in which the qualified registry cannot meet this requirement; and therefore, we also proposed an exception to this requirement: If the qualified registry does not receive the data from their clinician until the end of the performance period, this will preclude the qualified registry from providing feedback 4 times a year, and the qualified registry could be excepted from this requirement (84 FR 40820). We also solicited comment on other exceptions that may be necessary under this requirement.

We also understand that qualified registries can only provide feedback on data they have collected on their clinicians and groups, and realize the comparison would be limited to that data and not reflect the larger sample of those that have submitted on the measure for MIPS, which the qualified registry does not have access to. We believe qualified registry internal comparisons can still help MIPS eligible clinicians identify areas where further improvement is needed. The ability for MIPS eligible clinicians to be able to know in real time how they are performing against their peers, within a qualified registry, provides immediate actionable feedback.

Furthermore, in the CY 2020 PFS proposed rule (84 FR 40820), we also proposed to strengthen the qualified registry self-nomination process at § 414.1400(c)(1) to add that beginning with the 2023 MIPS payment year, qualified registries are required to attest during the self-nomination process that they can provide performance feedback at least 4 times a year (as specified at § 414.1400(c)(2)(ii)). We refer readers to section III.K.3.g.(3)(1) of this final rule where we discuss a parallel requirement for QCDRs (84 FR 40814); we intend to have the same requirements for both QCDRs and qualifies registries.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters agreed with the proposal for qualified registries to provide enhanced performance feedback at least 4 times a year including comparisons to other

¹¹⁹ Quality Payment Program Overview. <https://qpp.cms.gov/about/qpp-overview>.

clinicians who reported the same measure, at minimum. A few commenters agreed with the proposal that beginning in 2021, feedback from qualified registries must be provided at least 4 times a year and must include information on how participants compare to other clinicians within the qualified registry who have submitted data on a given measure. Commenters noted that this feedback and comparison is very beneficial to their participants and helps them identify potential areas for performance improvement as compared to their peers.

Response: We thank the commenters for their support.

Comment: Other commenters expressed concern that this would not provide participants with feedback on their performance from a programmatic perspective as a single registry does not represent a participant's entire peer cohort and providing registry-specific comparative performance feedback to compare their performance with that of their peers or predict their potential MIPS performance. Instead, the commenters stated their belief that it would be more appropriate to compare a MIPS eligible clinician or group's performance against the published benchmark.

Response: We thank the commenter for raising this concern. To clarify, the intent of providing eligible clinicians and groups with this performance feedback is to give them feedback on how they compare to other clinicians (their peers) who have submitted data on a given MIPS quality measure within the qualified registry they are reporting through. Additionally, the intent of this feedback is so clinicians can identify areas of quality measurement in which improvement is needed, and furthermore, they can see how they compare to their peers based within a qualified registry. While we understand that it is not feasible for a single registry to represent the cohort of all clinicians who have reported on a given measure, it at least gives the clinicians within the single registry an idea of how well they performed with other fellow clinicians within the registry. We believe that it is important to provide meaningful data back to clinicians to understand and identify areas for improvement. We are only able to compare a MIPS eligible clinician or group's performance against a published benchmark when the qualified registry measure has reached the appropriate benchmarking and reporting thresholds, after the submission period for a given performance period closes. However, we believe it is important that clinicians and groups receive performance

feedback in a timely fashion, by their qualified registry, in order to make real-time process improvements to their practice to improve the quality of care.

After consideration of the comments, we are finalizing our proposals as proposed. Specifically, we are amending § 414.1400(c)(2) to add (i) and (ii). We are amending the current § 414.1400(c)(2) to reclassify at paragraph (c)(2)(i) that beginning with the 2022 MIPS payment year, the qualified registry must have at least 25 participants by January 1 of the year prior to the applicable performance period. Additionally, we are also finalizing a new paragraph at § 414.1400(c)(2)(ii) to require that, beginning with the 2023 MIPS payment year, qualified registries provide the following as a part of the performance feedback given at least 4 times a year, provide specific feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure within the qualified registry. We are also finalizing an exception to this requirement: If the qualified registry does not receive the data from their clinician until the end of the performance period, this will preclude the qualified registry from providing feedback 4 times a year, and the qualified registry could be excepted from this requirement. We are also finalizing, as proposed, at § 414.1400(c)(1) to add that beginning with the 2023 MIPS payment year, qualified registries are required to attest during the self-nomination process that they can provide performance feedback at least 4 times a year (as specified at § 414.1400(c)(2)(ii)).

In the CY 2020 PFS proposed rule (84 FR 40814), we sought comment for future notice-and-comment rulemaking on whether we should require MIPS eligible clinicians, groups, and virtual groups who utilize a qualified registry to submit data throughout the performance period, and prior to the close of the performance period (that is, December 31st). The current performance period begins January 1 and ends on December 31st, and the corresponding data submission deadline is typically March 31st as described at § 414.1325(e)(1). We also sought comment for future notice-and-comment rulemaking, on whether clinicians and groups can start submitting their data starting April 1 to ensure that the qualified registry is providing feedback and the clinician or group during the performance period. This would allow qualified registries some time to provide enhanced and actionable feedback to MIPS eligible

clinicians prior to the data submission deadline.

While we are not summarizing and responding to comments we received on this topic in this final rule, we thank the commenters for their responses and will take them into consideration as we develop future policies for qualified registries.

(5) Remedial Action and Termination of Third Party Intermediaries

We refer readers to § 414.1400(f), the CY 2017 Quality Payment Program final rule (81 FR 77548) and the CY 2019 PFS final rule (83 FR 59908 through 59910) for previously finalized policies for remedial action and termination of third party intermediaries.

As explained in the CY 2020 PFS proposed rule (84 FR 40820), based on experience with third party intermediaries thus far, we have concerns that certain third party intermediaries may not fully appreciate their existing compliance obligations or the implications of non-compliance. Among other provisions, § 414.1400(a)(5) specifically obligates each third party intermediary to certify that all data it submits to CMS on behalf of a MIPS eligible clinician, group or virtual group is true, accurate and complete to the best of its knowledge. Section 414.1400(f)(1) states that, after providing written notice, CMS may take remedial action or terminate a third party intermediary if CMS determines that the third party intermediary has ceased to meet one or more of the applicable criteria for approval or has submitted data that is inaccurate, unusable or otherwise compromised. Moreover, § 414.1400(f)(3) identifies specific circumstances under which CMS may determine that data submitted by a third party intermediary meets the standard for inaccurate, unusable or otherwise compromised data.

Third parties intermediaries have an affirmative obligation to certify that the data they submit on behalf of a MIPS eligible clinician, group or virtual group are true, accurate and complete to the best of its knowledge. MIPS data that are inaccurate, incomplete, unusable or otherwise compromised can result in improper payment. Using data selection criteria to misrepresent a clinician or group's performance for an applicable performance period, commonly referred to as "cherry-picking," results in data submissions that are not true, accurate or complete. A third party intermediary cannot certify that data submitted to CMS by the third party intermediary are true, accurate and complete to the best of its knowledge if the third party intermediary knows the data submitted

are not representative of the clinician's or group's performance. Accordingly, a third party intermediary that submits a certification under § 414.1400(a)(5) in connection with the submission of data it knows are cherry-picked has submitted a false certification in violation of existing regulatory requirements. If CMS believes cherry-picking of data may be occurring, we may subject the third party intermediary and its clients to auditing in accordance with § 414.1400(g).

In the CY 2020 PFS proposed rule (84 FR 40821), we explained that despite these existing obligations, we have received inquiries from third party intermediaries regarding perceived opportunities to selectively submit data that are unrepresentative of the MIPS performance of the clinician or group for which the third party intermediary is submitting data. These inquiries suggest that certain third party intermediaries may not fully appreciate their current regulatory obligations or their implications.

The current regulations at § 414.1400(f) clearly establish that CMS enforcement authority includes the authority to pursue remedial actions or termination based on its determination that a third party intermediary was non-compliant with any applicable criteria for approval in § 414.1400(a) through (e) or if the third party intermediary submitted data that are inaccurate, unusable or otherwise compromised. Compliance with § 414.1400(a)(5) is a criteria for approval. Using data selection criteria to misrepresent a clinician or group's performance for an applicable performance period results in data that are inaccurate, unusable and otherwise compromised. Accordingly, if CMS determined that third party intermediary knowingly submitted data that are not representative of the clinician's or group's performance and certified that the submitted data were true, accurate and complete, CMS would have multiple grounds to impose remedial action or termination under existing regulations.

As described in the CY 2020 PFS proposed rule (84 FR 40821), we proposed two changes to more expressly emphasize CMS enforcement authority. First, we proposed to clarify that remedial action and termination provisions at § 414.1400(f)(1) are triggered if we determine that a third party intermediary submits a false certification under paragraph (a)(5). Second, we proposed to clarify that CMS authority to bring remedial actions or terminate a third party intermediary for submitting data that is inaccurate, unusable or otherwise compromise

extends beyond the specific examples set forth in § 414.1400(f)(3). We explained that with these revisions and a grammatical correction proposed at § 414.1400(f)(1), we would affirm existing CMS authority to pursue remedial actions or termination if we determine that a third party intermediary has ceased to meet one or more of the applicable criteria for approval, submits a false certification under paragraph (a)(5), or has submitted data that are inaccurate, incomplete, unusable, or otherwise compromised (84 FR 40821). We noted that we anticipate that these revisions will emphasize to third party intermediaries the sanctions they may face from CMS if they submit improper data to CMS. In addition, we noted that third party intermediaries may face liability under the federal False Claims Act if they submit or cause to submission of false MIPS data.

We proposed revisions to § 414.1400(f)(3) to clarify the intent of this provision (84 FR 40821). We also refer readers to CY 2019 PFS final rule (83 FR 59908 through 59910) for the discussion of the evolution of policies regarding remedial actions and termination of a third party intermediary. The agency's enforcement authority as codified in § 414.1400(f) broadly extends to include instances of willful misconduct by the third party intermediary and well as other instances in which a third party intermediary inadvertently submits data with deficiencies and errors that render the data "inaccurate, unusable or otherwise compromised." To facilitate a more fulsome understanding on when inadvertent conduct could trigger an enforcement action against a third party intermediary, the current regulatory text in § 414.1400(f)(3) provides that the threshold for "inaccurate, unusable or otherwise compromised" may be met if the submitted data includes TIN/NPI mismatches, formatting issues, calculation errors, or data audit discrepancies that affect more 3 percent of the total number of MIPS eligible clinicians or groups for which data was submitted by the third party intermediary. Through the CY 2020 PFS proposed rule (84 FR 40821), we proposed to add the phrase "including but not limited to" to the text of § 414.1400(f)(3) to emphasize that this provision is illustrative of circumstances that may result in enforcement action and should not be misinterpreted to limit the agency's ability to impose remedial actions or terminate a third party intermediary that knowingly submits inaccurate data.

Lastly, we proposed grammatical corrections related to the use of the plural term "data" (84 FR 40821).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed support for CMS conducting audits if we believe data have been "cherry-picked" or are otherwise not accurate.

Response: We thank commenters for their support.

Comment: Another commenter further encouraged CMS to publish aggregate information from their 2018 auditing of MIPS eligible clinicians and groups with regard to suspected instances of cherry-picked data in regard to third party intermediaries.

Response: We thank the commenter for their suggestion, and would encourage them to clarify what type of aggregated data they are looking for as these types of audit results are not typically published.

Comment: A few commenters stated that although CMS has provided some indication of what may constitute an inaccuracy, greater clarity and transparency is critical so that registries can implement appropriate checks and identify additional data inaccuracies or errors beyond those that are detected through each registry's CMS approved data validation plan. The commenters further urged CMS to: Clearly define a registry's responsibility to address data inaccuracies that can be attributed to data that the registry has access to, controls and manages; consider developing a report that describes and differentiates errors, as well as other "issues" that should be brought to the registry's attention; clearly define what is considered when calculating an error rate; and provide additional detail regarding CMS' description of criteria that may disqualify a third-party intermediary. One commenter specifically stated its belief that when individuals or practices withhold Medicare billing data, this unavailable data should not be counted against the registry as an inaccuracy since the registry has no readily available solution to address this issue without access to current CMS' claims data. One commenter encouraged CMS to release additional instructions for individual clinicians and groups to understand their responsibilities in submitting accurate and complete data and not hold third-parties accountable for data issues outside their control.

Response: We thank the commenters for their suggestions. As described in the CY 2017 Quality Payment Program

final rule (81 FR 77366 through 77374), and through our resources in the Quality Payment Program Resource Library, such as our 2020 Self-Nomination Tool Kit for QCDR and qualified registries: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/580/2020%20Self-Nomination%20Toolkit%20for%20QCDRs%20%26%20Qualified%20Registries.zip> we provide further descriptions of the expectations of data validation plans and examples of what would constitute data inaccuracies, including the guidance that the QCDR should make CMS aware of any errors that may impact a clinician's ability to report or how the clinician may score on a measure or overall. We refer commenters to the MIPS Data Validation Execution Report (DVER) template and the self-nomination factsheet for further details on expectations of data validation and discussion of remedial action and termination due to these error rates, both documents can be found on the Quality Payment Program Resource Library <https://qpp.cms.gov/about/resource-library>. In addition, on a monthly basis through our mandatory support calls (81 FR 77368), we have typically reminded our approved QCDRs and qualified registries of our expectations for the data validation execution report and the methodology for calculating error rates and we anticipate using these calls and other guidance for additional education of third party intermediaries in the future. We will look to provide additional education to clinicians and groups in understanding their responsibility to help ensure the data submitted on their behalf by third party intermediaries are true, accurate, and complete data. However, we believe third parties intermediaries are also accountable for the accuracy of what they submit to CMS. If a third party intermediary finds inaccuracies or data integrity issues, it should ensure that it does not knowingly submit data that are misrepresentative, and are not true, accurate, or complete. We will take the commenters suggestions into future consideration.

Comment: A few commenters requested clarification on whether specific scenarios involved data inaccuracies that would trigger remedial action. One commenter sought clarification on whether a data submission is inaccurate if the submission misstates whether a clinician is a non-MIPS eligible clinician, a Qualified APM Participant or other APM participant; and if that

misstatement would trigger a remedial action under § 414.1400(f). Another commenter sought clarification as to whether a qualified registry would be subject to remedial action if the data submitted did not meet appropriate data completeness thresholds.

Response: We believe it is the responsibility of the third party intermediary to validate data prior to submission to CMS and to ensure that the data is true, accurate, and complete to the best of its knowledge. This certification is applicable to information regarding a clinician's eligibility status. We expect that data submitted by third party intermediaries are true, accurate and complete to the best of the submitter's knowledge. If a third party intermediary knows data are not true, accurate or complete, the third party intermediary should not submit those data. Whether CMS will bring remedial action or terminate a third party intermediary under § 414.1400(f) for submitting a false certification or for submitting data that are inaccurate, unusable or otherwise compromised depends on the particular facts and circumstances. If a third party intermediary submits data that misstate whether a clinician is non-eligible, a Qualified APM Participant, or other APM participant then the third party intermediary has submitted data that are inaccurate. We believe that third party intermediaries should be able to track the eligibility status of the clinicians and groups they support MIPS reporting for, particularly as it pertains to MIPS eligible, voluntary participation, and opt-ins. That is to also account for those clinicians and groups who have chosen to opt-in participating in the program. If we determine a third party intermediary is misrepresenting the status of its clinicians, we would anticipate seeking a corrective action plan from the third party intermediary to address these deficiencies. If its submission meets applicable program requirements, such as a submission of data on a single patient to meet a minimum threshold, a third party intermediary may be able to accurately certify that the data it is submitting are true, accurate and complete even if the data does not meet the data completeness threshold for an individual eligible clinician. Data submissions that do not meet appropriate data completeness thresholds (as described in section III.K.3.c of this final rule) will not receive an error message from the system, and will be scored according to the scoring regulations at § 414.1380. If the data submitted does not satisfy the

data completeness thresholds, the submission is unlikely to receive full credit, and will be scored accordingly; however, this alone would not render the third party intermediary's submission incomplete for purposes § 414.1400. Through our resources in the Quality Payment Program Resource Library, known as our 2020 Self-Nomination Tool Kit (<https://qpp-cm-prod-content.s3.amazonaws.com/uploads/580/2020%20Self-Nomination%20Toolkit%20for%20QCDRs%20%26%20Qualified%20Registries.zip>), we provide further descriptions of the expectations of data validation plans and examples of what would constitute data inaccuracies. Failure to comply with program regulations could result in remedial action. From the data error perspective, we remind third party intermediaries that they are expected to certify that their data submissions are true, accurate, and complete to the best of their knowledge.

Comment: One commenter expressed their belief that the provision in § 414.1400(f)(3)(ii) which gives weight to data errors that affect 3 percent of the MIPS eligible clinicians and groups whose data was submitted by the third party intermediary may unfairly penalize third party intermediaries with a small number of participants. The commenter provided the example that a quality registry reporting for only 25 clinicians triggering the 3 percent threshold if its submission included a data error on a single patient of a single clinician. The commenter recommended revising the provision such that the threshold was measured based on the percentage of patients reported by third party intermediary rather than the percentage of clinicians.

Response: We believe it is important to hold third party intermediaries responsible for data errors regardless of the volume of clinicians and groups they support. Third party intermediaries with smaller volumes of reporting clinicians and groups should be able to ensure the accuracy of the data they submit and have fewer errors when compared to larger third party intermediaries. To facilitate a more fulsome understanding on when inadvertent conduct could trigger an enforcement action against a third party intermediary, the current regulatory text in § 414.1400(f)(3) provides that the threshold for "inaccurate, unusable or otherwise compromised" may be met if the submitted data includes TIN/NPI mismatches, formatting issues, calculation errors, or data audit discrepancies that affect more 3 percent of the total number of MIPS eligible

clinicians or groups for which data was submitted by the third party intermediary. Through the CY 2020 PFS proposed rule (84 FR 40821), we proposed to add the phrase “including but not limited to” to the text of § 414.1400(f)(3) to emphasize that this provision is illustrative of circumstances that may result in enforcement action and should not be misinterpreted to limit the agency’s ability to impose remedial actions or terminate a third party intermediary that knowingly submits inaccurate data. We disagree with the commenter’s suggestion to revise the policy to state that the threshold should be measures based on the percentage of patients reported by the third party intermediaries rather than the percentage of clinicians because this auditing at the patient level does not allow us to determine the overall impact of the data error to the cohort of clinicians who utilized the third party to report. Utilizing the percentage of patients as the data error threshold may lead to inaccurate representations of the overall impact of a data error found through third party reporting.

Comment: Some commenters urged CMS to be mindful that from their perspective third party intermediaries, especially specialty society clinical data registries, do not have the capacity to tell whether a group has specifically submitted false or incomplete data. These commenters believed it is the responsibility of the MIPS eligible clinician or group to demonstrate to CMS that their data are accurate and complete using documentation as described by CMS in this rule. Moreover, if “cherry-picking” is found by CMS, these commenters believed the audit should be sent to the MIPS eligible clinician or group, and not the third party intermediary.

Response: We believe it is the responsibility of the third party intermediary to validate data prior to submission to CMS and to ensure that the data it submits are true, accurate, and complete to the best of its knowledge. It should be a joint responsibility of the eligible clinician and the third party intermediary to ensure that data submitted to CMS is true and reflective of their scope of practice, while avoiding selection bias.

After consideration of the comments, we are finalizing our proposals as proposed. Specifically, we are finalizing that remedial action and termination provisions at § 414.1400(f)(1) are triggered if we determine that a third party intermediary submits a false certification under paragraph (a)(5). Additionally, we are finalizing that CMS

authority to bring remedial actions or terminate a third party intermediary for submitting data that are inaccurate, unusable or otherwise compromised extends beyond the specific examples set forth in § 414.1400(f)(3). We added the phrase “including but not limited to” to the text of § 414.1400(f)(3) to emphasize that this provision is illustrative of circumstances that may result in enforcement action and should not be misinterpreted to limit the agency’s ability to impose remedial actions or terminate a third party intermediary that knowingly submits inaccurate data. In addition, we note that third party intermediaries may face liability under the federal False Claims Act if they submit or cause to submission of false MIPS data.

Lastly, we are finalizing the corrections related to the use of the plural term of “data.”

h. Public Reporting on Physician Compare

(1) Background

For previous discussions on the background of Physician Compare, we refer readers to the CY 2016 PFS final rule (80 FR 71116 through 71123), the CY 2017 Quality Payment Program final rule (81 FR 77390 through 77399), the CY 2018 Quality Payment Program final rule (82 FR 53819 through 53832), the CY 2019 PFS final rule (83 FR 59910 through 59915), and the Physician Compare Initiative website at <https://www.cms.gov/medicare/quality-initiatives-patient-assessment-instruments/physician-compare-initiative/>.

We proposed to publicly report on Physician Compare: (1) Aggregate MIPS data, including the minimum and maximum MIPS performance category and final scores earned by MIPS eligible clinicians, beginning with Year 2 (CY 2018 data, available starting in late CY 2019), as technically feasible; and (2) an indicator on the profile page or in the downloadable database that displays if a MIPS eligible clinician is scored using facility-based measurement, as specified under § 414.1380(e)(6)(vi), as technically feasible (see 84 FR 40821 through 40824). A summary of the comments received and our finalized policies are discussed in more detail in this final rule.

(2) Regulation Text Changes

Section 1848(q)(9)(A) and (D) of the Act requires that we publicly report on Physician Compare in an easily understandable format:

- The final score for each MIPS eligible clinician;

- Performance of each MIPS eligible clinician for each performance category;
- Periodic aggregate information on the MIPS, including the range of final scores for all MIPS eligible clinicians and the range of performance of all the MIPS eligible clinicians for each performance category; and
- The names of eligible clinicians in advanced APMs and, to the extent feasible, the names of such advanced APMs and the performance of such APMs.

Section 1848(q)(9)(B) of the Act requires that the information made available under section 1848(q)(9) of the Act must indicate, where appropriate, that publicized information may not be representative of the eligible clinician’s entire patient population, the variety of services furnished by the eligible clinician, or the health conditions of individuals treated.

To more completely and accurately reference the data available for public reporting on Physician Compare, we proposed to amend § 414.1395 by adding paragraph (a)(1) stating that CMS posts on Physician Compare, in an easily understandable format: (i) Information regarding the performance of MIPS eligible clinicians, including, but not limited to, final scores and performance category scores for each MIPS eligible clinician; and (ii) the names of eligible clinicians in Advanced APMs and, to the extent feasible, the names and performance of such Advanced APMs. As discussed in section III.K.3.h.(3) of this final rule, we also proposed to amend § 414.1395 by adding paragraph (a)(2) stating that CMS periodically posts on Physician Compare aggregate information on the MIPS, including the range of final scores for all MIPS eligible clinicians and the range of the performance of all MIPS eligible clinicians with respect to each performance category. Finally, we proposed to amend § 414.1395 by adding paragraph (a)(3) stating that the information made available under § 414.1395 will indicate, where appropriate, that publicized information may not be representative of an eligible clinician’s entire patient population, the variety of services furnished by the eligible clinician, or the health conditions of individuals treated.

We did not receive public comments on the proposed regulation text changes. As such, we are finalizing our policy as proposed to amend § 414.1395 by adding paragraph (a)(1) stating that CMS posts on Physician Compare, in an easily understandable format: (1) Information regarding the performance of MIPS eligible clinicians, including, but not limited to, final scores and

performance category scores for each MIPS eligible clinician; and (2) the names of eligible clinicians in Advanced APMs and, to the extent feasible, the names and performance of such Advanced APMs. In addition, we are finalizing our policy as proposed to amend § 414.1395 by adding paragraph (a)(3) stating that the information made available under § 414.1395 will indicate, where appropriate, that publicized information may not be representative of an eligible clinician's entire patient population, the variety of services furnished by the eligible clinician, or the health conditions of individuals treated.

(3) Final Score, Performance Categories, and Aggregate Information

Section 1848(q)(9)(D) of the Act requires the Secretary to periodically post on Physician Compare aggregate information on the MIPS, including the range of composite scores for all MIPS eligible clinicians and the range of the performance of all MIPS eligible clinicians with respect to each performance category. We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53823), where we previously finalized policies to publicly report on Physician Compare, either on profile pages or in the downloadable database, the final score for each MIPS eligible clinician and the performance of each MIPS eligible clinician for each performance category, and to periodically post aggregate information on the MIPS, including the range of final scores for all MIPS eligible clinicians and the range of performance of all the MIPS eligible clinicians for each performance category, as technically feasible, for all future years.

Although we previously finalized a policy to periodically post aggregate information on the MIPS, as technically feasible, for all future years, we have not proposed or finalized in rulemaking a specific timeframe for doing so. As part of our phased approach to public reporting, we wanted to first gain experience with the MIPS data prior to publicly reporting it in aggregate, since we had not publicly reported on Physician Compare aggregate data under legacy programs. For example, we publicly reported the Physician Quality Reporting System (PQRS) performance information only at an individual clinician and group practice level. Now that we have experience with the MIPS data, including the Year 1 performance information which was not available for analysis at the time of prior rulemaking, we can now propose a specific timeframe for publicly reporting

aggregate MIPS data on Physician Compare.

Therefore, in accordance with section 1848(q)(9)(D) of the Act, we proposed to publicly report on Physician Compare aggregate MIPS data, including the minimum and maximum MIPS performance category and final scores earned by MIPS eligible clinicians, beginning with Year 2 (CY 2018 data, available starting in late CY 2019), as technically feasible, and to codify this policy at § 414.1395(a) (84 FR 40822). We clarify that the aggregate data publicly reported would be inclusive of all MIPS eligible clinicians. We also note that some aggregate MIPS data is already publicly available in other places, such as via the Quality Payment Program Experience Report. We note that the 2017 Quality Payment Program Experience Report is available at <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/491/2017%20QPP%20Experience%20Report.pdf>. As noted in the CY 2018 Quality Payment Program final rule (82 FR 53823), we will use statistical testing and user testing, as well as consultation with the Physician Compare Technical Expert Panel, to determine how and where these data are best reported on Physician Compare (for example in the Physician Compare Downloadable Database or on the Physician Compare Initiative page). In addition to minimum and maximum MIPS performance category and final scores, we also solicited comment on any other aggregate information that stakeholders will find useful for future public reporting on Physician Compare.

We received public comments on other aggregate information that stakeholders will find useful for future public reporting on Physician Compare. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported publicly reporting aggregate MIPS data, including the minimum and maximum MIPS performance category and final scores earned by MIPS eligible clinicians, beginning with Year 2 (2018 data available starting in late 2019). A few commenters supported the goals of public reporting information on Physician Compare yet remained concerned that Medicare patients and their caregivers may not be able to accurately understand and interpret aggregated information, such as the minimum and maximum MIPS performance category and final scores earned by MIPS eligible clinicians. Two commenters supported publicly reporting information on Physician Compare, but expressed concern about

the accuracy of the data while another commenter that supported public reporting also noted that publishing aggregate information may not be meaningful for certain clinician types. One commenter recommended delaying publicly reporting aggregate information until concerns around accuracy of the data can be resolved.

Response: We appreciate commenters support and the concerns raised. We note that section 1848(q)(9)(D) of the Act requires the Secretary to periodically post on Physician Compare aggregate information on the MIPS, including the range of composite scores for all MIPS eligible clinicians and the range of the performance of all MIPS eligible clinicians with respect to each performance category. In addition, we will use statistical testing and user testing, as well as consultation with the Physician Compare Technical Expert Panel, to determine how and where these data are best reported on Physician Compare to ensure these data are understood and interpreted accurately. We believe we should employ the same phased approach to ensure the data made public accurately represents clinical performance and is understood by website users. We will actively work to ensure that the language on the website and the additional education and outreach conducted for patients and caregivers continues to make this information clear. In addition, we will work to ensure all data publicly reported on Physician Compare is accurate. As such, all data available for public reporting are available for review and correction during the targeted review process, as specified at § 414.1385. Data under review will not be publicly reported until the review is complete. We clarify that aggregate data will reflect MIPS eligible clinicians and groups collectively and will not be specialty-specific.

After consideration of the comments, we are finalizing our proposal to publicly report on Physician Compare aggregate MIPS data, including the minimum and maximum MIPS performance category and final scores earned by MIPS eligible clinicians, beginning with Year 2 (CY 2018 data, available starting in late CY 2019), as technically feasible. We are also finalizing our proposal to amend § 414.1395 by adding paragraph (a)(2) stating that we periodically post on Physician Compare aggregate information on the MIPS, including the range of final scores for all MIPS eligible clinicians and the range of the performance of all MIPS eligible

clinicians with respect to each performance category.

(4) Quality

For previous discussions on publicly reporting quality performance category information on the Physician Compare website, we refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53824) and the CY 2019 Quality Payment Program final rule (83 FR 59912).

Although we did not make any proposals regarding publicly reporting quality performance category information, we solicited additional comments on adding patient narratives to the Physician Compare website in future rulemaking, to the extent consistent with our authority to collect such information under section 1848(q) of the Act and our authority to include an assessment of patient experience and patient, caregiver, and family engagement under section 10331(a)(2)(E) of the Affordable Care Act.

Physician Compare website user testing has repeatedly shown that Medicare patients and caregivers greatly desire narrative reviews, quotes and testimonials by their peers, and a single overall “value indicator,” reflective for each MIPS eligible clinician and group, and will expect to find such information on the Physician Compare website already, based on their experiences with other consumer-oriented websites. We currently do not display any narrative patient satisfaction information on Physician Compare or any single overall value indicator for MIPS eligible clinicians and groups (except MIPS performance category and final scores); currently all performance information on Physician Compare is publicly reported at the individual measure level. Therefore, we solicited comment on the value of and considerations for publicly reporting such information to assist patients and caregivers with making healthcare decisions, building upon the feedback received in response to the CY 2018 Quality Payment Program proposed rule (82 FR 30166 through 30167), in which we specifically sought comment on publicly reporting responses to five open-ended questions that are part of the Agency for Healthcare Research and Quality (AHRQ)’s CAHPS Patient Narrative Elicitation Protocol (<https://www.ahrq.gov/cahps/surveys-guidance/item-sets/elicitation/index.html>). While we are not summarizing and responding to comments we received in this final rule, we appreciate the responses from the commenters and may take them into account as we develop future policies

for public reporting on Physician Compare.

We refer readers to section III.K.3.c.(1)(c)(i) of this final rule for an additional solicitation for comments to add narrative reviews into the CAHPS for MIPS group survey in future rulemaking.

To be publicly reported on Physician Compare, patient narrative data will have to meet our public reporting standards, described at § 414.1395(b), and reviewed in consultation with the Physician Compare Technical Expert Panel, to determine how and where these data would be best reported on Physician Compare. We solicited comment on the value of collecting and publicly reporting information from narrative questions and other patient-reported outcome measures (PROMs), as well as publishing a single “value indicator” reflective of cost, quality and patient experience and satisfaction with care for each MIPS eligible clinician and group, on the Physician Compare website and will consider feedback from the patient, caregiver, and clinician communities before proposing any policies in future rulemaking. We also noted that if we propose to publicly report patient narratives in future rulemaking, we will address all related patient privacy safeguards consistent with section 10331(c) of the Affordable Care Act, which requires that information on physician performance and patient experience is not disclosed in a manner that violates the Freedom of Information Act (5 U.S.C. 552) or the Privacy Act of 1974 (5 U.S.C. 552a) with regard to the privacy individually identifiable health information, and other applicable law. While we are not summarizing and responding to comments we received in this final rule, we appreciate the responses from the commenters and may take them into account as we develop future policies for public reporting on Physician Compare.

(5) Promoting Interoperability

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53827) and the CY 2019 Quality Payment Program final rule (83 FR 59913) for previously finalized policies related to the Promoting Interoperability performance category and Physician Compare.

Although we did not make any proposals regarding publicly reporting Promoting Interoperability category information, we refer readers to the “Medicare and Medicaid Programs; Patient Protection and Affordable Care Act; Interoperability and Patient Access for Medicare Advantage Organization

and Medicaid Managed Care Plans, State Medicaid Agencies, CHIP Agencies and CHIP Managed Care Entities, Issuers of Qualified Health Plans in the Federally Facilitated Exchanges and Health Care Providers” proposed rule (referred to as the Interoperability and Patient Access proposed rule) published in the March 4, 2019 **Federal Register** (84 FR 7646 through 7647), where we proposed to include an indicator on Physician Compare for the eligible clinicians and groups that submit a “no” response to any of the three prevention of information blocking attestation statements in § 414.1375(b)(3)(ii)(A) through (C). To report successfully on the Promoting Interoperability performance category, in addition to satisfying other requirements, a MIPS eligible clinician must submit an attestation response of “yes” for each of these statements. These statements contain specific representations about a clinician’s implementation and use of CEHRT and are intended to verify that a MIPS eligible clinician has not knowingly and willfully taken action (such as to disable functionality) to limit or restrict the compatibility or interoperability of certified EHR technology. In the event that these statements are left blank, that is, a “yes” or a “no” response is not submitted, the attestations would be considered incomplete, and we would not include an indicator on Physician Compare. We also proposed to post this indicator on Physician Compare, either on the profile pages or the downloadable database, as feasible and appropriate, starting with the 2019 performance period data available for public reporting starting in late 2020. We refer readers to the CY 2017 Quality Payment Program final rule for additional information on these attestation statements (81 FR 77028 through 77035).

(6) Facility-Based Clinician Indicator

As discussed in the CY 2018 Quality Payment Program final rule (82 FR 53823), we finalized a policy to publicly report the MIPS performance category and final scores earned by each MIPS eligible clinician on Physician Compare, either on profile pages or in the downloadable database. We also finalized that we will make all measures under the MIPS quality performance category available for public reporting on Physician Compare, either on profile pages or in the downloadable database, as technically feasible (82 FR 53824). We will use statistical testing and user testing to determine how and where measures are reported on Physician Compare. We established at

§ 414.1380(e) a facility-based measurement scoring option under the MIPS quality and cost performance categories for clinicians that meet certain criteria beginning with the 2019 MIPS performance period/2021 MIPS payment year. Section 414.1380(e)(1)(ii) provides that the scoring methodology applicable for MIPS eligible clinicians scored with facility-based measurement is the Total Performance Score methodology adopted for the Hospital VBP Program, for the fiscal year for which payment begins during the applicable MIPS performance period.

With this in mind, we have considered how to best display facility-based MIPS eligible clinician quality and cost information on Physician Compare, appreciating our obligation to publicly report certain MIPS data for MIPS eligible clinicians and groups. As those clinicians and groups scored under the facility-based option are MIPS eligible, we will publicly report their performance category and MIPS final scores on Physician Compare and considered two options for publicly reporting their facility-based measure-level performance information on Physician Compare: (a) Displaying hospital-based measure-level performance information on Physician Compare profile pages, including scores for specific measures and the hospital overall rating; or (b) including an indicator showing that the clinician or group was scored using the facility-based scoring option with a link from the clinician's Physician Compare profile page to the relevant hospital's measure-level performance information on Hospital Compare. We believe that a link from the clinician's Physician Compare profile page to the relevant hospital's performance information on Hospital Compare is preferable for several reasons including: Concerns about duplication with Hospital Compare, interpretability by Physician Compare website users expecting to find clinician-level, rather than hospital-level, information and operational feasibility. Additionally, we believe this approach is consistent with our consumer testing findings that Medicare patients and caregivers find value in information on the relationships clinicians and groups may have with facilities where they perform services. We note that the facility-based scoring indicator would be separate from the hospital affiliation information for admitting privileges currently posted on Physician Compare profile pages.

For these reasons, we proposed to make available for public reporting an indicator on the Physician Compare profile page or downloadable database

that displays if a MIPS eligible clinician is scored using facility-based measurement, as specified under § 414.1380(e)(6)(vi), as technically feasible (84 FR 40824). We also proposed to provide a link to facility-based measure-level information, as specified under § 414.1380(e)(1)(i), for such MIPS eligible clinicians on Hospital Compare, as technically feasible. In addition, we proposed to post this indicator on Physician Compare with the linkage to Hospital Compare beginning with CY 2019 performance period data available for public reporting starting in late CY 2020 and for all future years, as technically feasible. We requested comment on this proposal.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported making available for public reporting an indicator on the Physician Compare profile page or downloadable database that displays if a MIPS eligible clinician is scored using facility-based measurement and provide a link to facility-based measure-level information for such MIPS eligible clinicians on Hospital Compare, as technically feasible. One commenter supported the goals of public reporting information on Physician Compare yet remained concerned that Medicare patients and their caregivers may not be able to accurately understand and interpret the facility-based indicator. A few commenters supported publicly reporting the facility-based indicator and recommended providing context and/or CMS providing explanatory text mentioning that facility-level measures assess care provided at a facility level, rather than a clinician or group level.

Response: We note that findings from our consumer testing indicate that Medicare patients and caregivers find value in information on the relationships clinicians and groups may have with facilities where they perform services. In addition, we note that with the exception of data that must be mandatorily reported on Physician Compare, data included on Physician Compare must meet our public reporting standards, as described at § 414.1395(b). This means data included on Physician Compare public facing profile pages must resonate with website users as determined by CMS. We will use statistical testing and user testing, as well as consultation with the Physician Compare Technical Expert Panel, to determine how and where these data are best reported on Physician Compare, including either on

profile pages or the downloadable database and to provide the appropriate context and explanatory text for Medicare patients and caregivers.

After consideration of the comments, we are finalizing our proposal to make available for public reporting an indicator on the Physician Compare profile page or downloadable database that displays if a MIPS eligible clinician is scored using facility-based measurement, as specified under § 414.1380(e)(6)(vi), as technically feasible. We are also finalizing our proposal to provide a link to facility-based measure-level information, as specified under § 414.1380(e)(1)(i), for such MIPS eligible clinicians on Hospital Compare, as technically feasible. In addition, we are finalizing our proposal to post this indicator on Physician Compare with the linkage to Hospital Compare beginning with CY 2019 performance period data available for public reporting starting in late CY 2020 and for all future years, as technically feasible.

4. Overview of the APM Incentive

a. Overview

Section 1833(z) of the Act requires that an incentive payment be made in years 2019 through 2024 (or, in years after 2025, a different PFS update) to Qualifying APM Participants (QPs) for achieving threshold levels of participation in Advanced APMs. In the CY 2017 Quality Payment Program final rule (81 FR 77399 through 77491), we finalized the following policies:

- Beginning in payment year 2019, if an eligible clinician participated sufficiently in an Advanced APM during the QP Performance Period, that eligible clinician may become a QP for the year. Eligible clinicians who are QPs are excluded from the MIPS reporting requirements for the performance year and payment adjustment for the payment year.

- For payment years from 2019 through 2024, QPs receive a lump sum incentive payment equal to 5 percent of their prior year's estimated aggregate payments for Part B covered professional services. Beginning in payment year 2026, QPs receive a differentially higher update under the PFS for the year than non-QPs.

- For payment years 2019 and 2020, eligible clinicians may become QPs only through participation in Medicare Advanced APMs.

- For payment years 2021 and later, eligible clinicians may become QPs through a combination of participation in Medicare Advanced APMs and Other Payer Advanced APMs (which we refer

to as the All-Payer Combination Option).

In the CY 2018 Quality Payment Program final rule (82 FR 53832 through 53895), we finalized clarifications, modifications, and additional details pertaining to Advanced APMs, QP and Partial QP determinations, Other Payer Advanced APMs, Determination of Other Payer Advanced APMs, Calculation of All-Payer Combination Option Threshold Scores and QP Determinations, and Physician-Focused Payment Models (PFPMs).

In the CY 2019 PFS final rule (83 FR 59915 through 59940), we finalized clarifications, modifications, and additional details pertaining to use of Certified Electronic Health Record Technology (CEHRT), MIPS-comparable quality measures, bearing financial risk for monetary losses, the QP Performance Period, Partial QP election to report to MIPS, Other Payer Advanced APM criteria, determination of Other Payer Advanced APMs, calculation of All-Payer Combination Option Threshold Scores and QP determinations under the All-Payer Combination Option.

In this final rule, we discuss policies pertaining to Advanced APMs and the All-Payer Combination Option.

b. Terms and Definitions

As we continue to develop the Quality Payment Program, we have identified the need to propose new definitions to go along with the previously defined terms. A list of the previously defined terms is available in the CY 2017 Quality Payment Program final rule (81 FR 77537 through 77540), the CY 2018 Quality Payment Program final rule (82 FR 53951 through 53952), and in the CY 2019 PFS final rule (83 FR 60075 through 60076), and reflected in our regulation at § 414.1305.

In the CY 2017 Quality Payment Program final rule, we defined the term “Medical Home Model” and “Medicaid Medical Home Model.” Since defining these terms in the CY 2017 Quality Payment Program final rule, we solicited comment on whether or not to establish a similar definition to describe payment arrangements similar to Medical Home Models and Medicaid Medical Home Models that are operated by other payers (82 FR 30180).

As discussed in the CY 2020 PFS proposed rule (84 FR 40731), we proposed to add the defined term “Aligned Other Payer Medical Home Model” to § 414.1305, to mean a payment arrangement (not including a Medicaid payment arrangement) operated by an other payer that formally partners with CMS in a CMS Multi-Payer Model that is a Medical Home

Model through a written expression of alignment and cooperation, such as a memorandum of understanding (MOU), and is determined by CMS to have the following characteristics:

- The other payer payment arrangement has a primary care focus with participants that primarily include primary care practices or multispecialty practices that include primary care physicians and practitioners and offer primary care services. For the purposes of this provision, primary care focus means the inclusion of specific design elements related to eligible clinicians practicing under one or more of the following Physician Specialty Codes: 01 General Practice; 08 Family Medicine; 11 Internal Medicine; 16 Obstetrics and Gynecology; 37 Pediatric Medicine; 38 Geriatric Medicine; 50 Nurse Practitioner; 89 Clinical Nurse Specialist; and 97 Physician Assistant;
- Empanelment of each patient to a primary clinician; and
- At least four of the following: Planned coordination of chronic and preventive care; Patient access and continuity of care; Risk-stratified care management; Coordination of care across the medical neighborhood; Patient and caregiver engagement; Shared decision-making; and/or Payment arrangements in addition to, or substituting for, fee-for-service payments (for example, shared savings or population-based payments).

We are finalizing this proposal. For additional discussion related to this definition of Aligned Other Payer Medical Home Model, please see section III.K.4.e of this final rule.

c. Advanced APMs

(1) Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77408), we finalized the criteria that define an Advanced APM based on the requirements set forth in sections 1833(z)(3)(C) and (D) of the Act. An Advanced APM is an APM that:

- Requires its participants to use certified EHR technology (CEHRT) (81 FR 77409 through 77414);
- Provides for payment for covered professional services based on quality measures comparable to measures under the quality performance category under MIPS (81 FR 77414 through 77418); and
- Either requires its participating APM Entities to bear financial risk for monetary losses that are in excess of a nominal amount, or is a Medical Home Model expanded under section 1115A(c) of the Act (81 FR 77418 through 77431). We refer to this criterion as the financial risk criterion.

In the CY 2018 Quality Payment Program final rule (82 FR 53832 through 53895), we finalized clarifications, modifications, and additional details pertaining to the Advanced APM criteria, Qualifying APM Participant (QP) and Partial QP determinations, the Other Payer Advanced APM criteria, Determination of Other Payer Advanced APMs, Calculation of All-Payer Combination Option Threshold Scores and QP Determinations, and we discussed Physician-Focused Payment Models (PFPMs).

In the CY 2019 PFS final rule (83 FR 59915 through 59938), we finalized the following:

Use of CEHRT:

- We revised § 414.1415(a)(i) to specify that an Advanced APM must require at least 75 percent of eligible clinicians in each APM Entity, or, for APMs in which hospitals are the APM Entities, each hospital, use CEHRT as defined at § 414.1305 to document and communicate clinical care with patients and other health care professionals.

MIPS-Comparable Quality Measures:

- We revised § 414.1415(b)(2) to clarify, effective January 1, 2020, that at least one of the quality measures upon which an Advanced APM bases payment must either be finalized on the MIPS final list of measures, as described in § 414.1330; endorsed by a consensus-based entity; or determined by CMS to be evidenced-based, reliable, and valid.
- We revised the requirement at § 414.1415(b)(3) that the quality measures upon which an Advanced APM bases payment must include at least one outcome measure (unless there are no available or applicable outcome measures included in the MIPS final quality measures list for the Advanced APM’s first QP Performance Period) to provide, effective January 1, 2020, that at least one such outcome measure must either be finalized on the MIPS final list of measures as described in § 414.1330; endorsed by a consensus-based entity; or determined by CMS to be evidence-based, reliable, and valid.

Bearing Financial Risk for Monetary Losses:

- We revised § 414.1415(c)(3)(i)(A) to maintain the generally applicable revenue-based nominal amount standard at 8 percent of the average estimated total Medicare Parts A and B revenue of all providers and suppliers in participating APM Entities for QP Performance Periods 2021 through 2024.

In this section of the final rule, we address policies regarding several aspects of the Advanced APM criterion on bearing financial risk for monetary losses—specifically our proposal to amend the definition of expected

expenditures, and our request for comment on whether certain items and services should be excluded from the capitation rate for our definition of full capitation arrangements.

(2) Bearing Financial Risk for Monetary Losses

(a) Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77418), we divided the discussion of this criterion into two main topics: (1) What it means for an APM Entity to bear financial risk for monetary losses under an APM (which we refer to as either the generally applicable financial risk standard or Medical Home Model financial risk standard); and (2) what levels of risk we would consider to be in excess of a nominal amount (which we refer to as either the generally applicable nominal amount standard or the Medical Home Model nominal amount standard).

(b) Expected Expenditures

In the CY 2017 Quality Payment Program final rule (81 FR 77550), we established a definition of expected expenditures at § 414.1415(c)(5) to mean the beneficiary expenditures for which an APM Entity is responsible under an APM. For episode payment models, “expected expenditures” means the episode target price. We established this definition of expected expenditures for the purposes of applying the Advanced APM financial risk criterion to determine whether an APM meets the generally applicable nominal amount standard.

In the CY 2017 Quality Payment Program proposed rule (81 FR 28305 through 28309), we proposed to measure three dimensions of risk under our generally applicable nominal amount standards: (1) Marginal risk, which refers to the percentage of the amount by which actual expenditures exceed expected expenditures for which an APM Entity would be liable under the APM; (2) minimum loss rate (MLR), which is a percentage by which actual expenditures may exceed expected expenditures without triggering financial risk; and (3) total potential risk, which refers to the maximum potential payment for which an APM Entity could be liable under the APM.

However, based on commenters’ concerns regarding technical complexity, we did not finalize the marginal risk and MLR components of the generally applicable nominal amount standard under the Advanced APM criteria (81 FR 77427), but did finalize those additional elements of

risk under the Other Payer Advanced APM criteria. We stated in the CY 2017 Quality Payment Program final rule (81 FR 77426) that it is not necessary to include the marginal risk and MLR components in the generally applicable nominal amount standard for Advanced APMs because we are committed to creating Advanced APMs with strong financial risk designs that incorporate risk adjustment, benchmark methodologies, sufficient stop-loss amounts, and sufficient marginal risk; and that all APMs involving financial risk that we operate now or in the future would meet or exceed the proposed marginal risk and MLR requirements. In the CY 2017 Quality Payment Program proposed rule (81 FR 28306), we explained that, to determine whether an APM satisfies the marginal risk component of the generally applicable nominal amount standard, we would examine the payment required under the APM as a percentage of the amount by which actual expenditures exceeded expected expenditures. We proposed that we would require this percentage to exceed a required marginal risk percentage of 30 percent regardless of the amount by which actual expenditures exceeded expected expenditures. We believed that any marginal risk below 30 percent could create scenarios in which the total risk could be very high, but the average or likely risk for an APM Entity would actually be very low (81 FR 28306).

Our rationale for proposing the marginal risk requirement was that the inclusion of the marginal risk requirement would contribute to maintaining a more than nominal level of average or likely risk under an Advanced APM. We did not finalize the marginal risk requirement under the Advanced APM criteria because, as noted above, we believed that all Advanced APMs that we operate now or would potentially operate in the future would meet or exceed the previously proposed marginal risk and MLR requirements, and we believed the total risk portion of the nominal amount standard alone was sufficient to ensure that the level of average or likely risk under an Advanced APM would actually be more than nominal for participants.

However, based on our experience to date, we became concerned that the total risk portion of the benchmark-based nominal amount standard as currently constructed may not always be sufficient to ensure that the level of average or likely risk under an Advanced APM is actually more than nominal for participants. This is because the benchmark-based nominal

amount standard at § 414.1415(c)(3)(i)(B) is dependent upon the definition of expected expenditures codified at § 414.1415(c)(5), where expected expenditures are defined as the beneficiary expenditures for which an APM Entity is responsible under an APM, and for episode payment models, the episode target price.

In our experience implementing the Quality Payment Program and considering the diversity of model designs, we came to believe there is a need to amend the definition of expected expenditures to further ensure there are more-than-nominal levels of average or likely risk under an Advanced APM that would meet the generally applicable benchmark-based nominal amount standard. For instance, an APM could have a sufficient total risk to meet the benchmark-based nominal amount standard and a sharing rate that results in adequate marginal risk if actual expenditures exceed expected expenditures. However, in that same APM, the level of expected expenditures reflected in the APM’s benchmark or episode target price could be set in a manner that would substantially reduce the amount of loss the APM Entity would reasonably expect to incur.

For an APM to meet the generally applicable benchmark-based nominal amount standard, we believe there should be not only the potential for financial losses based on expenditures in excess of the benchmark as provided in § 415.1415(c)(3)(i)(B) of our regulations, but also a meaningful possibility that an APM Entity might exceed the benchmark. If the benchmark is set in such a way that it is extremely unlikely that participants would exceed it, then there is little potential for participants to incur financial losses, and the amount of risk is essentially illusory.

Therefore, in the CY 2020 PFS proposed rule (84 FR 40731 through 40732), we proposed to amend the definition of expected expenditures at § 414.1415(c)(5). Specifically, we proposed to define expected expenditures for purposes of this section as the beneficiary expenditures for which an APM Entity is responsible under an APM. For episode payment models, expected expenditures means the episode target price. For purposes of assessing financial risk for Advanced APM determinations, the expected expenditures under the terms of the APM should not exceed the expected Medicare Parts A and B expenditures for a participant in the absence of the APM. If expected expenditures under the APM exceed the Medicare Parts A and B

expenditures that an APM Entity would be expected to incur in the absence of the APM, such excess expenditures are not considered when CMS assesses financial risk under the APM for Advanced APM determinations.

In general, expected expenditures are expressed as a dollar amount, and may be derived for a particular APM from national, regional, APM Entity-specific, and/or practice-specific historical expenditures during a baseline period, or other comparable expenditures. However, in making our proposal, we recognized that expected expenditures under an APM often are risk-adjusted and trended forward, and may be adjusted to account for expenditure changes that are expected to occur as a result of APM participation. For the purpose of the definition of expected expenditures that we proposed, we would not consider risk adjustments to be excess expenditures when comparing expected expenditures under the APM to the costs that an APM Entity would be expected to incur in the absence of the APM.

We proposed the amendment to the definition of expected expenditures to allow us to ensure that there are more-than-nominal amounts of average or likely risk under an APM that meets the generally applicable benchmark-based nominal amount standard. We also believed that the proposed amended definition of expected expenditures, particularly the proposal to not consider excess expenditures when determining whether an APM meets the benchmark-based nominal amount standard, would provide a more appropriate basis for us to assess whether an APM Entity would bear more than a nominal amount of financial risk for participants under the generally applicable benchmark-based nominal amount standard.

We also proposed a similar amendment to the definition of expected expenditures for the Other Payer Advanced APM generally applicable nominal amount standard in section III.I.4.d.(2)(b)(i) of this final rule.

We sought comment on this proposal. The following is a summary of the comments we received and our responses.

Comment: A few commenters opposed the proposed amended definition of expected expenditures. These commenters were concerned that application of the proposed definition of expected expenditures could potentially cause some current Advanced APMs to no longer meet the generally applicable nominal amount standard beginning in CY 2020, and thus to no longer be Advanced APMs.

Response: It is possible that application of the amended definition could lead to a current Advanced APM no longer meeting the expected expenditure nominal amount standard at § 414.1415(c)(3)(i)(B), and potentially no longer being an Advanced APM if it does not meet the standard at § 414.1415(c)(3)(i)(A). However, all Advanced APMs for CY 2019 that satisfy the current generally applicable nominal amount standard by meeting the expected expenditure nominal amount standard at § 414.1415(c)(3)(i)(B) would continue to do so under the proposed amended definition of expected expenditures.

Comment: A few commenters supported the exclusion of risk adjustment when considering what constitutes excess expenditures.

Response: We thank the commenters for their support of our proposal and will not consider risk adjustments to be excess expenditures when comparing expected expenditures under the APM to the costs that an APM Entity would be expected to incur in the absence of the APM.

After considering the public comments received, we are finalizing our proposal to amend the definition of expected expenditures at § 414.1415(c)(5) without modification.

(c) Excluded Items and Services Under Full Capitation Arrangements

In the CY 2017 Quality Payment Program final rule (81 FR 74431), we finalized a capitation standard at § 414.1415(c)(6), which provides that a full capitation arrangement meets the Advanced APM financial risk criterion. We defined a capitation arrangement as a payment arrangement in which a per capita or otherwise predetermined payment is made under the APM for all items and services for which payment is made through the APM furnished to a population of beneficiaries, and no settlement is performed to reconcile or share losses incurred or savings earned by the APM Entity. We clarified that arrangements between CMS and Medicare Advantage Organizations under the Medicare Advantage program are not considered capitation arrangements for purposes of this definition.

In the CY 2019 PFS final rule (83 FR 59939), we made technical corrections to the Advanced APM financial risk capitation standard at § 414.1415(c)(6). These corrections clarified that our financial risk capitation standard applies only to full capitation arrangements where a per capita or otherwise predetermined payment is made under the APM for all items and

services furnished to a population of beneficiaries during a fixed period of time, and no settlement or reconciliation is performed.

As we began to collect information on other payer payment arrangements for purposes of making Other Payer Advanced APM determinations, we noticed that some payment arrangements that are submitted as capitation arrangements consistent with § 414.1420(d)(7) include a list of services that have been excluded from the capitation rate, such as hospice care, organ transplants, and out-of-network emergency services. In reviewing these exclusion lists, we came to believe that it may be appropriate for CMS to allow certain capitation arrangements to be considered “full” capitation arrangements even if they categorically exclude certain items or services from payment through the capitation rate.

As such, in the CY 2020 PFS proposed rule (84 FR 40827), we solicited comments on what categories of items and services might be excluded from a capitation arrangement that would still be considered a full capitation arrangement. Specifically, we solicited comment on whether there are common industry practices to exclude certain categories of items and services from capitated payment rates and, if so, whether there are common principles or reasons for excluding those categories of services. We also sought comment on what percentage of the total cost of care such exclusions typically account for under what is intended to be a “full” global capitation arrangement. We also solicited comment on how non-Medicare payers define or prescribe certain categories of services that are excluded from global capitation payment arrangements.

We received a few comments on this topic as summarized below.

Comment: All commenters were supportive of excluding certain items and services from the definition of full capitation arrangements for the purposes of the advanced APM financial risk criterion. They asserted that the exclusion of certain services from the definition of full capitation arrangements for purposes of the Advanced APM financial risk criterion would provide the ability to tailor different APMs to meet the needs of different payers and provider types. The commenters also identified specific items and services such as hospice care, emergency care, or specific high cost pharmaceuticals.

Response: We will take these comments into consideration as we consider possible proposals in future rulemaking.

(3) Summary

In this section, we are finalizing the following policy:

- *Expected Expenditures:* We are finalizing as proposed an amendment to the definition of expected expenditures at § 414.1415(c)(5) to state that for the purposes of this section, for purposes of assessing financial risk for Advanced APM determinations, the expected expenditures under the terms of the APM should not exceed the expected Medicare Parts A and B expenditures for a participant in the absence of the APM. If expected expenditures under the APM exceed the Medicare Parts A and B expenditures that an APM Entity would be expected to incur in the absence of the APM, such excess expenditures are not considered when CMS assesses financial risk under the APM for Advanced APM determinations.

d. Qualifying APM Participant (QP) and Partial QP Determinations

(1) Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77433 through 77450), we finalized policies relating to QP and Partial QP determinations. In the CY 2019 PFS final rule (83 FR 59923 through 59925), we finalized additional policies relating to QP determinations and the Partial QP election to report to MIPS.

(2) Group Determination

(a) Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77440), we finalized that QP determinations would generally be made at the APM Entity level, but for two exceptions in which we make the QP determination at the individual level: (1) Individuals participating in multiple Advanced APM Entities, none of which meet the QP threshold as a group; and (2) eligible clinicians on an Affiliated Practitioner List when that list is used for the QP determination because there are no eligible clinicians on a Participation List for the APM Entity (81 FR 77439 through 77443). As a result, the QP determination for the APM Entity generally applies to all the individual eligible clinicians who are identified as part of the APM Entity participating in an Advanced APM. If the APM Entity's Threshold Score meets the relevant QP threshold, all individual eligible clinicians in that APM Entity would receive the same QP determination, applied to their NPIs, for the relevant payment year. The QP determination calculations are aggregated using data for all eligible clinicians participating in the APM

Entity on a determination date during the QP Performance Period.

(b) Application of Partial QP Status

In the CY 2017 Quality Payment Program final rule (81 FR 77440), we stated that we would apply QP status at the NPI level instead of at the TIN/NPI level. We noted that an individual clinician identified by an NPI may have reassigned billing rights to multiple TINs, resulting in multiple TIN/NPI combinations being associated with one individual clinician (NPI). We also stated that if QP status was only applied to one of an individual clinician's multiple TIN/NPI combinations, an eligible clinician who is a QP for only one TIN/NPI combination might still have to report under MIPS for another TIN/NPI combination. Under that approach, the APM Incentive Payment would be based on only a fraction of the clinician's covered professional services instead of, as we believe is the most logical reading of the statute, all those services furnished by the individual clinician, as represented by an NPI. Therefore, we expressed our concern with applying QP status only to a specific TIN/NPI combination as it would not effectuate the goals of the APM incentive path of the Quality Payment Program to reward individual clinicians for their commitment to Advanced APM participation.

For Partial QPs, we currently apply Partial QP status at the NPI level across all TIN/NPI combinations as we have for QP status. However, in the CY 2020 PFS proposed rule (84 FR 40827 through 40828), we explained that for eligible clinicians who are Partial QPs, based on our experience implementing the Quality Payment Program and feedback from stakeholders, we believe it would be more appropriate to apply any exclusion from MIPS reporting requirements and payment adjustments only to TIN/NPI combinations affiliated with that TIN. Under our current policy, Partial QPs are excluded from the MIPS reporting requirements and payment adjustment based on an election made at the APM Entity or individual eligible clinician level, and this exclusion is currently applied at the NPI level across all of their TIN/NPI combinations. Partial QPs do not receive an APM Incentive Payment; rather, the APM Entity in which the Partial QPs participated is permitted to choose whether to be subject to the MIPS reporting requirements and payment adjustments. As such, while an eligible clinician who is a Partial QP might wish to be excluded from MIPS reporting requirements and payment adjustments with respect to the TIN/NPI

combination that relates to the APM Entity in the Advanced APM through which they achieved Partial QP status, that same eligible clinician might wish to report to MIPS and receive a MIPS payment adjustment with respect to other TIN/NPI combinations (for example, because they anticipate receiving an upward MIPS payment adjustment).

Therefore, we proposed that beginning with the 2020 QP Performance Period, Partial QP status would apply only to the TIN/NPI combination(s) through which an individual eligible clinician attains Partial QP status, and to amend our regulation by adding § 414.1425(d)(5) to reflect this change. This means that any MIPS election for a Partial QP would only apply to the TIN/NPI combination through which Partial QP status is attained, so that an eligible clinician who is a Partial QP for only one TIN/NPI combination may still be a MIPS eligible clinician, and subject to the MIPS reporting requirements and payment adjustment, for other TIN/NPI combinations.

We received public comments on our proposal. We thank the commenters for the public comments on this proposal. After including our proposal in the CY 2020 PFS proposed rule (84 FR 40827 through 40828), we further investigated the system requirements to implement the proposed policy. Our current data systems apply Partial QP assignment to NPIs, rather than to TIN/NPI combinations, and we determined that we would not be able to modify our system to implement the proposed policy, if finalized, for the 2020 QP Performance Period. After taking into account our operational limitations, we are not finalizing the proposed policy. We will review and consider the public comments received, continue to seek stakeholder feedback and, if appropriate, proposed policies pertaining to Partial QPs in future rulemaking.

(3) QP Performance Period

(a) Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77446 through 77447), we finalized for the timing of QP determinations that a QP Performance Period runs from January 1 through August 31 of the calendar year that is 2 years prior to the payment year. We finalized that during the QP Performance Period, we will make QP determinations at three separate snapshot dates (March 31, June 30, and August 31), each of which will be a final determination for the eligible clinicians

who are determined to be QPs. The QP Performance Period and the three separate QP determinations apply similarly for both the group of eligible clinicians on a Participation List and the individual eligible clinicians on an Affiliated Practitioner List.

(b) APM Entity Termination

In the CY 2017 Quality Payment Program final rule, we finalized at §§ 414.1425(c)(5) and 414.1425(d)(3) that an eligible clinician is not a QP or Partial QP for a year if the APM Entity group voluntarily or involuntarily terminates from an Advanced APM before the end of the QP Performance Period (81 FR 77446 through 77447). We also finalized at §§ 414.1425(c)(6) and 414.1425(d)(4) that an eligible clinician is not a QP or Partial QP for a year if one or more of the APM Entities in which the eligible clinician participates voluntarily or involuntarily terminates from the Advanced APM before the end of the QP Performance Period, and the eligible clinician does not achieve a Threshold Score that meets or exceeds the QP or Partial QP payment amount threshold or QP or Partial QP patient count threshold based on participation in the remaining non-terminating APM Entities (81 FR 77446 through 77447). We finalized these policies in part to ensure that APM Entities and eligible clinicians who achieve QP or Partial QP status during a QP Performance Period actually assume a more than a nominal amount of financial risk, as is necessary for Advanced APMs, for at least the full QP performance period from January 1 through August 31, if not the entire performance year under the Advanced APM.

Currently, under the terms of some Advanced APMs, APM Entities can terminate their participation in the Advanced APM while bearing no financial risk after the end of the QP Performance Period for the year (August 31). Under our current regulation, an APM Entity's termination after that date would not affect the QP or Partial QP status of all eligible clinicians in the APM Entity. In the CY 2020 PFS proposed rule (84 FR 40828), we acknowledged that it may be appropriate for an Advanced APM to allow participating APM Entities to terminate without bearing financial risk for that performance period under the terms of the Advanced APM itself, including allowing such terminations to occur after the end of the QP Performance Period (August 31). However, we noted that allowing those eligible clinicians to retain their QP or Partial QP status without having borne financial risk under the Advanced APM

through which they attained QP or Partial QP status is not aligned with the structure and principles of the Quality Payment Program, which is designed to reward those APM Entities and eligible clinicians for meaningfully assuming more than a nominal amount of financial risk, as required by the Advanced APM criteria. A critical aspect of Advanced APMs is that participants must bear more than a nominal amount of financial risk under the model. If an APM Entity terminates participation in the Advanced APM without financial accountability, the APM Entity has not yet borne more than a nominal amount of financial risk. As such, we do not believe it is appropriate for eligible clinicians in an APM Entity that terminates after QP determinations are made, but before bearing more than a nominal amount of financial risk, to retain any status as QPs or Partial QPs.

Therefore, regarding QP status, in the CY 2020 PFS proposed rule (84 FR 40827 through 40828), we proposed to revise our regulation at § 414.1425(c)(5) and to add § 414.1425(c)(5)(i) and (ii) to state, beginning with the 2020 QP Performance Period, that an eligible clinician is not a QP for a year if: (1) The APM Entity voluntarily or involuntarily terminates from an Advanced APM before the end of the QP Performance Period; (2) or the APM Entity voluntarily or involuntarily terminates from an Advanced APM at a date on which the APM Entity would not bear financial risk under the terms of the Advanced APM for the year in which the QP Performance Period occurs. In addition, we proposed to revise our regulation at § 414.1425(c)(6) and add §§ 414.1425(c)(6)(i) and (ii) to state, beginning with the 2020 QP Performance Period, that an eligible clinician is not a QP for a year if: (1) One or more of the APM Entities in which the eligible clinician participates voluntarily or involuntarily terminates from the Advanced APM before the end of the QP Performance Period, and the eligible clinician does not achieve a Threshold Score that meets or exceeds the QP payment amount threshold or QP patient count threshold based on participation in the remaining non-terminating APM Entities; or (2) one or more of the APM Entities in which the eligible clinician participates voluntarily or involuntarily terminates from the Advanced APM at a date on which the APM Entity would not bear financial risk under the terms of the Advanced APM for the year in which the QP Performance Period occurs, and the eligible clinician does not achieve a Threshold Score that meets or exceeds

the QP payment amount threshold or QP patient count threshold based on participation in the remaining non-terminating APM Entities.

Regarding Partial QP status, in the CY 2020 PFS proposed rule (84 FR 40828), we also proposed to revise § 414.1425(d)(3) and add §§ 414.1425(d)(3)(i) and (ii), to state, beginning with the 2020 QP Performance Period, that an eligible clinician is not a Partial QP for a year if: (1) The APM Entity voluntarily or involuntarily terminates from an Advanced APM before the end of the QP Performance Period; or (2) the APM Entity voluntarily or involuntarily terminates from an Advanced APM at a date on which the APM Entity would not bear financial risk under the terms of the Advanced APM for the year in which the QP Performance Period occurs. We also proposed to revise § 414.1425(d)(4) and add §§ 414.1425(d)(4)(i) and (ii), to state, beginning with the 2020 QP Performance Period, that an eligible clinician is not a Partial QP for a year if: (1) One or more of the APM Entities in which the eligible clinician participates voluntarily or involuntarily terminates from the Advanced APM before the end of the QP Performance Period, and the eligible clinician does not achieve a Threshold Score that meets or exceeds the Partial QP payment amount threshold or Partial QP patient count threshold based on participation in the remaining non-terminating APM Entities; or (2) one or more of the APM Entities in which the eligible clinician participates voluntarily or involuntarily terminates from the Advanced APM at a date on which the APM Entity would not bear financial risk under the terms of the Advanced APM for the year in which the QP Performance Period occurs, and the eligible clinician does not achieve a Threshold Score that meets or exceeds the Partial QP payment amount threshold or Partial QP patient count threshold based on participation in the remaining non-terminating APM Entities. We believe these amendments and additions account for the scenarios in which an APM Entity could terminate from an Advanced APM at a date on which the APM Entity would not incur any financial accountability under the terms of the Advanced APM. We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters opposed our proposal. A few of these commenters agreed that QPs in APM Entities that terminated their

participation in an Advanced APM without bearing financial risk should not receive the APM Incentive Payment. These commenters expressed concern that there would be a very short window of time between the termination from the Advanced APM and the reporting deadlines required for reporting to MIPS such that there would not be enough time to prepare for MIPS reporting for that year.

Response: We have consistently maintained that participants in Advanced APMs may be considered MIPS eligible clinicians and that they may need to report to MIPS, depending on whether they attain QP or Partial QP status. Eligible clinicians who participate with one or more APM Entities in Advanced APMs are MIPS eligible clinicians unless they are excluded from MIPS based on QP or Partial QP status, or some other ground. As such, they are potentially subject to the MIPS reporting requirements and payment adjustment throughout the performance year. We encourage individual eligible clinicians who are Advanced APM participants to check their QP or Partial QP status throughout the year online, and to communicate with their APM Entities in case there are any changes at the APM Entity Level that may affect whether they will need to report to MIPS.

Comment: One commenter suggested that for involuntary terminations, of an APM Entity's participation in an Advanced APM, affected eligible clinicians should retain their QP or Partial QP status based on their significant investment and participation in the Advanced APM.

Response: We acknowledge that participation in Advanced APMs is a significant investment. However, we also recognize that opportunities exist to take advantage of the program. Whether termination is voluntary or involuntary, we have a duty to ensure that the benefits of QP or Partial QP status, including the APM Incentive Payment and any exemption from the MIPS reporting requirements and payment adjustment is based on fully meeting the

elements of Advanced APM participation, including the requirement that an APM Entity in an Advanced APM is actually required to bear a more than nominal amount of financial risk during the relevant QP Performance Period.

We are finalizing our proposed policies without modification that an eligible clinician is not a QP or a Partial QP for the year through an APM Entity that voluntarily or involuntarily terminates from an Advanced APM at a date on which the APM Entity will not bear financial risk under the terms of the Advanced APM for the year in which the QP Performance Period occurs.

(4) Summary

In this section, we are taking the following actions on our proposed policies:

- *Application of Partial QP Status:* We are not finalizing our proposal that, beginning with the 2020 QP Performance Period, Partial QP status will apply only to the TIN/NPI combination(s) through which an individual eligible clinician attains Partial QP status.

- *APM Entity Termination:* We are finalizing without modification the proposal to revise our regulations at §§ 414.1425(c)(5) and (6) and (d)(3) and (4) to state that an eligible clinician is not a QP or a Partial QP for the year when an APM Entity terminates voluntarily or involuntarily from an Advanced APM at a date on which the APM Entity will not bear financial risk under the terms of the Advanced APM for the year in which the QP Performance Period occurs.

e. All-Payer Combination Option

(1) Overview

Section 1833(z)(2)(B)(ii) of the Act requires that beginning in payment year 2021, in addition to the Medicare Option, eligible clinicians may become QPs through the Combination All-Payer and Medicare Payment Threshold Option, which we refer to as the All-Payer Combination Option. In the CY

2017 Quality Payment Program final rule (81 FR 77459), we finalized our overall approach to the All-Payer Combination Option. The Medicare Option focuses on participation in Advanced APMs, and we make QP determinations under this option based on Medicare Part B covered professional services attributable to services furnished through an APM Entity. The All-Payer Combination Option does not replace or supersede the Medicare Option; instead, it will allow eligible clinicians to become QPs by meeting the QP thresholds through a pair of calculations that assess a combination of both Medicare Part B covered professional services furnished through Advanced APMs and services furnished through payment arrangements offered by payers other than Medicare that CMS has determined meet the criteria to be Other Payer Advanced APMs. We finalized that beginning in payment year 2021, we will conduct QP determinations sequentially so that the Medicare Option is applied before the All-Payer Combination Option (81 FR 77438). The All-Payer Combination Option encourages eligible clinicians to participate in payment arrangements that satisfy the Other Payer Advanced APM criteria with payers other than Medicare. It also encourages sustained participation in Advanced APMs across multiple payers.

We finalized that the QP determinations under the All-Payer Combination Option are based on payment amounts or patient counts as illustrated in Tables 36 and 37, and Figures 1 and 2 of the CY 2017 Quality Payment Program final rule (81 FR 77460 through 77461), presented in this final rule as Tables 64A and 64B and Figures 2 and 3. We also finalized that, in making QP determinations with respect to an eligible clinician, we will use the Threshold Score (that is, based on payment amount or patient count) that is most advantageous to the eligible clinician toward achieving QP status, or if QP status is not achieved, Partial QP status, for the year (81 FR 77475).

TABLE 64A: QP Payment Amount Thresholds – All-Payer Combination Option

Payment Year	2019	2020	2021	2022	2023 and later
QP Payment Amount Threshold

FIGURE 2: QP Determination Tree, Payment Years 2021-2022

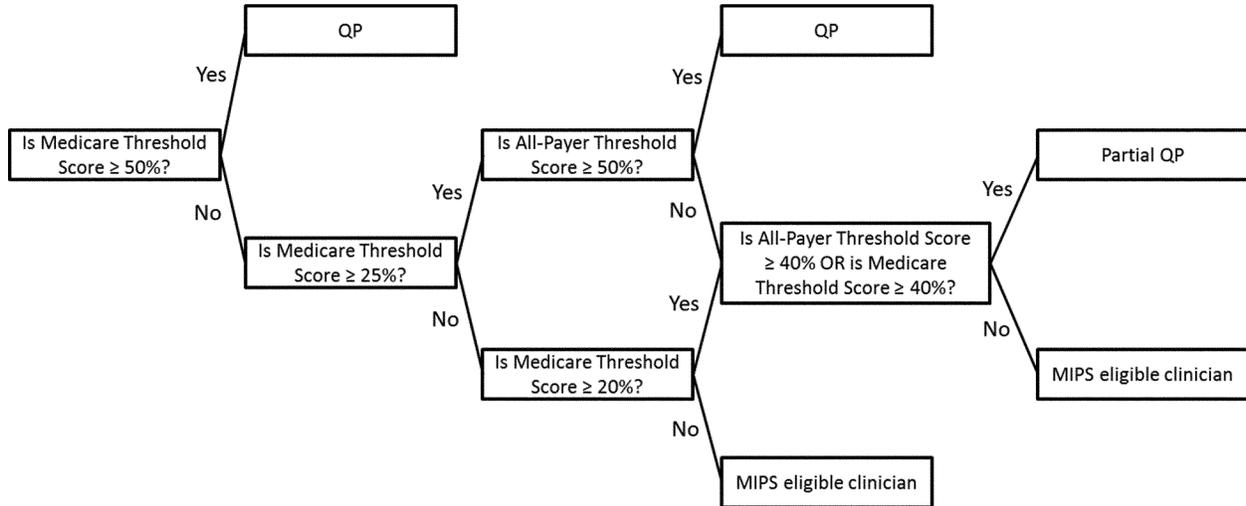

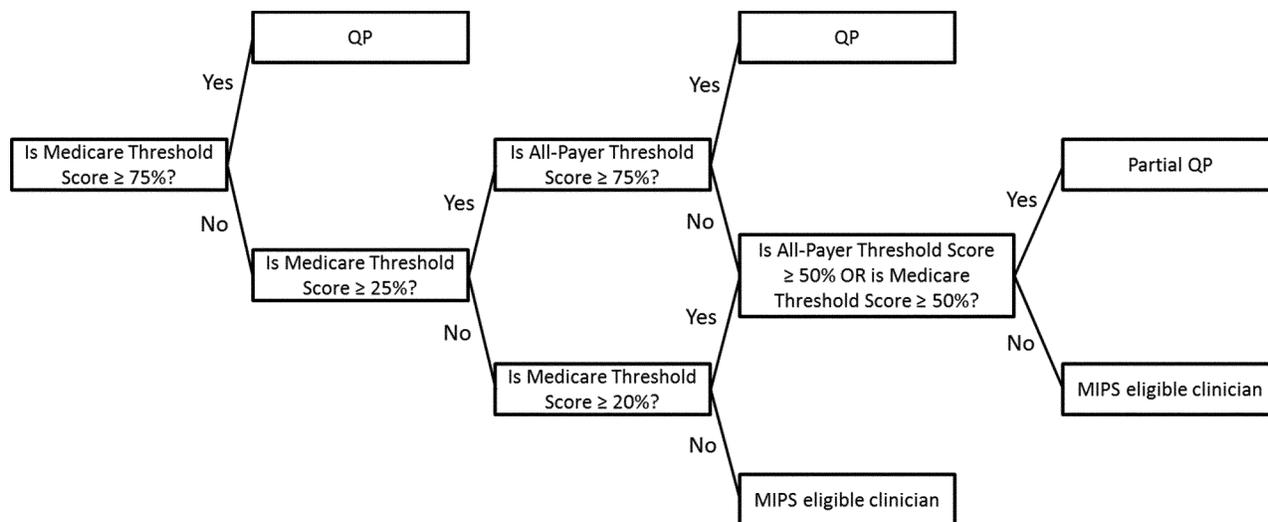

FIGURE 3: QP Determination Tree, Payment Years 2023 and Later

Unlike the Medicare Option where we have access to all of the information necessary to determine whether an APM meets the criteria to be an Advanced APM, we cannot determine whether payment arrangements offered by other payers meet the criteria to be an Other Payer Advanced APM without receiving information about the payment arrangements from an external source. Similarly, we do not have the necessary payment amount and patient count information to determine under the All-Payer Combination Option whether an eligible clinician meets the payment amount or patient count threshold to be a QP without receiving certain information from an external source.

In the CY 2018 Quality Payment Program final rule (82 FR 53844 through 53890), we established additional policies to implement the All-Payer Combination Option and finalized certain modifications to our previously finalized policies. A detailed summary of those policies can be found at 82 FR 53874 through 53876 and 53890 through 53891.

In the CY 2019 PFS final rule (83 FR 59926 through 59938), we finalized the following:

Other Payer Advanced APM Criteria

- We changed the CEHRT use criterion so that in order to qualify as an Other Payer Advanced APM as of January 1, 2020, the other payer arrangement must require at least 75 percent of participating eligible clinicians in each participating APM Entity group, or each hospital if hospitals are the APM Entities, use CEHRT to document and communicate clinical care.

- We allowed payers and eligible clinicians to submit evidence as part of their request for an Other Payer Advanced APM determination that CEHRT is used by the requisite percentage of eligible clinicians participating in the payment arrangement (50 percent for 2019, and 75 percent for 2020 and beyond) to document and communicate clinical care; and specified that we will use such evidence to demonstrate the level of CEHRT use, whether or not CEHRT use is explicitly required under the terms of the payment arrangement.

- We amended § 414.1420(c)(2), effective January 1, 2020, to provide that at least one of the quality measures used in the payment arrangement in paragraph (c)(1) of this regulation must be:

- ++ Finalized on the MIPS final list of measures, as described in § 414.1330;

- ++ Endorsed by a consensus-based entity; or

- ++ Determined by CMS to be evidenced-based, reliable, and valid.

- We revised § 414.1420(c)(3) to require that, effective January 1, 2020, unless there is no applicable outcome measure on the MIPS quality measure list, that to be an Other Payer Advanced APM, an other payer arrangement must use an outcome measure, that must be:

- ++ Finalized on the MIPS final list of measures, as described in § 414.1330;

- ++ Endorsed by a consensus-based entity; or

- ++ Determined by CMS to be evidenced-based, reliable, and valid.

- We also revised our regulation at § 414.1420(c)(3)(i) to provide that, for payment arrangements determined to be Other Payer Advanced APMs for the 2019 performance year that did not

include an outcome measure that is evidence-based, reliable, and valid, and that are resubmitted for an Other Payer Advanced APM determination for the 2020 performance year (whether for a single year, or for a multi-year determination as finalized in CY 2019 PFS final rule (83 FR 55931 through 55932), we would continue to apply the previous requirements for purposes of those determinations. This revision also applies to payment arrangements in existence prior to the 2020 performance year that are submitted for determination to be Other Payer Advanced APMs for the 2020 performance year and later.

- We revised § 414.1420(d)(3)(i) to maintain the generally applicable revenue-based nominal amount standard at 8 percent of the total combined revenues from the payer of providers and suppliers in participating APM Entities for QP Performance Periods 2021 through 2024.

Determination of Other Payer Advanced APMs

- We finalized details regarding the Payer Initiated Process for Remaining Other Payers. To the extent possible, we aligned the Payer Initiated Process for Remaining Other Payers with the previously finalized Payer Initiated Process for Medicaid, Medicare Health Plans, and CMS Multi-Payer Models.

- We eliminated the Payer Initiated Process that is specifically for CMS Multi-Payer Models. These payers will be able to submit their arrangements through the Payer Initiated Process for Remaining Other Payers as finalized in the CY 2019 PFS final rule (82 FR 59933 through 59935), or through the Medicaid or Medicare Health Plan

payment arrangement submission processes, and no longer need a special pathway.

Calculation of All-Payer Combination Option Threshold Scores and QP Determinations

- We added a third alternative to allow requests for QP determinations at the TIN level in instances where all clinicians who reassigned billing rights under the TIN participate in a single APM Entity. We modified our regulation at § 414.1440(d) by adding a third alternative to allow QP determinations at the TIN level in instances where all clinicians who have reassigned billing under the TIN participate in a single APM Entity, as well as to assess QP status at the most advantageous level for each eligible clinician.

- We clarified that, in making QP determinations using the All-Payer Combination Option, eligible clinicians may meet the minimum Medicare threshold using one method, and the All-Payer threshold using the same or a different method. We codified this clarification by amending § 414.1440(d)(1).

- We extended the weighting methodology that is used to ensure that an eligible clinician does not receive a lower score on the Medicare portion of their all-payer calculation under the All-Payer Combination Option than the Medicare Threshold Score they received at the APM Entity level in order to apply a similar policy to the proposed TIN level Medicare Threshold Scores.

In this section of the final rule, we are finalizing our proposed definition of the term Aligned Other Payer Medical Home Model. We are also finalizing our proposals regarding bearing financial risk for monetary losses, specifically the Medicaid Medical Home Model financial risk standard and our proposed amendment to the definition of expected expenditures. We also discuss our request for comment on whether certain items and services could be excluded from the capitation rate consistent with our definition of full capitation arrangements.

(2) Aligned Other Payer Medical Home Models

(a) Definition

As we explained when finalizing the definitions of Medical Home Model and Medicaid Medical Home Model in the CY 2017 Quality Payment Program final rule, MACRA does not define “medical homes,” but sections 1848(q)(5)(C)(i), 1833(z)(2)(B)(iii)(II)(cc)(BB), 1833(z)(2)(C)(iii)(II)(cc)(BB), and 1833(z)(3)(D)(ii)(II) of the Act make

medical homes an instrumental piece of the law (81 FR 77403). The terms Medical Home Model and Medicaid Medical Home Model are limited to Medicare and Medicaid payment arrangements, respectively, and do not include other payer payment arrangements.

As we discuss in section III.I.4.b. of this final rule, in the CY 2020 PFS proposed rule (84 FR 40832), we proposed to amend § 414.1305 to add the defined term “Aligned Other Payer Medical Home Model”, which would mean an aligned other payer payment arrangement (not including a Medicaid payment arrangement) operated by an other payer formally partnering in a CMS Multi-Payer Model that is a Medical Home Model through a written expression of alignment and cooperation with CMS, such as a memorandum of understanding (MOU), and is determined by CMS to have the following characteristics:

- The other payer payment arrangement has a primary care focus with participants that primarily include primary care practices or multispecialty practices that include primary care physicians and practitioners and offer primary care services. For the purposes of this provision, primary care focus means the inclusion of specific design elements related to eligible clinicians practicing under one or more of the following Physician Specialty Codes: 01 General Practice; 08 Family Medicine; 11 Internal Medicine; 16 Obstetrics and Gynecology; 37 Pediatric Medicine; 38 Geriatric Medicine; 50 Nurse Practitioner; 89 Clinical Nurse Specialist; and 97 Physician Assistant;
- Empanelment of each patient to a primary clinician; and
- At least four of the following:

Planned coordination of chronic and preventive care; Patient access and continuity of care; risk-stratified care management; coordination of care across the medical neighborhood; patient and caregiver engagement; shared decision-making; and/or payment arrangements in addition to, or substituting for, fee-for-service payments (for example, shared savings or population-based payments).

The proposed definition of Aligned Other Payer Medical Home Model includes the same characteristics as the definitions of Medical Home Model and Medicaid Medical Home Model, but it applies to other payer payment arrangements. In the CY 2020 PFS proposed rule (84 FR 40832), we explained that we believe that structuring this definition in this manner is appropriate because we recognize that there may be medical

homes that are operated by other payers that may be appropriately considered medical home models under the All-Payer Combination Option.

We proposed to exclude Medicaid payment arrangements from this definition of Aligned Other Payer Medical Home Model because we have previously defined the term Medicaid Medical Home Model at § 414.1305 and we believe it is important to distinguish Medicaid payment arrangements from other payment arrangements, given the requirements in sections 1833(z)(2)(B)(ii)(I)(bb) and 1833(z)(3)(B)(ii)(I)(bb) of the Act requiring us to consider whether there is a medical home or alternative payment model under the Title XIX state plan in each state when making QP determinations using the All-Payer Combination Option.

For purposes of the Aligned Other Payer Medical Home Model definition, for an arrangement to be aligned, we explained that we mean through a written expression of alignment and cooperation with CMS, such as an MOU. CMS Multi-Payer Models require alignment across the different payers, and a written expression reflects the fact that each arrangement has been reviewed by CMS and CMS has determined that the other payer payment arrangement is aligned with a CMS Multi-Payer Model that is a Medical Home Model. We proposed to limit this Aligned Other Payer Medical Home Model definition to other payer payment arrangements that are aligned with CMS Multi-Payer Models that are Medical Home Models because we can be assured that the structure of these arrangements is similar to the Medical Home Models and Medicaid Medical Home Models for which we have already made a similar determination. Based on our experience to date, we anticipate that participants in these arrangements may generally be more limited in their ability to bear financial risk than other entities because they may be smaller and predominantly include primary care practitioners, whose revenues are a smaller fraction of the patients’ total cost of care than those of other eligible clinicians. At the same time, we do not believe that participants in all medical homes, regardless of payer, face the same limitations on their ability to bear financial risk. We explained that we believe that some participants may have different organizational or financial circumstances that allow them to bear greater such risk. We believe that applying the proposed Aligned Other Payer Medical Home Model definition to all other payer payment arrangements

would create potential new opportunities for gaming in commercial settings where we do not have control over the design of such models.

However, we believe that payment arrangements that have been aligned and are similar to a Medicaid Home Model, where we have already put in place policies to control against gaming, would be similarly constrained.

In addition, we have acquired additional understanding of some other payer payment arrangements after one year of experience with the Payer Initiated Process, which included some arrangements that are aligned with CMS Multi-Payer Models that are Medical Home Models.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposed definition of the term Aligned Other Payer Medical Home Model.

Response: We appreciate the support for adding the defined term Aligned Other Payer Medical Home Model.

Comment: Some commenters expressed concern that the proposed definition of Aligned Other Payer Medical Home Models would include only those other payer payment arrangements that meet the definition as proposed, requiring alignment with CMS Multi-Payer Models, and not including other payer payment arrangements that are not aligned with a CMS Multi-Payer Model. These commenters recommend that the definition be broadened to include any other payer payment arrangement that would not be formally partnering with a CMS Multi-Payer Model, but would otherwise meet the proposed definition. These commenters stated that CMS is being too prescriptive, and limiting the definition would unnecessarily limit opportunities for participation by eligible clinicians in other payer payment arrangements that would have all of the characteristics of medical home models. Some of these same commenters stated that, while they understood CMS' concern with potential gaming related to payment arrangements that have lower nominal risk thresholds, they believe CMS is already collecting sufficient information to allow for monitoring of other payer payment arrangements such that limiting the definition to only include other payer arrangements that are aligned with CMS Multi-Payer Models is not necessary. One commenter stated that CMS has generally attempted to align Advanced APM and Other Advanced APM policies, and asserted

that approach should carry over to inclusion of all commercial payment arrangements that meet the Medical Home Model definition.

Response: We continue to be concerned about the potential for gaming associated with payment arrangements where we do not have any control over the design. We necessarily rely on a limited set of self-reported information, and as a result, we have a limited capability to monitor for, or respond effectively to, potential gaming. We also believe our cautious approach is appropriate given that the All-Payer Combination Option has only been available since the 2019 QP Performance Period and we are still gathering additional information and experience. We acknowledge that limiting the definition of Aligned Other Payer Medical Home Model to only include other payer payment arrangements that meet the proposed definition, including alignment with a CMS Multi-Payer Model, may result in some other payer payment arrangements not being considered an Aligned Other Payer Medical Home Model even though they may be structurally similar to Medical Home Models and Medicaid Medical Home Models. However, as we discussed in the CY 2020 PFS proposed rule (84 FR 40833), we continue to believe that finalizing the definition as proposed is the best approach for expanding innovation while ensuring program integrity.

After considering public comments, we are finalizing without modification our proposal to amend § 414.1305 to define the term "Aligned Other Payer Medical Home Model".

(b) Other Payer Advanced APM Criteria for Aligned Other Payer Medical Home Models

As defined in § 414.1305, an Other Payer Advanced APM is an other payer arrangement that meets the Other Payer Advanced APM criteria set forth in § 414.1420. Accordingly, in the CY 2020 PFS proposed rule (84 FR 40833), we proposed that the CEHRT criterion codified in § 414.1420(b) and the use of quality measures criterion codified in § 414.1420(c) will apply to any Aligned Other Payer Medical Home Model for which we will make an Other Payer Advanced APM determination. Further, we proposed to revise § 414.1420(d)(8) to require Aligned Other Payer Medical Home Models to comply with the 50 eligible clinician limit to align with the requirements that apply to Medical Home Models and Medicaid Medical Home Models.

Regarding the applicable financial risk and nominal amount standards,

consistent with the financial risk and nominal amount standards applicable to Medical Home Models and Medicaid Medical Home Models, we proposed that the Aligned Other Payer Medical Home Model financial risk and nominal amount standards will be the same as the Medicaid Medical Home Model financial risk and nominal amount standards. We proposed corresponding amendments to § 414.1420(d)(2) and (4) so that those sections would reflect the Medicaid Medical Home Model and Aligned Other Payer Medical Home Model financial risk standard, and Medicaid Medical Home Model and Aligned Other Payer Medical Home Model nominal amount standard, respectively. We proposed this policy consistent with our principle of aligning the Advanced APM criteria and Other Payer Advanced APM criteria to the extent feasible and appropriate, as well as our continued belief that organization size is a proxy for potential risk-bearing capacity.

We did not receive any public comments on our proposal that the CEHRT criterion in § 414.1420(b) and the use of quality measures criterion in § 414.1420(c) will apply to any Aligned Other Payer Medical Home Model for which we will make an Other Payer Advanced APM determination. We discuss public comments regarding our proposal to apply the 50 eligible clinician limit to Aligned Other Payer Medical Home Models in section III.K.4.e.(3)(b) of this final rule.

We are finalizing without modification our proposal that the CEHRT criterion codified in § 414.1420(b) and the use of quality measures criterion codified in § 414.1420(c) will apply to any Aligned Other Payer Medical Home Model for which we will make an Other Payer Advanced APM determination.

(c) Determination of Aligned Other Payer Medical Home Model and Other Payer Advanced APM Status

In the CY 2020 PFS proposed rule (84 FR 40833), we proposed that payers may submit other payer arrangements for CMS determination as Aligned Other Payer Medical Home Models and Other Payer Advanced APMs, as applicable, through the Payer Initiated Process, to be effective January 1, 2020, for applications for the 2021 QP Performance Period. In the CY 2019 PFS final rule, we finalized a process for Remaining Other Payers to submit other payer arrangements for CMS determination of Other Payer Advanced APM status (83 FR 59934 through 59935). Other payers will be required to submit their other payer arrangements

for CMS determination as Aligned Other Payer Medical Home Models and Other Payer Advanced APMs, as applicable, using this Remaining Other Payer process.

We also proposed that APM Entities and eligible clinicians can submit other payer arrangements for CMS to determine whether they are Aligned Other Payer Medical Home Models and Other Payer Advanced APMs, as applicable, through the Eligible Clinician Initiated Process.

We received no public comments on these proposals. We are finalizing our proposal without modification that payers may submit other payer arrangements for CMS determination as Aligned Other Payer Medical Home Models and Other Payer Advanced APMs, as applicable, through the Payer Initiated Process. This policy will be effective January 1, 2020, beginning with applications submitted for the 2021 QP Performance Period. Other payers will submit their other payer arrangements for CMS determination as Aligned Other Payer Medical Home Models and Other Payer Advanced APMs, as applicable, using this Remaining Other Payer process. We are also finalizing our proposal without modification that APM Entities and eligible clinicians can submit other payer arrangements for CMS to determine whether they are Aligned Other Payer Medical Home Models and Other Payer Advanced APMs, as applicable, through the Eligible Clinician Initiated Process.

(3) Bearing Financial Risk for Monetary Losses

(a) Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77466), we divided the discussion of this criterion into two main topics: (1) What it means for an APM Entity to bear financial risk if actual aggregate expenditures exceed expected aggregate expenditures under a payment arrangement (which we refer to as either the generally applicable financial risk standard or Medicaid Medical Home Model financial risk standard); and (2) what levels of risk we would consider to be in excess of a nominal amount (which we refer to as either the generally applicable nominal amount standard or the Medicaid Medical Home Model nominal amount standard).

In the CY 2017 Quality Payment Program final rule, we finalized that for a Medicaid Medical Home Model to be an Other Payer Advanced APM, if the APM Entity's actual aggregate expenditures exceed expected aggregate

expenditures, the Medicaid Medical Home Model must:

- Withhold payment for services in the APM Entity and/or the APM Entity's eligible clinicians;
- Reduce payment rates to the APM Entity and/or the APM Entity's eligible clinicians;
- Require direct payment by the APM Entity to the Medicaid program; or
- Require the APM Entity to lose the right to all or part of an otherwise guaranteed payment or payments.

We based this standard on our belief that Medicaid Medical Home Models are unique types of Medicaid APMs because they are identified and treated differently under the statute. We believe it is appropriate to establish a unique standard for bearing financial risk that reflects these statutory differences and remains consistent with the statutory scheme, which is to provide incentives for participation by eligible clinicians in Advanced APMs (81 FR 77467 through 77468).

In addition, to be an Other Payer Advanced APM, a Medicaid Medical Home Model must require that the total annual amount that an APM Entity potentially owes or foregoes under the Medicaid Medical Home Model must be at least:

- For QP Performance Period 2019, 3 percent of the APM Entity's total revenue under the payer.
- For QP Performance Period 2020, 4 percent of the APM Entity's total revenue under the payer.
- For QP Performance Period 2021 and later, 5 percent of the APM Entity's total revenue under the payer.

(b) Aligned Other Payer Medical Home Model Financial Risk and Nominal Amount Standards

Neither the current Medical Home Model financial risk and nominal amount standards nor the Medicaid Medical Home Model financial risk and nominal amount standards apply to similar arrangements with other payers for purposes of Other Payer Advanced APM determinations. Consistent with the proposal we are finalizing in this rule to define the term, Aligned Other Payer Medical Home Model. In the CY 2020 PFS proposed rule (84 FR 40834), we proposed to amend § 414.1420(d)(2) and (d)(4) of our regulations to conform the financial risk and nominal amount standards for Aligned Other Payer Medical Home Models with the existing Medicaid Medical Home Model financial risk and nominal amount standards. Recognizing the similar characteristics of these "medical home" other payer payment arrangements, we believe that the same financial risk and

nominal amount standards should be applied to Aligned Other Payer Medical Home Models as to Medicaid Medical Home Models.

Further, we proposed a corresponding amendment to § 414.1420(d)(2)(ii) to state that, based on the APM Entity's failure to meet or exceed one or more specified performance standards, an Aligned Other Payer Medical Home Model must require the direct payment by the APM Entity to the payer. This amendment would further conform the requirements for Aligned Other Payer Medical Home Models with the current requirements for Medicaid Medical Home Models.

We explained that we believe that if we applied the Medicaid Medical Home Model financial risk and nominal amount standards to all other payer arrangements that would meet the Aligned Other Payer Medical Home Model definition, but for the arrangements' not being aligned with a CMS Multi-Payer Model that is a Medical Home Model, we might create gaming opportunities whereby other payers might develop arrangements that appear to be medical homes solely to take advantage of the unique nominal amount standard. This would be of particular concern because we have less insight into the nature of arrangements not aligned with CMS Multi-Payer Models.

In addition, as the 50 eligible clinician limit as codified in §§ 414.1415(c)(7) and 414.1420(d)(8) currently applies to Medical Home Models and Medicaid Medical Home Models, respectively, we correspondingly proposed that the 50 eligible clinician limit apply to Aligned Other Payer Medical Home Models by amending § 414.1420(d)(8).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported our proposed amendment to our regulations to conform the financial risk and nominal amount standards for Aligned Other Payer Medical Home Models with those for Medicaid Medical Home Models.

Response: We appreciate the commenters' support for our proposal.

Comment: A few commenters supported our proposal to make corresponding revisions to § 414.1420(d)(2)(ii) to add that an Aligned Other Payer Medical Home Model must require the direct payment by the APM Entity to the payer, aligning with the current requirement for Medicaid Medical Home Models.

Response: We appreciate the commenters' support for our proposal.

Comment: Two commenters opposed our proposal to require Aligned Other Payer Medical Home Models to comply with the 50 eligible clinician limit to align with the requirements that apply to Medical Home Models and Medicaid Medical Home Models. These commenters stated that the application of the 50 eligible clinician limit to Aligned Other Payer Medical Home Models is an arbitrary cap that would unnecessarily limit the adoption of such payment arrangements by excluding certain entities and clinicians who would benefit from participating in an Aligned Other Payer Medical Home Model. Specifically, the commenters expressed concern that certain large specialty groups would be unable to participate in Aligned Other Payer Medical Home Models if the 50 eligible clinician limit were finalized.

Response: As a general principle, we align policies pertaining to the Advanced APM criteria and the Other Payer Advanced APM criteria to the extent feasible and appropriate. We continue to believe that alignment of the requirements that apply to Medical Home Models, Medicaid Medical Home Models, and Aligned Other Payer Medical Home Models, including the 50 eligible clinician limit, is appropriate.

After considering public comments, we are finalizing our proposal, without modification, to amend § 414.1420(d)(2) and (4) to conform the financial risk and nominal amount standards for Aligned Other Payer Medical Home Models with the existing Medicaid Medical Home Model financial risk and nominal amount standards for Medicaid Medical Home Models as proposed. We are also finalizing without modification our proposal that the 50 eligible clinician limit apply to Aligned Other Payer Medical Home Models by amending § 414.1420(d)(8).

(b) Generally Applicable Other Payer Advanced APM Nominal Amount Standard

(i) Overview

In the CY 2017 Quality Payment Program final rule (81 FR 77471), we finalized at § 414.1420(d)(3)(ii) that except for risk arrangements described under the Medicaid Medical Home Model Standard, for a payment arrangement to meet the nominal amount standard, the specific level of marginal risk must be at least 30 percent of losses in excess of the expected expenditures and total potential risk

must be at least 4 percent of the expected expenditures. Furthermore, we finalized that a payment arrangement must require APM Entities to bear financial risk for at least 3 percent of the expected expenditures for which an APM Entity is responsible under the payment arrangement. Section 414.1420(d)(6) provides that, for purposes of this section, expected expenditures is defined as the Other Payer Advanced APM benchmark or, for episode payment models, as the episode target price.

(ii) Marginal Risk

As we stated in the 2017 Quality Payment Program final rule (81 FR 77470), to determine that a payment arrangement satisfies the marginal risk portion of the nominal amount standard, we would examine the payment required under the payment arrangement as a percentage of the amount by which actual expenditures exceeded expected expenditures. Specifically, for marginal risk we finalized that for a payment arrangement to meet the nominal amount standard, the specific level of marginal risk must be at least 30 percent of losses in excess of the expected expenditures. We also stated that the rate of marginal risk could vary with the amount of losses.

To date, we have applied the marginal risk requirement as requiring that a payment arrangement must exceed the marginal risk rate of 30 percent at all levels of total losses even as the marginal risk rate varies depending on the amount by which actual expenditures exceed expected expenditures, consistent with § 414.1420(d)(5)(i). For example, certain other payer arrangements where the marginal risk met or exceeded 30 percent at lower levels of losses in excess of expected expenditures, but fell below 30 percent at higher levels of losses, would not meet the marginal risk requirement of the generally applicable nominal amount standard.

In general, this approach has worked well and served its intended purpose of ensuring only other payer arrangements with strong financial risk components are determined to be Other Payer Advanced APMs. At the same time, this policy has necessitated that we determine that certain other payer arrangements are not Other Payer Advanced APMs even though they include strong financial risk components and well exceed the 30 percent marginal risk requirement at the

most common levels of losses in excess of expected expenditures, and employ marginal risk rates below 30 percent only at much higher levels of losses. We do not believe these other payer arrangements include marginal risk rates below 30 percent to avoid subjecting participants to more than nominal amounts of risk. Rather, we believe that these other payer arrangements employ the lower marginal risk rates at higher levels of losses in order to protect participants from potentially catastrophic losses and undue financial burden that might arise because of market factors likely outside their control.

Therefore, in the CY 2020 PFS proposed rule (84 FR 40834), we proposed to amend § 414.1420(d)(5)(i) to provide that in event that the marginal risk rate varies depending on the amount by which actual expenditures exceed expected expenditures, we would use the average marginal risk rate across all possible levels of actual expenditures for comparison to the marginal risk rate specified in paragraph (d)(3)(ii) of this section, with exceptions for large losses and small losses as described in paragraphs (d)(5)(ii) and (d)(5)(iii) of this section.

We proposed that we would calculate the average marginal risk rate in two steps. An example of such a calculation is presented in Table 65. This example uses a model that relies on a Total Cost of Care (TCOC) benchmark. This methodology for the calculating average marginal risk rate can also be applied to other types of other payer payment arrangements. In this example, we first take the sum of the marginal risk for each percent above the Total Cost of Care (TCOC) benchmark to determine the participant losses. For example, at 3 percent add 50 percent (amount for 1 percent above benchmark) plus 50 percent (amount for 2 percent above benchmark) plus 50 percent (amount for 3 percent above benchmark), which equals 1.50 percent. Second, we divide the participant losses by the percentage above the benchmark (in our example, 1.50 percent divided by 3) to get average marginal risk. The average marginal risk rate remains above 30 percent at all levels of potential losses up to the point where the participant would be responsible for losses equal to the total potential risk requirement of 3 percent. We note that this example presents the calculation only up to the point where the total potential risk requirement is met.

TABLE 65: Example Average Marginal Risk Calculation

Performance (% above TCOC Benchmark)	Marginal Risk	Participant Losses	Average marginal risk
1%	50%	0.50%	50%
2%	50%	1.00%	50%
3%	50%	1.50%	50%
4%	25%	1.75%	44%
5%	25%	2.00%	40%
6%	25%	2.25%	38%
7%	25%	2.50%	36%
8%	25%	2.75%	34%
9%	25%	3.00%	33%

As we discussed in the CY 2020 PFS proposed rule (84 FR 40835), with this proposed amendment, significant and meaningful financial risk would continue to be required for Other Payer Advanced APMs because the average marginal risk rate would need to be at least 30 percent. At the same time, the proposed amendment would allow us to recognize that significant and meaningful risk can be present even where there is wide variation in the application of marginal risk rates, allowing for continued innovation in the marketplace. This proposed policy is intended to ensure that all Other Payer Advanced APMs include marginal risk of at least 30 percent up to the point that the participant owes 3 percent of losses, which is the intended effect of the current marginal risk standard, while providing flexibility to avoid excluding certain payment arrangements that have strong financial risk designs. When considering average marginal risk in the context of total risk, as we propose to do for Other Payer Advanced APM determinations, certain risk arrangements can create meaningful and significant risk-based incentives for performance and at the same time ensure that the payment arrangement has strong financial risk components.

We note that in making this change we would not lower the standard for the applicable marginal risk rate, but rather allow for new flexibility as to how it can be met. In the CY 2020 PFS proposed rule, we clarified that the amendment as proposed would not change the allowance for large losses provision as described in paragraph (d)(5)(ii) of § 414.1420, so that when calculating the average marginal risk rate, we may disregard the marginal risk rates that apply in cases when actual expenditures exceed expected expenditures by an amount sufficient to require the APM Entity to make financial risk payments under the payment arrangement greater than or equal to the total risk

requirements. We also clarified that the proposal would not change the exception for small losses described in paragraph (d)(5)(iii).

We received comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported our proposal, and no commenters opposed our proposal. Two of these commenters stated that the proposal would provide greater flexibility in the design of other payer payment arrangements, and therefore, would encourage other payers to seek Other Payer Advanced APM determinations for their payment arrangements.

Response: We appreciate the support for our proposal.

After considering public comments, we are finalizing our proposal, without modification, to amend § 414.1420(d)(5)(i) to provide that in event that the marginal risk rate varies depending on the amount by which actual expenditures exceed expected expenditures, the average marginal risk rate across all possible levels of actual expenditures will be used for comparison to the marginal risk rate specified in paragraph (d)(3)(ii) of this section, while retaining the current exceptions for large losses and small losses as described in paragraphs (d)(5)(ii) and (d)(5)(iii) of this section.

(iii) Expected Expenditures

In the CY 2017 Quality Payment Program final rule (81 FR 77551), we established the definition of “expected expenditures” at § 414.1420(d)(6) to mean the Other Payer APM benchmark, except for episode payment models, for which it is defined as the episode target price. We also finalized at § 414.1420(d)(3)(ii) that, except for arrangements assessed under the Medicaid Medical Home Model financial risk and nominal amount

standards, in order to meet the Other Payer Advanced APM nominal amount standard, a payment arrangement’s level of marginal risk must be at least 30 percent of losses in excess of the expected expenditures and the total potential risk must be at least 4 percent (81 FR 77471).

In the CY 2017 Quality Payment Program proposed rule (81 FR 28332), we proposed to measure three dimensions of risk under our generally applicable nominal amount standards: (1) Marginal risk, which refers to the percentage of the amount by which actual expenditures exceed expected expenditures for which an APM Entity would be liable under the APM; (2) minimum loss rate (MLR), which is a percentage by which actual expenditures may exceed expected expenditures without triggering financial risk; and (3) total potential risk, which refers to the maximum potential payment for which an APM Entity could be liable under the APM. However, based on commenters’ concerns regarding technical complexity, we finalized only the marginal risk and MLR requirements.

In the CY 2017 Quality Payment Program proposed rule (81 FR 28333), we explained that, to determine whether an APM satisfies the marginal risk portion of the nominal risk standard, we would examine the payment required under the APM as a percentage of the amount by which actual expenditures exceeded expected expenditures. We proposed to require that this percentage exceed a required marginal risk percentage of 30 percent regardless of the amount by which actual expenditures exceeded expected expenditures.

Our rationale for proposing the marginal risk requirement was that the inclusion of a marginal risk requirement would be intended to focus on maintaining a more than nominal level of likely risk under an Advanced APM

or an Other Payer Advanced APM. However, even with a marginal risk requirement, as there is under the Other Payer Advanced APM criteria, in the CY 2020 PFS proposed rule (84 FR 40837), we explained that we believe there is a need to amend the definition of expected expenditures to ensure there are more than nominal levels of average or likely risk under Other Payer Advanced APMs that meet the generally applicable benchmark-based nominal amount standard. Even with the current marginal risk requirement, we believe a more rigorous definition of expected expenditures is needed to avoid situations where the level of expected expenditures would be set in a manner that reduces the losses a participant might incur. For the same general reasons, we made a similar proposal to revise our definition of expected expenditures under the Advanced APM criteria in the CY 2020 PFS proposed rule (84 FR 40825). We also believe it is important that our definition of expected expenditures is consistent across both the Advanced APM and Other Payer Advanced APM criteria. We generally try to align the Advanced APM and Other Payer Advanced APM criteria to the extent feasible and appropriate.

We made this parallel proposal for the Other Payer Advanced APM criteria to similarly account for scenarios where a payment arrangement can have a sufficient total risk potential to meet our standard, and a sharing rate that results in adequate marginal risk if actual expenditures exceed expected expenditures, but where the level of expected expenditures reflected in the payment arrangement's benchmark or episode target price could be set in a way that substantially reduces the amount of loss a participant in the payment arrangement would reasonably expect to incur.

For a payment arrangement to meet the generally applicable benchmark-based nominal amount standard, we believe there should be not only the potential for financial losses based on expenditures in excess of the benchmark as provided in § 414.1420(d)(6), but also some meaningful likelihood that a participant might exceed the benchmark. If the benchmark is set in such a way that it is extremely unlikely that participants will exceed it, then there is little potential for participants to incur financial losses, and the amount of risk is essentially illusory.

Therefore, we proposed to amend the definition of expected expenditures in § 414.1420(d)(6). Specifically, we would continue to define expected

expenditures, for the purposes of this section, as the Other Payer APM benchmark. For episode payment arrangements, expected expenditures would continue to mean the episode target price. However, for purposes of assessing financial risk for Other Payer Advanced APM determinations, the expected expenditures under the payment arrangement should not exceed the expenditures for a participant in the absence of the payment arrangement. The amended regulation would specify that if expected expenditures (that is, benchmarks) under the payment arrangement exceed the expenditures that the participant will be expected to incur in the absence of the payment arrangement, such excess expenditures are not considered when CMS assesses financial risk under the payment arrangement for Other Payer Advanced APM determinations.

We believe that this change would prevent the expected expenditures under the other payer payment arrangement being set in a manner that substantially reduces the amount of losses a participant may face while otherwise satisfying this Other Payer Advanced APM criterion.

We clarify that, in general, expected expenditures are expressed as a dollar amount, and may be derived from national, regional, APM Entity-specific, and/or practice-specific historical expenditures during a baseline period, or other comparable expenditures. However, we recognize expected expenditures under a payment arrangement are often risk-adjusted and trended forward, and may be adjusted to account for expenditure changes that are expected to occur as a result of participation in the payment arrangement. For the purpose of this definition of expected expenditures, we will not consider risk adjustments to be excess expenditures when comparing to the costs that an APM Entity will be expected to incur in the absence of the payment arrangement.

We believe that this amendment would allow us to ensure that there are more-than-nominal amounts of average or likely risk under an other payer payment arrangement that meets the generally applicable benchmark-based nominal amount standard. We believe that the amended definition of expected expenditures, particularly by our not considering excess expenditures, will provide a more definite basis for us to assess whether an APM Entity will bear more than a nominal amount of financial risk for participants under the generally applicable benchmark-based nominal amount standard.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters opposed this proposal. A few of these commenters asserted that the proposal would add significant administrative burden to other payers because other payers would have to carry out significant analytical work to demonstrate compliance with the requirement. A few of these commenters also stated this additional effort would discourage other payers from developing other payer payment arrangements that may be Other Payer Advanced APMs. In addition, a few of these commenters stated that the proposal does not clearly state how CMS would either calculate or assess whether expected expenditures under the other payer payment arrangement exceed the expenditures that the participant will be expected to incur, or whether the other payer would be required to assess whether expected expenditures under the other payer payment arrangement exceed the expenditures that the participant will be expected to incur. One commenter stated the language in the proposal is confusing and does not explain how the expenditures that would be expected to occur in the absence of the arrangement will be calculated. Another commenter noted that the proposal does not provide enough detail on how the assessment would be conducted and stated the requirement would require "difference-in-difference" evaluations, which require robust evaluations of claims data. Furthermore, some commenters stated that the proposed change would result in fewer payment arrangements qualifying as Other Payer Advanced APMs.

Response: In proposing this amendment, we did not intend to place an administrative burden on payers and do not expect payers to undertake an additional analysis of claims data to demonstrate compliance. As part of our Other Payer Advanced APM monitoring and program integrity activities, we would expect payers submitting payment arrangements for Other Payer Advanced APM determinations to understand that they may be subject to random or targeted monitoring as part of participation in Quality Payment Program in the form of a request for a simple analysis provided by the payer demonstrating that the expected expenditures under the payment arrangement should not exceed the expenditures for a participants in the absence of the payment arrangement. At the time of submissions of other

payment arrangements from either payers or eligible clinicians, no additional analysis would be required. In addition, we are not requiring that any payer conduct any “difference-in-difference” evaluation to comply with this amendment. We are notifying other payers that they should take this requirement into account when they design new payment arrangements that they intend to satisfy the financial risk criterion by way of the benchmark-based nominal amount standard.

We acknowledge that there may be instances where, even if no additional analysis is required, this policy may lead to a payer not to make a submission of their payment arrangement for Other Payer Advanced APM determinations. However, we believe that this policy monitoring is important to the integrity of the program, and that any such impact on submissions will be minimal.

After considering public comments, we are finalizing our proposal to amend the definition of expected expenditures at § 414.1420(d)(6) without modification. We clarify that demonstrating compliance with this requirement should require only a minimal amount of analysis, if any, on the part of the payer or clinicians.

(iv) Excluded Items and Services Under Full Capitation Arrangements

In the CY 2017 Quality Payment Program final rule (81 FR 77551), we finalized a capitation standard at § 414.1420(d)(7) which provides that a capitation arrangement meets the Other Payer Advanced APM financial risk criterion. For purposes of § 414.1420(d)(3), we defined a capitation arrangement as a payment arrangement in which a per capita or otherwise predetermined payment is made under the APM for all items and services for which payment is made through the APM furnished to a population of beneficiaries, and no settlement is performed for the purpose of reconciling or sharing losses incurred or savings earned by the APM Entity. We clarified that arrangements made directly between CMS and Medicare Advantage Organizations under the Medicare Advantage program are not considered capitation arrangements for purposes of § 414.1420(d)(7).

In the CY 2019 PFS final rule (83 FR 59939), we made technical corrections to the Advanced APM financial risk capitation standard at § 414.1420(d)(7). These corrections clarified that our financial risk capitation standard applies only to full capitation arrangements where a per capita or

otherwise predetermined payment is made under the APM for all items and services furnished to a population of beneficiaries during a fixed period of time, and no settlement or reconciliation is performed.

As we have begun to collect information on other payer payment arrangements for purposes of making Other Payer Advanced APM determinations, we have noticed that some payment arrangements that are submitted for CMS to determine as capitation arrangements consistent with § 414.1420(d)(7) include a list of services that have been excluded from the capitation rate, such as hospice care, organ transplants, or out-of-network emergency room services. In reviewing these exclusion lists, we believe that it may be appropriate for capitation arrangements to be considered “full” capitation arrangements even if they categorically exclude certain services from payment through the capitation rate. Therefore, in the CY 2020 PFS proposed rule (84 FR 40826), we solicited comment on how other payers define or determine what, if any, exclusions are reasonable in a given capitation arrangement. Specifically, we solicited comment on whether there are common industry practices to exclude certain categories of items and services from capitated payment rates and, if so, whether there are common principles or reasons for excluding those categories of services. In addition, we solicited comment on why such items or services are excluded.

We also solicited comment on how non-Medicare payers define or prescribe certain categories of services that are excluded with regard to global capitation payment arrangements. We also solicited comment on whether we should consider a capitation arrangement to be a full capitation arrangement even though it excludes certain categories of services from the capitation rate.

We received public comments responding to our solicitation for information. We appreciate the comments submitted and will take them into consideration for any potential future rulemaking on this issue. The comments that we received in response to this solicitation for information were applicable to both Advanced APMs and Other Payer Advanced APMs. For our responses to these comments, please see section III.K.4.c. of this final rule.

(4) Summary

In this section, we are finalizing the following policies:

- *Aligned Other Payer Medical Home Model*: We are finalizing our proposal to

define the term Aligned Other Payer Medical Home Model as proposed. In addition, we are finalizing without modification our proposals that the CEHRT criterion and the use of quality measures criterion will apply to any Aligned Other Payer Medical Home Model for which we will make an Other Payer Advanced APM determination. We are also finalizing our proposal without modification to conform the financial risk and nominal amount standards for Aligned Other Payer Medical Home Models to the existing standards for Medicaid Medical Home Model financial risk and nominal amount standards, including the 50 eligible clinician limit.

- *Marginal Risk*: We are finalizing without modification our proposal that when the marginal risk rate in a payment arrangement varies depending on the amount by which actual/ expenditures exceed expected expenditures, we will use the average marginal risk rate across all possible levels of actual expenditures for comparison to the marginal risk rate requirement, with exceptions for large losses and small losses as provided in § 414.1420(d)(5) without modification.

- *Expected Expenditures*: We are finalizing our proposal without modification to amend the definition of expected expenditures at § 414.1420(d)(6) to provide that, for assessing financial risk for Other Payer Advanced APM determinations for episode payment arrangements, the expected expenditures (episode target price) under the payment arrangement should not exceed the expenditures for a participant in the absence of the payment arrangement.

5. Quality Payment Program Technical Revisions

In the CY 2020 PFS proposed rule (84 FR 40837), we proposed certain technical revisions to our regulations to correct several technical errors and to reconcile the text of several of our regulations with the final policies we adopted through notice and comment rulemaking.

We proposed a technical revision to § 414.1405(f) of our regulations to specify that the exception for the application of the MIPS payment adjustment factors to model-specific payments is applicable starting in the 2019 MIPS payment year, not just for the 2019 MIPS payment year. This revision would align the regulation text with our final policy as stated in the preamble of the CY 2019 PFS final rule with comment period (83 FR 59887 through 59888) which makes clear that the exception begins with the 2019

MIPS payment year and continues in subsequent years.

We also proposed technical revisions to Table 59 of the CY 2019 PFS final rule with comment period (83 FR 59935) to correct two dates. Specifically we proposed to change the date for Medicare Health Plans: Guidance made available to ECs, then Submission Period Opens; it is currently listed as

September 2020, and we proposed to change that date to August 2020.

Similarly, we proposed to change the date for Remaining Other Payers: Guidance made available to ECs, then Submission Period Opens; it is currently listed as September 2020, and we proposed to change that to August 2020. These changes align with what was

originally finalized in the CY 2018 Quality Payment Program final rule with comment period (82 FR 53864) which stated that the dates were to be August 2020, and which we did not propose or intend to change in the CY 2019 PFS final rule. Table 66 is included as the corrected Table 59 from the CY 2019 PFS final rule.

TABLE 66: Proposed Other Payer Advanced APM Determination Process for Medicaid, Medicare Health Plans, and Remaining Other Payers for QP Performance Period 2020 (Corrected “Table 59” from the CY 2020 PFS proposed rule)

	Payer Initiated Process	Date	Eligible Clinician (EC) Initiated Process*	Date
Medicaid	Guidance sent to states, then Submission Period Opens	January 2019	Guidance made available to ECs, then Submission Period Opens	September 2019
	Submission Period Closes	April 2019	Submission Period Closes	November 2019
	CMS contacts states and posts Other Payer Advanced APM List	September 2019	CMS contacts ECs and states and posts Other Payer Advanced APM List	December 2019
Medicare Health Plans	Guidance made available to Medicare Health Plans, then Submission Period Opens	April 2019	Guidance made available to ECs, then Submission Period Opens	August 2020
	Submission Period Closes	June 2019	Submission Period Closes	November 2020
	CMS contacts Medicare Health Plans and posts Other Payer Advanced APM List	September 2019	CMS contacts ECs and Medicare Health Plans and posts Other Payer Advanced APM List	December 2020
Remaining Other Payers	Guidance made available to Remaining Other Payers, then Submission Period Opens	January 2019	Guidance made available to ECs, then Submission Period Opens	August 2020
	Submission Period Closes	June 2019	Submission Period Closes	November 2020
	CMS contacts Remaining Other Payers and posts Other Payer Advanced APM List	September 2019	CMS contacts ECs and Remaining Other Payers and posts Other Payer Advanced APM List	December 2020

*Note that APM Entities or eligible clinicians may use the Eligible Clinician Initiated Process.

We also proposed technical revisions to §§ 414.1415(c)(6) and 414.1420(d)(7) to correct the internal citation. The current citation, 42 U.S.C. 422, is incorrect. It should instead be 42 CFR part 422. We also proposed technical revisions to § 414.1420(d)(5). We clarify that “APM” in § 414.1420(d)(5) should be “other payer payment arrangement.” In the CY 2019 PFS final rule, we finalized deleting § 414.1420(d)(3)(ii)(B) and consolidating § 414.1420(d)(3)(ii)(A) into § 414.1420(d)(3)(ii), but that change

was not applied to the regulation. We proposed to revise the regulation accordingly. Relatedly, we proposed to amend § 414.1420(d)(5)(i), (ii), and (iii) to state in “paragraph (d)(3)(ii)” of this section instead of “paragraph (d)(3)(ii)(A)” of this section. We also proposed to clarify that “Other Payer Advanced APM” in § 414.1420(d)(5)(ii) should be “other payer payment arrangement,” as the marginal risk rate requirements are applied to any other payer payment arrangement that CMS

assesses against the Other Payer Advanced APM criteria. These revisions are technical in nature and do not change any substantive policies for the Quality Payment Program.

We did not receive any comments on these proposed technical revisions.

We are finalizing these technical revisions as proposed.

IV. Physician Self-Referral Law: Annual Update to the List of CPT/HCPCS Codes

A. General

Section 1877 of the Act prohibits a physician from referring a Medicare beneficiary for certain designated health services (DHS) to an entity with which the physician (or a member of the physician's immediate family) has a financial relationship, unless an exception applies. Section 1877 of the Act also prohibits the DHS entity from submitting claims to Medicare or billing the beneficiary or any other entity for Medicare DHS that are furnished as a result of a prohibited referral.

Section 1877(h)(6) of the Act and § 411.351 of our regulations specify that the following services are DHS:

- Clinical laboratory services.
- Physical therapy services.
- Occupational therapy services.
- Outpatient speech-language pathology services.
- Radiology services.
- Radiation therapy services and supplies.
- Durable medical equipment and supplies.
- Parenteral and enteral nutrients, equipment, and supplies.
- Prosthetics, orthotics, and prosthetic devices and supplies.
- Home health services.
- Outpatient prescription drugs.
- Inpatient and outpatient hospital services.

B. Annual Update to the Code List

1. Background

In § 411.351, we specify that the entire scope of four DHS categories is defined in a list of CPT/HCPCS codes (the Code List), which is updated annually to account for changes in the most recent CPT and HCPCS Level II

publications. The DHS categories defined and updated in this manner are:

- Clinical laboratory services.
- Physical therapy, occupational therapy, and outpatient speech-language pathology services.
- Radiology and certain other imaging services.
- Radiation therapy services and supplies.

The Code List also identifies those items and services that may qualify for either of the following two exceptions to the physician self-referral prohibition:

- EPO and other dialysis-related drugs furnished in or by an ESRD facility (§ 411.355(g)).
- Preventive screening tests, immunizations, or vaccines (§ 411.355(h)).

The definition of DHS at § 411.351 excludes services for which payment is made by Medicare as part of a composite rate (unless the services are specifically identified as DHS and are themselves payable through a composite rate, such as home health and inpatient and outpatient hospital services). Effective January 1, 2011, EPO and dialysis-related drugs furnished in or by an ESRD facility (except drugs for which there are no injectable equivalents or other forms of administration), have been reimbursed under a composite rate known as the ESRD prospective payment system (ESRD PPS) (75 FR 49030). Accordingly, EPO and any dialysis-related drugs that are paid for under ESRD PPS are not DHS and are not listed among the drugs that could qualify for the exception at § 411.355(g) for EPO and other dialysis-related drugs furnished by an ESRD facility.

ESRD-related oral-only drugs, which are drugs or biologicals with no injectable equivalents or other forms of administration other than an oral form, were scheduled to be paid under ESRD PPS beginning January 1, 2014 (75 FR

49044). However, there have been several delays of the implementation of payment of these drugs under ESRD PPS. On December 19, 2014, section 204 of the Stephen Beck, Jr., Achieving a Better Life Experience Act of 2014 (ABLE) (Pub. L. 113–295) was enacted and delayed the inclusion of these oral-only drugs under the ESRD PPS until 2025. Until that time, such drugs furnished in or by an ESRD facility are not paid as part of a composite rate and thus, are DHS.

The Code List was last updated in Tables 28 and 29 of the CY 2019 PFS final rule (83 FR 59718).

2. Response to Comments

We received no comments relating to the Code List that became effective January 1, 2019.

3. Revisions Effective for CY 2020

The updated, comprehensive Code List effective January 1, 2020, is available on our website at http://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/List_of_Codes.html.

Additions and deletions to the Code List conform it to the most recent publications of CPT and HCPCS Level II and to changes in Medicare coverage policy and payment status.

Tables 67 and 68 identify the additions and deletions, respectively, to the comprehensive Code List that become effective January 1, 2020. Tables 67 and 68 also identify the additions and deletions to the list of codes used to identify the items and services that may qualify for the exception in § 411.355(g) (regarding dialysis-related outpatient prescription drugs furnished in or by an ESRD facility) and in § 411.355(h) (regarding preventive screening tests, immunizations, and vaccines).

V. Interim Final Rule With Comment Period [CMS–1715–IFC]

A. Coding and Payment for Evaluation and Management, Observation and Provision of Self-Administered Esketamine (HCPCS Codes G2082 and G2083)

On March 5, 2009, the U.S. Food and Drug Administration (FDA) approved Spravato™ (esketamine) nasal spray,

used in conjunction with an oral antidepressant, for treatment of depression in adults who have tried other antidepressant medicines but have not benefited from them (treatment-resistant depression (TRD)).¹²⁰ Because of the risk of serious adverse outcomes

¹²⁰ <https://www.fda.gov/news-events/press-announcements/fda-approves-new-nasal-spray-medication-treatment-resistant-depression-available-only-certified>.

resulting from sedation and dissociation caused by Spravato administration, and the potential for abuse and misuse of the product, it is only available through a restricted distribution system under a Risk Evaluation and Mitigation Strategy (REMS). A REMS is a drug safety program that the FDA can require for certain medications with serious safety

concerns to help ensure the benefit of the medication outweigh its risks.¹²¹

Patients with major depression disorder who, despite trying at least two antidepressant treatments given at adequate doses for an adequate duration in the current episode, have not responded to treatment are considered to have TRD.¹²² TRD is especially relevant for Medicare beneficiaries.

Depression in the elderly is associated with suicide more than at any other age; adults 65 or older constitute 16 percent of all suicide deaths. The decrease in average life expectancy for those with depressive illness, including Medicare beneficiaries, is 7 to 11 years.

Depression is a major predictor of the onset of stroke, diabetes, and heart disease; it raises patients' risk of developing coronary heart disease and the risk of dying from a heart attack nearly threefold.¹²³ There has also been a longstanding need for additional effective treatment for TRD, a serious and life-threatening condition.¹²⁴

A treatment session of esketamine consists of instructed nasal self-administration by the patient, followed by a period of post-administration observation of the patient under direct supervision of a health care professional. Esketamine is a non-competitive N-methyl D-aspartate (NMDA) receptor antagonist. It is a nasal spray supplied as an aqueous solution of esketamine hydrochloride in a vial with a nasal spray device. This is the first FDA approval of esketamine for any use.¹²⁵ Each device delivers two sprays containing a total of 28 mg of esketamine. Patients would require either two (2) devices (for a 56mg dose) or three (3) devices (for an 84 mg dose) per treatment.

After reviewing the Spravato Prescribing Information, Medication Guide, and REMS requirements, we have concluded that effective and appropriate treatment of TRD with esketamine requires discrete services of a medical professional, meaning those that may furnish and report E/M services under the PFS, both during an overall course of treatment and at the

time the drug is administered.¹²⁶ Because of the risk of serious adverse outcomes resulting from sedation and dissociation caused by Spravato administration, and the potential for abuse and misuse of the product: The product is only available through a restricted distribution system under a REMS;¹²⁷ patients must be monitored by a health care provider for at least 2 hours after receiving their Spravato dose; the prescriber and patient must both sign a Patient Enrollment Form; and the product will only be administered in a certified medical office where the health care provider can monitor the patient.¹²⁸ Further information regarding certification of medical offices is available at www.SPRAVATOrems.com or 1-855-382-6022.

Because this newly available treatment regimen addresses a particular and urgent need for people with TRD, including Medicare beneficiaries, we recognize that it is in the public interest to ensure appropriate patients have access to this potentially life-saving treatment. We recognize, however, that the services and resources involved in furnishing this treatment are not adequately reflected in existing coding and payment under the PFS, or otherwise under Medicare Part B. Given the FDA approval conditions/requirements including that the drug is only available as an integral component of a physician's service, the absence of existing HCPCS coding that would adequately describe the service with the provision of the product, and our understanding based on review of the Spravato Prescribing Information, Medication Guide, and REMS requirements, we do not believe the Medicare beneficiaries in the greatest medical need of this treatment would be likely to have access to it until such time that Medicare coding and payment are updated. Medicare coding and payment policies are generally adopted through annual updates to the PFS. Unless we adopt coding and payment changes for this treatment beginning January 1, 2020, we believe that the next practicable alternative would be either standalone rulemaking or PFS rulemaking for 2021. Both of these alternatives would risk the lives of

Medicare beneficiaries with TRD for several months to over a year.

Therefore, to facilitate prompt beneficiary access to the new, potentially life-saving treatment for TRD using esketamine, we are creating two new HCPCS G codes, G2082 and G2083, effective January 1, 2020 on an interim final basis. For CY 2020, we are establishing RVUs for these services that reflect the relative resource costs associated with the evaluation and management (E/M), observation and provision of the self-administered esketamine product using HCPCS G codes. We note that we have historically established coding and payment on an interim final basis for truly new services when it is in the public interest to do so. Like most other truly new services, we expect diffusion of this kind of treatment into the market will take place over several years, even though we expect some people to benefit immediately. Consequently, the expected impact on other PFS services is negligible for 2020, and we will consider the public comments we receive on this interim final policy as we consider finalizing coding or payment rules for this treatment beginning in 2021. The HCPCS G-codes are described as follows:

- HCPCS code G2082: *Office or other outpatient visit for the evaluation and management of an established patient that requires the supervision of a physician or other qualified health care professional and provision of up to 56 mg of esketamine nasal self-administration, includes 2 hours post-administration observation.*
- HCPCS code G2083: *Office or other outpatient visit for the evaluation and management of an established patient that requires the supervision of a physician or other qualified health care professional and provision of greater than 56 mg esketamine nasal self-administration, includes 2 hours post-administration observation.*

In developing the interim final values for these codes, we used a building block methodology that sums the values associated with several codes. For the overall E/M and observation elements of the services, we are incorporating the work RVUs, work time and direct PE inputs associated with a level two office/outpatient visit for an established patient, CPT code 99212 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A problem focused history; A problem focused examination; Straightforward medical decision making. Counseling and/or coordination of care with other*

physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are self limited or minor. Typically, 10 minutes are spent face-to-face with the patient and/or family), which has a work RVU of 0.48 and a total work time of 16 minutes, which is based on a pre-service evaluation time of 2 minutes, an intraservice time of 10 minutes, and a postservice time of 4 minutes. We are also incorporating CPT codes 99415 (*Prolonged clinical staff service (the service beyond the typical service time) during an evaluation and management service in the office or outpatient setting, direct patient contact with physician supervision; first hour (List separately in addition to code for outpatient Evaluation and Management service)*) and 99416 (*Prolonged clinical staff service (the service beyond the typical service time) during an evaluation and management service in the office or outpatient setting, direct patient contact with physician supervision; each additional 30 minutes (List separately in addition to code for prolonged service)*) in which neither code has a work RVU, but includes direct PE inputs reflecting the prolonged time for clinical staff under the direct supervision of the billing practitioner.

Additionally, to account for the cost of the provision of the self-administered esketamine as a direct PE input, we are incorporating the wholesale acquisition cost (WAC) data from the most recent available quarter. For HCPCS code G2082, we are using a price of \$590.02 for the supply input that describes 56 mg (supply code SH109) and for HCPCS code G2083, we are using a price of \$885.02 for the supply input describing 84 mg of esketamine (supply code SH110).

We note that we are valuing these two HCPCS codes, in part, on the basis of a level 2 established patient office/outpatient E/M visit; consequently, for purposes of relevant Medicare conditions of payment, reporting these codes is similar to reporting a level 2 office/outpatient E/M visit code. In addition to seeking comment on the interim final values we are establishing for HCPCS codes G2082 and G2083, we also seek comment on the assigned work RVUs, work times, and direct PE inputs.

Under circumstances where the health care professional supervising the self-administration and observation does not also provide the esketamine product, the provider cannot report HCPCS codes G2082 or G2083. Rather, the visit and the extended observation (by either the billing professional or

clinical staff) could be reported using the existing E/M codes that describe the visit and the prolonged service of the professional or the clinical staff. CMS will monitor claims data to safeguard against duplicative billing for these services and items.

Historically, supply input prices are updated on a code by code basis and periodically through annual notice and comment rulemaking. The prices, including for a variety of pharmaceutical products, are not routinely updated like Part B drugs paid under the ASP methodologies. For the supply inputs for the esketamine product, used in developing rates for HCPCS codes G2082 and G2083, we are using the most recent available quarter of WAC data for 2020 pricing, but we anticipate using either data that is reported for determining payments under section 1847A of the Act (such as ASP) or compendia pricing information (such as WAC) in future years and expect to address this issue in further rulemaking. We seek comments on how to best establish input prices for the esketamine product, as well as other potential self-administered drugs that necessitate concurrent medical services, under PFS ratesetting in future years.

We note that there is a 60-day public comment period following publication of this interim final rule for the public to comment on these interim final amendments to our regulations. We refer readers to the **ADDRESSES** section of the final rule for instructions on submitting public comments. Comments are due by the "Comment date" specified in the **DATES** section of this rule.

B. Waiver of Proposed Rulemaking for Provisions

Under 5 U.S.C. 553(b) of the Administrative Procedure Act (APA), the agency is required to publish a notice of the proposed rule in the **Federal Register** before the provisions of a rule take effect. Similarly, section 1871(b)(1) of the Act requires the Secretary to provide for notice of the proposed rule in the **Federal Register** and provide a period of not less than 60 days for public comment. Section 553(b)(B) of the APA provides for exceptions from the notice and comment requirements; in cases in which these exceptions apply, section 1871(b)(2)(C) of the Act provides for exceptions from the notice and 60-day comment period requirements of the Act as well. Section 553(b)(B) of the APA and section 1871(b)(2)(C) of the Act authorize an agency to dispense with normal rulemaking requirements for good cause if the agency makes a

finding that the notice and comment process is impracticable, unnecessary, or contrary to the public interest.

We find that there is good cause to waive the notice and comment requirements under sections 553(b)(B) of the APA and section 1871(b)(2)(C) due to the urgent need of some Medicare beneficiaries for effective treatment for TRD, a serious and life-threatening condition. The U.S. Food and Drug Administration (FDA) approved Spravato (esketamine) nasal spray on March 5, 2019, used in conjunction with an oral antidepressant, for treatment of adults who have tried other antidepressant medications but have not benefited from them. Because of the treatment's unique method of delivery, specifically the necessary inclusion of a self-administered drug product as part of a uniquely identifiable service of a medical professional (as required through a restricted distribution system under a Risk Evaluation and Mitigation Strategy (REMS)),¹²⁹ existing Medicare coding and payment policies would not permit appropriate payment for these services. Consequently, Medicare beneficiaries' access to this treatment would be impeded without Medicare coding and payment policy changes established in this final rule with comment period. Given the longstanding need for additional effective treatments for patients with TRD and the potential risk to the lives of the Medicare beneficiaries with TRD, we believe it is in the public interest to adopt these interim final policies to ensure access by making available appropriate payment to physicians and other practitioners for provision of this service as soon as practicable, and that the lack of an appropriate payment mechanism would jeopardize or significantly delay access to this treatment regimen. We find that it would be impracticable and contrary to the public interest to undergo notice and comment procedures before finalizing these payment policies on an interim basis. We also find that delaying implementation of these policies is unnecessary because the impact on other PFS services for 2020 is negligible and the practical alternative for this treatment is no payment under Medicare Part B. In either case, payments for 2021 and beyond would be informed by public comments.

Therefore, we find good cause to waive the notice of proposed rulemaking as provided under section

¹²⁹ <https://www.fda.gov/news-events/press-announcements/fda-approves-new-nasal-spray-medication-treatment-resistant-depression-available-only-certified>.

1871(b)(2)(C) of the Act and section 533(b)(B) of the APA and to issue this interim final rule with an opportunity for public comment. We are providing a 60-day public comment period as specified in the **DATES** section of this document.

VI. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. chapter 35), we are required to publish a 30-day notice in the **Federal Register** and solicit public comment before a “collection of information” requirement is submitted to the Office of Management and Budget (OMB) for review and approval. For the purposes of the PRA and this section of the preamble, collection of information

is defined under 5 CFR 1320.3(c) of the PRA’s implementing regulations.

To fairly evaluate whether an information collection should be approved by OMB, PRA section 3506(c)(2)(A) requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our burden estimates.
- The quality, utility, and clarity of the information to be collected.
- Our effort to minimize the information collection burden on the affected public, including the use of automated collection techniques.

Our August 14, 2019 (84 FR 40482) proposed rule solicited public comment on each of the required issues under

section 3506(c)(2)(A) of the PRA for the following information collection requirements. We received PRA-related comments pertaining to the Open Payments Program and Quality Payment Program. A summary of the comments and our response are set out below, under sections V.B.5. and V.B.7.c.(3)(b).

A. Wage Estimates

To derive average costs, we used data from the U.S. Bureau of Labor Statistics’ May 2018 National Occupational Employment and Wage Estimates for all salary estimates (http://www.bls.gov/oes/current/oes_nat.htm). In this regard, Table 69 presents the mean hourly wage, the cost of fringe benefits and overhead (calculated at 100 percent of salary), and the adjusted hourly wage.

TABLE 69: National Occupational Employment and Wage Estimates

Occupation title	Occupation code	Mean hourly wage (\$/hr)	Fringe benefits and overhead (\$/hr)	Adjusted hourly wage (\$/hr)
Billing and Posting Clerks	43-3021	19.00	19.00	38.00
Bookkeeping, Accounting, and Auditing Clerks	43-3031	22.46	22.46	44.92
Chief Executive	11-1011	96.22	96.22	192.44
Compliance Officer	13-1041	41.85	41.85	83.70
Computer Systems Analysts	15-1121	45.01	45.01	90.02
Health Diagnosing and Treating Practitioners	29-1000	49.02	49.02	98.04
Licensed Practical Nurse (LPN)	29-2061	22.62	22.62	45.24
Medical Secretary	43-6013	17.83	17.83	35.66
Physicians	29-1060	101.43	101.43	202.86
Practice Administrator (Medical and Health Services Managers)	11-9111	54.68	54.68	109.36

As indicated, we adjusted our employee hourly wage estimates by a factor of 100 percent. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly from employer to employer, and because methods of estimating these costs vary widely from study to study. Nonetheless, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

B. Information Collection Requirements (ICRs)

1. ICRs Regarding Medicare Coverage for Opioid Use Disorder Treatment Services Furnished by Opioid Treatment Programs (OTPs) (§§ 414.800 through 414.806)

As described in section II.G. of this final rule, section 2005 of the SUPPORT for Patients and Communities Act

establishes a new Medicare Part B benefit for OUD treatment services furnished by OTPs for episodes of care beginning on or after January 1, 2020. In this final rule we are adopting our proposals to use the payment methodology in section 1847A of the Act, which is based on Average Sales Price (ASP), to set the payment rates for the “incident to” drugs and ASP-based payment to set the payment rates for the oral product categories, when we receive manufacturers’ voluntarily-submitted ASP data for these drugs.

The burden consists of the time/cost for manufacturers of oral opioid agonist or antagonist treatment medications (that are approved by the Food and Drug Administration under section 505 of the Federal Food, Drug, and Cosmetic Act for use in the treatment of OUD) to voluntarily prepare and submit their ASP data to CMS.

The burden for such reporting is currently approved by OMB under control number 0938–0921 (CMS–10110) and will remain unchanged (13 hours per response, 4 responses per year, 180 respondents, and 9,360 total hours) since our currently approved burden already accounts for the voluntary reporting of ASP data. We estimate that there are approximately 15 manufacturers of oral drugs used for treatment of opioid use disorder (OUD). We believe that approximately 10 of the 15 manufacturers already report ASP data to CMS for other drugs, and thus up to 5 manufacturers may newly report ASP data to CMS. However, we note that some of these new respondents may have subsidiary or similar relationships with manufacturers that already report ASP data and may be able to submit their data with a current respondent. While the policies we are adopting in

this CY 2020 PFS final rule may slightly increase the number of respondents, our 180 respondent estimate historically fluctuates over time as new Part B drug manufacturers are added while others leave or consolidate. The annual fluctuation in respondents in the past has typically been +/- 5 to 10 manufacturers per year; over the past few years, the annual fluctuation has sometimes been greater, ranging from -13 to +11, but over that same period the overall average of the annual fluctuation is near zero. As a result, the potential slight increase in respondents associated with voluntary reporting for oral drugs used in the treatment of OUD, remains unchanged from the currently approved burden estimate of 180 respondents. In addition, we believe that additional voluntary reporting for oral drugs used for treatment of OUD by those manufacturers that currently report ASP data to CMS for other drugs will impose minimal additional burden. Consequently, we are not making any changes under the aforementioned control number. However, we will continue to monitor the number of respondents to account for various factors such as a change in the number of voluntary submissions from oral OUD drug manufacturers, as well as other issues that may not be related to the voluntary reporting for oral drugs used in OTPs, such as manufacturer consolidations, and new Part B drug and biological manufacturers. We will revise the burden estimate as needed.

We received no comments in relation to our proposed burden estimates.

2. ICRs Regarding the Ground Ambulance Data Collection System

Section 1834(l)(17)(A) of the Act requires that the Secretary develop a ground ambulance data collection system that collects cost, revenue, utilization, and other information determined appropriate by the Secretary with respect to providers of services and suppliers of ground ambulance services (ground ambulance organizations). Section 1834(l)(17)(I) of the Act states that the PRA does not apply to the collection of information required under section 1834(l)(17) of the Act. Accordingly, we did not set out in the proposed rule the burden of the collection of information under the data collection system, and we are similarly not setting out that burden in this final rule. Please refer to section VII.F.2. of this final rule for a discussion of the impacts associated with the ground ambulance data collection system.

3. ICRs Regarding Intensive Cardiac Rehabilitation (§ 410.49)

Section 410.49(b)(1)(vii) and (viii) of this final rule will expand the covered conditions to chronic heart failure and add other cardiac conditions as specified through the national coverage determination (NCD) process. We do not anticipate the need to use the NCD process to add additional covered conditions in the near future. In the unlikely event an NCD request is submitted, it will be covered by OMB control number 0938-0776 (CMS-R-290), which will not expire until February 29, 2020. We are not making any changes under that control number since this rule does not impose changes to the currently approved submission process or burden.

We did not receive public comments on the ICRs for intensive cardiac rehabilitation.

4. ICRs Regarding the Medicare Shared Savings Program (42 CFR part 425)

Section 1899(e) of the Act provides that chapter 35 of title 44 of the U.S. Code, which includes such provisions as the PRA, shall not apply to the Shared Savings Program. Accordingly, we are not setting out burden under the authority of the PRA. Please refer to section VII.F.6. of this final rule for a discussion of the impacts associated with the changes to the Shared Savings Program quality reporting requirements included in this final rule.

5. ICRs Regarding the Open Payments Program

Section III.F. of this rule: (1) Expands the definition of “covered recipient,” (2) modifies “nature of payment” categories, and (3) standardizes data on reported covered drugs, devices, biologicals, or medical supplies.

Expanding the Definition of “Covered Recipient” (§§ 403.902, 403.904, and 403.908): This rule expands the definition of a “covered recipient” in accordance with the SUPPORT Act to include physician assistants, nurse practitioners, clinical nurse specialists, nurse anesthetists, and certified nurse midwives. The definition currently includes certain physicians and teaching hospitals. Section 6111(c) of the SUPPORT Act provides that chapter 35 of title 44 of the U.S. Code, which includes such provisions as the PRA, shall not apply to the changes to the definition of a covered recipient included in the SUPPORT Act. In this regard we are not setting out burden under the authority of the PRA. Such estimates can be found in the RIA under section VII.F.7. of this final rule.

Modification of the “Nature of Payment” Categories (§§ 403.902 and 403.904): The following changes will be submitted to OMB for approval under control number 0938-1237 (CMS-10495). Subject to renewal, the control number is currently set to expire on March 31, 2021. It was last approved on March 21, 2018, and remains active.

The changes will modify the “nature of payment” categories and provide more options for applicable manufacturers and GPOs to capture the nature of the payment made to the covered recipient. To accommodate this change, we project that reporting entities will need to update their system to incorporate the additional categories. We estimate, based on the trends in the number of entities that report every year, that there are 1,600 reporting entities and estimate, using the number of records that these entities report as a proxy for size of the entity. The total number of entities that report fluctuates year to year but has been close to 1,600 for the last two program years. We also estimate that 38 percent (or 611 entities) are small, 29 percent (or 457 entities) are medium, and 33 percent (or 532 entities) are large. We also estimate that 25 percent of reporting entities (400) will need to make minor, one-time updates to their data collection processes because they expect to report a transaction with one of the new categories. Among the 400 entities, we estimate it will take between 5 and 30 hours per entity depending on the size of the entity (with large companies requiring more time) at \$44.92/hr for support staff. For all of these entities, we estimate a subtotal of 5,895 hours [(30 hr for a large entity × 133 entities) + (10 hr for a medium entity × 114 entities) + (5 hr for a small entity × 153 entities)] at a cost of \$264,804 (5,895 hr × \$44.92/hr).

We also expect that all entities will need to make minor, one-time adjustments to their submission processes. For each entity we estimate that this will take 2 to 5 hours at \$44.92/hr (with larger entities requiring more time) for support staff and 1 hour at \$83.70/hr for compliance officers. For all entities, we estimate a subtotal of 7,767 hours [(5 hr for support staff at a large entity × 532 entities) + (5 hr for support staff at a medium entity × 457 entities) + (2 hr for support staff at a small entity × 611 entities) + (1 hr for compliance officer at each entity regardless of size × 1,600 entities)] at a cost of \$410,941 [(2,660 hr for support staff at large entities × \$44.92/hr) + (2,285 hr for support staff at medium entities × \$44.92/hr) + (1,222 hr for support staff at small entities × \$44.92/

hr) + (1,600 hr for compliance officers across all entities × \$83.70/hr)].
 In aggregate, we estimate a one-time burden of 13,662 hours (5,895 hr + 7,767 hr) at a cost of \$675,745 (\$264,804

+ \$410,941) to implement. After these adjustments are made, we do not anticipate any ongoing added burden beyond what is currently approved under the aforementioned control

number. We are maintaining these burden estimates as we believe they are representative of the array of potential burden associated with these changes.

TABLE 70—BURDEN TO MODIFY NATURE OF PAYMENT CATEGORIES

Description	Hours	Cost
Burden to update collection processes for entities that expect to report a transaction with a new Nature of Payment category	5,895	\$264,804
Burden to update submission processes and systems to account for the new Nature of Payment categories	7,767	410,941
Total	13,662	\$675,745

Standardizing Data Reporting for Covered Drugs, Devices, Biologicals, or Medical Supplies (§§ 403.902 and 403.904): The following changes will be submitted to OMB for approval under control number 0938–1237 (CMS–10495). Subject to renewal, the control number is currently set to expire on March 31, 2021. It was last approved on March 21, 2018, and remains active.

Applicable manufacturers and GPOs will need to accommodate the reporting of device identifiers. The following estimates may vary because the information collection system changes that are needed will vary since some entities may already be capturing this information in their systems while others may not.

We estimate, based on an analysis of currently available data, that approximately 850 entities (approximately 53 percent of an assumed 1,600) will need to report at least one record with a device identifier and that 450 of those entities do not already collect the device identifier. For this analysis we assumed that 38 percent (172 = 450 × 0.38) of the entities will be small, 29 percent (128 = 450 × 0.29) will be medium, and 33 percent (150 = 450 × 0.33) will be large. We differentiate because we assume that larger companies will incur more burden to make the changes needed to begin reporting device identifiers because they have more complex systems and potentially more records to report. The number of submitted records will not change, but this rule will add a new data element that may need to be reported along with some or all of an

entity's records. The precise tasks will vary by entity, but may include developing processes for gathering device identifier information or systems for collecting the data.

For the 450 entities that will be required to start collecting device identifiers, we estimate that this task will take between 20 and 100 hours for support staff depending on the size of the company (with larger companies requiring more time) at \$44.92/hr. For all entities, we estimate a subtotal of 24,840 hours [(100 hr for a large entity × 150 entities) + (50 hr for a medium entity × 128 entities) + (20 hr for a small entity × 172 entities)] at a cost of \$1,115,813 [(15,000 hr for support staff at a large entity × \$44.92/hr) + (6,400 hr for support staff at a medium entity × \$44.92/hr) + (3,440 hr for support staff at a small entity × \$44.92/hr)].

For the 850 entities that we expect will be required to begin reporting a device identifier, we estimate that this would take support staff between 10 and 40 hours per entity (with larger companies requiring more time) at \$44.92/hr and 2 hours at \$83.70/hr for compliance officers. For all entities, we estimate a subtotal of 21,100 hours [(40 hr for support staff at a large entity × 282 entities) + (20 hr for support staff at a medium entity × 244 entities) + (10 hr for support staff at a small entity × 324 entities) + (2 hr for compliance officers at every entity regardless of size × 850 entities)] at a cost of \$1,013,740 [(11,280 hr for support staff at large entities × \$44.92/hr) + (4,880 for support staff at medium entities × \$44.92/hr) + (3,240 for support staff at small entities ×

\$44.92/hr) + (1,700 hr for compliance officers across all entities regardless of size × \$83.70/hr)].

We also assume that the remaining 750 entities not planning to submit a device identifier will have a small amount of burden associated with updating their submission processes. We estimate that this will take support staff between 2 and 10 hours per entity (with larger entities requiring more time) at \$44.92/hr and 2 hours for compliance officers at \$83.70/hr. For all entities, we estimate a subtotal of 5,637 hours [(10 hr for support staff at a large entity × 249 entities) + (5 hr for support staff at a medium entity × 215 entities) + (2 hr for support staff at a small entity × 286 entities) + (750 hr for compliance officers at all entities regardless of size × 2 hr)] at a cost of \$311,384 [(2,490 hr for support staff at large entities × \$44.92/hr) + (1,075 hr for support staff at medium entities × \$44.92/hr) + (572 hr for support staff at small entities × \$44.92/hr) + (1,500 hr for compliance officers at all entities regardless of size × \$83.70/hr)].

In aggregate, we estimate a one-time burden of 51,577 hours (24,840 hr + 21,100 hr + 5,637 hr) at a cost of \$2,440,937 (\$1,115,813 + \$1,013,740 + \$311,384) to implement. After these adjustments are made, we do not anticipate there being any ongoing added burden beyond what is currently approved under the aforementioned control number. We are maintaining these burden estimates as we believe they are representative of the array of potential burden associated with these changes.

TABLE 71—BURDEN FOR CHANGES TO STANDARDIZE DATA ON REPORTED COVERED DRUGS, DEVICES, BIOLOGICALS, OR MEDICAL SUPPLIES

Description	Hours	Cost
First year data collection burden for entities that do not currently collect a device identifier	24,840	\$1,115,813
First year submission burden for all entities that will be required to report a device identifier	21,100	1,013,740
One time submission process and system updates for entities not reporting a device identifier	5,637	311,384

TABLE 71—BURDEN FOR CHANGES TO STANDARDIZE DATA ON REPORTED COVERED DRUGS, DEVICES, BIOLOGICALS, OR MEDICAL SUPPLIES—Continued

Description	Hours	Cost
Total	51,577	\$2,440,937

Comment: One commenter requested that CMS consider the potential additional burden on reporting entities based on the expanded definition of covered recipients.

Response: We recognize that there is an increased data reporting requirement associated with implementation of these statutory requirements, but the expanded definition is required by statute. The estimated burden of Open Payments program is outlined under OMB control number 0938–1237. Section VII.F.7.a. of this final rule provides an estimate of the anticipated regulatory impact, although section 6111(c) of the SUPPORT Act states that chapter 35 of title 44 of the U.S. Code, which includes such provisions as the PRA, shall not apply to the changes to the definition of a covered recipient. As implementation plans are made, we will work to provide guidance, technical assistance, and operational efficiencies to help reduce the potential burden as much as possible.

Comment: One commenter further stated that they believe the burden estimate to add DI information to the Open Payment dataset is greater than CMS assumed. The commenter would like to provide input to CMS on the implementation of this requirement.

Response: When making this burden estimate, we took into account all of the current reporting entities and the array of demographics. We divided the group into several smaller categories based on entity size and made assumptions about the effort needed to make system and process changes. We assume that our estimates for each category will be low for some entities, but high for others. As we work through implementing these changes, we hope stakeholders will continue to provide feedback during working sessions to ensure our data collection system is easy to use and provides clear information.

6. ICRs Regarding Medicare Enrollment of Opioid Treatment Programs

The following discusses the burden estimates we proposed regarding the enrollment of OTP programs.

As mentioned in section III.H. of this final rule, OTP providers will be required to enroll in Medicare via the paper or internet-based version of the Form CMS–855B (or its successor application) and any applicable

supplement, pay the application fee, submit fingerprints, and complete a provider agreement.

Based on SAMHSA statistics and our internal data, we generally estimated that: (1) There are about 1,700 certified and accredited OTPs eligible for Medicare enrollment; and (2) 200 OTPs would become certified by SAMHSA in the next 3 years (or roughly 67 per year), bringing the total amount of OTPs eligible to enroll to approximately 1,900 over the next 3 years.

Form Completion (§ 424.67(b)): We estimated that it would take each OTP an average of 3 hours to obtain and furnish the information on the Form CMS–855B (OMB control number: 0938–0685) and a new supplement thereto designed to capture information unique to OTPs. Per our experience, we believe that the OTP’s medical secretary would be responsible for securing and reporting data on the Form CMS–855B and new accompanying OTP supplement. We estimated that this task would take approximately 2.5 hours; of this amount, roughly 30 minutes would involve completion of the data on the supplement, though this timeframe could be higher or lower depending upon the number of individuals whom the OTP must list. Additionally, the form would be reviewed and signed by a health diagnosing and treating practitioner of the OTP, a process we estimated would take 30 minutes. We project a first-year burden of 5,301 hours (1,767 entities × 3 hr) at a cost of \$244,146 (1,767 entities × ((2.5 hr × \$35.66/hr) + (0.5 hr × \$98.04/hr))), a second-year burden of 201 hours (67 entities × 3 hr) at a cost of \$9,257 (67 entities × ((2.5 hr × \$35.66/hr) + (0.5 hr × \$98.04/hr))), and a third-year burden of 198 hours (66 entities × 3 hr) at a cost of \$9,119 (66 entities × ((2.5 hr × \$35.66/hr) + (0.5 hr × \$98.04/hr))). In aggregate, we estimated a burden of 5,700 hours (5,301 hr + 201 hr + 198 hr) at a cost of \$262,522 (\$244,146 + \$9,257 + \$9,119). When averaged over the typical 3-year OMB approval period, we estimate an annual burden of 1,900 hours (5,700 hr/3) at a cost of \$87,507 (\$262,522/3).

A copy of the draft OTP supplement was made available online, and we welcomed public comment on: (1) Its contents; (2) the usefulness of the data

to be captured thereon; and (3) the anticipated burden of completion. We received no comment and are finalizing the supplement as well as our burden estimates as proposed.

Fingerprinting (§ 424.518): In this rule, OTPs will be subject to high categorical risk level screening under § 424.518, which requires the submission of a set of fingerprints for a national background check (via FBI Applicant Fingerprint Card FD–258) from all individuals who maintain a 5 percent or greater direct or indirect ownership interest in the OTP. Since the burden is currently approved by OMB as a common form (FD–258) under control number 1110–0046, we are not setting out such burden. However, an analysis of the impact of this requirement can be found in the RIA section of this rule.

Application Fee (§ 424.514): As already discussed in this rule, each OTP will be required to pay an application fee at the time of enrollment. The application fee does not meet the definition of a “collection of information” (5 CFR 1320.3(c)) and, as such, is not subject to the requirements of the PRA. Although we are not setting out such burden under this PRA section, the cost is scored under section VII.F.8. of the RIA.

Provider Agreement (§ 424.67(b)(7)): OTPs will also have to complete a provider agreement in order to enroll in Medicare. The burden for reporting and completing the Provider Agreement Form CMS–1561 and –1561A (OMB control number 0938–0832) was based on SAMHSA statistics. We estimate that there are about 1,700 already certified and accredited OTPs eligible for Medicare enrollment initially; approximately 200 OTPs would become certified by SAMHSA in the next 3 years (or roughly 67 per year). We anticipate that it would take the OPT 5 minutes at \$192.44/hr for a Chief Executive to review and sign the CMS–1561 or CMS–1561A, and an additional 5 minutes at \$35.66/hr for a Medical Secretary to file the document when fully executed.

In aggregate, we estimate a 3-year burden of 317 hours ((1,767 OPTs for year 1 + 67 OTPs for year 2 + 67 OTPs for year 3) × 10 min/60) at a cost of \$36,154 ((317 hr/2 respondents ×

\$192.44/hr] + [317 hr/2 respondents × \$35.66/hr]). This results, roughly, in a Year 1 burden of 295 hours at a cost of \$33,623, a Year 2 burden of 11 hours at

a cost of \$1,272, and a Year 3 burden of 11 hours at a cost of \$1,254. Over the course of OMB's typical 3-year approval period, we estimate an average annual

burden of 106 hours (317 hr/3 years) at a cost of \$12,051 (\$36,154/3 years).

Total: Table 72 summarizes our foregoing burden estimates.

**TABLE 72: Combined Burden Related to Enrollment of OTPs
(Completion of CMS-855B and CMS-1561/-1561A)**

	Year 1	Year 2	Year 3	Total	Average Annual Burden
CMS-855B Time (Hours)	5,301	201	198	5,700	1,900
CMS-1561/-1561A Time (Hours)	295	11	11	317	106
TOTAL	5,596	212	209	6,017	2,006
CMS-855B Cost (\$)	244,146	9,257	9,119	262,522	87,507
CMS-1561/-1561A Cost (\$)	33,623	1,272	1,254	36,154	12,051
TOTAL	277,769	10,529	10,373	298,676	99,558

We received no comments on our proposed requirements and burden estimates and are therefore finalizing them without change. The requirement and burden estimates will be submitted to OMB for approval under control number 0938-0685 (Form CMS-855B; "Medicare Enrollment Application: Clinics/Group Practices and Certain Other Suppliers") and 0938-0832 (Form CMS-1561/-1561A; "Health Insurance Benefit Agreement").

7. The Quality Payment Program (42 CFR Part 414 and Section III.K. of This Final Rule)

a. Background

(1) ICRs Associated With MIPS and Advanced APMs

The Quality Payment Program is comprised of a series of ICRs associated with MIPS and Advanced APMs.

The ICRs reflect this final rule's policies, as well as policies in the CY 2017 and 2018 Quality Payment Program final rules (81 FR 77008 and 82 FR 53568, respectively), and the CY 2019 PFS final rule (83 FR 59452).

(2) Summary of Quality Payment Program Changes: MIPS

(a) Summary of Changes to our Currently Approved Burden Estimates

As discussed in more detail in section VI.B.7, the MIPS ICRs consist of: Registration for virtual groups; qualified registry self-nomination applications; and QCDR self-nomination applications; CAHPS survey vendor applications; Quality Payment Program Identity Management Application Process; quality performance category data submission by Medicare Part B claims collection type, QCDR and MIPS CQM

collection type, eCQM collection type, and CMS web interface submission type; CAHPS for MIPS survey beneficiary participation; group registration for CMS web interface; group registration for CAHPS for MIPS survey; call for quality measures; reweighting applications for Promoting Interoperability and other performance categories; Promoting Interoperability performance category data submission; call for Promoting Interoperability measures; improvement activities performance category data submission; nomination of improvement activities; and opt-out of Physician Compare for voluntary participants.

Two MIPS ICRs show changes in burden due to finalized policies: QCDR self-nomination applications and Call for Quality Measures. For the QCDR self-nomination applications ICR, we have decreased our estimate of the number of QCDR measures QCDRs will submit for approval from 9 to 2 (-7 measures) due to the finalized proposal to require measure testing prior to submission for approval. We have also increased our estimate of the time required to submit a QCDR measure by 1.5 hours due to the requirement for QCDRs to link their QCDR measures as feasible to at least one cost measure, improvement activity, or MIPS Value Pathways starting with the 2021 self-nomination period (+1 hour); and the requirement for QCDR measure stewards to submit measure testing data as part of the self-nomination process for each QCDR measure (+0.5 hours). The net effect of these changes is a reduction in burden per QCDR to self-nominate from 12 hours to 8 hours (-4 hours). For the Call for Quality Measures, we have increased our

estimate of the time required to nominate a quality measure for consideration by 1 hour due to the requirement that MIPS quality measure stewards link their MIPS quality measures to existing and related cost measures and improvement activities and provide rationale for the linkage.

The remaining changes to our currently approved burden estimates are adjustments to reflect better understanding of the impacts of policies finalized in previous rules, as well as the use of updated data sources available at the time of publication of this final rule.

We are not making any changes to the following ICRs: Registration for virtual groups, CAHPS survey vendor applications, Quality Payment Program Identity Management Application Process, CAHPS for MIPS survey beneficiary participation, and group registration for CAHPS for MIPS survey. See section VI.B.7.n. of this final rule for a summary of the ICRs, the overall burden estimates, and a summary of the assumption and data changes affecting each ICR.

The accuracy of our estimates of the total burden for data submission under the quality, Promoting Interoperability, and improvement activities performance categories may be impacted due to two primary reasons. First, we anticipate the number of QPs to increase because of total expected growth in Advanced APM participation as new models that are Advanced APMs for which we do not yet have enrollment data become available for participation. The additional QPs will be excluded from MIPS and likely not report. Second, it is difficult to predict what eligible clinicians who may report voluntarily

will do in the 2020 MIPS performance period compared to the 2018 MIPS performance period, and therefore, the actual number of participants and how they elect to submit data may be different than our estimates. However, we believe our estimates are the most appropriate given the available data.

The revised requirements and burden estimates for all Quality Payment Program ICRs (except for CAHPS for MIPS and virtual groups election) will be submitted to OMB for approval under control number 0938–1314 (CMS–10621). The CAHPS for MIPS Survey is approved under OMB control number 0938–1222 (CMS–10450). The Virtual Groups Election is approved under OMB control number 0938–1343 (CMS–10652).

(b) Summary of Changes to Burden Estimates Provided in the CY 2020 PFS Proposed Rule

In the CY 2020 PFS proposed rule (84 FR 40838 through 40881), we used respondent data from the 2017 MIPS performance period for the quality, Promoting Interoperability, and improvement activities performance categories with the sole exception of 104 CMS Web Interface respondents, which was based on the number of groups who submitted data for the quality performance category via the CMS Web Interface for the 2018 MIPS performance period. For this final rule, we have updated our respondent estimates for each of these performance categories with data from the 2018 MIPS performance period.

Our participation estimates are reflected in Tables 78, 79 and 80 for the quality performance category, Table 96 for the Promoting Interoperability performance category, and Table 101 for the improvement activities performance category.

(3) Summary of Quality Payment Program Changes: Advanced APMs

As discussed in more detail in sections VI.B.7. of this final rule, ICRs for Advanced APMs consist of: Partial Qualifying APM Participant (QP) election; Other Payer Advanced APM identification: Payer Initiated and Eligible Clinician Initiated Processes; and submission of data for All-Payer QP determinations under the All-Payer Combination Option.

For these ICRs, the changes to currently approved burden estimates are adjustments based on updated projections for the 2020 MIPS performance period. We are not making any changes to our per-respondent burden estimates and have not made any changes or adjustments to the burden estimates provided in the CY 2020 PFS proposed rule. We are also not making any changes to the Other Payer Advanced APM identification: Eligible Clinician Initiated Process ICR.

(4) Framework for Understanding the Burden of MIPS Data Submission

Because of the wide range of information collection requirements under MIPS, Table 73 presents a framework for understanding how the organizations permitted or required to submit data on behalf of clinicians vary across the types of data, and whether the clinician is a MIPS eligible clinician or other eligible clinician voluntarily submitting data, MIPS APM participant, or an Advanced APM participant. As shown in the first row of Table 73, MIPS eligible clinicians that are not in MIPS APMs and other clinicians voluntarily submitting data will submit data either as individuals, groups, or virtual groups for the quality, Promoting Interoperability, and improvement activities performance categories. Note that virtual groups are subject to the same data submission requirements as groups, and therefore, we will refer only to groups for the remainder of this section unless otherwise noted. Because MIPS eligible clinicians are not required to submit any additional information for assessment under the cost performance category, the administrative claims data used for the cost performance category is not represented in Table 73.

For MIPS eligible clinicians participating in MIPS APMs, the organizations submitting data on behalf of MIPS eligible clinicians will vary between performance categories and, in some instances, between MIPS APMs. For the 2020 MIPS performance period, the quality data submitted by MIPS APM participants reporting through the CMS Web Interface on behalf of their participant MIPS eligible clinicians will fulfill any MIPS submission requirements for the quality performance category. For other MIPS APMs, the quality data submitted by

APM Entities on behalf of their participant MIPS eligible clinicians will fulfill any MIPS submission requirements for the quality performance category if that data is available to be scored. However, as finalized in section III.K.3.c.(5)(c)(i)(A) of this rule, beginning in the 2020 MIPS performance period, MIPS eligible clinicians participating in MIPS APMs whose APM quality data is not available for MIPS may elect to report MIPS quality measures at either the APM entity, individual, or TIN-level in a manner similar to our established policy for the Promoting Interoperability performance category under the APM scoring standard for purposes of the MIPS quality performance category. If we determine there are not sufficient measures applicable and available, we will assign performance category weights as specified in § 414.1370(h)(5).

For the Promoting Interoperability performance category, group TINs may submit data on behalf of eligible clinicians in MIPS APMs, or eligible clinicians in MIPS APMs may submit data individually. For the improvement activities performance category, we will assume no reporting burden for MIPS APM participants. In the CY 2017 Quality Payment Program final rule, we described that for MIPS APMs, we compare the requirements of the specific MIPS APM with the list of activities in the Improvement Activities Inventory and score those activities in the same manner that they are otherwise scored for MIPS eligible clinicians (81 FR 77185). Although the policy allows for the submission of additional improvement activities if a MIPS APM receives less than the maximum improvement activities performance category score, to date all MIPS APM have qualified for the maximum improvement activities score. Therefore, we assume that no additional submission will be needed.

Advanced APM participants who are determined to be Partial QPs may incur additional burden if they elect to participate in MIPS, which is discussed in more detail in the CY 2018 Quality Payment Program final rule (82 FR 53841 through 53844), but other than the election to participate in MIPS, we do not have data to estimate that burden.

BILLING CODE 4120–01–P

TABLE 73: Clinicians or Organizations Submitting MIPS Data on Behalf of Clinicians, by Type of Data and Category of Clinician*

Category of Clinician	Type of Data Submitted			
	Quality Performance Category	Promoting Interoperability Performance Category	Improvement Activities Performance Category	Other Data Submitted on Behalf of MIPS Eligible Clinicians
MIPS Eligible Clinicians (not in MIPS APMs) and Other Eligible Clinicians Voluntarily Submitting MIPS Data ^a	As virtual group, group, or individual clinicians	As virtual group, group, or individual clinicians. Clinicians who are hospital-based, ambulatory surgical center-based, non-patient facing, physician assistants, nurse practitioners, clinician nurse specialists, certified registered nurse anesthetists, physical therapists, occupational therapists, qualified speech-language pathologists, qualified audiologists, clinical psychologists, and registered dietitians or nutrition professionals are automatically eligible for a zero percent weighting for the Promoting Interoperability performance category. Clinicians who submit an application and are approved for significant hardship or other exceptions are also eligible for a zero percent weighting.	As virtual group, group, or individual clinicians	Groups electing to use a CMS-approved survey vendor to administer CAHPS must register. Groups electing to submit via CMS Web Interface for the first time must register. Virtual groups must register via email.
MIPS Eligible Clinicians Participating in MIPS APMs that report via Web Interface	ACOs submit to the CMS Web Interface and CAHPS for ACOs on behalf of their participating MIPS eligible clinicians. If the ACO does not submit quality data, MIPS eligible clinicians participating in MIPS APMs may elect to report individually or at the TIN-level. ^c [Submissions by the ACO are not included in	Each MIPS eligible clinician in the APM Entity reports data for the Promoting Interoperability performance category through either group TIN or individual reporting. [Burden estimates for this final rule assume group TIN-level reporting]. ^c	CMS will assign the improvement activities performance category score to each APM Entity group based on the activities involved in participation in the MIPS APM. ^d [The burden estimates for this final rule assume no improvement activity reporting burden for APM participants because we assume the MIPS	APM Entities will make Partial QP election for participating MIPS eligible clinicians.

Category of Clinician	Type of Data Submitted			
	Quality Performance Category	Promoting Interoperability Performance Category	Improvement Activities Performance Category	Other Data Submitted on Behalf of MIPS Eligible Clinicians
	burden estimates for this final rule because quality data submission to fulfill requirements of the Shared Savings Program and for purposes of testing and evaluating the Next Generation ACO Model are not subject to the PRA]. ^b		APM model provides a maximum improvement activity performance category score.]	
MIPS Eligible Clinicians Participating in Other MIPS APMs	APM Entities submit to MIPS on behalf of their participating MIPS eligible clinicians; however if the quality data is not available to MIPS in time for scoring, MIPS eligible clinicians participating in MIPS APMs may elect to report individually or at the TIN-level. ^c [Submissions made by APM Entities to MIPS on behalf of their participating MIPS eligible clinicians are not included in burden estimates for this final rule because quality data submission for purposes of testing and evaluating Innovation Center models tested under section	Each MIPS eligible clinician in the APM Entity reports data for the Promoting Interoperability performance category through either group TIN or individual reporting. [The burden estimates for this final rule assume group TIN-level reporting].	CMS will assign the same improvement activities performance category score to each APM Entity based on the activities involved in participation in the MIPS APM. [The burden estimates for this final rule assume no improvement activities performance category reporting burden for APM participants because we assume the MIPS APM model provides a maximum improvement activity score.]	APM Entities will make Partial QP election for participating eligible clinicians.

Category of Clinician	Type of Data Submitted			
	Quality Performance Category	Promoting Interoperability Performance Category	Improvement Activities Performance Category	Other Data Submitted on Behalf of MIPS Eligible Clinicians
	1115A of the Act (or section 3021 of the Affordable Care Act) are not subject to the PRA.]			

* Because the cost performance category relies on administrative claims data, MIPS eligible clinicians are not required to provide any additional information, and therefore, the cost performance category is not represented in this table.

a Virtual group participation is limited to MIPS eligible clinicians, specifically, solo practitioners and groups consisting of 10 eligible clinicians or fewer.

b Sections 1899 and 1115A of the Act (42 U.S.C. 1395jjj and 42 U.S.C. 1315a, respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models are not subject to the PRA.

c Both group TIN and individual clinician Promoting Interoperability data will be accepted. If both group TIN and individual scores are available for the same APM Entity, CMS will use the higher score for each TIN/NPI. The TIN/NPI scores are then aggregated for purposes of calculating the APM Entity score.

d APM Entities participating in MIPS APMs receive an improvement activities performance category score of at least 50 percent.(42 CFR 414.1380) and do not need to submit improvement activities data unless the CMS-assigned improvement activities scores are below the maximum improvement activities score.

e Both group TIN and individual clinician quality data will be accepted. If both group TIN and individual scores are available for the same APM Entity, CMS will use the higher score for each TIN/NPI. We would then use the highest individual or TIN-level score attributable to each MIPS eligible clinician in an APM Entity in order to determine the APM Entity score based on the average of the highest scores for each MIPS eligible clinician in the APM Entity.

BILLING CODE 4120-01-C

The policies finalized in the CY 2017 and CY 2018 Quality Payment Program final rules, and the CY 2019 PFS final rule and continued in this final rule create some additional data collection requirements not listed in Table 73. These additional data collections, some of which were previously approved by OMB under the control numbers 0938-1314 (Quality Payment Program, CMS-10621) and 0938-1222 (CAHPS for MIPS, CMS-10450), are as follows:

Additional ICRs Related to MIPS Third-Party Intermediaries

- Self-nomination of new and returning QCDRs (81 FR 77507 through 77508, 82 FR 53906 through 53908, and 83 FR 59998 through 60000) (OMB 0938-1314).
- Self-nomination of new and returning registries (81 FR 77507 through 77508, 82 FR 53906 through 53908, and 83 FR 59997 through 59998) (OMB 0938-1314).
- Approval process for new and returning CAHPS for MIPS survey vendors (82 FR 53908) (OMB 0938-1222).

Additional ICRs Related to the Data Submission and the Quality Performance Category

- CAHPS for MIPS survey completion by beneficiaries (81 FR 77509, 82 FR 53916 through 53917, and 83 FR 60008 through 60009) (OMB 0938-1222).
- Quality Payment Program Identity Management Application Process (82 FR 53914 and 83 FR 60003 through 60004) (OMB 0938-1314).

Additional ICRs Related to the Promoting Interoperability Performance Category

- Reweighting Applications for Promoting Interoperability and other performance categories (82 FR 53918 and 83 FR 60011 through 60012) (OMB 0938-1314).

Additional ICRs Related to Call for New MIPS Measures and Activities

- Nomination of improvement activities (82 FR 53922 and 83 FR 60017 through 60018) (OMB 0938-1314).
- Call for new Promoting Interoperability measures (83 FR 60014 through 60015) (OMB 0938-1314).
- Call for new quality measures (83 FR 60010 through 60011) (OMB 0938-1314).

Additional ICRs Related to MIPS

- Opt out of performance data display on Physician Compare for voluntary reporters under MIPS (82 FR 53924 through 53925 and 83 FR 60022) (OMB 0938-1314).

Additional ICRs Related to APMs

- Partial QP Election (81 FR 77512 through 77513, 82 FR 53922 through 53923, and 83 FR 60018 through 60019) (OMB 0938-1314).
- Other Payer Advanced APM determinations: Payer Initiated Process (82 FR 53923 through 53924 and 83 FR 60019 through 60020) (OMB 0938-1314).
- Other Payer Advanced APM determinations: Eligible Clinician Initiated Process (82 FR 53924 and 83 FR 60020) (OMB 0938-1314).
- Submission of Data for All-Payer QP Determinations (83 FR 60021) (OMB 0938-1314).

b. ICRs Regarding the Virtual Group Election (§ 414.1315)

This rule is not finalizing any new or revised collection of information requirements or burden related to the virtual group election. The virtual group election requirements and burden are currently approved by OMB under

control number 0938–1343 (CMS–10652). Consequently, we are not making any virtual group election changes under that control number.

c. ICRs Regarding Third-Party Intermediaries (§ 414.1400)

(1) Background

Under MIPS, the quality, Promoting Interoperability, and improvement activities performance category data may be submitted via relevant third-party intermediaries, such as qualified registries, QCDRs, and health IT vendors. Data on the CAHPS for MIPS survey, which counts as either one quality performance category measure, or towards an improvement activity, can be submitted via CMS-approved survey vendors. Entities seeking approval to submit data on behalf of clinicians as a qualified registry, QCDR, or survey vendor must complete a self-nominate process annually. The processes for self-nomination for entities seeking approval as qualified registries and QCDRs are similar with the exception that QCDRs have the option to nominate QCDR measures for approval for the reporting of quality performance category data. Therefore, differences between QCDRs and qualified registry self-nomination are associated with the preparation of QCDR measures for approval.

The burden associated with qualified registry self-nomination, QCDR self-nomination and measure submission, and the CAHPS for MIPS survey vendor applications follow:¹³⁰

(2) Qualified Registry Self-Nomination Applications

The requirements and burden associated with qualified registries and their self-nomination will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As explained below, this rule will both adjust the number of self-nomination applications based on current data and revise the number of self-nomination applications due to policies promulgated in the CY 2019 final rule regarding the definition of a QCDR (83 FR 59895) and minimum participation requirements (83 FR 59897) which are effective beginning in the 2020 MIPS performance period. The adjustment will decrease our total burden estimates while keeping our burden per response estimates unchanged. We are not making any changes to the self-nomination process.

We refer readers to § 414.1400(a)(2) and (c)(1) which state that qualified

registries interested in submitting MIPS data to us on behalf of MIPS eligible clinicians, groups, or virtual groups need to complete a self-nomination process to be considered for approval to do so.

In the CY 2018 Quality Payment Program final rule (82 FR 53815) and as stated in § 414.1400(c)(1), previously approved qualified registries in good standing (that is, that are not on probation or disqualified) may attest that certain aspects of their previous year's approved self-nomination have not changed and will be used for the applicable performance period. In the same rule, we stated that qualified registries in good standing that would like to make minimal changes to their previously approved self-nomination application from the previous year, may submit these changes, and attest to no other changes from their previously approved qualified registry application for CMS review during the self-nomination period (82 FR 53815). The self-nomination period is from July 1 to September 1 of the calendar year prior to the applicable performance period beginning with the 2020 MIPS performance period (83 FR 59906).

For this final rule, we have adjusted the number of self-nominating applicants from 150 to 153 based on the number of applications received during the 2020 self-nomination period, an increase of 3 from the currently approved estimate of 150 (83 FR 59997 through 59998). This is a decrease of 137 from the estimate of 290 provided in the CY 2020 PFS proposed rule due to availability of more recent data. This estimate reflects impacts of revisions to both the definition of a QCDR and minimum participation requirements for entities seeking approval as a QCDR which were previously finalized in the CY 2019 PFS final rule (83 FR 59895 through 59897) that may or may not have resulted in some entities seeking approval as a qualified registry rather than a QCDR.

The burden associated with the qualified registry self-nomination process varies depending on the number of existing qualified registries that elect to use the simplified self-nomination process in lieu of the full self-nomination process as described in the CY 2018 Quality Payment Program final rule (82 FR 53815). The Quality Payment Program Self-Nomination Form is submitted electronically using a web-based tool. We will be submitting a revised version of the form for approval under OMB control number 0938–1314 (CMS–10621).

As described in the CY 2017 Quality Payment Program final rule, the full

self-nomination process requires the submission of basic information, a description of the process the qualified registry will use for completion of a randomized audit of a subset of data prior to submission, and the provision of a data validation plan along with the results of the executed data validation plan by May 31 of the year following the performance period (81 FR 77383 through 77384). As shown in Table 75, we estimate that the staff involved in the qualified registry self-nomination process will be mainly computer systems analysts or their equivalent, who have an adjusted labor rate of \$90.02/hr. Consistent with the CY 2019 PFS final rule (83 FR 59998), we estimate that the time associated with the self-nomination process ranges from a minimum of 0.5 hours (for the simplified self-nomination process) to 3 hours (for the full self-nomination process) per qualified registry. For the 2019 MIPS performance period, 135 qualified registries were approved to submit data out of the total 141 (96 percent) which submitted nomination forms. For our minimum burden estimate, we assume a similar percentage of the 153 qualified registries that submitted nomination forms in CY 2019 for the 2020 MIPS performance period will be approved and will nominate using the simplified process in CY 2020; this results in a total of 147 (153 × 96 percent) simplified self-nomination applications received. When considering this rule's adjusted number of nomination applications (153), we estimate that the annual burden will range from 91.5 hours [(147 simplified self-nominations × 0.5 hr) + [6 full self-nominations × 3 hr]] to 459 hours (153 qualified registries × 3 hr) at a cost ranging from \$8,237 (91.5 hr × \$90.02/hr) to \$41,319 (459 hr × \$90.02/hr), respectively (see Table 75).

As shown in Table 74, compared to the currently approved minimum estimates of 97.5 hours and \$8,777 and the maximum estimates of 450 hours and \$40,509, the increase in the number of respondents will adjust our total burden estimates by –6 hours and –\$540 [(6 registries × 0.5 hr × \$90.02/hr) + (–3 registries × 3 hr × \$90.02/hr)] and +9 hours and +\$810 (3 registries × 3 hr × \$90.02/hr). Although we are adjusting our total burden estimates based on more current data, the burden per response would remain unchanged. The reason for the decrease in minimum burden despite an increase in number of qualified registries, is the change in number of simplified and full self-nominations. In the CY 2019 PFS final rule, we estimate 141 simplified self-

¹³⁰ As stated in the CY 2019 PFS final rule (83 FR 53998), health IT vendors are not included in the burden estimates for MIPS.

nominations and 9 full self-nominations; for this final rule, we estimate 147 simplified self-

nominations and 6 full self-nominations.

TABLE 74: Change in Estimated Burden for Qualified Registry Self-Nomination

	Minimum Burden	Maximum Burden
Total Annual Hours for Qualified Registries in CY 2019 Final Rule (a)	97.5	450
Total Annual Hours for Qualified Registries in CY 2020 Final Rule (b)	91.5	459
Difference (c) = (b)-(a)	-6	+9
Total Annual Cost for Qualified Registries in CY 2019 Final Rule (d)	\$8,777	\$40,509
Total Annual Cost for Qualified Registries in CY 2020 Final Rule (e)	\$8,237	\$41,319
Difference (f) = (e)-(d)	\$-540	+\$810

As finalized in the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364) and as further revised in the CY 2019 PFS final rule at (83 FR 60088) and in § 414.1400(a)(2), qualified registries may submit data for any of the three MIPS performance categories quality (except for data on the CAHPS for MIPS survey); improvement activities; and Promoting Interoperability. In section III.K.3.g.(4)(a)(i) of this rule, we are finalizing changes to § 414.1400(a)(2) to state that beginning with the 2023 payment year (2021 performance period), qualified registries must be able to submit data for all of the MIPS performance categories identified in the regulation. We are also finalizing to amend § 414.1400(a)(2)(iii) to state that a third party intermediary may be excepted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4) or (5) or § 414.1380(c)(2)(i)(C)(1) through (7) or (9). As part of the current self-nomination process, qualified registries are already required to attest to the MIPS quality measures, performance categories, improvement activities, and/or Promoting Interoperability measures and objectives supported. As part of this policy, we are requiring qualified registries to attest to the ability to submit data for all three of these performance categories at time of self-nomination. As finalized in the CY 2017 Quality Payment Program final rule, qualified registries are required to provide feedback on all of the MIPS performance categories at least 4 times a year (81 FR 77367 through 77386). In section III.K.3.g.(4)(a)(ii), we are finalizing, beginning with the 2023 MIPS payment year, to require qualified registries to provide the following as a part of the performance feedback given at least 4 times (to the extent feasible)

a year: Feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure within the qualified registry. Further, qualified registries will be required to attest during the self-nomination process that they can provide performance feedback at least 4 times a year, and if not, provide sufficient rationale as to why they do not believe they would be able to meet this requirement. Because we are not requiring qualified registries to provide performance feedback to their clinicians and groups at a greater frequency than what has previously been required combined with qualified registries only being required to provide feedback using data they are already collecting, we do not believe this finalized policy creates enough additional burden for qualified registries to elect to discontinue participation in the Quality Payment Program. Therefore, we are not adjusting our estimates for the number of qualified registries that will self-nominate in the 2021 performance period or future years as a result of this requirement; if reliable information becomes available indicating this assumption is incorrect, we will adjust our assumptions and respondent estimates at that time. Because qualified registries will only be required to provide performance feedback to clinicians and not to CMS, and because qualified registries are already required to attest to the performance categories they support, we anticipate minimal changes to the self-nomination process as a result of these requirements and assume there will be minimal impact on the time required to complete either the simplified or full self-nomination process.

We are also finalizing in section III.K.3.g.(2) of this final rule and at § 414.1400(a)(4) to establish that a condition of approval is for the third

party intermediary to agree that prior to discontinuing services to any MIPS eligible clinician, group or virtual group during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, or virtual group to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved transition plan. Because of the uncertain, but low frequency (less than 10 per year historically) with which third party intermediaries have elected to discontinue services during a performance period, we are unable to estimate the total burden associated with development of CMS approved transition plans. However, we anticipate the time involved in developing a transition plan and disseminating it to their contracted MIPS eligible clinicians is likely to be no more than 10 hours.

Qualified registries must comply with requirements on the submission of MIPS data to CMS. The burden associated with qualified registry submission requirements will be the time and effort associated with calculating quality measure results from the data submitted to the qualified registry by its participants and submitting these results, the numerator and denominator data on quality measures, the Promoting Interoperability performance category, and improvement activities data to us on behalf of their participants. We expect that the time needed for a qualified registry to accomplish these tasks will vary along with the number of MIPS eligible clinicians submitting data to the qualified registry and the number of applicable measures. However, we believe that qualified registries already perform many of these activities for their participants. Therefore, we believe the estimates discussed earlier and shown in Table 75

represents the upper bound for qualified registry burden, with the potential for less additional MIPS burden if the

qualified registry already provides similar data submission services. Based on these assumptions, we estimate the total annual burden

associated with a qualified registry self-nominating to be considered for approval.

TABLE 75: Estimated Burden for Qualified Registry Self-Nomination

	Minimum Burden	Maximum Burden
# of Qualified Registry Simplified Self-Nomination Applications submitted (a)	147	0
# of Qualified Registry Full Self-Nomination Applications submitted (b)	6	153
Total Applications	153	153
Total Annual Hours Per Qualified Registry for Simplified Process (c)	0.5	0.5
Total Annual Hours Per Qualified Registry for Full Process (d)	3	3
Total Annual Hours (e) = (a)*(c)+(b)*(d)	91.5	459
Cost Per Simplified Process Per Registry (@ computer systems analyst’s labor rate of \$90.02/hr.) (f)	\$45.01	\$45.01
Cost Per Full Process Per Registry (@ computer systems analyst’s labor rate of \$90.02/hr.) (g)	\$270.06	\$270.06
Total Annual Cost (h) = (a)*(f)+(b)*(g)	\$8,237	\$41,319

Both the minimum and maximum burdens shown in Table 75 reflect adjustments to the number of respondents (from 150 to 153) due to availability of more recent data (+3 respondents). For purposes of calculating total burden associated with this final rule as shown in Table 116 only the maximum burden is being submitted to OMB for their review and approval.

We received no public comments related to the burden estimates for qualified registry self-nomination. The burden estimates have been updated from the CY 2020 PFS proposed rule (84 FR 40848 through 40849) due to availability of updated data.

(3) QCDR Self-Nomination Applications
(a) Self-Nomination Process

The requirements and burden associated with QCDRs and the self-nomination process will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As explained below, this rule will adjust the number of self-nomination applications submitted by QCDRs seeking approval to submit data from 200 to 76 based on data from the CY 2019 nomination period for the 2020 MIPS performance period. This estimate reflects impacts of revisions to both the definition of a QCDR and minimum participation requirements for entities seeking approval as a QCDR which were previously finalized in the CY 2019 PFS final rule (83 FR 59895 through 59897) that may or may not have resulted in some entities seeking approval as a qualified registry rather than a QCDR. This rule will also update the number of QCDR measures submitted for consideration by each QCDR seeking to

self-nominate (from 9 to 2), as well as the time required to submit information (from 1 hour to 2.5 hours) for each QCDR measure due to policies being finalized. In addition, our per response estimates for the simplified and full self-nomination processes will decrease from 9.5 hours to 5.5 hours and from 12 hours to 8 hours, respectively due strictly to our adjustment to the average number of QCDR measures submitted for approval by each QCDR based on availability of more recent data. These changes will decrease our minimum total burden estimate (from 2,025 hours to 418 hours) and increase our maximum total burden estimate (from 2,400 hours to 608 hours).

We refer readers to § 414.1400(a)(2) and (b)(1) which state that QCDRs interested in submitting MIPS data to us on behalf of a MIPS eligible clinician, group, or virtual group will need to complete a self-nomination process to be considered for approval to do so.

In the CY 2018 Quality Payment Program final rule and § 414.1400(b)(1), previously approved QCDRs in good standing (that are not on probation or disqualified) that wish to self-nominate using the simplified process can attest, in whole or in part, that their previously approved form is still accurate and applicable (82 FR 53808). Existing QCDRs in good standing that would like to make minimal changes to their previously approved self-nomination application from the previous year, may submit these changes, and attest to no other changes from their previously approved QCDR application, for CMS review during the current self-nomination period, from September 1 to November 1 (82 FR 53808). The self-nomination period is from July 1 to

September 1 of the calendar year prior to the applicable performance period beginning in the 2020 MIPS performance period (83 FR 59898).

The burden associated with QCDR self-nomination will vary depending on the number of existing QCDRs that will elect to use the simplified self-nomination process in lieu of the full self-nomination process as described in the CY 2018 Quality Payment Program final rule (82 FR 53808 through 53813). The OPP Self-Nomination Form is submitted electronically using a web-based tool. We will be submitting a revised version of the form for approval under OMB control number 0938–1314 (CMS–10621).

For this final rule, we have adjusted the number of QCDRs self-nominating for approval to submit data from 200 to 76 based on the number of applications received during the CY 2019 self-nomination period for the 2020 MIPS performance period, a decrease of 124 from the currently approved estimate of 150 (83 FR 59997 through 59998). This is a decrease of 15 from the estimate of 91 provided in the CY 2020 PFS proposed rule due to availability of more recent data. Given this decrease, for our minimum burden estimate we will assume each of the 76 QCDRs will be approved for the 2020 MIPS performance period and will self-nominate using the simplified process during the CY 2020 nomination period. This estimate reflects impacts of revisions to both the definition of a QCDR and minimum participation requirements for entities seeking approval as a QCDR which were previously finalized in the CY 2019 PFS final rule (83 FR 59895 through 59897) that may or may not have resulted in

some entities seeking approval as a qualified registry rather than a QCDR. We were unable to change our estimates in the CY 2019 PFS final rule to reflect these policies because we had neither the data to support a change nor any notifications of intent by previously approved QCDRs indicating they would no longer self-nominate as a QCDR (83 FR 59999). As a result, we are making the necessary adjustments to our respondent estimates in this final rule.

Based on previously finalized policies in the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364) and as further revised in the CY 2019 PFS final rule at § 414.1400(a)(2) (83 FR 60088), the current policy is that all third party intermediaries may submit data for any of the three MIPS performance categories quality (except for data on the CAHPS for MIPS survey); improvement activities; and Promoting Interoperability. In section III.K.3.g.(3)(a)(i) of this rule, we are finalizing changes to § 414.1400(a)(2) to state that beginning with the 2023 MIPS payment year (2021 performance period), QCDRs must be able to submit data for all of the MIPS performance categories identified in the regulation. We are also finalizing to amend § 414.1400(a)(2)(iii) to state that for the Promoting Interoperability performance category, a third party intermediary may be exempted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4) or (5) or § 414.1380(c)(2)(i)(C)(1) through (7) or (9). As finalized in the CY 2018 Quality Payment Program final rule, QCDRs are required to provide feedback on all of the MIPS performance categories that the QCDR reports at least 4 times a year (82 FR 53812). In section III.K.3.g.(3)(a)(iii) we are finalizing, beginning with the 2023 MIPS payment year, to require that QCDRs provide the following as a part of the performance feedback given at least 4 times a year: Feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure (MIPS quality measure and/or QCDR measure) within the QCDR. We also understand that QCDRs can only provide feedback on data they have collected on their clinicians and groups, and realize the comparison would be limited to that data and not reflect the larger sample of those that have submitted on the measure for MIPS, which the QCDR does not have access to. Further, we are also finalizing, beginning with the 2023 MIPS payment year, to require QCDRs to attest during the self-nomination process that they

can provide performance feedback at least 4 times a year, and if not, provide sufficient rationale as to why they do not believe they will be able to meet this requirement. We do not believe these proposals create enough additional burden for QCDRs to elect to discontinue participation in the Quality Payment Program because we are not requiring QCDRs to provide performance feedback to their clinicians and groups at a greater frequency than what has previously been required and because QCDRs will only be required to provide feedback using data they are already collecting. Therefore, we are not adjusting our estimates for the number of QCDRs that will self-nominate in the 2021 performance period or future years as a result of these finalized policies; if reliable information becomes available indicating this assumption is incorrect, we will adjust our assumptions and respondent estimates at that time. As part of the self-nomination process, QCDRs are already required to attest to the MIPS quality measures, performance categories, improvement activities, and Promoting Interoperability measures and objectives supported and will not be required to provide performance feedback to CMS. Therefore, we anticipate no additional steps being added to the self-nomination process as a result of these finalized policies and assume there will be no impact on the time required to complete either the simplified or full self-nomination process.

In the CY 2020 PFS proposed rule, we increased our per-respondent burden estimate for completing the full self-nomination process by 15 minutes (0.25 hours) due to the proposal to require QCDRs to describe the quality improvement services they will provide as part of their self-nomination (84 FR 40851). Due to this proposal not being finalized, we have decreased our burden estimate from the CY 2020 PFS proposed rule by 0.25 hours.

We estimate that the self-nomination process for QCDRs to submit on behalf of MIPS eligible clinicians or groups for MIPS will involve approximately 3 hours per QCDR to submit information required at the time of self-nomination as described in the CY 2017 Quality Payment Program final rule including basic information about the QCDR, describing the process it will use for completion of a randomized audit of a subset of data prior to submission, providing a data validation plan, and providing results of the executed data validation plan by May 31 of the year following the performance period (81 FR 77383 through 77384). However, for the simplified self-nomination process,

we estimate 0.5 hours per QCDR to submit this information.

We are also finalizing in section III.K.3.g.(2) of this final rule and at § 414.1400(a)(4) to establish that a condition of approval is for the third party intermediary to agree that prior to discontinuing services to any MIPS eligible clinician, group or virtual group during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, or virtual group to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved transition plan. Because of the uncertain, but low frequency (less than 10 per year historically) with which third party intermediaries have elected to discontinue services during a performance period, we are unable to estimate the total burden associated with development of CMS approved transition plans. However, we anticipate the time involved in developing a transition plan and disseminating it to contracted MIPS eligible clinicians is likely to be no more than 10 hours.

(b) QCDR Measure Requirements

As promulgated in the CY 2017 and CY 2018 Quality Payment Plan final rules (81 FR 77366 through 77374 and 82 FR 53812 through 53813), QCDRs calculate their measure results and also must possess benchmarking capabilities (for QCDR measures) that compare the quality of care a MIPS eligible clinician provides with other MIPS eligible clinicians performing the same quality measures. For QCDR measures, the QCDR must provide to us, if available, data from years prior (for example, 2017 data for the 2019 MIPS performance period) before the start of the performance period. In addition, the QCDR must provide to us, if available, the entire distribution of the measure's performance broken down by deciles. As an alternative to supplying this information to us, the QCDR may post this information on their website prior to the start of the performance period, to the extent permitted by applicable privacy laws. The time it takes to perform these functions may vary depending on the sophistication of the entity, but we estimate that a QCDR will spend an additional 1 hour performing these activities per measure.

As discussed in section III.K.3.g.(3)(c)(i)(B)(cc), we are finalizing that in order for a QCDR measure to be considered for use in the program beginning with the 2021 performance period and future years, all QCDR measures submitted for self-nomination

must be fully developed with completed testing results at the clinician level, as defined by the CMS Blueprint for the CMS Measures Management System, as used in the testing of MIPS quality measures prior to the submission of those measures to the Call for Measures. Beginning with the 2021 performance period and future years, we are finalizing in section III.K.3.g.(3)(c)(i)(B)(dd) of this final rule, to also require QCDRs to collect data on the potential QCDR measure, appropriate to the measure type, as defined in the CMS Blueprint for the CMS Measures Management System, prior to self-nomination. We estimate the time necessary to submit measure testing data as part of the self-nomination process will average approximately 0.5 hours per measure, understanding that this estimate may be either high or low depending on the type of measure and the quantity of data being submitted. We discuss additional impacts of this proposal in section VII.C.10.(f) of this rule's RIA.

In section III.K.3.g.(3)(c)(i)(A)(bb) of this rule, we are finalizing to amend § 414.1400 to state that CMS may consider the extent to which a QCDR measure is available to MIPS eligible clinicians reporting through QCDRs other than the QCDR measure owner for purposes of MIPS. If CMS determines that a QCDR measure is not available to MIPS eligible clinicians, groups, and virtual groups reporting through other QCDRs, CMS may not approve the measure. Because the choice to license a QCDR measure is an elective business decision made by individual QCDRs and we lack insight into both the specific terms and frequency of agreements made between entities, we are not accounting for QCDR measure licensing costs as part of our burden estimate. However, if information regarding the number of licensing agreements and the approximate cost per agreement becomes available, we may adjust our assumptions and burden estimates at that time.

In section III.K.3.g.(3)(c)(i)(B)(ee) of this rule, we are finalizing, beginning with the 2020 performance period, that after the self-nomination period closes each year, we will review newly self-nominated and previously approved QCDR measures based on considerations as described in the CY 2019 PFS final rule (83 FR 59900 through 59902). In instances in which multiple, similar QCDR measures exist that warrant approval, we may provisionally approve the individual QCDR measures for 1 year with the condition that QCDRs address certain areas of duplication with other

approved QCDR measures in order to be considered for the program in subsequent years. The QCDR could do so by harmonizing its measure with, or significantly differentiating its measure from, other similar QCDR measures. QCDR measure harmonization may require two or more QCDRs to work collaboratively to develop one cohesive QCDR measure that is representative of their similar yet, individual measures. We are unable to account for measure harmonization costs as part of our burden estimate, as the process and outcomes of measure harmonization will likely vary substantially depending on a number of factors, including: Extent of duplication with other measures, number of QCDRs involved in harmonizing toward a single measure, and number of measures being harmonized among the same QCDRs. We intend to identify only those QCDR measures which are duplicative to such an extent as to assume harmonization will not be overly burdensome, however, because the harmonization process will occur between QCDRs without our involvement, we are unable to predict or quantify the associated effort.

As discussed in section III.K.3.g.(3)(c)(i)(B)(bb) of this final rule, beginning with the 2021 performance period and future years, we are finalizing that QCDRs are required to link their QCDR measures as feasible to at least one of the following, at the time of self-nomination: (1) Cost measures (as found in section III.K.3.c.(2) of this final rule); (2) improvement activities (as found in Appendix 2: Improvement Activities Tables); or (3) CMS developed MIPS Value Pathways (as described in section III.K.3.a. of this final rule). We estimate that a QCDR will spend an additional 1 hour performing these activities per measure, on average.

We are also finalizing to formalize factors we would take into consideration for approving and rejecting QCDR measures for the MIPS program beginning with the 2022 MIPS payment year (2020 performance period). With regard to approving QCDR measures, we are finalizing the following: (a) 2-year QCDR measure approval process, and (b) participation plan for existing QCDR measures that have failed to reach benchmarking thresholds. As discussed in section III.K.3.g.(3)(c)(ii)(B) of this rule, we are finalizing to implement, beginning with the 2021 performance period, 2-year QCDR measure approvals (at our discretion) for QCDR measures that attain approval status by meeting the QCDR measure considerations and requirements described in section

III.K.3.g.(3)(c). The 2-year approvals will be subject to the following conditions whereby the multi-year approval will no longer apply if the QCDR measure is identified as: Topped out; duplicative of a new, more robust measure; reflects an outdated clinical guideline; requires measure harmonization, or if the QCDR self-nominating the measure is no longer in good standing. We believe this could result in reduced burden for QCDRs as they would not necessarily be required to submit every measure for approval annually. However, because we are unable to predict which previously approved QCDR measures will be removed or retained in future years, we are likewise unable to predict the total number of measures that will be submitted for approval and the resulting impact on future burden. We anticipate that the number of QCDR measures submitted in the 2021 performance period will reflect the impact of this policy; at that time we will update our assumptions and burden estimates accordingly.

We estimate that on average, each QCDR will submit information for 2 QCDR measures, for a total burden of 2 hours per QCDR (1 hr per measure × 2 measures). Based on the number of measures nominated during the CY 2019 nomination period for the 2020 MIPS performance period (790, or approximately 10.4 measures per QCDR) as well as an analysis of currently approved QCDR measures which indicates less than 10 percent of current measures have completed testing, we believe each QCDR is likely to submit 1 previously approved QCDR measure for approval during the CY 2020 nomination period. We also believe the finalized policy requiring measure testing will result in additional measures undergoing testing than in previous years and therefore estimate each QCDR will submit 1 additional measure for approval during the CY 2020 nomination period, for a total of 2 measures per QCDR. Finally, we believe the finalized changes in requirements for QCDR measure submission and for QCDRs to harmonize measures we identify as duplicative discussed earlier in this section will result in a reduction in the number of QCDR measures submitted for approval in future years. However, we are unable to quantify the impact these changes will have on the number of measures QCDRs will submit for approval beyond the impacts previously discussed. As information becomes available in future years, we will revisit our assumptions to better reflect the impact of these requirements on QCDRs and the quantity of measures

being submitted for consideration annually. When combined with our previously stated assumption regarding our inability to predict which QCDR measures will maintain approval in future years, we believe the estimate of 2 measures per QCDR to be appropriate.

Beginning with the 2021 performance period, we are finalizing in section III.K.3.g.(3)(c)(iii) of this rule that in instances where an existing QCDR measure has been in MIPS for 2 years, and has failed to reach benchmarking thresholds due to low adoption, where a QCDR believes the low-reported QCDR measure is still important and relevant to a specialist's practice, that the QCDR may develop and submit to a QCDR measure participation plan, to be submitted as part of their self-nomination. Because we are unable to predict the frequency with which existing QCDR measures will meet the finalized criteria for allowing QCDRs to submit a measure participation plan or the likelihood of QCDRs electing to submit a plan, we are unable to estimate the total associated burden. However, we anticipate the time involved in developing a measure participation plan is likely to average between 1 and 2 hours, depending on the QCDR and the level of detail they choose to include. In future performance periods we may reassess availability of the number of QCDR measure participation plans submitted by QCDRs and estimate the associated burden, if possible. In aggregate, we estimate a QCDR will require 2.5 hours per QCDR measure, an increase of 1.5 hours from the currently approved estimate of 1 hour (83 FR 59999). As discussed earlier in this section, we estimate each QCDR will submit 2 QCDR measures for approval, on average. Therefore, we estimate each QCDR will require 5 hours (2 measures \times 2.5 hr per measure) to submit QCDR measures for approval, independent of the selection of the simplified or full self-nomination process.

We are finalizing in section III.K.3.g.3(c)(i)(A)(bb)(BB) of this final rule, to amend § 414.1400 to add paragraph (b)(3)(iv)(I) to state that we would give greater consideration to measures for which QCDRs: (a) Conducted an environmental scan of existing QCDR measures; MIPS quality measures; quality measures retired from the legacy Physician Quality Reporting System (PQRS) program; and (b) utilized the CMS Quality Measure Development Plan Annual Report and the Blueprint for the CMS Measures Management System to identify measurement gaps prior to measure development. We are also finalizing in section III.K.3.g.3(c)(i)(A)(bb)(CC) of this final rule and § 414.1400 to add paragraph (b)(3)(iv)(J), to state that, beginning with the 2020 performance period, we place greater preference on QCDR measures that meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods. Those that do not meet this requirement, may not continue to be approved. Lastly, we are finalizing in section III.K.3.g.3(c)(i)(B)(aa) of this final rule, beginning with the 2020 performance period, to change both of the below listed considerations into requirements and add § 414.1400(b)(3)(v) to include the following for QCDR measure requirements for approval: Measures that are beyond the measure concept phase of development; and measures that address significant variation in performance. Because these proposals do not impact the amount of information QCDRs are required to submit for the nomination of a QCDR measure, we are not finalizing any additional changes to our burden estimate as result of these policies. We also do not believe these policies are likely to result in any additional change in the number of measures submitted

per QCDR beyond the impacts previously discussed.

In the CY 2019 PFS final rule, the burden associated with self-nomination of a QCDR was estimated to range from a minimum of 9.5 hours (0.5 hours to submit information for simplified self-nomination process and 9 hours for submission of QCDR measures) to a maximum of 12 hours (3 hours for the full self-nomination process and 9 hours for the submission of QCDR measures) (83 FR 59999). For this rule, we are finalizing to increase the burden associated with self-nomination to a minimum of 5.5 hours (0.5 hours to submit information for the simplified self-nomination process and 5 hours for the submission of QCDR measures) to a maximum of 8 hours (3 hours to submit information for the full self-nomination process and 5 hours for the submission of QCDR measures) to account for our revised estimate of the average number of QCDR measures submitted for consideration per QCDR, as well as the revised estimate of burden per QCDR measure.

We assume that the staff involved in the QCDR self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor rate of \$90.02/hr. Considering that the time per QCDR associated with the self-nomination process ranges from a minimum of 5.5 hours to a maximum of 8 hours, we estimate that the annual burden will range from 418 hours (76 QCDRs \times 5.5 hr) to 608 hours (76 QCDRs \times 8 hr) at a cost ranging from \$37,628 (418 hr \times \$90.02/hr) and \$54,732 (608 hr \times \$90.02/hr), respectively (see Table 76).

Based on the assumptions previously discussed, we provide an estimate of the total annual burden associated with a QCDR self-nominating to be considered "qualified" to submit quality measures results and numerator and denominator data on MIPS eligible clinicians.

TABLE 76: Estimated Burden for QCDR Self-Nomination and QCDR Measure Submission

	Minimum	Maximum
# of QCDR Simplified Self-Nomination Applications submitted (a)	76	0
# of QCDR Full Self-Nomination Applications submitted (b)	0	76
Total Applications	76	76
Total Annual Hours Per QCDR for Simplified Process (c)		
Total Annual Hours Per QCDR for Full Process (d)	5.5	5.5
Total Annual Hours (e) = (a)*(c) + (b)*(d)	8	8
Cost Per Simplified Process Per QCDR (@ computer systems analyst's labor rate of \$90.02/hr) (f)	418	608
Cost Per Full Process Per QCDR (@ computer systems analyst's labor rate of \$90.02/hr) (g)	\$495.11	\$495.11
Total Annual Cost (h) = (a)*(f)+(b)*(g)	\$720.16	\$720.16
	\$37,628	\$54,732

Both the minimum and maximum burden shown in Table 76 reflect adjustments to the number of respondents due to availability of more recent data, as well as changes resulting from policies finalized in the CY 2019 PFS final rule regarding the definition and minimum participation requirements for entities seeking approval as QCDRs which will be effective beginning with the 2020 MIPS performance period. For purposes of calculating total burden associated with

the final rule as shown in Table 116, only the maximum burden is used.

Independent of the change to our per response time estimate, the decrease in the number of respondents (from 200 to 76) results in an adjustment of between $-1,303$ hours [$(-74 \text{ QCDRs} \times 9.5 \text{ hr}) + (-50 \text{ QCDRs} \times 12 \text{ hr})$] at a cost of $-\$117,297$ ($-1,303 \text{ hr} \times \90.02) and $-1,488$ hours ($-124 \text{ QCDRs} \times 12 \text{ hr}$) at a cost of $-\$133,950$ ($-1,488 \text{ hr} \times \$90.02/\text{hr}$). Accounting for the adjustment in the number of QCDRs, the change in time per QCDR to self-

nominate results in an change of between -304 hours ($76 \text{ QCDRs} \times -4 \text{ hr}$) at a cost of $-\$27,366$ ($-304 \text{ hr} \times \$90.02/\text{hr}$) and -304 hours ($76 \text{ QCDRs} \times -4 \text{ hr}$) at a cost of $-\$27,366$ ($-304 \text{ hr} \times \$90.02/\text{hr}$). As shown in Table 77, when these two adjustments are combined, the net impact ranges between $-1,607$ hours ($-1,304 \text{ hr} - 304 \text{ hr}$) at a cost of $-\$144,663$ ($-\$117,297 - \$27,366$) and $-1,792$ hours ($-1,488 \text{ hr} - 304 \text{ hr}$) at a cost of $-\$161,316$ ($-\$133,950 - \$27,366$).

TABLE 77: Change in Estimated Burden for QCDR Self-Nomination and QCDR Measure Submission

	Minimum Burden	Maximum Burden
Total Annual Hours for QCDRs in CY 2019 Final Rule (a)	2,025	2,400
Total Annual Hours for QCDRs in CY 2020 Final Rule (b)	418	608
Difference (c) = (b)-(a)	-1,607	-1,792
Total Annual Cost for QCDRs in CY 2019 Final Rule (d)	\$182,291	\$216,048
Total Annual Cost for QCDRs in CY 2020 Final Rule (e)	\$37,628	\$54,732
Difference (f) = (e)-(d)	-\$144,663	-\$161,316

QCDRs must comply with requirements on the submission of MIPS data to CMS. The burden associated with the QCDR submission requirements will be the time and effort associated with calculating quality measure results from the data submitted to the QCDR by its participants and submitting these results, the numerator and denominator data on quality measures, the Promoting Interoperability performance category, and improvement activities data to us on behalf of their participants. We expect that the time needed for a QCDR to accomplish these tasks will vary along with the number of MIPS eligible clinicians submitting data to the QCDR and the number of applicable measures. However, we believe that QCDRs already perform many of these activities for their participants. As stated in section III.K.3.g.(3)(a)(i), based on our review of existing 2019 QCDRs through the 2019 QCDR Qualified Posting, approximately 92 QCDRs, or about 72 percent of the QCDRs currently participating in the program are able to submit data for these three performance categories. In addition, through our review of previous qualified postings for the 2018 and 2017 MIPS performance periods, we have observed that in 2018, 73 percent (approximately 110 QCDRs) and in 2017, 73 percent (approximately 83 QCDRs) have been able to submit data for all three of the quality,

Promoting Interoperability, and improvement activity performance categories. Given this, we believe it is reasonable that all QCDRs have the capacity to submit data for the improvement activities and Promoting Interoperability performance categories and are not making any further changes to our burden estimates. Therefore, we believe the 608 hour estimate noted in this section represents the upper bound of QCDR burden, with the potential for less additional MIPS burden if the QCDR already provides similar data submission services.

The following is a summary of the public comments received on the Quality Payment Program ICRs regarding the burden estimates for QCDR self-nomination.

Comment: A few commenters believe that the scope of proposals in the proposed rule increases cost and burden to the point where some third-party intermediaries may end their participation in MIPS. One commenter stated that several provisions would additionally require it to alter business plans, missions, and customer service priorities while another commenter cited their belief that CMS is attempting to shift costs and burden of administering the MIPS program onto specialty societies that create measures and operate QCDRs.

Response: We believe that our policies are intended to standardize and

raise the bar on the services and the quality of the third party intermediaries we have in the MIPS program. Similar to years past, the standards and requirements of QCDRs are higher when compared to that of qualified registries, as we expect QCDRs to have extensive experience in quality reporting, quality measure development, and clinical expertise to not just facilitate reporting, but to also help address measurement gaps found within the program. We believe that QCDRs and qualified registries should further clinician goals of quality improvement by providing meaningful information and services. While we estimate increases in the burden for self-nomination, the burden per QCDR measure submitted for approval, and the costs associated with developing measures and meeting requirements for approval as a QCDR or registry, we believe that the increased cost and burden are significantly outweighed by the positive impact of the policies for MIPS eligible clinicians. We discuss the financial impact of these proposals beyond reporting burden further in section VII.F.10.f. of the RIA.

Comment: One commenter believes that the “true costs” associated with a QCDR application, whether using the simplified or full application, must reflect more than the actual time to input the data required. The commenter further cited costs such as creating and maintaining registries and QCDR

measures, recruitment of clinicians to develop quality improvement initiatives, hiring staff to support and develop content and services identified by these clinicians, and technology solutions necessary to support the quality improvement services.

Response: We recognize there are additional costs and administrative burdens on respondents associated with self-nominating as a QCDR or submitting a QCDR measure beyond the reporting burden estimated in the Collection of Information section of this policy which only accounts for the time required for record keeping, reporting, and third-party disclosures associated with the policy. We discuss the financial impact of these proposals beyond reporting burden further in section VII.F.10.f. of the RIA. We understand that some respondents may require additional time above the 0.5 hours we estimate for the simplified self-nomination process and the 3 hours for the full self-nomination process, but given that we do not include the costs to maintain registries or create measures and quality improvement services in our burden estimate, we believe this estimate is a reasonable average across all respondents based on our review of the nomination process, the information required to complete the nomination form, and the criteria required to self-nominate as a QCDR.

After consideration of public comments, we are making no changes to our estimates as a result of public comments received, however we have decreased our per-respondent burden estimate for completing the full self-nomination form by 0.25 hours due to the decision not to finalize the proposal to require QCDR to engage in activities that will foster improvement in the quality of care. The burden estimates have been updated from the CY 2020 PFS proposed rule (84 FR 40850 through 40854) due to availability of updated data.

(4) CAHPS for MIPS Survey Vendor

This rule is not finalizing any new or revised collection of information requirements or burden related to CMS-approved CAHPS for MIPS survey vendors. The requirements and burden are currently approved by OMB under control number 0938-1222 (CMS-10450). Consequently, we are not making any MIPS survey vendor changes under that control number.

d. ICRs Regarding Quality Data Submission (§§ 414.1325 and 414.1335)

(1) Background

As explained below, this rule will adjust the number of respondents based on current data. The adjustment will increase our total burden estimates while keeping our “per response” estimates unchanged. We are not revising any requirements regarding the number of measures to be submitted or the manner in which they may be submitted.

Under our current policies, two groups of clinicians must submit quality data under MIPS: Those who submit as MIPS eligible clinicians and those who opt to submit data voluntarily but are not subject to MIPS payment adjustments.

Clinicians are ineligible for MIPS if they are newly enrolled to Medicare; are QPs; are partial QPs who elect to not participate in MIPS; are not one of the clinician types included in the definition for MIPS eligible clinician; or do not exceed the low-volume threshold as an individual or as a group.

To determine which QPs should be excluded from MIPS, we used the QP List for the 2019 predictive file that contains current participation in Advanced APMs as of January 15, 2019, that could be connected into our respondent data and are the best estimate of future expected QPs. From this data, we calculated the QP determinations as described in the Qualifying APM Participant definition at § 414.1305 for the 2020 QP performance period. We assumed that all partial QPs will participate in MIPS data collections. Due to data limitations, we could not identify specific clinicians who have not yet enrolled in APMs, but who may become QPs in the future 2020 Medicare QP Performance Period (and therefore will no longer need to submit data to MIPS); hence, our model may underestimate or overestimate the number of respondents.

Using participation data from the 2018 MIPS performance period combined with the estimate of QPs for the 2020 performance period, we estimate a total of 780,605 clinicians will submit quality data as individuals or groups in the 2020 MIPS performance period, a decrease of 183,641 clinicians when compared to our estimate of 964,246 clinicians in the CY 2019 PFS final rule (83 FR 60002).

In the CY 2017 Quality Payment Program final rule, we assumed that any clinician that submits quality data codes to us for the Medicare Part B claims collection type is intending to do so for the Quality Payment Program to ensure

that we fully accounted for any burden that may have resulted from our policies (81 FR 77501 through 77504); we continued using this assumption in both the CY 2018 Quality Payment Program final rule and the CY 2019 PFS final rule. In the CY 2019 PFS final rule, we finalized limiting the Medicare Part B claims collection type to small practices beginning with the 2021 MIPS payment year and allowing clinicians in small practices to report Medicare Part B claims as a group or as individuals (83 FR 59752). However, we also elected to continue using the assumption that all clinicians (except QPs) who submitted data via the Medicare Part B claims collection type in the 2018 MIPS performance period would continue to do so for MIPS to avoid overstating the impact of the change as we lacked the data to accurately estimate both the number of clinicians who would be impacted by the finalized policies and the potential behavioral response of those clinicians who would be required to switch to another collection type (83 FR 60001). For this final rule, beginning with the 2020 MIPS performance period, we assume only clinicians in small practices who submitted quality data via Medicare Part B claims in the 2018 MIPS performance period will continue to do so for the 2020 MIPS performance period. Further, we assume that clinicians in other practices (not small practices) who meet at least one of the following criteria will not need to find an alternate collection type for submitting quality performance category data for the Quality Payment Program for the 2020 MIPS performance period: (1) Facility-based; (2) submitted quality data via Medicare Part B claims and at least one other collection type; or (3) were previously scored as part of a group. Finally, we assume clinicians in other practices (not small practices) who meet all of the following criteria will submit via the MIPS CQM collection type for the 2020 MIPS performance period because the Medicare Part B claims collection type will no longer be available as an option for collecting and reporting quality data: (1) Scored as individuals; (2) not facility-based; and (3) submitted quality data only via the Medicare Part B claims collection type in the 2018 MIPS performance period. Because we do not have data to accurately predict what collection type each affected clinician would use to collect and report quality data, we assume that the affected clinicians will select the MIPS CQM collection type because, when compared to Medicare Part B claims, we believe this is the next most accessible and least burdensome

alternative. Our assumptions result in a 103,103 decrease in the estimated number of clinicians who will submit quality data via Medicare Part B claims and a 12,931 increase in the number of clinicians who will submit via the QCDR/MIPS CQM collection type, as shown in Table 78.

We assume that 100 percent of APM Entities in MIPS APMs will submit quality data to CMS as required under their models. Consistent with assumptions used in the CY 2019 PFS final rule (83 FR 60000 through 60001), we include all quality data voluntarily submitted by MIPS APM participants made at the individual or TIN-level in our respondent estimates. Therefore, we are not finalizing any adjustments to our respondent estimates as a result of the policies discussed in section III.K.3.c.(5)(c)(i)(A) of this final rule, which allows MIPS eligible clinicians participating in MIPS APMs to elect to report MIPS quality measures at either the individual or TIN-level under the APM scoring standard beginning in the 2020 MIPS performance period. To estimate who will be a MIPS APM participant in the 2020 MIPS performance period, we used the latest QP List for the first snapshot data of the 2019 QP performance period. This file was selected to better reflect the expected increase in the number of MIPS APMs in future years compared to previous APM eligibility files. If a MIPS eligible clinician is determined to not be scored as a MIPS APM, then their reporting assumption is based on their reporting for the CY 2018 MIPS performance period. For clinicians who participated in an APM in 2018, were not in an APM in 2019, and did not report MIPS quality data in 2018, we assume they will elect to report to MIPS via the MIPS CQM collection type, similar to our previously stated assumption regarding clinicians who are

required to use an alternate reporting option.

Our burden estimates for the quality performance category do not include the burden for the quality data that APM Entities submit to fulfill the requirements of their APMs. The burden is excluded as sections 1899(e) and 1115A(d)(3) of the Act (42 U.S.C. 1395jj(e) and 1315a(d)(3), respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models tested under section 1115A of the Act (or section 3021 of the Affordable Care Act) are not subject to the PRA.¹³¹ Tables 78, 79 and 80 explain our revised estimates of the number of organizations (including groups, virtual groups, and individual MIPS eligible clinicians) submitting data on behalf of clinicians segregated by collection type.

Table 78 provides our estimated counts of clinicians that will submit quality performance category data as MIPS individual clinicians or groups in the 2020 MIPS performance period based on data from the 2018 MIPS performance period.

For the 2020 MIPS performance period, respondents will have the option to submit quality performance category data via Medicare Part B claims, direct, and log in and upload submission types, and CMS Web Interface. We estimate the burden for collecting data via collection type: Claims, QCDR and MIPS CQMs, eCQMs, and the CMS Web Interface. We believe that, while estimating burden by submission type may be better aligned with the way clinicians participate with the Quality Payment Program, it is more important to reduce confusion and enable greater transparency by maintain consistency with previous rulemaking.

For an individual, group, or third-party to submit MIPS quality, improvement activities, or Promoting

Interoperability performance category data using either the log in and upload or the log in and attest submission type or to access feedback reports, the submitter must have a CMS Enterprise Portal user account. Once the user account is created using the Identity Management Application Process, registration is not required again for future years.

Table 78 shows that in the 2020 MIPS performance period, an estimated 94,846 clinicians will submit data as individuals for the Medicare Part B claims collection type; 391,430 clinicians will submit data as individuals or as part of groups for the MIPS CQM or QCDR collection types; 247,856 clinicians will submit data as individuals or as part of groups via eCQM collection types; and 46,473 clinicians will submit as part of groups via the CMS Web Interface. In the CY 2020 PFS proposed rule, we estimated 109,951 clinicians will submit data as individuals for the Medicare Part B claims collection type; 359,621 clinicians will submit data as individuals or as part of groups for the MIPS CQM or QCDR collection types; 247,329 clinicians will submit data as individuals or as part of groups via eCQM collection types; and 116,342 clinicians will submit as part of groups via the CMS Web Interface (84 FR 40856). Our updated estimates reflect the availability of more recent data.

Table 78 provides estimates of the number of clinicians to collect quality measures data via each collection type, regardless of whether they decide to submit as individual clinicians or as part of groups. Because our burden estimates for quality data submission assume that burden is reduced when clinicians elect to submit as part of a group, we also separately estimate the expected number of clinicians to submit as individuals or part of groups.

TABLE 78—ESTIMATED NUMBER OF CLINICIANS SUBMITTING QUALITY PERFORMANCE CATEGORY DATA BY COLLECTION TYPE

	Medicare Part B claims	QCDR/MIPS CQM	eCQM	CMS web interface	Total
Number of clinicians to collect data by collection type (as individual clinicians or groups) in 2020 MIPS performance period (excludes QPs) (a)	94,846	391,430	247,856	46,473	780,605
* Number of clinicians to collect data by collection type (as individual clinicians or groups) in 2019 MIPS performance period (excludes QPs) (b)	257,260	324,693	243,062	139,231	964,246
Difference (c) = (a) – (b)	– 162,414	+ 66,737	+ 4,794	– 92,758	– 183,641

* Currently approved by OMB under control number 0938–1314 (CMS–10621).

¹³¹ Our estimates do reflect the burden on MIPS APM participants of submitting Promoting

Interoperability performance category data, which is outside the requirements of their APMs.

In the CY 2018 Quality Payment Program final rule (82 FR 53625 through 53626), beginning with the 2019 MIPS performance period, we allowed MIPS eligible clinicians to submit data for multiple collection types for a single performance category. Therefore, with the exception of clinicians not in small practices who previously submitted quality data via Medicare Part B claims, we captured the burden of any eligible clinician that may have historically collected via multiple collection types, as we assume they will continue to collect via multiple collection types and that our MIPS scoring methodology will take the highest score where the same measure is submitted via multiple

collection types. Hence, the estimated numbers of individual clinicians and groups to collect via the various collection types are not mutually exclusive and reflect the occurrence of individual clinicians or groups that collected data via multiple collection types during the 2018 MIPS performance period.

Table 79 uses methods similar to those described to estimate the number of clinicians that will submit data as individual clinicians via each collection type in the 2020 MIPS performance period. We estimate that approximately 94,846 clinicians will submit data as individuals using the Medicare Part B claims collection type; approximately

100,269 clinicians will submit data as individuals using MIPS CQMs or QCDR collection types; and approximately 38,935 clinicians will submit data as individuals using eCQMs collection type. In the CY 2020 PFS proposed rule, we estimated that 109,951 clinicians will submit data as individuals using the Medicare Part B claims collection type; approximately 106,039 clinicians will submit data as individuals using MIPS CQMs or QCDR collection types; and approximately 47,455 clinicians will submit data as individuals using eCQMs collection type (84 FR 40856 through 40857). Our updated estimates reflect the availability of more recent data.

TABLE 79—ESTIMATED NUMBER OF CLINICIANS SUBMITTING QUALITY PERFORMANCE CATEGORY DATA AS INDIVIDUALS BY COLLECTION TYPE

	Medicare Part B claims	QCDR/ MIPS CQM	eCQM	CMS web interface	Total
Number of Clinicians to submit data as individuals in 2020 MIPS Performance Period (excludes QPs) (a)	95,846	100,269	38,935	0	234,050
* Number of Clinicians to submit data as individuals in 2019 MIPS Performance Period (excludes QPs) (b)	257,260	71,439	47,557	0	376,256
Difference (c) = (a) - (b)	-162,414	+28,830	-8,622	0	-142,206

* Currently approved by OMB under control number 0938-1314 (CMS-10621).

Consistent with the policy finalized in the CY 2018 Quality Payment Program final rule that for MIPS eligible clinicians who collect measures via Medicare Part B claims, MIPS CQM, eCQM, or QCDR collection types and submit more than the required number of measures (82 FR 53735 through 54736), we will score the clinician on the required measures with the highest assigned measure achievement points and thus, the same clinician may be counted as a respondent for more than one collection type. Therefore, our columns in Table 79 are not mutually exclusive.

Table 80 provides our estimated counts of groups or virtual groups that will submit quality data on behalf of clinicians for each collection type in the 2020 MIPS performance period and reflects our assumption that the formation of virtual groups will reduce burden. With the previously discussed

exceptions regarding groups who experienced a change in APM participation status between the 2018 and 2019 MIPS performance periods, we assume that groups that submitted quality data as groups in the 2018 MIPS performance period will continue to submit quality data either as groups or virtual groups for the same collection types as they did as a group or TIN within a virtual group for the 2020 MIPS performance period. Specifically, we estimate that 10,949 groups and virtual groups will submit data for the QCDR or MIPS CQM collection types on behalf of 291,161 clinicians; 4,398 groups and virtual groups will submit for eCQM collection types on behalf of 208,921 eligible clinicians; and 104 groups will submit data via the CMS Web Interface on behalf of 46,473 clinicians. In the CY 2020 PFS proposed rule, we estimated that 10,552 groups and virtual groups will submit data for the QCDR or MIPS

CQM collection types on behalf of 253,582 clinicians; 4,332 groups and virtual groups will submit for eCQM collection types on behalf of 199,874 eligible clinicians; and 104 groups will submit data via the CMS Web Interface on behalf of 116,342 clinicians (84 FR 40857). Our updated estimates reflect availability of more recent data. In the CY 2017 and CY 2018 Quality Payment Program final rules, the CY 2019 PFS final rule, the CY 2020 PFS proposed rule, we were required to adjust our respondent estimates to account for MIPS eligible clinicians who we assumed would respond as participants in a virtual group. Because we are now able to base our respondent estimates on data from the 2018 MIPS performance period, which was the first performance period in which clinicians could submit as participants in a virtual group, we are no longer making the adjustment for virtual group participation.

TABLE 80—ESTIMATED NUMBER OF GROUPS AND VIRTUAL GROUPS SUBMITTING QUALITY PERFORMANCE CATEGORY DATA BY COLLECTION TYPE ON BEHALF OF CLINICIANS

	Medicare Part B claims	QCDR/ MIPS CQM	eCQM	CMS web interface	Total
Number of groups to collect data by collection type (on behalf of clinicians) in 2020 MIPS performance period (excludes QPs) (a)	0	10,949	4,398	104	15,451
* Number of groups to collect data by collection type on behalf of clinicians in 2019 MIPS performance period (b)	0	10,542	4,304	286	15,132

TABLE 80—ESTIMATED NUMBER OF GROUPS AND VIRTUAL GROUPS SUBMITTING QUALITY PERFORMANCE CATEGORY DATA BY COLLECTION TYPE ON BEHALF OF CLINICIANS—Continued

	Medicare Part B claims	QCDR/ MIPS CQM	eCQM	CMS web interface	Total
Difference (c) = (a) – (b)	0	+ 407	+94	– 182	319

* Currently approved by OMB under control number 0938–1314 (CMS–10621).

The burden associated with the submission of quality performance category data have some limitations. We believe it is difficult to quantify the burden accurately because clinicians and groups may have different processes for integrating quality data submission into their practices’ workflows. Moreover, the time needed for a clinician to review quality measures and other information, select measures applicable to their patients and the services they furnish, and incorporate the use of quality measures into the practice workflows is expected to vary along with the number of measures that are potentially applicable to a given clinician’s practice and by the collection type. For example, clinicians submitting

data via the Medicare Part B claims collection type need to integrate the capture of quality data codes for each encounter whereas clinicians submitting via the eCQM collection types may have quality measures automated as part of their EHR implementation.

We believe the burden associated with submitting quality measures data will vary depending on the collection type selected by the clinician, group, or third-party. As such, we separately estimated the burden for clinicians, groups, and third parties to submit quality measures data by the collection type used. For the purposes of our burden estimates for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, we also assume

that, on average, each clinician or group will submit 6 quality measures. In terms of the quality measures available for clinicians and groups to report for the 2020 MIPS performance period, the total number of quality measures will be 218. The new MIPS quality measures proposed for inclusion in MIPS for the 2020 MIPS performance period and future years are found in Table Group A of Appendix 1; MIPS quality measures with proposed substantive changes can be found in Table Group D of Appendix 1; and MIPS quality measures proposed for removal can be found in Table Group C of Appendix 1. These measures are stratified by collection type in Table 81, as well as counts of new, removed, and substantively changed measures.

TABLE 81—SUMMARY OF QUALITY MEASURES FOR THE 2020 MIPS PERFORMANCE PERIOD

Collection type	Number of measures finalized as new	Number of measures finalized for removal	Number of measures finalized with a substantive change	Number of measures remaining for CY 2020 *
Medicare Part B Claims Specifications	0	9	19	55
MIPS CQMs Specifications	2	39	72	196
eCQM Specifications	1	4	34	47
Survey—CSV	0	0	0	1
CMS Web Interface Measure Specifications	0	0	9	10
Administrative Claims	0	0	0	1
Total	3	42	83	218

* A measure may be specified under multiple collection types but will only be counted once in the total.

For the 2020 MIPS performance period, there is a net reduction of 39 quality measures across all collection types compared to the 257 measures finalized for the 2019 MIPS performance period (83 FR 60003). We do not anticipate that removing these measures will increase or decrease the reporting burden on clinicians and groups as respondents are still required to submit quality data for 6 measures.

As discussed in section III.K.3.c.(1)(c)(ii) of this rule, we proposed to adopt a higher data completeness threshold (the percentage of eligible patients the clinician must check to see whether the measure applies to) for the 2020 MIPS performance period, such that MIPS

eligible clinicians and groups submitting quality measure data on QCDR measures, MIPS CQMs, and eCQMs must submit data on at least 70 percent of the MIPS eligible clinician or group’s patients that meet the denominator criteria, regardless of payer for the 2020 MIPS performance period. We believe this proposal may increase administrative burden for some clinicians as it affects the amount of data they have to collect, but will have no impact on regulatory burden as it affects neither the number of quality measures they are required to report nor the amount of data they must report for each quality measure once results have been aggregated.

(2) Quality Payment Program Identity Management Application Process

This rule is not finalizing any new or revised collection of information requirements or burden related to the identity management application process. The requirements and burden are currently approved by OMB under control number 0938–1314 (CMS–10621). Consequently, we are not making any identity management application process changes under that control number.

(3) Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type

This rule is not finalizing any new or revised collection of information

requirements related to the submission of Medicare Part B claims data for the quality performance category. However, we are making adjustments to our currently approved burden estimates based on more recent data. The requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As noted in Table 78, based on 2018 MIPS performance period data, we assume that 94,846 individual clinicians will collect and submit quality data via the Medicare Part B claims collection type. This rule is finalizing to adjust the number of Medicare Part B claims respondents from 257,260 to 94,846 (a decrease of 162,414) based on more recent data and our updated methodology of accounting only for clinicians in small practices who submitted such claims data in the 2018 MIPS performance period rather than all clinicians who submitted quality data codes to us for the Medicare Part B claims collection type. This is a decrease of 15,105 from the CY 2020 PFS proposed rule estimate of 109,951 respondents due to availability of more recent data (84 FR 40858 through 40859). We continue to anticipate that the Medicare Part B claims submission process for MIPS is operationally similar to the way the claims submission process functioned under the PQRS. Specifically, clinicians will

need to gather the required information, select the appropriate QDCs, and include the appropriate QDCs on the Medicare Part B claims they submit for payment. Clinicians will collect QDCs as additional (optional) line items on the CMS–1500 claim form or the electronic equivalent HIPAA transaction 837–P, approved by OMB under control number 0938–1197. This final rule's provisions do not necessitate the revision of either form and we made no changes to the associated estimate of reporting burden.

As shown in Table 82, consistent with our currently approved per respondent burden estimates, we estimate that the burden of quality data submission using Medicare Part B claims will range from 0.15 hours at a cost of \$13.50 (0.15 hr × \$90.02/hr) to 7.2 hours at a cost of \$648.14 (7.2 hr × \$90.02/hr) per respondent. The burden will involve becoming familiar with MIPS data submission requirements. We believe that the start-up cost for a clinician's practice to review measure specifications is 7 hours, consisting of 3 hours at \$109.36/hr for a practice administrator, 1 hour at \$202.86/hr for a clinician, 1 hour at \$45.24/hr for an LPN/medical assistant, 1 hour at \$90.02/hr for a computer systems analyst, and 1 hour at \$38.00/hr for a billing clerk. We are not revising our currently approved per response burden estimates.

The estimate for reviewing and incorporating measure specifications for the claims collection type is higher than that of QCDRs/Registries or eCQM collection types due to the more manual, and therefore, more burdensome nature of Medicare Part B claims measures.

Considering both data submission and start-up requirements, the estimated time (per clinician) ranges from a minimum of 7.15 hours (0.15 hr + 7 hr) to a maximum of 14.2 hours (7.2 hr + 7 hr). In this regard the total annual time ranges from 678,149 hours (7.15 hr × 94,846 clinicians) to 1,346,813 hours (14.2 hr × 94,846 clinicians). The estimated annual cost (per clinician) ranges from \$717.70 [(0.15 hr × \$90.02/hr) + (3 hr × \$109.36/hr) + (1 hr × \$90.02/hr) + (1 hr × \$45.24/hr) + (1 hr × \$38.00/hr) + (1 hr × \$202.86/hr)] to a maximum of \$1,352.34 [(7.2 hr × \$90.02/hr) + (3 hr × \$109.36/hr) + (1 hr × \$90.02/hr) + (1 hr × \$45.24/hr) + (1 hr × \$38.00/hr) + (1 hr × \$202.86/hr)]. The total annual cost ranges from a minimum of \$68,071,259 (94,846 clinicians × \$717.70) to a maximum of \$128,264,419 (94,846 clinicians × \$1,352.34).

Table 82 summarizes the range of total annual burden associated with clinicians submitting quality data via Medicare Part B claims.

BILLING CODE 4120-01-P

TABLE 82: Estimated Burden for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type

	Minimum Burden	Median Burden	Maximum Burden
# of Clinicians (a)	94,846	94,846	94,846
Hours Per Clinician to Submit Quality Data (b)	0.15	1.05	7.2
# of Hours Practice Administrator Review Measure Specifications (c)	3	3	3
# of Hours Computer Systems Analyst Review Measure Specifications (d)	1	1	1
# of Hours LPN Review Measure Specifications (e)	1	1	1
# of Hours Billing Clerk Review Measure Specifications (f)	1	1	1
# of Hours Clinician Review Measure Specifications (g)	1	1	1
Annual Hours per Clinician (h) = (b)+(c)+(d)+(e)+(f)+(g)	7.15	8.05	14.2
Total Annual Hours (i) = (a)*(h)	678,149	763,510	1,346,813
Cost to Submit Quality Data (@ computer systems analyst’s labor rate of \$90.02/hr) (j)	\$13.50	\$94.52	\$648.14
Cost to Review Measure Specifications (@ practice administrator’s labor rate of \$109.36/hr) (k)	\$328.08	\$328.08	\$328.08
Cost to Review Measure Specifications (@ computer systems analyst’s labor rate of \$90.02/hr) (l)	\$90.02	\$90.02	\$90.02
Cost to Review Measure Specifications (@ LPN’s labor rate of \$45.24/hr) (m)	\$45.24	\$45.24	\$45.24
Cost to Review Measure Specifications (@ billing clerk’s labor rate of \$38.00/hr) (n)	\$38.00	\$38.00	\$38.00
Cost to Review Measure Specifications (@ physician’s labor rate of \$202.86/hr) (o)	\$202.86	\$202.86	\$202.86
Total Annual Cost Per Clinician (p) = (j)+(k)+(l)+(m)+(n)+(o)	\$717.70	\$798.72	\$1,352.34
Total Annual Cost (q) = (a)*(p)	\$68,071,259	\$75,755,492	\$128,264,419

As shown in Table 83, using the unchanged currently approved per respondent burden estimates which range from \$717.70 to \$1,352.34, the decrease in number of respondents from 257,260 to 94,846 results in a total

adjustment of between – 1,161,260 hours (– 162,414 respondents × 7.15 hr/ respondent) at a cost of – \$116,565,015 (– 162,414 respondents × \$717.70/ respondent) and – 2,306,279 hours (– 162,414 respondents × 14.2 hr/

respondent) at a cost of – \$219,639,598 (– 162,414 respondents × \$1,352.34/ respondent). For purposes of calculating total burden associated with the final rule as shown in Table 116, only the maximum burden is used.

TABLE 83: Change in Estimated Burden for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type

	Minimum Burden	Median Burden	Maximum Burden
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	1,839,409	2,070,943	3,653,092
Total Annual Hours for Respondents in CY 2020 Final Rule (b)	678,149	763,510	1,346,813
Difference (c) = (b)-(a)	-1,161,260	-1,307,433	-2,306,279
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	\$184,636,274	\$205,478,964	\$347,904,017
Total Annual Cost for Respondents in CY 2020 Final Rule (e)	\$68,071,259	\$75,755,492	\$128,264,419
Difference (f) = (e)-(d)	-\$116,565,015	-\$129,723,472	-\$219,639,598

We received no public comments related to the burden estimates for submission of quality performance category data using the Medicare Part B

claims collection type. The burden estimates have been updated from the CY 2020 PFS proposed rule (84 FR

40858 through 40859) due to availability of updated data.

(4) Quality Data Submission by Individuals and Groups Using MIPS CQM and QCDR Collection Types

This rule is not finalizing any new or revised collection of information requirements related to the MIPS CQM or QCDR collection types. However, we are making adjustments to our currently approved burden estimates based on more recent data. The requirements and burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

As noted in Tables 78, 79, and 80, and based on 2018 MIPS performance period data, we assume that 391,430 clinicians will submit quality data as individuals or groups using MIPS CQM or QCDR collection types. Of these, we expect 100,269 clinicians, as shown in Table 79, will submit as individuals and 10,949 groups and virtual groups, as shown in Table 80, are expected to submit on behalf of the remaining 291,161 clinicians. This is a decrease of 5,770 individuals and an increase of 397 groups from the CY 2020 PFS proposed rule's estimates of 106,039 individuals and 10,552 groups due to availability of more recent data (84 FR 40860). As previously stated, we assume clinicians in other practices (not small practices) who meet all of the following criteria will submit via the MIPS CQM collection type for the 2020 MIPS performance period because the Medicare Part B claims collection type will no longer be available as an option

for collecting and reporting quality data: (1) Scored as individuals; (2) not facility-based; and (3) submitted quality data only via the Medicare Part B claims collection type in the 2018 MIPS performance period. As a result of this assumption and our use of more recent data, this rule is finalizing to adjust the number of QCDR and MIPS CQM respondents from 81,981 to 111,218 (an increase of 29,237). Given that the number of measures required is the same for clinicians and groups, we expect the burden to be the same for each respondent collecting data via MIPS CQM or QCDR, whether the clinician is participating in MIPS as an individual or group.

Under the MIPS CQM and QCDR collection types, the individual clinician or group may either submit the quality measures data directly to us, log in and upload a file, or utilize a third-party intermediary to submit the data to us on the clinician's or group's behalf.

We estimate that the burden associated with the QCDR collection type is similar to the burden associated with the MIPS CQM collection type; therefore, we discuss the burden for both together below. For MIPS CQM and QCDR collection types, we estimate an additional time for respondents (individual clinicians and groups) to become familiar with MIPS collection requirements and, in some cases, specialty measure sets and QCDR measures. Therefore, we believe that the burden for an individual clinician or

group to review measure specifications and submit quality data total 9.083 hours at \$872.37 per individual clinician or group. This consists of 3 hours at \$90.02/hr for a computer systems analyst (or their equivalent) to submit quality data along with 2 hours at \$109.36/hr for a practice administrator, 1 hour at \$90.02/hr for a computer systems analyst, 1 hour at \$45.24/hr for a LPN/medical assistant, 1 hour at \$38.00/hr for a billing clerk, and 1 hour at \$202.86/hr for a clinician to review measure specifications. Additionally, clinicians and groups who do not submit data directly will need to authorize or instruct the qualified registry or QCDR to submit quality measures' results and numerator and denominator data on quality measures to us on their behalf. We estimate that the time and effort associated with authorizing or instructing the quality registry or QCDR to submit this data will be approximately 5 minutes (0.083 hours) per clinician or group (respondent) for a cost of \$7.50 (0.083 hr × \$90.02/hr for a computer systems analyst).

In aggregate, we estimate an annual burden of 1,010,193 hours (9.083 hr/response × 111,218 groups plus clinicians submitting as individuals) at a cost of \$97,023,431 (111,218 responses × \$872.37/response). Based on these assumptions, we have estimated in Table 84 the burden for these submissions.

TABLE 84: Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM/QCDR Collection Type

	Burden Estimate
# of clinicians submitting as individuals (a)	100,269
# of groups submitting via QCDR or MIPS CQM on behalf of individual clinicians (b)	10,949
# of Respondents (groups plus clinicians submitting as individuals) (c)=(a)+(b)	111,218
Hours Per Respondent to Report Quality Data (d)	3
# of Hours Practice Administrator Review Measure Specifications (e)	2
# of Hours Computer Systems Analyst Review Measure Specifications (f)	1
# of Hours LPN Review Measure Specifications (g)	1
# of Hours Billing Clerk Review Measure Specifications (h)	1
# of Hours Clinician Review Measure Specifications (i)	1
# of Hours Per Respondent to Authorize Qualified Registry to Report on Respondent's Behalf (j)	0.083
Annual Hours Per Respondent (k)= (d)+(e)+(f)+(g)+(h)+(i)+(j)	9.083
Total Annual Hours (l) = (c)*(k)	1,010,193
Cost Per Respondent to Submit Quality Data (@ computer systems analyst's labor rate of \$90.02/hr) (m)	\$270.06
Cost to Review Measure Specifications (@ practice administrator's labor rate of \$109.36/hr) (n)	\$218.72
Cost Computer System's Analyst Review Measure Specifications (@ computer systems analyst's labor rate of \$90.02/hr) (o)	\$90.02

Cost Billing Clerk Review Measure Specifications (@ clerk's labor rate of \$38.00/hr) (q)	\$38.00
Cost Clinician Review Measure Specifications (@ physician's labor rate of \$202.86/hr) (r)	\$202.86
Cost for Respondent to Authorize Qualified Registry/QCDR to Report on Respondent's Behalf (@ computer systems analyst's labor rate of \$90.02/hr) (s)	\$7.50
Total Annual Cost Per Respondent (t) = (m)+(n)+(o)+(p)+(q)+(r)+(s)	\$872.37
Total Annual Cost (u) = (c)*(t)	\$97,023,431

As shown in Table 85, using the unchanged currently approved per respondent burden estimate, the

increase in number of respondents from 81,981 to 111,218 results in a total increase of 265,560 hours (29,237

respondents × 9.083 hr/respondent) at a cost of \$25,505,530 (29,237 respondents × \$872.37/respondent).

TABLE 85: Change in Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM/QCDR Collection Type

	Burden Estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	744,633
Total Annual Hours for Respondents in CY 2020 Final Rule (b)	1,010,193
Difference (c) = (b)-(a)	+265,560
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	\$71,517,901
Total Annual Cost for Respondents in CY 2020 Final Rule (e)	\$97,023,431
Difference (f) = (e)-(d)	+\$25,505,530

We received no public comments related to the burden estimates for submission of quality performance category data using the MIPS CQM/QCDR collection type. The burden estimates have been updated from the

CY 2020 PFS proposed rule (84 FR 40860 through 40861) due to availability of updated data.

(5) Quality Data Submission by Clinicians and Groups: eCQM Collection Type

This rule is not finalizing any new or revised collection of information requirements related to the eCQM

collection type. However, we are making adjustments to our currently approved burden estimates based on more recent data. The requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As noted in Tables 78, 79, and 80, based on 2018 MIPS performance period data, we assume that 254,469 clinicians will elect to use the eCQM collection type; 38,935 clinicians are expected to submit eCQMs as individuals; and 4,398 groups and virtual groups are expected to submit eCQMs on behalf of the remaining 208,921 clinicians. This rule finalizes to adjust the number of eCQM respondents from 51,861 to 43,333 (a decrease of 8,528) based on more recent data. This is a decrease of 8,520 individuals and an increase of 66 groups from the CY 2020 PFS proposed rule's estimates of 47,455 individuals and 4,332 groups due to availability of more recent data (84 FR 40861). We expect the burden to be the same for each respondent using the eCQM collection type, whether the clinician is

participating in MIPS as an individual or group.

Under the eCQM collection type, the individual clinician or group may either submit the quality measures data directly to us from their eCQM, log in and upload a file, or utilize a third-party intermediary to derive data from their CEHRT and submit it to us on the clinician's or group's behalf.

To prepare for the eCQM collection type, the clinician or group must review the quality measures on which we will be accepting MIPS data extracted from eCQMs, select the appropriate quality measures, extract the necessary clinical data from their CEHRT, and submit the necessary data to the CMS-designated clinical data warehouse or use a health IT vendor to submit the data on behalf of the clinician or group. We assume the burden for collecting quality measures data via eCQM is similar for clinicians and groups who submit their data directly to us from their CEHRT and clinicians and groups who use a health IT vendor to submit the data on their behalf. This includes extracting the

necessary clinical data from their CEHRT and submitting the necessary data to the CMS-designated clinical data warehouse.

We estimate that it will take no more than 2 hours at \$90.02/hr for a computer systems analyst to submit the actual data file. The burden will also involve becoming familiar with MIPS submission. In this regard, we estimate it will take 6 hours for a clinician or group to review measure specifications. Of that time, we estimate 2 hours at \$109.36/hr for a practice administrator, 1 hour at \$202.86/hr for a clinician, 1 hour at \$90.02/hr for a computer systems analyst, 1 hour at \$45.24/hr for an LPN/medical assistant, and 1 hour at \$38.00/hr for a billing clerk.

In aggregate we estimate an annual burden of 346,664 hours (8 hr × 43,333 groups and clinicians submitting as individuals) at a cost of \$33,577,875 (43,333 responses × \$774.88/response). Based on these assumptions, we have estimated in Table 86 the burden for these submissions.

TABLE 86: Estimated Burden for Quality Performance Category: Clinicians (Submitting Individually or as Part of a Group) Using the eCQM Collection Type

	Burden estimate
# of clinicians submitting as individuals (a)	38,935
# of Groups submitting via EHR on behalf of individual clinicians (b)	4,398
# of Respondents (groups and clinicians submitting as individuals) (c)=(a)+(b)	43,333
Hours Per Respondent to Submit MIPS Quality Data File to CMS (d)	2
# of Hours Practice Administrator Review Measure Specifications (e)	2
# of Hours Computer Systems Analyst Review Measure Specifications (f)	1
# of Hours LPN Review Measure Specifications (g)	1
# of Hours Billing Clerk Review Measure Specifications (h)	1
# of Hours Clinicians Review Measure Specifications (i)	1
Annual Hours Per Respondent (j)=(d)+(e)+(f)+(g)+(h)+(i)	8
Total Annual Hours (k)=(c)*(j)	346,664
Cost Per Respondent to Submit Quality Data (@ computer systems analyst's labor rate of \$90.02/hr) (l)	\$180.04
Cost to Review Measure Specifications (@ practice administrator's labor rate of \$109.36/hr) (m)	\$218.72
Cost to Review Measure Specifications (@ computer systems analyst's labor rate of \$90.02/hr) (n)	\$90.02
Cost to Review Measure Specifications (@ LPN's labor rate of \$45.24/hr) (o)	\$45.24
Cost to Review Measure Specifications (@ clerk's labor rate of \$38.00/hr) (p)	\$38.00
Cost to D21Review Measure Specifications (@ physician's labor rate of \$202.86/hr) (q)	\$202.86
Total Cost Per Respondent (r)=(l)+(m)+(n)+(o)+(p)+(q)	\$774.88
Total Annual Cost (s) = (c)*(r)	\$33,577,875

As shown in Table 87, using the unchanged currently approved per

respondent burden estimate, the decrease in number of respondents from

51,861 to 43,333 results in a total difference of – 68,224 hours (– 8,528

respondents × 8 hr/respondent) at a cost of –\$6,608,177 (– 8,528 respondents × \$774.88/respondent).

TABLE 87: Change in Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the eCQM Collection Type

	Burden Estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	414,888
Total Annual Hours for Respondents in CY 2020 Final Rule (b)	346,664
Difference (c) = (b)-(a)	-68,224
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	\$40,186,052
Total Annual Cost for Respondents in CY 2020 Final Rule (e)	\$33,577,875
Difference (f) = (e)-(d)	-\$6,608,177

We received no public comments related to the burden estimates for submission of quality performance category data using the eCQM collection type. The burden estimates have been updated from the CY 2020 PFS proposed rule (84 FR 40861 through 40862) due to availability of updated data.

(6) Quality Data Submission via CMS Web Interface

This rule is not finalizing any new or revised collection of information requirements related to submission of quality data via the CMS Web Interface. However, we are making adjustments to our currently approved burden estimates based on more recent data. The requirements and burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

We assume that 104 groups will submit quality data via the CMS Web

Interface based on the number of groups who completed 100 percent of reporting quality data via the Web Interface in the 2018 MIPS performance period. This is a decrease of 182 groups from the currently approved number of 286 groups provided in the CY 2019 PFS final rule (83 FR 60007) due to receipt of more current data. We estimate that 46,473 clinicians will submit as part of groups via this method, a decrease of 92,758 from our currently approved estimate of 139,231 clinicians. This is a decrease of 69,869 individuals from the CY 2020 PFS proposed rule’s estimate of 116,342 individuals due to availability of more recent data (84 FR 40862).

The burden associated with the group submission requirements is the time and effort associated with submitting data on a sample of the organization’s beneficiaries that is prepopulated in the CMS Web Interface. Our burden estimate for submission includes the time (61.67 hours) needed for each

group to populate data fields in the web interface with information on approximately 248 eligible assigned Medicare beneficiaries and submit the data (we will partially pre-populate the CMS Web Interface with claims data from their Medicare Part A and Part B beneficiaries). The patient data either can be manually entered, uploaded into the CMS Web Interface via a standard file format, which can be populated by CEHRT, or submitted directly. Each group must provide data on 248 eligible assigned Medicare beneficiaries (or all eligible assigned Medicare beneficiaries if the pool of eligible assigned beneficiaries is less than 248) for each measure. In aggregate, we estimate an annual burden of 6,414 hours (104 groups × 61.67 hr) at a cost of \$577,359 (6,414 hr × \$90.02/hr). Based on the assumptions discussed in this section, Table 88 summarizes the burden for groups submitting to MIPS via the CMS Web Interface.

TABLE 88: Estimated Burden for Quality Data Submission via the CMS Web Interface

	Burden Estimate
# of Eligible Group Practices (a)	104
Total Annual Hours Per Group to Submit (b)	61.67
Total Annual Hours (c) = (a)*(b)	6,414
Cost Per Group to Report (@ computer systems analyst’s labor rate of \$90.02/hr.) (d)	\$5,551.53
Total Annual Cost (e) = (a)*(d)	\$577,359

As shown in Table 89, using our unchanged currently approved per respondent burden estimate, the

decrease in number of respondents results in a total adjustment of – 11,224

hours (– 182 respondents × 61.67 hr) at – \$1,010,379 (– 11,224 hr × \$90.02/hr).

TABLE 89: Change in Estimated Burden for Quality Data Submission via the CMS Web Interface

	Burden Estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	17,637
Total Annual Hours for Respondents in CY 2020 Final Rule (b)	6,413
Difference (c) = (b)-(a)	-11,224
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	\$1,587,739
Total Annual Cost for Respondents in CY 2020 Final Rule (e)	\$577,359
Difference (f) = (e)-(d)	-\$1,010,379

We received no public comments related to the burden estimates for submission of quality performance category data using the CMS Web Interface. The burden estimates have been updated from the CY 2020 PFS proposed rule (84 FR 40862 through 40863) due to availability of updated data.

(7) Beneficiary Responses to CAHPS for MIPS Survey

This rule is not finalizing any new or revised collection of information requirements or burden related to the CAHPS for MIPS survey. The CAHPS for MIPS survey requirements and burden are currently approved by OMB under control number 0938-1222 (CMS-10450). Consequently, we are not making any MIPS survey vendor changes under that control number.

(8) Group Registration for CMS Web Interface

This rule is not finalizing any new or revised collection of information requirements related to the group registration for CMS Web Interface. However, we are adjusting our currently approved burden estimates based on more recent data. The adjusted burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

Groups interested in participating in MIPS using the CMS Web Interface for the first time must complete an online registration process. After first time registration, groups will only need to opt out if they are not going to continue to submit via the CMS Web Interface. In Table 90, we estimate that the registration process for groups under MIPS involves approximately 0.25

hours at \$90.02/hr for a computer systems analyst (or their equivalent) to register the group.

In this rule, we are adjusting the number of respondents from 67 to 69 based on more recent data; an increase of 18 from our estimate of 51 in the CY 2020 PFS proposed rule (84 FR 40863). We assume that approximately 69 groups will elect to use the CMS Web Interface for the first time during the 2020 MIPS performance period based on the number of new registrations received during the CY 2019 registration period; an increase of 2 compared to the number of groups currently approved by OMB. As shown in Table 90, we estimate a burden of 17.25 hours (69 new registrations × 0.25 hr/registration) at a cost of \$1,553 (17.25 hr × \$90.02/hr).

TABLE 90: Estimated Burden for Group Registration for CMS Web Interface

	Burden Estimate
Number of New Groups Registering for CMS Web Interface (a)	69
Annual Hours Per Group (b)	0.25
Total Annual Hours (c) = (a)*(b)	17.25
Labor rate for a computer systems analyst (d)	\$90.02/hr
Total Annual Cost (e) = (a)*(d)	\$1,553

As shown in Table 91 using our unchanged currently approved per respondent burden estimates, the

decrease in the number of groups registering to submit MIPS data via the CMS Web Interface results in an

adjustment to the total time burden of 0.5 hours at a cost of \$45 (– 2 groups × 0.25 hr × \$90.02/hr).

TABLE 91: Change in Estimated Burden for Group Registrations for the CMS Web Interface

	Burden Estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	16.75
Total Annual Hours for Respondents in CY 2020 Final Rule (b)	17.25
Difference (c) = (b)-(a)	+0.5
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	\$1,508
Total Annual Cost for Respondents in CY 2020 Final Rule (e)	\$1,553
Difference (f) = (e)-(d)	+\$45

We received no public comments related to the burden estimates for group registrations for the CMS Web Interface. The burden estimates have been updated from the CY 2020 PFS proposed rule (84 FR 40863 through 40864) due to availability of updated data.

(9) Group Registration for CAHPS for MIPS Survey

This rule is not finalizing any new or revised collection of information requirements or burden related to the group registration for the CAHPS for MIPS Survey. The CAHPS for MIPS survey requirements and burden are currently approved by OMB under control number 0938-1222 (CMS-10450). Consequently, are not making any MIPS survey vendor changes under that control number.

e. ICRs Regarding the Nomination of Quality Measures

The requirements and burden associated with this data submission will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

Quality measures are selected annually through a call for quality measures under consideration, with a final list of quality measures being published in the **Federal Register** by November 1 of each year. Under section 1848(q)(2)(D)(ii) of the Act, the Secretary must solicit a "Call for Quality Measures" each year. Specifically, the Secretary must request that eligible clinician organizations and other relevant stakeholders identify and submit quality measures to be considered for selection in the annual list of MIPS quality measures, as well as updates to the measures. Under section 1848(q)(2)(D)(ii) of the Act, eligible clinician organizations are professional organizations as defined by nationally recognized specialty boards of certification or equivalent certification boards.

As we described in the CY 2017 Quality Payment Program final rule (81 FR 77137), we will accept quality measures submissions at any time, but only measures submitted during the timeframe provided by us through the pre-rulemaking process of each year will be considered for inclusion in the annual list of MIPS quality measures for the performance period beginning 2 years after the measure is submitted. This process is consistent with the pre-rulemaking process and the annual call for measures, which are further described at <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Pre-Rule-Making.html>.

To identify and submit a quality measure, eligible clinician organizations and other relevant stakeholders use a one-page online form that requests information on background, a gap analysis which includes evidence for the measure, reliability, validity, endorsement and a summary which includes how the proposed measure relates to the Quality Payment Program and the rationale for the measure. In addition, proposed measures must be accompanied by a completed Peer Review Journal Article form. As discussed in section III.K.3.c.(1)(d)(i) of this rule, we are finalizing that beginning with the 2020 Call for Measures process, MIPS quality measure stewards will be required to link their MIPS quality measures to existing and related cost measures and improvement activities, as applicable and feasible. MIPS quality measure stewards will also be required to provide a rationale as to how they believe their measure correlates to other performance category measures and activities. We believe this will require approximately 0.6 hours at \$109.36/hr for a practice administrator and 0.4 hours at \$202.86 for a clinician to research existing measures or activities and provide a rationale for the linkage

to the new measure. We also estimate it will require 0.3 hours at \$109.36/hr for a practice administrator to make a strategic decision to nominate and submit a measure and 0.2 hours at \$202.86/hr for clinician review time. We recognize there is additional burden on respondents associated with development of a new quality measure beyond the 1.5 hour estimate (0.6 hr + 0.4 hr + 0.3 hr + 0.2 hr) which only accounts for the time required for recordkeeping, reporting, and third-party disclosures associated with the policy; but we believe this estimate to be reasonable to nominate and submit a measure. The 1.5 hour estimate also assumes that submitters will have the necessary information to complete the nomination form readily available, which we believe is a reasonable assumption. Additionally, some submitters familiar with the process or who are submitting multiple measures may require significantly less time, while other submitters may require more if the opposite is true. Representing an average across all respondents based on our review of the nomination process, the information required to complete the nomination form, and the criteria required to nominate the measure, we believe the total estimate of 1.5 hours per measure to be reasonable and appropriate.

As shown in Table 92, we estimate that 28 submissions will be received during the 2020 Call for Quality Measures based on the number of submissions received during the 2019 Call for Quality Measures process; a decrease of 112 compared to the number of submissions currently approved by OMB (140 submissions). This is an increase of 2 from the CY 2020 PFS proposed rule due to availability of more recent data (84 FR 40865). In keeping with the focus on clinicians as the primary source for recommending new quality measures, we are using

practice administrators and clinician time for our burden estimates.

Consistent with the CY 2017 Quality Payment Program final rule, we also estimate it will take 4 hours at \$202.86/hr for a clinician (or equivalent) to complete the Peer Review Journal

Article Form (81 FR 77153 through 77155). This assumes that measure information is available and testing is complete in order to have the necessary information to complete the form, which we believe is a reasonable assumption.

As shown in Table 92, in aggregate we estimate an annual burden of 154 hours (28 submissions \times 5.5 hr/submission) at a cost of \$28,884 {28 submissions \times [(0.9 hr \times \$109.36/hr) + (4.6 hr \times \$202.86/hr)]}.

TABLE 92: Estimated Burden for Call for Quality Measures

	Burden estimate
# of New Quality Measures Submitted for Consideration (a)	28
# of Hours Per Practice Administrator to Identify, Propose, and Link Measure (b)	0.9
# of Hours Per Clinician to Identify and Link Measure (c)	0.6
# of Hours Per Clinician to Complete Peer Review Article Form (d)	4.00
Annual Hours Per Response (e)= (b) + (c) + (d)	5.50
Total Annual Hours (f) = (a)*(e)	154
Cost to Identify and Submit Measure (@ practice administrator's labor rate of \$109.36/hr.) (g)	\$98.42
Cost to Identify Quality Measure and Complete Peer Review Article Form (@ physician's labor rate of \$202.86/hr.) (h)	\$933.16
Total Annual Cost Per Respondent (i)=(g)+(h)	\$1,031.58
Total Annual Cost (j)=(a)*(i)	\$28,884

Independent of the decrease in the number of new quality measures submitted for consideration, the increase in burden per nominated measure results in a difference of 140 hours at a cost of \$20,546 {140

submissions \times [(0.6 hr \times \$109.36/hr) + (0.4 hr \times \$202.86/hr)]}. The decrease in the number of new quality measures submitted results in an adjustment of -616 hours at -\$115,537 (-112 submissions \times [(0.9 hr \times \$109.36/hr) +

(4.6 hr \times \$202.86/hr)]}. As shown in Table 93, in aggregate, the combine impact of these changes is -476 hours (140 - 616) at a cost of -\$94,991 (\$20,546 - \$115,537).

TABLE 93: Change in Estimated Burden for Call for Quality Measures

	Burden Estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	630
Total Annual Hours for Respondents in CY 2020 Final Rule (b)	154
Difference (c) = (b)-(a)	-476
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	\$123,875
Total Annual Cost for Respondents in CY 2020 Final Rule (e)	\$28,884
Difference (f) = (e)-(d)	-\$94,991

We received no public comments related to the burden estimates for the Call for Quality Measures. The burden estimates have been updated from the CY 2020 PFS proposed rule (84 FR 40864 through 40865) due to availability of updated data.

f. ICRs Regarding Promoting Interoperability Data (§§ 414.1375 and 414.1380)

(1) Background

For the 2020 MIPS performance period, clinicians and groups can submit Promoting Interoperability data through direct, log in and upload, or log in and attest submission types. We have

worked to further align the Promoting Interoperability performance category with other MIPS performance categories. With the exception of submitters who elect to use the log in and attest submission type for the Promoting Interoperability performance category, which is not available for the quality performance category, we anticipate that individuals and groups will use the same data submission type for the both of these performance categories and that the clinicians, practice managers, and computer systems analysts involved in supporting the quality data submission will also support the Promoting Interoperability data submission process. In the 2019

and prior MIPS performance periods, individuals and groups submitting data for the quality performance category via a qualified registry or QCDR that did not also support reporting of data for the Promoting Interoperability or improvement activity performance categories would be required to submit data for these performance categories using an alternate submission type. The finalized policies discussed in sections III.K.3.g.(3)(a)(i) and III.K.3.g.(4)(a)(i) of this rule requiring qualified registries and QCDRs to be able to submit data for the quality, improvement activities, and Promoting Interoperability performance categories will alleviate this issue. Hence, the following burden estimates

show only incremental hours required above and beyond the time already accounted for in the quality data submission process. Although this analysis assesses burden by performance category and submission type, we emphasize that MIPS is a consolidated program and submission analysis and decisions are expected to be made for the program as a whole.

(2) Reweighting Applications for Promoting Interoperability and Other Performance Categories

This rule is not finalizing any new or revised collection of information requirements related to the submission of reweighting applications for Promoting Interoperability and other performance categories. However, we are making adjustments to our currently approved burden estimates based on more recent data from the 2019 MIPS performance period. The adjusted burden estimates will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

As established in the CY 2017 and CY 2018 Quality Payment Program final rules, MIPS eligible clinicians who meet the criteria for a significant hardship or other type of exception may submit an application requesting a zero percent weighting for the Promoting Interoperability performance category in the following circumstances: Insufficient internet connectivity, extreme and uncontrollable circumstances, lack of control over the availability of CEHRT, clinicians who are in a small practice, and decertified EHR technology (81 FR 77240 through 77243 and 82 FR 53680 through 53686, respectively). In addition, in the CY 2018 Quality Payment Program final rule, we established that MIPS eligible clinicians and groups citing extreme and uncontrollable circumstances may also apply for a reweighting of the quality, cost, and/or improvement activities performance categories (82 FR 53783 through 53785). As discussed in section III.K.3.d.(2)(b)(ii)(A), we are finalizing, beginning with the 2018 MIPS performance period and 2020 MIPS payment year, to reweight the performance categories for a MIPS eligible clinician who we determine has

data for a performance category that are inaccurate, unusable or otherwise compromised due to circumstances outside of the control of the clinician or its agents if we learn the relevant information prior to the beginning of the associated MIPS payment year. Because this is a new policy and we believe these occurrences are rare based on our experience, we are unable to estimate the number of clinicians, groups, or third party intermediaries that may contact us regarding a potential data issue. Similarly, the extent and source of documentation provided to us for each event may vary considerably. Therefore, we are not finalizing any changes to our currently approved burden estimates as a result of this policy. Respondents who apply for a reweighting for any of these performance categories have the option of applying for reweighting for the Promoting Interoperability performance category on the same online form. We assume that respondents applying for a reweighting of the Promoting Interoperability performance category due to extreme and uncontrollable circumstances will also request a reweighting of at least one of the other performance categories simultaneously and not submit multiple reweighting applications.

Table 94 summarizes the burden for clinicians to apply for reweighting the Promoting Interoperability performance category to zero percent due to a significant hardship exception (including a significant hardship exception for small practices) or as a result of a decertification of an EHR. Based on the number of reweighting applications received for the 2018 MIPS performance period, we assume 30,472 respondents (eligible clinicians or groups) will submit a request to reweight the Promoting Interoperability performance category to zero percent due to a significant hardship (including clinicians in small practices) or EHR decertification and an additional 148 respondents will submit a request only to reweight one or more of the quality, cost, or improvement activity performance categories, for a total of 30,620 reweighting applications

submitted. This is an increase of 24,447 from our estimate of 6,025 in the CY 2020 PFS proposed rule due to availability of more recent data (84 FR 40866). A significant portion of this increase is due to a data issue CMS was made aware of and is specific to a single third-party intermediary. While we do not anticipate similar data issues to occur in each performance period, we do believe future similar incidents may occur and are electing to use this data without adjustment to reflect this belief. Of our total respondent estimate of 30,620, we estimate that 24,377 respondents (eligible clinicians or groups) will submit a request for reweighting the Promoting Interoperability performance category to zero percent due to extreme and uncontrollable circumstances, insufficient internet connectivity, lack of control over the availability of CEHRT, or as a result of a decertification of an EHR. An additional 6,243 respondents will submit a request for reweighting the Promoting Interoperability performance category to zero percent as a small practice experiencing a significant hardship.

The application to request a reweighting to zero percent only for the Promoting Interoperability performance category is a short online form that requires identifying the type of hardship experienced or whether decertification of an EHR has occurred and a description of how the circumstances impair the clinician or group's ability to submit Promoting Interoperability data, as well as some proof of circumstances beyond the clinician's control. The application for reweighting of the quality, cost, Promoting Interoperability, and/or improvement activities performance categories due to extreme and uncontrollable circumstances requires the same information with the exception of there being only one option for the type of hardship experienced. We estimate it will take 0.25 hours at \$90.02/hr for a computer system analyst to complete and submit the application. As shown in Table 94, we estimate an annual burden of 7,655 hours (30,620 applications × 0.25 hr/application) at a cost of \$689,103 (7,655 hr × \$90.02/hr).

TABLE 94: Estimated Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories

	Burden estimate
# of Eligible Clinicians or Groups Applying Due to Significant Hardship and Other Exceptions (a)	24,377
# of Eligible Clinicians or Groups Applying Due to Significant Hardship for Small Practice (b)	6,243
Total Respondents Due to Hardships, Other Exceptions and Hardships for Small Practices (c)	30,620
Hours Per Applicant per application submission (d)	0.25
Total Annual Hours (e)=(a)*(c)	7,655
Labor Rate for a computer systems analyst (f)	\$90.02/hr
Total Annual Cost (g)=(a)*(f)	\$689,103

As shown in Table 95, using our unchanged currently approved per respondent burden estimate, the

increased number of respondents results in a total adjustment of 6,145 hours (24,579 respondents × 0.25 hr/

respondent) and \$553,150 (24,579 respondents × \$22.50/respondent).

TABLE 95: Change in Estimated Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories

	Burden Estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	1,510
Total Annual Hours for Respondents in CY 2020 Final Rule (b)	7,655
Difference (c) = (b)-(a)	+6,145
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	\$135,953
Total Annual Cost for Respondents in CY 2020 Final Rule (e)	\$689,103
Difference (f) = (e)-(d)	+\$553,150

We received no public comments related to the burden estimates for reweighting applications for Promoting Interoperability and other performance categories. The burden estimates have been updated from the CY 2020 PFS proposed rule (84 FR 40866 through 40867) due to availability of updated data.

(3) Submitting Promoting Interoperability Data

This rule is not finalizing any new or revised collection of information requirements related to the submission of Promoting Interoperability data. However, we are making adjustments to our currently approved burden estimates based on updated estimates of QPs and MIPS APMs for 2020 MIPS performance period. The adjusted burden estimates will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

A variety of organizations will submit Promoting Interoperability data on behalf of clinicians. Clinicians not participating in a MIPS APM may submit data as individuals or as part of

a group. In the CY 2017 Quality Payment Program final rule (81 FR 77258 through 77260, 77262 through 77264) and CY 2019 PFS final rule (83 FR 59822–59823), we established that eligible clinicians in MIPS APMs (including the Shared Savings Program) may report for the Promoting Interoperability performance category as an APM Entity group, individuals, or a group.

As shown in Table 96, based on data from the 2018 MIPS performance period, we estimate that a total of 74,281 respondents consisting of 59,865 individual MIPS eligible clinicians and 14,416 groups and virtual groups will submit Promoting Interoperability data; this is an adjustment to the number of respondents from 93,869 to 74,281 (a decrease of 19,588) based on more recent data. This is a decrease of 21,493 individuals and an increase of 1,911 groups from the CY 2020 PFS proposed rule's estimates of 81,358 individuals and 12,505 groups also due to availability of more recent data (84 FR 40868). In the CY 2017 and CY 2018 Quality Payment Program final rules,

the CY 2019 PFS final rule, the CY 2020 PFS proposed rule, we were required to adjust our respondent estimates to account for MIPS eligible clinicians who we assumed would respond as participants in a virtual group. Because we are now able to base our respondent estimates on data from the 2018 MIPS performance period, which was the first performance period in which clinicians could submit as participants in a virtual group, we are no longer making the adjustment for virtual group participation.

Because our respondent estimates are based on the number of actual submissions received for the Promoting Interoperability performance category, it is not necessary to account for policies adopted in the CY 2017 Quality Payment Program final rule regarding reweighting, which state that if a clinician submits Promoting Interoperability data, they will be scored and the performance category will not be reweighted (81 FR 77238–77245). This approach is identical to the approach we used in the CY 2019 PFS final rule (83 FR 60013 through 60014);

however, we failed to state the distinction in that final rule that we no longer need to make modifications to our estimates due to the use of actual MIPS submission data. As established in the CY 2017 and CY 2018 Quality Payment Program final rules and the CY 2019 PFS final rule, certain MIPS eligible clinicians will be eligible for automatic reweighting of the Promoting Interoperability performance category to zero percent, including MIPS eligible clinicians that are hospital-based, ambulatory surgical center-based, non-patient facing clinicians, physician assistants, nurse practitioners, clinician nurse specialists, certified registered nurse anesthetists, physical therapists; occupational therapists; qualified speech-language pathologists or qualified audiologist; clinical psychologists; and registered dietitians or nutrition professionals (81 FR 77238 through 77245, 82 FR 53680 through 53687, and 83 FR 59819 through 59820, respectively). For the same reasons discussed above regarding our use of data reflecting the actual number of Promoting Interoperability data submissions received, these estimates already account for the reweighting policies in the CY 2017 and CY 2018 Quality Payment Program final rules, including exceptions for MIPS eligible clinicians who have experienced a significant hardship (including clinicians who are in small practices), as well as exceptions due to decertification of an EHR (81 FR 77240 through 77243 and 82 FR 53680 through 53686).

In section III.K.3.c.(4)(f)(iii) of this rule, we are finalizing to revise the definition of a hospital-based MIPS eligible clinician under § 414.1305 to include groups and virtual groups. We are finalizing that, beginning with the 2022 MIPS payment year, a hospital-based MIPS eligible clinician under § 414.1305 means an individual MIPS eligible clinician who furnishes 75 percent or more of his or her covered

professional services in an inpatient hospital, on-campus outpatient hospital, off campus outpatient hospital, or emergency room setting based on claims for the MIPS determination period, and a group or virtual group provided that more than 75 percent of the NPIs billing under the group’s TIN or virtual group’s TINs, as applicable, meet the definition of a hospital-based individual MIPS eligible clinician during the MIPS determination period. We are also finalizing to revise § 414.1380(c)(2)(iii) to specify that for the Promoting Interoperability performance category to be reweighted for a MIPS eligible clinician who elects to participate in MIPS as part of a group or virtual group, all of the MIPS eligible clinicians in the group or virtual group must qualify for reweighting, or the group or virtual group must meet the finalized revised definition of a hospital-based MIPS eligible clinician or the definition of a non-patient facing MIPS eligible clinician as defined in § 414.1305. We believe these policies could result in a decrease in the number of data submissions for the Promoting Interoperability performance category, but we do not currently have the data necessary to determine how many groups would elect to forego submission. As additional information becomes available in future years, we will revisit the impact of this policy and adjust our burden estimates accordingly.

As discussed in section III.K.3.c.(4)(d)(i)(B) of this rule, we are finalizing to allow clinicians to satisfy the optional bonus Query of PDMP measure by submitting a “yes/no” attestation, rather than reporting a numerator and denominator. In the CY 2019 PFS final rule, we updated our burden assumptions from 3 hours to 2.67 hours to reflect the change from 5 base measures, 9 performance measures, and 4 bonus measures to the reporting of 4 base measures (83 FR 60013 through 60014). Due to a lack of data

regarding the number of health care providers who would submit data for bonus Promoting Interoperability measures, we have consistently been unable to estimate burden related to the reporting of bonus measures and are therefore unable to account for any change in burden due to the proposed change to a “yes/no” attestation for the Query of PDMP measure. If we have better data in the future, we may reassess our burden assumptions and whether we can reasonably quantify the burden associated with the reporting of bonus measures.

We assume that MIPS eligible clinicians scored under the APM scoring standard, as described in section III.K.3.c.(5) of this rule, will continue to submit Promoting Interoperability data the same as in 2018. Each MIPS eligible clinician in an APM Entity reports data for the Promoting Interoperability performance category through either their group TIN or individual reporting. Sections 1899 and 1115A of the Act (42 U.S.C. 1395jjj and 42 U.S.C. 1315a, respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models are not subject to the PRA. However, in the CY 2019 PFS final rule, we established that MIPS eligible clinicians who participate in the Shared Savings Program are no longer limited to reporting for the Promoting Interoperability performance category through their ACO participant TIN (83 FR 59822–59823). Burden estimates for this final rule assume group TIN-level reporting as we believe this is the most reasonable assumption for the Shared Savings Program, which requires that ACOs include full TINs as ACO participants. As we receive updated information which reflects the actual number of Promoting Interoperability data submissions submitted by Shared Savings Program ACO participants, we will update our burden estimates accordingly.

TABLE 96—ESTIMATED NUMBER OF RESPONDENTS TO SUBMIT PROMOTING INTEROPERABILITY PERFORMANCE DATA ON BEHALF OF CLINICIANS

	Number of respondents
Number of individual clinicians to submit Promoting Interoperability (a)	59,865
Number of groups to submit Promoting Interoperability (b)	14,416
Total Respondents in 2020 MIPS performance period (CY 2020 Final Rule) (c) = (a) + (b)	74,281
* Total Respondents in 2019 MIPS performance period (CY 2019 Final Rule) (d)	93,869
Difference (e) = (c) – (d)	– 19,588

We estimate the time required for an individual or group to submit Promoting Interoperability data to be 2.67 hours. As previously discussed, we are

finalizing changes to § 414.1400(a)(2) to state that beginning with the 2023 MIPS payment year, QCDRs and qualified registries must be able to submit data for

all the MIPS performance categories identified in the regulation. Based on our review of 2019 qualified registries and QCDRs, we have determined that 70

percent and 72 percent of these vendors, respectively, are already able to submit data for these performance categories. For clinicians who currently utilize qualified registries or QCDRs that have not previously offered the ability to report Promoting Interoperability or improvement activity data, we believe this will result in a reduction of burden as it will simplify MIPS reporting. In order to estimate the impact on reporting burden, we would need to correlate the specific individual clinicians and groups who submitted

quality performance category data via the MIPS CQM/QCDR collection type that are required to report data for both the quality and Promoting Interoperability performance categories with the specific qualified registries or QCDRs that are affected by this proposal. Currently, we do not have the necessary information to perform this correlation and are therefore unable to estimate the resulting impact on burden. If data becomes available in the future which enables us to perform this

analysis, we will update our burden estimates at that time.

As shown in Table 97, the total burden estimate for submission of data on the specified Promoting Interoperability objectives and measures is estimated to be 198,083 hours (74,281 respondents \times 2.67 incremental hours for a computer analyst's time above and beyond the clinician, practice manager, and computer system's analyst time required to submit quality data) at a cost of \$17,831,402 (198,083 hr \times \$90.02/hr).

TABLE 97: Estimated Burden for Promoting Interoperability Performance Category Data Submission

	Burden Estimate
Number of individual clinicians to submit Promoting Interoperability (a)	59,865
Number of groups to submit Promoting Interoperability (b)	14,416
Total (c) = (a) + (b)	74,281
Total Annual Hours Per Respondent (b)	2.67
Total Annual Hours (c) = (a)*(b)	198,083
Labor rate for a computer systems analyst to submit Promoting Interoperability data (d)	\$90.02/hr
Total Annual Cost (e) = (a)*(d)	\$17,831,402

As shown in Table 98, using our unchanged currently approved per respondent burden estimate, the

decrease in number of respondents results in a total adjustment of -52,235 hours (-19,588 respondents \times 2.67 hr/

respondent) at a cost of -\$4,702,165 (-52,235 hr \times \$90.02/hr).

TABLE 98: Change in Estimated Burden for Promoting Interoperability Performance Category Data Submission

	Burden Estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	250,317
Total Annual Hours for Respondents in CY 2020 Final Rule (b)	198,083
Difference (c) = (b)-(a)	-52,235
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	\$22,533,566
Total Annual Cost for Respondents in CY 2020 Final Rule (e)	\$17,831,402
Difference (f) = (e)-(d)	-\$4,702,165

We received no public comments related to the burden estimates for submission of data for the Promoting Interoperability performance category. The burden estimates have been updated from the CY 2020 PFS proposed rule (84 FR 40867 through 40869) due to availability of updated data.

g. ICRs Regarding the Nomination of Promoting Interoperability (PI) Measures

This rule is not finalizing any new or revised collection of information requirements related to the nomination of Promoting Interoperability measures. However, we are making adjustment to our currently approved burden estimates based on data from the 2019 MIPS performance period. The adjusted burden estimates will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

Consistent with our requests for stakeholder input on quality measures and improvement activities, we also requested potential measures for the Promoting Interoperability performance category that measure patient outcomes, emphasize patient safety, support improvement activities and the quality performance category, and build on the advanced use of CEHRT using 2015 Edition standards and certification criteria. Promoting Interoperability measures may be submitted via the Call for Promoting Interoperability

Performance Category Measures Submission Form that includes the measure description, measure type (if applicable), reporting requirement, and CEHRT functionality used (if applicable). This rule does not propose any changes to that form.

We estimate 10 proposals will be submitted for new Promoting Interoperability measures, based on the number of proposals submitted during

the CY 2019 nomination period. This is a decrease of 37 from the estimate currently approved by OMB (47 proposals) under the aforementioned control number and a decrease of 18 from the 28 proposals estimated in the CY 2020 PFS proposed rule due to availability of more recent data (84 FR 40869). We estimate it will take 0.5 hours per organization to submit an activity to us, consisting of 0.3 hours at

\$109.36/hr for a practice administrator to make a strategic decision to nominate that activity and submit an activity to us via email and 0.2 hours at \$202.86/hr for a clinician to review the nomination. As shown in Table 99, we estimate an annual burden of 5 hours (10 proposals × 0.5 hr/response) at a cost of \$734 (10 × [(0.3 h × \$109.36/hr) + (0.2 hr × \$202.86/hr)]).

TABLE 99: Estimated Burden for Call for Promoting Interoperability Measures

	Burden Estimate
# of Promoting Interoperability Measure Nominations (a)	10
# of Hours Per Practice Administrator to Identify and Propose Measure (b)	0.30
# of Hours Per Clinician to Identify Measure (c)	0.20
Annual Hours Per Respondent (d)=(b) + (c)	0.50
Total Annual Hours (e) = (a)*(d)	5
Cost to Identify and Submit Measure (@ practice administrator's labor rate of \$109.36/hr) (f)	\$32.81
Cost to Identify Improvement Measure (@ physician's labor rate of \$202.86/hr) (g)	\$40.57
Total Annual Cost Per Respondent (h)=(f)+(g)	\$73.38
Total Annual Cost (i)=(a)*(h)	\$734

As shown in Table 100, using our unchanged currently approved per respondent burden estimate, the

decrease in the number of respondents results in an adjustment of -18.5 hours

at a cost of -\$2,715 (-37 respondents × 0.5 hr × \$73.38 per respondent).

TABLE 100: Change in Estimated Burden for Call for Promoting Interoperability Measures

	Burden Estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	23.5
Total Annual Hours for Respondents in CY 2020 Final Rule (b)	5
Difference (c) = (b)-(a)	-18.5
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	\$3,449
Total Annual Cost for Respondents in CY 2020 Final Rule (e)	\$734
Difference (f) = (e)-(d)	-\$2,715

BILLING CODE 4120-01-C

We received no public comments related to the burden estimates for the Call for Promoting Interoperability measures. The burden estimates have been updated from the CY 2020 PFS proposed rule (84 FR 40869 through 40870) due to availability of updated data.

h. ICRs Regarding Improvement Activities Submission (§§ 414.1305, 414.1355, 414.1360, and 414.1365)

This rule is not finalizing any new or revised collection of information requirements related to the submission of Improvement Activities data. However, we are making adjustments to our currently approved burden

estimates based on more recent data. The adjusted burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

As discussed in section III.K.3.c.(3)(d)(iii) of this rule, after consideration of comments received, we are modifying our final policy to state that beginning with the 2020 MIPS performance period and for future years, each improvement activity for which groups and virtual groups submit a "yes" response must be performed by at least 50 percent of the NPIs billing under the group's TIN or virtual group's TINs, as applicable; and the NPIs must perform the same activity during a continuous 90-day period within the same performance year. Because eligible

clinicians attest to improvement activities at the group level, there is no impact on reporting burden as a result of this policy.

As previously discussed, beginning with the 2023 MIPS payment year and for future years, we are finalizing to require QCDRs and qualified registries be able to submit data for three performance categories: Quality, improvement activities, and Promoting Interoperability; our discussion of burden for submitting Promoting Interoperability data in section VI.B.7.f.(3) noted our inability to account for the reduction in burden associated with the proposal. Consistent with our decision not to change our per respondent burden estimate to submit

Promoting Interoperability data, we are not changing our per respondent burden estimate to submit improvement activity data as a result of this policy.

Furthermore, as discussed in section III.K.3.c.(3)(e)(i) of this rule, we are finalizing to establish removal factors to consider when proposing to remove improvement activities from the Inventory. However, we do not believe this will affect reporting burden, because respondents will still be required to submit the same number of improvement activities and this policy will not require respondents to submit any additional information. We are also finalizing for the CY 2020 performance period and future years to: Add 2 new improvement activities, modify 7 existing improvement activities, and remove 15 existing improvement activities. Because MIPS eligible clinicians are still required to submit the same number of activities, we do not expect these proposals to affect our currently approved burden estimates. In addition, in order for an eligible clinician or group to receive credit for being a patient-centered medical home or comparable specialty practice, the eligible clinician or group must attest in the same manner as any other improvement activity. In section III.K.3.c.(3)(d)(iii) of this final rule, we are also finalizing: (1) To modify the definition of rural area; (2) to update § 414.1380(b)(3)(ii)(A) and (C) remove the reference to the four listed accreditation organizations to be recognized as patient-centered medical homes and removing the reference to the specific accrediting organization for comparable specialty practices; and (3) to conclude and remove the CMS Study on Factors Associated with Reporting Quality Measures. Because these policies neither impact the number of respondents nor the time to submit data for the improvement activities performance category, we have made no associated changes to our burden estimate. We discuss the cost reduction associated with concluding the CMS Study on Factors Associated with Reporting Quality Measures in section VII.F.10.d of this final rule.

While these finalized policies do not add additional reporting burden, we have adjusted our currently approved burden estimates based on more recent data. The adjusted burden will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

The CY 2018 Quality Payment Program final rule provides: (1) That for activities that are performed for at least a continuous 90 days during the performance period, MIPS eligible

clinicians must submit a “yes” response for activities within the Improvement Activities Inventory (82 FR 53651); (2) that the term “recognized” is accepted as equivalent to the term “certified” when referring to the requirements for a patient-centered medical home to receive full credit for the improvement activities performance category for MIPS (82 FR 53649); and (3) that for the 2020 MIPS payment year and future years, to receive full credit as a certified or recognized patient-centered medical home or comparable specialty practice, at least 50 percent of the practice sites within the TIN must be recognized as a patient-centered medical home or comparable specialty practice (82 FR 53655).

In the CY 2017 Quality Payment Program final rule, we described how we determine MIPS APM scores (81 FR 77185). We compare the requirements of the specific MIPS APM with the list of activities in the Improvement Activities Inventory and score those activities in the same manner that they are otherwise scored for MIPS eligible clinicians (81 FR 77817 through 77831). If, based on our assessment, the MIPS APM does not receive the maximum improvement activities performance category score, then the APM Entity can submit additional improvement activities. We anticipate that MIPS APMs in the 2020 MIPS performance period will not need to submit additional improvement activities as the models will already meet the maximum improvement activities performance category score.

A variety of organizations and in some cases, individual clinicians, will submit improvement activity performance category data. For clinicians who are not part of APMs, we assume that clinicians submitting quality data as part of a group through direct, log in and upload submission types, and CMS Web Interface will also submit improvement activities data. In the 2019 and prior MIPS performance periods, individuals and groups submitting data for the quality performance category through a MIPS CQM or QCDR that did not also support reporting of data for the Promoting Interoperability or improvement activity performance categories would be required to submit data for these performance categories using an alternate submission type, the finalized policies discussed in sections III.K.3.g.(3)(a)(i) and III.K.3.g.(4)(a)(i) of this rule requiring qualified registries and QCDRs to be able to submit data for all three of the MIPS performance categories identified in § 414.1400(a)(2) will help to alleviate this issue. As finalized in the CY 2017 Quality

Payment Program final rule (81 FR 77264), APM Entities only need to report improvement activities data if the CMS-assigned improvement activities score is below the maximum improvement activities score. Our CY 2018 Quality Payment Program final rule burden estimates assumed that all APM Entities will receive the maximum CMS-assigned improvement activities score (82 FR 53921 through 53922).

As represented in Table 101, based on 2018 MIPS performance period data, we estimate that a total of 103,813 respondents consisting of 86,935 individual clinicians and 16,878 groups will submit improvement activities during the 2020 MIPS performance period; this is an adjustment to the number of respondents from 136,004 to 103,813 (a decrease of 32,191) based on more recent data. This is a decrease of 15,819 individuals and an increase of 1,117 groups from the estimates of 102,754 individuals and 15,761 groups provided in the CY 2020 PFS proposed rule due to availability of more recent data (84 FR 40871). In the CY 2017 and CY 2018 Quality Payment Program final rules, the CY 2019 PFS final rule, the CY 2020 PFS proposed rule, we were required to adjust our respondent estimates to account for MIPS eligible clinicians who we assumed would respond as participants in a virtual group. Because we are now able to base our respondent estimates on data from the 2018 MIPS performance period, which was the first performance period in which clinicians could submit as participants in a virtual group, we are no longer making the adjustment for virtual group participation. In addition, as previously discussed regarding our estimate of clinicians and groups submitting data for the quality and Promoting Interoperability performance categories, we have updated our estimates for the number of clinicians and groups that will submit improvement activities data based on projections of the number of eligible clinicians that were not QPs or members of an APM in the 2018 MIPS performance period but will be in the 2020 MIPS performance period, and will therefore not be required to submit improvement activities data.

Our burden estimates assume there will be no improvement activities burden for MIPS APM participants. We will assign the improvement activities performance category score at the APM Entity level. We also assume that the MIPS APM models for the 2020 MIPS performance period will qualify for the maximum improvement activities performance category score and, as

such, APM Entities will not submit any additional improvement activities.

TABLE 101: Estimated Numbers of Organizations Submitting Improvement Activities Performance Category Data on Behalf of Clinicians

	Count
# of clinicians to participate in improvement activities data submission as individuals during the 2020 MIPS performance period (a)	86,935
# of Groups to submit improvement activities on behalf of clinicians during the 2020 MIPS performance period (b)	16,878
Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the 2020 MIPS performance period (CY 2020 Final Rule) (c) = (a) + (b)	103,813
*Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the 2019 MIPS performance period (CY 2019 Final Rule) (d)	136,004
Difference (e)=(c)-(d)	-32,191

*Currently approved by OMB under control number 0938-1314 (CMS-10621).

Consistent with the CY 2019 PFS final rule, we estimate that the per response time required per individual or group is 5 minutes at \$90.02/hr for a computer system analyst to submit by logging in

and manually attesting that certain activities were performed in the form and manner specified by CMS with a set of authenticated credentials (83 FR 60016).

As shown in Table 102, we estimate an annual burden of 8,651 hours (103,813 responses × 5 minutes/60) at a cost of \$778,771 (8,651 hr × \$90.02/hr).

TABLE 102: Estimated Burden for Improvement Activities Submission

	Burden Estimate
Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the 2019 MIPS performance period (a)	103,813
Total Annual Hours Per Respondent (b)	5 minutes
Total Annual Hours (c) = (a)*(b)	8,651
Labor rate for a computer systems analyst to submit improvement activities (d)	\$90.02/hr
Total Annual Cost (e) = (c)*(d)	\$778,771

As shown in Table 103, using our unchanged currently approved per respondent burden estimate, the

decrease in the number of respondents results in an adjustment of -2,683 hours (-32,191 responses × 5 minutes/

60) at a cost of -\$241,486 (-2,683 hr \$90.02/hr).

TABLE 103: Change in Estimated Burden for Improvement Activities Submission

	Burden Estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	11,334
Total Annual Hours for Respondents in CY 2020 Final Rule (b)	8,651
Difference (c) = (b)-(a)	-2,683
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	\$1,020,257
Total Annual Cost for Respondents in CY 2020 Final Rule (e)	\$778,771
Difference (f) = (e)-(d)	-\$241,486

We received no public comments related to the burden estimates for submission of data for the Improvement

Activities performance category. The burden estimates have been updated from the CY 2020 PFS proposed rule (84

FR 40870 through 40872) due to availability of updated data.

i. ICRs Regarding the Nomination of Improvement Activities (§ 414.1360)

This rule is not finalizing any new or revised reporting, recordkeeping, or third-party disclosure requirements related to the nomination of improvement activities. However, we are making adjustments to our currently approved burden estimates based on data from the 2019 MIPS performance period. The adjusted burden estimates will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In the CY 2018 Quality Payment Program final rule, for the 2018 and future MIPS performance periods,

stakeholders were provided an opportunity to propose new activities formally via the Annual Call for Activities nomination form that was posted on the CMS website (82 FR 53657). The 2019 Annual Call for Activities lasted from February 1, 2019 through July 1, 2019, during which we received 31 nominations of new or modified activities which will be evaluated for the Improvement Activities Under Consideration (IAUC) list for possible inclusion in the CY 2020 Improvement Activities Inventory. Based on the number of improvement activity nominations received in the CY 2019 Annual Call for Activities, we estimate that we will receive 31

nominations for the 2020 Annual Call for Activities, which is a decrease of 94 from the 125 nominations currently approved by OMB and a decrease of 97 from the estimate of 128 provided in the CY 2020 PFS proposed rule (84 FR 40872).

We estimate 1.2 hours at \$109.36/hr for a practice administrator or equivalent to make a strategic decision to nominate and submit that activity and 0.8 hours at \$202.86/hr for a clinician's review. As shown in Table 104, we estimate an annual burden of 62 hours (31 nominations × 2 hr/nomination) at a cost of \$9,099 (31 × [(1.2 hr × \$109.36/hr) + (0.8 hr × \$202.86/hr)]).

TABLE 104: Estimated Burden for Nomination of Improvement Activities

	Burden Estimate
# of Nominations of New Improvement Activities (a)	31
# of Hours Per Practice Administrator to Identify and Propose Activity (b)	1.2
# of Hours Per Clinician to Identify Activity (c)	0.8
Annual Hours Per Respondent (d)=(b) + (c)	2
Total Annual Hours (e) = (a)*(d)	62
Cost to Identify and Submit Activity (@ practice administrator's labor rate of \$109.36/hr) (f)	\$131.23
Cost to Identify Improvement Activity (@ physician's labor rate of \$202.86/hr) (g)	\$162.29
Total Annual Cost Per Respondent (h)=(f)+(g)	\$293.52
Total Annual Cost (i)=(a)*(h)	\$9,099

As shown in Table 105, using our unchanged currently approved per respondent burden estimate, the

decrease in the number of nominations results in an adjustment of –188 hours at a cost of –\$27,591 { –94 activities ×

[(1.2 hr × \$109.36/hr) + (0.8 hr × \$202.86/hr)]}.

TABLE 105: Change in Estimated Burden for Nomination of Improvement Activities

	Burden Estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	250
Total Annual Hours for Respondents in CY 2020 Final Rule (b)	62
Difference (c) = (b)-(a)	-188
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	\$36,690
Total Annual Cost for Respondents in CY 2020 Final Rule (e)	\$9,099
Difference (f) = (e)-(d)	-\$27,591

We received no public comments related to the burden estimates for nomination of Improvement Activities. The burden estimates have been updated from the CY 2020 PFS proposed rule (84 FR 40872 through 40873) due to availability of updated data.

j. ICRs Regarding the Cost Performance Category (§ 414.1350)

The cost performance category relies on administrative claims data. The Medicare Parts A and B claims submission process (OMB control number 0938–1197; CMS–1500 and CMS–1490S) is used to collect data on cost measures from MIPS eligible clinicians. MIPS eligible clinicians are

not required to provide any documentation by CD or hardcopy, including for the 10 episode-based measures we are finalizing to include in the cost performance category as discussed in section III.K.3.c.(2)(b)(iii) of this rule. Moreover, the provisions of this final rule do not result in the need to add or revise or delete any claims data fields. Therefore, we are not finalizing any new or revised collection

of information requirements or burden for MIPS eligible clinicians resulting from the cost performance category.

k. Quality Payment Program ICRs Regarding Partial QP Elections (§§ 414.1310(b)(ii) and 414.1430)

This rule is not finalizing any new or revised collection of information requirements related to the Partial QP Elections to participate in MIPS as a MIPS eligible clinician. However, we are making adjustments to our currently approved burden estimates based on updated projections for the 2020 MIPS performance period. The adjusted burden will be submitted to OMB for

approval under control number 0938–1314 (CMS–10621).

In section III.K.4.d.(2)(b), we are finalizing that, beginning for eligible clinicians who become Partial QPs in the 2021 MIPS performance period, Partial QP status will only apply to the TIN/NPI combination through which Partial QP status is attained. Any Partial QP election will only apply to TIN/NPI combination through which Partial QP status is attained so that an eligible clinician who is a Partial QP for only one TIN/NPI combination may still report under MIPS for other TIN/NPI combinations.

As shown in Table 106, based on our predictive QP analysis for the 2020 QP

performance period, which accounts for the increase in QP and Partial QP thresholds, we estimate that 12 APM Entities and 2,010 eligible clinicians will make the election to participate as a Partial QP in MIPS representing approximately 15,500 Partial QPs, an increase of 1,941 from the 81 elections currently approved by OMB under the aforementioned control number. We estimate it will take the APM Entity representative or eligible clinician 15 minutes (0.25 hr) to make this election. In aggregate, we estimate an annual burden of 505.5 hours (2,022 respondents × 0.25 hr/election) at a cost of \$45,080 (505.5 hours × \$90.02/hr).

TABLE 106: Estimated Burden for Partial QP Election

	Burden Estimate
# of respondents making Partial QP election (12 APM Entities, 2010 eligible clinicians) (a)	2,022
Total Hours Per Respondent to Elect to Participate as Partial QP (b)	0.25
Total Annual Hours (c) = (a)*(b)	505.5
Labor rate for computer systems analyst (d)	\$90.02/hr
Total Annual Cost (e) = (c)*(d)	\$45,505

As shown in Table 107, using our unchanged currently approved per respondent burden estimate, the

increase in the number of Partial QP elections results in an adjustment of

485.25 (1,941 elections × 0.25hr) at a cost of \$43,682 (485.25 hr × \$90.02/hr).

TABLE 107: Change in Estimated Burden for Partial QP Election

	Burden Estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	20.25
Total Annual Hours for Respondents in CY 2020 Final Rule (b)	505.5
Difference (c) = (b)-(a)	+485.25
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	\$1,823
Total Annual Cost for Respondents in CY 2020 Final Rule (e)	\$45,505
Difference (f) = (e)-(d)	+\$43,682

We received no public comments related to the burden estimates for Partial QP election. The burden estimates have been updated from the CY 2020 PFS proposed rule (84 FR 40873 through 40874) due to availability of updated data.

l. ICRs Regarding Other Payer Advanced APM Determinations: Payer-Initiated Process (§ 414.1445) and Eligible Clinician Initiated Process (§ 414.1445)

As indicated below, the finalized requirements and burden discussed

under this section will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

(1) Payer Initiated Process (§ 414.1445)

This rule is not finalizing any new or revised collection of information requirements related to the Payer-Initiated Process. However, we are making adjustments to our currently approved burden estimates based on updated projections for the 2020 MIPS performance period. As mentioned

above, the adjusted burden will be submitted to OMB for approval.

As shown in Table 108, based on the actual number of requests received in the 2018 QP performance period, we estimate that in CY 2020 for the 2021 QP performance period 110 payer-initiated requests for Other Payer Advanced APM determinations will be submitted (10 Medicaid payers, 50 Medicare Advantage Organizations, and 50 remaining other payers), a decrease of 105 from the 215 total requests currently approved by OMB under the

aforementioned control number. We estimate it will take 10 hours at \$90.02/hr for a computer system analyst per

arrangement submission. In aggregate, we estimate an annual burden of 1,100 hours (110 submissions × 10 hr/

submission) at a cost of \$99,022 (1,100 hr × \$90.02/hr).

TABLE 108: Estimated Burden for Other Payer Advanced APM Identification Determinations: Payer-Initiated Process

	Burden Estimate
# of other payer payment arrangements (10 Medicaid, 50 Medicare Advantage Organizations, 50 remaining other payers) (a)	110
Total Annual Hours Per other payer payment arrangement (b)	10
Total Annual Hours (c) = (a)*(b)	1,100
Labor rate for a computer systems analyst (d)	\$90.02/hr
Total Annual Cost (e) = (c)*(d)	\$99,022

As shown in Table 109, using our unchanged currently approved per respondent burden estimate, the

decrease in the number of payer-initiated requests from 215 to 110 results in an adjustment of -1,050

hours (-105 requests × 10 hr) at a cost of -\$94,521 (-1,050 hr × \$90.02/hr).

TABLE 109: Change in Estimated Burden for Other Payer Advanced APM Identification Determinations: Payer-Initiated Process

	Burden Estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	2,150
Total Annual Hours for Respondents in CY 2020 Final Rule (b)	1,100
Difference (c) = (b)-(a)	-1,050
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	\$193,543
Total Annual Cost for Respondents in CY 2020 Final Rule (e)	\$99,022
Difference (f) = (e)-(d)	-\$94,521

We received no public comments related to the burden estimates for the Other Payer Advanced APM Identification Determinations: Payer-Initiated Process. The burden estimates have been updated from the CY 2020 PFS proposed rule (84 FR 40874) due to availability of updated data.

(2) Eligible Clinician Initiated Process (§ 414.1445)

This rule is not finalizing any new or revised collection of information requirements or burden related to the Eligible-Clinician Initiated Process. The requirements and burden are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not making any changes to the eligible clinician initiated process under that control number.

(3) Submission of Data for QP Determinations Under the All-Payer Combination Option (§ 414.1440)

This rule is not finalizing any new or revised collection of information requirements related to the Submission of Data for QP Determinations under the All-Payer Combination Option. However, we are making adjustments to our currently approved burden estimates based on updated projections for the 2020 MIPS performance period. The adjusted burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

The CY 2017 Quality Payment Program final rule provided that either APM Entities or individual eligible clinicians must submit by a date and in a manner determined by us: (1) Payment arrangement information necessary to assess whether each other payer arrangement is an Other Payer Advanced APM, including information on financial risk arrangements, use of CEHRT, and payment tied to quality

measures; (2) for each payment arrangement, the amounts of payments for services furnished through the arrangement, the total payments from the payer, the numbers of patients furnished any service through the arrangement (that is, patients for whom the eligible clinician is at risk if actual expenditures exceed expected expenditures), and (3) the total number of patients furnished any service through the arrangement (81 FR 77480). The rule also specified that if we do not receive sufficient information to complete our evaluation of another payer arrangement and to make QP determinations for an eligible clinician using the All-Payer Combination Option, we will not assess the eligible clinicians under the All-Payer Combination Option (81 FR 77480).

In the CY 2018 Quality Payment Program final rule, we explained that in order for us to make QP determinations under the All-Payer Combination Option using either the payment

amount or patient count method, we will need to receive all of the payment amount and patient count information: (1) Attributable to the eligible clinician or APM Entity through every Other Payer Advanced APM; and (2) for all other payments or patients, except from excluded payers, made or attributed to the eligible clinician during the QP performance period (82 FR 53885). We also finalized that eligible clinicians and APM Entities will not need to submit Medicare payment or patient information for QP determinations under the All-Payer Combination Option (82 FR 53885).

The CY 2018 Quality Payment Program final rule also noted that we will need this payment amount and patient count information for the periods January 1 through March 31, January 1 through June 30, and January 1 through August 31 (82 FR 53885). We noted that the timing may be challenging for APM Entities or eligible clinicians to submit information for the August 31 snapshot date. If we receive information for either the March 31 or June 30 snapshots, but not the August 31 snapshot, we will use that information to make QP determinations under the All-Payer Combination Option. This payment amount and patient count information is to be submitted in a way that allows us to distinguish information from January 1

through March 31, January 1 through June 30, and January 1 through August 31 so that we can make QP determinations based on the two finalized snapshot dates (82 FR 30203 through 30204).

The CY 2018 Quality Payment Program final rule specified that APM Entities or eligible clinicians must submit all of the required information about the Other Payer Advanced APMs in which they participate, including those for which there is a pending request for an Other Payer Advanced APM determination, as well as the payment amount and patient count information sufficient for us to make QP determinations by December 1 of the calendar year that is 2 years to prior to the payment year, which we refer to as the QP Determination Submission Deadline (82 FR 53886).

In the CY 2019 PFS final rule, we finalized the addition of a third alternative to allow QP determinations at the TIN level in instances where all clinicians who have reassigned billing rights to the TIN participate in a single (the same) APM Entity (83 FR 59936). This option will therefore be available to all TINs participating in Full TIN APMs, such as the Medicare Shared Savings Program. It will also be available to any other TIN for which all clinicians who have reassigned billing rights to the TIN are participating in a

single APM Entity. To make QP determinations under the All-Payer Combination Option at the TIN level as finalized using either the payment amount or patient count method, we will need to receive, by December 1 of the calendar year that is 2 years to prior to the payment year, all of the payment amount and patient count information: (1) Attributable to the eligible clinician, TIN, or APM Entity through every Other Payer Advanced APM; and (2) for all other payments or patients, except from excluded payers, made or attributed to the eligible clinician(s) during the QP performance period for the periods January 1 through March 31, January 1 through June 30, and January 1 through August 31.

As shown in Table 110, we assume that 20 APM Entities, 448 TINs, and 83 eligible clinicians will submit data for QP determinations under the All-Payer Combination Option in 2019, and increase of 242 from the 309 total submissions currently approved by OMB under the aforementioned control number. We estimate it will take the APM Entity representative, TIN representative, or eligible clinician 5 hours at \$109.36/hr for a practice administrator to complete this submission. In aggregate, we estimate an annual burden of 2,755 hours (551 respondents × 5 hr) at a cost of \$301,287 (2,755 hr × \$109.36/hr).

TABLE 110: Estimated Burden for the Submission of Data for All-Payer QP Determinations

	Burden Estimate
# of APM Entities submitting data for All-Payer QP Determinations (a)	20
# of TINs submitting data for All-Payer QP Determinations (b)	448
# of eligible submitting data for All-Payer QP Determinations (c)	83
Hours Per respondent QP Determinations (d)	5
Total Hours (e) = [(a)*(d)]+[(b)*(d)]+[(c)*(d)]	2,755
Labor rate for a Practice Administrator (f)	\$109.36/hr
Total Annual Cost (g) = (e)*(f)	\$301,287

As shown in Table 111, using our unchanged currently approved per respondent burden estimate, the

increase in the number of data submissions from 309 to 551 results in an adjustment of 1,210 hours (242

requests × 5 hr) at a cost of \$132,326 (1,210 hr × \$109.36/hr).

TABLE 111: Change in Estimated Burden for the Submission of Data for All-Payer QP Determinations

	Burden Estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	1,545
Total Annual Hours for Respondents in CY 2020 Final Rule (b)	2,755
Difference (c) = (b)-(a)	+1,210
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	\$168,961
Total Annual Cost for Respondents in CY 2020 Final Rule (e)	\$301,287
Difference (f) = (e)-(d)	+\$132,326

We received no public comments related to the burden estimates for the submission of data for All-Payer QP Determinations. The burden estimates have been updated from the CY 2020 PFS proposed rule (84 FR 40875 through 40876) due to availability of updated data.

m. ICRs Regarding Voluntary Participants Election To Opt-Out of Performance Data Display on Physician Compare (§ 414.1395)

This rule is not finalizing any new or revised collection of information requirements related to the election by voluntary participants to opt-out of public reporting on Physician Compare. However, we are making adjustment to our currently approved burden estimates based on data from the 2018 MIPS performance period. The adjusted burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

We estimate that 10 percent of the total clinicians and groups who will

voluntarily participate in MIPS will also elect not to participate in public reporting. This results in a total of 10,042 ($0.10 \times 100,415$ voluntary MIPS participants) clinicians and groups, a decrease of 1,575 from the currently approved estimate of 11,617 and a decrease of 1,474 from the estimate of 11,516 respondents in the CY 2020 PFS proposed rule due to availability of more recent data (84 FR 40876) due to the availability of more recent data. Voluntary MIPS participants are clinicians that are not QPs and are expected to be excluded from MIPS after applying the eligibility requirements set out in the CY 2019 PFS final rule but have elected to submit data to MIPS. As discussed in the RIA section of the CY 2019 PFS final rule, we estimate that 33 percent of clinicians that exceed one (1) of the low-volume criteria, but not all three (3), will elect to opt-in to MIPS, become MIPS eligible, and no longer be considered a voluntary reporter (83 FR 60050).

In section III.K.3.h.(6) of this rule, we are finalizing to publicly report (1) an indicator if a MIPS eligible clinician is scored using facility-based measurement beginning with Year 3 (2019 performance information available for public reporting in late 2020) and (2) aggregate MIPS data beginning with Year 2 (2018 performance information available for public reporting in late 2019). We believe it is possible that the percentage of voluntary participants electing not to participate in public reporting may change as a result of these policies, we lack the ability to predict the behavior of clinicians' response to them. Table 112 shows that for these voluntary participants, we estimate it will take 0.25 hours at \$90.02/hr for a computer system analyst to submit a request to opt-out. In aggregate, we estimate an annual burden of 2,511 hours ($10,042 \text{ requests} \times 0.25 \text{ hr/request}$) at a cost of \$225,995 ($2,511 \text{ hr} \times \$90.02/\text{hr}$).

TABLE 112: Estimated Burden for Voluntary Participants to Elect Opt Out of Performance Data Display on Physician Compare

	Burden Estimate
# of Voluntary Participants Opting Out of Physician Compare (a)	10,042
Total Annual Hours Per Opt-out Requester (b)	0.25
Total Annual Hours (c) = (a)*(b)	2,511
Labor rate for a computer systems analyst (d)	\$90.02/hr
Total Annual Cost (e) = (a)*(d)	\$225,995

As shown in Table 113, using our unchanged currently approved per respondent burden estimate, the

decrease in the number of opt outs by voluntary participants from 11,617 to 10,042 results in an adjustment of

393.75 hours ($-1,575 \text{ requests} \times 0.25 \text{ hr}$) at a cost of $-\$35,445$ ($-393.75 \text{ hr} \times \$90.02/\text{hr}$).

TABLE 113: Change in Estimated Burden for Voluntary Participants to Elect Opt Out of Performance Data Display on Physician Compare

	Burden Estimate
Total Annual Hours for Respondents in CY 2019 Final Rule (a)	2,904.25
Total Annual Hours for Respondents in CY 2020 Final Rule (b)	2,511
Difference (c) = (b)-(a)	-393.75
Total Annual Cost for Respondents in CY 2019 Final Rule (d)	\$261,441
Total Annual Cost for Respondents in CY 2020 Final Rule (e)	\$225,995
Difference (f) = (e)-(d)	-\$35,445

We received no public comments related to the burden estimates for voluntary participants to opt-out of performance data display on Physician Compare. The burden estimates have been updated from the CY 2020 PFS proposed rule (84 FR 40876 through 40877) due to availability of updated data.

n. Summary of Annual Quality Payment Program Burden Estimates

Table 114 summarizes this final rule’s burden estimates for the Quality Payment Program. To understand the burden implications of the policies finalized in this rule, we have also estimated a baseline burden of continuing the policies and information

collections set forth in the CY 2019 PFS final rule into the 2020 MIPS performance period. Our estimated baseline burden estimates reflect the availability of more accurate data to account for all potential respondents and submissions across all the performance categories, more accurately reflect the exclusion of QPs from all MIPS performance categories, and better estimate the number of third-parties likely to self-nominate as qualified registries and QCDRs, as well as the number of measures submitted per QCDR. The baseline burden estimate is 2,932,925 hours at a cost of \$279,573,747. This baseline burden estimate is lower than the burden approved for information collection

related to the CY 2019 PFS final rule due to updated data and assumptions. The difference of – 276 hours and – \$23,257 between this baseline estimate and the total burden shown in Tables 114 and 116 is the reduction in burden associated with impacts of finalized policies to require QCDRs to perform measure testing, partially offset by an increase in burden due to finalized policies requiring QCDRs to submit measure testing data and to require quality measures and QCDR measures be linked to existing cost measures, improvement activities, or MIPS Value Pathways, as feasible and applicable at the time of self-nomination.

*Currently approved under OMB control number 0938-1314 (CMS-10621).

Table 115 provides the reasons for changes in the estimated burden for information collections in the Quality Payment Program segment of this final

rule. We have divided the reasons for our change in burden into those related to new policies and those related to adjustments in burden from continued

Quality Payment Program Year 3 policies that reflect updated data and revised methods.

**TABLE 115: Reasons for Change in Burden Compared to the Currently Approved
CY 2019 Information Collection Burdens**

TOTAL		384,432	-123,919	Varies	-1,722,544	Varies	-166,778,034

* As it relates to the PRA, this rule will not impose any non-labor costs.

**OMB and CMS’ PRA package ID numbers: OMB 0938-1237 (CMS-10495), OMB 0938-0685 (CMS-855B), and OMB 0938-1314 (CMS-10621).

***The burden for these changes to the Open Payments program represent one-time system changes.

D. Beneficiary Liability

Many policy changes could result in a change in beneficiary liability as it relates to coinsurance (which is 20 percent of the fee schedule amount, if applicable for the particular provision after the beneficiary has met the deductible). To illustrate this point, as shown in our public use file Impact on Payment for Selected Procedures available on the CMS website at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>, the CY 2019 national payment amount in the nonfacility setting for CPT code 99203 (Office/outpatient visit, new) was \$109.92, which means that in CY 2019, a beneficiary would be responsible for 20 percent of this amount, or \$21.98. Based on this final rule, using the CY 2020 CF, the CY 2020 national payment amount in the nonfacility setting for CPT code 99203, as shown in the Impact on Payment for Selected Procedures public use file, is \$110.43, which means that, in CY 2020, the final beneficiary coinsurance for this service would be \$22.09.

VII. Regulatory Impact Analysis

A. Statement of Need

This final rule makes payment and policy changes under the Medicare PFS and implements required statutory changes under the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA), the Achieving a Better Life Experience Act (ABLE), the Protecting Access to Medicare Act of 2014 (PAMA), section 603 of the Bipartisan

Budget Act of 2015, the Consolidated Appropriations Act of 2016, the Bipartisan Budget Act of 2018, and sections 2005 6063, and 6111 of the SUPPORT for Patients and Communities Act of 2018. This final rule also makes changes to payment policy and other related policies for Medicare Part B.

This final rule is necessary to make policy changes under Medicare fee-for-service. Therefore, we included a detailed Regulatory Impact Analysis (RIA) to assess all costs and benefits of available regulatory alternatives and explained the selection of these regulatory approaches that we believe adhere to statutory requirements and, to the extent feasible, maximize net benefits.

B. Overall Impact

We examined the impact of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (February 2, 2013), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96-354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104-4), Executive Order 13132 on Federalism (August 4, 1999), the Congressional Review Act (5 U.S.C. 804(2)), and Executive Order 13771 on Reducing Regulation and Controlling Regulatory Costs (January 30, 2017).

Executive Orders 12866 and 13563 direct agencies to assess all costs and

benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). An RIA must be prepared for major rules with economically significant effects (\$100 million or more in any 1 year). We estimated, as discussed in this section, that the PFS provisions included in this final rule will redistribute more than \$100 million in 1 year. Therefore, we estimate that this rulemaking is “economically significant” as measured by the \$100 million threshold, and hence also a major rule under the Congressional Review Act. Accordingly, we prepared an RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, practitioners and most other providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify for small business status under the Small Business Administration standards. (For details, see the SBA’s website at <http://www.sba.gov/content/table-small-business-size-standards> (refer to the 620000 series)). Individuals and states are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a substantial number of small entities. The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

Approximately 95 percent of practitioners, other providers, and suppliers are considered to be small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this section, as well as elsewhere in this final rule is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. The PFS does not reimburse for services provided by rural hospitals; the PFS pays for physicians' services, which can be furnished by physicians and nonphysician practitioners (NPPs) in a variety of settings, including rural hospitals. We did not prepare an analysis for section 1102(b) of the Act because we determined, and the Secretary certified, that this final rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits on state, local, or tribal governments or on the private sector before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2019, that threshold is approximately \$154 million. This final rule will impose no mandates on state, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has Federalism implications. Since this regulation does not impose any costs on state or local governments, the requirements of Executive Order 13132 are not applicable.

Executive Order 13771, entitled "Reducing Regulation and Controlling Regulatory Costs," was issued on January 30, 2017. We estimate the rule generates \$0.61 million in annualized savings in 2016 dollars, discounted at 7 percent relative to year 2016 over a perpetual time horizon. This final rule is still considered an E.O. 13771 regulatory action due to potential unquantified cost. Details on the estimated costs of this rule can be found in the preceding and subsequent analyses.

For the Quality Payment Program, we estimate that between 210,000 and 270,000 clinicians will become Qualifying APM Participants (QPs) and the total lump sum APM Incentive Payments will be approximately \$535–685 million in the 2022 Quality Payment Program payment year. We estimate that approximately 880,000 clinicians will be MIPS eligible clinicians for the 2020 MIPS performance period. We estimate that MIPS payment adjustments will be approximately equally distributed between negative MIPS payment adjustments and positive MIPS payment adjustments (\$433 million redistributed) to MIPS eligible clinicians, as required by the statute to ensure budget neutrality. Up to an additional \$500 million is also available for the 2022 MIPS payment year for additional positive MIPS payment adjustments for exceptional performance. Please refer to section VII.F.10 of this final rule for the full RIA of the Quality Payment Program.

We prepared the following analysis, which together with the information provided in the rest of this preamble, meets all assessment requirements. The analysis explains the rationale for and purposes of this final rule; details the costs and benefits of the rule; analyzes alternatives; and presents the measures we would use to minimize the burden on small entities. As indicated elsewhere in this final rule, we proposed a variety of changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of

services, and implementing statutory provisions. We provide information for each of the policy changes in the relevant sections of this final rule. We are unaware of any relevant federal rules that duplicate, overlap, or conflict with this final rule. The relevant sections of this final rule contain a description of significant alternatives if applicable.

C. Changes in Relative Value Unit (RVU) Impacts

1. Resource-Based Work, PE, and MP RVUs

Section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of expenditures for the year to differ by more than \$20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve budget neutrality.

Our estimates of changes in Medicare expenditures for PFS services compared payment rates for CY 2019 with payment rates for CY 2020 using CY 2018 Medicare utilization. The payment impacts in this final rule reflect averages by specialty based on Medicare utilization. The payment impact for an individual practitioner could vary from the average and would depend on the mix of services he or she furnishes. The average percentage change in total revenues will be less than the impact displayed here because practitioners and other entities generally furnish services to both Medicare and non-Medicare patients. In addition, practitioners and other entities may receive substantial Medicare revenues for services under other Medicare payment systems. For instance, independent laboratories receive approximately 83 percent of their Medicare revenues from clinical laboratory services that are paid under the Clinical Laboratory Fee Schedule (CLFS).

The annual update to the PFS conversion factor (CF) was previously calculated based on a statutory formula; for details about this formula, we refer readers to the CY 2015 PFS final rule with comment period (79 FR 67741 through 67742). Section 101(a) of the MACRA repealed the previous statutory update formula and amended section 1848(d) of the Act to specify the update adjustment factors for CY 2015 and beyond. The update adjustment factor for CY 2020, as required by section 1848(d)(19) of the Act, is 0.00 percent before applying other adjustments.

To calculate the CY 2020 CF, we multiplied the product of the current year CF and the update adjustment factor by the budget neutrality adjustment described in the preceding paragraphs. We estimated the CY 2020

PFS CF to be 36.0896 which reflects the budget neutrality adjustment under section 1848(c)(2)(B)(ii)(II) of the Act and the 0.00 percent update adjustment factor specified under section 1848(d)(19) of the Act. We estimate the

CY 2020 anesthesia CF to be 22.2774, which reflects the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments.

TABLE 117—CALCULATION OF THE CY 2020 PFS CONVERSION FACTOR

CY 2019 Conversion Factor		36.0391
Statutory Update Factor	0.00 percent (1.0000)
CY 2020 RVU Budget Neutrality Adjustment	0.14 percent (1.0014)
CY 2020 Conversion Factor	36.0896

TABLE 118—CALCULATION OF THE CY 2020 ANESTHESIA CONVERSION FACTOR

CY 2019 National Average Anesthesia Conversion Factor		22.2730
Statutory Update Factor	0.00 percent (1.0000)
CY 2020 RVU Budget Neutrality Adjustment	0.14 percent (1.0014)
CY 2020 Anesthesia Fee Schedule Practice Expense and Malpractice Adjustment	-0.46 percent (0.9954)
CY 2020 Conversion Factor	22.2016

Table 119 shows the payment impact on PFS services of the policies contained in this final rule. To the extent that there are year-to-year changes in the volume and mix of services provided by practitioners, the actual impact on total Medicare revenues will be different from those shown in Table 119 (CY 2020 PFS Estimated Impact on Total Allowed Charges by Specialty). The following is an explanation of the information represented in Table 119.

- *Column A (Specialty):* Identifies the specialty for which data are shown.
- *Column B (Allowed Charges):* The aggregate estimated PFS allowed charges for the specialty based on CY

2018 utilization and CY 2019 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.

- *Column C (Impact of Work RVU Changes):* This column shows the estimated CY 2020 impact on total allowed charges of the changes in the work RVUs, including the impact of changes due to potentially misvalued codes.

- *Column D (Impact of PE RVU Changes):* This column shows the estimated CY 2020 impact on total allowed charges of the changes in the PE RVUs.

- *Column E (Impact of MP RVU Changes):* This column shows the estimated CY 2020 impact on total allowed charges of the changes in the MP RVUs.

- *Column F (Combined Impact):* This column shows the estimated CY 2020 combined impact on total allowed charges of all the changes in the previous columns. Column F may not equal the sum of columns C, D, and E due to rounding.

BILLING CODE 4120-01-C

2. CY 2020 PFS Impact Discussion

a. Changes in RVUs

The most widespread specialty impacts of the RVU changes are generally related to the changes to RVUs for specific services resulting from the misvalued code initiative, including RVUs for new and revised codes. The estimated impacts for some specialties, including clinical social workers, podiatry, urology, and obstetrics/gynecology reflect increases relative to other physician specialties. These increases can largely be attributed to finalized increases in value for particular services following the recommendations from the American Medical Association (AMA)'s Relative Value Scale Update Committee and CMS review, increased payments as a result of finalized updates to supply and equipment pricing, and the continuing implementation of the adjustment to indirect PE allocation for some office-based services.

The estimated impacts for several specialties, including ophthalmology and optometry, reflect decreases in payments relative to payment to other physician specialties as a result of revaluation of individual procedures reviewed by the AMA's relative value scale update committee (RUC) and CMS. The estimated impacts for other specialties, including vascular surgery, reflect decreased payments as a result of continuing implementation of the previously finalized updates to supply and equipment pricing. The estimated

impacts also reflect decreased payments due to continued implementation of previously finalized code-level reductions that are being phased-in over several years. We also note that the estimated impact for the neurology specialty is decreasing as compared to the proposed impacts due to the decision to finalize contractor pricing for some of the new long term EEG monitoring services. For independent laboratories, it is important to note that these entities receive approximately 83 percent of their Medicare revenues from services that are paid under the CLFS. As a result, the estimated 1 percent increase for CY 2020 is only applicable to approximately 17 percent of the Medicare payment to these entities.

We often receive comments regarding the changes in RVUs displayed on the specialty impact table (Table 119), including comments received in response to the proposed rates. We remind stakeholders that although the estimated impacts are displayed at the specialty level, typically the changes are driven by the valuation of a relatively small number of new and/or potentially misvalued codes. The percentages in Table 119 are based upon aggregate estimated PFS allowed charges summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty, and compared to the same summed total from the previous calendar year. Therefore, they are averages, and may not necessarily be representative of what is happening to the particular

services furnished by a single practitioner within any given specialty.

b. Impact

Column F of Table 119 displays the estimated CY 2020 impact on total allowed charges, by specialty, of all the RVU changes. A table showing the estimated impact of all of the changes on total payments for selected high volume procedures is available under "downloads" on the CY 2020 PFS final rule website at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>. We selected these procedures for sake of illustration from among the procedures most commonly furnished by a broad spectrum of specialties. The change in both facility rates and the nonfacility rates are shown. For an explanation of facility and nonfacility PE, we refer readers to Addendum A on the CMS website at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>.

c. Estimated Impacts Related to Changes for Office/Outpatient E/M Services for CY 2021

Although we did not propose changes to E/M coding and payment for CY 2020, we proposed certain changes for CY 2021. In the proposed rule, we displayed an impact table that illustrated the specialty level impact associated with implementing the proposed changes to the office/outpatient E/M code set in CY 2020, rather than CY 2021. Table 120 reflects that we are finalizing as proposed.

We believe these estimates provide insight into the magnitude of potential changes for certain physician specialties but note that Table 120 does not take into account other changes to payment rates finalized for CY 2020 and should be considered for illustrative purposes only. Furthermore, as the CY 2021

impact of the revalued office/outpatient E/M code set will be inclusive of policies finalized in that year's rulemaking, we believe it would be premature to provide updated impacts for CY 2020. Table 120 illustrates the estimated specialty level impacts associated with finalizing the work

values for the office/outpatient E/M codes, as well as the revalued HCPCS add-on G-code for primary care and certain types of specialty visits as proposed for CY 2020, exclusive of any other changes finalized for CY 2020.

BILLING CODE 4120-01-C

Overall, those specialties that bill higher level established patient visits, such as endocrinology or family practice, see the greatest increases as those codes were revalued higher relative to the rest of the office/outpatient E/M code set. Those specialties that see the greatest decreases are those that do not generally bill office/outpatient E/M visits. Other specialty level impacts are primarily driven by the extent to which those specialties bill using the office/outpatient E/M code set and the relative increases to the particular office/outpatient E/M codes predominantly billed by those specialties. We note that any potential coding changes and recommendations in overall valuation for new and existing codes between the CY 2020 rule and the CY 2021 final rule could impact the actual change in overall RVUs for office/outpatient visits relative to the rest of the PFS. Given the various factors that will be considered by the variety of stakeholders involved in the CPT and RUC processes, we do not believe we can estimate with any degree of certainty what the impact of potential changes might be. We also, note, however, that any changes in coding and payment for these services would be subject to notice and comment rulemaking.

As discussed elsewhere in this section of the final rule, we estimate this approach would lead to burden reduction for practitioners, while allowing a year of preparatory time and time for potential refinement over the next year as we take into account any feedback from stakeholders on these changes.

Comment: We received a number of comments on the impact analysis conducted to show the estimated specialty level impacts associated with

implementing the proposed changes to the office/outpatient E/M code family for CY 2020, rather than CY 2021. Overall commenters requested that CMS provide more details as to how the impacts analysis was conducted, particularly the assumptions behind estimated utilization for HCPCS code GPC1X.

Response: For purposes of estimating the specialty level impacts we assumed that the following specialties would bill HCPCS code GPC1X with 100 percent of their office/outpatient E/M visit codes: Family practice, general practice, internal medicine, pediatrics, geriatrics, nurse practitioner, physician assistant, endocrinology, rheumatology, hematology/oncology, urology, neurology, obstetrics/gynecology, allergy/immunology, otolaryngology, interventional pain management, cardiology, nephrology, infectious disease, psychiatry, and pulmonary disease. We want to underscore that this was an assumption regarding which specialties are likely to furnish the types of medical care services that serve as the continuing focal point for all needed health care services or with medical care services that are part of ongoing care related to a patient's single, serious, or complex chronic condition and is not meant to be prescriptive as to which specialties may bill for this service. As stated earlier, there are no specialty restrictions for billing HCPCS code GPC1X.

We encourage the public to submit additional information and recommendations regarding utilization for HCPCS code GPC1X prior to the February 10th deadline for submission of RUC and stakeholder valuation recommendations to be considered in CY 2021 rulemaking.

D. Effect of Changes Related to Telehealth

As discussed in section II.F. of this final rule, we proposed to add three new codes, HCPCS codes G2086, G2087, and G2088, to the list of Medicare telehealth services for CY 2020. Although we expect these changes to have the potential to increase access to care in rural areas, based on recent telehealth utilization of services already on the list, including services similar to the additions, we estimate there will only be a negligible impact on PFS expenditures from these additions. For example, for services already on the list, they are furnished via telehealth, on average, less than 0.1 percent of the time they are reported overall. The restrictions placed on Medicare telehealth by the statute limit the magnitude of utilization; however, we believe there is value in allowing physicians and patients the greatest flexibility when appropriate.

E. Effect of Changes Related to Physician Supervision for Physician Assistant (PA) Services

As discussed in section II.I of this final rule, we proposed to revise § 410.74(a)(2) such that the statutory physician supervision requirement for PA services at section 1861(s)(2)(K)(i) of the Act would be met when a PA furnishes their services in accordance with state law and state scope of practice rules for PAs in the state in which the services are furnished, with medical direction and appropriate supervision as required by state law in which the services are performed. In the absence of state law governing physician supervision of PA services, the physician supervision required by Medicare for PA services would be evidenced by documentation in the medical record of the PA's approach to

working with physicians in furnishing their services. This change would substantially align the regulation on physician supervision for PA services at § 410.74(a)(2) with our current regulations on physician collaboration for NP and CNS services at §§ 410.75(c)(3) and 410.76(c)(3). Our finalized policies are responsive to practitioner concerns that Medicare requirement for supervision of PA services may impose a more stringent standard than state laws governing physician supervision of PA services, and suggestions that the current regulatory definition of physician supervision as it applies to PAs could inappropriately restrict the practice of PAs in delivering their professional services to the Medicare population. While we expect that our finalized policies may result in increased administrative flexibility for PAs as they furnish services to patients, we cannot determine the specific impact our revised policies will have on practice business plans and demand for certain levels of clinicians though we expect that any emerging trends may be indicative of the current and expanded role of nonphysician practitioners as members of the medical team.

F. Other Provisions of the Regulation

1. Effect of Medicare Coverage for Opioid Use Disorder Treatment Services Furnished by Opioid Treatment Programs (OTPs)

As discussed in section II.G of this final rule, section 2005 of the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act establishes a new Medicare Part B benefit for opioid use disorder (OUD) treatment services furnished by opioid treatment programs (OTPs) for episodes of care beginning on or after January 1, 2020. The Substance Abuse and Mental Health Services Administration (SAMHSA) currently performs regulatory certification of OTPs. Currently, SAMHSA certifies about 1,700 OTPs. They are located predominately in urban areas, tend to be freestanding facilities, and provide a range of services, including medication-assisted treatment (MAT). The payor mix for OTPs currently includes Medicaid, private payors, TRICARE, as well as individual pay patients. The updated total estimated net Medicare and Medicaid impact, including FFS and Medicare Advantage, over 10 years is \$1,484,000,000. We note that this estimate has increased compared to the estimate in the proposed rule, to reflect changes in the policies being finalized

compared to the proposed policies, including the adoption of add-on codes describing intake activities and periodic assessments. In developing this estimate, it was assumed that the average treatment length would be 12 months in duration and the average rate per week in CY 2020 was assumed to be \$220, which is a weighted average of the rates we are finalizing for the bundled payments for treatment with methadone, buprenorphine, and naltrexone and reflects the payment methodology that was finalized for the non-drug component, which sums the rates of similar services paid for under Medicare. It also includes payment for initial and periodic assessments that were added in this final rule. The initial assessment was assumed to be provided once at the beginning of treatment for patients new to the program. For the purpose of this estimate, it was assumed that periodic assessments would occur twice per year. These rates were updated annually by the Medicare Economic Index (MEI), based on our finalized policy.

We assumed that the impact in the first year would be reduced by 50 percent due to potential delays in provider enrollment and necessary investment by providers to transition to Medicare coding and billing systems. Additionally, any change to FFS benefits has an associated impact on payments to Medicare Advantage plans so an adjustment was made to reflect this impact, based on the projected distribution of spending in each year. The estimate also accounts for the impact on the program due to the change in the monthly Part B premium as a result of implementation of this new benefit, which we estimate to increase from approximately \$0.09 (9 cents) in 2021 to \$0.14 (14 cents) in 2029. The Part B enrollment and MEI assumptions were based on the President's Fiscal Year 2020 Budget baseline that was released in July of 2019. As with all estimates, and particularly those for new separately billable services, this outcome is highly uncertain because the available information on which to base estimates is limited and is not directly applicable to a new Medicare payment. The cost and utilization estimates are based on Medicare and Medicaid claims data for beneficiaries with OUD, together with statistics about the types of services typically furnished at OTPs.

It is difficult for us to predict how coverage of OTP services will specifically affect the market. We anticipate current OTPs may expand access to care for Medicare beneficiaries since they will be able to receive

payment from Medicare for services furnished to beneficiaries when they previously were unable to do so. Coverage may also create financial incentives to establish new OTPs. However, since TRICARE, Medicaid, and some private payers already pay for OTP services, it is less clear whether the presence of Medicare payment rates will have any effect on current rates for OTP services or on new rates should additional private coverage be established.

2. Changes to the Ambulance Physician Certification Statement Requirement

This final rule will clarify the requirements at §§ 410.40 and 410.41 regarding the requirements for physician certification and non-physician certification statements and expand the list of staff members who can sign non-physician certification statements. While we believe that clarification of the regulatory provisions associated with physician certification and non-physician certification statements is needed and would be well received by stakeholders, we do not believe that these clarifications would have any substantive monetary or impact the amount of time needed to complete the certification statements. We believe the primary benefit of the clarification would be for providers and suppliers in preparing and submitting the original certification statements. It is feasible the clarification could result in fewer claims being denied. However, hypothetically, these denials are likely a small subset of the ambulance claim denials and those denied for technical PCS issues are likely appealed and overturned.

Moreover, we have examined the impact of expanding the list of individuals who may sign the non-physician certification statement. This added flexibility in accessing additional individuals to sign a non-physician certification statement would be needed only when the physician was unavailable. Thus, while we anticipate that some providers would use the increased flexibility, the precise impact is not calculable.

3. Medicare Ground Ambulance Data Collection System

As discussed in section III.B.2. of this final rule, section 50203(b) of the BBA of 2018 added a new paragraph (17) to section 1834(l) of the Act, which requires the Secretary to develop a data collection system to collect cost, revenue, utilization, and other information determined appropriate with respect to providers and suppliers of ground ambulance services. In

section III.B.4 through III.B.7. of this final rule, we outline the provisions that implement this section, including the data that will be collected through the data collection system, sampling methodology, requirements for reporting data, payment reductions that will apply to ground ambulance providers and suppliers that fail to sufficiently report data and that do not qualify for a hardship exemption, informal review process that will be available to ground ambulance providers and suppliers that are subject to a payment reduction, and our policies for making the data available to the public.

We estimate that ground ambulance providers and suppliers will need to engage in two primary activities with respect to these requirements, both of which will require them to incur cost and burden: Data collection and data reporting. The data collection activity includes: (1) Reviewing instructions to understand the data required for reporting; (2) accessing existing data systems and reports to obtain the required information; (3) obtaining required information from other entities where appropriate; and (4) if necessary, developing processes and systems to collect data that are not currently collected, but that they will be required to report under the data collection system. The data reporting activity includes entering the collected information in the Medicare Ground Ambulance Data Collection Instrument.

To estimate the data collection impact, we assumed that each ground

ambulance organization that is selected to submit data for a year would take up to 20 hours to collect the required data, which would include 4 hours to review the instructions and 16 hours to collect the required data. These estimates were informed by our discussions with ambulance organizations during stakeholder engagements and through more in-depth interviews with nine ambulance organizations for the purpose of soliciting feedback on data collection instrument items as described in section III.B.3. and III.B.4. of this final rule. Most participants indicated that they would be able to provide some of the required information with an investment of 1–2 hours and complete information with additional hours to collect the missing data. Many participants indicated that they would need to reach out to other staff at the organization, at contracted organizations (such as billing companies), or at other entities (such as municipal government financial staff for government ambulance organizations) to collect required information that was not in the organization's accounting or billing systems. Some participants indicated that their organization would need to adjust data collection processes or collect new data over the course of a year to ensure that required data was available in the appropriate format prior to submission.

Actual data collection and reporting will vary depending on the mix of employees at sampled ambulance

organizations, the staff with available time to dedicate to data collection and data reporting activities at each organization, the staff in different roles that already perform similar activities in each organization, and whether billing services are contracted out or conducted internally.

Because we expect that the staff (by category) that will contribute to data collection and reporting will be highly variable across ground ambulance organizations, we calculated a blended mean wage for the purposes of estimating burden. Table 121 lists the Standard Occupational Classification (SOC) categories contributing to the blended wage, the mean wage for each SOC specific to North American Industry Classification System (NAICS) industry code 621910 (Ambulance Services), and the relative contribution of each SOC to the blended mean. The source mean wage and employment data is from the Bureau of Labor Statistics May 2018 Occupational Employment Statistics data (available from <https://download.bls.gov/pub/time.series/oe/>) for the indicated SOC and NAICS codes, which was most recently available wage and employment data set. We assumed that financial clerks (SOC category 433000) would account for 25 percent of the total data collection and reporting effort, and that six other SOC categories would contribute to the remaining 75 percent (see Table 121).

TABLE 121: Estimated Mean Hourly Wages for Occupations Involved in Data Collection

Standard Occupational Classification Category	Mean Hourly Wage (\$)	Weight (% Effort)*
Top Executives (111000)	51.49	17%
Other Management Occupations (119000)	39.23	12%
Business and Financial Operations Occupations (130000)	28.60	15%
Secretaries and Administrative Assistants (436010)	18.11	10%
Other Office and Administrative Support Workers (439000)	16.20	10%
Financial Clerks (433000)	18.51	25%
First-Line Supervisors of Office and Administrative Support Workers (431011)	27.92	10%
Blended Mean Hourly Wage	28.91	100%

*Note: Weights may not sum to 100 percent due to rounding. Source: Bureau of Labor Statistics Occupational Employment Statistics, May 2018, available from <https://download.bls.gov/pub/time.series/oe/>.

In addition, we calculated the cost of overhead, including fringe benefits, at 100 percent of the mean hourly wage. Although we recognize that fringe benefits and overhead costs may vary significantly by employer, and that there are different accepted methods for

estimating these costs, doubling the mean blended wage rate to estimate total cost is an accepted method to provide a reasonably accurate estimate. Therefore, assuming a mean blended wage of \$28.91 for data collection, and assuming the cost of overhead,

including fringe benefits, at 100 percent of the mean hourly wage, we calculated a wage plus benefits estimate of \$57.82 per hour of data collection. To calculate at the total data collection cost per sampled ground ambulance organization, we multiplied the time

required for data collection by the burdened hourly wage (20 hours * \$57.82/hour) for a total of \$1,156.

We discussed several sampling options in section III.B.5. of this final rule. We finalized our proposed sampling rate of 25 percent that would yield an expected 2,690 respondents (based on 2016 data) in the first sample, resulting in a total estimated data collection cost of \$3,110,684 (2,690 respondents * \$1,156 per respondent).

To estimate the cost of data reporting, we assumed it will require 3 hours to enter, review, and submit information into the proposed web-based data collection system. The estimate of 3 hours was also informed by interviews with nine ambulance organizations to solicit feedback on the data instrument items under consideration. We included time for staff to review the collected data before entering it into the data collection system. We also assumed that staff responsible for reporting the data would have the same blended hourly wage used to estimate data collection costs above (\$28.91) as the staff that collected the data. Again, assuming the cost of overhead at 100 percent of the mean hourly wage, we calculated at a wage plus benefits estimate of \$57.82. Therefore, we estimate a per-respondent cost for data submission of \$173.46 (3 hours * \$57.82/hour). To calculate the total cost for data reporting under a 25 percent sampling rate, we multiplied the number of ground ambulance organizations sampled annually by the time required for data entry times the total hourly wage estimate, for a total of \$466,603 across all respondents (2,690 respondents * 3 hours * \$57.82/hour).

Adding the total data collection and reporting costs yields a total annual impact for ground ambulance organizations of \$3,577,287 (\$3,110,684 for data collection [2,690 respondents * 20 hours * \$57.82/hour] + \$466,603 total cost for data submission [2,690 respondents * 3 hours * \$57.82/hour]) with a 25 percent sampling rate. Our estimate of total annual impact would be lower at \$1,430,649 (\$1,244,042 for data collection [1,076 respondents * 20 hours * \$57.82/hour] + \$186,606 for data submission [1,076 respondents * 3 hours * \$57.82/hour]) under a 10 percent sampling rate alternative and higher at \$7,153,244 (\$6,220,212 for data collection [5,379 respondents * 20 hours * \$57.82/hour] + \$933,032 for data submission [5,379 respondents * 3 hours * \$57.82/hour]) under a 50 percent sampling rate. In all cases, the estimated cost of collecting and reporting data is \$1,330 per organization sampled (\$1,156 for data collection [20 hours * \$57.82/hour] + \$173.46 for data

submission [3 hours * \$57.82/hour]). The per-organization estimate reflects an average. Based on discussions with ambulance organizations to provide feedback on instrument items, we do not anticipate that larger or smaller ambulance organizations in terms of transport volume, costs, or revenue will face systematically more or less burden in data collection or reporting. While larger organizations generally have higher transport volumes, costs, and revenue, and more complex financial arrangements that may increase reporting burden, they also tend to have existing data collection and reporting processes and staff that will reduce the additional effort required to submit the required data. On the other hand, while smaller organizations have less data to collect and report, they may not have current processes in place to begin collecting some required data.

Comment: Two commenters disagreed with our estimate to complete the survey. One commenter stated for smaller organizations, compliance with the proposed cost reporting requirements will take considerably longer than the 20 hours over the course of 12 months estimated by CMS because a lot of the data being sought is not currently collected or sorted. The other commenter stated that the proposed estimate of 20 hours is not valid and should be 40 hours but would not include the time taken by others, such as the dispatcher or medical director, to collect the data. According to the commenter, the volunteer services do not collect a lot of data that is not directly needed for their operations and thus much of this will be new data.

Response: We understand that the length of time it will take to complete the data collection will vary considerably, depending on numerous factors including the organizational structure of the ambulance organization, the existing accounting and cost reporting system, and the size and characteristics of the ambulance organization. For some, the amount of time required will be less than the estimate, and for others, it will be more. The estimate we provided is based on our experience in working with ambulance organizations during the development of the survey, and the time generally required by other programs with similar data collection requirements. We note that the data collection system was designed so that respondents only are required to answer the questions that are relevant for their organization, so for some organizations, the reporting requirements will also be less than for others.

b. Hardship Exemption Process

As discussed in section III.B.7.b. of this final rule, we proposed a process for ground ambulance organizations to request and for CMS to grant hardship exemptions from the 10 percent payment reduction. To request a hardship exemption, we proposed that a ground ambulance organization would be required to complete and submit a request form that we would make available on the Ambulances Services Center website at <https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html>.

We estimate that 25 percent of the total number of ground ambulance organizations will be selected each year as the representative sample to report the required information under the data collection system. That is, 25 percent out of the total 10,758 NPIs, or 2,690 ambulance providers and suppliers.

While we expect that few, if any, ground ambulance organizations will request a hardship exemption, we do not have experience in collecting data from ground ambulance organizations that could be used to develop an estimate, so we based our estimate on the total number of organizations being surveyed. As a result, we estimated that a total of 2,690 ground ambulance organizations would apply for a hardship exemption, and that it would take 15 minutes for each of these ground ambulance organizations 15 minutes to complete and submit the request form.

We assumed for purposes of this estimate that the mix of staff responsible for completing this form would have the same blended hourly wage used to estimate the data collection and data reporting costs. We also calculated the cost of overhead, including fringe benefits, at 100 percent of the mean hourly wage, as we did above. As a result, we estimated that the total cost burden associated with the completion and submission of the hardship exemption request form would be approximately \$38,884.

We did not receive any comments on our estimate to complete the hardship exemption form. As we discussed in section III.B.7.b. of this final rule, we are finalizing our proposed process for hardship exemptions.

c. Informal Review Process

As discussed in section III.B.7.c. of this final rule, we proposed a process for a ground ambulance organization to seek an informal review of our determination that it is subject to the 10 percent reduction.

We estimate that a collection of information burden of 15 minutes for a

ground ambulance organization that is requesting an informal review to gather the requested information and send an email to our AMBULANCEODF mailbox.

We used the total number of ambulance organizations that will be surveyed each year to develop our estimates and estimated a total burden of 40,350 minutes ($15 \times 2,690$) or 672.5 hours for 2,690 ground ambulance organizations to complete this process. Taking into account the same blended mean hourly wage and fringe benefits as we did for our other estimates, we estimated that the total for all sampled ground ambulance organizations to gather the requested information and submit the form would be approximately \$38,884.

We did not receive any comments on our estimate to collect and submit the information for an informal review. As we discussed in section III.B.7.c. of this final rule, we are finalizing our proposed process to request an informal review.

4. Intensive Cardiac Rehabilitation (ICR)

As discussed in section III.C. of this final rule, we are adding stable, chronic heart failure (CHF) (defined as patient with left ventricular ejection fraction of 35 percent or less and NYHA class II to IV symptoms despite being on optimal heart failure therapy for at least 6 weeks) to the list of covered conditions for ICR, as well as, the ability for use to use the NCD process to add additional covered conditions for ICR. Heart failure impacts approximately 5.7 million adults, and approximately 80 percent of individuals over age 65 have heart failure. (The majority (86 percent) of Medicare beneficiaries are over age 65.) We estimate 4,560,000 beneficiaries over age 65 have heart failure.

The uptake by beneficiaries has historically been low for CR and ICR. From February 2014 to 2017, after stable CHF was added to the covered conditions for CR, only 439,888 claims were processed for this service with a diagnosis code of CHF. Less than 1 percent of beneficiaries with heart failure utilized CR. Given that the uptake of ICR has been even lower than CR, we expect the same trend (low uptake) for intensive cardiac rehabilitation due to the nature of these programs which entail rehabilitation through lifestyle modification. We conducted a claims analysis that examined claims prior to and after a 2014 NDC that added stable CHF to the list of covered conditions for CR. Prior to the implementation of stable CHF as a covered condition for CR, 1.8 percent of claims for CR included a diagnosis

code for CHF. After implementation, 4.7 percent of claims for CR included a diagnosis code for CHF. Therefore, for ICR, which has historically been utilized much less than CR (for example, when all CR and ICR claims are combined, only 1 percent of the claims are for ICR), we anticipate there may be a similar slight percentage increase in claims for ICR for treatment of stable CHF. Assuming a 4.7 percent increase in ICR claims due to adding stable CHF as a covered condition, we estimate an increase of 3,378 claims annually. For 2019, the facility and non-facility prices for CR and ICR are the same, and the average price is \$120.93. Therefore, based on our estimated increase in claims, at an average price of \$120.93, the estimated total cost of adding stable, chronic heart failure to the list of covered conditions for ICR is estimated at \$408,502 annually. From 2010–2017, the median number of ICR visits per calendar year was 18 visits per beneficiary. Therefore, based on our expected increase in the number of claims (3,378), the estimated number of beneficiaries covered would be 187. Based on these estimates, we estimate there will only be a negligible impact on Medicare expenditures by finalizing this rule.

Additionally, we do not anticipate providers currently offering ICR would need to obtain any specialized technology and equipment to treat ICR patients with stable CHF beyond what they would obtain for ICR patients seeking treatment for the existing six covered conditions.

With the finalization of this rule, we now cover the seven cardiac conditions that constitute the vast majority of cardiac conditions that CR and ICR can treat. Due to the breadth of the covered conditions, we do not anticipate the need to use the NCD process to add additional covered conditions to CR and ICR in the near future.

Lastly, while CR and ICR have low utilization at this point in time, an increase in the number of CR and/or ICR providers in underserved areas could result in an increase in utilization due to increased availability/proximity to services. However, we are not able to accurately quantify the number of entities that would seek approval as CR or ICR programs. Additionally, we acknowledge, that the expansion of coverage to ICR could generate attention around the importance of CR/ICR and may increase beneficiary utilization.

5. Medicaid Promoting Interoperability Program Requirements for Eligible Professionals (EPs)

In the Medicaid Promoting Interoperability Program, to keep electronic clinical quality measure (eCQM) specifications current and minimize complexity, we proposed to align the eCQMs available for Medicaid EPs in 2020 with those available for MIPS eligible clinicians for the CY 2020 performance period. We are finalizing this proposal as proposed. We anticipate that this alignment will reduce burden for Medicaid EPs by aligning the requirements for multiple reporting programs, and that the system changes required for EPs to implement this change would not be significant, as many EPs are expected to report eCQMs to meet the quality performance category of MIPS and therefore should be prepared to report on those eCQMs for 2020. Not implementing this alignment could lead to increased burden because EPs might have to report on different eCQMs for the Medicaid Promoting Interoperability Program, if they opt to report on newly added eCQMs for MIPS. We expect that this policy will have only a minimal impact on states, by requiring minor adjustments to state systems for 2020 to maintain current eCQM lists and specifications. State expenditures to make any systems changes required as a result of this policy will be eligible for 90 percent Federal financial participation.

For 2020, we proposed to require that Medicaid EPs report on any six eCQMs that are relevant to the EP's scope of practice, including at least one outcome measure, or if no applicable outcome measure is available or relevant, at least one high priority measure, regardless of whether they report via attestation or electronically. This policy would generally align with the MIPS data submission requirement for eligible clinicians using the eCQM collection type for the quality performance category, which is established in § 414.1335(a)(1). If no outcome or high priority measure is relevant to a Medicaid EP's scope of practice, he or she could report on any six eCQMs that are relevant. We are finalizing this policy as proposed. This policy will be a continuation of our policy for 2019 and we believe it will not create new burden for EPs or states.

We also proposed that the 2020 eCQM reporting period for EPs in the Medicaid Promoting Interoperability Program who have demonstrated meaningful use in a prior year would be a minimum of any continuous 274-day period within CY

2020. We proposed to shorten the reporting period from a full calendar year to enable states to take attestations for 2020 as early as October 1, 2020. We noted that we believe this would improve states' flexibility as they move toward the end of the Medicaid Promoting Interoperability Program and the December 31, 2021 statutory deadline to make incentive payments. We explained that we believed that this proposal would create no additional burden for EPs or health IT vendors, as Certified EHR Technology (CEHRT) should be able to run eCQM reports for any number of days and during any time period. The eCQM reporting period would be a minimum and EPs could continue to report on a full calendar year if they wish. As in previous years, we proposed that the 2020 eCQM reporting period for EPs attesting to meaningful use for the first time would be any continuous 90-day period within the calendar year.

After considering the comments we received on this proposal, we are finalizing a continuous 90-day eCQM reporting period for all Medicaid EPs in 2020, rather than requiring a minimum of any continuous 274-day period within CY 2020 for EPs in the Medicaid Promoting Interoperability Program who have demonstrated meaningful use in a prior year. The reporting period is a minimum, and we encourage EPs to report on a longer period if they are able to do so. As discussed above, at section III.D of this final rule, we believe that finalizing a 90-day eCQM reporting period for 2020, as recommended by commenters, instead of the 274-day eCQM reporting period we proposed, is more likely to reduce burden on EPs, health IT vendors, states, and other stakeholders, as compared to a full-year period or the 274-day eCQM reporting period we proposed.

Finally, we proposed to change Medicaid policy for 2021 related to EP Meaningful Use Objective 1, Measure 1 (Conduct or review a security risk analysis (SRA)). We proposed to allow Medicaid EPs to conduct an SRA at any time during CY 2021, even if the EP conducts the SRA after attesting to meaningful use of CEHRT to the state. A Medicaid EP who has not completed an SRA for CY 2021 by the time he or she attests to meaningful use of CEHRT for CY 2021 would be required to attest that he or she will complete the required SRA by December 31, 2021. Currently, this measure must be completed in the same calendar year as the EHR reporting period. This may occur before, during, or after the EHR reporting period, though if it occurs after the EHR reporting period it must

occur before the provider attests to meaningful use of CEHRT or before the end of the calendar year, whichever comes first. In practice, this means that EPs do not attest to meaningful use of CEHRT before completing this measure. However, due to the changes we previously made to the EHR and eCQM reporting period timelines for CY 2021, all Medicaid EPs are expected to attest to meaningful use of CEHRT on or before October 31, 2021. Accordingly, if we did not propose to change the deadline for conducting the SRA, Medicaid EPs would no longer have the option of completing an SRA at the end of the calendar year, and would likely have to complete one well before December 2021. If an EP typically conducts the security risk analysis at the end of each year, this timeline could create burden for the EP, and may not be optimal for protecting information security, because it could disrupt the intervals between security risk analyses. We have also heard feedback from health care providers that SRAs are generally conducted for a whole clinic and the current requirement would create burden on non-EP health care providers in 2021. We are finalizing this change as proposed. As noted in the proposed rule, we believe this policy would prevent additional burden for both EPs and non-EP health care providers. We acknowledge that some EPs might experience increased burden due to the risk of recoupments from what we believe would likely be a small minority of EPs who fail to produce sufficient documentation for the SRA. However, we believe this potential additional burden is clearly outweighed by the reduced burden on what we anticipate would be the vast majority of Medicaid EPs that are afforded flexibility to conduct the SRA at any point in the calendar year that aligns with their operational needs.

As also discussed in the proposed rule, this policy could create burden for states, as they might have to adjust their pre-payment and post-payment verification plans and conduct more thorough audits for this meaningful use objective. However, states are already required to conduct adequate oversight of the Medicaid Promoting Interoperability Program, including routine tracking and verification of meaningful use attestations (*see* 42 CFR 495.318(b), 495.332(c), and 495.368), and we did not propose to change that requirement for 2021. We have established at 42 CFR 495.322(b) that 90 percent federal financial participation will be available for state administrative expenditures related to Medicaid

Promoting Interoperability Program audits and appeals that are incurred on or before September 30, 2023.

6. Medicare Shared Savings Program

In section III.F.1.b. of this final rule, we summarize certain modifications to the quality measure set used to assess the quality performance of ACOs participating in the Shared Savings Program based on changes made to the CMS Web Interface measures under the Quality Payment Program in section III.I.3.b.(1). Specifically, (1) revisions to the numerator guidance for ACO-17—Preventive Care and Screening: Tobacco use: Screening and Cessation Intervention and maintaining the measure as pay-for-reporting for performance years 2019; and (2) reverting ACO-43—Ambulatory Sensitive Condition Acute Composite (AHRQ Prevention Quality Indicator (PQI) #91) to pay-for-reporting for 2 years (2020 and 2021) to account for a substantive change in the measure.

The net result of these modifications to the Shared Savings Program quality measure set will be a measure set of 23 measures for performance year 2020. These changes will have no impact on the number of measures an ACO is required to report; therefore, there is no expected change in reporting burden for ACOs.

7. Open Payments

a. Expanding the Definition of “Covered Recipient” (§§ 403.902, 403.904, and 403.908)

Our initial estimate based on the available information is that there will be approximately \$10 million dollar per year in increased burden to reporting entities and the new covered recipient groups for submitting, collecting, retaining, and reviewing data. This estimate is based on existing burden calculations. It assumes that there will be 734,000 new records (~7 percent increase) reported about 205,000 (~33 percent increase) covered recipients.

We also believe there will be costs to reporting entities for updating their systems and reporting processes. However, we are unable to estimate these costs because they will vary depending on the reporting entity's individual circumstances.

As explained in section IV.5. of this final rule, section 6111(c) of the SUPPORT Act states that chapter 35 of title 44 of the U.S. Code, which includes such provisions as the PRA, shall not apply to the changes to the definition of a covered recipient. Therefore, a detailed breakdown is not provided in that section. The above estimates

however, do provide a RIA of this provision.

b. Modification of the “Nature of Payment” Categories (§§ 403.902 and 403.904)

We anticipate minor additional costs for system updates associated with our provision to modify the “nature of payment” categories. As we indicated in section III.F. of this final rule, said provisions are intended to add clarity. They will not increase the amount of information to be reported. Data already reported to us may simply be reported in a different category. We proposed these changes only to be made prospectively and did *not* propose to have manufactures and GPOs to make changes to previously reported data. This provision would, generally speaking, allow reporting entities to better characterize the nature of a payment and would not constitute a new requirement. Hence, the expected impact is minimal.

c. Standardizing Data Reporting (§§ 403.902 and 403.904)

Approximately 850 entities (approximately 53 percent), have reported a transaction that will require the addition of a device identifier when this final rule is implemented. The total cost of the addition of this new data element cannot be estimated because it would depend on: (1) Whether the entity already tracks this data element and (2) the extent to which the entity would need to update their system to be able to report this data element.

8. OTP Enrollment and Revocation of Physician/Eligible Professional Enrollment for Abusive Part B Prescribing or Patient Harm

i. OTP Enrollment

As stated previously in this final rule, we proposed that OTP providers be required to not only enroll in Medicare, but also to: (1) Pay an application fee at the time of enrollment; and (2) submit a set of fingerprints for a national background check (via FBI Applicant Fingerprint Card FD-258) from all individuals who maintain a 5 percent or greater direct or indirect ownership interest in the OTP. The following is a discussion of the associated impacts we estimated in the proposed rule.

a. Application Fee

The application fees for each of the past 3 calendar years (CY) were or are \$560 (CY 2017), \$569, (CY 2018), and \$586 (CY 2019). Consistent with § 424.518, the differing fee amounts were predicated on changes/increases in the Consumer Price Index (CPI) for all

urban consumers (all items; United State city average, CPI-U) for the 12-month period ending on June 30 of the previous year. Although we could not predict future changes to the CPI, the fee amounts between 2017 and 2019 increased by an average of \$13 per year. We believed this was a reasonable barometer with which to establish estimates (strictly for purposes of the proposed rule) of the fee amounts in the first 3 CYs of this rule (that is, 2020, 2021, and 2022). We thus projected a fee amount of \$599 in 2020, \$612 for 2021, and \$625 for 2022.

Applying these prospective fee amounts to the number of projected applicants in the rule’s first 3 years, we estimated a cost to enrollees of \$1,058,433 (or $1,767 \times \$599$) in the first year, \$41,004 (or $67 \times \$612$) in the second year, and \$41,250 (or $66 \times \$625$) in the third year.

b. Fingerprinting

Based on the experiences of the provider community to date, we estimated that it would take each owner (BLS: Top Executives) approximately 2 hours at \$123.32/hr to obtain and submit fingerprints. (According to the most recent BLS wage data for May 2018, the mean hourly wage for the general category of “Top Executives” is \$61.66 (see http://www.bls.gov/oes/current/oes_nat.htm#43_0000). With fringe benefits and overhead, the figure is \$123.32.)

As mentioned in the preamble of this final rule, SAMHSA statistics indicate that there are currently about 1,677 active OTPs. Of these, approximately 1,585 have full certifications and 92 have provisional certifications.

Although we did not have specific data on the matter, we projected, for purposes of our burden estimates, a total of 1,500 direct or indirect ownership interests in OTP providers that would require the submission of fingerprints over the first 3 years. This 1,500 figure is less than the 1,900 projected applicants (discussed in the ICR section of this rule) in the first 3 years following the final rule’s publication because some applicants may have non-profit business structures and, thus, would not have owners. Furthermore, our estimation of individual owners who would qualify to submit fingerprints was based on a sampling of similar provider types, including DMEPOS suppliers (high risk), MDPP suppliers (high risk), rural health clinics (limited risk) and others.

As noted in the preamble to this final rule, however, the only OTPs that will be assigned to the high-risk level of categorical screening (thus requiring the

submission of fingerprints) will be those that were not fully and continuously certified by SAMHSA since October 23, 2018. We believe this group represents about one-quarter of all projected OTP applications. Using our previously mentioned per-year projections of the number of enrolling OTPs, we believe that there will be 442 high-risk level applications in the first year, 17 in the second year, and 17 in the third year. (This results in a total of 476 OTPs.) In addition, application of the one-quarter percentage to the above-mentioned universe of 1,500 ownership interests results in a revised figure of 375 ($1,500 \times 0.25$).

Applying these new figures to the aforementioned per year breakdown of applicants, we estimate a first year burden of 698 hours at a cost of \$86,077 ($698/\text{hr} \times \$123.32/\text{hr}$). We obtained the 698 hour estimate by first dividing 442 (the number of first-year applicants) by 476, resulting in a figure of 0.93. We then multiplied 0.93 by 375 (the number of ownership interests over the 3-year period) and thereafter by 2 hours.

Applying this same formula, we projected a second-year time estimate of 26 hours (or $0.035 \times 375 \text{ owners} \times 2 \text{ hr}$) at a cost of \$3,206 ($26 \text{ hr} \times \$123.32/\text{hr}$), and a third-year estimate of 26 hours (or $0.035 \times 375 \text{ applicants} \times 2 \text{ hr}$) at a cost of \$3,206 ($26 \text{ hr} \times \$123.32/\text{hr}$). In aggregate, we estimated a burden of 750 hours ($698 \text{ hr} + 26 \text{ hr} + 26 \text{ hr}$) at a cost of \$92,489 ($\$86,077 + \$3,206 + \$3,206$). When annualized over the 3-year period, we estimated an annual burden of 250 hours ($750 \text{ hours}/3$) at a cost of \$30,830 ($\$92,489/3$).

c. Conclusion

We received no comments on our proposed estimates regarding application fees and fingerprinting. We are therefore finalizing them, subject to the modification of our fingerprinting projections.

ii. Revocation of Physician/Eligible Professional Enrollment for Improper Part B Prescribing or Patient Harm

As previously discussed in the proposed rule and this final rule, we proposed the following:

- Under existing § 424.535(a)(14), CMS may revoke a physician’s or other eligible professional’s enrollment if he or she has a pattern or practice of prescribing Part D drugs that:

(i) Is abusive, and/or represents a threat to the health and safety of Medicare beneficiaries; or

(ii) fails to meet Medicare requirements. We proposed to expand the scope of § 424.535(a)(14) to include Part B drugs.

• In new §§ 424.530(a)(15) and 424.535(a)(22), respectively, we proposed that CMS could deny or revoke a physician's or other eligible professional's enrollment if he or she has been subject to prior action from a state oversight board, federal or state health care program, Independent Review Organization (IRO) determination(s), or any other equivalent governmental body or program that oversees, regulates, or administers the provision of health care with underlying facts reflecting improper physician or other eligible professional conduct that led to patient harm.

Using our current average annual number of revocations for improper Part D prescribing as a barometer, we project that approximately 10 revocations per year will occur due to our expansion of § 424.535(a)(14) to include Part B drugs. Regarding our patient harm provision, we project approximately 5 revocations per year. This is based on our statements in section III.H of this final rule that we will exercise our authority under this provision only in significant and exceptional cases of patient harm. This results in an annual estimated total of 15 revocations for these two provisions. Based on our internal statistics concerning the average annual amount of provider payments, we project a per-revoked provider amount of \$50,000. We therefore estimate our combined annual projected savings to the Trust Funds (specifically, monies that would not otherwise be paid to the revoked providers) concerning the abusive Part B prescribing and patient harm revocation provisions to be \$750,000 (15 revocations X \$50,000) annually. Over 10 years, this results in a total savings of \$7.5 million.

9. Deferring to State Scope of Practice Requirements

a. Ambulatory Surgery Centers

Currently, there are approximately 5,800 Medicare-participating ASCs. We are finalizing our proposal with modification at § 416.42(a)(1) to clarify that there are two components to any pre-procedure evaluation and require that, immediately before surgery, a physician must examine the patient to evaluate the risk of the procedure to be performed, and a physician or anesthetist must examine the patient to evaluate the risk of anesthesia for that procedure. We are finalizing this change to reduce ASC compliance burden and provide for patient assessment and care continuity while maintaining patient safety and care. At § 416.42(a)(1)(ii), we will allow an anesthetist or a physician

to perform the required pre-surgical anesthesia risk evaluation. We do not believe this modification to the proposed policy affects our estimates.

In total, ASCs provided about 6.4 million services in 2016. We assume that 30 percent of all procedures will utilize the services of a nurse anesthetist instead of a physician to meet this requirement, which reduces the average cost of the examination. We estimate the pre-surgical anesthesia evaluation to take 15 minutes to complete. We are assuming these estimates based on previous experience and conversations with stakeholders.

According to 2018 Bureau of Labor Statistics data, the hourly cost for a physician (including fringe benefits and overhead calculated at 100 percent of the mean hourly wage) is approximately \$203 (\$51 for 15 minute evaluation), and the hourly cost for a nurse anesthetist is approximately \$168 (\$42 for 15 minute evaluation). Assuming 1.92 million procedures annually, we can predict a savings of approximately \$17.3 million $((\$51 - \$42) \times 1.92 \text{ million})$. We have used our best estimate as to the percentage of pre-surgical evaluations by anesthetists overall.

b. Hospice

We are revising § 418.106 to permit hospices to accept orders for drugs from attending physicians who are physician assistants. We do not believe that there are any associated financial impacts for hospices.

10. Changes Due to Updates to the Quality Payment Program

In section III.K. of this final rule, we included our policies for the Quality Payment Program. In this section of the final rule, we present the overall and incremental impacts to the number of expected QPs and associated APM Incentive Payments. In MIPS, we estimate the total MIPS eligible population and the payment impacts by practice size for the 2020 MIPS performance period based on various proposed policies to modify the MIPS final score and the proposed new performance threshold and additional performance threshold. For this RIA, we updated performance period and eligibility data to reflect information submitted in the 2018 MIPS performance period.

a. Estimated APM Incentive Payments to QPs in Advanced APMs and Other Payer Advanced APMs

From 2019 through 2024, through the Medicare Option, eligible clinicians receiving a sufficient portion of

Medicare Part B payments for covered professional services or seeing a sufficient number of Medicare patients through Advanced APMs as required to become QPs, for the applicable performance period, will receive a lump-sum APM Incentive Payment equal to 5 percent of their estimated aggregate payment amounts for Medicare covered professional services furnished during the calendar year immediately preceding the payment year. In addition, beginning in payment year 2021, in addition to the Medicare Option, eligible clinicians may become QPs through the All-Payer Combination Option. The All-Payer Combination Option will allow eligible clinicians to become QPs by meeting the QP thresholds through a pair of calculations that assess a combination of both Medicare Part B covered professional services furnished through Advanced APMs and services furnished through Other Payer Advanced APMs.

The APM Incentive Payment is separate from and in addition to the payment for covered professional services furnished by an eligible clinician during that year. Eligible clinicians who become QPs for a year are exempt from MIPS reporting requirements and payment adjustment. Eligible clinicians who do not become QPs, but meet a lower threshold to become Partial QPs for the year, may elect to report to MIPS and, if they elect to report, would then be scored under MIPS and receive a MIPS payment adjustment. Partial QPs are not eligible to receive the APM Incentive Payment. For the 2020 QP Performance Period, we define Partial QPs to be eligible clinicians in Advanced APMs who collectively have at least 40 percent, but less than 50 percent, of their payments for Part B covered professional services through an APM Entity, or collectively furnish Part B covered professional services to at least 25 percent, but less than 35 percent, of their Medicare beneficiaries through an APM Entity. This MIPS payment adjustment may be positive, negative, or neutral. If an eligible clinician does not attain either QP or Partial QP status, and does not meet any another exemption category, the eligible clinician would be subject to MIPS, would report to MIPS, and would receive the corresponding MIPS payment adjustment.

Beginning in payment year 2026, payment rates for services furnished by clinicians who achieve QP status for a year would be increased each year by 0.75 percent for the year, while payment rates for services furnished by clinicians who do not achieve QP status for the year would be increased by 0.25

percent. In addition, MIPS eligible clinicians would receive positive, neutral, or negative MIPS payment adjustments to payment for their Part B PFS services in a payment year based on performance during a prior performance period. Although the statute establishes overall payment rate and procedure parameters until 2026 and beyond, this impact analysis covers only the fourth payment year (2022 payment year) of the Quality Payment Program.

In section III.K.4.e.(3)(c)(ii) of this final rule, we amended the marginal risk standard finalized in § 414.1420(d)(5) by amending paragraph (d)(5)(i) to provide that in event that the marginal risk rate varies depending on the amount by which actual expenditures exceed expected expenditures, the average marginal risk rate across all possible levels of actual expenditures would be used for comparison to the marginal risk rate specified in paragraph (d)(3)(ii) of § 414.1420(d), and we retained the exceptions for large losses and small losses as described in that section. We do not yet have experience with QP and Partial QP Determinations under the All-Payer Combination Option, as the 2019 QP Performance Period is the first year in which eligible clinicians can become QPs or Partial QPs under the All-Payer Combination Option. To date, we have only determined a modest number of payment arrangements from non-Medicare payers that meet the Other Payer Advanced APM criteria. However, we expect this policy may increase the number of arrangements that may meet the Other Payer Advanced APM financial risk criterion.

Based on our analysis there are 21,000 providers within 5 percent of performance year 2020 QP thresholds in Advanced APMs, and therefore, could potentially benefit from participation in Other Payer Advanced APMs. Assuming a static marketplace, there are between 100–150 eligible clinicians that would benefit from the change in the marginal risk requirement at this time (that is, in 2020 QP Performance Period). This is because there are likely to be only a small number of eligible clinicians who both (1) participate in the payment arrangements we determined were not Other Payer Advanced APMs, but will become Other Payer Advanced APMs under the policy, and (2) have QP scores just below the QP threshold. While this number may grow in the future as payers adopt payment arrangements designed to reflect the change in the marginal risk requirement, we anticipate the incremental impact of this policy will have a small impact on the number of clinicians that meet the QP threshold and the total number of payment

arrangements that are determined to be Other Payer Advanced APMs for the 2020 QP Performance Period.

Overall, we estimated that for the 2020 QP Performance Period between 210,000 and 270,000 eligible clinicians will become QPs, therefore be excluded from MIPS, and qualify for the lump sum APM incentive payment in Payment Year 2022 based on 5 percent of their Part B allowable charges for covered professional services in the preceding year. These allowable charges for QPs are estimated to be between approximately \$10,700 million and \$13,700 million in total for the 2020 performance year. The analysis for this final rule used the 2019 second snapshot participation file, and the 2019 third snapshot participation file for the MSSP Basic Level E and MSSP Enhanced models. We estimate that the total lump sum APM Incentive Payments will be approximately \$535–685 million for the 2022 Quality Payment Program payment year.

In section VII.F.10.b. of this final rule, we projected the number of eligible clinicians that will be QPs, and thus excluded from MIPS, using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect Advanced APMs that will be operating during the 2020 QP Performance Period, as well as some Advanced APMs anticipated to be operational during the 2020 QP Performance Period. The projections also reflect an estimated number of eligible clinicians that would attain QP status through the All-Payer Combination Option. The following APMs are expected to be Advanced APMs for the 2020 QP Performance Period:

- Next Generation ACO Model, Comprehensive Primary Care Plus (CPC+) Model;
- Comprehensive ESRD Care (CEC) Model (Two-Sided Risk Arrangement);
- Vermont All-Payer ACO Model (Vermont Medicare ACO Initiative);
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track);
- Oncology Care Model (Two-Sided Risk Arrangements);
- Medicare ACO Track 1+ Model;
- Bundled Payments for Care Improvement Advanced;
- Maryland Total Cost of Care Model (Maryland Care Redesign Program; Maryland Primary Care Program); and
- Medicare Shared Savings Program (Track 2, Basic Track Level E, and the ENHANCED Track).

We used the APM Participant Lists and Affiliated Practitioner Lists, as

applicable, (see 81 FR 77444 through 77445 for information on the APM Participant Lists and QP determinations) for the Predictive QP determination file for 2019 to estimate QPs, total Part B allowed charges for covered professional services, and the aggregate total of APM incentive payments for the 2020 QP Performance Period. We examined the extent to which Advanced APM participants would meet the QP Thresholds of having at least 50 percent of their Part B covered professional services or at least 35 percent of their Medicare beneficiaries furnished Part B covered professional services through the APM Entity.

We received the following comments on the APM estimates:

Comment: One commenter expressed concern that the RIA estimates similar totals for the number of QPs in performance year 2019 and performance year 2020, reflecting a relatively flat projected growth of QPs in 2020.

Response: In the CY 2020 PFS proposed rule (84 FR 40732), we estimated the number of QPs based on the best data at the time of publication. Our current analysis reflects the most recent participation data as of August 31, 2019 and as a result our projections indicate an increase in the number of QPs for PY2020.

As a result of the availability of more recent data, we have updated our calculations in this final rule and estimate that for the 2020 QP Performance Period between 210,000 and 270,000 eligible clinicians will become QPs.

b. Estimated Number of Clinicians Eligible for MIPS Eligibility

(1) Methodology To Assess MIPS Eligibility

(a) Clinicians Included in the Model Prior to Applying the Low-Volume Threshold Exclusion

To estimate the number of MIPS eligible clinicians for the 2020 MIPS performance period in this final rule, our scoring model used a combination of the first determination period from the 2019 MIPS performance period (from October 1, 2017 to September 30, 2018) and data from the end of calendar year 2018 (from October 1, 2018 to December 31, 2018). The first determination period from the 2019 MIPS performance period eligibility file was selected as it includes several eligibility files changes that affect the Quality Payment Program moving forward. The rationale for including the data from the end of CY 2018 was to create a 15-month window for assigning

MIPS eligible clinicians as we finalized in the CY 2019 PFS final rule (83 FR 59727 through 59730). We included 1.6 million clinicians (see Table 122) who had PFS claims from October 1, 2017 to December 31, 2018. We excluded from our analysis individual clinicians who were affected by the automatic extreme and uncontrollable policy finalized for the 2018 MIPS performance period/2020 MIPS payment year in the CY 2019 PFS final rule (83 FR 59876) as we are unable to predict how these clinicians would perform in a year where there was no extreme and uncontrollable event.

Clinicians are ineligible for MIPS (and are excluded from MIPS payment adjustment) if they are newly enrolled to Medicare; are QPs; are partial QPs who elect to not participate in MIPS; are not one of the clinician types included in the definition for MIPS eligible clinician; or do not exceed the low-volume threshold as an individual or as a group. Therefore, we excluded these clinicians when calculating those clinicians eligible for MIPS. Due to policy changes the exclusion for participants in the Medicare Advantage Qualifying Payment Arrangement Incentive (MAQI) has been removed.

For the estimated MIPS eligible population for the 2022 MIPS payment year, we restricted our analysis to clinicians who are a physician (as defined in section 1861(r) of the Act); a physician assistant, nurse practitioner, and clinical nurse specialist (as such terms are defined in section 1861(aa)(5) of the Act); a certified registered nurse anesthetist (as defined in section 1861(bb)(2) of the Act); a physical therapist, occupational therapist, speech-language pathologist, audiologist, clinical psychologist, and registered dietitian or nutrition professional as finalized in the CY 2019 PFS final rule (83 FR 60076).

As noted previously, we excluded QPs from our scoring model since these clinicians are not MIPS eligible clinicians. To determine which clinicians in the initial population of 1.6 million should be excluded as QPs, we used the APM Participant List for the first snapshot date for the 2019 QP performance period, supplemented by the most recent 2018 performance period APM participation data for those clinicians not on the 2019 first snapshot list. From this data, we calculated the QP determinations as described in the Qualifying APM Participant definition at § 414.1305 for the 2020 QP performance period. We assumed that all Partial QPs would elect to participate in MIPS and included them in our scoring model and eligibility counts.

The projected number of QPs excluded from our model is 163,200. Due to data limitations, we could not identify specific clinicians who may become QPs in the 2020 Medicare QP Performance Period; hence, our model may underestimate or overestimate the fraction of clinicians and allowed charges for covered professional services that will remain subject to MIPS after the exclusions.

We also excluded newly enrolled Medicare clinicians from our model. To identify newly enrolled Medicare clinicians, we used the enrollment date from the 2018 Quality Payment Program performance period data.

(b) Assumptions Related to Applying the Low-Volume Threshold Exclusion

The low-volume threshold policy may be applied at the individual (that is, TIN/NPI) or group (that is, TIN or APM entity) levels based on how data are submitted or at the APM Entity level if the clinician is part of a MIPS APM Entity scored under the APM scoring standard. To determine who among those in the total initial population of 1.6 million is a MIPS APM participant, we used those who are APMs in the 2018 performance period as well as the additional clinicians in the first snapshot date of the 2019 QP performance period. To determine who is a member of a virtual group we used those who are in a virtual group for the 2018 performance period. If a MIPS eligible clinician is determined to not be scored as a MIPS APM or virtual group participant, then their reporting type, that is, group (TIN) or individual (TIN/NPI) is based on their reporting for the CY 2018 MIPS performance period. If no data are submitted by a clinician (TIN/NPI) or the clinician's group (TIN), and the TIN/NPI is not associated with an APM Entity or virtual group during the performance period, then the low-volume threshold is applied at the TIN/NPI level to PFS charges and beneficiary count for the 2019 first determination period. A clinician or group that exceeds at least one but not all three low-volume threshold criteria may become MIPS eligible by electing to opt-in and subsequently submitting data to MIPS, thereby getting measured on performance and receiving a MIPS payment adjustment. Our method of modeling opt-in participation is described later in this section.

Table 122 presents the estimated MIPS eligibility status and the associated PFS allowed charges of clinicians in the initial population of 1.6 million clinicians in the analysis of the 2020 MIPS performance period after using 2018 MIPS performance period

data and applying the policies for the 2020 MIPS performance period.

For the purposes of modeling, we made assumptions on group reporting to apply the low-volume threshold. One extreme and unlikely assumption is that no practices elect group reporting, virtual group reporting, or participate in an APM and the low-volume threshold would always be applied at the individual level. Although we believe a scenario in which only these clinicians would participate as individuals is unlikely, this assumption is important because it quantifies the minimum number of MIPS eligible clinicians. For this final rule model, we estimate there were approximately 220,000 clinicians¹³² who would be MIPS eligible because they exceed the low volume threshold as individuals and are not otherwise excluded. In Table 122, we identify clinicians under this assumption as having "required eligibility."

We anticipate that groups that submitted to MIPS as a group or registered as a virtual group for the CY 2018 MIPS performance period will continue to do so for the CY 2020 MIPS performance period. Using this group assumption and including those identified with MIPS APM entities in our scoring model, we identified 639,004 MIPS eligible clinicians. In Table 122, we identify these clinicians who do not meet the low-volume threshold individually but are anticipated to submit to MIPS as a group, virtual group or MIPS APM as having "group eligibility." Using CY 2018 MIPS performance period data, we can identify group reporting through the submission of improvement activities, Promoting Interoperability, or quality performance category data.

To model the opt-in policy finalized in the CY 2019 PFS final rule (83 FR 59735), we assumed that 33 percent of the clinicians who exceed at least one but not all low-volume threshold criteria and submitted data to CY 2018 MIPS performance period would elect to opt-in to MIPS. We selected a random sample of 33 percent of clinicians without accounting for performance. We believe this assumption of 33 percent opt-in participation is reasonable because some clinicians may choose not to submit data due to performance, practice size, or resources or alternatively, some may submit data, but elect to be a voluntary reporter and not be subject to a MIPS payment

¹³² The count of 224,082 MIPS eligible clinicians for required eligibility includes those who participated in MIPS (206,226 MIPS eligible clinicians), as well as those who did not participate (17,856 MIPS eligible clinicians).

adjustment based on their performance. This 33 percent participation assumption is identified in Table 122 as “Opt-In eligibility”. In this final rule

analysis, we estimate an additional 20,644 clinicians would be eligible through this policy for a total MIPS eligible population of approximately

880,000. The leads to an associated \$69 billion allowed PFS charges estimated to be included in the 2020 MIPS performance period.

TABLE 122: Description of MIPS Eligibility Status for CY 2022 MIPS Payment Year Using the CY 2020 PFS Assumptions**

Eligibility Status	Predicted Participation Status in MIPS Among Clinicians*	CY 2020 PFS Final Rule estimates	
		Number of Clinicians	PFS allowed charges (\$ in mil)***
Required eligibility (always subject to a MIPS payment adjustment because individual clinicians exceed the low-volume threshold in all 3 criteria)	Participate in MIPS	201,708	\$48,349
	Do not participate in MIPS	18,610	\$4,147
Group eligibility (only subject to payment adjustment because clinicians' groups exceed low-volume threshold in all 3 criteria and submit as a group)	Submit data as a group	639,004	\$15,426
Opt-In eligibility assumptions (only subject to a positive, neutral, or negative adjustment because the individual or group exceeds the low-volume threshold in at least 1 criterion but not all 3, and they elect to opt-in to MIPS and submit data)	Elect to opt-in and submit data	20,644	\$1,019
Total Number of MIPS Eligible Clinicians and the associated PFS allowed charges		879,966*	68,941
Not MIPS Eligible			
Potentially MIPS Eligible (not subject to payment adjustment for non-participation; could be eligible for one of two reasons: (1) meet group eligibility; or (2) opt-in eligibility criteria)	Do not opt-in; or Do not submit as a group	380,352	\$9,069
Below the low-volume threshold (never subject to payment adjustment; both individual and group is below all 3 low-volume threshold criteria)	Not applicable	81,982	\$444
Excluded for other reasons (Non-eligible clinician type, newly enrolled, QP)	Not applicable	265,982	\$10,980
Total Number of Clinicians Not MIPS Eligible		728,316	20,493
Total Number of Clinicians (MIPS and Not MIPS Eligible)		1,608,282	89,434

* Estimated MIPS Eligible Population

** Table 122 does not include clinicians impacted by the automatic extreme and uncontrollable policy (approximately 20,000 clinicians and \$1,672 million in PFS allowed charges). It also does not include excluded eligible clinicians in CPC+ APMs who otherwise would have been MIPS eligible (approximately 765 clinicians and \$36 million in PFS allowed charges).

*** Allowed charges estimated using 2017 and 2018 dollars. Low-volume threshold is calculated using allowed charges. MIPS payment adjustments are applied to the paid amount.

There are approximately 380,352 clinicians who are not MIPS eligible, but could be if their practice decides to participate or they elect to opt-in. We describe this group as “Potentially MIPS eligible”. These clinicians would be

included as MIPS eligible in the unlikely scenario in which all group practices elect to submit data as a group and all clinicians that could elect to opt-into MIPS do elect to opt-in. This assumption is important because it

quantifies the maximum number of MIPS eligible clinicians. When this unlikely scenario is modeled, we estimate that the MIPS eligible clinician population could be as high as 1.26 million clinicians.

Finally, there are some clinicians who would not be MIPS eligible either because they or their group are below the low-volume threshold on all three criteria (approximately 82,000) or because they are excluded for other reasons (approximately 266,000).

Since eligibility among many clinicians is contingent on submission to MIPS as a group, virtual group, APM participation or election to opt-in, we will not know the number of MIPS eligible clinicians until the submission period for the 2020 MIPS performance period is closed. For this impact analysis, we used the estimated population of 879,966 MIPS eligible clinicians described above.

c. Estimated Impacts on Payments to MIPS Eligible Clinicians

(1) Summary of Approach

In sections III.K.3.c., III.K.3.d. and III.K.3.e. of this final rule, we present several provisions which impact the performance category scores, final score calculation, and the MIPS payment adjustment. We discuss these changes in more detail in section VII.F.10.c.(2) of this RIA as we describe our methodology to estimate MIPS payments for the 2022 MIPS payment year. We note that many of the MIPS policies from the CY 2019 Quality Payment Program final rule were only defined for the 2019 MIPS performance period and 2021 MIPS payment year (including the performance threshold, the additional performance threshold, the policy for redistributing the weights of the performance categories, and many scoring policies for the quality performance category) which precludes us from developing a baseline for the 2020 MIPS performance period and 2022 MIPS payment year if there was no new regulatory action. Therefore, our impact analysis looks at the total effect of the finalized MIPS policies on the MIPS final score and payment adjustment for CY 2020 MIPS performance period/CY 2022 MIPS payment year.

The payment impact for a MIPS eligible clinician is based on the clinician's final score, which is a value determined by their performance in the four MIPS performance categories: Quality, cost, improvement activities, and Promoting Interoperability. As discussed in section VII.F.10.c.(2) of this final rule, we generally used the most recently available data from the Quality Payment Program which is data submitted for the 2018 MIPS performance period.

The estimated payment impacts presented in this final rule reflect averages by practice size based on Medicare utilization. The payment impact for a MIPS eligible clinician could vary from the average and would depend on the combination of services that the MIPS eligible clinician furnishes. The average percentage change in total revenues that clinicians earn would be less than the impact displayed here because MIPS eligible clinicians generally furnish services to both Medicare and non-Medicare patients; this program does not impact payment from non-Medicare patients. In addition, MIPS eligible clinicians may receive Medicare revenues for services under other Medicare payment systems, such as the Medicare Federally Qualified Health Center Prospective Payment System, that would not be affected by MIPS payment adjustment factors.

(2) Methodology To Assess Impact

To estimate participation in MIPS for the CY 2020 Quality Payment Program for this final rule, we generally used 2018 MIPS performance period data. Our scoring model includes the 879,966 estimated number of MIPS eligible clinicians as described in section VII.F.10.b.(1)(b) of this RIA.

To estimate the impact of MIPS on eligible clinicians, we generally used the 2018 MIPS performance period data, including data submitted for the quality, improvement activities, and Promoting Interoperability performance categories, CAHPS for MIPS and CAHPS for ACOs, the total per capita cost measure, Medicare Spending Per Beneficiary (MSPB) clinician measure and other data sets.¹³³ We calculated a hypothetical final score for the 2020 MIPS performance period/2022 MIPS payment year for each MIPS eligible clinician using score estimates described in this section for quality, cost, Promoting Interoperability, and improvement activities performance categories.

Starting with the 2018 performance period, certain groups could apply to be a virtual group and would be scored as a single group. For our model, we assumed that clinicians who participated as virtual groups for 2018 would continue to be a virtual group for the 2020 performance period.

¹³³ Data submitted to MIPS for the 2017 MIPS performance period data was used for the improvement score for the quality performance category. We also incorporated some additional data sources when available to represent more current data.

(a) Methodology To Estimate the Quality Performance Category Score

We estimated the quality performance category score using a similar methodology described in the CY 2019 PFS final rule (83 FR 60053 through 60054) with the following modifications that reflect the newly finalized policies for the 2020 MIPS performance period and improvement to our modeling methodology. As discussed in section III.K.3.c.(1)(c)(ii) of this final rule, we increased the data completeness requirement for the CY 2020 performance period from 60 percent to 70 percent. As discussed in section III.K.3.c.(1) of this final rule, we finalized a quality performance category weight of 45 percent for the 2020 MIPS performance period.

We also applied modifications that were previously finalized including the validation process that was finalized in the CY 2017 Quality Payment Program final rule (81 FR 77289 through 77291), applying the topped out scoring cap that was finalized (82 FR 53721 through 53727) to the measures subject to the scoring cap for the 2019 MIPS performance period, and the provisions in section III.K.3.d.(1)(b)(i)(C) of this final rule for benchmarks based on flat percentages to avoid potential inappropriate treatment.

Finally, our model applied the APM scoring standard policies finalized in the CY 2019 PFS final rule (83 FR 59754) as modified by the provisions in section III.K.3.c.(5)(c)(i)(B) of this final rule to MIPS eligible clinicians identified as being scored as a MIPS APM in the eligibility section VII.F.10.b.(1)(b) of this final rule. As described in section III.K.3.c.(5)(c)(i)(B) of this final rule, we will apply a minimum score of 50 percent, or an 'APM Quality Reporting Credit', under the MIPS quality performance category for certain APM entities participating in MIPS. In our model, this 'APM Quality Reporting Credit' was implemented for APM Entities that do not use Web Interface. As described in section III.K.3.c.(5)(c)(i)(A) of this final rule, we calculate an aggregated APM Entity quality performance category score from submitted MIPS data by the participants in an APM Entity not required to use Web Interface.

As described in section VII.F.10.b.(1)(b) of this final rule, we are using the APM Participant List for the first snapshot date for the 2019 QP performance period supplemented by the most recent 2018 performance period APM participation data for those clinicians not on the 2019 first snapshot list, using all available data to identify

who is an APM participant. For this analysis, the only MIPS reported measures available that are reported by a MIPS APM Entity would be the Web Interface measures and CAHPS for ACOs. In the case of MIPS APM entities associated with APMs that require participating entities to report Web Interface measures and CAHPS for ACOs, if the APM Entity existed in 2018, we calculated a score based on the Web Interface submission and CAHPS for ACOs from the 2018 performance period. If the APM Entity did not submit MIPS quality performance data for the 2018 performance period and was participating in the Shared Savings Program, we calculated an aggregate score based on individual submissions similar to how we estimate aggregate scores for MIPS APM entities that are not required to utilize the Web Interface. If the APM Entity is new for 2019 and is associated with an APM that requires participating entities to submit Web Interface measures and CAHPS for ACOs (and therefore did not have the ability to submit Web Interface measures for the 2018 performance period), and the participating clinician was associated with a different APM Entity in 2018 we used the score of the 2018 associated Entity. If that participating clinician was not associated with a different APM Entity in 2018 we used the median Web Interface score because we would anticipate the new APM Entities would report quality using the Web Interface in the future. For the MIPS APMs that do not utilize Web Interface only, we calculated an average quality performance category score based on group and individual submissions and then applied the APM Quality Reporting Credit policy to add 50 percent to the MIPS quality performance category score for APM Entities submitting to MIPS as discussed in section III.K.3.c.(5)(c)(i)(B) of this final rule. All quality performance category scores would be capped at 100 percent after receiving the 50 percent APM Quality Reporting Credit.

(b) Methodology To Estimate the Cost Performance Category Score

In section III.K.3.c.(2) of this final rule, we finalized a cost performance category weight of 15 percent for the 2020 MIPS performance period. In section III.K.3.c.(2)(b)(iii) of this final rule, we added 10 episode-based measures to the cost performance category beginning with the 2020 performance period in addition to the 8 episode-based measures finalized in the CY 2019 PFS final rule (83 FR 59767). In section III.K.3.c.(2)(b)(v) of this rule,

we included the revised total per capita cost and MSPB clinician measures.

We estimated the cost performance category score using all measures finalized in section III.K.3.c.(2)(b)(viii) of this final rule. The total per capita cost measure performance was estimated based on the revised measure using claims data from October 2016 through September 2017. The MSPB clinician measure performance was estimated based on the revised measure using claims data from January through December of 2017. For the episode-based measures, we used the specifications for the 8 episode-based measures finalized in the CY 2019 PFS final rule (83 FR 35902 through 35903), the specifications for the 10 new episode-based measures discussed in section III.K.3.c.(2)(b)(iii) of this final rule and claims data from January through December of 2017. A limitation of this cost data is that it does not overlap with the 2018 calendar year so we did not have cost measures for clinicians (TIN/NPIs) that newly bill in 2018. Cost measures are scored if the clinicians or groups met or exceed the case volume: 20 For the total per capita cost measure, 35 for MSPB clinician, 10 for procedural episode-based measures, and 20 for acute inpatient medical condition episode-based measures. The cost measures are calculated for both the TIN/NPI and the TIN, except for the lower gastrointestinal hemorrhage measure, which we discussed in section III.K.3.c.(2)(vi)(B) of this final rule to calculate only for groups. For clinicians participating as individuals, the TIN/NPI level score was used if available and if the minimum case volume was met. For clinicians participating as groups, the TIN level score was used, if available, and if the minimum case volume was met. For clinicians with no measures meeting the minimum case requirement, we did not estimate a score for the cost performance category, and the weight for the cost performance category was redistributed according to section III.K.3.c.(2) of this final rule. The raw cost measure scores were mapped to scores on the scale of 1–10, using benchmarks based on all measures that met the case minimum and if the group or clinician exceeded the low-volume threshold during the relevant performance period. For the episode-based cost measures, separate benchmarks were developed for TIN/NPI level scores and TIN level scores. For each clinician, a cost performance category score was calculated as the average of the measure scores available for the clinician.

(c) Methodology To Estimate the Facility-Based Measurement Scoring

As finalized in the CY2019 PFS final rule (83 FR 59856), we determine the eligible clinician's MIPS cost and quality performance category score in facility-based measurement based on Hospital VBP Program Total Performance Score for eligible clinicians or groups who meet the eligibility criteria, which we designed to identify those who primarily furnish services within a hospital. We estimate the facility-based score using the scoring policies finalized in the CY2018 Quality Payment Program final rule (82 FR 53763). In section III.K.3.d.(1)(c) of this final rule, we finalized technical changes for clarity and those changes do not affect the facility-based policies.

We used data for the first determination period for the 2019 performance period to attribute clinicians and groups to hospitals and assign the specific Hospital VBP Program Total Performance Score. If a Hospital VBP Program Total Performance Score could not be assigned to a clinician, in instances in which the attributed facility does not participate in the Hospital VBP program or no facility could be attributed, that clinician was determined as not eligible for facility-based measurement and assumed to participate in MIPS via other methods. We are not requiring eligible clinicians to opt-in to facility-based measurement; it is possible that a MIPS eligible clinician or a group is automatically eligible for facility-based measurement, but they participate in MIPS as an individual or a group. In these cases, we used the higher combined quality and cost performance category score, as reflected in the final score, from facility-based scoring compared to the combined quality and cost performance category score from MIPS submission-based scoring.

(d) Methodology To Estimate the Promoting Interoperability Performance Category Score

We estimated the Promoting Interoperability performance category score using the methodology described in the CY 2019 PFS final rule (83 FR 60055) with the following modifications that reflect the new policies for the 2020 MIPS performance period.

In section III.K.3.c.(4)(d)(i)(B) of this final rule, we modified the Query of PDMP measure to a yes/no response. The Query of PDMP measure was not modeled because the measure was not available in the 2018 MIPS performance period submissions data.

In section III.K.3.c.(4)(f)(iii) of this final rule, we revised the definition of hospital-based MIPS eligible clinician to include groups and virtual groups. We also stated that a hospital-based MIPS eligible clinician under § 414.1305 means an individual MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in sites of service identified by the POS codes used in the HIPAA standard transaction as an inpatient hospital, on-campus outpatient hospital, off campus outpatient hospital, or emergency room setting based on claims for the MIPS determination period, and a group or virtual group provided that more than 75 percent of the NPIs billing under the group's TIN or virtual group's TINs, as applicable, meet the definition of a hospital-based individual MIPS eligible clinician. In section III.K.3.c.(4)(f)(iv) of this final rule, we discussed accounting for a group or virtual group that meets the definition of a non-patient facing MIPS eligible clinician such that the group or virtual group only has to meet a threshold of more than 75 percent. Also, as described in sections III.K.3.c.(4)(f)(iii) and III.K.3.c.(4)(f)(iv) of this final rule, we assigned a zero percent weight for the Promoting Interoperability performance category for groups defined as hospital-based and non-patient facing, and redistribute the points associated with the Promoting Interoperability performance category to another performance category or categories. Therefore, in our impact analysis model, a group was only assigned a zero percent weight for the Promoting Interoperability performance category and the points for Promoting Interoperability performance category was redistributed if: (1) All the TIN/NPIs were eligible for reweighting as established at § 414.1380(c)(2)(iii) for MIPS eligible clinicians submitting data as a group or virtual group, or 2) the group met the revised definition of a hospital-based MIPS eligible clinician as discussed in section III.K.3.c.(4)(f)(iii) of this final rule or the definition of a non-patient facing MIPS eligible clinician, as discussed in section III.K.3.c.(4)(f)(iv) of this final rule, as defined in § 414.1305. We also incorporated into our model the policy to continue automatic reweighting for NPs, PAs, CNSs and CRNAs, physical therapists,

occupational therapist, speech-language pathologists, audiologists, clinical psychologists, and registered dietitians or nutrition professionals as described in sections III.K.3.c.(4)(f)(i) and III.K.3.c.(4)(f)(ii) of this final rule.

In our model, for the APM participants identified in section VII.F.10.b.(1)(b) of this final rule, we simulated MIPS APM Entity scores by using submitted Promoting Interoperability data by groups or individuals that we identified as being in a MIPS APM to calculate an APM Entity score.

All other policies for the Promoting Interoperability performance category described in section III.K.3.c.(4) of this final rule did not impact our modeling methodology for this performance category because either the data were not available in the 2018 MIPS performance period submissions data or the changes reflect the modeling strategy previously used and described in the CY 2019 PFS final rule (83 FR 60055). For example, since the Verify Opioid Treatment Agreement measure was not modeled in the CY 2019 PFS final rule (83 FR 60055) because the measure was not available in the 2017 MIPS performance period submissions data, the removal of this measure did not impact our methodology for this final rule.

This is the first iteration of the model where there are small practice hardship applications, therefore, we only reweighted small practices if they resubmitted an application and did not submit Promoting Interoperability performance category data.

(e) Methodology To Estimate the Improvement Activities Performance Category Score

We modeled the improvement activities performance category score based on CY 2018 MIPS performance period data and APM participation identified in section VII.F.10.b.(1)(b) of this final rule. In section III.K.3.c.(3)(d)(iii) of this final rule, we increase the minimum number of clinicians in a group or virtual group who are required to perform an improvement activity to 50 percent for the improvement activities performance category beginning with the CY 2020 performance year and future years. We did not incorporate this change into our

model because we did not have the information to model this provision. For the APM participants identified in section VII.F.10.b.(1)(b) of this final rule, we assigned an improvement activity performance category score of 100 percent.

Clinicians and groups not participating in a MIPS APM were assigned their CY 2018 MIPS performance period improvement activities performance category score.

(f) Methodology To Estimate the Complex Patient Bonus

In section III.K.3.d.(2)(a) of this final rule, we continued the complex patient bonus for the 2020 MIPS performance period. Consistent with the policy to define complex patients as those with high medical risk or with dual eligibility, our scoring model used the complex patient bonus information calculated for the 2018 performance period data.

(g) Methodology To Estimate the Final Score

As discussed in sections III.K.3.c.(1)(b), III.K.3.c.(2)(a), and summarized in section III.K.3.d.(2)(b) of this final rule, our model assigns a final score for each TIN/NPI by multiplying each performance category score by the corresponding performance category weight, adding the products together, multiplying the sum by 100 points, and adding the complex patient bonus. After adding any applicable bonus for complex patients, we reset any final scores that exceeded 100 points equal to 100 points. For MIPS eligible clinicians who were assigned a weight of zero percent for any performance category, we redistributed the weights according to section III.K.3.d.(2)(b)(iii) of this final rule.

(h) Methodology To Estimate the MIPS Payment Adjustment

As described in the CY 2018 Quality Payment Program final rule (82 FR 53785 through 53787), we applied a hierarchy to determine which final score should be used for the payment adjustment for each MIPS eligible clinician when more than one final score is available (for example if a clinician qualifies for a score for an APM entity and a group score, we select the APM entity score).

We then calculated the parameters of an exchange function in accordance with the statutory requirements related to the linear sliding scale, budget neutrality, minimum and maximum adjustment percentages and additional payment adjustment for exceptional performance (as finalized under § 414.1405), using a performance threshold of 45 points and the additional performance threshold of 85 points (as discussed in sections III.K.3.e.(2) and III.K.3.e.(3) of this final rule). We used these resulting parameters to estimate the positive or negative MIPS payment adjustment based on the estimated final score and the paid amount for covered professional services furnished by the MIPS eligible clinician. We considered other performance thresholds which are discussed in section VII.F.2. of this RIA.

(3) Impact of Payments by Practice Size

Using the assumptions provided above, our model estimates that \$433 million would be redistributed through budget neutrality and that \$500 million would be distributed to MIPS eligible clinicians that meet or exceed the additional performance threshold. The model further estimates that the maximum positive payment

adjustments are 6.2 percent after considering the MIPS payment adjustment and the additional MIPS payment adjustment for exceptional performance.

Table 123 shows the impact of the payment adjustments by practice size and based on whether clinicians are expected to submit data to MIPS. We estimate that a smaller proportion of clinicians in small practices (1–15 clinicians) who participate in MIPS will receive a positive or neutral payment adjustment compared to larger sized practices. In aggregate, the cohort of clinicians in small practices participating in MIPS and who submit to MIPS receive a 1.0 percent increase in total paid amount, which is lower than the comparative payment increases received by the cohort of MIPS eligible clinicians in larger-sized practices. Table 123 also shows that 92.5 percent of MIPS eligible clinicians that participate in MIPS are expected to receive positive or neutral payment adjustments. We want to highlight that we are using 2018 MIPS performance period submissions data for these calculations, and it is likely that there will be changes that we cannot account for at this time because the performance thresholds increased for the 2020 MIPS

performance period to avoid a negative payment adjustment.

The combined impact of negative and positive adjustments and the additional positive adjustments for exceptional performance as a percent of paid amount among those that do not submit data to MIPS was not the maximum negative payment adjustment of 9 percent possible because these clinicians do not all receive a final score of zero. Indeed, some MIPS eligible clinicians that do not submit data to MIPS may receive final scores above zero through performance on the cost performance category, which utilizes administrative claims data and does not require separate data submission to MIPS. Among those who we estimate would not submit data to MIPS, 89 percent are in small practices (15,993 out of 18,017 clinicians who do not submit data). To address participation concerns, we have policies targeted towards small practices including technical assistance and special scoring policies to minimize burden and facilitate small practice participation in MIPS or APMs. We also note this participation data is generally based off participation for the 2018 performance period and that participation may change for the 2020 performance period.

TABLE 123: MIPS Estimated Payment Year 2022 Impact on Total Estimated Paid Amount by Participation Status and Practice Size^a

Practice Size*	Number of MIPS eligible clinicians	Percent MIPS Eligible Clinicians with Positive or Neutral Payment Adjustment	Percent MIPS Eligible Clinicians with a Positive Adjustment with Exceptional Payment Adjustment	Percent MIPS Eligible Clinicians with Negative Payment Adjustment	Combined Impact of Negative and Positive Adjustments and Exceptional Performance Payment as Percent of Paid Amount**
Among those submitting data***					
1) 1-15	140,825	81.1%	36.2%	18.9%	1.0%
2) 16-24	43,304	87.4%	40.0%	12.6%	1.3%
3) 25-99	199,829	92.0%	40.7%	8.0%	1.4%
4) 100+	477,991	96.5%	50.3%	3.5%	1.8%
Overall	861,949	92.5%	45.3%	7.5%	1.4%
Among those not submitting data					
1) 1-15	15,993	0.0%	0.0%	100.0%	-8.6%
2) 16-24	663	0.0%	0.0%	100.0%	-8.6%
3) 25-99	904	0.0%	0.0%	100.0%	-8.8%
4) 100+	457	0.0%	0.0%	100.0%	-8.7%
Overall	18,017	0.0%	0.0%	100.0%	-8.6%

*Practice size is the total number of TIN/NPIs in a TIN.

** 2018 data used to estimate 2020 performance period payment adjustments. Payments estimated using 2018 dollars trended to 2022. The percentage represents the total adjustments after taking all the positive adjustments and subtracting the negative adjustments for all MIPS eligible clinicians in the same respective practice size.

***Includes facility-based clinicians whose quality data is submitted through hospital programs.

We received the following comments about our MIPS impact analysis:

Comment: One commenter raised concerns that scoring policies may inadvertently disadvantage smaller (but not small) groups and individual clinicians, and encouraged CMS to continue analyzing and addressing differences that are found.

Response: We agree on the importance of evaluating the impact of scoring policies that affect payment distributions. Table 123 analyzes the impact of payment redistribution by differing practice sizes. In our analysis, over 80 percent of clinicians in small practices (1–15 clinicians) that submit data to MIPS would receive a positive or neutral adjustment. The table also shows the results for practices of 16 to 25 clinicians.

After consideration of public comments, we have not updated our approach to the estimating the impact of the MIPS payments, however, we did update several data sources.

e. Potential Costs of Compliance With the Promoting Interoperability and Improvement Activities and Cost Performance Categories for Eligible Clinicians

(1) Potential Costs of Compliance With Promoting Interoperability Performance Category

In section III.K.3.c.(4)(d)(i)(B) of this final rule, we allow clinicians and groups to satisfy the optional bonus Query of PDMP measure by submitting a “yes/no” attestation, rather than reporting a numerator and denominator. As discussed in the Collection of Information section of this final rule, we are not changing our burden assumptions to account for this policy due to a lack of information regarding the number of clinicians reporting bonus measures combined with our currently approved burden estimates being based only on the reporting of required measures. However, we do believe that for clinicians or groups who report this measure, there will be a reduction in reporting burden compared to what would have been required to submit the measure without this change related to the elimination of the need to perform calculations prior to submitting a numerator and denominator. As data availability allows, we will reassess the inclusion of this burden in the Collection of Information in the future.

In sections III.K.3.g.(3)(a)(i) and III.K.3.g.(4)(a)(i) of this rule, beginning with the 2021 performance period and for future years, we require QCDRs and qualified registries to support three performance categories: Quality,

improvement activities, and Promoting Interoperability. In the Collection of Information section, we discussed the potential burden reduction associated with simplifying MIPS reporting for clinicians who currently utilize qualified registries or QCDRs that have not previously offered the ability to report Promoting Interoperability or improvement activity data. We believe it is also possible that some MIPS eligible clinicians may elect to begin utilizing qualified registries or QCDRs as a result of this policy and its potential for simplifying their MIPS reporting combined with the benefits of improving the quality of care provided to their patients. We do not have information with which to estimate the number of clinicians who may pursue this option, therefore we cannot quantify the associated costs, cost savings, and benefits consistent with the CY 2018 Quality Payment Program final rule (82 FR 53946).

(2) Potential Costs of Compliance With Improvement Activities Performance Category

In section III.K.3.c.(3)(d)(iii) of this final rule, we are: (1) Modifying the definition of rural area; (2) updating § 414.1380(b)(3)(ii)(A) and (C) removing the reference to the four listed accreditation organizations to be recognized as patient-centered medical homes and removing the reference to the specific accrediting organization for comparable specialty practices; (3) increasing the group reporting threshold to 50 percent; (4) establishing factors to consider for removal of improvement activities from the Inventory; (5) removing 15, modifying seven, and adding two new improvement activities for the 2020 performance period and future years; and (6) concluding and removing the CMS Study on Factors Associated with Reporting Quality Measures.

The finalized proposals to modify the definition of a rural area and to remove references to the four listed accreditation organizations to be recognized as patient-centered medical homes and to the specific accrediting organization for comparable specialty practices will have no financial impact due to the nature of the regulatory changes being finalized.

Given groups’ familiarity with the improvement activities in the Improvement Activities Inventory, we believe that a group would find applicable and meaningful activities to complete that are not specific to practice size, specialty, or practice setting and would apply to at least 50 percent of individual MIPS eligible clinicians in

the group. Therefore, an increase in the minimum threshold for a group to receive credit for the improvement activities performance category should not present additional complexity or burden. We also anticipate that the vast majority of clinicians performing improvement activities, to comply with existing MIPS policies, would continue to perform the same activities under the policies established in this final rule because previously finalized improvement activities continue to apply for the current and future years unless otherwise modified per rule-making (82 FR 54175). Most of the improvement activities in the Inventory remain unchanged for the 2020 MIPS performance period. Of the activities that are being removed, or modified, many were duplicative which means many clinicians or groups would be able to continue the activity, but it would be reported under a different activity in the Improvement Activities Inventory.

Our provision to establish removal factors for consideration when removing improvement activities from the Improvement Activities Inventory would provide guidance for clinicians or groups on the considerations for the removal of improvement activities and would not present additional burden. The changes to the Improvement Activities Inventory that include the modification, removal, and addition of improvement activities provide clarity, avoid duplication, and provide more options for clinicians to select improvement activities that are appropriate for their clinical practice and would not present additional burden. Furthermore, in this final rule, we end and remove the Study on Factors Associated with Reporting Quality Measures beginning with the 2020 MIPS performance period. In the CY 2019 PFS final rule, we finalized a sample size of 200 clinicians, each of which completed a 15-minute survey both prior to and after submitting MIPS data (83 FR 60058). As a result of ending the study, we estimate a reduction in burden of 100 hours and \$20,286 (200 clinicians × 0.5 hours × \$202.86).

(3) Potential Costs of Compliance With the Cost Performance Category

We state in section VI.B.7.j of the CY 2020 PFS final rule that there were no submissions required for the cost performance categories, therefore, we did not include any compliance cost associated with that performance category; however, we received the following comments on administrative costs for the cost performance category proposals.

Comment: One commenter noted that in a large multi-specialty organization the number of cost measures could increase administrative burden on clinicians and organizations, to track measures and work to improve performance.

Response: We acknowledge there are administrative burdens and related financial costs associated with each administrative claims measure clinicians, groups, and organizations may choose to monitor. However, because these costs can vary significantly due to organizational size, number of administrative claims measures being reported, volume of clinicians reporting each measure, and the specific methods employed to improve performance, we are unable to provide an estimate of the financial impact each clinician, group, or organization may experience.

As a result of these comments, we are acknowledging that while there is no data collection burden, there may be associated costs for clinicians and group practices to monitor new cost measures; however, we are unable to quantify that impact.

f. Potential Costs of Compliance for Third Party Intermediaries

Based on previously finalized policies in the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364) and as further revised in the CY 2019 PFS final rule at § 414.1400(a)(2) (83 FR 60088), the current policy is that all third party intermediaries may submit data for any of the three MIPS performance categories quality (except for data on the CAHPS for MIPS survey); improvement activities; and Promoting Interoperability. As previously discussed in section III.K.3.g.(3)(a)(i) and III.K.3.g.(4)(a)(i) of this final rule, we are finalizing changes to § 414.1400(a)(2) to state that beginning with the 2023 MIPS payment year (2021 performance period), QCDRs and qualified registries must be able to submit data for all the MIPS performance categories identified in the regulation. In section III.K.3.g.(1) of this final rule, we further state that we anticipate using the QCDR and qualified registry self-nomination vetting process to assess which of these entities will be subject to the requirement to support reporting the Promoting Interoperability performance category and which third parties could be excepted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4) or (5) or § 414.1380(c)(2)(i)(C)(1) through (7) or (9). Based on our review of qualified

registries and QCDRs approved to submit data for the 2019 MIPS performance period, 70 percent of qualified registries and 72 percent of QCDRs are already able to submit data for the quality, improvement activities, and Promoting Interoperability performance categories. We believe this provision could result in the remaining qualified registries and QCDRs incurring additional costs to upgrade information technology systems in order to make this ability available to clinicians, with less cost incurred by entities who would be subject to an exception for the Promoting Interoperability performance category. However, given that each of these entities and their information technology systems are unique, and there is no method of determining which entities may have already begun the process of developing this ability, we are unable to determine the impact of transitioning from allowing this ability as an option to requiring it. Also, given that the majority of these entities have already begun offering the ability to submit data on behalf of the improvement activities and Promoting Interoperability performance categories, we assume they have done so because they believe the benefits outweigh the costs and is therefore, in their best financial interests to do so.

In section III.K.3.g.(3)(a)(iii) of this final rule, beginning with the 2021 performance period, we require qualified registries and QCDRs to provide the following as part of the performance feedback given at least 4 times a year: Feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure (MIPS quality measure and/or QCDR measure) within the QCDR. We understand that QCDRs can only provide feedback on data they have collected on their clinicians and groups, and realize the comparison would be limited to that data and not reflect the larger sample of those that have submitted on the measure for MIPS, which the QCDR does not have access to. As finalized in the CY 2017 and CY 2018 Quality Payment Program final rules (81 FR 77367 through 77386 and 82 FR 53812), qualified registries and QCDRs are required to provide feedback on all of the MIPS performance categories that the qualified registry or QCDR reports at least 4 times a year. Given that we did not propose a significant change but are instead modifying and strengthening the existing policy, we do not anticipate a significant increase in cost or effort for

Third Party Intermediaries to comply with this provision.

In section III.K.3.g.(3)(c)(i)(B)(cc), we require that in order for a QCDR measure to be considered for use in the program beginning with the 2021 performance period and future years, all QCDR measures submitted for self-nomination must be fully developed with completed testing results at the clinician level, as defined by the CMS Blueprint for the CMS Measures Management System, as used in the testing of MIPS quality measures prior to the submission of those measures to the Call for Measures. Beginning with the 2021 performance period and future years, we also require QCDRs to collect data on the potential QCDR measure, appropriate to the measure type, as defined in the CMS Blueprint for the CMS Measures Management System, prior to self-nomination. The testing process for quality measures is dependent on the measure type (for example, a measure that is specified as an eCQM measure has additional steps it must undergo when compared to other measure types). The National Quality Forum (NQF) has developed guides for measure testing criteria and standards which further illustrate these differences based on measure type.¹³⁴ Additionally, the costs associated with testing vary based on the complexity of the measure and the developing organization. The Journal of the American Medical Association states that the costs associated with quality measures are generally unknown or unreported.¹³⁵ While we understand the policy will result in additional costs for QCDRs to develop measures, given the uncertainty regarding the number and types of measures that will be proposed in future performance periods coupled with the lack of available cost data on measure development and testing, we are unable to determine the financial impact of this provision on QCDRs beyond the likelihood of it being more than trivial. Likewise, we understand that some QCDRs already perform measure testing prior to submission for approval while others do not. This variability makes it difficult to estimate the incremental impact of this regulation.

In section III.K.3.g.(3)(c)(i)(A)(bb)(AA) of this rule, we amend § 414.1400 to state that CMS may consider the extent

¹³⁴ http://www.qualityforum.org/Measuring_Performance/Submitted_Standards.aspx.

¹³⁵ Schuster, Onorato, and Meltzer. "Measuring the Cost of Quality Measurement: A Missing Link in Quality Strategy", *Journal of the American Medical Association*. 2017; 318(13):1219-1220. <https://jamanetwork.com/journals/jama/fullarticle/2653111?resultClick=1>.

to which a QCDR measure is available to MIPS eligible clinicians reporting through QCDRs other than the QCDR measure owner for purposes of MIPS. If CMS determines that a QCDR measure is not available to MIPS eligible clinicians, groups, and virtual groups reporting through other QCDRs, CMS may not approve the measure. Because the choice to license a QCDR measure is an elective business decision made by individual QCDRs and we have little insight into both the specific terms and frequency of agreements made between entities, we are unable to account for the financial impact of licensing QCDR measures for each QCDR. In aggregate across all QCDRs, the financial impact would be zero as fees paid by one QCDR will be collected by another QCDR.

In section III.K.3.g.(3)(c)(i)(B)(ee) of this rule, we discuss, beginning with the 2020 performance period, that after the self-nomination period closes each year, we will review newly self-nominated and previously approved QCDR measures based on considerations as described in the CY 2019 PFS final rule (83 FR 59900 through 59902). In instances in which multiple, similar QCDR measures exist that warrant approval, we may provisionally approve the individual QCDR measures for 1 year with the condition that QCDRs address certain areas of duplication with other approved QCDR measures in order to be considered for the program in subsequent years. The QCDR could do so by harmonizing its measure with, or significantly differentiating its measure from, other similar QCDR measures. QCDR measure harmonization may require two or more QCDRs to work collaboratively to develop one cohesive QCDR measure that is representative of their similar yet, individual measures. We are unable to account for the financial impact of measure harmonization, as the process and outcomes will likely vary substantially depending on a number of factors, including: Extent of duplication with other measures, number of QCDRs involved in harmonizing toward a single measure, and number of measures being harmonized among the same QCDRs. We intend to identify only those QCDR measures which are duplicative to such an extent as to assume harmonization will not be overly burdensome, however, because the harmonization process will occur between QCDRs without our involvement, we are unable to predict or quantify the associated effort.

We understand that some QCDRs may believe the provisions to require measure harmonization and encourage QCDRs to license their measures to

other QCDRs as a consideration for measure approval may result in a reduced ability for QCDRs to differentiate themselves in the marketplace. We note that in addition to the suite of measures offered by a QCDR and their relevance to individual clinicians and groups, ease of incorporating a QCDR's measures into existing practice workflows, as well as integration into broader quality improvement programs are two examples of distinguishing characteristics for clinicians to consider when selecting a QCDR. In addition, clinicians may also consider cost (if any); recommendations, support, or endorsements from specialty societies; the number of other users submitting data to the QCDR; the specific educational services and quality improvement initiatives offered; and the specific performance feedback information provided as part of the required reports provided at least 4 times a year. We believe that the impact these provisions may have on the perceived differentiated value of certain QCDRs is counterbalanced by the need to promote more focused quality measure development towards outcomes that are meaningful to patients, families and their providers.

In this final rule, we discussed our policy to formalize a number of factors we would take into consideration for approving and rejecting QCDR measures for the MIPS program beginning with the 2020 performance period and future years. With regard to approving QCDR measures, we are implementing the following: (1) 2-year QCDR measure approval process, and (2) participation plan for existing QCDR measures that have failed to reach benchmarking thresholds.

As discussed in section III.K.3.g.(3)(c)(ii)(B), we are implementing, beginning with the 2021 performance period, 2-year QCDR measure approvals (at our discretion) for QCDR measures that attain approval status by meeting the QCDR measure considerations and requirements described in section III.K.3.g.(3)(c). The 2-year approvals would be subject to the following conditions whereby the multi-year approval will no longer apply if the QCDR measure is identified as: Topped out; duplicative of a new, more robust measure; reflects an outdated clinical guideline; requires measure harmonization, or if the QCDR self-nominating the measure is no longer in good standing. We believe this will result in reduced burden for QCDRs as they will no longer be required to submit each measure for approval annually. However, because we are

unable to predict which previously approved QCDR measures will be removed or retained in future years, we are likewise unable to predict the impact on future burden associated with QCDRs submitting measures for approval. Beginning with the 2021 performance period, we require that in instances where an existing QCDR measure has been in MIPS for 2 years and has failed to reach benchmarking thresholds due to low adoption, where the QCDR believes the low-reported QCDR measure is still important and relevant to a specialist's practice, that the QCDR may submit to CMS a QCDR measure participation plan, to be submitted as part of their self-nomination. Because we are unable to predict the frequency with which existing QCDR measures will meet the criteria for allowing QCDRs to submit a measure participation plan or the likelihood of QCDRs electing to submit a plan, we are unable to estimate the impact associated with this provision.

As discussed in section III.K.3.g.(3)(c)(i)(B)(bb) of this final rule, beginning with the 2021 performance period and future years, QCDRs must link their QCDR measures as feasible to the following, at the time of self-nomination: (a) Cost measures (as found in section III.K.3.c.(3) of this final rule), (b) improvement activities (as found in Appendix 2: Improvement Activities Tables), or (c) CMS developed MIPS Value Pathways (as described in section III.K.3.a. of this final rule). We do not assume any additional impact beyond the 1 hour per QCDR measure as discussed in section VI.B.7 of the Collection of Information section of this final rule.

We are also finalizing in section III.K.3.g.(2) of this final rule and at § 414.1400(a)(4) to establish that a condition of approval is for the third party intermediary to agree that prior to discontinuing services to any MIPS eligible clinician, group or virtual group during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, or virtual group to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved transition plan. Historically, less than 10 third party intermediaries have elected to discontinue services during a performance period and we have no basis to assume this is likely to change in future years. We do not assume any additional impact beyond the 10 hours per transition plan discussed in section VI.B.7 of this final rule.

We are finalizing in section III.K.3.g.3(c)(i)(A)(bb)(BB) of this final rule to amend § 414.1400 to add paragraph (b)(3)(iv)(I) to state that we would give greater consideration to measures for which QCDRs: (a) Conducted an environmental scan of existing QCDR measures; MIPS quality measures; quality measures retired from the legacy Physician Quality Reporting System (PQRS) program; and (b) utilized the CMS Quality Measure Development Plan Annual Report and the Blueprint for the CMS Measures Management System to identify measurement gaps prior to measure development. We are also finalizing in section III.K.3.g.3(c)(i)(A)(bb)(CC) of this final rule and § 414.1400 to add paragraph (b)(3)(iv)(J), to state that, beginning with the 2020 performance period, we place greater preference on QCDR measures that meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods. Those that do not meet this requirement, may not continue to be approved. Lastly, we are finalizing in section III.K.3.g.3(c)(i)(B)(aa) of this final rule, beginning with the 2020 performance period, to change both of the below listed considerations into requirements and add paragraph (b)(3)(v) to include the following for QCDR measure requirements for approval: Measures that are beyond the measure concept phase of development; and measures that address significant variation in performance. We do not assume any additional impacts beyond those previously discussed in this section or in the Collection of Information section.

We received public comments on the compliance costs for third party intermediaries. The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed their opinion that the scope of proposals in the proposed rule increases cost and burden to the point where some third-party vendors may end their participation in MIPS. One commenter stated that several provisions would additionally require it to alter business plans, missions, and customer service priorities while another commenter cited their belief that CMS is attempting to shift costs and burden of administering the MIPS program onto specialty societies that create measures and operate QCDRs.

Response: We disagree. We believe that our policies are intended to standardize and raise the bar on the services and the quality of the third-party intermediaries we have in the

MIPS program. Similar to years past, the standards and requirements of QCDRs are higher when compared to that of qualified registries, as we expect QCDRs to have extensive experience in quality reporting, quality measure development, and clinical expertise to not just facilitate reporting, but to also help address measurement gaps found within the program. We believe that QCDRs and qualified registries should further clinician goals of quality improvement by providing meaningful information and services. We believe that the increased cost and burden are significantly outweighed by the positive impact of the policies for MIPS eligible clinicians. As a result of the comments, we have not updated our estimates.

g. Assumptions & Limitations

We note several limitations to our estimates of MIPS eligible clinicians' eligibility and participation, negative MIPS payment adjustments, and positive payment adjustments for the 2022 MIPS payment year. We based our analyses on the data prepared to support the 2018 performance period initial determination of clinician and special status eligibility (available via the NPI lookup on qpp.cms.gov),¹³⁶ APM Participant List for the first snapshot date for the 2019 QP performance period, CY 2018 Quality Payment Program Year 2 data and CAHPS for ACOs. The scoring model results presented in this rule assume that CY 2018 Quality Payment Program Year 2 data submissions and performance are representative of CY 2020 Quality Payment Program data submissions and performance. The estimated performance for CY 2020 MIPS performance period using Quality Payment Program Year 2 data may be underestimated because the performance threshold to avoid a negative payment adjustment for the 2018 MIPS performance period/2019 MIPS payment year was significantly lower (15 out of 100 points) than the performance threshold for the 2020 MIPS performance period/2022 MIPS payment year (45 out of 100). We anticipate clinicians may submit more performance categories to meet the higher performance threshold to avoid a negative payment adjustment.

In our MIPS eligible clinician assumptions, we assumed that 33 percent of the opt-in eligible clinicians that participated in the CY 2018 Quality Payment Program Year 2 would elect to

opt-in to the MIPS program. It is difficult to predict whether clinicians will elect to opt-in to participate in MIPS with the finalized policies.

A limitation of our cost data is that it does not overlap with the 2018 calendar year so we may not be capturing performance for all clinicians.

There are additional limitations to our estimates: (1) Because we used historic data, we assumed participation in the three performance categories in MIPS Year 2 would be similar to MIPS Year 4 performance; and (2) to the extent that there are year-to-year changes in the data submission, volume and mix of services provided by MIPS eligible clinicians, the actual impact on total Medicare revenues will be different from those shown in Table 123. Due to the limitations described, there is considerable uncertainty around our estimates that is difficult to quantify in detail.

G. Alternatives Considered

This final rule contains a range of policies, including some provisions related to specific statutory provisions. The preceding preamble provides descriptions of the statutory provisions that are addressed, identifies those policies when discretion has been exercised, presents rationale for our policies and, where relevant, alternatives that were considered. For purposes of the payment impact on PFS services of the policies contained in this final rule, we presented the estimated impact on total allowed charges by specialty. The alternatives we considered, as discussed in the preceding preamble sections, would result in different payment rates, and therefore, result in different estimates than those shown in Table 119 (CY 2020 PFS Estimated Impact on Total Allowed Charges by Specialty).

1. Alternatives Considered Related to Medicare Coverage for Opioid Use Disorder Treatment Services Furnished by Opioid Treatment Programs

We considered several possibilities for pricing the oral medications, namely methadone and buprenorphine (oral), included in the OTP payment bundles. As described in section II.G. of this final rule, we finalized the use of ASP-based payment to set the payment rates for the oral OTP drug product categories when we receive manufacturer-submitted ASP data for these drugs and to limit the payment amounts for oral drugs to 100 percent of the ASP instead of 106 percent of the ASP. When ASP data are not available for the oral OTP drugs, we finalized use of the TRICARE rate to set the drug portion of the payment for

¹³⁶ The time period for this eligibility file (September 1, 2016 to August 31, 2017) maximizes the overlap with the performance data in our model.

methadone and the NADAC data to set the drug portion of the payment for oral buprenorphine. We note that, for the CY 2020 payments, we were able to calculate an ASP for methadone because of manufacturer reporting. However, we did not receive ASP data from any of the buprenorphine oral manufacturers. Therefore, this drug category was priced using NADAC survey data.

In developing the policies for this final rule, we also considered several other options for pricing of oral drugs as described in the proposed rule, including the methodology under section 1847A of the Act; Medicare Part D Prescription Drug Plan Finder data; WAC; and NADAC data. In determining which alternative data source to finalize for pricing the oral OTP drugs, in the event we did not receive manufacturer-submitted ASP pricing data, we considered commenters' varied responses to the options presented in the proposed rule. We also considered the possibility of using the TRICARE rate for methadone as the primary pricing methodology and increasing the payment limits to 106 percent of the ASP, instead of 100 percent of the ASP, as suggested by commenters.

We did not receive comments that would significantly alter our assumptions regarding estimated impacts of these alternatives. For methadone, using the methodology under section 1847A of the Act, Medicare Part D Prescription Drug Plan Finder data, WAC, TRICARE rates, and NADAC data methodologies would have resulted in a slightly decreased impact when compared to the reported ASP. For buprenorphine (oral), the Medicare Part D Prescription Drug Plan Finder data is very similar to NADAC pricing. Therefore, we believe there would be minimal changes in the estimated impacts from using this alternative data source. Since WAC-based pricing is slightly higher than NADAC pricing, we note that using WAC-based pricing would increase the estimated impacts marginally. For both oral product categories, increasing the payment limit to 106 percent of the ASP, instead of 100 percent of the ASP, would have resulted in a correspondingly higher impact.

While considering whether to finalize the rates that were proposed for the non-drug component, we explored a number of alternative scenarios based on commenters' responses to our proposals. For example, we considered whether to finalize the proposed rate that was based on a crosswalk to TRICARE's bundled weekly rate for methadone, whether to base the Medicare rate on the rates set by state Medicaid programs, or

whether to calculate the rate using a building block methodology which sums the payment rates for similar services paid under Medicare currently. Were we to have finalized the proposed rates that were based on a crosswalk to TRICARE's weekly bundled rate, that would have resulted in a lower impact compared to the estimated impact of the rates we are finalizing, which were calculated using a building block methodology, as the TRICARE rate for non-drug services is lower than the rate we have finalized using the building block approach. Were we to have finalized rates equal to those set by some state Medicaid programs, the estimated impact would vary depending on which state Medicaid programs were used.

We note that there is significant variability across the state Medicaid programs in terms of the payment rates and what services are included in the bundle or billed separately, and that some states have payment rates that are higher than our finalized rate. Additionally, we considered whether to finalize partial episodes for each of the bundled payments. Were we to have finalized partial episodes that would have likely resulted in a lower overall impact compared to the rates we are finalizing, as the rates that were proposed for the partial episodes were calculated by taking one half of the value of the non-drug component for the full episodes. As noted in section II.G of this rule, we are not finalizing our proposal to create partial episodes for CY 2020.

We also considered several alternatives for the update factor used in updating the payment rates for the non-drug component of the bundled payment for OUD treatment services, including the Bureau of Labor Statistics Consumer Price Index for All Items for Urban Consumers (CPI-U) (Bureau of Labor Statistics #CUUR0000SA0 (<https://www.bls.gov/cpi/data.htm>)) and the IPPS hospital market basket reduced by the multifactor productivity adjustment. Based on a CMS forecast of projected rates, we believe that the projected MEI and CPI-U rates are anticipated to be similar, and thus using the CPI-U as an update factor would have minimal effect on estimated impacts. Since the projected IPPS hospital market basket rate is generally higher than the projected MEI rate, using the IPPS hospital market basket rate would result in higher estimated impacts. We received one comment which stated that an OTP's cost structure is more similar to a hospital outpatient department than a physician's office, so the IPPS annual

update factor should be used instead of the MEI rate. In considering the appropriate update factor to finalize, we considered the medical services being provided by the OTP facilities and we believe that conceptually physician office services more closely align to OTP services, and compositionally the MEI more closely aligns with the services associated with the OTP payment system.

2. Alternatives Considered Related to Payment for E/M Services

In developing our policies for office/outpatient E/M visits effective January 1, 2021, we considered a number of alternatives. For reasons discussed in section II.P. of this final rule, we did not include either the extended office/outpatient E/M HCPCS code GPR01 or the single blended payment rates for combined visit levels 2 through 4 that were finalized in the CY 2019 final rule for CY 2021 in our considerations. Our alternatives also did not include the revaluation of global surgical services, as recommended by the AMA RUC, which incorporated the revised office/outpatient E/M code values. We note that in all of the alternatives we considered, the valuation for all codes in the office/outpatient E/M code set would increase. Therefore, all specialties for whom the office/outpatient codes represent a significant portion of their billing would also see payment increases while those specialties who do not report those codes would see overall payment decreases. Any variation in the magnitude of the increases or decreases are a result of a specialties overall billing patterns.

We did, however, consider proposing to eliminate both add-on codes, HCPCS code GCG0X and HCPCS code GPC1X, that were finalized in the CY 2019 final rule for CY 2021. Our stated rationale in the CY 2019 final rule for developing HCPCS code GPC1X (83 FR 59625 through 59653) was to more accurately account for the type and intensity of E/M work performed in primary care-focused visits beyond the typical resources reflected in the single payment rate for the levels 2 through 4 visits. The reason for finalizing HCPCS code GCG0X, as stated in the CY 2019 FR (83 FR 59625 through 59653) GCG0X was to reflect additional resource costs for inherently complex services that are non-procedural. We considered whether these two add-on codes would still be necessary in the context of the revised descriptors and valuations for office/outpatient E/M services. We considered an alternative, therefore, in which we adopted the RUC's recommended values

but excluded the two HCPCS add-on G-codes. In reviewing the results of this policy option, we observed that our concerns about capturing the work associated with visits that are part of ongoing, comprehensive primary care and/or care management for patients

having a single, serious, or complex chronic condition were still present. The specialty level impacts associated with this alternative are displayed in Table 124. The specialties that benefited most from this alternative, such as Endocrinology and Rheumatology, are

those that primarily bill levels 3–5 established patient office/outpatient E/M visits, as those visit levels had the greatest increases in valuation among the overall office/outpatient E/M code set.

BILLING CODE 4120-01-P

TABLE 124: Estimated Specialty Specific Impacts of Accepting the RUC Recommended Values but Deleting Both HCPCS G codes GCG0X and GPC1X if Implemented in CY 2020

TOTAL	\$92,979	0%	0%	0%	0%

We also considered, as an alternative, proposing CMS refinements to the RUC recommendations for two of the CPT codes. Consistent with our generally established policies for reviewing work RVUs recommended by the RUC, we observed that the increase in work RVU for CPT codes 99212 and 99214 (levels 2 and 4 for established patients) seemed disproportionate to the increase in total time for these services, particularly in comparison with the work to time relationships among the other seven E/M code revaluations. For CPT code 99212, we observed that the total time

for furnishing this service increased by 2 minutes (13 percent increase), but that the recommended work RVU increased by nearly 50 percent from 0.48 to 0.70. We reviewed other CPT codes with similar times as the survey code and identified a potential crosswalk to CPT code 76536 (*Ultrasound, soft tissues of head and neck e.g., thyroid, parathyroid, parotid, real time with image documentation*), with a work RVU of 0.56. We therefore considered decreasing the work RVU for CPT code 99212 to 0.56. For CPT code 99214, the total time increased from 40 to 49

minutes, which is a 23 percent change, while the work RVU increased from 1.50 to 1.92 (28 percent increase). We considered a crosswalk to CPT code 73206 (*Computed tomographic angiography, upper extremity, with contrast material(s), including noncontrast images, if performed, and image postprocessing*), with a work RVU of 1.81 and total time of 50 minutes. The refinements we considered for the RUC recommendations are shown in Table 125.

TABLE 125: Current, RUC recommended and CMS Refined Office/Outpatient E/M Work RVUs

CPT/HCPCS	Current Work RVU (Current)	RUC-Recommended Work RVU	Alternative: CMS-Refined Work RVU
99201	0.48	NA	NA
99202	0.93	0.93	0.93
99203	1.42	1.6	1.6
99204	2.43	2.6	2.6
99205	3.17	3.5	3.5
99211	0.18	0.18	0.18
99212	0.48	0.7	0.56
99213	0.97	1.3	1.3
99214	1.5	1.92	1.81
99215	2.11	2.8	2.8
99XXX	NA	0.61	0.5
GPC1X	0.25	NA	0.33
GCG0X	0.25	NA	0.33

Table 126 illustrates the specialty level impacts of refining the RUC recommendations. Under this

alternative those specialties who frequently bill CPT code 99212 or CPT code 99214, such as dermatology and

family practice, respectively, experience more modest increases relative to other alternatives.

TABLE 126: Estimated Specialty Specific Impacts of CMS Refined Values if Implemented in CY 2020

TOTAL	\$92,979	0%	0%	0%	0%

We also considered an alternative that reflected CMS refinements to the three CPT codes as described above and also included the consolidated, redefined and revalued HCPCS add-on G code, GPC1X.

Table 127 illustrates the specialty level impacts associated with making refinements to the RUC recommended values for the office/outpatient E/M code set and also making separate payment for HCPCS add-on code

GPC1X. These impacts are similar to what we proposed, with slight less positive impacts for those specialties who bill CPT codes 99212 or 99214.

TABLE 127: Estimated Specialty Specific Impacts of CMS Refined Values with HCPCS add-on G code GPC1X if Implemented in CY 2020

(A) Specialty	(B) Allowed Charges (mil)	(C) Impact of Work RVU Changes	(D) Impact of PE RVU Changes	(E) Impact of MP RVU Changes	(F) Combined Impact

BILLING CODE 4120-01-C

Comment: As discussed previously, some commenters questioned the necessity of additional coding to describe medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious, or complex chronic condition. Some commenters encouraged CMS to work with CPT and the RUC, rather than utilize Medicare specific G-codes, to address concerns regarding payment for these services. Other commenters rejected the necessity of additional payment all together.

Response: Please see the full discussion in section II.P. of this final rule. We continue to believe that the revalued office/outpatient E/M visits do not accurately account for the resources associated with furnishing primary care and certain types of specialty visits.

Comment: Overall, commenters did not support CMS' refinements to the valuation of CPT codes 99212 and 99214 as reflected in alternatives considered, stating that the values recommended to CMS by the RUC were more accurate as they were part of a rigorous survey and represented a consensus by the medical community.

Response: As discussed in section II.P. of this final rule, we agree with commenters and are finalizing as proposed.

3. Alternatives Considered for the Quality Payment Program

For purposes of the payment impact on the Quality Payment Program, we view the performance threshold and the additional performance threshold, as the critical factors affecting the distribution of payment adjustments. We ran two separate models with performance thresholds of 35 and 50 respectively (as an alternative to the proposed

performance threshold of 45) to estimate the impact of a more moderate and a more aggressive increase in the performance threshold. A lower performance threshold would be a more gradual transition and could potentially allow more clinicians to meet or exceed the performance threshold. The lower performance threshold would lower the amount of budget neutral dollars to redistribute and increase the number of clinicians with a positive payment adjustment, but the scaling factor would be lower. In contrast, a more aggressive increase would likely lead to higher positive payment adjustments for clinicians that exceed the performance threshold because the budget neutral pool would be redistributed among fewer clinicians. We ran each of these models using the proposed additional performance threshold of 85. In the model with a performance threshold of 35, we estimate that \$360 million would be redistributed through budget neutrality. There would be a maximum payment adjustment of 6.0 percent after considering the MIPS payment adjustment and the additional MIPS payment adjustment for exceptional performance. In addition, 5.2 percent of MIPS eligible clinicians would receive a negative payment adjustment among those that submit data. In the model with a performance threshold of 50, we estimate that \$470 million would be redistributed through budget neutrality, and that there would be a maximum payment adjustment of 6.4 percent after considering the MIPS payment adjustment and the additional MIPS payment adjustment for exceptional performance. In addition, 9.6 percent of MIPS eligible clinicians would receive a negative payment adjustment among those that submit data. We proposed a performance threshold of 45 because we believe increasing the performance

threshold to 45 points was not unreasonable or too steep, but rather a moderate step that encourages clinicians to gain experience with all MIPS performance categories. We refer readers to section III.K.3.e.(2) of this final rule for additional rationale on the selection of the performance threshold.

To evaluate the impact of modifying the additional performance threshold, we ran two models with additional performance thresholds of 75 and 80 as an alternative to the 85 points. We ran each of these models using a performance threshold of 45. The benefit of the model with the additional performance threshold of 75 would maintain the additional performance threshold that was in year 3. In the model with the additional performance threshold of 75, we estimate that \$433 million would be redistributed through budget neutrality, and there would be a maximum payment adjustment of 3.8 percent after considering the MIPS payment adjustment and the additional MIPS payment adjustment for exceptional performance. In addition, 7.5 percent of MIPS eligible clinicians would receive a negative payment adjustment among those that submit data. In the model with an additional performance threshold of 80, we estimate that \$433 million would be redistributed through budget neutrality, and that there would be a maximum payment adjustment of 4.5 percent after considering the MIPS payment adjustment and the additional MIPS payment adjustment for exceptional performance among those that submit data. Also, that 7.5 percent of MIPS eligible clinicians will receive a negative payment adjustment among those that submit data. We proposed the additional performance threshold at 85 points because we believe raising the additional performance threshold would

incentivize continued improved performance while accounting for policy changes in the fourth year of the program. We refer readers to section III.K.3.e.(3) of this final rule for additional rationale on the selection of additional performance threshold.

In addition, we ran a model with a weight of 20 percent for the cost performance category and of 40 percent for the quality performance category as an alternate to our finalized weight of 15 percent for the cost performance category. The 20 percent weight for the cost performance category has a mean score of 76.34 and a median score of 82.88 where our primary model has a mean score of 76.67 and a median score of 83.57.

H. Impact on Beneficiaries

1. Medicare PFS

There are a number of changes in this final rule that will have an effect on beneficiaries. In general, we believe that many of these changes, including those intended to improve accuracy in payment through regular updates to the inputs used to calculate payments under the PFS, will have a positive impact and improve the quality and value of care provided to Medicare providers and beneficiaries.

2. Quality Payment Program

There are several changes in this rule that would have an effect on beneficiaries. In general, we believe that many of these changes, including those intended to improve accuracy in payment through regular updates to the inputs used to calculate payments under the PFS, would have a positive impact and improve the quality and value of care provided to Medicare beneficiaries. For example, several of the new measures include patient-reported outcomes, which may be used to help patients make more informed decisions about treatment options. Patient-reported outcome measures provide information on a patient's health status from the patient's point of view and may also provide valuable insights on factors such as quality of life, functional status, and overall disease experience, which may not otherwise be available through routine clinical data collection. Patient-reported outcomes are factors frequently of interest to patients when making decisions about treatment. Similarly, our provisions in section III.K.3.g.(3) of this rule will improve the caliber and value of QCDR measures.

I. Burden Reduction Estimates: Payment for E/M Services

In the CY 2019 PFS final rule, we finalized proposals that we made in response to comments received from RFIs released to the public under our Patients Over Paperwork Initiative. Specifically, we finalized provisions that focused on simplifying the medical documentation payment framework for office/outpatient E/M services and allowing greater flexibility on the components practitioners could choose to document when billing Medicare for office/outpatient E/M visits. In that rule we discussed the specific changes to documentation requirements and estimated significant reductions in the amount of time that practitioners would spend documenting office/outpatient E/M visits, furthering our goal of allowing practitioners more time spent with patients. As discussed earlier in section II.P. of this final rule, we proposed to adopt the revised office/outpatient E/M code set. The proposals reflected our ongoing dialog with the practitioner community and took into account the significant revisions the AMA/CPT Editorial Panel has made to the guidelines for the office/outpatient E/M code set. We note that as part of its efforts to revise the guidelines, the AMA has also estimated a reduction in the amount of time practitioners would spend documenting office/outpatient E/M visits. The AMA asserts that its revisions to the office/outpatient E/M code set will accomplish similar, albeit greater burden reduction in comparison with CMS' approach, as finalized in the CY 2019 PFS final rule, and is more intuitive and in line with the current practice of medicine. We reviewed the AMA's estimates and acknowledge that overall the AMA's approach does result in burden reduction that are consistent with our broader goals discussed above. In comparison to our estimates of burden reduction, as discussed in the CY 2019 final rule, the AMA's estimates show less documentation burden to practitioners, the difference resulting from CMS' finalized policies that allow use of add-on codes to reflect additional resource costs inherent in furnishing some kinds of office/outpatient E/M visits that the current E/M coding and visit levels do not fully recognize (FR 83 59638). The AMA estimates reflect assumptions that the time spent documenting appropriate application of the add-on codes may result in additional burden to practitioners. We disagree with this assumption. In addition to proposing to redefine and revalue HCPCS G code add-on GPC1X to be more understandable and easy to

report for purposes of medical documentation and billing, and proposing to delete HCPCS G-code add-on GCG0X, we discussed that we believe that while an initial setup period is expected for practices to establish workflows that incorporate appropriate use of the add-on code, practices should be able to automate the appropriate use of the add-on code in a short period of time. Even so, our proposal to adopt the AMA's revised office/outpatient E/M code set was consistent with our goal of burden reduction and aligns with the policy principles that underlay what we finalized in the CY 2019 PFS final rule. The AMA's estimates of burden reduction as related to office/outpatient E/M documentation and other materials pertinent to the AMA/CPT and AMA/RUC's recent efforts to revise the office/outpatient E/M code set are available at <https://www.ama-assn.org/practice-management/cpt/cpt-evaluation-and-management>. The burden estimates as discussed above remain the same because we made no refinements to our proposals to adopt the AMA's revised office/outpatient E/M code set.

J. Estimating Regulatory Familiarization Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume that the total number of unique commenters on this year's proposed rule will be the number of reviewers of this rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all commenters reviewed last year's rule in detail, and it is also possible that some reviewers chose not to comment on the rule. For these reasons we thought that the number of past commenters would be a fair estimate of the number of reviewers of this rule. We welcomed any comments on the approach in estimating the number of entities which will review this rule.

We also recognize that different types of entities are in many cases affected by mutually exclusive sections of this rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule. We sought comments on this assumption.

Using the wage information from the May 2018 BLS for medical and health service managers (Code 11-9111), we

estimate that the cost of reviewing this rule is \$109.36 per hour, including overhead and fringe benefits https://www.bls.gov/oes/current/oes_nat.htm. Assuming an average reading speed, we estimate that it would take approximately 8.0 hours for the staff to review half of this rule. For each facility that reviews the rule, the estimated cost

is \$874.88 (8.0 hours × \$109.36). Therefore, we estimated that the total cost of reviewing this regulation is \$37,997,788 (\$874.88 × 43,432 reviewers).

K. Accounting Statement

As required by OMB Circular A-4 (available at [http://](http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf)

www.whitehouse.gov/omb/circulars/a004/a-4.pdf), in Tables 128 and 129 (Accounting Statements), we have prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2019 to CY 2020 based on the FY 2020 President’s Budget baseline.

TABLE 128—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES

Category	Transfers
CY 2020 Annualized Monetized Transfers	Estimated increase in expenditures of \$0.3 billion for PFS CF update.
From Whom To Whom?	Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare.

TABLE 129—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED COSTS, TRANSFER, AND SAVINGS

Category	Transfer
CY 2020 Annualized Monetized Transfers of beneficiary cost coinsurance.	\$0.1 billion.
From Whom to Whom?	Beneficiaries to Federal Government.

L. Conclusion

The analysis in the previous sections, together with the remainder of this preamble, provided an initial Regulatory Flexibility Analysis. The previous analysis, together with the preceding portion of this preamble, provides an RIA. In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

List of Subjects

42 CFR Part 403

Grant programs—health, Health insurance, Hospitals, Intergovernmental relations, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 409

Health facilities, Medicare.

42 CFR Part 410

Health facilities, Health professions, Diseases, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 411

Diseases, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 414

Administrative practice and procedure, Biologics, Drugs, Health facilities, Health professions, Diseases, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 415

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 416

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 418

Health facilities, Hospice care, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 424

Emergency medical services, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 425

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 489

Health facilities, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 498

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as set forth below:

PART 403—SPECIAL PROGRAMS AND PROJECTS

■ 1. The authority citation for part 403 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

- 2. Section 403.902 is amended—
- a. By adding in alphabetical order the definitions of “Certified nurse midwife”, “Certified registered nurse anesthetist”, and “Clinical nurse specialist”;
- b. By revising the definition of “Covered recipient”;
- c. By adding in alphabetical order the definitions of “Device identifier”, “Long term medical supply or device loan”, “Non-teaching hospital covered recipient”, “Nurse practitioner”, “Physician assistant”, “Short term medical supply or device loan”, and “Unique device identifier”.

The additions and revisions read as follows:

§ 403.902 Definitions.

* * * * *

Certified nurse midwife means a registered nurse who has successfully completed a program of study and clinical experience meeting guidelines prescribed by the Secretary, or has been certified by an organization recognized by the Secretary.

Certified registered nurse anesthetist means a certified registered nurse anesthetist licensed by the State who meets such education, training, and other requirements relating to anesthesia services and related care as the Secretary may prescribe. In prescribing such requirements the

Secretary may use the same requirements as those established by a national organization for the certification of nurse anesthetists. Such term also includes, as prescribed by the Secretary, an anesthesiologist assistant.

Clinical nurse specialist means, an individual who—

(1) Is a registered nurse and is licensed to practice nursing in the State in which the clinical nurse specialist services are performed; and

(2) Holds a master's degree in a defined clinical area of nursing from an accredited educational institution.

Covered recipient means—

(1) Any physician, physician assistant, nurse practitioner, clinical nurse specialist, certified registered nurse anesthetist, or certified nurse-midwife who is not a bona fide employee of the applicable manufacturer that is reporting the payment; or

Device identifier is the mandatory, fixed portion of a unique device identifier (UDI) that identifies the specific version or model of a device and the labeler of that device (as described at 21 CFR 801.3 in paragraph (1) of the definition of "Unique device identifier").

Long term medical supply or device loan means the loan of supplies or a device for 91 days or longer.

Non-teaching hospital covered recipient means a person who is one or more of the following: Physician; physician assistant; nurse practitioner; clinical nurse specialist; certified registered nurse anesthetist; or certified nurse-midwife.

Nurse practitioner means a nurse practitioner who performs such services as such individual is legally authorized to perform (in the State in which the individual performs such services) in accordance with State law (or the State regulatory mechanism provided by State law), and who meets such training, education, and experience requirements (or any combination thereof) as the Secretary may prescribe in regulations.

Physician assistant means a physician assistant who performs such services as such individual is legally authorized to perform (in the State in which the individual performs such services) in accordance with State law (or the State regulatory mechanism provided by State law), and who meets such training, education, and experience requirements

(or any combination thereof) as the Secretary may prescribe in regulations.

Short term medical supply or device loan means the loan of a covered device or a device under development, or the provision of a limited quantity of medical supplies for a short-term trial period, not to exceed a loan period of 90 days or a quantity of 90 days of average daily use, to permit evaluation of the device or medical supply by the covered recipient.

Unique device identifier means an identifier that adequately identifies a device through its distribution and use by meeting the requirements of 21 CFR 801.40 and 830.3.

- 3. Section 403.904 is amended by—
- a. Revising paragraphs (c)(1), (c)(3) introductory text, (c)(3)(ii) and (iii), (c)(8), (e)(2) introductory text and;
- b. Adding paragraph (e)(2)(xi);
- c. Revising paragraphs (e)(2)(xiv) and (xv);
- d. Adding paragraph (e)(2)(xviii); and
- e. Revising paragraphs (f)(1) introductory text, (f)(1)(i)(A) introductory text, (f)(1)(i)(A)(1),(3) and (5), (f)(1)(iv), (f)(1)(v), (h)(5), (h)(7), and (h)(13).

The revisions and addition read as follows:

§ 403.904 Reports of payments or other transfers of value to covered recipients.

(c) * * *
(1) *Name of the covered recipient.* For non-teaching hospital covered recipients, the name must be as listed in the National Plan & Provider Enumeration System (NPPES) (if applicable) and include first and last name, middle initial, and suffix (for all that apply).

(3) *Identifiers for non-teaching hospital covered recipients.* In the case of a covered recipient the following identifiers:

- (ii) National Provider Identifier (if applicable and as listed in the NPPES). If a National Provider Identifier cannot be identified for a non-teaching hospital covered recipient, the field may be left blank, indicating that the applicable manufacturer could not find one.
- (iii) State professional license number(s) (for at least one State where the non-teaching hospital covered recipient maintains a license), and the State(s) in which the license is held.

(8) *Related covered drug, device, biological or medical supply.* Report the

marketed or brand name of the related covered drugs, devices, biologicals, or medical supplies, and therapeutic area or product category unless the payment or other transfer of value is not related to a particular covered drug, device, biological or medical supply.

(i) For drugs and biologicals—
(A) If the marketed name has not yet been selected, applicable manufacturers must indicate the name registered on *clinicaltrials.gov*.

(B) Any regularly used identifiers must be reported, including, but not limited to, national drug codes.

(ii) For devices, if the device has a unique device identifier (UDI), then the device identifier (DI) portions of it must be reported, as applicable.

(iii) Applicable manufacturers may report the marketed name and therapeutic area or product category for payments or other transfers of value related to a non-covered drug, device, biological, or medical supply.

(iv) Applicable manufacturers must indicate if the related drug, device, biological, or medical supply is covered or non-covered.

(v) Applicable manufacturers must indicate if the payment or other transfer of value is not related to any covered or non-covered drug, device, biological or medical supply.

(e) * * *
(2) *Rules for categorizing natures of payment.* An applicable manufacturer must categorize each payment or other transfer of value, or separable part of that payment or transfer of value, with one of the categories listed in paragraphs (e)(2)(i) through (xviii) of this section, using the designation that best describes the nature of the payment or other transfer of value, or separable part of that payment or other transfer of value. If a payment or other transfer of value could reasonably be considered as falling within more than one category, the applicable manufacturer should select one category that it deems to most accurately describe the nature of the payment or transfer of value.

(xi) Debt forgiveness.

(xiv) Compensation for serving as faculty or as a speaker for a medical education program.

(xv) Long term medical supply or device loan.

(xviii) Acquisitions.

(f) * * *

(1) Research-related payments or other transfers of value to covered recipients, including research-related

payments or other transfers of value made indirectly to a covered recipient through a third party, must be reported to CMS separately from other payments or transfers of value, and must include the following information (in lieu of the information required by § 403.904(c)):

(i) * * *

(A) If paid to a non-teaching hospital covered recipient, all of the following must be provided:

(1) The non-teaching hospital covered recipient's name as listed in the NPPES (if applicable).

* * * * *

(3) State professional license number(s) (for at least one State where the non-teaching hospital covered recipient maintains a license) and State(s) in which the license is held.

* * * * *

(5) Primary business address of the non-teaching hospital covered recipient(s).

* * * * *

(iv) Name(s) of any related covered drugs, devices, biologicals, or medical supplies (subject to the requirements specified in paragraph (c)(8) of this section); for drugs and biologicals, the relevant National Drug Code(s), if any; and for devices and medical supplies, the relevant device identifier, if any, and the therapeutic area or product category if a marketed name is not available.

(v) Information about each non-teaching hospital covered recipient principal investigator (if applicable) set forth in paragraph (f)(1)(i)(A) of this section.

* * * * *

(h) * * *

(5) Short term medical supply or device loan.

* * * * *

(7) A transfer of anything of value to a non-teaching hospital covered recipient when the covered recipient is a patient, research subject or participant in data collection for research, and not acting in the professional capacity of a covered recipient.

* * * * *

(13) In the case of a non-teaching hospital covered recipient, a transfer of anything of value to the covered recipient if the transfer is payment solely for the services of the covered recipient with respect to an administrative proceeding, legal defense, prosecution, or settlement or judgment of a civil or criminal action and arbitration.

* * * * *

■ 4. Section 403.908 is amended by revising paragraphs (g)(2)(ii) introductory text to read as follows:

§ 403.908 Procedures for electronic submission of reports.

* * * * *

(g) * * *

(2) * * *

(ii) Covered recipients—

* * * * *

PART 409—HOSPITAL INSURANCE BENEFITS

■ 5. The authority citation for part 409 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

§ 409.27 [Amended]

■ 6. Section 409.27 is amended in paragraph (c) by removing the reference “§ 410.40(d)(1)” and adding in its place the reference “§ 410.40(e)(1)”.

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

■ 7. The authority citation for part 410 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

■ 8. Section 410.20 is amended by adding paragraph (e) to read as follows:

§ 410.20 Physicians' services.

* * * * *

(e) *Medical record documentation.* The physician may review and verify (sign/date), rather than re-document, notes in a patient's medical record made by physicians; residents; nurses; medical, physician assistant, and advanced practice registered nurse students; or other members of the medical team including, as applicable, notes documenting the physician's presence and participation in the services.

■ 9. Section 410.40 is amended—

■ a. By redesignating paragraphs (a) through (f) as paragraphs (b) through (g), respectively;

■ b. By adding new paragraph (a);

■ c. In newly redesignated paragraph (b)(1) by removing the reference “paragraphs (d) and (e)” and adding in its place the reference “paragraphs (e) and (f)”; and

■ d. By revising newly redesignated paragraphs (e)(2)(i), (e)(3)(i), and (e)(3)(ii) through (v).

The additions and revision reads as follows:

§ 410.40 Coverage of ambulance services.

(a) *Definitions.* As used in this section, the following definitions apply:

Non-physician certification statement means a statement signed and dated by an individual which certifies that the medical necessity provisions of

paragraph (e)(1) of this section are met and who meets all of the criteria in paragraphs (i) through (iii) of this definition. The statement need not be a stand-alone document and no specific format or title is required.

(i) Has personal knowledge of the beneficiary's condition at the time the ambulance transport is ordered or the service is furnished;

(ii) Who must be employed:

(A) By the beneficiary's attending physician; or

(B) By the hospital or facility where the beneficiary is being treated and from which the beneficiary is transported;

(iii) Is among the following individuals, with respect to whom all Medicare regulations and all applicable State licensure laws apply:

(A) Physician assistant (PA).

(B) Nurse practitioner (NP).

(C) Clinical nurse specialist (CNS).

(D) Registered nurse (RN).

(E) Licensed practical nurse (LPN).

(F) Social worker.

(G) Case manager.

(H) Discharge planner.

Physician certification statement

means a statement signed and dated by the beneficiary's attending physician which certifies that the medical necessity provisions of paragraph (e)(1) of this section are met. The statement need not be a stand-alone document and no specific format or title is required.

* * * * *

(e) * * *

(2) * * *

(i) Medicare covers medically necessary nonemergency, scheduled, repetitive ambulance services if the ambulance provider or supplier, before furnishing the service to the beneficiary, obtains a physician certification statement dated no earlier than 60 days before the date the service is furnished.

* * * * *

(3) * * *

(i) For a resident of a facility who is under the care of a physician if the ambulance provider or supplier obtains a physician certification statement within 48 hours after the transport.

* * * * *

(iii) If the ambulance provider or supplier is unable to obtain a signed physician certification statement from the beneficiary's attending physician, a non-physician certification statement must be obtained.

(iv) If the ambulance provider or supplier is unable to obtain the required physician or non-physician certification statement within 21 calendar days following the date of the service, the ambulance provider or supplier must document its attempts to obtain the

requested certification and may then submit the claim. Acceptable documentation includes a signed return receipt from the U.S. Postal Service or other similar service that evidences that the ambulance supplier attempted to obtain the required signature from the beneficiary's attending physician or other individual named in paragraph (e)(3)(iii) of this section.

(v) In all cases, the provider or supplier must keep appropriate documentation on file and, upon request, present it to the contractor. The presence of the physician or non-physician certification statement or signed return receipt does not alone demonstrate that the ambulance transport was medically necessary. All other program criteria must be met in order for payment to be made.

* * * * *

■ 10. Section 410.41 is amended by revising the section heading and paragraph (c)(1) to read as follows:

§ 410.41 Requirements for ambulance providers and suppliers.

* * * * *

(c) * * *

(1) Bill for ambulance services using CMS-designated procedure codes to describe origin and destination and indicate on claims form that the physician certification statement or non-physician certification statement is on file, if required.

* * * * *

■ 11. Section 410.49 is amended by revising paragraph (b)(1)(vii) and adding paragraph (b)(1)(viii) to read as follows:

§ 410.49 Cardiac rehabilitation program and intensive cardiac rehabilitation program: Conditions of coverage.

* * * * *

(b) * * *

(1) * * *

(vii) Stable, chronic heart failure defined as patients with left ventricular ejection fraction of 35 percent or less and New York Heart Association (NYHA) class II to IV symptoms despite being on optimal heart failure therapy for at least 6 weeks, on or after February 18, 2014 for cardiac rehabilitation and on or after February 9, 2018 for intensive cardiac rehabilitation; or

(viii) Other cardiac conditions as specified through a national coverage determination (NCD). The NCD process may also be used to specify non-coverage of a cardiac condition for ICR if coverage is not supported by clinical evidence.

* * * * *

■ 12. Section 410.59 is amended by—
■ a. Adding paragraphs (a)(4) and (e)(1)(v); and

■ b. Revising paragraphs (e)(2) introductory text, (e)(2)(i) and (v), and (e)(3).

The additions and revisions read as follows:

§ 410.59 Outpatient occupational therapy services: Conditions.

(a) * * *

(4) Effective for dates of service on and after January 1, 2020, for occupational therapy services described in paragraph (a)(3)(i) or (ii) of this section, as applicable—

(i) Claims for services furnished in whole or in part by an occupational therapy assistant must include the prescribed modifier; and

(ii) Effective for dates of service on or after January 1, 2022, claims for such services that include the modifier and for which payment is made under sections 1848 or 1834(k) of the Act are paid an amount equal to 85 percent of the amount of payment otherwise applicable for the service.

(iii) For purposes of this paragraph, “furnished in whole or in part” means when the occupational therapy assistant either:

(A) Furnishes all the minutes of a service exclusive of the occupational therapist; or

(B) Furnishes a portion of a service separately from the part furnished by the occupational therapist such that the minutes for that portion of a service furnished by the occupational therapy assistant exceed 10 percent of the total minutes for that service.

* * * * *

(e) * * *

(1) * * *

(v) Beginning in 2018 and for each successive calendar year, the amount described in paragraph (e)(1)(ii) of this section is no longer applied as a limitation on incurred expenses for outpatient occupational therapy services, but, is instead applied as a threshold above which claims for occupational therapy services must include the KX modifier (the KX modifier threshold) to indicate that the service is medically necessary and justified by appropriate documentation in the medical record and claims for services above the KX modifier threshold that do not include the KX modifier are denied.

(2) For purposes of applying the KX modifier threshold, outpatient occupational therapy includes:

(i) Outpatient occupational therapy services furnished under this section;

* * * * *

(v) Outpatient occupational therapy services furnished by a CAH directly or under arrangements, included in the

amount of annual incurred expenses as if such services were furnished under section 1834(k)(1)(B) of the Act.

* * * * *

(3) A process for medical review of claims for outpatient occupational therapy services applies as follows:

(i) For 2012 through 2017, medical review applies to claims for services at or in excess of \$3,700 of recognized incurred expenses as described in paragraph (e)(1)(i) of this section.

(A) For 2012, 2013, and 2014 all claims at and above the \$3,700 medical review threshold are subject to medical review; and

(B) For 2015, 2016, and 2017 claims at and above the \$3,700 medical review threshold are subject to a targeted medical review process.

(ii) For 2018 and subsequent years, a targeted medical review process applies when the accrued annual incurred expenses reach the following medical review threshold amounts:

(A) Beginning with 2018 and before 2028, \$3,000;

(B) For 2028 and each year thereafter, the applicable medical review threshold is determined by increasing the medical review threshold in effect for the previous year (starting with \$3,000 in 2027) by the increase in the Medicare Economic Index for the current year.

■ 13. Section 410.60 is amended by—

■ a. Adding paragraphs (a)(4) and (e)(1)(v); and

■ b. Revising paragraphs (e)(2) introductory text, (e)(2)(i), (ii) and (vi), and (e)(3).

The additions and revisions read as follows:

§ 410.60 Outpatient physical therapy services: Conditions.

(a) * * *

(4) Effective for dates of service on and after January 1, 2020, for physical therapy services described in paragraphs (a)(3)(i) or (ii) of this section, as applicable—

(i) Claims for services furnished in whole or in part by a physical therapist assistant must include the prescribed modifier; and

(ii) Effective for dates of service on or after January 1, 2022, claims for such services that include the modifier and for which payment is made under sections 1848 or 1834(k) of the Act are paid an amount equal to 85 percent of the amount of payment otherwise applicable for the service.

(iii) For purposes of this paragraph, “furnished in whole or in part” means when the physical therapist assistant either:

(A) Furnishes all the minutes of a service exclusive of the physical therapist; or

(B) Furnishes a portion of a service separately from the part furnished by the physical therapist such that the minutes for that portion of a service furnished by the physical therapist assistant exceed 10 percent of the total minutes for that service.

* * * * *

(e) * * *

(1) * * *

(v) Beginning in 2018 and for each successive calendar year, the amount described in paragraph (e)(1)(ii) of this section is not applied as a limitation on incurred expenses for outpatient physical therapy and outpatient speech-language pathology services, but is instead applied as a threshold above which claims for physical therapy and speech-language pathology services must include the KX modifier (the KX modifier threshold) to indicate that the service is medically necessary and justified by appropriate documentation in the medical record; and claims for services above the KX modifier threshold that do not include the KX modifier are denied.

(2) For purposes of applying the KX modifier threshold, outpatient physical therapy includes:

(i) Outpatient physical therapy services furnished under this section;

(ii) Outpatient speech-language pathology services furnished under § 410.62;

* * * * *

(vi) Outpatient physical therapy and speech-language pathology services furnished by a CAH directly or under arrangements, included in the amount of annual incurred expenses as if such services were furnished and paid under section 1834(k)(1)(B) of the Act.

(3) A process for medical review of claims for physical therapy and speech-language pathology services applies as follows:

(i) For 2012 through 2017, medical review applies to claims for services at or in excess of \$3,700 of recognized incurred expenses as described in paragraph (e)(1)(i) of this section.

(A) For 2012, 2013, and 2014 all claims at and above the \$3,700 medical review threshold are subject to medical review; and

(B) For 2015, 2016, and 2017 claims at and above the \$3,700 medical review threshold are subject to a targeted medical review process.

(ii) For 2018 and subsequent years, a targeted medical review process when the accrued annual incurred expenses reach the following medical review threshold amounts:

(A) Beginning with 2018 and before 2028, \$3,000;

(B) For 2028 and each year thereafter, the applicable medical review threshold is determined by increasing the medical review threshold in effect for the previous year (starting with \$3,000 for 2017) by the increase in the Medicare Economic Index for the current year.

■ 14. Section 410.67 is added to read as follows:

§ 410.67 Medicare coverage and payment of Opioid use disorder treatment services furnished by Opioid treatment programs.

(a) *Basis and scope.* (1) *Basis.* This section implements sections 1861(jjj), 1861(s)(2)(HH), 1833(a)(1)(CC) and 1834(w) of the Act which provide for coverage of opioid use disorder treatment services furnished by an opioid treatment program and the payment of a bundled payment under Part B to an opioid treatment program for opioid use disorder treatment services that are furnished to a beneficiary during an episode of care beginning on or after January 1, 2020.

(2) *Scope.* This section sets forth the criteria for an opioid treatment program, the scope of opioid use disorder treatment services, and the methodology for determining the bundled payments to opioid treatment programs for furnishing opioid use disorder treatment services.

(b) *Definitions.* For purposes of this section, the following definitions apply: *Episode of care* means a one-week (contiguous 7-day) period.

Opioid treatment program means an entity that is an opioid treatment program (as defined in § 8.2 of this title, or any successor regulation) that meets the requirements described in paragraph (c) of this section.

Opioid use disorder treatment service means one of the following items or services for the treatment of opioid use disorder that is furnished by an opioid treatment program that meets the requirements described in paragraph (c) of this section.

(1) Opioid agonist and antagonist treatment medications (including oral, injected, or implanted versions) that are approved by the Food and Drug Administration under section 505 of the Federal Food, Drug, and Cosmetic Act for use in treatment of opioid use disorder.

(2) Dispensing and administration of opioid agonist and antagonist treatment medications, if applicable.

(3) Substance use counseling by a professional to the extent authorized under State law to furnish such services including services furnished via two-way interactive audio-video

communication technology, as clinically appropriate, and in compliance with all applicable requirements.

(4) Individual and group therapy with a physician or psychologist (or other mental health professional to the extent authorized under State law), including services furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements.

(5) Toxicology testing.

(6) Intake activities, including initial medical examination services required under § 8.12(f)(2) of this title and initial assessment services required under § 8.12(f)(4) of this title.

(7) Periodic assessment services required under § 8.12(f)(4) of this title.

(c) *Requirements for opioid treatment programs.* To participate in the Medicare program and receive payment, an opioid treatment program must meet all of the following:

(1) Be enrolled in the Medicare program.

(2) Have in effect a certification by the Substance Abuse and Mental Health Services Administration (SAMHSA) for the opioid treatment program.

(3) Be accredited by an accrediting body approved by the SAMHSA.

(4) Have in effect a provider agreement under part 489 of this title.

(d) *Bundled payments for opioid use disorder treatment services furnished by opioid treatment programs.*

(1) CMS will establish categories of bundled payments for opioid treatment programs for an episode of care as follows:

(i) Categories for each type of opioid agonist and antagonist treatment medication;

(ii) A category for medication not otherwise specified, which will be used for new FDA-approved opioid agonist or antagonist treatment medications for which CMS has not established a category; and

(iii) A category for episodes of care in which no medication is provided.

(2) The bundled payment for episodes of care in which a medication is provided consists of payment for a drug component, reflecting payment for the applicable FDA-approved opioid agonist or antagonist medication in the patient's treatment plan, and a non-drug component, reflecting payment for all other opioid use disorder treatment services reflected in the patient's treatment plan (including dispensing/administration of the medication, if applicable). The payments for the drug component and non-drug component are added together to create the bundled payment amount. The bundled payment

for episodes of care in which no medication is provided consists of a single payment amount for all opioid use disorder treatment services reflected in the patient's treatment plan (excluding medication and dispensing/administration of medication).

(i) *Drug component.* The payment for the drug component for an episode of care will be determined as follows, using the most recent data available at time of ratesetting for the applicable calendar year:

(A) For implantable and injectable medications, the payment is determined using the methodology set forth in section 1847A of the Act, except that the payment amount shall be 100 percent of the ASP, if ASP is used.

(B) For oral medications, if ASP data are available, the payment amount is 100 percent of ASP, which will be determined based on ASP data that have been calculated consistent with the provisions in part 414, subpart 800 of this chapter and voluntarily submitted by drug manufacturers. If ASP data are not available, the payment amount for methadone will be based on the TRICARE rate and for buprenorphine will be calculated using the National Average Drug Acquisition Cost.

(C) *Exception.* For the drug component of bundled payments in the medication not otherwise specified category under paragraph (d)(1)(iii) of this section, the payment amount is based on the applicable methodology under paragraphs (d)(2)(i)(A) and (B) of this section (applying the most recent available data for such new medication), or invoice pricing until the necessary data become available.

(ii) *Non-drug component.* The payment for CY 2020 for the non-drug component of the bundled payment for an episode of care is the sum of:

(A) The CY 2019 Medicare physician fee schedule non-facility rates for the following items and services:

- (1) Psychotherapy, 30 minutes with patient
- (2) Group psychotherapy
- (3) Alcohol and/or substance (other than tobacco) abuse structured assessment and brief intervention at the non-physician practitioner rate.

(4) For administration of an injectable medication, if applicable, drug administration (Therapeutic, prophylactic).

(5) For the insertion, removal, or insertion and removal of the implantable medication, if applicable, the applicable rate.

(B) For dispensing oral medication, if applicable, an approximation of the average dispensing fees under state Medicaid programs.

(C) One fourth of the sum of the CY 2019 Clinical Laboratory Fee Schedule rate for two drug tests, presumptive, capable of being read by direct optical observation only and for a drug test, definitive, 1–7 drug classes.

(iii) *No medication provided episodes of care.* The bundled payment amount for CY 2020 for an episode of care in which no medication is provided is based on the non-drug component rate for an episode of care in which a drug is dispensed or administered, not including any amounts reflecting the cost of dispensing or administration of a drug.

(3) At least one OUD treatment service described in paragraphs (b)(1) through (5) of this section must be furnished to bill for the bundled payment for an episode of care.

(4) Adjustments will be made to the bundled payment for the following:

- (i) If the opioid treatment program furnishes:
 - (A) Counseling or therapy services in excess of the amount specified in the beneficiary's treatment plan and for which medical necessity is documented in the medical record, an adjustment will be made for each additional 30 minutes of counseling or individual therapy furnished during the episode of care.
 - (B) Intake activities described in paragraph (b)(6) of this section, an adjustment will be made when intake activities are furnished.
 - (C) Periodic assessments described in paragraph (b)(7) of this section, an adjustment will be made when this service is furnished.
 - (D) Additional take home supply of oral drugs of up to 21 days, in increments of 7 days, an adjustment will be made when oral medications are dispensed.

(ii) The payment amounts for the non-drug component of the bundled payment for an episode of care, and the adjustments for counseling or therapy, intake activities and periodic assessments will be geographically adjusted using the Geographic Adjustment Factor described in § 414.26 of this chapter.

(iii) The payment amounts for the non-drug component of the bundled payment for an episode of care, and the adjustments for counseling or therapy, intake activities and periodic assessments will be updated annually using the Medicare Economic Index described in § 405.504(d) of this chapter.

(5) Payment for medications delivered, administered or dispensed to a beneficiary as part of the bundled payment is considered a duplicative

payment if a claim for delivery, administration or dispensing of the same medications for the same beneficiary on the same date of service was also separately paid under Medicare Part B or Part D. CMS will recoup the duplicative payment made to the opioid treatment program.

(e) *Beneficiary cost-sharing.* A beneficiary copayment amount of zero will apply.

■ 15. Section 410.69 is amended in paragraph (b) by adding paragraph (5) to the definition of “Certified registered nurse anesthetist” to read as follows:

§ 410.69 Services of a certified registered nurse anesthetist or an anesthesiologist's assistant: Basic rule and definitions.

* * * * *
 (b) * * *
 Certified registered nurse anesthetist
 * * *

(5) For certified registered nurse anesthetist services, the certified registered nurse anesthetist may review and verify (sign and date), rather than re-document, notes in a patient's medical record made by physicians; residents; nurses; medical, physician assistant, and advanced practice registered nurse students; or other members of the medical team, including, as applicable, notes documenting the certified registered nurse anesthetist's presence and participation in the service.
 * * * * *

■ 16. Section 410.74 is amended by revising paragraph (a)(2)(iv) and by adding paragraph (e) to read as follows:

§ 410.74 Physician assistants' services.

(a) * * *
 (2) * * *
 (iv) Performs the services in accordance with state law and state scope of practice rules for physician assistants in the state in which the physician assistant's professional services are furnished. Any state laws and scope of practice rules that describe the required practice relationship between physicians and physician assistants, including explicit supervisory or collaborative practice requirements, describe a form of supervision for purposes of section 1861(s)(2)(K)(i) of the Act. For states with no explicit state law and scope of practice rules regarding physician supervision of physician assistant's services, physician supervision is a process in which a physician assistant has a working relationship with one or more physicians to supervise the delivery of their health care services. Such physician supervision is evidenced by documenting at the

practice level the physician assistant's scope of practice and the working relationships the physician assistant has with the supervising physician/s when furnishing professional services.

* * * * *

(e) *Medical record documentation.*

For physician assistants' services, the physician assistant may review and verify (sign and date), rather than re-document, notes in a patient's medical record made by physicians; residents; nurses; medical, physician assistant, and advanced practice registered nurse students; or other members of the medical team, including, as applicable, notes documenting the physician assistant's presence and participation in the service.

■ 17. Section 410.75 is amended by adding paragraph (f) to read as follows:

§ 410.75 Nurse practitioners' services.

* * * * *

(f) *Medical record documentation.* For nurse practitioners' services, the nurse practitioner may review and verify (sign and date), rather than re-document, notes in a patient's medical record made by physicians; residents; nurses; medical, physician assistant, and advanced practice registered nurse students; or other members of the medical team, including, as applicable, notes documenting the nurse practitioner's presence and participation in the service.

■ 18. Section 410.76 is amended by adding paragraph (f) to read as follows:

§ 410.76 Clinical nurse specialists' services.

* * * * *

(f) *Medical record documentation.* For clinical nurse specialists' services, the clinical nurse specialist may review and verify (sign and date), rather than re-document, notes in a patient's medical record made by physicians; residents; nurses; medical, physician assistant, and advanced practice registered nurse students; or other members of the medical team, including, as applicable, notes documenting the clinical nurse specialist's presence and participation in the service.

■ 19. Section 410.77 is amended by adding paragraph (e) to read as follows:

§ 410.77 Certified nurse-midwives' services: Qualifications and conditions.

* * * * *

(e) *Medical record documentation.*

For certified nurse-midwives' services, the certified nurse-midwife may review and verify (sign and date), rather than re-document, notes in a patient's medical record made by physicians; residents; nurses; medical, physician

assistant, and advanced practice registered nurse students; or other members of the medical team, including, as applicable, notes documenting the certified nurse-midwife's presence and participation in the service.

■ 20. Section 410.105 is amended by adding paragraph (d) to read as follows:

§ 410.105 Requirements for coverage of CORF services.

* * * * *

(d) *Claims.* Effective for dates of service on and after January 1, 2020 physical therapy or occupational therapy services covered as part of a rehabilitation plan of treatment described in paragraph (c) of this section, as applicable—

(1) Claims for such services furnished in whole or in part by a physical therapist assistant or an occupational therapy assistant must be identified with the inclusion of the respective prescribed modifier; and

(2) Effective for dates of service on and after January 1, 2022, such claims are paid an amount equal to 85 percent of the amount of payment otherwise applicable for the service as defined at section 1834(k) of the Act.

(3) For purposes of this paragraph, "furnished in whole or in part" means when the physical therapist assistant or occupational therapy assistant either—

(i) Furnishes all the minutes of a service exclusive of the respective physical therapist or occupational therapist; or

(ii) Furnishes a portion of a service separately from the part furnished by the physical or occupational therapist such that the minutes for that portion of a service exceed 10 percent of the total time for that service.

PART 411—EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT

■ 21. The authority citation for part 411 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395w–101 through 1395w–152, 1395hh, and 1395nn.

■ 22. Section 411.370 is amended—

■ a. In paragraph (b) introductory text, by removing the phrase "CMS determines" and adding in its place the phrase "CMS will determine"; and

■ b. By revising paragraphs (b)(1), (c) introductory text, (d), and (e).

The revisions read as follows:

§ 411.370 Advisory opinions relating to physician referrals.

* * * * *

(b) * * *

(1) The request must relate to an existing arrangement or one into which

the requestor, in good faith, specifically plans to enter. The planned arrangement may be contingent upon the party or parties receiving a favorable advisory opinion. CMS does not consider, for purposes of an advisory opinion, requests that involve the activities of third parties.

* * * * *

(c) *Matters not subject to advisory opinions.* CMS will not address through an advisory opinion—

* * * * *

(d) *Facts subject to advisory opinions.*

The requestor must include in the advisory opinion request a complete description of the arrangement that the requestor is undertaking, or plans to undertake, as described in § 411.372.

(e) *Acceptance of requests.* (1) CMS does not accept an advisory opinion request or issue an advisory opinion if—

(i) The request is not related to a named individual or entity;

(ii) The request does not describe the arrangement at issue with a level of detail sufficient for CMS to issue an opinion, and the requestor does not timely respond to CMS requests for additional information;

(iii) CMS is aware, after consultation with OIG and DOJ, that the same course of action is under investigation, or is or has been the subject of a proceeding involving the Department of Health and Human Services or another governmental agency;

(iv) CMS believes that it cannot make an informed opinion or could only make an informed opinion after extensive investigation, clinical study, testing, or collateral inquiry; or

(v) CMS determines that the arrangement or course of conduct at issue is or would be in violation of applicable State or Federal law or regulation.

(2) CMS may elect not to accept an advisory opinion request if it determines, after consultation with OIG and DOJ:

(i) The course of action described is substantially similar to a course of conduct that is under investigation or the subject of a proceeding involving the Department or other law enforcement agencies; and

(ii) Issuing an advisory opinion could interfere with the investigation or proceeding.

* * * * *

■ 23. Section 411.372 is amended by—

■ a. Revising paragraphs (b)(4)(i) and (ii), (5), (6), and (8)(ii);

■ b. Removing paragraph (b)(9); and

■ c. Adding paragraph (d).

The revisions and addition read as follows:

§ 411.372 Procedure for submitting a request.

* * * * *

(b) * * *

(4) * * *

(i) A complete description of the arrangement that the requestor is undertaking, or plans to undertake, including:

(A) The purpose of the arrangement; the nature of each party's (including each entity's) contribution to the arrangement; the direct or indirect relationships between the parties, with an emphasis on the relationships between physicians involved in the arrangement (or their immediate family members who are involved); and

(B) Any entities that provide designated health services; the types of services for which a physician wishes to refer, and whether the referrals will involve Medicare or Medicaid patients;

(ii) Complete copies of all relevant documents or relevant portions of documents that affect or could affect the arrangement, such as personal service or employment contracts, leases, deeds, pension or insurance plans, or financial statements (or, if these relevant documents do not yet exist, a complete description, to the best of the requestor's knowledge, of what these documents are likely to contain);

* * * * *

(5) The identity of all entities involved either directly or indirectly in the arrangement, including their names, addresses, legal form, ownership structure, nature of the business (products and services) and, if relevant, their Medicare and Medicaid provider numbers. The requestor must also include a brief description of any other entities that could affect the outcome of the opinion, including those with which the requestor, the other parties, or the immediate family members of involved physicians, have any financial relationships (either direct or indirect, and as defined in section 1877(a)(2) of the Act and § 411.354), or in which any of the parties holds an ownership or control interest as defined in section 1124(a)(3) of the Act.

(6) At the option of the requestor, a discussion of the specific issues or questions to be addressed by CMS including, if possible, a discussion of why the requestor believes the referral prohibition in section 1877 of the Act might or might not be triggered by the arrangement and which, if any, exceptions the requestor believes might apply. The requestor should attempt to designate which facts are relevant to each issue or question raised in the request and should cite the provisions

of law under which each issue or question arises.

* * * * *

(8) * * *

(ii) The chief executive officer, or other authorized officer, of the requestor, if the requestor is a corporation;

* * * * *

(d) *Requests for expedited review.* Parties may seek expedited review of arrangements under § 411.380(c)(1)(i) for a determination as to whether the arrangement or course of conduct is indistinguishable in all material aspects from an arrangement or course of conduct that was the subject of a prior advisory opinion. Parties seeking such expedited review must identify the relevant advisory opinion and provide an explanation of why the subject arrangement is indistinguishable from the prior relevant advisory opinion. Requestors should clearly and prominently indicate in their submission to CMS that they are seeking expedited review.

■ 24. Section 411.375 is amended by—

- a. Revising paragraphs (a);
- b. Removing paragraph (b); and
- c. Redesignating paragraphs (c) and (d) as paragraphs (b) and (c).

The revision reads as follows:

§ 411.375 Fees for the cost of advisory opinions.

(a) *Hourly rate.* CMS will charge an hourly rate of \$220. Parties may request an estimate from CMS after submitting a complete request. Before issuing the advisory opinion, CMS will calculate the final fee for responding to the request.

* * * * *

■ 25. Section 411.379 is amended by revising paragraphs (a), (b), (d) and (e) to read as follows:

§ 411.379 When CMS accepts a request.

(a) Upon receiving a request for an advisory opinion, CMS promptly makes an initial determination of whether the request contains a level of detail sufficient for CMS to process the request.

(b) If CMS determines that the request submitted lacks details necessary for CMS to process the request, CMS will provide notification to the requestor within 15 working days of receiving the request.

* * * * *

(d) CMS formally accepts a request when CMS determines that the request (inclusive of any supplemental submissions) describes the arrangement at issue with sufficient detail and that

the grounds for rejection of a request listed at § 411.370(e) do not apply. Upon accepting the request, CMS notifies the requestor by regular U.S. mail of the date that CMS formally accepts the request.

(e) The applicable time period that CMS has to issue an advisory opinion set forth in § 411.380(c) does not begin until CMS formally accepts the request for an advisory opinion.

■ 26. Section 411.380 is amended by revising paragraph (c) to read as follows:

§ 411.380 When CMS issues a formal advisory opinion.

* * * * *

(c)(1) Except as set forth in paragraph (c)(2) of this section, CMS issues an advisory opinion in accordance with the provisions of this part within 60 working days after the date on which it formally accepts the advisory opinion request.

(i) In the case of a request for a determination that an arrangement or course of conduct is indistinguishable in all material aspects from another arrangement or course of conduct that was the subject of a prior opinion, CMS issues an advisory opinion within 30 working days after the date on which it formally accepts the advisory opinion request.

(ii) In the case of a request that CMS determines, in its discretion, involves complex legal issues or highly complicated fact patterns, CMS issues an advisory opinion within a reasonable time period after the date on which it formally accepts the advisory opinion request.

(iii) If the last day of the 60-working day or 30-working day time period falls on a Saturday, Sunday, or Federal holiday, CMS may issue the advisory opinion at the close of business on the first business day following the weekend or holiday.

(2) The applicable time period for issuing an advisory opinion is suspended from the time CMS;

(i) Notifies the requestor that the costs have reached or are likely to exceed the triggering amount as described in § 411.375(c)(2) until CMS receives written notice from the requestor to continue processing the request;

(ii) Requests additional information from the requestor until CMS receives the additional information;

(iii) Notifies the requestor of the full amount due until CMS receives payment of this amount; and

(iv) Notifies the requestor of the need for expert advice until CMS receives the expert advice.

* * * * *

■ 27. Section 411.382 is revised to read as follows:

§ 411.382 CMS' right to rescind advisory opinions.

(a)(1) Any advice CMS gives in an advisory opinion does not prejudice its right to reconsider the questions involved in the opinion, and CMS may rescind or revoke the opinion if it determines that there is good cause to rescind or revoke the opinion.

(2) Good cause shall exist where—

(i) There is a material change in the law that affects the conclusions reached in an opinion; or

(ii) A party that has received a negative advisory opinion seeks reconsideration based on new facts or law.

(b) CMS provides advance notice to the requestor and to the public of its decision to rescind or revoke the opinion so that the requestor and other parties may discontinue any course of action they have taken in accordance with, or in good faith reliance on, the advisory opinion.

(c) CMS does not proceed against the requestor with respect to any action the requestor and the involved parties have taken in good faith reliance upon CMS' advice under this part, provided—

(1) The requestor presented to CMS a full, complete and accurate description of all the relevant facts; and

(2) The parties promptly discontinue the action upon receiving notice that CMS had rescinded or revoked its approval, or discontinue the action within a reasonable “wind down” period, as determined by CMS.

§ 411.384 [Amended]

■ 28. Section 411.384 is amended in paragraph (b) by removing the phrase “for public inspection during its normal hours of operation and”.

■ 29. Section 411.387 is revised to read as follows:

§ 411.387 Effect of an advisory opinion.

(a) An advisory opinion is binding on the Secretary, and a favorable advisory opinion shall preclude imposition of sanctions under section 1877(g) of the Act with respect to:

(1) The individuals or entities requesting the opinion; and

(2) Individuals or entities that are parties to the specific arrangement with respect to which such advisory opinion has been issued.

(b) The Secretary will not pursue sanctions under section 1877(g) of the Act against any party to an arrangement that CMS determines is indistinguishable in all its material aspects from an arrangement with

respect to which CMS issued a favorable advisory opinion.

(c) Individuals and entities may rely on an advisory opinion as non-binding guidance that illustrates the application of the physician self-referral law and regulations to the specific facts and circumstances described in the advisory opinion.

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 30. The authority citation for part 414 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395hh, and 1395rr(b)(1).

■ 31. Section 414.601 is amended by adding the following sentence to the end of the section:

§ 414.601 Purpose.

* * * Section 1834(l)(17) of the Act requires the development of a data collection system to collect cost, revenue, utilization, and other information determined appropriate from providers of services and suppliers of ground ambulance services.

■ 32. Section 414.605 is amended by—

■ a. Adding the definition of “Ground ambulance organization” in alphabetical order; and

■ b. In the definition of “Paramedic ALS intercept (PI)” by removing the reference “§ 410.40(c)” and adding in its place the reference “§ 410.40(d)”.

The addition reads as follows:

§ 414.605 Definitions.

* * * * *

Ground ambulance organization means a Medicare provider or supplier of ground ambulance services.

* * * * *

■ 33. Section 414.610 is amended by adding paragraph (c)(9) to read as follows:

§ 414.610 Basis of payment.

* * * * *

(c) * * *
(9) *Payment reduction for failure to report data.* In the case of a ground ambulance organization (as defined at § 414.605) that is selected by CMS under § 414.626(c) for a year that does not sufficiently submit data under § 414.626(b) and is not granted a hardship exemption under § 414.626(d), the payments made under this section are reduced by 10 percent for the applicable period. For purposes of this paragraph, the applicable period is the calendar year that begins following the date that CMS provided written notification to the ground ambulance organization under § 414.626(e)(1) that

the ground ambulance did not sufficiently submit the required data.

* * * * *

■ 34. Section 414.626 is added to subpart H to read as follows:

§ 414.626 Data reporting by ground ambulance organizations.

(a) *Definitions.* For purposes of this section, the following definitions apply:

Data collection period means, with respect to a year, the 12-month period that reflects the ground ambulance organization's annual accounting period.

Data reporting period means, with respect to a year, the 5-month period that begins the day after the last day of the ground ambulance organization's data collection period.

For a year means one of the calendar years from 2020 through 2024.

Medicare Ground Ambulance Data Collection Instrument means the single survey-based data collection instrument that can be accessed by sampled ambulance organizations under this section via a secure web-based system for reporting data under this section.

(b) *Data collection and submission requirement.* Except as provided in paragraph (d) of this section, a ground ambulance organization selected by CMS under paragraph (c) of this section must do the following:

(1) Within 30 days of the date that CMS notifies a ground ambulance organization under paragraph (c)(3) of this section that it has selected the ground ambulance organization to report data under this section, the ground ambulance must select a data collection period that corresponds with its annual accounting period and provide the start date of that data collection period to the ground ambulance organization's Medicare Administrative Contractor.

(2) Collect during its selected data collection period the data necessary to complete the Medicare Ground Ambulance Data Collection Instrument.

(3) Submit to CMS a completed Medicare Ground Ambulance Data Collection Instrument during the data reporting period that corresponds to the ground ambulance organization's selected data collection period.

(c) *Representative sample.* (1) *Random sample.* For purposes of the data collection described in paragraph (b) of this section, and for a year, CMS will select a random sample of 25 percent of eligible ground ambulance organizations that is stratified based on:

(i) Provider versus supplier status and ownership (for-profit, non-profit, and government);

(ii) Service area population density (transports originating in primarily urban, rural, and super rural zip codes); and

(iii) Medicare-billed transport volume categories.

(2) *Selection eligibility.* A ground ambulance organization is eligible to be selected for data reporting under this section for a year if it is enrolled in Medicare and has submitted to CMS at least one Medicare ambulance transport claim during the year prior to the selection under paragraph (b)(1) of this section.

(3) *Notification of selection for a year.* CMS will notify an eligible ground ambulance organization that it has been selected to report data under this section for a year at least 30 days prior to the beginning of the calendar year in which the ground ambulance organization must begin to collect data by posting a list of selected organizations on the CMS web page and providing written notification to each selected ground ambulance organization via email or U.S. mail.

(4) *Limitation.* CMS will not select the same ground ambulance organization under this paragraph (c) in 2 consecutive years, to the extent practicable.

(d) *Hardship exemption.* A ground ambulance organization selected under paragraph (c) of this section may request and CMS may grant an exception to the reporting requirements under paragraph (b) of this section in the event of a significant hardship, such as a natural disaster, bankruptcy, or similar situation that the Secretary determines interfered with the ability of the ground ambulance organization to submit such information in a timely manner for the data collection period selected by the ground ambulance organization.

(1) To request a hardship exemption, the ground ambulance organization must submit a request form (accessed on the Ambulances Services Center website (<https://www.cms.gov/Center/Provider-Type/Ambulances-Services-Center.html>) to CMS within 90 calendar days of the date that CMS notified the ground ambulance organization that it would receive a 10 percent payment reduction as a result of not submitting sufficient information under the data collection system. The request form must include all of the following:

(i) Ground ambulance organization name.

(ii) NPI number.

(iii) Ground ambulance organization address.

(iv) Chief executive officer and any other designated personnel contact information, including name, email

address, telephone number and mailing address (must include a physical address, a post office box address is not acceptable).

(v) Reason for requesting a hardship exemption.

(vi) Evidence of the impact of the hardship (such as photographs, newspaper or other media articles, financial data, bankruptcy filing, etc.).

(vii) Date when the ground ambulance organization would be able to begin collecting data under paragraph (b) of this section.

(viii) Date and signature of the chief executive officer or other designated personnel of the ground ambulance organization.

(2) CMS will provide a written response to the hardship exemption request within 30 days of its receipt of the hardship exemption form.

(e) *Notification of non-compliance and informal review.* (1) *Notification of non-compliance.* A ground ambulance organization selected under paragraph (c) of this section for a year that does not sufficiently report data under paragraph (b) of this section, will receive written notification from CMS that it will receive a payment reduction under § 414.610(c)(9).

(2) *Informal review.* A ground ambulance organization that receives a written notification under paragraph (e)(1) of a payment reduction under § 414.610(c)(9) may submit a request for an informal review within 90 days of the date it received the notification by submitting all of the following information:

(i) Ground ambulance organization name.

(ii) NPI number.

(iii) Chief executive officer and any other designated personnel contact information, including name, email address, telephone number and mailing address with the street location of the ground ambulance organization.

(iv) Ground ambulance organization's selected data collection period and data reporting period.

(v) A statement of the reasons why the ground ambulance organization does not agree with CMS' determination and any supporting documentation.

(f) *Public availability of data.* Beginning in 2022, and at least once every 2 years thereafter, CMS will post on its website data that it collected under this section, including but not limited to summary statistics and ground ambulance organization characteristics.

(g) *Limitations on review.* There is no administrative or judicial review under section 1869 or section 1878 of the Act, or otherwise of the data required for

submission under paragraph (b) of this section or the selection of ground ambulance organizations under paragraph (c) of this section.

■ 35. Section 414.1305 is amended by—

■ a. Adding the definition of “Aligned Other Payer Medical Home Model” in alphabetical order;

■ b. Revising the definition of “Hospital-based MIPS eligible clinician”;

■ c. Adding the definition of “MIPS Value Pathway” in alphabetical order; and

■ d. Revising the definition of “Rural area”.

The additions and revision read as follows:

§ 414.1305 Definitions.

* * * * *

Aligned Other Payer Medical Home Model means an aligned other payer payment arrangement (not including a Medicaid payment arrangement) operated by a payer formally partnering in a CMS Multi-Payer Model that is a Medical Home Model through a written expression of alignment and cooperation, such as a memorandum of understanding (MOU) with CMS, and is determined by CMS to have the following characteristics:

(1) The other payer payment arrangement has a primary care focus with participants that primarily include primary care practices or multispecialty practices that include primary care physicians and practitioners and offer primary care services. For the purposes of this provision, primary care focus means the inclusion of specific design elements related to eligible clinicians practicing under one or more of the following Physician Specialty Codes: 01 General Practice; 08 Family Medicine; 11 Internal Medicine; 16 Obstetrics and Gynecology; 37 Pediatric Medicine; 38 Geriatric Medicine; 50 Nurse Practitioner; 89 Clinical Nurse Specialist; and 97 Physician Assistant;

(2) Empanelment of each patient to a primary clinician; and

(3) At least four of the following:

(i) Planned coordination of chronic and preventive care.

(ii) Patient access and continuity of care.

(iii) Risk-stratified care management.

(iv) Coordination of care across the medical neighborhood.

(v) Patient and caregiver engagement.

(vi) Shared decision-making.

(vii) Payment arrangements in addition to, or substituting for, fee-for-service payments (for example, shared savings or population-based payments).

* * * * *

Hospital-based MIPS eligible clinician means:

(1) For the 2019 and 2020 MIPS payment years, a MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in sites of service identified by the Place of Service (POS) codes used in the HIPAA standard transaction as an inpatient hospital, on-campus outpatient hospital, off campus-outpatient hospital, or emergency room setting based on claims for a period prior to the performance period as specified by CMS; and

(2) For the 2021 MIPS payment year, a MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in sites of service identified by the POS codes used in the HIPAA standard transaction as an inpatient hospital, on-campus outpatient hospital, off campus outpatient hospital, or emergency room setting based on claims for the MIPS determination period; and

(3) Beginning with the 2022 MIPS payment year, an individual MIPS eligible clinician who furnishes 75 percent or more of his or her covered professional services in sites of service identified by the POS codes used in the HIPAA standard transaction as an inpatient hospital, on-campus outpatient hospital, off campus outpatient hospital, or emergency room setting based on claims for the MIPS determination period, and a group or virtual group provided that more than 75 percent of the NPIs billing under the group's TIN or virtual group's TINs, as applicable, meet the definition of a hospital-based individual MIPS eligible clinician during the MIPS determination period.

* * * * *

MIPS Value Pathway means a subset of measures and activities established through rulemaking.

* * * * *

Rural area means a ZIP code designated as rural by the Federal Office of Rural Health Policy (FORHP), using the most recent FORHP Eligible ZIP Code file available.

* * * * *

- 36. Section 414.1310 is amended by—
 ■ a. Revising paragraph (e)(2)(ii); and
 ■ b. Removing paragraphs (e)(3) through (5).

The revision reads as follows:

§ 414.1310 Applicability.

* * * * *

- (e) * * *
 (2) * * *

(ii) Individual eligible clinicians that elect to participate in MIPS as a group must aggregate their performance data

across the group's TIN, and for the Promoting Interoperability performance category, must aggregate the performance data of all of the MIPS eligible clinicians in the group's TIN for whom the group has data in CEHRT.

* * * * *

- 37. Section 414.1315 is amended by revising paragraph (d)(2) to read as follows:

§ 414.1315 Virtual groups.

* * * * *

(d) * * *

(2) Solo practitioners and groups of 10 or fewer eligible clinicians that elect to participate in MIPS as a virtual group must aggregate their performance data across the virtual group's TINs, and for the Promoting Interoperability performance category, must aggregate the performance data of all of the MIPS eligible clinicians in the virtual group's TINs for whom the virtual group has data in CEHRT.

* * * * *

- 38. Section 414.1320 is amended by adding paragraph (f) to read as follows:

§ 414.1320 MIPS performance period.

* * * * *

(f) For purposes of the 2023 MIPS payment year, the performance period for:

(1) The Promoting Interoperability performance category is a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year.

(2) [Reserved]

- 39. Section 414.1330 is amended by revising paragraphs (b)(3) to read as follows:

§ 414.1330 Quality performance category.

* * * * *

(b) * * *

(3) 45 percent of a MIPS eligible clinician's final score for MIPS payment years 2021 and 2022.

- 40. Section 414.1335 is amended by revising paragraph (a)(3)(i) to read as follows:

§ 414.1335 Data submission criteria for the quality performance category.

(a) * * *

(3) * * *

(i) For the 12-month performance period, a group that participates in the CAHPS for MIPS survey must use a survey vendor that is approved by CMS for the applicable performance period to transmit survey measures data to CMS.

* * * * *

- 41. Section 414.1340 is amended by revising paragraphs (a)(1) and (2) and

adding paragraphs (a)(3), (b)(3), and (d) to read as follows:

§ 414.1340 Data completeness criteria for the quality performance category.

(a) * * *

(1) At least 50 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment year 2019.

(2) At least 60 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment years 2020 and 2021.

(3) At least a 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for the 2022 MIPS payment year.

(b) * * *

(3) At least a 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for the 2022 MIPS payment year.

* * * * *

(d) If quality data are submitted selectively such that the submitted data are unrepresentative of a MIPS eligible clinician or group's performance, any such data would not be true, accurate, or complete for purposes of § 414.1390(b) or § 414.1400(a)(5).

- 42. Section 414.1350 is amended by revising paragraphs (b), (c)(2) and (d)(3) to read as follows:

§ 414.1350 Cost performance category.

* * * * *

(b) *Attribution.* (1) Cost measures are attributed at the TIN/NPI level for the 2017 through 2019 performance periods.

(2) For the total per capita cost measure specified for the 2017 through 2019 performance periods, beneficiaries are attributed using a method generally consistent with the method of assignment of beneficiaries under § 425.402 of this chapter.

(3) For the Medicare Spending per Beneficiary clinician (MSPB clinician) measure specified for the 2017 through 2019 performance periods, an episode is attributed to the MIPS eligible clinician who submitted the plurality of claims (as measured by allowed charges) for Medicare Part B services rendered during an inpatient hospitalization that is an index admission for the MSPB clinician measure during the applicable performance period.

(4) For the acute condition episode-based measures specified for the 2017 performance period, an episode is attributed to each MIPS eligible clinician who bills at least 30 percent of

inpatient evaluation and management (E/M) visits during the trigger event for the episode.

(5) For the procedural episode-based measures specified for the 2017 performance period, an episode is attributed to each MIPS eligible clinician who bills a Medicare Part B claim with a trigger code during the trigger event for the episode.

(6) For the acute inpatient medical condition episode-based measures specified for the 2019 performance period, an episode is attributed to each MIPS eligible clinician who bills inpatient E/M claim lines during a trigger inpatient hospitalization under a TIN that renders at least 30 percent of the inpatient E/M claim lines in that hospitalization.

(7) For the procedural episode-based measures specified for the 2019 performance period, an episode is attributed to each MIPS eligible clinician who renders a trigger service as identified by HCPCS/CPT procedure codes.

(8) Beginning with the 2020 performance period, each cost measure is attributed according to the measure specifications for the applicable performance period.

* * * * *

(c) * * *

(2) For the Medicare spending per beneficiary clinician measure, the case minimum is 35.

* * * * *

(d) * * *

(3) 15 percent of a MIPS eligible clinician's final score for MIPS payment years 2021 and 2022.

■ 43. Section 414.1360 is amended by adding paragraph (a)(2) to read as follows:

§ 414.1360 Data submission criteria for the improvement activities performance category.

(a) * * *

(2) *Groups and virtual groups.*

Beginning with the 2020 performance year, each improvement activity for which groups and virtual groups submit a yes response in accordance with paragraph (a)(1) of this section must be performed by at least 50 percent of the NPIs billing under the group's TIN or virtual group's TINs, as applicable, and the NPIs must perform the same activity during any continuous 90-day period within the same performance year.

* * * * *

■ 44. Section 414.1370 is amended by adding paragraph (e)(2) and revising paragraph (g)(1) to read as follows:

§ 414.1370 APM scoring standard under MIPS.

* * * * *

(e) * * *

(2) For purposes of calculating the APM Entity group score under the APM scoring standard, MIPS scores submitted by virtual groups will not be included.

* * * * *

(g) * * *

(1) *Quality.* Beginning in the 2020 Performance year—

(i) *MIPS APMs that require APM Entities to submit quality data through a MIPS submission mechanism.* The MIPS quality performance category score for a performance period will be calculated for the APM Entity using the data submitted for the APM Entity through a MIPS submission mechanism in accordance with § 414.1335.

(ii) *MIPS APMs that do not require APM Entities to submit quality data through a MIPS submission mechanism.* The APM Entity will be assigned an APM Quality Reporting Credit worth 50 percent of the total quality performance category score. The APM Quality Reporting Credit will be added to the MIPS quality performance category score to generate an APM Entity quality performance category score, which in no case shall exceed 100. The MIPS quality performance category score for a performance period will be calculated for the APM Entity using the data submitted for the APM Entity through a MIPS submission mechanism in accordance with § 414.1335.

(iii) *Determination of score for each MIPS eligible clinician in an APM entity.* Regardless of whether a MIPS APM requires APM Entities to submit quality data through a MIPS submission mechanism, if data are not submitted for an APM Entity through a MIPS submission mechanism in accordance with § 414.1335, the score for each MIPS eligible clinician in such APM Entity is the higher of either:

(A) A TIN level score based on the measure data for the quality performance category reported by a TIN for the MIPS eligible clinician in accordance with § 414.1335; or

(B) An individual level score based on the measure data for the quality performance category reported by the MIPS eligible clinician in accordance with § 414.1335.

(iv) *Quality improvement score.* For an APM Entity for which CMS calculated a total quality performance category score for one or more participants in the APM Entity for the preceding MIPS performance period, CMS calculates a quality improvement

score for the APM Entity group as specified in § 414.1380(b)(1)(xvi).

* * * * *

■ 45. Section 414.1380 is amended—

■ a. In paragraph (b)(1)(i) introductory text by removing the years “2019, 2020, and 2021” and adding in its place the years “2019 through 2022”;

■ b. In paragraph (b)(1)(i)(A)(1) by removing the years “2019, 2020, and 2021” and adding in its place the years “2019 through 2022”;

■ c. By revising paragraph (b)(1)(ii) introductory text;

■ d. By adding paragraph (b)(1)(ii)(C);

■ e. By revising paragraph (b)(1)(v)(A)(1)(i);

■ f. In paragraph (b)(1)(v)(A)(1)(ii) by removing the years “2019, 2020, and 2021” and adding in its place the years “2019 through 2022”;

■ g. In paragraph (b)(1)(v)(B)(1)(i) by removing the years “2019, 2020, and 2021” and adding in its place the years “2019 through 2022”;

■ h. In paragraph (b)(1)(vi)(C)(4) by removing the phrase “2020 and 2021 MIPS payment year” and adding in its place the phrase “2020 through 2022 MIPS payment years”;

■ i. By revising paragraph (b)(3)(ii)(A) and (C);

■ j. In paragraph (c)(2)(i)(A)(4) by removing the phrase “beginning with the 2021 MIPS payment year” and adding in its place the phrase “for the 2021 and 2022 MIPS payment years”;

■ k. In paragraph (c)(2)(i)(A)(5) by removing the years “2019, 2020, and 2021” and adding in its place the years “2019, 2020, 2021, and 2022”;

■ l. By adding paragraph (c)(2)(i)(A)(9);

■ m. By revising paragraph (c)(2)(i)(C) introductory text;

■ n. By adding paragraphs (c)(2)(i)(C)(10) and (c)(2)(ii)(D);

■ o. By revising paragraph (c)(2)(iii) and (c)(3) introductory text; and

■ p. In paragraph (e)(2)(i)(C) by removing the phrase “Can be attributed” and adding in its place the phrase “Can be assigned”.

The revisions and additions read as follows:

§ 414.1380 Scoring.

* * * * *

(b) * * *

(1) * * *

(ii) *Benchmarks.* Except as provided in paragraphs (b)(1)(ii)(B) and (C) of this section, benchmarks will be based on performance by collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period.

* * * * *

(C) Beginning with the 2022 MIPS payment year, for each measure that has a benchmark that CMS determines may have the potential to result in inappropriate treatment, CMS will set benchmarks using a flat percentage for all collection types where the top decile is higher than 90 percent under the methodology at paragraph (b)(1)(ii) of this section.

* * * * *

- (v) * * *
- (A) * * *
- (1) * * *

(i) Each high priority measure must meet the case minimum requirement at paragraph (b)(1)(iii) of this section, meet the data completeness requirement at § 414.1340, and have a performance rate that is greater than zero.

* * * * *

- (3) * * *
- (ii) * * *

(A) The practice has received accreditation from an accreditation organization that is nationally recognized.

* * * * *

(C) The practice is a comparable specialty practice that has received recognition through a specialty recognition program offered through a nationally recognized accreditation organization; or

* * * * *

- (c) * * *
- (2) * * *
- (i) * * *
- (A) * * *

(9) Beginning with the 2020 MIPS payment year, for the quality, cost, and improvement activities performance categories, CMS determines, based on information known to the agency prior to the beginning of the relevant MIPS payment year, that data for a MIPS eligible clinician are inaccurate, unusable or otherwise compromised due to circumstances outside of the control of the clinician and its agents.

* * * * *

(C) Under section 1848(o)(2)(D) of the Act, a significant hardship exception or other type of exception is granted to a MIPS eligible clinician based on the following circumstances for the

Promoting Interoperability performance category. Except as provided in paragraph (c)(2)(i)(C)(10) of this section, in the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

* * * * *

(10) Beginning with the 2020 MIPS payment year, CMS determines, based on information known to the agency prior to the beginning of the relevant MIPS payment year, that data for a MIPS eligible clinician are inaccurate, unusable or otherwise compromised due to circumstances outside of the control of the clinician and its agents.

* * * * *

- (ii) * * *

(D) For the 2022 MIPS payment year:

Reweighting scenario	Quality (%)	Cost (%)	Improvement activities (%)	Promoting interoperability (%)
No Reweighting Needed: Scores for all four performance categories	45	15	15	25
Reweight One Performance Category:				
No Cost	55	0	15	30
No Promoting Interoperability	70	15	15	0
No Quality	0	15	15	70
No Improvement Activities	60	15	0	25
Reweight Two Performance Categories:				
No Cost and no Promoting Interoperability	85	0	15	0
No Cost and no Quality	0	0	15	85
No Cost and no Improvement Activities	70	0	0	30
No Promoting Interoperability and no Quality	0	50	50	0
No Promoting Interoperability and no Improvement Activities	85	15	0	0
No Quality and no Improvement Activities	0	15	0	85

(iii) For the Promoting Interoperability performance category to be reweighted in accordance with paragraph (c)(2)(ii) of this section for a MIPS eligible clinician who elects to participate in MIPS as part of a group or virtual group, all of the MIPS eligible clinicians in the group or virtual group must qualify for reweighting based on the circumstances described in paragraph (c)(2)(i) of this section, or the group or virtual group must meet the definition of a hospital-based MIPS eligible clinician or a non-patient facing MIPS eligible clinician as defined in § 414.1305.

(3) *Complex patient bonus.* For the 2020, 2021 and 2022 MIPS payment years, provided that a MIPS eligible clinician, group, virtual group or APM entity submits data for at least one MIPS

performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, as follows:

* * * * *

■ 46. Section 414.1385 is amended by revising paragraph (a) to read as follows:

§ 414.1385 Targeted review and review limitations.

(a) *Targeted review.* A MIPS eligible clinician or group may request a targeted review of the calculation of the MIPS payment adjustment factor under section 1848(q)(6)(A) of the Act and, as applicable, the calculation of the additional MIPS payment adjustment factor under section 1848(q)(6)(C) of the Act (collectively referred to as the MIPS payment adjustment factors) applicable

to such MIPS eligible clinician or group for a year. The process for targeted review is as follows:

(1) A MIPS eligible clinician or group (including their designated support staff), or a third party intermediary as defined at § 414.1305, may submit a request for a targeted review.

(2) All requests for targeted review must be submitted during the targeted review request submission period, which is a 60-day period that begins on the day CMS makes available the MIPS payment adjustment factors for the MIPS payment year. The targeted review request submission period may be extended as specified by CMS.

(3) A request for a targeted review may be denied if the request is duplicative of another request for a targeted review; the request is not

submitted during the targeted review request submission period; or the request is outside of the scope of the targeted review, which is limited to the calculation of the MIPS payment adjustment factors applicable to the MIPS eligible clinician or group for a year. If the targeted review request is denied, there will be no change to the MIPS final score or associated MIPS payment adjustment factors for the MIPS eligible clinician or group. If the targeted review request is approved, the MIPS final score and associated MIPS payment adjustment factors may be revised, if applicable, for the MIPS eligible clinician or group.

(4) CMS will respond to each request for a targeted review timely submitted and determine whether a targeted review is warranted.

(5) A request for a targeted review may include additional information in support of the request at the time it is submitted. If CMS requests additional information from the MIPS eligible clinician or group that is the subject of a request for a targeted review, it must be provided and received by CMS within 30 days of CMS' request. Non-responsiveness to CMS' request for additional information may result in a final decision based on the information available, although another non-duplicative request for a targeted review may be submitted before the end of the targeted review request submission period.

(6) If a request for a targeted review is approved, CMS may recalculate, to the extent feasible and applicable, the scores of a MIPS eligible clinician or group with regard to measures, activities, performance categories, and the final score, as well as the MIPS payment adjustment factors.

(7) Decisions based on the targeted review are final, and there is no further review or appeal. CMS will notify the individual or entity that submitted the request for a targeted review of the final decision.

(8) Documentation submitted for a targeted review must be retained by the submitter for 6 years from the end of the MIPS performance period.

* * * * *

■ 47. Section 414.1395 is amended by revising paragraph (a) to read as follows:

§ 414.1395 Public reporting.

(a) *General.* (1) CMS posts on Physician Compare, in an easily understandable format, the following:

(i) Information regarding the performance of MIPS eligible clinicians, including, but not limited to, final scores and performance category scores for each MIPS eligible clinician; and

(ii) The names of eligible clinicians in Advanced APMs and, to the extent feasible, the names and performance of such Advanced APMs.

(2) CMS periodically posts on Physician Compare aggregate information on the MIPS, including the range of final scores for all MIPS eligible clinicians and the range of the performance of all MIPS eligible clinicians with respect to each performance category.

(3) The information made available under this section will indicate, where appropriate, that publicized information may not be representative of an eligible clinician's entire patient population, the variety of services furnished by the eligible clinician, or the health conditions of individuals treated.

* * * * *

■ 48. Section 414.1400 is amended by—

- a. Revising paragraphs (a)(2) introductory text and (a)(2)(iii);
- b. Adding paragraphs (a)(4)(v) and (vi);
- c. Revising paragraph (b)(1);
- d. Adding paragraphs (b)(2)(iii), (b)(3)(iv) through (vii), ;
- e. Revising paragraph (c)(1);
- f. Adding paragraphs (c)(2)(i) and (ii); and
- g. Revising paragraphs (f)(1) introductory text and (f)(3) introductory text.

The revision and addition reads as follows:

§ 414.1400 Third party intermediaries.

(a) * * *

(2) Beginning with the 2023 MIPS payment year, QCDRs and qualified registries must be able to submit data for all of the following MIPS performance categories, and Health IT vendors must be able to submit data for at least one of the following MIPS performance categories:

* * * * *

(iii) Promoting Interoperability, if the eligible clinician, group, or virtual group is using CEHRT; however, a third party intermediary may be exempted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4) or (5) or § 414.1380(c)(2)(i)(C)(1) through (7) or § 414.1380(c)(2)(i)(C)(9)).

* * * * *

(4) * * *

(v) The third party intermediary must provide services throughout the entire performance period and applicable data submission period.

(vi) Prior to discontinuing services to any MIPS eligible clinician, group, or virtual group during a performance

period, the third party intermediary must support the transition of such MIPS eligible clinician, group, or virtual group to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved a transition plan.

* * * * *

(b) * * *

(1) *QCDR self-nomination.* For the 2020 and 2021 MIPS payment years, entities seeking to qualify as a QCDR must self-nominate September 1 until November 1 of the CY preceding the applicable performance period. For the 2022 MIPS payment year and future years, entities seeking to qualify as a QCDR must self-nominate during a 60-day period during the CY preceding the applicable performance period (beginning no earlier than July 1 and ending no later than September 1).

Entities seeking to qualify as a QCDR for a performance period must provide all information required by CMS at the time of self-nomination and must provide any additional information requested by CMS during the review process. For the 2021 MIPS payment year and future years, existing QCDRs that are in good standing may attest that certain aspects of their previous year's approved self-nomination have not changed and will be used for the applicable performance period. Beginning with the 2023 payment year, QCDRs are required to attest during the self-nomination process that they can provide performance feedback at least 4 times a year (as specified at paragraph (b)(2)(iv) of this section), and if not, provide sufficient rationale as to why they do not believe they would be able to meet this requirement. Each QCDR would still be required to submit notification to CMS within the reporting period promptly within the month of realization of the impending deficiency in order to be considered for this exception, as discussed at paragraph (b)(2)(iv) of this section.

(2) * * *

(iii) Beginning with the 2023 MIPS payment year, require QCDRs to provide performance feedback to their clinicians and groups at least 4 times a year, and provide specific feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure within the QCDR. Exceptions to this requirement may occur if the QCDR does not receive the data from their clinician until the end of the performance period.

(3) * * *

(iv) QCDR measure considerations for approval include:

(A) Preference for measures that are outcome-based rather than clinical process measures.

(B) Measures that address patient safety and adverse events.

(C) Measures that identify appropriate use of diagnosis and therapeutics.

(D) Measures that address the domain of care coordination.

(E) Measures that address the domain for patient and caregiver experience.

(F) Measures that address efficiency, cost, and resource use.

(G) Beginning with the 2021 performance period—

(1) That QCDRs link their QCDR measures as feasible to at least one of the following at the time of self-nomination:

(i) Cost measure;

(ii) Improvement activity; or

(iii) An MVP.

(2) In cases where a QCDR measure does not have a clear link to a cost measure, improvement activity, or an MVP, we would consider exceptions if the potential QCDR measure otherwise meets the QCDR measure requirements and considerations.

(H) Beginning with the 2020 performance period CMS may consider the extent to which a QCDR measure is available to MIPS eligible clinicians reporting through QCDRs other than the QCDR measure owner for purposes of MIPS. If CMS determines that a QCDR measure is not available to MIPS eligible clinicians, groups, and virtual groups reporting through other QCDRs, CMS may not approve the measure.

(I) We give greater consideration to measures for which QCDRs:

(1) Conducted an environmental scan of existing QCDR measures; MIPS quality measures; quality measures retired from the legacy Physician Quality Reporting System (PQRS) program; and

(2) Utilized the CMS Quality Measure Development Plan Annual Report and the Blueprint for the CMS Measures Management System to identify measurement gaps prior to measure development.

(J) Beginning with the 2020 performance period, we place greater preference on QCDR measures that meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods. Those that do not, may not continue to be approved.

(1) Beginning with the 2020 performance period, in instances where a QCDR believes the low-reported QCDR measure that did not meet benchmarking thresholds is still important and relevant to a specialist's practice, that the QCDR may develop

and submit a QCDR measure participation plan for our consideration. This QCDR measure participation plan must include the QCDR's detailed plans and changes to encourage eligible clinicians and groups to submit data on the low-reported QCDR measure for purposes of the MIPS program.

(2) [Reserved]

(v) QCDR measure requirements for approval include:

(A) QCDR Measures that are beyond the measure concept phase of development.

(B) QCDR Measures that address significant variation in performance.

(C) Beginning with the 2021 performance period, all QCDR measures must be fully developed and tested, with complete testing results at the clinician level, prior to submitting the QCDR measure at the time of self-nomination.

(D) Beginning with the 2021 performance period, QCDRs are required to collect data on a QCDR measure, appropriate to the measure type, prior to submitting the QCDR measure for CMS consideration during the self-nomination period.

(E) Beginning with the 2022 MIPS payment year, CMS may provisionally approve the individual QCDR measures for 1 year with the condition that QCDRs address certain areas of duplication with other approved QCDR measures in order to be considered for the program in subsequent years. If the QCDR measures are not harmonized, CMS may reject the duplicative QCDR measure.

(vi) Beginning with the 2021 performance period, QCDR measures may be approved for 2 years, at CMS discretion, by attaining approval status by meeting QCDR measure considerations and requirements. Upon annual review, CMS may revoke QCDR measure second year approval, if the QCDR measure is found to be: Topped out; duplicative of a more robust measure; reflects an outdated clinical guideline; requires QCDR measure harmonization; or if the QCDR self-nominating the QCDR measure is no longer in good standing.

(vii) Beginning with the 2020 performance period, QCDR measure rejection criteria considerations include, but are not limited to, the following factors:

(A) QCDR measures that are duplicative, or identical to other QCDR measures or MIPS quality measures that are currently in the program.

(B) QCDR measures that are duplicative or identical to MIPS quality measures that have been removed from MIPS through rulemaking.

(C) QCDR measures that are duplicative or identical to quality measures used under the legacy Physician Quality Reporting System (PQRS) program, which have been retired.

(D) QCDR measures that meet the topped out definition as described at § 414.1305.

(E) QCDR measures that are process-based, with consideration to whether the removal of the process measure impacts the number of measures available for a specific specialty.

(F) Whether the QCDR measure has potential unintended consequences to a patient's care.

(G) Considerations and evaluation of the measure's performance data, to determine whether performance variance exists.

(H) Whether the previously identified areas of duplication have been addressed as requested.

(I) QCDR measures that split a single clinical practice or action into several QCDR measures.

(J) QCDR measures that are "checkbox" with no actionable quality action.

(K) QCDR measures that do not meet the case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive years.

(L) Whether the existing approved QCDR measure is no longer considered robust, in instances where new QCDR measures are considered to have a more vigorous quality actions, where CMS preference is to include the new QCDR measure rather than requesting QCDR measure harmonization.

(M) QCDR measures with clinician attribution issues, where the quality action is not under the direct control of the reporting clinician.

(N) QCDR measures that focus on rare events or "never events" in the measurement period.

(c) * * *

(1) *Qualified registry self-nomination.* For the 2020 and 2021 MIPS payment years, entities seeking to qualify as a qualified registry must self-nominate from September 1 until November 1 of the CY preceding the applicable performance period. For the 2022 MIPS payment year and future years, entities seeking to qualify as a qualified registry must self-nominate during a 60-day period during the CY preceding the applicable performance period (beginning no earlier than July 1 and ending no later than September 1). Entities seeking to qualify as a qualified registry for a performance period must provide all information required by CMS at the time of self-nomination and must provide any additional

information requested by CMS during the review process. For the 2021 MIPS payment year and future years, existing qualified registries that are in good standing may attest that certain aspects of their previous year's approved self-nomination have not changed and will be used for the applicable performance period. Beginning with the 2023 payment year, qualified registries are required to attest during the self-nomination process that they can provide performance feedback at least 4 times a year (as specified at § 414.1400(c)(2)(ii)), and if not, provide sufficient rationale as to why they do not believe they would be able to meet this requirement. Each qualified registry would still be required to submit notification to CMS within the reporting period promptly within the month of realization of the impending deficiency in order to be considered for this exception, as discussed at § 414.1400(c)(2)(ii).

(2) * * * (i) Beginning with the 2022 MIPS Payment Year, the qualified registry must have at least 25 participants by January 1 of the year prior to the applicable performance period. (ii) Beginning with the 2023 MIPS payment year, require qualified registries to provide performance feedback to their clinicians and groups at least 4 times a year, and provide specific feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure within the qualified registries. Exceptions to this requirement may occur if the qualified registries does not receive the data from their clinician until the end of the performance period.

* * * * * (f) * * * (1) If CMS determines that a third party intermediary has ceased to meet one or more of the applicable criteria for approval, has submitted a false certification under paragraph (a)(5) of this section, or has submitted data that are inaccurate, unusable, or otherwise compromised, CMS may take one or more of the following remedial actions after providing written notice to the third party intermediary:

* * * * * (3) For purposes of paragraph (f) of this section, CMS may determine that submitted data are inaccurate, unusable, or otherwise compromised, including but not limited to, if the submitted data:

- 49. Section 414.1405 is amended by—
■ a. Adding paragraphs (b)(7) and (8);
■ b. Adding paragraph, (d)(6); and

■ c. Revising paragraph (f) introductory text.

The additions and revision read as follows:

§ 414.1405 Payment.

* * * * * (b) * * * (7) The performance threshold for the 2022 MIPS payment year is 45 points. (8) The performance threshold for the 2023 MIPS payment year is 60 points.

* * * * * (d) * * * (6) The additional performance threshold for the 2022 and 2023 MIPS payment years is 85 points.

(f) Exception to application of MIPS payment adjustment factors to model-specific payments under section 1115A APMs. Beginning with the 2019 MIPS payment year, the payment adjustment factors specified under paragraph (e) of this section are not applicable to payments that meet all of the following conditions:

* * * * * ■ 50. Section 414.1415 is amended by revising paragraph (c)(5) and (6) to read as follows:

§ 414.1415 Advanced APM criteria.

* * * * * (c) * * * (5) For the purposes of this section, expected expenditures means the beneficiary expenditures for which an APM Entity is responsible under an APM. For episode payment models, expected expenditures means the episode target price. For purposes of assessing financial risk for Advanced APM determinations, the expected expenditures under the terms of the APM should not exceed the Medicare Part A and Part B expenditures for a participant in the absence of the APM. If the expected expenditures under the APM exceed the Medicare Part A and Part B expenditures that an APM Entity would be expected to incur in the absence of the APM, such excess expenditures are not considered when CMS assesses financial risk under the APM for purposes of Advanced APM determinations.

(6) Capitation. A full capitation arrangement meets this Advanced APM criterion. For purposes of this part, a full capitation arrangement means a payment arrangement in which a per capita or otherwise predetermined payment is made under the APM for all items and services furnished to a population of beneficiaries during a fixed period of time, and no settlement is performed to reconcile or share losses

incurred or savings earned by the APM Entity. Arrangements between CMS and Medicare Advantage Organizations under the Medicare Advantage program (part 422 of this title) are not considered capitation arrangements for purposes of this paragraph (c)(6).

* * * * * ■ 51. Section 414.1420 is amended by revising paragraph (d)(2) introductory text, (d)(2)(ii), (d)(3)(ii), (d)(4) introductory text and (d)(5) through (8) to read as follows:

§ 414.1420 Other payer advanced APM criteria.

* * * * * (d) * * * (2) Medicaid Medical Home Model and Aligned Other Payer Medical Home Model financial risk standard. The APM Entity participates in a Medicaid Medical Home Model or an Aligned Other Payer Medical Home Model that, based on the APM Entity's failure to meet or exceed one or more specified performance standards, does one or more of the following:

* * * * * (ii) Require direct payment by the APM Entity to the payer;

* * * * * (3) * * * (ii) Except for risk arrangements described under paragraph (d)(2) of this section, the risk arrangement must have a marginal risk rate of at least 30 percent.

(4) Medicaid Medical Home Model and Aligned Other Payer Medical Home Model nominal amount standard. For a Medicaid Medical Home Model or an Aligned Other Payer Medical Home Model to meet the Medicaid Medical Home Model nominal amount standard, the total annual amount that an APM Entity potentially owes a payer or forgoes must be at least the following amounts:

* * * * * (5) Marginal risk rate. For purposes of this section, the marginal risk rate is defined as the percentage of actual expenditures that exceed expected expenditures for which an APM Entity is responsible under an other payer payment arrangement.

(i) In the event that the marginal risk rate varies depending on the amount by which actual expenditures exceed expected expenditures, the average marginal risk rate across all possible levels of actual expenditures would be used for comparison to the marginal risk rate specified in paragraph (d)(3)(ii) of this section, with exceptions for large losses as described in paragraph (d)(5)(ii) of this section and small losses

as described in paragraph (d)(5)(iii) of this section.

(ii) *Allowance for large losses.* The determination in paragraph (d)(3)(ii) of this section may disregard the marginal risk rates that apply in cases when actual expenditures exceed expected expenditures by an amount sufficient to require the APM Entity to make financial risk payments under the other payer payment arrangement greater than or equal to the total risk requirement under paragraph (d)(3)(i) of this section.

(iii) *Allowance for minimum loss rate.* The determination in paragraph (d)(3)(ii) of this section may disregard the marginal risk rates that apply in cases when actual expenditures exceed expected expenditures by less than 4 percent of expected expenditures.

(6) *Expected expenditures.* For the purposes of this section, expected expenditures is defined as the Other Payer APM benchmark. For episode payment models, expected expenditures means the episode target price. For purposes of assessing financial risk for Other Payer Advanced APM determinations, the expected expenditures under the payment arrangement should not exceed the expenditures for a participant in the absence of the payment arrangement. If expected expenditures under the payment arrangement exceed the expenditures that the participant would be expected to incur in the absence of the payment arrangement, such excess expenditures are not considered when assessing financial risk under the payment arrangement for Other Payer Advanced APM determinations.

(7) *Capitation.* A full capitation arrangement meets this Other Payer Advanced APM criterion. For purposes of paragraph (d)(3) of this section, a full capitation arrangement means a payment arrangement in which a per capita or otherwise predetermined payment is made under the payment arrangement for all items and services furnished to a population of beneficiaries during a fixed period of time, and no settlement is performed for the purposes of reconciling or sharing losses incurred or savings earned by the participant. Arrangements made directly between CMS and Medicare Advantage Organizations under the Medicare Advantage program (part 422 of this title) are not considered capitation arrangements for purposes of this paragraph.

(8) *Aligned Other Payer Medical Home Model and Medicaid Medical Home Model 50 eligible clinician limit.* Notwithstanding paragraphs (d)(2) and (4) of this section, if an APM Entity participating in an Aligned Other Payer

Medical Home Model or Medicaid Medical Home Model is owned and operated by an organization with 50 or more eligible clinicians whose Medicare billing rights have been reassigned to the TIN(s) of the organization(s) or any of the organization's subsidiary entities, the requirements of paragraphs (d)(1) and (3) of this section apply.

* * * * *
 ■ 52. Section 414.1425 is amended by revising paragraphs (c)(5) and (6), and (d)(3) and (4) to read as follows:

§ 414.1425 Qualifying APM participant determination: In general.

* * * * *

(c) * * *

(5) Beginning in the 2020 QP Performance Period, an eligible clinician in an APM Entity is not a QP for a year if:

(i) The APM Entity voluntarily or involuntarily terminates from an Advanced APM before the end of the QP Performance Period; or

(ii) The APM Entity voluntarily or involuntarily terminates from an Advanced APM at a date on which the APM Entity would not bear financial risk for that QP performance period under the terms of the Advanced APM, even if such termination date occurs within such QP Performance Period.

(6) Beginning in the 2020 QP Performance Period, an eligible clinician is not a QP for a year if:

(i) One or more of the APM Entities in which the eligible clinician participates voluntarily or involuntarily terminates from the Advanced APM before the end of the QP Performance Period, and the eligible clinician does not achieve a Threshold Score that meets or exceeds the QP payment amount threshold or QP patient count threshold based on participation in the remaining non-terminating APM Entities; or

(ii) One or more of the APM Entities in which the eligible clinician participates voluntarily or involuntarily terminates from the Advanced APM at a date on which the APM Entity would not bear financial risk under the terms of the Advanced APM, and the eligible clinician does not achieve a Threshold Score that meets or exceeds the QP payment amount threshold or QP patient count threshold based on participation in the remaining non-terminating APM Entities.

* * * * *

(d) * * *

(3) Beginning in the 2020 QP Performance Period, an eligible clinician is not a Partial QP for a year if:

(i) The APM Entity voluntarily or involuntarily terminates from an Advanced APM before the end of the QP Performance Period; or

(ii) The APM Entity voluntarily or involuntarily terminates from an Advanced APM at a date on which the APM Entity would not bear financial risk for that performance period under the terms of the Advanced APM.

(4) Beginning in the 2020 QP Performance Period, an eligible clinician is not a Partial QP for a year if:

(i) One or more of the APM Entities in which the eligible clinician participates voluntarily or involuntarily terminates from the Advanced APM before the end of the QP Performance Period, and the eligible clinician does not achieve a Threshold Score that meets or exceeds the Partial QP payment amount threshold or Partial QP patient count threshold based on participation in the remaining non-terminating APM Entities; or

(ii) One or more of the APM Entities in which the eligible clinician participates voluntarily or involuntarily terminates from the Advanced APM at a date on which the APM Entity would not bear financial risk under the terms of the Advanced APM, and the eligible clinician does not achieve a Threshold Score that meets or exceeds the Partial QP payment amount threshold or Partial QP patient count threshold based on participation in the remaining non-terminating APM Entities.

* * * * *

PART 415—SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS, SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN CERTAIN SETTING

■ 53. The authority citation for part 415 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 54. Section 415.172 is amended by revising the section heading and paragraph (b) to read as follows:

§ 415.172 Physician fee schedule payment for services of teaching physicians.

* * * * *

(b) *Documentation.* Except for services furnished as set forth in §§ 415.174 (concerning an exception for services furnished in hospital outpatient and certain other ambulatory settings), 415.176 (concerning renal dialysis services), and 415.184 (concerning psychiatric services), the medical records must document the teaching physician was present at the time the service is furnished. The presence of the teaching physician during procedures

and evaluation and management services may be demonstrated by the notes in the medical records made by the physician or as provided in § 410.20(e) of this chapter.

* * * * *

- 55. Section 415.174 is amended by—
- a. Revising paragraph (a)(6); and
- b. Removing and reserving paragraph (b).

The revision reads as follows:

§ 415.174 Exception: Evaluation and management services furnished in certain centers.

(a) * * *

(6) The medical records must document the extent of the teaching physician’s participation in the review and direction of services furnished to each beneficiary. The extent of the teaching physician’s participation may be demonstrated by the notes in the medical records made by the physician or as provided in § 410.20(e) of this chapter to each beneficiary in accordance with the documentation requirements at § 415.172(b).

(b) [Reserved]

PART 416—AMBULATORY SURGICAL CENTERS

- 56. The authority citation for part 416 is revised to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

- 57. Section 416.42 is amended by revising paragraph (a)(1) to read as follows:

§ 416.42 Condition for coverage—Surgical services.

* * * * *

(a) * * *

- (1) Immediately before surgery—
- (i) A physician must examine the patient to evaluate the risk of the procedure to be performed; and
- (ii) A physician or anesthesiologist as defined at § 410.69(b) of this chapter must examine the patient to evaluate the risk of anesthesia.

* * * * *

PART 418—HOSPICE CARE

- 58. The authority citation for part 418 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

- 59. Section 418.106 is amended by revising paragraph (b)(1) to read as follows:

§ 418.106 Condition of participation: Drugs and biologicals, medical supplies, and durable medical equipment.

* * * * *

(b) * * *

- (1) Drugs may be ordered by any of the following practitioners:

- (i) A physician as defined by section 1861(r)(1) of the Act.
- (ii) A nurse practitioner in accordance with state scope of practice requirements.
- (iii) A physician assistant in accordance with state scope of practice requirements and hospice policy who is:
 - (A) The patient’s attending physician; and
 - (B) Not an employee of or under arrangement with the hospice.

* * * * *

PART 424—CONDITIONS FOR MEDICARE PAYMENT

- 60. The authority citation for part 424 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

- 61. Section 424.67 is added to subpart E to read as follows:

§ 424.67 Enrollment requirements for opioid treatment programs (OTP).

(a) *General enrollment requirement.* In order for a program or eligible professional (as that term is defined in section 1848(k)(3)(B) of the Act) to receive Medicare payment for the provision of opioid use disorder treatment services, the provider must qualify as an OTP (as that term is defined in § 8.2 of this title) and enroll in the Medicare program under the provisions of this section and of subpart P of this part.

(b) *Specific requirements and standards for enrollment.* To enroll in the Medicare program, an OTP must meet all of the following requirements and standards:

- (1) Fully complete and submit the Form CMS–855B application (or its successor application) and any applicable supplement or attachment thereto to its applicable Medicare contractor. This includes, but is not limited to, the following:

(i) Maintain and submit to CMS (via the applicable supplement or attachment) a list of all physicians, other eligible professionals, and pharmacists (regardless of whether the individual is a W–2 employee of the OTP) who are legally authorized to prescribe, order, or dispense controlled substances on behalf of the OTP. The list must include the physician’s, other eligible professional’s, or pharmacist’s:

- (A) First and last name, and middle initial.
- (B) Social Security Number.
- (C) National Provider Identifier.
- (D) License number (if applicable).

(ii) Certifying via the Form CMS–855B and/or the applicable supplement or attachment thereto that the OTP meets and will continue to meet the specific

requirements and standards for enrollment described in paragraphs (b) and (d) of this section.

(2) Comply with the application fee requirements in § 424.514.

(3) Successfully complete the assigned categorical risk level screening required under, as applicable, § 424.518(b) and (c).

(4)(i) Have a current, valid certification by SAMHSA for an opioid treatment program consistent with the provisions and requirements of § 8.11 of this title.

(ii) A provisional certification under § 8.11(e) of this title does not meet the requirements of paragraph (b)(4)(i) of this section.

(5) Report on the Form CMS–855B and/or any applicable supplement all OTP staff who meet the definition of “managing employee” in § 424.502. Such individuals include, but are not limited to, the following:

(i) Medical director (as described in § 8.2 of this title).

(ii) Program sponsor (as described in § 8.2 of this title).

(6)(i)(A) Must not employ or contract with a prescribing or ordering physician or eligible professional or with any individual legally authorized to dispense narcotics who, within the preceding 10 years, has been convicted (as that term is defined in 42 CFR 1001.2) of a Federal or State felony that CMS deems detrimental to the best interests of the Medicare program and its beneficiaries based on the same categories of detrimental felonies, as well as case by case detrimental determinations, found at § 424.535(a)(3).

(B) Paragraph (b)(6)(i)(A) of this section applies regardless of whether the individual in question is:

- (1) Currently dispensing narcotics at or on behalf of the OTP; or
- (2) A W–2 employee of the OTP.

(ii) Must not employ or contract with any personnel (regardless of whether the individual is a W–2 employee of the OTP) who is revoked from Medicare under § 424.535 or any other applicable section in Title 42, or who is on the preclusion list under § 422.222 or § 423.120(c)(6) of this chapter.

(iii) Must not employ or contract with any personnel (regardless of whether the individual is a W–2 employee of the OTP) who has a prior adverse action by a State oversight board, including, but not limited to, a reprimand, fine, or restriction, for a case or situation involving patient harm that CMS deems detrimental to the best interests of the Medicare program and its beneficiaries. CMS will consider the factors enumerated at § 424.535(a)(22) in each

case of patient harm that potentially applies to this paragraph.

(7)(i) Sign (and adhere to the term of) a provider agreement in accordance with the provisions of part 489 of this chapter.

(ii) An OTP's appeals under part 498 of a Medicare revocation (under § 424.535) and a provider agreement termination (under § 489.53 of this chapter) must be filed jointly and, as applicable, considered jointly by CMS under part 498 of this chapter.

(8) Comply with all other applicable requirements for enrollment specified in this section and in subpart P of this part.

(c) *Denial of enrollment.* CMS may deny an OTP's enrollment application on any of the following grounds:

(1)(i) The provider does not have a current, valid certification by SAMHSA as required under paragraph (b)(4)(i) of this section or fails to meet any other applicable requirement in this section.

(ii) Any of the denial reasons in § 424.530 applies.

(2) An OTP may appeal the denial of its enrollment application under part 498 of this chapter.

(d) *Continued compliance, standards, and reasons for revocation.* (1) Upon and after enrollment, an OTP—

(i) Must remain validly certified by SAMHSA as required under § 8.11 of this title.

(ii) Remains subject to, and must remain in full compliance with, the provisions of this section and of subpart P of this part. This includes, but is not limited to, the provisions of paragraph (b)(6) of this section, the revalidation provisions in § 424.515, and the deactivation and reactivation provisions in § 424.540.

(iii) Upon revalidation, successfully complete the moderate categorical risk level screening required under § 424.518(b).

(2) CMS may revoke an OTP's enrollment on any of the following grounds:

(i) The provider does not have a current, valid certification by SAMHSA as required under paragraph (b)(4)(i) or fails to meet any other applicable requirement or standard in this section, including, but not limited to, the OTP standards in paragraphs (b)(6) and (d)(1) of this section.

(ii) Any of the revocation reasons in § 424.535 applies.

(3) An OTP may appeal the revocation of its enrollment under part 498 of this title.

(e) *Claim payment.* For an OTP to receive payment for furnished drugs:

(1) The prescribing or medication ordering physician's or other eligible professional's National Provider

Identifier must be listed on Field 17 of the Form CMS-1500; and

(2) All other applicable requirements of this section, this part, and part 8 of this title must be met.

(f) *Relation to part 8 of this title.*

Nothing in this section shall be construed as:

(1) Supplanting any of the provisions in part 8 of this title; or

(2) Eliminating an OTP's obligation to maintain compliance with all applicable provisions in part 8 of this title.

■ 62. Section 424.502 is amended by adding the definition of "State oversight board" in alphabetical order to read as follows:

§ 424.502 Definitions.

* * * * *

State oversight board means, for purposes of §§ 424.530(a)(15) and 424.535(a)(22) only, any State administrative body or organization, such as (but not limited to) a medical board, licensing agency, or accreditation body, that directly or indirectly oversees or regulates the provision of health care within the State.

* * * * *

■ 63. Section 424.518 is amended by adding paragraphs (b)(1)(xii) and (xiii) and (c)(1)(iv) to read as follows:

§ 424.518 Screening levels for Medicare providers and suppliers.

* * * * *

(b) * * *
(1) * * *

(xii) Prospective (newly enrolling) opioid treatment programs that have been fully and continuously certified by the Substance Abuse and Mental Health Services Administration (SAMHSA) since October 23, 2018.

(xiii) Revalidating opioid treatment programs.

* * * * *

(c) * * *
(1) * * *

(iv) Prospective (newly enrolling) opioid treatment programs that have not been fully and continuously certified by SAMHSA since October 23, 2018.

* * * * *

■ 64. Section 424.520 is amended by revising paragraph (d) introductory text to read as follows:

§ 424.520 Effective date of Medicare billing privileges.

* * * * *

(d) *Physicians, non-physician practitioners, physician and non-physician practitioner organizations, ambulance suppliers, and opioid treatment programs.* The effective date for billing privileges for physicians,

non-physician practitioners, physician and non-physician practitioner organizations, ambulance suppliers, and opioid treatment programs is the later of—

* * * * *

■ 65. Section 424.521 is amended by revising the section heading and paragraph (a) introductory text to read as follows:

§ 424.521 Request for payment by physicians, non-physician practitioners, physician and non-physician organizations, ambulance suppliers, and opioid treatment programs.

(a) Physicians, non-physician practitioners, physician and non-physician practitioner organizations, ambulance suppliers, and opioid treatment programs may retrospectively bill for services when the physician, non-physician practitioner, physician or non-physician organization, ambulance supplier, or opioid treatment program has met all program requirements, including State licensure requirements, and services were provided at the enrolled practice location for up to—

* * * * *

■ 66. Section 424.530 is amended by adding paragraph (a)(15) to read as follows:

§ 424.530 Denial of enrollment in the Medicare program.

(a) * * *

(15) *Patient harm.* (i) The physician or other eligible professional (as that term is defined in 1848(k)(3)(B) of the Act) has been subject to prior action from a State oversight board, Federal or State health care program, Independent Review Organization (IRO) determination(s), or any other equivalent governmental body or program that oversees, regulates, or administers the provision of health care with underlying facts reflecting improper physician or other eligible professional conduct that led to patient harm. In determining whether a denial is appropriate, CMS considers the following factors:

(A) The nature of the patient harm.

(B) The nature of the physician's or other eligible professional's conduct.

(C) The number and type(s) of sanctions or disciplinary actions that have been imposed against the physician or other eligible professional by a State oversight board, IRO, Federal or State health care program, or any other equivalent governmental body or program that oversees, regulates, or administers the provision of health care. Such actions include, but are not limited to in scope or degree:

(1) License restriction(s) pertaining to certain procedures or practices.

(2) Required compliance appearances before State oversight board members.

(3) License restriction(s) regarding the ability to treat certain types of patients (for example, cannot be alone with members of a different gender after a sexual offense charge).

(4) Administrative/monetary penalties.

(5) Formal reprimand(s).

(D) If applicable, the nature of the IRO determination(s).

(E) The number of patients impacted by the physician's or other eligible professional's conduct and the degree of harm thereto or impact upon.

(ii) Paragraph (a)(15)(i) of this section does not apply to actions or orders pertaining exclusively to either of the following:

(A) Required participation in rehabilitation or mental/behavioral health programs; or

(B) Required abstinence from drugs or alcohol and random drug testing.

* * * * *

■ 67. Section 424.535 is amended by—

■ a. In paragraph (a)(14) introductory text, by removing the phrase "prescribing Part D drugs" and adding in its place the phrase "prescribing Part B or D drugs"; and

■ b. Adding paragraph (a)(22).

The addition reads as follows:

§ 424.535 Revocation of enrollment in the Medicare program.

(a) * * *

(22) *Patient harm.* (i) The physician or other eligible professional (as that term is defined in 1848(k)(3)(B) of the Act) has been subject to prior action from a State oversight board, Federal or State health care program, Independent Review Organization (IRO) determination(s), or any other equivalent governmental body or program that oversees, regulates, or administers the provision of health care with underlying facts reflecting improper physician or other eligible professional conduct that led to patient harm. In determining whether a revocation is appropriate, CMS considers the following factors:

(A) The nature of the patient harm.

(B) The nature of the physician's or other eligible professional's conduct.

(C) The number and type(s) of sanctions or disciplinary actions that have been imposed against the physician or other eligible professional by the State oversight board, IRO, Federal or State health care program, or any other equivalent governmental body or program that oversees, regulates, or administers the provision of health care.

Such actions include, but are not limited to in scope or degree:

(1) License restriction(s) pertaining to certain procedures or practices.

(2) Required compliance appearances before State medical board members.

(3) License restriction(s) regarding the ability to treat certain types of patients (for example, cannot be alone with members of a different gender after a sexual offense charge).

(4) Administrative or monetary penalties.

(5) Formal reprimand(s).

(D) If applicable, the nature of the IRO determination(s).

(E) The number of patients impacted by the physician's or other eligible professional's conduct and the degree of harm thereto or impact upon.

(ii) Paragraph (a)(22)(i) of this section does not apply to actions or orders pertaining exclusively to either of the following:

(A) Required participation in rehabilitation or mental/behavioral health programs; or

(B) Required abstinence from drugs or alcohol and random drug testing.

PART 425—MEDICARE SHARED SAVINGS PROGRAM

■ 68. The authority citation for part 425 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395hh, and 1395jjj.

§ 425.612 [Amended]

■ 69. Section 425.612 is amended in paragraph (a)(1)(v)(E) introductory text by removing the phrase "paragraph (a)(1)(v)(B)" and adding in its place the phrase "paragraph (a)(1)(v)(D)".

PART 489—PROVIDER AGREEMENTS AND SUPPLIER APPROVAL

■ 70. The authority citation for part 489 is revised to read as follows:

Authority: 42 U.S.C. 1302, 1395i-3, 1395x, 1395aa(m), 1395cc, 1395ff, and 1395(hh).

■ 71. Section 489.2 is amended by adding paragraphs (b)(10) and (c)(3) to read as follows:

§ 489.2 Scope of part.

* * * * *

(b) * * *

(10) Opioid treatment programs (OTPs).

(c) * * *

(3) OTPs may enter into provider agreements only to furnish opioid use disorder treatment services.

■ 72. Section 489.10 is amended by revising paragraph (a) to read as follows:

§ 489.10 Basic requirements.

(a) Any of the providers specified in § 489.2 may request participation in Medicare. In order to be accepted, it must meet the conditions of participation or requirements (for SNFs) set forth in this section and elsewhere in this chapter. The RNHCs must meet the conditions for coverage, conditions for participation and the requirements set forth in this section and elsewhere in this chapter. The OTPs must meet the requirements set forth in this section and elsewhere in this chapter.

* * * * *

■ 73. Section 489.13 is amended by adding paragraph (a)(2)(iii) to read as follows:

§ 489.13 Effective date of agreement or approval.

(a) * * *

(2) * * *

(iii) For an agreement with an opioid treatment program (OTP), the effective date is the effective date of billing as established under § 424.520(d) or § 424.521(a), as applicable.

* * * * *

■ 74. Section 489.53 is amended by revising paragraph (a)(3) to read as follows:

§ 489.53 Termination by CMS.

(a) * * *

(3) It no longer meets the appropriate conditions of participation or requirements (for SNFs and NFs) set forth elsewhere in this chapter. In the case of an RNHCI, it no longer meets the conditions for coverage, conditions of participation and requirements set forth elsewhere in this chapter. In the case of an OTP, it no longer meets the requirements set forth in this section and elsewhere in this chapter.

* * * * *

PART 498—APPEALS PROCEDURES FOR DETERMINATIONS THAT AFFECT PARTICIPATION IN THE MEDICARE PROGRAM AND FOR DETERMINATIONS THAT AFFECT THE PARTICIPATION OF ICFs/IID AND CERTAIN NFs IN THE MEDICAID PROGRAM

■ 75. The authority citation for part 498 continues to read as follows:

Authority: 42 U.S.C. 1302, 1320a-7j, and 1395hh.

■ 76. Section 498.2 is amended in the definition of "Provider" by revising the introductory text and adding paragraph (3) to read as follows:

§ 498.2 Definitions.

* * * * *

Provider means any of the following:

* * * * *

(3) An entity that has in effect an agreement to participate in Medicare but only to furnish opioid use disorder treatment services.

* * * * *

Dated: October 24, 2019.

Seema Verma,

Administrator, Centers for Medicare & Medicaid Services.

Dated: October 28, 2019.

Alex M. Azar II,

Secretary, Department of Health and Human Services.

Note: The following appendices will not appear in the Code of Federal Regulations.

Appendix 1: MIPS Quality Measures

Note: Except as otherwise noted in this final rule, previously finalized measures and specialty measure sets will continue to apply for the 2022 MIPS payment year and future years. In addition, electronic Clinical Quality Measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table A as follows: NQF #/eCQM NQF #.

BILLING CODE 4120-01-P

TABLE Group A: New Quality Measures Finalized for the 2022 MIPS Payment Year and Future Years

A.1 International Prostate Symptom Score (IPSS) or American Urological Association-Symptom Index (AUA-SI) Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	476
Description:	Percentage of patients with an office visit within the measurement period and with a new diagnosis of clinically significant Benign Prostatic Hyperplasia who have International Prostate Symptoms Score (IPSS) or American Urological Association (AUA) Symptom Index (SI) documented at time of diagnosis and again 6-12 months later with an improvement of 3 points.
Measure Steward:	Large Urology Group Practice Association and Oregon Urology Institute
Numerator:	Patients with a documented improvement of at least 3 points in their urinary symptom score during the measurement period.
Denominator:	Equals Initial Population. Initial population is: Male patients with an initial diagnosis of benign prostatic hyperplasia, 6 months prior to, or during the measurement period, and a urinary symptom score assessment within 1 month of initial diagnosis and a follow-up urinary symptom score assessment within 6-12 months, who had a qualifying visit during the measurement period.
Exclusions:	Denominator: Patients with urinary retention that starts within 1 year of initial BPH diagnosis; Patients with an initial BPH diagnosis that starts during, or within 30 days of hospitalization; Patients with a diagnosis of morbid obesity, or with a BMI Exam >40 before the follow up urinary symptom score.
Measure Type:	Patient Reported Outcome
Measure Domain:	Person and Caregiver-Centered Experience and Outcomes (section 1848(s)(1)(B)(iv) of the Act)
High Priority Measure:	Yes (Patient Reported Outcome)
Collection Type:	eCQM Specifications
Rationale:	<p>This measure was proposed because it represents a patient reported outcome by evaluating the patient’s response regarding their symptoms associated with the diagnosis of Benign Prostatic Hyperplasia (BPH). Results can be used by clinicians in evaluating whether the patient’s symptoms from BPH have improved during the 6 to 12 months after diagnosis and treatment of this disease. The measure was evaluated by the MAP and it was conditionally supported pending NQF endorsement. While we agree with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required by section 1848(q)(2)(D)(v) of the Act. Measure information provided by the measure developer indicates IPSS and AUA-SI are statistically valid and reliable symptom scores. The IPSS was adopted by the World Health Organization in 1993. The AUA-SI was developed and validated by the American Urological Association in 1992. The IPSS uses the same questions as the AUA-SI, but also adds a disease-specific quality of life question (O’Leary, 2005). It is a reproducible, validated index designed to determine disease severity and response to therapy (DSilva, 2014). Based on the information provided by the measures steward, we believe the measure is evidence-based and represents an important patient reported outcome.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=89244.</p>
Comment:	One commenter had concerns about the proposed International Prostate Symptom Score (IPSS) or American Urological Association – Symptom Index (AUA-SI) Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia measure. The commenter noted that this measure was conditionally recommended by the MAP for inclusion in a federal program pending a full evaluation by NQF as there were concerns regarding the feasibility of the measure collection. Specifically, there were concerns about the measure’s ability to feasibly obtain response rates electronically or in a clinical setting. While the developer indicated that the measure was tested using multiple EHR formats, MAP members indicated that additional testing with multiple EHRs should be completed. While the commenter supported patient reported outcome measures, it recommended against including this new measure in the MIPS program until there is a full evaluation and recommendation by the NQF.
Response:	We thank the commenter for their comment and agree that NQF endorsement is preferred; however, it is not required for implementation into MIPS. The measure steward completed additional testing following NQF feedback regarding their submission to NQF for the Fall 2018 review. After completing this testing, the measure steward found that it is feasible to obtain response rates electronically. The CMS document “Blueprint for the CMS Measures Management System v.15.0”, explains software resources such as “Bonnie that allow eCQM developers to test and verify the behavior of their

Category	Description
	eCQM logic. The Bonnie application allows measure developers to independently load measures that they have constructed using the Measure Authoring Tool (MAT) and helps measure developers execute the measure logic against the constructed patient test deck and evaluate whether the logic aligns with the intent of the measure. ⁷
	After consideration of the comments, we are finalizing the <i>International Prostate Symptom Score (IPSS) or American Urological Association Symptom Index (AUA-SI) Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia</i> measure as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.

A.2. Multimodal Pain Management

Category	Description
NQF #: / eCQM NQF #:	N/A
Quality #:	477
Description:	Percentage of patients, aged 18 years and older, undergoing selected surgical procedures that were managed with multimodal pain medicine.
Measure Steward:	American Society of Anesthesiologists (ASA)
Numerator:	Patients for whom multimodal pain management is administered in the perioperative period from 6 hours prior to anesthesia start time until discharged from the post-anesthesia care unit.
Denominator:	Patients, aged 18 years and older, who undergo selected surgical procedures
Exclusions:	Emergent Cases
Measure Type:	Process
Measure Domain:	Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	Yes (Opioid-related)
Collection Type:	MIPS CQMs Specifications
Rationale:	<p>This measure was proposed because it encourages clinicians to effectively manage patients' pain using multimodal strategies, which in turn can significantly reduce unnecessary opioid use, excessive post-operative prescriptions, and length of stay. We believe there is an urgent need for measures that address the opioid epidemic affecting the nation. It is imperative to include measures in MIPS that support healthy outcomes for patients using opioids. The clinical action being evaluated within this measure supports the reduction in use of opioids for patients in the perioperative treatment of pain. The measure was updated from what was submitted to the MAP following feedback from stakeholders and NCQA's Technical Expert Panel (TEP). The original measure evaluated by the MAP was conditionally supported pending NQF endorsement. While we agree with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required by section 1848(q)(2)(D)(v) of the Act. The measure steward indicated that testing data from 503 clinicians for 24,728 cases met the denominator criteria during testing of the measure. The mean performance rate calculated from this data was 74.24 percent with a standard deviation of +/- 0.1492 with a performance range of 0.00 to 100.00. Reliability was assessed at the clinician level and based on data from a large, academic medical center and a Veterans Health Administration facility. In May 2018, the ASA conducted a systematic assessment of face validity among members of its Committee on Pain Medicine and Committee on Regional Anesthesia and Acute Pain Medicine. The 33 respondents indicated a substantial level of agreement supporting this measure's value and validity. Based on the information provided by the measures steward, we believe the measure is evidence-based and represents an important clinical process.</p> <p>The measure steward revised the measure by adding an age criteria and removing elective cases as an inclusion criteria. Upon stakeholder feedback, the denominator eligible cases were expanded to make the measure more applicable to ambulatory settings. Due to this denominator expansion, an age of 18 years and older was added to the denominator criteria as many of the pediatric cases captured by the expanded codes do not require multimodal pain management. Additionally, pediatric patients have a different range of appropriate multimodal pain management options. As such, the measure steward limited the patient population to the clinically relevant adult patient population. A denominator exclusion was added for emergent cases to replace the previous elective surgery requirement for denominator eligibility. The measure steward also stated, citing user feedback, when emergent cases are an exclusion criterion compared to using elective cases as an inclusion criterion, the measure produced more reliable results. We agree that these changes result in a more clinically relevant, reliable, and meaningful measure by expanding the denominator eligible code set to capture all applicable adult patients in different settings and refining the patient population to be in alignment with these changes.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=89244.</p>
Comment:	Several commenters supported the new Multimodal Pain Management measure. The measure aligns with the meaningful measures initiative as it seeks to manage postoperative pain through multimodal pain strategies instead of using just opioids. However, the commenter stated there is considerable room for improvement based on preliminary measure performance data. The measure would serve as a meaningful indicator of quality and limit a critical access point for opioid use, abuse, or dependence while effectively managing pain. Another commenter thanked CMS for adding this high priority measure, as multimodal pain management is an essential element of Enhanced Recovery After Surgery (ERAS).
Response:	We thank the commenters and appreciate their support of new measure Q477. We agree the measure would limit a critical access point for opioid use, abuse, or dependence while still effectively managing pain. We agree with the commenter in reference to the considerable room for improvement in performance of treating patients 6 hours prior to anesthesia start time until discharged from the post-anesthesia care unit. The Multimodal Pain Management quality measure was previously available as a Quality Clinical Data Registry (QCDR) measure under the Anesthesia Quality Institute, National Anesthesia Clinical Outcomes Registry QCDR and has produced data to support that there is room for improvement in the performance for this particular interaction between anesthesiologist and patients. The 2018 performance data also supported a clinical need to promote multimodal pain management prior to the use of opioids. We believe this measure will support eligible clinicians to use alternative pain therapies. <p>After consideration of the comments, we are finalizing the <i>Multimodal Pain Management</i> measure as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years.</p>

A.3. Adult Immunization Status

Category	Description
NQF # / eCOM NQF #:	N/A
Quality #:	N/A
Description:	Percentage of members 19 years of age and older who are up-to-date on recommended routine vaccines for influenza; tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster; and pneumococcal.
Measure Steward:	National Committee for Quality Assurance
Numerator:	<p>Numerator 1: Members in Denominator 1 (D1) who received an influenza vaccine on or between July 1 of the year prior to the measurement period and June 30 of the measurement period.</p> <p>Numerator 2: Members in D2 who received at least 1 Td vaccine or 1 Tdap vaccine between 9 years prior to the start of the measurement period and the end of the measurement period.</p> <p>Numerator 3: Members in D3 who received at least 1 dose of the herpes zoster live vaccine or 2 doses of the herpes zoster recombinant vaccine anytime on or after the members 50th birthday.</p> <p>Numerator 4: Members in D4 who were administered both the 13-valent pneumococcal conjugate vaccine and the 23-valent pneumococcal polysaccharide vaccine at least 12 months apart, with the first occurrence after the age of 60.</p> <p>Numerator 5: The actual number of required immunizations administered to members in D5.</p>
Denominator:	<p>Denominator 1: Members age 19 and older at the start of the measurement period.</p> <p>Denominator 2: Members age 19 and older at the start of the measurement period.</p> <p>Denominator 3: Members age 50 and older at the start of the measurement period.</p> <p>Denominator 4: Members age 66 and older at the start of the measurement period.</p> <p>Denominator 5: The total number of possible immunizations required for members age 19 and older determined by their age at the start of the measurement period.</p>
Exclusions:	<p>Denominator:</p> <p>Members with any of the following:</p> <ul style="list-style-type: none"> • Prior anaphylactic reaction to the vaccine or its components any time during or before the measurement period. • History of encephalopathy within seven days after a previous dose of a Td-containing vaccine. • Active chemotherapy during the measurement period. • Bone marrow transplant during the measurement period. • History of immunocompromising conditions, cochlear implants, anatomic or functional asplenia, sickle cell anemia & HB-S disease or cerebrospinal fluid leaks any time during the member's history prior to or during the measurement period. • In hospice or using hospice services during the measurement period.
Measure Type:	Process
Measure Domain:	Community/Population Health (section 1848(s)(1)(B)(v) of the Act)
High priority measure:	No
Collection Type:	MIPS CQMs Specifications, CMS Web Interface Measure Specifications
Rationale:	<p>We proposed this preventive immunization measure because it is a comprehensive evaluation for compliance with recommended adult vaccinations and supports the 2019 adult immunization schedule that has been approved by the CDC, which is based on the recommendation from the Advisory Committee on Immunization Practices. NCQA and the HHS National Vaccine Program Office submitted this measure via Call for Measures to be considered for MIPS implementation. This robust composite measure assesses the quality clinical action regarding the administration of the influenza, Tdap/Td, herpes zoster, and pneumococcal vaccines. The immunizations included within this measure will reduce the prevalence of severe diseases that may be associated with hospitalization and decrease overall health care costs. This measure is consistent with Healthy People 2020 goals, developed by the Centers for Disease Control and Prevention, to promote healthy behaviors, for increasing immunization rates. The measure was evaluated by the MAP, but this entity did not support this composite measure since it had not been analytically tested at the clinician level, but clinically it is evidence-based as required by section 1848(q)(2)(D)(v) of the Act. We believe that the health plan level version of the measure can be adapted to the clinician level by revising the measure analytics to assess the proportion of patients who have been administered influenza, Tdap/Td, herpes zoster, and pneumococcal vaccines by MIPS eligible clinicians. Implementing the measure at the clinician level does not change the medical intent or evidence supporting preventive immunizations for patients. Therefore, we believe implementing the measure at the clinician level will be successful. Currently, MIPS includes three of the four composite measure's components as individual measure analytics. Individual measures: Q110: Preventive Care and Screening: Influenza Immunization; and Q111: Pneumococcal Vaccination Status for Older Adults have been implemented in the MIPS and PQRS programs for a combined total of over seven years. Another component of this composite measure, Q474: Zoster (Shingles) Vaccination, was implemented as a new individual measure in 2019 MIPS and was tested at the clinician and group level prior to submission to the Call for Measures. The administration of the vaccination diphtheria toxoids and acellular pertussis (Tdap), contained in Adult Immunization Status, is also present in the MIPS program as a component within measure Q394: Immunizations for Adolescents. We recognize this measure is specified currently for adolescents, but believe the logic this measure represents is adaptable to the adult population.</p>

Category	Description
	<p>We believe that the individual measures referenced above represent each component of the Adult Immunization Status composite measure. Additionally, measures Q110 and Q111 have been successfully implemented in all MIPS collection types. This accomplishment supports the face validity of these measure concepts and demonstrates the ease in which the composite health plan measure can be adapted for MIPS use. As such, we believe the health plan level version of this measure can be adapted accordingly to suit the program requirements of MIPS. Nonetheless, we will continue to work with the measure steward to obtain additional testing results regarding this composite measure's implementation for programs beyond the health plan level. The measure steward provided the following health plan evidence to support the value of proposing this composite measure as a quality measure. The information is based on commercial and Medicaid plan performance rates for members aged 19-64 and Medicare plan rates for members aged 65 and older. Across the plans, performance rates were as follows: influenza (mean=24 percent, min=3 percent, max=73 percent; Td or Tdap (mean=35 percent, min=1 percent, max=94 percent); zoster (mean=28 percent, min=0.1 percent, max=85 percent); pneumococcal (mean=17 percent, min=1 percent, max=62 percent); and composite (mean=28 percent, min=2 percent, max=79 percent). We believe this evidence represents there is a need to improve adult vaccination coverage. Based on the information provided by CDC in conjunction with the ACIP, we believe the measure is clinically evidence-based and represents an important clinical process. Therefore, we maintain that this measure provides a comprehensive assessment of quality adult preventive care and would met the meaningful measure initiative.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=89244.</p>

Comment: Several commenters opposed the addition of the new Adult Immunization Status measure that would result in the removal of measures Q110: Preventive Care and Screening: Influenza Immunization, Q111: Pneumococcal Vaccination Status for Older Adults, and Q474: Zoster (Shingles) Vaccination. Commenters were concerned with the complexity of this new measure and the confusion it could bring to clinicians. Benchmarks published by CMS for measures Q110 and Q111 still show a significant gap in care that can be addressed by these measures. Q474 is a newer measure, and there may be a benchmark published based on retroactive performance at a later date. Several commenters expressed concern that the new measure was not supported by the MAP, had only been tested at the health plan level, and that measure specifications had not yet been released.

One commenter opposed the new Adult Immunization Status measure in MIPS and the Web Interface because the look-back period for some of these immunizations of 10 years is not captured in the EHRs for patients that are new to a practice or where the EHR has changed. There are other barriers to Medicare beneficiaries receiving recommended immunizations, including in states with high levels of poverty, due to high cost-sharing for beneficiaries. Most vaccines are given at pharmacies or hospitals, so communication with the primary care physician is sporadic, resulting in higher burden to primary care physicians.

Another commenter did not support the new measure because it does not aid surgical teams in providing improved surgical care and it adds an unnecessary task to a surgeon's workflow that provides little value to surgical patients. Another commenter was concerned with replacing measure Q110 with an untested composite immunization measure that could prevent CMS from understanding how many patients with heart failure are receiving this potentially lifesaving immunization.

Another commenter stated they believed that the Adult Immunization Status measure should also reflect the evaluation/assessment need to update the patient's measles, mumps, and rubella (MMR) immunization status. Another commenter stated the new measure requires multiple age-appropriate preventive immunizations and provided suggestions to improve the applicable numerators and denominators for the measure.

Response: We thank the commenters for their comments. We are not finalizing the Adult Immunization Status measure for the 2020 MIPS performance period/2022 MIPS payment year due to the imminent changes in clinical guidelines for pneumococcal vaccination. We believe it is advantageous to evaluate the clinical guidelines and Adult Immunization Status measure for inclusion through future rulemaking. This assures alignment between this important clinical measure and the clinical guidelines that support it.

We appreciate the comments regarding EHRs and the eQOMs that support those systems and will continue to encourage measure stewards to develop eQOMs in the future. We agree that with the 10-year look-back period allowed for some of these immunizations, they may not have been captured in the EHR at the time of administration, or for patients that are new to a practice or where the EHR has changed. However, we believe the data from EHRs and state immunization registries should be updated and reflect the immunization status for every patient to maintain accurate and current medical record documentation. In response to the opposition of this measure citing the popularity and preference of the individual measures for individual performance rates, we believe this measure will continue to support endeavors for thorough administration of each vaccination as applicable to the eligible clinicians' patient population. We believe that submitting one vaccination measure would be less burdensome than potentially submitting several vaccination measures. The measure is specified to provide eligible clinicians' performance rates for each immunization and would be benchmarked based on the overall compliance. This would allow eligible clinicians to review and identify deficits in administration of vaccinations and make adjustments to their practice accordingly to drive and support public health initiatives.

Category	Description
	<p>We agree this measure may not add value to the overall interaction or care a surgeon may provide to a patient especially since primary care eligible clinicians most likely represent the front-line preventive care for this clinical concept. We encourage the surgeons to collaborate and develop measures that offer quality outcomes within their specialty while decreasing burden to their workflow. We encourage the commenters to collaborate with the measure steward, NCQA, for potential measure revisions that may lead to quality outcomes for patients. In regards to the suggestions to improve the applicable numerators and denominators for the measure, we encourage the commenter to collaborate with the measure steward to revise the measure for possible implementation in MIPS in future years.</p>
	<p>After consideration of the comments, we are not finalizing the <i>Adult Immunization Status</i> measure as proposed for the 2020 MIPS performance period/2022 MIPS payment year and future years. Upon further discussion with PPRNet, the current measure steward of measure Q474, they have decided to no longer maintain the measure within MIPS and do not plan to transfer stewardship of the measure to CMS. As a result, measures Q110 and Q111, are being retained in the MIPS program and Q474 is being removed.</p>

A.4. Functional Status Change for Patients with Neck Impairments

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	478
Description:	<p>This is a patient-reported outcome performance measure (PRO-PM) consisting of a patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients aged 14+ with neck impairments. The change in FS is assessed using the Neck FS PROM.* The measure is risk-adjusted to patient characteristics known to be associated with FS outcomes. It is used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.</p> <p>*The Neck FS PROM is an item-response theory-based computer adaptive test (CAT). In addition to the CAT version, which provides for reduced patient response burden, it is available as a 10-item short form (static/paper-pencil).</p>
Measure Steward:	Focus on Therapeutic Outcomes, Inc.
Numerator:	<p>The proportion of a provider's (clinic's or clinician's) patient care episodes that met or exceeded the risk-adjusted predicted Residual Change Score. The Residual Change Score is defined as the difference between the Actual and Predicted Change Scores where:</p> <ol style="list-style-type: none"> 1. The Actual Score is the patient's Functional Status (FS) Score; 2. The Actual Change Score is the change in the patient's FS score from Admission to Discharge; and 3. The Predicted Change Score is the risk-adjusted prediction of FS change. (Please see the Comments section of JIRA submission for details of the Risk-adjustment component.) <p>Calculating the Residual Change Score, Example:</p> <ul style="list-style-type: none"> • Actual Score at Admission = 45 • Actual Score at Discharge = 60 <ul style="list-style-type: none"> ○ Actual Change Score (Discharge minus Admission) = +15 ○ Predicted Change Score = +10 • Residual Change Score (Actual Change minus Predicted) = +5 <p>Numerator Options:</p> <ul style="list-style-type: none"> • Performance Met = The Residual Change Score is equal to or greater than 0 • Performance Not Met = The Residual Change Score is less than 0 <p>Performance may be calculated on 3 levels as follows:</p> <ol style="list-style-type: none"> 1. Patient Level: For the individual patient episode, the patient's Actual FS scores relative to the risk-adjusted predicted. This level should be used for optimizing care as described below.* 2. Clinician Level: The average of the Residuals for patient care episodes managed by a clinician (individual provider) over a 12 month time period. 3. Clinic Level: The average of the Residuals for patient care episodes managed by a group of clinicians within a clinic over a 12 month time period. <p>* A provider's (clinician's or clinic's) performance must be assessed based on an average all of the provider's patient episodes. On the level of the individual patient, variation is expected. When an individual episode does not result in meeting or exceeding the performance standard, the functional data should be useful to the provider in optimizing the balance of effectiveness/efficiency for that particular care episode. For example, if patient-perceived function is not improving, or has plateaued in progress, that data may be a component of provider-patient communication and care decision-making such as the following examples:</p> <ol style="list-style-type: none"> 1. Does the provider understand the patient's perception of his/her current level of function? 2. Should the treatment plan be modified? 3. Should the patient be discharged sooner than later? 4. Should the patient be referred to a different care provider?
Denominator:	Patients aged 14+ who initiated rehabilitation therapy, chiropractic, or medical episodes of care for neck impairments including but not limited to cervical (neck) pain, radiculopathy, strain, sprain, stenosis, myelopathy, spondylosis or disc disorders.
Exclusions:	None
Measure Type:	Patient Reported Outcome
